# Smallpox

From Wikipedia, the free encyclopedia

*"Variola" redirects here. For other uses, see Variola (disambiguation).*

**Smallpox** was an infectious disease caused by variola virus (often called smallpox virus) which belongs to the genus Orthopoxvirus.[7][11] The last naturally occurring case was diagnosed in October 1977, and the World Health Organization (WHO) certified the global eradication of the disease in 1980,[10] making smallpox the only human disease to be eradicated.[12]

The initial symptoms of the disease included fever and vomiting.[5] This was followed by formation of ulcers in the mouth and a skin rash.[5] Over a number of days, the skin rash turned into the characteristic fluid-filled blisters with a dent in the center.[5] The bumps then scabbed over and

each had considerable political impact, she said.

Describing politics as a "way of service," she said that she did not understand why the Pope had taken the action. "We're all trying to sort it out," she said.

## *Eradication of Smallpox To Be Announced Today*

Special to The New York Times

UNITED NATIONS, N.Y., May 7 — Smallpox, one of the deadliest and oldest viral diseases of humans, has been eradicated from the earth, World Health Organization officials said today in a news conference broadcast here from Geneva.

The death of smallpox, which had been reported in stages over the last two years, marks the first time in history that the natural transmission of a disease has been completely stopped. Public health leaders have hailed the accomplishment as a milestone in medicine.

The official declaration of the eradication of smallpox will be made in ceremonies tomorrow at the World Health Assembly, now being held in Geneva.

The health organization began the intensified smallpox eradication program in 1967. In that year, smallpox was reported in 42 countries and killed two million people. It also scarred and blinded another eight million people.

An immediate effect of the eradication program has been to make smallpox vaccinations needless, thereby eliminating the risks from that centuries-old procedure. Also, no person will need to have evidence of a smallpox vaccination for travel to any country at any time.

## Reactor Builder Gets Extension

LYNCHBURG, Va., May 7 (UPI) — Babcock & Wilcox, a Lynchburg-based builder of nuclear reactors, has won a 20-day extension to appeal a $100,000 fine by the Nuclear Regulatory Commission. The commission contends that the company did not report significant safety information that might have prevented last year's accident at the Three Mile Island nuclear plant near Harrisburg, Pa. Babcock & Wilcox requested an extension until May 21, and the commission said yesterday that the request was granted.

**SportsMonday is more than the score**

*Nights are tender in our sleek satin gown sheltered by a brief quilted bolero. Pink touched with palest aqua in Antron® III nylon satin. Bolero in petite-small or medium-large, 33.00 Gown in petite, small or medium, 28.00 Fourth Floor, Lord & Taylor, Fifth Avenue at 39th Street—call (212) 391-3300. And at Manhasset, Westchester, Garden City, Millburn, Ridgewood-Paramus and Stamford.*

### Patterns Day is back!

Mark your calendar: Thursday, March 7th, 2024. That's when Patterns Day will return for its third edition.

Patterns Day is a one-day event focused on design systems. It's for designers, developers, project managers, writers, and anyone else who's working with design systems, pattern libraries, style guides, and components. Tickets are on sale now!

Once again, Patterns Day will be in the magnificent Duke of York's cinema in Brighton, with its historic charm and dangerously comfortable seats.

The first Patterns Day was all the way back in 2017. Then we had the second Patterns Day in 2019. You can watch videos of the talks from both years.

We all know what happened after 2019. Nothing like a global pandemic to stop an event in its tracks.

Now, finally, Patterns Day is returning in 2024.

After all this time, is there still a need for an event focused on design systems?

In my opinion, the answer is "more than ever!"

When Clearleft first ran Patterns Day, we had been doing design systems work for a while, but other organisations were only at the start of their journey. Many of the attendees were from companies that were dabbling in design systems, or planned to put a design system together.

That situation has changed. Now most organisations either have at least some experience with design systems. Many companies have got design systems up and running.

Illinois apart
Things are busy, busy, busy at Clearleft. As well as the regular client work, we're on the home stretch for dConstruct 2007. I've been slacking off with the podcast and I really need to knuckle down and hammer out the format for the upcoming microformats workshop. The food blog and DOM Scripting blog have been sorely neglected too but that's nothing new.
I really shouldn't be taking any time out right now but I can't resist the lure of a few days in Chicago. I have the great honour of being asked to speak at An Event Apart, the traveling roadshow for people who make websites. Tomorrow morning I'll be getting the bus to Heathrow where a plane awaits, ready to whisk me across the pond.
I've never been to Chicago before. I hear the skyline is breathtaking. I've been reading up on the local attractions on offer and before the conference kicks off I'm hoping to make it to the aquarium and the Field Museum (where a Darwin exhibition is currently running).
Most of all, I'm determined to sample the famous pizza and hot dogs. My explorations will, of course, be documented on Flickr.
