

Theory in the virtual observatory

HERVÉ WOZNIAK

UNIVERSITÉ DE MONTPELLIER

... SPAP ... SNAP ... TSAP ... SIMDB ... SIMDAP ... S3 ... SIMDM ... SIMDAL ...

What are we talking about?

Theory (in IVOA): everything to do with modelling and simulations, but not with paper and pencil

Focus on

- The large-scale 'cosmo' simulations vs 'micro'-physics simulations/modelling debate
- The lengthy, delicate and sometimes difficult IVOA recommendation process (especially when it comes to Theory)
- The lack of implementation

Topics not mentioned here (because you can't talk about everything)

- Semantics (although essential for theory)
- GRID (Grid5000, EGEEIII, EGI, etc.)
- Atomic and molecular data spin-off

A 20-year look back

(WELL, A BIT MORE...)

Small Theory Data in the Virtual Observatory

Jonathan C. McDowell
Smithsonian Astrophysical Observatory, 60 Garden St, Cambridge, MA 02138

Abstract. The integration of large theoretical simulation archives with the VO has been widely discussed. I suggest that it is also important to include smaller theoretical datasets and functional relationships in a structured way, and outline some possible conventions.

2022-Today

Oct '22: workshop ASOV-ASN @ CINES

- Re-compute or store ? Sets a (rather) short duration of storage
- Only “Simulations of Interest”
- Linked to published papers
- Platforms à la “Data Centers” for simulations ?
 - ISMDB
 - Galactica ?

Many people interested to publish their simulations but not involved in ASOV and IVOA developments

SimDM → VO-DML by Gerard Lemson

No progress on addressing the vocabulary, on updating SimDM

TIG : Simon O’Toole & Giuliano Taffoni

refocusing on pure cosmo simulations

Last email on TIG mailing list (Oct '23):

- The discovery of theory and simulation data – do we need a TAP like service? We would need a suitable data model.
- Can ObsCore be extended to allow for data to be found and queried in this way?
- There is a need for a standardised way to describe mock data (catalogues, images, etc)
- How much can be covered by a “Simple Data Access Protocol”? If it is designed with non-observational data in mind, as well as observational
- One of the main outcomes was that we need to be pragmatic – simulation data is extremely diverse, so we should look at what is already being done and build a methodology and standards around that.

Take-home messages

ASOV

needing a new lease of life

- Young colleagues
- ANO-CC ?

federating of French community

implementing available standards

- ISMDB
- Galactica
- Pollux

reinforcing links with IVOA

IVOA

not so much activity in TIG but :

- Science platforms =? new paradigm

Cf May 2021 on-line Interop:

<https://wiki.ivoa.net/twiki/bin/view/IVOA/InterOpMay2021SPW>

- Artificial intelligence (both ML and DL)
- refocusing on cosmological simulations (step backwards ??)

Need for next SimDM, SimDB

Need of an European federative project ?
