## **NOTE BY THE SECRETARIAT**

The Protocol concerning Specially Protected Areas and Biological Diversity in the Mediterranean and the Action plan for the Protection of the Marine Environment and the Sustainable Development of the Coastal Areas of the Mediterranean (MAP Phase II), adopted by the Contracting Parties to the Barcelona Convention in 1995, contain provisions for the preparation of inventories at national as well as regional level.

At their 10th Ordinary Meeting (Tunis, 18-21 November 1998), the Contracting Parties to the Convention for the Protection of the Mediterranean Sea against Pollution adopted common criteria for the preparation of national inventories of natural sites of conservation interest.

The criteria provided for the establishment of a reference list of marine and coastal natural habitat types, to be drafted on the basis of a model classification. At the same Meeting the Contracting Parties invited the Regional Activity Centre for Specially Protected Areas (SPA/RAC) to work on the elaboration of a model classification of marine habitat types for the Mediterranean region, as well as a reference list of habitat types.

The COP 11 (Malta, 27-30 October 1999) adopted the Classification of benthic marine habitat types for the Mediterranean region and the Reference List of Marine Habitat Types for the Selection of Sites to be included in the National Inventories of Natural Sites of Conservation Interest.

The 19th Meeting of the Contracting Parties requested SPA/RAC to revise the Reference List of Marine and Coastal Habitat Types in the Mediterranean for consideration by COP 20, taking in full account the biodiversity-related MAP Ecological Objectives, IMAP, and GES targets (Decision IG.22/12).

At their 20th Ordinary Meeting (Tirana, Albania, 17-20 December 2017), the Contracting Parties, took note of the updated Reference List of Marine and Coastal Habitat Types in the Mediterranean, so that it can be used, where necessary, as a first basis for identifying reference habitats to be monitored at the national level under the IMAP and requested the (SPA/RAC) to finalize, in consultation with its focal points, the Classification of benthic marine habitat types for the Mediterranean region and the Reference List of Marine and Coastal Habitat Types in the Mediterranean, with a view to submitting them to the Contracting Parties at their 21st Ordinary Meeting (Decision IG.23/8).

In this context, SPA/RAC convened a meeting of experts (Rome, Italy 22-23 January 2019)<sup>1</sup>, thanks to the kind invitation of the Government of Italy and financial support of the MAVA Foundation for Nature. The Expert Meeting reviewed and endorsed the Draft Updated Classification of benthic marine habitat types and the Draft Updated Reference List of Marine Habitat Types for the Mediterranean region and invited SPA/RAC to submit them to the 14th Meeting of SPA/BD Focal Points and MAP Focal Points meetings and to the 21st Ordinary Meeting of the Contracting Parties, for adoption.

There are some geomorphologic / hydrologic features not included in the above list because their presence is independent from the depth zone and the substrate type, but they must also be considered due to the role they play in the Mediterranean ecosystem<sup>2</sup>. They can hold a “complex of habitats” and geoforms that cannot be treated in isolation, and therefore, they do not fit inside other categories. Among them:

- Hydrothermal vents
- Cold seeps (sulfide, methane – e.g. pockmarks, mud volcanoes)
- Brine pools
- Freshwater resurgences
- Seamounts (including banks, hills, etc.)
- Submarine canyons
- Escarpments
- Boulders fields
