Principles, practices, application of non-personal interpretive activities common to natural/cultural history, including exhibits, audio-visual and illustrative materials. RPTM 425 Principles of Interpretive Materials (3) The primary objective of this course is for students to follow the exhibit creation process from conceptualization through construction to completion. Along the way, students will present their works-in-progress to fellow students and instructors for modification and improvement. Their final products will be used in a practical environment in the exhibit room at Shaver's Creek Environmental Center and at various educational functions around the state - PA State Farm Show, Central PA Festival of the Arts, Penn State's Ag Progress Days, etc. Main topics to be covered: *Topics vs. Themes: narrowing the unifying concepts in exhibit design *Flow in an exhibit and museum space: how to guide logical progression of thought in both an exhibit and exhibition area *Color Schemes *Computer aided design techniques *Woodworking skills This course is one of the selections for RPTM majors in the environmental interpretation emphasis of the Outdoor Recreation option. Students from other majors may enroll in this course if they have met the pre-requisite (RPTM 325).

Enforced Prerequisite at Enrollment: RPTM 325

RPTM 430: Environmental Education Methods and Materials

3 Credits

Methods and materials for developing, implementing, and evaluating environmental education programs within formal and non-formal educational settings. RPTM (AEE) 430 Environmental Education Methods and Materials (3) The primary objective of this course is to provide students with an introduction to Environmental Education (EE) methods (pedagogy) and materials for both formal and non-formal settings. A second objective is to provide the student with an opportunity to apply specific methods and materials to practical situations at Shaver's Creek Environmental Center. These opportunities include Outdoor School, School Day Programs, Maple Harvest Festival, and Scout Programs. A third objective is to provide information about gaining access to EE materials through web-based, written, and personal contacts. Main topics typically include: Introduction to the history, definition, and philosophy of Environmental Education (EE); Differences between formal and non-formal EE settings; PDE Environment & Ecology Standards; Models of EE pedagogy; Place-based-education labs covering: The Land, Water Resources, Fauna, and Flora; Keystone Aquatic Resource Education; teacher resource workshop (or other national curricula- i.e. P WILD, PLT, Project WET, etc.); EE Resources available at SCEC, the web, and other EE centers. This course is one of the selections for RPTM majors in the environmental interpretation emphasis and adventure-based programming emphasis within the Outdoor Recreation option. Students from other majors may enroll in this course if they have met the pre-requisite (RPTM 325).

Enforced Prerequisite at Enrollment: RPTM 325

RPTM 433W: Program Evaluation and Research in Recreation Services

3 Credits

Systematic, structured problem-solving process for decision making in recreation and parks. Research techniques/evaluation procedures; quantitative, qualitative methodologies; deductive, inductive reasoning. RPTM 433 Program Evaluation and Research Services (3) The goal of this course is to provide students with the background necessary to understand and evaluate research reports and to conduct research projects of moderate complexity in the field of recreation, parks, and tourism management. The research focus of the class is on evaluation and assessment. Class topics include introductions to the philosophy of science, including the nature of theories, hypotheses, concepts and constructs, to measurement theory, to applied sampling techniques, and to methods of scale construction. Both quantitative and qualitative research methods are addressed. In-class activities include the conceptualization and execution of an applied evaluation project. This project involves practice in interviewing, in-class focus groups, survey questionnaire development, data collection, and data analysis. The course will provide students with a conceptual map of how research is conducted, the resources available to them, the vocabulary of research, and guidance in writing a research report. Additionally, this is a Writing Across the Curriculum class. Students will prepare several short writing projects, some based on interviews or observational studies that they have conducted, as well as a final report based on the evaluation research conducted by the entire class. The course material is divided into units of study with topical areas within each unit sequentially presented to parallel the research process itself. Students are expected to have read assigned materials and to attend class prepared to discuss them. Classes involve lectures, discussions, and in-class activities such as focus groups, survey questionnaire development and presentations of research results. This class is required of all undergraduate majors in Recreation, Park and Tourism Management. RPTM 356 and a 3-credit course in statistics are prerequisites for this course. Students from other majors are welcome in this course, providing they have met the pre-requisites.

Enforced Prerequisite at Enrollment: 5th semester standing Writing Across the Curriculum

RPTM 435: Recreation Facilities Planning and Management

3 Credits

Planning and management of selected facilities with emphasis upon maintenance, activity, and support provisions. RPTM 435 Recreation Facilities Planning and Management (3) The purpose of this course is to introduce students to planning, design, and maintenance practices at recreation and park facilities. This course will emphasize the activity and support provisions of recreation facilities and will identify standards of design and maintenance. Compliance with accepted risk management practices and the Americans with Disabilities Act (ADA) will also be stressed in this course. Specific topics covered in this course include: Maintenance management practices and risk management procedures; Monitoring and reporting recreation and park facility use; General planning considerations of selected recreation facilities, parks and tourism attractions; Special materials and apparatus required for specific park and recreation facilities; Support facilities necessary to complement developments that offer these activities (e.g., vehicular circulation and parking, lighting, emergency provisions, etc.). This is a required course for RPTM majors in the park management emphasis within the Outdoor Recreation Option. The course is also on the department list of the

Commercial and Community Recreation Option. Students in other majors are welcome providing there are seats available after RPTM majors have been scheduled.

Enforced Prerequisite at Enrollment: 5th semester standing

RPTM 440: Theories, Policies and Practices of Outdoor Experiential Leadership

3 Credits

The first objective of this course is to promote understanding of the history and evolution of adventure-based programming and to look at how this process has impacted the state of programming today in USA and beyond. This leads to the second objective- to be able to articulate the range of theories that influence practices of adventure based programming and place that understanding within socio cultural historical contexts. Third, students will be able to identify schools of thought in theories of ethics, how these apply in different outdoor contexts for different groups and have an understanding of adventure education as a moral endeavor. Fourth, students are expected to critically analyze various topics related to current issues in the field, discussed and consider various positions prior to looking at the future trends of adventure-based programming. In all aspects of the course students will familiarize themselves with seminal and current literature in relation to theory, practice and policy. Main topics to be covered - Indicative Content: History of Experiential Education/Adventure-based Programming; organization level risk management; Programming for various audiences: youth at risk, elderly people with disabilities, women, college student orientation programs, and experiential education in the classroom; Ethical issues and ethical principles; Current Issues: controversial issues, and budgets/strategic planning. RPTM 440 is a selection for RPTM majors in the outdoor experiential learning emphasis of the Outdoor Recreation option. The pre-requisite for this course is RPTM 330.

Enforced Prerequisite or Concurrent at Enrollment: RPTM 330

RPTM 456: Programming in Recreation Services

3 Credits

This course is designed to provide students with information and practical experience required to successfully design, promote, implement, and evaluate programs and special events. There are several course objectives, including: (a) increasing students' knowledge of key concepts in program planning and an understanding how they impact programming decisions; (b) increasing students' knowledge of decision factors involved in analyzing and designing a recreation program or special event; and (c) increasing students' skills associated with key management functions required to implement a recreational program or special event. Students are required to work in teams to design, promote, implement and evaluate a special event that will benefit participants and the sponsoring agency objectives. The course serves as a capstone course in the RPTM major. Main topics covered in the course include programming concepts, including programmer, program contexts, benefits-based programming, programming approaches, comprehensive programming cycle, and program formats; management structures, including organization of teams into committee structures with clear roles, responsibilities, and reporting structure; program design, including program concept, program purpose, goals and objectives, and development of themed events; situation analysis, including analysis of internal and external factors/ resources, potential participants; needs and interests, and program-related research; budget development and sponsorship, including direct fixed and variable costs associated with event, differential pricing,

and sponsorship; promotion, including purposes for promotion, types of promotional tools, and development of a promotional plan; Event logistics, including development of a schedule of events, equipment and supplies, volunteers and staffing, registration, site layout, and event logistics; Risk management, including safety check, policies and procedures, staff/volunteer orientation, and overall risk management plan; program evaluation, including summative and formative, process and outcome evaluation. This is a required course for majors in Recreation, Park, and Tourism Management. Students from other majors may enroll in this course, providing they have met the pre-requisites.

Enforced Prerequisite at Enrollment: RPTM 236 and RPTM 120 and 5th Semester standing

RPTM 457: Peer Mentoring

2 Credits

The purpose of the peer-mentoring course is to provide students who have successfully completed and demonstrated leadership ability in RPTM 456 with an opportunity to gain additional leadership and event planning skills by mentoring a group of students currently enrolled in the class. Peer mentors serve as facilitators to teams of students in RPTM 456 who are charged with planning, promoting, implementing and evaluating a special event for a community or campus-based organization. Peer mentors are expected to help teach a minimum of 2 classes during the semester. Peer mentors take a leadership role in helping students understand and apply course content. Additionally, peer mentors serve as a liaison between the course instructor, the agency supervisor they are working with, and their assigned team.

Enforced Prerequisite at Enrollment: RPTM 236 and RPTM 456

RPTM 470: Recreation and Park Management

3 Credits

Management of recreation and park services in public/non-profit settings; planning, budgeting fiscal development, resources allocation, decision- , making, computer applications. RPTM 470 Recreation and Park Management (3)The primary objective of this course is to provide advanced standing RPTM students with an understanding of management and administration procedures that are essential to operating and managing park facilities and recreation programs. Secondly, students will be given an opportunity to be exposed to park and recreation governance processes and will be asked to synthesize the roles that key stakeholders play in the management of public-sector park and recreation organizations. Key topics covered in this course include: *A historical account of park and recreation operating environment as well as trends in park support and positioning of the field *Inter-organizational partnerships and collaborations in the park and recreation field *Financing, budgeting and fiscal control processes *Human resource management principles and policies *Creating effective working relationships with community stakeholders and park and recreation board members *Comprehensive recreation, park and open space planning This course is required for RPTM majors in the park management emphasis within the Outdoor Recreation Option. Students in other majors are welcome providing there are seats available after RPTM majors have been scheduled.

Enforced Prerequisite at Enrollment: RPTM 320

RPTM 475: Advanced Arena Management

3 Credits

Advanced Arena Management develops advanced skills and understanding in arena and live entertainment management fields including operations, budgeting, marketing and staffing. Course is taught on site at a sports/ entertainment arena and also includes off-campus site visits to at least two (2) major live entertainment venues. Off campus travel with the class group is required for this course. Topics include; developing events from inception to delivery; booking, contract negotiation, scheduling, ticketing, food/beverage and alcohol service, safety and security, fan experience, risk management, and business management. Students are provided with management level exposure to a variety of departments throughout the arena and are given the opportunity to learn directly from department managers.

Enforced Prerequisite at Enrollment: RPTM 370

RPTM 494: Research Project

1-6 Credits/Maximum of 6

Research Project

RPTM 494H: Senior Honors Thesis

1-6 Credits/Maximum of 6

Senior Honors Thesis

Honors

RPTM 495A: Internship in Recreation Services

3-12 Credits/Maximum of 12

The Recreation, Park and Tourism Management's Internship provides students with the opportunity to gain experience in the field while under the supervision of both the on-site supervisor and a faculty supervisor. The primary purpose of the RPTM Internship is to enable each student to meet his or her educational objectives through participation in a well-planned and organized practical experience. Students will gain access to direct recreation service delivery; program, personnel and facilities management; risk management; event planning; marketing and program evaluation. In most instances, students are engaged in an off-campus learning experience that aligns with their specific field of study within the field of Recreation, Park, Tourism and Event Management.

Enforced Prerequisite at Enrollment: RPTM 394 and RPTM 456 and 7th sem standing and 2.0 GPA. Recommended Preparation: 300 hrs practical experience and current and valid certification in advanced first aid and CPR or Wilderness First Aid/First Responder.

RPTM 495B: Internship in Golf Management

1-4 Credits/Maximum of 12

Observation and participation under supervision in golf operations in public, private, municipal, or military settings.

Enforced Prerequisite at Enrollment: RPTM 395B and 2.00 cumulative grade point average
Full-Time Equivalent Course

RPTM 495C: Internship in Golf Management

1-4 Credits/Maximum of 4

Observation and participation under supervision in golf operations in public, private, municipal, or military settings.

Enforced Prerequisite at Enrollment: RPTM 495B or 2.00 cumulative grade point average
Full-Time Equivalent Course

RPTM 495D: Internship in Golf Management

1-4 Credits/Maximum of 4

Observation and participation under supervision in golf operations in public, private, municipal, or military settings.

Enforced Prerequisite at Enrollment: RPTM 495C or 2.00 cumulative grade point average
Full-Time Equivalent Course

RPTM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

RPTM 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

RPTM 497P: **SPECIAL TOPICS**

3 Credits/Maximum of 9

RPTM Practicum Special Topics

RPTM 498: Special Topics

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

RPTM 499: Foreign Studies

1-12 Credits/Maximum of 12

Foreign Studies in RPTM.

Enforced Prerequisite at Enrollment: RPTM 199
International Cultures (IL)

Rehabilitation and Human Services (RHS)

RHS 93: WorkLink Seminar I

1-6 Credits/Maximum of 12

This variable credit, repeatable seminar is taken as part of the WorkLink Strategies and Employability Certificate. WorkLink is a 2-year certificate program in career and inclusive education created for students with

intellectual disabilities (ID). Students will complete 24 credit hours in the WorkLink Seminar I and II (e.g., career development, life skills, financial literacy, person-centered career planning), and audit up to 24 additional credits as electives from the Penn State General Education course offering. Students will spend at least 50% of their time in the program pursuing inclusive coursework (non WorkLink Seminar courses). WorkLink Seminar I provides a broad exploration of several topics related to career preparation, academic success, personal health and wellness, independent living skills, and safety. Students will engage with peers, mentors, and WorkLink staff to increase their awareness of career and independent living skills and how these interact with opportunities and responsibilities associated with being a Penn State student. Students will recognize their own skills and learning and support needs related to academic, independent living, career, and wellness goals, and apply content to develop personalized plans for growth in these areas. This two-semester seminar partially fulfills the first-year requirements for the WorkLink Certificate. Upon instructor approval, students not in the WorkLink Certificate program may take WorkLink Seminar I credits to gain knowledge and skill in various topic areas covered.

Prerequisite: Permission of instructor

RHS 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

RHS 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

RHS 100: Introduction to Disability Culture

3 Credits

This course is designed to increase student awareness of personal, interpersonal, and societal aspects of disability, including how disability can be defined and understood differently in varied individual, institutional, and cultural contexts. Students will learn models of disability that will help them to (a) clearly distinguish different ways of conceptualizing disability and (b) critically think about how disability is represented and understood in varied cultural contexts, including in the US and in other countries. Through discussion of class readings and completion of class assignments, students will examine the ethical, economic, and social implications of disability and the dynamics of group and individual behavior that impact social interactions among people with and without disabilities. A strong emphasis will also be placed on understanding disability from a variety of cultural perspectives and assessing the impact of racial, ethnic, gender, socioeconomic, and socio-political factors, both domestically and internationally, on disability status.

International Cultures (IL)

United States Cultures (US)

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

RHS 193: WorkLink Seminar II

1-6 Credits/Maximum of 12

This course is intended for students enrolled in the WorkLink Certificate program. WorkLink Seminar II (RHS 193) provides a broad exploration of several topics related to career preparation, job searching, work readiness, and internships through experiential learning. Students will engage with peers, mentors, and WorkLink staff and community employers to increase their awareness of workplace self-advocacy, job accommodations, career development, skills necessary for employment in today's job market, job search strategies, and networking. Students will recognize their own skills related to job and career goals, and apply content to develop personalized plans for growth in these areas. This two-semester seminar fulfills the second year requirements for the WorkLink Certificate. Upon instructor approval, students not in the WorkLink Certificate program may take WorkLink Seminar II credits to gain knowledge and skill in various topic areas covered.

Prerequisite: RHS 93

RHS 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

RHS 226: College Student Mental Health and Wellness

3 Credits

Have you ever wanted to learn more about yourself, your friends, your roommates, or other people in college? If so, then this course is for you. In this class, we will explore factors that affect the mental health and wellbeing of college students, including sleep, substance use, social anxiety, discrimination, academic stress, the campus climate, resilience, peer relationships, values, and suicide. The course will address both how to prevent problems from developing as well as interventions for improving college students' mental health and wellbeing. We will use lectures, guest speakers, films, discussion, and weekly readings to learn about college students and their mental health. The class will be especially relevant to your career if you are considering a mental health profession (e.g., psychology, counseling, social work, rehabilitation), but it will appeal to students in any major who are interested in learning more about college students' mental health, including their own. Cultural factors that affect college students' well-being will be considered throughout the course. Culture will be defined broadly to include ethnicity, sexual orientation, religion, gender, class, ability, race, and age. Students will be encouraged to think critically about course material through the lenses of their own lived experiences and worldviews. Prevalence, characteristics, causes, implications, prevention, and treatment of common mental health conditions among college students will be addressed, as well as campus resources for addressing such conditions. The course also will focus on factors that promote the psychological well-being of college students, such as friendships, identity, romantic relationships, meaning, and career preparation. The primary goal for the course is that you deepen your understanding of psychological wellness and mental health problems commonly faced by college students. A secondary aim is for you to learn about yourself so that you can optimize your psychological well-being, prevent mental health problems from developing, recognize when you or a friend might need help, improve

the wellness of campus communities to which you belong, and become familiar with local resources that can provide assistance.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

RHS 295: Internship

1-12 Credits/Maximum of 12

N/A

RHS 295A: WorkLink Internship

1-9 Credits/Maximum of 12

Full or part-time, supervised non-group instruction including field experiences, or internships for students in the WorkLink certificate program or by approval of the instructor. Students will complete these internships on campus or in the community.

Prerequisite: RHS 93 Concurrent: RHS 193

RHS 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

RHS 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

RHS 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

RHS 300: Introduction to Rehabilitation and Human Services

3 Credits

This course serves as an introduction to Rehabilitation and Human Services practice settings. The course reviews the human services profession, including introductory information about social problems within a socio-political context to show how culture and ideology influence experiences and perspectives. The foundation of the human services profession is explored by examining educational standards and professional requirements: its roots as a helping profession within the history of social welfare provision, its ethical standards, theoretical underpinnings, and the nature of the generalist practice model, with an emphasis on helping people with disabilities.

RHS 301: Introduction to Counseling as a Profession

3 Credits

Overview of the counseling theories that are often used in human service and rehabilitation practices.

RHS 302: Client Assessment in Rehabilitation and Human Services

3 Credits

The purpose of this course is to give students an overview of a range of rehabilitation and health related assessments for use in clinical practice. The primary focus of the class is to gain an understanding of the range of formal tests and assessments used to support the overall goal of maintaining functioning across multiple life domains for people with disabilities. Students will learn about the multicultural concerns impacting test bias, test fairness, and ethical considerations in test selection and interpretation. Students will gain an understanding of important concepts related to the psychometrics of tests and assessments, including basic statistical concepts. Students will learn how to evaluate the quality of assessments, and how to select appropriate assessments for clients on an individual and best practice basis.

Concurrents: EDPSY 101; STAT 100; STAT 200

RHS 303: Group Work in Rehabilitation Practice and Human Services

3 Credits

Students will learn about basic issues and key concepts regarding Group Work in Rehabilitation Practice and Human Services. An overview of essential elements and dynamics for conducting groups and various team-related activities will be the major focus. The purpose of this course is to provide students with a foundational understanding of group work and experiences within Rehabilitation and Human Services settings.

Recommended Preparations: 6 credits in psychology, sociology, human development and family studies and/or crime, law and justice

RHS 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

RHS 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

RHS 400W: Case Management and Communication Skills

3 Credits

Principles and practices of obtaining, recording, evaluating, and utilizing case data in rehabilitation planning; implementation of rehabilitation plans.

Prerequisite: RHS 300
Writing Across the Curriculum

RHS 401: Community Mental Health Practice and Services

3 Credits

This course introduces issues specific to therapeutic helping in community mental health settings. Practical skills, knowledge, information, and suggestions unique to community mental health are

provided. Topics such as roles of community practitioners, mental health services, psychiatric rehabilitation principles, recovery, ethics, diversity, certified peer specialists, evidence-based practices, advocacy, funding, and community change are addressed.

Prerequisites: 4th semester standing or Graduate Status Recommended Preparation: 6 credits in psychology, sociology, human development and family studies and/or crime, law and justice

RHS 402: Children and Families in Rehabilitation Settings and Human Services

3 Credits

Contemporary family issues, child development, legal considerations, cultural and familial factors within rehabilitation and human services practice will be addressed.

Prerequisite: RHS 301

RHS 403: Medical Aspects of Disability

3 Credits

The purpose of this course is to give students an overview of many chronic illnesses and disabilities, and their impact in the lives of the individuals who live with them. This course is designed for non-medical professionals and students interested in working with individuals with disabilities and chronic illnesses. The primary focus of the class is to gain an understanding of the experience of disability. Specifically, the course covers the body systems and their functions, how disabilities and illnesses impact many aspects of life across the lifespan (work, family, identity), the personal, environmental, and cultural factors that contribute to the experience of disability, as well as appropriate rehabilitation goals and accommodations associated with the illnesses and disabilities covered in class. Students will learn how to use disability related principles, practices, and models for conceptualizing diverse clients living with a range of disabilities across the lifespan, including how disability impacts family members. An understanding of diagnostic criteria, appropriate treatments and interventions, supports, assistive technology, and referrals will be covered for each category of disability discussed in class and for each case study assignment.

Prerequisites: 4th semester standing or Graduate Status Recommended Preparation: 6 credits in psychology, sociology, human development and family studies and/or crime, law and justice

RHS 404: Rehabilitation Services for Transition Age Youth with Disabilities: Theory and Practice

3 Credits

Stark educational and employment disparities exist between youth and young adults with disabilities and their typically developing peers. Difficulty with obtaining and maintaining employment post-high school poses a threat to lifelong earnings and self-sufficiency. This course is intended for students who plan to work as a human services professional who supports these youth and young adults as they transition from high school to employment and educational opportunities. Students in this course will develop the knowledge, skills, and resources necessary to understand and practice effective strategies to work with transition age youth with disabilities (14-24 years) in different rehabilitation settings including, but not limited to: vocational rehabilitation (SVR) systems, career and technical education, and/or educational settings. This course will incorporate perspectives and legislation from special education

and career and technical education to provide an understanding of the requirements and standards for transition and employment services for youth and young adults with disabilities. Developmental models of career, self-determination, independent living, and social maturation will be provided as context for the material. In this course, students will be exposed to current issues and topics that affect service delivery for this population in different settings. The course will also address topics pertaining to case management practices, policies and procedures involved with client service delivery. In this course students will gain an understanding of the historical context and development of transition services, including supported employment, rehabilitation philosophy, and approach to transition. Students will learn about the roles and functions of professionals supporting transition age youth, methods for engaging youth/young adults and their families as well as models and evidence based practices in transition services and how to use person-centered planning. We will also cover topics related to case management practices, relevant legislative mandates; policies and practices guiding service delivery.

Prerequisite: 4th Semester Standing or Graduate Status

RHS 410: Employment Strategies for People with Disabilities

3 Credits

Develop knowledge, skills, and resources necessary to understand and practice effective employment strategies in working with people with disabilities. This course is designed for students to develop knowledge, skills, and necessary resources to understand and practice effective employment strategies in working with people with disabilities, including individuals from culturally diverse backgrounds. Students will develop skills on networking with employers (e.g., social media, professional organizations, interviewing employers, etc.) for building professional contacts and networks. Various forms of labor market information will be analyzed to identify both challenges and opportunities for people with disabilities in different sectors of the labor market (primary and secondary). Throughout the course, students will learn about disability issues in the workplace (e.g., laws, policy, stigma, accommodations, etc.). A strong emphasis will be on understanding how laws and policies impact employment for people with disabilities, and students will identify legal and illegal practices. Best employer practices will be identified regarding mitigating disability impact on both employees (current and future) and employers. This course will incorporate Assistive Technology (AT) applications so students will be able to identify appropriate AT devices to assist people with disabilities in obtaining and retaining employment along with applicable strategies for working with employers in developing employment opportunities in today's changing world of work. Students will understand how disability is a critical component of workforce diversity and strengths people with disabilities bring to the workplace. Students will identify how people with disabilities should prepare for the employment process including training opportunities (formal and informal), resume development, interview preparation, and initiatives to promote increased employment outcomes. Different disability populations (e.g., youth, Veterans, aging workers, etc.) will be discussed including common barriers for employment as well as how to create opportunities in different employer settings.

Prerequisite: 5th Semester standing or 3 credits of LHR or LHR 100
Cross-listed with: LHR 410

RHS 420: Culture & Disability: Study Abroad in Ireland

6 Credits

Study aspects of culture and disability through lecture, visiting Irish disability service agencies, and guest speakers from various disability agencies. This course is designed to increase student awareness of disability from a cross-cultural comparison between the United States and Ireland including: personal, interpersonal, and societal aspects of disability, including how disability can be defined and understood differently in varied individual, institutional and cultural contexts. Students will learn models of disability that will help (a) clearly distinguish different ways of conceptualizing disability and (b) critically think about how disability is represented and understood in varied cultural contexts. Students will examine ethical, economic, and social implications of disability. Dynamics of group, family and individual behavior that impact interactions between people, with and without disabilities, will be addressed. Interactions and assignments will aid in the introduction of students to interpersonal communication and interaction issues among international cultures. A strong emphasis will be placed on understanding disability from a variety of cultural perspectives and assessing the impact of racial, ethnic, gender, socioeconomic, and socio-political factors on disability status. Throughout the course students will engage with various service providing agencies (which may include sensory disabilities, intellectual/cognitive disabilities, and physical disabilities). Class time will be allotted to prepare for engagement and reflection as well as providing background information for understanding global policy and how to make comparisons. Students will participate in a culminating activity, such as attending the International Disability Summer School that equips students with the insights and skills necessary to translate the generalities of international positions on disabilities into tangible reform for persons with disabilities and understand disability from a global perspective. This course meets the requirement for RHS 100 (RHS majors and RHS minors and honors students), and/or up to 6 credits toward 400 level elective requirements for RHS minors. SPLED students can earn up to 6 credits towards the SPLED minor

Cross-listed with: SPLED 420
International Cultures (IL)
United States Cultures (US)

RHS 428: Rehabilitation Corrections

3 Credits

This course will provide an overview of the many facets of rehabilitation within correctional settings, including the history of rehabilitation in the criminal justice system, classification and risk assessment, offender needs and treatment individualization, and interventions for various populations. This course will cover diversion programs, prison/jail programs, and reentry services. We will evaluate evidence of program effectiveness, analyze issues related to program implementation, and explore solutions for barriers to treatment in correctional settings.

Prerequisites: RHS 300; CRIM 100 or Graduate Status

RHS 433: Trauma-informed care for school & human service professionals

3 Credits

Many helping professionals interact with people who have survived, or are at risk for trauma, even when these professionals are not directly

involved in either the design or delivery of direct interventions for trauma symptoms. This class is intended for students who wish to pursue one of these human services careers. In this class, students will learn how to conceptualize their students' and/or clients' struggles using a trauma-sensitive perspective that can enhance service outcomes. Course topics include types of traumas and adversities; the lasting effects of chronic trauma; laws and reporting procedures; how to identify appropriate resources and evidence-based practices; communication strategies; and risk, protective and resiliency factors; understanding the connection to professional wellness and vicarious trauma; and populations at highest risk for types of trauma. The application of these topics to settings such as schools, healthcare, and the criminal justice system will be discussed.

RHS 493: Professional Development and Internship Preparation in RHS

3 Credits

This course is designed to prepare students for a successful internship experience and career in RHS settings. Students will further their understandings of theories and models of human development that inform the human services profession. A major focus of the course will be on furthering students' understanding of how to apply and use these theories in working with their intended populations, increase their knowledge and appreciation of diverse cultures, and further develop professional dispositions. Students will also learn practice skills designed to secure an appropriate internship placement as well as gain exposure to different human service settings and an understanding of what is required of professionals within these settings. In addition to preparing for an internship placement, this course will also cover topics related to long-term career planning including issues such as determining the need for continued education and preparing for a career as a Human Services professional.

Prerequisite: RHS 100, RHS 300, RHS 301, RHS 302 RHS 303

RHS 495: **SPECIAL TOPICS**

15 Credits

RHS 495A: Rehabilitation and Human Services Internship

6-12 Credits/Maximum of 12

Internship in rehabilitation and related human services agencies and institutions providing psychosocial, vocational, educational, and/or residential services to people with disabilities. The internship in RHS provides students the opportunity to implement what they have learned in their program coursework. Students will develop and practice core competencies while exploring professional career opportunities. RHS students must complete 12 total credits of RHS 495A. These 12 credits can be completed in a single semester or divided equally across 2 semesters. To register for this course, a completed internship application must be submitted to the RHS program in the semester prior to taking RHS 495A.

Prerequisites: Recommended Preparation: Students must have successfully completed all other required coursework for the major (grade of C or higher) as well as fulfilled general education requirements.

RHS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

RHS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical of of special interest.

Religious Studies (RLST)

RLST 1: Introduction to World Religions

3 Credits

The course introduces students to the academic study of religion as well as to some of the major religious traditions of the world. Beginning with an introduction to polytheism, the course primarily focuses on the five major religions of the modern world—that is Buddhism, Christianity, Hinduism, Islam, and Judaism.

RLST 3: Introduction to the Religions of the East

3 Credits

Religious experience, thought, patterns of worship, morals, and institutions in relation to culture in Eastern religions. RLST 3 / ASIA 3 Introduction to the Religions of the East (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will explore the foundations, development, and diversity of religious traditions in Asia, focusing mostly on Hinduism, Buddhism, Confucianism, Daoism, and Shinto. It is organized according to two sections: Foundations and Developments. The Foundations section provides an introduction to the worldviews and practices of Eastern teachings. We will also discuss the structure of society, the social expectations on individuals based on gender and class, and rituals, which expose us to rich mythologies or intricate ceremonies. The second section, Developments, traces the evolution of religious doctrine and practice through history. Here, we learn to distinguish among large and small-scale movements and schools, and to familiarize ourselves with the geographical scope of each religion in South, Southeast, and East Asia. An abiding emphasis in this course will be on how to read and interpret the varied scriptures and primary texts of these religions.

RLST 4: Jewish and Christian Foundations

3 Credits

This course seeks to help students better understand the Bible and appreciate its role as an authoritative collection of sacred texts for Jews and Christians. The Bible is a difficult book, one that is demanding on many levels. In order to read the Bible intelligently, it is important to understand the historical and cultural backgrounds of the biblical writings. This course explores the history and geography of ancient Near Eastern civilizations that shaped the experience of ancient Israel and, later, the Greek and Roman imperial contexts that shaped Second Temple Judaism and early Christianity. The focus of the course, however, is on the biblical narrative itself and the particular ways that the story of Israel and its covenant with God was represented in scripture: in tales, poems, hymns, dialogues, and genealogies. A basic goal of the course, then, is to promote intelligent, well-informed reading of the Bible. Also important is the willingness to read the Bible closely and critically, with a view toward larger questions raised by biblical texts: how is God to be known and understood? What is the purpose of human life in the world? What moral obligations ought to structure our common life? Does human history have direction and purpose? What is the good and how do we follow it? The Bible takes up these questions and many more. Though an ancient anthology shaped by the succession of Assyrian, Babylonian, Persian, Hellenistic, and Roman empires, the Bible is not merely a product of its original contexts. Millennia of transmission and interpretation have made it a product of history in a much more extended and dynamic sense. In this course, we will examine larger questions raised by the biblical writers and consider the ways that the Bible has shaped, informed, and guided Jewish and Christian ways of life.

RLST 12N: Lands of the Bible

3 Credits

Utilizing the textual and archaeological evidence, this course introduces students to the lands, cultures, and peoples associated with the Hebrew Bible, New Testament, and Qur'an. Geographically, the lands of the Bible encompass what is often referred to as the Cradle of Civilization or Fertile Crescent - an arc-shaped region defined by the Nile, Jordan, Tigris and Euphrates river valleys. Today this crescent includes the modern countries and regions of Egypt, Israel, the Palestinian territories, Jordan, Syria, southeastern Turkey, and Iraq. Spanning ten millennia of history (ca. 9000 BCE-750 CE), this course explores a series of landmarks in the history of human development, which are considered together with Jewish, Christian, and Islamic traditions. These include the birth of religion and the agricultural revolution (Garden of Eden), the first cities and the invention of writing (Tower of Babel; Patriarchal/Matriarch traditions), Egyptian imperial rule in Canaan (Exodus), the collapse of the Bronze Age (Emergence of Israel), impact of empire (united and divided kingdoms of Israel and Judah), Alexander the Great and the Roman imperial expansion to the east (world of Jesus and development

of rabbinic Judaism), Byzantine Palestine (expansion of Christianity), and the Islamic conquest of the Holy Land. Through an integration of numerous disciplines, including historical geography, archaeology, ancient history, biblical studies, epigraphy, and anthropology, students will investigate the interaction between the cultures of the ancient Near East and the religious traditions that developed in the lands associated with the Bible, a relationship that continues to shape the region and the world until today.

RLST 70: Prophecy in the Bible and the Ancient Near East

3 Credits

This course will introduce students to the prophetic traditions of the Bible and the Ancient Near East. The course will explore the development of prophetic circles in the ancient Near East (including Egypt, Syria-Palestine, and Mesopotamia), and then focus on the major prophetic traditions of the Hebrew Bible (e.g., the books of Isaiah, Jeremiah, Ezekiel, Amos, Hosea, Micah, Haggai, Zechariah, and Daniel). It will also look at how these traditions were understood in early Judaism and nascent Christianity. Special attention will be paid to the roles of priests, kings, and prophets in ancient Israel to better understand Israelite and Judaeen prophetic traditions in ancient Israelite society. The course will then examine the rise of apocalypticism and its medieval and modern manifestations including a brief look at Islam. Additional emphasis will be placed on the religious and political interactions which manifest themselves in prophetic movements - then and now - including the rhetoric of ideology and propaganda. Important figures and events illustrate these cultural and political trends.

RLST 90: Jerusalem: Past, Present, and Future

3 Credits

Jerusalem, a city sacred to Judaism, Christianity, and Islam, is often depicted as the spiritual and physical center of the world. Throughout its 5000-year history, Jerusalem has attracted diverse cultures, empires, and peoples who have vied for control of this holy city. Jerusalem: Past, Present, and Future surveys the cultural, religious, political, archaeological, and historical record of Jerusalem, beginning with its earliest settlement during the third millennium BCE; through its expansion as a second millennium Canaanite urban center; its role as the capital of Israel and Judah during the first millennium BCE biblical periods; the influence of the Egyptian, Assyrian, Babylonian, Persian, Hellenistic, Roman, Byzantine, Crusader, Mamluk, and Ottoman empires; and its development under Jewish, Christian, and Islamic control. The significance of Jerusalem's past, its impact on contemporary society and politics in the modern Middle East, and differing visions for this contested city's future are examined in light of various interpretations of the textual and archaeological evidence.

RLST 102: Canaan and Israel in Antiquity

3 Credits

This course is an overview of the ancient history and cultures of Canaan (the Mediterranean Levant of Syria-Palestine) and the emergence of Israel. It involves a critical view of biblical texts (especially the Hebrew Bible, aka Old Testament) in light of other ancient texts, archaeology, and historical methods, in order to explain the nature and the evolution of society, religion, and thought in the prebiblical and biblical era. We will be especially interested in the period from the end of the Late Bronze Age (c. 1200 BCE) to the Persian period (539-332 BCE), and will examine ongoing debates about the Bible and history, as well as the development

of Israelite religion from polytheism toward monotheism and a distinctive worldview.

RLST 103: Introduction to Hinduism

3 Credits

Historical overview of the development of ideas that forms the basis of the south Asian religious culture. ASIA 103 / RLST 103 Introduction to Hinduism (3) (GH;IL)(BA). This course meets the Bachelor of Arts degree requirements. We begin with a discussion of the pre-Vedic Indus Valley civilization reflecting upon its influence on later south Asian cultures. The course then traces how the Vedic ritual tradition, and the Vedantic philosophy gave rise to the concepts of Karma (individual action and its underlying motives), Samsara (the cyclical view of life), and the Atman (nature of the individual). Moreover, we pause here to explore the relationship between the emerging idea of civic responsibility (Dharma) and its relationship to the Vedic and Vedantic thought. Next we examine how the Vedantic philosophical tradition may have incorporated a diversity of philosophical views including both Brahmanical as well as non-Brahmanical traditions of Buddhism, Jainism, Lokayata, etc. The class will read excerpts from the religious literature of the era. The first part of the course concludes with selected readings from the Bhagavadgita, Mahabharata, as well as some Buddhist and Jaina texts. All of these readings will be in English. Class discussions focus on how the classical Hindu worldview may have emerged from the philosophical foundation of the Vedantas, and later built the groundwork for the Hindu Bhakti (devotion) movements. The second part of the course focuses on the various regional Bhakti traditions from the middle ages onwards, analyzing how the regional cultures may have related with the great classical Brahmanic tradition. The course concludes with a discussion of how Hinduism in the post 1800s responded to the forces of colonization, exploring how the different religious and cultural traditions of south Asia may have interacted with other religious cultures (both indigenous and foreign) like Buddhism, Jainism, Islam, and Christianity. We shall read excerpts from noteworthy thinkers and writers of nineteenth and twentieth century to understand the very interesting dynamics between religion and civil society of more recent times. This course concludes with a discussion of how Hinduism in the post 1800s responded to the forces of colonization, exploring how the different religious and cultural traditions of historical south Asia may have interacted with other religious cultures (both indigenous and foreign) like Buddhism, Jainism, Islam, and Christianity. We shall read excerpts from noteworthy thinkers and writers of nineteenth and twentieth century to understand the very interesting dynamics between religion and civil society of more recent times.

RLST 104: Introduction to Buddhism

3 Credits

A general survey of the basic doctrine, practice, and historical development of Hinayana and Mahayana Buddhism. RLST 104 / ASIA 104 Introduction to Buddhism (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is a general survey of the historical development, basic doctrines, and practices of Hinayana, Mahayana, and Vajrayana Buddhism. The course is structured around the "Three Jewels" of Buddhism: Buddha, Dharma, and Sangha. That is to say, we will learn about the Buddha as a historical figure and spirit; we will come to understand the basic elements of his doctrinal teachings; and we will examine the community of followers who have practiced his teachings. Special attention will be paid to the various "geographies" of Buddhism as expressed through different cultures in ancient India, Southeast Asia, and East Asia. At the conclusion of the course, we will encounter Buddhism as a relatively new cultural force in America. The course revolves around the discussion of key issues in the philosophy, ethics, and theology of various forms of Buddhism.

RLST 105N: Buddhism and US Society

3 Credits

This course focuses on Buddhism in the United States. We will overview the historical factors that led to the development of Buddhism in the U.S., the many traditions that currently exist in the U.S., the role of Buddhism in the daily lives of different types of Americans, and various problems or frameworks that have characterized American Buddhism (such as race, gender, technology, and media representations). One major theme of the course is literary expressions of American Buddhism, such as the writings of Jack Kerouac and bell hooks. A second major theme, Buddhist meditation, will be explored through interdisciplinary perspectives drawing from both the humanities and social sciences. In the final portion of the class, we will focus on Buddhism in Pennsylvania, involving students in an ethnographic exploration of the religious pluralism in our home state.

RLST 107: Introduction to Islam

3 Credits

An introduction to the basic history of the Islamic tradition and also to Muslim beliefs and practices, this course will give students insight into the diverse world of Islam. From its origin in Arabia in the seventh century, Islam today is professed by more than 1.5 billion people all over the world. This course includes an outline of that history, including the early Muslim community and the Muslim holy book, the Qur'an. It touches on major institutions, such as Islamic law, philosophy, theology, and mysticism, and covers key rituals in Muslim daily life. The impact of modernity will be considered, including Muslim life in the United States.

RLST 108: Myths and Mythologies

3 Credits

World mythology: myths primarily of non-Western cultures, based on selected areas and traditions around the world. CMLIT 108 Myths and Mythologies (3) (GH;IL)(BA) This course offers a survey of several different cultural traditions as expressed in myth, as well as discussion of myth in its literary, social, geographical, political, and religious contexts. Various theories of the evolution and analysis of myth will be examined. Mythological traditions from around the globe will be compared in order to determine qualities which they share and examine ways in which they are unique. This course will help you see the world in new and exciting ways, based on the wide variety of global myths. At the same time, you will consider the permanent human issues which connect all of these traditions to each other, to the modern world, and to you. CMLIT 108 is one of the choices of survey courses, which count toward the Comparative Literature major and the World Literature minor. This course also fulfills the General Education humanities requirement, the Bachelor of Arts humanities requirement, and the International Cultures requirement.

RLST 110: Introduction to the Bible: Old Testament

3 Credits

The Old Testament (or, Hebrew Bible) is the record of the interaction between the people of ancient Israel and their God. As a religious text, the Bible is inextricably intertwined with the cultures of Israel's neighbors, including the Canaanites, Syrians, Greeks, Assyrians, Babylonians, Arabs, Egyptians, and the peoples of the eastern desert. To study the Hebrew Bible and its development during the first millennium BCE is to study the history, culture, and literature of the entire region. This course introduces students to the literature of ancient Israel, its rituals, the stories which established a people's identity, and which defined their moral behavior. Great figures of the texts, such as Moses, David, Solomon, Bathsheba, Ruth, Jeremiah, Daniel, and Ezra, teach us important lessons about life and how people of faith attempted to relate to one another, to God, and to people outside their ethnic group. Students will read from the biblical text, as well as from secondary source readings which contains scholarly opinion from a variety of sources. Recent archaeological and epigraphical studies will be incorporated into the course to enhance our work. The ultimate goal will be to assess the meaning of the texts in their ancient Near Eastern environment; to understand the development of Hebrew religion and the beginnings of Rabbinic Judaism; and to understand the connection between biblical studies and other fields of study, such as History, Religious Studies, Archeology, Linguistics, and Comparative Literature.

RLST 111: Early Judaism

3 Credits

Early Judaism will introduce students to the history of Judaism as reflected in Jewish literature from the period of the Babylonian exile (587/6 BCE) to the closure of the Babylonian Talmud (ca. 600 CE). This course will analyze the development of Judaism from its emergence out of the ancient Israelite religion through the formative period of rabbinic Judaism. Attention will be given to the diversity of ideas and practices that characterized early Judaism and the influence the larger Persian, Hellenistic, and Roman worlds had on Judaism's development. We will examine selections from the Hebrew Bible, and from other literature, including the Dead Sea Scrolls, the Apocrypha, the New Testament, the Mishnah, and the Talmudim.

RLST 113: Jewish Myths and Legends

3 Credits

Comparative study of diverse interpretations of stories from the Bible in Judaism and Christianity. CMLIT 113 / JST 113 / CAMS 113 / RLST 113 Myths and Legends of the Jews (3) (GH;IL) The impact of the Bible on Western Culture is immense. Beyond its religious importance, the motifs and images from its myths and stories permeate literature and art, providing a basic frame of reference that for much of history could be taken for granted. A degree of familiarity with these motifs so as to be truly fluent is no longer common, and so it requires special effort to discern allusions to biblical traditions. Moreover, these traditions are not static: religious communities continually re-interpret them and appropriate them in very different contexts. Many prominent traditions in Judaism, Christianity, and Islam do not appear explicitly anywhere in the Hebrew Bible, but are the product of imaginative and ingenious interpretation and re-tellings. Why, for example, is Noah an example of a righteous person in Christian tradition, but in rabbinic tradition is more often portrayed as a profane, earthly-minded man who was saved only because he was the least bad of an evil generation? Why is Moses commonly portrayed with horns in medieval art? Underlying such different traditions are centuries of debate and reflection on these texts as sacred scripture, and competing religious communities often authorized their distinctive beliefs and practices by reading them into scripture. The differences are often too subtle to discern apart from careful comparison. This course will explore the boundaries between Scripture and tradition by means of a close examination of the myths and stories in the Hebrew Bible and their subsequent interpretation and re-tellings in Judaism, Christianity, and Islam. Using methods from comparative mythology and folklore, as well as comparative midrash, our procedure will be to compare these traditions closely with the biblical text, asking: What are the main motifs in the mythology of Judaism?

Does Judaism have a coherent mythology? How do their myths compare with the myths of their neighbors? Where did these myths come from? How do these traditions relate to the Bible? What was the function of these myths? Why are there competing myths? How is it possible that Judaism affirms belief in only one God, but has myths that include other divine beings? We will also compare with later interpretive traditions (Jewish, Christian, Islamic). Can we trace trajectories of interpretation? Can we discern particular interpretive methods in operation? We will seek to answer: what do these re-workings of the traditions tell us about the development and function of Scripture, and the social circumstances of the communities? Finally, we will seek to detect reflections of these interpretive traditions in literature and art from the medieval to the modern periods. The course is organized around major topics in the Jewish Scriptures: God, creation, heaven and hell, Torah, Sabbath, Abraham and other ancestors, Israel and holy land, exile, and Messiah. Throughout we will consider how sacred stories function to form ethical perspectives and values.

RLST 114: Modern Judaism

3 Credits

This course will explore the developments in Judaism since the Enlightenment and the French Revolution. Major changes have come to the world since 1700-changes represented by terms such as the Enlightenment, Emancipation, Industrialization, Nationalism, Urbanization, Immigration, and Egalitarianism/Feminism. These broad social changes led to the break-up of traditional communities and, among other things, reformulations of Jewish Life and Jewish Religion. The effects can be seen in a number of Jewish responses-Assimilation, Hassidism, Self-Defense and Nationalism, Denominationalism, and Egalitarianism/Feminism-which we shall study in this class. In particular, we shall look at Jewish spirituality-its historical and theological development, its many historical and modern manifestations, and how it works.

RLST 115: The American Jewish Experience

3 Credits

Chronological and topical survey of the story of Jewish life in America. We will trace the social, religious, cultural, and political developments in the Jewish community from the Colonial Period to the present. Topics to be covered include immigration, acculturation, ethnicity, gender,

politics, and communal and religious innovation. While "knowing the facts" is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or "order" to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations/arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the relationship between the experiences of members of the American Jewish community and United States history as a whole. (2) Students will gain an understanding and knowledge of the political, economic, and social processes that shaped the American Jewish experience. (3) Students will learn how to "think historically" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of American Jewish history. Demonstrate an understanding of the diverse experiences of different groups of Americans. Demonstrate an understanding of the social, political, and ideological structures that shaped the American Jewish experience and continue to shape the modern United States.

RLST 116: Muslims in America

3 Credits

This course is a study of Muslims in North America, primarily the United States. It examines the multiple racial, cultural, and national groups that comprise this diverse community, starting with the historical record of the Muslims that came to the Americas as African slaves. Next, we examine African American Islam in its myriad formations. The influx of immigrants in the 1960s from the Middle East, Africa and Asia, dramatically shifted demographics in U.S. Muslim communities. Finally, we consider the post-9/11 period, which has put Islam and Muslims at the center of U.S. political and cultural discourse.

RLST 120: New Testament

3 Credits

CAMS 120 / JST 120 / RLST 120 New Testament (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. This course provides an introduction to the collection of early Christian writings that make up the New Testament. It begins with an examination of the first-century context in which these writings took shape—one overshadowed by the Roman empire, influenced by Hellenistic culture, and based,

above all, on varieties of Judaism. From there, the course takes up a few guiding questions. How, in this ancient context, did the first Christians understand and portray the figure at the center of their communities, Jesus of Nazareth? What do the New Testament writings reveal about the beliefs and aspirations of these communities as they advanced a movement that would, in time, become among the most consequential in world history? By the end of the course, students will have gained knowledge of the historical context of New Testament writings and an understanding of why the New Testament has been such an important and influential collection of writings.

RLST 121: Jesus the Jew

3 Credits

Although Jesus of Nazareth is the object of Christian devotion, he was not a Christian himself, but a pious Jew. What can be known about the historical figure of Jesus the Palestinian Jew? How would his teachings and actions have fit in the context of Judaism of his day, in the Greco-Roman world? What did he mean when he proclaimed the coming kingdom of God? Because almost all of our source material espouses Jesus as the Christ of Christian faith, the first step is to understand the aims and perspectives of these Christian sources, including the canonical Gospels as well as non-canonical Gospels. Through careful examination of these sources in light of critical scholarship and the social and historical context of Judaism in the Greco-Roman world, we will consider how much the historian is able to reconstruct of Jesus using historical method, what the limits of this investigation are, and how relevant the task is. We will consider and evaluate a few of the different scholarly reconstructions of the historical Jesus. Major emphases will include the historical, social, religious, political, and cultural contexts of Jesus, including important precursors; the political, institutional, and cultural history of the teachings and actions of Jesus in their Jewish setting, and how these are reinterpreted by his followers after his death. Attention will be paid to the development of variant Christian traditions about Jesus including Jesus as Messiah, his death as a saving event, the resurrection as exaltation of Jesus as Lord, the memorialization of Jesus in Christian ritual practice, and the cultural and religious impact of Jesus throughout history. In addition to the early Christian sources on Jesus (especially the canonical Gospels, but also other New Testament texts and non-canonical writings), on each topic students will read selections from early Jewish writings in order to illuminate the cultural context. These include the Dead Sea Scrolls, Philo, Josephus, Jewish texts among the so-called Apocrypha and Pseudepigrapha, early rabbinic texts, and epigraphical writings. Relevant archeological evidence and Greco-Roman sources will also be considered. Broader issues of historical, cultural, linguistic, political and geographical context will be covered in lectures and secondary readings.

RLST 122: Apocalypse and Beyond

3 Credits

Apocalypse and Beyond is a topic (and title) meant to suggest that apocalyptic imagination about the end of the world, first begun in the Ancient Near East with certain Jewish and Christian writings, is constantly re-envisioned for each new age. Apocalyptic literature and world views are frequently produced by marginalized groups who perceive themselves to be persecuted, and who envision a violent (often divine) intervention, which alone will bring justice. In Part One of the course, we will examine the ancient literary genre of apocalypse, which was popular in the Ancient Near East from around 200 BCE to 200 CE, especially in Jewish and Christian writings both in the Bible (e.g., Daniel and Revelation) and outside of it (e.g., First Enoch, the Apocalypse of Peter, and the Apocalypse of Paul). The authors of these apocalypses expected the evil age in which they were living to dramatically end in their lifetimes; although that did not happen, apocalyptic thinking became foundational to the three world religions stemming from the Near East: Judaism, Christianity, and Islam to varying degrees. In Part Two, we will examine the ideology, sociological underpinnings and some historical examples of apocalyptic groups and movements in medieval to modern times, and look at the impact that apocalyptic world views have had on the secular world, including philosophy, political movements, and popular culture, such as movies.

RLST 123: History of God: Origins of Monotheism

3 Credits

This course examines the early history of God; that is, the concept of the divine as a single supreme being. In particular, it focuses on the origins of monotheism and the development of its three major traditions in the Near East: Judaism, Christianity, and Islam, from their respective beginnings to around 1000 C.E. The course will begin with an analysis of the polytheistic religious milieu of the Ancient Near East in the second and first millennia B.C.E., and will consider the question of how, when, and why belief in one God first appeared in ancient Israel. Various modern theories about the origins of Israel's national God (Hebrew Yhwh/Yahweh and Aramaic Yhw/Yaho) will be analyzed, with careful attention to the evidence of ancient texts and archaeology. Following a discussion of the nature of the religion(s) of early Israel, the course will then turn to the development of Judaism as the world's first monotheism. It will then examine the subsequent emergence of Christianity in Roman-era Palestine and Islam in Late Antique Arabia, with a brief glance at the Persian religion of Zoroastrianism, which shares some commonalities. Finally, the course will compare and contrast some of the major beliefs,

practices, and significant historical trends and movements within the first centuries of the three major monotheisms.

RLST 124: Early and Medieval Christianity

3 Credits

This course provides an introduction to the history of Christianity. It traces, specifically, the development of the Christian movement from its beginnings as a small Jewish sect in Jerusalem to its unlikely emergence as the religion of the Roman Empire and, finally, its subsequent spread and development in Europe, Asia, and Africa. In form and structure, the course is historical, following figures and events in a more or less chronological sequence and taking up questions of causality, influence, and social identity. Yet the course is also concerned with the ideas, concepts, and philosophical viewpoints that have shaped Christianity and given it a certain intellectual coherence over time. The course begins with first-century construals of messianic identity and also with the figure of Jesus, as he was portrayed in the New Testament gospels. It then follows the first generations of the Christian movement, considering it within the context of first-century Judaism and the early Roman empire. Topics include persecution, martyrdom, and the important contributions of Origen. The middle section of the course looks at the second, third, and fourth centuries through three lenses, as it were: the office of bishop, the rise of monasticism, and the realities of empire. Bishops, monks, and emperors all shaped Christianity in essential ways, creating a rich and complicated spiritual, moral, theological, intellectual, and geo-political legacy for generations to come. The final third of the course looks at the development of Christianity beyond the fourth century in geographical groupings including churches in Africa, Asia, the Middle East, western Europe, Byzantium, and the Slavic lands. It is hoped, in all of this, that students will gain an understanding not only of Christian history but also of what made - and what makes - Christianity a distinctive and influential religion.

RLST 129: Philosophy of Religion

3 Credits

This course surveys perennial philosophical questions connected with religion: What is God, deity, or divinity? What is the nature and significance of religious experience? Is it rational to hold religious beliefs? How persuasive are arguments about the existence of God? How compatible is religion with modern science? What are the meanings of miracles, immortality, and creation? In what ways might morality depend on religion? What role ought religion to play in society and the public sphere? What lesson should we draw from profound religious experiences? Ought religious tolerance to be limited at all? Through the reading and discussion of relevant historical and contemporary texts, students will be encouraged to reflect on such questions from a variety of perspectives.

RLST 133N: Ethics of Climate Change

3 Credits

Climate change is not only a political, economic, and social crisis, it presents one of the great moral problems of our time. This course will cover the science, policy, and ethics of climate change. It fulfills general science requirements by giving an overview of the role played by such diverse scientific disciplines as chemistry, earth systems, ecology, and geology in understanding our changing climate while also exploring mitigation and adaptation strategies being developed in the fields of engineering, forestry, agriculture, and others. It fulfills humanities requirements by delving into the ethical dimensions of climate change, including religious and humanistic theories of human flourishing, deontological and teleological theories of ethics, and analysis of specific choices addressed by international negotiators. A hallmark of this course is using Penn State as a 'living laboratory' by taking advantage of both faculty expertise and the realworld activities of the Office of Physical Plant. Every week, students will interact with experts from various quarters of the University in order to see how climate change is being approached in a multi-disciplinary fashion. The first third of the course will feature guest lectures by EMS faculty working on paleoclimate, modeling, carbon sinks, ocean acidification and other aspects of climate science. The second portion will engage humanists, economists, historians, and artists at Penn State. The third will include tours of Penn State facilities, such as the East Campus Power Plant, and interviews with researchers developing new energy and sequestration technologies. In addition to exams and papers, students will prepare for a mock negotiation by learning about the energy profile and history of assigned countries. They will then have to set specific CO2 and temperature goals and come up with solutions to achieve these. The goal is to understand the role placed by ethical ideals in the pragmatic process of producing an equitable solution. In short, this course will give students the tools to understand the basic science of climate change and its ethical implications. Students will come away with a better sense of the moral dimensions of this phenomenon and the implications for human civilization and for the biosphere.

RLST 135: Ethics in Jewish Tradition and Thought

3 Credits

This course takes as its starting point the idea that modern ethical frameworks are deeply rooted in the soil of older traditions. By examining the development of Jewish intellectual traditions and their roots in the Bible, it provides students with an opportunity to study ethics in a philosophically textured, culturally rich, and historically informed way. And by focusing on Jewish engagement with the Bible, the course illuminates other traditions that derive from biblical monotheism: for example, those associated with Christianity, Islam, and the Enlightenment. The first part of the course takes up the idea of tradition and includes a study of biblical texts that serve as the foundation for key moral concepts. Following the traditional division of the scriptures, it examines questions of human identity and responsibility in the Torah, social ethics in the Prophets, and the quest for wisdom in the Writings. The final topic in this unit is the development of ethical tradition among the great sages of Jewish antiquity. The second unit shifts focus to the appropriation of tradition in modern Jewish thought. After reviewing important developments in Jewish thought in the medieval and early modern periods, it turns attention to the ways that some recent figures have addressed perennial concerns in light of commitments and ways of being that are integral to Jewish identity. By reading closely the works of such seminal thinkers as James Kugel, Joseph Soloveitchik, and Abraham Heschel, we will gain a deep acquaintance not only with important vocabulary but also with the ways that traditional words and concepts may be used dynamically to produce fresh ways of looking at questions in moral philosophy.

RLST 137: Gender, Sexuality, and Religion

3 Credits

WMNST 137 explores the history of different conceptions of gender and sexuality as they are understood within major religions (e.g. Hinduism, Judaism, Islam, Christianity, Buddhism, indigenous spiritual systems). The course emphasizes modern and contemporary contexts of gender/religion debates, introducing feminist historical methods in order to trace the origins and trajectories of today's controversies. Students should expect to gain a comparative historical perspective on at least three theological traditions. Possible topics include: history of gender and religious practices; femininities and masculinities in a spiritual context; the flesh and the spiritual body; and sexuality, and both ethical and theological approaches to theories of gender, feminism, and identity.

We will explore ways in which religious teachings, in both historical and contemporary contexts, inform secular understandings of gender and the ways in which contemporary conceptions of gender inform religious practice. While religion plays a crucial role in defining sex and gender norms, changing sex and gender norms can pressure the doctrine, discourses, practices and organizational structures of faith institutions, some established centuries or millennia ago. The course considers not only the roles of women and men, or constructions of masculinity and femininity, but also the impacts of non-binary genders and sexualities that may be acceptable (even celebrated) in some religions and shunned in others. We will address urgent and perennial questions from different religious perspectives: what is the spiritual meaning of sexuality? Is sexuality an obstacle or a vehicle for spiritual fulfillment? Who are the voices of authority who set the sacred rules on sexuality and who gets to enforce them? How do we (or should we) balance the tensions of non-aligned government and religious concerns, as in contemporary debates around same-sex marriage; abortion and reproductive rights; legal definitions of "family"; the Muslim veil in secular contexts; divorce; trans rights; attitudes toward the body; gender mutilation and/or sex-reassignment surgery; sexual violence towards women, gay, and trans individuals around the world; child and sexual abuse among the clergy; and religious leadership and inclusion. The course also touches on the impacts of colonialism, globalization, and migration on gender and sexuality.

RLST 140Y: Religion in American Life and Thought

3 Credits

The course aims to cast light on contemporary religious life in the United States by looking at the history of American religion. The course will provide students with a broad overview of American religious life from the colonial era to the present, focusing on the diversity and vitality of American religious traditions, as well as areas of intersection and conflict around race, ethnicity, gender, class, and sexuality. The course will also ask students to consider how aspects of these histories continue to shape religious belief, practice, and public discourse in contemporary life. Students will consider important religious and philosophical writings, as well as a popular/mass cultural, ethnographic, or other documentary sources that shed light on both the intellectual and lived history of religious life and thought in the United States.

RLST 145: African Diaspora Religions and Spiritualities

3 Credits

This course is an introduction to religions and spiritual traditions of the African Americas including the United States, the Caribbean and Latin America, emphasizing present institutions and practices, their relationship to Africa and African spirituality, their shape and function during slavery, and their development from Emancipation to the present. Through various examples and case studies, we will trace the relationship between religion and resistance, race politics, gender and sexuality, religion and social change. The course addresses core ideas of the disciplines of religious studies and African Diaspora theory. The category of religion is explored through a diasporic framework that considers the legacy of slavery and contemporary racial and social hierarchies. The course approaches religions of the African Americas as epistemologies of resistance to white oppression introducing students to the diaspora condition as marked by historical violence and the dialectics of loss and displacement. Central to the course are concepts of religious orthodoxy and authenticity, cultural retentions and transformations and the dynamics of religious power and authority. The course follows a comparative framework in investigating religious life, introducing students to diaspora theory as a discourse of difference that engages critically with the particularities of the religious traditions of the African Americas without collapsing their differences. By addressing identity formations, the course focuses on religion as a discourse of power and one that articulates religious life as shaped by gender and race politics and by economics and social realities. To this end, the course follows an interdisciplinary approach and engages a variety of material including literary and historical texts, visual arts and music and dance makes it possible for students to understand the complexity of religious life in the African Americas.

RLST 147: The Life and Thought of Malcolm X

3 Credits

The life of Malcolm X/El Hajj Malik El Shabazz (1925-1965) and his social, political, economic, and moral thought. AFAM 147 / RLST 147 The Life and Thought of Malcolm X (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine in-

depth the life, speeches, and thoughts of Malcolm X/El Hajj Malik El Shabazz. While the Autobiography will be a major source, we will also use other sources to develop an understanding of the philosophy and thought of Malcolm X. We will explore the social, economic, political, cultural, religious, moral, and spiritual context of America in general and of African Americans in particular. We will examine Malcolm X's influence on the period in which he lived and since his assassination. We will compare and contrast his view on issues of race, culture, politics, education, crime, human rights, civil rights, morality, and economics with those of other African American leaders and with the prevailing views of most Americans on those subjects. We will devote a large portion of the course to the examination of the social movements that impacted on Malcolm and those that he influenced. The speeches of Malcolm X and the writings about Malcolm X are instructive and will be utilized along with other documents. Videotapes and audiotapes will also be employed as instructional materials. Students are expected to be ACTIVE participants in the learning/teaching experience. Students are required to participate in class discussions centered on the readings and related topics. There will be a written mid-term examination and a written final examination. Students are expected to complete an individual research project related to the course and write a paper on that research as well as to participate in a collaborative group project of their choosing on a subject related to the class. This course will count in the supporting courses category of the major and minors in African/African American studies. It also will fulfill credits in the Religious Studies Program. It may also be used to fill GH and US requirements.

RLST 153: Dead Sea Scrolls

3 Credits

The discovery of the Dead Sea Scrolls was one the most important archeological discoveries of the 20th century. This collection of over 900 scrolls found in caves by the Dead Sea includes the oldest manuscripts of the Hebrew Bible (Old Testament) and hundreds of other Jewish writings dating from the 2nd century BCE to the 1st century CE, many of which were previously unknown. In this course we will examine select examples of the Dead Sea Scrolls in order to understand how these writings have revolutionized our understanding of the formation of the Bible, Jewish groups in the Greco-Roman period, and the origins of Christianity and rabbinic Judaism, and why there is so much scholarly debate around them. We will consider such issues as Jewish law, biblical interpretation, messianism, apocalypticism, prayer and rituals. The course will include discussion of the archaeology of the Qumran settlement and caves, scribal practices and the production of scrolls, and scholarly methods in reconstructing and interpreting ancient texts. We will study this one sectarian movement as a microcosm of the issues related to Jewish identity in this critical period that birthed both rabbinic Judaism and Christianity. We will focus on the beliefs and practices by which this movement constructed their particular community identity and worked out their place in the world.

RLST 160: Sacrifice in the Ancient World

3 Credits

Sacrifice (from Latin sacer "holy + facere "to make") is one of the most prevalent yet troubling aspects of religion. Its destruction and violence is often at odds with other rituals and core understandings within a religion, so why is it done and what good does it do? For the sacrificer, does it represent a gift to the gods, a renunciation, an exchange, a surrogate, or something else? This course will examine some competing definitions and theories of sacrifice, as well as its manifestations in the cultures and religions of the ancient Mediterranean world, especially those of Greece, Rome, Egypt, Mesopotamia, Hatti, Israel, and Phoenicia. A brief look at religious sacrifice elsewhere, such as ancient Mesoamerica and India, will conclude the course.

RLST 181: Introduction to the Religions of China and Japan

3 Credits

A survey of the history, philosophy, and cultural impact of the major Far Eastern religions: Confucianism, Taoism, Buddhism, and Shinto. ASIA 181 / RLST 181 Introduction to the Religions of China and Japan (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This is an introductory survey of the historical, philosophical, and cultural dimensions of the major religious traditions in China and Japan. The course delineates and highlights the organic view of the universe and the hierarchical ordering of society in East Asia. It traces the evolution of the major traditions (Confucianism, Daoism, Buddhism in China, as well as Shinto, Buddhism and Confucianism in Japan) by examining their ideas of humanity and nature, morality and society, and metaphysics and ethics. It also reveals the interaction and interrelation between ideology, politics and society, and their impact on the development of the major religious traditions in history. A major focus is the relation between the popular and folk practices and beliefs of esoteric Daoism, devotional Buddhism, and fertility-cult Shinto and the elite and literate doctrines and precepts of Confucianism, philosophical Daoism, and monastic Buddhism. The course also devotes some attention to the influence of religion on various facets of culture, such as medicine, science, literature, art and food. The objectives of the course are first to acquaint students with the religious beliefs, values, and practices of China and Japan by looking at their historical formations and contemporary manifestations, and second, to locate them in a global and comparative context.

RLST 194: Jerusalem: Sacred and Profane

3 Credits

Jerusalem, a city sacred to Judaism, Christianity, and Islam, is often depicted as the spiritual and physical center of the world. Throughout its 5000-year history, Jerusalem has attracted diverse cultures, empires, and peoples who have vied for control of this city that is both religiously significant and a very ordinary site of urban life. Jerusalem: Sacred and Profane surveys the archaeological, religious, cultural, political, social, and historical record of Jerusalem in the ancient, medieval, and modern periods. We will explore a series of themes in the city's history: the built urban environment, political power in and over the city, sacred sites and pilgrimage, the everyday experiences of Jerusalemites, the changing cultural meanings of the city across various religious and national traditions, and war, violence, and memory in the urban landscape. The significance of Jerusalem's past, its impact on contemporary society and politics in the modern Middle East, and differing visions for this

contested city's future are examined in light of various interpretations of the historical evidence.

RLST 235: The Church and the Jews

3 Credits

Examination of the relationship between Western church and the Jews from the First Century to Enlightenment. HIST 235/HIST 235 The Church and the Jews (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine a key aspect of western history - the complex relationship between the Western (Roman Catholic) Church and the Jews, from the first century to the present. We will analyze ideas and policies regarding Jews as expressed in different realms, from theology and canon law to church art and popular preaching. We will also examine how changing conditions led to striking changes in church attitudes and policy, and how church policy was often at odds with popular sentiments about Jews. The course will be designed to enable students to grasp the fluidity of attitudes over time, and the interplay of economic, social, political, and theological factors; to grasp of essential elements of a key area of conflict in western culture; and to develop their skills in the close reading of primary texts. Students will be evaluated on the basis of three quizzes and a final exam. The course would offer a chance for students to develop perspectives previously gained in a number of courses, particularly HIST 001 and 002 (The Western Heritage), RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), HIST 107 (Medieval Europe), HIST 407 (Early Medieval Society), and J ST 010 (Jewish Civilization). It would complement such courses as HIST 108 (The Crusades), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), HIST 414 (Renaissance and Reformation), J ST 111 (Early Judaism), J ST 110 (Hebrew Bible), RL ST 120 (New Testament), and RL ST 124 (Early and Medieval Christianity). The course will count for 3 credits toward a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major.

RLST 280: Gendering the Divine in Indian and South Asian Religions

3 Credits

Throughout South Asia, ancient religious beliefs and cultural traditions interact with forms of modernity that constitute the daily lives and practices of women and men today. Focusing on conceptualizations of sex and gender over South Asia's long history, this course investigates the ways in which religious traditions and cosmologies have informed gender roles and hierarchies in India, Nepal, and other neighboring nations from the ancient period through the present day. In so doing, the course also explores how political realities—revolutions, terrorism, elections, nationalist movements, for example—can both exploit and challenge the gendered entanglements of religion and secular life. Students engage basic historical methods as well as feminist analytical methods (e.g., intersectionality) as they read a variety of cultural histories and ethnographies, as well as religious, philosophical and literary texts.

RLST 407Y: Antisemitisms

3 Credits

Surveys the history of anti-Semitism from antiquity through the Middle Ages to the present. HIST (J ST) 409Y (RL ST 407Y) European Anti-Semitism from Antiquity to the Present (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course analyzes major episodes in the history of anti-Semitism and tries to clarify the motives and dynamics involved. It seeks to understand what these episodes

have in common and what is unique in each case—is there a single universal, eternal antisemitism? Or are there rather 'anti-Semitismisms' each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates? We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire's essays, German philosophical texts from Kant to Marx, Wagner's racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher. The major part of the grade will depend on a short research paper which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course to J ST/HIST 416 (Zionist History) and J ST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category.

RLST 410: Jews in the Medieval World

3 Credits

Trends in medieval Jewish society under Islam and Western Christendom. HIST 410/HIST 410 Jews in the Medieval World (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. The Jews lived in widely scattered communities under Christian and Islamic rule

in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new conditions they encountered in Europe and the Mediterranean region from the ninth to the fifteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students' skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-a-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression. Students will be evaluated on the basis of two mid-term exams (the first after the survey of the Muslim world, the second after the examination of the Franco-German region) and a comprehensive final exam. The course will be linked to most of the courses taught in the field of Jewish Studies, especially J ST 111 (Early Judaism), J ST 114 (Modern Judaism), and J ST 118 (Modern Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258). The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major. It will be offered once a year with an enrollment of approximately 60 students.

Cross-listed with: HIST 410, JST 410
Bachelor of Arts: Humanities
International Cultures (IL)
United States Cultures (US)

RLST 411: Jewish Studies

3 Credits/Maximum of 9

Study of the life and thought of a particular period or movement in the history of Judaism.

Prerequisites: Second semester standing
Cross-listed with: JST 411
Bachelor of Arts: Humanities
International Cultures (IL)
United States Cultures (US)

RLST 420: Major Christian Thinkers

3 Credits

Systematic inquiry into the religious thought of one or more Christian thinkers, such as Paul, Augustine, Luther, Calvin, Kierkegaard, or Tillich.

Prerequisite: 3 credits in religious studies

Bachelor of Arts: Humanities

RLST 422: Religion and American Culture

3 Credits/Maximum of 6

Selected topics, problems, or historical movements in American religion; relation between religion and American culture.

Cross-listed with: AMST 422
Bachelor of Arts: Humanities

RLST 423: Orthodox Christianity: History and Interpretations

3 Credits

Examines Orthodox Christianity from origins to present using critical historical analysis of primary and secondary sources. RLST 423 / HIST 423 Orthodox Christianity: History and Interpretations (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements.

This course examines Orthodox Christianity from its origins to the present by focusing on a series of four major problems using critical historical analysis of primary and secondary sources. 1) The course provides students with the means to examine Orthodox self-understanding: Orthodox doctrine of God, its anthropology. 2) The issue of a world religion and the relationship of Orthodoxy to other world religions and secular authorities and other forms of Christianity, especially "western" Christians. 3) The challenge of alternate world religions—Judaism, Islam, western Christianities. 4) The challenge of modern Orthodoxy in the context of twentieth and twenty-first century developments and issues.

Prerequisite: HIST 105
Cross-listed with: HIST 423
Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

RLST 425W: Books of the Bible: Readings and Interpretation

3 Credits/Maximum of 12

Study of a biblical book/topic in terms of literary, historical, and cultural contexts, history of interpretation, and critical scholarship. CAMS (J ST/RL ST) 425W Books of the Bible: Readings and Interpretation (3 per semester/maximum of 12) The Bible is a diverse collection of writings sacred to Jews and Christians written over about 1000 years, in a variety of different genres and historical circumstances. This course allows students the opportunity to study in depth a particular book of the Bible, from either the Hebrew Bible/Old Testament or the New Testament. We will explore the literary, historical and cultural context of the book in question. A literary analysis of the book will include consideration of genre and literary devices, and a close reading of the text. A historical analysis will consider the date of composition, its source materials, comparative traditions in other cultures, and relevant historical and cultural factors relevant to understanding the text. The course will introduce students to various other approaches to interpretation of the Bible in modern scholarship, including feminist and post-colonial critiques. We will also explore the varied interpretations and uses of the book in Judaism, Christianity, and Islam throughout history, and its influences in Western culture, including art and literature. The course will be offered once a year with varying content, and students may repeat it when taught with different content.

Prerequisite: 3 credits in CAMS or J ST or RL ST, recommended CAMS/J ST/RL ST 110 or 120; or ENGL 104.

Cross-listed with: CAMS 425W, JST 425W

Writing Across the Curriculum

RLST 432W: Gender and Sexuality in the Bible

3 Credits

This writing intensive course will examine issues of gender and sexuality in the Bible, including the Hebrew Bible/Old Testament, the Deuterocanon, and the New Testament. It will introduce students to a variety of academic approaches to the Bible with respect to a broad range of topics. These topics include: gender identity, sexual orientation, sex, marriage and divorce, adultery, monogamy and polygyny, same-sex relations, chastity and celibacy, prostitution, gender violence, pornography, fertility, procreation, abortion, divine gender and sex, incest, and many others. In covering these themes, the course will deal with some of the most challenging and often disturbing stories and passages in the Bible, the ancient library of books that is sacred to Jews and Christians and which has otherwise greatly influenced civilization for more-or-less two thousand years. Alongside a close reading of the text (philology), this course will employ historical and literary criticism, investigations into ancient material culture (archaeology), modern theoretical interpretive approaches, reception theory, and other methodologies to examine not only the biblical writings in their ancient contexts, but their interpretation and use throughout history to construct social norms.

Prerequisite: 3 credits in CAMS, RLST, or JST.

Cross-listed with: CAMS 432W, JST 432W, WGSS 432W

Bachelor of Arts: Humanities

Writing Across the Curriculum

RLST 440Y: The Orthodox Christian Tradition

3 Credits

History, culture, and beliefs of the Eastern Orthodox religious tradition with special reference to Russia.

Prerequisite: RL ST004 , RL ST124 , RL ST125W , RUS 100 or RUS 110

Bachelor of Arts: Humanities

International Cultures (IL)

United States Cultures (US)

Writing Across the Curriculum

RLST 461: Sociology of Religion

3 Credits

Contemporary religion in the global perspectives: beliefs, structure, and function of major religious traditions, denominations, and cults.

Enforced Prerequisite at Enrollment: 3 credits of SOC or RLST

Cross-listed with: SOC 461

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

United States Cultures (US)

RLST 471Y: Classical Islamic Civilization, 600-1258

3 Credits

Pre-Islamic Arabia; Muhammad; Arab conquests; Islamic beliefs and institutions; literary, artistic, and scientific achievements; relations with Europe; breakdown of unity.

Cross-listed with: HIST 471Y

Bachelor of Arts: Humanities

Bachelor of Arts: World Cultures

International Cultures (IL)

Writing Across the Curriculum

RLST 472: Islamic Philosophy

3 Credits

A survey of major texts from the Islamic philosophical tradition, focusing primarily on the classical period (ninth to twelfth centuries) and its influence on modern thinkers.

Prerequisites: 9 credits in RLST and/or PHIL, or 6 credits of PHIL at the 200-level

Cross-listed with: PHIL 472

Bachelor of Arts: Humanities

Bachelor of Arts: World Cultures

International Cultures (IL)

RLST 478: Ethics After the Holocaust

3 Credits

The aim of this course is to explore various ways in which philosophers have responded to Auschwitz (a signifier, or name, which is in turn not without controversy and complexity). It will examine, in particular, the promise and failure of post-Holocaust ethical theory, with attention to evil, suffering, goodness, witnessing, testimony, trauma, and human rights. Authors include Levi, Agamben, Arendt, Adorno, Levinas, Jonas, and Jankelevitch. Through reading and discussion of primary sources, this course introduces students to these philosophers' leading questions, methods, and conclusions, with reference to their historical context and their impact on later philosophy. The course will make these writings accessible to students without unduly presupposing prior knowledge, while also encouraging students to rise to the challenge with their own critical analysis and creative interpretations.

Prerequisite: One course in either JST or PHIL

Cross-listed with: JST 478, PHIL 478

Bachelor of Arts: Humanities

RLST 483: Zen Buddhism

3 Credits

The development and current state of Zen Buddhist thought and practice.

Cross-listed with: ASIA 487

Risk Management (RM)

RM 214: Applications of Probability Theory to Actuarial Science

1.5 Credits

This course introduces students to actuarial science topics and the actuarial profession. To become an actuary, individuals must pass a series of professional examinations that accredit them as professionals in the field. This course provides an introduction to the material on the earlier exams such as applications of probability theory to insurance, financial mathematics (compound interest and annuities), and provides instruction on spreadsheets, so that students can perform their

homework using them. Topics covered include applications of the following to insurance and actuarial science: conditional probability, independence, combinatorial principles, Bayes Theorem, and random variables. Specific probability distributions used include the binomial, uniform, Poisson, geometric, negative binomial, hyper-geometric, and multinomial discrete distributions, as well as the exponential, normal, uniform, and gamma continuous distributions. Expectations, distribution parameters, means, medians, modes, variances, skewness, and moment generating functions are also covered. The more advanced topics of joint, marginal, and conditional distributions are used, along with functions and transformations of random variables. The application of probability theory to risk management is addressed. Throughout the course, sample problems will be reviewed to help prepare students for the actuarial professional exams.

Enforced Prerequisite at Enrollment: C or better in MATH 141 Corequisite: STAT 414 or MATH 414 Concurrent Courses: MATH 230 or MATH 231

RM 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

RM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

RM 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

RM 301: Risk and Decisions

3 Credits

Introduction to decision-making under uncertainty. Mathematical probability and statistics, decision theory and game theory will be studied. R M 301 Risk and Decisions (3) Most tough business decisions involve risk. Smart risk-taking requires special analytical problem solving skills and careful consideration of the relevant data. In this course, you will learn how to conceptualize decisions involving risk, how to analyze your choices, how to estimate the risk, and how to communicate and defend your analysis to others. The skills and tools you will learn come from economics, probability, statistics, and game theory. The focus will be on how the tools from these fields are applied to real world business decisions in risky environments. The concept of risk diversification will be discussed under both independent and correlated risks. Decision rules such as expected value maximization and expected utility maximization will be covered. The role of risk aversion of the decision-making process will be discussed along with how it can be measured. The study of decision analysis will include the use of decision trees. The basic concepts in game theory will be introduced. Students will learn what a Nash equilibrium is and how to derive such an equilibrium. More complicated games with incomplete information will be introduced which are important in decision-making where parties often are missing key pieces of information but must still choose a business strategy. Problems of asymmetric information will be studied; these situations arise when

one party to a transaction or contract has more information relevant to the decision than the other party. For these types of problems, such as adverse selection and moral hazard, optimal solutions will be discussed.

Enforced Prerequisite at Enrollment: (BA 301 or FIN 301) and (MATH 110 or MATH 140) and (STAT 200 or SCM 200)

RM 302: Risk and Insurance

3 Credits

Introduction to the principles and methods of handling business and personal risks; emphasis on insurance techniques.

Enforced Prerequisite at Enrollment: 4th semester standing

RM 303: Real Estate Fundamentals

3 Credits

Introduction to urban real estate; economic forces affecting property rights; real estate markets and finance; land-use analysis; government policies.

Enforced Prerequisite at Enrollment: 4th semester standing

RM 320W: Risk Management and Insurance

3 Credits

Goals and methods of risk management. Commercial insurance and alternative risk transfer (ART) methods in addition to the characteristics of insurance markets and intermediaries used by risk managers. This course covers the risk management process used by organizations to deal with the risks that they face with an emphasis on the types of risk commonly handled through the commercial insurance market. It addresses the costs and benefits of risk management, the goals of the process and the methods available to handle risks. The methods covered include both traditional and nontraditional ones including retention, commercial insurance, captive insurers, loss sensitive contracts, finite risk plans and securitization. The characteristics of the insurance markets and intermediaries used by risk managers are studied. These include insurance company organizational forms, operational structures, measures of performance, regulation and the role of brokers. The risks to organizations that are addressed include risks to employees, risks to customers, risks to shareholders and risks to third parties. The types of insurance covered include workers compensation, employment practices liability, products liability, general liability, directors and officers liability and environmental impairment liability. In addition, the failure of risk management during the recent financial crisis is analyzed. The course ends with a case study of risk management at Penn State University to give students a detailed perspective of the risk management program of a complex organization and to provide insight into how changes in the market environment can significantly affect such a program.

Enforced Prerequisite at Enrollment: FIN 301 and (MATH 110 or MATH 140) and (STAT 200 or SCM 200)
Writing Across the Curriculum

RM 330W: Real Estate Risk Analysis

3 Credits

Risk and value associated with real estate decision making, which includes purchasing, leasing renovation, financing, and investing. The purpose of this course is to demonstrate how value and risk is central

to virtually all real estate decision making, including whether and how to lease, buy or mortgage a property acquisition; whether to renovate, refinance, demolish or expand a property; and when and how to divest a property. The goal is to finish the course with a value oriented framework based on a set of valuation and decision making tools that can be applied in a variety of real world situations and to understand industry indicators (external factors) that determine the level of risk associated with real estate ventures.

Enforced Prerequisite at Enrollment: 5th - 11th Semester standing
Writing Across the Curriculum

RM 395: Internship

1-3 Credits/Maximum of 3

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor

RM 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

RM 401: Fundamentals of Private Pensions

3 Credits

Analysis of pension regulation, funding, vesting, retirement annuities under insured and self-insured plans, actuarial cost analysis, plan termination insurance.

Enforced Prerequisite at Enrollment: RM 302 or RM 320W

RM 405: Corporate Risk Management

3 Credits

Risk management for firms and organizations; loss control, risk transfer, and loss financing alternatives; Corporate employee benefit program design and financing.

Enforced Prerequisite at Enrollment: RM 302 or RM 320W

RM 410: Financial Mathematics for Actuaries

3 Credits

This course focuses on Interest Theory, including compound interest, annuities with non-contingent payments; equations of value; loans and their valuation; the pricing of bonds, determining their yields to maturity and outstanding balances; determination of yield rates; duration of an asset or liability, and immunization of interest rate risk. The course helps prepare actuarial students for the international actuarial exam in Financial Mathematics (FM).

Enforced Prerequisite at Enrollment: C or better in MATH 141

RM 411: Long Term Actuarial Mathematics - Fundamentals

3 Credits

A study of the mathematical theory of life contingencies, single-life functions, and their applications. The course provides a solid understanding of the mathematics of life insurance and annuities, and helps actuarial students prepare for the long-term part of the Fundamentals of Actuarial Mathematics (FAM) actuarial exam. Students will gain an understanding of key concepts for selling insurance to various constituents, which includes among other things pricing based on a person's age and gender. Additional topics covered in the course include: 1) Key features of long-term insurance coverages, 2) Key concepts concerning survival models for individual lives, 3) Calculations on the present value random variables associated with long-term insurance benefits and expenses, 4) The premium and policy value calculation process, and 5) Pricing simple financial options under the binomial and Black-Scholes models.

Enforced Prerequisite at Enrollment: C or better in RM 410 and (STAT 414 or MATH 414)

RM 412: Long Term Actuarial Mathematics - Advanced Topics

3 Credits

A study of joint-life and survivor-life functions, population life tables, and multiple decrement theory, with applications to disability and retirement problems. The course provides a solid understanding of the advanced topics in long-term actuarial mathematics, and helps actuarial students prepare for the Advanced Long-Term Actuarial Mathematics (ALTAM) actuarial exam. Topics covered include: 1) Key concepts of multiple state survival models, including calculations of premium and policy values, 2) Analysis of emerging surplus and apply profit testing principles, 3) Basic pension/retirement benefits, including accrual, valuation and funding calculations, and 4) Various equity-linked life insurance guarantees and options, including relevant pricing, reserving and hedging principles. Building on these topics, students will be able to apply theoretical concepts to real-world insurance problems using a project-based approach focused on one or more advanced topics covered in the course.

Enforced Prerequisite at Enrollment: C or better in RM 411

RM 415: Modeling for Actuarial Science

3 Credits

Modeling for Actuarial Science provides detailed actuary principles dealing with models of interest rates used to price liabilities, and models of stock prices and options used to price employee options and cash balance accounts. The first section of the course focuses on discrete models, such as binomial option pricing, which can be used for pricing employee stock options. The second section covers put-call parity, the effects of style, maturity, and strike price on option prices, generalized parity, and exchange options. The third section looks at continuous models such as: 1) the Black-Scholes formula and its applications to options on stocks, currencies, futures, and market-making, 2) Delta-Hedging and the understanding of and pricing of exotic options (Asian, Barrier, Compound, Gap, and Exchange Options), 3) understanding lognormal distributions, Monte Carlo testing, Brownian motion, Ito's Lemma, historic and implied volatility, Sharpe ratios, interest rate models, and the application of these to liabilities. The course assists in preparing

students for the international actuarial exam MFE (Models in Life Contingencies).

Enforced Prerequisite at Enrollment: C or better in RM 410

RM 420: Property, Casualty, and Health Insurance

3 Credits

Actuarial methods and concepts used to model property, casualty and health insurance losses along with credibility theory. RM 420 Property, Casualty, and Health Insurance (3) This course provides a solid understanding of actuarial methods and concepts used to develop loss models for property and casualty insurance and health insurance. The course makes use of real world numerical examples in order to demonstrate how actuaries use historical claims and pricing data, both company specific and industry, to determine rates and increases. The class also gives students a foundation in Credibility Theory and simulation to prepare for the actuarial examination on loss models.

Enforced Prerequisite at Enrollment: C or better in RM 412

RM 421: Short Term Actuarial Mathematics - Fundamentals

3 Credits

RM 421 provides a solid understanding of actuarial methods and concepts used to develop loss models for property and casualty insurance and health insurance. The course makes use of real world numerical examples in order to demonstrate how actuaries use historical claims and pricing data, both company specific and industry, to determine rates and increases. Topics covered include: 1) Understand the key features of insurance and reinsurance coverages, 2) Understand the characteristics of severity, frequency and aggregate models, 3) Understand the concepts and applications of credibility theory, 4) Apply basic methods for calculation of premiums and reserves for short term insurance coverages. The course helps actuarial students to prepare for the international Fundamentals of Actuarial Mathematics (FAM) exam.

Enforced Prerequisite at Enrollment: C or better in RM 410 and (STAT 415 or MATH 415)

RM 422: Short Term Actuarial Mathematics - Advanced Topics

3 Credits

This course covers advanced topics of actuarial methods and concepts used to develop loss models for property and casualty insurance and health insurance. The course makes use of real world numerical examples in order to demonstrate how actuaries use historical claims and pricing data, both company specific and industry, to determine rates and increases. Topics covered include: 1) Interpretation and calculations with severity, frequency and aggregate models, 2) Construction and selection of parametric models, 3) Estimation of losses using credibility procedures, and 4) Pricing and reserving for short-term insurance coverages. The course helps to prepare actuarial students for the international Advanced Short-Term Actuarial Mathematics (ASTAM) actuarial exam.

Enforced Prerequisite at Enrollment: C or better in RM 421

RM 424: Real Estate Law

3 Credits

Analyze contemporary law applicable to various types of ownership interests and rights, methods of transferring ownership, and use of real property. B LAW 424 B LAW (R M) 424 Real Estate Law (3) Analysis of contemporary law applicable to various types of ownership interests and rights, methods of transferring ownership, and use of real property. The objectives for this course are: (1) to provide students with an understanding of essential U.S. real estate property law, including the rights private property owners may obtain, how ownership and transfer are handled in view of present and future interests, constitutional issues that impact real estate ownership, and the legal aspects of modern real estate contractual transactions; (2) to teach students the ability to spot the legal issues arising from the above as future business leaders and (3) to introduce students to the legal reasoning process necessary to address and avoid the legal dilemmas presented by such issues. Instructional methods for the course will include detailed lectures and classroom discussion of readings and other materials. Student progress and mastery of the material will be evaluated through periodic examinations.

Enforced Prerequisite at Enrollment: BLAW 341 or BLAW 243

Cross-listed with: BLAW 424

RM 430: Life and Health Insurance

3 Credits

Industrial organization of the US life-health insurance industry; economic issues related to organizational structure, operational functions, and the supply and demand for life-health products.

Enforced Prerequisite at Enrollment: RM 302 or RM 320W

RM 440: Risk, Strategy, and Decision Making

3 Credits

One of the key ways that a business attempts to manage risk it anticipates and confronts in markets is through organizational-level elements such as its business strategy, structure, and culture. These elements emerge from a series of decisions guided by the insights and biases of individuals. As such, the management of enterprise risk must also include an understanding of how individuals (e.g. managers) approach risk through their decisions and decision making processes. In this course, we look at some of these critical elements separately and then together as they integrate to guide and define enterprise risk management. The basic course objectives are to come away with an understanding of the following: Forms of strategic risk - From market to internally-driven risk; from emotional to economic-driven, how does strategic risk present itself? How do executives recognize/assess and respond to the "portfolio of risk" that they must address to make the business successful? Business strategy and structure - One way risk is addressed and articulated is through a business strategy. What is strategy? What are the key decisions that comprise a business strategy? How are organizations structured to implement these strategies and move information across the firm? Where and how is risk assessed in these processes and structures, and incorporated into a strategic risk plan? Decision making - Decision making around strategy and risk management plays out in various forms and across different levels (i.e., individuals and groups). What goes right and wrong? How are these processes systematically linked to perceptions and actions associated

with risk management. Organizational culture - Perhaps one of the most critical elements in enterprise risk management is the role played by organizational culture (or simply "How we do things around here and my role as an organizational member doing it.") We examine the roots of organizational culture and how it is aligned to perspectives of risk and its management. Descriptive vs. prescriptive perspectives - Once we "described" what does/could go on, we need to engage in looking at ways that organizations can prevent pitfalls and correct suboptimal practices.

Enforced Prerequisite at Enrollment: RM 302 or RM 303 or RM 320W or RM 330W

RM 450: Contemporary Issues in Real Estate Markets

3 Credits

Historical performance, land use issues, market valuation, real estate development, public policy issues.

Enforced Prerequisite at Enrollment: RM 303 or RM 330W

RM 460: Real Estate Financial Analysis

3 Credits

Debt and equity financing, capital structure, "creative financing," risk analysis, corporate asset management. FIN (R M) 460 Real Estate Financial Analysis (3) The objective of this course is to provide in-depth coverage of real estate investment and financing decisions. The focus is on the private market, including corporate asset management. Investment analysis moves from the basics of forecasting cash flows, through advanced topics including the impact of real option value on investment and development decisions. Risk measurement is given particular attention with a focus on sensitivity and simulation analysis. There is some coverage of asset pricing models like the Capital Asset Pricing Model, which is critically analyzed with respect to its applicability in real estate markets. The impact of illiquidity, management costs, and the suspicion of non-normally distributed returns are explored, as are the implications of relative market inefficiency. The financing module begins with the basics of mortgage debt mathematics, which is then extended to include comparisons of various repayment programs. Included are interest-only, balloon, shared appreciation, growing equity, graduated payment and reverse annuity loans, as well as various creative financing of commercial properties. The latter include participating mortgages, convertible mortgages, and mezzanine debt. Featured in the corporate asset management section is the lease/buy decision. Other topics may be addresses based on current events. It is anticipated that guest speakers will be invited where appropriate.

Enforced Prerequisite at Enrollment: FIN 305W or RM 303 or RM 330W
Cross-listed with: FIN 460

RM 470: Real Estate and Capital Markets

3 Credits

Analysis of publicly-traded real estate of both the equity, (REITs) and debt (MBSs) sides. The course also provides international perspectives. FIN 470 / RM 470 Real Estate and Capital Markets (3) The objectives of this course are to expose the student and explore the issues associated with the analysis of "public" ("Wall Street") real estate, including both equities (such as Real Estate Investment Trusts or REITs) and debt vehicles (such as Mortgage-Backed Securities or MBSs). In addition, the course will focus on the increasingly globalization of real estate capital markets as the real estate sector becomes integrated into the

global financial system. The differences between private and public real estate analysis will also be explored, including the suitability of traditional asset pricing models for real estate analysis. Topics include the growing impact of institutional real estate forces on the real estate sector, the use of modern financial economics methods to real estate including the concept of market efficiency, modern portfolio theory applications, market measures of risk and return, the use of option-based models, and other advances. The rise of Wall Street's interest in real estate securities is an important institutional development and serves as the underlying background for the analysis of MBSs using fixed-income security techniques. As globalization has spread, the real estate sector has moved with these changes and prospects for a global real estate market are examined and evaluated. This course serves as a compliment to FIN 460, which emphasizes traditional financial analyses of individual real estate projects. In FIN 470, real estate securities are viewed as a natural extension towards the complete integration of real estate and capital markets. In this sense, these courses will enable traditional and modern analyses of the real estate sector for years to come.

Enforced Prerequisite at Enrollment: FIN 305W or RM 303 or RM 330W
Cross-listed with: FIN 470

RM 475: Quantitative Analysis for Business

3 Credits

This course provides students with working knowledge of some widely used quantitative methods, such as Monte Carlo simulations, t-tests, linear regressions, nonlinear regressions, regressions with dummy variables, and regressions with interacting explanatory variables, as well their applications in business. The course will focus on understanding and applying each method, but not on statistical theory or their proof. Monte Carlo simulations will be used to substitute for mathematical proofs. By the end of the course, students should understand the purposes of the above methods and how to use them to solve real estate, financial, marketing, and risk management problems. Students should also be able to interpret results in ways that are correct, insightful, and useful, should be aware of potential problems of each method, such as the omitted variable bias, multicollinearity, heteroskedasticity of regressions, and should know how to make corrections if these problems are present. Students should also have developed working knowledge of R, which is a programming language and software environment widely used by quantitative analysts. Students should know how to use R to conduct basic data manipulation, do simple Monte Carlo simulations, do t-tests, and run linear and non-linear regressions.

Enforced Prerequisite at Enrollment: SCM 200 or STAT 200
Cross-listed with: FIN 455

RM 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

International Cultures (IL)

Rural Sociology (RSOC)

RSOC 11: Intro Rural Sociology

3 Credits

Basic sociological concepts applied to rural societal institutions and rural communities; causes and consequences of rural social change as applied to domestic and global regions. The objectives of the course are (1) to acquaint students with the fundamental concepts, principles and research methods of rural sociology; and (2) to assist students in applying these concepts and principles to gain an understanding of rural societal institutions and the forces leading to social change in rural America and globally. Lectures and readings are designed to encourage students to examine their assumptions and understanding of the structure and functioning of rural communities, the forces leading to rural social change, and the likely course of these changes in the future. A major objective is to challenge students to critically analyze rural society and rural social institutions from a sociological perspective. Understanding the changing nature of rural society in an increasingly urbanizing and integrated world is a key consideration.

RSOC 400N: Exploring Indigenous Ways of Knowing in Great Lakes Region: Lecture

3 Credits

Exploring Indigenous Ways of Knowing in the Great Lakes Region explores concepts and values distinctive to indigenous ways of knowing (IK) in the Great Lakes Region through readings, video segments, and lectures. Five structural concepts or key themes - local knowledge, relational knowledge, empirical knowledge, spiritual knowledge, and traditional knowledge - provide a conceptual framework for understanding indigenous cultures and knowledge production and their unique contributions to western society in the 21st century. Students will be introduced to the Algonquian cultures of the Great Lakes Region

and to the Ojibwe (Anishinaabeg), Odawa, and Potawatomi (Three Fires) cultures in particular. This course will introduce students to the distinctive ways indigenous people experience, understand, and know the world through their relationship with the land or region to which they belong. Too often, colonizers around the world have ignored indigenous knowledge systems even though these ways of knowing have sustained peoples, cultures, and environments for thousands of generations. Because these ways of knowing are generally preserved and transmitted through stories, music, ceremony, and embodied traditions, they are seldom understood and frequently dismissed by those who control the production of knowledge in the modern world. The knowledge of the indigenous peoples of the Great Lakes region will, in this course, be presented as an empirically grounded scientific body of knowledge and theory comparable and complementary to the European tradition and, in specific ways, enhancing the sustainability of western scientific knowledge and practice. This course is a prerequisite for the Maymester field experience - Exploring Indigenous Ways of Knowing among the Ojibwe CED 401 which offers students an opportunity to experience indigenous ways of knowing by engaging with Ojibwe educators, traditional knowledge holders, elders, and families in several of the three largest Ojibwe reservations in the US.

Study in selected countries of rural social institutions and current rural sociological problems.

International Cultures (IL)

Russian (RUS)

RUS 1: Elementary Russian I

4 Credits

An introduction to the fundamentals of the language and culture with emphasis on communicative proficiency, clarity of pronunciation, and basic skills in reading, writing, and conversation. This course assumes

no prior knowledge of Russian. Students who grew up in a home where Russian was spoken must take a placement interview with the course instructor at least a week prior to the beginning of classes.

Bachelor of Arts: World Language (All)

RUS 2: Elementary Russian II

4 Credits

Continued introduction to the fundamentals of the language and culture with emphasis on communicative proficiency, clarity of pronunciation, and basic skills in reading, writing, and conversation. Students who grew up in a home where Russian was spoken must take a placement interview with the course instructor at least a week prior to the beginning of classes.

Prerequisite: RUS 001

Bachelor of Arts: World Language (All)

RUS 3: Intermediate Russian I

4 Credits

Continued study of grammar and review of basic grammatical structures with emphasis on acquisition of vocabulary and continued development of conversational, writing, and reading skills. Students who grew up in a home where Russian was spoken must take a placement interview with the course instructor at least a week prior to the beginning of classes. Upon successful completion of this course, students are expected to attain Intermediate Low level of speaking proficiency according to the ACTFL guidelines.

Prerequisite: RUS 002

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

RUS 51: Elementary Intensive Russian for Graduate Students I

3 Credits

Intensive introduction to Russian: first half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. RUS 051 Elementary Intensive Russian for Graduate Students I (3) This is the first in a series of three courses designed to give students an intensive introduction to Russian. This is the first half of elementary sequence in reading, writing, speaking, listening, and cultural contexts. Students will learn the Russian vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

Prerequisite: graduate standing

RUS 52: Elementary Intensive Russian for Graduate Students II

3 Credits

Intensive introduction to Russian: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. RUS 052 Elementary Intensive Russian for Graduate Students II (3) This is the second in a series of three courses designed to give students an intensive introduction to Russian. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the Russian vocabulary. Lessons are taught in an authentic cultural context.

Prerequisite: RUS 051 and graduate standing

RUS 53: Intermediate Intensive Russian for Graduate Students

3 Credits

Continued intensive study of Russian at the intermediate level: reading, writing, speaking, listening, cultural contexts. RUS 053 Intermediate Intensive Russian for Graduate Students (3) This is the third in a series of three courses designed to give students an intermediate intensive knowledge of Russian. Continued intensive study of Russian at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

Prerequisite: RUS 052 or equivalent, and graduate standing

RUS 83: First-Year Seminar in Russian

3 Credits

Russia's cultural past and present. RUS 083 First-Year Seminar in Russian (3) (GH; FYS; IL) (BA) Russia, the world's largest country stretching over eleven time zones in Europe and Asia, is currently undergoing a dramatic transformation. For the past hundred years, Russia has served as a laboratory of gigantic dimensions as various social ideals were implemented with unprecedented radicalism. At the same time, Russia's intellectuals raised 'ultimate questions' about social justice, the existence of God, and the meaning of human life with an unparalleled acuity and intensity. This course surveys Russia's cultural past and present and introduces students to the various attitudes of Russian thinkers and authors toward the questions of national identity and national destiny. It could be offered either as a broad overview of general trends and key ideas or as a theme-specific survey. With that said, while the thematic focus may vary from year to year, students will discuss examples of Russian high culture (philosophy, literature, art, music) alongside critical inquiries into daily life in imperial, communist, and post-communist Russia in each iteration of the course. Special emphasis will be placed on the in-depth study of a few seminal works of Russian literature and cinema. In addition to introducing students to the key topics in Russian history and culture, this course will help to prepare them for a variety of additional courses in the fields of literature and Russian/East European area studies. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and to have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests. The course will be taught in English, and no prior knowledge of Russian culture and history is required. Each section of this course will be limited to twenty students who will be instructed by an experienced professor. The classwork will consist of a fusion of lectures, seminar-style discussions, group work, short writing assignments, collaborative group projects, student presentations, and a research project. This course can be used to fulfill the General Education or Bachelor of Arts Humanities requirement, the International Cultures requirement, and the first-year seminar requirement.

RUS 100: Russian Culture and Civilization

3 Credits

RUS 100 Russian Culture and Civilization (3) (GH; IL) (BA). This course meets the Bachelor of Arts degree requirements and is a prescribed course for the Russian major and minor. The course acquaints students with the general contours of Russian culture and civilization from the origins to the recent past. Students will read the story of the Russian people, which includes their ongoing quest for national identity between east and west, their triumphs and tragedies, and their important contributions to world culture. The course surveys history, politics, language, literature, folklore, religion, music, and art. Students will be acquainted with various attitudes of Russian thinkers and authors towards the question of national identity and national destiny. Examples of Russian high culture (philosophy, literature, art, music) and the Russian religious faith (Orthodoxy) are discussed alongside views of daily life. Although the course's focus is on Russian culture and civilization rather than on history, some historical background is necessary to properly understand and interpret the culture. That is why a historical frame is systematically provided. As a General Education course, Russian 100 incorporates the following four elements of active learning: international competence (which is inherent to the subject matter), information gathering and analysis, active use of writing, and dialogue pertaining to social behavior, community, and scholarly conduct, which will be provoked by the reading material. A knowledge of Russian is not required, as class lectures and discussions, as well as all additional readings, are in English. The course materials include weekly lectures designed as multimedia presentations, readings assigned through the Penn State Libraries electronic reserve system, and some films.

RUS 101N: Russian Cinema

3 Credits

RUS 101N Russian Cinema (3) (GH; GA; IL). From the beginning, cinema has been an intersection of technology, art, entertainment, industry, commerce, politics, and more. The course acquaints students with major filmmakers who shaped Russian cinema over the 20th century and beyond. The course surveys Russian cinema from its beginnings to the present, with emphasis on historical, political, and cultural contexts. Russian cinema is defined as feature films and documentaries produced in pre-revolutionary Russia, as well as in the Soviet Union and post-Soviet Russia. The course will chronologically overview the developments in Russian film mapping these onto major historical events and artistic and cultural trends. It will also introduce students to fundamental concepts

and terminology for film analysis. The course is taught exclusively in English; neither prior knowledge of Russian history and culture nor of film history and terminology is required. To preserve as much authenticity as possible, all movies will be viewed in Russian with English subtitles. Films will cover different genres, such as melodrama, historical film, screen adaptation of literary comedy, propaganda film, and documentary. Readings will provide a historical perspective and acquaint students with classical writings by filmmakers and theorists. Short papers and/or presentations will provide students with opportunities for personal research and active use of writing. The course is designed to satisfy General Education Inter-Domain course requirements as a GH (General Humanities), as a GA (General Arts), and as an IL (International Cultures) course.

RUS 110: Russian Folklore

3 Credits

Study of byliny, lyrical and historical songs, folktales, drama, ceremonial poetry, chants, charms, proverbs, and mythology of Russia. In English. RUS 110 Russian Folklore (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Russian 110 is a general survey of Russian folklore for English-speaking students. It concerns itself not with the aristocratic and intelligentsia culture of Russia, but with the rites of passage, agricultural ceremonies, beliefs, legends, folktales, and epics of the Russian peasants, most of whom were illiterate. Students are evaluated on the basis of three examinations (half short-answer and half essay), a legend collecting project, and a final. The legend project requires students to collect a legend or tale (usually from the American tradition), evaluate it against folklore indices, present it to the other students, and write it up. Russian 110 may be counted toward the major in Russian Translation (BS). It may also be used to fulfill General Education Humanities and International/Intercultural Competency requirements. This course will be offered once a year with 50 seats per offering.

Bachelor of Arts: Humanities
 International Cultures (IL)
 Writing Across the Curriculum

RUS 143: The Culture of Stalinism and Nazism

3 Credits

This course, which is cross-listed between Russian and German, aims to acquaint students with an important and troubling chapter of 20th-century culture. The regimes of Stalin and Hitler have had a decisive impact not only on life in Russia and Germany, but in much of Europe and the world at large. There is no consensus among scholars about how to classify these systems, whether the term "totalitarian" is appropriate to describe them, and whether Stalinist Russia and Nazi Germany are essentially similar or essentially different historical phenomena. Espousing a comparative perspective, this course explores the culture produced by Stalinist Russia and Nazi Germany, taking into account both the culture of daily life and selected works of "high culture," including literature, the visual arts, architecture, music, and film. The ideological underpinnings of both systems will be discussed and compared. The classics of Stalinist Socialist Realism and Nazi propaganda will be analyzed both as political statements and works of art. The course will also include a reading of authors who attempted to create critical representations of life in Stalinist and Nazi societies, such as Lydia Chukovskaya, Varlam Shalamov, Primo Levi, and George Orwell. The course is designed to be suitable for all students generally interested in Russian and/or German culture, or interested in various fields of humanistic study, whether or not they have previously studied the culture of Russia or Germany. A knowledge of Russian or German is not required, as class lectures and discussions as well as all reading assignments will be in English. This course is designed to count as General Education, as a GH "Humanities," and as an IL "International Cultures" course. It meets the BA requirements in the humanities by asking students to demonstrate competence in 20th-century German and Russian history, political philosophy, literature, art and film.

RUS 144: Multicultural Russia: Narratives of Race and Ethnicity in Russian Literature and Culture

3 Credits

RUS 144 Multicultural Russia: Narratives of Race and Ethnicity in Russian Literature and Culture (3) (GH, IL). Despite media's renewed attention to Russia's domestic and foreign affairs, the fact that Russia-a gigantic land mass stretching all the way from Finland to the Sea of Japan-is, even today, not really a "nation" but an "empire," encompassing peoples of many different ethnic, racial, linguistic, and religious backgrounds,

remains a little known fact for the American audience. According to a 2005 report by the Council of Europe Commissioner for Human Rights, more than 170 distinct ethnic groups live within the borders of the Russian Federation. For most of the past two centuries, this empire was even larger and more diverse. While, inside the Soviet Union, this diversity was often celebrated as proof of the "friendship of peoples" underlying the Communist state. In the 1920s and the early 1930s, the Soviet authorities promoted the voices, literatures, and cultures of the empire's ethnic and national minorities, as long as they were "national in form" but "socialist in content." Once the survival of the new state was secured, the so-called Soviet "nationalization" campaign was brought to a stop and even reversed in some cases, resulting in silencing of numerous treasures of world literature that offer invaluable glimpses into the lives of an ethnically, geographically, and culturally diverse range of peoples, who identify today as Russian citizens. This course explores the major works by authors representing many ethnic minorities in the territory of modern Russia, as well as works by writers from former Russian and Soviet colonies, such as Ukraine, Georgia, Armenia, Uzbekistan, and Kyrgyzstan. Special attention is also paid to Jewish experience and Russia's encounters with Africa and Africans. Focusing on five major regions-Ukraine, the Caucasus, Central Asia, the Far East, and Africa-the course analyzes primary texts for their rhetorical and poetic effects, the historical and political contexts in which literary discourses surrounding questions of ethnicity, culture, and race develop, and the conditions under which they are marketed to, or suppressed from, different groups of readers. Where applicable, the primary readings are supplemented with short selections from the scholarly literature on theories of race and ethnicity, human rights, colonialism, Russian/Soviet nationality policies, and the politics of censorship and literacy under Communism. The course is taught in English and requires no prior knowledge of Russian culture and history. It offers a variety of class activities - lectures, screenings, guided discussions, group work, and student presentations - and incorporates several elements of active learning - information gathering and analysis, active use of writing, and oral presentations and modeling demonstrations - to help students develop and apply actively their critical thinking and close reading skills. This course fulfills the General Humanities requirement and is designated as an International Cultures course.

RUS 145: Putin's Russia and Its Protest Culture

3 Credits

RUS 145 Putin's Russia and Its Protest Culture (3) (GH, IL). The collapse of the Soviet Union in 1991 caught most observers by surprise and has led Russia on a path of political, economic, and cultural liberalization of an unprecedented scope. But despite the initial excitement, post-Soviet Russia has emerged as a state characterized by authoritarianism and crony capitalism. How so? Why did Russia's political and economic transition fail to produce the intended results? What are the factors that gave rise to and sustained Vladimir Putin's regime? What are its key pillars and contradictions? What is the Russian people's response to Putinism, its punitive domestic politics, and its aggressive posture toward Russia's neighbors and the West? This course seeks to answer these questions by examining the relationship between individuals and

the state in present-day Russia. Designed as a comprehensive overview of major events and most prominent voices in Putin's Russia that have influenced and continue to influence contemporary Russian culture and politics, this course aims at providing students with an opportunity to evaluate critically a set of creative and analytical works produced in Putin's Russia by representative writers, filmmakers, visual artists, journalists, political observers, human rights activists, and cultural critics from both aesthetic and ethical points of view. Particular attention is paid to Putin's solidification of power, the Second Russo-Chechen War, Putin's prosecution of the oligarchs and political dissent, Russia's state-sponsored disinformation offensive and its global ramifications, as well as their deliberations in arts and public discourse. The course is taught in English and requires no prior knowledge of Russian culture and history. Its classwork consists of lectures, screenings, guided discussions, group work, short quizzes, student presentations and incorporates the following elements of active learning: information gathering and analysis, oral presentations, and active use of writing. The course fulfills the General Humanities requirement and is designated as an International Cultures course.

RUS 214: Intermediate Russian III

4 Credits

Intensive practice of Russian reading, writing, listening and speaking; review of Russian grammar. RUS 214 Intermediate Russian III (4) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course will provide intensive Russian language training at the intermediate level, stressing the four skills of reading, writing, listening, and speaking. Together with its companion course, Russian 204, the course will provide a complete review of Russian grammar. It will include a discussion of participles and verbal adverbs, verbs of motion, and problems of Russian syntax in conjunction with conversation practice and writing assignments. Russian 214 will be a required course for Russian majors. It can be taken before or after Russian 204 (which will also be required). Grading will be based on regular written tests and a final exam that will include an oral component. Students will be encouraged to use the new language training equipment available at Sparks Building.

RUS 401: Advanced Russian I

4 Credits

Advanced practicum in conversation, reading, and composition. This course is designed as a transition from Intermediate to Advanced level of speaking proficiency. It is taught in Russian and covers topics in grammar in the context of the spoken and written language. Emphasis is placed on verbal morphology, simple and complex sentence structures. Short readings will include original or adapted texts covering a variety of genres and topics. Quizzes, tests, class discussions, individual and small group presentations, short descriptive and expository essays, and internet-based assignments that address current events and illustrate different linguistic usage will be essential means to explore the subject matter and assess students' progress. The course also aims to increase the students' understanding of Russian culture and the Russian way of life. This course meets the BA and IL requirements. Students must take RUS 200 prior to RUS 401 or receive permission of the program.

Prerequisite: RUS 200

Bachelor of Arts: World Lang (12th Unit)

Bachelor of Arts: Humanities

International Cultures (IL)
Exceeds 12th Unit of World Language

RUS 402: Advanced Russian II

3 Credits

Advanced practicum in reading, writing, and conversation. RUS 402 (IL) builds on and expands the language competence acquired in Russian 200 and 401 and is taught entirely in Russian to ensure complete immersion. Students will work with a variety of texts and audio-visual materials on topics of general interest. Upon successful completion of the course, students will acquire basic competence in representing points of view other than their own, defending an argument, and hypothesizing on a more abstract level. The course also aims to increase the students' understanding of Russian culture and the Russian way of life.

Prerequisite: RUS 401; or Permission of program
Bachelor of Arts: Humanities

RUS 403: Advanced Russian Conversation and Composition

3 Credits

Advanced practicum in conversation and composition. RUS 403 (BA) (IL) includes situational topics and complex academic discourse and is designed to enhance students' oral, listening comprehension, and writing skills in Russian. It is taught entirely in Russian to ensure complete immersion. Students will work with authentic Russian texts and audio-video materials of moderate complexity in various genres and will actively engage in conversations and discussions on a number of topics of personal, community, national, or international interest: current events, culture, history, the arts, and politics. They will gain sufficient control of basic structures and generic vocabulary to be understood by native speakers of the language, including those unaccustomed to nonnative speech. Upon successful completion of the course, students will acquire basic competence in representing points of view other than their own, defending an argument, and hypothesizing on a more abstract level. The course also aims to increase the students' understanding of Russian culture and the Russian way of life.

Prerequisite: RUS 200 or permission of program; Concurrent: RUS 400, RUS 401, RUS 402, RUS 405, RUS 412
Bachelor of Arts: Humanities
International Cultures (IL)

RUS 404: Advanced Reading and Composition

3 Credits

Advanced Russian Reading and Composition. RUS 404 Advanced Reading and Composition (3) RUS 404 focuses on reading and writing in Russian. Some time is spent on reading strategies, methods of building a working Russian vocabulary, sentence structure, and word order. Reading materials are at the advanced level and for the most part treat the history of the Russian Revolution and Civil War, the Stalinist era and the Thaw. Literary selections complement the historical readings and include works of Blok, Akhmatova, Zoshchenko, Bulgakov and Solzhenitsyn.

Prerequisite: RUS 401, RUS 402, or RUS 403

RUS 405: Seminar in Russian Literature

3-6 Credits/Maximum of 6

Readings in classical Russian literature; Topics vary. RUS 405 Seminar in Russian Literature (3 per semester/maximum of 6) (IL) In no other culture has literature attained the centrality it enjoyed in nineteenth- and twentieth-century Russia. Political, social and historical constraints propelled Russian writers into figures of witness, prophecy and moral instruction. Yet far from being limited to the vast, dark novels of legend, Russian literature offers a great deal of variety, including much humor, lyricism and fantasy. Russian 405 is a senior-level seminar devoted to the in-depth study of selected texts of classical nineteenth- and twentieth-century Russian literature. It presupposes a solid reading knowledge of Russian. The choice of authors and texts will vary from one year to the next. Writers discussed on a regular basis will include such major figures as Alexander Pushkin, Mikhail Lermontov, Nikolai Gogol, Ivan Turgenev, Fyodor Dostoevsky, Lev Tolstoy, Anton Chekhov, as well as selected writers from the Soviet and post-Soviet period. The thematic emphasis will vary from one year to the next. The focus may be on the oeuvre of a single writer, on the development of a particular genre (e.g., lyric poetry or the short story), on a particular time period (e.g., the so-called "Silver Age" at the beginning of the twentieth century), or a particular theme (e.g., the conflict between liberalism vs. radicalism, the "woman question," the role of religion, Russia vs. the West, Russian "Orientalism," the Communist Revolution and its discontents, etc.). The literary texts will be read in Russian. They will be analyzed both in their socio-historical context and as aesthetically compelling manifestations of verbal art. Explorative analytical writing and class discussion will be essential means to explore the subject matter.

Prerequisites: RUS 401 or Permission of program
International Cultures (IL)

RUS 406: Russian Film

3 Credits

Conversation and Composition based on classical Russian films. RUS 406 Russian Film (3) (IL) Taught in Russian, this course offers an overview of the development of the film industry in the USSR/Russia within its historical context: from the silent classics of the Soviet Golden Age, to the mass entertainment movies of Socialist Realism, the new-wave productions of the cultural thaw of the 60s, the popular genres of the 'stagnating' 70s, the liberated films of the glasnost period, and the most recent movies reflecting Russia's difficult economic transition. Russian cinema will be discussed as an index of sociopolitical trends over the years, as well as a medium in its own right. Therefore, attention will be devoted to historical turning points that affected the cultural policies of the Soviet Union, and consequently the styles, themes, and quality of filmmaking. At the same time, the course will consider the film as text, and analyze the feelings it stirs, the moods it evokes, and the ideological message it conveys. To this end, the course will cover the basic elements and techniques of film language (shots, montage, mise en scene, etc.) and the process of visual perception that affects the audience.

Prerequisite: RUS 401, RUS 402, or RUS 403
International Cultures (IL)

RUS 410: Heritage Russian

4 Credits

Introductory course for heritage speakers aiming at developing basic reading, writing, and grammar skills in Russian. The course is intended for students who grew up speaking Russian at home but had minimum exposure to writing and reading. Study materials include simple original readings (fairy tales, short stories, poems, songs) and visual and multimedia texts. The course is designed to enhance the students' knowledge and understanding of Russian culture and increase their awareness of their own complex cultural identity.

Prerequisite: basic speaking proficiency in Russian; placement test and consent of instructor

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

Bachelor of Arts: Humanities

International Cultures (IL)

Exceeds 12th Unit of World Language

RUS 412: Russian Translation

3 Credits/Maximum of 6

Translation from Russian into English of complex texts from the humanities, social sciences, and technical fields.

Prerequisite: 9 credits of Russian at the 200 level or higher

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

Bachelor of Arts: Humanities

International Cultures (IL)

Exceeds 12th Unit of World Language

RUS 414: Advanced Grammar and Linguistic Analysis of Contemporary Russian

3 Credits

In-depth study of selected grammar topics pertaining to the phonology, morphology, and syntax of Modern Standard Russian with glimpses into the history of the Russian language. The course aims to both enhance students' understanding of linguistic structures in general and at improving their proficiency in Russian.

Prerequisites: RUS 401, and RUS 402; or RUS 403; or Permission of program

Bachelor of Arts: Humanities

International Cultures (IL)

RUS 420: Senior Seminar in Russian Culture

3 Credits

Senior seminar devoted to topics in Russian culture and conducted in Russian. Building on linguistic and cultural material covered in the second and third levels of study toward the Russian major, this course is designed to add depth and sophistication to the students' understanding of basic concepts in Russian culture and improve their ability to discuss and write about them in Russian. The course materials cover, selectively, the "big themes" and concepts of Russian culture, such as the legacy of Kievan Rus, the cultural/historical preconditions for the 'Third Rome' theory, the rift between the people and the upper classes following Peter the Great, Westernizers versus Slavophiles, the Bolshevik Revolution, the Stalinist terror, WWII, the Thaw, Stagnation, Perestroika, and Putinism.

Study materials include texts from a wide variety of genres and reflect a diversity of linguistic styles. They may incorporate passages from the ancient chronicles, folk legends, memoirs and autobiographies, as well as selections from historical and literary texts and films. Major artistic movements are considered in their connection to the respective historic period and their reception today. Students will also engage in brief weekly current events presentations. Frequent quizzes, participation in discussions, presentations, and research projects will be essential means to explore the subject matter and assess the students' progress. Students must complete RUS 100, RUS 401, and RUS 402 or RUS 403 prior to RUS 420 or receive permission of the program.

Prerequisites: RUS 100, RUS 401, RUS 402; RUS 403 Corequisites: 7th Semester standing or Permission of program

Bachelor of Arts: Humanities

International Cultures (IL)

RUS 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

RUS 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

Honors

RUS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

RUS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

RUS 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities

International Cultures (IL)

School of Science Engineering and Technology (SSET)

SSET 295: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, individual training including practical field experiences or internships where written and oral critique of the activity is required. SSET 295 Internship (1-18) The objectives of the Penn State Harrisburg, Capital College Internship Program are to: ♦ Attract and retain capable students to pursue their educational and career goals in mathematics, engineering, engineering technology, and the sciences, ♦ Connect students with professionals who practice engineering, mathematics, technical, and science skills daily, ♦ Establish mentoring programs to break down the barriers between student learners and practicing professionals, ♦ Create service learning and internship experiences designed to reinforce classroom learning in technical and theoretical subjects, ♦ ♦ Retain students in the College and in the region by developing a seamless transition from the academy to the workplace. The instructional and cooperative arrangements with business and industry will begin early, will be sustained throughout the four-year educational program, and will be supported by strong partnerships linking educational, business, industrial, and the intellectual communities in operative regional networks. Cooperation, collaboration, and a commitment to the future of the profession are essential if the 'brain drain' is to be reversed in this region. Another aspect of the internship program is to assist students in finding career-related, temporary employment opportunities, and to provide support and training for such positions while pursuing their education at Penn State Harrisburg, Capital College. The Internship Program will be administered by the School of Science, Engineering, and Technology. The staff is versed in handling student/employer relations and handles student orientations, resume/job listing database management, interview schedules, registration, evaluations, and final reports. Students who utilize the Internship Program in any way will be required to register for courses applicable to each program. The course credits may range from one to three depending upon the particular program requirements. The utilization or substitution of internship credits to meet degree requirements is strictly a program decision. This course requires that students submit a report that is of professional quality, concise, and focused on answering the provided questions. It must be typed in 12-point font and double-spaced. Students will be assigned either an SA (satisfactory) or UN (unsatisfactory) grade based on their reports and employer evaluations. The original report, portfolio, and evaluation forms are due on the last day of instruction for the semester or session. The grading will be based on the following criteria: 20% Internship Plan 20% Portfolio 20% Final Report 40% Employer Evaluation No special on-campus facilities are required for the course. The course will be offered every semester including the summer session.

Prerequisite: prior approval of the proposed assignment by the program

SSET 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, individual training including practical field experiences or internships where written and oral critique of the activity is required. SSET 395 Internship (1-18) The objectives of the Penn State Harrisburg, Capital College Internship Program are to: ♦ Attract and retain capable students to pursue their educational and career goals in

mathematics, engineering, engineering technology, and the sciences, ♦ Connect students with professionals who practice engineering, mathematics, technical, and science skills daily, ♦ Establish mentoring programs to break down the barriers between student learners and practicing professionals, ♦ Create service learning and internship experiences designed to reinforce classroom learning in technical and theoretical subjects, ♦ ♦ Retain students in the College and in the region by developing a seamless transition from the academy to the workplace. The instructional and cooperative arrangements with business and industry will begin early, will be sustained throughout the four-year educational program, and will be supported by strong partnerships linking educational, business, industrial, and the intellectual communities in operative regional networks. The course will be offered every semester including the summer session.

Prerequisite: prior approval of the proposed assignment by the program

School Psychology (SPSY)

SPSY 472: Human Development, Health, & Education From A Global Perspective

3 Credits/Maximum of 3

Intended to address the University's global community objectives and provide scholarly background on human development in other cultures.

Prerequisites: PSYCH 110
Cross-listed with: PSYCH 472
International Cultures (IL)

SPSY 472H: Human Development, Health, & Education From A Global Perspective

3 Credits/Maximum of 3

Intended to address the University's global community objectives and provide scholarly background on India for Schreyer Honors students.

Prerequisite: PSYCH100H
Cross-listed with: PSYCH 472H
International Cultures (IL)

SPSY 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

SPSY 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Science (SC)

SC 60N: Art in the Natural World

3 Credits

This course will foster appreciation of art and the natural world through exploration of the flora, fauna, geology, and water systems. Students will use scientific and artistic observation skills to understand, relate, and respond to connections in nature. Students will learn how to identify species in the field and gain a base knowledge of natural history. Students will develop observational skills and a deeper awareness of their natural surroundings through scientific observation, visual expressions, and writing responses. Using a common visual language, utilizing the elements and principles of design, students will begin to develop an aesthetic awareness through observational collecting. Nature presents an installation ready to analyze, deepening the students' natural curiosity and ability to make connections. Most course work will be in the field and will include use of tools such as binoculars, microscopes, cameras, and sketchbooks. Goals for this course will include enhancing effective communication and critical and creative thinking. Students will use visual, oral, and written communication to express their observations of the natural world. Critical and creative thinking will be used to analyze and synthesize observations to develop independent research projects and presentations.

General Education - Integrative: Interdomain

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

SC 100: Introduction to Research

1 Credits

Introduces essential elements of laboratory safety, laboratory techniques, research ethics, and scientific communication skills. Especially for undergraduate research students. SC 100 Introduction to Research (1) The main objective of the course is to prepare students for a fulfilling and successful learning experience in the research laboratory. Students who engage in undergraduate research often continue to project for four to six semesters. This course provides students with the necessary introductory information to the undergraduate research experience so that the entire experience is more satisfying and productive for the students. A corollary goal is to introduce research students to other, like-minded students. Several in-class activities will involve group work combined with an explicit discussion of productive group dynamics. The course will cover four major issues associated with a sustained research project: safety, techniques, ethics, and communication. The course will make students more cognizant of the importance of each of these areas and will provide justification for the importance of each activity in the research enterprise. Students will be evaluated via a series of assignments in which the students reflect on the components of each

area and the importance of that area to the continuation of scientific knowledge. Students will be quizzed on safe laboratory practices, usually with a laboratory practical on safety. Students will be assessed on the satisfactory performance common laboratory techniques such as using a pipette, using an analytical balance, using a power source, and proper handling of large equipment like super speed centrifuges. Ethics will be assessed via assignments that require students to contemplate a variety of ethical issues. As part of ethical conduct students will be expected to learn the proper composition of a laboratory notebook. The notebook will provide a segue between ethics and communication skills. Students will examine several recent scientific research articles and discuss the way in which the article is written. They will be assessed on their ability to summarize and critique the article in writing. A book on scientific writing could be assigned for this portion of the course because a student would find use of such a resource as they progress on an independent research project. The laboratory technicians or laboratory managers might assist the faculty member who is teaching the course.

SC 101: Job Placement Skills and Strategies

1 Credits

Strategies and skills designed to identify career/life goals and implement career decisions.

Cross-listed with: AG 100

SC 103N: When Data Meets Design

3 Credits

The student will become an effective generator and consumer of the data visualizations that saturate public and professional discourse. The student will examine the rules of design and how they can be used to construct compelling visualizations of data. The student will use this knowledge to critique data visualizations from the media and their peers. The student will produce data visualizations of their own using data sets that they generate and analyze. Though the focus throughout the course will be on natural science, we will also consider data relevant to areas such as business, science, history, education, and politics. The student will emerge from this course with an appreciation of how data visualizations influence their life, as well as the skill set to craft persuasive visualizations to support issues of interest to them. For the purposes of this course no prior knowledge is assumed in science, data handling, or design. We will build the knowledge and vocabulary needed in order to pair these two domains and equip you with a lifelong tool for creating persuasive data-driven explanations.

Enforced Prerequisite at Enrollment: Completion or placement beyond MATH 21.

GenEd Learning Objective: Integrative Thinking

SC 120N: Plants, Places, and People

3 Credits

Students learn about plants from the perspective of sustainability, agriculture, food, genetics, textiles, and medicine, across history and

around the globe, after spending a few weeks learning about basic plant biology. Students engage with a group project in collaboration with other students to deepen their understanding and appreciation of plant biological and historical connections with human civilization. Students share these projects with the class in a peer-teaching and learning exercise in the final weeks of class.

SC 125N: History of Infectious Disease and Epidemiology

3 Credits

Infectious diseases once thought to be nearly eradicated have seen a resurgence in recent years. The majority of the cases arose from people who deliberately chose not to vaccinate their children against these disease. Even in the twenty-first century the nature of disease and how to prevent it is not merely a matter of science, but an issue laden with cultural, political, and religious concerns. This course charts the history of disease both as a subject of scientific inquiry and a cultural and religious phenomenon. We will begin with early Greek and Egyptian attempts to understand disease as a foreign entity attacking the body and end in the twenty-first century with current ideas surrounding the use of antibiotics, vaccines, and emerging threats throughout the world. Along the way we will discuss the impact of significant epidemics - for example, Bubonic Plague, Syphilis, and Influenza - as well as changing scientific thinking of both how to deal with disease and how to understand the natural world. In tandem with the historical background key scientific ideas necessary for studying disease - including current understanding of the microbial world, microscopy techniques, and modern gene theory - will be presented to the students through classroom instruction and virtual laboratories.

SC 135N: Society and Disease Management

3 Credits

Society and Disease Management is an interdisciplinary general education course to educate students in the biological mechanisms of diseases, treatment of individual patients, and how disease burden is managed within communities. In addition to studying how infectious diseases spread through populations, societal impacts and global health approaches to managing disease interventions will be examined. Foundations of this course include the basics of the human immune

system, development of vaccines and antibiotics, emergence of drug resistant diseases, as well as applications from economics, systems theory, and health policy. Specific diseases will be examined within a historical context leading to a survey of present day concerns relating to treatments, and then explore issues regarding future methods to control or eradicate disease. This longitudinal approach will provide students with a full awareness of disease management from its beginnings, to both early and modern treatment methods, culminating in how to potentially combat a disease using advances in genomic medicine and biotechnology all within the cultural framework of a community.

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

SC 142N: Science in Literature

3 Credits

The course explores two streams in parallel. Students will examine selected historic landmarks in science (e.g. evolution, atomic energy/ weapons, climate change, biotechnology), with a focus on common misconceptions about the facts and practice of science. The course will also examine the development of literary and popular portrayals of science and scientists in their political, economic, social and cultural contexts, paired to these particular scientific developments. By considering past and current scientific problems, students will refine their quantitative and analytical skills. By considering scientific writing, novels, short stories, graphic novels, cinema, poetry, and other forms, students will refine their critical and reflective writing and speaking about both the rhetorical and discursive practices of science writing, and the social and cultural impact of literature in popular understandings of science.

SC 145N: The Visual Body

3 Credits

This course uses the field of anatomical illustration to explore the history of medicine and our understanding of the human body. Charting the influence of visual art and imaging systems as essential aspects of medicine, this survey of art and historical imagery connects the study of human anatomy with principles of visual literacy and design. In addition to researching historical publications through writing and discussions, students will produce a research portfolio based on illustrations examined in the course. Lab activities with human cadavers will help students learn the basics of human anatomy within a historical context. No fine arts skills are required to take this course: only an enthusiasm for the study of human anatomy and its visual history. Scientific research is often concerned with a constant progress toward future discoveries - but it is vital to understand the research and discoveries that came before our

time. For medicine, this history is uniquely linked to the evolution of art, printing technology, and education. Any scientist would be well served by some knowledge of art and design. Experiments rarely change the world on their own, and much can be gained and lost in the communication of their results. But anatomy is especially reliant on images and illustrations (even after the invention of photography). In order to explore the unique relationship between medical discovery and art history, we have designed this course to be a space for interdisciplinary research. Co-taught by an artist and an anatomist, we will take advantage of an on-site cadaver lab and digital media resources to reimagine the history course as a site of discovery, design, and discussion.

SC 183Q: From Beast Books to Resurrecting Dinosaurs

3 Credits

In this honors course, we'll explore changing perspectives on life and approaches to studying life. More specifically, we'll examine, through an historical lens, humankind's quest to describe and explain and, ultimately, to expand the diversity of the living world. We begin with early attempts to classify living things for example, Aristotle and Pliny. We then see how medieval bestiaries appropriated classical ideas about nature while adding to them in the context of Christian historia. In the Enlightenment, Linnaeus's taxonomic work provided a new way of naming and systematizing organisms. On the other hand, the nascent scientific methods of Sir Francis Bacon anticipate the shift from the descriptive to the theoretical and mechanistic that accompanied Darwin's first sketch of a phylogenetic tree and the theory of evolution. We consider new theories, methods, and language in our examination of Watson and Crick and the double helix, molecular biology, and genomics. The course concludes with a glimpse at future possibilities enabled by what was studied previously in the course: genetic engineering, synthetic biology, and de-extinction. The course's original structure offers the experiential engagement of the sciences through laboratory experiments and fieldwork along with the workshop and directed discussions characteristic of the humanities seminar. The content and type of "readings" also reflect both areas and include primary and secondary sources in a variety of media. A visit to a natural history museum and/or zoo provides important physical contexts where students learn about type specimens, live specimens, and how scientists today use collections. They will assemble and curate their own zoological collection, juxtaposing various approaches to describing and classifying animals. The integration of the humanities and the sciences into a single course, along with the incorporation of significant experiential work, helps students gain a broad and deep understanding of and appreciation for each of these intellectual disciplines and for life itself.

SC 200: Science in Our World: Certainty and Controversy

3 Credits

A science appreciation course, aimed at making non-scientists more informed consumers of science. Science is frequently in the news. That's because it affects our everyday lives, shapes our view of the world and our place in it, and will have a profound impact on our future. This course teaches an appreciation of science and scientific thinking. It is aimed at making non-scientists more informed consumers of science by improving their ability to distinguish good science from bad science, and science from non-science. Students will be evaluated in part on their analysis of news stories that appear during the course of the semester. The course assumes no background knowledge. It is not for future scientists. Content is delivered by case studies of controversies within science and/or the public domain, some of which are resolved, some of which are not. These case studies will vary by semester and instructor. The course illustrates general principles of science by studying arguments now largely resolved, but which still resonate, such as child health and IQ, smoking, and why the peacock has such a ridiculous tail. The course will also examine unresolved scientific controversies which might include personalized genetic medicine, passive smoking, nanotechnology, the effects of gun laws on violence and suicide, or deer management in Pennsylvania. The course will also evaluate unresolved scientific issues in the contemporary media: why it is in the news, what are the scientists involved actually doing and arguing about, and how is the media handling the science? The course will include an analysis of media reaction to a scientific paper published by PSU faculty. The course will discuss paradigm shifts which have occurred during the students' lifetimes, particularly those involving our view of ourselves and our universe, and include speculation on the paradigm shifts that could occur in the next twenty years. The course will draw on experts from within and outside of PSU. Throughout, the focus is on the nature of the debates, looking at how scientists evaluate problems, and why that can generate controversy within science and beyond science-but at the same time, generate trustworthy knowledge which profoundly affects our well being and our understanding of ourselves.

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

SC 201: Medical Professions

1 Credits

Learn about the different medical professions and related subjects. SC 201 Medical Professions (1) The purpose of this course is to provide students with general information on the different health professions and various related subjects as potential career options. Many students come to the university with an interest in pursuing a health profession but do not have a clear idea of what kind of work is involved in the particular profession of their choice. Moreover, students often are not aware that there are other health career options available. This one-credit course is targeted to all students that have a general interest in health and science, and may include students in the following majors: premedicine, science, biology, chemistry, biochemistry and molecular biology, forensic science, nursing, kinesiology, nutrition, and biobehavioral health. Some of the professions discussed are: allopathic and osteopathic medicine, physical therapy, occupational therapy, physician assistant, nurse practitioner, dentistry, maxillo-facial surgery, optometry, audiology, genetic

counseling, nursing, podiatry, and pharmacy. In addition to describing the professions, time is spent talking about academic preparation for specific professions and the application process for admission to health profession schools. Furthermore, the nature of various health profession training programs are described, as well as how students obtain tuition funds for payment of such programs. One week's topic generally focuses on health profession training outside the United States (e.g., foreign medical schools). This course is structured as a seminar course; all lectures are given by invited speakers. The speakers talk about the profession in general and may give specific information about the particular school they attend or currently work at. Students are encouraged to ask questions about the health careers and also to interact with the speakers after the class, where they might ask specific questions pertaining to their suitability as an applicant. The course will meet in the evenings, for one hour, one day a week, for 15 weeks. The students that enroll in this course receive a satisfactory or unsatisfactory grade based on attendance only (there are no exams, quizzes or written reports). Students may miss up to three classes during the fifteen week session. Therefore, students that attend twelve of the fifteen lectures will receive a satisfactory grade. If a student needs to miss class due to an evening exam, they will need to fill out an Excused Absence Form, which can be obtained from the instructor (no other activities are excusable except for athletic competitions for students in varsity teams).

SC 205N: BS: Identifying Bias and Falsehood

3 Credits

The course will consider the ways statements are used for aims other than to convey accurate information. This disregard for truth results in the increasingly difficult task of identifying bias and falsehood in the age of information. There are three areas most corrosive to knowledge: language, science, and statistics. The course will examine the appeal of rhetorical arguments and the role of bias in assessing claims; various ways evidence fails to support a conclusion; and the manipulation of data to make information appear more compelling than it is. Students will learn to evaluate the truth of arguments based on philosophical and scientific criteria, and use a variety of skills to identify bias and falsehood in the media.

SC 210: Sophomore Science Seminar

2 Credits

Covers topics related to success in upper level courses including critical thinking, library resources, reading primary literature, and communication skills. SC 210 Sophomore Science Seminar (2) The main objective of this course is to serve as a bridge between the first two years of a science program and the last two years. Sophomore students need to understand that upper-level coursework in the sciences requires higher order cognitive skills as well as an intellectual maturity that enables the student to meet the challenge of upper level coursework. Students also require an ability to access the multitude of scientific information available on the web and in library databases therefore students will be

expected to demonstrate their ability to retrieve information. Sophomore students are faced with many exciting possibilities that they should be aware of including undergraduate research and cooperative education. This course will enable students to make more informed decisions about how to best structure their own educational needs while meeting the demands of upper level coursework. Students will be assessed via a variety of methods including participation in discussion, actively seeking information from seminar guest speakers (in the form of questions), written reports (interview with faculty member, summary of scientific article, synthesis of newspaper reports about recent discoveries, individually selected research topic), and oral presentations (critique of recent science information in newspapers, independent topic, interview with faculty member).

SC 220: Principles and Strategies for Effective STEM Learning I

1 Credits/Maximum of 1

This course is designed to prepare undergraduate peer-learning mentors for their role in facilitating student centered learning activities. This course is designed to prepare peer-learning mentors for their role in facilitating student centered learning activities. The course content includes a blend of strategies for effective teaching and learning coupled with the opportunity to practice strategies of effective mentorship and feedback to peers and faculty. Through selected readings and course discussions students are introduced to the basic tenants of learning: the role of prior knowledge, the organization of knowledge into networks, the role motivation plays in learning, tools for the development of gaining mastery, effective practice and feedback, the importance of course climate, and the role metacognition plays in achieving self-regulated learning. Each of these topics is covered in one of the seven class periods. The students who have completed this course will be able to understand: - How prior knowledge affects learning and suggest alternate examples to help peers see the information through another perspective - How the organization of knowledge affects long term learning and share with peers the knowledge networks most commonly utilized in STEM disciplines - Factors that motivate student learning and apply this knowledge to assist faculty in motivating student engagement - How students develop mastery and assist peers to engage in activities that promote mastery through directed practice - How practice and feedback enhance learning and provide effective feedback when working with their peers - How course climate affects learning and provide faculty with valuable feedback in regard to the climate of their course learning spaces - How learners develop stronger metacognitive skills to be able to reflect on their own learning experiences and share this with their peers. Student mastery of the material is typically assessed through weekly written reflection assignments based on the readings and in class discussions. These reflections are graded and feedback is provided to assist students in growth in becoming effective learning facilitators. A final reflection assignment is typically given in which the students are asked to describe how these course topics will be put to use in the assignment as a learning assistant.

SC 240: Learning Assistant Experience

1-2 Credits/Maximum of 8

This course is experiential training in facilitating collaborative active learning in science. The students in this experiential learning course are selected by the course instructors to participate as a part of their instructional team to facilitate active learning activities in their classroom and or laboratory courses. Students engaged in this experience must have demonstrated mastery of the course material covered in the

course they are facilitating. These students encourage and guide group work, lead problem solving sessions, and provide faculty with student feedback. They are required to attend all laboratory or course sessions as well as attend weekly team meetings to debrief on the week's activities and prepare for upcoming activities.

Enforced Prerequisite Concurrent at Enrollment: SC 220

SC 290: Renewable Energy in Costa Rica

3 Credits/Maximum of 3

Renewable energy sources are essentially carbon-free and more sustainable than fossil or nuclear fuels. This course reflects the remarkable progress that has been made in the field in recent years. We will spend about one-third of our time in "the classroom," studying renewable energy systems, their underlying physical and technological principles, their economics, their environmental impact and how they can be integrated into the World's energy systems. The rest of the time will be in the field, getting our hands dirty, learning by doing. While Costa Rica is well known as a World leader for conservation policies and eco-tourism, the Central American country also stands out for its environmentally oriented policies and its success in mainstreaming energy sustainability into national policy. Currently, 99.2% of the total primary energy supply in Costa Rica is of renewable type, with geothermal accounting for over a third, hydroelectric dependency not exceeding 50%, and a very small share from fossil fuels (0.6% non-sustainable biomass, and 0.2% from oil). Students learn about renewable energy technologies for the developing World in Costa Rica, one of only a few countries in the region that have taken a concerted structural approach to the issue of sustainable development.

International Cultures (IL)

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Soc Resp and Ethic Reason

SC 294: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

SC 295: Science Co-op Work Experience I

1-3 Credits/Maximum of 3

A supervised work experience where the student is employed in a scientific position. To be offered for SA/UN grading.

Prerequisite: acceptance into the Eberly College of Science co-op program

Full-Time Equivalent Course

SC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

SC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

SC 306: BS MBA Undergraduate Seminar

2 Credits/Maximum of 6

This course is designed for students enrolled in the Science BS/MBA IUG degree program. It will provide an opportunity for students to become familiar with key MBA common terms and concepts that will be useful for their required co-ops, internships, and their transition into work in the Smeal MBA part of the degree program. During the course, instructors will introduce or reinforce learning about hard skills of supply chain management, finance, business planning and marketing, and soft skills associated with leadership, organizational dynamics and modern management. The course will improve student ability to formulate and present strategies and communicate effectively as a leader and team member. The course will expand the number of occasions for the BS/MBA class cohort to experience inter-class interaction and it will provide mutual support opportunities. In order to facilitate these inter-class interactions, it is designed to be repeatable so students in later years of the program can work with the students just beginning the program. The course will augment the integrative learning that was established in first year seminars and extracurricular BS/MBA enrichment programs. The course is designed to facilitate continued student development as self-directed learners. The course will advance student perspectives of professional and career development.

SC 306W: BS MBA Undergraduate Seminar

2 Credits

This course is designed for students enrolled in the Science BS/MBA IUG degree program. The course is designed to facilitate continued student development as self-directed learners. The course will advance student perspectives of professional and career development.

Writing Across the Curriculum

SC 395: Science Co-op Work Experience II

1-3 Credits/Maximum of 3

A supervised work experience where the student is employed in a scientific position. To be offered for SA/UN grading.

Enforced Prerequisite at Enrollment: SC 295

Full-Time Equivalent Course

SC 400: Consequences of Science

1 Credits

A series of lecture/discussions in which science faculty members show the social implications of their research specialty.

SC 402: Science-Related Employment: Corporate Organization, Opportunities, and Expectations

1-3 Credits/Maximum of 3

Present undergraduate and graduate students with information and skills necessary for success in science-related job positions available in industry.

Enforced Prerequisite at Enrollment: 5th semester standing or permission of program

SC 451: Science Outreach and Communication

1 Credits

SC 451 will provide students with the skills and experience necessary to design outreach activities based on their research and interests, communicate their science in multiple modes, and engage with diverse audiences. Lectures will provide foundational material via a focus on the fundamentals of science communication and outreach, as well as some of the pedagogical basics of science education. Guest speakers will build upon this groundwork by leading modules on lesson planning for effective outreach and communicating with audiences through a variety of platforms, including social media, personal or professional blogs, media interviews, and press releases. These guest modules will be supplemented by panel discussions (with outreach and research professionals from Penn State) on science engagement in different settings (e.g., museums, extension meetings, public science lectures, K-12 classrooms, etc.), disseminating research via social media, and creating and integrating research-related outreach into broader impact statements for grant proposals. The design of student outreach projects will provide a unifying thread throughout the semester, as students work in small groups to create, refine, and implement unique outreach activities following best practices outlined in lectures and panel discussions. Students will be encouraged to choose topics outside of their normal studies, expanding their ability to communicate science with which they are less familiar. Students will have multiple opportunities to both receive feedback from their peers and instructors and offer feedback on their peers' projects. Students will exhibit their activities at an event, and in doing so, practice the communication and engagement skills they developed throughout the semester. Through this process, students will gain experience disseminating science, as well as confidence in their ability to accomplish successful science outreach. Afterward, students will evaluate and reflect on their experience and use this self-evaluation to refine their activities for future use.

Enforced Prerequisite at Enrollment: ENGL 15 or CAS 100 or ENGL 137H or CAS 138T or ESL 15

SC 475N: Anatomy in Italy: Cadavers, Culture, and Science

3 Credits

Anatomy is more than learning to name structures. Students will practice critical thinking and analytical skills, and develop key literacies while studying human cadavers and learning to predict a structure's function by observing its shape, texture, and tissues. Students will practice critical and integrative thinking while discussing the historical circumstances that gave rise to, supported, and sometimes hindered the development of anatomy as a science by synthesizing original arguments (written and oral) that explore the evolution of anatomic science within the context of Italian history, politics, and culture. Students will also study the ethics of acquiring cadavers within contemporary and renaissance contexts, identify individual graphics and historical sculptures that demonstrate anatomic understanding, and discuss their origins and implications for renaissance-era society. Students will also develop their communication skills: presenting original posters, leading class discussions, writing term papers, and creating webcasts as part of a service project. During spring break, students will travel with the instructors to Italy and study: anatomic wax specimens born through collaborations between anatomists and artists; Michelangelo's hidden anatomy in the Sistine Chapel; and the history of medicine. As preparation for their study abroad experience, students must concurrently enroll in IT 197: Italian Language and Culture for Study Abroad

Prerequisite: Consent of Instructors and (Biol 161 or BIOL 128 or BIOL 240W or BIOL 141 or BIOL 472 or KINES 202 or BIOL 129)

GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

SC 476: Human Dimensions of Health Care

3 Credits

Field experience in five or more medical settings; complementary exposure to the scientific literature; weekly discussions. SC 476 Human Dimensions of Health Care (3) This course, delivered jointly by Penn State and the local medical community, is designed to provide field experience for students with plans for a future in the health professions. The course is structured around rotations through multiple no less than five medical settings, which may include Community Medicine, Dentistry, Emergency Room, Family Medicine, Hospice Care, Oncology, Optometry, Palliative Care, Pediatrics, Physical Therapy, Senior Services, Wound Care, and other specialties. The first four weeks consist of an introduction and orientation to the goals each setting. The purpose of these sessions is to acquaint the students with the requirements of the course as well as expectations for the on-site rotations. During this time, the students become familiar with the health care issues associated with each setting through literature specific to particular medical settings. At the end of these sessions the students write a course plan, in which they review the major issues common to each setting, and project how they expect to gain and how they expect to contribute in each setting. During the next nine weeks, the students rotate through the medical settings, spending two afternoons per week in rotation. Students are scheduled to assignments with one of the medical settings for the afternoon. At these times the students are under direct supervision of the setting's staff.

Where feasible, students may also sit in on physicians' staff meetings, attend lectures, or receive other forms of special instruction provided by medical staff. All students will maintain a logbook of activities during the rotations. Weekly meetings on campus are devoted to reports of experiences by each of the students, discussions based on the questions developed during the orientation period, and resolution of issues which may arise. In this way, students assigned to each rotation inform those students who will later enter that setting.

Prerequisite: 5th semester standing; BIOL 230W and BIOL 240W or equivalent; approval of health sciences committee or coordinator

SC 494: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

SC 494H: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

SC 495: Science Co-op Work Experience III

1-3 Credits/Maximum of 3

A supervised work experience where the student is employed in a scientific position. To be offered for SA/UN grading.

Enforced Prerequisite at Enrollment: SC 395
Full-Time Equivalent Course

SC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

SC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Science Education (SCIED)

SCIED 110: Introduction to Engineering for Educators

3 Credits

This course focuses on physics content, engineering design principles, and elementary science education pedagogy.

Cross-listed with: ENGR 110

SCIED 112: Climate Science for Educators

3 Credits

Concepts of climate sciences highlighted by evidence-based explanations and scientific discourse in preparation for K-6 science teaching. This introductory, multidisciplinary course will focus on the interactions among physical science concepts, earth science concepts, and scientific practices to develop understandings about Earth's climate system. The course is primarily intended for prospective elementary school teachers (Childhood and Early Adolescent Education, PK-4 and 4-8 majors), although it is available to other non-science majors. The development of models is an integral part of the course as a means to facilitate climate systems thinking by serving as a means to explain phenomena and predict outcomes. In addition, students in the course consider how what they are learning applies to teaching by offering opportunities to think about how they might extend their knowledge to teaching contexts. This course consists of integrated lectures and laboratory investigations in class meetings each week, with work on collaborative projects outside of class.

Cross-listed with: EARTH 112

SCIED 114: Sound and Light for Educators

4 Credits/Maximum of 4

Waves, sound, and light concepts highlighted by evidence-based explanations and scientific discourse in preparation for K-6 science teaching. This course has two main focus areas: physics content typically addressed in elementary science curriculum and effective pedagogy for supporting children's meaningful science learning. An introduction to waves is used to construct an initial model, which is applied to sound phenomena and elaborated. The more robust model is then applied to understanding light phenomena and again elaborated. As the model develops across units of instruction, students are engaged in constructing explanations from evidence, model-based reasoning, and scientific discourse. Instructional approaches that are grounded in research on children's learning are used to engage education majors in their own learning, while teaching applications provide opportunities for them to unpack their experiences and apply them to school science teaching.

Cross-listed with: PHYS 114

SCIED 116: Introduction to Astronomy for Educators

3 Credits

This course is designed to engage students with the big ideas of astronomy in ways that will help them understand both the content of astronomy, as well as the practices of science as carried out by astronomers. The course is designed for prospective elementary and middle school teachers (PK-4 and 4-8 majors), although it is available to other non-science majors. Throughout the course, students engage in a series of investigations that lead towards the development of evidence-based explanations for patterns observed in the current Solar System. Investigations will include computer-based simulations, night-sky observations, and use of simple laboratory equipment. These investigations lead students towards an understanding of how observations of the current Solar System can be explained by the model of its formation. The course is designed to build from students' own personal observations of the day and night sky towards developing increasingly sophisticated explanations for those phenomena and

beyond. Conducting these astronomy investigations will help students understand fundamental aspects of physics, thus broadly preparing them for future science teaching in these domains. The course models evidence-based pedagogy, thus helping to prepare students for future teaching careers as they learn effective strategies for teaching science.

Cross-listed with: ASTRO 116

SCIED 118: Field Natural History for Teachers

3 Credits

The purpose of this course is to equip students with knowledge of central Pennsylvania flora and fauna, familiarize students with different techniques for teaching about natural history, and to engage students with citizen science efforts. This class uses lectures sparingly and is instead designed to be an experiential and hands-on class that will engage students with the natural world on campus and other local sites. Analyzing natural history-based educational programs and the pedagogical methods for teaching in both outdoor and indoor settings is a core component of this class, alongside participation with citizen science data collection efforts and dissemination of findings. The overall goal of this course is to familiarize students with the natural history and biodiversity of Pennsylvania and techniques for educating in, for, and about the outdoors. At the end of the course, students will be able to: (1) Analyze the importance of interrelationships between all living organisms and how this contributes to a healthy planet. (2) Identify common Pennsylvania flora and fauna. (3) Regard living things as teaching tools for science classrooms. (3) Evaluate methods for teaching about different natural history topics in both indoor and outdoor settings. (4) Demonstrate their natural history observations and understandings by contributing to a citizen science project.

SCIED 140: Outdoor School Field Experience

2 Credits/Maximum of 6

To provide students with educational leadership skills and teaching opportunities working with children in an outdoor residential camp setting. RPTM 140 Outdoor School Field Experience (2 per semester/ maximum of 4) is cross listed as SCIED 140. The Outdoor School Field Experience course allows students to observe, learn, and apply leadership techniques and teaching methodologies in an experiential, residential education program that occurs off campus. This field-based experience provides students with numerous opportunities to practice and refine their leadership and teaching skills through active participation in one week of Outdoor School Field Experience. Students are provided with the opportunity to explore personal values related to the natural environment, sustainable practices, health and wellness and technology, and to practice behavioral changes as they role model those values to the residential campers.

Enforced Prerequisite at Enrollment: Students must apply for and be accepted into the Outdoor School Field Experience.

Cross-listed with: RPTM 140

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

SCIED 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

SCIED 298: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

SCIED 410: Using Technology to Enhance Science Teaching

3 Credits

This course explores contemporary practice and research associated with applications of technology to enhance science learning and teaching.

Prerequisite: admission to one of the science teaching options in SECED

SCIED 411W: Teaching Secondary Science I

3 Credits

Introduction to teaching secondary school science, including curriculum, learning theory, media, evaluation as they relate to student progress. SCIED 411W Teaching Secondary Science I (3) Science Education 411W is an introduction to secondary science education. The course is a project based course for individuals planning to teach science in grades 7-12 and has a significant emphasis on professional writing. The course is also appropriate for those interested in teaching or in program development of out-of-school science learning environments (e.g., science centers, nature centers, museums). Students will participate in activities that are designed to help forge a 'philosophy of science teaching' that is supported by research based findings on 1) learning and assessing learning, 2) best practices for teaching, 3) images of science and scientific inquiry, and 4) the effective design of lessons and activities. There are several peer-teaching assignments where students teach each other and two student teaching assignments with middle school children from area schools. Students are expected to complete written reports and reflections on-type assignments for lesson plan reviews, curriculum assessments, science research reports, and clinical interviews. One of the major goals of SCIED 411 is to promote 'reflection in action' and 'reflection on action' among the students. These are two constructs put forth by Donald Schon that argues an important meta cognitive dynamic for teachers is to think about what they are doing while teaching (in action), and to also think about what they will do differently in future episodes of teaching (on action). On each occasion in 411 when students complete a peer teaching or clinic teaching experience they are requested to complete a 'reflection writing assignment'. Criteria for success on the writing assignments is 1) to provide an accurate description (which may include a lesson plan or references to the lesson plan) of the teaching; 2) to diagnose and identify the successes and the shortcomings of the lesson in terms of student learning; 3) to make connections to course readings that offer suggestions for adapting the lesson to promote learning. The reflection assignments are typically 2 to 3 single-spaced pages accompanied by the lesson plan. Across the semester, from the first 'reflection' assignment to the last 'reflection' assignment there is an expectation that the 411 students will demonstrate an increasing depth and sophistication of reflection, analysis and attention with respect to the construction of learning goals

and instruction strategies that promote working with students prior knowledge, employing formative assessment tasks to make students' thinking visible, and using questions and strategies that frame a student-centered discourse learning environment. The course professor will grade the written assignments and provide written and oral feedback. Each assignment will be revised and posted to an on-line student portfolio. Written communication is important in the field of education and science. In this course, the importance of written communication as a means to learn and reflect on the subject matter of the science disciplines and on teaching is emphasized. The value of scientific reports, analysis of curricular materials, development and reflection on lesson plans, and statements regarding the student's philosophy of science teaching will be evident through written assignments, feedback, and revision. Through the experience of reading, discussion, development of lessons, and practice teaching, students will develop the ability to do the following: (a) Use appropriate techniques to probe students' prior knowledge and understandings of scientific concepts. Knowledge about students' alternative conceptions and intuitions is then used to design effective lesson plans and assessments. (b) Plan and teach science lessons employing sound research-based techniques for inquiry teaching. Students will complete both peer and student teaching assignments that are videotaped. (c) Prepare written reflections and evaluations that incorporate analytical perspectives that are based on personal experiences and on course readings and research-based frameworks and practices. Students will be offering written reflective comment on their own teaching and that of classmates. The course goals include the ability to develop a 'reflection in action' and 'reflection on action' decision-making orientation that is informed by evidence-based practices linked to student learning.

Prerequisites: 5th Semester standing or Graduate Status or Non Degree Graduate Status
Writing Across the Curriculum

SCIED 412: Teaching Secondary Science II

3 Credits

SCIED 412 is the second of two sequenced methods courses for preservice science teachers who are pursuing certification to teach in grades 7-12. In SCIED 412, prospective science teachers learn to effectively plan, deliver, and assess science instruction. The course emphasizes contemporary theory and practice associated with science education in public school classroom settings. As in SCIED 411W, emphasis is placed on developing professional science teachers; this includes promoting development of the knowledge, skills, and dispositions that lead to reflective practice, collaborative action, and lifelong inquiry into teaching and learning. Students will develop an understanding of science learning theories and the approaches that diverse learners take to construct knowledge; develop competence in the use of science content and inquiry processes and materials for planning instruction relevant to learners' needs; develop skills in instructional, communicative, managerial, and evaluative strategies; and will demonstrate facility in selecting and integrating appropriate technological tools into instruction. Throughout the course, special attention is given to identifying and addressing the needs of diverse learners, including English Language Learners and students with special needs. Students also develop familiarity with state and national curriculum standards that guide science, technology, and engineering education; they also demonstrate the ability to plan and deliver lessons that address those standards. SCIED 412 is scheduled concurrently with a supervised field experience in a middle or secondary school, where

students have the opportunity to apply and evaluate their developing instructional skills.

Prerequisite: SCIED 411W

SCIED 458: Teaching Science in the Elementary School

3 Credits

SCIED 458 is designed to support teacher candidates in developing their own reflective practice in science teaching for young learners. Candidates in this course engage in a series of experiences that move them from their own understanding of engagement in science, to understanding children's engagement in science, and finally towards methods of designing science instruction for young learners. Central to this work is a focus on reflective practice; expert teachers reflect on their own teaching practices. During this course, candidates learn to be critical of their own learning, instructional design, and teaching. Candidates use this to revise their practice as they grow as science teachers. The course activities, assignments, readings, and placement experiences offer multiple opportunities for candidates to learn essential knowledge and practices to support children's curiosity about the world. Course assignments and in-class experiences are designed to help teacher candidates understand the importance of engaging their future students in a strongly integrated focus on science content and practice. This encompasses both how scientists work (the practice of doing science and building our knowledge of the world) and how children learn the skills and practices of doing science. Helping children understand the practices of science is of equal importance as helping them learn the content of science. To start understanding ways of supporting children in learning to do science in age-appropriate ways, teacher candidates in this course contrast their understanding and experiences with those of children. Assignments are designed to help facilitate exploration of the links between understanding children's prior knowledge and beliefs, using knowledge of how people learn, and making pedagogical choices to move children towards specific content and practice goals. Candidates consider the role of differentiated instruction and methods of assessment in science teaching. Finally, the course examines methods of adapting science curriculum using knowledge of children and specified learning goals. Teacher candidates bring together what they have learned about the practices of science, social constructivist instructional methods, and assessment to think critically about how to support elementary students learning science across time. SCIED 458 is a part of a block of courses in a PSU teacher education program that is unified by a basic set of principles and a field experience component.

Prerequisites: 4th Semester standing Recommended Preparations: One course each in life, earth, and physical sciences (one having a lab component)

SCIED 458H: Teaching Science in the Elementary School

3 Credits

Interpreting children's science experiences and guiding development of their scientific concepts; a briefing of science content material and its use.

Honors

SCIED 460: Trends and Issues in Science, Technology, Engineering, and Mathematics (STEM) Education

3 Credits/Maximum of 3

Develops understandings of Science, Technology, Engineering, and Mathematics (STEM) education research and practices for PreK-12 teaching and learning

Prerequisite: 7th Semester Standing

Cross-listed with: MTHED 460

SCIED 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Science, Technology, and Society (STS)

STS 47: Wilderness, Technology, and Society

3 Credits

Impact of developments in science, literature, and art on changing attitudes toward nature; consequences for conservation, preservation, environmental ethics.

Cross-listed with: SOC 47

Bachelor of Arts: Social and Behavioral Sciences

STS 55: Space Science and Technology

3 Credits

The science and technology of space exploration and exploitation; physical principles; research and development; history, space policy, and social implications.

Cross-listed with: AERSP 55

Bachelor of Arts: Natural Sciences

Bachelor of Arts: Social and Behavioral Sciences

STS 100: Science, Technology, and Culture

3 Credits

A survey of the development and culture of science, technology, and medicine in world history. S T S 100 Science, Technology, and Culture (3)(GH)(BA) This course meets the Bachelor of Arts degree requirements. 'Science, Technology, and Culture' surveys the development and culture of science, technology, and medicine in world history. This course will introduce students to using the humanities, social sciences, and the arts to understand the development and uses of science, technology, and medicine in human history. The course focuses on broad trends and changes over time in their social and cultural contexts. The course is intended to address the needs of a wide range of students. For students majoring in the the arts, humanities and social sciences, the course provides a deeper understanding of the relationship between lay/popular and techno-scientific cultures. For the scientific and technically oriented student, the class exposes students to the study of technical and scientific problems from a broader cultural and historical perspective. All students will develop a knowledge of the values that have motivated and informed scientific, technological, and clinical ventures as well as an appreciation of important cultural dimensions of techno-scientific work, including the influence of religious concepts and practices, the impact of race, class, and gender, the significance of language and symbols, and the role played by local and global traditions. The course also asks students to think critically about the role of science, technology, and medicine in world history and the impact of that history on today's world. Topics include: the role of scientific and technical expertise in society; the social and economic conditions that have fostered and impeded scientific development and technological innovation; the social, aesthetic, and symbolic considerations that have shaped the way scientific ideas have been framed and used; and the impact of scientific notions and technological innovations on social life. Students are required to read both primary and secondary texts. Students are also required to augment their classroom readings with scholarly material that they find through library and electronic research. In addition to regular classroom discussions, students will also participate in team-based learning activities and projects that require the students to interact with their peers and to present their thoughts publicly.

Bachelor of Arts: Humanities

STS 100H: The Ascent of Humanity

3 Credits

A survey of some of the intellectual achievements that highlight humanity's attempts to understand nature and shape the environment.

Bachelor of Arts: Humanities

Honors

STS 101: Modern Science, Technology, and Human values

3 Credits

Relationships of science and technology to human aspirations, values, and arts.

Bachelor of Arts: Humanities

STS 105: Food Facts and Fads

3 Credits

This course is an introduction to the central role of food and food production in all areas of human life. The social and technological bases of various food systems are examined from the hunter-gatherer to the agrarian to the modern industrial system and its discontents. The course also considers how different types of food (e.g., meat, milk, cereals, chocolate) are preserved and distributed, examining both the effects of the development of the science and technology on society and vice versa. The roles of various food components (e.g., proteins, carbohydrates, fats, and vitamins) are examined both within the foods as determinants of quality, and also in terms of human nutrition and health. Finally, various other ways food may be considered appropriate or inappropriate will be studied including scientifically based reasons (e.g., safety, taste, adulteration) and non-scientifically based reasons (e.g., ethical, legal, religious).

Cross-listed with: FDSC 105

Bachelor of Arts: Social and Behavioral Sciences

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

STS 110N: Chemistry in World Wars I and II

3 Credits

The study and assessment of chemical developments during the First and Second World Wars will form the backbone of this course. As the course is historically focused on the period from 1914 to 1945, the students will develop a basic understanding of the significant historical events that led to the development of chemical innovations in materials, medicine, and weapons. To understand the scientific context of these developments, the students will also learn about the basics of chemistry, including recognizing the nature of the scientific process and discovery. In addition, the students will read, evaluate, and discuss primary and secondary sources to provide them with further insight into significant figures, events, and developments. These lectures, readings, and discussions (along with other assignments) will allow students to explore the ethical dimensions, the economic effects, the social consequences, and the public health impact that these scientific discoveries had on scientists, soldiers, and civilians. The students will also ascertain how many of the scientific discoveries made between 1914 and 1945 have had both beneficial applications and detrimental effects since 1945.

International Cultures (IL)

General Education: Natural Sciences (GN)

General Education - Integrative: Interdomain

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

STS 115: Pre-departure Intercultural Learning

1-3 Credits/Maximum of 9

STS 115 (1-3) Pre-departure Cross-cultural Engagement serves as a pre-departure introduction for students to the culture of their international travel destination affiliated with Penn State programing. The course content covers key social issues, practical cultural information that

is relevant for travelers and students, and language use for essential communication. In addition, this course seeks to promote safety, mitigate cultural shock, make students more capable abroad, and help Penn State students to become better ambassadors of their university and country. Students in this course can expect to acquire the appropriate context and preparation necessary to confront challenges abroad and have a more enriching experience. In addition, learners will be provided context about the international travel destination to prepare them for their activities abroad, positioning learners to be able to connect course content to topics in science, technology, and society that will be explored in an international environment. By the end of this course, students will be able to express information important about the travel region; identity, demonstrate critical thinking related to the location of travel, evaluate cultural differences, articulate key concepts in the local culture and its cuisine, demonstrate proficiency in the ability to use appropriate vocabulary in the target culture, construct effective communication strategies, and employ a capability to be an effective communicator in the local context of their immersion experience abroad. In addition, students will engage in critical analysis of international institutions as they relate to those one is familiar with in their home country, foster cultural humility, and develop cultural intelligence. Students will broaden their comprehension of a variety of factors that influence the local, regional, and national environments. Themes of politics, environment, industry, immigration, history, and cultural tradition will be explored. Furthermore, students engage in critical analysis of international institutions as they relate to those one is familiar with in their home country. Human behavior as it relates to both the host and home country are a focus of the course. The course will employ various methods of distilling knowledge including at the epistemic, theoretical, and empirical levels as it endeavors to provide students with a framework to interpret and subsequently describe events in a global context. In addition, as international culture is a focal point of this course, it is a natural fit to meet the International Cultures (IL) requirement.

International Cultures (IL)

STS 124: History of Western Medicine

3 Credits

This course explores the history of health, illness, and medicine in western society from Ancient Egypt through the modern world. Relying on both primary and secondary sources, the course examines major developments in the understanding of health, illness, medical treatment, and medical practice in western society from Ancient Egypt to the present. The course will explore such themes as the changing status of medical practitioners, the experience of patients in different historical settings, artistic depictions of illness and healing, and the increasingly prominent role of medicine in public policy in order to better understand the links between medicine and its social, cultural, intellectual, and political contexts.

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

STS 151N: Technology and Society in American History

3 Credits

This course examines the development of technology in the United States from the colonial period to the present, and places into a historical context the reception and influence of these technological developments on the social, economic, and political life of the United States. The technologies serving American society—past and present—range widely and include, for example, new harvesting techniques, railroads and motor vehicles, assembly-line mass production, and electricity and its multiple dependent technologies. Technologies have always influenced, and been influenced by, human societies; this course examines how technologies and Americans have interacted and influenced each other.

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

STS 199: Science, Technology, and Society: Foreign Studies

1-3 Credits/Maximum of 12

Science, Technology, and Society foreign studies. Courses offered in foreign countries by individual or group instruction.

STS 200: Critical Issues in Science, Technology, and Society

3 Credits

An overview of interactions between science, technology, and society from social sciences and humanities perspectives.

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Science (GS)

STS 201: Climate Change, Energy, and Biodiversity

3 Credits

Studies of global warming, energy options, and biodiversity; their interrelations as sciences and as societal issues.

Bachelor of Arts: Natural Sciences

Bachelor of Arts: Social and Behavioral Sciences

STS 233: Ethics and the Design of Technology

3 Credits

Humans have always created artifacts and artificial environments to aid us in our survival and to help fulfill our needs and desires. Moreover, today technology is all pervasive, transforming and conditioning our social and political relations, our cultural understanding of ourselves, and our relationship with other animals and the natural environment. Designers make important choices concerning the creation, development, and deployment of many if not most technological innovations.

Consequently, the task of the designer is an ethical one. It is therefore important to give future designers the opportunity to reflect upon the meaning of technology, particularly in its moral dimensions. Two means will be used to achieve our course goals. Much of the time will be spent thinking about and discussing the various impacts that particular technologies have upon the social, cultural, and political lives of human beings and upon the natural environment. To facilitate thoughtful discussion, we will read a number of authors, writing short papers in preparation for critical discussion in class. The second means is aimed at putting our ideas into practice by working in teams on several design projects. These design projects will require the integration of readings, discussion, and research and their synthesis to resolve the moral aspect of a design problem. Student teams will work cooperatively on these projects and make oral progress reports as well as final written and oral reports.

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

STS 235: Science and Religion

3 Credits

This course investigates the relationship between science and religion in multiple cultures. S T S 235 Science and Religion (3) (GH) The purpose of this course, designed to fulfill general education requirements in the humanities (GH), is to encourage students to investigate the relationships between the disciplines of science and religion. While most of the emphasis of the course will be on the historical interaction between science and Western religion, we will also investigate science ('natural philosophy') in the Islamic, Hindu, and Eastern religious traditions. Students will read classic texts that discuss science and religion from scientists such as Newton and Darwin as well as from world Scriptures and contemporary positions of various influential scientists and religious scholars concerning views of the material world as it relates to the spiritual world. There will be no attempt to encourage students to accept a particular religious or secular viewpoint. Rather, the course will be successful if at its conclusion the student can articulate a personal viewpoint while appreciating the reasons others might have for holding alternative opinions. Students will develop an understanding of the arguments and the historical context in which they originated which lead to differing positions. Thus, individual students will be expected to demonstrate this understanding in a series of examinations scheduled throughout the semester, and in a final examination if required by the instructor. Discussion and debate are useful devices in the search for understanding. In order to facilitate such discussion, students will be required to make one presentation to the class on an assigned topic.

This presentation will serve as the starting point for class exploration of the topic. To encourage active and collaborative learning, the student presentations may be group efforts, however, no group will consist of more than three students.

Prerequisite: completion of a basic composition course or the equivalent, S T S100 or S T S101 , or completion of 30 credits of coursework
General Education: Humanities (GH)

STS 245N: Globalization, Technology, and Ethics

3 Credits

The objective of Globalization, Technology, and Ethics is to prepare students (especially but not limited to engineering, information sciences & technology, and business students) who are headed into the corporate, NGO (non-profit) or government sectors for the challenges and realities of working in a rapidly globalizing world. This course will encourage students to become leaders in a mobile and diverse transnational workplace and help them to become critical citizens of that world. Through team-centered projects and readings from the social sciences and humanities, students will broaden their understanding of engineering, technology, and culture and then be introduced to how one makes ethical decisions about that world. This course is designed to provide skills, theories and experiences that will help them to be respectful, diplomatic and professional while being able to successfully work with technology in multiple cultures and contexts. Students will understand the relationships and the effects on industry, economics, and the many facets of society in an interdependent global economy. These interrelationships will include the differing impacts on individual countries (winners and losers), the question of responsibilities of use or development of technologies and science (long term verses short term impacts). Students will be able to apply ethical analysis to these and many other issues that professionals face.

Enforced Prerequisite at Enrollment: ENGL 15 and CAS 100

Science, Technology, and Society foreign studies. Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

STS 313: Global Engineering Fellows Seminar

1 Credits

This is a required gateway course for engineering students to be considered to join the Global Engineering Fellows program. In this course, students build on their global experiences. This course will expand students' ability to articulate the value of their global experiences,

develop intercultural competencies, foster presentation skills, and enhance global perspectives.

Recommended Preparation: Students will have participated in a global experience abroad such as an approved study abroad program (embedded allowed), or an international research, internship, or service program while a Penn State student (supported by Univ International Cultures (IL)

STS 399: Science, Technology and Society: Foreign Studies

1-3 Credits/Maximum of 12

Science, Technology, and Society foreign studies. Courses offered in foreign countries by individual or group instruction.

STS 408: Cultural Foundations of Communications

3 Credits

Examination of oral, scribal, print, industrial, and electronic cultures; analysis of impact of technology on communications and social structure. COMM 408 / STS 408 Cultural Foundations of Communications (3)(BA) This course meets the Bachelor of Arts degree requirements. COMM 408 / STS 408 traces the development of communications technologies and their impact on culture over the last 500 years. Students will examine how different tools for communicating changed the way people organized and made sense of their worlds. The course begins by looking at oral cultures and moves on to the scribal, print, industrial, electronic and post-industrial or postmodern cultures, studying the media developments that marked each of these eras. With each period and its corresponding technology students will examine how and why the new media altered not only the form of communication (the type of speech, form of writing and/or speed of information transfer), but also how such changes altered the content of knowledge (how people made sense of their lives and communities). Readings are drawn from a range of disciplinary perspectives on the issues, from history, sociology and anthropology, to philosophy, communication studies and cultural theory. The historical and theoretical knowledge provided by the course will give students a solid foundation for coming to terms with media trends in present-day society and for thinking through their possible epistemological, political and cultural impacts. The course is a communications elective for the Journalism and Telecommunications majors and the Media Studies minor.

Enforced Prerequisite at Enrollment: Select 3 credits from the following: COMM 100 or COMM 110 or COMM 118 or COMM 150 or COMM 180 or COMM 251 or COMM 320 or COMM 370

Cross-listed with: COMM 408

Bachelor of Arts: Social and Behavioral Sciences

STS 416: Race, Gender and Science

3 Credits

The class will focus on race and gender as products of science, and how societal values shape scientific activity.

SRA 111: Introduction to Security and Risk Analysis

3 Credits

Introduction to Security and Risk Analysis is a preliminary course with a broad focus, spanning the areas of security, risk and analysis. In addition to familiarizing the student with basic technical terminology, it will also touch upon social and legal issues, risk analysis and mitigation, crime intelligence and forensics, and information warfare and assurance. This course will motivate students to understand the requirements for security in any government agency or business organization through the use of case studies. Included in this segment are cases related to cyberterrorism, bioterrorism, and critical infrastructure protection. Some concepts to be covered in the area of information security are: confidentiality, integrity, availability, and non-repudiation. Various methods of safe guarding these security concerns will be discussed, such as: single- and multi-factor authentication, encryption, digital signatures, prevention of denial of service attacks, and so forth. This course also covers the principles and the approaches to risk analysis. Here students study vulnerability analysis, crime and intelligence analysis, forensics, techniques for risk assessment and risk mitigation.

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

SRA 197: Special Topics

1-9 Credits/Maximum of 9

International Cultures (IL)

SRA 211: Threat of Terrorism and Crime

3 Credits

Provides overview of nature, scope, and seriousness of threats to security as a result of terrorism and crime. SRA 211 Threat of Terrorism and Crime (3) Threat of Terrorism and Crime is a course designed to acquaint students with the security threats posed by both terrorist and criminal activity, and with strategies to combat these threats. Terrorism and security are defined as well as terrorism in its historical context. Varieties of terrorist groups, organizations and their actions are studied with targets of terrorism being a focus. Types of crime including street, employee, organized and white collar crime are studied. Information theft

can occur in each of the types of crime. Security threats of each type are studied and mitigation techniques are evaluated. Methods of studying terrorism and crime cover data collection, analysis of the reliability of the data, and fusing the data so that information is obtained that leads to knowledge to combat terrorism and crime. Finally to put the course in perspective, students study critical shortfalls in our understanding of terrorism and crime including unreliable data, biased estimates and a lack of understanding of terrorist and criminal motives and objectives.

SRA 221: Overview of Information Security

3 Credits

Provides an understanding of the overview of information security including security architecture, access control, and internet secure applications. SRA 221 Overview of Information Security (3) SRA 221 focuses on an overview of information security. Students will learn the principles of information security, security architectures and models, aspects and methods of information security such as physical security control, operations security, access control, hacks/attacks/defense, systems and programs security, cryptography, network and web security, worms and viruses, and other Internet secure applications. Students will also learn how to plan and manage security, security policies, business continuity plans, disaster recovery plans, and social and legal issues of information security. A major component of the course will be several hands-on exercises and a final team-based project. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphases will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

Enforced Prerequisite at Enrollment: SRA 111 and (CMPSC 101 or IST 140 or CMPSC 121)

SRA 231: Decision Theory and Analysis

3 Credits

Provides an overview of decision theoretical and analytical concepts and tools in the security risk analysis field. SRA 231 Decision Theory and Analysis (3) Decision Theory and Analysis is designed for students to build an understanding of how to improve the judgment and decision making of individuals, groups and organizations. Behavioral decision theories provide the theoretical core for the course. These theories draw on insights from a diverse set of disciplines, including cognitive and social psychology as well as economics, statistics and philosophy. Offered annually (and more if demand requires), this course will foster understanding of: (a) the cognitive, emotional, social and institutional factors that influence judgment and choice, (b) normative (economic) models of rational choice, and (c) how judgment and decision making can be predicted and/or improved through prescriptive aids and models. Applications of these theories and methods to real-life venues will be used to engage and focus the students. For example, insights on how such concepts apply to supply chain security, bioterrorism threats, legal decision making, large-scale risk assessments (e.g., assessing risks of transnational threat), and first-response/crisis decision making will be common. Where appropriate, real situations and cases are used to bring concepts and scenarios alive. Overall, the course emphasizes basic skills and concepts that enhance an individual's ability to understand why individuals, groups and organizations behave the way they do, how they formulate the issues and problems they confront, as well as to choose rationally among competing courses of action.

Enforced Prerequisite at Enrollment: SRA 211 and STAT 200

SRA 268: Visual Analytics

3 Credits

This course introduces the fundamental principles, methods, and tools of visual analytics that enable security and risk analysts to synthesize information and derive insight from massive, dynamic, ambiguous, and often conflicting data. Decisions in risk and security management are increasingly driven by data. Analysts are faced with a continuously growing set of data originated from a wide range of sources and in a wide variety of formats. Such data need to be analyzed in order to understand a situation and react promptly. This causes significant information overload to analysts and prevents them from developing good situation awareness. Visual Analytics (VA) offers an effective solution for making sense of massive datasets by exploiting interactive visualization technologies to extend human cognitive abilities. It helps analysts in detecting the expected and discover the unexpected, providing timely, defensible, and in communicating findings and assessment effectively for action. SRA 268 provides students with a quick overview of the current state of the art in visual analytics and their applications in data-driven security investigation and risk assessment. It prepares students with advanced data analytic skills and critical thinking with data. Cases studies and projects showcase the applications of visual analytics in cyber security and intelligence analysis, emergency and crisis management, and business intelligence.

Enforced Prerequisite at Enrollment: SRA 111

SRA 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

SRA 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

SRA 297: Special Topics

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

SRA 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

SRA 311: Risk Analysis in a Security Context

3 Credits

Assessment and mitigation of security vulnerabilities for people, organizations, industry sectors, and the nation. SRA 311 Risk Management: Assessment and Mitigation (3) Risk Analysis in a Security Context is focused on developing analytical skills aimed at

producing credible and meaningful answers to critical questions of risk management. Risk is considered at all levels within this course, including those created by intelligent adversaries, including cybercriminals and terrorists, although risks may also include natural disasters, system failures, accidents, etc. Students successfully completing this course are capable of applying a diverse set of analytic techniques to answer questions in contexts such as information security, counterterrorism and intelligence, or any other particular field where protection is an issue. Topics in this course include critical thinking, systems analysis, risk assessment and associated analysis methods, risk communication, and risk control.

Enforced Prerequisite at Enrollment: SRA 231

SRA 311W: Risk Analysis in a Security Context

3 Credits

This intermediate course is appropriate for students majoring in Security and Risk Analysis. This course provides students with the background, experience and perspective required to document risk and identify policies and procedures that effectively deal with hazards and threats to which the organization is vulnerable, jeopardizing its mission. This writing intensive course requires students to identify and assess organization risks, and recommend controls to executive decision makers. Individual and group writing assignments provide practical experience preparing organizational-level documents that effectively communicate the risk context, risk analysis (e.g., identification and assessment), risk communication, and risk control elements for a risk management plan. Students receive and provide peer feedback on writing assignments, as well as instructor feedback, with the goal of improving writing skills and conforming writing styles to organization and industry expectations.

Enforced Prerequisite at Enrollment: SRA 231

Writing Across the Curriculum

SRA 365: Statistics for Security and Risk Analysis

3 Credits

Theoretical foundations and practice of intermediate statistics. SRA 365 Statistics for Security and Risk Analysis (3) SRA 365 is an intermediate-level statistics course emphasizing how to summarize data using descriptive statistics, how to make data-driven decisions using inferential statistics, and how to critically evaluate data presented in the media, all within the context of security, risk, and analysis. This is both a theory and application course. Students will learn about statistical theories, such as regression, and chi-square analyses, and apply their knowledge of these theories by analyzing and interpreting data using a statistical software package.

Enforced Prerequisite at Enrollment: C or better in STAT 200 or SCM 200

SRA 397: Special Topics

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

SRA 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

SRA 421: The Intelligence Environment

3 Credits

The Role of information and intelligence introduces students to the architecture and policies of the U.S. Intelligence Community (IC) and examines how U.S. intelligence policies and practices relate to overall U.S. foreign policy objectives and are influenced by today's global environment and emerging technologies. The course examines the users and processes of IC, participants of Competitive Intelligence, and comparative intelligence communities. SRA 421 The Intelligence Environment (3) This course examines intelligence structures and policies and explores the role and use of information and intelligence in the 21st Century, in support of individual citizens, national defense and corporate America. It will introduce the major actors in the U.S. intelligence community and frame U.S. intelligence policies in terms of overall U.S. foreign policy objectives in the current globalized international arena. The course discusses the history and evolution of U.S. intelligence policies, capabilities and information requirements as well as the legal and constitutional foundations of those policies. The course will examine and apply methods and techniques of the information user and intelligence practitioner. The course will also provide experience in applying principles and techniques learned in the context of a team-based intelligence-analysis simulation exercise.

Enforced Prerequisite at Enrollment: SRA 111 and SRA 211 and SRA 231

SRA 433: Deception and Counterdeception

3 Credits

Deception tactics, technologies and procedures and approaches to counterdeception analysis. SRA 433 Deception and Counterdeception (3) This course introduces deception and counterdeception and their role in support of security risk analyses in competitive environments. The course covers fundamental theories of deception, human cognition and its vulnerabilities to deception, and the vulnerabilities of technical collection systems and sensors to deception. The course discusses deceptive practices in use by attackers and defenders, including both non-technical and technical means. The course also provides experience applying technical and non-technical counterdeception techniques to security risk analysis problems.

Enforced Prerequisite at Enrollment: SRA 211 and SRA 221 and SRA 231 and SRA 311

SRA 440W: Security and Risk Analysis Capstone Course

3 Credits

This course is designed to provide IST students enrolled in their last year of study in the SRA major to experience a semester-long security and risk analysis scenario or problem-solving exercise by providing realistic analytic dilemmas requiring solutions that incorporate facets of the three SRA Options. The problems selected for the Capstone should lend themselves to team collaboration and group solutions.

Enforced Prerequisite at Enrollment: SRA 221 and SRA 311 and (ENGL 202C or ENGL 202D)

Writing Across the Curriculum

SRA 450: Cyber-Crime and Cyber-Warfare

3 Credits

Cyber-crime and cyber-warfare are among the most critical areas facing information security professionals. Both have emerged as strategic issues facing the United States. This importance is recognized by NSA, DHS and industry. This course will familiarize students with the history, tools, methods, players, laws and policies regarding cyber-crime and cyber-warfare. This course will add to the offerings in the MPS Information Security and Forensics major as well as the SRA BS ICS and IAM options.

Enforced Prerequisite at Enrollment: SRA 111 and SRA 231

SRA 468: Spatial Analysis of Risks

3 Credits

The objective of this course is to develop a spatial perspective on risk analysis empower students with GIS spatial data representation, visualization, and analysis methods that are fundamental to the spatial analysis of risk. Risk analysis is critical for public safety agencies and insurance companies, land developers, and by government planners for better disaster preparedness. Geographical Information systems and associated spatial analytical tools are widely used to characterize hazards (earthquakes, hurricanes, cyclones and floods) and their impacts of life, properties, and environment. Through a set of lectures, labs, and projects, students will develop skills and competencies in mapping hazards, exposure, and vulnerabilities, and integrating these risk components through geospatial relationships. A state-of-the-art GIS software (such as ArcGIS) will be used to support practical data processing (filtering, subsetting, reclassification), GIS analysis (location queries, buffer analysis, and spatial join/overlay), and visualization.

Prerequisite: IST 210, SRA 111.

SRA 471: Informatics, Risk, and the Post-Modern World

3 Credits

Provides in-depth study of how security informatics is influenced by the risk and post-modern culture. SRA 471 Informatics, Risk, and the Post-Modern World (3)The post-modern world provides a changing climate and context for defining and understanding threats, intelligence, decisions, and risk. Likewise, post-modern cultures consist of beliefs that are heavily influenced by psychology, social connectivity, collective behavior, religion, ethnicity, and political systems. This system of systems is heavily dependent upon and influenced by information, information technology, and the web (social informatics). When examining human behavior as it impacts risk, these various social-technical factors must be considered in planning for terrorism, intelligence analysis, and emergency events. As the post-modern world becomes increasingly complicated, the ability to discern, identify, and address threats in terms of risk becomes exceedingly more difficult. Provision of learning underlying psychological, social, political, religious, and technical components of how risk accelerates through various stages will be critical for protection of national and international interests within the security sphere. Security informatics will be at the heart of both recognizing emerging situations and employing tools/agents/measures to assuage emergency, terrorist, or even national disaster events. This course provides the student with a broad perspective to critically examine both theories and practice of security informatics as related to the cultures in which threats emerge asymmetrically. Students will be placed on the role of systems analysts

to problem solve and analyze information from a broad bandwidth of information specifically as informed by culture, post-modern thought, psychological intent, and situation awareness. The course will be grounded by participation in case studies and/or analyzing exercises of risk. Students will be required to do comprehensive reading assignments, engage in team cognition-social interaction, and become familiar with social informatics concepts and tools as related to risk, terrorism, and information warfare. As the post-modern world becomes increasingly complicated, the ability to discern, identify, and address threats in terms of risk becomes exceedingly more difficult. Provision of understanding some of the underlying psychological, social, political, religious, and technical components of how risk accelerates through various stages will be critical for protection of national and international interests within the security sphere. As extreme events become more prevalent in society, security informatics will be at the heart of both recognizing emerging situations and employing tools/agents to assuage emergency, terrorist, or even national disaster events.

Enforced Prerequisite at Enrollment: SRA 231

SRA 472: Integration of Privacy and Security

3 Credits

Exploration of technological, operational, organizational and regulatory issues related to maintenance of individual privacy, confidentiality of organizations, and information protection. SRA 472 Integration of Privacy and Security (3) This course is designed to introduce students to the major organizational, technical, operational and regulatory issues in information privacy and security, and to give them experience in performing a privacy analysis, designing privacy-aware applications and developing privacy policy in organizations. Topics covered include: conceptualizations and theories of privacy and security, privacy laws and compliance, building a privacy organizational infrastructure, integrating privacy in the software development process, performing a privacy analysis, privacy issues in outsourcing and cross-border data transfers, integrating privacy into customer relationship management and vendor management, information systems audit and intentional standards on privacy and security. This course will mix technical details, applied value and organizational insights of assuring privacy and security through the use of case studies, real-life problems, hands-on exercises and team projects.

Enforced Prerequisite at Enrollment: SRA 211 or SRA 221

SRA 480: Crisis Informatics

3 Credits

This course examines how information and communication technologies have played a role in saving lives' specifically in the areas of technologies used toward emergency response. It explores disaster response and the inter-connectedness of information, people, and technologies in a crisis. In particular, it examines how information is managed, organized, coordinated, and disseminated during a crisis; it analyzes information needs and seeking behaviors during a crisis, and explores how information and communication technologies can support communities in a crisis. Students reflect on lessons learned from past crises, and develop strategies to manage future crises. This course will equip students with the knowledge and skills to enable them to be key players in crisis response.

Enforced Prerequisite at Enrollment: SRA 111 and SRA 211

SRA 494: Research Project

1-12 Credits

Supervised student activities on research projects identified on an individual or small-group basis.

SRA 496: Independent Studies

1-18 Credits

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

SLAV 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Social Data Analytics (SODA)

SODA 308: Research Design for Social Data Analytics

3 Credits

This course engages students in the study and use of research design tools for the analysis of "big data." SODA 308 Research Design for Social Data Analytics (3) The tools of social science and social data analytics affect how data scientists and social scientists understand the world. This course engages students in the study and use of research design tools for the analysis of social systems and "big data." Topics to be addressed include: how the scientific method relates to a practice of establishing the validity of propositions and the role that analytics can play in that process when the observations are vast and varied; how the validity of systematic patterns in data are assessed as well as how spurious or biased patterns in the data are ruled out; and how the scientific method can guide the use of exploratory techniques such as machine learning and visual analytics. Through the course, students will learn to develop innovative research designs in an effort to improve the statistical analyses used with social data and how to

present these analyses to nontechnical audiences, such as non-profits, employers, and the general public. Course requirements include several short memoranda that require the development and presentation of a research design and data analysis plan. Students will also gain practical experience working with several "big data" sets. Students are required to have an understanding of introductory statistics (equivalent to the knowledge they would gain from PL SC 309) prior to taking this course.

Prerequisite: PL SC309

SODA 496: Special Topics

1-18 Credits/Maximum of 999

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

SODA 497: Special Topics

1-9 Credits/Maximum of 999

Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Social Studies Education (SSED)

SSED 100N: Foundations of History and Social Studies Concepts for K-8 Teachers

3 Credits

SSED 100N provides foundational historical content integrated with key geographic and economic concepts relevant to social studies curriculum at the elementary and middle level (grades K-8). Its main objective is to support educational inquiry (learning based in compelling questions) into historical, geographical, and economic connections across and between past eras, world regions, and the contemporary global context as academic preparation for teaching social studies to young learners. Topic areas include broad overviews of world civilizations from ancient times to the modern era and of U.S. history; fundamental geographic and economic concepts and their effects on human history; and global cultures and economy in contemporary times. The course is arranged as online unit modules that provide instruction, guide reading, and assess learning and cumulative understanding in a sequence and pace that supports building connections across this diverse range of topics and to K-8 education.

Recommended Preparation: 3rd Semester standing

International Cultures (IL)

United States Cultures (US)

General Education - Integrative: Interdomain

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

SSED 200: American Heritage

3 Credits

Recommended Preparations: HIST 20 Essentials of American Heritage for heritage interpretative education applications. SS ED 200 American Heritage (3)(US) SS ED 200 is designed to introduce students to Heritage Education as a career opportunity for students interested in teaching history/heritage, working at history museums and heritage sites, Public

History, and/or working in related fields and/or to diversify, enhance, and enrich their teacher certification, and/or to enrich their understanding of America's founding. SS ED 200 is the first in a series of four courses that lead to the Heritage Education Certificate (15 credits). Students who complete the program shall be eligible and prepared to complete the requirements for the Certified Interpretative Guide credential as offered by the National Association for Interpretation. In this course, students will synthesize knowledge and understandings of American heritage focused on America's founding as found in past and prevailing curricular sources and more importantly as represented at America's heritage sites and historical museums. Students will have opportunities to apply this knowledge through curricular and presentation experiences. Taking advantage of Penn State's central location and access to heritage/history museums and heritage and historical sites throughout the Northeast, the course will include visitations to select heritage and historical sites and museums. Pending outside funding, one to three field trips to local and regional heritage sites shall be included in this course. Pending arrangements with local and regional sites, typically, trips scheduled shall be "day-trips." Students unable to travel will be provided with alternative assignments. As part of these visits, students will observe heritage presentations by staff, engage staff, view exhibits/collections, make and record observations via technology (pictures, video, and personal notes). Student assessments will include critical essay reviews on past and present presentations of America's founding as found in relevant sources together with assessments of local, regional, and national heritage sites. Two exams shall also be required.

Prerequisite: any U.S. History selection (3 credits)
United States Cultures (US)

SSED 411: Teaching Secondary Social Studies I

3 Credits

SSED 411 Teaching Secondary Social Studies I is the first methods courses in a two-course sequence in preparation for teaching social studies in the secondary grades (7-12), with emphasis on the the subjects most frequently taught in schools and specified in academic standards (civics/government, economics, geography, and history). The principal goal is to provide prospective teachers with a better understanding of the nature, curriculum, and educational structures of social studies in the U.S.; of how to identify, select, instruct, and assess rigorous content and learning outcomes; and of effective strategies for designing, planning, and implementing instruction. Additional topics may be included as determined by the section instructor.

Prerequisites: GEOG 30N Recommended Preparations: Completion of at least 6 credits of Social Studies Teaching Option Requirements for Additional Courses or Supporting Courses and Related Areas

SSED 412W: Teaching Secondary Social Studies II

3 Credits

Writing-intensive course focusing on study of the social studies teacher's role in planning instruction; strategies for teaching. SS ED 412W Teaching Secondary Social Studies II (3)Advanced study and practice of teaching social studies in the secondary grades (7-12) with emphasis on content and methods for the major subject areas (citizenship and government, economics, geography, and history). The principal goal is to provide prospective teachers with intellectual preparation and relevant practice in selecting and applying rigorous content knowledge to higher-order thinking in the classroom and practical experience designing, planning, and implementing social studies instruction. Topics include the social

studies teacher's role in planning and practicing instruction, strategies for implementing and assessing teaching in the social studies, and others as determined by the section instructor. As a writing course (W), SS ED 412W engages students in professional in-depth writing experiences that involve planning, process, development, teaching and learning social studies content, and other relevant writing that teachers are expected to perform.

Prerequisites: SSED 411 Corequisites: CI 495C
Writing Across the Curriculum

SSED 430W: Teaching Social Studies in the Elementary Grades

3 Credits

Social studies transforms the social sciences and humanities to promote civic competence (National Council for the Social Studies, 2002). In this course, teacher candidates learn to coordinate and conceptualize the richness of anthropology, economics, geography, history, civics, and sociology for elementary classroom pedagogy. Candidates become familiar with various instructional strategies that support social studies. Candidates gain an understanding of the information, concepts, theories, analytical approaches, and different perspectives-including global and multicultural perspectives-that are important to teaching social studies. Candidates also learn how to assess social studies learning in a variety of ways. This course stresses technology, content integration, social science competence, differentiated instruction, multicultural/global knowledge, teaching social historical inquiry, and constructing democratic learning communities. Teacher candidates learn how to apply the State Learning Frameworks and National Standards in their classroom instruction. At the conclusion of the course, candidates have a good understanding of elementary social studies and are able to develop and demonstrate powerful social studies curricula. Being a "W" course, SSED 430 incorporates both formal and informal writing into in-class and graded assignments to encourage teacher candidates to develop as critical thinkers and productive writers. This writing includes an essay describing one's own experiences as a social studies learner, reading responses, the creation of a unit of instruction, and several lesson plans that describe significant activities. These writing tasks are meant to professionalize the communication skills required to effectively teach social studies as well as to effectively communicate with parents, educators, and administrators. SSED 430W is a part of a block of courses in a PSU teacher education program that is unified by a basic set of principles and a field experience component.

Prerequisites: 4th Semester standing Recommended Preparation: 9 credits in history and the social sciences
Writing Across the Curriculum

SSED 470: Issues in Social Studies Education

1-6 Credits/Maximum of 6

Concentration on particular issues, trends, and developments in the social studies.

Prerequisite: Instructional I certificate and teaching experience

SSED 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

SSED 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Social Work (SOCW)

SOCW 195: Introduction to Social Work with Field Hours

3 Credits

This course provides an introduction to the social work profession through a historical, ethical, and value-based exploration within a transcultural perspective. A focus on the skills and knowledge base of the profession as well its advocacy foundation with at-risk, disenfranchised, and marginalized populations will be presented. Students will also have an introduction to field education through required pre-practicum hours. Course objectives and format methodology is based upon the core competencies and practice behaviors designed by the CSWE. 1. To construct a beginning understanding and demonstrate ethical and professional behaviors in social work practice. 2. To demonstrate an understanding of how the social work generalist practitioner engages in diversity and difference in practice. 3. To understand how the social work generalist practitioner advances human rights and social, economic, and environmental justice. 4. To construct a beginning understanding of how the social work generalist practitioner engages in practice-informed research and research-informed practice. 5. To demonstrate an understanding of the role policy play in the practice of generalist social workers. 6. To construct an understanding of how social workers, intervene with individuals, families, groups, organizations, and communities.

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Soc Resp and Ethic Reason

SOCW 205: Diversity, Equity, Inclusion, and Justice

3 Credits

This course will provide social work students with the knowledge, skills, and values necessary to engage in culturally competent social work practice at the generalist level. An emphasis on activism, advocacy, anti-racism, anti-discrimination, culture, ethnicity, international social work, and social justice within diverse communities and practice settings will be examined. According to the National Association of Social Workers Code of Ethics, cultural competence and social diversity have three primary components: 1. Social workers should demonstrate an understanding of culture and its function in human behavior and society, recognizing the strengths that exist in all cultures. 2. Social workers should demonstrate knowledge that guides practice with clients of various cultures and be able to demonstrate skills in the provision of culturally informed services that empower marginalized individuals and groups. Social workers must act against oppression, racism, discrimination, and inequities, and acknowledge personal privilege. 3. Social workers should demonstrate awareness and cultural humility by engaging in critical self-reflection (understanding their own bias and engaging in self-correction), recognizing clients as experts of their

own culture, committing to lifelong learning, and holding institutions accountable for advancing cultural humility.

United States Cultures (US)

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

SOCW 215: Introduction to Social Welfare History, Policy, Programs, and Services

3 Credits

This course familiarizes students with the historical development of social welfare history, policy, programs, and services. This section will provide students with a national and global perspective to better understand social welfare concepts at the generalist level. Elements of advocacy, human rights, social, political, and economic justice are essential reoccurring themes embedded in the course. SOCW 215 assists students in developing an understanding of how the implementation of social welfare policies, programs, and services are funded, influenced, and regulated at the local, state, and federal levels. Students will be introduced to multiple historical periods in American society that are relevant to the foundation of social welfare programming and the social work profession. Key figures and pioneers of the social work profession will also be discussed including Jane Addams, Mary Richmond, Dr. Dorothy Height, Clara Barton, Whitney M. Young Jr., Cesar Chavez, and other influential leaders.

United States Cultures (US)

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Soc Resp and Ethic Reason

SOCW 290: Human Behavior and the Social Environment

3 Credits

This course provides students with a conceptual framework to acquire knowledge of human behavior and the social environment with an emphasis on human growth and development theories throughout the life span. Special attention to biopsychosocial functioning and spiritual factors will be examined from a social work practice perspective. SOCW 290 will assist students in identifying indicators of normal and abnormal development in addition to better understanding person-in-environment (PIE) theory and other multidisciplinary theoretical frameworks relevant to social work. Competent social work practitioners view human behavior in the social environment through a resiliency, risk, and vulnerability model. By examining human behavior throughout the lifespan, SOCW 290 provides a foundation for students to organize thoughts about the challenges and needs of diverse client populations to better provide social work-related interventions, services, support, and resources. Theories discussed in this course will be connected to cultural, developmental, and social issues that are experienced throughout each stage of life. Students are expected to utilize acquired knowledge and skills gained in this course to better understand the interactions between clients and their environment by examining the major domains of human development from a social work lens. This course is designed to address CSWE competency requirements. SOCW 290 is a requirement for SOCW majors.

Prerequisites: SOCW 195

General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Global Learning
 GenEd Learning Objective: Integrative Thinking
 GenEd Learning Objective: Soc Resp and Ethic Reason

SOCW 300: Social Work Methods - Individuals

3 Credits

The primary focus of this course is to introduce students to direct practice with individuals. Strength based strategies, which value client self-determination while helping clients to obtain their highest functioning level, are an important underpinning of ethical social work practice and as such must be presented and understood by social work students if they are to become successful change agents. This course will provide an introduction on client engagement, assessment, goal setting, intervention and termination processes in challenging practice environments and within a multicultural perspective. The course will be framed within the nine competencies and practice behaviors as outlined by the Council for Social work Education that are appropriate for an advanced level course. Course Objectives and Format Methodology based upon the Core Competencies and Practice Behaviors of Social Work Education 1. Demonstrate the knowledge of social work ethical and professional values the social service delivery system to be able to make an informed decision about entry into the field of social work. 2. Identify how the social work generalist practitioner advances human rights and social, economic, and environmental justice within a micro and macro practice with individuals. 3. Describe the types or forms of human diversity (e.g. culture, gender) encountered in social work practice and describe principles and guidelines for responding to human differences. 3. Define the roles and functions of social work practice to engage and evaluate individuals, families, groups, organizations, and communities. 4. Develop the ability to understand the multiple methods used by generalist social workers with systems of all sizes. 5. Employ in understanding how the social work generalist practitioner engages in diversity and difference in practice with individuals. 6. Apply empowering practices and ways of working collaboratively. 7. Identify and describe key social work values, knowledge, principles, and skills within an ethical framework as defined in the NASW Code of Ethics. Cognitive Methods Students will effectively and discriminately classify, synthesize and convert knowledge and understanding gained from course readings, lectures, videos/digital content, and guest lectures into informed class participation and reflective class assignments. Affective Methods Students will examine and challenge their value assumptions as they attempt to analyze contemporary theories of human development. They will explore practical implications of their values and the prevailing social values within this culture as they relate to the provision of social work. This will be achieved through class discussion and as such it is essential that students participate in class. Experiential Methods Students will experiment with various analytical and practice skills as they relate to theory and research methods in small and large group experiences, discussions and a variety of class presentations.

Prerequisites: SOCW 195

SOCW 301: Social Work Methods - Groups

3 Credits

The primary focus of this course is to introduce students to the importance of group work with a variety of client populations as well as provide a foundation in group work theories, modalities and facilitation. Social work students are in many instances most often comfortable working with individuals or family units and have little to no experience

in group leadership. Since group work regularly occurs within a micro or clinical context as well as in larger macro practice settings it is imperative that social work students become familiar with and proficient in group work. This course discusses planning for, conducting, and evaluating several types of groups including skills, support, treatment, psychoeducational, task orientated, macro practice, anti-oppressive, eating disorder, elementary school conflict resolution and teen pregnancy groups. Additional group work with disenfranchised populations including immigrants and people with HIV/AIDS. Students will be asked to apply critical thinking to inform and communicate professional judgments. The course will be framed within eight of the nine competencies and practice behaviors as outlined by the Council for Social work Education that are appropriate for an advanced level course.

Prerequisites: SOCW 195

SOCW 302: Social Work Methods - Families

3 Credits

The primary focus of this course is to introduce students to the importance of work with families and to provide a foundational platform from which to practice. Students and professionals in the field of social work usually can easily identify deficiencies and issues within a family system. What is not as easily discernible is the strengths which all families possess. Understanding how individuals and families, not only survive, but can thrive under adverse conditions can enable social workers to move families toward healing. Therefore, students must not only study family dynamics and theories of family therapy but must first understand the concept of resiliency as it is rooted in the strength's perspective. Students will be asked to apply critical thinking to inform and communicate professional judgments. The course will be framed within the nine competencies and practice behaviors as outlined by the Council for Social work Education that are appropriate for an advanced level course.

Prerequisites: SOCW 195

SOCW 303: Methods - Communities & Organizations

3 Credits

This course will examine the interventions, research, and theories that generalist social workers use in macro practice settings while working with communities, groups, organizations, and public policy. Students will develop skills in community activism, advocacy, development, empowerment, mobilizing, organizing, and organizational leadership. SOCW 303 students will also learn how to create a community action plan, needs assessment, program budget, grant proposal, logic model, and SWOT analysis to further develop administrative and leadership skills. As a course requirement, students will be expected to engage with communities and organizations outside of the classroom. Therefore, the following background clearances may be required: PA child abuse clearance, PA criminal background check, and an IdentoGO/FBI fingerprint clearance. Upon successful completion of this course, students will foster a better understanding of how macro-level social workers employ various approaches to engage, assess, intervene, and evaluate diverse populations and organizations from a generalist practice perspective.

Prerequisite: SOCW 195 and SOCW 205 and SOCW 215 and SOCW 290

SOCW 315: Assessment, Documentation, and Effective Interviewing Skills in Social Work

3 Credits

This course will provide students with an overview of the necessary skills, strategies, techniques, theories, and values associated with social work interviewing and case management. Students will learn how to monitor, plan, and seek services for clients at the micro, mezzo, and macro levels. Other topics explored will include clinical interviewing, conducting assessments, and initiating the referral process. Clinical interviewing is an important skill for all social workers to achieve due to its nature of fostering effective communication patterns between the client and practitioner. Students will master how to apply social work interviewing skills to practice through engaging in a variety of techniques: Basic listening, clarifying, confronting, feedback, focusing, supporting, reflecting, reframing, redirecting, validating, among others. According to the National Association of Social Workers, case management dates its development back to the emergence of the social work profession and it still remains integral to contemporary social work practice. The National Association of Social Workers' benchmark study of licensed social workers in the United States documented that case management is a component of many social work positions, and that a significant number of social workers report spending more than half their time on case management-related responsibilities. Social workers must be competently skilled in interviewing and generalist case management techniques to effectively meet the needs of their client populations.

Prerequisite: SOCW 195 and SOCW 205 and SOCW 215 and SOCW 290**SOCW 407: Research Methods in Social Work**

3 Credits

This course introduces students to the methods and processes of social work research. A major emphasis of this course is the integration of practice-informed research and research-informed practice. Social work students will learn how to utilize research evidence to inform policy and practice through scientific inquiry. Students will analyze research designs, develop qualitative and quantitative skills, engage in hypothesis formation and testing, and evaluate social work program outcomes. Throughout this section, students will assess multiple practice-based research studies relevant to social work practice. Developing and conducting a social work-related research project through the application of newly developed skills in this course is expected. Upon completion of SOCW 407, students will develop an understanding of how research is an integral part of the problem-solving process in social work practice settings. Ethical considerations in the conduction of research with human subjects will also be explored. SOCW 407 is a required course for all social work majors enrolled in the BSW program.

Prerequisite: SOCW 195 and SOCW 205 and SOCW 215 and SOCW 290 and STAT 200**SOCW 495A: Social Work - Internship**

3 Credits

The social work internship is intended to give aspiring social workers experience in clinical settings and non-profit agencies. They will have the opportunity to apply their knowledge to real-world situations and deepen their experiences through field studies.

Prerequisite: SOCW 195 and SOCW 300 and SOCW 301 and SOCW 302**SOCW 495B: Social Work - Internship**

9 Credits

This advanced internship is an immersive field experience for students pursuing the BSW. Students will be placed in clinical sites and non-profit agencies to deepen their experiences through field work.

Prerequisite: SOCW 195 and SOCW 300 and SOCW 301 and SOCW 302 and SOCW 495A**Sociology (SOC)****SOC 1: Introductory Sociology**

3 Credits

The nature and characteristics of human societies and social life. SOC 1 Introductory Sociology (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. Introductory Sociology provides perspectives and information useful in understanding all societies. The major theories (functionalism, conflict, and symbolic interactionism) and concepts provide the foundation upon which the remaining material rests. Learning how sociologists do research provides the tools for understanding the production of knowledge and for evaluating the validity of sociological assertions. Familiarity with systematic theorizing and conceptual development, along with some comprehension of the nature of the scientific method as it is applied in sociology, enhances critical reasoning. To promote a more complete understanding of human social life, both in its inherent constraints and in the opportunities it provides; the nature and reality of culture and social structure are explored. The study of socialization provides perspectives on how one becomes a member of society. Exploring social interaction adds insight into the formation of the social self and the salience of group identities and norms. Ending this first section with a discussion of social control highlights the forces of stability and change in society. The course then progresses to considerations of social stratification and inequality. The nature of privilege and oppression are discussed and considered in the specific contexts of race, ethnicity, gender, and age. The focus then shifts to social institutions. The essential work of society is accomplished via its major institutions: family, education, health care, economy and work, religion, and politics. Applying theoretical perspectives to the form and function of these institutions enhances an understanding of how different social structures provide varying constraints and opportunities to their inhabitants. Finally, considering large-scale forces for change provides a platform to comprehend where human societies have been, are now, and might be headed. Throughout the course, the lectures as well as the textbook draw amply on cross-cultural and cross-national material. In addition, the course emphasizes the complexity of human social life and describes the many variables (social structural, cultural, interpersonal, and psychological) that influence behavior. A special component of the course deals with topics pertinent to the social behavior and norms of students of the ages typically taking this course. Depending on the faculty member, these topics could include sexual behavior, alcohol use, and problems in interpersonal relationships. Discussion and questions are encouraged in all sections. Sections of this course may include group research projects, debates, and library or internet-based research. Along with personal contact, students have the opportunity to communicate with teaching assistants and faculty members via e-mail. Writing assignments, along with in-class examinations, are required in all sections. This course meets a general education requirement in the social and behavioral sciences.

Writing Across the Curriculum

SOC 3: Introductory Social Psychology

3 Credits

Social psychology is a discipline that bridges sociology and psychology. Sociology focuses on large, medium, and small scale social patterns and influences while psychology tends to emphasize the individual organism and its functioning. Social psychologists borrow perspectives and methods from both sociology and psychology. The major thrust of the sociological perspective on social psychology is on the influence of the social group areas such as socialization, social influence, conformity, group decision-making, interpersonal relationships, and power. This introduction to social psychology course focuses on sociological perspectives on human development, social interaction between individuals, group influences on individuals, and interaction between groups. A key theme of this course is for students to demonstrate understanding of how sociology helps us understand "real world" human behavior, social interaction, subjective experience, including students' own. A secondary objective of this course is for students to demonstrate a basic understanding of where sociological knowledge comes from and how it is evaluated.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

SOC 5: Social Problems

3 Credits

Introduces students to the ways that sociologists seek to understand social conditions, events, and behaviors that people think of as "social problems" that need to be solved. Students will examine a range of social problems, such as poverty, crime, inequality, violence, environmental change, and race/sex/gender discrimination, from a variety of perspectives regarding their causes, consequences, and solutions. Encourages students to use sociological tools to critically assess the validity of claims about social problems so they can decide for themselves what should be done to address them.

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

SOC 12: Criminology

3 Credits/Maximum of 3

Criminology is the study of the causes of criminal behavior. As such this course is an introduction to the topic with special focus on the major theories and concepts explaining criminal behavior. A key focus of the class is examining the most recent scientific research testing the basic theories in criminology. The students learn the various research techniques that have been methods and data sources used to study criminal behavior. Several important areas of study that link understanding criminal behavior and its distribution across the social system are investigated including age, gender, race and ethnicity. One

goal of the course is to promote a more complete understanding of crime and how it is enmeshed in human social life. Students read a general text, as well as scholarly articles in Criminology.

 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Integrative Thinking

SOC 15: Urban Sociology

3 Credits

City growth and decline; impact of city life on individuals, families, neighborhoods, and government; urban life-styles.

Bachelor of Arts: Social and Behavioral Sciences
 General Education: Social and Behavioral Scien (GS)

SOC 19: Sociology of Popular Culture

3 Credits

Applies sociological theories, concepts, and research techniques to studying popular culture as a foundation of social life and human relationships. Covers a range of pop culture from blockbuster movies produced by global corporations to content created by social media users. Students will learn about the production and consumption of different types of popular culture and analyze its social significance. Offers students opportunities to investigate forms of pop culture that they are curious about from different sociological perspectives. Encourages students to become more sociologically savvy observers of their cultural environment and gain a richer awareness of implications of popular culture in their own lives. Provides a foundation for further study in sociology and related social sciences, as well as academic and applied disciplines that focus on popular culture and other types of art and culture.

Bachelor of Arts: Social and Behavioral Sciences

SOC 20N: Critical Media Literacy

3 Credits

We live in a world in which we are surrounded with media messages that influence how we think and act. Since we are so immersed in media culture, it is important that we know how to analyze media content, production and reception, so that media can become tools for liberation and creativity, not control. In this course, we will learn to critically analyze work produced in different forms of mass communication. The course focuses on power, ideology and social inequality, analyzing relationships between media producers and audiences, and between information, the politics of representation, and power, including a focus on the crucial areas of gender, sexuality, class, and race. The course takes a dialectical perspective that focuses on both theory and practice, providing students with the opportunity and knowledge necessary to produce their own short film using the resources of Penn State's media commons.

SOC 23: Population and Policy Issues

3 Credits

Local, national, and international population trends; basic techniques of demographic analysis; population problems; implications for public planning and policy. SOC 23 Population and Policy Issues (3) (GS) (BA) This course meets the Bachelor of Arts degree requirements. Demographic changes are some of the most important factors in understanding the future of specific professions, our nation, and the world. This course introduces students to the discipline of demography,

including an overview of demographic issues, theories of population, and major findings from demographic research. Focusing on the state, national, and global level, students will learn how the discipline of demography and how population structure and age are related to social institutions and public policy issues. Students will receive hands-on experience with the data and methods used by professional demographers and health and urban planners. Thus, this course should provide students with 1) a global perspective on population changes, 2) knowledge of demography research and theory, 3) analytical skills for the application of demography to public policy, 4) an awareness of how the diversity of a population (e.g., age structure, race, ethnicity, sex, and culture) is related to public policy, and 5) the active learning of demographic techniques. The instructors encourage discussion and questions in all sections. This course meets a General Education requirement in Social and Behavioral Sciences.

 Honors

SOC 30: Sociology of the Family

3 Credits

This course examines the family in American society by looking at individually lived family experience, the family as a systematic social institution influenced by larger social processes and social structure and context, and the ways in which family patterns and processes influence broader social patterns. Students will learn how researchers resolve issues related to the definition of family; how researchers develop theories and conduct research on family issues; how family experiences are shaped by factors such as race/ethnicity, social class, and the larger social context; how the key stages of the family life course and family challenges may be experienced by individuals and influenced by the larger social context; how family choices and processes impact the larger society. The course both provides a foundation for further study in both general sociology and sociology of the family, and prepares students to make informed choices about their future family-related issues. Throughout the course students are empowered to reflect on their individual experiences, and to link individual experience to the larger social context and the family as a key social institution.

SOC 35: Sociology of Aging

3 Credits

Introduction to the sociological study of aging. SOC 035 Sociology of Aging (3)(BA) This course meets the Bachelor of Arts degree requirements. The sociology of aging covers social aspects of aging, including common beliefs about older people, the diversity of the aged, and how institutions such as the economy and family influence the aging process. Evaluation methods include two exams, each worth 20 percent of the final grade, and a series of written assignments. For example, there is one 5-7 page paper and a second shorter one on aging in another society. The course serves as a basis for taking SOC 435, Social Gerontology. It can be counted toward the major or minor in Sociology or Human Development and Family Studies.

Bachelor of Arts: Social and Behavioral Sciences

SOC 60N: Society and Cultures in Modern Israel

3 Credits

Israel is often portrayed in media and popular society in incomplete or distorted terms. In some cases, it is presented as a troubled, violent, dangerous place, as a place permeated by long-standing hatred between Jews and Muslims, Israelis and Arabs, Israelis and Palestinians. In others, the focus is on the state's role as the center of Judaism—a home of the "chosen people" and the source of inspiration for one of the world's great monotheistic religions. Some present it as a model for how a democracy can succeed under trying demographic, historic, and geopolitical circumstances. Others frame Israel as a place of

conflagration (armageddon) that will usher in a messianic period or as a nation-state with a discriminatory regime that privileges its majority population over its minority and administers oppressive policies over Palestinians in the occupied territories it captured in the 1967 War. While there are elements of truth in each of these presentations, the full picture of Israeli society is much richer and more complex. This course teaches students to cut through the mythology, and develop a more accurate understanding of what Israel is in the 21st century. Since Israel is a culturally, ethnically, and religiously diverse society, it is only possible to understand the true nature of modern Israel through exploring the many sub-groups that comprise the Israeli citizenry. The course looks at Ashkenazi and Mizrahi Jews (both religious and secular), Muslim and Christian Palestinian Arab citizens of Israel, Ethiopian-Israelis, Russian-Israelis, Bedouins, and Druze. For each group, it looks at demographics, background histories, migration patterns, institutions, cultural norms, values, and practices. We will look at what is important to each group, how they see and organize themselves, and how they understand and experience the world around them. The course aims to convey an understanding of the geographic, demographic, and social-historical context in which Israelis live as well as the diversity of Israeli culture. Students will be challenged to be critical readers of Israeli society and the way it is represented and to strive for measured, evidence-based analyses.

SOC 83: First-Year Seminar in Sociology

3 Credits

This course meets the Bachelor of Arts degree requirements. Each section or offering of this course will be limited to 20 students who will be instructed by an experienced faculty member. Each section will focus on a well-defined body of scholarship that addresses a relatively specific topic while at the same time provide an opportunity for surveying broadly existing knowledge in the discipline. The specific content of the course will vary from offering to offering, and depending on the interests of the instructor, will introduce students to a sociological perspective on particular social issues. For example, one section examines racism and sexism as axes of privilege and oppression. Other sections may deal with major social institutions, such as the family or religion, or with fundamental social processes (e.g., demographic, social, and psychological). Finally, some sections may have a heavier policy emphasis—examining responses to social issues—while others might take a comparative or international approach. Each section will emphasize the development of discussion, writing, and analytical skills and will give students the opportunity to work individually and in small groups. Students can expect to receive a general introduction to the University as an academic community and to explore their responsibilities as members of that community. They will also become familiar with the learning tools and resources available to them, and they will be able to establish relationships with faculty and other students who share their academic interests. This course fulfills a general education or Bachelor of Arts requirement in the social/behavioral sciences.

SOC 103: Racism and Sexism

3 Credits

This survey course examines racism and sexism as cultural, political and economic processes that shape contemporary social life in the United States. It provides an historical overview of the roots of modern racism and sexism and will explore these structural inequalities continue to matter in a "post-racial" and "post-feminist" era. Students will engage a broad range of texts that discuss these forms of inequality as intersecting, mutually constituted forms of marginalization. Students will develop a deeper understanding of how race, gender, sexuality, and class conditions identity formation; racism as a structural process that shapes and limits the life chances of non-white communities; and the long tradition of resistance that women and communities of color have developed to combat these social inequalities. The course is divided into two sections. The first introduces a range of terms: race, gender, class, sexual politics, intersectionality and neoliberalism. The second half considers various case studies: mass incarceration, toxic waste, (un)natural disasters, reproductive justice, and Islamophobia in the war on terror. Students will leave with both an understanding of key theoretical terms in the study of racism and sexism and be able to apply these concepts to contemporary social issues.

SOC 109: Sociological Perspectives

3 Credits

Intensive and critical analysis of the bases of the social order, change, values, knowledge, and conflict.

Bachelor of Arts: Social and Behavioral Sciences

SOC 110: Sociology of Gender

3 Credits

Changing sex role expectations and behavior for men and women in contemporary society. SOC (WMNST) 110 Sociology of Gender (3) (GS;US) (BA) This course meets the Bachelor of Arts degree requirements. This course provides an introduction to the analysis and understanding of how men's and women's lives are different and how they intersect with each other. The course focuses on the social construction of gender and the impact of gender on experiences in a variety of social contexts and institutions throughout the life course, including cross-cultural comparisons of gender expectations. An overriding objective is to help students better assess and analyze the effects of gender throughout history and in their everyday lives. Class

sessions are a mixture of lectures, discussions, group exercises, guest speakers, and films designed to engage the students in the learning process. Each session helps students to critically evaluate the effects of gender discussed in their readings and experienced in their everyday lives. The evaluation tools used for this course extend this critical evaluation. Although the specific evaluation methods vary by sections, all sections use some form of reaction papers, book reviews, and/or journals. These writing assignments require students to demonstrate an understanding of the class readings, lectures, and activities, and to offer an evaluation and assessment of these readings and presentations. Because the social construction of gender is intertwined with family, work, religion, education, government, and all interpersonal interaction, the course overlaps with courses in each of these areas. This course meets a General Education requirement in Social and Behavioral Sciences. It can be used as a lower-level sociology course in the Sociology BA major and the Sociology minor. It can also be used as a supporting course in the Women's Studies major and minor.

SOC 119N: Race, Ethnicity and Culture

3-4 Credits

SOC 119N Race, Ethnicity and Culture (3 or 4 credits) (GS/GH;US/IL) (BA) Additionally, SOC 119N is an Inter Domain course (Social Sciences and Humanities) This course focuses on historical patterns and current status of racial, ethnic and cultural groups and issues locally, nationally, and internationally. SOC 119 has three objectives. First, the course will introduce students to new ways of thinking about race, ethnicity and culture from the perspectives of the social sciences and humanities. Students will be able to compare and contrast differences between race, ethnicity and culture. They will be able to understand the extent and pervasiveness of racial, ethnic and cultural inequality and discrimination in the U.S. and explain how unequal systems impact different ancestry groups both in the U.S. and around the world. Students will be able to compare historical causes and consequences of sociological processes such as immigration, assimilation and multiculturalism, and they will develop new ways of understanding how these processes are expressed in popular culture (e.g., art, music, literature) and intergroup dynamics. The second objective is to provide students with the intellectual tools for having more thoughtful conversations about the issues address in the class. By acquiring these tools Students will be able to formulate more thoughtful questions and responses when they engage others in everyday discussions about the many racial, ethnic and cultural factors and forces that pull people and groups together and push them apart. The third objective is to encourage students to explore their own racial and cultural identity. Students will explore pathways to allow them to discover new ways to understand their own racial and ethnic place in the world and the history of their own families. Students will be able to more clearly explain how their identity reflects and shapes their life experiences as well as others in their racial and ethnic group(s).

SOC 120N: Knowing Right from Wrong

3 Credits

"Knowing Right from Wrong" provides a comprehensive understanding of the nature of moral ideas, beliefs, and behaviors in contemporary contexts. What roles do nature and nurture play in the development of moral sensibilities? How do moral emotions and moral reasoning interact to produce moral behavior? What defines moral character and how does it influence what we do? Is it possible to derive what ought to be done from what is known about the world? How do we respond when moral demands compete with another? How do our moral convictions color our perceptions of world events? Can individuals and groups with differing moral commitments communicate with one another and live together peacefully? The course integrates perspectives from philosophy, psychology, and sociology, and prepares students to think about (and act in) a world in which morality (and its linked concepts, such as judgment of others) plays an increasingly important social and political role. The course treats morality as both an aspirational concept and as an actual social practice, and focuses on three major themes: (1) the origins and development of moral reasoning and ethical systems, (2) the influence of moral emotions and moral intuitions on moral reasoning and behavior, and (3) the influence of social and contextual factors on moral behavior and expression. Integrating the philosopher's interest in ethics, with the psychologist's interest in the mind and body, and the sociologist's interest in groups, the course provides a comprehensive introduction to morality in contemporary society, and the ways in which it shapes the lives of people in everyday situations.

SOC 130N: Buddhism and US Society

3 Credits

This course focuses on Buddhism in the United States. We will overview the historical factors that led to the development of Buddhism in the U.S., the many traditions that currently exist in the U.S., the role of Buddhism in the daily lives of different types of Americans, and various problems or frameworks that have characterized American Buddhism (such as race, gender, technology, and media representations). One major theme of the course is literary expressions of American Buddhism, such as the writings of Jack Kerouac and bell hooks. A second major theme, Buddhist meditation, will be explored through interdisciplinary perspectives drawing from both the humanities and social sciences. In the final portion of the class, we will focus on Buddhism in Pennsylvania, involving students in an ethnographic exploration of the religious pluralism in our home state.

SOC 145N: The Holocaust and Human Rights

3 Credits

This inter-domain course integrates historical (GH) study of the Holocaust with sociological (GS) perspectives on the Holocaust and human rights. Topical content begins with historical antisemitism ("the longest hatred") and elaborates the history of the Holocaust in German and in Europe. A second half of the course explores consequent definitions of genocide and human rights, globally established by the United Nations through international law. Post-war campaigns to reduce prejudice and to raise 'Holocaust consciousness' are presented along with sociological insights into problems of persecution through eugenics, xenophobia, and racialized inequalities. Survivor testimonies underscore the value of resilience and the ethics of standing up against injustice, including discrimination or persecution based on cultural or another group identification.

SOC 150N: Healthy People, Healthy Society

3 Credits

This course examines how individual health and well-being are influenced by social forces and public policy. The course revolves around three questions: How are social life and individual well-being linked? How can social policy positively influence individual well-being? And, what can individuals do to produce healthy social relations and support social policies that increase population health? The course has four sequential parts. The first portion of the course begins in the 19th Century, when the social aspects of health were first discovered and addressed. Students will learn basic sociological and population health terminology and methods, as well as the meaning of "social life" within sociology and public health. The second portion of the course focuses on the social processes that produce health inequality, their effect on public health, and the policy interventions that can be used to overcome them and protect individual health and well-being today. This portion of the course will use public health cases to understand the roots of social inequality and the power of social policy to alleviate health inequity. We pay special attention to areas of tension in public health delivery: public goods, privatization, cost-benefit ideas, social justice, politicization of science

and regulatory capture. The third portion of the course focuses on the processes that shape individual health behaviors and influence of social behaviors on individual well-being. Relevant concepts discussed include culture, networks, framing, nudging, norms, and peer influence. The final portion of the course considers ways that individual behaviors contribute to a healthy society. This includes examining individual social behaviors, like civic engagement and religious activity, and social movements to understand how social responsibility can promote better health for all.

SOC 162N: Communicating Care

3 Credits

Communicating Care ENGL 162N / SOC 162N / CAS 162N What do we talk about when we talk about health? Our states of well-being and illness are topics that, like the weather, drive our daily conversations, but we rarely have time to study and practice these vital exchanges. Spoken in emergency rooms or on long-distance calls, by medical professionals, family members, or strangers making small talk, the languages we use to share pain and recovery require our knowledge of long-established scripts and our willingness to improvise. By exploring how these encounters draw from and work as textual and dramatic performances, this course will guide students to achieve a new level of literacy in the most essential communicative art of caring. Students will analyze health conversations in literary texts, such as short stories, poems, memoirs, and graphic novels. They will explore real-life scenarios drawn from their own experiences, fieldwork, social science theories, and published case studies. Developing skills in the humanities (GH), they will see how subjective, often individual experience, historical perspectives, and creative expression help people to communicate about health and care. Developing their abilities in the social and behavioral sciences (GS), they will see how theory provides insights to predict and understand health and practices of care, investigate objective perspectives and recognize the contributions of fieldwork and data-driven studies to analyzing and improving communication when health is a main concern. They will integrate these methodologies especially to pursue these fields' common goals of making beneficial connections between individuals and groups, and managing private and public life.

SOC 180N: State, Society, and Public Policy

3 Credits

Alexis de Tocqueville called association the *mother science* of politics and saw voluntary associations as a pillar of American democracy. These associations must compete in what might be called a moral

economy of public policy that preserves the value of equality. This course brings together ideas from political philosophy, history, political science, communication, sociology and economics to address an important question: How have voluntary, nongovernmental associations come to shape and implement public policy? The class begins with the core concepts in political thought and traces them through to contemporary ideas about civil society that span the political spectrum. After critically assessing these ideas, we integrate them into a framework for understanding the process of making public policy.

SOC 201: Presumed Innocent? Social Science of Wrongful Conviction

3 Credits

The criminal justice system is a human creation and some errors are expected. Sometimes guilty parties go free and sometimes innocent people are convicted. In this course, we will employ the perspective of the social scientist to understand why and how wrongful convictions occur. How can social science help to predict, explain, and prevent wrongful convictions? This course is organized into three units. In the first unit, we will examine the large body of social science research that demonstrates disparities in all stages of the criminal justice system. For example, young Black and Latino men are disproportionately arrested, charged, convicted and imprisoned for violent crimes. This is partly due to these men disproportionately living in environments that foster crime, but social science research shows sometimes it's also partly due to the discretionary decisions of police, prosecutors, and courts. As a result, these demographic groups are most likely to be wrongfully convicted. In the second unit, we'll explore the factors in the justice system that might lead to a wrongful conviction, including false confessions, eyewitness misidentification, poor legal representation, government misconduct, and informants and snitches. Social scientific findings elucidate how each of these factors influence conviction accuracy. Finally, we'll discuss how social science research on the risks and factors that contribute to wrongful convictions can be used to improve policies to reduce the risk of such convictions. Simple reforms such as openness about

plea-bargaining, eyewitness identification reform (e.g., sequential lineups, double-blind procedures, etc.), recording of interrogations, and introducing Innocence Commissions in every state can improve our criminal justice system.

SOC 205N: Critical Race Theory in the Humanities and Social Sciences

3 Credits

This course closely examines the place and power of race in America. By tracing the history of how race works in particular American institutions, such as public education, criminal justice, and federal housing, students will gain a deep sense of how social categories and understandings shape material conditions and human welfare. Through the study of policies, court cases, memoirs, documentary films, and freedom struggles, this course will interrogate the many Americas that race has created and their implications for democracy and justice. Not only will this course focus on making race visible, but also the many ways that race intersects with class, gender, and sexuality and how these concepts empower and marginalize at the same time. All the while, students will use Critical Race Theory methods to reach empathy and strengthen social (GS) and historical (GH) literacies. Discussion, writing, critical reading, and primary source analysis will be integral to this class. Class sessions will include whole- and small-group discussion where active listening and thoughtful participation will be taught and required. Students will be encouraged to explore their own conceptions of race and how those ideas shape knowledge and experience. Ultimately, this is a course that will weave data, theory, and story as we encourage students to move toward empathy through comprehensive understandings of race. This course therefore examines race as both deeply personal and structural.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Bachelor of Arts: Social and Behavioral Sciences

SOC 208N: Visual Representations of the Middle East in the US and Middle East

3 Credits

This course is an introduction to the visual culture, the visual experience and sociological/historical context of images of the Middle East in the US mass media. The focus of the course will be on reading and interpreting visual images (painting, photography, film, illustration, digital media) and analyzing the larger social and cultural forces that shape the production, distribution and consumption of these media forms. We will explore these issues by focusing on a series of images/case studies located in a specific historical context, allowing us to introduce some of the major movements in visual culture, explore the social contexts of these images, and the ways in which the visual experience shapes our social lives and personal identities. Course evaluations will include exams, writing assignments, a class blog, and a final art project. The course examines visual representations of cultures over time, providing students with the artistic, historical, political and sociological context of their production. This integrative framework will enable students to understand how the creation of visual media and its interpretations both influence and are influenced by social context. It will introduce students to integrative thinking by providing them with interpretive techniques of the social sciences and the arts to increase their powers of visual analysis so that they can discuss an image's medium, composition, style and iconography. The course will examine the ways that the arts can be an expression of cultural values, helping students to comprehend the hegemonic aspects of image composition, production, exhibition and distribution. The course will explore the social milieus in which media is created, often depicting stereotypical images that poorly represent the complexity of the myriad cultural groups in the Middle East.

SOC 209: Poverty in Africa

3 Credits

African countries are generally considered to be among the poorest countries on the planet. On average, their incomes are low as are their levels of education. Poor African countries also have a range of peculiar characteristics that negatively affect their living standards. As these standards decline, western audiences have increasingly been targeted by aid organizations seeking donations to help the African cause. Despite growing awareness of African poverty, however, few attempts have been made to locate discourses on African poverty within historical, theoretical, and contemporary contexts. This course provides an overview of the key issues foundational for understanding the dynamics of poverty and human development in African societies. It examines various academic conceptualizations of poverty, the dimensions of poverty in African countries, as well as poverty's various causes and consequences. The course also intends to highlight the complex nature of the social, political, and economic causes of African poverty and their implications. Furthermore, it will identify the important challenges

to poverty alleviation in African societies, the effectiveness of foreign aid, and alternative strategies to poverty alleviation. The course will also provide unique opportunities for students to develop a focused understanding of specific issues that affect Africa's socioeconomically vulnerable groups as well as related issues relevant for understanding the dynamics of poverty in specific areas on the continent.

SOC 210N: Social Determinants of Health

3 Credits/Maximum of 3

If the United States spends more money on medical care than any other country, why does it rank so poorly on many indicators of health and well-being? Why are there so many and important health disparities across different population groups within the United States? How do our social, economic and political conditions "get under the skin" to affect our health and well-being? These kinds of questions are fundamental in the growing interdisciplinary field of population health and will be addressed in this course. The purpose of this course is to introduce you to the social factors that influence health, such as race, class, gender, social networks, families, and public policies. We will explore the range of broader social factors that influence health, key sociological concepts and theories that help us understand these processes, and methods used to study them. The course will enhance student education and engagement in the area of vulnerable populations and health equity. After taking this course, students will be able to: - Describe the social and economic factors that influence health and disease patterns - Describe and discuss the social and economic factors that contribute to health inequalities across populations, particularly in the United States - Understand the important role social determinants play in the health of individuals and society

SOC 211: Health Inequality: Understanding the Geographies of Life and Death

3 Credits/Maximum of 3

This course provides an introduction to the concepts, measurement and study of health and health inequality across geographic scales from the international to the local scale, and to study health inequality in diverse contexts (including urban and rural; historical and contemporary). The lectures will cover the nature, causes and consequence of health inequality, temporal trends and spatial patterns in health indicators, and examine associations between socioeconomic and environmental factors and health. The emphasis will be on easily measured and available primary health indicators such as mortality and morbidity, communicable and non-communicable disease as well as mental health. The lab component of the course will focus on finding, critiquing, interpreting and presenting health-related data and will introduce students to fundamental

concepts and expand their skill set in both basic statistics (numerical and graphical skills) and mapping (geographic visualization skills). At the end of the course the students will be more familiar with measures of human health and a variety of international and US data resources. The lecture component begins with focus on describing and understanding past, present and future patterns and trends in human health, examining these at the global, national (US), regional (Appalachia) and local (Pennsylvania) scales. The second half of the course includes lectures on the social determinants of health, the ways in which the legal landscape and direct and indirect discriminatory practices can influence health and wellbeing (e.g., around reproductive health, sexuality, and risk-taking behaviors), mental health, and the geographies of access to resources and the geography of exposure to risks. The final lecture will discuss 21st century "Global" health challenges. The parallel lecture and labs provide opportunities for practical learning. The labs are designed to expose students to the use of health data, geographic information systems and basic spatial analysis tools providing them with skills that help them to accurately summarize and report data on health outcomes. Students will learn how to find, critique and use data appropriately to measure and map health outcomes. The labs will be based on sample data sets and case studies that draw on the use and interpretation of a variety of data sets, international, national, and sub-national. Towards the end of the course, students will generate their own community health case study based on the skills they have used during the course.

General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Integrative Thinking
 GenEd Learning Objective: Key Literacies

SOC 245N: Globalization, Technology, and Ethics

3 Credits

The objective of Globalization, Technology, and Ethics is to prepare students (especially but not limited to engineering, information sciences & technology, and business students) who are headed into the corporate, NGO (non-profit) or government sectors for the challenges and realities of working in a rapidly globalizing world. This course will encourage students to become leaders in a mobile and diverse transnational workplace and help them to become critical citizens of that world. Through team-centered projects and readings from the social sciences and humanities, students will broaden their understanding of engineering, technology, and culture and then be introduced to how one makes ethical decisions about that world. This course is designed to provide skills, theories and experiences that will help them to be respectful, diplomatic and professional while being able to successfully work with technology in multiple cultures and contexts. Students will understand the relationships and the effects on industry, economics, and the many facets of society in an interdependent global economy. These interrelationships will include the differing impacts on individual countries (winners and losers), the question of responsibilities of use or development of technologies and science (long term verses short term impacts). Students will be able to apply ethical analysis to these and many other issues that professionals face.

SOC 258N: Introduction to Child Maltreatment and Advocacy Studies

3 Credits

Introduction to the multidisciplinary field of child maltreatment. CMAS (HD FS) 258 Introduction to Child Maltreatment and Advocacy Studies (3) This course will focus on the identification, investigation, service, advocacy, prosecution, and prevention of child maltreatment as well as the treatment of adverse health outcomes for children who have been maltreated. Specific topics include the causes, correlates, and consequences of child maltreatment, best practices for reporting and investigating an allegation of child maltreatment, evidence-based prevention and intervention programs, the Child Welfare System, and relevant legal issues (e.g., termination of parental rights, children's testimony in court, etc.). By definition, this course will detail issues related to the abuse and neglect of children. This material can be difficult to hear, view, and discuss. This course is a required course, and a prerequisite for all advanced courses, for a Minor in Child Maltreatment and Advocacy Studies.

SOC 269: Intercultural Dialogue Concepts and Practice

1-4 Credits

SOC 269 is an immersive experience in small group cross-cultural communication for students who have "international student" status at Penn State. In this class you will study the concepts of facilitated dialogue and how to apply these concepts to think together across borders. In this course, you will learn the nature and value of "activated" participation in a facilitated dialogue, and you will learn the crucial framework of "conflict and collaboration" to add to your mindset as an "activated" participant, which we will refer to as a participator. You will study discourse and rhetoric by examining the stories you hear from others and you will learn to develop your own story-telling abilities. You will engage in this process through participating in cross-cultural conversations twice weekly with your international and domestic peers at Penn State. All dialogues, both through in-class training and practicum, will revolve around both U.S. and international themes, which will often invite conflict and disagreement, as well as political divides and historical legacies. In class, you will learn a set of practices that will allow you to directly engage with these divergent perspectives, and you will practice applying them directly to your dialogues. This course includes 1.5 hours of weekly class time and 3 hours in a weekly course practicum, in which you will use your position as dialogue "participator" (an activated participant) along with your foundational communication skills (introduced in class) to develop and test hypotheses about people, culture, and social conflict according to a Grounded Theory approach. Some of the specific skills you will learn during the will be: designing and delivering open-ended questions, listening actively reflectively, as

well as techniques for collaborating with facilitators to co-construct a conversational environment for "thinking together."

SOC 290N: Cinema and Globalization

3 Credits/Maximum of 3

This course explores how films reflect (and in some cases attempt to explain, promote and memorialize) the emergence and transformation of global social phenomena. Through course readings, students will become familiar with key texts on globalization produced by social scientists and cultural theorists, and will link those key texts to a diverse array of cinematic representations of various global actors, issues, institutions and processes, as well as historical and theoretical interpretations and debates on globalization. The course introduces students to the work of internationally recognized film directors (for example, Euzhan Palcy, Jia Zhangke, Stephen Frears, Rainer Werner Fassbinder, or Majid Majidi) and studies of globalization (by scholars such as Arjun Appadurai, Guy Standing, Saskia Sassen, John Tomlinson, Robbie Robertson), and asks students to link scholarly perspectives with the visual rhetoric of cinema artists.

SOC 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

SOC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which will fall outside the scope of formal courses.

Bachelor of Arts: Social and Behavioral Sciences

SOC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

SOC 297G: Special Topics - GenEd

1-9 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This is a Special Topics GenEd course.

SOC 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

SOC 300: Preceptorship in Sociology

1-4 Credits/Maximum of 8

Supervised experience as a teaching assistant under the supervision of an approved faculty member.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Bachelor of Arts: Social and Behavioral Sciences

SOC 309: Sociology of Health

3 Credits

Sociological concepts and principles operative in public and private areas of health and illness, including cultural, ethnic, and ecological factors.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Bachelor of Arts: Social and Behavioral Sciences

SOC 369: Foundational Theory and Practice in Small Group Facilitation

3-4 Credits

This course is an introduction to dialogue facilitation practices in a small group context with a focus on U.S. and international cultural and social issues. In this course, you will learn to recognize the foundational sociological forces that shape human interaction on the family, community, societal, and global levels, and you will understand the essential role of facilitators in rebalancing these forces. You will discover what it means to "think together across borders," and you will have opportunities to think together with "participants" from a multiplicity of social positions, examining and exploring the cultural and structural forces that shape your own and others' perspectives. In this course you will begin to examine your assumptions about US cultures, values, and traditions in relation to global communities around the world. The course includes an embedded practicum, during which you will develop a unique set of communication practices that allow you to effectively lead a small group, cross-cultural dialogue. So you will attend class 4 hours per week and then co-facilitate at least two (and sometimes three) 90-minute dialogues weekly with other students who are enrolled in the class. The participants of these dialogues will be other Penn

State students who register for World in Conversation dialogues as well as students who are enrolled at universities around the world (using VTC technology). You will be provided with live coaching and direct feedback to support your development. Some of the specific skills you will learn during the in-class component of the course will be how to create a conversational environment for "thinking together", engaged Socratic inquiry, asking open-ended questions, active reflective listening, techniques for disrupting communication patterns, and working with a partner facilitator. In this course you will learn to see and think as a facilitator. You will develop the ability to "seek truth" in relationship to complex social issues by inviting a multiplicity of perspectives to be explored and how to work with and navigate both debate and dialogue. You will understand the elements that make a dialogue more than just an exchange of ideas, and you will learn to excavate the complex mindsets and worldviews of "participants" that bring nuance and thoughtful inquiry into topics that are often divisive (and thus, examined too simplistically). By the end of this course, you will be proficient in all of the key mindsets and communication practices of a dialogue facilitator.

SOC 376: Introduction to Human Service Organizations

3 Credits

This course is designed to acquaint students with the role of various social agencies. The course covers the history of social service organizations in the United States, with an emphasis on the growing diversity of theory and practice in human service settings. Focus is placed on understanding social service organizations through the conflict, symbolic interactionist, and functionalist perspectives. Other perspectives are also considered. The course centers on the kinds of social services that exist and their operation in society. An emphasis is placed on ethical behaviors and best practices in human services professions, with the goal of preparing students for work in social service settings.

SOC 381: Junior Honors Seminar in Sociology

1 Credits

Supervised experience in planning the honors thesis and a sociological career.

Enforced Prerequisite at Enrollment: Sociology major and junior standing and admission to the Schreyer Honors College
Bachelor of Arts: Social and Behavioral Sciences
Honors

SOC 381H: Junior Honors Seminar in Sociology

1 Credits

This course is a supervised experience required for students with junior standing who have been admitted to the Schreyer Honors College and are pursuing honors in Sociology/Criminology. The course uses a combination of group discussion, individual meetings, and written assignments to help students consider thesis topic ideas and form a

partnership with a thesis supervisor from the Soc/Crim faculty. Students will ultimately develop a thesis project idea with the thesis supervisor's guidance.

Prerequisite: sociology major, junior standing, and admission to the Schreyer Honors College
Bachelor of Arts: Social and Behavioral Sciences
Honors

SOC 400W: Senior Research Seminar

3 Credits

Major concepts and principles of sociology through reading, data analysis, and writing. Capstone course for senior Sociology majors.

Enforced Prerequisite at Enrollment: SOC 470
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

SOC 403: Advanced Social Psychology

3 Credits

Analysis of the major theoretical approaches and research findings of contemporary social psychology.

Enforced Prerequisite at Enrollment: 3 credits in SOC
Bachelor of Arts: Social and Behavioral Sciences

SOC 404: Social Influence and Small Groups

3 Credits

The study of social influence, leadership and status, and social cohesion and commitment processes in small groups.

Enforced Prerequisite at Enrollment: 3 credits in SOC
Bachelor of Arts: Social and Behavioral Sciences

SOC 405: Sociological Theory

3 Credits

Overview of the development of sociological theory; current issues and controversies.

Enforced Prerequisite at Enrollment: 3 credits in SOC
Bachelor of Arts: Social and Behavioral Sciences

SOC 406: Sociology of Deviance

3 Credits

Theory and research concerning deviant behaviors and lifestyles viewed as significant departures from a group's normative expectations. SOC (CRIMJ/CRIM) 406 Sociology of Deviance (3) (BA) This course meets the Bachelor of Arts degree requirements. Sociology of Deviance focuses on the theory and research in social construction of social norms, the violation of norms, and social reaction to the violation of norms. The course focuses on the role of social structure and power in the definition of deviance, on structural, cultural, and social psychological processes involved in deviant behavior, and the dynamics of social reaction to deviance. The course includes some content focusing on criminal deviance, but also emphasizes non-criminal deviance, as well as the role of social movements and social change in constructing and contesting deviance definitions. CRIMJ/SOC/CRIM 012 and CRIM/CRIMJ 250W are

prerequisites. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the 'Crime' component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

Enforced Prerequisite at Enrollment: 3 credits of SOC or CRIM or CRIMJ

Cross-listed with: CRIM 406, CRIMJ 406

Bachelor of Arts: Social and Behavioral Sciences

SOC 406H: Sociology of Deviance

SOC 408: Urban Ecology

3 Credits

Spatial and temporal aspects of urban structure; urban growth, neighborhoods, racial and ethnic groups, mental illness; cross-cultural perspectives.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Bachelor of Arts: Social and Behavioral Sciences

SOC 409: Racial and Ethnic Inequality in America

3 Credits

The impact of inequality and discrimination on individual and group identity among various racial and ethnic groups. SOC 409 / AFAM 409 Racial and Ethnic Inequality in America (3) (US) (BA) This course meets the Bachelor of Arts degree requirements. This course explores the impact of inequality and discrimination on individual and group identity for a wide range of social groups with special focus on racial and ethnic majorities and minorities. Using an extensive list of readings, writing assignments, small group activities, and journals (for personal reflection and scholarly critique) the students join the instructor in exploring the effects of inequality and discrimination. While emphasis is given to the inequality and discrimination experienced by local and national populations, a significant portion of the class will address issues rooted in international structures and institutions. Students are evaluated on quizzes, reaction papers, and analysis journals. AFAM 409 / SOC 409 is not a required course in Sociology; it is, however, an optional 400-level course for all majors and minors that fulfills one of their upper-level course requirements. AFAM 409 / SOC 409 is not required for the major or minor, but it is one of several optional courses from which they can choose to fulfill major and minor requirements.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Cross-listed with: AFAM 409

Bachelor of Arts: Social and Behavioral Sciences

United States Cultures (US)

SOC 410: The Global Impact of Education

3 Credits

This course examines the global impact of education on human rights, health, economic development, political mobilization, religion, and environmental sustainability. The education revolution has significantly changed the world's population from one largely unschooled to one mostly schooled in just the last 150 years, yet the full impact of this major transformation is only now emerging through social science research. The course will explore, at both the individual and societal levels, how education changes many dimensions of global society in both positive and negative ways. It also focuses on the use and misuse of educational programs in social and economic development worldwide through Non-Government Organizations (NGO's), national governments, and multinational agencies.

Enforced Prerequisite at Enrollment: 5th semester standing

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Soc Resp and Ethic Reason

SOC 411: Racial and Ethnic Diversity and the American Family

3 Credits

This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States. HD FS 416 (SOC 411) Racial and Ethnic Diversity and the American Family (3) During the last several decades, the racial and ethnic composition of the U.S. population has changed dramatically. At end of the 20th century, non-Hispanic whites accounted for less than 75 percent of the U.S. population. While blacks remained the largest minority group, there were nearly as many Hispanics as blacks, and the number of Asians was increasing. Population projections indicate that by the middle of the 21st century, Hispanics will make up nearly one-fourth of the U.S. population. Blacks, Asians, and American Indians together will comprise an additional fourth of the population. The last several decades have also brought significant changes in family life in the United States, including declining rates of marriage, a rising age-at-marriage, an increase in cohabitation, and a dramatic rise in the proportion of births outside of marriage. While these trends in family life have been experienced by all racial and ethnic groups, there is substantial variation in family patterns by race and ethnicity. The course will build on other courses in social inequality and the family. The course does not overlap with any existing courses in the Department of Sociology or with courses offered in other relevant departments. This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States. The student will read articles from major sociological journals and learn to extract major points and issues. He/she will learn to synthesize and critique various arguments on major issues in the field. The student will acquire skills in summarizing and evaluating arguments in essay form. He/she will also develop oral presentation skills. Final grades for the course will be based on class participation, a brief (approximately 5 pages) paper, a group presentation, a midterm examination (essay format) and a final examination (essay format). The course is not required for the Sociology minor or major. However, the course can count as one of the 400-level elective courses in Sociology for the Sociology minor, B.A. or B.S.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Cross-listed with: HDFS 416

United States Cultures (US)

SOC 412: Crime, Social Control, and the Legal System

3 Credits

Legal and extralegal control; public opinion on crime; criminal justice and correctional processes; legal sanctions; control strategies. Field trip.

Enforced Prerequisite at Enrollment: SOC 12 or SOC 13 or SOC 5

Cross-Listed

Bachelor of Arts: Social and Behavioral Sciences

SOC 413: Advanced Criminological Theory

3 Credits

This course provides an in-depth look at theories of crime and examines influential empirical studies designed to these theories. CRIMJ 413/CRIMJ (CRIM/SOC) 413 Advanced Criminological Theory (3)Advanced criminological theory is intended to extend and deepen students' knowledge of core ideas in criminology. The course has four main emphases: 1) learning major schools of thought in criminology, 2) learning about the uses and construction of theory, 3) learning about approaches to integrating criminological theories, and 4) exploring how criminological concerns are grounded in and interrelated with core issues in sociology. The course is offered once a year with 50 seats per offering. CRIMJ/CRIM/SOC 012 is a prerequisite. Students will be evaluated on research or analytical papers, written assignments on course readings, and/or in-class essay-style exams. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with a Deviance and Criminology specialization.

Enforced Prerequisite at Enrollment: (SOC 12 or CRIM 12) and CRIMJ 250W

Cross-listed with: CRIM 413, CRIMJ 413

SOC 414: Criminal Careers and the Organization of Crime

3 Credits

Research on and theory of criminal careers and crime organizations, emphasizing recruitment and disengagement; offender characteristics and lifestyles; policy implications.

Enforced Prerequisite at Enrollment: CRIMJ 12 or CRIMJ 13 or SOC 5

Cross-listed with: CRIMJ 414

Bachelor of Arts: Social and Behavioral Sciences

SOC 416: Sociology of Education

3 Credits

The theoretical, conceptual, and descriptive contributions of sociology to education.

Bachelor of Arts: Social and Behavioral Sciences

United States Cultures (US)

SOC 419: Race and Public Policy

3 Credits

Seminar format course in which sociological theory and research are applied to current race policy issues. The course examines a number of different aspects of race relations and public policy, including the social and biological constructs of race, historical race policy, modern race policy, affirmative action, criminal justice and other issues regarding race.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Cross-listed with: PUBPL 419

Bachelor of Arts: Social and Behavioral Sciences

United States Cultures (US)

SOC 422: World Population Diversity

3 Credits

Survey of world diversity in national population growth/composition; the impacts of demographic change on the economic/social life of nations/people.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Bachelor of Arts: Social and Behavioral Sciences

SOC 423: Social Demography

3 Credits

Social demographic perspectives on fertility, mortality, morbidity, migration, population density, demographic transitions, social mobility, family, the aged, and minorities.

Enforced Prerequisite at Enrollment: SOC 23 or SOC 422

Bachelor of Arts: Social and Behavioral Sciences

SOC 424: Social Change

3 Credits

Critical review of classical and recent theories of social change, emphasizing the transformations occurring in the modern world.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Bachelor of Arts: Social and Behavioral Sciences

SOC 425: Social Conflict

3 Credits

An analysis of the variables affecting intergroup and international conflict and cooperation.

Enforced Prerequisite at Enrollment: 3 credits in SOC

SOC 428: Homelessness in America

3 Credits

Survey of social science research on homelessness in the contemporary United States.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Bachelor of Arts: Social and Behavioral Sciences

SOC 429: Social Stratification

3 Credits

Structure and dynamics of class, caste, and status systems; class differentials and social mobility; current theoretical and methodological issues.

Enforced Prerequisite at Enrollment: 3 credits in SOC Bachelor of Arts: Social and Behavioral Sciences

SOC 430: Family in Cross-Cultural Perspective

3 Credits

Sociological analysis of family systems in various cultures and subcultures.

Enforced Prerequisite at Enrollment: 3 credits in SOC Bachelor of Arts: Social and Behavioral Sciences

SOC 431: Family Disorganization: Stress Points in the Contemporary Family

3 Credits

Focuses on divorce, remarriage, incest, family violence as well as problems associated with family formation and parent-child relations.

Enforced Prerequisite at Enrollment: 6 credits in HDFS or 6 credits in PSYCH or 6 credits in SOC or (3 credits in HDFS and 3 credits in PSYCH) or (3 credits in HDFS and 3 credits in SOC) or (3 credits in PSYCH and 3 credits in SOC)

Cross-listed with: HDFS 431

Bachelor of Arts: Social and Behavioral Sciences

SOC 432: Social Movements

3 Credits

Why and how people mobilize to promote or retard social change. Factors predicting success or failure of social movements.

Enforced Prerequisite at Enrollment: 3 credits in SOC Bachelor of Arts: Social and Behavioral Sciences

SOC 435: Perspectives on Aging

3 Credits

An analysis of the demographic, social, and cultural factors affecting the aged population in American society.

Enforced Prerequisite at Enrollment: 3 credits in SOC Cross-listed with: HDFS 434 Bachelor of Arts: Social and Behavioral Sciences

SOC 440: Family Policy

3 Credits

An in-depth examination of family policy. HD FS (SOC) 440 Family Policy (3)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to provide an in-depth examination of family policy. Students will identify and critically analyze major issues, controversies, and policies that affect families. Attention will be devoted to recognizing both intended and unintended consequences of family policies and understanding policy challenges and trade-offs. Students

will gain an understanding of how policies are shaped by both facts and myths, as well as our values. Students will examine historical and current trends in family patterns (e.g., divorce, women's labor force participation, nonmarital births) to understand the implications they hold for individuals, families and society. Students will gain an awareness of the social, economic, historical, legal, and political contexts within which family policies exist and are proposed. Although the main focus is on U.S. family policy, some time will be devoted to learning about family policies in other countries. We will learn about several specific family policies in-depth (e.g., welfare), but a final goal is to help students develop a general way of looking at family policy that they can then use to understand any issue of family policy that unfolds throughout their lifetime. This course will foster thoughtful reflection and critical thinking, writing skills, research skills, and skills of synthesis, logic, and argument. Course goals will be accomplished through course readings, writing assignments, lectures, class discussions, debates and group projects. Mastery of course material and student evaluation are assessed in several ways. Students will take a midterm and final exam that cover lectures, class discussions, and assigned readings. Two papers are also required. The first paper is based on an analysis of newspaper articles dealing with family policy issues that students will collect and relate to course materials. The second paper is a literature-based analysis of a family policy in a society outside the United States. Class participation is also essential and its evaluation will be based on a combination of class attendance, contributions to class discussions, participation in group debates and projects, and an oral presentation of the final paper on a non-U.S. family policy.

Enforced Prerequisite at Enrollment: 3 credits of SOC or HDFS Cross-listed with: HDFS 440 Bachelor of Arts: Social and Behavioral Sciences

SOC 445: U.S. Immigration

3 Credits

This class examines theories of U.S. immigration and immigrant adaptation, effects of immigration, and policy. SOC 445 U.S. Immigration (3) The United States has long been known as a nation of immigrants. People have come for all sorts of reasons, including economic opportunity, political asylum, and religious freedom. Immigration continues to be a fundamental source of demographic and social change today. However, the nature of the changes brought about by immigration will depend on the pathways immigrants and their descendants take as they incorporate into American society. This course is designed to introduce students to theories of immigration, patterns of immigrant incorporation, immigration's impact on the U.S., and political debates about immigration issues. Topic to be discussed include: -Why do immigrants come to the U.S.? -In what kinds of communities do immigrants live? -What is the economic impact of immigration on U.S. society? -What is the social impact of immigration? -Are new immigrants assimilating? -What are the problems with current immigration policies and what are the alternative approaches to reform?

Enforced Prerequisite at Enrollment: 3 credits in SOC

SOC 446: Political Sociology

3 Credits

Sociological analysis of types of political organization and their relations with other elements of social life.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Bachelor of Arts: Social and Behavioral Sciences

SOC 447: Ethnic Minorities and Schools in the United States

3 Credits

Analysis of the social and cultural factors which affect educational outcomes among minority pupils, especially Blacks, Hispanics, and Indians.

Cross-listed with: EDTHP 447
United States Cultures (US)

SOC 450: Justice and the Environment

3 Credits

Considers notions of justice in relation to environmental philosophy, environmental movements, and general environmental concerns.

Prerequisite: 90 credits, graduate status, or permission of the program

SOC 451: Health, Disease & Society

3 Credits

This course provides an introduction to the concepts, measurement and study of inequality across spatial scales and in diverse contexts. SOC 451 Health, Disease & Society (3) (GS) Health is not simply a matter of biology, but involves a number of factors that are social, cultural, political, geographic, and economic in nature. This course will focus on the critical role social factors play in determining or influencing the health of individuals, groups, and the larger society. The emphasis in the course is on the social patterning of health and disease with focusing on variation by age, gender, race/ethnicity, disability status, socioeconomic status (income, education, occupation) and neighborhood/community. There will be selected coverage of the "sociology of medicine" with some discussion of medical power and knowledge, the organizational structure of health care, and the experience of illness and such issues such as stigma.

Enforced Prerequisite at Enrollment: 3 credits in SOC
General Education: Social and Behavioral Scien (GS)

SOC 452: Spatial Inequality

3 Credits

This course provides an introduction to concepts, measurement and study of spatial inequality in the US and across the globe. SOC 452 Spatial Inequality (3) This is a lecture and lab-based course that provides an introduction to the concepts, measurement and study of inequality across spatial scales from international and national through to sub-national and local scales, and to study spatial inequality in diverse contexts (urban and rural; historical and contemporary). This will cover diverse substantive topics such as racial segregation, housing and labor markets, exposure to risks (e.g., pollution, crime, NIMBY facilities) and access to resources (e.g., supermarkets, schools, and health care). The lab component introduces undergraduates to geographic information system software and basic spatial analysis. The lecture component of the course has four main sections. In Section 1 the focus is on fundamental questions such as: Why inequality? How to measure inequality? What are the key dimensions of inequality? This section will be wrapped up by an overview of the causes and consequences of inequality. In Section 2 the focus is on inequality between nations and inequality

within nations (i.e., non-US). Section 3 will focus on the United States and specifically examining different levels or "territories" of inequality; neighborhood-level to state-level differences. This section focuses on urban spatial inequality and issues such as spatial segregation, access to services and exposure to risks. Section 3 concludes with discussions of rural inequalities focusing on access to health services. Section 4 focuses on 21st century challenges regarding rapid urbanization in the developing world and revisits themes related to "Global" inequality. The lab components of the course will parallel lectures and provide opportunities for practical learning. Specifically the labs are designed to expose students in sociology and across the social sciences to the use of geospatial data, geographic information systems and basic spatial analysis tools providing them with skills that help them to accurately summarize and report data on spatial inequalities. Students will learn how to find, critique, and use data appropriately to measure and map inequality. They will be introduced to spatial analytical concepts and learn how to assemble geospatial databases. They will learn skills associated with basic exploratory spatial data analysis and understand concepts such as scale, spatial heterogeneity, and spatial dependence.

Enforced Prerequisite at Enrollment: 3 credits in SOC

SOC 454: The City in Postindustrial Society

3 Credits

Postindustrial social organization in the United States and Europe; consequences for metropolitan social stratification, community power, and environmental quality.

Enforced Prerequisite at Enrollment: 3 credits in SOC
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)

SOC 455: Work and Occupations

3 Credits

Work and occupational life in modern society; work in the past, present, and future.

Enforced Prerequisite at Enrollment: 3 credits in SOC
Bachelor of Arts: Social and Behavioral Sciences

SOC 456: Gender, Occupations, and Professions

3 Credits

The role of gender in shaping contemporary North American patterns of employment, occupational roles, and statuses.

Enforced Prerequisite at Enrollment: 3 credits in SOC
Cross-listed with: WMNST 456
Bachelor of Arts: Social and Behavioral Sciences

SOC 457: Jewish Communities: Identity, Survival, and Transformation in Unexpected Places

3 Credits

Examines the global array of smaller Jewish communities that have flourished outside the main urban centers of Jewish settlement. JST 457 / ANTH 457 / SOC 457 Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3) (US;IL) This course addresses an understudied aspect of Jewish experience. It aims to expand our understanding of Jewish communities by focusing on those

that are, alternatively, small, situated in out-of-the-way places, culturally outside the Jewish urban mainstream, or embedded in a larger society with markedly different values and traditions. These communities often constitute the points-of-contact between Jews and non-Jews, and in so doing sometimes transform Jews, non-Jews, and the relationships among them. Other such communities constitute experiments in Jewish lifeways and provide mainstream Jews with pilot projects for potential social and cultural change. This course will explore the significance of small, little-known, idiosyncratic, and anomalous Jewish communities on Jewish history and culture, and draw on them to instruct students on the social and cultural processes of small or unusual communities generally. The communities studied will be located both in the U.S. and elsewhere in which Jews have lived as a minority community during modern times. The course will look at the founding, growth, and decline of such communities and at their social processes and institutions. It will explore how to understand and analyze such communities, which vary from one part of the world to another. The social world of Jewish communities, large and small, is a core interest of Penn State's Jewish Studies Program. This course will complement the current offerings in Jewish Studies, strengthening the social, cultural, and contemporary perspectives available in the Program. It will provide students with an opportunity to explore individual experience and micro-level processes among Jews, and to study the dynamics of identity and survival. It will complement the current offerings in Sociology and Anthropology by affording an opportunity to focus on community-level social processes and by adding a course on contemporary Jewry. The course will integrate knowledge from a variety of sources and fields, promote intercultural understanding, and meet US and IL requirements. Materials will be interdisciplinary, and will include ethnographies, sociological studies, population studies, histories, and personal narratives. They will include primary texts, creative works, and scholarly analyses. The assignments will be structured to facilitate preliminary experience in independent analysis, library research, or field research. The course will be offered approximately once a year. Enrollment will be limited to 30 students in order to promote active, engaged learning. Evaluations will be based on short papers and outlines that will prepare students for their final, term papers.

Enforced Prerequisite at Enrollment: Three credits in JST or ANTH or SOC
Cross-listed with: ANTH 457, JST 457
International Cultures (IL)
United States Cultures (US)

SOC 459: Communities and Crime

3 Credits

In this course you will learn about how crime levels vary across different types of neighborhoods and about the role of different socioeconomic, demographic, spatial, and informal social control aspects of neighborhoods in promoting or buffering crime. We will address the patterns, concepts, theories, methods, and policies related to communities and crime. We will critically assess theory and research on the effects of neighborhood structure and social organization on crime, focusing in particular on the classic and contemporary thinking on poverty, social disorganization, disorder, collective efficacy, institutional trust, cultural heterogeneity, segregation, immigration and how they affect criminal behavior and victimization. Through readings, class discussions, and activities, writing projects, and presentations, you will be given the opportunity to reflect on what you are learning and to apply the theoretical concepts to real-life examples and to new contexts in and out of the class.

Enforced Prerequisite at Enrollment: SOC 12 or CRIM 12

Cross-listed with: CRIM 459

SOC 461: Sociology of Religion

3 Credits

Contemporary religion in the global perspectives: beliefs, structure, and function of major religious traditions, denominations, and cults.

Enforced Prerequisite at Enrollment: 3 credits of SOC or RLST

Cross-listed with: RLST 461

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

United States Cultures (US)

SOC 466: Solving Community Problems

3 Credits

Explains how communities solve local problems by partnering with researchers, practitioners, and policy makers. Demonstrates how such partnerships help communities tackle complex problems by clarifying their causes, identifying solutions, leveraging resources, and mobilizing stakeholders to act. Examines community-engaged research projects - such as collaborative efforts to revitalize neighborhoods, reduce crime & violence, empower youth, house the homeless, improve health, and promote sustainability - that address local manifestations of broader societal problems. Students will collaborate with community partners to design, implement, and evaluate problem-solving projects. Provides students with skills and knowledge needed to collaborate productively in community-engaged problem-solving initiatives.

Enforced Prerequisite at Enrollment: SOC 207 or CRIM 250W

Recommended Preparation: 5th Semester standing

Cross-listed with: CRIM 466

SOC 467: Law and Society

3 Credits

Law and society studies the social origins of law and legal systems; occupational careers, and decision-making of legal officials. SOC (CRIMJ/CRIM) 467 Law and Society (3) (BA) This course meets the Bachelor of Arts degree requirements. Law and society teaches students' knowledge of key concepts and core ideas about the role of law in society. The course will cover the basics of key legal philosophies, major social science theories of law and society, research in law and society, the structure of the legal profession, and vital contemporary issues involving the role of law in society. CRIM/CRIMJ 113 and CRIM/CRIMJ 250W are prerequisites. The evaluations methods will include written assignments on course readings, and essay-style exams. Law and Society may be counted toward the credits required for the B.A. and B.S. in Crime, Law and Justice. It would fulfill one of the 400-level requirements in the 'Law' component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

Enforced Prerequisite at Enrollment: CRIM 12 or CRIMJ 12 or CRIMJ 100 or permission of program

Cross-listed with: CRIM 467, CRIMJ 467

Bachelor of Arts: Social and Behavioral Sciences

SOC 468: Mood-Altering Substances in Society

3 Credits

Perspectives of cultures throughout the world toward mood-altering substances are reviewed in light of public policy, benefits, and problems.

SOC 469: Advanced Theory and Practice in Small Group Facilitation

3-4 Credits/Maximum of 12

This course will build on your knowledge of the foundational facilitator mindsets and communication practices that you developed in SOC 369. You will refine your ability to re-balance the sociological forces that shape human interaction on the interpersonal, societal, and global levels. You will learn to use all of the facilitator communication practices with intuition and nuance in a variety of conversational contexts. The fundamental difference between the foundational facilitation course and facilitation on the advanced level is that SOC 469 will prepare you to make choices about how to apply the dialogue methodology in contexts in which the topics are not explicit and thus, the stakes of the conversations are less immediately apparent (though still present). The structure of this course is parallel to SOC 369: you will complete an imbedded practicum during which you will lead small group dialogues with a focus on both U.S. and international cultural and social issues. At the advanced level, dialogues will not start with a singular focus but will instead begin with an exploration of the "sociological addresses" of the "participants." You will develop the ability to ask questions that seamlessly access information while also catalyzing a conversation. You will then work with the sociological themes that are revealed in the conversation, identifying relevant questions that will invite group members to examine society. This course meets for four hours per week, in addition to which you will also co-facilitate at least three 90-minute dialogues weekly. The participants of these dialogues will be other Penn State students who register for World in Conversation dialogues. You will be provided with live coaching and direct feedback to support your development throughout the semester.

Enforced Prerequisite at Enrollment: SOC 369

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

United States Cultures (US)

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

SOC 470: Intermediate Social Statistics

4 Credits

Introduces basic methodological concepts and statistical tools commonly used for conducting sociological research. Students will gain experience using research methods and statistics to answer research questions by going through a scientific research process that includes hypothesis testing; graphically and numerically describing distributions; statistical inference, and practical data analysis techniques like bivariate linear regression; analysis of variance; and multiple linear regression. Encourages students to be informed consumers of quantitative research who understand how statistics are computed and interpreted, and how they can be used to address key social science questions. Students will also gain basic familiarity with a statistical software package.

Enforced Prerequisite at Enrollment: SOC 207

Bachelor of Arts: Social and Behavioral Sciences

SOC 471: Qualitative Research Methods in Sociology

3 Credits

Theory, methods, and practice of qualitative data collection, including observation, participant observation, interviewing; supervised projects in natural settings.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Bachelor of Arts: Social and Behavioral Sciences

SOC 472: Work-Life Practices and Policies

3 Credits

Explore the causes and consequences of conflicts between work, family, and other life commitments, and how these may be resolved. LER 472 Work-Life Practices and Policies (3)(BA) This course meets the Bachelor of Arts degree requirements. The interdisciplinary field of work-family and work-life developed as a result of middle-class women's entry into the labor force, a movement that generated conflict between family and paid work commitments. Overall, the course addresses the reasons the field developed, relevant theoretical perspectives regarding the issues, and related problems as well as proposed solutions at both the public and private sector levels. The overarching objectives of the course are to expand students' understanding of conflicts between work and family commitments, and how these might be resolved through private and public sector initiatives. Specifically, the course concerns how individuals, families, and organizations interact to help hinder the achievement of balance between work and life commitments, and relevant effects on those involved. The changing demographics of the family, laws and trends around working time, father and mother time with children, the expanded need for elder care, work-life programs such as flextime, concierge services, paid parental leave, part-time careers, paid time-off banks, and the role of unions, corporations and government legislation are covered. The course attempts to link the likely future needs of students to broader trends in society and how balance could be achieved at the level of individuals, families, other stakeholders in the community, and for society as well. Fields of research relevant to the course include labor studies, women's studies, Industrial/Organizational psychology, the sociology of work and of family, and child development. Students will be evaluated on the basis of class participation, through two in-class examinations, and through a final written or oral project providing a chronology and analysis of an adult's work-family history.

Enforced Prerequisite at Enrollment: 3 credits in LER or LHR

Cross-listed with: LHR 472, WMNST 472

Bachelor of Arts: Social and Behavioral Sciences

SOC 477: Sociology of Sexuality

3 Credits

An analysis of the demographic, social, and cultural factors affecting the developments and experience of sexuality in contemporary society.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Cross-listed with: WMNST 477

SOC 478: Men and Masculinities

3 Credits

This course is designed to discuss and analyze masculinity in contemporary societies. The focus in this course will be in examining the way masculinity is constructed and the different ways that boys and men (and girls and women) learn to experience it. Various areas of social structure and social interaction will be explored such as historical origins of masculinities, theoretical constructions of masculinity, media, work, subcultures, violence/mass shootings, and sexualities. Students will develop critical thinking skills as sociologists, and as members of society. Additionally, students will be encouraged to think about the way their gender has been shaped and shapes their own lives.

Enforced Prerequisite at Enrollment: 3 credits in SOC Recommended Preparation: 5th Semester standing

SOC 481H: Senior Honors Seminar in Sociology

1 Credits

Supervised experience in planning and writing the honors thesis.

Enforced Prerequisite at Enrollment: Sociology major, senior standing, and admission to the Schreyer Honors College Honors

SOC 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

SOC 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences Honors

SOC 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor
Bachelor of Arts: Social and Behavioral Sciences

SOC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Social and Behavioral Sciences

SOC 496H: Independent Studies

3 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Social and Behavioral Sciences Honors

SOC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

SOC 499: Foreign Study--Sociology

2-6 Credits/Maximum of 6

Study, in selected foreign countries, of groups, institutions, and social problems.

Enforced Prerequisite at Enrollment: 3 credits in SOC
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

Software Engineering (SWENG)

SWENG 311: Object-Oriented Software Design and Construction

3 Credits

Design, documentation, testing, and construction of software using software engineering strategies embodied in object-oriented programming languages. SWENG 311 Object-Oriented Software Design and Construction (3) Object-oriented design and programming embody powerful design strategies that are based on practical and proven software engineering techniques. In this class, students will learn how existing object-oriented languages support these strategies, how to apply these strategies to moderately-sized systems, and how to use a visual object-oriented modeling tool such as the Unified Modeling Language (UML). Students will build on programming skills acquired in prerequisite programming courses by programming in a major object-oriented programming language.

Enforced Prerequisite at Enrollment: CMPSC 122

SWENG 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

SWENG 396: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

SWENG 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

SWENG 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

SWENG 400: Introduction to Software Engineering Studio

3 Credits

Provides an introduction to the principles of software engineering and includes complementary instruction in one programming language.

Enforced Prerequisite at Enrollment: Senior standing or above

SWENG 411: Software Engineering

3 Credits

Software engineering principles including life cycle, dependability, process modeling, project management, requires specification, design analysis, implementation, testing, and maintenance. SWENG 411 Software Engineering (3) This is an introductory course in software engineering, addressing the software development process, including aspects such as software requirements documentation, design specification, implementation, system integration, testing, and maintenance by individuals and teams. Topics include software process modeling, requirements elicitation and documentation, software architecture design and analysis, detailed design and programming, graphical user interface (GUI's) design and prototyping, software quality assessment, software testing, software maintenance and evolution management, personal and team-based development. In lab students gain practical experience by completing programming assignments and utilizing computer-aided software engineering (CASE) tools for their personal projects tailored to each stage of the software life cycle. A semester long team-based project is required that reinforces teamwork fundamentals and the concepts covered in lecture. The projects and assignments provide an opportunity for student teamwork, document writing, and oral presentations.

Enforced Prerequisite at Enrollment: CMPSC 122 and Concurrent: SWENG 311

SWENG 421: Software Architecture

3 Credits

The analysis and design of software systems using canonical design patterns. SWENG 421 Software Architecture (3) This course introduces the frequently-used software infrastructures in software development by experienced engineers. The formal UML notations are utilized to design software architecture and help communicate the design visually. Students will learn the real practice of architectural styles, design patterns and design reuse. As to certain complex problems, alternative architectures will be proposed and their design trade offs will be evaluated. For instance, students compare two-tier with three-tier client/server architectures for distributed systems, and employ multi-

process and multi-thread concurrent architectures for high performance computation systems. Moreover, students learn to conduct high level quality analysis from the design artifacts. The quality evaluation will focus on a number of attributes, including reusability, extensibility and performance. A great deal of effort is placed on the major categories of design types containing dozens of separate design patterns. Students first review the most fundamental design patterns. Afterwards, they apply creational patterns to effectively create objects, partitioning patterns to categorize objects, structural patterns to allocate objects, behavioral patterns to interface the communication between objects, and concurrent patterns to handle tasks simultaneously. These skills will enable students to extend their own knowledge after graduation by giving them the skills to learn new patterns on their own. Finally, students will integrate their programs with native code applications to enlarge the application domains. To achieve best reusability, they also learn modular designs to develop component-based software. These help them meet today's software needs of cross applications and architectures.

Enforced Prerequisite at Enrollment: SWENG 411

SWENG 431: Software Verification, Validation, and Testing

3 Credits

Introduction to methods of software verification, validation, and testing; mathematical foundations of testing, reliability models; statistical testing. SWENG 431 Software Verification, Validation, and Testing (3) Provides a background necessary for verification, validation, and testing of software systems. Verification addresses the question: 'are we building the product right?' In other words, does the product meet the engineering specifications? Validation addresses whether the right product is being built and if it meets the design requirements. The testing aspect of the course addresses many of the methods available to test software systems. The levels of testing explored are 1) unit level (each module is tested independently), 2) integration testing (where the modules are integrated together and tested as a complete system), and 3) acceptance testing (the testing requirements of the users). Following this, specific test methodologies are addressed. By the end of this course the student should also be able to develop an appropriate test plan.

Enforced Prerequisite at Enrollment: SWENG 411 and (STAT 301 or STAT 318)

SWENG 452W: Embedded Real Time Systems

3 Credits

The design and implementation of real time systems. SWENG 452W Embedded Real Time Systems (3) Real time operating systems is the study of hardware/software systems in which timing constraints must be met for correctness. Real time systems are embedded in applications ranging from the antilock brakes in cars to the flight control systems for jetliners. Students are first introduced to the concept of systems with real time constraints by examining case studies. The unified modeling languages (UML) with real time extension is introduced allowing students to capture the constraints present in the systems in a variety of models allowing the problem to be described at several levels of abstraction. Tasks and messages are introduced as programming structures which can satisfy the constraints described by the UML models. With a basic understanding of real time systems and how to implement them, the focus of the course shifts away from these technical concerns towards understanding the documentation of the requirements using the Volere Requirements Specification template. All the writing assignments in the class will revolve around Volere in one way or another. Increasingly

complex case studies will give the class the opportunity to explore more sophisticated inter-task communications mechanisms as well as common pitfalls present in RTOS applications. Students will learn how to verify the correctness of their applications in order to guarantee that the real time constraints can be met when the system is deployed. Discussion will turn to application programmer interfaces used by hardware vendors to port hardware into a RTOS. The class will end by designing and building a complex RTOS by a team of students using the techniques learned in the class. The project will outline the needs of the RTOS application in a project proposal using the Volere template. The proposal will be developed iteratively with the faculty member until its scope and definition are clear. This proposal will be developed into a complete requirement specification including a time-line and identification of development benchmarks. This system resulting from the development will be documented in the final report write-up.

Enforced Prerequisite at Enrollment: CMPSC 472 or CMPSC 473 or CMPEN 441

Writing Across the Curriculum

SWENG 455: Engineering Quality and Security in Software

3 Credits

Software systems are becoming an integral part of our daily life. In many domains the failure of a software system is not acceptable. Such a failure will have catastrophic effects. Hence, the quality of such software systems becomes so crucial. This course introduces software quality, the associated quality factors, software errors and the software quality assurance system. As software systems advance in complexity so do the threats that they face. Hence, the security of these systems has become so essential. Traditionally, security has been thought of as an add-on to an existing system. In this course, students will understand that this is not sufficient. Students will learn to consider security throughout the development process by extending the traditional software development life cycle and UML. For the requirements phase, this course will teach students to collect secure requirements, perform security requirements planning, and perform vulnerability mapping. For the design phase, this course will teach students to design a secure software architecture and perform architectural risk analysis. For the implementation phase this course will introduce students to secure coding. For the testing phase, the course will introduce students to secure testing. Finally students will be introduced to secure deployment and secure maintenance. A semester long team-based project will be part of this course to practice the concepts covered in the class.

Enforced Prerequisite at Enrollment: SWENG 411

SWENG 465: Web Services

3 Credits

This course introduces the students to a contemporary computing paradigm called "service-oriented computing." SWENG 465 Web Services (3) This course focuses on a new computing paradigm called "service-oriented computing", which has been greatly impacting a wide array of software systems. It covers "service-oriented architecture." Students will not only gain an in-depth understanding of the concepts and technical issues underpinning Web services, but also gain hands-on experience of the development of software systems built upon Web services.

Enforced Prerequisite at Enrollment: SWENG 311 or CMPSC 221

SWENG 480: Software Engineering Design

3 Credits

Concepts of engineering ethics, economy, and project management, senior capstone project selection, and technical communication skills. SWENG 480 Software Engineering Design (3) This course prepares senior software engineering students for industrial engineering design and project management. It covers the engineering design process, project planning and evaluation, engineering ethics, and engineering economy. In addition, students select, specify, and start their capstone design project, which is completed, in the follow-up course, SWENG 481. Students are expected to carry out a group design project that is on par with industrial expectations. Upon completion of this course a student should have a solid understanding of the engineering design process, a clear capstone project description, should have completed some preliminary design work, and be adequately prepared to complete the project in SWENG 481.

Enforced Prerequisite at Enrollment: SWENG 431

SWENG 481: Software Engineering Project

3 Credits

Capstone group design projects in software engineering. SWENG 481 Software Design Projects (3) In this course students complete their group senior design project started in SWENG 480. Design groups meet regularly with a faculty advisor to report progress and resolve technical issues. Oral and written progress reports are expected at selected times. The class culminates with a final technical defense of the project.

Enforced Prerequisite at Enrollment: SWENG 480

SWENG 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

SWENG 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

SWENG 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

SWENG 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

SWENG 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Soil Science (SOILS)

SOILS 71: Environmental Sustainability

3 Credits

This class provides an introduction to environmental sustainability for students with no background in environmental science or soils. The concept of sustainability provides a framework for understanding environmental problems by balancing the needs of current society with the long-term needs of future societies and the environment. Sustainability also provides a framework for linking international cultures because environmental problems and solutions often cross political and cultural boundaries. The goal of the course is to develop critical thinking skills related to sustainable environmental choices. As we explore the concept of sustainability, we will discover the role of soil in mediating human-environment interactions by determining natural plant and animal abundance, supporting agriculture, and buffering the environment against modern pollution. The four themes of the class are: 1) Environment, Sustainability and Natural Resources, which introduces students to the scientific method and value systems that affect environmental choices, to fundamental ecological principles and to basic concepts of soil science and environmental science, 2) Challenges to Sustainability, in which we consider some of the major challenges to global sustainability; climate change, loss of biodiversity and ecosystem services, human population growth and resource consumption and waste management, 3) Feeding the World and its Impact on the Environment in which we consider the Malthusian dilemma of how we can feed ~10 billion of people in the near future together with the conservation dilemma of how we can maintain a healthy environment, and 4) Sustainability Solutions, in which we consider what has been done to achieve environmental protection while sustainably increasing food production and students are challenged to develop their own sustainability solution to a current issue somewhere in the world. The class will include "soils cases" in which examples from environmental soil science are used to convey principles of sustainability, and "sustainability activities" to see examples of sustainable environmental choices on campus or in State College. Students will complete the class with: 1) a survey of the key issues in global environmental sustainability, 2) exposure to current scientific information related to these issues, 3) an enhanced ability to interpret environmental data, 4) an increased knowledge of the role of soils in maintaining environmental quality, 5) an increased understanding of how environmental problems and solutions are global phenomena, requiring cooperation among many international cultures, and 6) a significant depth of knowledge about "what it takes" to feed 10 billion people while maintaining a healthy environment.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

SOILS 101: Introductory Soil Science

3 Credits

This survey and foundational course introduces students to a broad range of subject matter from most sub-disciplines of soil science. We study a range of soil characteristics and seek to understand their relationship to soil function, land use, plant growth, environmental quality, and society/culture. This course introduces students to the variety and complexity of soils on a local, national, and international scale. We identify the physical, chemical, and biological properties and processes of soils and relate these to the way that societies use and abuse soils. Students acquire a working knowledge of the technical terminology of soil science and begin developing observational skills needed to describe and/or locate soil properties for specific locations and to interpret those properties for various uses. We learn to recognize and explain various land use and management practices and to select those that are appropriate at a given site. Students also evaluate the impact of land use and management decisions on agricultural productivity and sustainability, environmental and ecological health, and on community relationships. This course is required or on a list from which students select for many environmental and agricultural majors. It is specifically listed as a prerequisite for many other SOILS courses and for several soils-related courses taught at Penn State.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

SOILS 102: Introductory Soil Science Laboratory

1 Credits

Laboratory exercise and field trips designed to develop student competency in soil description, analysis, and assessment. SOILS 102 Introductory Soil Science Laboratory (1) This laboratory course is designed for students who plan to work directly with soils, make land use and management decisions, or to be involved in projects requiring practical application of soil science principals. By conducting weekly laboratory and field exercises and writing reports on their work, students will deepen their understanding of, and learn to apply, the fundamental soil properties and processes introduced in SOILS 101. This laboratory course, in conjunction with the SOILS 101 lecture course, will provide foundational learning in soil science and prepare students for upper level soil science courses. This laboratory course is also designed to provide students with hands on experience in analytical procedures for soil assessment, testing, and interpretation, as well as field experience in observing, characterizing and describing soils.

Enforced Prerequisite at Enrollment: SOILS 101

SOILS 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

SOILS 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (1L)

SOILS 401: Soil Composition and Physical Properties

3 Credits

Advanced study of mineralogical and physical properties of soils which affect soil-plant-water relationships.

Enforced Prerequisite at Enrollment: SOILS 101

SOILS 402: Soil Nutrient Behavior and Management

3 Credits

Soil Nutrient Behavior and Management is a senior/graduate level course that covers the chemical and biological processes that determine the behavior of essential plant nutrients in soils. As this understanding of basic nutrient behavior is developed in the course, it is applied directly to explain the basis for management of nutrients for optimum plant availability. This same nutrient behavior is linked to the fate of nutrients either applied as sources of plant nutrition or through disposal of nutrient containing materials on soils, which is a major environmental issue. Management practices necessary to minimize environmental impacts from nutrients are also covered. From this background students will be able to understand nutrient behavior and management recommendations and adapt management to a variety of soil-plant systems and situations both for plant growth and environmental protection. Real world examples of developing and adapting management systems are used to illustrate this process. The laboratory exposes the student to common soil testing procedures, methods for studying soil nutrient-plant interactions, and examples of practical application of management practices in the field.

Enforced Prerequisite at Enrollment: CHEM 110 and SOILS 101

SOILS 403: Soil Morphology Practicum

2 Credits/Maximum of 4

Students develop field skills to describe soil morphology, classify soils, and make land use interpretations. SOILS 403 Soil Morphology Practicum (2 per semester/maximum of 4) SOILS 403 is an eight week course that provides students with the opportunity to: make detailed soil morphological descriptions and interpretations; evaluate soil properties and their suitability for different land uses; and observe various soils throughout the Northeastern U.S. SOILS 403 synthesizes techniques used to describe soil morphology and site characteristics, classify soils, and make land use interpretations. The field skills taught are highly applicable to those pursuing careers in fields of environmental studies, engineering, waste disposal, horticulture, landscape architecture, agricultural, forestry, consulting, and by those describing soils for research. Students also have the opportunity to try out for the Penn State Undergraduate Collegiate Soil Judging Team each fall.

Enforced Prerequisite at Enrollment: SOILS 101 or equivalent

SOILS 404: Urban Soils

3 Credits

This course introduces the student to natural and human-influenced soils. SOILS 404 Urban Soils (3) This course introduces the student to the management of soils in urban and suburban settings via comparisons in soil physical, chemical, and biological properties. The soil is also examined as the interface between the biotic and abiotic components of an urban site. Therefore, site management of soil during or following placement is examined in detail. Urban soil physical and chemical properties are discussed in terms of site stability. The interactions between stormwater management, erosion control, soil mechanics, and the soil's ability to support vegetation are examined in the context of sustaining urban environments. The soil design process is presented: site assessment, biophysical analysis, profile construction, specification formulations, and conformance testing and inspection protocols. Professional practical examples such as mine reclamation, brown field restoration, and landscape construction are presented to illustrate the process. The student completes a series of exercises to gain experience in soil examination, soil/land use interpretation, site assessment, soil erosion calculations and a group assignment that evaluates soil issues on a reclamation or construction project.

Enforced Prerequisite at Enrollment: SOILS 101

SOILS 405: Hydropedology

3 Credits

Soil and water interactions across scales, integrated studies of landscape- soil-water relationships, fundamental processes of water flow and chemical transport. SOILS (GEOSC) 405 Hydropedology (3) Hydropedology is the study of the fluxes, storages, pathways, residence times, and spatio-temporal organization of water in the root and deep vadose zones, and their relations to climate, ecosystem, land use, and contaminant fate. The aim is to characterize integrated physical, chemical, and biological processes of soil-water interactions across scales (including chemicals and energy transported by water flow). This course embraces interdisciplinary and multiscale studies of interactive pedological and hydrological processes in the earth's surface and subsurface environments. The course will address the fundamental issues and practical applications of hydropedology (as a sister discipline of hydrogeology). This course emphasizes in situ soils that have distinct characteristics of pedogenic features, structures, layers, and soil-landscape relationships in the real world. Students will gain an in-depth understanding of soil and water interactions across scales from point observations to watershed phenomena, and will gain skills in predicting flow pathways and water fluxes in the landscape. This course promotes active learning, critical thinking, and hands-on skills. Course format will consist of two lectures and one laboratory/field exercise each week. The course will utilize a network of local watersheds with different land uses for demonstrations and class projects. Grading will be based on weekly lab/field exercise (20%), class research project (40%), homework (10%), one midterm exams (15%), and one final exam (15%). Since hydropedology is linked to a wide array of environmental, ecological, geological, agricultural, and natural resource issues of societal importance, SOILS (GEOSC) 405 will support interdisciplinary training of students in Soil Science as well as in other disciplines of the College of Agricultural Sciences, especially Agricultural and Biological Engineering, Agronomy, and Forest Resources. Students in the College of Earth and Mineral Sciences, College of Engineering, Eberly College of Science, and the Intercollege Graduate Degree Program in Ecology also will find

this course useful when undertaking research on the vadose zone, the hydrologic cycle, and the earth system.

Enforced Prerequisite at Enrollment: SOILS 101

Cross-listed with: GEOSC 405

SOILS 412W: Soil Ecology

3 Credits

Introduction to soil organisms; includes interactions between organisms, their processes, and metabolism with a major focus on microorganisms.

Enforced Prerequisite at Enrollment: BIOL 11 or BIOL 127 or BIOL 110

Writing Across the Curriculum

SOILS 416: Soil Genesis, Classification, and Mapping

4 Credits

Lecture and laboratory course on the genesis of soils, their classification, mapping, and interpretation for land use. SOILS 416 Soil Genesis and Classification (3) The study of soil genesis, classification, and mapping examines the evolution of soils, their organization into natural units, and their distribution throughout the world. Physical, chemical, and morphological soil characteristics are studied both in the field and classroom and then used to classify soils. These classification units are in turn used to study the processes that influence soil development. Students acquire a detailed knowledge of the technical terminology of soil genesis and develop observational and analysis skills needed to describe and/or interpret soil morphologies in the context of the landscape a profile is found in. Students learn to recognize and explain soil genetic pathways due to current or past soil forming periods (as affected by climate change for example). Students also evaluate the effect of soil genesis on land use and management decisions, learn how to map soils at multiple scales, and deliver soil mapping information. The course is comprised of weekly lectures and a laboratory. Exercises in the field and laboratory are designed to further develop a student's ability to ascertain a natural soil's origin using the five soil forming factors. Field skills that will be refined over the course of the semester include profile description, site description, soil mapping, and measurement and characterization of soil physical and chemical properties. Upon completion of SOILS 416, students will demonstrate: 1) deep understanding of fundamental soil processes that result in the genesis of soils around the world; 2) familiarity with soil analytical and testing protocols for common laboratory and field measurements used in studying the genesis of soils; 3) skills for interpreting soil profiles from the soil orders of the world; 4) accurate prediction of soil genesis pathways for a given landform; 5) the ability to interpret soil profile physical and chemical data, classify a soil according to US Soil Taxonomy, map soils to an order 1 level, and be able to apply soil profile information as gathered from the US Soil Survey program to make land use interpretations.

Enforced Prerequisite at Enrollment: SOILS 101

SOILS 418: Nutrient Management in Agricultural Systems

3 Credits

AGECO 418 / ANSC 418 / SOILS 418 Nutrient Management in Agricultural Systems is a senior-level course that applies the fundamentals of animal, plant and soil sciences to the issues and solutions in the area where livestock production intersects with water and air quality. Modern regionalization and concentration of animal production systems comes

with environmental implications due to a net influx of nutrients to livestock farms. While some nutrients leave the farm in the form of animal products, 60 to 70% of the nutrients are excreted and applied to nearby crop land. If not properly managed these nutrients represent a risk to environmental quality. Students in this cross-listed course gain both scientific and practical understanding of sound nutrient management principals and strategies. The course considers big picture concepts such as nutrient cycling as well as farm-level implementations such as Nutrient Management Planning.

Enforced Prerequisite at Enrollment: (BIOL 11 and BIOL 12) or BIOL 110 or BIOL 127 or BISC 3

Cross-listed with: AGECO 418, ANSC 418

SOILS 419: Soil Environmental Chemistry

3 Credits

Introduction to chemical constituents and processes occurring in soils. Topics include mineral weathering, soil solution chemistry and adsorption of solutes. GEOSC 418/GEOSC 418 (SOILS 419) Soil Environmental Chemistry (3) Upon completion of the course, the students will be able to identify the soil components and properties responsible for the chemical reactivity of soils and will know the fundamental chemical processes that occur in soils. The students will also be able to link theoretical concepts to real life environmental problems. The students will be evaluated on examinations, homework, and class participation. GEOSC 418 (SOILS 419) is offered every Spring semester. Class limit: 25 students.

Enforced Prerequisite at Enrollment: CHEM 112 and SOILS 101

Cross-listed with: GEOSC 418

SOILS 420: Remediation of Contaminated Soils

3 Credits

Basic principles and technical aspects of remediation of contaminated soils. SOILS 420 Remediation of Contaminated Soils (3) Remediation of contaminated soils is an introduction to the basic principles and techniques of remediation. Upon completion of this course, students will be able to determine what type of remediation technology needs to be used in real-world conditions depending upon the chemical nature and extent of contamination and learn about protocols for soil sampling and leach testing. They will learn about regulatory background and many different types of wastes that will be encountered in contaminated soils. Students gain knowledge of various cationic and anionic species of metal contaminants and how best to fix these using chemical fixation and solidification technique, which is an established remediation technology. In addition, they will learn about other established technologies such as on-site and off-site incineration and innovative technologies such as bioremediation, phytoremediation, vacuum extraction, thermal desorption, soil washing, solvent extraction, ex-situ supercritical oxidation, in-situ vitrification etc. They will be able to determine which technology is cost-effective for a particular contaminated soil. Students are evaluated through written testing of their understanding of basic remediation concepts and an oral presentation about a novel remediation technology through literature search. Soils 420 has no laboratory component.

Enforced Prerequisite at Enrollment: SOILS 101

SOILS 422: Natural Resources Conservation and Community Sustainability

4 Credits/Maximum of 4

Conservation, land-use, and community (soil, water, air, plants, animals, and humans) impacting quality of life and sense of place. SOILS 422 provides the student with practical knowledge of community and natural resources conservation. The course covers symbiotic aspects of soil, water, air, plants, animals, and humans and their impact on the community. The course focuses on developing methods for the conservation and sustainable use of resources. This involves understanding the land ethic and developing a sense of place. Conservation awareness has grown in recent years. Originally, erosion control was the sole reason for conservation planning. Eventually water conservation also became a concern addressed by planning. We have now moved into an era of ecosystem-based planning, where soil health, water and air quality, sustainable communities, and much more are considered in conservation planning. This planning involves both natural and human resources. SOILS 422 covers understanding, designing, and developing best management practices (BMPs) for addressing resource conservation and maintaining sustainable farmland and communities. Calculating runoff and soil loss are researched and integrated into conservation planning as tools for establishing the need for BMPs. Resources and technologies are covered, such as soil surveys, geographic information systems (GIS), global positioning systems (GPS), and ground penetrating radar (GPR). Networking and partnerships are also covered to give the student a practical knowledge of the critical nature of teamwork. Additionally, workings and interactions between federal, state, and local organizations and agencies are explored. Land-use patterns, such as urban and suburban sprawl, mining, logging, and resource utilization are explored. Education is enhanced in the form of a community/sense of place project. This project utilizes classroom knowledge and incorporates student research into a practical plan for developing an appreciation and awareness for one's community. Throughout the course the various aspects of soil, water, air, plants, animals and humans are woven together to emphasize the importance of all decisions on the ecosystem. After completing SOILS 422, the student will be equipped to make valuable and educated decisions to positively affect the community. Hands-on aspects of the course include various field trips to experience field conservation and community stability. At the end of the course the student will be able to evaluate effects of human activities on the landscape; make sustainable landuse decisions; determine the need for, and design best management practices; and develop a sense of place and describe individual roles and responsibilities in the community.

Enforced Prerequisite at Enrollment: SOILS 101

SOILS 440: Chemistry of the Environment: Soil, Water, and Air

3 Credits

This course is designed for junior and senior undergraduates with some previous chemistry background. The course will advance students' understanding of chemical concepts and link them to applications in environmental chemistry. The course focuses on topics in environmental soil chemistry such as: soil mineralogy, mineral weathering, sorption and ion exchange, chelation and complex formation, soil pH and acidic/alkaline soils, oxidation/reduction, soil salinity, soil biochemistry, and the dissolution/precipitation of common metals and compounds. The solid phase is emphasized, but solid/solution equilibria, aquatic chemistry, metals in the aqueous environment, and aquatic

pollution will also be covered. The course also covers a detailed overview of stratospheric chemistry, tropospheric chemistry, and climate change.

Enforced Prerequisite at Enrollment: (CHEM 110 and CHEM 111 and CHEM 112) or CHEM 202 or CHEM 210

Cross-listed with: ERM 440

SOILS 450: Environmental Geographic Information Systems

3 Credits

Use of geographic information systems (GIS) and digital spatial databases to characterize landscapes for environmental assessment and management.

Enforced Prerequisite at Enrollment: SOILS 101

SOILS 489: Supervised Experience in College Teaching

1-3 Credits/Maximum of 3

Participate with instructors in teaching an undergraduate soil science course; assist with teaching and evaluation and with development of instructional materials.

Enforced Prerequisite at Enrollment: SOILS 101 and approval of instructor

SOILS 494: Undergrad Research

1-6 Credits/Maximum of 6

Supervised student activities on research projects identified on an individual or small group basis.

Enforced Prerequisite at Enrollment: permission of the SOILS program

SOILS 494H: Honors Thesis Research

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of a SOILS honors thesis. The course involves research and other scholarly activities (such as writing) necessary for completion of an approved SOILS honors thesis.

Enforced Prerequisite at Enrollment: Enrollment in the Schreyer Honors College and permission of a SOILS honors adviser

SOILS 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

Full-Time Equivalent Course

SOILS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

SOILS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

SOILS 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Spanish (SPAN)

SPAN 1: Elementary Spanish I

4 Credits

Audio-lingual approach to basic Spanish; writing. Students who have received high school credit for two or more years of Spanish may not schedule this course for credit, without the permission of the department.

Bachelor of Arts: World Language (All)

SPAN 2: Elementary Spanish II

4 Credits

Audio-lingual approach to basic Spanish continued; writing. Students who have received high school credit for four years of Spanish may not schedule this course for credit, without the permission of the department.

Prerequisite: SPAN 001

Bachelor of Arts: World Language (All)

SPAN 3: Intermediate Spanish

4 Credits

Audio-lingual review of structure; writing; reading.

Prerequisite: SPAN 002

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

SPAN 10: Intensive Spanish

6 Credits

Basic Spanish grammar, oral, aural, and writing skills (essentially equivalent to SPAN 001 and first half of SPAN 002).

Bachelor of Arts: World Language (All)

SPAN 20: Intensive Spanish

6 Credits

Basic and intermediate Spanish grammar, oral, aural, and writing skills (essentially equivalent to second half of SPAN 002 and all of SPAN 003).

Prerequisite: SPAN 010

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

SPAN 51: Elementary Intensive Spanish for Graduate Students I

3 Credits

Intensive introduction to Spanish: first half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. SPAN 051 Elementary Intensive Spanish for Graduate Students I (3) This is the first in a series of three courses designed to give students an intensive introduction to Spanish. This is the first half of elementary sequence in reading, writing, speaking, listening, and cultural contexts. Students will learn the Spanish vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

Prerequisite: graduate standing

SPAN 52: Elementary Intensive Spanish for Graduate Students II

3 Credits

Intensive introduction to Spanish: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. SPAN 052 Elementary Intensive Spanish for Graduate Students II (3) This is the second in a series of three courses designed to give students an intensive introduction to Spanish. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the Spanish vocabulary. Lessons are taught in an authentic cultural context.

Prerequisite: SPAN 051 or equivalent, and graduate standing

SPAN 53: Intermediate Intensive Spanish for Graduate Students

3 Credits

Continued intensive study of Spanish at the intermediate level: reading, writing, speaking, listening, cultural contexts. SPAN 053 Intermediate Intensive Spanish for Graduate Students (3) This is the third in a series of three courses designed to give students an intermediate intensive knowledge of Spanish. Continued intensive study of Spanish at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

Prerequisite: SPAN 052 or equivalent, and graduate standing

SPAN 83: First-Year Seminar in Hispanic Literatures and Cultures

3 Credits

Introduction to the study of Hispanic literatures and cultures. SPAN 083S First-Year Seminar in Hispanic Literatures and Cultures (3) (GH;FYS;IL) (BA) This course meets the Bachelor of Arts degree requirements. The first-year seminar in Spanish will introduce students to the study of Hispanic literatures and culture in their first semester at the University. Students will read (in English) significant literary texts, view art works (including films and videos), listen to music and explore the Hispanic world in general. These experiences will help prepare them for additional courses in literature and in Spanish, but will also serve as an introduction to things Hispanic, and as a point of comparison with U.S. culture. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them including the opportunity to develop relationships with faculty and other students who share their academic interests. This course will introduce students to the study of Hispanic literatures and culture in their first semester

at the University. This experience will help prepare them for additional courses in literature and in Spanish. The course satisfies both the first-year seminar and a general education humanities or Bachelor of Arts humanities requirement.

Bachelor of Arts: Humanities
International Cultures (IL)
First-Year Seminar

SPAN 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities
International Cultures (IL)

SPAN 100: Intermediate Grammar and Composition

3 Credits

An intermediate level grammar review that also incorporates directed and original composition exercises.

Prerequisite: SPAN 003 or SPAN 020
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Exceeds 12th Unit of World Language

SPAN 100A: Intermediate Grammar and Composition for Spanish Bilinguals

3 Credits

A review of grammar and practice with composition focusing on needs and problems specific to Spanish-speaking bilinguals.

Prerequisite: placement
Bachelor of Arts: Humanities

SPAN 100B: Intermediate Grammar and Composition for Students in Medical-Related Fields

3 Credits

Intermediate Grammar and Composition for Students in Medical-Related Fields. SPAN 100B Intermediate Grammar and Composition for Students in Medical-Related Fields (3) The main goals of the course are to help students develop their competence in using medical terminology in Spanish and to become familiar with the cultural aspects in the health care of Latinos/Hispanics in the United States. In addition, the course will review intermediate level Spanish-language grammar and will provide structure to improve students receptive (listening and reading) and productive (speaking and writing) skills needed for this specialized vocabulary. During the semester students will learn and practice health terminology in Spanish, and they will apply the specialized vocabulary through case scenarios, noticias (news) and readings. Participants will be exposed to Spanish from the first day and are expected to stay up-to date with the current health news as it relates to the Hispanic/Latino population of the United States. The course is intended for those who are beyond the basic level of Spanish (must have taken Span 003), but participants are not expected to be fluent speakers.

Prerequisite: SPAN 003 or SPAN 020

SPAN 100C: Intermediate Grammar and Composition for Students in Communication-related Fields

3 Credits

This course focused on grammar and the media environment replaces Spanish 100 for students going into Communication majors. SPAN 100C Intermediate Grammar and Composition for Students in Communication-related Fields (3) Intermediate Grammar and Composition for Students in Communication-related fields (Spanish in the Media) is an online content-based course for Spanish majors aimed to develop communication skills through a focus on mass media in Hispanic culture. This online course is a perfect match for double majors in Spanish and Media (Advertising/Public Relations, Media Studies, Journalism, etc). This course is restricted to students who are Communication majors or pre-majors. Completing this course achieves 15th credit level proficiency and replaces SPAN 100.

Prerequisite: SPAN 003 or SPAN 020

SPAN 100H: Intermediate Grammar and Composition

3 Credits

An intermediate level grammar review that also incorporates directed and original composition exercises.

Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Honors
Exceeds 12th Unit of World Language

SPAN 105: Elementary Spanish I for Students in the Agricultural Sciences

4 Credits

The course covers basic Spanish, grammar, and oral, aural, and writing skills for students in the Agricultural Sciences. Students who have received high school credit for two or more years of Spanish may not schedule this course for credit without the permission of the instructor. This course does not count toward Spanish majors or the Spanish minor. SPAN 105 Elementary Spanish I for Students in the Agricultural Sciences (4)(BA) This course meets the Bachelor of Arts degree requirements. The class will focus on the development of basic language skills, socio-cultural awareness and discourse. The class periods will be used to develop: (1) the student's knowledge of Spanish as a linguistic code through mastery of a personalized vocabulary as well as common idiomatic language structures important to the student's ability to communicate with Spanish speakers employed in their area of agricultural interest; (2) the student's understanding of major grammatical concepts critical to effective communication in work management within the food, agriculture and natural resources industries; (3) the student's cultural awareness of the varied Spanish speaking cultures with which the student will come into contact in the workplace; and (4) the student's ability to be creative with their knowledge of the language as it relates to the development of self-confidence and effective communicative proficiency in Spanish. Frequent short quizzes and the collection and grading of are important components of the course as they are used to encourage the use of Spanish on a daily basis. Classroom activities will be designed to require students to use and develop their communication skills in Spanish to communicate efficiently and relate personally to Spanish speakers. Students will be evaluated based on homework, quizzes, exams, and class participation. Students who have received high school credit for

four years of Spanish may not schedule this course for credit, without the permission of the instructor. This course does not count toward Spanish majors or the Spanish minor.

Bachelor of Arts: Humanities

SPAN 106: Elementary Spanish II for Students in the Agricultural Sciences

4 Credits

Further development of basic Spanish skills and the cultural awareness needed to work with Spanish speakers in the agricultural industries. SPAN 106 Elementary Spanish II for Students in the Agricultural Sciences (4) The class will focus on further development of the elementary language skills, socio-cultural awareness and discourse introduced in SPAN 105. It will also build on the agricultural concepts introduced in Spanish 105. The class periods will be used to develop further: (1) the student's knowledge of Spanish as a linguistic code through further mastery of a personalized vocabulary as well as common idiomatic language structures important to the student's ability to communicate with Spanish speakers employed in their area of agricultural interest; (2) the student's understanding of major grammatical concepts critical to effective communication in work management within the food, agriculture and natural resources industries; (3) the student's cultural awareness of the varied Spanish speaking cultures with which the student will come into contact in the workplace; and (4) the student's ability to be creative with their knowledge of the language as it relates to the development of self-confidence and effective communicative proficiency in Spanish. Frequent short quizzes and the collection and grading homework assignments are important components of the course as they are used to encourage the use of Spanish on a daily basis. Classroom activities will be designed to require students to use and develop their communication skills in Spanish to communicate efficiently and relate personally to Spanish speakers. Students will be evaluated based on homework, quizzes, exams, and class participation. Students who have received high school credit for four years of Spanish may not schedule this course for credit, without the permission of the instructor. This course does not count toward Spanish majors or the Spanish minor.

Prerequisite: SPAN 105

SPAN 110: Intermediate Conversation

3 Credits

Practice in oral expression in Spanish, with emphasis on aural comprehension, idiomatic usage, and fluency. Use of journalistic materials.

Prerequisite: SPAN 003 or SPAN 020
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Exceeds 12th Unit of World Language

SPAN 130: Iberian Civilization

3 Credits

Spanish 130 is a general education course on Iberian culture and civilization. The goal of this course is to provide the student with a broad, general introduction to the lands, peoples, history, and cultures of the area known as Spain and Portugal; to inform the student about the region's ethnic diversity, cultural heritages, and problems

of development; to investigate vital symbols, myths, figures, icons, superstitions, and faiths; to foster critical thinking and associative skills; to suggest continuity and draw parallels between past and present; and to allow for a framework for undertaking further study. This course will survey the civilizations of these European lands and we will get an overview of the main historical events that make up this rich and complex history. The course is designed to expose students to the full range of Iberian history and diversity. Since we are covering centuries of history and several other variables (linguistic, artistic, ethnic, religious, political, economic, geographic, biologic, etc.), this tour will of necessity be pretty rudimentary. However, students will acquire an understanding of the diverse cultural currents and historical milestones that contributed to the creation of modern Spain and Portugal.

SPAN 131: Ibero-American Civilization

3 Credits

SPAN 131 Ibero American Civilization (3) (GH; IL; US) (BA): Spanish American and Brazilian life from the Conquest to the present; including studies of literature, art, the indigenous heritage, and contemporary problems. This course meets the Bachelor of Arts degree requirements. The nations and peoples of Latin America have a unique, interesting history and cultural heritage that are rooted in the traditions, beliefs, experiences, values, and struggles of Native American, European, African and other populations. As close neighbors and major trading partners of the United States, Latin American republics have both benefited and suffered from the proximity and foreign policies of the northern capitalist democracy, and have contributed to its strength and growing ethno-racial diversity. This course aims to provide the student with a broad, general introduction to the lands, peoples, and history of Latin America; to inform the student about the region's ethnic diversity, cultural background, and problems of development; and to promote appreciation for the values and practices of other cultures, and a better understanding of relations between the nations of the region and the United States. Traditional resident classes will usually combine presentation of content and discussion of reading assignments, with an expectation of high student participation. Films, videos, and recordings will enhance and illustrate readings. This course will fulfill the Humanities Breadth and Cultural Diversity requirements. The course does not count toward credits in the major or minor in Spanish because it is taught in English. Nevertheless, it will complement the department's offerings by providing students with a greater appreciation of Latin America's cultural origins, socioeconomic development, and everyday realities.

SPAN 132: Afro-Hispanic Civilization

3 Credits

A general introduction to human and cultural elements of African origin in Spanish- and Portuguese-speaking countries of Latin America. SPAN 132 / AFR 132 / AFAM 132 Afro-Hispanic Civilization (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. The nations and peoples of Latin America have a unique, interesting history and cultural heritage that are rooted in the traditions, beliefs, experiences, values, and struggles of Native American, European, African and other populations. This course focuses on the presence and participation of African peoples and their descendants in the formation and development of societies and cultures in representative areas of the Caribbean, South America, and Central America and on the evolution, diversity, and richness of the African heritage therein. Course content includes the African background, the experience and impact of slavery, the social, cultural, and economic heritage of slavery, the role of race in Latin America, and Afro-Hispanic intellectual, literary, and artistic developments (e.g., aspects of folklore, music). The course aims to provide students with a general

introduction to human and cultural elements of African origin within the Spanish- and Portuguese-speaking nations of the Americas so that they may be more knowledgeable of the meaning, significance and widespread influence of the African diaspora. It proposes to provide the student with a better understanding of Africa's contribution to Latin American identity, diversity, culture, and development; to promote appreciation for the values and practices of other cultures, and greater awareness of the relations between the nations of the region and the United States.

Exceeds 12th Unit of World Language

SPAN 200A: Intensive Grammar and Composition for Spanish Bilinguals

3 Credits

This course will enhance writing proficiency in Spanish of Spanish speaking students by targeting common problems characteristic of Spanish speakers.

Prerequisite: SPAN 100A

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

Bachelor of Arts: Humanities

Exceeds 12th Unit of World Language

SPAN 210: Readings in Iberian Civilization

3 Credits

Intermediate level Spanish readings dealing with Iberian life from pre-historic times to the present.

Prerequisite: SPAN 200

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

Bachelor of Arts: Humanities

Exceeds 12th Unit of World Language

SPAN 210N: Multilingual and Intercultural Communication

3 Credits/Maximum of 6

SPAN 210N Multilingual and Intercultural Communication course will showcase the fundamental components of the intersection of language and culture through humanities and social science. The purpose of this course is to teach the underlying mechanisms of multilingualism through language science principles and develop an understanding of intercultural communication through humanistic approaches. The content of this course focuses on linguistic strategies for succeeding in multilingual environments (e.g. dialect variation, second language acquisition strategies) as well as intercultural communication practices for navigating new environments (e.g. understanding cultural norms, skills for global leadership). The course requires an introductory level understanding of language. Students will learn how language and culture inform each other through the examination of cultures within the United States and internationally, including non-Western cultures.

Prerequisites: SPAN 3 or SPAN 3H or SPAN 20 or IT 3 or IT 20 or PORT 3 or PORT 123

Cross-listed with: IT 210N, PORT 210N

SPAN 215: Introduction to Spanish Linguistics

3 Credits

Introduction to the fundamental components of linguistics using data from the Spanish language. SPAN 215 Introduction to Spanish Linguistics (3) Spanish 215 will introduce students to the fundamental components of linguistics (phonology, morphology, syntax, lexicon, and semantics) using data from the Spanish language. The course requires no previous knowledge of linguistics, but presupposes familiarity with Spanish at the 15 credit level or higher. The underlying purpose is to awaken students' interest in Spanish linguistics; to provide them with a foundation in the terminology and concepts necessary for studying higher level courses that are part of Spanish major and minor curricula; and to help them to decide which of the upper level classes they would be most interested in taking. Student performance in the course will be evaluated by (a) exams designed to verify their familiarity and understanding of linguistic

terminology and concepts, their skill in doing phonetic transcription, and their ability to solve problems in phonology, morphology, syntax, and semantics, and (b) their preparedness and participation in classroom activities.

Prerequisite: SPAN 100

SPAN 220: Readings in Ibero-American Civilization

3 Credits

Intermediate level Spanish readings dealing with Ibero-American life from the pre-conquest to the present.

Prerequisite: SPAN 200

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

Bachelor of Arts: Humanities

Exceeds 12th Unit of World Language

SPAN 253W: Introduction to Hispanic Literature

3 Credits

Introduction to generic distinctions, critical methods, and approaches to Hispanic literature. SPAN 253W Introduction to Hispanic Literature (3) (BA) This course meets the Bachelor of Arts degree requirements. During the semester students will learn how to write, and will practice writing, critical and analytical essays based upon the different genres of literature studied in class. Students will learn strategies and approaches for analyzing short stories, poems, movies, and novels, all written or directed by prominent authors from Spain and Latin America. The development of writing skills which reflect sophistication at the level of thought, organization, and style will also be a fundamental objective of the course.

Writing Across the Curriculum

SPAN 269N: Theater and Performance

3 Credits

In Spanish Theatre and Performance, the students will read and analyze a variety of Spanish and Latin American plays from a literary perspective as well as from the perspective of a director, designer, and actor. We will use that analysis to create and perform monologues and scenes in Spanish. The students will learn acting, directing, and design skills and put those creative skills at service to further develop their ability to communicate effectively in the target language. This is a course for oral communication through the use of acting. In this course, we will use acting techniques in order to improve our fluency in oral expression. There will be some grammar instruction that will flow through the scripts we encounter. This course will facilitate your ability to express yourself both professionally and personally. The class is conducted in Spanish. The students will use Creative Thinking in order to support the Key Literacy of developing a world language, particularly Spanish. This course will examine plays from a variety of different countries. Play will be chosen from both Latin America and Spain, thereby introducing students to a variety of

international cultures. We will be looking at these plays from a historical and social perspective, thereby examining the cultural values, traditions, beliefs, and customs of several countries and cultures. We will look at plays ranging from the turn of the twentieth century through today and see how they and their contexts change through time. We will see how, for example, the plays of Lorca (Spain) might influence playwrights from other Spanish-speaking countries. (The second performance of "Bodas de sangre" was in Buenos Aires Argentina.)

SPAN 297N: Special Topics - Inter Domain

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest. This Special Topics is an Inter-Domain GenEd course

SPAN 299: Foreign Study--Intermediate Conversational Spanish

3 Credits

Grammar review and practice in oral expression and aural comprehension.

Bachelor of Arts: Humanities

International Cultures (IL)

SPAN 300: Advanced Grammar and Composition Through Reading

3 Credits

Development of advanced grammar and composition skills through reading texts by native speakers and adapting their techniques for original compositions.

Prerequisite: SPAN 215 or SPAN 253W

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

Bachelor of Arts: Humanities

Exceeds 12th Unit of World Language

SPAN 300B: Advanced Grammar and composition for Students in Medical-related Fields

3 Credits/Maximum of 3

Advanced Grammar and Composition for Students in Medical-related Fields.

Prerequisite: SPAN 100B

SPAN 305: Spanish for Social Services

3 Credits

Provides practical language applications for students going to social work, psychology, and the legal and medical professions. SPAN 305 Spanish for Social Services (3) SPAN 305 Spanish for Social Services (3) provides practical language applications for students going into social work, psychology, and the legal and medical professions. At the same time, there is an emphasis on the wide range of historic, linguistic and cultural influences that make up the Hispanic community in the US today.

Prerequisite SPAN 215 or 253W

SPAN 305H: Spanish for Social Services

3 Credits

Practical Spanish for social workers, medical personnel, law enforcement officers, etc.; emphasis on Puerto Rican vocabulary, idiom, and pronunciation.

Honors

SPAN 310: Business Spanish

3 Credits

No description.

SPAN 314: Spanish Sounds

3 Credits

Spanish phonetics and phonemics; systematic means of correcting pronunciation defects; other audio-lingual applications.

Prerequisite SPAN 215

SPAN 315N: Spanish and Spanish-speakers in the U.S.

3 Credits

In this course, we investigate various aspects of the language(s) and language behaviors of U.S. Latinos. The course is premised on the idea that language is a crucial component in the formation of identity. To understand Latina/o identity formation in the U.S., then, one must analyze what role languages—Spanish and English—have played in identity formation. The class commences with a brief historical assessment of the various U.S. Latino communities, including Mexican-American, Cuban-American, and Puerto Rican communities. Such a historical purview proves significant in the study of the cultural traditions that persist in these communities, chief among these, the Spanish language. In exploring the Spanish language in U.S. Latino communities, we consider several major sets of questions, among them the following: In what ways do the languages of U.S. Latino communities differ from those of monolingual Spanish- (and English-) speaking communities? What factors contribute to the maintenance and loss of Spanish in these communities? How does language contribute to the creation of individual and societal identity? How is language exploited in the representation of other U.S. Latino cultural traditions? We consider these questions across a variety of genres: poetry, prose (autobiography in particular), film, art, television, and music. These texts reveal how social environments determine language use as well as how artists have used language to reshape social environments, through, for example, the development of new language practices such as Spanish-English code switching. The course also connects these cultural practices to debates on Spanish in public life and policy.

SPAN 316: Building Words and Sentences in Spanish

3 Credits

Building words and sentences in Spanish. Analysis of Spanish word structure and its relationship to syntactic structures. SPAN 316 Building Words and Sentences in Spanish (3) "Building words and sentences in Spanish" is an introduction to the study of Spanish morphology and syntax. In linguistics, morphology is the study of the morphemes (e.g. affixes, words, roots) of language and how they combine together to form words. Syntax is the study of how words combine together to form phrases and sentences. Because this course is for Spanish majors and minors, the focus in this course is on the structure of words, phrases, and sentences in Spanish, how Spanish compares to other languages, and how morphology and syntax vary across Spanish dialects. Special focus will be made on explaining the kinds of errors typical of English-speaking learners of Spanish as a second language, and a primary goal of the course is for students to improve their proficiency in using Spanish morphosyntax. The course is taught in Spanish.

Prerequisite SPAN 215

SPAN 326: Reading the BorderLands: Geography and Identity Along the U.S.-Mexico Border

3 Credits

This course examines representations of the U.S.-Mexico border in relation to the actual geographic space. SPAN 326 Reading the Border/Lands (3) (GH;US) This class will center on discussions of the U.S.-Mexico borderlands in cultural theory and practice. "Borderlands" is understood as a transcultural space filled with physical, cultural, economic, political, and mythical elements. The aim is to view how different artists from the Borderlands, both northern Mexican and Chicano, mediate their borderlands reality. That is to say, the goal of the class is to examine the different imaginative geographies in the borderlands. We examine a wide-ranging mix of cultural texts that includes prose, poetry, essays, and performance art, as well as film and video art. We explore how writers have historically rethought notions of citizenship, identity, and culture to create more fluid spaces of representation in cultural contact zones. We will in particular, pay close attention to the relationship between national geography and the shaping of regional identities and popular cultures and relationships between the maps that nations draw and the cultural forms that cut across them.

SPAN 353: Topics in the Cultures of Spain

3 Credits

This course offers a comparative study of the literature, artistic manifestations, intellectual traditions, and cultural productions of Spain. This course offers a comparative study of the literature, artistic manifestations, intellectual traditions, and cultural productions of Spain. Depending on the semester focus, topics related to literary movements, comparative approaches to genre, and/or connections between textual representation and politics, social movements, and/or Spain's long and complex history (both locally and globally) may be at the center of discussion. Additionally, varied issues of gender, race and ethnicity, rural and urban environments, religion, and evolving conceptions of nationhood may be included as overarching themes. Particular literary genres and representative works may be foregrounded in yet another iteration of the course, wherein students will study and discuss principal readings against cultural backdrops framed by exposure to art, film, music, and/or other historical, intellectual, sociopolitical, and/or media-based materials of relevance to the semester-specific context at hand.

Prerequisite SPAN 253W

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

Bachelor of Arts: Humanities

Exceeds 12th Unit of World Language

SPAN 354: Topics in Border Studies

3 Credits

This course offers a study of borders as key sites of contact, exchange, conflict, hybridity, and identity production in and across varied contexts of Spanish, Latin American, and/or Latina/o culture(s). This course offers

a study of borders - geopolitical, social, intellectual, literary, artistic, and/or historical - as key sites of contact, exchange, conflict, hybridity, and identity production in and across varied contexts of Spanish, Latin American, and/or Latina/o culture(s). While diverse variables (including diaspora, gender, race and ethnicity, sexuality, colonialism, nationhood and transnationalism) will inform particular iterations of the course, approaches and text selection will be shaped by an understanding of borders as constructs defined by conditions of dynamic interaction and transformation. Materials to be considered in the course, which will vary according the focus, may include literary, artistic, and intellectual works, film, media-based texts, music, and/or historical documents

Prerequisite SPAN 253W
Bachelor of Arts: World Language (All)
Bachelor of Arts: Humanities

SPAN 355: Topics in the Cultures of Latin America

3 Credits

This course offers a comparative study of the literatures, artistic manifestations, intellectual traditions, and cultural productions of the Latin American region. This course offers a comparative study of the literatures, artistic manifestations, intellectual traditions, and cultural productions of the Latin American region. Throughout the course, we will reflect on the (im)possibility of characterizing a vast region by taking into account ongoing factors its broader history and culture, as well as national and local particularities. Topics will vary by semester and may include: literary and artistic periods and movements, (post)coloniality and decoloniality, the politics of race, gender, and sexuality, urban and rural sociopolitical movements, (self-)representations in old and new media, discourses of the political (populisms, revolutions, dictatorships, and neoliberalism), and migration studies. Students will engage with literary texts, historic documents, art, music, and other materials in order to understand different kinds of writing and forms of representation. While most materials will be in Spanish, the course may also include works in translation from Brazil, as well as the English- and/or French-speaking Caribbean.

Prerequisite: SPAN 200 and SPAN 253W
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Bachelor of Arts: Humanities
Exceeds 12th Unit of World Language

SPAN 356: Topics in the Cultures of the Americas

3 Credits

This course offers a comparative study of the literatures and cultures of the Americas, bringing Latin America into dialogue with the United States (and in some instances Canada). This course offers a comparative study of the literatures and cultures of the Americas, bringing Latin America into dialogue with the United States (and, in some instances, Canada). Throughout the course, we will explore the (dis)continuities that both connect and divide the hemisphere, and we will trace the movement of people, artistic practices, and ideas across borders while paying attention to the distinctive aspects of national and local cultures. Topics will vary by semester and may include: empire and colonialism, the literary and cultural legacies of slavery, the figure of the "native," crime literature or science fiction in the Americas, theater of the Americas, literatures and cultures of the Spanish-American War, media and the U.S./Mexico border, and cultures of the Caribbean diaspora. Although the course may cover English-language materials, or works in translation from Brazil and/or the

French-speaking Caribbean, most of the texts/recordings/films will be in Spanish, as will all assignments written by students.

Prerequisite: SPAN 200 and SPAN 253W

1-12 Credits/Maximum of 12

Advanced training in Spanish language skills.

Prerequisite: SPAN 003
International Cultures (IL)

SPAN 410: Advanced Oral Expression and Communication

3 Credits

Emphasis on achieving practical command of spoken Spanish and the comprehension of native speech. Use of journalistic materials.

Prerequisite: (SPAN 100A or SPAN 200) and (SPAN 215 or SPAN 253W)
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Exceeds 12th Unit of World Language

SPAN 410H: Advanced Oral Expression and Communication

3 Credits

Emphasis on achieving practical command of spoken Spanish and the comprehension of native speech. Use of journalistic materials.

Honors

SPAN 411: The ABCs of Bilingualism: Acquisition, Brain, and Community

3 Credits/Maximum of 6

In SPAN 411, students will learn to understand the bilingual landscape of the Spanish-speaking world and its consequences for communities and individuals. SPAN 411 the ABCs of Bilingualism: Acquisition, Brain, and Community will showcase the fundamental components of bilingualism (first language acquisition, language mixing, language and society, language contact, and cognitive consequences of bilingualism) situating

them in the Spanish speaking world. The course requires an introductory level understanding of linguistics and presupposes familiarity with Spanish at the 15-credit level or higher. The purpose of this course is to adopt an understanding of the underlying mechanisms of bilingualism and what it means to be a bilingual speaker, as well as understand the community-level impact of speaking multiple languages. Students will learn theories surrounding the study of bilingualism and apply linguistic knowledge to better understand bilingual communities that are new to them.

Prerequisites: SPAN 215

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

Exceeds 12th Unit of World Language

SPAN 412: Translation

3 Credits

Techniques of written translation from Spanish to English and vice versa, particularly for business, literature, and social work. Students will learn translation theory and best practices, as well as strategies for overcoming the most common translation problems in Spanish-English translation. Some time will be spent on a review of grammar issues that most commonly result in errors in translation. Students will also learn how to deal with colloquial language and cultural references in a Spanish source text, and will be taught to consider the function of dialect, style and register in a source text and their impact in translation. In the final weeks of the semester, the focus shifts from the theoretical to the practical, as students apply their skills to the translation in advertising, scientific and technical texts, documents, and literary and artistic translation.

Prerequisite: (SPAN 100A or SPAN 200) and (SPAN 215 or SPAN 253W or SPAN 300B)

SPAN 412H: Translation

3 Credits

Techniques of oral and written translation from Spanish to English and vice versa, particularly for business, literature, and social work.

Honors

SPAN 413: Interpretation

3 Credits

Introduction to the art of interpretation, with particular attention to the professions for which it is most commonly required. SPAN 413 Interpretation (3) Spanish 413 will provide students with demonstrations and exercises designed to develop the skills required in sight translation and in consecutive, simultaneous and summary interpretation. The course does not presume to provide the training needed for entrance into the profession; it is intended to give students sufficient understanding of the rigors and demands of the profession and to help them determine whether they have the interest and skills to pursue further training in this area. At the same time, it will provide students with a unique opportunity to improve their listening comprehension and fluency in the target language, whether English or Spanish.

Prerequisite: SPAN 412

SPAN 417: How Languages Are Learned

3 Credits

This class is a linguistics course that focuses on language acquisition in children and adults. Linguistics is the scientific study of language and its structure, and linguistic inquiry focuses on various levels of language: phonology examines the sounds of language, morphology examines the structure of words (e.g., root words and their inflections), and syntax focuses on the structure of phrases and sentences. Using the tools of phonology, morphology, and syntax, this course will address the following questions. What is unique about human language? How is language learned in infancy? How do humans learn additional languages after they have learned their first language? How does bilingual language development compare to monolingual language development? Can knowing more than one language actually be detrimental? What are the different languages spoken by bilinguals in the Spanish-speaking world? What sorts of bilingual education programs are there in the Spanish-speaking world, including in the U.S.? By answering these questions, this course introduces students to bilingualism and bilingual language acquisition.

Prerequisite: (SPAN 100A or SPAN 200) and SPAN 215

SPAN 418: The Evolution of Spanish

3 Credits

The emergence and development of the sounds and forms of Spanish.

Prerequisite: (SPAN 100A or SPAN 200) and SPAN 215

SPAN 418H: The Evolution of Spanish

3 Credits

The emergence and development of the sounds and forms of Spanish.

Honors

SPAN 420: Spanish for Business and International Trade

3 Credits

Spanish 420, Spanish for Business and International Trade, is an introduction to business administration (organizational structure, human resources, marketing, accounting, cross-cultural etiquette, business ethics, etc.) within the context of the Spanish language and Hispanic cultures against the backdrop of the global economy. Participants will broaden and deepen their ability to apply their Spanish skills in a professional setting by reading and evaluating current business articles, discussing and analyzing business issues in various Hispanic countries, examining the intersection of business and culture in the Spanish-speaking world, viewing short videos, preparing a resume in Spanish, and participating in other written and oral activities. To complement the core content, various assignments also allow students to focus on their individual majors.

Prerequisite: SPAN 100A or SPAN 200 and SPAN 215 or SPAN 253
Bachelor of Arts: Humanities

SPAN 423: Spanish in Contact with Other Languages

3 Credits

Multilingualism in the Spanish Speaking World explores the multitude of languages spoken in Spanish-speaking countries, including the

languages and dialects of Spain, indigenous languages of Mexico, Central, and South America, the Spanish spoken in Equatorial Guinea and the United States, as well as Spanish-based Creole languages. Through linguistic comparative analyses (e.g. phonological, morphosyntactic) of these various languages and dialects, informed by readings on the history and socio-political status of bilingualism in Spanish-speaking countries, students will refine their critical reading and writing skills in Spanish, while gaining a more informed appreciation of the linguistic diversity found within Spanish-speaking world. This course fulfills requirements for the major and minor in Spanish, and allows students interested in Spanish culture and language to undertake more in-depth and specialized study in linguistics.

Prerequisite: SPAN 215

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

Bachelor of Arts: Humanities

Bachelor of Arts: World Cultures

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

SPAN 424: Facts and Myths about Learning Spanish

3 Credits

This course focuses on key aspects of the acquisition of Spanish as a second language. The course will address questions such as: Can watching Netflix help me learn Spanish? What type of practice, and how much, can help me learn a language? Does the native language change when we learn a second language? Does speaking a second language influence thought and perception? Is it worthwhile to invest in studying a language abroad, and why? Is computer-based learning as effective as face-to-face learning? Is it enough to learn 'standard' Spanish? Throughout the course, students are presented with these and similar questions which they will have consider and evaluate as "facts" or "myths". The course goes from theory to practice, and emphasizes hands-on experience based on examining data and experiments. During the semester, you will regularly work by examining data from real speakers (native and non-native) to help you answer the questions explored in the course and to develop your own hypotheses.

Prerequisite: SPAN 215

Bachelor of Arts: World Language (All)

Bachelor of Arts: Humanities

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

SPAN 425: The Spanish Your Teachers Never Taught You

3 Credits

Have you ever failed to understand someone because they didn't use the word "whom" properly? There is often a big difference between how one is "supposed to" use a language, and how the language is actually used in the world. Where does this difference come from? Why are some ways of speaking considered to be more correct, more logical, or more polite, and others are disdained, discouraged, or ridiculed? More importantly, how do these judgments spread, and what are their consequences? In this course we will read and conduct rigorous linguistic (e.g. phonetic or syntactic) analyses of how Spanish is used in a wide range of communities both in countries where Spanish is the majority language as well as in the US, we will apply methods from sociolinguistics to explore how linguistic variation is associated with social meanings, and we will critically examine how standard varieties are defined and promoted, and how

nonstandard varieties are evaluated, both positively and negatively. We will also engage with points of view of Spanish users, community members, and others through critical study of literary works and other primary sources (e.g. social media, opinion writings, political statements, interviews), to listen to what different people say about varieties of Spanish, and about those who use those varieties. Through these efforts we will explore why languages vary and change, and how and why people come to be evaluated (negatively or positively, accurately, or inaccurately) on the basis of how they speak. Satisfies requirements for the major and minor in Spanish.

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

Bachelor of Arts: Humanities

Exceeds 12th Unit of World Language

SPAN 470: Youth Cultures in Latin(a/o) America

3 Credits

Young people have been at the center of political and cultural revolutions around the world and throughout history. For example, revolutions, urban movements, ethnic/racial pride, LGBTQ+, feminist movements, music basaars, DJs and rave parties, and "barras de futbol" are only some of the manifestations associated with young people in Latin(a/o) American literature, film, music, and journalism. Nevertheless, the concept of "youth" as an academic category only appeared in the 1960's. In this course, we will study different manifestations of youth cultures in the Hemispheric Americas, paying special attention to the Latinx communities in the U.S. and Latin America, since the 1960's and until the contemporary moment. The key question that will guide us is: How does each of these literary, artistic, and media representations of youth enter into dialogue with political events in which young people have been at the center of efforts to bring about political changes in the U.S. Latinx communities and Latin American? Using short fiction, film and documentaries, songs, blogs, and other cultural materials (YouTube clips, images, graffiti, etc.), we will identify and compare different youth cultures in Latinx communities in the U.S. and Latin America in terms of their productions, representations, and effects in the public sphere. We will enrich our analysis of primary materials with theoretical and critical readings that will help us to contextualize the different manifestations in our study.

Prerequisite: (SPAN 100A or SPAN 200) and SPAN 253W

Cross-listed with: LTNST 470

SPAN 472: The Contemporary Spanish American Novel

3 Credits

The regionalist and social novel since 1910, together with the social background.

SPAN 479: U.S. Latina/o Culture en Espanol

3 Credits

This course is conducted in Spanish and will analyze some of the central themes that shape the diverse Latina/o experiences in the United States. Some of the main topics that the course will address include: the politics of labeling; definitions of displacements; the politics of language; imaginary homelands and geographic spaces; and conceptualizations of race, gender, and sexuality. These themes will be seen through the lens of Latina/o literature and film. The main objective of this course is to help students think critically about the conceptual, theoretical, historical, and social issues that inform the Latina/o experience in the United States.

Exceeds 12th Unit of World Language

SPAN 491: Masterpieces of Spanish Drama and Poetry

3 Credits

Reading, analysis, and discussion of selected masterpieces of Spanish drama and poetry.

Prerequisite: (SPAN 100A or SPAN 200) and SPAN 253W

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

Bachelor of Arts: Humanities

Exceeds 12th Unit of World Language

SPAN 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

SPAN 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

SPAN 496H: Independent Studies

3 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

Honors

SPAN 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

SPAN 499: Foreign Study--Spanish

1-12 Credits/Maximum of 12

Contemporary Spanish life and civilization. Emphasis on post-Civil War period: literature, arts, and sociopolitical problems.

Prerequisite: SPAN 100 , SPAN 110 , or SPAN 120

Bachelor of Arts: Humanities

SPLED 395W: Observing Special Education Settings Spanning Across School Transitions

3 Credits

Observation of Special Education Settings and Transitions through the Systems provides students with an opportunity to (a) observe exceptional individuals in a supervised setting, (b) become familiar with methods of observation, (c) use methods of writing for other professionals using descriptive summaries and graphic displays of data, (d) discuss transitions and what they look like in various settings, and (e) learn about the high-leverage practices used in effective teaching. This course provides a broad exploration of the various settings and elements that encompass special education. It allows for direct observation into today's schools to investigate trends in education. It considers how cultural

perspectives can impact teaching. Building on these insights, students will work on professional writing across multiple contexts. Students will have opportunities to collaborate with each other to develop professional relationships.

Prerequisite: Admission to SPLED program. Corequisites: SPLED 401, SPLED 425, SPLED 418 Recommended Preparations: Clearances as required by the Pennsylvania Department of Education and the Pennsylvania State University for field experiences. Writing Across the Curriculum

SPLED 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

SPLED 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

SPLED 400: Inclusive Special Ed Foundations: Legal, Characteristics, Collaboration, Assessment, and Management

4 Credits

Legal issues, learner characteristics, collaboration skills, assessment, and behavior management related to educating students with disability in inclusive settings. SPLED 400 Teaching Exceptional Students in General Education Settings (4) This course is delivered via a model of blended instruction and addresses foundational skills (assessment and management) and knowledge (laws, etiologies, collaboration) for those working with students with special education needs in general education classrooms. Almost 30% of the content includes student understanding of the history and current relevance of special education law; roles and responsibilities of general education teachers in providing services to students with special education needs; characteristics and etiologies relevant to providing effective instruction to students with mild and severe disabilities; and developing and maintaining effective education teams. Roughly 35% of content is relevant to assessment in inclusive settings and is centered on sound instructional decision making as well as linking instruction to standards based curricula. Coverage includes understanding formative and summative assessment; creating and administering curriculum-based assessments in reading, mathematics, and writing; designing systems to collect behavioral data; interpreting a variety of norm-referenced test scores; using brief experimental analyses is adequate for a given purpose. Roughly 35% of content is relevant to applying principles of Applied Behavior Analysis (ABA) to managing and motivating learners with special needs placed in inclusive settings. Broad objectives include student acquisition of knowledge and skills related to ABA principles and interventions such as: identifying the nature (positive and negative) of consequences maintaining or decreasing specific behaviors; operationally defining behavior; establishing a classroom and school environment conducive to learning for all students; creating class-wide, school-wide; and individual motivation systems; intervening to decrease specific behavior; and using functional behavioral assessments (FBAs) and positive behavior supports.

Prerequisites: EDPSY 014, EDPSY 010; EDPSY 011; HDFS 229; HDFS 239, and fourth semester standing or higher Recommended Preparations: This course is intended for students who are in their fifth semester of study.

SPLED 400H: Inclusive Special Ed Foundations: Legal, Characteristics, Collaboration, Assessment, and Management

4 Credits/Maximum of 4

Legal issues, learner characteristics, collaboration skills, assessment, and behavior management related to educating students with disability in inclusive settings. SPLED 400 Teaching Exceptional Students in General Education Settings (4) This course is delivered via a model of blended instruction and addresses foundational skills (assessment and management) and knowledge (laws, etiologies, collaboration) for those working with students with special education needs in general education classrooms. Almost 30% of the content includes student understanding of the history and current relevance of special education law; roles and responsibilities of general education teachers in providing services to students with special education needs; characteristics and etiologies relevant to providing effective instruction to students with mild and severe disabilities; and developing and maintaining effective education teams. Roughly, 35% of the content is relevant to assessment in inclusive settings and is centered on sound instructional decision making as well as linking instruction to standards based curricula. Coverage includes understanding formative and summative assessment; creating and administering curriculum-based assessments in reading, mathematics, and writing; designing systems to collect behavioral data; interpreting a variety of norm-referenced test scores; using brief experimental analyses is adequate for a given purpose. Roughly 35% of content is relevant to applying principles of Applied Behavior Analysis (ABA) to managing and motivating learners with special needs placed in inclusive settings. Broad objectives include student acquisition of knowledge and skills related to ABA principles and interventions such as: identifying the nature (positive and negative) of consequences maintaining or decreasing specific behaviors; operationally defining behavior; establishing a classroom and school environment conducive to learning for all students; creating class-wide, school-wide; and individual motivation systems; intervening to decrease specific behavior; and using functional behavioral assessments (FBAs) and positive behavior supports.

Prerequisites: EDPSY 14, EDPSY 10; EDPSY 11; HDFS 229; HDFS 239, and third semester standing or higher. Recommended Preparation: This course is intended for students who are in their fourth semester of study Honors

SPLED 401: Motivating Exceptional Learners

4 Credits

Group and individual techniques to promote student task engagement and prosocial behavior.

Prerequisites: Admission to SPLED program COREQUISITES: SPLED 395W, SPLED 408, SPLED 425

SPLED 402: Human Rights: Historical and Current Issues in Special Education

3 Credits

Litigation, legislation, regulation, and advocacy issues impacting on educational and related services for individuals with academic and/or physical disabilities.

Prerequisite: or concurrent: SPLED400 or SPLED425

SPLED 403A: Evidence-Based Instruction for Elementary Students with Disabilities in Reading, Math, and Writing

3 Credits

Evidence-based methods for design, delivery, and adaption of instruction for elementary students with disabilities in reading, mathematics, and writing. SPLED 403A Evidence-Based Instruction for Elementary Students with Disabilities in Reading, Math, and Writing (3)This course is delivered via a model of blended instruction and addresses aspects of designing, delivering, and adapting instruction for students across the range of disability (i.e., mild, moderate, and severe) in elementary, inclusive settings. Content on relevant learner characteristics of special needs students is found throughout the course. About half the course covers content on: designing direct and explicit instruction; self-regulated learning; assistive technology; adaptations and accommodation for learners with several disabilities; and the hierarchy of taxonomical units relative to instructional design. The remaining half of the course covers content relevant to a wide range of literacy concerns and includes: evidence based practices for instruction in early reading (e.g. decoding, phonemic awareness, phonic and structural analysis; and vocabulary); reading comprehension at primary and intermediate levels (e.g. test structure, content specific vocabulary, and narrative and expository reading in content domains); writing (e.g. handwriting, spelling grammar, and written expression); and mathematics (e.g. number sense and early numeracy, basic facts and operations, applied skills, problem solving, fractions, decimals, and percents).

Prerequisites: C or better in SPLED 400

SPLED 403B: Evidence-Based Methods for Teaching Secondary Students with Disabilities in Inclusive Settings

3 Credits

Evidence-based methods for designing, delivering, and adapting instruction for students with disabilities in inclusive secondary education settings. SPLED 403B Evidence-Based Methods for Teaching Secondary Students with Disabilities in Inclusive Settings (3)This course is delivered via a model of blended instruction and addresses aspects of designing, delivering, and adapting instruction for students across the range of disability (i.e., mild, moderate, and severe) in secondary inclusive settings. Content on relevant learner characteristics of special needs students is found throughout the course. About half the course covers content on: designing direct and explicit instruction; self-regulated learning; assistive technology; adaptations and accommodation for learners with several disabilities; and the hierarchy of taxonomical units relative to instructional design. The remaining half of the course covers content relevant to a variety of procedures and approaches to help students with special education needs gain meaningful access to secondary curriculum content without watering it down or ignoring the instructional needs of students without disabilities. Broadly this content includes ways of planning and delivering instruction to help all students, including those with learning problems, understand and retain critical course content. Topics include using graphic organizers, options for presenting content, mnemonics; task specific learning strategies; cooperative groups and peer focused interventions; study guides and guided notes; advance organizers; text structures for narrative and expository text; single and multiple-approaches for reading comprehension; writing mechanics, prompts, and rubrics; narrative, informative, and persuasive writing; problem solving (including Polya's

model); analogies; elaborative interrogation; and practice for problem solving.

Prerequisite: C or better in SPLED 400

SPLED 403H: Evidence-Based Instruction for Elementary Students with Disabilities in Reading, Math, and Writing

3 Credits

Evidence-based methods for design, delivery, and adaptation of instruction for elementary students with disabilities in reading, mathematics, and writing.

Honors

SPLED 404: Working with Families and Professionals in Special Education

3 Credits

Strategies for productive interactions between special educators and others such as colleagues, employers, parents, service providers, professionals, and students.

Prerequisite: A grade of C or better in SPLED395W, SPLED401, SPLED425, SPLED 418; **Corequisites:** SPLED 411, SPLED 412, SPLED 454, SPLED 495E

SPLED 408: Meeting Instructional Needs of English Language Learners with Special Needs

3 Credits

A major objective of this course is for students to be able to develop or modify instructional plans that reflect evidence based practices for adapting for the needs of English Language Learners (ELL) with special needs. The course has been developed to fulfill Pennsylvania Department of Education requirements and in recognition of the growing number of ELLs in the general population and thus, in special education settings. This course covers (1) theory and research on the instructional needs of ELLs and (2) the knowledge base on effective instruction for students with special needs and assists students in bringing these two areas of research together. Major topic areas include principles and issues in second language acquisition; ELLs characteristics including linguistic and cultural factors that affect second language acquisition; techniques and methods of research-based instruction for ELLs with special needs; lesson planning and instructional modifications for ELLs with special needs; and appropriate assessment practices for ELLs with special needs.

Prerequisites: EDPSY 14, EDPSY 10; EDPSY 11 or Graduate Status
Corequisites: SPLED 395W, SPLED 401, SPLED 425; Graduate Status
Cross-listed with: EDPSY 408

SPLED 409A: Fundamental Literacy Skills for Students with Special Needs

3 Credits

Effective reading curriculum and teaching methods to teach students with special needs. SPLED 409A Fundamental Literacy Skills for Students with Special Needs (3) Effective classroom-based assessment, curriculum development, and instructional strategies for teaching reading to educate students with special needs will be described in this course. Students will learn how to assess, develop curriculum,

and provide scientifically based explicit instruction in reading to K-12 students with special needs. Students will learn how to select reading skills necessary to scaffold and enhance students' present reading skills. Methods for using science-based assessment strategies and developing foundational reading skills within a classroom context will be described. This course builds on prerequisite Special Education courses in curriculum and instructional methods. Students in SPLED 409A extend knowledge of explicit instructional strategies in the context of reading. The content offered in this course complements 409B and 409C through the integration of researched-based methods and sound instructional design within a curriculum to most effectively teach students with special needs.

Prerequisites: a grade of C or better in SPLED 404, SPLED 412, SPLED 411, SPLED 454, SPLED 495E; **Corequisites:** SPLED 409B, SPLED 409C, SPLED 495G

SPLED 409B: Writing and Content Literacy for Students with Special Needs

3 Credits

Effective curriculum and materials for teaching writing and content literacy to students with special needs. SPLED 409B Writing and Content Literacy for Students with Special Needs (3) Effective application of classroom-based measurement, curriculum development, and instructional strategies for teaching writing and content literacy to educate students with special needs will be described in this course. Students will learn how to use assessment to develop curriculum and provide scientifically based best practice instruction in writing mechanics (handwriting, spelling, capitalization & punctuation) and written expression (pre-planning to revision) to K-12 students with special needs. Students will learn how to identify, select, and teach content text structure. Methods for using assessment to develop a reading comprehension curriculum within a content classroom context and teach K-12 students with special needs to read and comprehend narrative and expository text (such as text found in Math, Science, Social Studies, and other content textbooks) will be described. Methods for using assessment to develop curriculum and teach K-12 students with special needs to respond to content text and materials through writing will also be examined. This course builds on prerequisite Special Education courses in curriculum and instructional methods. Students in SPLED 409B will have achieved mastery in basic reading theory, assessment, curriculum, and instructional methods. The content offered in this course adds to the existing course content by specifically addressing writing mechanics, written expression, and content reading, curriculum development, and instructional methods (including plans for generalization and maintenance) for students with special needs. Written responses for assigned readings will be required for each topic area. Written evaluations and class assignments (including case studies) will be given to assess student learning throughout the course time period. Students' learning will be further evaluated through projects that demonstrate understandings of applying classroom-based measurement, curriculum development, and the instructional methods required to effectively teach writing and content learning to students with special needs. Student applied projects, in coordination with practicum placement, for writing instruction will include: (1) the collection of baseline writing data for a student with special needs, (2) development of a curriculum scope and sequence, (3) development of a research validated instructional intervention, (4) implementation of the intervention, (5) the collection of writing data throughout instruction and after instruction, and (6) development and implementation of an instructional plan for maintenance and generalization. To demonstrate

understandings of teaching content reading and writing, students will prepare a presentation of an identified research-based content reading or writing instructional strategy or approach taught within a curriculum scope and sequence.

Prerequisite: A grade of C or better in SPLED 404, SPLED 411, SPLED 412, SPLED 454, SPLED 495E; **Corequisites:** SPLED 409A, SPLED 409C, SPLED 495G

SPLED 409C: Mathematics Instruction for Students with Special Needs

3 Credits

Research-based practices for teaching mathematics skills to students with special needs. SPLED 409C Mathematics Instruction for Students with Special Needs (3) Research-based assessment, instruction, and intervention strategies for teaching mathematics skills to struggling students, students with learning disabilities, and chronically low performing students will be described in this course. Students will identify (a) the risk factors associated with mathematics disabilities, (b) effective prevention and remediation models of mathematics disabilities, (c) characteristics of scientifically based instruction in content-area skills (e.g., counting, addition, fractions, problem solving, geometry, algebra) for K-12 students with disabilities, and (d) how to effectively provide and assess the effects of such instruction while provided in general and special education classrooms. This course builds on prerequisite Special Education courses in curriculum and instructional methods. Students in SPLED 409C will have achieved mastery in assessment, curriculum, and instructional methods. The content offered in this course adds to the existing course content by specifically addressing how to teach content-area skills for students with special needs. Written responses and/or online discussion board posts for assigned readings will be required for the topic areas. Written evaluations, online quizzes, and class assignments will be given to assess student learning throughout the course time period. Students learning will be further evaluated through projects that demonstrate understanding of classroom-based assessment, curriculum development, and the instructional methods required to effectively teach content-area mathematics skills to students with special needs. Student applied projects, in coordination with practicum placement, for mathematics instruction will include: (1) the collection of baseline mathematics performance data for a student with special needs, (2) development of a curriculum scope and sequence, (3) development of a research validated instructional intervention, (4) implementation of the intervention, (5) on-going data collection throughout instruction and after instruction, and (6) development and implementation of an instructional plan for maintenance and generalization. To demonstrate understandings of teaching content area mathematics skills, students will prepare a lesson on a math concept for a teaching demonstration using the instructional strategies and techniques learned during the class.

Prerequisite: A grade of C or better in SPLED 404, SPLED 411, SPLED 412, SPLED 454, SPLED 495E; **Corequisites:** SPLED 409A, SPLED 409B, SPLED 495G

SPLED 410: Culturally Responsive Pedagogy in Special Education

3 Credits

Culturally Responsive Pedagogy (CRP) in Special Education is designed to help students recognize and appreciate diversity in the classroom specifically related to students with exceptionalities. This course will develop ways to encourage student engagement by creating supportive and inclusive classrooms where all students feel they belong. The

student learning outcomes are engaging and include elements of active learning. Broadly, the overarching elements of the course will focus on (1) enhanced cognitive development and understanding of concepts and vocabulary related to CRP, (2) develop social and cultural connections with students and families, and (3) support student engagement and retention using cultural reciprocity and understanding.

Prerequisite: CI 280 EDPSY 14 EDPSY 101 EDTHP 115 MATH 200 PSYCH 100 PSYCH 212

SPLED 411: Intervention for Students with Severe Disabilities

3 Credits

Assessment, teaching strategies, curricula, materials, and assistive techniques for use with individuals having severe disabilities.

Prerequisites: A grade of C or better in SPLED395W , SPLED401 , SPLED425, SPLED 418; **Corequisites:** SPLED 404, SPLED 412, SPLED 454, SPLED 495E

SPLED 412: Instruction for Students with Mild Disabilities

3 Credits

The purpose of SPLED 412 is to introduce appropriate methodology for teaching academic skills to students with learning disabilities or those students who experience academic difficulties. The majority of the course deals with effective practices for designing and delivering academic instruction and independent work for students who do not learn optimally under current conditions within the general education environment. In this course, pre-service teachers will learn about the principles of effective instruction and a teaching model that applies these principles using evidence-based instructional methods to support these students. This course will also address ways that this model can be flexibly adapted to meet the needs a wide range of students, tasks, and environments.

Prerequisite: A grade of C or better in SPLED 395W, SPLED 401, SPLED 425 and SPLED 418. **Corequisites:** SPLED 404, SPLED 411, SPLED 454 and SPLED 495E

SPLED 415: Early Intervention and Early Childhood Special Education (EI/ECSE)

3 Credits/Maximum of 4

This course provides an introduction to Early Intervention/Early Childhood Special Education (EI/ECSE). Students will discuss the historical contexts and origins of early childhood special education affecting children with developmental delays and disabilities. Students will identify the prevalence of developmental delays and disabilities and the importance of early intervention for cognitive, physical, behavioral, and social-emotional developmental trajectories. Students will investigate family-systems theory, family-centered approaches, and family-professional partnerships as well as culturally sustaining practices in EI/ECSE. Issues of racial, cultural, and linguistic diversity will be emphasized. Building on these ideas, this course will address issues of diversity and equitable access to quality services to ensure all children thrive in their natural educational environment. Students will preview and practice conducting common screenings and assessments for infancy, toddlerhood, and early childhood. Students will learn how to choose appropriate instructional strategies, practice applying them, and

discuss how to implement strategies to foster an inclusive environment and culture in home, community, and school settings.

Prerequisite: Admission to SPLED program or at least a 4th semester standing for non-SPLED majors.

SPLED 418: Technologies for Persons with Disabilities

3 Credits

This course will teach students the role of the special education teacher in supporting the use of assistive technology (AT) by individuals with disabilities in school and community settings. Students will learn the role of the special education teacher in the AT process, including (as appropriate) how to identify student AT needs, obtain information on common AT applications and devices, make first-hand use of current AT solutions, and evaluate the use of AT to address specific student needs. Students will also learn the legal responsibilities of the special education teacher in the AT procurement and implementation process. Particular attention will be given to the use of AT to assist students with disabilities in reading, writing, math, communication, and the development of social skills. Students will learn the role and responsibilities of the special education teacher on the AT team, as well as the roles and responsibilities of the other licensed professionals on the AT team. Special attention will be given to the acquisition of strategies to engage and support the participation of family members in acquiring and implementing AT interventions. Students will also be provided with resources and strategies for making use of state and national information resources and services related to AT.

Prerequisites: Entrance to SPLED Major; **Corequisites:** SPLED 395W, SPLED 425, SPLED 415, SPLED 401

SPLED 419: Assistive Technology for General Education Teachers

2-3 Credits

Strategies to support use of assistive technologies by students with disabilities in general education classrooms. SPLED 419 Assistive Technology for General Education Teachers (2-3) This course will teach students the role of the general education teacher in supporting the use of assistive technology (AT) by students with disabilities in general education classrooms. Students will learn the role of the general education teacher in the AT process, including (as appropriate) how to identify student AT needs, obtain information on common AT applications and devices, make first-hand use of current AT solutions, and evaluate the use of AT to address specific student needs. Particular attention will be given to the use of AT to assist students with disabilities in reading, writing, math, communication, and the development of social skills. Students will learn the role and responsibilities of the general education teacher on the AT team, as well as issues of "scope of practice", and the roles and responsibilities of the other licensed professionals on the AT team. Students will also be provided with resources and strategies for making use of state and national information resources and services related to AT.

Prerequisites: EDPSY 10 or EDPSY 11 or EDPSY 14 or HDFS 129 or HDFS 229 or HDFS 239 or Graduate student status

SPLED 420: Culture & Disability: Study Abroad in Ireland

6 Credits

Study aspects of culture and disability through lecture, visiting Irish disability service agencies, and guest speakers from various disability

agencies. This course is designed to increase student awareness of disability from a cross-cultural comparison between the United States and Ireland including: personal, interpersonal, and societal aspects of disability, including how disability can be defined and understood differently in varied individual, institutional and cultural contexts. Students will learn models of disability that will help (a) clearly distinguish different ways of conceptualizing disability and (b) critically think about how disability is represented and understood in varied cultural contexts. Students will examine ethical, economic, and social implications of disability. Dynamics of group, family and individual behavior that impact interactions between people, with and without disabilities, will be addressed. Interactions and assignments will aid in the introduction of students to interpersonal communication and interaction issues among international cultures. A strong emphasis will be placed on understanding disability from a variety of cultural perspectives and assessing the impact of racial, ethnic, gender, socioeconomic, and socio-political factors on disability status. Throughout the course students will engage with various service providing agencies (which may include sensory disabilities, intellectual/cognitive disabilities, and physical disabilities). Class time will be allotted to prepare for engagement and reflection as well as providing background information for understanding global policy and how to make comparisons. Students will participate in a culminating activity, such as attending the International Disability Summer School that equips students with the insights and skills necessary to translate the generalities of international positions on disabilities into tangible reform for persons with disabilities and understand disability from a global perspective. This course meets the requirement for RHS 100 (RHS majors and RHS minors and honors students), and/or up to 6 credits toward 400 level elective requirements for RHS minors. SPLED students can earn up to 6 credits towards the SPLED minor

Cross-listed with: RHS 420

International Cultures (IL)

United States Cultures (US)

SPLED 425: Foundations of Special Education, Etiologies, Law, and Implications for Practice

3 Credits

This course provides an introduction to all exceptionalities included in special education programs as delineated by the most recent Federal legislation guiding service for individuals with special needs. An important component of this course is the exploration of typical developmental stages and milestones used to monitor children's growth and progress over time. Students will learn about the different types of disabilities as categorized by Federal regulations. In addition, recent legislation is explored in relation to services provided, funding requirements, accommodations and classroom placement. This course provides future educators with a solid foundation for an understanding of disabilities, services, and legislation as they enter into the special education profession. In addition, this course will prepare students to (a) address common misconceptions and myths associated with special education, (b) work with interdisciplinary teams in the formation of Individualized Education Programs (IEP), and (c) promote the preparation of exceptional individuals to assume adult roles.

Prerequisite: Admission to SPLED program **Corequisites:** SPLED 395W, SPLED 401 and SPLED 418

SPLED 430: Foundational Skills for Working with Students with Special Education Needs in General Education Clas

1 Credits

Introduction to working with students with special education needs in the general education classroom, including history and legal foundation.

Prerequisite: teacher certification or permission of instructor

SPLED 454: Assessment for Instruction

3 Credits

Students enrolled in this course will gain knowledge related to research, theory, and practice of assessing learners with special needs across various education settings. After enrolling in this course, students will be able to describe and employ research findings and theory in the areas of (1) history and legal foundations of assessment in special education, (2) instructional decision making, (3) the technical adequacy and interpretation of norm-referenced tests, (4) the display and interpretation of data, (5) progress monitoring across content areas, and (6) assessing learners with severe needs.

Prerequisite: A grade of C or better in SPLED 395W, SPLED 401, SPLED 425 and SPLED 418
Corequisites: SPLED 404, SPLED 411, SPLED 412, SPLED 495E

SPLED 461: Introduction to Autism Spectrum Disorders: Issues and Concerns

3 Credits

Overview of issues, characteristics, and evidenced-based assessment strategies, and approaches for individuals with autism/PDD. SPLED 461 Introduction to Autism Spectrum Disorders: Issues and Concerns (3) This course will center on working with individuals having Autism Spectrum Disorders (ASD) and Pervasive Developmental Disorders (PDD) in educational and related settings. Topics include an overview of characteristics and diagnosis, ethical issues in treatment, assessment, the use of science in treatment approaches, working effectively with families, and strategies for successful inclusion of students with ASD/PDD in integrated settings. Course content will be delivered through DVD lectures, and required as well as supplemental readings. Evaluation procedures will include on line multiple-choice exams. The course will be changed to assess students through 6 (v.4) online multiple choice exams. Multiple choice format offers immediate feedback to students. To ensure assessment of applications skills, exams will include case studies in which students must apply skills to areas such as child assessment, data analysis, and strategies for working effectively with parents.

Prerequisites: 4th semester standing

SPLED 462: Autism and Applied Behavior Analysis

3 Credits

This course addresses principles of applied behavior analysis and empiricism related to instruction and special issues affecting individuals with autism. SPLED 462 Autism and Applied Behavior Analysis (3) This world campus course will include an overview of basic principles of applied behavior analysis (ABA) and elements of empiricism and ethics in educational settings. Course objectives will center on acquisition of content related to: a) principles of ABA instruction; b) ethical standards in education; c) best practice interventions for learning; d) strategies for diagnosing and programming for behavioral issues; e) special issues

affecting individuals with ASD and their families. Course content will be delivered through DVD lectures, and required as well as supplemental readings. Evaluation procedures will include on line multiple-choice exams, and on line assignments.

Prerequisite: 5th Semester Standing

SPLED 463: Communication and Social Competence

3 Credits

Overview of deficits and strategies in speech, language, and communication across the Autism Spectrum Disorder. SPLED 463 Communication and Social Competence (3) Communication and Social Competence is the third course in the 5 course (12 credit) series leading to the Professional Development Certificate in Autism. All information, activities, and assignments are through videotaped and web-based learning. Content includes an overview of the deficits in the area of speech, language, and communication across the Autism Spectrum Disorders (ASD). Basic information on the nature of these deficits is provided from both a psycholinguistic model as well as a behavioral model. In addition to information on deficits, the majority of the course content will provide practical information related to intervention.

Prerequisites: 5th Semester Standing

SPLED 464: Assessment and Curriculum

3 Credits

Overview of screening, diagnosis, and identification of skills in developmental domains and curricula for individuals with autism. SPLED 464 Assessment and Curriculum (3) Assessment and Curricula is the fourth course in the 5 course (12 credit) series leading to the Professional Development Certificate in Autism. All information, activities, and assignments are through videotape and web-based learning. Content includes types of assessment and identification of skills in developmental domains. Practical strategies will be outlined.

Prerequisites: 5th Semester Standing

SPLED 495: **SPECIAL TOPICS**

3-15 Credits/Maximum of 15

SPLED 495D: Professional Development for Special Education Teacher Candidates

3 Credits

As a new professional in the school, special educators must embrace the school and community to provide a welcoming, safe and equitable environment for all children. In this professional development course, special education teacher candidates will learn, interact and reflect on the teaching, leading, and advocacy skills needed to be effective in the classroom and beyond. Special educators play a key role in education of all students. Students will learn about the ways in which their career may look after graduation. In preparation, the criteria on which teacher candidates are evaluated, the interview process, and effective communication skills will be discussed. Special educators must collaborate with professionals in the school and community as well as family and caregivers of students to develop an effective individualized education program for each student. The course will cover the process of assessment, planning of lessons and interventions, as well as data collection and analysis for data-based decision making. Along with

effective instruction and leadership, teacher candidates will learn to advocate for all learners on their caseload, and others during this course.

Prerequisite: A C or better in SPLED 409A, 409B, 409C and 495G
Corequisite: SPLED 495F

SPLED 495E: Experience with Exceptional Children

3 Credits

Supervised and guided field experience in a variety of possible settings (e.g. schools, day care centers, vocational settings) where students will practice lesson design, deliver instruction, and develop appropriate instructional activities, while implementing behavior management.

Prerequisites: A grade of C or better in SPLED 395W , SPLED 401 , SPLED 425, SPLED 418; **Corequisites:** SPLED 404, SPLED 411, SPLED 412, SPLED 454

SPLED 495F: Practicum in Special Education

12 Credits

The student teaching experience is a culmination of previous coursework. As new teachers, graduates will enter classrooms prepared to meet the individualized academic and social needs of students. The student will be expected to plan and create a welcoming, equity minded environment for all students. The student will be expected to demonstrate appropriate assessment strategies for both formative and summative evaluation. The student will also be expected to develop appropriate lesson plans based on the Individualized Education Program (IEP) and state standards. Students will implement plans using the explicit instructional strategies and demonstrate good management strategies to enhance learning and decrease off task behavior. Students are expected to demonstrate appropriate interpersonal communication skills, as well as dependability regarding professional responsibilities

Prerequisite: A grade of C or better required in SPLED 409A, 409B, 409C and 495G **Recommended Preparation:** Clearances as required by the Pennsylvania Department of Education and the Pennsylvania State University for field experiences.

SPLED 495G: Experience with an Integrated Inclusion Classroom

3-4 Credits/Maximum of 4

Supervised teaching in integrated general classrooms with activities in curriculum- based assessment, data-driven intervention, direct instruction with students in need.

Corequisites: SPLED 409A, SPLED 409B, SPLED 409C

SPLED 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

SPLED 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Statistics (STAT)

STAT 100: Statistical Concepts and Reasoning

3 Credits

Statistics is the art and science of decision making in the presence of uncertainty. The purpose of Statistics 100 is to help students improve their ability to assess statistical information in both everyday life and other University courses. Topics covered include methods for collecting and summarizing data, analyzing the relationship between variables, and using basic probability concepts to draw conclusions about populations based on data. The course is less technical and more conceptual than Statistics 200. Statistical concepts and interpretations will dominate over techniques and calculations ζ but students should be comfortable working with fractions and square roots.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

STAT 184: Introduction to R

2 Credits

R is a powerful, open-source programming language used widely for applications in statistics and data science. It is easily extendible, and thousands of user-created packages are publicly available to extend its capabilities. This course will introduce students to data computing fundamentals and a reproducible workflow using the R programming language and related tools. Students will be expected to access, join, wrangle, clean, and visualize real data from various sources (e.g. CSV, HTML scraping, web URL, R packages). The course will emphasize use of "tidyverse" R packages (e.g. dplyr, ggplot2), although students will also be exposed to Base R and other packages. In addition, students will be exposed to one or more integrated development environments (e.g. RStudio) and will be expected to write well-documented code using a reproducible workflow (e.g. RMarkdown, Git/GitHub). The course focuses on descriptive and graphical summary techniques rather than inferential statistical techniques

Enforced Prerequisite at Enrollment: Placement into MATH 21 or higher

STAT 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

STAT 200: Elementary Statistics

4 Credits

Descriptive statistics, frequency distributions, probability, binomial and normal distributions, statistical inference, linear regression, and correlation. STAT 200 is a standard first course in statistics. Student who have successfully completed this course will understand basic concepts of probability and statistical inference, including common graphical and numerical data summaries; notions of sampling from a population of interest, including the sampling distribution of a statistic; construction and interpretation of confidence intervals, test statistics,

and p-values; and connections between probabilistic concepts like the normal distribution and statistical inference. They will recognize various types of data, appropriate statistical methods to analyze them, and assumptions that underlie these methods. They will also gain extensive experience in the use of statistical software to analyze data and the interpretation the output of this software.

Enforced Prerequisite at Enrollment: Placement into MATH 21 or higher
Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

STAT 240: Introduction to Biometry

3 Credits

Statistical analysis, sampling, and experimentation in the agricultural sciences; data collection, descriptive statistics, statistical inference, regression, one factor AOV, probability. Students may take only one course from STAT 200, 220, 240, 250 for credit. STAT 240 Introduction to Biometry (3) (GQ)(BA) This course meets the Bachelor of Arts degree requirements. This is a course concerned with statistical analysis pertaining to the natural and agricultural sciences. The objective of the course is to provide students with a good basis for understanding uncertainty and its effects on understanding observational studies and experiments. Course content includes data collection, descriptive statistics, statistical inference, regression, and ANOVA. Students will learn through lectures, individual and group problem solving, computer-based activities, and case study discussions. Since real-life use of statistics relies upon computers, this course will provide a strong hands-on analysis element necessitating regular access to computer labs. The statistical background gained by students will provide them with a base for future use of statistics in both their course work and careers.

Enforced Prerequisite at Enrollment: Placement into MATH 21 or higher
Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

STAT 250: Introduction to Biostatistics

3 Credits

Statistical analysis and interpretation of data in the biological sciences; probability; distributions; statistical inference for one- and two-sample problems. STAT 250 is a standard first course in statistics, with an emphasis on applications and statistical techniques of particular relevance to the biological sciences. Students who have successfully completed this course will understand basic concepts of probability and statistical inference, including common graphical and numerical data summaries; notions of sampling from a population of interest, including the sampling distribution of a statistic; construction and interpretation of confidence intervals, test statistics, and p-values; and connections between probabilistic concepts such as normal distributions and statistical inference. They will recognize various types of data, appropriate statistical methods to analyze them, and assumptions that underlie these methods. Students will use statistical software to analyze real data.

Enforced Prerequisite at Enrollment: Placement into MATH 21 or higher
Bachelor of Arts: Quantification

General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

STAT 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

STAT 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

STAT 300: Statistical Modeling I

3 Credits

This course is designed to serve as a bridge between introductory statistics (including AP statistics) and more advanced applied statistics courses. The course will emphasize applied statistical modeling for real data using computer software (e.g. R, Minitab). Broad statistical topics include simple linear regression, multiple linear regression, analysis of variance (ANOVA) and factorial designs, logistic regression, multiple linear regression.

Enforced Prerequisite at Enrollment: STAT 100 or STAT 200 or STAT 240 or STAT 250 or SCM 200 or PSYCH 200 or DS 200 or IE 323

STAT 318: Elementary Probability

3 Credits

Combinatorial analysis, axioms of probability, conditional probability and independence, discrete and continuous random variables, expectation, limit theorems, additional topics. Students who have passed either MATH(STAT) 414 or 418 may not schedule this course for credit.

Enforced Prerequisite at Enrollment: MATH 141

Cross-listed with: MATH 318

Bachelor of Arts: Quantification

STAT 319: Elementary Mathematical Statistics

3 Credits

Statistical inference: principles and methods, estimation and testing hypotheses, regression and correlation analysis, analysis of variance, computer analysis. Students who have passed STAT (MATH) 415 may not schedule this course for credit.

Enforced Prerequisite at Enrollment: MATH 318 or STAT 318 or MATH 414 or STAT 414 or STAT 418 or MATH 418

Cross-listed with: MATH 319

Bachelor of Arts: Quantification

STAT 380: Data Science Through Statistical Reasoning and Computation

3 Credits

A case study-based course in the use of computing and statistical reasoning to answer data-intensive questions. STAT 380 Data Science Through Statistical Reasoning and Computation (3) This course

addresses the fact that real data are often messy by taking a holistic view of statistical analysis to answer questions of interest. Various case studies will lead students from the computationally intensive process of obtaining and cleaning data, through exploratory techniques, and finally to rudimentary inferential statistics. This process will exploit students' exposure to introductory statistics as well as the R programming language -hence the required prerequisites- yet novel computing and analytical techniques will also be introduced throughout the course. For the collection of data, students will learn scripting and database querying skills; for their exploration, they will employ R capabilities for graphical and summary statistics; and for their analysis, they will build upon the basic concepts obtained in their introductory statistics course. The varied case studies will elucidate additional statistical topics such as identifying sources of bias and searching for high-dimensional outliers. A possible textbook for this course is Data Science in R: A Case Studies Approach to Computational Reasoning and Problem Solving (2015) by Deborah Nolan and Duncan Temple Lang.

Enforced Prerequisite at Enrollment: (STAT 200 or DS 200 or PLSC 309) and STAT 184

STAT 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

STAT 400: Statistical Modeling II

3 Credits

This course is intended to build directly upon STAT 300 (Applied Statistical Modeling I) for students pursuing a major in statistics or a closely related program. Topics include likelihood-based inference, generalized linear models, random and mixed effects modeling, multilevel modeling. In particular, the applied nature of the course seeks to examine the advantages and disadvantages of various modeling tools presented, identify when they may be useful, use R software to implement them for analysis of real data, evaluate assumptions, interpret results, etc.

Enforced Prerequisite at Enrollment: STAT 184 and MATH 220 and (STAT 300 or STAT 462)

STAT 401: Experimental Methods

3 Credits

Random variables; probability density functions; estimation; statistical tests, t-tests; correlation; simple linear regression; one-way analysis of variance; randomized blocks.

Enforced Prerequisite at Enrollment: MATH 111 or MATH 141

STAT 414: Introduction to Probability Theory

3 Credits

STAT(MATH) 414 is an introduction to the theory of probability for students in statistics, mathematics, engineering, computer science, and related fields. The course presents students with calculus-based probability concepts and those concepts can be used to describe the uncertainties present in real applications. Topics include probability spaces, discrete and continuous random variables, transformations, expectations, generating functions, conditional distributions, law of large

numbers, central limit theorems. Students may take only one course from STAT(MATH) 414 and 418.

Enforced Prerequisite at Enrollment: MATH 230 or Concurrent: MATH 232 or (MATH 231 and RM 214)

Cross-listed with: MATH 414

STAT 415: Introduction to Mathematical Statistics

3 Credits

A theoretical treatment of statistical inference, including sufficiency, estimation, testing, regression, analysis of variance, and chi-square tests.

Enforced Prerequisite at Enrollment: MATH 414 or STAT 414

Cross-listed with: MATH 415

STAT 416: Stochastic Modeling

3 Credits

Review of distribution models, probability generating functions, transforms, convolutions, Markov chains, equilibrium distributions, Poisson process, birth and death processes, estimation.

Enforced Prerequisite at Enrollment: (STAT 318 or MATH 318 or STAT 414 or MATH 414) and (MATH 230 or MATH 232)

Cross-listed with: MATH 416

STAT 418: Introduction to Probability and Stochastic Processes for Engineering

3 Credits

Introduction to probability axioms, combinatorics, random variables, limit laws, and stochastic processes. Students may take only one course from MATH414 / STAT 414 and MATH 418 / STAT 418 for credit. STAT 418 / MATH 418 Introduction to Probability and Stochastic Processing for Engineering (3) This course gives an introduction to probability and random processes. The topics are not covered as deeply as in a semester-long course in probability only or in a semester-long course in stochastic processes only. It is intended as a service course primarily for engineering students, though no engineering background is required or assumed. The topics covered include probability axioms, conditional probability, and combinatorics; discrete random variables; random variables with continuous distributions; jointly distributed random variables and random vectors; sums of random variables and moment generating functions; and stochastic processes, including Poisson, Brownian motion, and Gaussian processes.

Enforced Prerequisite at Enrollment: MATH 230 or MATH 231

Cross-listed with: MATH 418

STAT 418H: Probability

3 Credits

Fundamentals and axioms, combinatorial probability, conditional probability and independence, probability laws, random variables, expectation; Chebyshev's inequality. Students may take only one course from STAT(MATH) 414 and 418 for credit.

Cross-Listed

Honors

STAT 440: Computational Statistics

3 Credits

Topics related to computing in statistics, including numerical linear algebra, optimization, simulation, numerical integration, and bootstrapping. STAT 440 Computational Statistics (3) This course introduces many important ideas in statistical computing. Students are expected to possess knowledge of mathematical statistics at the level of STAT 415 and matrices at the level of MATH 220. Students will learn the statistical computing environment called R and use R to implement many of the theoretical computing topics, which include numerical linear algebra, optimization, numerical and Monte Carlo integration, random number generation and simulation, and bootstrapping. Other statistical and mathematical software may be treated briefly, including symbolic mathematics environments like Mathematica and Maple.

Enforced Prerequisite at Enrollment: STAT 200 and MATH 220 and (STAT 415 or MATH 415)

STAT 460: Intermediate Applied Statistics

3 Credits

Review of hypothesis testing, goodness-of-fit tests, regression, correlation analysis, completely randomized designs, randomized complete block designs, latin squares.

Enforced Prerequisite at Enrollment: STAT 200 or STAT 240 or STAT 250 or STAT 401

STAT 461: Analysis of Variance

3 Credits

Analysis of variance for single and multifactor designs; response surface methodology.

Enforced Prerequisite at Enrollment: STAT 200 or STAT 240 or STAT 250 or STAT 401

STAT 462: Applied Regression Analysis

3 Credits

Introduction to linear and multiple regression; correlation; choice of models, stepwise regression, nonlinear regression.

Enforced Prerequisite at Enrollment: STAT 200 or STAT 240 or STAT 250 or STAT 401

STAT 463: Applied Time Series Analysis

3 Credits

Identification of models for empirical data collected over time; use of models in forecasting. STAT 463 Applied Time Series Analysis (3) This course covers many major topics in time series analysis. Students will learn some theory behind various time series models and apply this theory to multiple examples. An introduction to time series and exploratory data analysis will be followed by a lengthy study of several important models, including autoregressive, moving average, autoregressive moving average (ARMA), autoregression integrated moving average (ARIMA), and seasonal models. For each model methods for parameter estimation, forecasting, and model diagnostics will be covered. Additional topics will include spectral techniques for periodic time series, including power spectra and the Fourier transform, and

one or more miscellaneous topics chosen by the instructor, such as forecasting methods, transfer function models, multivariate time series methods, Kalman filtering, and signal extraction and forecasting. The use of statistical software will be a central component of this course, as will the proper interpretation of computer output. Students enrolling for this course are assumed to have taken a semester-long course on regression.

Enforced Prerequisite at Enrollment: (STAT 300 or STAT 462) and (STAT 318 or MATH 318 or STAT 414 or MATH 414 or STAT 418 or MATH 418)

STAT 464: Applied Nonparametric Statistics

3 Credits

Tests based on nominal and ordinal data for both related and independent samples. Chi-square tests, correlation.

Enforced Prerequisite at Enrollment: STAT 200 or STAT 240 or STAT 250 or STAT 401

STAT 466: Survey Sampling

3 Credits

Introduction to design and analysis of sample surveys, including questionnaire design, data collection, sampling methods, and ratio and regression estimation. STAT 466 Survey Sampling (3) This course covers classical sampling design and analysis methods useful for research and management in many fields. Topics include design of questionnaires; methods of data collection, sample-survey designs including simple random sampling, stratified sampling, cluster sampling, and systematic sampling ratio, regression, and difference estimation; two-stage cluster sampling; population size estimation; methods for dealing with nonresponse; and possibly other topics at the discretion of the instructor. Statistical software will be used to apply many of the techniques covered by this course.

Enforced Prerequisite at Enrollment: STAT 200 or STAT 240 or STAT 250 or STAT 401

STAT 470W: Problem Solving and Communication in Applied Statistics

3 Credits

This is a capstone course intended primarily for undergraduate statistics majors in their last semester prior to graduation. The course is designed to reinforce problem solving and communication skills through development of writing ability, interaction with peers and the SCC, statistical consulting center (SCC), and oral presentations. Course objectives are tailored to the needs of each cohort and may include the application of statistical reasoning to real-world problems and case studies, recognition or recommendation of appropriate experimental designs, proficient use of ANOVA & GLMs with understanding of associated modeling assumptions, ability to identify concerns about the use or interpretation of statistical models in context, and both written and verbal communication of statistical findings.

Enforced Prerequisite at Enrollment: STAT 461 and STAT 462 and 7th Semester standing
Writing Across the Curriculum

STAT 480: Introduction to SAS

1 Credits

Introduction to SAS with emphasis on reading, manipulating and summarizing data. STAT 480 Introduction to SAS (1) STAT 480 addresses the fundamentals of the SAS programming language. It addresses the programming environment and major aspects of the Base SAS software, including reading in, manipulating, and transforming data. It also addresses techniques for reshaping and restructuring data files, merging and concatenating data sets, creating summaries and subsets of data sets, formatting and printing data, as well as using some of the basic statistical procedures.

Enforced Prerequisite at Enrollment: 3 credits in Statistics**STAT 481: Intermediate SAS for Data Management**

1 Credits

Intermediate SAS for data management. STAT 481 Intermediate SAS for Data Management (1) STAT 481 builds on the skills and tools learned in STAT 480 to provide intermediate level ability to use the Statistical Analysis System (SAS). It covers additional capability and major uses of the program, such as error checking, report generation, date and time processing, random number generation, and production of presentation quality output for graphs and tables. Other possible topics include advanced merging, PROC SQL, importing and exporting data sets, SAS GRAPH, and the Output Delivery System.

Enforced Concurrent at Enrollment: STAT 480**STAT 482: Advanced Topics in SAS**

1 Credits

Advanced statistical procedures in SAS, including ANOVA, GLM, CORR, REG, MANOVA, FACTOR, DISCRIM, LOGISTIC, MIXED, GRAPH, EXPORT, and SQL. STAT 482 Advanced Topics in SAS (1) STAT 482 builds on the skills and tools learned in STAT 480 and STAT 481 to provide advanced programming ability to use the Statistical Analysis System (SAS). It provides a survey of the major statistical analysis procedures, such as the TTEST, GLM, REG, MANOVA, FACTOR, DISCRIM, LOGISTIC, and MIXED procedures. Other topics include using the TABULATE procedure to create reports, generating random numbers, exporting data from SAS data sets, using the SAS/Graph module to produce presentation quality graphs, using the SQL procedure to query and combine data tables, and using macros to write more efficient SAS programs. Credit can not be received for both STAT 482 and STAT 480/481/483.

Enforced Concurrent at Enrollment: STAT 480 and STAT 481**STAT 483: Statistical Programming in SAS**

3 Credits

Introduction, intermediate, and advanced topics in SAS. Credit can not be received for both STAT 483 and STAT 480/481/482. STAT 483 Statistical Analysis System Programming (3) The three-credit STAT 483 course is a combination of the three one-credit courses STAT 480, STAT 481, and STAT 482. In STAT 480, students are introduced to the SAS windowing system, basic SAS programming statements, and descriptive reporting procedures, such as the FORMAT, PRINT, REPORT, MEANS, and FREQ procedures. In STAT 481, the focus is primarily on extending the programming skills of the students, as they learn how to read messy data into SAS data sets, how to combine SAS data sets

in various ways, how to use SAS character functions, how to read and process date and time variables, how to use arrays and do loops to write more efficient programs, and how to use the Output Delivery System to create SAS output in a variety of formats. STAT 482 provides a survey of the major statistical analysis procedures, such as the TTEST, GLM, REG, MANOVA, FACTOR, DISCRIM, LOGISTIC, and MIXED procedures. Other STAT 482 topics include using the TABULATE procedure to create reports, generating random numbers, exporting data from SAS data sets, using the SAS/Graph module to produce presentation quality graphs, using the SQL procedure to query and combine data tables, and using macros to write more efficient SAS programs. Credit can not be received for both STAT 483 and STAT 480/481/482.

Enforced Prerequisite at Enrollment: 3 credits in Statistics**STAT 484: The R Statistical Programming Language**

1 Credits/Maximum of 1

Builds an understanding of the basic syntax and structure of the R language for statistical analysis and graphics. R is a popular tool for statistical analysis and research used by a growing number of data analysts inside corporations and academia. The flexibility and extensibility of R are key attributes that have driven its adoption in a wide variety of fields. This course begins with an overview of the R language and the basics of R programming. Building upon these basic understandings and procedures, this course then provides students with hands on experience in implementing statistical analysis of data in univariate, bivariate and multivariate contexts using the R software. In addition, the course works through accessing, importing and manipulating data. Documentation of work and report writing are also important aspects of the course content, and R Markdown is utilized to illustrate best practices.

Enforced Prerequisite at Enrollment: 3 credits in Statistics**STAT 485: Intermediate R Statistical Programming Language**

1 Credits

Builds an understanding of the basic syntax and structure of the R language for statistical analysis and graphics. R is a popular tool for statistical analysis and research used by a growing number of data analysts inside corporations and academia. The flexibility and extensibility of R are keys attributes that have driven its adoption in a wide variety of fields. This course begins extends the application of statistical analyses by providing students with hands on experience implementing R in various regression and ANOVA contexts. In addition, data visualization options are considered for producing customized graphics and simple programming is learned. Documentation of work and report writing is also an important aspect of the course content.

Enforced Concurrent at Enrollment: STAT 484**STAT 487: Introduction to Statistical Analysis with Python**

2 Credits

Due to the pervasiveness of Python as a statistical analysis tool, there is a demand for statisticians to learn Python to perform descriptive and inferential data analysis. The course will take a case study approach to introduce students to Python. Students will learn to work with complex data using Python and will get hands-on experience on how to use Python to conduct statistical analyses.

Enforced Prerequisite at Enrollment: STAT 300 or STAT 460 or STAT 461 or STAT 462 or STAT 500

STAT 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

Enforced Prerequisite at Enrollment: 6 credits in Statistics

STAT 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

Enforced Prerequisite at Enrollment: 6 credits in Statistics Honors

STAT 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships.

Enforced Prerequisite at Enrollment: 6 credits in Statistics

STAT 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

SCM 200: Introduction to Statistics for Business

4 Credits

SCM 200 introduces basic statistical concepts and models within the framework of business problems and applications. Students learn about the usefulness of business statistics to decision making, how to perform basic statistical and analytical procedures, and how to interpret, critically evaluate, and analyze data. Special emphasis is given to active learning methods.

Enforced Prerequisite at Enrollment: MATH 21 or higher or satisfactory score on the mathematics placement examination

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

SCM 200H: Honors Introduction to Statistics for Business

4 Credits

SCM 200H Honors Introduction to Statistics for Business introduces basic statistical concepts and models within the framework of business problems and applications. Students learn about the usefulness of business statistics to decision making, how to perform basic statistical and analytical procedures, and how to interpret, critically evaluate, and analyze data. International Cultures (IL)

SCM 301: Supply Chain Management

3 Credits

SCM 301 is an introductory course that provides an overview of key logistics and supply chain management processes, concepts, and methodologies. Emphasis is given to the framework for supply chain management, the analysis of logistics cost, and service trade-offs among inventory, transportation, and warehousing activities, the strategic role of information technology in supply chains, the use of third-party

logistics providers, and the methods of measuring the value of logistics performance. Instruction is based on problem-based learning pedagogy.

Enforced Prerequisite at Enrollment: ACCTG 211 and ECON 102 and (SCM 200 or STAT 200)

SCM 301H: Supply Chain Management - Honors

3 Credits

SCM 301H focuses on supply chain management concepts, principles, and methodologies for effective and efficient management of product and service operations across supply chain networks. The course explores the framework for supply chain management, the key issues and challenges, the key cost and service elements, the basic analytical tools, and the strategic role of information technology. Major themes embedded in this course include: principles and framework of supply chain management such as processes, drivers, and common decisions; the complexities of matching supply and demand in an uncertain business environment; performance metrics in determining a corporation's top and bottom lines; and the globalization of supply chains and the integration of these chains throughout all business disciplines.

Enforced Prerequisite at Enrollment: ACCTG 211 and ECON 102 and (SCM 200 or STAT 200)

Honors

SCM 320: Transport Systems

3 Credits

Strategic role of freight transportation systems and services in supply chain networks. Not available to baccalaureate business students in Smeal. SCM 320 Transport Systems (3) SCM 320 develops an understanding of the strategic role of freight transportation systems in supply chain networks. Emphasis is given to the components of transportation systems, including their technological features, operational processes, and cost conditions, the buyer-seller channels for acquiring transportation services, and the strategic and tactical alternatives for transport procurement. Instruction is based on problem-based learning pedagogy.

Enforced Prerequisite at Enrollment: SCM 301 or MKTG 301

SCM 340: Introduction to Supply Chain Analytics

3 Credits

Supply Chain Analytics studies key decision areas in supply chain design and operation using data driven methodologies. The course introduces students to strategic, tactical and operational supply chain problems including demand forecasting, risk analysis, revenue management, distribution and facility location. Through this course, data visualization and communicating data insights will be discussed. Finally, through the analysis and discussion of data students will learn to obtain useful insights on how to optimize the value of supply chain processes and operations and present these findings in the most relevant way.

Enforced Prerequisite at Enrollment: SCM 301

SCM 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

SCM 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

SCM 404: Demand Fulfillment

3 Credits

Analysis of demand fulfillment and the role of distribution operations management in the supply chain. SCM 404 Demand Fulfillment (3) This course introduces the student to how customer demand is managed and how subsequent orders are filled in both business-to-business and business-to-consumer markets. Topics focus on the demand fulfillment process, which encompasses flows of goods, information, and funds from the moment a business receives an order from a customer until all requirements for the order are satisfied in full. These topics include: *role of demand management and distribution operations in the supply chain*transportation management*distribution center processes*inventory control and order management elements*facility costing and productivity analysis*strategic demand management and distribution operations issues in the supply chain.Both theoretical and quantitative perspectives will be offered on these topics. Additionally, each topic will be addressed from strategic and financial perspectives. After completing this course, students will have the knowledge, skills, and abilities to: *Explain the role of demand management in the supply chain*Explain the role of distribution operations in demand management*Determine the strategic and financial impacts of demand management and distribution operations management*Articulate the role of information systems in demand management and distribution operations management*Use quantitative techniques to analyze supply chain processes*Describe related system software. This is one of three prescribed foundation courses for the Supply Chain and Information Systems major for which SCM 301 Supply Chain Management is a prerequisite. This course also satisfies the prerequisite for SCM 421 Supply Chain Modeling and Analysis. Student evaluations are based on individual and group homework assignments and computer-lab exercises, as well as on at least three written examinations.

Enforced Prerequisite at Enrollment: BA 302 or SCM 301

SCM 405: Manufacturing and Services Strategies

3 Credits

Investigates manufacturing and services strategies in supply chain networks. SCM 405 Manufacturing and Services Strategies (3) This course examines manufacturing and services strategies, with special emphasis given to quality management concepts, methods, and issues. After completing this course, students will have the knowledge, skills, and abilities to: ♦ Explain the role of manufacturing or services operations from the boundary-spanning perspective of supply chain management and how supply chain management can be used as a strategic competitive advantage ♦ Articulate how the various components of a manufacturing strategy are integrated, particularly

with respect to the use of information technologies for supply chains ♦ Effectively apply operational and quality tools useful in implementing manufacturing strategies. Individual and team assignments form the basis for evaluation. Evaluation methods include a combination of class participation, exams, 'hands-on' exercises, case studies, and written assignments. This is one of three prescribed foundation courses in the Supply Chain and Information Systems major for which B A 302 'Supply Chains' is a prerequisite. The course is also an important prerequisite for the capstone course in the major, SC&IS 450 'Supply Chain Leadership.'

Enforced Prerequisite at Enrollment: SCM 301 or BA 302

SCM 405H: Manufacturing and Services Strategies

3 Credits

Investigates manufacturing and services strategies in supply chain networks.

Honors

SCM 406: Strategic Procurement

3 Credits

Analysis of strategic procurement in the supply chain. SCM 406 Strategic Procurement (3) SCM 406 provides an in-depth analysis of the procurement process and supplier management, with strong emphasis placed on managing a supplier base for both products and services. Elements examined include the strategic role of procurement in supply chains, the identification and evaluation of requirements, the strategic make-versus-buy decision, how to identify, evaluate, and select potential suppliers and conduct a post-purchase evaluation; and the impact of information technology on strategic procurement. Both theoretical and quantitative perspectives will be offered. In addition, the topics will be addressed from strategic, financial, and global perspectives. In light of these perspectives, the course objectives are to develop a comprehensive understanding of: (1) the supplier selection and evaluation process (2) the relationship between product design and the supplier base (3) the types of relationships that exist between buyers and sellers (4) the impact of information technology on strategic purchasing and supply management. Students will also develop skills in using quantitative tools to select and evaluate suppliers. This is the third of three prescribed foundation courses in the Supply Chain and Information Systems major.

Enforced Prerequisite at Enrollment: BA 302 or SCM 301

SCM 415: Project Portfolio Management and Organizations

3 Credits

An advanced course in project management focusing on portfolio planning and control within the context of specific organizational challenges. MGMT 415 Project Portfolio Management and Organizations (3) Project Portfolio Management (PPM) is a strategically-focused course on the management of projects, programs, and portfolios in organizations. The management of individual projects is a complex, multi-level challenge involving myriad issues of planning, organizing, and controlling all project elements. Project portfolio management addresses a more strategic need; namely, the process of project selection in order to develop a balanced portfolio of projects designed to support organizational initiatives. As a result, this course addresses the critical issues of maximizing value in a portfolio, linking projects to organizational strategy, understanding the critical organization effects of structure, environment, and culture on project success, and

creating a coherent PPM framework for the firm. Because the focus is more strategic, the role of the instructor in this course is to go beyond the mechanics of planning and controlling a single project to training students how to think strategically where projects and programs are concerned; to recognize their role in creating a PPM plan for an organization, selecting projects for value, rebalancing a project portfolio, and maintaining this focus within the organization.

Enforced Prerequisite at Enrollment: SCM 301 and (MGMT 409 or MGMT 410 or BA 421)

Cross-listed with: MGMT 415

SCM 416: Warehousing and Terminal Management

3 Credits

Administration of warehouse and terminal functions in logistics systems, with analysis of customer service, forecasting, inventory, investment, design, and operation. Not available to baccalaureate business students in Smeal.

Enforced Prerequisite at Enrollment: SCM 301

SCM 421: Supply Chain Analytics

3 Credits

Models and Methodologies for supply chain analysis. SCM 421 Supply Chain Analytics (3) This course provides a spreadsheet-based, example-driven approach to learn about important supply chain models, problems, and solution methodologies. The objectives of this course are: (1) to develop valuable modeling skills that students can appreciate and use effectively in their careers (2) reinforce and enrich your understanding of supply chain theories, principles, and concepts studied previously in foundation courses. Student evaluation is based on: (1) individual and team group performance on problem-based exercises (2) individual performance on examinations (3) class participation.

Enforced Prerequisite at Enrollment: SCM 404 or SCM 405 or SCM 406

SCM 421H: Supply Chain Analytics

3 Credits

Models and Methodologies for supply chain analysis.

Honors

SCM 445: Operations Planning and Control

3 Credits

Aggregate production planning procedures, disaggregation methods in hierarchical production planning, master production scheduling, material requirements planning, lot-sizing, and capacity planning. Not available to baccalaureate business students in Smeal.

Enforced Prerequisite at Enrollment: SCM 301

SCM 448: Building Sustainable Supply Chains

3 Credits

This course looks at sustainability from a business perspective. In particular, it focuses on how to design businesses and their supply chains that are both economically and environmentally sustainable. Firms are under increasing pressure from governments, stakeholders, non-

governmental organizations (NGOs) and the general public to develop products and processes that have a lower impact on the environment (e.g., lower carbon emissions). The course is designed to be offered via the Case Method teaching approach. This method uses decision-focusing cases to put students in the role of people who were faced with difficult decisions at some point in the past. Students will be challenged to develop ways industries can mitigate consumption problems. The outcome is to provide students with a knowledge base in core areas of sustainability from a business (supply chain) perspective. These core areas include but are not limited to: Fundamentals, Eco-efficiency, Product Stewardship, and Sustainable Strategy.

Enforced Prerequisite at Enrollment: SCM 301 or permission of the instructor

SCM 450W: Strategic Design and Management of Supply Chains

3 Credits

Strategic design and management of supply chains. SCM 450W Strategic Design and Management of Supply Chains (3) This course is about the strategic design and effective operation of supply chains. It will help prepare you for supply chain management positions in manufacturing, distributing, and other service firms including providers of logistics services. The course focuses on the definition, as well as the application, of a single logic that guides the management of all the supply chain activities. Information decision support systems, primarily computer-based, provide the foundation for this logic. Because the determination of inventory locations and the control of inventory levels play a key role in this logic, we spend considerable time on these subjects. The last section of the course covers ways to lead and organize people to manage cross-firm and cross-functional relationships effectively. After completing this course, students should have the knowledge, skills, and abilities to: -Articulate the process perspective and the total systems view of supply chain management, the impact of systems thinking on firm performance, and the nature of relationships supply chain networks. -Quantify the effect of strategic initiatives such as postponement and risk pooling on the financial performance of the firm, as well as on supply chain performance. -Use and apply selected quantitative tools useful in implementing supply chain strategies. -Explain the complex nature of human interaction needed to successfully introduce supply chain concepts in the firm. This is the prescribed capstone course for the Supply Chain and Information Systems major. It builds upon the fundamental supply chain knowledge, skills, and abilities developed in foundation and intermediate courses. Students must complete SCM 421 before taking this course. SCM 450W is a writing-intensive course. In addition to written assignments encompassing case studies, hands-on exercises, and examinations, student evaluations include oral presentations and class participation.

Enforced Prerequisite at Enrollment: SCM 421
Writing Across the Curriculum

SCM 455: Logistics Systems Analysis and Design

3 Credits

Customer service, inventory management, transportation, warehousing, purchasing, international logistics, site location planning and analysis, and total cost analysis.

Enforced Prerequisite at Enrollment: SCM 301 or SCM 310

SCM 460: Purchasing and Materials Management

3 Credits

Purchasing policies, procedures, order specifications and agreements, supplier selection, and the role of purchasing in production planning and inventory management. Not available to baccalaureate business students in Smeal. This is an online introductory Web course on purchasing and materials management. As such, its focus will be on the management of the purchasing and materials management functions. We will emphasize the overall goals of purchasing, which include: providing an uninterrupted flow of materials and services; keeping inventory at a minimum to achieve the objectives of the company; maintaining quality standards; developing competent suppliers; standardizing the item bought; obtaining the lowest ultimate price; improving the organization's competitive position; and achieving good external and internal working relationships. Key topics to be covered include: purchasing policies and procedures, order specifications and agreements, supplier selection, and the role of purchasing in production planning and inventory management. The use of SAP R/3 Enterprise Resource Planning system will be an integral component of this course. Students will complete numerous lab projects consisting of hands-on assignments in the use of the SAP R/3 Materials Management application. SAP R/3 assignments will include the processing of material master records, vendors, requisitions, request for quotes, quotation analysis, purchase order creation, purchase receipts, and invoice processing.

Enforced Prerequisite at Enrollment: SCM 301 or SCM 310

SCM 465: Electronic Business Management

3 Credits

A problem-based exploration of the various electronic business tools and technologies required to efficiently manage a supply chain. Not available to baccalaureate business students in Smeal.

Enforced Prerequisite at Enrollment: SCM 301 or SCM 310

SCM 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

SCM 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

SCM 495: Internship in Supply Chain Management

1-3 Credits/Maximum of 6

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

SCM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

SCM 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

SCM 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Surveying (SUR)

SUR 111: Plane Surveying

4 Credits

Plane surveying principles; basic measurement statistics; use and care of equipment; traversing, area, and coordinate computations; differential leveling; RTK-GPS measurements. SUR 111 Plane Surveying (4) The objectives of this first course in surveying is to introduce the surveying profession and cover the fundamental methods of plane surveying which include use and care of equipment, field procedures, computations, and measurement error theory. As a result of completing the classroom component of the course, students will be able to: (1) make accurate conversions between commonly used surveying units, (2) apply the rules of significant figures to surveying measurements and calculations, (3) identify sources and types of error in surveying measurements, (4) understand differential leveling theory including note-form, survey closure, and loop adjustment, (5) compute the standard error of a set of repeated measurements and establish an acceptable range of observed values based upon a specified level of confidence, (6) adjust a set of measured angles and compute line directions for a closed traverse, (7) compute and adjust by compass rule the departures and latitudes of a closed traverse, (8) apply coordinate geometry methods to compute coordinates, direction, distance, and area. As a result of completing the laboratory component of this course, students will be able to: (1) perform a differential leveling survey within FCGS third order work, (2) perform a closed traverse survey with a relative precision of 1/10,000 using a total station, (3) use the RTK-GPS field method to measure position of stations in a closed traverse, and (4) complete a set of traverse computations for a closed traverse and present them in a prescribed format. SUR 111 is a prerequisite to all SUR courses. Student performance is based upon a mixture of homework, field exercises, writing assignments, quizzes, exams and a course portfolio. The final exam is comprehensive. All field exercises are held outside and on the campus grounds. Students must dress for weather conditions of the day of the laboratory exercise.

Enforced Concurrent at Enrollment: MATH 26 or MATH 40 or MATH 140

SUR 121: Elementary Surveying

3 Credits

The objectives of this first course in surveying are to introduce the surveying profession and cover the fundamental surveying principles, techniques, and practices. Concepts covered in the course include: Introduction to surveying principles and practices; basic measurement statistics; use and care of equipment; differential leveling; measurement and computations of distances, angles, and directions; field note keeping; surveying safety; surveying profession. As a result of completing the classroom component of the course, students will be able to: (1) make accurate conversions between commonly used surveying units, (2) apply the rules of significant figures to surveying measurements and calculations, (3) identify sources and types of error in surveying measurements, (4) collect and adjust differential leveling measurements, (5) understand angles, azimuths, and bearings used in surveying, (6) collect angle and distance measurements using modern surveying instruments and techniques, (7) compute accuracy / precision statistics for angle and distance measurements, (8) collect measurements of coordinate geometry problems.

Enforced Concurrent at Enrollment: MATH 26 or MATH 40 or satisfactory performance on the mathematics placement examination.

SUR 122: Control Surveying

3 Credits

This course builds on the concepts learned in SUR 121 to establish vertical and horizontal control using traversing procedures and GNSS techniques. Students will be able to: (1) collect angle and distance measurements; (2) adjust a set of measured angles and compute line directions for closed and link traverses; (3) compute and adjust the departures and latitudes of a closed and link traverse; (4) use adjusted observations to compute adjusted coordinates, directions, distances, and area; (5) understand the relationships between the physical earth, the geoid, and ellipsoid; (6) perform coordinate transformations from geocentric to geodetic coordinates, and from geodetic to mapping coordinates; (7) understand the use of map projections in the state plane coordinate system, and the use of coordinate systems in large mapping and construction projects; (8) perform reduction of observations; (9) understand basic GNSS measurement principles; and (10) establish vertical and horizontal control using a variety of GNSS techniques. As part of the outdoor labs students will be able to: (1) perform a closed and link traverse survey using a total station, (2) use total station technology to establish vertical and horizontal control; (3) use GNSS technology to establish vertical and horizontal control; (4) design and establish vertical and horizontal control to support mapping and construction applications.

Enforced Prerequisite at Enrollment: SUR 121

SUR 132: Surveying Software Analysis Tools

3 Credits

SUR 132 is an introductory course in computer programs that are frequently being used in surveying for mapping, land information systems, and surveying product delivery. Standard industry software is used, including but not limited to CAD and GIS, for generating surveying products, maps, and databases. As part of the course students will be able to: (1) draw planimetric features relevant for surveying (e.g., deeds, parcels, buildings, sidewalks, etc.) (2) create contours and terrain models from various datasets (e.g., ground shots, aerial datasets,

satellite datasets) to depict topography; (3) create and edit geospatial datasets and geodatabases relevant for surveying, mapping and land parcel information systems; (4) convert and transfer datasets from CAD to GIS and vice versa (interoperability between different software); (5) understand basic mapping elements and map design concepts; and (6) use of appropriate scale, mapping, and visualization concepts for technical and non-technical communication with maps;

Enforced Concurrent at Enrollment: SUR 122

SUR 162: Methods in Large Scale Mapping

3 Credits

CAD applications in mapping; data collection using traditional and satellite techniques; map compilation; COGO. SUR 162 Methods in Large Scale Mapping (3) SUR 162 is the basic mapping course in the curriculum. The concept of reference datum is introduced; the US national spatial reference system is described. Map design considerations such as scale are introduced. Map compilation emphasizes computer aided drafting. Basic standards and procedures of control and mapping surveys are introduced. Basic concepts of coordinate geometry are introduced. Laboratory exercises incorporate practice in control and mapping surveys, in map compilation and in application of coordinate geometry. As a result of completing the classroom component of the course students will be able to (1) describe hardcopy and softcopy maps, (2) describe the standard series of maps in the US National Mapping Program, (3) describe US national map accuracy standards, (4) apply map design considerations such as map clarity, order and balance, (5) calculate scale and map layout, (6) apply procedures of interpolation to calculate positions of contours, (7) describe the use of triangulated irregular networks to create contours, (8) describe components of the US national spatial reference system, (9) describe design considerations for triangulation, trilateration, traverse and precise leveling, (10) describe the survey procedures used to locate contours, (11) describe procedures to make a digital elevation model, (12) design a survey to collect mapping data using a data collector to enable efficient drawing, (13) use coordinate geometry to calculate position and elevation of a feature, to calculate direction and distance of a line, to calculate coordinates of a station using intersection, to calculate coordinates of an occupied station using resection. As a result of completing the laboratory component of the course students will be able to (1) set up a new map compilation project in a mapping program, (2) create and use blocks for standard map features (eg borders, title boxes), (3) use mapping program COGO features, (4) use mapping program contouring capabilities to create a digital terrain model, (5) use mapping program features to load collected positional data and draft a manuscript, (6) design and conduct a control traverse, and a mapping survey to collect data using an electronic data collector.

Enforced Prerequisite at Enrollment: SUR 111 and EDSGN 100

SUR 212: Route and Construction Surveying

4 Credits

Circular, compound, spiral horizontal curves; equal, unequal tangent vertical curves; alignments, earthwork; control, building, pipe, street, and as-built construction surveys. SUR 212 Route and Construction Surveying (4) SUR 212 builds directly upon the fundamental surveying principles presented in SUR 111 (Plane Surveying), particularly traverse methods and coordinate geometry calculations. The course covers the fundamental geometric computations for street alignment design starting with simple circular, compound circular and spiral horizontal

curves. This includes computation for intersection angles, radius, length, tangents, degree of curvature, stationing and stake-out calculations using coordinate geometry methods. The topics of vertical curve analysis follow which includes street grade, rate of change of grade, stationing, low and high points, passing a curve through fixed point and other alignment related analysis and design. Both equal tangent and unequal tangent vertical curves are discussed. Vertical curves are followed by street cross-sections, templates, slope stake locations, cut/full, earthwork computations and other aspects of 3-D alignment design. Once curve geometry and street alignment calculations are covered, the course moves into field stake-out methods for construction. Street alignment stake-out is covered first, using industry standard software with traditional and RTK-GPS equipment. A road alignment project is used to combine the aspects of geometric analysis and design with field stake-out methods including a control survey. Beyond street stake-out, other construction surveys are addressed including building, pipe line, culverts, storm and sanitary sewers, as-built and other construction related surveys. The laboratory exercises present field methods for construction projects in accordance with design specifications. Computations of earthwork volumes are also covered for other construction projects beyond that of street alignments.

Enforced Prerequisite at Enrollment: SUR 162

SUR 213: Route and Construction Surveying

3 Credits

SUR 213 builds upon and uses concepts from SUR 121 and SUR 122 applies them in route and construction applications. The course covers stake out subdivisions and buildings for development, horizontal and vertical roadway computations and stake-out. In addition, the course provides a base knowledge of buildings, bridges, culverts, pipelines, sewers, earthwork volumes, erosion and sedimentation, and as-builts as it pertains to survey construction. The laboratory exercises focus on field methods for route and construction layout projects in accordance with design specifications. CAD is being used throughout the course for design and layout lab assignments, and to prepare surveying deliverables.

Enforced Prerequisite at Enrollment: SUR 122

SUR 221: Large-scale Mapping Surveys

3 Credits

SUR 221 is the basic mapping course in the curriculum, which also considers project management and client considerations. The course begins with client considerations and outlying what products will be delivered; typically, a report of record of survey maps and analyses showing the degree to which required survey standards have been met. Economic feasibility, contracting, budgeting and project management concepts of mapping surveys are also considered. Students complete a control survey using GNSS methods that will be used to support the data collection. Through traversing and detailing using a total station, students collect side shots and ground shots. GNSS techniques are also introduced for collecting side shots and ground shots. Collected datasets are used to create a topographic map in CAD to meet client requirements and specifications. Students compile a detailed report of survey.

Enforced Prerequisite at Enrollment: SUR 122 and SUR 132 Enforced Concurrent at Enrollment: EDSGN 100

SUR 222: Photogrammetry

3 Credits

Basic principles of metric photogrammetry with single and stereopair photos; coordinate transformations; map production with stereo imagery; flight planning. Lab. SUR 222 - Photogrammetry (3) Photogrammetry covers the basic principles of aerial photography and the geometry of the optics in relation to aerial cameras. Mathematical theories for refining and processing measurements from single aerial photographs are developed. Such measurements are transformed to obtain real world coordinates of features on the surface of the earth. Two-dimensional conformal, affine, and projective coordinate transformation equations and the three-dimensional conformal coordinate transformation equations are developed and applied to the measurements on the photographs. In addition, the theory underlying the geometry of stereopairs of photographs are developed and used to determine elevations of features on the photograph. Stereographic equipment and software are used to produce accurate topographic maps of the overlap areas between stereopairs. The course also covers procedures and considerations for planning an aerial photography mission which include flight planning, cost analysis, equipment selection, placement of photo controls, and overall project management.

Enforced Concurrent at Enrollment: SUR 162

SUR 241: Surveying Measurement Analysis

3 Credits

Surveying Measurement Analysis explores the fundamental concepts of statistical error analysis with applications to surveying measurements. It covers the normal distribution function and theories describing the fundamental procedures in data, including measures of central tendency and measures of data variation. It then explores sampling distribution theory and develops statistical confidence intervals and testing using the χ^2 , student's t, and F distributions. Fundamental concepts in the propagation of variance are developed and applied to the traditional surveying observations of angles, distances, azimuths, elevation differences. These error propagation techniques are further used to explore the propagation of variance in traditional traverse computations. The accompanying lab exercises help reinforce and validate the theoretical foundations of this class.

Enforced Prerequisite at Enrollment: SUR 121 **Enforced Concurrent at Enrollment:** MATH 110 or MATH 140

SUR 262: Coordinate Systems in Map Projections

2 Credits

Introduction to coordinate systems used in the Lambert, Mercator, Transverse Mercator, and UTM map projections; reduction of surveying observations. SUR 262 Coordinate systems in Map Projections (2) Coordinate systems in map projections covers the fundamental relationships between the physical earth, the geoid, the ellipsoid and map projections. It will explore the use of map projections in state plane coordinate systems, and the use of these coordinate systems in large mapping and construction projects. The course explores the corrections that must be made to properly use these coordinate systems including the reduction of observed elevations, distances, azimuths and angle.

Enforced Concurrent at Enrollment: (MATH 110 or MATH 140) and SUR 162

SUR 272: Cadastral Surveying

3 Credits

Evolution of land records systems; PLS: property ownership and conveyancing; common and statute law; rules of construction; boundary location procedures.

Enforced Prerequisite at Enrollment: SUR 111

SUR 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

SUR 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

SUR 313: Integrated Surveying

3 Credits

The course objectives are directed toward providing instruction and practical experience in activities common in surveying practice, experience requiring the integration of virtually all abilities gained in previous surveying courses. The class is organized as a student surveying company with the instructor as general supervisor. Objective 1 of the student surveying company is to analyze a letter from a client (the instructor) requesting a survey. The letter will request a survey (typically ALTA boundary or construction). The client letter will specify standards (ALTA and other) the survey is to meet, standards commonly required in survey practice. The client letter will specify products to be delivered, typically a report of record of survey maps and analyses showing the degree to which required survey standards have been met. In addressing objective 1, students determine exactly what work needs to be done to satisfy client requirements. Typically these include several sub-surveys: (1) a relatively long-range satellite (GNSS) survey to bring control into the project area, (2) a traditional local control survey to create a control network to control subordinate surveys and the surveys producing what the client has requested, typically boundary retracement and mapping surveys. The result of work on objective 1 is the organization of the class into coordinating groups, one per sub-survey plus two additional groups for report compilation and editing and map production and editing. Objective 2 of the student surveying company is to develop detailed work plans for sub-surveys, report preparation and map production. The result of work on objective 2 is the set of work plans. A written contract (as a letter of understanding) between the student surveying company and the client is prepared. Objective 3 is to perform that record search, field work, data analysis, mapping and preliminary report writing for the sub-surveys necessary to meet client requirements. Objective 4 is to compile the final report of survey.

Enforced Prerequisite at Enrollment: SUR 221 **Enforced Concurrent at Enrollment:** SUR 213 and SUR 373W

SUR 341: Adjustment Computations

3 Credits

Adjustment computations covers the basic theory and mechanics of a least squares adjustment using the traditional surveying observations of distances, angles, azimuths, and elevation differences. It explores the theory of error propagation, and uses this theory to determine the precision of indirectly measured quantities. It explores post-adjustment analysis through the use of various statistical tests, and error ellipse computation and analysis. This course primarily focuses on the least squares adjustment and analysis of differential leveling, triangulation, trilateration, traverse, and network observations. Plane fitting, parametric model estimation, and regression analysis are also covered.

Enforced Prerequisite at Enrollment: SUR 241 and SUR 122 and MATH 220 Enforced Concurrent at Enrollment: (CMPSC 200 or CMPSC 201) and (STAT 200 or STAT 401)

SUR 351: Geodetic Models

3 Credits

Three dimensional geodesy; computations on the ellipsoid; map projections; reduction of observations and elements of physical geodesy. SUR 351 Geodetic Models (3) Course covers the basic gravimetric and geometric geodesy aspects as related to surveying. Motions of the Earth and the effect on reference systems are explored. The Earth's gravity field, its measurement, reduction of gravity observations to the geoid, uses for gravity and gravity anomalies are studied. Different coordinate reference systems are studied including astronomic, geodetic, and satellite coordinate systems. Transformation between the various coordinate systems is covered while also considering crustal plate motion. Basic mathematical representations and transformations between various representative ellipsoids are explored. Satellite navigation and positioning is discussed at a rudimentary level. Both point positioning and relative positioning techniques are discussed.

Enforced Prerequisite at Enrollment: MATH 141 and SUR 262

SUR 352: Geometric and Physical Geodesy

3 Credits

This course provides a thorough background on geometric and physical geodesy. With respect to Geometric Geodesy the course covers: Computations to the ellipsoid and coordinate transformations between various coordinate systems, considering crustal plate motion. The astronomic, geodetic, and satellite coordinate systems are studied. Satellite navigation and positioning is discussed at a rudimentary level. With respect to Physical Geodesy the course covers: The Earth's gravity field, its measurement, reduction of gravity observations to the geoid, uses for gravity and gravity anomalies are studied. Geoid determination, Stokes's formula, the remove-restore methods, least-squares collocation. Vertical positioning and height datums and systems. Principles and applications of airborne, terrestrial, and satellite gravimetry and satellite altimetry.

Enforced Prerequisite at Enrollment: SUR 122 Enforced Concurrent at Enrollment: (MATH 230 or (MATH 231 and MATH 232)) and (MATH 251 or (MATH 250 and MATH 252))

SUR 361: Surveying Laser Scanning

3 Credits

Introduction to laser scanning surveying. Principles of Light Detection And Ranging (LiDAR) technologies from terrestrial and mobile platforms. The process of point cloud generation from LiDAR techniques are discussed. The course covers the registration and geo-referencing process from multiple scans for indoor and outdoor data acquisition, as well as the direct geo-referencing and point cloud generation from mobile platforms. Error sources in terrestrial and mobile sensors and their system calibration procedures for quantifying and modeling such errors. Industry standard software is used for processing and analysis of point clouds for surveying applications related to 3D modeling, terrain modeling, creating drawings in CAD, and change detection of natural and man-made structures.

Enforced Prerequisite at Enrollment: SUR 122 Enforced Concurrent at Enrollment: SUR 132 and SUR 241 and (MATH 110 or MATH 140)

SUR 362: Introduction to Geospatial Information Engineering

3 Credits

Geospatial information technology provides a means through which data about land can be analyzed to obtain information that may be used to support land management decisions. The objective of this course is to teach students to collect and process spatial data, analyze and make decisions, and to communicate the results using maps and other information delivery formats. This course begins with the introduction of geospatial technology and its application in decision making, resource allocation and management, a socio-economic development. Students learn the different types of data that are used in geospatial information technology. They learn about graphical data structures as well as descriptive databases and how to build them. Spatial data models are discussed together with their advantages and drawbacks, as well as descriptive databases. Students capture various datasets from the field, convert them into usable formats, and process them using the models that have been discussed so as to reinforce the knowledge. The use of technology for land parcel information management is discussed. Procedures for performing geospatial analyses and querying databases are discussed and students conduct laboratory exercises using the field data that they captured. Map making techniques are discussed and students learn to communicate the results of analysis through maps.

Enforced Prerequisite at Enrollment: SUR 132 Enforced Concurrent at Enrollment: SUR 222 and (MATH 110 or MATH 140)

SUR 372W: Legal Aspects of Land Surveying

3 Credits

Legal research; rules of evidence including classification and evaluation; unwritten rights; land description composition; easements.

Enforced Prerequisite at Enrollment: SUR 272 Writing Across the Curriculum

SUR 373W: Cadastral and Legal Aspects of Surveying

4 Credits

Cadastral surveying and law related to land surveying and property rights are the basis of this course. The course provides a review of the evolution of land records systems in the US. The creation and retracement of sectionalized and non-sectionalized boundaries are

discussed. U.S. and Pennsylvania statutes and common law related to topics such as boundary retracement, boundary resurvey, adverse possession, easements, and boundary evidence are researched and reported by the students. Boundary retracement principles such as the rules of construction, boundary location procedures, and legal research and collection of written and measured evidence are discussed with a focus on finding a nexus between the two types of evidence. In addition, the course covers the rules of evidence including classification and evaluation. Unwritten rights, easements, and riparian rights are also discussed. The principles of land description composition are provided, and the students apply them in realistic scenarios that are writing intensive. Students perform legal research in real case studies, collect data related to record boundaries (e.g., previous deeds), and make an analysis of the property's history and property survey. Students will have to write extensive reports of their findings and use principles of effective surveying communication to prepare a report to the client including "record of survey" maps.

Enforced Prerequisite at Enrollment: SUR 122 and SUR 132
Writing Across the Curriculum

SUR 381: Stormwater Hydraulics and Hydrology

4 Credits

Stormwater Management Hydraulics and Hydrology is an elementary treatment of common design practices used to create stormwater management plans for small to medium sized land development projects. Erosion and sedimentation design is also addressed within the context of a stormwater management plan. The course is intended for engineering students who are not required to take formal fluid mechanics or hydrology courses, yet have a need to understand or complete the design aspects of stormwater management as it relates to their professional practice. The course contains three segments. The first segment covers the elementary hydraulics necessary to design drainage structures and storm water detention facilities. These topics include fluid statics, continuity, conservation of mass, conservation of energy, friction losses, minor losses, energy grade line, open channel flow, weirs and orifices. The second segment covers elementary hydrology methods used to analyze runoff from land development sites and small to medium watersheds. The hydrology topics include watershed characteristics, rainfall, abstractions, runoff, time of concentration, peak flow methods, hydrograph methods, basic channel routing and detention basin routing. The third segment covers government regulations and common design methods used to design storm sewers, detention basins and erosion control plans. A project includes the design of a stormwater management system for a residential subdivision.

Enforced Prerequisite at Enrollment: MATH 141 and Sixth Semester standing

SUR 382: Subdivision Design

2 Credits

Introduction to Land Development Design is targeted for students in the Surveying Engineering Technology program. The course covers the basic surveying principles as these are applied to residential development and the subdivision of parcels. Overview of private restrictions and public regulations of land use, the planning process, local zoning ordinances and subdivision regulations. Students complete a basic design project in CAD. The design follows the Subdivision and Land Development

Ordinance (SALDO) code, and it also considers topography, zoning, utilities, existing and proposed roads, and client requirements.

Enforced Prerequisite at Enrollment: SUR 213 and SUR 221 Enforced Concurrent at Enrollment: SUR 373W

SUR 421: Advanced Photogrammetry

3 Credits

Advanced mathematical methods for processing digital imagery and point clouds, and applications in surveying. This course is designed to provide a deeper understanding of the mathematical models used in Photogrammetry. New techniques are also presented, such as Structure from Motion (SfM) and Simultaneous Localization and Mapping (SLAM) for surveying applications. Platforms that are considered are terrestrial (close-range photogrammetry) and aerial (UAS and airborne photogrammetry). The course covers image alignment and georeferencing using ground control points (indirect) and multisensory direct georeferencing. Occlusion detection and true-orthophoto generation, together with image block mosaicking and refinement, are presented. Camera calibration and self-calibration approaches are discussed. The course also discusses principles and requirements for designing point cloud surveys that meet project needs.

Enforced Prerequisite at Enrollment: SUR 132 and SUR 222 and MATH 220

SUR 422: Digital Photogrammetry

3 Credits

Mathematical methods for processing digital imagery, creating digital elevation models and ortho-photographs, and applications in spatial data infrastructure. SUR 422 Digital Photogrammetry (3) As a continuation to an existing photogrammetry course, this course is designed to provide a deeper understanding of the mathematical principles of photogrammetry as well as current applications of photogrammetric mapping. In recognition of the increasing use of digital images in geospatial technologies, especially in applications involving natural resource inventory and mapping, this course provides advanced knowledge in softcopy photogrammetry. This course deals with mathematical methods for processing tilted aerial photographs. Two- and three-dimensional coordinate transformation methods for correcting the geometry of digital imagery are taught. These are followed with the development of collinearity equations for analytical aerotriangulation and the adjustment of a block of photographs. Extraction of contours and development of elevation models are also taught. Creation of digital ortho-photographs, mosaics and color balancing of mosaicked images are discussed. Applications of ortho-rectified digital images in geospatial technologies are also taught. Laboratory exercises include the use of computer hardware and software to enhance and classify remotely sensed images, apply softcopy photogrammetry methods to develop contour maps, digital elevation models, and digital orthophotographs from a block of photographs. The course has direct relationship to photogrammetry, adjustment computations, and multipurpose land information systems which are all taught in the surveying program. It is a required course which is offered to baccalaureate degree students in the surveying engineering program. Academic achievement is evaluated through quizzes, home works, and examinations.

Enforced Prerequisite at Enrollment: MATH 220 and SUR 362

SUR 424: Monitoring Applications in Surveying

3 Credits

Engineering structures, natural and man-made, must be monitored periodically to ensure their safety of operation. Monitoring is a challenging task that necessitates robust surveying methods. This course discusses advanced mathematical and surveying methods for monitoring applications in surveying engineering. Monitoring using total stations, GNSS, and point clouds methods are discussed. Point cloud methods include laser scanning and photogrammetric datasets acquired from terrestrial and aerial platforms. Often in monitoring applications an integration or combination of the abovementioned datasets is necessary; therefore, this course covers the optimal integration of these datasets. The course covers multi-epoch comparisons and robust statistical analysis to distinguish between actual changes and apparent changes due to noise. Monitoring of one or more of the following structures are covered: buildings, bridges, dams, tunnels, levees, rockfalls, landslides, and coastal erosion.

Enforced Prerequisite at Enrollment: SUR 222 and SUR 361 and SUR 241
Enforced Concurrent at Enrollment: SUR 441

SUR 432: Geospatial Applications in Surveying

3 Credits

Airborne and satellite methods are increasingly used in surveying applications for topographic mapping, building extraction and modeling, and monitoring. This course focuses on advanced geospatial principles and techniques in surveying with emphasis on GIS tools for mapping, identification, extraction, and interpretation of both physical and cultural landscape features. Visible imaging, RADAR, hyperspectral, and LiDAR sensors for airborne and satellite platforms are presented. Georeferencing of airborne and satellite datasets. Terrain filtering and modeling, feature extraction methods, classification, and segmentation in GIS using imagery and point clouds. Hydrographic approaches from airborne LiDAR and satellite imagery are covered. This course also brings an introduction to airborne and spaceborne SAR Interferometry for terrain mapping and monitoring applications.

Enforced Prerequisite at Enrollment: SUR 132 and SUR 222 and SUR 361

SUR 441: Data Analysis and Project Design

3 Credits

Post least squares adjustment analysis of control networks, statistical testing, blunder detection, network design considerations, and computer optimization techniques.

Enforced Prerequisite at Enrollment: STAT 200 and SUR 341

SUR 455: Precise Positioning Systems

3 Credits

The course provides a background on stellar coordinate systems and reviews the main geodetic reference coordinate systems used with GNSS technology. Satellite orbital theory provides the basis for understanding GNSS operation. GNSS concepts that are also covered include pseudo-ranging, GNSS error sources, and GNSS vector adjustment. The mathematical and field techniques that are followed to eliminate and/or reduce GNSS errors (e.g., satellite orbits and clocks, troposphere and ionosphere, receiver clock, multipath and noise) are presented and reinforced through practical problems with real data. The GNSS static and

kinematic techniques for setting control points and perform surveying mapping tasks are demonstrated. Students collect their own data, and they use standard industry software to adjust their measurements, and to demonstrate that uncertainty is sufficient for the project application at hand. The course also covers inertial sensors and inertial navigation for modern surveying technologies, as well as the integration of GNSS and inertial sensors for mobile mapping.

Enforced Prerequisite at Enrollment: SUR 352 and PHYS 214 and (MATH 230 or (MATH 231 and MATH 232))
Enforced Concurrent at Enrollment: SUR 441

SUR 462: Parcel-Based Geospatial Information Systems

3 Credits

Acquisition processing of land parcel data; development of land information system and applications in geospatial information technology. SUR 462 Parcel-Based Geospatial Information Systems (3) People and cultures around the world have different perceptions of land. Land has different value to many people. As a natural resource, with finite size, there are always competing interests when it comes to allocation use and management of units of land. The basic unit of land is the parcel. All activities are associated with land parcels. With such competing interests, it is important to manage land and its resources in an effective manner so as to ensure its sustainability. To ensure proper stewardship of land, data about each land parcel must be maintained so that information from parcel-based geodatabases may be used to support decisions involving land, people, and communities. Parcel-based information technology serves as a component of the geospatial technology with special applications in place-based information. This course builds on the knowledge obtained from SUR 362, Geospatial Information Engineering course. It begins by considering various perceptions of the use and value of land to different cultures, communities, and organizations. A justification is made for the need to manage land and resources in land in order to promote good stewardship. The use of technology for land parcel information management is discussed. From there the course progresses through land parcel data types and sources, data conversion and geodatabase development. Applications of land parcel data in place-based information management are discussed. Accuracy considerations for parcel data in various applications are also discussed. Spatial analysis and methods for presenting or communicating results are discussed.

Enforced Prerequisite at Enrollment: SUR 362 and SUR 372W

SUR 471: Professional Aspects of Land Surveying

3 Credits

Ethical issues and legal limits of practice; surveyor as an expert witness; surveyor-client relationship; responsibilities to the profession.

Enforced Prerequisite at Enrollment: SUR 372W

SUR 482: Land Development Design

3 Credits

The land development process; geometric, environmental, aesthetic aspects of development; local regulatory requirements; preparation of final plat and report. SUR 482 Land Development Design (3) Land development design is designed for seniors in Surveying Engineering and covers the basic principles of residential design and development. The objective of the course is to provide students with exposure to elements

of the land development process from an engineering perspective. Topics covered include land development regulations, site analysis of soils, site evaluation in terms of opportunities and constraints, sketch design, site layout, preliminary design, street layout including horizontal and vertical design, grading plan, drainage design, stormwater management, sewer and water, and erosion and sedimentation controls. Students work in teams of two or three on a design project for a local property. Students will utilize AutoCAD Civil 3D (or similar software) and the Virginia Tech/Penn State Urban Hydrology Model (VTPSUHM) (or similar) in the project design. A site visit to the design property is included in the course. At the end of the course, student teams will exchange their project designs and critique each other's work from the view point of a township engineer. Designs are evaluated for adherence to a pre-selected municipal subdivision and land development ordinance (SALDO). Students are required to present their final designs to the class. They must be prepared to explain their work and defend any design elements that are questioned during the presentation. After completion of this course, students will be able to: 1) evaluate a site for land development potential, 2) prepare sketch designs for a proposed land development site, incorporating opportunities and constraints, 3) prepare a preliminary design including street alignment for a residential subdivision, sanitary sewer for a residential subdivision, storm sewer with inlets and inverts and a grading plan; and 4) prepare a mock final plan for public review and presentation.

Enforced Prerequisite at Enrollment: SUR 212 and SUR 372W
Enforced Concurrent at Enrollment: SUR 381

SUR 490: Seminar in Surveying

1 Credits

Individual or group work in surveying.

Enforced Prerequisite at Enrollment: Senior standing

SUR 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

SUR 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Sustainability (SUST)

SUST 150N: The Science of Sustainable Development

3 Credits

This course will focus on how human society depends on the environment for its continued existence. It will examine several major topics relating to environmental and social sustainability including ecosystem conservation, sustainability of food systems with special reference to the water-food-energy nexus, and current and future trends in urbanization. Within each of these topics, students will learn fundamental scientific principles and use this information to gain a better understanding of what human behaviors have led to our current resource production and consumption crisis. This class will explore ways people

can modify behavior to relieve poverty in developing nations and meeting basic human needs while still affording economic growth, environmental protection, and social equality to all peoples around the world.

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Science (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

SUST 200: Foundations of Leadership in Sustainability

3 Credits

SUST 200 will teach the fundamental concepts of social, environmental, and economic sustainability and the interrelationships between these metrics and human behavior. The goal of this course is to provide students with a foundation in sustainability literacy and responsibility that will facilitate their development as global citizens and sustainability leaders in their respective fields and personal lives. The course will be an introduction to and foundation for the Sustainability Leadership Minor. Primary subjects covered include sustainability literacy, the ethical foundations of sustainability, the scientific metrics used to evaluate the sustainability of systems, energy literacy, sustainable business principles, and self-awareness. The course will emphasize the importance of understanding the relationships among these topics, and the interdisciplinary approaches needed to develop a comprehensive and integrative view of the world. Class activities will focus on the cultivation of communication, critical thinking, inquiry, and problem-solving skills. Emphases will be on student engagement in personal, community, and global sustainability challenges, and the preparation of students for more immersive sustainability learning opportunities.

General Education: Social and Behavioral Science (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

SUST 242N: Issues in Sustainability

3 Credits

This course is part of the General Education Integrative Studies curriculum. As such, it combines Humanities (GH) and Social and Behavioral Sciences (GS) through the topic of sustainability. Students will read, write, and think integratively by considering the humanistic values of sustainability and how those values are connected to the political, social, and cultural forces that shape sustainable activities. The course examines the concepts and key issues of sustainability through a variety of literary, scientific, political, and popular texts. Class discussions will trace the roots of sustainability in environmental writing, will analyze the diverse debates surrounding sustainability, and will consider local, national, and international texts about sustainability. Students will interact with invited guest speakers, conduct field research on sustainability in local communities and institutions, and create their own narratives and scenarios for sustainable futures based on their findings and speculations. The course will address central issues of sustainability in society today, including: - What are the historical and cultural foundations of sustainability? - How is sustainability a political, social, and ethical issue? - How do crises and disasters create challenges for sustainability? - How is sustainability connected to

local, urban, and transnational environments? The goal of the course is to develop two types of awareness. First, students will develop an awareness of the key discussions about sustainability in society today. Second, students will cultivate a critical awareness of how debates about sustainability are shaped through the written and spoken word. Sustainability is more than just protecting the great outdoors or using a recycling bin. It is also a product of the discourse surrounding it. In other words, sustainability-and what we think, say, and do concerning it-is influenced by what other groups and individuals have written or said about it. Sustainability debates are shaped by more than simply "the facts" surrounding environmental issues; they are also shaped by the persuasive tactics and rhetorical choices writers and speakers make. Students will spend the semester analyzing, discussing, and creating texts that engage the key issues and most important topics of sustainability and environmentalism.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 30H

General Education: Humanities (GH)

General Education: Social and Behavioral Scien (GS)

SUST 295: Internship

1-6 Credits/Maximum of 6

Supervised off-campus, non-group instruction including individual field experience, practicums, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: SUST 200

SUST 325N: Health and Environmental Sustainability

3 Credits

NURS / SUST 325N: Health in Environmental Sustainability; 3 credits. (Inter-Domain), (GHW), (GN). People live in constant contact with the environment: the built environment of homes, offices, and industrial facilities, as well as in cities or less developed areas such as farms or in nature / the outdoors. How do the air we breathe, the water we drink, the land we live on, the food we eat, and the materials and chemicals we use in these environments impact our health? At a time when nations are spending up to 1/6th of their budgets on healthcare, it is critical to understand how we impact the environment and how it impacts us back. This course covers the importance of environmental health on individual and community health, the effects of environmental hazards on diverse populations and the impact of climate change on disease. It also reviews best practices for environmental health, for building healthy communities, and introduces students to environmental health advocacy. A beneficial environment sustains human health and the well-being of all species on the planet.

1-15 Credits/Maximum of 99

This course is used to temporarily register students that are studying overseas. Permanent courses will be entered after the student returns.

Theatre (THEA)

THEA 1S: First-Year Seminar: Theatre Production Practices

1 Credits

An orientation to the School of Theatre production practices, resources, faculty, and practicum. THEA 001S First-Year Seminar: Theatre Production Practices (1)(BA) This course meets the Bachelor of Arts degree requirements. THEA 001S will serve as the First-Year Seminar for all undergraduate majors in the School of Theatre. In all School of Theatre degree programs, backstage production is one of the primary curricular

and experiential areas held in common. It is in this area that most theatre students gain their first practical experience in producing theatre on our stages. This course will provide the necessary training and experience for all students to safely practice in the production of live theatre in our spaces. This course will orient first-year students to faculty, facilities, and practices of production utilized in the School of Theatre season. Students will be introduced to the faculty and their areas of expertise. They will be oriented to the spaces and equipment in our theatres and taught safe operation of the equipment. They will learn the practical and professional expectations placed on students participating in a School of Theatre production. Learning will take place both in lecture/demonstration format and through the practical experience of working on a School of Theatre production. Students will be evaluated by: 1. Backstage practices and safety will be evaluated through knowledge based quizzes and/or skill demonstrations as appropriate to each subject. 2. Professionalism evaluated through attendance, reliability and skill growth as observed during the execution of practicum assignments.

Bachelor of Arts: Arts
First-Year Seminar

THEA 80: Pit Orchestra

1-3 Credits/Maximum of 3

Rehearsal and performance of contemporary and historical musical theatre styles, including operetta and light opera. THEA 080 Pit Orchestra (1-3 per semester/maximum of 3) (GA) (BA) This course meets the Bachelor of Arts degree requirements. THEA 080 provides an introduction to the particular demands of the orchestral pit player, with an emphasis on the musical theater repertoire. The course objectives is to prepare the student for a professional theatre engagement. This course parallels the orchestra ensembles in the School of Music (Philharmonia, Chamber Orchestra) but with the added techniques of theatre orchestra: standard vamps, 'vocal last time' vamps, fade on cue, cut on cue, etc. Grades are determined by (1) level of performance and improvement, and (2) attendance at all rehearsals, sectionals and performances. The special facilities for this course will include orchestral rehearsal space in the School of Music, as well as the Pit/Performance space in the School of Theatre. Enrollment will vary depending on the needs of individual musical scores; however, the performance schedule is such that an ensemble large enough to accommodate both players and substitutes is desirable. This is a repeatable course. Students will comprise the orchestra for a School of Theatre's production each semester. An audition is required for admission to this course. Emphasis will be placed on precision ensemble playing, as well as the skill of playing together as a section while simultaneously following the conductor. Because of the highly technical nature of theatrical productions, there are frequent cues given by the conductor which are vitally important to the performance. Mastering the specialized skill of splitting one's attention evenly between the music stand and the podium will be a major objective of this course. In the process of preparing the music for each production other skills will be taught and acquired, such as: learning when to accompany and when to play in a solo manner; when to follow and when to lead as a section player; for brass players, developing the 'Broadway' sound: big, bright, and focused; for reed doublers, the techniques involved in performing on multiple instruments in a single number; for all musicians, familiarity with the plethora of styles now being performed on Broadway: traditional Broadway, pop, rock, and the more classical styles of some of the contemporary theatre composers.

Enforced Prerequisite at Enrollment: Audition

Bachelor of Arts: Arts

THEA 100: The Art of the Theatre

3 Credits

THEA 100 The Art of the Theatre (3) (GA;US;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course is a survey of all aspects of the living art of the theatre. Throughout the semester, the in-class analysis of written scripts, performance contexts, dramatic structure, and theatrical genres will give insights into the imaginative impulses of theatre artists and their audiences. As a variety of individual texts are explored, scenes are used to illustrate the various topics under consideration. The course is concerned with the universality of the theatrical impulse, and includes a selection of international and multi-ethnic voices and performance techniques. Students will experience American theatre history as a conversation that parallels the country's struggle for identity in the 19th, 20th, and 21st Centuries. Students learn about Western performance traditions alongside traditions happening elsewhere in the world in the same time period within political contexts, to create a global perspective of theatre. This course provides the groundwork for all other theatre courses and is also designed to allow the general student to experience and understand the art of the theatre.

International Cultures (IL)

United States Cultures (US)

General Education: Arts (GA)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

THEA 101N: Performance and Society

3 Credits

Inspired by the evolving field of performance studies, THEA 101: Performance & Society introduces theatre and performance as artistic practice, creative action, a way of knowing, and a record and unfolding of culture. Combining the disciplinary domains of social science and the arts, the performances and performance practices we study range from the sacred, to the artistic, to the commercial (and often more than one of these at once). This course positions the study of performance as interdisciplinary—drawing from foundational texts in sociology, anthropology, and literature, just as it draws from such other art forms as visual art, architecture, dance, and music. We work from the following three interrelated premises: art and culture shape each other; performance happens everywhere—in many geographies, and in spaces real and virtual; and theatre and dance are human endeavors that tell us about the past, rehearse the present, and point to possible futures. To test these ideas, students will participate in projects that explore the limits and extremities of performance through the lenses of theatre studies and social science, fields that view performance as human endeavor, and everyday life as performance, respectively. As the preceding suggests, this class is an integrative domains course that fulfills GA (arts) and GS (social science), positioning Theatre and Sociology as disciplinary partners. Thus, we take a "dramaturgical approach" to analyzing performance, as sociologist Erving Goffman terms it in the foundational work, *The Presentation of Self in Everyday Life* (1956). It is this correspondence between social science and theatre that *Introduction to Performance and Society* will explore. Students will: Learn their major theories, ways of thinking, and methodologies used in

sociology; understand "performance" as an agile term used in sociology, theatre, performance studies, and other fields; experience a variety of performance spaces and places-from theatres, studios, and public places, to ad hoc and virtual spaces such as the Internet, social media platforms, and the mind; complete creative projects such as scripts, designs, dances, and collaborative performances that allow them to experience what performing artists do and how they do it; and attend and write about theatrical productions as art and social event THEA 101 asks students to study, share, and live the course's premises through collaborative activities, creative projects, and writing. Class activities ask students to interrogate the meanings of "liveness," "community," and "performance," as well as articulate theatre's role as an art and social practice in the past, present, and future.

GenEd Learning Objective: Integrative Thinking

THEA 102: Fundamentals of Acting

3 Credits

Introduction to the art and craft of acting for non-theatre majors. THEA 102 Fundamentals of Acting teaches the basic principles of Acting and Performance. THEA 102 aims to introduce the student to basic principles of the art and craft of acting, focusing on HOW and WHY actors do what they do in preparation of and for a performance less than on the attainment of performance skills themselves. Students will become acquainted with acting processes, theatre terminology, script analysis, improvisation, and other fundamentals to give them a more inclusive sense of the totality of the actor's work as craftsman and artist. In so doing, the student actors must tap their own powers of concentration, observation, creativity, and imagination. A major focus in the course is the development of the ability to analyze one's own work and the work of peers in the class. Problem-solving in solo, paired, and/or large group contexts is a daily requirement in class.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

THEA 103: Fundamentals of Directing

3 Credits

Training and experience in basic skills of directing. Designed for non-theatre majors.

Bachelor of Arts: Arts

THEA 104: Fundamentals of Theatre Production

3 Credits

Training and experience in basic skills of technical theatre. Designed for non-theatre majors.

Bachelor of Arts: Arts

THEA 105: Introduction to Theatre

3 Credits

Introduction to Theatre is a general education course intended to introduce the performing arts in all their global complexity. The course will contain elements of world theatre history; however, the focus of the course will be on the functions and practices of the art. Beginning with the shared basics of any theatrical event, the course will explore both the exotic and the familiar. Guest performers will demonstrate the conventions of South Asia and Africa. A company of actors and directors will perform scenes from many of the plays read by students and from styles, genres, or playwrights highlighted in the textbook readings. Other lessons will provide links to videos from The National Theatre of England. The last unit of the class will focus on contemporary American practice to explore how Asian, European, and African influences have culminated in American theatre practice today.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

THEA 105H: Introduction to Theatre

3 Credits

An introduction and overview of the history, craft, and art of the theatre to foster an informed appreciation of theatrical events. This course is an alternate to THEA 100.

Bachelor of Arts: Arts

Honors

THEA 106: Theatre Foundations

3 Credits

The THEA 106 class is an introductory examination of Theatre and Meaning designed for first-year theatre majors. It is guided by two overarching questions. Why do we (human beings) make theatre? And: how does theatre generate meaning? The course begins by considering theatre's various origin stories. It then proceeds through a series of case studies that (1) compare dramatic texts from different eras and cultures, and (2) consider historical performance practices in their proper social and philosophical contexts.

Bachelor of Arts: Arts

United States Cultures (US)

THEA 107: Introduction to Dramatic Structure

3 Credits

An introduction to structural analysis in dramatic literature.

THEA 111: The Fundamentals of Singing and Vocal Production

3 Credits

The origin of singing predates the development of spoken language. Singing is the act of producing musical sounds with the human voice and provides a medium for communication universally across cultures. This course explores the fundamentals of voice production and offers

tools to help singers at any level develop their singing voices. Preliminary objectives will include a basic understanding of musical information associated with singing. The main objectives of the course are: to explore and understand the four systems of singing (respiration, phonation, resonance and articulation) and how they relate to voice production; to provide a greater understanding of fundamental elements of singing; to understand basic laryngeal anatomy as it relates to voice production; to build an awareness of body alignment as it relates to singing; and to provide practice tools for continued education and vocal growth through an applied vocal exercise database. This entry level, non-major, course offering provides greater accessibility to personalized voice instruction which can often only be found in the one on one studio setting. Additionally, as singing is highly personal, this course offers students the opportunity to practice and explore singing at their own pace and in private. The objectives will be accomplished by utilizing an interactive, multimedia online curriculum including instructional videos that demonstrate vocal concepts, selected readings, selected supplementary videos, and a vocal exercise database. Evaluation methods will include quizzes, reflections and assessments of recordings of the students own singing. Students will receive (3) credits for this course, as well as (GA) designation. All videos, texts and examples will be made available to students online.

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

THEA 112: Introduction to Musical Theatre

3 Credits

Beginning with developing an understanding of basic musical theatre terminology, Introduction to Musical Theatre will proceed to examine musical theatre development as it parallels the quixotic historical landscape. The course is designed to allow the general student to experience and understand the art of the musical theatre. The course will begin with an exploration of foundational vocabulary and subsequently move through seven major periods of musical theatre history: Greek Tragedies (BCE-1800), Operetta (1800-1900), Cinderella Musicals (1900-1928), Champagne Musicals (1928-1943), Golden Age Musicals (1943-1966), Concept Musicals (1966-1983), and Pop Musicals (1983-Present). Students will be asked to read a libretto, and listen to the score of, one show from each of these periods to fully understand, and compare, the artistic transitions that epitomized each era. Each of these productions are seminal works in the evolution of the musical: HMS Pinafore, No, No, Nanette, Show Boat, Oklahoma, Guys and Dolls, Cabaret, Company, A Chorus Line, Rent, and Next to Normal. In addition to the studying of these works, students will be taught, in chronological order, the persons and movements that helped shape the discourse of musical theatre, as well as looking at other shows that fostered dialogues between audiences and artists. While musical theatre is a primarily American art form, the development of musical theatre in other countries will be discussed as students will explore the contributions musical theater made in the countries of Greece, South Africa, Japan, China, England, France, Italy, and parts of Latin America. Each week students will be quizzed on the content they have studied and there will be two midterms and one cumulative final examination.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

THEA 113: Musical Theatre Theory I

2 Credits

Studies in the fundamentals of music notation and sight-singing. THEA 113 (2) is designed to provide the beginning musical theatre student with the fundamentals of music theory and diatonic harmony as well as the analytical skills with which to approach and appreciate the structure of songs and musical theatre scores. It is focused primarily on the musical theatre literature to enable the beginning student to learn and appreciate more efficiently the literature that will be central to the performance classes in the major. The class places a rigorous emphasis on pitch and rhythmic identification to develop a high degree of musicianship in the beginning student, both to provide a solid basis for the classes to come and to make the performer more competitive in the musical theatre industry. It is designed to be entry-level in preparation for THEA 114 (Musical Theatre Form and Analysis) and the upper-level theory classes (THEA 212 and THEA 214). The course presupposes no previous musical training or experience. For those with some previous musical theory education, the course may function successfully as a refresher before the more rigorous analysis courses to follow. It satisfies a significant need in that it focuses on the specific theoretical knowledge the musical theatre student needs to know to become competitive in a professional career.

Bachelor of Arts: Arts

THEA 114: Music Theatre: Form and Analysis

3 Credits

A survey of music theatre as an art form.

Bachelor of Arts: Arts

THEA 115: B.F.A. Acting Foundations

2 Credits

Fundamental aspects of training the actor's body, voice, mental focus, and imagination. THEA 115 B.F.A. Acting Foundations (2) THEA 115 is an introduction to the awakening and enhancement of beginning students' physical, vocal, mental, and imaginative instrument in preparation for the demanding work to follow in later acting, voice/speech, and movement studios. The course will introduce physical conditioning and breathing exercises specifically for actors, introduce exercises to enhance mental focus/concentration, and lead students through a series of exercises designed to stimulate and enhance the actor's imagination and trust in the world of fantasy. Students will be exposed to a variety of techniques from which they may, over time, develop their own individual physical/mental training discipline. They will be encouraged to accurately assess their own physical/vocal/mental self-image, to develop a plan (with the instructor) to minimize intrusive mannerisms and to maximize positive traits and work habits. Grading will be based on each student's commitment to the training regimen, application of past lessons in present assignments, quality of daily work, and the ability to accurately perform the exercises taught.

THEA 116: Musical Theatre Theory II

2 Credits/Maximum of 4

THEA 116 develops continues music theory for musical theatre majors and augments theory with practical piano skills. THEA 116 is an introduction to the awakening and enhancement of beginning students' physical, vocal, mental, and imaginative instrument in preparation for the demanding work to follow in later acting, voice/speech, and movement studios. The course will introduce physical conditioning and breathing exercises specifically for actors, introduce exercises to enhance mental focus/concentration, and lead students through a series of exercises designed to stimulate and enhance the actor's imagination and trust in the world of fantasy. Students will be exposed to a variety of techniques from which they may, over time, develop their own individual physical/mental training discipline. They will be encouraged to accurately assess their own physical/vocal/mental self-image, to develop a plan (with the instructor) to minimize intrusive mannerisms and to maximize positive traits and work habits.

Enforced Prerequisite at Enrollment: THEA 113

THEA 120: Acting I

3 Credits

Fundamental skills and training in acting. Emphasis on physical/vocal awareness and the nature of dramatic communication. Theatre majors only.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or DANCE 100

Bachelor of Arts: Arts

THEA 121: Fundamentals of Acting II

3 Credits

This course is a continuation of THEA 120 and designed to build upon the basic foundation of acting. THEA 121 Fundamentals of Acting II (3) THEA 121 is a continuation of THEA 120 and designed to build upon the basic foundation of acting. Regardless the style or medium, good acting boils down to the process of 'living truthfully under imaginary circumstances.' THEA 121 will provide the student with practicum experiences in scene study and Monologue/Auditioning technique. The course will also deepen and expand the range of student experience to include a more sophisticated and diverse immersion into the craft of acting.

Enforced Prerequisite at Enrollment: THEA 120

THEA 130: Introduction to Theatre Scenic and Costume Technology

3 Credits

Introduction to the methods, materials, equipment, concepts and processes involved in the construction of scenery and costumes for the theatre. THEA 130 Introduction to Theatre Scenic and Costume Technology (3) This course will familiarize students with the methods, materials, equipment, concepts, and processes involved in the construction of scenery and costumes for the theatre. The emphasis of this course will be on the physical process that results in the production of both scenery and costumes. Lecture topics include: Soft Goods Layout and Construction Basic Flat Layout and Construction Dimensional Scenery Rigging and Paint The Costume Shop/The Big Picture Designer's Sketch to Wearable Costume Hand Sewing Techniques

Sewing Techniques/The Sewing Machine In addition to lectures, students will be expected to participate in hands-on laboratory activities that will reinforce and inform the classroom theory. These activities will give students an opportunity to apply the principles they will learn in the lecture component. These courses enable our students to converse intelligently with all of the members of the theatre community, regardless of their specific theatre emphasis. Students will develop a fundamental understanding of the relationship between the various areas of theatre production.

THEA 131: Introduction to Theatre Sound and Lighting Technology

3 Credits

Introduction to the methods, materials, equipment, facilities, concepts and processes used to create theatre lighting and sound. THEA 131 Introduction to Theatre Sound and Lighting Technology (3) This course will familiarize students with the methods, materials, equipment, facilities, concepts and processes used to create theatre sound and lighting. The emphasis of this course will be on the physical process that results in the production of both lighting and sound. Lecture topics include: Mixers Connectors & Cable Playback vs. Reinforcement Safety & Hanging Lights Focusing, Circuits and Dimmers Instrument types, Qualities of Light In addition to lectures, students will be expected to participate in hands-on laboratory activities that will reinforce and inform the classroom theory. These activities will give students an opportunity to apply the principles they will learn in the lecture component. These technical theatre courses enable our students to converse intelligently with all members of the theatre community, regardless of their specific theatre emphasis. Students will develop a fundamental understanding of the relationship between the various areas of theatre production.

THEA 132: Survey of Theatre Production Practice

3 Credits/Maximum of 3

Survey and application of Scenic, Costume, Lighting, and Sound techniques and practices.

THEA 146: Basic Theatrical Makeup

2 Credits

Both straight and corrective makeup, with character and styling techniques for stage, film, and television.

Bachelor of Arts: Arts

THEA 150: Fundamentals of Design for the Theatre

3 Credits

Exploration of the philosophy and technique of scenic, costume, and lighting design.

Bachelor of Arts: Arts

THEA 152: Theatrical Design Foundations for the BFA

3 Credits/Maximum of 3

Study and practice of the philosophy, processes, and techniques of the theatrical designer.

THEA 159: Theatre Portfolio & Business Practices I

1 Credits

This course is the first half of our professional preparation arc, intended to train the student of theatre for life as a professional theatre designer or technician. There are many challenges to working in the business of theatre, arising primarily from the fact that most theatre professionals are self-employed. It's not enough to be talented; one must also be a savvy businessperson. This class will set you up with the skills you need to effectively document your design & tech work over the course of your time at Penn State, with a focus on resumes, cover letters, photography, and some basic skills for finding and landing summer jobs & internships.

THEA 189: Principles of Stagecraft, A Look Behind the Curtain

1.5 Credits/Maximum of 6

THEA 189 Principles of Stagecraft, A Look Behind the Curtain (1.5 per semester/repeatable up to 4 times) (GA)(BA). For non-theatre major students only, theatre minors are ok. This course meets the Bachelor of Arts degree requirements. Ever see a show and wonder how did they build that? THEA 189 provides introductory knowledge in to scenic, property and costume construction painting techniques, lighting technology, and safety used in theatre today. This is accomplished through online and lab components. The online component is presented in the form of modules that students take at their own pace. These modules delve into the various topics listed above. Since the course is repeatable, multiple modules are available for each topic. Once the student has taken the class once, the next time they take the class they will simply complete another module on each topic. The lab component will provide hands-on experience in the topics learned online. Students will have the ability to work within one of the technical areas of scenery, props, paints, costumes or lighting, helping to build, hang, costume, prop or paint a produced show. NOTE: the labs are by appointment only. At the beginning of the semester students will be given access to a calendar with several labs available to sign up for. Labs may vary from week to week and include both weekday and weekend time slots. Students will be required to sign up for approximately 10-12 slots during the semester or the equivalent of about 40 hours of lab time. Students should plan their schedules accordingly to ensure they have adequate time to complete the lab portion of the class. There is no set time for this class.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

THEA 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

THEA 198: Special Topics

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

THEA 199: Foreign Studies--Theatre Arts

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Enforced Prerequisite at Enrollment: Approval by department

Bachelor of Arts: Arts

International Cultures (IL)

THEA 200: Script Analysis

2 Credits

An introduction to script analysis for theatre majors, which focus on full text analysis as a foundation for area specific analysis. Two styles of analysis (contextual and structural) are studied. THEA 200 Script Analysis (2) THEA 200 is a course designed to teach theatre majors and minors the art and craft of understanding play texts. The course begins by exploring the nature and means of transmitting meaning through theatre texts. Discourse theory and contextual analysis are applied to at least two examples of American realism. The second method of analysis is a structuralism approach that will also be applied to at least two examples of American realism. The third area of study is the application of historicism and structuralism to non-realistic scripts. Students will work individually and in small groups to create written and oral presentations of their analyses. The course is designed to teach through practice and application of methods to a variety of types of scripts written for the theatre.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105

THEA 201W: Script Analysis

3 Credits

This course is an introduction to some of the most common tools of script analysis used by designers, performers, stage managers, technicians, dramaturgs, playwrights, and other artists of the theatre. The class proceeds by examining diverse scripts in a variety of ways that help to reveal theiractable / designable / directable values. Understanding any given script's inherent dramatic values is a foundational first step to making informed, meaningful, and exciting choices for its production. It is also a foundational first step toward informed, meaningful, and exciting discussions of text and productions. Ultimately, it is the development of the student's (often discipline specific) ability to recognize a script's hidden potential that is the true goal of the course.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or DANCE 100

Writing Across the Curriculum

THEA 202: Beginning Scene Study

3 Credits

Introduction to the fundamentals of scene study through readings, improvisations, exercises and scene work. THEA 202 Beginning Scene Study (3) A continuation of work started in THEA 102, this course is designed for theatre minors who wish to further advance their understanding of the art of acting. Advanced scene work, exercises, improvisations, and text analysis are explored, along with peer evaluations and instructor feedback on both processes and performances.

Enforced Prerequisite at Enrollment: THEA 102 or THEA 120

THEA 206: Critical Theory for Performance

3 Credits

THEA 206 is an intensive introduction to critical performance theory. Through reading, writing, and attendance at arts events, students will learn methods for experiencing, analyzing, and writing about theatre, dance, and other performing arts forms through the lenses of class, race, gender, nationalism, and abilities. To do this, students will learn and apply concepts from critical theory from its historical precedents to its contemporary forms. These theories include semiotics and structuralism; post-Structuralism and deconstruction; Marxism and materialism; feminism and queer theory; postmodernism and post-colonial theory. Students will apply concepts learned through several scaffolded writing projects-response papers, a critical essay, and a performance analysis (long-form review).

Enforced Prerequisite at Enrollment: THEA 100 or TEHA 101N or THEA 105 or THEA 106 or DANCE 100
 Bachelor of Arts: Arts
 General Education: Humanities (GH)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Soc Resp and Ethic Reason

THEA 207: Gender and Theatre

3 Credits

A study of theatre and drama literature as formed by issues of gender, race, and ethnic background. THEA 207 Gender and Theatre (3) (GA;US) (BA) This course meets the Bachelor of Arts degree requirements. Theatre 207 provides a basic survey of issues of representations of gender identity in theatre. The course will trace women's experiences in theatre from their absence on European classical stages to the more recent formation of feminist theatres. The course will explore issues of sexual orientation and gender identity as presented through drama and performance. The plays and writings chosen for study may include selections from African, European, African American, Latina, Asian American, Anglo American, and Native American playwrights. The course will examine issues of gender as they are presented by women of different races and cultures, by men of different races and cultures, and by women and men of various sexual orientations. The goal of the course is to examine the ways theatre and theatrical performances have portrayed individuals within a pluralistic society based on gender identity and ethnicity. Theatre has existed in every known civilization, but until recently, the contributions of predominantly white European males have provided the basis for the study of theatre. Most drama anthologies include plays written predominantly by white European males. By focusing on gender as it has been and is portrayed in theatre from diverse perspectives, THEA 207 will encourage an aesthetic appreciation of the art of theatre while exploring issues of gender identity on artistic creation and critical response.

Bachelor of Arts: Arts
 United States Cultures (US)
 General Education: Arts (GA)
 GenEd Learning Objective: Creative Thinking
 GenEd Learning Objective: Soc Resp and Ethic Reason

THEA 208: Workshop: Theatre in Diverse Cultures

3 Credits

A performance-oriented class which explores the historic and contemporary theatrical works of various culturally diverse peoples. THEA 208 / AFAM 208 Theatre Workshop in Diverse Cultures (3) (GA;US;IL) (BA) This course meets the Bachelor of Arts degree requirements. Theatre Workshop in Diverse Cultures is a performance-oriented class that aims to introduce students to the broad cultural diversity that exists in artistic expression. The class will focus on several plays throughout the semester that will represent cultural, ethnic, and gender diversity as well as different literary styles. Students will be exposed to various cultures by working on plays created by artists from those cultures. The course will concentrate on a specific playwright, culture, or region, such as plays from the Caribbean. Students will be required to read, study, analyze, and perform plays from the genre. For example, the class may focus on the works, life, and philosophy of August Wilson and read Joe Turner's Come and Gone, Seven Guitars, Piano Lesson, and Fences. The class may explore Asian styles such as Noh Theatre and Asian American works by D. H. Hwang or work by Nigerian playwright and Nobel Prize winner Wole Soyinka. The presentation of these plays will be a principle part of the class, but the reading and discussion of the material will be as important. Students will participate in some capacity with the production of these plays in areas such as stage management, dramaturgy, sets and props, lights, sound, costumes, house management, publicity, and acting. These pieces will be performed in class, in workshop, and occasionally for the general public. Students will work as an ensemble and become acquainted with basic acting and theatre techniques. The course objectives are: 1) to develop and enhance students' appreciation for the discipline and commitment required for multicultural theatrical presentations 2) to help to sensitize all students to the broad cultural diversity in artistic expression 3) to provide students with an introductory engagement with drama. THEA 208 / AFAM 208 serves as a primary selection for students pursuing the Theatre minor.

Cross-listed with: AFAM 208
 Bachelor of Arts: Arts
 International Cultures (IL)
 United States Cultures (US)

THEA 209: Hip Hop Theatre

3 Credits

Hip Hop Theatre defines and explores Hip Hop as an art form. The student will explore Hip Hop culture through Hip Hop Theatre aesthetics: Emceeing, Dejaying, Beat boxing, graffiti art, and dance. Hip Hop Theatre is designed for students with an interest in Hip Hop Theatre/culture. This class introduces students to Hip Hop Theatre through Hip Hop aesthetics: Emceeing, Dejaying, Beat boxing, graffiti art, and dance. In addition, this class includes lecture sessions and discussions about Hip Hop culture Theatre as a global, multi-ethnic, grassroots youth culture committed to social justice and self-expression through specific modes of performance. This course seeks to introduce students to a culturally significant art form, enhance theatrical discourse, and provide practical opportunities for students to apply skills learned in class via collaborative creations, text, and performance. This course is directly related to dance, theatre, African American history and other arts based and humanities based courses. Students will be evaluated on their attendance, participation in class, willingness to learn, and the effort put forth in class.

THEA 211: Dramaturgy

3 Credits

THEA 211 is an introduction to the history, theory, and practice of production dramaturgy. Students will learn to: practice theory-driven and production-oriented play analysis; to write thoughtful dramatic criticism, informed by theatre theory and critical thinking; and to practice a range of scholarly, artistic and interpersonal skills; in order to advocate for the emergent production at hand. To do this, students will study historical and contemporary dramaturgical theory, a transhistorical set of essays that argue for a certain form, content, or purpose of theatre and performance. Students will learn the historical and contemporary role of the dramaturg in production, and will practice the skills associated with the contemporary dramaturg. These include providing research support for theatre production, designing audience events such as talkbacks and receptions, and writing program pieces such as playwright bios and production histories. The cumulative dossier students create can serve as a dramaturgy portfolio for those who wish to pursue dramaturgy through graduate study or through taking the role in productions going forward. For all students, the portfolio develops an understanding of the dual role of dramaturg as scholar and artist.

Enforced Prerequisite at Enrollment: DANCE 100 or THEA 100 or THEA 101N or THEA 106
Bachelor of Arts: Arts

THEA 212: Musical Theatre Theory III

2 Credits/Maximum of 2

Intermediate studies in diatonic harmony, analysis, sight-singing and dictation. THEA 212 (2) is designed to provide the intermediate musical theatre student with the mastery of harmonic and melodic analysis with which to approach and appreciate the structure of songs and musical theatre scores. It is designed to enable the intermediate student to sight-read more efficiently the literature that is central to the performance classes in the major, and to develop basic accompaniment and transposition skills that will become indispensable to the professional career. A continued emphasis on pitch and rhythmic identification will enable the intermediate student to maintain a high degree of musicianship in the performance classes required in the major and will make the performer more competitive in the musical theatre industry. THEA 113, the entry-level theory course and THEA 114, Music Theatre Form and Analysis are prerequisites to THEA 212, which is designed as the third course of the theory-form-and-analysis sequence. The course satisfies a significant need in that it focuses on the specific theoretical knowledge the musical theatre student requires to become competitive in a professional career.

Enforced Prerequisite at Enrollment: THEA 113 and THEA 114 and THEA 116
Bachelor of Arts: Arts

THEA 214: Musical Theatre Theory IV

2 Credits/Maximum of 2

Advanced studies in the technique and practice of chromatic harmonic analysis and sight-singing. THEA 214 is designed to provide the advanced musical theatre student with the analytical skills with which to approach and appreciate the harmonic and melodic structure found in the various compositional styles of musical theatre literature. It is focused specifically on musical theatre literature that is representative of

the current repertoire to enable the advanced student to function more effectively in auditions and other performance venues. The course is designed to function as the culmination of the theory-form-and-analysis sequence, connecting up the terminology, techniques, and repertoire, developed throughout the four-semester process. The course satisfies a significant need in that it focuses on the specific theoretical knowledge that the musical theatre student is required to master in order to become competitive in a professional career.

Bachelor of Arts: Arts

THEA 220: Acting II

3 Credits

Principles of acting through improvisation, exercises, and character analysis, with emphasis on basic skills of voice and movement. For theatre majors only.

Enforced Prerequisite at Enrollment: THEA 120
Bachelor of Arts: Arts

THEA 221: Acting III

3 Credits

A continuation of Thea. 220. For theatre majors only.

Enforced Prerequisite at Enrollment: THEA 220
Bachelor of Arts: Arts

THEA 222: Acting Laboratory

2 Credits

Laboratory experience in student-directed scenes and/or one-act plays.

Enforced Prerequisite at Enrollment: THEA 120
Bachelor of Arts: Arts

THEA 223: Musical Theatre Performance I

2 Credits

Studio training in the unique performance skills, repertoire and business of professional music theatre. THEA 223 Musical Theatre Performance I (2) (BA) This course meets the Bachelor of Arts degree requirements. The purpose of this class is to introduce sophomore BFA musical theater students to the art of performing the solo song based on the book musical. While utilizing the performer's skills in acting, singing and dance/movement, the student will learn how to communicate clearly and compellingly 1. who his/her character is 2. to whom the character is singing 3. why the character is singing these particular words to this particular music at this particular time. The student must understand his/her environment, relationships, obstacles, tactics, and stakes in order to accomplish this task. This is the class that begins to synthesize the student's performance training for the special demands of musical theatre. Most of the work will concentrate on solo performance, building the student's power and confidence and beginning to explore both their individual uniqueness and their crucial relationship to their audience. Students must prepare two contrasting musical theatre pieces from 'book' musicals preferably from 'The Golden Age' (1920-1960s). These songs must be chosen in collaboration with musical theatre faculty and the student. Students must obtain copies of the music and lyrics for their songs and the book. A thorough knowledge of the book is as important as a through knowledge of the music and lyrics in order to make informed

performance choices. Students are required to keep a journal. Written exercises about passive, active, stage directions, and character analysis as well as in-class exercises on these topics will be part of the class assignments.

Enforced Prerequisite at Enrollment: THEA 114 or THEA 115 or THEA 116 or THEA 212

Bachelor of Arts: Arts

THEA 224: Musical Theatre Performance II

2 Credits

Studio training in the unique performance skills, repertoire and business of professional music theatre. THEA 224 Musical Theatre Performance II (2) (BA) This course meets the Bachelor of Arts degree requirements. This course will cover three primary areas of study: musical theatre scene work, the study of the major repertoire in musical theatre from 1965-1990 (excluding Sondheim and Webber), and performance power training. Scenes that contain songs require special techniques of the actor-singer. Using the preparation and presentation of four such scenes, the musical theatre student will begin to develop successful performance strategies for musical theatre scene work. Through the use of in-class reports the musical theatre student will continue to gain understanding and appreciate the rich musical theatre literature of the late 1960s and the 1990s. Primarily, the course will cover the works and lives of Bock and Harnick, Jerry Herman, Kander and Ebb, Jule Styne, Jones and Schmidt, and Maltby and Shire. Through exercises, studies, and improvisation designed to sharpen the student's use of energy, focus, structuring skills, imagining, stylizing, and coordinating, the musical theatre student will obtain a significant increase in his/her performance power. The musical theatre student will prepare three duet scenes with song and an ensemble scene with song during the semester. Students will have two opportunities to present each duet scene. THEA 224 is a continuation of Musical Theatre Performance I. These studios represent the core of the musical theatre training program.

Enforced Prerequisite at Enrollment: THEA 223

Bachelor of Arts: Arts

THEA 225A: B.F.A. Acting Studio I

2 Credits

Exercises to develop truthful listening and responding as a foundation for acting studio scene study. Listening and responding in an unadorned, truthful way is the lynch-pin of the actors's work. In THEA 225A, students will begin with exercises designed to foster and increase the depth of truthful behavior on stage. In addition, this coursework includes exercises to increase awareness of the sensory world around us and its effect on the actor's imagination, availability to emotion, and mental focus. Contentless scene work leads the student through the basics of behavior on stage: playing for a purpose (goal), encountering obstacles, and finding the necessary tactics to behave appropriately in the imaginary circumstances. The final stage of the semester applies the skills acquired to a full scene from a play.

Enforced Concurrent at Enrollment: THEA 115 and THEA 131

THEA 225B: B.F.A. Movement Studio I

2 Credits

Introduction to techniques to condition the actor and improve physical awareness and self-use. Listening and responding in an unadorned,

truthful way is the lynch-pin of the actors's work. In THEA 225A, students will begin with exercises designed to foster and increase the depth of truthful behavior on stage. In addition, this coursework includes exercises to increase awareness of the sensory world around us and its effect on the actor's imagination, availability to emotion, and mental focus. Contentless scene work leads the student through the basics of behavior on stage: playing for a purpose (goal), encountering obstacles, and finding the necessary tactics to behave appropriately in the imaginary circumstances. The final stage of the semester applies the skills acquired to a full scene from a play.

Enforced Concurrent at Enrollment: THEA 115

THEA 225C: B.F.A. Voice/Speech Studio I

2 Credits

Introduction to actor voice and speech training. THEA 225C is the first in a sequence of voice and speech courses for the actor. This first semester installment will focus on awareness and conditioning activities related to breath, posture, resonance and articulation. Prose and poetry readings will be used for application activities. Students will experience activities that will heighten their physical awareness of vocalizing. Most activities will involve a re-learning of how they speak, bringing to their conscious awareness the processes of voice/speech which were initially learned through early childhood nurturing. Class events will include awareness of breath patterns and the means to release inhibitive behaviors related to spinal posture, head and neck alignment, and musculature along the breath/vocal tract. Students will also gain awareness of how breath relates to their expressive/emotional system. Class activities will also include physical awareness of the consonant and vowel sounds and their phonetic transcriptions. Each event will strive to improve actors' intelligibility and increase musicality of speech. Through application assignments with word lists, sentences, poetry and prose, students will increase language sensitivity. This semester will also address voice quality issues directly and how they relate to the above. Specific events will focus on vibratory awareness in primary resonators and how to apply this awareness in all vocal life. Issues of vocal health, projection and emotional demands will be addressed.

Enforced Concurrent at Enrollment: THEA 115

THEA 250: Introduction to Scene Design

3 Credits

Introduction to the history, processes, materials, and concepts involved in designing scenery for the theatre. THEA 250 Introduction to Scene Design (3) This course is the introductory course to the art and practice of designing scenery for the stage. The primary goals of the course are to introduce students to the history and profession of scene design, and to help students learn a fundamental design process to apply to the evolution and presentation of design for stage scenery. This process includes play analysis, script and visual research methods, analysis of dramatic action, concept evolution, and visual communication methods. Evaluations will be based on the following: 1. Students will submit papers to demonstrate text analysis skills and to explore the work of specific designers or historical trends (25%) 2. Students will receive in-class critiques to evaluate their design concepts and communication skills (25%) 3. Students will receive comment sheets for each studio project critiquing specific aspects of their design process (50%)

Enforced Prerequisite at Enrollment: THEA 130 and THEA 131

THEA 251: Theatre Drafting Techniques

2 Credits

Introduction to drafting of floor plans, section drawings, construction graphics, and mechanical perspective for the theatre. THEA 251 Theatre Drafting Techniques (1) (BA) This course meets the Bachelor of Arts degree requirements. Theatre 251 is a foundation course for all students studying theatre design or technology. Students will learn the lexicon of lines and marks that make up the language of theatre drafting. They will be instructed in traditional drafting techniques and work to master the skills required to execute complete, accurate, and clear draftings. Drafting is the basic form of communication in theatre design and technology. All students involved in these disciplines will use drafting extensively throughout their careers. As such, the skills introduced and practiced in this course form a necessary foundation for all other design and technology courses. This course prepares students by teaching them a language necessary to advanced coursework. Theatre 251 is a required course in the theatre B.F.A. Production program. Throughout the course students complete draftings of increasing complexity. These draftings will be evaluated for content, clarity and skill. Individual drafting projects will be assigned a point value.

Bachelor of Arts: Arts

THEA 252: Design Presentation Techniques

1 Credits

Media and materials exploration; sketching, rendering, and modeling methods.

Bachelor of Arts: Arts

THEA 253: Scene Painting

1 Credits

Introduction to painting scenery for the theatre; methods and materials.

Bachelor of Arts: Arts

THEA 260: Introduction to Costume Design

3 Credits

Introduction to costume design process through character analysis and the use of color, line, and texture. THEA 260 Introduction to Costume Design (3) (BA) This course meets the Bachelor of Arts degree requirements. THEA 260 provides the student the opportunity to experience the costume design process from the reading of the script to the creation of a fully rendered costume design. The work of a costume designer begins with the ability to read the play script from both the perspective of the audience and that of the human beings depicted in the imaginary premise. The student is given a specific methodology for reading a play and determining the plot, the dramatic action, and the theme or significance of the action of the play. Next, the student is exposed to research methods and techniques that illuminate historical periods and genres and allow the designer to fully appreciate the lives of human being living in different times and locations. Beginning projects are derived from contemporary dramatic material that requires relatively little examination into the social and historical period. Subsequent projects, however, move farther away from contemporary realism and require extensive research to grasp the essence of the period. The next section of the course is devoted to an examination of how this research and analysis is used by the costume designer to make artistic

choices. Students are introduced to a specific technique for analyzing a character and determining what kind of clothing would be appropriate for the individual based on the student's analysis of their personality, social status, and function in the play. The final project involves the creation of a costume design for the entire play. The student is guided through the process of improving rendering skills, creating a finished representation of each garment worn in the play, and enhancing their ability to communicate these choices to a director and actors.

Bachelor of Arts: Arts

THEA 261: Introduction to Costume Construction Techniques

3 Credits

Intermediate study of the methods, materials, equipment, concepts and processes involved in the construction of costumes for the theatre. THEA 261 Introduction to Costume Construction Techniques (3) This course will advance the knowledge of students in the methods, materials, equipment, concepts and processes involved in the construction of costumes for the theatre. The emphasis of this course will be on the specialized processes that result in the production of theatrical costumes. Formal course material in the form of lecture/demonstrations will address the specialized approach to the construction and tailoring of theatrical costumes for men's and women's wear. Examination of the historic context of the clothing technique, as well as the contemporary application of such techniques for theatrical use will also be addressed. In addition to lectures and demonstrations, students will be expected to participate in hands-on laboratory activities that will reinforce and inform the classroom theory. These activities will give students an opportunity to apply the principles they learn in the lecture component.

THEA 270: Introduction to Lighting Design

3 Credits

THEA 270 Introduction to Lighting Design (3) will focus on helping each student to develop a design process that takes them from script to stage. Students will study each step of the lighting design process and use these steps to create the design for a fictional production. Students will also have the opportunity to hone their design skills with a series of practical projects that will allow them to experiment with intangible qualities of light. This class will use a traditional proscenium presentation for the development of these techniques.

Enforced Prerequisite at Enrollment: THEA 201W and THEA 251 and THEA 252. Recommended Preparation: THEA 131 and THEA 150
Bachelor of Arts: Arts

THEA 280: Introduction to Technical Direction for the Theatre

3 Credits

Introduction to the methods, materials, equipment, facilities, concepts and processes associated with Technical Direction for the Theatre. THEA 280 Introduction to Technical Direction for the Theatre (3) This course will familiarize students with the methods, materials, equipment, facilities, concepts and processes used by Theatre Technical Directors to produce the spectacle of theatre. The concepts of project management will be introduced and the processes associated with project management will be explored. The steps involved in producing a technical package that will facilitate the implementation and completion of a production will be introduced and explored. The emphasis of this course will be on exploring how Technical Directors bring designs to reality on the stage. The planning and management processes will be

introduced and explored through the use of exercises and projects that will reinforce and inform the lectures.

Enforced Prerequisite at Enrollment: THEA 130 and THEA 131

THEA 282: Production Practicum

3-6 Credits/Maximum of 6

This course provides students with first-hand experience working on a theatrical production at the university. Students will learn the responsibilities and processes of preparing for a live theatre production by either performing in or working behind the scenes on a pre-selected production. After the completion of the production, students will evaluate their work.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

THEA 285: Introduction to Sound Design

3 Credits

An introduction to sound design for the theatre. THEA 285 Introduction to Sound Design (3) The purpose of this course is to provide an overview of the techniques and the tools of sound design and the sound designer's role in the collaborative design process in the theatre setting. The goal of this course is to develop a method of understanding sound and sound design, and discovering a language with which to express this understanding in a theatrical context. In order to accomplish these goals, there is fundamental exposure to the terms and techniques of contemporary sound design that is necessary along with an understanding of the challenges and problems inherent in designing sound for the stage. The course also serves as an introduction to continuing advanced study in topics such as audio recording and advanced sound design that relate to sound design. Projects will make up the majority of the assignments for the class, and therefore will constitute the majority of the grading. The evaluation of these projects will not only consist of written and audio submitted portions, but also the student's presentation of the project to the class. During the sections of the class based on the terminology and tools of theatrical sound design, quizzes will be administered in order to check the progress of the students and ensure their comprehension of the material. Each student will complete a final project in lieu of a final exam: the sound design of a theatrical script. This project will not only consist of the final design work, but also the class presentation of the conceptual basis for the design as well as the implementation of the design.

Enforced Prerequisite at Enrollment: INART 258A or THEA 150

THEA 289: Theatre Production Practicum

1 Credits/Maximum of 3

Supervised experience in production techniques. THEA 289 Theatre Production Practicum (1 per semester/maximum of 3) (BA) This course meets the Bachelor of Arts degree requirements. The course is designed to provide practical training in the production techniques of theatre arts. In preparing the physical productions for the School of Theatre, the student will encounter the technology of theatre arts. Diverse areas such as construction, electricity, painting, mechanics, plastics, electronics, costuming, and sewing are experienced in an organized and directed

laboratory situation. The course compliments the introductory theatre production courses and the advanced production practicum course. The B.A. program and the B.F.A.--production option requires a maximum of two credits of this course, and the B.F.A.--musical theatre option requires three credits.

Bachelor of Arts: Arts

THEA 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts

THEA 296H: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, supervised on an individual basis and which fall outside the scope of formal courses.

Honors

THEA 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a subject which may be topical or of special interest.

Bachelor of Arts: Arts

THEA 298: Special Topics

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Bachelor of Arts: Arts

THEA 299: Foreign Studies--Theatre Arts

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

THEA 322: Voice and Speech I

2 Credits

Vocal techniques for the actor: articulation, voice control, support, and projection. In this class students will be working in three areas: practical voice and speech work to include relaxation, body alignment, breath, resonance, pitch and range, articulation; basic anatomy; and, text (putting the skills learnt into practice). Students will develop a set of exercises that help to release tension and build breath, muscularity and strength, and good resonance. In addition, students will build an awareness of how the voice works (anatomy) and work with poetic and dramatic text to see how the imaginative demands of the text can be fulfilled by the voice. Students will also learn to use voice with language that is not their own and to be confident and clear in their speech. The final goal is to develop an awareness of 'healthy voice' usage

Enforced Prerequisite at Enrollment: THEA 115 or THEA 120
Bachelor of Arts: Arts

THEA 323: Voice and Text

3 Credits

This course focuses on building the vocal and analytical skills required to embody challenging text and communicate it clearly. Building on the foundation of the previous BFA voice courses, students learn to strategically utilize the vocal tools at their disposal in order to illuminate thought and character. Students gain facility with a variety of texts, including those with poetic language and written in verse, and how to use that language to their advantage.

Enforced Prerequisite at Enrollment: THEA 225C and THEA 322

THEA 324: Movement for Actors I

2 Credits

Techniques and skills in physical expression, awareness, control, and stage movement.

Enforced Prerequisite at Enrollment: THEA 120 or THEA 115 or THEA 225B
Bachelor of Arts: Arts

THEA 325: Movement for Actors II

2 Credits

Continuation of THEA 324.

Enforced Prerequisite at Enrollment: THEA 324
Bachelor of Arts: Arts

THEA 326: Music Theatre Performance Workshop

1 Credits/Maximum of 3

Performance studies in cabaret, revue, and club environments.

Enforced Prerequisite at Enrollment: THEA 224
Bachelor of Arts: Arts

THEA 327: Musical Theatre Auditions

2 Credits

Research and preparation of auditions for work in professional musical theatre venues. THEA 327 Musical Theatre Auditions (2) (BA) This course meets the Bachelor of Arts degree requirements. Theatre 327 offers junior and senior musical theatre students an opportunity to examine the art of the musical theatre audition from research to performance. Since these students have completed two to three years of vocal and acting study, piano, and music theory, they are ready to work at honing their skills for professional auditions. Each student will prepare four to six professional auditions and simulate them in class. Feedback is provided by the class and visiting guests from the profession. All audition material is memorized and professional attitude as well as dress is required. The audition material is different for each student in the class. Grading is based on the student's ability to prepare quickly and accurately, take direction, and incorporate it into the audition on the spot. The continued research and performance of new material is required weekly. Theatre 327 is an elective course in the B.F.A. theatre musical theatre option.

Enforced Prerequisite at Enrollment: THEA 224
Bachelor of Arts: Arts

THEA 399: Foreign Studies--Theatre Arts

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individuals or group instruction.

International Cultures (IL)

THEA 400: Advanced Theatre Projects

1-6 Credits/Maximum of 99

Individual and group-directed study of in-depth projects involving reading, discussion, performance, and critical analysis by faculty.

Enforced Prerequisite at Enrollment: 7th semester standing or higher or 12 credits in THEA
Bachelor of Arts: Arts

THEA 401: Theatre History I: Ancient to 1700

3 Credits

Survey of drama and theatre from primitive rites through the Renaissance.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or THEA 112 or DANCE 100
Bachelor of Arts: Arts
International Cultures (IL)

THEA 401H: Theatre History I

3 Credits

Survey of drama and theatre from primitive rites through the Renaissance.

Honors

THEA 402: Theatre History II: From 1700 to Present

3 Credits

Survey of European drama and theatre from the eighteenth century through the modern period. THEA 402 Theatre History II: From 1700 to Present (3) A survey of drama and theatre from the seventeenth century through the modern period. The course is a sequential second half of the history of world theatre. Beginning with the post-Shakespearean era, students study major theatre movements in play writing, acting, theatre architecture and design. Some eras include the English Restoration and Georgian periods, the French Neoclassical period, German Romanticism, and the rise of the Beijing Opera. In addition, emerging post-colonial theaters of Africa and Asia will be explored. For each major era or movement, a play by one of the acknowledged masters of the form will be read and discussed in class. Students will write brief responses to their assigned readings, as well as experience a variety of assessment techniques.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or THEA 112 or DANCE 100 or THEA_MFA
Bachelor of Arts: Arts

THEA 403: 20th Century Theatre History

3 Credits

This course begins in the mid-twentieth century following the theatrical experimentation and socio-political changes that influenced Modernism's Avant-Garde movement, Bertolt Brecht and Erwin Piscator's Epic Theatre, and the Theatre of the Absurd (examined in THEA 402). We explore what came after the advent of Modernism - what artists moved away from, what they repurposed, and what they imagined anew. One of the keynotes of this ensuing artistic period is the concept of "post": Post-Modern, Post-Dramatic, Post-Colonial, and Post-Human. Altogether, we will examine dramatic literature, influential theatre artists, and performance practices in global theatre from the mid to late twentieth century.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or THEA 112 or DANCE 100 or THEA_MFA

General Education: Arts (GA)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

THEA 404: Twenty-first Century Theatre and Drama

3 Credits

This course focuses on twenty-first century theatre and drama, exploring select dramatic literature, artists, and theatre companies within the framework of the social, cultural, and political changes that have occurred since the year 2000. Though we are just entering the twentieth year in this millennium, they are years shaped by monumental events beginning with the September 11, 2001 attacks on the United States, to the present moment where we find ourselves in the midst of a global pandemic. These two historical points frame a container where we find the effects of social justice issues such as systemic racism, gender equality, nationalism, climate change, and immigration policies as lived realities. Who are we as individuals, families, and societies as we navigate our world? Where do we struggle in our humanity, and where do we endure - or sometimes, thrive? Our focus in this course is where, how, and why theatre artists in the twenty-first century engage with these societal concerns, and how they take up these questions in the stories, language, rhythms, and spectacles they create.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or THEA 112 or DANCE 100 or THEA_MFA

General Education: Arts (GA)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

THEA 405W: Theatre History: American Theatre

3 Credits/Maximum of 3

Survey of American drama and theatre from the colonial period to the present. THEA 405 Theatre History - American Theatre is a course that introduces students to the rich history of American theatre from the colonial era to today. Each week plays and supporting materials become the focus of conversations about the intersections of race, gender, class, religion, and art. Early plays from the colonial and post-colonial years reveal the peculiar love/hate relationship between colonists and theatre. After the Revolutionary War plays become the rallying cry as the new nation attempts to forge an identity separate from and equal to Europe.

In the decades that follow theatre provides a voice to previously silent Americans: women, former slaves, immigrants, and non-Christians. The course culminates in the present with readings of the three most recent Pulitzer Prize winning plays and discussion of their impact. This is a Writing-Intensive course.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or DANCE 100

Bachelor of Arts: Arts

United States Cultures (US)

Writing Across the Curriculum

THEA 407W: Women and Theatre

3 Credits

A study of theatre practice and dramatic literature as informed by issues of gender, race, and ethnic background. THEA (WMNST) 407 Women and Theatre (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. Theatre 407 approaches the study of theatre/performance as a valuable site for the exploration of race, class, and gender as social constructs. The focus will be on 20th century developments of women and theater. Feminist theory and theatrical practice will be a focus of the course and will reflect conflicts and differences present within feminism.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or THEA 112 or DANCE 100 or THEA_MFA

Cross-listed with: WMNST 407W

Bachelor of Arts: Arts

United States Cultures (US)

Writing Across the Curriculum

THEA 408W: History of American Musical Theatre

3 Credits

A survey of the history of American musical theatre presented in a social, cultural, and aesthetic prospective.

Bachelor of Arts: Arts

THEA 411: Dramaturgy Practicum

1-3 Credits/Maximum of 12

Dramaturgy Practicum is a variable credit course (1-3) that trains theatre students in the practices of dramaturgy for production. Students may be paired with a particular School of Theatre production or project as an in-rehearsal dramaturg. Others will be assigned to dramaturgy teams or will complete particular dramaturgy tasks. These can include keeping group-sourced or single-authored blogs; posting to social media; taking and sharing photos and videos of the design process; interviewing artists in

production; writing program notes; making lobby installations; hosting talkbacks with performers, audiences, and designers. Students might instead be assigned to a research or archiving project with the School of Theatre in order to learn theatre archiving skills. The 3-credit option is only open to students who have taken THEA 211 - Dramaturgy. These students will take on a major project, most typically the role of production dramaturg for a School of Theatre production or other major project. For the 1-credit option, students will either work on a dramaturgy team, or else they will focus on one kind of dramaturgy practice for several productions, such as production photography, social media posting, talkbacks, program notes, or outreach events.

Enforced Prerequisite at Enrollment: THEA 211

THEA 412: African American Theatre

3 Credits

Exploration of the development of African American theatre from its roots in Africa through the diaspora, to the present time. THEA 412 / AFAM 412 African American Theatre (3) (US;IL) (BA) This course meets the Bachelor of Arts degree requirements. In this course, we will explore the development of African American theatre from its roots in Africa and Europe, through the diaspora, to the present time. We will learn something of the rich diversity of African American people and their contribution to the world's creative mainstream. We will become acquainted with both historical and contemporary artists who created and continue to create this unique American art form. The goals of the course are: 1) to develop familiarity with African American theatre and the socio-historic context in which it was created 2) to develop an understanding of the relationship of African American theatre to mainstream American theatre 3) to acquire an appreciation of the schools, styles, and techniques of African American theatre We will do this by reading and engaging plays in the context of the period in which they were created, viewing films of plays, and attending relevant productions where possible.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or DANCE 100

Cross-listed with: AFAM 412

Bachelor of Arts: Arts

International Cultures (IL)

United States Cultures (US)

THEA 419: Musical Theatre: Business of the Business

3 Credits

This course is lecture and discussion based and designed to address the needs of students preparing to enter the professional musical theatre. Topics will include the techniques and skills of networking, unions, casting directors, agents and managers, headshots/ resumes, bios, life in NYC, tax preparation, and other topics related to the business side of acting for the musical theatre.

THEA 420: Scene Study I

3 Credits/Maximum of 9

Advanced monologue and scene study techniques. Principal focus on realism. THEA 420 Advanced Scene Study is a course in which students are allowed to explore and deepen their understanding of the art and craft of acting. The course is repeatable for credit and taught by a variety of instructors. This allows students to experience the processes of different pedagogical methodologies. Regardless of the instructor, the shared

emphases include: scene work in a variety of styles (from classical verse plays to cutting edge contemporary material) tailored to the needs of the individual student; movement toward increased technical proficiency; deepening awareness that "acting is living truthfully under imaginary circumstances," however similar or different those circumstances may be to the actor's personal life; and, growing self-sufficiency through self-directed scenes and individual rehearsal discipline. The environment of the classroom/rehearsal space is both safe and critical, as students begin to accept that risk is integral to successful acting. The student is also engaged in giving constructive criticism to their peers, learning to be honest, detailed, and nurturing in the process. This critical process requires students to give unconditional support to their peers, support that is geared toward mutual improvement and emotional/physical safety

Enforced Prerequisite at Enrollment: THEA 115 or THEA 120 or THEA 427A

Bachelor of Arts: Arts

THEA 421: Advanced Acting: Physical Approaches

3 Credits

This course builds on the physical approach to character and story creation explored in THEA 420, and aims to equip the student with a working knowledge informed by direct experience and application of physical approaches like, but not limited to, those of Jacques Lecoq, Kari Margolis, and the work of Dell Arte International School of Physical Theatre. Physical approaches are part of 21st Century theatre-making, and our students must have knowledge of current approaches that will both take their work to a more fully-embodied level, and prepare them for work in the theatre field of today.

Enforced Prerequisite at Enrollment: THEA 420

THEA 422: Advanced Scene Study

3 Credits

This course introduces the actor to the skills necessary for successful auditions and performances in television, film, digital media and other commercial venues.

Enforced Prerequisite at Enrollment: THEA 421

THEA 423: Musical Theatre Performance III

2 Credits

Studio training in the unique performance skills, repertoire and business of professional musical theatre. THEA 423 Musical Theatre Performance III (2) (BA) This course meets the Bachelor of Arts degree requirements. In depth preparation and performance of scenes from the works of Sondheim and Webber. Also, exploration of the adjustments needed to perform successfully in non-traditional performance venues. The third in a musical theatre performance studio sequence, THEA 423 applies performance technique and methodology studied in previous studio classes to the works of contemporary composers, particularly Stephen Sondheim and Andrew Lloyd Weber. The course also explores the adjustment to performance needed when working in non-traditional stage spaces such as ballrooms, cruise ships, and industrials. THEA 423 is a continuation of Musical Theatre Performance II. These studios represent the core of the musical theatre training program. Grading will be based on the quality of the musical theatre student's studio work, report, and demonstrated respect for the professional studio environment.

Enforced Prerequisite at Enrollment: THEA 224
Bachelor of Arts: Arts

THEA 424: Musical Theatre Performance IV

2 Credits

Studio training in the unique performance skills, repertoire and business of professional musical theatre. THEA 424 Musical Theatre Performance IV (2) (BA) This course meets the Bachelor of Arts degree requirements. This studio is designed for senior musical theatre majors to hone their skills in acting, singing, and dancing in the last semester of their college career. The majority of the class will be the preparation of the Senior New York Showcase where each student will have the opportunity to perform for an invited audience of agents, alumni, and special guests. Students are responsible for all research and preparation of showcase material. Showcase material will be coached in class, but the main body of preparation relies on the students themselves, utilizing skills and techniques learned throughout their studio training. Grading will be based on attendance, preparation, and attitude. These are all critical factors for entering the profession and for successfully completing this course. Deadlines and appointments must be kept. Students must do adequate outside preparation. THEA 424 is a continuation of Musical Theatre Performance III. These studios represent the core of the musical theatre training program.

Enforced Prerequisite at Enrollment: THEA 423
Bachelor of Arts: Arts

THEA 425A: B.F.A. Acting Studio II

2 Credits

Scene Study THEA 425A B.F.A. Acting Studio II (2) THEA 425A is a laboratory or practicum course requiring active student presentation of work in progress for critiques by the instructor and input from peers. Working in pairs, students will be assigned a five-minute scene from modern American realism. Students must read the play from which the assigned scene is taken, do the necessary historical/analytical homework, develop a character biography and a scene score, and present the result of their work in the initial on-the-feet working sessions for faculty critique and peer input. Taking away responses from each working session, the students are expected to rehearse outside of class to address any issues raised in the previous working session and to ready the scene for the next viewing. In THEA 425A, the instructor will serve, not as a director, but as an acting coach, asking probing questions and using his or her own energy to exhort, guide, and discipline the students. It is expected that faculty intervention will decrease and student self-reliance will increase with each passing studio.

Enforced Prerequisite at Enrollment: THEA 115 and THEA 225A Enforced Concurrent at Enrollment: THEA 425C

THEA 425C: B.F.A. Voice/Speech Studio II

2 Credits

Advanced voice and speech training for BFA Musical Theatre students. THEA 425C B.F.A. Voice/Speech Studio II (2) In THEA 425C, B.F.A. Musical Theatre students will continue to develop and expand their vocal instrument. Basics of vocal production will be repeated and developed with a greater focus on the individual actor's application of his/her voice in the performance of various texts. The first ten weeks will recall the basics of the past two semesters of voice/speech work and continue to expand the actors' capabilities. Extended work in the area of breath

support and release, resonance and vocal range, and speech/articulation will all be explored with appropriate texts. In the last five weeks of the semester, work will focus on text in the performance setting. A short program of text performances will be devised and presented in the last week of class.

Enforced Prerequisite at Enrollment: THEA 225C or THEA 425A

THEA 427A: B.F.A. Acting Studio III

2 Credits

Continuation of THEA 425A THEA 427A B.F.A. Acting Studio III (2) THEA 427A is an extension of THEA 425A, a laboratory or practicum course requiring active student presentation of work in progress for critiques by the instructor and input from peers. Working in pairs, students will be assigned a five-minute scene from modern American realism. Students must read the play from which the assigned scene is taken, do the necessary historical/analytical homework, develop a character biography and a scene score, and present the result of their work in the initial 'on-the-feet' working sessions for faculty critique and peer input. Taking away responses from each working session, the students are expected to rehearse outside of class to address any issues raised in the previous working session and to ready the scene for the next viewing. In THEA 427A, the instructor will serve, not as a director, but as an acting coach, asking probing questions and using his or her own energy to exhort, guide, and discipline the students. It is expected that faculty intervention will decrease and student self-reliance will increase with each passing studio.

THEA 427C: B.F.A. Voice/Speech Studio III

2 Credits

Stage Dialect Studies THEA 427C B.F.A. Voice/Speech Studio IV (2) THEA 427C focuses on the acquisition of stage dialects and accents. For each dialect the student becomes aware of the resonance, phonetic, inflection, and rhythm changes necessary to perform dramatic text with an accent or dialect. Vocal agility, phonetic recall and the ability to integrate the altered vocal behavior to the demands of acting are the primary goals. Each dialect unit will have an introductory instruction, a review session, and a presentation of a reading of a dialect monologue. The final project will be the performance of two dialect monologues. Students will be evaluated upon preparedness, work ethic, focus, openness to change, growth, degree of self-reliant recall, and creative application of new skills. This studio performance class offers opportunity for assessment from the instructor in each class session. Periodic assignments will be made to assess self-reliant application of the work.

Enforced Prerequisite at Enrollment: THEA 425C or THEA 427A

THEA 427H: Theatre Makeup

2 Credits

Advanced makeup techniques, casting with moulage and rubber, construction of prosthetics, hair work.

THEA 428: Musical Theatre Performance Studio V

2 Credits/Maximum of 4

Students will prepare and present workshop reading of a new musical theatre piece

Enforced Prerequisite at Enrollment: THEA 224

THEA 429: Theatre Performance Practicum

1-3 Credits/Maximum of 99

Supervised experience in rehearsal and performance of significant roles.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or DANCE 100

Bachelor of Arts: Arts

THEA 434: Introduction to Directing

3 Credits

Introduction to principles and procedures of play direction.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or THEA 112 or DANCE 100

Bachelor of Arts: Arts

THEA 434H: Introduction to Directing

3 Credits

Introduction to principles and procedures of play direction.

Bachelor of Arts: Arts

Honors

THEA 436: Directorial Processes

3 Credits

Preparing a play for production including the scoring of the script, developing ground plan, casting, and staging projects in American realism.

Enforced Prerequisite at Enrollment: THEA 434 or THEA_MFA

Bachelor of Arts: Arts

THEA 437: Artistic Staff for Production

1-6 Credits/Maximum of 6

To provide students with experience in choreography, dramaturgy, combat, staging, voice/speech, musical direction, assisting in direction, for major productions.

Enforced Prerequisite at Enrollment: approval of proposed assignment by instructor prior to registration

Bachelor of Arts: Arts

THEA 440: Principles of Playwriting

3 Credits/Maximum of 6

Structure, dramatic effect, characterization, and dialogue; the writing, reading, and criticism of original one-act plays. THEA 440 Principles of Playwriting (3 per semester/maximum of 6)(BA) This course meets the Bachelor of Arts degree requirements. THEA 440 is a course in which students are allowed to explore, deepen, and exercise their understanding of the craft of playwriting. This course is repeatable and taught by one instructor. This course utilizes diverse critical commentary, craft-based texts, and plays that elaborate and illustrate the core writing techniques of structure, dramatic effect, characterization, and dialogue. The writing requirement of the class concentrates on the construction of several ten-

minute plays, which are shared in the class as works-in-progress. The students engage with giving and getting constructive criticism inside a safe and nurturing space, and the students work towards articulating and exercising the technical aspects of writing in a clear, concise, and effective manner.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or THEA 112 or DANCE 100

Bachelor of Arts: Arts

THEA 448: Theatre Management

3 Credits

Want to work in Theatre, but you don't want to act or work backstage? There are countless roles "behind the scenes" that are pivotal to the creation and success of theatrical productions. This course offers hybrid studies focused on equipping students to either work in one of these professional settings or launch their own product, organization, or endeavor. Through theoretical analysis coupled with real world experiences and many guest speakers from Broadway and beyond, students have the chance to explore career opportunities based on their interests, expand their skill-sets, and make connections that will help prepare them for possible post-college careers in theatre management.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or THEA 101N

THEA 450: Advanced Topics in Scene Design

3 Credits/Maximum of 6

Design emphasis on a variety of production techniques, genre, and styles. THEA 450 Advanced Topics in Scene Design (3 per semester/maximum of 6)(BA) This course meets the Bachelor of Arts degree requirements. This course will build upon the basic design process introduced in THEA 250. Students will explore design solutions for shows requiring multiple locals. Students will also be introduced to shows reflecting a variety of dramatic styles and will explore effective design solutions within stylistic constraints. In addition to previously introduced graphic skills, emphasis will be placed on graphic techniques involved in the production of scenery, including design drafting, prop drawings, and paint elevations. As this course may be repeated, there will be a rotation of topics to ensure that students receive different content each semester. Topics within the rotation may include: Design for Shakespeare, unit settings Design for Musicals, practical and stylistic concerns Design for Opera Design for shows requiring simultaneous local Poetic or fragmented realism Design for contemporary episodic scripts Epic theatre design

Enforced Prerequisite at Enrollment: THEA 250 or portfolio review

Bachelor of Arts: Arts

THEA 451: Drafting, Drawing, and Painting for the Theatre

1 Credits

Drafting, freehand drawing including perspective methods and property development, rendering techniques, and painters' elevations.

Enforced Prerequisite at Enrollment: (THEA 251 and THEA 252) or THEA_MFA

Bachelor of Arts: Arts

THEA 452: CAD Drafting for Theatre and other Entertainment Applications

3 Credits

CAD Drafting for theatre is an Advanced level course that focuses on the technical aspects of drafting. Students will become well versed in the use of CAD drafting programs such as AutoCAD. Students will learn all of the essential functions to accurately convey information through graphical representations in both 2D and 3D models. This course is geared specifically towards how to use CAD programs to convey information for theatrical and entertainment uses such as technical drafting, scenic elevations, lighting plots, sound diagrams and other entertainment documentation. In addition to learning about the effective use of a CAD program, students will also learn theatrical drafting standards and techniques. This includes information on standardized paper sizes, line weights and styles, use of color, dimensioning guidelines and other pertinent drafting standards. By the end of this course students will have the necessary knowledge to effectively draft, plate and present drawings in both 2d and 3d models for use in entertainment based productions.

Enforced Prerequisite at Enrollment: THEA 251

THEA 453: Advanced Scene Painting

1-3 Credits/Maximum of 12

Practicum study in painting techniques currently in professional use. Exploration of tools, available paints, and texturing materials.

Enforced Prerequisite at Enrollment: THEA 253 or THEA_MFA
Bachelor of Arts: Arts

THEA 454: Period Research for the Theatre

3 Credits

History of decor, styles, and movements in art and architecture.

Enforced Prerequisite at Enrollment: THEA 250 or THEA 260 or THEA 270 or THEA 280 or THEA 285 or THEA_MFA
Bachelor of Arts: Arts

THEA 455: Imagination & Collaboration

3 Credits/Maximum of 3

This course will create an environment in which students can learn about, and build strategies for, their involvement in creative collaborations. They will examine their own individual characteristics, what they know and what they value, and then explore how those characteristics affect their ability to effectively work as part of a creative team. Students will be asked to step outside of their comfort zone to put collective ideas ahead of their own, with the hope of finding collaborative success with their team, but without a guarantee of success, challenging each student to improve the way they communicate, interpret, build trust, brainstorm, compromise, and resolve conflict. Students will work on their creative problem-solving abilities within a group of students from different disciplines in order to achieve a common goal, and they will examine and experience a variety of roles and power dynamics within a team setting, from project manager to contributing member. They will develop stronger competencies in teamwork, professionalism, communication, and leadership as artists and designers.

THEA 459: Theatre Portfolio & Business Practices II

1 Credits

THEA 459 Theatre Portfolio & Business Practices II (1) This course is designed to prepare the student of design for life as a professional theatre designer. There are many challenges to working in the business of design, arising primarily from the fact that most theatre designers are self-employed. It's not enough to be a talented designer; one must also be a savvy business person. Contracts, taxes, record-keeping, resumes, portfolios, interviewing, job hunting, and legal considerations will all be addressed, as they relate to life as a freelance designer. Special attention will be paid to the assembly of a professional portfolio & website, which is the centerpiece of any modern designers' work.

Enforced Prerequisite at Enrollment: THEA 159
Bachelor of Arts: Arts

THEA 460: Advanced Topics in Costume Design

3 Credits/Maximum of 6

Developing and executing a design concept in a variety of the performing arts. THEA 460 Advanced Topics in Costume Design (3 per semester/maximum of 6) (BA) This course meets the Bachelor of Arts degree requirements. THEA 460 places emphasis on the use of text analysis and extensive historical research to make artistic choices as a costume designer in a production of a classical play, opera, or dance. Plays of this sort are of a size and scope not often found in contemporary material, which places exceptional demands on a designer. This course investigates the manner in which the theatrical imagination can be liberated to fulfill the particular requirements of classic theatre, opera, and dance. The course will require several large-scale projects that reinforce the costume design process in a variety of the performing arts. Each area of work within a project is separately graded. These projects will contain written segment components such as a design statement or character analysis, an oral presentation or explanation of the designer's choices and process, and (where applicable) a demonstration of the fully realized costume renderings. The student is expected to master the process that takes a costume designer from reading a script (or listening to a piece of music) to the creation of a design concept to the visual presentation of renderings from which clothing can be constructed. Particular emphasis is placed on developing the oral presentation skills necessary to communication with the director and other theatre artists.

Enforced Prerequisite at Enrollment: THEA 260 or THEA 464
Bachelor of Arts: Arts

THEA 461: Advanced Topics in Costume Construction and Technology

3 Credits/Maximum of 6

A specialized course in advanced costume construction techniques and theatrical costume technologies. THEA 461 Advanced Topics in Costume Construction and Technology (3 per semester/maximum of 6) (BA) This course meets the Bachelor of Arts degree requirements. THEA 461 addresses the skills and techniques of theatrical costume construction necessary for the undergraduate student to understand and master in preparation for work within a professional costume setting. Emphasis is placed upon the creation of an historic silhouette as illustrated by a theatrical costume rendering for both men and women, with an eye to theatrical execution. Focus is placed on the production of clothing, as well as the creation of theatrical properties and accessories for the historic figure. The course will require several large-scale projects

that reinforce the costume construction process in a variety of historic eras. Each area of work within a project is separately graded. These projects will contain supporting research and examine the understanding and identification of construction and accessory techniques as manifested in the costume rendering. A student's approach to problem solving, personal process, communication skills, and successful time management will also be addressed.

Enforced Prerequisite at Enrollment: THEA 261
Bachelor of Arts: Arts

THEA 464: History of Fashion

3 Credits

Survey of dress from Egyptian period to contemporary fashion.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or DANCE 100 or THEA_MFA
Bachelor of Arts: Arts

THEA 465: History of Fashion II

3 Credits

Survey of dress from 1800 to contemporary fashion. THEA 465 History of Fashion II (3)(BA) This course meets the Bachelor of Arts degree requirements. The course is the second part of the history of fashion that is an elective for graduate theatre students, is required for the B.F.A. Costume Design emphasis, and is an elective for the undergraduate theatre minor. The goal of the course is to identify and examine movements and trends in clothing and fashion from 1800 to the present. Each period is studied by using primary sources, slide presentations, and actual garments to illustrate the relationship between clothing and broad social, historical and artistic developments. Emphasis will be placed on plays that serve as particularly good examples of a period or style of fashion covered in the course. Grading will be based on periodic quizzes covering topics from class lectures, slide presentations, and textbook readings. There will be one oral presentation, a written comprehensive final exam, and assigned graphic presentations or 'redrawings' of clothing pieces. To complete these 'redrawings' the student will find a primary source or a photographic reproduction of a primary source and 'redraw' the garment. For example, a student may find a painting, a sculpture, or photo of a garment (usually on a figure) that represents the period being discussed in class. The student would then 'redraw' or copy that image, not trace, for the purposes of identifying the clothing pieces that are shown in the original. The 'redrawings' are graded not on the student's ability to draw but rather on the content, detail, and thoroughness of the pencil sketch.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or DANCE 100 or THEA_MFA
Bachelor of Arts: Arts

THEA 470: Advanced Topics in Lighting Design

3 Credits/Maximum of 9

Advanced Topics in Lighting Design will rotate through opera, dance, non-traditional spaces, architecture, advanced technology, and color theory. THEA 470 Advanced Topics in Lighting Design (3 per semester/ maximum of 6) (BA) This course meets the Bachelor of Arts degree requirements. Advanced Topics in Lighting Design will utilize a rotating curriculum and may be taken twice for credit. Topics will include lighting design for opera, dance, non-traditional spaces, architecture, advanced

technology, and color theory. Students will also learn to write and critique their own work, as well as the work of others, and to speak knowledgeably about design topics. There will also be some flexibility to allow students to pursue individual interests and group-directed projects.

Enforced Prerequisite at Enrollment: THEA 270
Bachelor of Arts: Arts

THEA 472: Lighting Technology

3 Credits

An introduction to the basics of electricity, dimmer protocols, lightboard programming, lighting paperwork, and master electrician & assistant lighting design practices. THEA 472 Lighting Technology (3) THEA 472 is an introduction to the basics of electricity, dimmer protocols, lightboard programming, lighting paperwork, and master electrician & assistant lighting design practices. This course will help prepare theatre designers to understand the inner workings of all of the equipment, working practices and safety requirements that are involved with the business of lighting design. This course will also provide students with many of the skills needed to get their foot in the door and get started in the business. Special attention will be paid to safety, stressing the need for safe working practices and environments over the need to get the show up no matter what. Students will learn how all of the advanced technology that is being introduced to the world of lighting functions and how these new technologies are all integrated into a functional system. Students will serve as master electricians and/or as assistant lighting designers as part of the hands-on production aspect of the class, with ample time devoted to process discussions and post-show critiques of the work. Small-group problem solving and system troubleshooting will be discussed in depth and applied to real production situations.

Enforced Prerequisite at Enrollment: THEA 131 and THEA 289

THEA 474: Theatre Design History I

3 Credits

This course is the first half of a two-semester arc, intended to provide students with a fundamental understanding of the history of theatre design & technology. Beginning with the Greeks and continuing through to modern day, theatre is often a mirror to society, and it is essential that all of the designers, artisans, and craftspeople involved in each production have a visual and aural lexicon of history to draw from. In each area, we will investigate how the world history of the time influenced the creation of theatre productions, with particular attention paid to noteworthy designers, technicians, and craftspeople. Additionally, the evolution of various innovations will be studied to learn how they affected the history of theatre production, but also how theatre influenced the development of new technologies & methods. Theatre Design History I will cover the era from prehistory through to the beginning of the Industrial Revolution, along with specific study of multiple non-Western theatre traditions.

THEA 475: Theatre Design History II

3 Credits

This course is the second half of a two-semester arc, intended to provide students with a fundamental understanding of the history of theatre design & technology. Beginning with the Greeks and continuing through to modern day, theatre is often a mirror to society, and it is essential that all of the designers, artisans, and craftspeople involved in each production have a visual and aural lexicon of history to draw from. In

each area, we will investigate how the world history of the time influenced the creation of theatre productions, with particular attention paid to noteworthy designers, technicians, and craftspeople. Additionally, the evolution of various innovations will be studied to learn how they affected the history of theatre production, but also how theatre influenced the development of new technologies & methods. Theatre Design History II will cover the era from the Industrial Revolution through to modern day.

Enforced Prerequisites at Enrollment: THEA 474

THEA 476: Lighting Technology for Production

1 Credits/Maximum of 6

THEA 476 is a 1-credit course fulfilling, in part, the requirements of the Theatre BFA Design & Technology Major. Students who are assigned to School of Theatre productions in the Lighting area as an Assistant Master Electrician, Master Electrician, Moving Light Programmer, or Lighting Systems Engineer, in support of the Lighting Design, are eligible to register. The course will be delivered as an independent study with the School's Lighting Design faculty, building on the skills learned in classes and previous productions.

Enforced Prerequisite at Enrollment: THEA 289 Enforced Concurrent at Enrollment: THEA 472

THEA 477: Lighting Design for Production

1 Credits/Maximum of 6

Design and execution of design projects.

Enforced Prerequisite at Enrollment: THEA 289
Bachelor of Arts: Arts

THEA 480: Advanced Topics in Technical Direction for the Theatre

3 Credits/Maximum of 6

Advanced study of the methods, materials, equipment, facilities, concepts and processes associated with Technical Direction for the Theatre. THEA 480 Advanced Topics in Technical Direction for the Theatre (3 per semester/maximum of 6) This course will build on the foundations established in THEA 280. Students will be engaged in studying advanced topics through discussions and explorations of current theatre technology, communication and the management systems used to control the processes associated with modern technical direction. Examples of topics include project management, current trends in drafting, advanced technical packages, and structural design for the stage. This course is repeatable and topics will vary. Students will participate in class discussions, hands-on exploration of equipment, investigate current practices through observation and research, and will complete projects associated with the topics studied.

Enforced Prerequisite at Enrollment: THEA 280

THEA 480B: Technical Production IV

3 Credits

Discussion of problems of the technical director: personnel management, time management, scheduling, budgeting, purchasing, and the technical drawing of production.

Enforced Prerequisite at Enrollment: THEA 280
Bachelor of Arts: Arts

THEA 481: Stage and Production Management

3 Credits

Production planning, scheduling, assignment of personnel, rehearsal procedures, and budgeting.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106
Bachelor of Arts: Arts

THEA 482: Technical Production - Rigging

3 Credits

In-depth exploration of current rigging techniques used in entertainment.

Bachelor of Arts: Arts

THEA 484: Sound Recording Techniques

3 Credits

Multi-track audio recording and post production techniques. THEA 484 Sound Recording Techniques (3) THEA 484 will provide fundamental skills in recording an audio production. The first four weeks will cover basics of current recording equipment, basic microphone theory and placement according to principles of sound propagation within performance spaces. The second four weeks will expand on the principles of the first four weeks, considering the problems of recording in a variety of different locations and specific techniques for recording particular instruments. The final seven weeks will focus on work within a recording studio. Students will need to configure a mixer with a multi-rack digital recorder and create a mastered CD with all appropriate post processing (EQ, compression, reverberation, etc.). Students will work on teams for various recording projects, with one student serving as producer for each, so that they gain a comprehensive knowledge of the various duties involved in setting up and operating recording equipment. Team projects will make up the majority of the grading for the class. Periodic quizzes will be administered in order to check the progress of the students and ensure their comprehension of the material. Each student will complete a final project in lieu of a final exam. During the production of this project, they will also be expected to serve in ancillary roles for their classmates' projects. Their participation in these other projects will be considered in the grading of their final project.

Enforced Prerequisite at Enrollment: INART 258A or THEA 285

THEA 485: Sound for Theatre Production

3 Credits/Maximum of 6

Aesthetics of live and recorded sound; recording and editing techniques for the stage.

Enforced Prerequisite at Enrollment: THEA 106 and THEA 150

THEA 486: Stage Management for Production

1-9 Credits/Maximum of 9

Stage manager for University Theatre production.

Bachelor of Arts: Arts

THEA 489: Theatre Production Practicum

1 Credits/Maximum of 99

Supervised experience in production techniques. For theatre majors only.

Enforced Prerequisite at Enrollment: THEA 289 or THEA_MFA

Bachelor of Arts: Arts

THEA 490: London Study Tour

3 Credits

An intensive academic and cultural experience in the theatre capital of the English-speaking world. THEA 490H London Study Tour (3) Theatre-going forms the heart of the LST and of its academic identity. London is the outstanding theatre city of the English-speaking world, offering consistently superb choices in classic plays, contemporary and avant-garde theatre, musical theatre, opera and dance. Students will see a minimum of seven theatre and dance performances: some will be purchased in advance by the instructor, and others will be selected by participants from a wide range of choices. As a complement to the theatre core, the LST's faculty leaders will provide students with an orientation to London and its history, culture, and sights.

Honors

THEA 494: Research Projects - Honors

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

THEA 495: Internship Practicum

1-6 Credits/Maximum of 12

Professional field experience in theatre performance, production, and management assignments.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or DANCE 100 or THEA_MFA

Bachelor of Arts: Arts

Full-Time Equivalent Course

THEA 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts

THEA 496H: Independent Studies - Honors

1-18 Credits/Maximum of 18

Creative projects, including research and design, supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts

Honors

THEA 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Arts

THEA 498: Special Topics

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Bachelor of Arts: Arts

THEA 499: Foreign Studies--Theatre Arts

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or DANCE 100

International Cultures (IL)

Turfgrass (TURF)

TURF 100: Introduction to Turfgrass Management

3 Credits

Introduction to turfgrass species, establishment, maintenance, and pest control of turfgrass species used for sports, lawn/utility turf, and golf courses. TURF 100 Introduction to Turfgrass Management (3) TURF 100 is an introduction to the major turfgrass species, including their identification, growth and development, adaptation, and practical uses. Students will be introduced to turfgrass establishment and renovation. The importance and timing of cultural practices will be covered as well as an introduction to turfgrass pest management. There are demonstration labs including field trips and hands-on activities. There will be three exams and seven quizzes. The students will also be graded on projects including identifying various turfgrass species, seeds, insects, diseases, and weeds. This course is designed for non-science majors with little experience in plant science and culture. This course serves primarily as a service course for the Professional Golf Management Option in the College of Health and Human Development. This course has numerous web-based resources that the students can access independently. The students are required to make several visits to a demonstration lab in the research greenhouses. There are also a number of scheduled field trips.

TURF 230: Turfgrass Pesticides

1 Credits

Course covers chemical toxicity, formulations, environmental fate, labels, MSDS, calibration, IPM, safety, handling, storage, and Pennsylvania certification and regulations.

TURF 235: The Turfgrass

3 Credits

Characterization of the primary plant species used for sports, lawn and utility turf; includes turfgrass morphology, environmental adaptation, and cultural requirements.

TURF 238: Turf and Ornamental Weed Control

3 Credits

Students will be introduced to the development of integrated weed management strategies utilizing a variety of cultural and chemical methods.

Cross-listed with: HORT 238

TURF 295: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practical, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

TURF 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

TURF 307: Golf Course Irrigation and Drainage

3 Credits

TURF 307 is a course developed to instruct students interested in working in the turfgrass management profession. The majority of the course is devoted to irrigation topics with a strong concentration on turfgrass irrigation applications, while the remainder concerns surface and subsurface drainage. The course covers the following topics: The influence of weather on irrigation management; sprinkler characteristics, selection; management of piping and control systems; maximizing irrigation efficiency by using turfgrass evapotranspiration, soil characteristics, and expectations of venue; fundamental hydraulics, irrigation layout and piping sizing; pump characteristics and system winterization; surface and subsurface drainage systems. The course also includes short field trips to various local industry-related facilities for educational evaluation. Note: PLANT 217 may not be substituted for TURF 307 for prescribed course credit.

Enforced Prerequisite at Enrollment: TURF 235 Recommended Preparation: MATH 21 and SOILS 101

TURF 425: Turfgrass Cultural Systems

3 Credits

TURF 425 will prepare students for the practical application of agronomic principles and concepts in the green industry. Students will develop management and problem solving skills. The course will be a platform for students to learn about the integration of different turfgrass maintenance practices into sound management strategies that lead to the production of high quality turfgrass areas. Specifically, the course will include

concepts about golf turfgrass, sports turfgrass and home lawn care. There will be a focus on both the aesthetic quality and functionality of these turfgrass sites and the interrelationship of the concepts.

Enforced Prerequisite at Enrollment: TURF 235 Recommended Preparation: SOILS 101

TURF 434: Turfgrass Edaphology

3 Credits

TURF 434 Turfgrass Edaphology (3) TURF 434 is offered to students that are entering their final year of the turfgrass science major. This course builds on introductory turfgrass and soil courses. In this course you will learn to interpret soil physical results using the United States Golf Associated specifications for greens construction. You will learn how to evaluate and manipulate the physical properties of a soil in order to provide a quality turfgrass stand under varying conditions. You will use new information as well as physical and quantitative tools provided to aid in soil management decisions. You will defend your decisions to other students in group-exercises conducted on a computer bulletin board. You will also submit your decision making process and defend your decisions in writing, in the form of business proposals. This class has a series of labs, some of which run over several weeks. You will use class material and the physical and quantitative tools learned in the labs to inform your decision-making processes. Your grade will be based on exams, lab reports, and practicums. The practicums and the labs are interrelated. The practicums, which are mini-case studies of actual turfgrass situations and problems, require you to apply techniques and information learned in the physical lab periods. The practicums are graded on initial draft, final draft, and your critique of other student's solution to a problem. TURF 434 is an advanced course in soil physical properties.

Enforced Prerequisite at Enrollment: TURF 235 Recommended Preparation: SOILS 101

TURF 435: Turfgrass Nutrition

4 Credits

Turfgrass Nutrition is a study in the nutrition and growth of turfgrass plants. Upon completion of this course, students will be able to distinguish the function and requirements of nutrients in the turfgrasses; describe how soil physical and soil chemical properties/conditions affect nutrient availability; select soil amendments to remedy soil chemical limitations; identify the best fertilizers and application methods to satisfy site-specific nutritional requirements; prepare nutrient management plans by appraising edaphic and environmental conditions and current cultural management and use; and will have discovered how best to sample soil, tissue, and water; submit samples, choose appropriate specialty tests, and interpret reports. TURF 435 compliments Turfgrass Edaphology, by examining soil chemical (rather than physical) properties as turfgrass growth parameters and addressing ameliorative measures in concept and operation. Students are introduced to the many classes of specialty fertilizers used in turfgrass management and their specific attributes are revealed through laboratory and field exercises. Students are evaluated through written testing of plant growth and nutrition concepts, interpretation of soil analysis, recommendations of fertilizer type and rate, and nutrient fate and management. TURF 435 has a substantial laboratory component.

Enforced Prerequisite at Enrollment: TURF 235 Recommended Preparation: SOILS 101

TURF 436W: Case Studies in Turfgrass Management

3 Credits

Case Studies in Turfgrass Management is a three credit, writing intensive course for students in the final year of the Turfgrass Science major. The goal of this capstone course is to provide students with an understanding of processes involved in solving turfgrass and soil problems at the managerial level. Using several real-life scenarios provided by the instructor, students will learn to gather facts associated with a problem, analyze the problem, formulate a set of options for solving the problem, implement a plan of action, and evaluate the results of the action. Once these processes are assimilated, students will form teams and select challenging turf and soil problems, analyze them, formulate options for solving the problems, select the most feasible solutions, and evaluate outcomes. Teams will submit reports and develop presentations for class. Teams will also be charged with questioning presenting teams and evaluating team members. Students will be evaluated through exams, reports, presentations, and class participation.

Enforced Prerequisite at Enrollment: TURF 235 and (TURF 434 or TURF 435) Recommended Preparation: TURF 238 and TURF 425 Writing Across the Curriculum

TURF 490: Colloquium

1 Credits

Oral presentations developed by students in consultation with the course instructor.

Enforced Prerequisite at Enrollment: Seventh semester standing

TURF 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practical, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

Full-Time Equivalent Course

TURF 495A: Internship

1 Credits/Maximum of 3

Preparation for or follow up to supervised off-campus, nongroup instruction including field experiences, practical, or internships. Written and oral critique of activity required.

TURF 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

TURF 497: Special Topics

2-6 Credits/Maximum of 6

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

TURF 499: Foreign Studies

1-8 Credits

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

TURF 499B: Foreign Studies

1-8 Credits

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Ukrainian (UKR)

UKR 1: Elementary Ukrainian I

4 Credits

Reading, writing, and speaking Ukrainian.

Bachelor of Arts: World Language (All)

UKR 2: Elementary Ukrainian II

4 Credits

Reading, writing, and speaking Ukrainian.

Prerequisite: UKR 001

Bachelor of Arts: World Language (All)

UKR 3: Intermediate Ukrainian

4 Credits

Reading, writing, and speaking Ukrainian.

Prerequisite: UKR 002

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

UKR 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

UKR 100: Ukrainian Culture and Civilization

3 Credits

Survey of Ukrainian culture and civilization from the Middle Ages to the present. UKR 100 Ukrainian Culture and Civilization (3) (GH;IL)The course acquaints students with Ukrainian culture from the origins of Kyivan-Rus in the 9th Century to the present day. The course will examine the many facets that make up culture: history, politics, language, literature, folklore,

religion, science, music, and art. The course will place Ukrainian culture in the broader context of the Slavic nations and peoples. It will focus on the development of national identity from the origins of the Ukrainian people through the colonial period under tsarist Russian domination, through Soviet domination, and finally to post-independence identity following the dissolution of the Soviet Union in 1991. The course will include films and expert guest lectures. The course format will consist of lectures, slide, video and audio presentations. Readings will all be in English. Questions and discussion on class lectures and readings and on topical matters will be strongly encouraged. At the end of the course, students will be familiar with the problems that post-colonial Ukraine faces at present. They will have a basic general knowledge of Ukrainian history and geography, and will be acquainted with representative achievements of Ukrainian high and folk culture. There will be a mid-term (30%), a final exam (30%), and a research paper (30%). The latter will be graded both for content and writing ability. Ten percent of the class grade will be for class participation, including attendance and active participation in discussions. Students may also receive extra credit by making a 10-15 minute oral presentation in class on a pre-approved topic, which will offer students the opportunity to practice public speaking. The exams will include written identification questions, brief essay questions, and a longer essay question that synthesizes knowledge acquired in class. As a General Education course, Ukrainian 100 incorporates the following four elements of active learning: international competence (a much lesser known part of the East European world), information gathering and analysis, active use of writing, and dialogue pertaining to social behavior, community and scholarly conduct. The case of Ukraine as a 'submerged nation,' subsumed under tsarist Russia and the Soviet Union, will provide students with a colonial paradigm of development of a minority culture and language under a politically stronger colonizing culture. Students need to write a 10-page paper for the course and will learn to explore library and internet resources. The paper will be graded for content, clarity, structure, and effective use of language. As an extra-credit option, students may volunteer to give a class presentation on their research topic or another topic of interest. Students may also acquire extra-credit by writing reaction papers on topical extracurricular lectures or visits to Ukrainian cultural sites (like the Ukrainian Museum in New York, the Ukrainian Embassy in Washington, DC, or historic Byzantine Rite Ukrainian churches). Ukrainian 100 is not required for the B.A. degree in Russian, but may be used under the rubric of 'Additional Courses' for the B.S. degree in Russian Translation. UKR 100 may be used to satisfy the Gen Ed Humanities and United States Cultures and International Cultures requirements.

International Cultures (IL)
General Education: Humanities (GH)

UKR 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

UKR 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

UKR 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

UKR 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

UKR 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

UKR 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

Honors

UKR 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Veterinary and Biomedical Sciences (VBSC)

VBSC 50: Mechanisms of Disease

3 Credits

Introduction to the study of disease pathogenesis and careers in Animal Health Research and Service. VB SC 050S Mechanisms of Disease (3) Mechanisms of Disease is a first year seminar directed to students with an interest in a career in veterinary medicine or in bio-medical disciplines. Students are introduced to the concepts of epidemiology, cell biology, clinical medicine and toxicology through use of appropriate case material. The importance of basic science courses to the understanding of this material is emphasized. Reading and written assignments are related to the case study material as well as adaptation to the college experience. Grading is based on class participation and written assignments.

First-Year Seminar

VBSC 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

VBSC 101: Careers in Veterinary Medicine and the Allied Professions

1 Credits

Exploring career pathways in veterinary medicine and the allied health industry. VB SC 101 Careers in Veterinary Medicine and the Allied Professions (1) The course is intended for first year students with an interest in careers in veterinary medicine or in the allied industries. Upon completion of the course students will have an understanding of the various careers possible in veterinary medicine; including types of specialization by species and/or by discipline. Students will have the opportunity to discuss careers in industries related to animal health and animal health research. Student learning will occur through the use of guest speakers, written assignments and on-line discussion groups. Student evaluation will be based on performance on assignments and on-line discussion groups.

VBSC 130: Understanding Human Disease

3 Credits

All humans are impacted by disease, either personally or through friends or family members who are affected. Understanding Human Disease is an overview of disease processes for individuals not majoring in a scientific field. Students will have the opportunity to study the basic knowledge tools required to understand how different diseases arise, how they progress, how they are treated and in many cases, how they can be prevented. The course material is divided into two segments: the first portion discussing the different ways that diseases develop and includes explanations on normal and abnormal inflammatory processes, different types of infectious diseases, genetic diseases and congenital abnormalities (birth defects), diseases that affect the immune system and metabolic diseases. Diseases that are affecting significant populations such as HIV, diabetes, cancer and heart disease will be discussed. The second segment includes a discussion of the significant diseases affecting different organ systems of the body. Student participation is encouraged through questions. Additional topics of immediate interest as identified by the news media or class interest will be discussed. The course is intended for those who wish to better understand published medical journalism, for individuals who want to be able to discern the caliber of medical information in the popular press, for those students who wish to make healthy choices in their lifestyle and for individuals who may not be destined for a career in a scientific field.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

VBSC 190: Careers in Veterinary and Biomedical Sciences

1 Credits

Career strategic planning and opportunities for Veterinary and Biomedical Sciences.

VBSC 211: The Immune System and Disease

3 Credits

Introduction to the immune system that emphasizes the immune response to infection and consequences of a defective immune response.

Bachelor of Arts: Natural Sciences

VBSC 230: The Science of Poisons

3 Credits

An introduction to toxicology using real world examples to highlight the impact of toxicants on environmental, biochemical and physiological processes. VB SC 230 The Science of Poisons (3) Toxicology is the study of poisons (natural and man-made) and how these agents adversely affect living organisms. It involves the prevention of harm and the development of measures to assess risk. As a science it borrows from many disciplines including biochemistry, chemistry, epidemiology, genetics, and physiology. It also has great societal impact with regard to the development and testing of consumer products, exposure to industrial chemicals, and maintaining safe food and water. The course format will be lectures that incorporate real world examples of the effects of toxicant exposure on many levels (cell, organ, whole body, environmental). Students will be evaluated by quizzes, exams, and class participation. Students are required to have a basic understanding of biology and chemistry. The course is offered once per year in the Fall semester.

Enforced Prerequisite at Enrollment: CHEM 110 and BIOL 110

VBSC 231: Introduction to Cancer Research and Medicine

3 Credits

An understanding of the terminology, basic concepts, techniques, multidisciplinary approaches and challenges in cancer research and medicine. VB SC 231 Introduction to Cancer Research and Medicine (3) Introduction to Cancer Research and medicine is designed for second year undergraduate students preparing for careers in biomedical research. Students will develop an understanding of the theories, scope, approaches and challenges of cancer related biomedical research. The lectures and discussions will emphasize the interdisciplinary character of the discovery process. Students will be introduced to topics on cellular mechanisms responsible for cancer development and progression; techniques in cancer research involving generation and banking of research materials, and methods for performing molecular, genomic and proteomic analyses; approaches for discovery and validation of diagnostic and prognostic biomarkers as well as systems for high through put screening of targets for rational development of interventional therapeutics. Student evaluation will be based on performance on examinations and class participation.

Enforced Prerequisite at Enrollment: BIOL 110

VBSC 280: Current Issues in Veterinary Medicine

2 Credits

Discussion of the social, ethical and economic aspects of current and emerging issues related to animal ownership and veterinary medicine. V B SC 280 Current Issues in Veterinary Medicine (2) Current Issues in Veterinary Medicine is designed to provide students with the opportunity to research, present and discuss the social, ethical and economic issues important in Veterinary Medicine. Students will be expected to research the literature on specific topics within the general area of discussion, prepare and deliver an in class presentation and discuss their findings. Students are evaluated on class presentations and on three written position papers during the semester. The course is offered every spring semester.

VBSC 280N: Current Topics in Veterinary Medicine

3 Credits

Discussion of the social, ethical, and economic aspects of current and emerging issues related to animal ownership and veterinary medicine emphasizing the appropriate citation of sources and writing about contemporary issues facing this field. Writing assignments will center on new and emerging issues facing today's veterinary professionals. Students completing this course will produce a writing portfolio that includes a range of works appropriate for different audiences, as well as having participated in extensive self and peer evaluation of writing. Students scheduling this course will first complete Engl 15 and Biol 110. Course objectives include teaching written communication skills that will prove valuable to VBSC majors. Upon completion of this course, students should be able to: develop focused writing objectives based on some knowledge of the target audience, find reliable sources of evidence, critically evaluate evidence and sources, correctly cite sources for various types of material, develop an effective outline, write and revise drafts for a final piece of written communication, perform self and peer evaluations of writing, and produce a final piece of written communication that achieves the original objective and is valuable to the target audience. Topics will surround veterinary shortages and possible solutions, gender demographics, animal rights versus animal welfare, small animal care inequity, euthanasia, laboratory testing and medicine, and more.

Enforced Prerequisite at Enrollment: ENGL 15 and BIOL 110

General Education: Humanities (GH)

General Education: Natural Sciences (GN)

General Education - Integrative: Interdomain

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

Writing Across the Curriculum

VBSC 290: Undergraduate Research Colloquium

1 Credits

Presentations by appropriate faculty on research opportunities for undergraduates. VB SC 290H Undergraduate Research Colloquium (1) The goal of the course is for students to acquire the skills necessary to obtain an independent research project of the scope and scale required to complete an Honors Thesis. Students will learn to use online tools to approach primary literature in order to familiarize themselves with faculty research topics. Department faculty will present overviews of their research programs, including potential opportunities for undergraduate projects. First year honors students in the Veterinary and Biomedical Sciences, Immunology and Infectious Disease, and Toxicology majors should take this course in their second semester. Other interested students may take the course with department approval.

Enforced Prerequisite at Enrollment: Permission of program.

Honors

VBSC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

VBSC 331: Pharmacology I: Drug Actions and Reactions

3 Credits

This course teaches the general principles of pharmacology and mechanisms of drug action. The objectives of this course include: Explain fundamental principles of drug action, including how drugs affect the body and how the body affects drugs; Map a drug's path in the body based on route of administration; Explain factors contributing to varied drug response among a population; Describe the mechanism of action, general effect(s), and therapeutic use(s) for major drug classes, and ; Apply pharmacological principles in discussing novel or emerging therapeutic strategies. This course is designed for those interested in becoming health care professionals in the fields of medicine, nursing and pharmacy, as well as those interested in basic scientific research and biotechnology.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M

VBSC 340: Introduction to Human and Veterinary Public Health

3 Credits

This course introduces students to the history of human and veterinary public health, the structure of the human and veterinary public health system (CDC, FDA, and USDA) and the various sectors of veterinary and human public health practice, in order to gain an understanding of the complex factors that determine the health status of a human and animal populations. National, state, and local level practices will be analyzed, as well as the roles that law and government play in human and veterinary public's health. The course will simulate the students' interest in other public health course and program offerings.

VBSC 395: Internship

1-10 Credits/Maximum of 10

Independent study and supervised field experience related to the student's professional interest. Limited to students in animal agriculture majors.

Enforced Prerequisite at Enrollment: Fifth-semester standing in an animal agriculture major. Approval by department of proposed plan before registration.

Full-Time Equivalent Course

VBSC 402W: Biology of Animal Parasites

3 Credits/Maximum of 3

An introduction to animal parasitology. Emphasis placed on host/parasite interactions, parasites of zoonotic importance, control programs and taxonomy. VB SC 402W Biology of Animal Parasites (3) This course provides students an opportunity to obtain an introduction to the field of animal parasitology. Material presented emphasizes life cycle patterns of animal parasites, host-parasite interactions and pathology, disease patterns and zoonotic potential of parasites to human disease, economic importance of parasitic diseases, taxonomy and parasite control programs. Information presented in this course will be useful to students interested in pursuing a career in veterinary medicine or careers dealing with animal care and management. Evaluation of student performance is achieved by 6 quizzes, three examinations and 3 writing assignments. The course is offered each spring semester with an enrollment of 15 to 25 students.

Enforced Prerequisite at Enrollment: BIOL 110

Cross-listed with: ENT 402W
Writing Across the Curriculum

VBSC 403: Principles of Animal Disease Control

3 Credits

Principles of disease control based on knowledge of the multiple causes of animal disease.

Enforced Prerequisite at Enrollment: MICRB 106 or MICRB 201 **Enforced Concurrent at Enrollment:** ANSC 301

VBSC 403H: Principles of Animal Disease Control

3 Credits

Principles of disease control based on knowledge of the epidemiology of animal disease. VB SC 403H Principles of Animal Disease Control (3) Animal Health and well being has emerged as a clear concern of society. The general public is concerned about the health and well-being of their companion animals as well as the animals that provide them with portions of their daily diet. The Foot and Mouth Disease outbreak that occurred in Great Britain in the spring of 2001 coming on the heels of increased concern about Bovine Spongiform Encephalopathy and its possible links to the human disease; variant Creutzfeldt Jacob Disease, resulted in an increased awareness for the potential for animal disease to have adverse effects on society. These effects range from availability of wholesome food products to the zoonotic transmission of diseases between humans and animals. The goal of this course is to introduce students to the principles of animal disease prevention. This requires the student recall relevant background knowledge in biology, nutrition, microbiology and animal husbandry and management. Students will develop an understanding of the complex physiological, biochemical and microbiological mechanisms of importance to the maintenance of health and the prevention of disease. Examples of certain diseases are used to illustrate the application of general principles of disease control. Diseases of world wide importance as discussed in addition to the major diseases of importance to Pennsylvania animal owners. Collectively, the course material should provide animal owners, managers and future animal health professionals with the background to improve the decision making process required to maintain animal health and prevent losses from disease. The inherent, environmental and special factors involved in the maintenance of health and the prevention of disease will be emphasized.

Enforced Prerequisite at Enrollment: MICRB 106 or MICRB 201 **Enforced Concurrent at Enrollment:** ANSC 301
Honors

VBSC 405: Laboratory Animal Science

3 Credits

Principles involved in maintaining laboratory animals. Emphasis is on management, preventive medicine, and surgical considerations used in laboratory animal colonies. VB SC 405 Laboratory Animal Science (3) This course in Laboratory Animal Science introduces students to the biology and characteristics of a variety of laboratory animal species, explores the care and use of animals in various research environments and examines ethical/legal issues pertaining to the use of animals in research and teaching. The laboratory section reinforces topics discussed in lecture and provides an opportunity for students to learn basic animal handling techniques in a safe and professionally supervised environment. Students work with live laboratory animals including mice, rats, hamsters,

guinea pigs, and rabbits. They learn handling techniques, administration techniques (such as by injection), and sample collection techniques (such as blood collection). They also learn surgical principles and perform a surgical procedure using aseptic technique. The Laboratory Animal Science course appeals to and benefits several general groups of students. Those who plan to pursue careers involving animal research such as in academia or industry receive a broad foundation in the field of laboratory animal science as well as an introduction to techniques commonly employed when handling animals. Those pursuing careers involving veterinary medicine or veterinary technology receive training and the opportunity to develop clinical/technical skills focused on a unique group of species. Students that are undecided in their career choice find that the field of laboratory animal science holds many opportunities for those with animal knowledge, handling skills and an understanding of the societal issues surrounding the use of animals in research.

Enforced Prerequisite at Enrollment: ANSC 201 and ANSC 301 and BIOL 110

VBSC 407: Ruminant Herd Health Management

3 Credits

The course will provide students with basic and foundational knowledge regarding herd health programs in ruminant production systems. The student will explore crucial areas of managing production systems such as implementation and development of standard operating procedures (SOPs) and protocols and biosecurity programs for common diseases that threaten the sustainability of the human food supply worldwide, such as Brucellosis and Tuberculosis. Furthermore, the student will explore important concepts regarding diagnosis, treatment, management and prevention of ruminant diseases in an organized manner, moving from younger to older animals, and following them through their production cycle. In addition, the course will integrate on-farm field data collection with farm record analysis to provide students with critical thinking skills for troubleshooting a variety of health issues in production systems. Students enrolling in this course must possess basic information regarding animal biology and farm management. The information provided in this course will complement several courses regarding cattle operation management and prevention of diseases in production animals.

Enforced Prerequisite at Enrollment: ANSC 308 or ANSC 309 or VBSC 403 or ANSC 310

VBSC 409: Wildlife Diseases

3 Credits

The purpose of this course is to provide students with an appreciation of the changing role of wildlife diseases as they relate to wild vertebrate species. The student will learn disease terminology and mechanisms, wildlife disease information resources, selected diseases of historic and current importance for the major Taxa, legal aspects of wildlife diseases, the opportunities for careers in wildlife disease investigation, and scientific writing as it relates to wildlife disease. In particular, the student will gain detailed knowledge of the ecology of diseases that affect wildlife species as well as domestic animals and humans, wildlife diseases with zoonotic potential, those having a significant economic impact on humans, and those which may threaten species survival.

Enforced Prerequisite at Enrollment: BIOL 110

VBSC 410: Principles of Immunology

3 Credits

The MICRB 410 / VBSC 410 Theories of immunity (3cr.) course provides a basic foundation in immunology with a focus on the progression from antigen recognition and innate immune responses to the development of acquired immunity. During the course, students will have the opportunity to learn about key topics that lead to an understanding of the how the human immune system functions. Such topics include the primary cells and anatomical sites of the immune system as well as the activation and processes of innate immunity. In addition, students will learn about the organization and generation of lymphocyte antigen receptors, major histocompatibility complexes, and antigen presentation. Topics will also be presented that allow students to build an understanding of how antigen recognition and presentation leads to the development, selection, and survival of B and T lymphocytes. T-cell mediated immunity, humoral immunity, and the dynamics of the immune response will also be discussed in depth. Topics such as the immunobiology of allergy, transplantation, autoimmunity, immunodeficiency, diseases, vaccines, and/or cancer will also be presented in order to help students build an understanding of the interplay between the immune system and health and disease will be discussed throughout the semester.

Enforced Prerequisite at Enrollment: (MICRB 201 or MICRB 201H) and (BMB 251 or MICRB 251 or BMB 251H or BIOL 230W or BIOL 230M)
Cross-listed with: MICRB 410

VBSC 415: Research Practice in Veterinary and Biomedical Sciences

2 Credits

Research Practice in VBSC provides practical training in laboratory research, which is integrated with formal training in responsible conduct of research, experimental design and data analysis and in-depth discussion of key concepts in the current scientific literature.

Enforced Prerequisite at Enrollment: Third semester standing and BIOL110 or BIOL110H. Permission of the Instructor. Enforced Concurrent at Enrollment: BIOL 230W or BMB 251.

VBSC 418: Bacterial Pathogenesis

2 Credits

Study of molecular interactions between bacterial pathogens and their hosts.

Enforced Prerequisite at Enrollment: MICRB 201 and MICRB 410

VBSC 420: General Animal Pathology

3 Credits

This is a lecture-based course that will incorporate pictures and photomicrographs of gross and histologic lesions. This course primarily emphasizes the fundamental mechanisms of disease at the molecular, cellular, and tissue level, with less emphasis on the gross and clinical manifestations of disease. Students are expected to attend class and participate in class discussion. Specific subjects that will be presented include cellular injury and death, inflammation, blood coagulation, hemodynamic disorders, diseases of immunity, cellular adaptation, neoplasia, microbial mechanisms of disease, introduction to gross pathology, and pathology in practice. This course utilizes

knowledge previously attained from courses in biology, microbiology, and immunology.

Enforced Prerequisite at Enrollment: VBSC 211 Enforced Corequisite at Enrollment: VBSC 211 and MICRB 201

VBSC 421: Comparative Anatomy of Vertebrates

4 Credits

BIOL 421 / VBSC 421 Comparative Anatomy of Vertebrates Students will study vertebrate anatomy from an evolutionary and developmental perspective. They will become familiar with important structures, terminology and function; a basic requirement of the biomedical sciences. Comparisons between representative vertebrate groups (including fish, amphibians, reptiles, birds and mammals) will be used to illustrate structural adaptations of each organ system from an evolutionary perspective. Specific examples comparing ancestral and descendant species will demonstrate the relationships between the lifestyle of an organism and the morphology of homologous structures. A study of early embryonic development, differentiation of primary germ layers and organ formation will provide a basis for understanding organ structure and function. Laboratory activities will involve work with preserved specimens and will focus heavily on anatomic structure identification and function. Topics include anatomic directional terminology, vertebrate classification systems, early embryonic development and a detailed examination of the various organ systems. Specimens are selected to illustrate the anatomy of ancestral vertebrate species, the evolutionary changes observed in descendant species and the association of morphology with lifestyle. Although students will invest the majority of their time becoming familiar with the anatomy of a representative mammal (the cat), multiple species will be examined, and students will be expected to recognize selected anatomic structures in each species studied.

Enforced Prerequisite at Enrollment: BIOL 129 or BIOL 141 or BIOL 220W or BIOL 220M or BIOL 230W or BIOL 230M or BIOL 240W or BIOL 240M or BMB 251 or BMB 251H
Cross-listed with: BIOL 421

VBSC 423W: Pathology of Nutritional and Metabolic Diseases

3 Credits

Overview of nutritional and metabolic diseases of animals integrating concepts from biochemical and physiologic aberrations to clinical applications. VB SC 423W Pathology of Nutritional and Metabolic Diseases (3)Nutrition plays a critical role in health, disease and convalescence of man and animals. Understanding the role of nutrition in disease pathogenesis, recovery and prevention requires an integration of biochemical and physiologic sciences and clinical practice. The intent of this course is to help the student integrate their knowledge from various basic science disciplines to real-world clinical issues related to the role of nutrition in disease pathogenesis, management and prevention across various animal species. Common nutrition and metabolic disease of production and companion animals will be used to demonstrate various principles of disease pathogenesis from a biochemical to whole animal basis. Deficiency and toxicity diseases of all essential nutrients will be addressed. In addition, a secondary role of nutrition in disease susceptibility and recovery mediated through immunologic and physiologic processes will be highlighted. In completing the course, students will have an understanding of comparative gastrointestinal anatomy and how this influences essential nutrients required and unique nutritional disease conditions. Additionally, students will gain

appreciation for clinical management of nutritional diseases from diagnosis to prevention. Course format will be lectures and case-based discussions. With the integrative approach to course content, students are required to have previous courses in biology, biochemistry and nutrition. The course can meet requirements for writing across the curriculum and satisfies 400-level course requirements for Animal Bioscience and Animal Science majors. Prerequisites for the course include B M B 211 or B M B 401, and AN SC 301 or equivalent nutrition course.

Enforced Prerequisite at Enrollment: (BMB 211 or BMB 401) and ANSC 301

Writing Across the Curriculum

VBSC 425: Principles of Avian Diseases

3 Credits

Principles of pathogenesis and control of diseases in poultry and other avian populations. Case material used where appropriate. ANSC 425 / VBSC 425 Principles of Avian Diseases (3) This course discusses the major diseases of domestic poultry, with etiology, prevention, and treatment reviewed on each disease. Since many of these diseases also affect wild birds and pet birds these are also reviewed. Lastly, avian disease with zoonotic (human public health) potential are also discussed in the course. This course is required by those seeking a poultry minor. Previous coursework in pathogenic microbiology is beneficial.

Enforced Prerequisite at Enrollment: (MICRB 106 and MICRB 107) or (MICRB 201 and MICRB 202) Enforced Concurrent at Enrollment: ANSC 211 and ANSC 311

Cross-listed with: ANSC 425

VBSC 430: Principles of Toxicology

3 Credits

Introduction to the biomedical aspects of toxicology with emphasis on the mechanisms and fate of chemical interaction with biological systems.

Enforced Prerequisite at Enrollment: (BIOL 110 and BIOL 240W) or BMB 211 or BMB 401

VBSC 431: Environmental Toxicology

3 Credits

Effects of pollutants on animal health at the chemical, physical, and cellular level.

Enforced Prerequisite at Enrollment: BIOL 110 and CHEM 110 and CHEM 112

Cross-listed with: ERM 431

VBSC 432: Advanced Immunology: Signaling in the Immune System

3 Credits

The study of signaling pathways that regulate the immune response. BMB 432 / MICRB 432 / VBSC 432 Advanced Immunology: Signaling in the Immune System (3) This course will use the immune system as a model in which to study how cells communicate in order to coordinate an immune response. We will focus on signaling mechanisms that regulate such immune responses as T cell activation, Th1/Th2

differentiation, macrophage activation, and migration of immune cells to sites of inflammation. All lectures are based on recent reviews by key investigators in each field, as well as primary articles to present students with the most recent advances, techniques, and approaches used. The goal of the course will be to convey a basis understanding of intracellular signaling mechanisms that will pertain to all areas of biology, an appreciation for current questions and future directions in the field, and an in depth understanding of the signals that govern immune responses. The material presented will build on the basic concepts learned in BMB 400 and MICRB 410, and will lay the foundation for more advanced courses at the graduate level.

Enforced Prerequisite at Enrollment: (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M) and (MICRB 410 or VBSC 410) Cross-listed with: BMB 432, MICRB 432

VBSC 433: Molecular and Cellular Toxicology

3 Credits

In-depth coverage of processes by which drugs/chemicals interact with biological systems and the experimental approaches used to study these interactions.

Enforced Prerequisite at Enrollment: BMB 401 or BMB 401H or BMB 211 Cross-listed with: BMB 433

VBSC 435: Viral Pathogenesis

3 Credits

Viral Pathogenesis provides students with a general knowledge of medically relevant viruses, with a specific focus on important human viral pathogens. The course is meant to help students understand how viruses cause diseases in humans and animals. Lectures and in-class discussions will focus both on the fundamentals of viral infection and disease mechanisms, and on contemporary virology-related topics in the scientific literature. Topics discussed can be divided into two main areas: (1) general concepts related to viral pathogenesis and the control of viral infections; and (2) specific viruses that cause human disease including HIV-1, herpes viruses, papillomaviruses, influenza virus, West Nile virus, Ebola virus, and SARS virus. Although prior knowledge of virology is not required for taking this course, a working knowledge of molecular biology, cell biology, immunology, and some microbiology is helpful.

Enforced Prerequisite at Enrollment: (MICRB 201 or MICRB 201H) and (BMB 252 or MICRB 252 or BMB 252H) or (BIOL 230W or BIOL 230M) Cross-listed with: BMB 435, MICRB 435

VBSC 438: Introduction to Molecular Pharmacology

3 Credits

Upon completion of this course the student will be able to correlate their knowledge of basic and organic chemistry, biochemistry and physiology to the understanding of drug actions. The molecular interactions between drugs and their tissue receptors and possible modifications of drugs to target different receptors will be discussed. Drugs used to treat infectious disease, treat cardiovascular disease, modulate the immune system, and treat cancer will be examined for their molecular interactions. Students will understand the complexities of new drug design and development from the initial stages of laboratory development to final approval for use by the Food and Drug Administration.

Enforced Prerequisite at Enrollment: CHEM 202 and CHEM 201 and BIOL 110 and (BMB 211 or BIOL 230W or BMB 251)

VBSC 439: Mucosal Immunology and the microbiome

3 Credits

Mucosal tissues are gateways into the body. Because of their direct interaction with the environment, a specialized immune response is needed. Unlike the systemic immune system, which functions in a sterile environment inside the body, mucosal immune responses must be able to discriminate between harmful pathogens and benign stimuli like commensal organisms and food. The emphasis of this course is to understand the unique properties of the mucosal immune system. This course will build on the general understanding of immunology presented in MICRB410 and provide a detailed discussion of the symbiotic relationship between the microbiome and the development and function of the mucosal immune system. The effects of disruptions in the microbiome and the effects on disease will also be a major theme of the course. The course will include lecture and discussion of the topics presented in the textbook. In addition, articles from the primary literature will be presented and discussed. These articles will also provide an experimental framework for understanding the mucosal immune system. The topics presented here will provide a greater understanding of mucosal immunology and its interactions with the microbiome for students majoring in Immunology and Infectious Disease, Veterinary and Biomedical Sciences, Animal Science, Biochemistry and Molecular Biology, Biology, Microbiology, Food Science and Nutrition. The course would also be appropriate for Graduate students seeking more information about mucosal immune responses.

Enforced Prerequisite at Enrollment: MICRB 410

VBSC 444: Epidemiology of Infectious Diseases

3 Credits

Overall, the emphasis of this course will be on the core epidemiologic concepts of infectious diseases. Epidemiology is the study of how health and diseases are distributed in populations and the factors that influence or determine this distribution. Infectious disease epidemiology monitors the occurrence of diseases and develops strategies for preventing and controlling disease. In addition to understanding basic epidemiological methods, the course will provide an introduction to infectious disease epidemiology. It will focus on tools and epidemiological methods used for identifying, preventing and controlling infectious disease problems and present a review of epidemiology of many major infectious diseases. The lectures and discussions are designed to provide theoretical and practical framework and principles of infectious disease epidemiology to prepare students majoring in biology, pathobiology, animal science, food science, molecular biology and human nutrition to face the infectious diseases challenge in real world.

Enforced Prerequisite at Enrollment: BIOL 110 and (STAT 200 or STAT 250)

VBSC 445: Molecular Epidemiology of Infectious Diseases

3 Credits

A discussion and practicum of the molecular laboratory techniques used to study molecular epidemiology of infectious diseases.

Enforced Prerequisite at Enrollment: BIOL 220 and (STAT 200 or STAT 250) and VBSC 444

VBSC 448W: Current Topics in Immunology

3 Credits

Study of current approaches and questions driving research in immunology and infectious diseases.

Enforced Prerequisite at Enrollment: MICRB 410 and BMB 400 Writing Across the Curriculum

VBSC 450: Medical Entomology

3 Credits/Maximum of 3

Transmission of human and animal pathogens by insects, mites and ticks, including emergent pathogens, envenomization, and forensic entomology. This course presents principles of transmission of human and animal pathogens by insects, mites and ticks. Non-transmission based aspects of medically important arthropods such as envenomization, forensic entomology and genomics will be discussed also. Basic arthropod biology with special attention to biological properties of vectors and their interactions with pathogens will be presented. We will cover basic components of arthropod disease cycles and principles of pathogen transmission dynamics. The major groups of arthropod-borne pathogens and vectors will be discussed. Special topics will include emergent pathogens, vector genetics, traditional and modern disease control strategies and venomous arthropods.

Enforced Prerequisite at Enrollment: ENT 313 or (BIOL 11 and BIOL 12) or BIOL 110 or BIOL 220W

Cross-listed with: ENT 450

VBSC 451: Immunotoxicology of Drugs and Chemicals

3 Credits

An in depth discussion of the effect of xenobiotics and drugs on host immune mechanisms. VB SC 451 Immunotoxicology of Drugs and Chemicals (3) Maintaining good health is a priority for most of us, and a key element in staying healthy is a properly functioning immune system. However, we are constantly exposed to a barrage of chemicals in the environment both natural and man-made. Some of the key questions asked included: 1) do environmental chemicals affect the generation of immunity?, 2) is our environment to blame for bad health? , and 3) can natural compounds cause immunotoxicity? These questions and more will be addressed in Immunotoxicology. This course will focus primarily on the effects of chemicals in the environment but will also cover the impact of other factors such as therapeutics, recreational drugs, and dietary factors on the immune system. Immunomodulatory mechanisms will be examined at systemic, cellular and molecular levels. Discussions will include theory, principles, and methodology and key issues in immunotoxicity, host immune mechanisms, and tumorigenesis. Key issues in regulatory immunotoxicology will be discussed to make students prepared for jobs in Federal Regulatory Agencies. Grading for undergraduates will include midterm and finals, and class participation; while graduate students will be required to also write a short, immunotoxicologically-related research proposal. Our intent is to provide a bridge between the two sciences and the undergraduate majors of Immunology and Toxicology, with an introduction to the basic mechanisms by which environmental, occupational, and therapeutic agents may interfere with immunologic systems. Immunotoxicology is

offered every fall semester and is designed for undergraduate students from toxicology, immunology, and forensic science majors.

Enforced Prerequisite at Enrollment: MICRB 201 or BMB 251

VBSC 455: One Health

3 Credits

This course addresses the challenges and opportunities at the convergence of One Health/public health, animal health, and environmental/ecosystem health. This interdisciplinary course will introduce the concept of One Health as an increasingly important approach to a holistic understanding of disease prevention and the maintenance of human and animal health. The list of topics will include lectures that emphasize the bidirectional impact of animal health on human health, the impact of the earth's changing ecology on health, issues of food and water security and preparedness and the benefits of comparative medicine. The course will also explore short and long term approaches to address the problems that emerge from growing interaction between human and animal populations driven by growth in the human population, new trends in animal production practices, industrial pollution, changing patterns of wildlife populations, human intrusion on new ecosystems, and trans-border mobility of humans, animals, and food.

Enforced Prerequisite at Enrollment: VBSC 340

VBSC 456: Case Studies in Global One Health

3 Credits

The lectures will cover a variety of topics ranging from measures of health and disease in populations through events occurring in globalization of health. Students will do class presentations of case studies based on evidence-based reports that justify and elaborate upon the major one-health efforts that can and have changed the health status of millions of people globally. The case studies will cover key aspects of One Health including assessment, policy development and quality assurance on one-health programs. The case studies will reveal the magnitude and understanding of current health challenges facing the world. The case studies will show how countries with minimal financial resources and limited health infrastructure, through sensible and systematic efforts have improved the health of their people. Through these case studies, the students will learn to identify critical factors that have contributed to successes as well as failures of various institutions and initiatives intended to address one-health issues.

Enforced Prerequisite at Enrollment: VBSC 455 and VBSC 444

VBSC 485: Human Genomics and Biomedical Informatics

3 Credits

The purpose of this course is to introduce students to the field of Human Genomics and Biomedical Informatics, in particular in the context of genetic architecture of complex human diseases and traits. The field of Human Genomics has experienced a massive explosion in data generation technologies, new discoveries, and increasing popularity in many scientific fields. This course will cover the molecular, statistical, population, and analytical aspects of modern human genomics and translational aspects of this field in biomedical informatics. Current methods to uncover the complex underpinnings of disease including

methods to explore gene-gene and gene-environment interactions and data integration will also be covered.

Enforced Prerequisite at Enrollment: BIOL 322 and (STAT 200 or STAT 250 or STAT 301 or STAT 401)

Cross-listed with: BMB 485

VBSC 494: Honors Thesis

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of a Veterinary and Biomedical Sciences honors thesis.

Enforced Prerequisite at Enrollment: Junior or senior status in the Schreyer Honors College and permission of the Veterinary and Biomedical Sciences honors advisor.
Honors

VBSC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

VBSC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

VBSC 499: Foreign Studies

0.5-4 Credits/Maximum of 10

Courses offered in foreign countries by individual or group instruction.

Wildlife (WILDL)

WILDL 101: Introduction to Wildlife Management

3 Credits

Basic principles of wildlife management. Introduction to general ecology and wildlife population dynamics.

WILDL 103: Animal Identification

4 Credits/Maximum of 4

Identification of mammals, birds, reptiles, and amphibians; introduction to their life histories.

WILDL 106: Wildlife Management Techniques

4 Credits

This course is an overview of laboratory and field techniques for wildlife and natural resource research and management. The first third of the course prepares students to become proficient in land navigation by emphasizing topographical map, compass and Global Positioning System (GPS) use and basic surveying techniques and measurements. The second third of the course covers urban and suburban wildlife management, including techniques for encouraging native wildlife and discouraging human-wildlife conflict. The final third of the course addresses mark and recapture techniques, censusing methods and

population estimation, and wildlife telemetry methods. In-field data collection, data entry, and management are emphasized throughout the course. This course satisfies the DuBois campus first year engagement (FYE) by introducing the student to campus, University, and professional resources.

First-Year Seminar

WILDL 106T: Wildlife Management Techniques (Honors)

4 Credits

This course is an overview of laboratory and field techniques for wildlife and natural resource research and management. The first third of the course prepares students to become proficient in land navigation by emphasizing topographical map, compass and Global Positioning System (GPS) use and basic surveying techniques and measurements. The second third of the course covers urban and suburban wildlife management, including techniques for encouraging native wildlife and discouraging human-wildlife conflict. The final third of the course addresses mark and recapture techniques, censusing methods and population estimation, and wildlife telemetry methods. In-field data collection, data entry, and management are emphasized throughout the course. This course satisfies the DuBois campus first year engagement (FYE) by introducing the student to campus, University, and professional resources. The honors section of the course includes an in-depth exploration of a survey technique or method or additional field experience(s). The activities for the honors section vary by semester and are related to the interests of the students enrolled in the course. Previous activities have included participating in a night-time owl playback survey and generating transects for a deer pellet count.

First-Year Seminar

Honors

WILDL 204: Wildlife Mensuration

4 Credits

Estimation and analysis of animal populations and their habitats, including sampling considerations and basic biometry.

Enforced Prerequisite at Enrollment: 3 credits in MATH

WILDL 207: Outdoor Recreation

3 Credits

Sociology, history, and economics of recreational demand; recreational areas and management procedures.

WILDL 208M: Terrestrial Wildlife Management (Honors)

3 Credits

Ecological characteristics and manipulation of terrestrial habitats; control of wildlife populations. This course provides an overview of ecological characteristics of terrestrial habitats and the influence of those characteristics on wildlife populations. Course goals include (1) acquisition of knowledge related to how wildlife (at the individual and population level) interact with and are influenced by changes in their environment, (2) application of management and survey techniques (emphasized in the laboratory component of course), (3) understanding the application of techniques and principles learned in this class and others to wildlife management scenarios at the local, state, federal, and international level, (4) acquisition of critical thinking, reading, writing, and

research skills, and (5) collecting and organizing data and presenting it in a professional format. Writing, editing, and peer review are emphasized. The honors section of the course includes an in-depth exploration of a survey technique or method or additional field experience(s). The activities for the honors section vary by semester and are related to the interests of the students enrolled in the course. Previous activities have included additional bird banding opportunities, a trip to a local workshop on disease, and preliminary analysis of saw-whet owl banding data.

Enforced Prerequisite at Enrollment: FORT 150 and WILDL 101 and WILDL 103 and WILDL 106

Honors

Writing Across the Curriculum

WILDL 208W: Terrestrial Wildlife Management

3 Credits

This course provides an overview of ecological characteristics of terrestrial habitats and the influence of those characteristics on wildlife populations. Course goals include (1) acquisition of knowledge related to how wildlife (at the individual and population level) interact with and are influenced by changes in their environment, (2) application of management and survey techniques (emphasized in the laboratory component of course), (3) understanding the application of techniques and principles learned in this class and others to wildlife management scenarios at the local, state, federal, and international level, (4) acquisition of critical thinking, reading, writing, and research skills, and (5) collecting and organizing data and presenting it in a professional format. Writing, editing, and peer review are emphasized.

Enforced Prerequisite at Enrollment: WILDL 101 and (WILDL 106S or WILDL 106H) Recommended Preparations: WILDL 103

Writing Across the Curriculum

WILDL 209: Animal Handling and Care

4 Credits

Techniques in capturing, marking, and maintaining wild animals in captivity. Wildlife physiology, parasitology, and necropsy procedures are covered.

Enforced Prerequisite at Enrollment: WILDL 101

WILDL 211: GIS and Aerial Photo Interpretation in Wildlife Management

4 Credits/Maximum of 4

Use of Geographic Information Systems and aerial photo technology with applications in wildlife management and natural resources.

WILDL 213: Wetlands and Fisheries Management

4 Credits

Introduction to basic limnology. Ecology and management of swamp, marsh, pond, and stream habitats and their animal populations.

Recommended Preparations: WILDL 101 and WILDL 103 and WILDL 106S

WILDL 294: Undergraduate Research in Wildlife

1 Credits/Maximum of 2

In Undergraduate Research in Wildlife, students will be introduced to all aspects of wildlife research including study design, writing a research

proposal, collection of data in the field, data entry, data analyses and statistical methods, and writing a scientific paper. Students will be responsible for managing all aspects of the selected research project including organizing data collection and field assistants. The professor will be available to advise on the writing of the research proposal (literature review and methods), field work, data entry and analyses, and the writing of the final paper. Students will be responsible for presenting their research in the future.

WILDL 295: Internship in Wildlife Technology

1-6 Credits/Maximum of 6

Supervised off-campus field experience related to student's major.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor.

WILDL 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

WILDL 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Wildlife and Fisheries Science (WFS)

WFS 150S: First-Year Seminar

2 Credits

The objectives of this first-year seminar course are to: (1) Engage and prepare first-year college students for academic success by orienting them to the scholarly community and introducing them to available academic resources. (2) Introduce students to Pennsylvania's forests and some of the research and other activities currently underway at Penn State that supports the conservation and management of these resources. (3) Introduce students to strategies they can use while at Penn State to prepare for careers related to forestry, wildlife/fisheries, and other natural resources disciplines.

Cross-listed with: FOR 150S
First-Year Seminar

WFS 209N: Wildlife and Fisheries Conservation

3 Credits

The conservation and management of our natural resources is critical to all aspects of human existence. Wildlife and fishery resources are integral to our food supplies, the quality of our lands, and form a deep foundation of our culture. This course will introduce students to fisheries and wildlife and basic ecological principles as they relate both to the natural and human-influenced environment. It is open to all students with a basic background in biology. Students will learn to identify and analyze the interacting components of fisheries and wildlife systems and to apply basic ecological principles to current wildlife and fisheries management and conservation issues. The course will explore the basic

tools, practices, and concepts used in the conservation and management of fish, wildlife, and their respective habitats. The course will also explore the human dimensions aspects of managing common property resources, like fish and wildlife, including the roles various stakeholders have in the management of these resources.

Recommended Preparation: a course in high school biology

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

WFS 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

WFS 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

WFS 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

WFS 300: The Vertebrates

2 Credits

Overview of the evolution, systematics, ecology, and behavior of the subphylum vertebrata. W F S 300 The Vertebrates (2) The purpose of this course is to introduce students to vertebrate zoology and will include overviews of vertebrate evolution, systematics, anatomy, physiology, ecology, and behavior. The course will begin by introducing the phylum Chordata. The cephalochordata, amphioxus (Branchiostoma lanceolatum), will be discussed and used as a model of a prevertebrate. The basic organization and theories of vertebrate evolution will be reviewed. The superclasses, Agnatha and Gnathostomata, will be introduced. The origin of each of the major group of vertebrates will be traced. The general approach will be phylogenetic and include discussions of the major changes associated with each group's evolution and selected elements of their extant diversity and biology.

Enforced Prerequisite at Enrollment: BIOL 110

WFS 301: Vertebrate Laboratory

2 Credits

W F S 301 Vertebrate Laboratory (2) The purpose of this course is to introduce students to the anatomy of the vertebrates and to expose students to the diversity of vertebrates that reside in Pennsylvania. Students will dissect and learn the anatomy of the dogfish, frog, and cat or mink. Additional laboratory periods will concentrate on collecting/observing, and identifying fish, amphibians, reptiles, birds, and mammals.

Museum curation techniques will be taught, and students will be required to construct dichotomous keys to specimens that inhabit Pennsylvania. The identification part of the course is meant to introduce students to representatives of the taxa that occur within the Commonwealth in preparation for higher-level courses in ichthyology, herpetology, ornithology, or mammalogy. Collection techniques will emphasize the proper collection and preservation of organisms for natural history museums.

Enforced Concurrent at Enrollment: BIOL 110 and (WFS 209 or WILDL 101)

WFS 310: Wildlife and Fisheries Measurements

3 Credits

Wildlife and Fisheries Measurements will introduce students to basic measurements used to describe fish and wildlife populations and their habitats. Laboratory exercises will stress sampling approaches and implementation, common techniques for collecting information about amphibians, fish, birds, and mammals and their respective habitats, mapping and orienteering, and methods for summarizing and reporting findings.

Enforced Concurrent at Enrollment: BIOL 110 and (WFS 209 or WILDL 101) and (STAT 200 or STAT 240 or STAT 250)

WFS 340: Statistics for Conservation of Wild Populations

3 Credits

Statistics for Conservation of Wild Populations provides an overview of the statistical techniques used by wildlife and fisheries biologists to research wild animal populations and guide management and conservation. Wildlife and fisheries researchers use many approaches that are not taught in general statistics classes, because they deal with wild populations that cannot be censused, randomly sampled, or consistently resampled. We will cover methods used to estimate animal abundance, survival, occupancy, and habitat use, as well as how we can test hypotheses about individual, temporal, and spatial variation. Students will learn how to implement these methods using standard statistical software (such as program R and MARK), how to determine the best method for answering a question, and how to interpret statistical results in the context of management and conservation.

Enforced Prerequisite at Enrollment: C or higher in STAT 200 or STAT 240 or STAT 250

WFS 406: Ornithology Laboratory

2 Credits

W F S 406 Ornithology Laboratory (2) Ornithology Laboratory establishes the basic skills for identifying bird species in the field. This laboratory and field course is open to students with some background in wildlife and should be taken after completing or at the same time as the ornithology lecture course. The objectives of this course are for students to use laboratory specimens, identification software, field guides, and instructor-led field trips to 1) define, locate, and recognize anatomical features used to describe birds and characterize families; 2) recognize and identify approximately 160 species of birds by sight and approximately 60 by song in the field and/or lab; and 3) describe habitat, seasonal abundance, and distribution of bird species within the state. Most weeks include an introductory lecture followed by field instruction.

Enforced Concurrent at Enrollment: WFS 407

WFS 407: Ornithology

3 Credits

Introduction to the biology, ecology, adaptations, and conservation of birds.

Enforced Prerequisite at Enrollment: BIOL 110

WFS 408: Mammalogy

3 Credits

IDENTIFICATION, SYSTEMATICS, CHARACTERISTICS, ADAPTATIONS, ECOLOGY, BEHAVIOR, NATURAL HISTORY AND CONSERVATION, AND SOCIO-ECONOMIC ASPECTS OF MAMMALS.

Enforced Prerequisite at Enrollment: BIOL 110

WFS 409: Mammalogy Laboratory

2 Credits

W F S 409 Mammalogy Laboratory (2) Mammalogy Laboratory provides the necessary skills for identifying North American mammals. Taken concurrently with or after completing the mammalogy lecture course, this laboratory and field course is open to students with some background in wildlife. The objectives of this course are for students to 1) identify North American mammals by skulls and skins, 2) identify eastern North American mammals by tracks in the field, 3) capture and measure small mammals, and 4) gain an understanding of the characteristic behavior and ecology of North American mammals. Fields skills include animal handling, tracking, and observation. Additional skills may include skin and skull preparation and museum techniques for the care of mammals.

Enforced Concurrent at Enrollment: WFS 408

WFS 410: General Fishery Science

3 Credits

Introduction to the study, management, and uses of fish populations; methods of investigation, culture, and harvest of fishes.

Enforced Concurrent at Enrollment: BIOL 110 or WFS 209 or WILDL 101

WFS 422: Ecology of Fishes

3 Credits

Role of fishes in aquatic communities and general ecosystems. Environmental factors influencing fish as individuals, populations, and communities.

Enforced Prerequisite at Enrollment: BIOL 110

WFS 430: Conservation Biology

3 Credits

The application of biological principles to issues in the conservation of biodiversity. FOR (W F S) 430 Conservation Biology (3) This course applies basic principles of ecology and genetics to issues regarding the conservation forested ecosystems and their associated fisheries and wildlife. The objective of this course is to provide a broad appreciation of the concepts in conservation biology that are important to solving

contemporary natural resources problems. Students will be exposed to the history of conservation biology, values of biodiversity, definitions of species concepts, protecting the genetic structure of species, extinction as a natural process, vulnerability to extinction, biodiversity at the community, ecosystem, and landscape levels, habitat fragmentation, metapopulations, legal aspects of conservation, ecosystem management, exotic species, pollution, human population issues, measuring genetic diversity, attitudes towards nature, ex-situ conservation, and ecosystem restoration.

Enforced Prerequisite at Enrollment: BIOL 220W or FOR 308 or WFS 209
Cross-listed with: FOR 430

WFS 431: Conservation Genetics

3 Credits

This course will provide a comprehensive overview of evolution and conservation genetics, an interdisciplinary science that focuses on understanding the processes that influence genetic diversity at the individual and population levels. Foundational concepts in evolutionary ecology, population, and quantitative genetics, and tools described therein will be applied to conservation design, management, and restoration strategies for species of conservation or commercial importance to address real-world challenges in conservation science. This course will cover issues including inbreeding, climate change, invasive species, conservation of threatened and endangered species, adaptation and climate change, and habitat restoration using examples from a broad range of biological systems.

Enforced Prerequisite at Enrollment: BIOL 110
Cross-listed with: FOR 431

WFS 435: Limnology

3 Credits

Biogeochemistry and natural history of freshwater ecosystems. W F S (E R M) 435 Limnology (3) This course will define and describe major principles (physical, chemical, biological, and ecological) that govern the structure and function of freshwater ecosystems (ponds, lakes, and rivers). Current scientific literature will be critically reviewed and discussed in relation to comparative philosophy, methodology, and case studies that cover a range of topics in limnology. The objectives of E R M (W F S) 435 are to familiarize students with the major physical properties, chemical cycles, taxonomic groups of organisms, and ecological interactions that define and describe the natural function of aquatic ecosystems. The course will use case studies to illustrate and examine pertinent issues (e.g., excessive material loading, introduction to exotic species, habitat fragmentation, and climate change) that can alter the structure and function of aquatic ecosystems. Knowledge of these basic ecosystem principles will be applied towards formulating real-life resolutions to the issues identified in class, in order to better manage aquatic resources (methods to reduce material loads, transport controls of exotic species, habitat restoration, and reduction of global gases). This course will be useful to both undergraduate and graduate students seeking degrees in Environmental Resource Management, Wildlife and Fisheries Science, Ecology, and other related subjects. At the undergraduate level, the course will serve as a 400-level selection in both the Environmental Resource Management and Wildlife and Fisheries Science degree programs. At the graduate level, the course will compliment several Wildlife and Fisheries courses that form the compliment of that degree program. Moreover, the course can satisfy the course requirement for ecosystems ecology in the inter-college Ecology

graduate program and serve as a breadth course in Water Resources for graduate students in the Watershed Stewardship program.

Enforced Prerequisite at Enrollment: BIOL 110 and BIOL 220W and CHEM 110

Cross-listed with: ERM 435

WFS 436: Limnological Methods

3 Credits

Application of current methodologies to evaluate the biological, chemical, and physical characteristics of aquatic ecosystems. E R M (W F S) 436 Limnological Methods (3) Limnological Methods will instruct students to apply state of the art analytical measurements in order to gain an understanding of how and why ecosystems support specific biodiversity and biogeochemical cycles. The course will help students define key ecological elements (e.g., ecosystem metabolism, resource limitation, predator-prey relations) in both qualitative and quantitative terms, thereby making them tangible, tractable, and readily understandable. The course will use an instructional rubric to integrate conceptual, analytical, and communicative exercises in order to instruct students about how to evaluate variation in natural ecosystems. This course provides experiential training in the scientific process (rubric), so students can learn by doing, thereby internalizing their knowledge. Course content is organized into three 5-week sections, each of which will emphasize one component of the biogeochemical cycle (physical, chemical, biological). In each section, students will carry out a focused group study designed to evaluate how a pertinent environmental perturbation can affect that component of the aquatic biogeochemical cycle. The course content in each five-week block will have students: 1) review the experimental design and hypothesis, 2) implement the experimental design in the field or laboratory, 3 and 4) process and analyze samples in the laboratory, and 5) make statistical and graphical evaluations of the experimental results relative to their hypothesis (in class) and present these findings in written form. Knowledge of these basic ecosystem principles will be applied towards formulating real-life solutions to the issues identified in class, in order to better manage aquatic ecosystems. This course will be useful to undergraduate students seeking degrees in Environmental Resource Management and Wildlife and Fisheries Science, as well as graduate students pursuing degrees in Ecology, Forest Science, Wildlife and Fisheries Science, Watershed Stewardship, and other related subjects. At the undergraduate level, the course will serve as a 400-level elective in Environmental Resource Management degree program, Wildlife and Fisheries Science degree program, and the inter-college Marine Science option. At the graduate level, the course will complement several Forest Science and Wildlife and Fisheries courses. Moreover, the course can also satisfy the requirements for the ecosystems ecology focus in the inter-college Ecology graduate program. Grades will be based on three research papers, and a final laboratory practical.

Enforced Prerequisite at Enrollment: BIOL 110 and CHEM 110
Cross-listed with: ERM 436

WFS 446: Wildlife and Fisheries Population Dynamics

3 Credits

Wildlife and Fisheries Population Dynamics focuses on the concepts and tools needed to make predictions about how populations of fish and wildlife respond to changes in their environment, external stressors, and management actions. Students will learn the mathematical and programming tools needed to measure population processes and make predictions about future population sizes. The students will

have opportunities to apply these concepts and tools to address fish and wildlife population management problems. Examples include assessing the effects of harvest, managing invasive species and wildlife diseases, reducing extinction risk and recovering small populations, and predicting the efficacy of a range of management actions affecting population demography. Students taking the class will need to have an understanding of basic fish and wildlife ecology, tools and techniques for monitoring populations, and general concepts related to the conservation and fish and wildlife management.

Enforced Prerequisite at Enrollment: (WFS 209 or WILDL 101) and (STAT 200 or STAT 240 or STAT 250) Recommended Preparation: WFS 310

WFS 447M: Wildlife Management

3 Credits

Management of renewable wildlife resources by applying ecological concepts, habitat evaluation, and decision-making; writing and editing reports are emphasized.

Honors
Writing Across the Curriculum

WFS 447W: Wildlife Management

3 Credits

Management of renewable wildlife resources by applying ecological concepts, habitat evaluation, and decision-making; writing and editing reports are emphasized.

Prerequisite: W F S209 or W F S309
Writing Across the Curriculum

WFS 450: Wetland Conservation

3 Credits

Wetland types, classification, functions and values; hydrology, soils, and plants; introduction to wetland identification and delineation; wetland regulations. E R M (W F S) 450 Wetland Conservation (3) Wetlands are unique ecosystems, differing in many ways from both terrestrial and aquatic environments. They provide recognized values and functions to society, although these values and functions remain difficult to quantify. The study of wetlands is interdisciplinary, requiring background knowledge in science, management and policy disciplines. This course will explore the variety of wetland types and functions, and emphasize the diverse hydrological, biological, chemical, and physical interactions that occur within wetlands. Because wetlands are recognized as valuable assets in the landscape, issues surrounding wetland management and regulation have taken on increased importance; we will address these issues as well. Topics will also include the restoration of degraded wetlands and wetland creation, along with the construction of wetlands for pollution abatement. Students will become familiar with different wetland types and how they are classified, and will develop skills in understanding the interactions between wetland hydrology, hydric soils and hydrophytic vegetation. They will also develop an understanding of important national and state policies and regulations pertaining to wetlands and their protection and delineation. Classroom assessment will be based on three cumulative exams, homework assignments, and a final project. The course will fulfill 3 credits of electives or technical selections in the Wildlife and Fisheries Science major. Other students university-wide may be interested in the course, and the intention is to

develop a course that is accessible to a wide variety of traditional and non-traditional students. For proper instruction, a technology classroom with computer projection equipment will be required. E R M 450 will be offered each fall semester. Enrollment will be limited to 60-80 students.

Enforced Prerequisite at Enrollment: ERM 300 or WFS 209
Cross-listed with: ERM 450

WFS 452: Ichthyology

2 Credits

Ichthyology is the study of fishes, the largest and most diverse group of vertebrate animals. This course covers a wide range of topics including systematics, classification, morphology, physiology, behavior, and ecology of fishes. Students will learn the characteristics and natural history of the major groups of fishes and consider conservation and management implications.

Enforced Prerequisite at Enrollment: BIOL 110

WFS 453: Ichthyology Laboratory

2 Credits

Ichthyology Laboratory establishes the basic skills for identifying freshwater fish with a focus on the fishes of Pennsylvania. Students use laboratory specimens, field guides, and dichotomous keys to define and recognize anatomical features used to describe fish and characterize families. Students learn to identify fish species using scientific and common names and to describe factors that affect the distribution and abundance of species across the state. Field trips to local waterways allow students to learn collecting techniques and practice identification skills in the field.

Enforced Prerequisite at Enrollment: BIOL 110 Recommended Preparation: WFS 452

WFS 454: Field Ichthyology

2 Credits

Field Ichthyology is designed familiarize students with collection, observation, and field identification of Pennsylvania's fish fauna. Students will get hands-on instruction on how to collect, preserve, catalog, curate, and observe fishes. Additionally, students will learn how to gather pertinent in situ behavioral and distribution information on fishes and how to manage, record, and store field data. With the increasing emphasis on biodiversity and environmental monitoring, students need to be able to collect, manage, and store data as well as secure the chain of custody. This course is offered annually in partnership with agencies, research centers, and universities within Pennsylvania. Classes begin Sunday evening and extend until Friday afternoon. After the three-hour introductory class on Sunday evening, students meet each day for field collections/observations from 8am-5pm (weather dependent). In the evenings, students reassemble in the laboratory for additional activities and lectures. On one day, a series of night collections is made that extends until midnight. Students are responsible for their motel and food expenses during the week. All transportation to and from the collection sites is provided. The class will meet at least four times by appointment during the fall semester to enable students to process preserved samples that they collected.

Enforced Prerequisite at Enrollment: BIOL 110

WFS 460: Wildlife Behavior

3 Credits

Scholarly discussion and critique of history, concepts, and application of wildlife behavioral concepts to conservation issues. The course will give an in-depth coverage of concepts related to an understanding of wildlife behavior. Particular focus will be given to a discussion, critique, and development of these concepts and their application to contemporary issues in conservation and natural resource management of wildlife because there is a general lack of understanding of behavior by conservationists and natural resource managers.

Enforced Prerequisite at Enrollment: BIOL 110**WFS 461: Animal Welfare: Science and Ethics**

3 Credits

Understanding animal welfare and well-being in farmed, wild and captive animals, and the implications for policy, legislation and conservation. Whether we interact with farmed animals, wild animals in natural settings, or captive reared wild animals bred for research or for re-introductions, there is a growing interest in their welfare. What do animals need to manifest good welfare and well-being? To find answers we need to devise experiments that determine what animals want and what they find aversive. This allows us to find ways to decrease fear and stress associated with handling and captivity. This course covers the practical issues of animal welfare; animal ethics in wildlife management, conservation, and agriculture; and the use of animals in research. The course provides a framework with which to consider philosophical positions on animal use (covering aspects such as rights-based views versus utilitarian views) and the history of ethical debate over the interactions that humans have with other species. The course also addresses the current social, economic, and legal developments related to animal welfare and animal ethics.

Enforced Prerequisite at Enrollment: BIOL 110**WFS 462: Amphibians and Reptiles**

3 Credits

This course explores the evolution, ecology, and conservation of amphibians and reptiles. This course is open to all students with some background in biology. The objectives of this course are for students to 1) describe the evolution, anatomy, reproduction, and physiology of amphibians and reptiles, 2) place contemporary research in the context of the natural history traits and behavioral ecology of herps, and 3) critically evaluate the application of these concepts to natural resource management for salamander, frog, turtle, lizard, and snake species and populations.

Enforced Prerequisite at Enrollment: 5th Semester standing or higher and 6 credits of BIOL**WFS 463W: Fishery Management**

3 Credits

Management of sport and commercial fisheries, including biological, political, social, and economic factors; regulations and other management techniques. W F S 463W Fishery Management (3) This course will introduce students to the management of recreational and commercial fisheries. The course emphasizes fishery management as a goal-oriented process that adapts over time to changes in fish

populations and societal goals. Students will learn to recognize and understand that ecological, economic, political, and social forces shape this management process. Major methods of fisheries management involving people, population, and habitat management will be surveyed. Case studies highlighting the application of these management strategies to current fishery management are explored. Writing reports and management plans is emphasized.

Enforced Prerequisite at Enrollment: WFS 209 and WFS 300 and WFS 301 and WFS 310

Writing Across the Curriculum

WFS 465: Restoration Ecology

4 Credits

Restoration ecology is a discipline that integrates principles from ecology, engineering, landscape architecture, economics and other select social sciences to repair ecosystems that have been degraded, damaged, or destroyed. The goal of restoration is to restore the structure of biological communities and the ecological functions and ecosystem services they provide to society. This course will cover the field of restoration ecology for students who see themselves someday practicing or participating in restoration projects during their careers. The course will cover the conceptual and theoretical foundations that underlie restoration efforts and link these to real-world applications in past and ongoing restoration projects in a variety of types of ecosystems. Examples of local and regional restoration projects will be used to reinforce principles discussed in class.

Enforced Prerequisite at Enrollment: BIOL 110 or FOR 203
Concurrent at Enrollment: BIOL 220W or FOR 308
Recommended Preparation: 3 credits in statistics
Cross-listed with: FOR 465

WFS 489: Supervised Experience in College Teaching

1-3 Credits/Maximum of 3

The Supervised Experience in College Teaching course provides select undergraduate students with formal, supervised teaching experience in a Wildlife and Fisheries Science course. Faculty recruit students who excel in a particular course to serve as undergraduate teaching assistants for subsequent offerings of that course. Duties may include serving as peer tutors, teaching assistants, or laboratory assistants, and developing and/or evaluating course activities and materials. Students participating in this course will develop a deeper understanding of the focus course material by actively helping teach the material. The course is only available to students who are invited to serve as teaching assistants for a Wildlife and Fisheries Science course and enrollment is by permission of the instructor.

Enforced Prerequisite at Enrollment: Permission of program**WFS 494: Undergraduate Research**

1-12 Credits/Maximum of 999

Supervised student activities on research projects identified on an individual or small group basis.

Enforced Prerequisite at Enrollment: Permission of the Wildlife and Fisheries Science Program

WFS 494H: Undergraduate Research

1-12 Credits/Maximum of 999

Supervised student activities on research projects identified on an individual or small group basis

Enforced Prerequisite at Enrollment: Permission of the Wildlife and Fisheries Science honors adviser, Schreyer Honors College Honors

WFS 495: Wildlife/Fisheries Internship

1-6 Credits/Maximum of 6

Supervised field experience related to the student's major.

Enforced Prerequisite at Enrollment: Approval of proposed assignment by instructor prior to registration
Full-Time Equivalent Course

WFS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

WFS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

WFS 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Women's Gender and Sexuality Studies (WGSS)

WGSS 432W: Gender and Sexuality in the Bible

3 Credits

This writing intensive course will examine issues of gender and sexuality in the Bible, including the Hebrew Bible/Old Testament, the Deuterocanon, and the New Testament. It will introduce students to a variety of academic approaches to the Bible with respect to a broad range of topics. These topics include: gender identity, sexual orientation, sex, marriage and divorce, adultery, monogamy and polygyny, same-sex relations, chastity and celibacy, prostitution, gender violence, pornography, fertility, procreation, abortion, divine gender and sex, incest, and many others. In covering these themes, the course will deal with some of the most challenging and often disturbing stories and passages in the Bible, the ancient library of books that is sacred to Jews and Christians and which has otherwise greatly influenced civilization for more-or-less two thousand years. Alongside a close reading of the text (philology), this course will employ historical and literary criticism, investigations into ancient material culture (archaeology), modern theoretical interpretive approaches, reception theory, and other methodologies to examine not

only the biblical writings in their ancient contexts, but their interpretation and use throughout history to construct social norms.

Prerequisite: 3 credits in CAMS, RLST, or JST.

WMNST 83N: First-Year Seminar in Women's Studies

3 Credits

WMNST 83N First-Year Seminar in Women's Studies (3) This course introduces first-year students to the complex and interdisciplinary field of Women's, Gender, and Sexuality Studies. Students develop an understanding of a feminist approach to understanding stratifications of power and privilege in society not only impact but co-constitute constructions of gender and sexual identity that are sometimes at odd with an individual's lived experience. Students learn that social variables such as gender, age, social class, religion, ethnicity, race, sexual orientation and place of residence affect the way people view the world, behave and communicate. Students will develop the ability to locate, organize, and evaluate information about these identity intersections from a variety of sources, and use them to synthesize and analyze their own lived experience as a gendered being. Through the reading of texts, discussions, debates, and individual and collaborative projects, students are introduced to: feminist analysis of current topics and issues in women's and gender studies; to using women's and gender studies as a discipline and form of critical engagement; to the concepts of interdisciplinary vs. multidisciplinary research and scholarship; to

intersectional analysis of identity, power, and oppression; to scholarly conduct and responsibilities. Students will be expected to develop an understanding of current issues and debates within and beyond the field of women's and gender studies as they relate to contemporary fiction and nonfiction writing as well as feminist thought through social media. Students will recognize that social variables such as gender, age, social class, religion, ethnicity, race, sexual orientation, and place of residence affect the way people view the world, behave, and communicate. Students will develop the ability to locate, organize, and evaluate information about these identity intersections from a variety of sources and use them to synthesize and analyze their own ideas as well as come to an understanding regarding the stratification of power and privilege in society.

WMNST 100: Introduction to Women's and Gender Studies

3 Credits

This introductory survey course fulfills requirements for General Education in Social Sciences, the Bachelor of Arts degree in Social and Behavioral Sciences, and US and International Cultures competence. It is also a prerequisite for upper-level courses in Women's, Gender, and Sexuality Studies. This class focuses on women's shared and unshared experiences, issues of gender roles and stereotyping, questions related to sex/gender systems, and the different disciplinary approaches to the study of women and gender. The course asks how women's behavior, activities, accomplishments, roles, sexuality and status have been shaped by biological, psychological, sociological, cultural, historical and political determinants, as well as by women's experiences based on their racial, class and sexual identities. Topics include the history of women's liberation movements, women's experiences in home, work and educational settings, gender roles and stereotyping as influenced by media, culture, education, and other social institutions, health and body image issues, and multiple forms of oppression. The course will focus equally on feminist issues in both the US and on a global scale and is both interdisciplinary (drawing information and readings from history, psychology, political science, and sociology) and broadly inclusive (addressing at all times the relationship between gender, race, class, ethnicity and sexual orientation).

WMNST 101N: African American Women

3 Credits

This course offers an introduction to the sociological, historical, and political experiences of African American women, their roles and contributions to society. Through an interdisciplinary approach, we will pay particular attention to historical and contemporary responses to intersectional challenges African American women face. Drawing from the 19th, 20th, and 21st centuries, through the use of print and digital texts, oral histories, film, music, poetry, and local events, we will investigate various forms of social and political activism including work in labor, civil rights, black power, feminist, womanist, and other movements, the impact of popular culture on what it means to be an African American woman, as well as the implications of claiming such an identity. By focusing on key moments, institutions, and figures in history, the course demonstrates African American women's central roles in the development of American institutions as we know them today, and challenges students to engage critically with questions of race, gender, class, and sexuality, as they wrestle with theories of Black Feminist Thought and Womanism.

WMNST 102: Women of the African Diaspora

3 Credits

Women of the African Diaspora is an introduction to studying the lives of African Diaspora women and the systems of power that shape them across cultures and geographies. The course centers on the politics of race and gender, on notions of origins and belonging and the meaning of resistance as a cultural and political tool. We will engage with patriarchy as a system of power implicated in identity formation and social relations. We will pay particular attention to the ways colonial histories and racial legacies have shaped the experiences of women in Diaspora. To this end, students will explore the complex and contested ways in which multiple economic, political, and cultural institutions affect the lives of women in the diaspora and examine a variety of issues including economy and labor, mobility and Activism, creativity and literary production and spirituality and social change. Rooted in a diasporic and transnational feminist framework, the course addresses issues of power, culture, racial formation, and citizenship and explores spatiality, movement and border crossings. It follows an intersectional approach to the politics of race and gender and engages diaspora as a historical and contemporary condition that addresses the realities of women in African decent as shaped by the legacy of slavery and the contemporary racial and social pattern of globalization. Students will explore broad patterns, changes, and continuities between diasporic communities globally and the way they shaped women's experiences through an analysis of the history of colonization, slavery, independence struggles, nation-building, imperialism, neo-colonialism, revolution, violence and social movements. The course will provide an interdisciplinary perspective to develop a nuanced understanding of the histories and the lived experiences of women of African descent both globally and in the context of their local geographies. To this end, the course explores both similarities and differences of diasporic experiences. It examines the complex and contested ways in which multiple economic, political, and cultural institutions affect lives of women of African Descent both in the US and globally and by addressing the relationship between economy and labor, mobility and Activism, creativity and literary production, spirituality and social change. It challenges universal and homogenous notions of blackness and engages feminist politics of solidarity as a site of both difference and commonality. The course incorporates interdisciplinary approaches and materials such as films, music, novels, short stories to examine how racial, gender, sexual, and class identities are constructed in the context of the diaspora.

WMNST 103: Racism and Sexism

3 Credits

This survey course examines racism and sexism as cultural, political and economic processes that shape contemporary social life in the United States. It provides an historical overview of the roots of modern racism and sexism and will explore these structural inequalities continue to matter in a "post-racial" and "post-feminist" era. Students will engage a broad range of texts that discuss these forms of inequality as intersecting, mutually constituted forms of marginalization. Students will develop a deeper understanding of how race, gender, sexuality, and class conditions identity formation; racism as a structural process that shapes and limits the life chances of non-white communities; and the long tradition of resistance that women and communities of color have developed to combat these social inequalities. The course is divided into two sections. The first introduces a range of terms: race, gender, class, sexual politics, intersectionality and neoliberalism. The second half considers various case studies: mass incarceration, toxic waste, (un)natural disasters, reproductive justice, and Islamophobia in the war on terror. Students will leave with both an understanding of key theoretical terms in the study of racism and sexism and be able to apply these concepts to contemporary social issues.

WMNST 104: Women and the American Experience

3 Credits

Selected aspects of the role of women in United States history and culture from colonial to modern times. AMST 104 / WMNST 104 Women and the American Experience (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. AMST 104 / WMNST 104 is a broad-ranging introduction to women in American history and culture from colonial to modern times. While specific topics may vary from class to class, this survey course examines the history of American women, paying particular attention to issues of race and diversity and examining how American women's cultural, political, and economic roles have changed over time. Major themes and topics might include: work and the sexual division of labor; civic activities and the political dimensions of women's historical experience; political power and processes in American history; the role of family and personal life; women as active makers of history in the full range of national experience; the influences of art, literature, popular culture, technology, geography, regionalism, religion, immigration, and other sociological and cultural factors. This course offers students valuable experience in critical thinking, analysis, and writing and a broad introduction to American women's issues, and so serves as preparation for more advanced courses in American studies, American literature, American women's history, and women's and gender studies. AMST 104 / WMNST 104 counts towards the American Studies major and minor and the Women's Studies major and minor.

WMNST 105N: Living in a Diverse World

3 Credits

This introductory survey course fulfills General Education Integrative Studies requirements in humanities and social sciences, and also meets the requirements for the United States Cultures Designation and Bachelor of Arts in Humanities and Social and Behavioral Sciences. This course uses literature, film and scholarly texts to inspire students to explore how conceptions of social difference, such as those linked to categories of gender, race, sexuality, class, ethnicity, and disability, shape society and everyday interactions historically and today. The course takes an intersectional perspective to explore how and why these categories vary over time and space, the effects of such variations for individuals and communities, and the connections between identity and the exercise of power. Geographically, the course emphasizes the relationship between social difference and power in the U.S. history and society, but takes a transnational perspective when possible by making comparisons to contexts beyond the United States. Furthermore, the class examines how individuals and communities most directly marginalized by these processes contest and re-imagine dominant categories and assumptions. Materials and discussions in the class trace broad social and historical trends as well as dive into the facets of everyday life. The class is designed to encourage reflection on the ethical challenges that arise when we become aware of how privilege, power and difference are intertwined in our world and daily lives. Students who successfully navigate this course will be able to: 1. Apply basic theories of identity, difference, social power and privilege to a wide range of textual and visual materials, and to their own interactions in the context of day-to-day life. 2. Critically engage at an introductory level histories of how race, gender, sexuality, class and disability have been constructed in the U.S. context. 3. Consider transnational dimensions of similar dynamics and contrast these with the U.S. context. 4. Identify and analyze the multiple ways individuals, communities and social movements have resisted and remade categories of identity and changed relations of power over time and space. 5. Recognize and explore the ethical dimensions of social, political and/or economic marginalization rooted in constructions of social identity.

WMNST 106N: Representing Women and Gender in Literature, Art and Popular Cultures

3 Credits

Interdisciplinary consideration of primary works and scholarship pertaining to women in the humanities and the arts. WMNST 106N Representing Women and Gender in Literature, Art and Popular Cultures

(3) (GA;GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This is an introductory survey course that fulfills General Education Integrative Studies requirements in humanities and arts, and also fulfills United States and International Cultures requirements. The course is a prerequisite for upper level women's studies courses. WMNST 106N is an introduction to the interdisciplinary field of Women's, Gender, and Sexuality Studies, with an emphasis on the experiences, achievements, and status of women in the arts and humanities in the U.S. and global context. While providing a broad overview of scholarly research and theory pertaining to women and gender, students will also see many examples of contemporary women's creative practice through the visual arts, media, and popular culture. Students will learn about the challenges women artists have faced in making their way in a male-dominated arts and media industry; they will learn how these artists sought and continue to seek new languages and forms, whether in paint, words, film, music, crafts, to reassess and re-imagine notions of sex and sexuality, gender, race and ethnicity that underlie many forms of social injustice. Depending on the location where the course is taught, class meetings may be a mixture of lectures, group discussions, individual and group exercises, films, and guest speakers. Assigned readings and class meetings may be designed to help students reassess predominant modes of thought and to give students tools to appreciate the creative work of highly diverse women. Depending again upon location, evaluation methods will include a balanced selection from among short papers, longer research papers, journals, book reviews, quizzes, exams, group assignments and other creative activities.

WMNST 110: Sociology of Gender

3 Credits

Changing sex role expectations and behavior for men and women in contemporary society. SOC (WMNST) 110 Sociology of Gender (3) (GS;US) (BA) This course meets the Bachelor of Arts degree requirements. This course provides an introduction to the analysis and understanding of how men's and women's lives are different and how they intersect with each other. The course focuses on the social construction of gender and the impact of gender on experiences in a variety of social contexts and institutions throughout the life course, including cross-cultural comparisons of gender expectations. An overriding objective is to help students better assess and analyze the effects of gender throughout history and in their everyday lives. Class sessions are a mixture of lectures, discussions, group exercises, guest speakers, and films designed to engage the students in the learning process. Each session helps students to critically evaluate the effects of gender discussed in their readings and experienced in their everyday lives. The evaluation tools used for this course extend this critical evaluation. Although the specific evaluation methods vary by sections, all sections use some form of reaction papers, book reviews, and/or journals. These writing assignments require students to demonstrate an understanding of the class readings, lectures, and activities, and to offer an evaluation and assessment of these readings and presentations. Because the social construction of gender is intertwined with family, work, religion, education, government, and all interpersonal interaction, the course overlaps with courses in each of these areas. This course meets a General Education requirement in Social and Behavioral Sciences. It can be used as a lower-level sociology course in the Sociology BA major and the Sociology minor. It can also be used as a supporting course in the Women's Studies major and minor.

WMNST 116N: Family and Gender Roles in Modern History

3 Credits

This course explores the transformation of modern families in the "Western" world, beginning with the basic context and elements of families as early as sixteenth-century Europe and Colonial America. The course has a primary focus on marriage, parents and children, and gender in the context of the history of family, family life, and gender roles in the United States. The course focuses on the social history of families, encompassing the ever-changing elements of sociological, political, and gender history within American families.

WMNST 117: Women in United States History

3 Credits

HIST 117 / WMNST 117 provides students with an overview of the most important historical developments in the history of women in the United States, including women's actual experiences as members of a class, a race, and an ethnic community, the progress women have made as individuals, workers, and citizens as well as the opposition they have faced. While knowing the facts is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or order to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations/arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the diverse experiences of different groups of American women. (2) Students will gain an understanding and knowledge of the political, economic, and social processes that shaped the history of women in the United States. (3) Students will learn how to think historically by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of United States women's history. Demonstrate an understanding of the diverse experiences of different groups of American women. Demonstrate an understanding of the social, political, and ideological structures that shaped the history of American women and continue to shape the modern United States.

WMNST 120: Sex, Gender, and the Body

3 Credits

This introductory course considers core topics in the field of feminist sexuality studies to both unsettle popular mainstream discourses on sexuality and to aid students in developing a more comprehensive, inclusive, and ethical lens through which to view intersections of gender, sexuality, and the body. Over the course of the semester, students will engage critical conversations in the field of feminist sexuality studies, from debates on pornography and sex work to subcultural and queer sexual practices to the emergence "hook-up culture" and new technologies transforming the landscape of sexual knowledge and practice. The course also substantively engages the ethics of sexual consent, sexual pleasure, and sexual communication. Utilizing an intersectional approach, the course examines how sexual identities and experiences are informed by differences of race, ethnicity, gender, class, and dis/ability status. The course is interdisciplinary and grounded in the behavioral and social sciences, drawing from feminist sociological, psychological, historical, ethnographic, and public health literatures in order to provide students with a comprehensive and multi-faceted introduction to recent, contemporary, and emergent scholarship on sexual health and diverse forms of sexual practice. Geographically, the course emphasizes the relationship between social difference, power, and sexuality in U.S. history and society, but takes a transnational perspective when possible by making comparisons to contexts beyond the United States. Furthermore, the class examines how individuals and communities most directly marginalized by these processes of sexual stigmatization contest and re-imagine dominant categories and assumptions. Materials and discussions in the class trace broad social and historical trends as well as dive into the facets of everyday life. The class is designed to encourage reflection on the ethical challenges that arise when we become aware of how privilege, power and difference impact sexual knowledge and practice.

WMNST 136: Race, Gender, and Employment

3 Credits

This course will ask how race and gender affect work in the contemporary United States. We will consider how race and gender shape people's work opportunities, their wages at work, and whether they participate in paid or unpaid labor (or both). We will begin with an overview of work and the changes in the workforce over time; we will move to investigate

how workplace structures reproduce gender and race inequalities; will ask how race and gender inequalities are informally maintained through education systems and social networks; will consider differing dimensions of inequality across poverty, immigration, and sexuality; and will consider how studying unpaid labor helps us better understand the formal paid economy. This course meets the Bachelor of Arts degree requirements.

WMNST 137: Gender, Sexuality, and Religion

3 Credits

WMNST 137 explores the history of different conceptions of gender and sexuality as they are understood within major religions (e.g. Hinduism, Judaism, Islam, Christianity, Buddhism, indigenous spiritual systems). The course emphasizes modern and contemporary contexts of gender/religion debates, introducing feminist historical methods in order to trace the origins and trajectories of today's controversies. Students should expect to gain a comparative historical perspective on at least three theological traditions. Possible topics include: history of gender and religious practices; femininities and masculinities in a spiritual context; the flesh and the spiritual body; and sexuality, and both ethical and theological approaches to theories of gender, feminism, and identity. We will explore ways in which religious teachings, in both historical and contemporary contexts, inform secular understandings of gender

and the ways in which contemporary conceptions of gender inform religious practice. While religion plays a crucial role in defining sex and gender norms, changing sex and gender norms can pressure the doctrine, discourses, practices and organizational structures of faith institutions, some established centuries or millennia ago. The course considers not only the roles of women and men, or constructions of masculinity and femininity, but also the impacts of non-binary genders and sexualities that may be acceptable (even celebrated) in some religions and shunned in others. We will address urgent and perennial questions from different religious perspectives: what is the spiritual meaning of sexuality? Is sexuality an obstacle or a vehicle for spiritual fulfillment? Who are the voices of authority who set the sacred rules on sexuality and who gets to enforce them? How do we (or should we) balance the tensions of non-aligned government and religious concerns, as in contemporary debates around same-sex marriage; abortion and reproductive rights; legal definitions of "family"; the Muslim veil in secular contexts; divorce; trans rights; attitudes toward the body; gender mutilation and/or sex-reassignment surgery; sexual violence towards women, gay, and trans individuals around the world; child and sexual abuse among the clergy; and religious leadership and inclusion. The course also touches on the impacts of colonialism, globalization, and migration on gender and sexuality.

WMNST 166: History of Sexuality

3 Credits

WMNST/HIST 166 History of Sexuality (3) (GH;US) This is a 100-level course on the history of sexuality, spanning several centuries and a wide range of contexts. The study of sexuality offers a particularly good lens for developing students' analytical ability to think historically about something that is often considered both natural and exclusively modern. Topics will include the role of religion, medicine, law, and politics in controlling and shaping sexuality; change and controversy over birth control, abortion, and gender roles; the connections between prescriptive literature and lived experience; the origins and meanings and racial violence in the context of ideas about sexuality; the concept of respectability; and the experiences and conflicts that have shaped the emergence of modern lesbian, gay, and trans identities. Students evaluate large questions about sources, methods, and analysis that historians face, including: How do we recover stories of private life, from societies and eras different from our own? How does our own understanding of what sexuality "is" complicate our historical exploration? What can we learn about gender and sexuality, repression and resistance, deviance and acceptance, identity and community from studying persons of nonconforming gender from the past? How has racism been employed to justify particular reproductive and sexual practices, as well as to limit claims to sexual respectability? To what extent is the study of sexuality inherently a study of gender, sex roles, and feminism? While focused primarily on the United States, the course will offer students opportunities to examine these questions in other, transnational contexts.

WMNST 175N: Fashion, Gender, and Identity

3 Credits

Do clothes really "make" the woman? In this course, we explore how the living art and practice of fashion intersects with gender, and shapes our multiple identities. This is an integrative learning course, which means we bring together the methods, theories and skills taught in general education arts courses (GA) with those practiced in general education humanities courses (GH). Our course is grounded in visual literacy, and we learn how to read clothing through the study of formal elements including material, color, form, line, texture and mood. Our inquiries place women's fashion into cultural, political and social contexts. We concentrate on three areas of study: the construction of particular kinds of femininity through fashion, challenges and subversions, and the contributions of women at all levels of the fashion industry, from factory labor to haute couture. Along the way, we will be encountering diverse individuals who have shaped women's fashion, from Michelle Obama to the pop star Selena to Vera Wang. Finally, in this class we connect theory to practice by situating ourselves as creators of fashion. During interactive laboratories, we empower ourselves by acquiring skills including basic sewing, cutting, sketching, draping, and embellishing garments; we also digitally design a collection using specialized software.

WMNST 194: Women Writers

3 Credits

Short stories, novels, poetry, drama, and essays by English, American, and other English-speaking women writers. ENGL (WMNST) 194 Women Writers (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. English 194 will constitute a wide ranging study of works by American, British, and other English-speaking women writers, including novels, short stories, poems, plays, and prose. The class will approach this literature from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Bradstreet, Wollstonecraft, C. Rosefti, M. Shelley, Austen, C. Bronte, E. Bronte, G. Eliot, D. Wordsworth, Dickinson, Wharton, Stowe, Freeman, Jewett, Fuller, H.D., Moore, Sitwell, Bishop, Brooks, Plath, Cather, Woolf, Stein, Lessing, Bowen, O'Connor, Welty, Porter, Oates, Olsen, Sarton, Gordimer, Atwood, Morrison, Kinkaid, McCarthy, and Churchill. The course seeks to make students aware of the extensive body of literature written by women through the analysis, evaluation, and appreciation of specific works by women writers. The course also seeks to help students understand the female perspectives—the varying values and interests of women—reflected in the texts at

hand and to position these perspectives within wider social, historical, and political contexts. The course also seeks to make students aware of the special problems faced by both women writers and the female inhabitants of the societies they describe in their work. As a course in women's literature, ENGL/WMNST 194 concerns itself with questions of gender. In so far as some of these women writers are black or women of color, it concerns itself with questions of race and ethnicity. In as far as the course looks at women's literature in the context of men's literature, it is concerned with the inter-relationship between dominant (male) and non-dominant (female) culture in the United States as well as in Britain. In so far as the course covers lesbian writers, it is concerned with sexual orientation. Topics under consideration will vary from class to class, but may include a chronological introduction to the development of women's literature, a consideration of a principle theme or themes common to women's literature through a number of works from across a number of historical periods, a consideration of a number of women's works in the context of historical events central to their creation, a consideration of a number of women's works in the context of formal or aesthetic elements common to those works and their various effects. This class will prepare students for advanced courses in women's literature as well as other academic courses that engage in the verbal and written analysis of complex written texts.

International Cultures (IL)

WMNST 200: Global Feminisms

3 Credits

This course introduces students to the complexity of feminisms in the context of contemporary globalization. Much of the course focuses on the variety of feminist movement transnationally, particularly as those movements respond to not only local culture and politics, but also to global politics, and as such it touches again and again on the history of power. Explorations of the interanimating systems of power in a given area or region includes attention to ideologies of gender, race, sexuality, colonialism, imperialism, health and welfare, any or all of which are either supported or disrupted by globalism. The course holds a feminist lens to issues such as: gender and sexualities; the politics of the body; ongoing effects of colonialism-in theory and practice-on women worldwide; women's health; women and the environment; women's labor; political economy; transnational migrations; global class relations; women and/in the media; violence against women; women and war;

the global sex/human trafficking trades; silence and marginalization; citizenship politics; women in politics and activism around the globe. The course examines contemporary feminist theory in the Global North and the Global South, highlighting the ways in which the term "feminism" continues to be contested. Given that we no longer talk about "feminism" in the singular in the United States, lack of agreement on the priorities of feminists worldwide is even more acute, given diverse cultural, political and economic positions of women around the globe. Thus the course also asks students to resist the kinds of generalizations that have led to inadequate feminist response to urgent challenges faced by women around the world. At the same time, the course will ask what kinds of connections can be made between local feminisms, and transnational feminist movement.

WMNST 202N: Women, Gender, and Feminisms in Africa

3 Credits

This introductory course provides students with a broad interdisciplinary overview of scholarly research and theory related to women and gender studies in Africa, using both historical and contemporary examples from across the continent. We will explore the complex, and oftentimes contradictory, meanings attached to gender and sexuality in various African contexts. For example, what does it mean to be a "good" woman in Uganda today? How does this definition change (or not) if she comes out as a lesbian? What if s/he identifies as a transgender man or rejects gender binaries altogether? What if gender did not matter, or even, did not exist? In addition to exploring these types of questions, we will also examine African feminist thought, paying close attention to the ways in which African feminisms are similar to and/or different from other forms of feminism worldwide. We will also consider what these movements looked like in practice. What strategies did African feminists utilize to promote social change? What challenges did they face? What victories resulted from their efforts? Although topics may vary from semester to semester, key themes include environmental activism, anti-war/peace activism, political activism, sex worker rights activism, activism to support peoples living with HIV/AIDS, and activism against harmful traditional practices. Finally, we will examine the ways in which African feminists have contributed to global debates and initiatives on women's rights and gender equity. Students in this course can expect to engage with diverse texts from the humanities (esp. history, literature, film studies, and philosophy), as well as from the social and behavioral sciences (esp. anthropology, geography, sociology, and political science).

WMNST 205: Gender, Diversity and the Media

3 Credits

COMM (WMNST) 205 Gender, Diversity and the Media (3) (GS;US)(BA)
This course meets the Bachelor of Arts degree requirements. This course examines diversity, equity and inclusion issues in media content, media business and media practice. Students examine communications scholarship, theory, media effects research and critical analysis of media content, policy and practice. Students learn about the media industry, its diverse distribution formats and representation patterns and the media role as public educator and social reality framer. Students research scholarship on human diversity issues in media representation and media effects and explore economic, political and social implications of media practice. Students critically analyze media content and media industry practice to build knowledge about ethical and responsible media practice. Course content is designed to help build deeper knowledge of how media interacts with identity formation, public knowledge and social understanding or misunderstanding of gender, race, ethnicity, ability, sexual orientation and class diversity, equity and inclusion. Students learn relevant communication theory to help explain how media interacts with our identity formation and our capability to navigate human difference in society. Students build critical thinking and media literacy skills, which are essential to navigate media and distinguish truth from fallacy. The course provides a foundation for further study of media in our diverse complex US democracy and global society and empowers students to interpret and pursue their interests, rights, and opportunities with ethics and integrity as media professionals.

WMNST 207N: LGBTQ+ Identity, Culture and The Arts

3 Credits

WMNST 207N: LGBTQ+ Identity, Culture and the Arts will blend theories and methods in the Social and Behavioral Sciences (GS) with those of the Integrative Arts (GA). The course introduces key ideas, concepts and issues related to LGBTQ+ identity and culture, while highlighting aesthetic values of LGBTQ+ expression. The course broadly traces the historical, global, political and academic trajectories of LGBTQ+ studies and considers contemporary topics (for example, global-local influences, intersectionality, activism, and the media) as they relate to LGBTQ+ identity and the arts. The course is attentive to the ways that sexual identities intersect with other types of identities, such as age, gender, race/ethnicity, ability, religion. The course will also help students develop arts-related skills and teach students to recognize and value the arts as an integral part of LGBTQ+ cultural expression. Students will write critical papers, participate in discussions with artists and scholars, explore queer art and art spaces, as well as create a performance or installation art project. Incorporating seminar - and lecture-style instruction with constructivist-creative learning and experiential strategies, the course seeks to develop a learning community stimulated by discourse,

collaboration, and creative/aesthetic exploration. This course is a General Education interdomain (N) course for General Education Social and Behavioral Sciences (GS) and General Education Arts (GA), with US Cultures (US), International Cultures (IL) designate. The course is cross listed in both Women's Studies and Arts.

WMNST 213Y: African American Women's History

3 Credits

This course examines the social, political, and economic history of African American women in the United States from slavery to the present. Using secondary and primary sources along with film and discussion, we will explore the varied lived experiences of African American women paying special attention to the themes of family, sexuality, labor, politics, and religion. We will examine how the simultaneity of racial and sexual oppression influence African American women's actions. Additionally, we will consider dominant images of African American women in a historical context. While the course is primarily discussion in format, the professor will lecture when necessary. As the course is writing-intensive, papers of various lengths constitute the bulk of student assessment.

WMNST 220: Beyond Birth Control: Feminist Perspectives on Women's Sexualities

3 Credits

This course explores various aspects of women's sexualities from an interdisciplinary and intersectional feminist perspective. Assigned reading from feminist theory, social science research, and feminist sexologists will explore: the female body and embodied identities; the social construction of sexualities; sexual rights; sexual pleasure and desire; impacts of racism, poverty, sexism, heterosexism and transphobia on sexual identities; and how women make meaning of their sexual experiences. We also investigate models of sex and sexuality education that attend to queer and trans desire, sexuality and sexual identities.

WMNST 225N: Sexuality and Modern Visual Culture

3 Credits

ENGL 225N / ARTH 225N / WMNST 225N Sexuality and Modern Visual Culture (3) (GA;GH) An examination of the visual expression of gender and sexual identities in English-speaking cultures since the late nineteenth century. The terms "feminist" and "homosexual" were invented by the Victorians and reflect profound shifts in conceptions of identity. Another invention of the nineteenth century was the idea of the literary and artistic "avant-garde" as a minority contingent with politically and/or aesthetically advanced views. These ideas of minority culture were deeply enmeshed with one another, and have exerted profound influence ever since. This course explores that history with the objectives of expanding students' knowledge of modern art and literature, and of fostering more sophisticated understandings of how evolving socio-political ideas affect our sense of who we are and how we relate to texts and images. The course is relevant to students of American and English studies, art, art history, and women's, gender and sexuality studies.

WMNST 227: Introduction to Queer Theory

3 Credits

ENGL 227 Introduction to Sexuality Studies (3) (GH;US) This course focuses on the body of critical writings known as queer theory in order to analyze issues of sexuality and gender since 1969. The course interrogates sexual norms and their deviations, with a particular focus on the relationships between sexuality, imagination, and ethics in the making of sexual communities and fostering activism around sexuality and gender. We will study how class, race, and gender have been shaped, and themselves shape, the production of and resistance to sexual norms. Queer Theory engages issues "queer space" and "queer time," related concepts that relate bodies and environments to history and memory, and to fantasy, imagination, and utopianism. We will also explore the ways marginalization, shame, and criminalization have been transformed into visionary acts of "world-making" that have changed contemporary understandings of bodies, identities, social formations, literature and visual culture. Throughout, our focus will be on the relationships between sexuality and ethics, and how both shape the history of queer culture and activism.

WMNST 240Q: Artistic Patronage in Europe

3 Credits

This course surveys the institutions and social networks in which European fine arts were created, consumed and critiqued. Beginning with the medieval period and ranging to the early 20th century, the course will examine the variety of communities where public and private often intersected and which sponsored innovations in the arts. Often indexing social movements and political change, such communities include convents and cathedrals, royal academies and courts, coffee houses, salons, and theaters. Artists, performers, patrons, politicians, journalists, and others collaborated and competed in these spaces. Such communities could embody political and economic power, or foster resistance to it. This approach to the history of the arts in western culture puts the focus less on the individual creative genius of great composers, writers, painters, and sculptors, and more on the social exchanges and institutions that sponsored and received their work. Such an approach brings to light particularly the ways in which women played significant roles in the production and reception of culture: as salon hostesses, patronesses, and divas, women often enabled and enacted cultural production. Some examples of particular units of study might include: the German convent of Hildegard of Bingen (1098-1179), where monophonic chant and allegorical morality plays developed; the Mantuan (Italy) court of Isabella d'Este, the first lady of the world, (1474-1539) where the roots of the madrigal began and where notable painters found support and sponsorship; the French salons of Mme. Geoffrin (1699-1777) and Mme. de Staël (1766-1817); and the student residences in Madrid where avant-garde writers and artists interacted. Each unit will also consider the relationships between the aesthetic norms and values of a period and the economic and political realities of sponsorship. The course will require that students attend at least one musical performance or concert held

on campus during the semester and complete a brief writing project based on that experience. This requirement will encourage students to think about their own university as a contemporary space of cultural sponsorship.

WMNST 245: Introduction to LGBTQ Studies

3 Credits

An introduction to the dominant themes in Lesbian, Gay, Bisexual, Transgender, and Queer Studies, with an emphasis on both literary & cultural studies. This course explores the history of modern, western ideas about sexual identity as manifested in literature, theater, film, and other narrative forms of popular culture. Drawing on the substantial body of "queer theory" generated by scholars in the humanities since the 1990s, this class examines sexuality not as a "natural" or consistent phenomenon, but as a set of beliefs that have changed over time and manifest themselves differently in different cultural and historical contexts. Starting in the late nineteenth century, scientific and medical authorities began categorizing individuals into sexual types based on their manifestations of gendered characteristics and their erotic attractions and practices. This medical typing corresponded with the development of subcultures associated with deviance from sexual norms; these subcultures produced a rich variety of texts, images, performances, and social forms, many of which became central to both popular and high culture. This course explores this rich archive, moving among media. It investigates constructions of sexual conformity and how sexual nonconformists positioned themselves in relation to cultural and medical group identities. It examines how distinctions between gendered, raced, and classed bodies were historically produced and culturally contested. It considers what commonalities gay identities may - or may not - share with lesbian identities and how transgender and other identities have altered perceptions of sexual identity. The course also explores the relationship of the avant-garde to the mass media and how sexual subcultures have shaped literary and other cultural forms of expression. Comparative study of issues of sexual mobility beyond and between the borders of the United States expands the course's critical scope beyond dominant forms of western culture. This course does not propose definitive answers to the questions of identity it addresses. Instead it negotiates the ways sexualities have enabled individuals to articulate - and disarticulate - themselves within social bodies past and present. This course, therefore, has wide relevance for students interested in how group identities come into being and transform over time in dynamic relation to other historical forces. Exploring a wide variety of cultural forms associated with the history of sexual identity as well as a variety of interpretations of that history, this course opens students to an archive of literature, theater, film, and other narrative arts with the potential to inform and enrich their understandings of many kinds of challenges to regimes of normativity today.

WMNST 250: Sexual Identity over the Life Span

3 Credits

Concepts of affectional and sexual orientation over life span, with emphasis on lesbian and gay male personal, family, and community adaptation. HD FS (WMNST) 250 Sexual Identity over the Life Span (3) (US) This course reviews concepts of sexual identity as informed by a human development perspective. Concepts of sexual orientation are discussed in the context of a review of lesbian, gay male, and bisexual lives. Developmental processes of lesbian and gay life are detailed: personal change from the teenage years through adulthood, changes in family and relationship patterns, and impact of communities, laws, and culture. These processes are contrasted to the developmental processes of women and men who identify themselves as heterosexual. The complex effect of gender, race, ethnicity, class status, and historical time on sexual orientation and its expression has generated ongoing controversies in scholarship as well as in public discourse. The course will be an introduction to these controversies as informed by human development research.

WMNST 280: Gendering the Divine in Indian and South Asian Religions

3 Credits

Throughout South Asia, ancient religious beliefs and cultural traditions interact with forms of modernity that constitute the daily lives and practices of women and men today. Focusing on conceptualizations of sex and gender over South Asia's long history, this course investigates the ways in which religious traditions and cosmologies have informed gender roles and hierarchies in India, Nepal, and other neighboring nations from the ancient period through the present day. In so doing, the course also explores how political realities—revolutions, terrorism, elections, nationalist movements, for example—can both exploit and challenge the gendered entanglements of religion and secular life. Students engage basic historical methods as well as feminist analytical methods (e.g., intersectionality) as they read a variety of cultural histories and ethnographies, as well as religious, philosophical and literary texts.

WMNST 300: Latinx Gender and Sexuality Studies

3 Credits

WMNST/LTNST 300 Latinx Gender and Sexuality Studies (3) (GH/US/BA) This course examines the historical development, theoretical premises, and political, social, and artistic contributions of Latinx feminisms in the United States. It shows the connections to as well as the divergences from Latin American feminism by beginning with an analysis of how the Spanish conquest, the imposition of Catholicism, and subsequent years of colonialism shaped gender and sexual identities. It examines the contemporary effects of these historical issues and inquires into the common concerns of Latin American feminists and Latinx feminists. It asks how theories and practices have diverged given different geographies, both between the U.S. and Latin America and within the U.S. The course will examine changes in the 1960s and 1970s in the U.S., when Chicano and Puerto Rican nationalist movements also gave rise to a feminist consciousness amongst Latinas; the conjuncture of race, ethnicity, gender, and sexuality is considered, with attention to how Latinas critiqued Anglo feminism's narrow focus on gender. The course will focus on family formations, considering social science and feminist discourse on the issues of patriarchy. How have Latinx feminists valued yet also rearticulated the traditional family? What critiques have been made against heterosexism? How has the LGBTQ community formulated new kinds of families? How does migration shape family relations? The course will explore how Latinx artists in different genres have responded to and resisted traditional gender and sexual roles. Literature, film, poetry, performance art, and hip hop are all examined for their diverse representations of sexual desire.

WMNST 301N: Sexualities, Gender and Power: Feminist Thought and Politics

3 Credits

WMNST 301N Sexualities, Gender and Power: Feminist Thought and Politics (3) (GH;GS;US;) This course is an interdisciplinary survey of historical and contemporary feminist theories in both the United States and international contexts. While attention is given to key historical moments in feminist thought, the course stresses theoretical trends and debates in feminism today. Course themes will include: (1) feminist epistemology and standpoint theory, epistemic privilege and epistemologies of ignorance; (2) postcolonial critiques of western feminism, and contemporary efforts to define a transnational and anti-racist feminism, (3) gender identity and the very viability of the category; (4) the concept of freedom, liberation, and of women's agency in feminist narratives of liberation, (5) theoretical implications for defining productive labor for women that is not exclusively the labor of childbirth, and the subsequent care of children and family; (6) the ongoing search for new paradigms of embodiment and interdependency (such as feminist

disability and care studies) that counter patriarchal epistemologic constructions.

WMNST 303: Race and Gender in the Americas: Latin American and Caribbean Cultures

3 Credits

Utilizing a theoretical framework of intersectionality, this course examines historical and cultural constructions of race and gender in Latin America and the Caribbean. AFAM 303 / ANTH 303 / WMNST 303 Race and Gender in the Americas: Latin American and Caribbean Cultures (3) (GS;IL) Utilizing a theoretical framework of intersectionality this course examines how racial, gender, sexual, and class identities are constructed in Latin American/Caribbean societies. The course applies an anthropological perspective to a wide range of countries in the region to reflect on how historical events such as the conquest, colonization, slavery, and independence movements are relevant to understanding the region today, as well as how race, gender, and sexuality inform contemporary themes of empire, nation-building, imperialism, neo-colonialism, revolution, violence, militarization, social movements, religion, neoliberalism, U.S. involvement/relations, and popular culture. The course addresses issues of power, culture, racial formation, and citizenship by incorporating interdisciplinary material beyond ethnography such as newspapers, grassroots media, biographies, films, music, novels, personal testimonies, etc. Rooted in feminist anthropological scholarship, this course emphasizes how power (from above and below) and culture mediate relationships between individual/community agency and institutions/structures. As an effort to encourage students to think about Anthropology and culture beyond superficial or romanticizing celebrations of multiculturalism, food, and music, the course stresses the theoretical importance of situating power and privilege amidst difference. We conceptualize culture not only as socially transmitted patterns of behavior and ideas/meanings, but as a complex and dynamic process/medium grounded in unequal relations in which power is constituted and resisted. The ethnographic emphasis of the course centers on the complex lived realities and voices of people, encouraging students to learn, understand, and respect cultural difference. The course offers students a broad sense of how power is central in the production of knowledge (particularly within the disciplines of Anthropology and History). Students will critically engage an array of topical issues in Latin America beyond dichotomous thinking. Discussion of course material includes contemplating issues of ethics, subjectivity, bias, and privilege. Conversations regarding processes of "Othering" and traditional "us vs. them" debates that often occur when discussing developing countries will prompt students to situate their own power/privilege and challenge our assumptions and preconceived notions of Latin America. Moreover, this course teaches Latin American Cultures within a global context of racialization. As such it also stresses the historical and contemporary social, economic, cultural and political significance of the U.S. in Latin America, to demonstrate how we are connected and responsible to what happens "over there.;" In

order to promote service learning, a core tenant of feminist pedagogy, this course also offers students the opportunity to participate in an optional embedded program entitled "Cuba: Identity, Diversity and Popular Culture". This two week course in Havana, Cuba promotes interactive learning in and outside the classroom with international study. This course component successfully combines academic classes, hands-on activities, and service learning.

International Cultures (IL)

WMNST 350: Gender, War, and Militarism

3 Credits

This interdisciplinary seminar uses feminist theory to critically examine the ways in which war and militarism are deeply gendered. We will look at women's experiences of armed conflict across the world, but also the militarization of everyday life and the politics of gender within various military structures, both in the US and abroad. We will also examine the differential ways that men and women are affected by the war system and will consider the role of women and gender norms in peace and anti-militarism movements. This course focuses on women who actively participate in and/or support war, as well as those who actively oppose war and mobilize for peace. It also considers the experiences of those who become victims of the war system. Given that men and militarized understandings of masculinity play such a prominent role in warfare, the course will also explore the ways that masculine gender norms have been used to perpetuate cultures of war. Students can expect to engage with a variety of different types of texts: documentaries, feature films, memoirs, novels, newspapers, scholarly books and articles.

International Cultures (IL)

United States Cultures (US)

WMNST 364N: Black & White Sexuality

3 Credits

This course explains how narrow, "black and white," ways of thinking limit our understanding of the diverse expressions of human sexuality. The course title's double meaning also references the various ways that sexuality is socially constructed in relation to race. For example, we will explore how stereotypical beliefs about the sexuality of people of African descent persist in the United States and have been legitimized historically by various cultural discourses, social institutions, and academic fields. Course assignments will require us to rethink and challenge what we understand as "sexuality" and consider its many influences like race, gender, class that shape our emotions, needs, desires, relationships, representations, practices, and public policies. An aim of this course is to begin to make sense of the long, entangled, and inextricable relationship between race and sexuality in the United States.

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

WMNST 400N: Debates in Contemporary Feminism

3 Credits

This course is an advanced seminar in feminist and gender theory. The primary focus is critical engagement with social, political, and cultural theories of the social construction of gender and gender difference, and of the sources, causes, and effects of gender inequality and strategies for reducing or eradicating inequality. While emphasis will be placed on gender difference and inequality, substantial time will be spent on theories of how gender is implicated in and supported by other forms of inequality such as sexuality, race, ethnicity, and class. Standpoint and intersectional approaches will ground much of the course, and provide one dominant framework for thinking about identity, oppression and social power inequalities. Students will also take on more advanced readings addressing feminist epistemology and ontology, methodology and praxis. While topics change from instructor to instructor (for example: reproductive rights; women's health; labor; politics and voting; creative arts and representation; individual and social identities; gender and militarism) students can expect a balance between US and transnational contexts. This balance reflects contemporary feminism's acknowledgement of US global hegemony, and thus the impacts of US policies on the welfare of other nations and regions, while also emphasizing both oppositional and coalitional movements in those same nations and regions. Case studies of effective activist intervention at both local and global levels will support the bi-focal emphasis of the course.

WMNST 401: Doing Feminism: Theory and Practice

3 Credits

Advanced analysis of feminist theory and the nature of its integration (sometimes uneasily) within feminist movements and practices.

WMNST 401 Feminist Perspectives on Research and Teaching (3)The course explores current themes organizing debates and discussions within feminist discussions of teaching and research. Students will become familiar with various research perspectives that feminist

researchers use including interviews, ethnography, and action research. The course will examine debates within feminist research and teaching including power, difference, and race. Key themes will include questions around the politics of representation, the relationship of research to colonialism, the authority of the researcher, researcher-researched relations, and power/knowledge relations in research, classrooms, and knowledge production broadly defined. The aim is not to identify a feminist orthodoxy but rather: 1) to identify and understand the varieties of feminism existing today; 2) to become knowledgeable about a range of themes currently emerging in feminist debates on teaching and research; and 3) to arrive at an appreciation of the transformative effect upon teaching and research these new paradigms, debates, and themes have meant across a range of disciplinary boundaries.

Prerequisite: WMNST100 , or WMNST106 , or WMNST005 and WMNST301

WMNST 407W: Women and Theatre

3 Credits

A study of theatre practice and dramatic literature as informed by issues of gender, race, and ethnic background. THEA (WMNST) 407 Women and Theatre (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. Theatre 407 approaches the study of theatre/performance as a valuable site for the exploration of race, class, and gender as social constructs. The focus will be on 20th century developments of women and theater. Feminist theory and theatrical practice will be a focus of the course and will reflect conflicts and differences present within feminism.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or THEA 112 or DANCE 100 or THEA_MFA

WMNST 412: Education and the Status of Women

3 Credits

An examination of the relationship of education to the status of women in American society.

Cross-listed with: EDTHP 412

WMNST 420W: Gender and International Development

3 Credits

This course examines gendered processes of economic and social change in the Global South in a context of rapid globalization. We will study how gender inequities and inequalities shape and are shaped by economic restructuring, environmental change, international migration, the global spread of ideas and culture, and the shifting goals of International Development agencies. Readings and discussions are organized around three main learning units: 1) Approaches to Gender in Development; 2) Gender, Work, and Identity in the Global Economy; and 3) Rights, Reproduction and the Body. Particular attention will be paid to representations of women and men by Western organizations acting in the name of Feminism and/or Development, and to the responses of feminist communities in the South to these portrayals. In studying these issues, we will resist the tendency to conflate "gender" with "women", instead looking comprehensively at the identities, rights, and lived experiences of diverse gendered identities. We will carefully consider

differences using an intersectional frame that considers social factors such as sexuality, race, economic class, and legal status. Students will explore issues through diverse materials including reports, articles, book chapters, documentaries, presentations, and popular media.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 30H or ENGL 137H or CAS 137H

Cross-listed with: CED 420W

Writing Across the Curriculum

WMNST 423: Sexual and Domestic Violence

3 Credits

Legal, sociological, and psychological perspectives on sexual and domestic violence. CRIMJ 423 / CRIM 423 / WMNST 423 Sexual and Domestic Violence (3) (US) This course investigates violence against women, specifically domestic, sexual, and relationship violence. Students will examine some of the legal, sociological, and psychological perspectives about sexual, domestic, and relationship violence as well as the social and cultural roots of violence against women. Students will also gain an understanding of the experiences of victims of domestic and sexual violence as well as the issues presented by perpetrators. Students will be evaluated based on performance on exams, and two research papers. CRIMJ 423 / CRIM 423 / WMNST 423 is a supporting course in both the WMNST major and minor as well as a supporting course in the CLJ major. It may also be used to satisfy a GI requirement. This course is offered fall and spring semester with an enrollment of 60 students each semester.

Prerequisite: CRIMJ100

Cross-listed with: CRIM 423, CRIMJ 423
United States Cultures (US)

WMNST 424: Women and Sport

3 Credits

An interdisciplinary approach to contemporary issues related to women and sport from historical, physiological, psychological, and sociological perspectives.

Cross-listed with: KINES 424
United States Cultures (US)

WMNST 426W: Gendered Worlds

3 Credits

Gendered Worlds examines how systems of dominance manifest in everyday life. Through an intersectional approach to social differences, such as gender, race, class, ethnicity, age, ability, and sexuality, the course highlights the significance of difference in shaping experiences of space and place in a global context. The course incorporates approaches from cultural, postcolonial, subaltern, queer, gender, and critical race studies, all of which have influenced current debates across the field of geography. Feminist scholars have long been concerned with the spatial politics of cultural difference. As a point of entry to discussions of gender and geography, this course will explore the diverse ways in which geographers have conceived of, analyzed, and redefined gender as a contested spatial practice that intersects with other facets of identity such as race, class, and sexuality. Using contemporary geographic

texts, we will explore the gendered dynamics of geographic research, citizenship, violence, security, nationalism, nature, and globalization. The purpose of this course is to examine how gender is understood and utilized in the field of geography. This course also aims to enhance students' ability to engage in first-hand critical research, as well as collaborative learning, through a reflective and on-going process of research and writing over the course of the semester. At the end of the course, the successful student will be able to: 1. Deploy contemporary debates around gender theory, gendered spatial practices, and cultural difference. 2. Critique the cultural and social construction of gender across time and cultures. 3. Analyze representations of gender in social institutions such as the media. 4. Apply theories of gender and cultural difference in the context of critical written analysis.

Prerequisites: (GEOG 220 or GEOG 20 or GEOG 2N or WMNST 100) and (C or higher in ENGL 15 or ENGL 30H or ENGL 137H or CAS 137H or ESL 15) Recommended Preparation: GEOG 324 (preferred) or GEOG 320 or GEOG 326 or GEOG 328

WMNST 428: Gender and Politics

3 Credits

Gender in politics in the United States and around the world; major areas of women and politics research. PL SC (WMNST) 428 Gender and Politics (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed as an overview to the field of women and politics. It examines the role that women play in politics in the United States and around the world. Students will begin by examining how women are socialized differently from men and how that socialization effects women's political attitudes and participation. Then students will focus on women in different political offices and how their behavior compares to that of their male counterparts. Students will then analyze the women's movement in the United States. Finally, students will turn to different theories of the ideal position of women and men in politics and use those theories to explore the issue of pornography. Students will be evaluated on a final exam, short essays (4 3-5 page essays), class participation, and a research paper (15 pages). This is an advanced course with 6 credits prerequisite in Women's Studies or Political Science. This course fulfills the American Politics and Comparative Politics distribution as well as the advanced course requirement for the Political Science major. It is an elective for a Women's Studies major. It also fulfills an International/Intercultural competency requirement. This course will be offered once a year with 35 seats per offering.

Prerequisite: 3 credits in political science or women's studies

Cross-listed with: PLSC 428
Bachelor of Arts: Social and Behavioral Sciences

United States Cultures (US)

WMNST 430: Women in American Society

3 Credits

A historical study of women's roles and experiences in the United States.

Prerequisite: 6 credits of American Studies, Sociology, or Women's Studies

Cross-listed with: AMST 430
United States Cultures (US)

WMNST 438: Seminar in Feminist Philosophy

3 Credits

This course will explore some of the influential theories and texts in the field of feminist philosophy. Feminist philosophy encompasses a broad range of inquiry, from political and ethical issues to foundational metaphysical and epistemological problems - e.g., What is a woman? What is the relationship between knowledge, epistemology, and power? Feminist philosophical approaches are diverse and include thinkers from all approaches to philosophy and are often richly influenced by work in women of color feminisms (e.g., intersectionality, Latinx), approaches to sexuality studies (e.g., LGBT studies and Queer Theory), post- and decolonial studies, and disability studies. Assigned readings will typically offer a range of approaches to feminist philosophy. While a majority of the readings will cover issues discussed by contemporary thinkers, a few historically significant feminist philosophers will often be included. Through reading and discussion, this course will introduce students to some of the central approaches to feminism, some of the most pressing issues, as well as the central controversies of feminist philosophy. Students will develop their interpretative and philosophical skills, while gaining a deeper understanding of the importance of feminist philosophy to the tradition of philosophy as well as to the general betterment of society.

Prerequisites: 9 credits of philosophy; or 6 credits in philosophy where three credits are from PHIL 008 or 114; or 6 credits in philosophy where all six are at the 200-level

Cross-listed with: PHIL 438
Bachelor of Arts: Humanities

WMNST 439: Women and the Holocaust

3 Credits

Analysis of women's experience in the Holocaust and exploration of the role of gender in Holocaust Studies. J ST (HIST/WMNST) 439 Women and the Holocaust (3) Most of the early study of the Holocaust focused almost exclusively on the experiences of Jewish men. It was men who wrote the first and most widely read Holocaust memoirs and men who produced the first studies of the Holocaust. The first question motivating this class is thus what we can learn from examining women's experiences. Is it possible that the ghetto, the camp, and the forest look different from women's perspectives? Are there factors we miss when we read primary documents written by only half of the participants in these historical events? Beyond this, however, our exploration will also lead us to look more broadly at gender as a category of analysis. What do we gain by bringing questions of gender to bear on our study of the Holocaust? Are there any ethical concerns that should inform our approach?

Prerequisite: J ST 010 or J ST 121 or HIST 121 or consent of program
Cross-listed with: HIST 439, JST 439

WMNST 440W: Women in Global Cities

3 Credits

This course focuses on women in various global contexts, including Tehran, Mumbai, Singapore, São Paulo, Philadelphia, and Johannesburg among others. The course is driven by questions such as: How do women in these places understand a time marked by increasing globalization and urbanization, paralleled with poverty and uneven resource access. How do the politics of race, class, caste, religion, and migration status shape their urban experiences? The course draws on scholarly articles, graphic novels, podcasts, and other genres to combine academic and popular knowledge. Major thematic areas for this course include migration, informal economies, culture, and environmental change.

WMNST 450Y: Gender and Sexuality in Ancient Greece and Rome

3 Credits/Maximum of 3

An examination of gender, sexuality, and sexual desire in ancient Greece and Rome. This course examines issues of gender and sexuality in Greece and Rome. Through close analysis of ancient texts and artifacts, we will explore representations of gender in literature and art, medical theories of the male and female body, sexual norms and codes, and views on marriage, rape, adultery, and prostitution. In addition, we will consider how eroticism and gender both support and subvert political and social ideologies. The objective of this course is to enable students to analyze gender identities and conventions surrounding sexuality in the context of the Greek and Roman worlds. This course will also invite students to consider the influence of ancient conceptions of gender and sexuality on modern discussions and debates. Authors and texts may include Homer, Hesiod, Sappho, Sophocles, Aristophanes, Plato, Aristotle, the Hippocratic corpus, Catullus, Virgil, Ovid, and Augustine. These ancient readings will be supplemented with selections from modern feminist theorists and gender studies.

Prerequisite: 3 credits in CAMS

Cross-listed with: CAMS 450Y
International Cultures (IL)
Writing Across the Curriculum

WMNST 453: Women and the Criminal Justice System

3 Credits

This course focuses on the experiences of women as offenders, victims, and professionals in the criminal justice system. CRIMJ 453 / CRIM 453 / WMNST 453 Women and the Criminal Justice System (3) (US) The course will examine the role of women in the criminal justice system and look at the issues related to women as offenders, victims of crime, and as professionals in the system. Students will gain an understanding of the issues concerning women in the criminal justice system, examine how societal arrangements affect women as offenders, victims, and

criminal justice professionals, and better understand the overlooked problems faced by women in the criminal justice system. Students will be evaluated on the basis of exams, presentations, and papers. CRIMJ 453 / CRIM 453 / WMNST 453 is a supporting course for both WMNST and CLJ majors, as well as the WMNST minor. This course may also be used to satisfy a GI requirement. This course will be offered twice a year with 60 seats per offering.

Prerequisite: CRIMJ100 or WMNST100
Cross-listed with: CRIM 453, CRIMJ 453
United States Cultures (US)

WMNST 455: Gender Roles in Communication

3 Credits

Explores the literature on gender research in the discipline of human communication. CAS (WMNST) 455 Gender Roles in Communication (3) (US) This 400-level course is a theory and application course which also satisfies an intercultural requirement. CAS/WMNST 455 strives to ensure that students understand female and male differences and similarities in communication patterns, perceptions of the opposite sex, and expectations and stereotypes regarding the opposite sex. Many researchers find that gender communication is 'cross cultural' i.e., that women and men come from two different cultures, and therefore misunderstanding of each others' intent and expectations may frequently occur. This course examines how distinctions in meaning and interpersonal dynamics may create these two differing cultures, and promotes understanding and possibilities for adaptation. It also investigates when and if changing communication styles is desirable, and in which settings. A goal of the course is to help students to solve puzzles toward understanding those we work with and relate to, as well as to apply their knowledge to their own lives and contexts. The course content and format reflects these goals. CAS/WMNST 455 begins with theoretical information, later applying it to situations of interest to most -- relationships, language use differences (verbal and nonverbal), media messages, and workplace issues. Lecture incorporates considerable discussion and exploration of gender issues, and most topics are followed by activities, which illustrate how theories work in real life. This course is useful for any students seeking an intercultural course. It is recommended to Communications Arts and Sciences and Women's Studies majors and minors due to emphasis on communication theory and gender issues. Business, counseling, psychology, sociology, education and any social science majors may fulfill a US requirement through 455.

Enforced Prerequisite at Enrollment: 3rd Semester Standing
Cross-listed with: CAS 455
United States Cultures (US)

WMNST 456: Gender, Occupations, and Professions

3 Credits

The role of gender in shaping contemporary North American patterns of employment, occupational roles, and statuses.

Enforced Prerequisite at Enrollment: 3 credits in SOC
Cross-listed with: SOC 456
Bachelor of Arts: Social and Behavioral Sciences

WMNST 458: Critical Feminist Issues in Reproduction

3 Credits

This course examines women's reproductive health issues from a feminist perspective. Reproduction has always been thought of as 'women's work', yet decisions about reproduction are rarely made by women. This course will focus on how various political institutions (e.g., religious, economic, governmental, legal, medical, etc.) influence all aspects of human reproduction, and how these influences affect women's reproductive health, both ideologically and practically, as well as how women's reproduction affects women's lives. This course will examine four aspects of reproduction from a feminist perspective: reproductive rights, including access to birth control and abortion along with the right to be free of forced sterilization; infertility and the new conceptive technologies; pregnancy, including screening, sex selection, maternal and 'fetal rights'; and childbirth options. Throughout the course, we will return to the question of the 'politics of reproduction' by asking ourselves which powerful institutions govern each particular aspect of reproduction and whether the decisions made are good for women. Using a feminist perspective, we'll focus on making women and their health needs the center of discussion and examining the relative lack of power held by women in decisions made about their reproductive health. In addition to class readings (which are both theoretical and applied in nature) students will learn through class discussions, films, and group projects.

Enforced Prerequisite at Enrollment: WMNST 100 or WMNST 100U or WMNST 105N or WMNST 106N or WMNST 106Q or WMNST 301 or PSYCH 100

Cross-listed with: BBH 458

GenEd Learning Objective: Soc Resp and Ethic Reason

WMNST 462: Reading Black, Reading Feminist

3 Credits

This course examines intersectional identity and its representations of gender, class, race, sexuality, and cultural difference in texts by black American women. The course also identifies analyzes major issues concerning the discovery and development of a black feminist tradition and the ways in which that tradition has engaged issues of racism, sexism, class exploitation, and/or heteronormativity.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Cross-listed with: ENGL 462
Bachelor of Arts: Humanities
United States Cultures (US)

WMNST 464: Feminine/Masculine

3 Credits

Study of sex role learning; investigating feminine/masculine labeling; implications for contemporary society. BE SC 464 BE SC (WMNST) 464 Feminine and Masculine (3) (US) This course provides a critical examination of the concepts of masculinity and femininity through a consideration of how these have shifted and changed historically and cross-culturally. It considers a variety of theories of gender difference.

It investigates how gender is socially constructed and practiced. Thus, it examines how gender is enacted in interpersonal relationships and defined, reinforced, and challenged through processes of socialization as well as through the various institutional spheres of social life. The course addresses the diversity of masculinities and femininities within a single society. Thus, attention is given to race and class-based differences as well as to trans-genderism and homosexuality.

Prerequisite: general psychology or general sociology

Cross-listed with: BESC 464

United States Cultures (US)

WMNST 466: Lesbian and Gay History

3 Credits

Critical exploration of the history of sexuality, focusing especially on the emergence of modern lesbian and gay identities. WMNST (HIST) 466 Lesbian and Gay History (3) (US;IL) This course will explore the relationships in different cultures and historical periods between the dominant culture and homosexuals, whom the culture deemed, at different times, sinful, deviant, criminal or, more recently, a minority community. Students will confront the very nature of difference, and how it has been played out in European and American history. The course will challenge students to deal with how societies define difference itself; how they isolate or punish deviants; and how the creation of the 'homosexual' helped establish not simply difference but 'normalcy' in a highly sexualized modern culture. Finally, the course will explore notions of identity itself, focusing on the creation of a modern gay and lesbian identity and its impact on broader questions of gender, community, civil rights, and political discourse in the United States. An example of evaluation methods would be: course presented in a seminar format with grades based on class participation, brief analytical papers, and a longer research or historiographic paper.

Prerequisite: WMNST100 , WMNST117

Cross-listed with: HIST 466

International Cultures (IL)

United States Cultures (US)

WMNST 471: The Psychology of Gender

3 Credits

Theories and research on gender differences and gender roles. Emphasis on women's and men's current positions in society.

Enforced Prerequisite at Enrollment: PSYCH 100 and PSYCH 221

Cross-listed with: PSYCH 479

United States Cultures (US)

WMNST 472: Work-Life Practices and Policies

3 Credits

Explore the causes and consequences of conflicts between work, family, and other life commitments, and how these may be resolved. LER 472 Work-Life Practices and Policies (3)(BA) This course meets the Bachelor of Arts degree requirements. The interdisciplinary field of work-family and work-life developed as a result of middle-class women's entry into the labor force, a movement that generated conflict between family and paid work commitments. Overall, the course addresses the reasons the field developed, relevant theoretical perspectives regarding the issues, and related problems as well as proposed solutions at both the public and private sector levels. The overarching objectives of the course are

to expand students' understanding of conflicts between work and family commitments, and how these might be resolved through private and public sector initiatives. Specifically, the course concerns how individuals, families, and organizations interact to help hinder the achievement of balance between work and life commitments, and relevant effects on those involved. The changing demographics of the family, laws and trends around working time, father and mother time with children, the expanded need for elder care, work-life programs such as flextime, concierge services, paid parental leave, part-time careers, paid time-off banks, and the role of unions, corporations and government legislation are covered. The course attempts to link the likely future needs of students to broader trends in society and how balance could be achieved at the level of individuals, families, other stakeholders in the community, and for society as well. Fields of research relevant to the course include labor studies, women's studies, Industrial/Organizational psychology, the sociology of work and of family, and child development. Students will be evaluated on the basis of class participation, through two in-class examinations, and through a final written or oral project providing a chronology and analysis of an adult's work-family history.

Enforced Prerequisite at Enrollment: 3 credits in LER or LHR

Cross-listed with: LHR 472, SOC 472

Bachelor of Arts: Social and Behavioral Sciences

WMNST 476W: Anthropology of Gender

3 Credits

Cross-cultural construction of gender and sex roles; theories of gender construction; case studies and practical effects. ANTH 476 / WMNST 476 Anthropology of Gender (3) Students will learn the current theoretical approaches in anthropology to the cultural construction of gender and sex roles. The first 2-3 weeks of the course will concentrate on exploring and understanding these theoretical approaches. The remaining weeks will focus on case studies of non-western gender systems, and on the practical effects of those systems, but students will also be encouraged to relate these systems to their own experience. Each meeting will be based on discussion of the readings assigned for that meeting and students will be expected to participate. During the period devoted to theoretical approaches, discussion will focus on the assumptions, advantages, and disadvantages of each approach. For the part of the course devoted to readings on individual societies, one reading each week will be the basis for a critical essay of approximately five pages. These essays will be expected to include: 1) an identification of the theoretical approach that informs the work, 2) a statement of the author's arguments or questions, 3) a discussion of the methods used to provide data in support of the arguments or to answer questions, 4) a critique of the adequacy of data, and 5) a statement suggesting which additional elements might make for a better study. These essays will be graded for both content and form and students will have the option of rewriting essays (and improving their grade) after they receive comments. These essays will provide 60% of the course grade, while participation in discussions will provide another 15%. A short research paper will also be required. The paper must focus on a question or hypothesis concerning gender, and a preliminary proposal that includes the focus of the paper, its relevance to the course, and a beginning bibliography is required. A first draft of the paper will be required two weeks before the end of the semester. The research paper will provide 25% of the course grade. The course complements other courses in Anthropology that deal with sex differences, but will provide a perspective on gender that is not available elsewhere in the curriculum. The course can be used to fulfill a Behavioral Anthropology requirement in both the major and minor in Anthropology and a writing across the curriculum requirement. It will also provide

students in other departments with the opportunity to study aspects of diverse, non-western cultures. The course is currently identified as one that may be taken to fulfill the requirements of the Women's Studies minor.

Prerequisites: 3 credits of ANTH or 3 credits of WMNST

Cross-listed with: ANTH 476W

Writing Across the Curriculum

WMNST 477: Sociology of Sexuality

3 Credits

An analysis of the demographic, social, and cultural factors affecting the developments and experience of sexuality in contemporary society.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Cross-listed with: SOC 477

WMNST 480: Italian Women Writers

3 Credits

Italian women have often been stereotyped as the "Mamma" or the "Nonna" who cooks, prays, and idolizes her sons. Such images do not accommodate the wide variety of experiences and contributions of Italian women throughout history. This seminar explores texts written by women during the 19th, 20th, and 21st centuries in Italy, including autobiography, historical novels, short stories, poetry, children's books, and theater. We consider the political and cultural developments in Italy in these centuries with attention to differences among the various geographic regions and an emphasis on issues of special relevance to women and their changing legal status and social roles. As we approach each creative work, we analyze such issues as: the role of form and genre; the author's use of language and rhetoric; the political, philosophical, and theological questions posed by the text; the ways in which the text responds to the established Italian literary canon; and the text's depictions and uses of history. The course is conducted in English.

Prerequisite: Minimum fifth-semester standing or permission of instructor

Cross-listed with: IT 480

WMNST 489: British Women Writers

3 Credits

A study of selected British women writers. ENGL (WMNST) 489 British Women Writers (3) This course provides the opportunity to study writing by British Women from a historical perspective and to explore the views these women have of themselves as artists. The course will concentrate on a careful reading of works by a variety of authors. It will address the question of the role gender plays in the selection of literary forms and the development of character, theme, symbols, and rhetorical strategies. It will also explore what particular dimensions British women writers have brought to the British literary tradition. Students will be active learners through keeping reading journals, presenting background reports on the history of women in England, participating in small-group discussions about the texts, and writing 2 shorter essays and one longer research essay for the class. This course focuses on an area of British literature, which more traditionally structured courses tend to obscure. The course will be attractive to students from a variety of programs, including English majors, Women's Studies minors, and Interdisciplinary Humanities

students. The course will be offered once every two years. Estimated class size 20.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or (ENGL 137H and ENGL 138T)

Cross-listed with: ENGL 489

Bachelor of Arts: Humanities

WMNST 490: Women Writers and Their Worlds

3 Credits

American and British literature written from the perspective of women. ENGL (WMNST) 490 Women Writers and Their Worlds (3) (US;L)(BA) This course meets the Bachelor of Arts degree requirements. ENGL/WMNST 490 covers particular aspects of American and British literature written from the perspective of women. The courses stress the diversity of women's authorial worlds, both through time and/or space. The readings and specific focus vary from semester to semester. ENGL/WMNST 490 seeks to make students aware of the extensive body of literature written by women, but, unlike ENGL 194, which is a survey course of women's literature, ENGL/WMNST 490 can be a more intensive course, focusing on selected themes and topics of particular concern to women as reflected in the poetry and fiction of twentieth-century American and British women writers. The class can also be taught in relationship to earlier periods, dealing, for instance, with English women novelists from 1775-1865. In such a class, readings would include fiction by Fanny Burney, Mary Wolistonecraft, Ann Radcliffe, Jane Austen, Mary Shelly, Emily Bronte, Elizabeth Gaskell, and George Eliot. The course would then place each novel in its historical, social, intellectual, and literary context, and explore the various ways in which some of England's best writers transformed their female experience of the world into fiction that extended the range and influenced the development of the novel. Regardless of the particular focus, all sections of the course pose the following questions throughout: Do women use the same myths, archetypes, and literary conventions as male writers? Or do they sometimes have to modify the myths, archetypes, and literary conventions originated by their male precursors in order to adapt them to female experience? Is there such a thing as a distinctively female imagination, with a symbolic language of its own? Is there such a thing as a chain of literary influence linking women writers to each other? What are the strategies for coping with the anxieties of authorship? What is the interaction between gender and genre? In what ways are creativity and procreativity modes of defying prevailing ideologies? Does a woman's psychological development have an effect on the plots a woman novelist conceives? How does women's literature reflect the realities of women's lives? As a course in women's literature, ENGL/WMNST 490 concerns itself with questions of gender. In so far as some of these women writers are black or women of color, it concerns itself with questions of race and ethnicity. In as far as the course looks at women's literature in the context of men's literature, it is concerned with the inter-relationship between dominant (male) and non-dominant (female) culture in the United States as well as in Britain. In so far as the course covers lesbian writers, it is concerned with sexual orientation. Students should expect to complete a minimum of three written assignments in the course, two course papers, and an essay final exam in class. The papers each will ask students to choose a text to analyze in relationship to one of the thematic modules the course has chosen, for instance, to discuss how Virginia Woolf's Mrs. Dalloway analyzes the position of upper-middle class women in a particular moment in history when women had achieved the vote, but were still largely constrained by patriarchal social norms. In addition to written assignments, students will be evaluated on class discussion and

general participation. The course not only prepares students for taking up literary and cultural analysis in English classes, but also in any other class that engages in the verbal and written analysis of complex written texts, and in other classes in Women's Studies or in other Penn State departments that address the social, cultural, or ethical issues of gender. The course may be used as English Major elective credit or as credit towards the English Minor; it may also be used in the Women's Studies major and minor. It will be offered once a year with 40 seats per offering.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Cross-listed with: ENGL 490

WMNST 491: American Women Writers

3 Credits

A study of selected American women writers. ENGL 492 / AMST 476 / WMNST 491 American Women Writers (3) A study of selected women writers, this course provides the opportunity to study writing by American women from an historical perspective and to explore the views these women have of themselves as artists. The course will concentrate on a careful reading of works by a variety of authors. It will raise the question of the role that gender—as well as other differences such as race, class, and ethnicity—play in the selection of literary forms and the development of character, theme, symbol, and rhetorical strategy. It will also explore the dimensions American women have brought to the American literary tradition. The course satisfies the area requirement in culture for American Studies majors and is open to all majors meeting the prerequisite requirements. The course will be offered once every two years and enrollment is 25.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Cross-listed with: AMST 476, ENGL 492
Bachelor of Arts: Humanities

WMNST 492W: Contemporary Feminist Analysis: The Capstone Senior Seminar

3 Credits

Applied critical analysis of any aspect of society and/or culture from a contemporary feminist perspective. WMNST 492W Current Feminist Issues This course is the capstone course for the Women's Studies major. We keep the course small (15-20 students) and offer it every spring. It is constructed to provide you the opportunity to apply the knowledge and skills you have developed in Women's Studies to some of the major topics being addressed in current academic feminist discourse. The first goal of the course is for each student to become familiar with the major arguments and evidence regarding some of the current major topics in feminism. The second goal is for each student to learn more about the multidisciplinary perspectives of women's studies. The third goal of the course is for each student to develop and demonstrate her skill at carrying out feminist scholarship. There are two core elements of the course. The first is class discussion of readings addressing some of the major current feminist issues. Each year a new set of these topics is put together by the instructor, drawing upon the suggestions of other Women's Studies faculty and majors. The second

core element of the course is each individual student doing a term paper. Work on these papers will take place both publicly and privately, so that everyone in the course will learn something about how feminist projects are constructed in the various disciplines represented by the students' choices of topics for their papers. Because this is a W course, 2/3 of your grade will be based on writing assignments. Throughout the course, you will write short (2 page) papers on the readings that we will be discussing in our seminars. You will also write a term paper and some preliminary assignments related to it, including a topic justification paper, an annotated bibliography accompanied by a text description of the major themes identified in the bibliography, a class presentation on your paper topic, and the final 10-15 page paper. The other third of your grade will be based on your participation in seminar discussions.

Prerequisite: WMNST001 , WMNST301 , WMNST400
Writing Across the Curriculum

WMNST 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

WMNST 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

WMNST 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

WMNST 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside scope of formal courses.

WMNST 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

WMNST 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Wood Products (WP)

WP 203: Anatomical Properties of Wood

1 Credits

Provide information on tree form/growth, cell wall formation/ composition, structure of wood/bark cells; macroscopic/microscopic identification of hardwood/softwood cells. W P 203 Anatomical Properties of Wood (1) The purpose of this course is to introduce students to the basic concepts of the anatomical properties of wood and bark cells. Students taking this class will learn: 1) basic information on tree form and growth 2) basic information on cell wall chemical composition, formation and structure 3) identification and differentiation of different hardwood and softwood cells. Course grade will be based on weekly quizzes. W P 203 is a foundation course for the wood products major and a basic information course for the forest science major. The course will be taken by students in the fall semester in their sophomore or junior year for Wood Products major and in their sophomore, junior or senior year for the Forest Science major. This course provides essential background information for students in the Wood Products major. The information presented in this course will be needed for understanding advanced concepts present in 400-level courses. All wood products and forest science students will be required to take this course. It is listed as a prerequisite for most W P 400-level courses. The course is designed to provide information necessary for understanding advanced concepts presented in W P 400-level courses. Macroscopic and microscopic hardwood and softwood cell identification will be taught in a specialized laboratory made available by the School of Forest Resources.

WP 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

WP 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

WP 416: Wood Industries Management Development

3 Credits

Managerial concepts and issues important to forest products organizations will help prepare students to assume management-level positions. W P 416 Wood Industries Management Development (3) This course will introduce students to managerial concepts and issues important to wood products manufacturers. The design of the course is to help students think more critically about problems and issues that are directly related to efficiency and effectiveness within the wood-based industry, with an emphasis on utilizing human capital to increase competitive advantage. The overall goal of the course is to prepare students to assume management-level positions within wood-based businesses. Course content will be designed to meet the unique production environments our graduates will face. For example, managing an hourly workforce that is under-motivated with insufficient skills, in an environment that is often unpleasant and physically challenging. The course will include case studies from relevant industrial settings and will expose students to current managerial issues (i.e., via field trips to mills

and guest lecturers from industry). Students will give oral presentations based on assigned readings from a best selling managerial book and will also be asked to complete numerous in-class and out-of-class exercises (e.g., learning styles inventory, conflict style assessment, to-do lists, resume, etc.).

Prerequisite: W P 200W

WP 495: Wood Products Internship

1-6 Credits/Maximum of 6

Supervised field experience related to the student's major.

Enforced Prerequisite at Enrollment: Approval of proposed assignment by instructor prior to registration
Full-Time Equivalent Course

WP 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

WP 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

WP 499: Foreign Studies

1-12 Credits

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Workforce Education and Development (WFED)

WFED 1: Education for Work: Trends and Issues

3 Credits

Overview of the history and philosophies of education for employment, current issues, and school to work transition system.

WFED 99: Foreign Studies

1-12 Credits/Maximum of 12

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest. Several different topics may be taught in one year or semester. A specific title may be used in each instance and will be entered on the student's transcript.

WFED 207W: Assessment Techniques

3 Credits

Assessment, recording, and reporting of learning in an integrated
competency based vocational education system.

Prerequisite: WF ED105

Writing Across the Curriculum

WFED 270: Introduction to Industrial Training

3 Credits

Overview of training profession. Introduction to economic and
psychological foundations. Examination of relationship of industrial
training to education. WF ED 270 Introduction to Industrial Training (3)
This course is designed to prepare individuals for a variety of training
practitioner roles in businesses and industry. This course is actually

the first of two courses and is an introduction to the required core
courses for emphasizing the training and development professional
curriculum in the Department of Adult Education, Instructional Systems
and Workforce Education and Development. It is the intent of this
course to equip participants with entry-level knowledge and skill to
successfully pursue other designated professional core courses on needs
assessment, organization development, and cross-cultural training.
All of these courses fall into the category called Human Resource
Development (HRD). Industry trainers have had the opportunity to
provide formal training to many persons with a wide variety of skills
and competencies. Previous train-the-trainer courses in this series have
addressed presentation techniques, assessment, facilities management
and safety. This course will help trainers gain a total understanding of
their role in the larger picture of Human Resource Development. Although
traditional education is often focused on helping individuals lead better
lives, training is usually focused specifically on the work that people do in
one organizational setting. HRD deals with the financial value of human
beings to organizations. In this course, the HRD field will be examined
with respect to the training component with which participants are
connected.

WFED 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on
an individual basis and which fall outside the scope of formal courses.

WFED 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively
narrow subject which may be topical or of special interest.

WFED 299: Foreign Studies

1-12 Credits/Maximum of 12

Formal courses given infrequently to explore, in depth, a comparatively
narrow subject that may be topical or of special interest. Several different
topics may be taught in one year or semester. A specific title may be used
in each instance and will be entered on the student's transcript.

International Cultures (IL)

WFED 310: Leadership Competencies for Supervisors

3 Credits

Designed to teach contemporary supervisory leadership competencies
for mid-career learners with front-line supervisory responsibilities in the
workplace. WF ED 310 Leadership Competencies for Supervisors (3)
Leadership Competencies for Supervisors is a course designed primarily
for adult learners engaged in supervisory roles and functions in the
workplace. Its purpose is to ensure that all students are equipped with
the contemporary supervisory leadership competencies that are needed
to function effectively in today's workplace. Upon completion of this
course, the student should be able to a) Recognize the important role and
function of supervisory leadership, b) Relate common critical situations
experienced by supervisors and how they were handled, c) Demonstrate
proficiency in competency areas important to supervisory success
such as effective communication strategies, methods for resolving
conflict, managing employees, etc., and d) Demonstrate ability to develop
individuals and teams. Students will be assessed and evaluated through

quizzes, instructor and peer observation, self-assessments and reflection, and demonstration of project deliverables.

Prerequisite: two years of work experience, or fourth-semester standing, or prior approval by instructor

WFED 323: Vocational Student Organizations

3 Credits

Methods in originating, managing, and advising vocational student organizations.

WFED 395A: Trade and Industrial Occupational Experience

1-8 Credits/Maximum of 24

Individual work experience in manufacturing environment or skilled craft area to develop professional competence in specific occupation.

Prerequisite: completion of an occupational learning period in the field of certification or field of specialization

Full-Time Equivalent Course

WFED 395B: Occupational Resources Competence

1-8 Credits/Maximum of 24

WF ED 395B Occupational Resources Competence (1-8 per semester/maximum of 24) Occupational Resources Competence is a course designed primarily for adult learners who demonstrate an adequate understanding of contemporary resource usage and management related competencies that are needed to function effectively in today's global business environment. These competencies include: resource usage, resource management, computer and basic literacy, and understanding of systems in the workplace. Students will demonstrate competence through documentation of tasks performed and reflection on specialized accomplishments.

Prerequisite: completion of a two-year formal learning period in the field of specialization

Full-Time Equivalent Course

WFED 395C: Occupational and Professional Competence

1-8 Credits/Maximum of 24

WF ED 395C Occupational and Professional Competence (1-8 per semester/maximum of 24) Occupational and Professional Competence is a course designed primarily for adult learners who demonstrate an adequate understanding of contemporary professional mastery related competencies that are needed to function effectively in today's global business environment. These competencies include: interpersonal competence, oral and written communication, conceptual thinking, learning and information, self-responsibility and management in the workplace. Students will demonstrate competence through documentation of tasks performed and reflection on specialized accomplishments.

Prerequisite: completion of a two-year formal learning period in the field of specialization

Full-Time Equivalent Course

WFED 395D: Occupational Work Experience

1-8 Credits/Maximum of 24

Individual work experience in the manufacturing, health, service, or financial arena.

Full-Time Equivalent Course

WFED 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

WFED 399: Foreign Studies

1-12 Credits/Maximum of 12

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest. Several different topics may be taught in one year or semester. A specific title may be used in each instance and will be entered on the student's transcript.

International Cultures (IL)

WFED 402: Supervision of Vocational Education

3 Credits

For administrators, supervisors, and teachers responsible for improvement of instruction through supervision or for students preparing for supervisory work.

WFED 403: Technologies for Work Effectiveness

3 Credits

This seminar-style course is designed to provide workforce professionals with opportunities to learn about contemporary workplace technologies, tools and platforms, share experiences, and to be able to make informed decisions regarding their use. The course will focus on technology affordance in specific contexts and a deeper understanding of the use of such technologies in terms of their benefits, costs and implementation challenges.

Prerequisite: 7th semester standing or higher or permission of program

WFED 405: Project Management for Professionals

3 Credits

Covers the essential concepts and skills needed to make effective contributions on projects, on time and within budget. WF ED (ENGR) 405 Project Management for Professionals (3) Professionals in the workplace carry out many different projects every day ranging from somewhat small tasks, e.g., planning events and designing courses, to big projects, e.g., launching an enterprise wide system. Project Management for Professionals is a practical "hands-on" course designed for mid-career adult students and covers the essential concepts and skills needed to make effective contributions and have an impact on the successful accomplishment of projects on time and within budget. Project management principles and techniques are presented with an emphasis on how they are applied to real world workforce development projects. Topics include the project management life cycle and process; techniques for planning, scheduling, budgeting, and controlling project

performance; project manager responsibilities and skills; project team development and effectiveness; project communication; and organization structures.

Enforced Prerequisite at Enrollment: 4th semester standing. Students with no 4th semester standing need to provide evidence to the instructor of their work experience.

Cross-listed with: ENGR 405

WFED 410: Leadership Competencies for Professionals

3 Credits

Designed to teach contemporary professional leadership competencies for workforce professionals who do not currently have supervisory responsibilities. WF ED 410 Leadership Competencies for Professionals (3) Leadership Competencies for Professionals is a course designed primarily for adult learners who demonstrate high leadership potential and who may not have significant supervisory and managerial responsibilities. Its purpose is to ensure that all students develop an adequate understanding of the contemporary professional leadership competencies that are needed to function effectively in today's global business environment. These competencies include: collaboration / multi-disciplinary team-building, leadership in diversely distributed team environments, interpersonal communication in the workplace, conflict resolution / human performance management, project management, problem-solving / creative thinking / ethical decision making, and contemporary and emerging technology usage. Students will be assessed and evaluated through quizzes, instructor and peer observation, self-assessments and reflection, and team projects and presentations.

Prerequisite: two years of work experience, or fourth-semester standing, or prior approval by instructor

WFED 411: Occupational Safety and Health for Workforce Education and Development Professionals

3 Credits

This course assists participants in creating and supporting workplaces and educational environments free of occupational safety and health hazards. WF ED 411 Occupational Safety and Health for Workforce Education and Development Professionals (3) This course is designed to offer participants the knowledge and skills they need to create and support workplaces and educational environments free of occupational safety and health hazards. It provides Occupational Safety and Health Administration (OSHA) compliance and workplace safety training to educators, managers, supervisors, and other employees in the Career and Technical Education field as well as the Oil and Gas Drilling Industry, Advanced Manufacturing, and Construction industries.

Prerequisite: a minimum of 2 years work experience or 4th semester standing

WFED 413: Workforce Education for Diverse Learners

3 Credits

This course assists students in creating and supporting educational environments which promote enhanced learning and skill development for diverse learners. A primary focus is placed on program modifications, supplementary services, and resources required for diverse learners (including learners with disabilities) in workforce development and education programs. Topics such as the role of assessment and how it can be utilized to bring about positive changes in curriculum

and pedagogy to promote the transfer of learning will be addressed. This course will also introduce participants to instructional tools and strategies that will help teach to multiple levels of student abilities. Workforce education program modifications, supplementary services, and resources required for diverse learners will be provided throughout this course. Students will also learn to develop specialized adaptations and accommodations for diverse learners.

WFED 414: Teaching Career and Technical Education Content to Diverse Learners

3 Credits

This course explores the legal aspects of transitioning students from school to college and work, to assist Career and Technical Education (CTE) teachers in becoming active participants in assisting learners with special needs. Topics such as the role of assessment and how it can be used to bring about positive changes in curriculum and pedagogy to promote enhanced learning and skill development will be addressed. This course will also introduce participants to instructional tools and strategies that will help teach to multiple levels of student abilities. This course explores the legal aspects of transitioning students from school to college and work, to assist Career and Technical Education (CTE) teachers in becoming active participants in assisting learners with special needs. Topics such as the role of assessment and how it can be used to bring about positive changes in curriculum and pedagogy to promote enhanced learning and skill development will be addressed. This course will also introduce participants to instructional tools and strategies that will help teach to multiple levels of student abilities. Students will learn to develop specialized adaptations and accommodations based on educational research to promote the transfer of knowledge and skill. Special attention will be placed on data driven decisions in workforce education and the role CTE teachers.

Prerequisite: WFED 105

WFED 424: Facilitating Career Development

3 Credits

This course provides individuals with relevant skills and knowledge to assist others in planning careers and obtaining meaningful work. CN ED (WF ED) 424 Facilitating Career Development (3) This course provides individuals with relevant skills and knowledge to assist others in planning careers and obtaining meaningful work. This course addresses the following 12 Career Development Facilitator (CDF) competencies: 1) helping skills, 2) labor market information and resources, 3) assessment, 4) diverse populations, 5) ethical and legal issues, 6) career development models, 7) employability skills, 8) training clients and peers, 9) program management/implementation, 10) promotion and public relations, 11) technology, and 12) consultation. These 12 competencies are identified by the National Career Development Association (NCDA) for those who (will) deliver career development programs and services in a variety of settings. Potential job titles of CDFs include career group facilitator, job search trainer, career resource center coordinator, career coach, career development case manager, intake interviewer, occupational and labor market information resource person, human resource career development coordinator, employment/placement specialist, and workforce development staff. With certain years of work experience in career development, students who complete this course are eligible to apply for the Global Career Development Facilitator (GCDF) certification through the Center for Credentialing & Education (CCE), which is affiliated

with the National Board for Certified Counselors (NBCC). A GCDF is a person who works in any career development setting or who incorporates career development information or skills in their work with students, adults, clients, employees, or the public. As of January 2011, about 18,000 individuals acquired the GCDF certification world-wide including Bulgaria, Canada, China, Germany, Japan, Romania, Turkey, South Korea, and New Zealand. The goal of the GCDF credential was to provide standards, training specifications, and credentialing for diverse career development practitioners. This GCDF credential differentiates two levels of career practice, which are 1) career counseling and 2) career facilitation that does not require a counseling degree. This differentiation reflected the reality where many individuals who are currently providing career assistance are not professional counselors. This course is taught by a nationally and internationally trained CDF Instructor (CDFI) who is certified by the NCDA. In addition, the CDF curriculum is updated every three years by the Career Development Leadership Alliance (CDLA) under the supervision of the NCDA CDF Advisory Council in order to keep up with recent changes in the field.

Prerequisite: 300-400 level Psychology, HD FS, or Education courses or permission of the program
Cross-listed with: CNED 424

WFED 428: Fiscal Accounting and Management for Workforce Development Professionals

3 Credits/Maximum of 3

This course explores the subject of accounting through the sub-disciplines of financial and managerial accounting for Workforce Development Professionals.

Prerequisite: two years of work experience, or fifth semester standing, or prior approval by instructor

WFED 441: Conceptual and Legal Bases for Cooperative Vocational Education

2 Credits

History, conceptual and legal bases for a cooperative vocational education program.

Prerequisite: WF ED445

WFED 442: Operating Cooperative Vocational Education Programs

2 Credits

Student and training station selection, training plan and related subject development, records and reporting systems, school-industry coordination.

Prerequisite: WF ED441

WFED 445: Vocational Guidance

3 Credits

Problems and possibilities of vocational guidance; the field of guidance and guidance literature; methods of field work; school guidance techniques.

Prerequisite: WF ED105 ; fourth-semester standing

WFED 450: Cultural Diversity in the Workplace

3 Credits

Provides opportunities for students to explore different cultures and mores that are changing the dynamics of the workplace.

International Cultures (IL)
United States Cultures (US)

WFED 451: Lean-Sigma for Professionals

3 Credits

The course focuses on essential lean and six sigma concepts to improve processes in any industry.

Prerequisite: two years of relevant work experience or fourth semester standing or prior approval by program

WFED 471: Training in Industry and Business

3 Credits

Appraisal of training functions and development of competencies in work analysis, design, development, delivery, and evaluation of training.

Prerequisite: seventh-semester standing or higher

WFED 472: Platform Skills for Workplace Learning and Performance

3 Credits

Platform skills focuses on theory and practice related to delivering well-crafted and effective training presentations. Platform skills are particularly critical in business, industry and technical education, as the content covered in these fields involves direct application of the cognitive, affective and psychomotor learning domains in real world situations. Therefore, the purpose of this course is to provide participants with the skills and abilities needed to develop and deliver high quality professional presentations within business, industry and applied educational settings. Through this highly dynamic and interactive course, students will enjoy using their creativity to successfully communicate important information through oral presentations. A major emphasis will be placed experiential teaching and learning techniques and theory to practice connections which will enable participants to develop and deliver well-crafted and effective training presentations, while having fun in the process.

WFED 495: Internship

1-6 Credits/Maximum of 6

Supervised off-campus, nongroup instruction including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

WFED 495A: Cooperative Education Practicum

2 Credits

Validation of competencies learned in prerequisite courses during interaction with professional staff while functioning under the supervision of a certified cooperative coordinator.

Prerequisite: WF ED445

WFED 495C: Student Teaching

10 Credits/Maximum of 10

Supervised observation and practice teaching in approved vocational industrial schools/health occupations education settings.

Prerequisite: successful completion of occupational competency evaluation. PA Act 34 clearance required. In addition, non-Pennsylvania residents must provide evidence of an FBI background information check. (Forms: 228 Chambers)

WFED 495D: Instructional Internship in Industrial Training

5 Credits

Supervised internship in industrial training. Interns will be expected to perform instructional duties in industrial environments.

Prerequisite: WF ED105 , WF ED106 , WF ED207W , WF ED270 , WF ED471 ; successful completion of occupational competency examination

WFED 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

WFED 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

WFED 499: Foreign Studies

1-12 Credits/Maximum of 12

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest. Several different topics may be taught in one year or semester. A specific title may be used in each instance and will be entered on the student's transcript.

International Cultures (IL)**World Languages Education (WLED)****WLED 300: Foundations of Second Language Teaching**

3 Credits

Critical understanding of basic concepts and principles in second language acquisition and teaching. WLED 300 Foundations of Second Language Teaching (3) This course is designed to give prospective World Languages teachers a critical understanding of basic concepts and principles in, first and second language acquisition and teaching. The core of the course explicates processes of language acquisition viewed from major theories of first and second language acquisition and common issues within these major theories are presented and debated. This course should be taken concurrently with WLED 295A (Early Field Experience for World Languages Teacher preparation). Using the field experience component, students will be able to critically examine language teaching methodologies derived and implied from first and second language acquisition theories and to apply them while in their field experience. This course requires participating in the field experience

component, group-reflections and self-critique as well as to complete the required readings, and to develop a professional growth portfolio including the four domains stated in the Penn State model of Teacher Preparation (planning and preparing for student learning; teaching; inquiring and analyzing learning and teaching- and professionalism). This course should be taken concurrently with the Early Field Experience for World Languages Teacher Preparation (WLED 295A).

Concurrent: WL ED295A**WLED 399A: Language Learning Through Study Abroad**

3 Credits

Use of online technologies during study abroad to promote language and culture learning and to consider implications for teaching.

Prerequisite: WL ED300**WLED 400: Foundations of Language in Second Language Teaching**

3 Credits

Critical understanding of basic concepts and principles in second language acquisition and teaching. WLED 400 Foundations of Language in Second Language Teaching (3) This is an advanced course designed for practicing classroom teachers who want to further their knowledge of language acquisition/language teaching. It provides a critical understanding of basic concepts and principles in first and second language acquisition and teaching. The core of the course explicates processes of language acquisition viewed from major theories of first and second language acquisition and common issues within these major theories are presented and debated. Using their classroom experiences, students will be able to critically examine language teaching methodologies derived and implied from first and second language acquisition theories and to apply them in their classrooms. This course requires active participation, group-reflections and self-critique, and completion of required readings; 20-30 hours of volunteer work in an ESL setting; and development of a professional growth portfolio including the four domains stated in the Penn State Model of Teacher Preparation (planning and preparing for student learning; teaching; inquiring and analyzing learning and teaching; and professionalism) and the competencies for English Usage and Developing Linguistic Awareness stated by the Pennsylvania Department of Education.

Prerequisites: Second semester standing**WLED 411: Methods of Teaching World Languages in Grades 1-5**

3 Credits

Exploration of the complexity of teaching World Languages and development of curricular designs for teaching in grades 1-5 schools. WLED 411 Methods for Teaching World Languages in Grades 1-5 In this course prospective World Languages teachers will engage in a variety of theoretical, pedagogical and reflective events to explore the complex nature of language learning/teaching including (1) individual beliefs and knowledges, (2) issues related to language/power, (3) language/cultural diversity, and (4) development of curricular designs for teaching World Languages in grades 1 - 5. This course will be conducted in a workshop style. It will have three parallel strands: (a) we will review together basic concepts and principles of language learning/teaching through readings, class discussions and presentations; (b) make connections between the readings and the L2 experience in the Practicum-World Languages

Teaching in grades 1-5 (WLED 495B); and (c) as a group, the class will design thematic units, class plans, activities and didactic materials.

Prerequisite: EDPSY014 , EDTHP115 , WL ED295A , WL ED300;
Concurrent: WL ED495B

WLED 412M: Methods of Teaching World Languages in Grades 6-12

3 Credits

Exploring the complexity of teaching World Languages and development of curricular designs for teaching World Languages in grades 6-12. WL ED 412W Methods of Teaching World Languages in Grades 6-12 (3)The purpose of this course is to help students develop a principled approach to designing and implementing lessons in their World Language classroom. Specifically, students will work towards an understanding of the processes of developing abilities in a second language that acknowledges a range of theories and associated methods but that is also situated within a particular theoretical framework of language and language learning. In this way, students will be better positioned to make the myriad instructional decisions they will face in middle school and high school contexts, ranging from materials development to lesson planning and classroom management to assessment. This is a writing-intensive course. Students will engage in a variety of formal and informal writing activities both in and out of class. Taken together, these activities function to enhance students' abilities as both producers and consumers of a range of texts relevant to their teaching practice. In addition, writing is understood to be a process integral to the fulfillment of each of the course goals.

In addition, writing is understood to be a process integral to the fulfillment of each of the course goals.

Writing Across the Curriculum

WLED 444: Language, Culture and the Classroom: Issues for Practitioners

3 Credits

Critical understanding of cultural linguistic diversity to facilitate the inclusion of English Language Learners in a globalized classroom.

CIED 444 WLED 444 Language, Culture and the Classroom: Issues for Practitioners (3) In this course we will focus on the issues of power raised by the use of Standard English as the school language while in its grounds there are an increasing number of students who are using more than one language/dialect to communicate. We will also discuss how language mutates into an exceptional hegemonic/counterhegemonic device central to the problematic regarding school socialization. Finally, we will critically understand teachers' and schools' roles in building a safe classroom where diversity of languages and cultures are welcome and encouraged.

Prerequisite: WL ED300 or WL ED400

Cross-listed with: CIED 444

WLED 483: Evaluating Schools Performances and Programs with English Language Learners (ELLs)

3 Credits

Using/adapting multiple techniques to assess English Language Learners (ELLs) language and other school subjects. WL ED 483 Evaluating Schools Performances and Programs with English Language Learners (ELLs) (3) This course provides students with knowledge of a variety of assessment instruments to identify and monitor levels of second language and content proficiencies of English Language Learners (ELLs). Students will learn multiple assessment models used in English as a Second Language (ESL) programs. Students will establish connections between assessment and instruction for English Language Learners, as well as gain knowledge about services available, such as instructional support, multidisciplinary teams, and other assessment services for English Language Learners. This course requires active participation, group-reflections, discussions and activities as well as to develop a professional growth portfolio including the four domains stated in the Penn State model of Teacher Preparation (planning and preparing for student learning; teaching; inquiring and analyzing learning and teaching; and professionalism) and the competences for English Language Learners (ELLs) Language and Support Services Knowledge stated by the Pennsylvania Department of Education.

Prerequisite: WL ED300 or WL ED400

WLED 495: **SPECIAL TOPICS**

3 Credits

WLED 495B: Field Experience for World Languages Teacher Preparation in Grades 1-5

3 Credits/Maximum of 3

WL ED 495B Field Experience for World Languages Teacher Preparation in Grades 1-5 (3) Practicum situation where Prospective World Language teachers will demonstrate acquired knowledge on second language learning/teaching and educational theories. Prospective World Language teachers will have assigned school placements and will attend a weekly seminar where issues in World Language learning and teaching will be discussed. At their assigned school placement, prospective World Language teachers will have many opportunities to observe/work with children in grades 1-5 (1) focusing on second language learning/teaching and the socio/cultural issues associated to classroom practices while implementing and self-evaluated own designed activities and lessons; (2) weekly seminars will engage students in reflective activities that will enable them to analyze each week's events; (3) inquiry projects on teaching and learning of World Languages.

Prerequisites: EDPSY 14, EDTHP 115, WLED 300 Recommended

Preparation: Official clearances required. See: <http://www.ed.psu.edu/preservice/clearance.htm>

WLED 495C: Field Experience for World Languages Teacher Preparation in Grades 6-12

3 Credits/Maximum of 3

WL ED 495C Field Experience for World Languages Teacher Preparation in Grades 6-12 (3) Practicum situation where prospective World Language teachers will demonstrate acquired knowledge on second language learning/teaching and educational theories. Prospective World Language teachers will have assigned school placements in grades 6-12 and will attend a weekly seminar where issues in World Language learning and teaching will be discussed. At their assigned school placement, prospective World Language teachers will have many opportunities to observe/work with students in grades 6-12 (1) focusing on second language learning/teaching and the socio/cultural issues associated to classroom practices while implementing and self-evaluating their own designed activities and lessons, (2) weekly seminars will engage students in reflective activities that will enable them to analyze each week's events, and (3) inquiry projects on teaching and learning of World Languages.

Prerequisites: WLED 411, WLED 495B Recommended Preparation:
