

## I. SUPPLEMENTARY MATERIALS

## A. Example Scans with Synthesized Pathologies

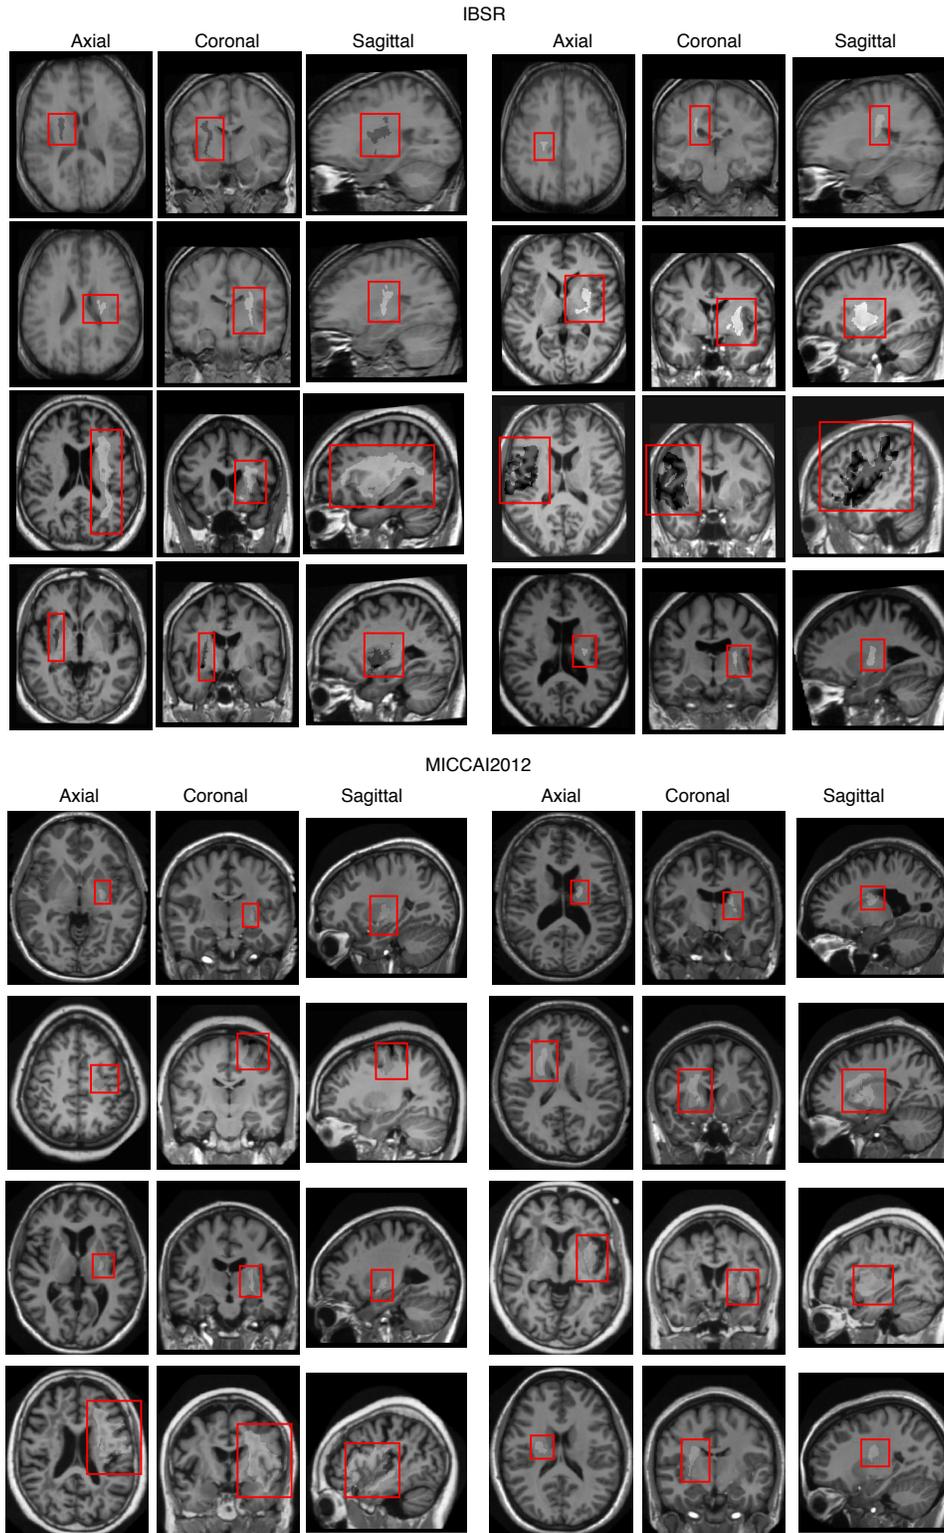

Fig. 1. 16 examples of the augmented scans with synthesized pathologies from IBSR and MICCAI2012 datasets. Each 3D scan is visualized with axial, coronal and sagittal views that contain pathologies. Red boxes localize the pathological areas.

### B. Example Segmentation Results on Pathological Scans

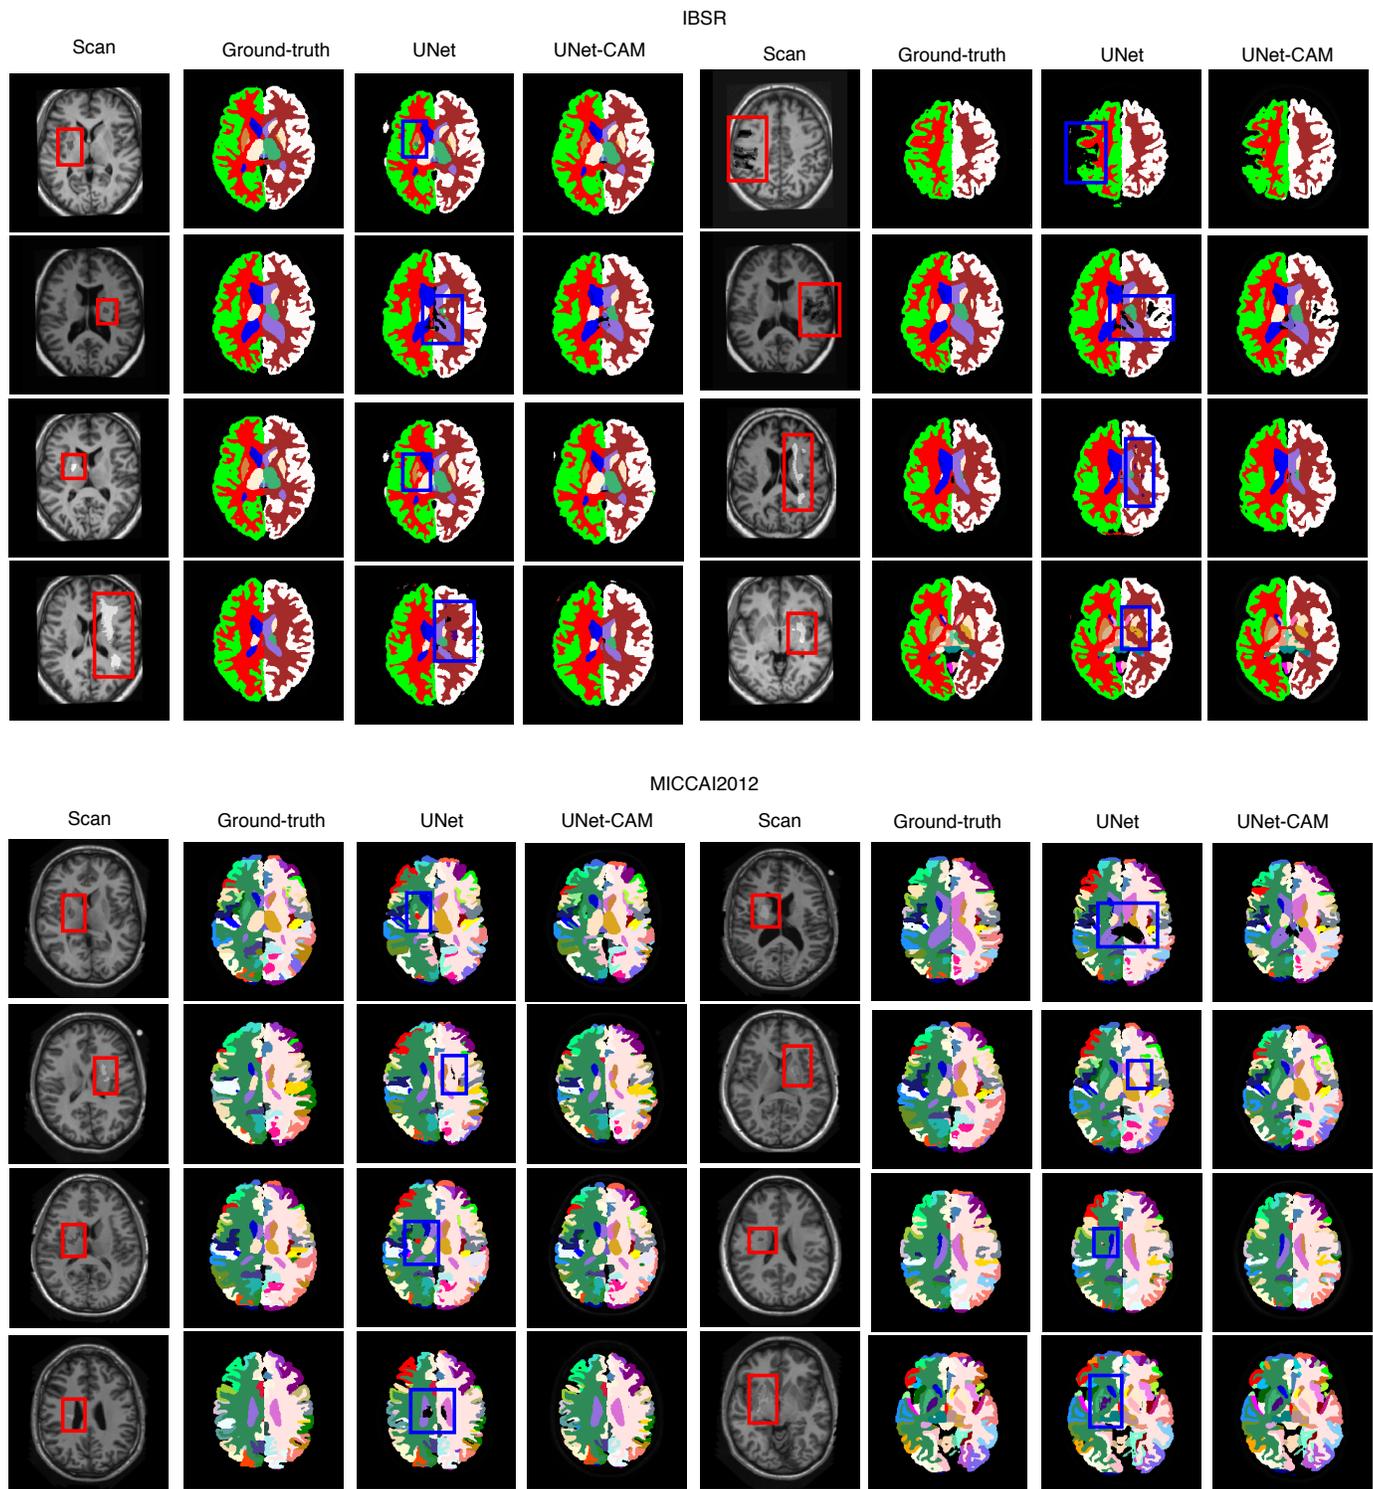

Fig. 2. Segmentation on 16 examples scans with pathologies from IBSR and MICCAI2012 datasets. Results from UNet and UNet-CAM are compared. Each 3D scan and its segmentation map are visualized with the axial view. Red boxes localize the pathological areas. Blue boxes highlight the spurious segmentation within UNet results, while UNet-CAM largely reduces the errors.
