This course focuses on how the nature of work is changing in the global economy, and the implications for economic opportunity and inequality in both . Labor in the Global Economy (3) This seminar focuses on how the nature of work is changing in the "new economy" and the implications for economic opportunity and inequality. Sections of the course examine: theoretical approaches to understanding contemporary process of labor restructuring, including globalization, rise of multinational corporations, and growth in global supply chains; case studies of restructuring processes; and innovative labor organizing initiatives at a local, regional and global scale. This course aims to develop a framework for understanding the nature of contemporary processes of economic restructuring and its impact on the world of work. Case studies will provide a deeper understanding of how broad macro-level changes in the nature of contemporary capitalism are mediated by a variety of technological, political, and socio-economic factors in particular industries and geographic contexts. The case studies section of the course will also examine business ethics and corporate social responsibility initiatives. Finally, an in-depth look at workers' responses to these changes at different scales (local, regional, global) will help deepen our understanding of the contested nature of workplace restructuring while exploring promising strategies for improving working conditions. This is a reading-intensive course dealing with the theoretical literature on rapid economic restructuring and how this is shaping work and employment.

Prerequisite: 6.0 credits of LHR and 6th Semester standing
Honors

LHR 480: Current Issues in Human Resources

3 Credits

Identity and race, gender and heritage, centrality and marginality, self and other, as expressed in literary works from around the world. Students will study current trends that are shaping human resources management. These trends include information technology, internationalization, new organizational forms, changing demographics, and competitive landscape. Examples of topics include use of social media in human resource management, virtual work, managing an aging workforce and working across international boundaries. The course is case based and as such explores experiences of actual companies. Students will study and discuss the strategies, successes and failures of companies and how these issues and challenges relate to the human resources function. Timely readings that expose students to theoretical structures underlying these changes will be part of this course. In addition, because this is a current issues class, students will be expected to actively follow trending news in the business world through news media and critically examine how it is shaping the human resource management practices. This

course will serve as a complement to MGMT 100, 341, 441 and LER 100, 201, 401 and 434.

Prerequisite: LHR 305

LHR 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

LHR 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences
Honors

LHR 495: Labor Studies Internship

1-12 Credits/Maximum of 12

Supervised practicum in labor relations setting with union, management, or government agency.

Prerequisite: 3 credits of LHR and Prior approval by department
Bachelor of Arts: Social and Behavioral Sciences

LHR 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Social and Behavioral Sciences

LHR 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

LHR 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

Landscape Architecture (LARCH)

LARCH 60: Cultural History of Designed Places

3 Credits/Maximum of 3

LARCH 60 is an introduction to the development of designed outdoor places from the ancient past to present day. Designed landscapes and urban spaces are expressions of cultural values and environmental influences. Underlying all of the designs is the fundamental human connection to, and manipulation of nature as people create spaces that reflect political views, religion, are entertaining or provide personal inspiration and, most recently, show concerns for the health of the earth. While there is discussion of Middle East and East Asian landscapes, the course focuses upon Western civilizations with roughly the last third focusing on North American landscapes. The act of design and art often reveals a culture's beliefs, values, and aspirations. As well, the creation of outdoor places uniquely express a relationship between humans and nature. These designs and the many spaces they provide (e.g. plazas, campuses, gardens, cities, parks, memorials, urban systems, our own backyards, etc.) are aesthetic phenomenon that speak richly of cultural values. This is true throughout history as it is today. The stories these landscapes tell go hand-in-hand with cultural histories, but are not always closely examined. Designed landscapes enrich our daily lives enormously, but are not always observed, or understood as intentional acts of design--in fact they seem effortlessly placed before us. Successful landscape architecture accommodates human and natural functions (as does good building architecture), but the best speak to larger issues: to our minds and spirits. This course addresses the art of understanding the many layers of intent in designed landscapes from the past to present-including those that surround us as we walk through the built environment.

Bachelor of Arts: Arts
International Cultures (IL)
United States Cultures (US)
General Education: Arts (GA)
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

LARCH 60H: History of Landscape Architecture

3 Credits

A survey of the historical development of outdoor space in relationship to allied arts from early beginnings to this century.

Honors

LARCH 65: Built Environment and Culture: Examining the Modern City

3 Credits

This interdisciplinary course is based on the premise that space is an active structuring element of human experience. Using theoretical orientations from disciplines like Landscape Architecture, Architecture, Urban Planning, Urban Studies, Geography, History, Sociology, Cultural Anthropology among others, this course investigates how social structures are spatially embedded in contemporary built environments, especially cities. We focus on cities, because we live in a rapidly urbanizing world, and since 2008, more than half the world's population have been living in urban areas. In this class we examine how social systems impact places, especially the modern city, and also how we as

human beings are impacted by and impact cities. Cities are examined in historical context, starting from the mid 19th century. We study industrial, colonial and global cities. We then focus on enduring themes pertaining to the experience of cities by different groups in society based on factors like gender, race, ethnicity, and socio-economic status. A variety of western and non-western cases are used to understand cities in a variety of contexts. This course will complement LARCH 60 and other courses related to human settlements and urbanization offered by various departments/programs like Architecture, Art History, Geography, History, and Sociology. This course meets the Bachelor of Arts degree requirement, and the intercultural requirement (US/IL).

Bachelor of Arts: Arts
International Cultures (IL)
United States Cultures (US)
General Education: Arts (GA)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

LARCH 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

LARCH 115: Design I: Intro Spatial Composition

3 Credits

Landscape Architecture Studio 1 is the first design studio in the undergraduate Landscape Architecture curriculum. This studio introduces students to foundational concepts and methods in landscape architecture with a primary focus on the principles of spatial composition. Spatial design composition is introduced through lectures and readings and design skill is developed through studio projects that explore the space-making potential of landform, plants and structures in creating human experience in the landscape. Students explore design ideas through sketching in plan, section and perspective and by modeling their ideas in three dimensions. Students are introduced to graphic layout and composition as a means of presenting their design ideas to others.

Enforced Corequisite at Enrollment: LARCH 155

LARCH 116: Design II: Spatial Design

3 Credits

Landscape Architecture Studio 2 - the second design studio in the undergraduate Landscape Architecture curriculum - introduces students to small-scale site design. Students are introduced to essential topics in site design: the importance of understanding and responding to site and program, the fundamentals of pedestrian and vehicular circulation, the necessity of designing within a broader social and natural landscape context, and creating refinement in design form. Students are introduced to fundamental concepts through lectures and readings then presented with design projects intended to provide immediate application of those concepts. At the end of each design project, students develop presentation graphics that explain their final designs and supporting information.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 115 and LARCH 155 and Enforced Concurrent at Enrollment: LARCH 156

LARCH 125: Landscape Architecture Orientation Seminar

1 Credits

Introductory seminar involving readings on significant issues in landscape architecture. LARCH majors only. LARCH 125 Landscape Architecture Orientation Seminar (1) LARCH 125 is a seminar course, the first of many in an entering student's Penn State career. Seminar classes offer the opportunity to read, think, share ideas through informal discussion, and refine personal thoughts reflection. The seminar is a common and useful tool to explore important ideas and develop critical thinking skills. The design and theory sequence begins with the freshman seminar, LARCH 125, which introduces students to landscape architecture issues. In this seminar students read and discuss the challenges and opportunities faced by contemporary landscape architects. To support student explorations, the class undertakes a series of readings of seminal works in landscape architecture and allied field that students carefully consider, question, and discuss. As a major part of student evaluation, they maintain a journal of their evolving ideas about the course content. Entering landscape architecture majors sometimes have a restricted notion of the wide variety of career directions that face them within the field of landscape architecture. This class proposes that the principal role of the landscape designer and planner is to make "place"; - a combination of physical, cultural and compositional cues that imbue built and natural forms with meaning. The goal of this first-year seminar class is for students to understand the type, or types, of place that landscape can be. The course introduces students to concepts of landscape as place, and asks them to ponder, explore, and respond to ideas about various perspectives on landscape "place"; This introduces them to the broad range of issues and activities that are addressed in the seemingly simple term, landscape architecture. Course Objectives: a) To become familiar with important issues in contemporary landscape architecture. b) To exercise and hone skills in critical thinking. c) To exercise and hone skills in speaking and writing persuasively. d) To begin to explore roles as future place makers.

First-Year Seminar

LARCH 145: Ecology and Plants I

3 Credits

LARCH 145 introduces students to plants, their ecological context, threats to ecosystems and the various roles that landscape architects play in the design of healthy ecosystems. Plants are central to landscape architecture. On the one hand, plants are one of the primary form-giving components in the landscape architects' palette. At the same time, plants occupy a central place in the ecosystems with which landscape architects interact on all scales of intervention in the landscape. The course is divided into two parts. The first introduces the concepts of plant communities and ecosystems through lectures while providing an introduction to identifying specific native and ornamental, woody and herbaceous plants through field observation - most within their ecological context. The second part of the course consists of lectures introducing the essential roles that landscape architects play as they interact with ecosystems in the landscape at a variety of scales. Here, students are introduced to ecosystem disturbance, the water cycle, issues related to water in the urban landscape, restoration ecology, ecological restoration, and landscape ecology. Finally, students are presented with a series of case studies that demonstrate how landscape architects, with allied

professionals, work to apply ecological principles in build design projects. Knowledge gained in LARCH 145 will be applied throughout the remainder of the landscape architecture curriculum.

LARCH 155: Skills Lab I: Hand & Digital Graphics

2 Credits

Landscape Architecture Skills Lab 1 is the skills lab that runs concurrently with the first design studio in the undergraduate Landscape Architecture curriculum. This skills lab introduces students to the fundamentals of visual communication in landscape architecture with a primary focus on 2D and 3D raster and vector drawing. Spatial design composition is developed through experiencing a variety of approaches to visual communication. Students explore design ideas through sketching in plan, section and perspective and by modeling their ideas in three dimensions. Students are introduced to skills from hand drawing to digital visualization techniques, as well as board and page layouts and effective implementation of photographs in design communication.

Enforced Corequisite at Enrollment: LARCH 115

LARCH 156: Skills Lab II: Hand & Digital Graphics

2 Credits

Landscape Architecture Skills Lab 2 is the skills lab that runs concurrently with the second design studio in the undergraduate Landscape Architecture curriculum. This skills lab will develop students at the intermediate level of visual communication in landscape architecture with a primary focus on 2D and 3D raster and vector drawing. Spatial design composition is developed through experiencing a variety of approaches to visual communication. Students explore design ideas through sketching in plan, section and perspective and by modeling their ideas in three dimensions.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 155 and LARCH 115 Concurrent at Enrollment: LARCH 116

LARCH 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

LARCH 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

LARCH 215: Design III: Site Design

4 Credits

Landscape Architecture Studio 3 - the third design studio in the undergraduate Landscape Architecture curriculum - follows LARCH 116 (Spatial Design) and further explores site design through expanded complexity of site and program. Students are presented with design projects that include more extensive and complex programs and a broader range of site scales, existing conditions and contexts. Projects also expand the extent and complexity of pedestrian and vehicular circulation. These expanded site and program considerations require students to consider a broader range of design responses while building

skill in site design. Throughout the semester, students will continue to develop skills in graphic representation and visualization to explore design ideas and develop presentation graphics. Students are expected to draw upon visualization skills developed in the concurrent LARCH 255.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 116 and LARCH 156 Concurrent at Enrollment: LARCH 255

LARCH 216: Design IV: Expanded Use, Scale, and Context

4 Credits

Landscape Architecture Studio 4 - the fourth studio in the undergraduate Landscape Architecture curriculum - follows LARCH 215 and introduces students to the broader perspective of landscapes as expressions of cultural and natural processes. Theories, methods, and tools for effectively studying and analyzing larger scale landscapes will be explored through readings and studio assignments. Students will be presented with landscapes in different geographic contexts and develop skills in conducting landscape research and analysis and using appropriate tools and techniques for effectively exploring alternative land use scenarios. In support of the expanded complexity of working at a larger scale, students are expected to draw upon their knowledge of ecology and ecosystems from previous coursework (LArch 145 and 245). Students will also draw upon precedent studies they may have conducted in landscape architecture history (LArch 060) and previous design studio courses. Students enrolled in LArch 216 will be concurrently enrolled in the associated skills course (LArch 256) that will develop their knowledge and skills with the tools of landscape planning, specifically geographic information systems (GIS). In addition, students will continue to develop skills in graphic representation and written and oral communication as a means to disseminate their planning and design proposals for review and discussion.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 145 and LARCH 215 and LARCH 255 Concurrent at Enrollment: LARCH 256

LARCH 221: Design Theory Seminar

1 Credits

Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 211. LARCH 221 Design Theory Seminar (1) Each of the four design studios that constitute the core of the professional curriculum has a companion seminar that provides the vehicle for structured exploration of the theoretical and philosophical framework within which we design and plan. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design. LARCH 221 is the first of a four-class sequence of design seminars. LARCH 221 is focused on landscape architectural design. Landscape architectural principles and issues are introduced through studies of design precedents, corollary readings in the sociological, psychological and cultural contexts of design and small-group discussions - the latter frequently related to topics under investigation in the companion studio, LARCH 211. As the curriculum progresses, the issues explored become increasingly complex and build upon prior seminars. The second-year theory seminar content is introductory in nature. The fall semester (LARCH 221) covers introductory writings addressing the broadset principles of landscape design processes, discussions of fundamental ordering principles, and philosophical positions on the interrelationships of landform, plants and structure. They introduce place-awareness through concepts such as genius loci, ordering principles

such as the golden section, and experiential responses to landscape from phenomenological viewpoints. Course Objectives:- To become familiar with important issues in contemporary landscape architecture.- To exercise and hone skills in critical thinking.- To exercise and hone skills in speaking and writing persuasively.- To begin to explore the issues that impinge upon and shape 'place.'

Enforced Prerequisite at Enrollment: LARCH 115 Enforced Concurrent at Enrollment: LARCH 116

LARCH 222: Design Theory Seminar

1 Credits

Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 212. LARCH 222 Design Theory Seminar (1) LARCH 222 is the companion seminar to the design studio LARCH 212. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design. Topics in LARCH 222 reflect the projects being explored in the companion studio but, in general, move beyond exploration of basic design concepts to include an emphasis on both natural and cultural elements of place and provides essential background to the processes and principles of site analysis in as much as those reflect the technological and cultural biases that are brought to design. Landscape architectural principles and issues relevant to the design topics being pursued in LARCH 212 are introduced through studies of design precedents, corollary readings in the sociological, psychological, and cultural contexts of design and small-group discussions - the latter frequently related to topics under investigation in the companion studio, LARCH 212. As the curriculum progresses, the issues explored become increasingly complex and build upon prior seminars. The second-year theory seminar content is introductory in nature. The spring semester (LARCH 222) continues to cover introductory writings addressing the broadset principles of landscape design processes, discussions of fundamental ordering principles, and philosophical positions on the interrelationships of landform, plants and structure - increasingly in the context of the design types being explored in LARCH 212. They introduce place-awareness through concepts derived from sociology, social psychology and cultural anthropology. Course Objectives: - To increase familiarity with important issues in contemporary landscape architecture. - To continue to develop skills in critical thinking. - To continue to build skills in speaking and writing persuasively. - To bring focused attention to the issues that impact the design of small, private and public spaces.

Enforced Prerequisite at Enrollment: LARCH 116 and LARCH 221 Enforced Concurrent at Enrollment: LARCH 212

LARCH 235: Design Implementation I: Grading

3 Credits

Introduction of basic principles and tools supporting landform data, site systems, grading, visualization representation and site circulation. LARCH 235 Design Implementation I: Grading (2) As an introductory design implementation course, this course provides the foundation for site design in landscape architecture. At the core of the course are four general bodies of knowledge: Geometrics, Landform Manipulation, Site Systems, and Computer Applications for Site Analysis and Design. Geometrics: In order to perform landform manipulation, students must be able to efficiently acquire and process basic physical information about a site and are required to understand a suite of measurements. This course will first provide an overview of the digital

and paper data sources available to landscape architects. Students will develop basic skills in manipulating or processing these data in order to comply with the requirements of site design. The course will also provide the basic measurements and formulae required for students to efficiently and accurately manipulate landforms. **Landform Manipulation:** One of the most critical skills landscape architects must acquire as designers is the ability to design landforms to accommodate changes in use and to translate their design ideas into dimensionally precise topographic representations of their designs. This course provides the basic knowledge for students to complete this process. Beginning with a single site element, students are expected to explore the suite of opportunities to place and modify a site to fit a single site element. Increased complexity is added to the suite throughout the remaining portions of the semester, thus enabling students to balance the opportunities and constraints presented by each individual design element and the overall site design. **Site Systems:** Building on ecological components of the curriculum, this course provides the first site specific and physical understanding of basic site systems critical to every landscape architect's design. Students will primarily focus on the major site features as related to site drainage, such as soil, topography, and surface geology, but will also be expected to recognize regional context in their designs. **Computer Applications for Site Analysis and Design:** A central component underlying the instruction of the course is providing students with a suite of computer tools. **Course objectives:** a) To assist in initial efforts in acquiring and processing site data; b) To perform calculations such as cut and fill, spot elevations, and slope calculations; c) To visualize and complete basic manipulation of landforms; d) To understand the interaction of physical site features on individual sites (e.g., soil and topography); and e) To communicate their final site designs according to professional standards

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 116 and LARCH 156 Concurrent at Enrollment: LARCH 215 and LARCH 255

LARCH 236: Design Implementation II: Materials

3 Credits

The landscape architect calls upon a rich array of materials to construct the built elements of landscape: walls, ground surfaces, overhead structures and furniture systems. The functional success and durability of many historical and traditional construction methods is based on a learned appreciation of the qualities and behaviors of materials in use in the landscape. Students develop understanding of the fundamental structural qualities of materials and use that knowledge to devise and illustrate their own design details. The same understanding of material behaviors will be used to investigate the qualities of novel construction materials, and will guide the development of construction details that respond to new constraints and opportunities. The main focus of 236 will be on materials and construction detailing, with emphasis on techniques appropriate for an array of design situations. Representation of design ideas using computer-aided-drafting is expected in this class.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 235 and LARCH 336

LARCH 245: Ecology & Plants II

3 Credits

This course applies knowledge gained in LARCH 145 by emphasizing planning and design based upon a systems approach to plants, soil and water. The course consists of lectures, campus walks, guest lectures and

one day-long field trip to a public garden. The lectures and campus walks focus upon the identification of native plants in the landscape. Guest lectures cover additional, related topics. Students learn about specific native plants and plant communities as the basis for ecological planting design in reference to the ways these plants adapt to local climate, soil and hydrologic regimes. The use of native plant communities in planting design as practiced in this course also promotes the conservation and restoration of biodiversity and the promotion of human wellbeing. It can minimize the use of fertilizer, irrigation, and costly maintenance regimes. Students are also introduced to landscapes that have been shaped by the interactions between people and their environment. The use of native plant communities can be part of the preservation and re-creation important vernacular and historic cultural landscapes. Native plant communities express the identity and beauty of place. A primary goal of the course is to develop students' understanding of the values and uses of native plant communities toward achieving sustainable solutions to the problems of environmental degradation, resource scarcity and global climate change. Course assignments are linked directly to this goal by providing students with experience in designing landscapes where natural processes can function effectively.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 145

LARCH 246: Ridge & Valley in the Field

1 Credits

LARCH 242 Ridge & Valley Field Study explores the intrinsic links between landform, geophysical and biological processes, vegetation communities, and human manipulation of the landscape through time. It comprises a series of four one-day trips to select locations across our local Ridge & Valley landform region (Appalachian Mountain section), providing the opportunity to examine phenomena at the site level, particularly plants, soils, and landscape contexts. The field experience is immediately preceded by a few skills-building preparatory activities (e.g. workshop(s), test) to establish basic competencies and fore-knowledge. An essential tenet of the course is that layered and interconnected landscape systems learning is something all landscape architects should pursue in their region of practice. Every place possesses a particular relationship between the underlying geology, climate, hydrology, landform, soils, and the plants and animals that inhabit it. Understanding this relationship and learning how to analyze and interpret landscapes is important to all spatial design work-as a source of essential information and as a source of design inspiration. The Ridge & Valley region contains an especially clear, distinct and "readable" relationship between the geophysical and the biological-between the geological underpinnings and the plants and animals that inhabit the surface. This makes the Ridge & Valley an outstanding context to learn how to observe these important, sometimes subtle, relationships. Once students understand what to look for and how to observe a landscape, they can apply this method to any landscape in the world. The conditions change from place to place, but the method is transferable.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 145

LARCH 255: Skills Lab III: Digital Graphics

2 Credits

Landscape Architecture Skills Lab 3 is the skills lab that runs concurrently with the third design studio in the undergraduate Landscape Architecture curriculum. This skills lab will develop students at the

advanced level of visual communication in landscape architecture with a primary focus on 2D and 3D raster and vector drawing. Spatial design composition is developed through experiencing a variety of approaches to visual communication. Students explore design ideas through sketching in plan, section and perspective and by modeling their ideas in three dimensions.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 116 and LARCH 156 Concurrent at Enrollment: LARCH 215

LARCH 256: Skills Lab IV: GIS

2 Credits

Landscape Architecture Skills Lab 4 is the skills lab that runs concurrently with the fourth design studio in the undergraduate Landscape Architecture curriculum. This skills lab will introduce geographic information system (GIS) as a primary tool in regional analysis and planning. The students will learn to integrate GIS into a broadly-based approach to managing data, developing concepts, and communicating ideas.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 215 and LARCH 255 Concurrent at Enrollment: LARCH 216

LARCH 276: Human Dimensions of Design: History & Theory

3 Credits

The human dimensions of placemaking must consider the types of places people populate. New to civilization, the 21st century has been characterized as the urban century. More people live in urban areas than in rural areas, and this trend is expected to continue especially in Asia and Africa. This course will primarily focus on examining social and cultural issues in landscape architecture and planning. The course will explore rural, urban, and extra-urban sites, the inclusivity and exclusivity of American spaces, and issues of gender and diversity of landscapes. The course will balance lectures, readings, and student presentations. Students will be introduced to methods to identify socio-cultural issues in landscape design, planning, and placemaking.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 60

LARCH 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

LARCH 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

LARCH 315: Design V: Expanded Use, Scale, and Context

4 Credits

Landscape Architecture Design Studio V - the fifth design studio in the undergraduate Landscape Architecture curriculum - follows LARCH 216 and introduces community and spatial design that accommodates civic and public functions while addressing social and environmental

imperatives. It also expands on site design and program that creatively reconciles community-based (i.e. residential and/or public space) agendas. In support of focused explorations of community-oriented design, students are expected to draw on their knowledge of regional and landscape systems from LARCH 216, as well as site design in LARCH 215. In designing public spaces that lie at the heart of thriving communities, students are also expected to draw on technical skills in grading, materials, and planting acquired the implementation sequence. Throughout the semester, students will continue to develop skills in graphic representation and visualization to explore design ideas and develop presentation graphics. Students are expected to draw upon visualization skills developed through the skills lab sequence.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 216 and LARCH 256

LARCH 321: Design Theory Seminar

1 Credits

Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 311. LARCH 321 Design Theory Seminar (1) LARCH 321 is the companion seminar to the design studio LARCH 311. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design. Topics in LARCH 321 reflect the projects being explored in the companion studio. During the third year, theory references build upon the second-year experiences and expand to broader regional investigations. The fall semester (LARCH 311 and 321) covers regional context as a preamble to large-scale master planning in land-use issues. In the seminar, students read broadly about the genesis of regional context as a construct of cultural, as well as biophysical influences. The concept of 'reading' the landscape is fully explored, introducing students to the clues and cues by which the origins of the existing landscape can be discerned. Themes in the third-year theory seminars become increasingly sophisticated. The regional landscape is the setting for some of our most pressing public debates - landscape restoration vs. agro-industry; landscape as economic resource vs. spiritual renewal; landscape as repository of cultural history vs dynamic reflection of current values. These themes are explored through readings that include the fundamental influences of topography; geology; regional ecology and hydrology; the human overlays of land use; transportation; demographics; and the cultural influences and responses seen in landscape history, cultural and visual analysis, etc., are introduced. Course Objectives: - To explore the political and philosophical influences that shape the regional landscape. - To expose students to important debates on the future of the regional landscape. - To continue to develop the ability to engage in public debate of these issues. - To continue to build skills in speaking and writing persuasively.

Prerequisite: LARCH241 , LARCH212 , LARCH222; Concurrent: LARCH311

LARCH 322: Design Theory Seminar

1 Credits

Inquiry-based reading and discussion of design theory literature relevant to the focus and content of LARCH 312. LARCH 322 Design Theory Seminar (1) LARCH 322 is the companion seminar to the design studio LARCH 312. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design. Topics in LARCH 322 reflect the projects being explored in the companion studio. During the third year, theory references build upon the second-year experiences and expand

to broader regional investigations. The spring semester (LARCH 312 and 322) covers site design issues within a regional context. In the seminar, students gain an understanding of communities and the complex of values that shape them, including the interrelationships of natural, cultural and economic factors on the future development of communities. Habitat management, watershed management, real-estate values, zoning and planning ordinances, individual and community rights are topics of discussions in this seminar. Students develop awareness that even small, individual site design requires an understanding of larger environmental and cultural contexts, and that success in planning at that large scale depends on implementation of wise planning at the site scale. Readings and discussion are supplemented by research and report writing that address contemporary debates on policy and planning. LARCH 322 also provides a setting for joining ideas presented in the context of both small-scale and large-scale design to engender in students a comprehensive view of the world of landscape design as an integrated whole where concepts developed at small scale become the framework and guiding principles for larger scale, vice versa. Course Objectives: - To explore students' values as they shape the designed landscape. - To expose students to important debates on the future shape of the inhabited landscape. - To continue to develop the ability to engage in public debate of these issues. - To continue to build skills in speaking and writing persuasively.

Prerequisite: LARCH311 , LARCH321; **Concurrent:** LARCH312

LARCH 335: Design Implementation III: Planting Methods

3 Credits

The third of four courses in the landscape architecture implementation sequence, this course addresses the applied principles, tools and techniques of planting design implementation, with a focus on landscape planting methods and technically proficient documentation. It relies on students having achieved foundational planting design knowledge and abilities in prior design studios and prerequisite courses. Proceeding briskly through site and contextual analysis and conceptual design, we will concentrate on methodical design development, investigation of planting implementation and management methods, and preparation of planting contract documentation. Upon completion of the course, students will have achieved proficiency in planting design implementation as integral to the overall design process and vital to realizing goals for landscape performance, aesthetics, site functionality, and broader social and environmental values.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 216 and LARCH 235 and LARCH 256

LARCH 336: Design Implementation IV: Stormwater

3 Credits

This course is the fourth of four studio courses in the implementation sequence, all of which focus upon the more technical aspects of landscape architectural practice. By means of lectures, studio problems, assigned readings, and computer courseware, LArch 336 will present the principles and techniques of: Advanced Landform Design and Site Grading- integration of landform and structure through iterative grading design process; water flow and surface drainage. Site Systems and Stewardship - soil, water, and vegetation interactions and ecology; site protection; site systems management; environmental responsibilities and stewardship. Hydrology and Stormwater Management - basic site hydrology; overview of hydrology and stormwater management concepts, infiltration; surface runoff calculations, surface and subsurface drainage

systems design. Production of technical drawings using computer-aided-drafting is expected in this class.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 235

LARCH 365W: Contemporary Trends in Landscape Architecture

3 Credits

LARCH 365(W), Contemporary Trends, is a writing-intensive course that enables a more thorough investigation of social, environmental and cultural issues as they relate to design. The course is grounded in three basic concepts: RESEARCH, COMMUNICATION, and theoretical CONTEXT within the discipline of landscape architecture, past and present. The course develops the skills of critical thinking and writing as pertains to contemporary issues in landscape architecture, with an understanding of precedent and evolution of design theory. The goal of this course is to introduce students to a variety of ways that contemporary landscape architects address and use these issues in their work, and to develop their skills in critical thinking, the art of critique, and communicating ideas in both verbal and written methods. The course is devoted to a wide range of relevant issues and topics confronting the profession and discipline of landscape architecture in the 21st century. It investigates the modern designed landscape as a distinct mode of cultural production-with its own materials, medium, codes, ethics, and concerns-in the context of landscape architectural theory's interconnection to evolving societal constructions of nature, social issues, environmentalism, and the city. It begins with the emergence of a modern sensibility about landscape in the late 19th century and tracks developments through modernism, postmodernism, and beyond. Information dissemination will be by lectures, readings, student research in the form of monographs and critique of built work.

Enforced Prerequisite at Enrollment: LARCH 60 Writing Across the Curriculum

LARCH 375: Human Dimensions of Design - Applied

3 Credits

Within the practice of landscape architecture, it is critical for designers to consider and integrate the human dimensions of place. Students will continue to learn to identify human dimensional issues and better understand the context of socio-cultural, sometimes controversial or emotionally charged issues in the landscape. This course will focus upon the practice of solving such issues in a contemporary context. The course will explore a variety of tools and strategies for problem solving in human dimensions of design and will teach the students that there are multiple approaches to understanding and solving complex design problems. The students will integrate theory and apply methods as they work through a series of different problems that allow them to apply design thinking to complicated socio-cultural issues. Through a series of exercises and participatory engagements, students will practice making decisions that affect community change through the perspective of design.

Enforced Prerequisite at Enrollment: LARCH 276

LARCH 386: Professional Practice

3 Credits

An investigation of current professional and business practices in the field of landscape architecture. For Landscape Architecture majors only.

LARCH 386 Professional Practice (3) LARCH 386 has a three-part role. It comprises an introduction to the variety of practice opportunities in landscape architecture, their opportunities and drawbacks; it provides an introduction to critical office management practices; and it assists students in the employment application process through coaching on interview technique and guidance on the preparation of supporting material. It is the overarching intent of this course to help students understand what it will mean to be a professional practicing a constantly changing marketplace of ideas. Topics covered include ethics, public relations, office and project-related practices, personal and professional development, and legal aspects of practice: contracts, specifications, liability insurance. Through active participation in the course, students will come to realize the diversity inherent in the profession. Course objectives: - To introduce a range of practice types, including: small, private practice, large-scale corporate practice, federal and state agencies, not-for-profit organizations, and other non-governmental organizations; - To discuss relations with other professionals, including the formation of teams and other strategic alliances, and negotiation of professional fees; - To outline and illustrate the various roles and responsibilities individuals might have both in and outside of an office, including situations of personal vs corporate responsibility; and - To investigate the inherent values or point of view of principals and others that effect how decisions are made and change occurs.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 315

LARCH 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

LARCH 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

LARCH 405N: Bicycling Culture and Urban Design

3 Credits

KINES 405N, a study abroad course, based in a bicycle friendly European city, provides students with an opportunity to experience the programs, policies, infrastructure (including urban design features) and culture associated with bicycling in what is one of the most bike-friendly cities in the world. Students will have an opportunity to be immersed in the city's bicycle culture, observe bicycle infrastructure and multi-modal transportation solutions, learn from programs and policies that support bicycling and learn about the role of bicycling in sustainable, liveable communities. This course will be taught from a multi-disciplinary perspective to address the complex issues associated with bicycling. Students are expected to apply information and content to other countries and communities.

Enforced Prerequisite at Enrollment: KINES 100 or LARCH 125 or [5th Semester standing and (3 credits of CAS or 3 credits of ENGL)]

Cross-listed with: KINES 405N

International Cultures (IL)

General Education: Arts (GA)

General Education: Health and Wellness (GHW)

General Education - Integrative: Interdomain

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

LARCH 414: Design and Theory V: Advanced Landscape Architectural Design

5-15 Credits/Maximum of 15

Review of landscape architectural theories and issues; supports development of comprehensive design study and/or independent honors (Thesis-Based) design projects. LARCH Majors only. LARCH 414 Design and Theory V: Advanced Landscape Architectural Design (5-15) Fourth- and fifth-year design studios are designated 'depth' studios. Each studio is aligned with one of the department's associated research centers or pursues special topical content and continues the development of site-scale planning and design skills for landscape architecture students with larger and more complex sites and programs. Students select a topic from the range of options. Students may choose to take a given topic on a maximum of two occasions. Topics are related to issues that have been introduced in previous studios and are as varied as possible from studio to studio. This allows students to select a topic of interest to explore with great intensity and detail. The studio alternatives offered each year are based on faculty expertise and student interest, and are chosen by the department head's review of faculty proposals. To date, studio topics have ranged from historic preservation to recreational landscapes, urban ecology to community planning. The type of project is determined on an individual basis, and will be rigorous and require a high level of depth of thought and a sophisticated product. Project types include regional master planning, large-scale site planning and medium-scale community/housing design. The design issues emphasize urban form, community identity and open-space systems in the United States as a follow-up to urban patterns experienced during the student's previous study abroad. The project types may include such topics as inner-city locations with mixed-use and complex programs that progress from research and planning to site-scale design. Often, students work with an actual client, such as an urban planning commission or a city economic development entity, etc. Issues of urban form as a setting for significant practice opportunities are emphasized. Locations such as brown fields, urban entertainment districts, waterfronts, housing infill, etc., form the basis for design response in context. Course Objectives: -To develop an in-depth understanding of one or another aspect of landscape architecture. -To be exposed to the rigor and challenges of developing and implementing one's own design expertise in the context of a specific environmental concern. -To exercise the design principles, technological tools and communication strategies developed during the course of the specific design studios.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 235 and LARCH 315 and LARCH 335

LARCH 424: Design Theory Seminar

3 Credits/Maximum of 9

Inquiry-based reading and discussion of design theory literature relevant to contemporary landscape architecture issues. Topics vary each semester. LARCH 424 Design Theory Seminar (1-3) LARCH 424, Design Theory Seminar, is a companion to the depth studios, LARCH 414. However, unlike the seminars offered during second and third years, LARCH 424 is not tied topically to any particular depth studio. Instead, this seminar provides a vehicle for rigorous and structured exploration of

the theoretical and philosophical issues that face landscape architectural designers and planners. The seminar is a small group setting where directed readings, independent research and reflection are employed to explore the context of contemporary design. These seminars, offered to fourth- and fifth-year students, enable professors and students to take their investigations to greater depth. Seminars are offered by different professors each semester and the content is expected to be somewhat aligned with the faculty member's research and scholarship or pursues special landscape architectural topical content of the faculty's choosing. Students select seminars from the range of options offered. This allows students to select a topic of interest to explore with great intensity and detail. Students are required to take up to three seminars to achieve a minimum of three credits. Topics are related to issues that have been introduced in previous studios and seminars and the department ensures that students have access to the widest range of topics. The seminar alternatives offered each year are based on faculty expertise and student interest, and are chosen by the department head's review of faculty proposals. Seminar topics related to our research centers include historic preservation, urban ecology, community planning and watershed stewardship. From time to time topics independent of our research centers, such as the impact of technology on design or the impact of public policy on design and planning, will be addressed. The type of seminar outcome is determined by instructors on an individual basis, and will be rigorous and require a high level of depth of thought and a sophisticated product. Course Objectives: • To further develop an in-depth understanding of the theoretical or socio-political context for one or another aspect of landscape architecture. -To challenge students to articulate their own values in the context of a specific environmental concern. -To examine the means by which designers reconcile their own, their clients', and society's values in the pursuit of particular design or planning goals.

Enforced Prerequisite at Enrollment: Students must earn a C or better in LARCH 365W

LARCH 450: Geodesign: Geospatial Technology for Design

3 Credits

Interactive geodesign and digital design studio. LARCH 450 Geodesign: Geospatial Technology for Design (3) This course addresses the role of continually evolving information technologies in landscape architectural research and practice by reference to long legacy of theoretical contributions from the field that have sought to reconcile and benefit from integrating the sciences of society and environment with art, design, and planning. This interactive digital design course is an advanced geodesign methods and principles class that applies digital tools to landscape research, modeling, analysis and design. This course presents a digital process for analyzing, managing, and ultimately designing landscape systems by allowing students to inventory, analyze and evaluate complex spatial datasets. Students will learn to critically evaluate and implement the interplay between various factors and design alternative futures. Lectures will introduce key geodesign principles and techniques. The goal is to investigate an array of geospatial software as a powerful design tool in a broad and integrated manner for all the activities of the landscape architect, designer, planner and architect. Using a variety of geospatial and digital tools, students will develop a process to study, analyze, and plan landscape systems. They will utilize activities from each lesson to develop primary and alternative strategies for their proposed project. The problem-based approach used by this course will encourage cross-cultural contexts for student projects. Geospatial design computing technology enables many alternate approaches to problem-solving, so that students will customize

their own learning experiences within the concrete structure of the course. This course brings advanced geospatial and digital analysis and evaluation into the design process, where concepts and ideas are vetted for suitability against a wide array of physical and social, place-based information. This on-the-fly suitability analysis provides a framework for design, giving landscape architects, architects, land-use planners, and others involved with design the tools to directly leverage geospatial information within their design workflows.

LARCH 494: Research Projects - Honors

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

LARCH 495: Internship

1-13 Credits/Maximum of 13

Supervised off-campus, non-group instruction including individual field experiences, practicums or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

LARCH 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

LARCH 496H: Independent Studies - Honors

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

LARCH 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

LARCH 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

LARCH 499A: Design Theory Seminar

1 Credits

Inquiry-based reading and discussion of design theory literature relevant to the focus and content of the associated design studio course, LARCH 499B. LARCH majors only.

Prerequisite: LARCH361W; Concurrent: LARCH499B, LARCH499C, LARCH499D

International Cultures (IL)

LARCH 499B: Design and Theory VI: Contemporary/International Landscape Architectural Design Issues

5 Credits

Study of and design for sites, programs, and social groups associated with ongoing contemporary landscape architectural concerns. LARCH majors only.

Prerequisite: LARCH312, LARCH361W; Concurrent: LARCH499A, LARCH499C, LARCH499D

International Cultures (IL)

LARCH 499D: Contemporary/International Special Topics

3 Credits

Special topics related to, and study in conjunction with 499B. Landscape Architecture majors only.

Prerequisite: LARCH361W; Concurrent: LARCH499B

International Cultures (IL)

Language and Literacy Education (LLED)

LLED 5: College Reading Improvement I

3 Credits

Improvement of basic reading skills: vocabulary development; literal and interpretative comprehension; application of these skills more efficiently to college work.

LLED 10: College Reading Improvement II

3 Credits

Development of higher level comprehension, vocabulary, and study skills incorporated into content area reading.

LLED 215N: Children's Picture Books as Multimodal Texts

3 Credits

Children's picture books are often described as fundamental in nurturing the development of young children into engaged readers and fearless writers. Many adults have a special place in their hearts for picture books they loved as children; books they read over and over again, books that spoke to their hearts and minds, and books that helped them figure out the mystery of written language. In this inter-domain course, we will take a close look at children's picture books and explore their magic through integrating humanities and the arts. We will read many, many books of different genres to examine how the written text and illustration work together to compose a work of art that we read, understand, enjoy and connect to. We will explore the criteria by which we judge the literary and artistic quality of picture books and will become acquainted with resources that can help us find exceptional books. We will also consider the significance of children's literature representing diverse perspectives and will work to deconstruct the values and biases implicit in texts written for young children. Much of the course will be organized in a

workshop format through which we will learn about the authoring and illustrating techniques and processes used by notable authors and illustrators of modern children's picture books, while also experimenting with the same techniques through drafting and developing our own picture books. Our end goal will be to thoughtfully weave linguistic and visual composition elements to craft original multimodal texts for children.

LLED 227: Understanding Childhood through Children's Literature: Books, Media, Toys

3 Credits

This course is transdisciplinary in nature, looking at the multiple ways children's cultures are constructed in contemporary and canonical literature for children, transmitted through films, games, and toys. It blends approaches that consider art, history, politics, popular culture, and technology, as bases of inquiry into children's cultures and childhood. It also considers other classic and contemporary texts for young people. The course opens with students' initial understanding of childhood in their unique cultural spaces and settings. It then proceeds to discuss the dominant perceptions of childhood and their possible implications for how society considers the roles of children and their cultures. It recommends critical multiculturalism as a possible theoretical lens to examine how creators of children's texts construct and imagine children, children's cultures and/or childhood. The course also offers a brief history of children's literature. The last half of the semester explores other texts side-by-side children's books from various cultures to enable students to ponder myriad childhood and children's cultures under exploration in the different texts. What patterns do they notice? How might this enable them to further understand the complex nature of children's cultures? Course assignments include designing an artifact that is representative of an aspect of children's culture from course materials.

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

LLED 235: Chinese Culture in Child Lit

3 Credits

Children's literature reveals how a culture imagines itself and offers a window into other cultures for young readers. What a child reads and what is read to the child shows the values the child's nation holds dearly. However, in this rapidly changing world, national culture is fluid, ever changing and mixing with other cultures. Being a global citizen and a potential educator for children requires some level of familiarity with a diverse array of cultures. This course will introduce you to traditional Chinese culture and explore its representations in western children's literature. The class will first delve into the works of Confucianism, Taoism, and Buddhism adapted for children. You will study the impact

of these intellectual schools in Chinese society and develop a broad and coherent understanding of Chinese cultural values. From there, the class will examine western children's literature, focusing on voices that echo with or differ from Chinese culture. For example, Ursula K Le Guinn, author of the Earthsea fantasy series, claims that her work was inspired by the Taoist ideas of balance and equilibrium. Other western authors may not claim as fans of Chinese thinking, however, their works clearly echo with Chinese values and thus have been received by Chinese parents and children warmly. For instance, Winnie-the-Pooh is a model of a western Taoist, as observed by Benjamin Hoof, the author of The Dao of Pooh, for Pooh's simplicity and non-action. The spider in Charlotte's Web exemplifies the Confucian ideal of being faithful to friends. The Little Prince plays the mystery of Buddhist nirvana. Some western ideas may seem strange in traditional China such as the idea of the Savior. However, this idea has now become well-known through Aslan the Lion created by C. S. Lewis in The Lion, the Witch and the Wardrobe. Since the early 20th century, western literature has quietly entered and enriched Chinese culture. By expanding your knowledge of traditional Chinese values, you will develop new perspectives to western children's literature. In the second half of the semester, you will write and illustrate a picture book embedded with your understanding of Chinese culture. You will design a curriculum appropriate for a preschool or early elementary classroom. Doing so, you learn how to help children appreciate different cultures, enhance their critical thinking through literature, and become aware of the connectedness among humans across the world.

LLED 400: Teaching Literacy in Early Childhood

3 Credits

Principles, problems, materials, and techniques involved in the development of speaking, listening, writing, and reading in early childhood in homes, schools, and communities. This course is intended to help teacher candidates become knowledgeable users of theory and language about language, literacy and culture as related to young children and to think through instructional possibilities thoroughly, using multiple sources of information to experiment with and provide justification for chosen decisions. Focusing specifically on young learners' (PK - 1) literacy development, we center a culturally responsive understanding of literacy curriculum that recognizes and supports the interconnectedness of home, community and school environments in early literacy development. We understand young children engage texts that go beyond print texts to include multimodal visual, auditory,

digital, movement, and artifactual texts. In LLED 400, candidates learn to understand how young children develop as readers, writers, users, and generators of literacies in and out of school. Literacy teaching is both an intellectual and practical matter in which teachers work with students in ways that recognize the complexities of language and its social uses, the role of play, learning and its cultural contexts, and schooling as organizational phenomena. Young children enter schools with multiple types of literacy knowledge and cultural experiences. Coming to understand these complexities requires the coordination of both theoretical awareness and applied knowledge. Developing practical strategies to teach literacy requires a dedication of head, hand, and heart to treat all people with dignity, acknowledging the contributions of all cultural groups and respecting diversity as it honors ideals of social justice. In LLED 400, teacher candidates develop a repertoire of organizational, instructional, and evaluative strategies for understanding and supporting individual young children's literacy development that are both research- and practice-based. Candidates work on projects independently and in collaborative groups. Content is presented by the instructor through a combination of lectures, weekly readings and reflections on readings, class discussion, activities and demonstrations, and viewing and analyzing video. Projects include an analysis of young children's literacy development and curriculum planning for early learners. A field experience connected to the coursework taken in conjunction with LLED 400 affords teacher candidates the opportunity to inquire about children's literacy encounters. LLED 400 is part of a block of courses in a PSU teacher education program that is unified by the basic set of principles supporting the development of a broader and more inclusive and anti-racist driven understanding of texts, children, and communities.

Prerequisites: 4th Semester standing **Corequisites:** LLED 401, LLED 402, CI 460

LLED 400H: Teaching Reading in the Elementary School

3 Credits

Introduction to the reading program; acquaintance with materials and techniques; observations of reading instruction; correlation with human growth and development.

Honors

LLED 401: Teaching Literacy in Elementary School

3 Credits

Principles, problems, materials, and techniques involved in teaching speaking, listening, writing, and reading in the elementary school. LLED 401 Teaching Literacy in Elementary School (3) is intended to acquaint teacher candidates with theories and practices of teaching literacy in the elementary grades 2 - 4 and to think through instructional possibilities thoroughly, using multiple sources of information to experiment with and provide justification for choices made. We center an understanding that text goes beyond print texts to include multimodal visual, auditory, digital, movement, and artifactual texts. In LLED 401, candidates learn to understand how children in grades 2-4 develop as readers, writers, users, and generators of literacies in and out of school. Literacy teaching is both an intellectual and practical matter in which teachers work with students in ways that recognize the complexities of language and its social uses, learning and its cultural contexts, and schooling as organizational phenomena. Children enter schools with multiple types of literacy knowledge and cultural experiences. Coming to understand these complexities requires the coordination of both

theoretical awareness and applied knowledge. Developing practical strategies to teach literacy requires a dedication of head, hand, and heart to treat all people with dignity, acknowledging the contributions of all cultural groups and respecting diversity as it honors ideals of social justice. In LLED 401, teacher candidates develop a repertoire of organizational, instructional, and evaluative strategies for understanding and supporting individual children's literacy development that are both research- and practice-based. Candidates work on projects independently and in collaborative groups. Content is presented by the instructor through a combination of lectures, weekly readings and reflections on readings, class discussion, activities and demonstrations, and viewing and analyzing video. Projects include an analysis of children's literacy and curriculum planning for early learners. A field experience connected to the coursework taken in conjunction with LLED 401 affords teacher candidates the opportunity to inquire about children's literacy encounters. LLED 401 is part of a block of courses in a PSU teacher education program that is unified by the basic set of principles supporting the development of a broader and more inclusive and anti-racist driven understanding of texts, children, and communities.

Prerequisites: 4th Semester standing

LLED 402: Teaching Children's Literature

3 Credits

The purpose of LLED 402 is to familiarize teacher candidates with different theories and practices of teaching literature. Candidates are immersed in the study and experiences of literature and strategic models of literature instruction. Understanding that belief systems inadvertently determine the models of literature instruction educators adopt. LLED 402 asks candidates to be mindful of the diverse nature of our communities, and encourages them to strive to create literary communities that respect, value, and encourage multiple modes of expressions. The basic course goals are to help candidates to understand the importance of story in all human lives; to exhibit a wide repertoire of flexible strategies for interpreting literature; to understand socio-cultural influences upon writing and literature; to know and be able to use basic reference tools and selection guides for research; to become familiar with different genres, diverse texts, and styles; to read for sequence and for secrets; to articulate responses to literature across a variety of media; to weave into the exploration of each of these goals a struggle to understand and to accept human difference; and to understand the role that literature plays in the school curriculum. The course presents theories of teaching literature and models of literature instruction that place at the center socio-cultural practices typical of democratic literary communities. This requires knowledge of how literature and texts work in real life and in a variety of social and cultural contexts. Informed by research, standards and current practices, LLED 402 exhibits the power of literature, the complexities of students' learning and experiences with texts, and the problem solving character of teaching.

Prerequisite: 4th Semester Standing

LLED 411: Teaching Language Arts In Secondary Schools I

3 Credits

Exploration of language, literacy, and culture and development of curricular designs for teaching language arts in secondary schools. LL ED 411 is designed to provide pre-service secondary English and communications teachers with the foundational experiences for inquiry into the relationships between language, literacy, and culture. Participants reflect upon personal experiences with language and

school, examine secondary education perspectives in pedagogical and philosophical terms, build supportive relationships with colleagues to develop the best curricular and instructional decisions, explore the social, psychological, political, and economic aspects of language use and literacy practices in a country with diverse cultures, explore the construction of meaning and knowledge by the use of language and other symbolic systems of representing and sharing experience. A strong emphasis is placed upon the teacher as collaborator, risk-taker, and researcher, who tries new ideas, documents the classroom experience that results, and shares reflections with colleagues to help construct the best understanding for teaching language arts in secondary schools. Course work involves extensive reading, the production of artifacts of a variety of types (written, performed, multi-media) such as journals, reviews, viewpoints, and original research, all done by both individuals and small groups to pursue the course objectives.

Prerequisites: 5th Semester standing Recommended Preparation: Entrance to SECED major or graduate certification program

LLED 412W: Teaching Language Arts in Secondary Schools II

3 Credits

Exploration of language, literacy, and culture and development of curricular designs for teaching language arts in secondary schools. LL ED 412W Teaching Language Arts in Secondary Schools II (3) This three-credit course addresses the theory, practice, and implications of teaching the English language arts at the secondary level. The course is the discipline-specific component of the Secondary Education block taken by majors in Secondary Education prior to student teaching. In this course, students explore issues in language, literacy, and culture and development of curricular designs for teaching language arts in secondary schools. Through in-class and out-of-class activities completed both independently and in collaboration, students read about, talk about, and practice teaching all of the language arts-reading, writing, speaking, listening, and thinking. Activities highlight ways of planning for instruction and ways of assessing student learning as teachers implement those plans. In addition, students will take up the professional issues facing beginning teachers of the English language arts-issues of professionalism and the teaching role, relationships with students, and how teaching can fit into a life. The course builds upon content developed in other courses in the major, including theories of reading, composition, media literacy, and pedagogy. Students engage in a variety of writing tasks both in support of developing course content and as a means of making their work public. This writing includes (but is not limited to) lesson planning, reflective writing on experiences both in the course and in related field experience, and the development of a professional portfolio. During class sessions, informal writing is used for a variety of purposes such as brainstorming, facilitating collaborative work, or framing discussion. Throughout the semester, students draft and receive feedback on a variety of portfolio components, which are revised and incorporated into a final version of the portfolio due at the end of the course. Portfolio contents vary according to instructor, but examples might include statements of educational philosophy, analysis of student writing from field experience, commentary on unit and lesson materials, reflective writing on reading and writing processes, and professional documents such as lesson plans and letters to mentors and potential employers.

Prerequisite: LL ED411 or LL ED400; Concurrent: C I 412W Writing Across the Curriculum

LLED 420: Teaching Adolescent Literature and Literacy

3 Credits

Exploration of adolescent literacy and curricular designs for teaching adolescent literature and literacy in secondary schools. LLED 420 is designed to provide the personal experiences and inquiry with adolescent literature and literacy patterns essential for pre-service teachers. Participants reflect upon personal experiences with adolescent literature, examine critical education perspectives in pedagogical and philosophical terms, build supportive relationships with colleagues to develop the best curricular and instructional decisions, explore the literary character of adolescent literature, the representation of cultural diversity in the voices of adolescent literature, and the curricular design of experiences with adolescent literature in secondary schools. A strong emphasis is placed upon the teacher as collaborator, risk-taker, and researcher, who tries new ideas, documents the classroom experience that results, and shares reflections with colleagues to help construct a better understanding of using adolescent literature in secondary schools. Course work involves extensive reading, written documents of a variety of types (journals, reviews, reports, original research) done by individuals and small groups to pursue the course objectives.

Prerequisites: 5th Semester standing Recommended Preparation: Entrance for SECED major or graduate level certification pathway.

LLED 421: Teaching Writing in Secondary Schools

3 Credits

This course will provide preparation for teaching writing in the secondary school context. Students completing this course will meet the following objectives: -Understand one's own history as a writer and as a student in relation to the student's current and future practice in the teaching of writing -Articulate principles of a process approach to writing instruction and a workshop learning environment for writing, grounded in research and theory -Know and use strategies for supporting student writers as they work through writing processes -Differentiate writing instruction for students with varying backgrounds and needs -Access, evaluate, and use professional resources for writing instruction in ways that are consistent with principles grounded in research and theory Course content will include an orientation to writing processes, the social contexts of written genres, classroom environments for teaching writing, overcoming barriers to writing in adolescents, conferring and feedback, teaching the conventions of written English, and writing assessment. In addition, students in the course will engage in professional activities appropriate to a teacher of writing at the secondary level. To achieve these aims, students will engage in significant in-class and out-of-class writing activities. They will study examples of teaching practice and student writing from real secondary school classrooms. They will read and apply research on effective writing instruction. They will develop instructional plans and classroom resources for writing instruction. Finally, they will articulate stances for practice as teachers of writing as they begin their professional careers as teachers

Prerequisites: 5th Semester standing

LLED 422: Teaching the Young Adult Literature Workshop

3 Credits

This course is designed to familiarize students with the genre and field of young adult (YA) literature and to provide a rationale and basis for practice for teaching adolescent literature in English Language Arts (ELA)

courses utilizing a Reader's Workshop format. By the end of this course, students will be able to (a) Articulate a working definition of adolescent/YA literature; (b) Respond to a variety of YA literature texts individually and in a group to increase understanding, appreciation, and enjoyment of this literary genre; (c) Describe some of the trends and dominant concerns in the field of YA literature, including: multiculturalism, new/digital literacies, critical literacy, and censorship; (d) Choose YA texts appropriate for classroom use by gaining familiarity with a range of popular and/or award-winning YA literature titles; (e) Select YA texts that will stimulate interest, foster appreciation for the written word, and increase motivation of learners to read independently for pleasure and for personal growth; (e) Make and support claims about the use of YA lit in the ELA classroom; (f) Design lessons in the context of a reader's workshop approach; (g) Explore, evaluate, and select instructional materials and professional resources for teaching with YA literature; and (h) Demonstrate an awareness of culturally responsive literature teaching and an understanding of how cultural, linguistic, and ethnic diversity impact teaching and learning as these ideas connect to YA literature. This course engages essential questions in the teaching of young adult literature in the workshop format. First, it invites students to engage the question "What is young adult literature (YA literature) or adolescent literature?" This is particularly important as the YA category grows in quantity and importance. Second, students consider, "How can we use YA literature to teach for social justice and social responsibility?," a question resonant with Standard Six of the National Council of Teachers of English's Standards for the Preparation of Teachers of English Language Arts. Students will consider in depth the advantages and the challenges of using YA literature in secondary classrooms. They will learn promising practices in adolescent literacy and teaching young adult literature as well as methods and materials that teachers can use to maximize engagement for all students. Finally, students will engage the linked questions of "How can ELA teachers motivate students to read for pleasure and personal growth?" and "How do we humanize our YA literature teaching and teach for love, justice, joy, and wisdom?"

Prerequisites: LLED 420; LLED 520

LLED 445: Teaching English in Bilingual/Dialectal Education

3 Credits

Theories, techniques, materials for teaching English speaking, reading, and writing to bilingual and nonnative speakers in elementary and secondary schools.

LLED 450: Content Area Reading

3 Credits

Study of reading skills and materials for specific content areas; diagnostic and instructional procedures for classroom teachers. LLED 450 Content Area Reading (3) LLED 450 is designed to explore the roles of texts and literacies within the daily lives of middle school age students. We will examine both in-school and out-of-school literacy practices related to meaning-making in specific communities of practice. In doing so, we will work from a broader definition of "text" that includes print, images, sound, hybrid combinations and artifacts from popular culture. In school, we examine how literacies are involved in the learning of content, emphasizing how social practices of thinking in different ways about the world have been organized into school subjects and how teachers can help students to engage productively in those practices. Out of school, we look at the ways in which this age group uses text and other forms of literacy to make sense of and in their lives. Toward that end, we look closely at the media that they use and the types of texts

that are produced for and by them. Although we honor the traditional practices of academic disciplines, we recognize how new texts and tasks ford those boundaries in order to pose and address school and everyday problems. The basic goals of this course are to help teacher candidates to use language well and thoughtfully concerning literacy, text, and culture; and to think through instructional problems thoroughly, using multiple sources of information to experiment with alternative solutions. We also expect candidates to understand the roles that culture plays in literacy practices, texts, schooling and assessments of "ability"; to learn how people function effectively in groups; and to develop a repertoire of organizational, instructional, and assessment strategies. This course considers how intermediate grades and middle schools are communities of practice that connect disciplines through the use of language and texts to make sense of the world. The communities surrounding schools influence these uses, and this course follows the students' learning outside the classroom and schools as well as within.

Prerequisites: EDPSY 014; 6th Semester standing or Graduate Status or Non Degree Graduate Status

LLED 462: The Art of the Picturebook

3 Credits

The Art of the Picturebook explores a wide range of picturebooks with the idea that illustrations are visual art evoking thoughts and feelings. Because picturebooks provide aesthetic experiences and contribute to aesthetic development, they are rich and important sources for literacy education. This course provides opportunities to extend students' repertoire of strategies for making sense of picturebooks, to deepen knowledge about picturebooks and the artists who create them, and to consider ways to help children become more sophisticated readers of picturebooks. While picturebooks are often emphasized as integral to the literacy development of young children, they can be engaging and desirable for older children as well. Course topics include picturebooks for the very young, as well as picturebooks that could appeal to elementary and middle school children. Whether picturebooks appear relatively simple and straightforward or contain innovatively complex or metafictional design elements, close readings of them with an understanding of terminology offer opportunities to express and discuss reactions and interpretations. The Art of the Picturebook provides students a forum for exploring preferences, ideas, insights, and questions about selected picturebooks, along with curricular and pedagogical considerations. Course readings include interviews with illustrators, selections about creating picture compositions, and scholarly essays presenting theoretical perspectives and ideas about picturebooks as literature and art for children's literacy development. This course emphasizes that reading and interpreting picturebooks is an active, creative process that is socially, culturally, and historically situated. Authors and illustrators are influenced by culture, so their art reflects values of that culture, consciously or unconsciously. A reader's experience with a picturebook is also influenced by cultural and social contexts in a given moment. Because engaging in aesthetic experiences is an active, creative process, reading picturebooks is, as Jane Doonan (1993), author of *Looking at Pictures in Picture Books*, asserts, a form of play. The Art of the Picturebook approaches picturebooks as sources of deep play. The course also provides opportunities to research selected illustrators, both for class discussions and an illustrator study project (e.g., a Wiki page). The culminating illustrator study project involves an in-depth investigation of a key children's book illustrator and a process of sharing works-in-progress with classmates for collaborative editing.

Prerequisites: 5th Semester standing

LLED 464: Nonfiction Literature for Children and Adolescents

3 Credits/Maximum of 3

Nonfiction Literature for Children and Adolescents explores a wide range of nonfiction literature in a variety of subject areas including social studies, math, science, and the arts. This course takes the position that reading nonfiction literature can inspire curiosity and a life-long love of learning, shape inquiry, nourish empathy and compassion, and inform agency. Topics include nonfiction as literature, resources for locating nonfiction literature, nonfiction literature in different subject areas, nonfiction literature as a catalyst for inquiry, creative nonfiction and hybrid texts, biographies and autobiographies, and nonfiction literature for agency. This course also examines techniques of writing nonfiction literature to develop an understanding of strategies that published authors use to create engaging works to inform readers and provide pleasurable reading experiences. This understanding can help adults who work with children and adolescents recognize and identify the qualities that they find desirable for selecting and sharing nonfiction literature with children and youths, whether shared for reading or serving specifically as mentor texts for writing.

Prerequisites: 5th Semester standing

LLED 465: Fantasy Literature for Children

3 Credits

Fantasy Literature for Children explores a range of fantasy literature including literary fairy tales, toy fantasies, ghosts/horror/suspense, science fiction, reworked fairy tales, low fantasy, and high fantasy. This course will consider different rationalizations for fantasy literature and will examine some of the key stories that illustrate fantasy from different perspectives, such as literary, social, and psychological angles. This course will look at, first, the beginnings of modern fantasy with the fairy tales of Hans Christian Andersen and Carlo Collodi's classic, *Pinocchio*. Then the course reading will include ghosts and other supernatural fantasy stories, and "reworked" fairy tales, a current trend in fantasy literature. Despite of some scholarly debates on science fiction, that is, whether it should be categorized into fantasy or not, this course will consider science fiction as being similar enough to fantasy for it to be included. The course will also include a study of fantasy books currently popular with school-age readers. Fantasy can be divided into two main groups: low fantasy and high fantasy. Several of the stories to be read in the course are perhaps best categorized as low fantasies, not because of what they are, but because they are not high fantasy, which has a mythic quality to it. High fantasy seems to go beyond the particulars of its story to explore the nature of good and of evil. Though high fantasies can be humorous at times, the overall tone is serious. Often characters are on quests and the stakes of success or failure usually involve saving the world from some great evil or preventing the tyranny of some powerful and evil ruler. Reading the different types of fantasy literature and the literary critiques and analyses of those works, this course will be wrestling with the overall importance of those books in the lives of children by pondering imagination and its role in the lives of children.

Prerequisites: 5th Semester standing

LLED 467: Children's Literature in the Classroom

3 Credits

Study of the theory and practice of using children's literature in the elementary school classroom.

LLED 480: Media Literacy in the Classroom

3 Credits

Exploration of media languages and literacy in classrooms, learning in an electronic age; issues, ideas, and teaching strategies.

Concurrent: LL ED 411, LL ED 420

LLED 495: School Practicum in Reading

1-18 Credits/Maximum of 18

Supervised practicum providing field experiences at any grade level, with opportunities to assume various teaching roles.

Prerequisite: LL ED400

LLED 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

LLED 496H: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

LLED 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

LLED 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Languages (Less Commonly Taught) (LANG)

LANG 51: Elementary Intensive Less Commonly Taught Language for Graduate Students I

3 Credits

Intensive introduction to a less commonly taught language: first half of elementary sequence in reading, writing, speaking, listening, cultural contexts.

Prerequisite: graduate standing

LANG 52: Elementary Intensive Less Commonly Taught Language for Graduate Students II

3 Credits

Intensive introduction to a less commonly taught language: second half of elementary sequence in reading, writing, speaking, listening, cultural contexts.

Prerequisite: LANG 051 and graduate standing

LANG 53: Intermediate Intensive Less Commonly Taught Language for Graduate Students

3 Credits

Continued intensive study of a less commonly taught language at the intermediate level: reading, writing, speaking, listening, cultural contexts.

Prerequisite: LANG 052 or equivalent and graduate standing

LANG 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

LANG 196: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

LANG 196A: Elementary Intensive Turkish I

4 Credits

Intensive introduction to Turkish: first half of elementary sequence in reading, writing, speaking, listening, cultural contexts.

LANG 196B: Elementary Intensive Turkish II

4 Credits

Intensive Introduction to Turkish: second half of elementary sequence in reading, writing, speaking, listening, cultural context.

LANG 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

LANG 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Latin (LATIN)**LATIN 1: Elementary Latin**

4 Credits

Pronunciation; inflections; simple rules of syntax.

Bachelor of Arts: World Language (All)

LATIN 2: Elementary Latin

4 Credits

Advanced syntax and sentence structure.

Bachelor of Arts: World Language (All)

LATIN 3: Intermediate Latin

4 Credits

Selected readings from representative authors.

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

LATIN 51: Elementary Intensive Latin for Graduate Students I

3 Credits

Intensive introduction to Latin: first half of graduate intensive sequence in elementary reading, writing, syntax, and cultural contexts. LATIN 051 Elementary Intensive Latin for Graduate Students I (3) This is the first in a series of three courses designed to give students an intensive introduction to Latin. This is the first half of elementary sequence in reading, writing, syntax, and cultural contexts. Students will learn the Latin alphabet, vocabulary, and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

Prerequisite: graduate standing**LATIN 52: Elementary Intensive Latin for Graduate Students II**

3 Credits

Intensive introduction to Latin: second half of graduate intensive sequence in elementary reading, writing, syntax, and cultural contexts. LATIN 052 Elementary Intensive Latin for Graduate Students II (3) This is the second in a series of three courses designed to give students an intensive introduction to Latin. This is the second half of elementary sequence in reading, writing, syntax, and cultural contexts. Lessons are taught in an authentic cultural context.

LATIN 53: Intermediate Intensive Latin for Graduate Students

3 Credits

Continued intensive study of Latin at the intermediate level: reading, writing, syntax, and cultural contexts. LATIN 053 Intermediate Intensive Latin for Graduate Students (3) This is the third in a series of three courses designed to give students an intensive intermediate knowledge of Latin. This is an intensive sequence in reading, writing, syntax, and cultural contexts. Lessons are taught in an authentic cultural context.

LATIN 101: Introductory Latin

4 Credits

Introduction to Latin forms, syntax, and vocabulary. LATIN 101 Introductory Latin (4) The aim of LATIN 101 is to introduce students to the fundamentals of classical Latin as soon as possible. Classical Latin is the literary dialect spoken and written by Romans from the first century BCE to the second century CE. This is the language that the classical Roman authors wrote, poets such as Catullus, Virgil, Horace, Ovid, Lucan, and Seneca and prose writers such as Caesar, Sallust, Cicero, Livy, Petronius, Tacitus, and Suetonius. The purpose of the course is to teach students the morphology, syntax, and vocabulary of classical Latin and train them to read and translate simple and complex sentences. The course consists of short weekly presentations of new grammatical and lexical content, vocabulary to be memorized, drills to practice forms and concepts, exercises in reading sentences, homework assignments translating sentences from Latin into English and English into Latin, and regular quizzes and tests to ensure retention and comprehension of

material. The goal of the course in the first semester is for students to be able to read short passages of continuous prose based on classical Latin models. The course focuses on reading, translating, and writing rather than speaking, although students will be expected to be able to read Latin aloud with correct pronunciation. LATIN 101 prepares students for Latin 102, the second semester of Introductory Latin, which in turn prepares students to take a 400-level course in Latin.

LATIN 102: Advanced Latin

4 Credits

Advanced study of Latin grammar, syntax, and vocabulary. LATIN 102 Advanced Latin (4) LATIN 102 continues from LATIN 101. Students who have taken at least three years of high school Latin may qualify to enroll in the course if they have performed well on either a Latin A.P. exam (minimum grade of 3) or a placement exam set by the instructor. LATIN 102 pursues the advanced study of the forms of syntax of classical Latin, the literary dialect spoken and written by Romans from the first century BCE to the second century CE. This is the language that the classical Roman authors wrote, poets such as Catullus, Virgil, Horace, Ovid, Lucan, and Seneca and prose writers such as Caesar, Sallust, Cicero, Livy, Petronius, Tacitus, and Suetonius. The purpose of the course is to equip students with the grammatical rules to read and write complex sentences in Latin. The course consists of short weekly presentations of new grammatical and lexical content, vocabulary to be memorized, drills to practice forms and concepts, exercises in reading sentences, homework assignments translating sentences from Latin into English and English into Latin, and regular quizzes and tests to ensure retention and comprehension of material. The goal of the course in the second semester is for students to be able to read longer passages of continuous Latin prose that has not been adapted. The course focuses on reading, translating, and writing rather than speaking, although students will be expected to be able to read Latin aloud with correct pronunciation. LATIN 102 will also continue to introduce students to Roman civilization and prepares students to take a 400-level course in Latin.

LATIN 203: Latin Reading and Composition

4 Credits

The course reviews Latin grammar, syntax, and vocabulary and introduces students to classical Latin poetry and prose. LATIN 203 Latin Reading and Composition (4) This four-credit course is at the intermediate-level and follows LATIN 003 or LATIN 102. It satisfies the 12th-credit foreign language requirement and prepares students to take 400-level Latin courses. The course is concerned with perfecting the knowledge of Latin grammar. This is accomplished by the review of grammatical rules and by the reading and explanation of Latin authors. The course reviews the forms, syntax, and vocabulary of Latin, and gives students practice exercises that improve translation skills. Equally important, students are introduced to the principles of Latin style by learning how to translate English into Latin. The review of Latin grammar and the introduction to Latin prose composition provide students with the competence to read representative Roman authors in poetry and prose. Rudimentary Latin readings, supported by school commentaries, are intended to familiarize students with famous examples of classical Roman literature while exemplifying the principles of classical Latin style. Evaluation methods include assessment of students through in-class oral and written drills, in-class translation of Latin into English and English into Latin, weekly translation assignments, regular quizzes, and midterm and final exams. These methods are intended to promote the learning of Latin vocabulary and grammar, to increase the comprehension of the

assigned readings, and to foster an appreciation of the stylistic virtuosity of Rome's greatest writers.

LATIN 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

LATIN 402: Republican Literature

3-12 Credits/Maximum of 12

Selected works by Plautus, Lucretius, Catullus, Cicero (content varies).

Prerequisite: LATIN 203 or LATIN 3 or permission of instructor

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

Latina/o Studies (LTNST)

LTNST 100: Introduction to Latina/o Studies

3 Credits

This course provides an interdisciplinary introduction to the study of Latinas/os in the U.S., beginning with a historical overview of the major events in the U.S. southwest, Mexico, and the Caribbean that led to the creation of Latina/o communities in this country. Within this historical context, the course explores a number of themes: 1) the reasons for migration and the effects on identity of movement between countries and within the U.S.; 2) the social protest movements of the 1960s, including Chicano and Puerto Rican nationalism, the farmworker movement, and Latina feminism; and 3) present-day issues as they affect the major Latina/o groups in the U.S., attending to both similarities and differences within and between the major groups.

Bachelor of Arts: Humanities

United States Cultures (US)

General Education: Humanities (GH)

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

LTNST 127: Introduction to U.S. Latina/o History

3 Credits

This course provides an interdisciplinary introduction to the study of Latinas and Latinos in the United States. The course includes a historical overview of the major events in the U.S. Southwest, Mexico, the Caribbean, and Central and South America that led to the creation of Latina/o communities in this country. Students will examine the formation of racial and class hierarchies within U.S. Latina/o communities; the processes of (international and regional) migration; gendered hierarchies and responses to sexism; and the complexities of U.S. Latina/o identity.

LTNST 139: Latino/a Philosophy

3 Credits

This introduction to Latino/a Philosophy covers the historical experience of Latino/a peoples and the impact that those experiences have had and can have on "American" philosophy. It also covers race, class, gender, and ethnicity in relation to the Latino/a experience, and thus ethics, political theory, legal theory, critical philosophy of race, and feminist philosophy. In the process it offers an introduction to key themes in contemporary philosophy. The course includes comparisons with African American, Asian, and Native American philosophies.

LTNST 226: Latina and Latino Border Theories

3 Credits

English 226 will constitute a wide-ranging examination of contemporary texts (1960-present) central to the construction of contemporary Latino/a culture. ENGL 226 Latina and Latino Border Theories (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course focuses on contemporary Latina/o cultural production, placing it in historical context and analyzing it through the framework of borders. We make connections between Latina/o groups, showing both similarities and differences. We examine the politics of representation, asking how artistic texts define community and individual identities that are coherent yet also embody the complexity of these identities. The texts cross and claim borders- cultural, sexual, gender, geographical, generational, spiritual, and institutional. We will ask how these art forms work to claim border spaces: How are cultural differences retained without constructing hierarchies of exclusion? What models of identity do these artists propose in response to structures of domination? We'll read novels, short stories, poems, history, and theoretical essays; we will also watch several films. Throughout the course, we will attend to particular histories and cultures of Latina/o groups; it is crucial to both maintain the specificity of each culture (Chicana/o, Puerto Rican, Cuban-American, and Dominican-American) and their connections to each other as Latinas/os in the U.S. Inquiring into these intersections leads one to ask the following: how can Latinos unite against the assault on immigrants and bilingual education without erasing very important differences among Latina/o populations?

How can Latinas unite against ongoing sexism and homophobia within their communities and the U.S. in general? How should we view the marketing category "Hispanic" and/or "Latino" and how do artists offer alternative conceptions of group identity?

LTNST 300: Latinx Gender and Sexuality Studies

3 Credits

WMNST/LTNST 300 Latinx Gender and Sexuality Studies (3) (GH/US/BA) This course examines the historical development, theoretical premises, and political, social, and artistic contributions of Latinx feminisms in the United States. It shows the connections to as well as the divergences from Latin American feminism by beginning with an analysis of how the Spanish conquest, the imposition of Catholicism, and subsequent years of colonialism shaped gender and sexual identities. It examines the contemporary effects of these historical issues and inquires into the common concerns of Latin American feminists and Latinx feminists. It asks how theories and practices have diverged given different geographies, both between the U.S. and Latin America and within the U.S. The course will examine changes in the 1960s and 1970s in the U.S., when Chicano and Puerto Rican nationalist movements also gave rise to a feminist consciousness amongst Latinas; the conjuncture of race, ethnicity, gender, and sexuality is considered, with attention to how Latinas critiqued Anglo feminism's narrow focus on gender. The course will focus on family formations, considering social science and feminist discourse on the issues of patriarchy. How have Latinx feminists valued yet also rearticulated the traditional family? What critiques have made been against heterosexism? How has the LGBTQ community formulated new kinds of families? How does migration shape family relations? The course will explore how Latinx artists in different genres have responded to and resisted traditional gender and sexual roles. Literature, film, poetry, performance art, and hip hop are all examined for their diverse representations of sexual desire.

LTNST 315N: Spanish and Spanish-speakers in the U.S.

3 Credits

In this course, we investigate various aspects of the language(s) and language behaviors of U.S. Latinos. The course is premised on the idea that language is a crucial component in the formation of identity. To understand Latina/o identity formation in the U.S., then, one must analyze what role languages—Spanish and English—have played in identity formation. The class commences with a brief historical assessment of the various U.S. Latino communities, including Mexican-American, Cuban-American, and Puerto Rican communities. Such a historical purview proves significant in the study of the cultural traditions that persist in these communities, chief among these, the Spanish language. In exploring the Spanish language in U.S. Latino communities, we consider several major sets of questions, among them the following: In what ways do the languages of U.S. Latino communities differ from those of monolingual Spanish- (and English-) speaking communities? What factors contribute to the maintenance and loss of Spanish in these communities? How does language contribute to the creation of individual and societal identity? How is language exploited in the representation of other U.S. Latino cultural traditions? We consider these questions across a variety of genres: poetry, prose (autobiography in particular), film, art, television, and music. These texts reveal how social environments determine language use as well as how artists have used language to reshape social environments, through, for example, the development of new language practices such as Spanish-English code switching. The course also connects these cultural practices to debates on Spanish in public life and policy.

LTNST 326: Reading the BorderLands: Geography and Identity Along the U.S.-Mexico Border

3 Credits

This course examines representations of the U.S.-Mexico border in relation to the actual geographic space. SPAN 326 Reading the Border/Lands (3) (GH;US) This class will center on discussions of the U.S.-Mexico borderlands in cultural theory and practice. "Borderlands" is understood as a transcultural space filled with physical, cultural, economic, political, and mythical elements. The aim is to view how different artists from the Borderlands, both northern Mexican and Chicano, mediate their borderlands reality. That is to say, the goal of the class is to examine the different imaginative geographies in the borderlands. We examine a wide-ranging mix of cultural texts that includes prose, poetry, essays, and performance art, as well as film and video art. We explore how writers have historically rethought notions of citizenship, identity, and culture to create more fluid spaces of representation in cultural contact zones. We will in particular, pay close attention to the relationship between national geography and the shaping

of regional identities and popular cultures and relationships between the maps that nations draw and the cultural forms that cut across them.

LTNST 403: Latina/o Literature and Culture

3 Credits

Literary and other forms of cultural expression (film, music, art, and theater) are compared across different Latina/o communities. LTNST (CMLIT) 403 Varieties of Latina/o Cultural Expression (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This course provides students with a multi-faceted comparative view of Latina/o literature in relation to other forms of cultural expression. First, the course presents a variety of cultural expressions to students in an effort to teach them the different ways that form affects content. Each text will be studied in its historical context as well, thereby providing students with a sense of Latina/o cultural history. Second, this course compares works from within the same genre, allowing students to recognize the ways that Latina/o culture has worked to build identity, to deconstruct identity, and to challenge cultural stereotypes. Such comparison further facilitates comparison of the ways that different cultural forms have been used by diverse Latina/o communities. Third, this course compares cultural forms, allowing students to see how Latina/o poetry affects music or how Latina/o theater affects novels. Fourth, this course will include texts that represent a variety of linguistic and national contexts, including many countries in Latin America, thereby allowing students to see the relationship between history, culture, language, geography, and identity. These are all themes that are at the center of both Latina/o Studies and Comparative Literature. A comparative perspective facilitates appreciation of the vast and varied ways that Latina/o communities have used cultural expression. A particular point of contact between Latina/o Studies and Comparative Literature is the influence of hybridity. A central issue explored in this course concerns the intricate connections between multiple ways of expressing identity, in the arts, literature, music, etc., in diverse circumstances, such as locations where Latina/o cultures may be in the mainstream (such as in Latin America) and in the minority (in the U.S.). Drawing upon approaches offered by comparative literature and theories such as post-structuralism, feminism, and post-colonialism, we will examine the complex process through which Latina/o culture has been defined, disseminated, contested, and commercialized. Of particular interest from a comparative perspective are the ways that Latina/o cultures are created through hybridization, processes of mutual borrowing and differentiation, as well as through transnational processes of migration, urbanization, and cultural contact. The course's objective is to show not only how complex societies consolidate a shared culture but also how diverse Latina/o communities have produced a multiplicity of cultures that have been expressed via a broad range of cultural registers. These communities often span vast geographical areas, not only in the

U.S. but across the Americas as people continue to look to their countries of origin for artistic inspiration.

Prerequisite: 3 credits in the humanities or in any LTNST course, or 4th-semester proficiency in Spanish

Cross-listed with: CMLIT 403

Bachelor of Arts: Humanities

United States Cultures (US)

LTNST 426: Chicana and Chicano Cultural Production: Literature, Film, Music

3 Credits/Maximum of 3

An in-depth study of Chicana/Chicano literature, film, and music from the inception of the Chicano Movement (1965-1975) to the present. ENGL 426 Chicana and Chicano Cultural Production: Literature, Film, and Music (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. ENGL 426 will constitute an in-depth study of Chicano/a literature, film, and music from the inception of the Chicano movement (1965-1975) to the present. In addition to primary aesthetic texts, students will read historical, political, and theoretical essays designed to situate the Chicano/a cultural texts in historical and political context. The aim of the course is to give students a better understanding of Chicano/a cultural production by situating these works of art against other U. S. artistic traditions and within wider historical and political movements. Authors and artists under consideration in this class will vary, but will likely include Luis Valdez, Tomas Rivera, Estella Portillo Trambley, Oscar Zeta Acosta, Corky Gonzales, Gloria Anzaldúa, Norma Alarcon, Cherrie Moraga, Richard Rodriguez, Dagoberto Gilb, Rolando Hinojosa, Alfredo Vea, Charlie Trujillo, Diego Vasquez Jr., Joe Rodriguez, Tomas Almaguer, Jose Esteban Munoz, Manuel Ramos, Lucha Corpi, Rudolfo Anaya, Michael Nave. This class will prepare students for advanced courses in Latin/a literatures as well as other academic courses that engage in the verbal and written analysis of complex texts. Students will be evaluated by means of essays written in and out of class, essay exams, group projects, term-long journals, and class participation. Students should expect to complete a minimum of three written assignments in the course of the term. The course may be used as ENGL major elective credit or as credit towards the ENGL minor and will be offered once a year with 40 seats per offering.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Cross-listed with: ENGL 426

International Cultures (IL)

United States Cultures (US)

LTNST 470: Youth Cultures in Latin(a/o) America

3 Credits

Young people have been at the center of political and cultural revolutions around the world and throughout history. For example, revolutions, urban movements, ethnic/racial pride, LGBTQ+, feminist movements, music bazaars, DJs and rave parties, and "barras de futbol" are only some of the manifestations associated with young people in Latin(a/o) American literature, film, music, and journalism. Nevertheless, the concept of "youth" as an academic category only appeared in the 1960's. In this course, we will study different manifestations of youth cultures in the Hemispheric Americas, paying special attention to the Latinx communities in the U.S. and Latin America, since the 1960's and until the contemporary moment. The key question that will guide us is: How does each of these literary, artistic, and media representations of youth enter into dialogue with political events in which young people have been at the center of efforts to bring about political changes in the U.S. Latinx communities and Latin America? Using short fiction, film and documentaries, songs, blogs, and other cultural materials (YouTube clips, images, graffiti, etc.), we will identify and compare different youth cultures in Latinx communities in the U.S. and Latin America in terms of their productions, representations, and effects in the public sphere. We will enrich our analysis of primary materials with theoretical and critical readings that will help us to contextualize the different manifestations in our study.

Prerequisite: (SPAN 100A or SPAN 200) and SPAN 253W
Cross-listed with: SPAN 470

LTNST 479: U.S. Latina/o Culture en Espanol

3 Credits

This course is conducted in Spanish and will analyze some of the central themes that shape the diverse Latina/o experiences in the United States. Some of the main topics that the course will address include: the politics of labeling; definitions of displacements; the politics of language; imaginary homelands and geographic spaces; and conceptualizations of race, gender, and sexuality. These themes will be seen through the lens of Latina/o literature and film. The main objective of this course is to help students think critically about the conceptual, theoretical, historical, and social issues that inform the Latina/o experience in the United States.

Prerequisite: (SPAN 100A or SPAN 200) and SPAN 253W
Cross-listed with: SPAN 479

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Learning Design and Technology (LDT)

LDT 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction

International Cultures (IL)

LDT 100: World Technologies and Learning

3 Credits

LDT 100 World Technologies and Learning (3) (GS;IL) explores the role of technology in learning across international contexts and the impact of these new learning technologies on world cultures. LDT 100 examines the sociocultural impacts of various learning technologies on learning, education, and culture. The course will examine several international cases of learning technologies (both contemporary and historical), as they are used for education and learning and implemented in several world cultures such as the US, UK, India, China, Africa, Europe, and Oceania. The primary objective of the course is to help students understand how learning technologies impact other cultures, and their own; how learning technologies hold the potential to bring change to education and new forms of learning; and how these changes can be predicted, understood, and planned for. The course may offer an important introduction to the area of Learning, Design, and Technology, but it is otherwise not related to specific programs of study. It contributes to the General Education requirements for undergraduates.

International Cultures (IL)

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

LDT 101: Effective Communication for Educators

3 Credits

Introduction to communication for educators, principles of pedagogical communication including educational communication technologies. LDT 101 Effective Communication for Educators (3) This course introduces future teachers to effective communication specific to educators' needs. Educators will learn skills for informational lesson planning, persuasive speaking and motivational presentations. This is an introduction to these skills such as lesson planning and effective parent communication, which are then honed later in methods courses. This course will address issues of civic engagement and broad communication for educators focused on educational issues. Included will be the design and presentation of individual communications, email, social media, new media, videos, digital photography, and other forms of emerging educational communications technologies. Assessment includes short quizzes, product review (to include lesson plans, speeches and presentations), online discussion participation, and other activities focused on building the specific skills needed for educators.

Prerequisite: CAS 100

LDT 110N: Making with Art and Learning Technologies

3 Credits

This course surveys the intersection of art and technology for making in regard to content creation for learning. Topics covered include maker spaces, DIY communities, online content creation as well as creativity, art, STEM, coding and engineering, and equity and inclusion. Examples include how people learn through creative computing, user-created art content, and livestreaming of making activities. Students will explore academic literature, popular news articles, and other media content. Activities include coding, creativity, crafting, and teaching peers. No programming or prior experience with digital or physical maker toolkits is required. Course materials are designed to be accessible to all levels. The course offers an important introduction to the area of Learning, Design, and Technology, but it is otherwise not related to specific programs of study. It contributes to the General Education requirements for undergraduates.

International Cultures (IL)

LDT 215: Creating Designs for Learning

3 Credits

This general education course introduces students to basics of the learning design field. The course introduces theories, processes, and techniques that students need to create designs for educational and training programs for formal and informal contexts (including after school clubs, higher education, corporate settings, museums, and non-profit organizations). Students interested in how to design educational artifacts should take this course. This is a hands-on course where students will learn basic skills, ethics, and practices of the learning design field via discussions, activities, writing, and presentations. Throughout the course, students will create a series of products, which can be used in their portfolios for later job searches. There are no prerequisites or technological skills required.

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

LDT 401: Gaming 2 Learn

3 Credits

Explores role of gaming, video gaming, and simulations in educational contexts including K-12, corporate, informal, non-profit and higher education.

LDT 410: Advanced Learning Experience Design Lab

3 Credits

This course provides students with advanced, practice-based experience in learning experience (LX) design. Students will learn advanced strategies in LX (including requirements, design, and evaluation) as well as situate LX within broader conversations about the role of design in society. The course places a strong focus on application through a design cycle that repeats itself over three collaborative projects, each increasing in scope and sophistication. Students who complete the course will reflect on their design work in a culminating portfolio assignment.

Prerequisites: LDT 215, LDT 310

LDT 415A: Systematic Instructional Development

3 Credits

Preparation in the use of a nine-step model for systematically analyzing instructional problems and developing validated, practical solutions. LDT 415A Systematic Instructional Development (3) LDT 415A introduces the instructional design process and then focuses on each step of the model using a project-based approach. It prepares instructional designers and trainers in the corporate, higher-education, and non-profit sectors to apply the instructional design process to create instructional materials, or to modify, alter, or re-design existing materials as needed, for example, to suit a particular context or audience.

Prerequisite: Bachelor's degree or equivalent; or 5th semester standing; or permission of program

LDT 415B: Systematic Instructional Development for Teachers

3 Credits

Preparation of teachers to use a systematic model to design learning environments for K-12 classrooms. LDT 415B Systematic Instructional Development for Teachers (3) This course focuses on K-12 teachers who will learn how to use the systematic design process for creation of learning environments. This process includes goal, objective and test item writing; text selections; media selections; implementation plans; and evaluation plans for both formative and summative evaluation. Products are turned in each week for feedback and input into the next weeks' assignment. Consideration of the ID4T (Instructional Design for Teachers) model use with standards, constructivist, user-design, and learner-based classrooms is included.

Prerequisite: 6th semester standing in education or equivalent professional experience

LDT 433: Teaching and Learning Online in K-12 Settings

3 Credits/Maximum of 3

Explores uses of online technologies for K-12 settings including cybercharter and blended settings. In this course, Teaching and Learning Online for K-12 Educators, students will receive an overview of the current status of K-12 Online Education, including criticisms of the movement and how cyber charter schools are impacting the general educational movement. Students will explore the complexities of school choice movement, the place of cyber charters in that movement and the ways that this movement can help and harm general educational progress. Students will critically examine the cyber charter school money trail so that they may identify various financial implications for the cyber charter movement on public schooling and learn how funding flows from the federal level to states to districts and finally to cyber charters. Students will be guided through the process of transforming their teaching when moving from traditional face-to-face classrooms to online settings.

Prerequisite: Bachelor's degree or equivalent; or 5th semester standing; or permission of program
Cross-listed with: INSYS 433

LDT 440: Educational Technology Integration

3 Credits

Technology integration in educational settings. EDTEC 440 Educational Technology Integration (3) This course introduces educators to broad-based educational computing applications. This course introduces ideas, skills, concepts and strategies for integrating computers into classroom teaching. The focus of the course is on models for integration, but specific applications and how they can be used in the classroom will also be explored. This course is part of a graduate program of study for a Master's of Education (M.Ed.) in Instructional Systems or an M.Ed. in Educational Technology. Within educational settings, technology is not simply an independent curriculum – i.e., teaching about how to use technology. Rather it is a powerful means for addressing, and potentially redefining, everyday teaching and learning issues. The potential of technology is most effectively realized when considered in combination with views about how individuals think and learn best. The goal of this course, then, is not for you to become an expert in 'technology,' but to become more of an expert in teaching and learning. Technology can be used as a vehicle to help you to further develop this expertise. This course is divided into five units which are based on the following areas of educational computing: (1) Technology Integration Concepts; (2) Productivity Tools; (3) Communication tools; (4) Interactive multimedia; and (5) emerging technologies. Each of these units is designed not only to provide you with the information you need in order to understand what the technology is about and how it functions, but more importantly to stimulate serious reflection upon how you as a teacher can make use of this resource and how using this resource relates to student learning.

Prerequisite: 6th semester standing

LDT 441: Design, Development, and Evaluation of Internet Resources

3 Credits/Maximum of 3

Design, production, and evaluation of instructional materials for delivery on the Internet. This course is designed to provide you with a conceptual and experiential overview of the process of creating stand-alone computer or web-based instruction to facilitate your understanding of the role and potential of Internet technologies as learning systems. This

course would be useful to anyone charged with providing online learning, is appropriate as a foundational overview for multi-media developers, and also would be valuable for supervisors of instructional designers and developers. A main feature of the course is a hands-on lesson project carried on throughout the course where you will identify, design, develop, and then evaluate an online stand-alone lesson (e.g., a learning object). Emphasis will be placed on the following goals: Demonstrate research-based message design principles, including navigation, screen design, and the use of color and visuals. Demonstrate basic skills and competencies related to developing instructional materials to be delivered using Internet/intranet technologies to understand the current requirements and also limitations of these approaches. Describe the role of the instructional designer in Internet-based instruction. Describe the advantages and limitations of Internet delivery in order to make informed instructional design decisions. Apply an instructional design model during the design and development of Internet-based instructional materials.

Cross-listed with: INSYS 441

LDT 447: Instructional Design for Multimedia Technologies

3 Credits/Maximum of 3

This is an applied skill course about producing and implementing multimedia in instruction and training. By its very nature, instructional multimedia is a collage of media types, and creating this collage requires a thorough understanding of learning strategies, design principles, and technology "obtainability" (e.g., both using existing media as lesson components as well as developing new learning media objects as needed). Fairly recently, multimedia tools have proliferated on the web and at the same time learners' expectations have also shifted, for example involving the delivery form factor and source, preferred media type, short lesson length, and many others. This course introduces you to the design, development, and delivery of instructional multimedia on modern educational platforms. Specifically, you will create multimedia instructional materials within the context of larger class discussions about Instructional Systems Design, evidenced-based learning strategies, Design Principles, media features, Copyright, Open Educational Resources (OER), Massive Open Online Courses, and the changing landscape of Higher Education.

Cross-listed with: INSYS 447

LDT 449: Video in the Classroom

3 Credits/Maximum of 3

Skills and knowledge needed to direct the use of video technologies in educational settings. EDTEC 449 Video in the Classroom (3) This course introduces video and multimedia production for educators based on the premise that participants are novices. The course is intended for teachers and trainers who would like to acquire fundamental theory and skills in designing and producing video and multimedia to support teaching and learning. It introduces the tools of media production (i.e. video, audio, and lighting) and develops basic skills, including production and editing techniques, storyboarding and project planning. Participants in this course will demonstrate: a basic proficiency in the operation and handling of media production tools, including video and audio editing; an understanding of appropriate media use for classroom use; a basic knowledge of the production processes, including conceptualization, storyboarding, scripting, and project management; and a basic proficiency in producing effective educational videos.

Cross-listed with: EDTEC 449

LDT 467: Emerging Web Technologies and Learning

3 Credits

This course examines emerging Web technologies and explores their application to learning and education.

Prerequisites: 5th Semester standing or Graduate Status or Non-degree GRAD status

Cross-listed with: EDTEC 467

LDT 495: Internship in Learning, Design, and Technology

1-18 Credits/Maximum of 18

Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required.

LDT 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

LDT 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Liberal Arts (LA)

LA 83: First Year Seminar in the Liberal Arts

1 Credits

An exploration of a theme through the lens of the humanities, social sciences and diverse cultural perspectives.

Prerequisite: open only to DUS students
First-Year Seminar

LA 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

LA 103: Professional Development for the Liberal Arts Student

1 Credits

This course is designed to provide you with the techniques and information necessary to specify and implement post-graduation educational and career plans. This course is designed to assist students in the College of the Liberal Arts with the process of developing and implementing career plans for after graduation. It helps students understand the process of seeking and gaining employment and how to effectively transition from college to the workplace. This course will help students think about how to make their time at Penn State worthwhile and will be exposed to the various opportunities available to them at the College and University level. Students will hear from staff, alumni, and employers about a range of topics including interviewing, hiring practices,

professionalism, social media, networking, post-graduate options, and other professional development topics. Students will start and/or continue to solidify their plans for after college and take steps to create a portfolio of work for the job and internship search. Students will use tools to learn more about themselves and explore career options. They will learn about career fields for students graduating with Liberal Arts degrees and hear from employers, staff, and alumni about how to leverage their education, skills, and knowledge to be successful during the job and internship search and during their time in the workforce. Students will develop a multitude of skills from this class, including identifying abilities, interests, and values and understand how to incorporate these into career decision-making. They will be able to utilize various resources such as informational interviewing and networking to research industries and careers, and inform career decision-making. They will make use of targeted searches, and online job postings to identify potential jobs and internships. Students will spend time writing effective position-specific application materials such as resumes and cover letters and learn to implement effective interviewing techniques during phone, individual, panel, and group interviews. For students who are thinking about post-baccalaureate options, the class will help these students identify and search for graduate programs as well as successfully complete the graduate school application process. This course will help students transition successfully into the professional world, using skills and knowledge to conduct future career decision making and job searches.

LA 135N: College, Work, and Citizenship in the 21st Century

3 Credits

Concentrated on the 21st-century, this course engages students in cutting-edge information about the critical roles the humanities and social sciences play in the high-tech global economy, now and in the future. In this course, students will learn what is vital about the humanities and social sciences in the global economy and society more generally. This class helps students to understand what is meant by the knowledge and creative economies, and why the modern economy's need for the core skills and knowledge developed through a humanities and social science education opens excellent career opportunities to students. Importantly, students will explore both humanistic and social science inquiry that challenges the dominant narratives and distorted facts that relegate the humanities and social sciences as insignificant and turn students away from these majors. Students will also learn to understand and explain in concrete ways the core skills and knowledge that humanities and social science students possess that are in high demand in business and industry so they can hone these skills in college as they prepare for life after college as contributing citizens through work and public life.

LA 199: Foreign Study--Liberal Arts

1-9 Credits/Maximum of 9

Study in selected foreign countries of the cultural, institutional, and/or social development of the host country.

International Cultures (IL)

LA 201W: Experiential Learning Portfolio

3 Credits

Students will learn how to assemble a portfolio that reflects their progress, knowledge, and insight into college-level study. L A 201W Experiential Learning Portfolio (3) This course will instruct students in what has become a distinctive model of performance assessment - a learning portfolio. Students will learn to assemble the components required to demonstrate their progress, articulate their knowledge, and gain insight into the qualities of learning that are expected of college-level study. Students will utilize active engagement and questioning of how we know what we know. The course is designed to assist learners in contextualizing what they have learned and provide them with the skills to contextualize what they learn in the future. By the end of the course, students will have developed an experiential learning portfolio.

Writing Across the Curriculum

LA 202: Innovation and Entrepreneurship in the Liberal Arts

3 Credits

Entrepreneurs and liberal arts graduates share a surprisingly broad array of learned traits. Both rely on well-trained habits of critical, analytical, and systems thinking, effective oral and written communication, perspective taking, coalition building, and intercultural competence to understand, challenge, and transform the limits of conventional systems and practices. For entrepreneurs, this training leads to the creation of new and innovative nonprofit and for-profit ventures; for liberal arts professionals, this training is often used to develop, expand, and alter our understanding and appreciation of the ever-shifting contours of the human experience. When integrated deliberately, this course prepares undergraduate students to imagine innovations and create ventures that add value to our understanding, experience, and expression of the liberal arts. Entrepreneurship, which cultivates self-efficacy and personal agency as professional learning behaviors, is perhaps especially salient for the liberal arts, which tend not to be prescriptively careerist. In this way, students who take this course can more intentionally pursue creative career work that extends the value and experience of their undergraduate liberal arts education.

LA 295: Undergraduate Field Experience or Practicum

1-18 Credits/Maximum of 18

Approved experience, related to student career objectives, in agencies external to the University.

LA 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

LA 297: Special Topics

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

LA 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

LA 335N: Media, Social Justice, and the Public Humanities

3 Credits/Maximum of 3

This course introduces students to the ideas and skills that comprise "public humanities," with a focus on digital media tools. It aims to develop student understanding of how public humanities work can address present-day problems, fostering empathy within and building bridges between persons, groups, and communities. It offers hands-on training in three forms of digital media: documentary film, podcasting, and web publishing. Through honest and respectful engagement with a diverse range of ideas, perspectives, and experiences, students will develop creative and critical thinking and problem-solving skills by locating, analyzing and applying information in project formation and production.

International Cultures (IL)

LA 402: Fundraising Leadership: Building a Strong Base

3 Credits

The course will focus on the fundamentals of fundraising and leadership, including communications, management of events and people, and stewardship.

Prerequisite: 60 undergraduate credits or permission of program

LA 404: Careers in Fundraising and Development

3 Credits

This course will guide students through an introduction to the fundraising/advancement profession, including a review of the history and emergence of the profession. The course will also touch on key issues such as professional ethics and the legal environment of the field. Students will learn about the wide array of career paths and sectors in which fundraising and advancement professionals are employed. The course will review current roles within fundraising and advancement and emerging practice areas such as social media fundraising, data analytics, and talent management. Students will acquire specific knowledge and develop some of the skills required to successfully secure entry-level positions such as asking for gifts, drafting newsletter copy, and creating materials to present to a board of trustees. Students will also make connections between life experiences, such as volunteering for a nonprofit organization, and positions in the field. Students should be able to make connections between fundraising and a variety of disciplines from English to psychology to economics. By the end of this course, students will be able to: 1. Describe fundraising as a profession, including a brief history, purpose, laws, ethics, and foundational principles. 2. Describe various positions held by fundraising professionals, including duties and responsibilities, skills and characteristics for success, and various pathways to a career in each position. 3. Practice foundational principles of fundraising as they apply to various fundraising positions. 4. Identify resources for locating fundraising positions and appropriate education and training opportunities. 5. Create professional application materials that reflect the students' ability to differentiate between various roles in fundraising professions. Students enrolled in this course will need to have acquired skills and knowledge in introductory courses, have a connection to an academic discipline, and be career-oriented. As a result, only upper-level students will be eligible to enroll. If academic departments are willing, the course might be added to the list of electives made available to students majoring in various fields such as English, psychology, or economics. Given the dearth of well-educated professionals and the growing number of jobs in the field this course could serve well those students who seek a career in the profession.

Prerequisite: ENGL 15, and 6 credits in social and behavioral sciences (GS)

LA 424: Liberal Arts Venture Development

3 Credits

Students who complete this course will be able to create a nonprofit or for-profit liberal arts venture based on the iterative vetting of an original idea rooted in careful and rigorous research; examine the impact of that venture and the resulting services and/or products on themselves, employees, customers, the environment, and local, national, and/or global communities; understand how the ecologies of successful nonprofit and for-profit liberal arts ventures operate; and articulate best practices of successful liberal arts startups and organizations in relation to founder

roles and relationships, fundraising, public presentation/pitching, market analysis, product differentiation, financial projecting, sales and marketing strategies, and scaling. Every other summer, this course will be offered in San Francisco, where students will be exposed to and work in one of the most entrepreneurial cities in the world, and meet a number of founders of non-profit and for-profit organizations whose services and solutions are tied to Liberal Arts disciplines.

LA 435: Public Humanities Capstone Experience

3 Credits

This course is the Capstone Experience for Public Humanities Fellows in the Humanities Institute. The course provides students with hands-on experience applying skills and insight gained during the prerequisite course, Introduction to Public Humanities. Students will gain substantive experience in research, digital media production, and community engagement. The centerpiece of the course is an individual digital public humanities project on a topic of the student's choosing. Students will also participate in public outreach events in conjunction with the Humanities Institute, actively participating in a community engagement plan in coordination with the Institute's documentary film series, HumIn Focus.

Prerequisite: LA 335N or COMM 335N

LA 494: Research Project Courses

1-12 Credits

Supervised student activities on research projects identified on an individual or small-group basis. (No course under L A 294/494 may be offered without approval of the associate dean of liberal arts. All courses must have a specific title and letter suffix.)

LA 494H: Research Project Courses

1-12 Credits

Supervised student activities on research projects identified on an individual or small-group basis. (No course under L A 294/494 may be offered without approval of the associate dean of liberal arts. All courses must have a specific title and letter suffix.)

Honors

LA 495: Undergraduate Field Experience or Practicum

1-12 Credits/Maximum of 12

Approved experience, related to student career objectives, in agencies external to University.

LA 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

LA 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

LA 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

LA 499: Foreign Study--Liberal Arts

1-9 Credits/Maximum of 9

Study in selected foreign countries of the cultural, institutional, and/or social development of the host country.

International Cultures (IL)

Library Studies (LST)

LST 83: The Twenty-First Century Researcher

1 Credits

Students learn to use technology and Libraries resources to access and cite relevant information into academic research projects. L ST 083S The Twenty-First Century Researcher (1) This course will equip students with research skills for academic success at Penn State.

The class will investigate the Libraries' physical facility and scholarly, academic online resources as a single, holistic learning lab, and engage students by providing hands-on experience in how to conduct research across the disciplines and in all formats. Students will develop and use several cutting-edge communications tools, including blogs, podcasts, and personal portals. By the end of the course, students will be able to create and conduct research projects, and integrate their findings into outstanding papers and presentations in a variety of media.

First-Year Seminar

LST 250: Peer Tutoring in Research

3 Credits

LST 250 is a research-based class that prepares students to critically think about, use, and produce information. Through a library and information science lens, this class will explore, study, and interrogate the research process. During the semester, students will conduct research, learn about various process for creating, producing, and finding information, and will have the chance to express their findings and frustrations with the other students in the class. By the end of the semester, students will be savvy users of library resources and will have the skills needed to teach others about the research process. This course is well suited for students who are interested in taking a deep dive into the research process, or who have aspirations to do something in the information science field in the future.

LST 301: Information Research Methods and Systems

1 Credits

Survey of information theories, structures and resources as related to library research methods for social, behavioral sciences and the humanities.

Honors

LST 370: Research Methods for Law and Government Information Resources

3 Credits

Evaluating, retrieving and integrating Federal and Legal Information Resources into scholarly research. L ST 370 Research Methods for Law and Government Information Resources (3) This course covers basic legal research and government information skills: (1) the structure and types of federal primary and secondary legal sources; (2) the structure and types of federal government information; and (3) electronic and print databases and indices to locate legal and government information. Students will develop research methods for locating and using judicial, executive, and legislative branch information sources in scholarly and disciplinary research.

Prerequisite: 3 credits in Administration of Justice, Political Science, Communication, History or Sociology

LST 490: Archival Management

1-3 Credits/Maximum of 3

Introduction to the principles and procedures in the management of archives and historical manuscripts.

Cross-listed with: HIST 490
Bachelor of Arts: Humanities

LST 495: Internship

1-9 Credits/Maximum of 9

Directed internship in library studies, archival administration, rare books curation and/or preservation.

Prerequisite: L ST 490 or L ST 496

LST 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses. Students may not register for these courses without prior written approval of a faculty member in the department in which the courses are listed.

Linguistics (LING)

LING 1: Language, Life and Society

3 Credits

In this course, we survey essential topics in the study of language with a view toward providing an overview of the approaches, methods, and goals of linguistics. We examine fundamental questions like what are the origins of human language? How does language work? How do human languages differ and how are they alike? How do children learn languages? Why does language change? What is the link between language and culture? Why do people have such strong opinions about others' language use? What is the impact of language loss in human society? We will address these questions and others through readings, problems and discussion. The goal of this course is to provide evidence and analytical methods by which students can critically evaluate their

own and other people's views of language. The course also focuses on helping students gain proficiency in the general skill of how to use data (in this case, qualitative language data), to make a well-supported scientific argument.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

LING 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be taught in one year or semester.

Bachelor of Arts: Social and Behavioral Sciences

LING 98: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be taught in one year or semester.

Bachelor of Arts: Social and Behavioral Sciences

LING 100: Foundations of Linguistics

3 Credits

The course consists of a general survey of language and linguistics. A number of topics relating to human knowledge and use of language are systematically and scientifically investigated. The focus of the course is not on any specific language or languages; rather, it is on properties common to all languages and on ways in which languages may differ. The focus is on examination of speakers' knowledge of language and the idea of language as a system of human communication; the course provides students with the tools needed for the recording, investigation, and close analysis of language. Areas of study include phonetics and phonology (the details of sound analysis), morphology (word structure), syntax (sentence structure), and semantics and pragmatics (the deep investigation of meaning). Another part of the course teaches the students about aspects of language in society through topics such as sociolinguistics and/or historical linguistics. This aspect of the course is crucial to students' understanding of how language and culture reflect and affect each other. The course uses examples from English and from non-English languages and cultures in order to investigate these topics, though no previous knowledge of any language other than English is presumed. A knowledge of basic linguistics is, however, generally very helpful in the learning of foreign languages.

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

LING 382: Language and Culture in Africa

3 Credits

This course will provide an introduction to language in Africa from linguistic and cultural perspectives. Course topics include: the study of African language families and what they teach us about the history of the continent, the analysis of unusual linguistic structures found in indigenous African languages, multilingualism in Africa and the interaction between colonial and indigenous languages, linguistic traditions such as storytelling, ceremonies, ethnobotany, etc., and language development, including literacy practices and language and technology. The course will explore these topics in-depth through case studies focusing on four diverse geographical areas in West, North, East and Southern Africa. The capstone of the course will be a two-week trip for interested students to study linguistic practices in Benin, West Africa in both urban and rural settings.

Prerequisite: LING 100 or AFR 110

Cross-listed with: AFR 382

Bachelor of Arts: World Cultures

LING 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor
Bachelor of Arts: Social and Behavioral Sciences

LING 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be taught in one year or semester.

Bachelor of Arts: Social and Behavioral Sciences

LING 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

LING 402: Syntax I

3 Credits

Principles of grammatical analysis in the generative framework; an overview of syntactic structures across languages. LING 402 Syntax I (3) (BA) This course meets the Bachelor of Arts degree requirements. The aim of this course is to provide students with the background needed to understand advances in modern generative syntactic theory and to encourage them to do creative and informed research in this area on English or other languages that they might know. The course provides a historical overview of the development of generative syntax. We explore in depth a number of topics that challenge any syntactic theory and we attempt to propose testable hypotheses concerning language structure.

Prerequisite: C or better in LING 100, or C or better in MATH 311W or C or better in CMPSC 360
Bachelor of Arts: Social and Behavioral Sciences

LING 404: Phonology I

3 Credits

LING 404 Phonology I (3)(BA) This course meets the Bachelor of Arts degree requirements. This course is about sound patterning in language. In particular, we will learn how human speech sounds are produced and how they function together as a system. We will learn the International Phonetic Alphabet applied to English. We will discuss phonological data from many different languages to seek common phonological processes that occur despite the apparent surface diversity of languages. We will do extensive work on phonological problems in order to master basic phonological analysis.

Prerequisite: LING 100
Bachelor of Arts: Social and Behavioral Sciences

LING 405: Introduction to Historical Linguistics

3 Credits

Introduction to Historical Linguistics is designed to teach the theories, methods, and data linguists used to study ancient and modern languages and language families, and the connections that can be traced through language between seemingly diverse peoples and cultures. This course will teach the methodologies used by historical linguists to seek to understand language change, and to reconstruct ancient language forms. These methodologies require students to already have a basic understanding of linguistics, in particular phonetics, phonology, morphology, syntax and semantics, as the course teaches students how to use methodologies within those subfields to investigate historical phenomena. The course will also investigate how linguistic analysis can be used to inform the study of human history. Topics include how languages change and evolve over time; language families, language change due to language contact, and the connection between language, history and archaeology. Students will thus also learn what language can teach us about the history of people groups around the world.

Prerequisite: LING 100
Bachelor of Arts: Humanities

LING 410: Morphology

3 Credits

Morphology is the scientific study of words and word structure. This course provides a detailed exploration of morphological processes from a largely comparative method. Students are also introduced various formal models that will guide our investigations. Throughout the course we will scaffold our knowledge of morphological structure and processes with the aid of these theoretical concepts.

Prerequisite: C or better in LING 100

LING 414: Phonetic Analysis: Acoustic and Auditory Phonetics

3 Credits

This course is an exploration of phonetic analysis with a focus on acoustic and auditory phonetics (the properties of sound waves, particularly speech sounds, and how hearers perceive sounds given the constraints of the human auditory system). We will focus on how acoustic and auditory phonetics can enhance our understanding of sounds in languages around the world, and how it can inform analytical methods such as those used in sociolinguistics, linguistic field methods, and laboratory-based research involving sounds. This course will include training in specialized acoustic analysis software.

Prerequisite: C or better in LING 100

LING 429: Language and Thought

3 Credits

Relations between language and cognition; cognitive implications of normal and impaired language development; cognition and bilingualism. LING (PSYCH 426) 429 Language and Thought (3)(BA) This course meets the Bachelor of Arts degree requirements. Is language a special and uniquely human ability that develops and functions independently of other cognitive processes? Do individuals who speak different languages also have different concepts about the meaning of objects and ideas? Does language development depend on exposure to spoken language? In this course we will examine the relation between language and

thought by considering evidence on language and cognition in both children and adults. Topics to be covered include the typical development and use of language as well as language and cognition in individuals whose language and/or cognition is impaired in some form. The latter include individuals with aphasia who have sustained brain damage following stroke or head injury, schizophrenics whose language reflects aspects of their disorder, children diagnosed with Williams Syndrome who appear to have good or even precocious language abilities in the face of severe cognitive impairment, and Alzheimer's patients in whom semantic memory has begun to deteriorate. The course will also discuss the acquisition of sign language among deaf individuals and the consequences of bilingualism for children raised with two languages and for adults with proficiency in more than a single language. The purpose of this course is to provide a survey of current scholarship on the relation of language and thought, including a review of recent developments in the primary literature. The necessary background is covered in introductory Psychology and Linguistics courses, which serve as alternative prerequisites. Students will learn about the consequences of typical and impaired development for relations between cognition and language ability. It is distinguished from PSYCH 457, Psychology of Language, by a focus on the implications of language, language development, and language impairment, for cognitive processes. It covers some topics also addressed by current courses in Linguistics and in Communications Sciences and Disorders, but is distinguished from those courses by its focus on perspectives and theories from cognitive psychology. This course may be used toward the 400-level PSY requirements of the PSYBA and PSYBS majors, and toward the PSY minor. Students typically will be assessed on the basis of class participation and discussion (20%), four papers (total 60%), and an in-class presentation based on reading original research literature (20%). The course typically will be offered once each year at the University Park campus with an enrollment limit of 50.

Enforced Prerequisite at Enrollment: PSYCH 100 or LING 1 or LING 100
Cross-listed with: PSYCH 426
Bachelor of Arts: Social and Behavioral Sciences

LING 446: L1 Acquisition

3 Credits

How children learn their first language; psycholinguistic aspects of lexical, syntactic, semantic, and phonological development. LING 446 (PSYCH 427) L1 Acquisition (3) (BA) This course meets the Bachelor of Arts degree requirements. This course focuses on how children learn their first language from the theoretical perspectives of imitation theories, social construction theories, and innateness theories. In addition, the course covers the various stages of language acquisition including phonological (sound system), morphological (word meaning), syntactical (grammar) and semantic (meaning) development from birth to adulthood. Other related subfields covered in the course include the acquisition of Pidgin and Creole languages, bilingual and multilingual acquisition, and language acquisition and linguistic change.

Enforced Prerequisite at Enrollment: PSYCH 100 or LING 100
Cross-listed with: PSYCH 427
Bachelor of Arts: Social and Behavioral Sciences

LING 447: Bilingualism

3 Credits

Explores the social and psychological aspects of bilingualism; topics include languages in contact, transference, maintenance, and loss.

LING 447 Bilingualism (3)(BA) This course meets the Bachelor of Arts degree requirements. This course presents a panoramic view of the major questions, research methods and results in bilingualism research. We will cover the following topics, in addition to those topics that emerge from students' research: bilingualism in society; political and social results of language contact; effects of social attitudes on bilinguals; how bilingualism affect language: transfer, code-switch, language contact and language change; the bilingual brain, psycholinguistic effects of having two grammars in sentence production, phonological perception and lexical storage; childhood bilingualism; developmental and educational consequences of bilingualism.

Bachelor of Arts: Social and Behavioral Sciences

LING 448: Sociolinguistics

3 Credits

Issues in the study of language in its sociocultural context; analysis of social dialects and speech styles. LING 448 Sociolinguistics (3) (BA) This course meets the Bachelor of Arts degree requirements. This course investigates sociolinguistics variation and linguistic change. We will be concerned with identifying the mechanisms by which changes come about and are transmitted within a linguistic system. The course contrasts traditional studies of change and variation which concentrate on linguistic internal factors to those that are based on sociolinguistic factors. Research from a wide variety of languages and cultures will be examined.

Bachelor of Arts: Social and Behavioral Sciences

LING 449: Semantics I

3 Credits

LING 449 Semantics I (3)(BA) This course meets the Bachelor of Arts degree requirements. This course examines our best understanding of how humans produce and understand utterances to have particular meanings. This course examines lexical semantics, which is concerned with word meaning, phrasal semantics, which examines phrase meanings and with pragmatics, the study of meaning in contexts. Because meanings cannot always be built up or deduced from the combined meaning of smaller elements, students will attempt to divulge the semantic principles at work in human language through a wide variety of problems, activities, and formal analyses.

Prerequisite: C or better in LING 100, or C or better in MATH 311W or C or better in CMPSC 360

Bachelor of Arts: Social and Behavioral Sciences

LING 457: Psychology of Language

3 Credits

Overview of psychological research and theory on language processes, including speech perception, word recognition, meaning representation, comprehension, and language acquisition. LING (PSYCH) 457 Psychology of Language (3)(BA) This course meets the Bachelor of Arts degree requirements. How do we process language? Why do we easily adjust to a speaker with a foreign accent? How do young children come to speak the language to which they are exposed? Why is it difficult to learn a second language as an adult? This course focuses on the cognitive processes engaged by language use. Topics to be covered include speech perception, word recognition, representation of word meaning, comprehension of sentences, spoken production of words

and sentences, and first and second language acquisition. In addition, the role of language in the study of thought and the role of biological mechanisms in theories of language learning will be discussed, as well as ways in which research on the language of special populations (e.g., deaf signers, dyslexics, aphasics) can inform theories of language processing and representation.

Enforced Prerequisite at Enrollment: PSYCH 100 or LING 100

Cross-listed with: PSYCH 457

Bachelor of Arts: Social and Behavioral Sciences

LING 493: Field Methods

3 Credits

In this course, students work directly (in groups) with a native speaker of a foreign language with which no one in the class has any prior familiarity. The students will work to uncover the set of sounds relevant to the language in question by winnowing down possible sound contrasts made in human languages. They will begin to construct a lexicon (vocabulary) built with a phonetic alphabet to discover how words and sentences are formed in the language. They will refine their techniques of questioning their research participant based on principles of linguistic field work.

Prerequisite: C or better in LING 100 Concurrent: LING 404 and LING 402 Recommended Preparation: Prior completion of Two upper-level linguistics courses. Field Methods is a capstone course for the Linguistics Major, background experience is expected.
Bachelor of Arts: Social and Behavioral Sciences

LING 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

LING 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences
Honors

LING 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Social and Behavioral Sciences

LING 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be taught in one year or semester.

Bachelor of Arts: Social and Behavioral Sciences

LING 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

Management (MGMT)

MGMT 100: Survey of Management

3 Credits

Introduction to organizational factors relevant to management processes, including leadership, motivation, job design, technology, organizational design and environments, systems, change. May not be used to satisfy Penn State Business baccalaureate degree requirements. Not available to students who have taken B A 304 or MGMT 301.

MGMT 100W: Survey of Management

3 Credits

Introduction to organizational factors relevant to management processes, including leadership, motivation, job design, technology, organizational design and environments, systems, change. May not be used to satisfy Penn State Business baccalaureate degree requirements. Not available to students who have taken B A 304 or MGMT 301.

Writing Across the Curriculum

MGMT 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

MGMT 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MGMT 215: Entrepreneurial Mindset

3 Credits

This course provides the opportunity to learn to think like an entrepreneur in the broader context of social entrepreneurship, intrapreneurship, creative problem solving, opportunity recognition, and innovation. MGMT 215 Entrepreneurial Mindset (3) An entrepreneurial mindset can be applied to different situations such as social entrepreneurship, intrapreneurship, creative problem solving, opportunity recognition, technology management, innovation and career development, etc. The skills and attributes of an entrepreneurial mindset can be used to expand career options and career paths for students in any major. Students will develop self-efficacy, leadership, recognition of new opportunities, resourcefulness, creativity and comfort with ambiguity. Further, this course will help students develop an appreciation for mistakes and failure as valuable learning opportunities. Through experiential exercises and problem based learning the student will be afforded the opportunity to study, apply and absorb an entrepreneurial mindset as an approach to

viewing the world, to recognizing opportunities and to developing novel solutions. After taking this course the student, regardless of a student's major or college, will have a greater understanding of how to apply entrepreneurial thinking to problems and adopt entrepreneurial solutions to those problems to transform them from problems into opportunities.

MGMT 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MGMT 296H: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

International Cultures (IL)

MGMT 301: Basic Management Concepts

3 Credits

MGMT 301 exposes undergraduate students to the fundamental principles and basic concepts of management, with emphasis on organizational design, management processes, leadership, motivation, and managing teams and individuals in a global business environment. Understanding these principles and concepts is extremely important for students preparing for and entering the business profession. Managers plan, organize, lead, and control. These functions provide a foundation for MGMT 301 and are included in all course topics and modules. Typical modules include: An Overview of Management; Strategy and Structure; Organizational Behavior; and Group/Organizational Dynamics. The overview of management focuses on the manager's role and function, decision making, ethics, and managerial oversight. Topics covered in a strategy and structure module will include culture, environmental influences, strategy, organizational structure, globalization, and innovation. Organizational Behavior focuses on how decision making is influenced by various stakeholders who have formal and informal authority and control in a business. What motivates individuals and who are leaders in an organization is discussed along with group dynamics. Understanding team processes, conflict, adaptation to change, and various levels of group and one-on-one communication is important and will be covered by reviewing traditional management strategies and structures along with discussions on current and evolving management issues. Students may earn credit towards graduation for only one of the following; BA 304, MGMT 301, MGMT 301H, or MGMT 301W.

Enforced Prereq at Enrollment: (ENGL 15 or ENGL 30H or ENGL 137H or ESL 15 or CAS 137H) and (ECON 102 or ECON 104) and (MATH 21 or a higher or a satisfactory score on the math placement exam)

MGMT 301H: Basic Management Concepts (Honors)

3 Credits

Study of fundamental principles and processes available to the understanding of management. Students will likely spend a major part of their lives working for one or, perhaps, leading one they have started. Although sound technical skills and relevant knowledge are important reasons an organization hires employees, the ability to lead and manage people is critical for future advancement. This course is focused on the social facets of organizations - as opposed to elements such as finance, marketing, operations, etc. A good grasp of how organizations work will help students succeed in their careers. This course provides a forum to critically engage with theories and concepts that attempt to explain organizational practices. It is designed to not only provide students with the basic fundamentals that may be used as tools to become better managers, but also help students question their own assumptions about how people ought to behave and how they actually do behave in organizations. This course, builds on the concepts embedded in a traditional foundation management course by researching the theories these courses are built upon and pointing out the advantages and limitations of these different approaches. The topics covered in this course will provide both the breadth and depth of understanding of various topics including organizational structure, strategy, culture, leadership styles, ethics, and staffing that fall under the domain of Management and Organization. In addition, specific challenges faced by managers in contemporary organizations such as managing teams, globalization, and diversity are also incorporated. These topics are covered using lectures, independent research, case analyses and experiential exercises that will help you develop in-depth domain knowledge as well as managerial skills. In addition, the course will facilitate the development of research and analytic skills through the inclusion of individual presentations of current topics that represent critical issues in organizations. A team project will further enhance knowledge acquisition of specific issues facing organizations and, since teams are prevalent across most organizational settings, also help develop teamwork skills. Students may earn credit towards graduation for only one of the following; BA 304, MGMT 301, MGMT 301H, or MGMT 301W.

Enforced Prereq at Enrollment: (ENGL 15 or ENGL 30H or ENGL 137H or ESL 15 or CAS 137H) and (ECON 102 or ECON 104) and (MATH 21 or a higher or a satisfactory score on the math placement exam)

Honors

MGMT 301M: Basic Management Concepts

3 Credits

Examination of fundamental principles and processes applicable to the study of management. May not be used to satisfy Smeal College baccalaureate degree requirements. Not available to students who have taken B A 304.

Honors

Writing Across the Curriculum

MGMT 301W: Basic Management Concepts

3 Credits

MGMT 301W, Basic Management Concepts, is a three credit course offered each semester across Penn State. MGMT 301W exposes undergraduate students to the fundamental principles and basic concepts of management, with emphasis on organizational design, management processes, leadership, motivation, and managing teams and individuals in a global business environment. Understanding these principles and concepts is extremely important for students preparing for and entering the business profession. Managers plan, organize, lead, and control. These functions provide a foundation for MGMT 301W and are included in all course topics and modules. Typical modules include: An Overview of Management; Strategy and Structure; Organizational Behavior; and Group/Organizational Dynamics. The overview of management focuses on the manager's role and function, decision making, ethics, and managerial oversight. Topics covered in a strategy and structure module will include culture, environmental influences, strategy, organizational structure, globalization, and innovation. Organizational Behavior focuses on how decision making is influenced by various stakeholders who have formal and informal authority and control in a business. What motivates individuals and who are leaders in an organization is discussed along with group dynamics. Understanding team processes, conflict, adaptation to change, and various levels of group and one-on-one communication is important and will be covered by reviewing traditional management strategies and structures along with discussions on current and evolving management issues. Students may earn credit towards graduation for only one of the following; BA 304, MGMT 301, MGMT 301H, or MGMT 301W.

Enforced Prereq at Enrollment: (ENGL 15 or ENGL 30H or ENGL 137H or ESL 15 or CAS 137H) and (ECON 102 or ECON 104) and (MATH 21 or a higher or a satisfactory score on the math placement exam) Writing Across the Curriculum

MGMT 320: Establishing Workforce Diversity and Inclusion

3 Credits

This course provides students with an understanding of the relevance and importance of diversity within corporate America as well as a review of global business practices. Students will examine marketing, management, and finance topics within the context of issues pertaining to persons of different orientations, gender and ethnic backgrounds. Diversity Workforce and Inclusion looks at topics that directly and indirectly impact employment opportunities, day-to-day work practices, and the civil environment in which individuals deal with as they attempt to establish themselves as successful individuals on equal footing with their colleagues. Course participants will be given the opportunity to examine their own biases and questions surrounding the topics of diversity, inclusion, and leadership in a multicultural environment. Current national and global trends in workplace diversity will be covered along with federal mandates that impact employment, education, and civil matters.

MGMT 321: Leadership and Motivation

3 Credits

Applies organizational behavior theories, concepts, and skills to leading and motivating individuals and groups.

Enforced Prerequisite at Enrollment: BA 304 or MGMT 301

MGMT 326: Organizational Behavior and Design

3 Credits

Concepts, theories, and methods of managing people and designing organizations. MGMT 326 Organizational Behavior and Design (3) This introductory course covers the concepts, theories, and methods of managing people and designing organizations. Issues and challenges of managing at different organizational levels (individual, group, project, and total organization) are discussed and illustrated with real-world examples. Students learn about the latest means of designing high-performing organizations, including how to change an organization. This course will serve as a foundation for taking advanced management courses. The primary method of evaluation is an examination after each of the four major parts of the course, but class participation and short papers may also be used for evaluation.

Enforced Prerequisite at Enrollment: BA 304 or MGMT 301

MGMT 331: Management and Organization

3 Credits

Designing organizations to effectively manage new technologies, structures, and people in changing global contexts.

Enforced Prerequisite at Enrollment: BA 304 or MGMT 301

MGMT 341: Human Resource Management

3 Credits

Introduction to the strategic planning and implementation of human resource management, including staffing, development, appraisal, and rewards.

Enforced Prerequisite at Enrollment: BA 304 or MGMT 301

MGMT 345: Cultural Intelligence in Leadership and Management

3 Credits

Globalization and technology have changed the way organizations interact with internal and external constituents. Leaders must strive to create an environment where individuals adapt in socially responsible ways in order to foster the growth of global citizens. This course explores the realm of cultural intelligence or cultural quotient (CQ) and its importance in developing an inclusive approach to leadership and management. Through an experiential learning approach, students will develop skills that will aid in their ability to appreciate, manage, lead, and work with individuals across a multitude of cultural identities.

Enforced Prerequisite at Enrollment: ECON 102 or ECON 104 International Cultures (IL)

MGMT 355: Leadership and Change in Organizations

3 Credits

This course focuses on concerns with understanding yourself as a leader in organizations-especially organizations undergoing change.

Enforced Prerequisite at Enrollment: MGMT 301

MGMT 365: Social Entrepreneurship

3 Credits

Social entrepreneurship exposes students to the power of solving social problems through market-based solutions. Entrepreneurs, in general, create opportunities through resource integration. Therefore, social entrepreneurs create socially beneficial opportunities through the integration of public and private resources. In this course, students will explore the latest regulatory, legal and macroenvironmental policies and issues related to social entrepreneurship. In contrast to existing entrepreneurship courses, social impact is the primary purpose driving firm creation. Profitability, or value capture is not required, but might provide an innovative business model choice. In order to support the creation and growth of important social opportunities, entrepreneurs should consider different business model innovations beyond financial returns alone might produce. After taking this course, students will be alert to legal and regulatory opportunities, be capable of developing relevant marketing innovations and provide measurement and impact analyses prior to and after implementation of their strategies associated with social entrepreneurship. These learning outcomes will benefit traditional entrepreneurs and social entrepreneurs in developing innovative solutions.

Enforced Prerequisite at Enrollment: MGMT 301**MGMT 395: Internship**

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor.**MGMT 397: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MGMT 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MGMT 400: Organization Development

3 Credits

A study of organizational change and methodologies related with change and improvement. Examination of planned change on processes, strategies, people and culture in organizations.

Enforced Prerequisite at Enrollment: MGMT 301**MGMT 401: Contemporary Issues in Management**

3 Credits

Advanced treatment of topics of current managerial significance. Issues examined will differ by instructor, section, and semester. Consult departmental office.

Enforced Prerequisite at Enrollment: MGMT 301**MGMT 409: Project Management for Non-business Majors**

3 Credits

Project management for non-business majors covers the technical and people skills related to project management within a variety of organizational structures. Students learn the tools and concepts needed to successfully balance schedule, budget, and scope while managing risk and resources during the project life cycle. Leadership and teamwork skills are emphasized and practiced in a hands-on approach throughout the duration of the course.

Enforced Prerequisite at Enrollment: 5th semester standing**MGMT 410: Project Management**

3 Credits

MGMT 410 Project Management (3) Project Management has been labeled by Fortune magazine as the number one career choice for the coming decade. Increasingly, organizations are adopting project management techniques and structures within their business framework. Project management offers the twin advantages of allowing organizations to create products and processes efficiently, through optimal use of resources, and rapidly, in order to respond to rapid time-to-market demands. This course would greatly aid business majors, as companies are in great need of a trained cadre of qualified project managers who can allow the business firm to operate to its highest potential. The role of the instructor in this course is to train students in the wide variety of demands and skills for which they must be qualified: the ability to exert leadership in managing project teams, an understanding of people and behavioral skills, and the ability to effectively use computer-based scheduling and tracking software to keep timetables and schedules. The course itself would be set up around semester-long projects, either developed by the instructor, or developed (in collaboration with the instructor) by students involved in business enterprises. As a result, students would have real-time experience in the challenges of creating a unified team, solving problems, tracking their projects, and presenting a final paper and presentation on the process.

Enforced Prerequisite at Enrollment: MGMT 301 and (SCM 301 or SCM 310)**MGMT 415: Project Portfolio Management and Organizations**

3 Credits

An advanced course in project management focusing on portfolio planning and control within the context of specific organizational challenges. MGMT 415 Project Portfolio Management and Organizations (3) Project Portfolio Management (PPM) is a strategically-focused course on the management of projects, programs, and portfolios in organizations. The management of individual projects is a complex, multi-level challenge involving myriad issues of planning, organizing, and controlling all project elements. Project portfolio management addresses a more strategic need; namely, the process of project

selection in order to develop a balanced portfolio of projects designed to support organizational initiatives. As a result, this course addresses the critical issues of maximizing value in a portfolio, linking projects to organizational strategy, understanding the critical organization effects of structure, environment, and culture on project success, and creating a coherent PPM framework for the firm. Because the focus is more strategic, the role of the instructor in this course is to go beyond the mechanics of planning and controlling a single project to training students how to think strategically where projects and programs are concerned; to recognize their role in creating a PPM plan for an organization, selecting projects for value, rebalancing a project portfolio, and maintaining this focus within the organization.

Enforced Prerequisite at Enrollment: SCM 301 and (MGMT 409 or MGMT 410 or BA 421)

Cross-listed with: SCM 415

MGMT 418: Project Planning and Resource Management

3 Credits

Advanced course in project management focusing on a more in-depth approach to project planning and scheduling and resource management. MGMT 418 Project Planning and Resource Management (3) Project Planning and Resource Management is a more in-depth look at some of the most important aspects of project management; the ability to accurately plan and schedule projects using the latest and most accurate methods. Further, the course addresses resource management within the context of planning, noting the important linkage between these two elements. Accurate planning can be done through a variety of techniques, including CPM, PERT, simulation, linear programming and other optimization methods. Students will learn when each of these methods are most useful, benefits and drawbacks of various planning and resource management techniques, and how to apply these techniques to their projects. In addition, students will learn about different types of project risks, and techniques for analyzing and managing these risks. Because the focus is hand-on and problem-based. The role of the instructor in this course is to demonstrate these analytical techniques through classroom exercises and assignments and software packages, including MS Project, simulation, and Analytic Hierarchical Process (AHP).

Enforced Prerequisite at Enrollment: SCM 301 and (MGMT 409 or MGMT 410 or BA 421)

MGMT 420: Negotiation and Conflict Management

3 Credits

An exploration of the sources of interpersonal conflict and strategies of resolution in the managerial context.

Enforced Prerequisite at Enrollment: MGMT 301 or BA 304

MGMT 424: Interpersonal Relationships in Organizations

3 Credits

Developing individual skills in interpersonal and group settings and experience-based and conceptual training in relating effectively to other people.

Enforced Prerequisite at Enrollment: MGMT 321 or MGMT 326

MGMT 425: New Venture Creation

3 Credits

Via problem-based learning, students define new business ventures to meet current market needs, develop business models, and present to various stakeholders. The goal of New Venture Creation is to better prepare undergraduate students to be leaders in adaptive, globally-minded, technology-savvy organizations. The course is structured so students develop skills that are of high value in any workplace: leadership skills, self-efficacy, creativity and the ability to deal with ambiguity. Upon course completion, students will have a working knowledge of traditional and non-traditional ways for identifying a new product or business opportunity, quantifying the potential, understanding the key competitive factors, researching the audience, and producing a convincing plan for financing and launch. Students who want to augment the skills and knowledge from their major with the ability to develop a new product/service/process, will find New Venture Creation a valuable course. This is a novel problem-based learning (PBL) course, where the learning is student-centered, with faculty acting primarily in the role of facilitators. Active/Experiential learning happens in this course because students develop ownership of their venture concepts and are fully responsible for the genesis of ideas.

Enforced Prerequisite at Enrollment: (ECON 102 or ECON 104 or ECON 14 or MGMT 215) and (CAS 100 or CAS 138T or EMSC 100S)

Cross-listed with: ENGR 425, IST 425

MGMT 426: Invention Commercialization

3 Credits

Working with Penn State inventions selected by the Intellectual Property Office, student teams define an optimum commercialization path each technology. ENGR 426ENGR (MGMT/IST/ENTR) 426 Invention Commercialization (3) The goal of ENGR (MGMT/IST/ENTR) 426 is to have students understand why invention commercialization is complicated and difficult by participating in the process. For example, the inventor rarely has insights into the markets for his/her invention, is often not interested in the details of commercialization, and can be secretive. In addition, the business and financial communities often do not take the time, or have the resources, to understand new technologies and perform complex due diligence. Thus lack of due diligence often leads to rejection of innovation because existing companies often discount new technologies from outside the company as NIH - 'not invented here'. Effective transfer of new invention or innovation to a commercial product requires at least three different functional communities to interface: technical, legal and business. Each uses a different language, comes from different educational and cultural backgrounds, and may have an inherent distrust of the others. These functional barriers are difficult to overcome. This course teaches how these barriers can be broken down as student teams help bridge the perceived chasm between key players in the invention commercialization process. In these teams, students bring the skills and knowledge from their major to develop an invention commercialization recommendation for the Technology Transfer Office and the inventor. For example, business students focus on finance and market opportunity assessment; engineering and IST students focus on design refinements, prototyping support, and (if appropriate) making technology suggestions to the inventor. Upon completing the course, the students will have a working knowledge of different university and corporate technology or invention commercialization processes, important intellectual property management tools for inventions (patents, license agreements, option agreements) source of funding to move

inventions toward product development, and delivering top quality presentations which outline the recommended commercialization path. Students who enjoy open-ended projects which involve the interplay of business and invention of who wants to work on interdisciplinary teams with the newest inventions will find this course a valuable course. NOTE: Because the inventions/products are based on Penn State faculty intellectual property, students must sign the Penn State Special Intellectual Property Agreement For Students - For Use When Assigning Intellectual Property to The Pennsylvania State University. The form can be viewed at <http://guru.psu.edu/policies/RAG13.html>The course will be offered both Spring and Fall semesters with an enrollment of 40 students.

Enforced Prerequisite at Enrollment: (ECON 102 or ECON 104 or ECON 14) and CAS 100
Cross-listed with: ENGR 426, IST 426

MGMT 427: Managing an Entrepreneurial Start-Up Company

3 Credits

Exploration of the tensions and experiences of starting and growing a new company. MGMT 427 Managing an Entrepreneurial Start-Up Company (3)Start-up companies have a high failure rate. Acquiring and balancing limited resources, changing direction quickly, building a coherent team, managing intellectual property, and creating new markets all test a wide range of managerial skills not usually demanded in one person within a larger organization. Whereas a large company has a strong and well-defined structure and ample resources to deal with unexpected challenges, a start-up usually has insufficient resources, or management experience and yet must deal with daily important and often unpredictable forces. It is the tenacity of an entrepreneur that can take a company through the valleys of despair to eventually succeed. Students will be exposed to these tensions and experience through problem-based learning methods what it is like to start and grow a new company. The course will provide students with knowledge and experience to increase the likelihood of success whether as a principal in a small company or an investor representative.

Enforced Prerequisite at Enrollment: (ECON 102 or ECON 104 or ECON 014) and CAS 100 and 5th semester standing.

MGMT 427W: Managing an Entrepreneurial Start-up

3 Credits

Start-up companies have a high failure rate. Acquiring and balancing limited resources, changing direction quickly, building a coherent team, developing an organization's culture from scratch, managing intellectual property, and creating new markets all test a wide range of managerial skills not usually demanded in one person within a larger organization. Whereas a large company has a strong and well-defined structure and ample resources to deal with unexpected challenges, a start-up usually has insufficient resources and/or management experience, yet it must deal on a daily basis with important and often unpredictable forces. Students will be exposed to these tensions and experience through problem-based learning methods that illustrate what it is like to start and grow a new company. The course will provide students with the knowledge and experience to increase their likelihood of success whether as a principal in a small company or an investor representative. Managing a Startup is a problem-based learning (PBL) course, where the learning is student-centered, with faculty acting primarily in the role of facilitators. Active learning happens in this course because students are engaged in the analysis of the complex situations that underlie startup companies. The course leverages the on-line course management system to define

weekly learning objectives, support electronic delivery of assignments and provide robust video content from entrepreneurs, investors and key employees, who provide additional insights into the management decisions and ethical dilemmas the leader of a startup faces. Because the course is structured around the on-line course management system, it could be offered at any Penn State location with very little revision. The particular companies and cases that are the focus of the class are easily adapted by using different case studies, companies and course mentors.

Enforced Prerequisite at Enrollment: CAS 100 and 5th Semester standing
Writing Across the Curriculum

MGMT 430: Project Risk Management

3 Credits

Risk management is indispensable for effective project management. The course provides students with proven theories, tools, and best practices in risk management in order to manage a project to its success. From the course, students will recognize that project risks are not surprises and can be effectively managed by conducting analytics and best practices in risk management planning, risk identification, qualitative and quantitative risk analyses, risk response planning, and risk monitoring and control. The course will also emphasize the applications of these concepts to practices. Case studies will be used to help students develop a practical understanding of the best practices in project risk management.

Enforced Prerequisite at Enrollment: SCM 301 and (MGMT 409 or MGMT 410)

MGMT 431: Entrepreneurship and Small Business Management

3 Credits

Entrepreneurship, new ventures, and management of small firms.

Enforced Prerequisite at Enrollment: ACCTG 211 and MGMT 301 and MKTG 301

MGMT 433: Leadership and Team Building

3 Credits

Team-based learning approach to developing conceptual knowledge, skills sets, and personal competencies needed for leading and managing organizations. MGMT 433 Leadership and Team Building (3)To lead effectively and to manage others in contemporary work contexts requires mastery not only of conceptual knowledge, but also of the intra- and inter-personal competencies and skills sets that are vital to successful performance in a work environment. This course emphasizes an experiential-based learning approach that is designed to impart skill sets and competencies in areas such as leadership, teambuilding, negotiating, communicating, valuing diversity, managing conflict, and more. The course thus uses assessment exercises, role playing techniques, group problem solving exercises, and other experiential-based learning techniques in order to provide students with a framework for better understanding their own strengths and weaknesses, to enable them to practice, enhance, and to gain confidence in their competencies in these various areas, as well as to enable students to better appreciate when and how to effectively apply these skills sets and competencies in the workplace.

Enforced Prerequisite at Enrollment: MGMT 301

MGMT 440: Advanced Human Resource Management

3 Credits

In depth study of human resource management and personnel administration functions and processes.

Enforced Prerequisite at Enrollment: MGMT 341

MGMT 441: Organizational Staffing and Development

3 Credits

This course focuses on the skills and methods managers need to manage staffing and development activities in organizations. MGMT 441 HRM Professional Seminar (Part 1): Staffing and Development (3) The purpose of this course is to give students the skills and knowledge they need to contribute to organizational staffing and development activities. Students will learn technical and organizational aspects of making hiring decisions, designing and implementing training programs, and developing career management initiatives. Topics include strategic human resource management, HR planning, the contingency workforce, HR information systems and technologies, job design, recruitment, selection, employment legislation, diversity, training, management development, career planning, and the like. This course is normally taken in the first semester of the senior year. It builds on information introduced in MGMT 341 (Human Resources Management) and moves beyond survey-level material to more specialized knowledge and skill. The course is taken concurrently with MGMT 442 (HRM Part One) and is typically taken as a precursor to MGMT 443 (HRM Proseminar, Part Two) and 444 (HRM Practicum, Part Two). These courses together constitute the core of the HRM Option for Management majors.

Enforced Prerequisite at Enrollment: MGMT 341

MGMT 443: Performance Management

3 Credits

This course focuses on skills and methods managers need to enhance the contribution of employees to organizational performance and effectiveness. MGMT 443 HRM Professional Seminar Part Two: Performance Management (3) The purpose of this course is to give students the skills and knowledge they need to enhance the contribution of employees to the performance and effectiveness of the organization. Students will learn technical and organizational aspects of performance planning, goal setting, performance and feedback, compensation and reward systems, incentive systems, high performance work organizational change, and the like. This course is normally taken in the second semester of the senior year. It builds on information introduced in MGMT 341 (Human Resources Management) and moves beyond survey-level material to more specialized knowledge and skill. The course is taken concurrently with MGMT 444 (HRM Practicum, Part Two) and is typically taken after students have completed MGMT 441 (HRM Proseminar, Part One) and MGMT 442 (HRM Practicum, Part One). These courses together constitute the core of the HRM Option for Management majors.

Enforced Prerequisite at Enrollment: MGMT 341

MGMT 445: Managing a Diverse Workforce

3 Credits

This course focuses on developing knowledge and skills for managing differences within and among organizations. It provides an in-depth look

at the sources of diversity-related conflicts in organizations, constructive approaches for managing these conflicts, and how corporations can leverage diversity for competitive advantage. The overall objective is to provide students with an understanding of the business case for diversity, the legal requirements surrounding the management of diversity in organizations, the structural dimensions of implementing diversity programs, skills for managing diversity in teams, as well as a general sensitivity to the kinds of issues that create conflicts within and between firms. Students will explore legal requirements including: EEOC, affirmative action, and the Americans with Disabilities Act and the implications of these for selection, compensation, promotion and dismissal. Examples of specific steps corporations have taken to address demographic, functional, occupational, and identity-based differences will be provided. Through the use of interactive case studies and experiential exercises, students will be given opportunities to learn about and appreciate their own and others' cultural heritages, reflect on constructive approaches for handling diversity-related conflicts (including those stemming from functional, occupational and identity-based differences as well as demographic ones) and for designing human resource management systems that capitalize on diversity and promotes inclusion.

Enforced Prerequisite at Enrollment: MGMT 301
United States Cultures (US)

MGMT 450: Labor Management Relations

3 Credits

Study of the key concepts and processes involved in current American labor/management relations.

Enforced Prerequisite at Enrollment: MGMT 301

MGMT 451: Business, Ethics, and Society

3 Credits

Advanced examination of social, ethical, legal, and economic responsibilities of those who must make and execute challenging business decisions and manage others who do. The course focuses on the knowledge, skills, and perspectives that a leader in business must have in order to navigate the intersection of business, ethics and society. This includes prescriptive frameworks for ethical decision making, an understanding of how people actually make ethical and unethical decisions, strategies for creating and sustaining ethical cultures, and practice addressing real and hypothetical challenges to responsible leadership in business.

Enforced Prerequisite at Enrollment: MGMT 215 or BA 342 or BA 243 or (BA 241 and BA 242)

MGMT 451W: Business, Ethics, and Society

3 Credits

Advanced examination of social, ethical, legal, economic, equity, environmental, public policy, and political influences on managerial DECISIONS AND STRATEGIES. MGMT 451W Business, Ethics, and Society (3) Focuses on the knowledge, skills, and perspectives that a manager must have in order to deal with the social, legal, ethical, and political demands in society. Ecological, ethical, and public policy dimensions of various managerial decisions are examined.

Enforced Prerequisite at Enrollment: (BA 241 and BA 242) or BA 243 or BA 342

Writing Across the Curriculum

MGMT 453: Creativity and Innovation

3 Credits

Analysis of the process of innovation in organizations and of how creativity and other variables influence the process. MGMT 453 Creativity and Innovation (3) Creativity and Innovation analyzes the process of innovation in modern business organizations and the variables that influence the process. The relationship between creativity and innovation is investigated and individual, organizational and environmental influences on both the creative and innovation processes are examined. Special attention is given to organizational architectures that are conducive to innovation. A major objective of the course is to help students develop the competencies necessary for managing innovative organizations.

Enforced Prerequisite at Enrollment: MGMT 301

MGMT 457W: Strategic Management of Innovation and Technologies

3 Credits

New technologies are turned into innovations and create value for consumers only when they are successfully commercialized. Brilliant technologies can sit for years or even decades in the ivory tower. A successful commercialization of certain technologies does not only require deep understanding of the features of the technologies, but also well-developed frameworks to understand the dynamics of the technologies, the industries that the technologies will be applied to, market potential responses to the technologies and other firms who are interested in collaborating or competing to commercialize the technologies. These frameworks help managers to design the optimal strategy for different types of technologies and innovations (including incremental, disruptive, radical, and sustainable innovations) under dynamic market environments. The course covers several concepts, frameworks and tools through case-based learning methods that illustrate how different innovations and technologies are strategically managed and commercialized. Analyzing the successes and failures detailed in the cases will provide students the knowledge and analytical skills needed to develop comprehensive strategies to manage new technologies. This course is writing-intensive so be prepared to hone your business writing skills along the way. Strategic Management of Innovation and Technologies is a case-based learning course, where the learning is student-centered, with faculty acting primarily in the role of facilitators. Active learning happens in this course because students are engaged in actively analyzing cases and applying newly learned frameworks to the cases. The course leverages the University's course content management system (CMS) to define weekly learning objectives, support electronic delivery of assignments and provide robust video content from managers, inventors and venture capitalists, who provide additional insights into the process of technology commercialization. Because the course is structured within the CMS system, it could be offered at any location with very little revision. The companies and cases that are the focus of the class are easily adapted by using different case studies, companies and course mentors.

Enforced Prerequisite at Enrollment: MGMT 453

Writing Across the Curriculum

MGMT 461: International Management

3 Credits

Examines issues of nations and cultures including motivation, communication, negotiation, leadership, ethics and social responsibility, and women in management.

Enforced Prerequisite at Enrollment: BA 304 or MGMT 301
International Cultures (IL)

MGMT 466: Organizational Learning and Knowledge Management

3 Credits

Examination of the social processes through which organizations continuously develop, acquire, interpret, and apply information and knowledge for performance enhancement and continuous improvement. MGMT 466 Organizational Learning and Knowledge Management (3) The primary focus of this course is to examine critically the social structures and processes through which organizations continuously acquire, develop, organize interpret, distribute and apply information and knowledge for performance enhancement and continuous improvement. Topics such as single-loop learning, double loop learning, and deuterolearning (i.e., learning how to learn) are considered, particularly as they apply to self managed work teams, process-based and network structural design, employee involvement approaches, impact of organizational culture and leadership practices. A second focus of the course is to examine the social processes and structures through which the key outcome of the learning process – organizational knowledge – usually expressed in terms of improved core competencies, and intellectual capital, can be leveraged across products, functions, business units, geographical regions, and competitive environments to improve organizational performance and competitive advantage and provide added value for customers. Particular emphasis is placed on knowledge management in support of the organization's competitive strategy, with a focus on the exchange of tacit, person-to-person knowledge that is difficult to codify and store. Additional emphasis is placed on the mechanisms available for organizational members to gain access to needed knowledge.

Enforced Prerequisite at Enrollment: MGMT 301

MGMT 471: Strategic Management

3 Credits

Issues that influence the competitive performance of the firm are identified and examined. MGMT 471 Strategic Management (3) This course focuses on the management of the firm using a strategic perspective. The strategic perspective emphasizes the firm as the unit of analysis (e.g., analyzing how a firm competes in its industry), and it addresses key decisions that have a long-term impact on the structure and performance of the organization (e.g., diversifying into a new business or changing the company's strategy). The course draws heavily on prior business courses in accounting, marketing, finance, and international management. Key topics include industry analysis, competitor analysis, company analysis, corporate-level strategy, business-level strategy, strategy implementation, and firm performance. The course is normally taught using the case methods, but the course may include a computer simulation and/or oral group presentations.

Enforced Prerequisite at Enrollment: MGMT 326 and concurrent BA 411

MGMT 471W: Strategic Management and Business Policy

3 Credits

Study of strategic management and business policy formulation and implementation processes.

Enforced Prerequisite at Enrollment: MGMT 301 and MKTG 301 and FIN 301 and SCM 301

Writing Across the Curriculum

MGMT 475W: Strategic Product Development

3 Credits

Study of an organization, industry, and evaluation of the introduction to a new product. Preparation of proposal for industry product. MGMT 475W Strategic Product Development (3) This course is the first of a two course sequence that will provide a capstone experience for the Interdisciplinary Business and Engineering BS degree. The tools of strategic management and cross-functional collaboration will be introduced and serve as a background for the design, development, and implementation of a new product within an existing corporation. Student teams will be provided with an industry concept and work toward the objectives of a firm sponsoring the product concept. During the first semester, the evaluation of the product including feasibility of the product, design, manufacture, and intellectual property will be evaluated by student teams and presented to the firm. The final document will include a complete written assessment of each of the components of feasibility.

Enforced Prerequisite at Enrollment: MGMT 301 and FIN 301 and MKTG 301 and (SCM 301 or SCM 310) and 7th semester standing. Recommended Preparation: MECH 211 or MCHT 111. Students should have successfully completed at least 6 credits in engineering. Writing Across the Curriculum

MGMT 476: Product Realization Capstone

3 Credits

Study of an organization, industry, and evaluation of the introduction of a new product. Preparation of proposal for industry product. MGMT 476 Product Realization Capstone (3) This course is the second of a two course sequence that will provide a capstone experience for the Interdisciplinary Business & Engineering BD degree. The tools of strategic management and cross-functional collaboration will be used to design, develop, and implement a new product within an existing corporation. Student teams will be provided with an industry concept and work toward the objectives of a firm sponsoring the product concept. During the second semester, the evaluation of the product including feasibility of the product, design, manufacture, and intellectual property will be used by student teams and a final presentation and written assessment will be prepared for the firm.

Enforced Prerequisite at Enrollment: MGMT 475W or 8th semester standing

MGMT 480: Business Transformation Consulting

3 Credits

This course provides key issues, concepts, and methodologies associated with business transformation and management consulting. Students will explore the professional services industry, industry best practices, and a variety of client contexts where advisory services are needed. Additionally, students will learn common consulting methods and

how to apply them in client organizations. A consulting-oriented solution development lifecycle is used as the organizing framework of the course. The primary phases of this framework include: client qualification/validation, problem identification, data gathering, requirements definition, project planning, solution design, solution development, solution implementation, and client relationship management. Students will learn to how to identify and define organization problems, highlight pain points, map work flows, explore business models, investigate strategic alignment, develop recommendations, present business cases, and prototype solutions. The course will also enable students to learn how to advise clients and present key points and recommendations in a direct, clear, and compelling manner. Course objectives are to provide students with consultative methods, skills, and tools essential to facilitating organizational change. The course is designed around real-world problems and projects involving organizational assessment, solution development, and implementation planning. In this course, each student will be assigned to a consulting team. Each consulting team will be assigned to work with a corporate client to address a real-world business problem. Students will learn how to work proactively with key stakeholders to identify and understand the choices, risks, and benefits of particular solution alternatives, prepare project proposals, develop a plan to support the needed changes, and assess the effectiveness of business transformation efforts. Depending on the project, the recommended solution may be prototyped or fully developed during the course.

Enforced Prerequisite at Enrollment: MGMT 301

MGMT 481: Global Strategic Management

3 Credits

With increasing competition around the globe, companies today confront an increasing array of choices regarding geographic markets, locations for key activities, ways of organizing businesses, operations, and processes for managing across borders. This course provides a broad exploration of new business models developed for competing in the global marketplace. It discusses the evidence, concepts and models for understanding the strategic issues facing executives nowadays and their impacts on company performance. In particular, it investigates various aspects of corporate level and business level strategy dealing with opportunities and challenges in the global competitive environment. It considers the dynamics in the global business environment and addresses key strategic decisions that influence firm growth and competitive advantages. The aim of this course is to prepare students to manage effectively in today's interconnected world by understanding this changing environment, principles of global strategy, and the relation between global strategy and organization. Students will develop strategic thinking capabilities and apply analytical tools and frameworks for understanding key factors influencing decision making in today's interconnected world. The course builds on insights from prior business courses in accounting, marketing, finance, organizational behavior, strategy, and international management. Learning will take place through lectures, in-class activities, case discussion, simulation, and group project and presentations.

Enforced Prerequisite at Enrollment: MGMT 326 or (MGMT 321 and MGMT 331)

MGMT 483: Compliance and Fairness in Organizations

3 Credits

Compliance with employment laws with respect to managing human resources and fair treatment in employer-employee relationships.

MGMT 483 Compliance and Fairness in Organizations (3) This course is intended for undergraduate students who want to learn more about the laws governing the employment practices introduced in the survey course in human resource management. This course will clarify the legal context within which businesses in general, and managers in particular, manage their employees. Students will learn about the legal rights and responsibilities of both employers and employees. Objectives of the course include learning how to comply with workplace laws and regulations, learning how to legally and effectively implement these requirements in an organization, and, as managers of human resources, knowing how to run a safe and fair workplace. To accomplish these objectives, students will evaluate and analyze federal employment laws and regulations, state employment laws (where applicable), and U.S. Supreme Court rulings. The emphasis will be on providing an informed legal context for managerial behavior. Student achievement of these learning objectives will be evaluated using several methods: students will summarize, interpret, and analyze employment law cases, write and develop a portfolio of critical essays of corporate employment practices, research and present (with team members) a project analyzing a current legal challenge to a specific company employment practice, and prepare a comprehensive written examination of material covered in the course.

Enforced Prerequisite at Enrollment: MGMT 341

MGMT 485: Entrepreneurial Opportunity Creation

3 Credits

Entrepreneurial Opportunity Creation is a process for co-creating ideas, markets and products by testing value propositions in actual market conditions. Opportunity co-creation prepares entrepreneurs to manage under conditions of extreme uncertainty. Opportunity creation is an iterative process between internal and external stakeholders focused on mutual value creation and exchange. Upon validation that a meaningful market opportunity exists, organizational resources are designed and deployed to match the learned opportunity. Unlike traditional entrepreneurial approaches, organizational formation is predicated on co-creation activities and is custom designed to fit the specific opportunity. This sequence reduces risk previously caused from efforts to predict the unpredictable, an uncertain future. This course will prepare students to learn how to create their own opportunities through active learning instead of predictive planning techniques rooted in risk analysis. Students will learn to use lean management techniques such as prototype development, sales and entrepreneurial marketing. This specific process or opportunity creation reverses conventional thinking and positions ideas, resources and experiences as outcomes of the process, not inputs.

Enforced Prerequisite at Enrollment: MGMT 453 and MGMT 425

MGMT 486: Entrepreneurial Investment and Resource Acquisition

3 Credits

As resource integrator's, entrepreneurs must first understand what resources are needed to create a new venture (through Entrepreneurial Opportunity Creation) and then solicit and organize internal and external resources (aka Venture Capital). Although venture capital is often conceptualized as formal investments made by large investment institutions seeking high growth opportunities, a more inclusive definition of venture capital more aptly considers all forms of external resource sharing to provide the creation of value, new ventures and wealth. The entrepreneurial ecosystem offers an expanding number of tools to aid new venture creation. As such, successful entrepreneurs need to be

aware of the options and understand their respective strengths and weaknesses. Today's entrepreneurs can utilize traditional investment tools such as banking, personal debt obligations and venture capital institutions as well as emerging forms of investment tools such as crowdfunding resources, angel investors and accelerators. This course will provide students with the insights into raising venture capital, more broadly defined as any necessary external assets, through business planning, networking, investment pitching and negotiating. This will require students to compile the learning outcomes gained through prerequisite material in opportunity creation into a comprehensive business plan including financial projections. Through these activities, students in this course will be prepared to engage with applicable external resources providers and/or investors.

Enforced Prerequisite at Enrollment: MGMT 485

MGMT 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

MGMT 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

MGMT 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor.

Full-Time Equivalent Course

MGMT 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MGMT 496B: ****SPECIAL TOPICS****

1-6 Credits

MGMT 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MGMT 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Management Information Systems (MIS)

MIS 103: Microcomputer Applications in Business

3 Credits

Introduction to current business uses of the microcomputer, including spreadsheets, database management, word processing, and decision-making models.

MIS 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

MIS 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MIS 204: Introduction to Management Information Systems

3 Credits

Introduction to Management Information Systems provides an overview of the role of information systems in business process design, the current technologies used for obtaining, storing, securing, and communicating information in support of operations and decision-making within a business organization, as well as, the concepts and principles for developing and using popular spreadsheet and database tools. Applications focus on the development of quantitative problem-solving skills applied to specific examples of business problems and issues found in business disciplines, including accounting, finance, marketing, supply chain operations, and general management. Problem solving skills will be reinforced by assigning problem sets to students to do on their own.

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

MIS 204H: Honors Introduction to Management Information Systems

3 Credits

Introduction to the use of information systems in business organizations. MIS 204H Introduction to Management Information Systems Honors (3) This honors section of MIS 204, will provide enhanced, in depth learning for Schreyer Honor students. MIS 204 is an applications-oriented course that provides an overview of (1) the role of information systems in business process design, (2) the current technologies used for obtaining, storing, and communicating information in support of operations and decision-making within a business organizations, and (3) the concepts and principles for programming, developing, and using popular spreadsheet and database tools. Applications focus on important problems and issues found in business disciplines, including accounting, finance, marketing, supply chain operations, and general management. The responsibility to understand and recognize opportunities to use

information systems belongs to all managers in an organization, not just the information technology managers. As future business managers in diverse functional areas, our students begin their journey to understand the foundations of information systems and how managers are using these systems to increase the competitiveness of their organizations. As an introductory course, students should be able to come into the class without any prior experience. However, even students with experience will hopefully learn something new. Students will develop a general understanding of how a business functions, understand how information and technology is used within a business and develop new student IT skill sets. In summary, we aim to provide an opportunity for all undergraduate business majors to use IT in their current or future jobs in such a way to ensure the success of their organization. In addition, the Schreyer Honor students will also be exposed to business data mining, a highly intelligent application of information technology in a variety of business contexts that often lead to core competitive advantages.

Honors

MIS 250: Introduction to Problem Solving with Spreadsheet Analysis and Information Systems Management

3 Credits

Introduction to Problem Solving with Spreadsheet Analysis and Information Systems Management introduces students to the use of information technologies for business problem solving and decision-making. This course explores the application of spreadsheet engineering concepts and principles of data management, business modeling, and reporting to business problems. Students demonstrate their understanding and mastery of these concepts through their application in examinations, practical lab exercises and assignments. Concepts are contextualized in a broader discussion of information systems management including: data security, ethical issues, social media, distributed (cloud) services, and emerging trends. The structure of this course intends to provide a well-rounded level of competency in the use of spreadsheet software as a tool while exploring problem decomposition and solution planning and construction. Therefore, the focus of the course is on developing problem-solving strategies while gaining insight on the tactical use of spreadsheets.

MIS 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MIS 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MIS 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MIS 301: Business Analytics

3 Credits

MIS 301 investigates use of databases, basic data mining tools, social networking software, and advanced level of spreadsheet management for analysis of large amounts of data. Learning methods emphasize active learning in the application of methods and tools to real data and the presentation of the results. Topics may include methods for analyzing not only structured data, but also unstructured data from the web, emails, blogs, social networks, click streams, etc. Finally, techniques for visualizing, presenting and communicating information in a useful way will be presented.

Enforced Prerequisite at Enrollment: (SCM 200 or STAT 200) Concurrent Courses: (MATH 110 or MATH 140) and (MIS 204 or MIS 250)

MIS 307: Object-Oriented Programming and Application Development

3 Credits

MIS 307 focuses on using object-oriented programming to develop a broader understanding of logical structures, algorithms, arithmetic facilities, and data structures to develop software that can be purposefully used to inform decisions and automate intentional processes. This is a hands-on, practical course designed to give students first-hand experience in applying object-oriented programming techniques to software development.

Enforced Prerequisite at Enrollment: IST 140 or CMPSC 101 or CMPSC 121

MIS 315: Python Programming

3 Credits

Students will learn how to program with Python, which is an interpreted, object-oriented, high-level programming language with dynamic semantics. Students will demonstrate how to easily use this for small, large, online and offline projects. Students will utilize Python for web development, simple scripting and data analysis. Students will describe how Python supports modules and packages, which encourages program modularity and code reuse. Students will develop a project with Python's interactive mode combined with the PyPI (Python Package Index). Students will become proficient with Python, which is the leading language of choice for many data scientists.

MIS 336: Database Management Systems

3 Credits

Theory and utilization of database management systems in organizations, including data modeling and applications development.

Enforced Prerequisite at Enrollment: MIS 204 or MIS 110 or CMPSC 121 or CMPSC 102

MIS 344: Introduction to Cybersecurity

3 Credits

MIS 344 is an introductory course designed to provide students the concepts of cybersecurity along with a deeper understanding of current information and the need for system protection. This course builds a foundation for understanding the critical issues associated with protecting information assets. It will include a hands-on practice that

involves protecting work with passwords and applying multiple security through research, application and certification in the field.

Enforced Prerequisite at Enrollment: MIS 204 or MIS 250

MIS 345: Introduction to Data Analytics

3 Credits

An introduction to data analytics including data preparation, data visualization, dimension reduction, modeling techniques, and applications in different domain areas.

Enforced Prerequisite at Enrollment: SCM 200 or STAT 200 or equivalent approved course

MIS 387: Website Design and Administration

3 Credits

Applied, hands-on, interdisciplinary website design/administration course. Acquired concepts, techniques and tools are exercised in individual and team projects. MIS 387 Website Design and Administration (3) This course is designed to teach students how to design, create, deploy, and administer websites. The students will have the opportunity to obtain a solid understanding of some of the tools and techniques, beyond basic HTML, used to publish on the Internet via the World Wide Web. Additionally, the students will learn how to present themselves professionally on the web to a specific target audience. The students' experiences will not be limited to the design and implementation of a website, but will include the opportunity to work within a team, to understand the benefits of working with client organizations to develop a website, and a web implementation plan.

Enforced Prerequisite at Enrollment: MIS 204

MIS 390: Foundations of Information Systems

3 Credits

MIS 390 examines concepts of IS (including hardware, software, and data storage and acquisition) and the support that IS provides for transactional, decisional, and collaborative business processes. Students will be able to understand the collection, processing, storage, distribution, and value of information and be able to make recommendations regarding IS that support and enable individuals in their daily lives as well as the management of customers and suppliers of the enterprise. These competencies include the ability to conduct a business process and systems analysis through a semester project that enables an organization to achieve strategic goals and objectives.

Enforced Prerequisite at Enrollment: MIS 204 or MIS 250

MIS 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

MIS 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MIS 404: Introduction to ERP and Business Processes

3 Credits

A problem-based, interdisciplinary course on Enterprise Resource Planning (ERP) concepts and business processes. MIS 404 Introduction to ERP and Business Processes (3) Enterprise Resource Planning (ERP) a group of integrated software modules used to run virtually all business processes in an organization. The course explains and demonstrates how business processes such as sales logistics, production/material management, procurement, and human resources are supported in an ERP software package.

Enforced Prerequisite at Enrollment: MIS 204 or 1st Level Programming Course or with the permission of the program

MIS 405: Supply Chain Information Systems with Oracle

3 Credits

Strategic design and implementation of Oracle supply chain management information systems in an ERP environment. MIS 405 Supply Chain Information Systems with Oracle (3) This course involves extensive discussion and study in the design and understanding of supply chain information systems. The vast majority of business data is generated through the use of supply chain information systems. Successful program managers and business analysts must understand how the data is generated, and how this strategic data is used to integrate various business functions. This course will focus on the implementation and management of supply chain information systems, and will include topics in the following areas: * Inventory Management * Purchasing and Materials Management * Bills of Material and Engineering * Master Scheduling and Material Requirements Planning. This course will include a special focus on Oracle eBusiness suite applications and numerous hands-on exercises that will ensure participants understand implementation strategies, supply chain information system processes, and data analysis.

Enforced Prerequisite at Enrollment: SCM 301 and MIS 204

MIS 406: Customer Information Systems with Oracle

3 Credits

A technology-based exploration of the various Oracle Order Management and Customer Relationship Management tools. MIS 406 Customer Information Systems with Oracle (3) This course provides a detailed explanation of customer relationship and order management within the organizational supply chain. The course demonstrates how Order Management process flows, application functionality, and organizational requirements are utilized to manage and control sales order fulfillment. Additionally the course will demonstrate how Oracle's integrated Customer Relationship Management (CRM) solution provides information-driven sales, service, and marketing support to the organization. Extensive use of state-of-the-art Oracle business software technology is employed.

Enforced Prerequisite at Enrollment: MIS 405

MIS 407: Enterprise Integration with Oracle

3 Credits

This is a technology course focusing on software development in an Oracle eBusiness ERP Environment. MIS 407 Enterprise Integration with Oracle (3) The Oracle Enterprise Integration course will cover the primary functionality of core business application modules and the flow of data through the major database tables. Students will perform SQL queries of critical Oracle ERP tables. Students will develop PL SQL program units which are the foundation of Oracle business modules. The open interfaces for Oracle Inventory and Oracle Purchasing will be demonstrated via programming sessions.

Enforced Prerequisite at Enrollment: MIS 336

MIS 413: User Interface Design

3 Credits

MIS 413 explores the concepts of user interface design principles by examining user experience (UX) and usability. Topics include design considerations such as: psychological and interaction principles, requirements analysis, designing for different screens, typography, symbols, color, graphics, and other visual language components. This is an experiential learning course that provide students with real-world experience on identifying user needs, experience, and capabilities of the system users along with understanding physical and mental limitations required to meet or exceed user expectations.

Enforced Prerequisite at Enrollment: MIS 307 and MIS 390

MIS 415: Social Media Management and Analytics

3 Credits

Students gain experience and in-depth analysis of social media management, digital marketing, SEO/M, and analytics of current digital business practices. MIS 415 Social Media Management and Analytics (3) With the rise of social media as a management, marketing and analytics tool, students need to learn how to use these tools to communicate better with customers as well as analyze important data that can help marketers solve digital marketing challenges. In this course, students will learn about the changing nature of digital business practices and will be able to gain experience with social media management, digital marketing, SEO, SEM, and analytics. In-depth analysis will be given on current practices and this course will build a framework from which students can pioneer their own ideas in the growing field of digital marketing. They will also be able to understand current issues in digital marketing and have the tools they need to assess those issues and further strengthen their understanding of this important, emerging field.

MIS 417: Programming for Data Analytics

3 Credits

Students will learn how to interpret data with popular data science programming. Students will study inferential statistics to generate information about data. Students will mine data and understand the necessity of data cleansing. Students will generate predictions (ensemble modeling) and understand the need for distributive computing to handle big data (Hadoop).

Enforced Prerequisite at Enrollment: MIS 315 and (SCM 200 or STAT 200)

MIS 420: Business Process Management

3 Credits

Process modelling is a foundational skill required to be able to implement a complete business process management capability in an organization. MIS 420 examines approaches, design principles, and state-of-the-art theories in the field of Business Process Modelling used to discover, model, assess, and leverage emerging technologies improve core business processes. This covers also examines emerging technologies and their relevance to automation, rationalization of procedures, and business process redesign.

Enforced Prerequisite at Enrollment: MIS 390**MIS 425: Managing Information Systems Projects**

3 Credits

MIS 425 provides an understanding of the processes, methods, techniques, and tools that are used for managing information systems projects in organizations to ensure consistency with business strategies to achieve a competitive advantage. Topics include principles of project management; project management functions, project management processes, selecting an appropriate project management methodology, agile software development principles, and scrum. Emphasis is placed on understanding and gaining practical knowledge of key project management skills: integration management, scope management, time management, cost management, quality management, human resource management, communications management, and risk management. Emphasis is also placed on understanding the scrum process and decision criteria for choosing between planned and agile project management approaches. Students will also learn the tools, techniques, and processes to manage projects that support organizational goals and objectives along with moving from one phase to another until the closure of the project.

Enforced Prerequisite at Enrollment: MIS 307 and MIS 390**MIS 430: Systems Analysis**

3 Credits

Information analysis and the logical specification of the system.

Enforced Prerequisite or Concurrent at Enrollment: MIS 336**MIS 431: Business Data Management**

3 Credits

Management of data including large, complex sets to support business analytics, strategy, and operations. MIS 431 Business Data Management (3) Business Data Management will enable students to use various database designs to acquire the information needed to make effective business decisions. Successful students will be able to design, create and implement a relational database in MySQL and be able to write SQL statements to obtain information from a database. In addition, students will investigate the next generation approaches for storing, manipulating, and managing web data in unstructured formats. Students will gain an understanding of the advantages and disadvantages among XML, NoSQL, NewSQL, and Relational databases. After completing this course, students should have the knowledge, skills, and abilities to be able to: * have an understanding of SQL by retrieving data from a database using SQL * design a database system including an ER Model, and implement the design in an enterprise database application such as

MySQL * have an understanding of NoSQL databases such as MongoDB and Graph databases, XML native databases, NewSQL databases and the advantages and disadvantages of these databases

Enforced Prerequisite at Enrollment: MIS 301. Concurrent: SCM 301**MIS 432: Business Information System Analysis**

3 Credits

The analysis of business information systems and the requirements specifications of redesigned systems. MIS 432 Business Information System Analysis (3) Business Information Systems Analysis introduces concepts underlying computer based information systems development. The course focuses on object-oriented concepts, project management and principles of systems development using standard UML diagram methodologies. The course develops a solid understanding of information systems development through the analysis of current information systems and the requirement specifications of a redesigned system, and also provides significant hands on experience using current technologies. After completing this course, the student should have the knowledge, skills, and abilities to be able to: -define and document an existing information system; -analyze an existing information system and specify the requirements for a replacement system; -use a specific Computer-Aided Software Engineering (CASE) tool to assist in Systems Analysis; -understand alternative approaches to systems development; -understand the purpose, context and commonly expected "deliverables" of systems analysis and -create a substantial project and prepare a professional report. The evaluation of students will be based on tests, lab work, and homework. This is a prescribed course for the M I S major and a support-of-major course for Smeal students M I S 432 will be offered in the fall and spring semesters in sections ranging from 25 to 40 students.

Enforced Concurrent at Enrollment: MIS 431**MIS 433: Rapid Application Development**

3 Credits

This course provides students with a real world, hands on introduction to the current industry of Rapid Application Development (RAD) tools and techniques. RAD includes prototyping and end-user development in order to quickly create information system applications. Mendix is one of the platforms that enables employees to work in smaller cross functional-teams and deliver software at a high rate of speed, and encompasses all the tools and environments needed to build and manage applications and their development. It includes project management, modelers, UI development, public app store online support and a strong collaboration approach using the online community.

Enforced Prerequisite at Enrollment: MIS 204 and MIS 336**MIS 435: Systems Design and Implementation**

4 Credits

MIS 435 Systems Design and Implementation (3) Current systems development methods involve a use-case based, and iterative and incremental approach. This is the approach generally used on object-oriented systems development projects and is the approach taught in this course. Design aspects of the course will emphasize design patterns and their application to systems design using the standard software design notation-The Unified Modeling Language. An Agile (light-weight) approach to systems design will be emphasized. Implementation aspects

of the course will focus on object-oriented programming using a modern object-oriented programming language.

Enforced Prerequisite at Enrollment: MIS 430 and (CMPSC 122 or CMPSC 302 or MIS 315)

MIS 441: Business Intelligence for Decision Making

3 Credits

Application of Information Technology based methods and tools to analyze business data and support decision making. MIS 441 Business Intelligence for Decision Making (3) Business intelligence encompasses the IT tools for exploring, analyzing, integrating, and reporting business data for fact-based, intelligent decision making. This course primarily investigates methods and tools for exploring and analyzing large amounts of business data also called "Big Data." Learning methods emphasize active learning in the application of methods and tools to real data and the presentation of the results. Students will be exposed to a variety of methods for analyzing both structured and unstructured data and they will work with business data sets to understand the value that can be extracted from large data sets. They will also learn how to classify and associate data to discover business rules that can be used to support decision making. The course will also cover methods to analyze social media information and about tools that can facilitate such analysis and discovery. Again they will get a chance to work with data from real social networks to gain an appreciation of how value can be obtained from such networks. Finally, they will learn about techniques for visualizing, presenting and communicating information in a useful way, e.g. through dashboards and with other technologies on various platforms.

Enforced Prerequisite at Enrollment: MIS 431

MIS 445: Business Intelligence

4 Credits

Develops insights and skills related to Business Intelligence, Data Warehousing, Data Mining, Analytics, OLAP, and report generators. MIS 445 Management Reporting Systems (4) This course develops insights and skills required to analyze management reporting systems, propose improvements, create reports, extract and package data using various software tools, and design data warehouses. It prepares students for the position of a Business Intelligence Specialist who can apply insight and technical competence to the challenges of leveraging Reporting, OLAP, Data Mining, Business Intelligence (BI), and Data Warehouse technologies.

Enforced Prerequisite at Enrollment: MIS 336

MIS 446: Information Technology and Business Strategy

3 Credits

Strategic use and management of information technology in digital global economy. MIS 446 Information Technology and Business Strategy (3) This course introduces the basics on the interplay between information technology and business strategies. The course starts with the general topic of strategic use of information technology in business (as enabler, differentiator, and disruptor) using examples from a variety of industries, followed by detailed coverage of the information technology strategy in individual industries including e-logistics, e-tailing, e-marketing, e-finance. The course also covers basics on the business information technology infrastructure and environments (Internet, Web, service-

oriented computing, and security and risks). Towards the end, the course discusses the role of information technology in the global economy, business value of the explosively growing digital social networks, and other emerging trends and new technology opportunities. Topics include: - Information technology strategy. IT-business strategy alignment; IT as enabler, differentiator, and disruptor.- Internet and Web infrastructure; extranet, intranet, hosting strategies; platform independence; eBusiness technology standards; open versus proprietary technologies; interoperability.- Web Services for implementing business applications; software as a service; Services science and services oriented architectures.- Overview of E-Business models, B2B, B2C, (x2y).- E-logistics and supply chain: Analysis of Dell model; Internet auctions, eBay; e-hubs; i-mode, GPS, RFID.- E-tailing: Amazon, eBay, Walmart, recommendation systems, reputation systems.- E-marketing: search engine advertising (Google AdWords/AdSense, Yahoo Search Marketing); database marketing (precision targeting).- E-finance: online brokerage (Schwab, E*Trade), wealth management (e-strategy, technology for churn prediction and customer acquisition/retention), payment technologies (paypal), computational trading strategies.- Collaboration/Community technologies: Blogs, MySpace, Facebook, YouTube, Voice over IP, videoconferencing, RSS, etc.; Impact on business communication and media industry. - Need for security in ecommerce - threats and solutions.- Globalization and IT. Offshoring and outsourcing.- Emerging trends and technology opportunities.

Enforced Prerequisite at Enrollment: MIS 301 or MIS 390

MIS 447: Data Warehousing

3 Credits

This course focuses on fundamental principles and applications of data warehousing. Topics covered include data warehouse planning, design, and implementation. MIS 447 Data Warehousing (3) This course focuses on fundamental principles and applications of data warehousing. Issues related to data warehouse planning, design, and implementation are also covered in this course. Through case studies in various business domains, course exercises and projects, students will learn practical dimensional modeling techniques, extract/transformation/load (ETL) logic, ETL design considerations, and report generation. Essentially, students will learn how to align multiple sources of data through data warehousing architectures for deriving valuable business insights through subsequent business intelligence operations. The course begins by reviewing basic database modeling principles, and then introduces dimensional modeling in the context of the various data warehousing architectures (e.g., Kimball, Corporate Information Factory, hybrid architectures). Key concepts related to data warehousing including dimensional table characteristics, fact table characteristics and granularity, types of dimensions, types of fact tables, dimension attribute hierarchies, consolidated fact tables, slowly changing dimension techniques, and multivalued dimensions and weighting factors are covered in the course. Also, key advanced database management techniques such as views, procedures, and triggers will be introduced. Building on these core concepts, the course also covers related concepts including the role of online analytical processing (OLAP) and packaged analytic solutions, enterprise data warehouse business architecture and matrix, data warehousing lifecycle, ETL subsystems and tasks, ETL system planning, ETL design and development process and tasks, and data modeling best practices for big data. Case studies from various business domains and processes are included throughout the course. Examples of these domains include retail sales, order management, procurement, accounting, healthcare, insurance, transportation, and telecommunication. The case studies are used to illustrate the concepts

as well as provide a context for hands-on exercises. Through course assignments and group projects, students have an opportunity to gain hands-on experience with data warehouse design, development, and prototype implementation.

Enforced Prerequisite at Enrollment: MIS 336 or equivalent approved course

MIS 448: Securing Information Systems

3 Credits

MIS 448 examines practices associated with assuring secure business operations in organizations. Assuring secure operations involves the creation, operation, defense, analysis, and testing of secure computer systems. Hence secure computing is an interdisciplinary area including aspects of computing, law, policy, human factors, ethics, and risk management. The proposed competencies cover these areas, but with an IS discipline lens. This includes data security, software security, human security, societal security, and organization security.

Enforced Prerequisite at Enrollment: MIS 390

MIS 450: Information Systems Practicum

3 Credits

This course provides an intensive experience in creative problem solving and provides an opportunity for integration of knowledge from the core curriculum. This course also provides an applied synthesis of foundational courses related to exercising design and applying one or more media of construction to effect and implement an Information Systems artifact to suit client or organizational needs. The capstone places an emphasis on the application of data management, application development, IT infrastructure, and IT Project Management. This course will require students to work in teams and apply a software/systems development paradigm toward the development of a system prototype to satisfy the intentions and needs of an organizational client.

Enforced Prerequisite at Enrollment: MIS 307 and MIS 390 and MIS 431 and seventh semester standing

MIS 461: Emerging Technologies

3 Credits

MIS 461 examines emerging technologies and explores their impact on business and societal issues through both a business and theoretical lens. This course also identifies and evaluates emerging technologies based on business requirements that have a variety of ethical, environmental, and sustainability implications. Students apply these technologies to enable suitable business opportunities.

Enforced Prerequisite at Enrollment: MIS 307 and MIS 390

MIS 465: DataBase Management

3 Credits

Provides a comparison of techniques, methodology of systems, limitations, and applications of various data base management systems. MIS 465 Database Management (3), is a required course for information systems majors in the business program. The objective of the course is to present database design and development, specifically relational database management systems (RDBMS), along with project work on developing database systems. The course coverage includes conceptual

data modeling, relational data model, structured query language (SQL), data normalization, database integrity, and database administration. Advanced topics such as distributed databases and data warehousing are also discussed briefly. The course prerequisite is IST 140 or CMPSC 101 or CMPSC 121 and MIS 390. This course is centered on a group project involving the design and development of a relational DBMS. Student groups also work on case and homework problems related to database design. A suitable relational database package, like ORACLE, is used by students in the group project. Database design and development involving the creation of tables, queries, forms, and reports are the center piece of the group project. MIS 465 will be offered once per semester with multiple sections based on student enrollment and demand.

Enforced Prerequisite at Enrollment: (IST 140 or CMPSC 101 or CMPSC 121) and MIS 390

MIS 466: Business Programming for the WEB

3 Credits

Advanced programming for WEB-based applications. MIS 466 Business Programming for the Web (3) The objective of this course is to teach students how to create and maintain business applications on the WEB. Students will learn how to use tags, scripting, and a low-level programming language to support business applications. Students will be encouraged to use the afore mentioned tools to provide useful and well-designed content to the WEB community. The course assumes knowledge of an object-oriented programming language and some introduction to HTML. A state-of-the-art programming language will be used to facilitate learning for project development. Team skills and problem solving, as an important part of the development process, will be emphasized and integrated into project development activities. To be successful in such a work environment, students need to learn how to work together to design, implement and test projects. Electronic commerce, employee training and development, accounting, and finance applications are typical of application areas that will be emphasized. Specific goals of the course are to: 1) expose students to concepts and principles necessary to provide well-designed and useful content on the WEB 2) teach students how to apply programming in a WEB-based environment 3) show students how these techniques increase productivity of complex systems, and 4) further student development of team skills when programming complex systems. INFSY 435 is an elective in the Information Systems program. INFSY 307 or the equivalent, required of all Information System majors. Student performance will be evaluated by means of assignments, examinations, and team-based projects. It is expected that this changed course will be offered two times during each academic year.

Enforced Prerequisite at Enrollment: MIS 307

MIS 479W: Enterprise Information Systems

3 Credits

Management and implementation of enterprise information systems for business integration and supply chain management. MIS 479W Enterprise Information Systems (3) This course examines enterprise-wide information systems architecture for the business setting and examines current commercial systems, with a special focus on SAP R/3 development tools and techniques. Topics include: - The acquisition, installation and operation of Enterprise Information Systems (EIS), formerly referred to as Enterprise Resource Management (ERP) systems- The strategic decisions regarding approaches business organizations select for the acquisition and integration of EIS components and

how executive level support for such endeavors is obtained- The overall management and coordination techniques used in the design, development and implementation of an organization's EIS, including the role that software vendors and other third party's play in the acquisition and implementation of enterprise systems.- The coordination and control of multi-party relationships. Specific analysis and design techniques are taught, including tools and methodologies for analyzing business processes in preparation for implementation of EIS, as well as database and data warehousing requirements.- The methods of determining data communication network requirements- The practical implementation concerns are addressed, such as preparing internal organizational units for migration to a new EIS architecture and to the maintenance and operation of EIS including concerns involving security and control.- The managerial and technical issues involved in the developing and testing of applications and user interfaces and customization of commercial packages.- The career planning issues and ways of obtaining training for specialization and advancement in careers involving EIS. This course is writing intensive. As such, student evaluations will consist of, at a minimum: examinations, position papers, case studies (written and oral), and assignments. Both individual and group assignments will be used. The objective is to enhance writing ability relevant to students preparing for careers in business. Group report writing, brief technical writing, technical documentation, end-user documentation, and memo writing will be covered. The major group writing assignments will be required throughout the semester, as well as individual assignments that will be prepared in preparation for the group. Peer assessments and instructor feedback and evaluation will be provided on a regular basis. This is a prescribed course for the MIS major.

Enforced Prerequisite at Enrollment: MIS 432

Writing Across the Curriculum

MIS 481: Business Analytics

3 Credits

Advances in computational technologies, coupled with the massive amounts of data available through business activities as well as the surrounding ecosystems, have created an amazing potential for managers to leverage analytics in order to gain organizational and competitive advantages. This course takes a two-fold approach to address Analytics Methodologies. The first section of the course provides a broad understanding of business analytics and the second section demonstrates the managerial best practices for leveraging the analytics. The course covers concepts such as analytics problem framing, data understanding & preparation, as well as descriptive & predictive modeling. The course incorporates applications and real-world datasets from marketing and other business disciplines for a hands-on learning experience. Best practices derived from cases are also incorporated into the course structure in order to learn the strategies required to implement and manage analytics initiatives in businesses. Students are initially introduced to business analytics through a series of examples, use cases, and applications. Next, descriptive analytics through the use of dashboard and business reporting techniques is presented as a means for business performance management. Following this, the overall predictive analytics process is explained with emphasis on framing the analytics problem from an understanding business context. Additionally, fundamental predictive modeling concepts are covered concurrently with the introduction of exemplary modeling techniques. Students then receive an opportunity to apply these techniques through the use of different problem scenarios and real-world datasets. Related topics including overfitting, and visualizing model performance are covered as well. Students are presented an expected value framework to assist

approaching business problems with a decision-analytic perspective. The course also covers managerial aspects of integrating business analytics within the enterprise by linking business strategy to business analytics initiatives. Approaches to initiate, manage, and sustain analytics initiatives to gain a competitive advantage are discussed with cases. At the end of the course, students are expected to have the competencies required to analyze possible opportunities for leveraging analytics across the boundaries of functional business domains as well as applying key analytic techniques and interpreting results for decision-making.

Enforced Prerequisite at Enrollment: MIS 345

MIS 489: Seminar in Information Systems

3 Credits

Covers new trends and concepts in information/processing technology and their applications and impact on computer information systems. MIS 489 Seminar in Information Systems (3) INFSY 489, Seminar in Information Systems, is an elective course for information systems majors in the business program. Information Systems is a rapidly changing discipline and students must be aware of these changes. This course covers new trends and concepts in information/processing technology and their applications and impact on computer information systems. In this course, students are introduced to new methods, tools, applications and terminology. The students develop key skills in the ability to assess new technologies, and the ability to incorporate these technologies into complex information systems. Students learn how to work with business applications in the latest prevalent technology. They work both individually and in groups on problems related to the topic addressed in the seminar. Topics for the seminar can differ with each offering of the course. This course is designed to provide the flexibility to coverage current issues and trend in the Information Technology world. Such topics could be (but not limited to) : advanced networking, mobile computing, wireless infrastructure, security, ERP, SAP, and others. The course prerequisites are INFSY 307 & INFSY 445INFSY 489 will be offered once per semester based on student enrollment and demand. The topics will vary upon it offering.

Enforced Prerequisite at Enrollment: MIS 307 and MIS 465

MIS 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

MIS 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

MIS 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor

Full-Time Equivalent Course

MIS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MIS 496A: **SPECIAL TOPICS**

1-6 Credits

MIS 496B: **SPECIAL TOPICS**

1-6 Credits

MIS 496C: **SPECIAL TOPICS**

1-6 Credits

MIS 496D: **SPECIAL TOPICS**

1-6 Credits

MIS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MIS 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Marketing (MKTG)

MKTG 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MKTG 220: Introduction to Selling Techniques

3 Credits

Principles underlying the sales process and practical application of these principles to selling situations. Studies role of selling in total marketing process.

Enforced Prerequisite at Enrollment: third-semester standing

MKTG 221W: Contemporary American Marketing

3 Credits

Social and economic aspects; movement of goods and services from producers to consumers; analysis of marketing functions, systems, and institutions. May not be used to satisfy Penn State Business baccalaureate degree requirements. Not available to students who have taken B A 303 or MKTG 301.

Enforced Prerequisite at Enrollment: 3 credits in ECON Writing Across the Curriculum

MKTG 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MKTG 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MKTG 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MKTG 301: Principles of Marketing

3 Credits

Principles of Marketing covers terminology and important concepts related to marketing in the business environment. Domestic and international environments that impact marketing are included, with particular emphasis on the marketing environment, segmentation, positioning and targeting. MKTG 301 course objectives include providing an overview and introduction to marketing; demonstrating the relationship of marketing to other functions and processes in a business organization on an integrated basis; providing real world examples of challenges and issues related to marketing; and explaining and discussing important concepts and analytical tools in marketing. Major themes embedded in the foundation of MKTG 301 include domestic and global economic factors influencing current marketing environments; how consumer, business and organizational customers are segmented and targeted; how marketing research and information systems are used to create and guide marketing strategies; how products are developed to serve customers, businesses and organizations; how service products are developed and managed to meet customer needs; how customers are reached through various conventional and technological channels and how these sales management processes are managed; how people in the United States and other nations are influenced by marketing in the non-profit sector; how products and services are marketed to other businesses and organizational customers; how marketing communications programs, which include advertising, publicity, sales promotion and web sites, are designed to reach domestic and international customers; how pricing strategies support corporate objectives in various economic climates; and how marketing programs adapt to shifts towards global markets. Students may earn credit towards graduation for only one of the following; BA 303, MKTG 301, MKTG 301H, or MKTG 301W.

Enforced Prereq at Enrollment: (ENGL 15 or ENGL 30H or ENGL 137H or ESL 15 or CAS 137H) and (ECON 102 or ECON 104) and (MATH 21 or a higher or a satisfactory score on the math placement exam)

MKTG 301H: Principles of Marketing (Honors)

3 Credits

Marketing begins and ends with the customer, from determining wants and needs to providing customer satisfaction. This course will emphasize fundamental marketing concepts, such as segmentation, targeting, and positioning, and the 4 P's (product, price, place, and promotion). In addition, the course will emphasize the use of marketing research to inform managerial decision-making. The overarching goal of this course is to introduce you to a) the role of marketing within business organizations and society, and b) the concepts and activities in marketing that create and deliver value to customers. At the conclusion of this course, students will be able to: 1) explain the fundamental concepts of marketing and the role of marketing in business; 2) apply marketing concepts and analysis tools to managerial decision-making; and, 3) provide real-world examples of challenges and issues in marketing. Major themes embedded in MKTG 301H include: domestic and global socioeconomic factors that influence marketing environments; the use of marketing research and information systems to create and guide marketing strategies; how consumers, businesses and organizational customers are segmented and targeted; how products are developed to serve customers, businesses and organizations; unique issues in the marketing of services versus goods; how customers are reached through conventional and technological channels; the sales function, including how sales processes are managed; how marketing communications programs (including advertising, publicity, sales promotion and new media) influence customers; how pricing strategies support corporate objectives, and how consumers respond to pricing; the roles of non-profit and social marketing; corporate social responsibility and sustainability in marketing; and the impact of marketing on society. Students may earn credit towards graduation for only one of the following; BA 303, MKTG 301, MKTG 301H, or MKTG 301W.

Enforced Prereq at Enrollment: (ENGL 15 or ENGL 30H or ENGL 137H or ESL 15 or CAS 137H) and (ECON 102 or ECON 104) and (MATH 21 or a higher or a satisfactory score on the math placement exam)

Honors

MKTG 301W: Principles of Marketing

3 Credits

Principles of Marketing is a three credit course offered each semester across Penn State and covers terminology and important concepts related to marketing in the business environment. Domestic and international environments that impact marketing are included, with particular emphasis on the marketing environment, segmentation, positioning and targeting. MKTG 301W course objectives include providing an overview and introduction to marketing; demonstrating the relationship of marketing to other functions and processes in a business organization on an integrated basis; providing real world examples of challenges and issues related to marketing; and explaining and discussing important concepts and analytical tools in marketing. Major themes embedded in the foundation of MKTG 301W include domestic and global economic factors influencing current marketing environments; how consumer, business and organizational customers are segmented and targeted; how marketing research and information systems are used to create and guide marketing strategies; how products are developed to serve customers, businesses and organizations; how service products are developed and managed to meet customer needs; how customers are reached through various conventional and technological channels and how these sales management processes

are managed; how people in the United States and other nations are influenced by marketing in the non-profit sector; how products and services are marketed to other businesses and organizational customers; how marketing communications programs, which include advertising, publicity, sales promotion and web sites, are designed to reach domestic and international customers; how pricing strategies support corporate objectives in various economic climates; and how marketing programs adapt to shifts towards global markets. Students may earn credit towards graduation for only one of the following; BA 303, MKTG 301, MKTG 301H, or MKTG 301W.

Enforced Prereq at Enrollment: (ENGL 15 or ENGL 30H or ENGL 137H or ESL 15 or CAS 137H) and (ECON 102 or ECON 104) and (MATH 21 or a higher or a satisfactory score on the math placement exam)
Writing Across the Curriculum

MKTG 302: Marketing Techniques for Electronic Commerce

3 Credits

Explores methods to implement/adapt marketing methods to the Internet; builds upon introductory marketing classes to examine what does/doesn't work. MKTG 302 Marketing Techniques for Electronic Commerce (3) This course examines the role of commerce and marketing with special focus on Internet commerce topics including: the commerce value chain, business strategies and business strategies for the global marketplace. Several Internet business models are examined. These include: business-to-business (B2B); business-to-consumer (B2C); consumer-to-consumer (C2C); and government-to-consumer (G2C); and other permutations of these models. Marketing fundamentals include market segmentation and product life cycle, and similar topics are reviewed with the emphasis on Internet implementation. Specific methods for conducting market research using the Internet as well as methods to determine who is the 'average' Internet user are examined. Advertising methods for the Internet vs. the traditional advertising mediums of TV, radio, and print, and methods to measure advertising success on the Internet are discussed. The Internet removes existing roadblocks and adds new roadblocks for businesses, thus requiring different pricing strategies. Distribution channels and methods of supply-chain management are studied. How marketers utilize e-mail, site commissions, cookies, filters, and databases is examined. Security, privacy, and ethical issues, e.g., consumers' rights to privacy and sale of consumer information, are reviewed. Finally, a market plan to migrate business functions to the Internet is developed.

Enforced Prerequisite at Enrollment: BA 303 or MKTG 301

MKTG 310: Public Relations and Marketing

3 Credits

Examination of the role of public relations in a company's efforts to manufacture and market its products and services.

Enforced Prerequisite at Enrollment: BA 303 or MKTG 301

MKTG 327: Retailing

3 Credits

Management of marketing institutions in distribution channels from producers to consumers. Emphasis on retail institutions: location, personnel, merchandising, control, promotion.

Enforced Prerequisite at Enrollment: BA 303 or MKTG 301

MKTG 330: Consumer Behavior

3 Credits

Application of behavioral science concepts to the understanding of buyer behavior as a basis for marketing management decision making.

Enforced Prerequisite at Enrollment: BA 303 or MKTG 301

MKTG 342: Marketing Research

3 Credits

Research approaches, methods, and applications studied as a formal approach to problem solving for marketing decisions.

Enforced Prerequisite at Enrollment: (BA 303 or MKTG 301) and (SCM 200 or STAT 200)

MKTG 343: Introduction to Marketing Analytics

3 Credits

Marketing Analytics helps students enhance skills and knowledge required for data-driven marketing decision process. The course introduces students to analytics for pricing, forecasting, different estimation techniques, calculating lifetime values, market segmentation, the impact of social network marketing and measuring the effectiveness of advertising. Through this course, data visualization and communicating data insights will be discussed as well strategic marketing decision making processes

Enforced Prerequisite at Enrollment: MKTG 342

MKTG 395: Sales Internship

3 Credits

A sales internship is a structured work experience conducted by an organization in cooperation with a Penn State college or campus. It is a learning experience that encompasses a set of specified tasks related to sales and requires the student to apply knowledge learned in an academic environment to the sales profession. A student may earn three academic credits for the successful completion of the internship. Internships may be completed within Fall, Spring, or Summer academic terms. All Internships require both organizational and faculty sponsors who oversee the student's internship experience. Companies are carefully screened to ensure that sales internships are a positive and beneficial experience. The organizational sponsor oversees the intern's work experience and is responsible for evaluating the student work performance. The faculty sponsor evaluates the intern's academic performance and authorizes the granting of academic credit upon completion of the internship. A sales internship provides students an important learning experience as they begin their journey into the work force.

Enforced Prerequisite at Enrollment: Prior approval of proposed internship by instructor

MKTG 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MKTG 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MKTG 410: Personal Selling

3 Credits

Principles underlying the selling process and practical application of these principles to selling situations.

Enforced Prerequisite at Enrollment: MKTG 301

MKTG 422: Advertising and Sales Promotion Management

3 Credits

Perspectives and models of the key decisions involved in managing advertising and sales promotion campaigns.

Enforced Prerequisite at Enrollment: MKTG 330 or MKTG 342

MKTG 422H: Advertising and Sales Promotion Management

3 Credits

Perspectives and models of the key decisions involved in managing advertising and sales promotion campaigns.

Honors

MKTG 426: Business Marketing

3 Credits

Developing marketing strategies and programs. The course emphasizes the special nature of the business and organizational markets.

Enforced Prerequisite at Enrollment: MKTG 330 and MKTG 342

MKTG 428: Advanced Sales Management

3 Credits

Approaches to planning, organizing, staffing, training, directing, and controlling the sales force in support of marketing objectives.

Enforced Prerequisite at Enrollment: MKTG 330 and MKTG 342

MKTG 437: Advanced Retailing and Merchandise Management

3 Credits

Analyzing planning and controlling the retail merchandising effort, including procurement, resource selection, vendor relations, product presentation, inventory control.

Enforced Prerequisite at Enrollment: MKTG 330 and MKTG 342

MKTG 440: Services Marketing

3 Credits

Marketing theory and methods applied to profit and nonprofit service industries such as health care, finance, transportation, tourism, arts and consulting.

Enforced Prerequisite at Enrollment: MKTG 330 and MKTG 342

MKTG 441: Sustainability in Marketing Strategy

3 Credits

This course examines sustainability in marketing strategy, including real-world applications, green solutions, and using marketing principles to solve social issues. MKTG 441 Sustainability in Marketing Strategy (3) This course will examine the growing trend of sustainability and its implications for marketing in today's world and in the future. It will explore how businesses develop and implement marketing strategies to promote sustainability, and analyze how companies are performing. Businesses are increasingly applying the concepts of sustainability to their decision-making for marketing strategy. Some firms are leaders in the sustainability movement, and are motivated by ethical conviction to do well for society and the environment. Others find themselves forced by pressure from shareholders, customers, governmental regulation, and peers. Given this increased attention to the concepts of sustainability by stakeholders, businesses are also looking for future employees with an understanding of the phenomenon.

Enforced Prerequisite at Enrollment: MKTG 301 and MKTG 342

MKTG 442: Sustainable Behavior of Consumers, Firms, and Societies

3 Credits

Sustainability is a broad domain concerning the extent to which environmental, economic, and social practices are viable for current and future generations. Consumer awareness of sustainability issues has evolved from an emerging social movement to mainstream values, but increasing sustainable behavior remains a challenge. This course is designed to provide students with the knowledge to enhance sustainable behaviors in firms, among consumers, and in society at large. In doing so, this course will include frameworks for understanding how to influence sustainable practices, consumer response to sustainability, and marketing communication issues as well as real-world examples of sustainable practices and issues, offering both a theoretical and applied approach. The course may also include a project which will entail student teams working on a real-world sustainable behavior problem in collaboration with a business or segment of the university campus when available or other course project addressing a relevant sustainability issue. Students should leave the course with an understanding of sustainability issues in the current marketplace and the knowledge and ability to influence sustainable behaviors. Students will enter their career with the knowledge and skills to be a sustainable business decision-maker and foster sustainable behavior.

Enforced Prerequisite at Enrollment: BA 342 or SUST 200 or CED 152
Cross-listed with: BA 442

MKTG 443: Sports Marketing

3 Credits

This course will focus on how companies develop, execute and measure marketing strategies and tactics to use sports teams, families,

leagues and other organizations to market their products and services domestically and internationally to consumers and business partners. The course will examine the marketing strategies employed by sports teams and leagues. MKTG 443 Sports Marketing (3)"Sports Marketing" is designed to explore how various types of businesses and other organizations market products and/or service related to sports as well as how sports are used as marketing platforms for non-sports products. Unique aspects of the sports business will be explored including how strategies and tactics related to marketing in this sector differs from other industries. The purpose of this course is to provide an overview of various aspects of sports marketing. This will include the use of sports as a marketing tool for other products, the marketing of sports products and emerging considerations that are relevant for both marketing through and the marketing of sports. Since sports involves consumers, businesses and other organizations, this courses will cover B2C as well as B2B marketing. How product, distribution, pricing and promotional programs are developed particular to this industry will be one of the primary focuses. Relationship marketing, the role of technology, sponsorships, ambush marketing, partnership leveraging, endorsements, venue naming rights, licensing and emerging legal and ethical issues will also be important focuses. A guest speaker series will provide additional professional perspectives on a variety of unique aspects of marketing particular to sports. Reading Sports Business Journal, the most highly regarded source of news by sports industry employees, will further expand this knowledge base as will current news events related to the industry. Students will be provided an opportunity to network with guest speakers and those interested in considering sports among their job search, will also be able to receive internship and career counseling from the instructional team. Students enrolled in this class will also be able to submit resumes and requests to be interviewed for internships with various sports organizations being arranged in cooperation with the Smeal Collage Corporate and Career Services Office. Students will apply what is being learned in the class to the development of a project related to sports marketing, with the added benefit of having a deliverable which can be used to further the search for jobs and/or internships in the sports business.

Enforced Prerequisite at Enrollment: BA 303 or MKTG 301

MKTG 444: Buyer Behavior and Applied Research

3 Credits

Buyer Behavior occupies the center of the customer-company interface. It informs the design of marketing strategy and planning by providing insights about the evolving consumer environment; consumer information processing and decision-making; consumer purchase and product usage patterns and influences; consumer attitude, consumer motivation. To address these diverse issues and concerns, consumer behavior analyses draws from related fields of economics, psychology, sociology, anthropology and other basic disciplines. Similarly, studying consumer behavior requires an extensive and diverse methodological tool kit of both qualitative and quantitative research techniques. Insights about consumers and consumption patterns help marketing professionals design products and marketing programs that resonate with consumers' thoughts, feelings, interests and motivations.

Enforced Prerequisite at Enrollment: MKTG 301 and MKTG 342

MKTG 445: Global Marketing

3 Credits

Role of international marketing in the global environment; political, economic, geographic, historical, cultural conditions; developing and implementing international marketing strategies. MKTG (I B) 445 Global Marketing (3) (IL) MKTG/I B 445 focuses on the wide range of issues, which face enterprises as they develop and execute marketing strategies and tactics, designed to support business activities in markets outside their home country. This course deals directly with these issues as they apply to firms, which concentrate on a few markets closer to home, or on many markets throughout the world, including via the Internet. This course also deals with the important role played by governments in shaping the global marketing environment, including through trade policies, treaties and marketing supports. Students successfully completing this course also gain a greater understanding of the cultural, technological, economic, political and social environments which international businesses and global marketers face as they seek to expand their product and/or service offerings into other nations. Understanding this important part of the challenge facing international businesses and global marketers is achieved through the text, lectures, and student group projects and presentations including some focused on specific countries, including both major trading partners of the United States and select emerging new markets. This course is designed for students who have an interest in these topics and/or who plan to enter fields such as international business or global marketing and/or who expect to work for businesses, which are active internationally. Class discussions and projects are designed to help students explore these topics in greater depth. A series of small group assignments and presentations will further help students apply what is being learned via problem-based learning. This is an interactive class. Therefore, a portion of the grade each student achieves will be based on class attendance and participation. Students are also expected to pay attention to examples of the issues discussed in class that they encounter during the semester in print broadcast, and online communications. Along with material from lectures and the text, issues discussed in class will be included in the exam.

Enforced Prerequisite at Enrollment: BA 303 or MKTG 301 International Cultures (IL)

MKTG 449: Sports Business Market Strategy

3 Credits

This course provides an overview of the business of sports, with an emphasis on marketing and market strategy. Particular topics include business strategy and competitive forces in sports, fan psychology, fan behavior, segmentation, targeting, positioning, sports brands, market research, fan satisfaction, licensing, facilities, technology, ethics, and careers in sports. It will provide practical case-study examples from the sports industry, and challenges students to explore solutions to a variety of business problems in sports. Students will apply concepts and frameworks from assigned readings and class discussions, to think critically about current and ongoing issues in business and marketing in the sports industry, and to present recommendations in a professional setting. Assignments and group presentations are intended to provide practical, hands-on experience, which students can leverage to enhance their value in the sports industry.

Enforced Prerequisite at Enrollment: MKTG 301

MKTG 450W: Marketing Strategy

3 Credits

Market-oriented problems of the firm; identification and selection of market opportunities; formulation of competitive strategies; marketing policies and programs.

Enforced Prerequisite at Enrollment: MKTG 330 and MKTG 342 Writing Across the Curriculum

MKTG 472: Strategic Brand Management

3 Credits

Brands are a potentially valuable asset to firms in Business-to-Business (B2B) and Business-to-Consumer (B2C) markets. Strong brands influence purchase and consumption by communicating value and providing differentiation in the marketplace. Effective brand management is therefore critical to maintaining the long-term profitability of products and services. This course investigates how to create profitable brand strategies by building, measuring, and managing brand equity. Theories and practical tools will address the following questions: how does branding influence purchase and consumption? how can firms build brand equity? how should brand equity be measured and managed over time? how should firms manage brands in a brand portfolio? how can firms leverage brand equity? At the conclusion of this course, students will be able to: 1) explain the fundamental concepts of branding and the role of branding in business; 2) apply branding concepts and analysis tools to managerial decision-making; and, 3) provide real-world examples of challenges and issues in branding.

Enforced Prerequisite at Enrollment: MKTG 330 and MKTG 342

MKTG 473: Digital Marketing

3 Credits

In recent years, marketing has dramatically shifted from traditional (e.g., commercial, print advertising) to digital using technologies such as the Internet, social media, augmented reality, mobile, Internet of Things, and wearables. This course will introduce students to the changing landscape of marketing through a digital marketing perspective. Major topics covered are digital marketing themes, communication platforms, content marketing, digital advertising, real-time marketing, marketing automation, search engine optimization (SEO) and search engine marketing (SEM), social media, mobile, video, digital technologies, and measurement. This course helps students understand, and evaluate the digital marketing landscape to aid in effective marketing campaigns. Students will learn the fundamentals, frameworks and useful concepts developed specifically for digital platforms. How core marketing and business principles (i.e. segmentation, marketing mix, commerce) are used or have been altered will be discussed. Case studies and examples of successful and failed campaigns will be analyzed. The course utilizes group work assignments to create and present a digital marketing plan of a company, brand or specific product/service. Last, there is a large emphasis on including guest speakers from the industry.

Enforced Prerequisite at Enrollment: MKTG 330 and MKTG 342

MKTG 474: Marketing Analytics

3 Credits

In rapidly changing markets characterized by ever more demanding customers served by global competitors, intuitive decision making, even

when honed by years of experience, is unlikely to generate superior results. Instead, successful marketers increasingly rely on Marketing Analytics, a systematic approach to applying analytical models to properly organized empirical data, with the goal of extracting true insights about the marketing environment. This course will introduce students to commonly used analytical tools in such areas as segmentation, targeting and positioning, satisfaction management, customer lifetime analysis, customer choice, product and price decisions using conjoint analysis, and text analysis and search analytics. This is a hands-on course based on the Marketing Engineering approach and Excel software, in which students will apply the tools studied to actual business situations and conduct a group project involving primary data collection and analysis. At the conclusion of this course, students will be familiar with some of the more common marketing analytics tools and be able to extract insights from marketing data using model-supported decision making.

Enforced Prerequisite at Enrollment: MKTG 330 and MKTG 342

MKTG 475: Innovation and Product Management

3 Credits

This course is an application-oriented interdisciplinary course on new product development concepts, and innovation management. MKTG 475 Innovation and Product Management (3) This course is designed to provide students the opportunity to examine and understand the new product development process. It takes the process from the strategy and ideation stage to the after-market product launch. The course blends the perspectives of marketing, management, and engineering into a single approach to product development. It provides students with an appreciation for the realities of industrial new product development practice. Therefore, case studies and other in-class assignments are designed in a way that students can apply the theoretical/abstract concepts to the real life phenomenon. The new product development projects are assigned to teams in real life, students have the opportunity to complete the case analyses and assignments in teams. Course aims to integrate micro level new product development issues (e.g., firm-level product strategy) to macro level issues (e.g., anti-trust regulations and legislations).

Enforced Prerequisite at Enrollment: MKTG 301

MKTG 476: Sales Management

3 Credits

Application of modern management principles to field sales force planning, organization, and administration; selection, training, and compensation plans.

Enforced Prerequisite at Enrollment: MKTG 301 and MGMT 301

MKTG 478: Services Marketing Management

3 Credits

Conceptual understanding of services and the analytical tools that are used in solving strategic services marketing problems.

Enforced Prerequisite at Enrollment: MKTG 301

MKTG 480: Intermediate Social Media Marketing

3 Credits

Social Media Marketing tools, techniques, and strategies to build brands and customers. MKTG 480 Intermediate Social Media Marketing (3) In today's business world, marketers must become more creative in the ways in which they present their company on an Internet based platform such as Twitter, Facebook, and Linked-In in order to present increasingly relevant products and services to a more receptive customer base. The course, Intermediate Social Media Marketing, is designed to provide hands-on experiences with the use of Social Media Marketing tools and techniques while adhering to socially acceptable and ethical standards and protocols. The technology tools and platforms include but not limited to: Facebook, LinkedIn, Twitter, YouTube, Google+, Pinterest, Foursquare, Friendster, Technorati, Blogs, Vlogs, Podcasts, Hootsuite, Radian6, various search engines, and QR codes. These social media tools can be used to find, reach, connect, and automate marketing messages to efficiently and effectively build relationships, stronger brands and loyalty. These technologies may be utilized with or without a fully realized marketing automation structure, allowing ideas to be shared on a global platform. Students will learn and apply the major categories of Social Media tools, the how's and why's of their use, and decide what venues to use to reach the social media marketing objectives of firms, which may include improving the content to increase online presence, brand awareness, fan likings, customer inquiries, and sales. During this course, students will devise a social media marketing plan for a local firm (or firms) that addresses (1) platform, (2) content, and (3) interaction. This course will achieve academic excellence by having students research the latest techniques and practices of social media, mobile, and direct marketing to build a social media marketing plan for a local firm (or firms) to expand its markets. Students will be analyzing a firm's current traditional and social media marketing practices, and short-term and long-term goals for its target markets.

Enforced Prerequisite at Enrollment: MKTG 330 or MKTG 342

MKTG 485: Business-to-Business Marketing

3 Credits

Application of marketing principles to commercial enterprises, industrial firms, government, and other non-profit institutions.

Enforced Prerequisite at Enrollment: MKTG 301

MKTG 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

MKTG 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

MKTG 495: Internship

1-18 Credits/Maximum of 18

Supervised off campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

MKTG 495A: Penn State Prime Practicum: Brand Management and Campaign Strategy

3 Credits

Penn State Prime is designed to give students hands-on, practical experience between brand ("client side") and ad agency ("agency side") while taking on a real consumer marketing challenge. Teams live out the journey from client-agency initial engagement, consumer insights to campaign development. In doing so, students apply skills developed in departmental workshops, marketing-related coursework, and other relevant experiences. Unlike traditional courses, students adopt specific roles on the client or agency side, and receive mentorship from a client or agency executive, teaching assistants, and the instructor. The goal of the practicum is to enhance and refine each student's ability to excel in the future by experiencing the real-world challenges and "messiness" of brand management and advertising in a semi-guided context. While a traditional course design would focus on specific aspects of client side and agency side topics such as brand, advertising, and promotion management, Penn State Prime's project team environment gives students the opportunity to utilize real-world exposure to pull content together.

Enforced Prerequisite at Enrollment: Permission from the Instructor

MKTG 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MKTG 496A: **SPECIAL TOPICS**

1-6 Credits

MKTG 496B: **SPECIAL TOPICS**

1-6 Credits/Maximum of 6

MKTG 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MKTG 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MKTG 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Materials Engineering Technology (MAET)

MAET 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Materials Science and Engineering (MATSE)

MATSE 81: Materials in Today's World

3 Credits

A survey of the properties, manufacture, and uses of polymers, ceramics, and metals in today's world with emphasis on modern developments and new materials. This course presents the basic science and technology of materials to non-science students. The course concentrates on 'Materials in Today's World' but frames the discussion in a relevant historical framework. Course topics are built around 'The Central Paradigm of Materials Science and Engineering,' which links processing to structures to properties to performance. First, students are introduced to the basic concepts of metals and nonmetals, and to a fundamental understanding of The Periodic Table. From these conceptual ideas, ceramics and electronic materials are rationalized on the basis of their electronic structures. The properties of materials, e.g., mechanical, thermal, electronic, and photonic, are developed directly from the structural knowledge of the materials classifications. The concept of materials design is introduced with respect to the properties of density, melting point, and hardness. Current practices for processing and manufacturing of materials are compared with methods that were employed in antiquity. This course meets the Bachelor of Arts: Natural Sciences (BA) and General Education: Natural Sciences (GN) Penn State requirements.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

MATSE 101: Energy and the Environment

3 Credits

Energy utilization and technological development, energy resources, conversion and consequences on the local and global environment, and future energy alternatives. EGEE (MATSC) 101 Energy and the Environment (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Energy is the life-blood of any society. The information and principles learnt in this course will allow the students to make sound judgments in the area of personal energy choices; There is

increasing concern about the influence of human activities, particularly energy use, on global climate change. This has an impact on global business aspects. Students in all walks of life need to be exposed to the basic concepts to appreciate the positions of policymakers, scientists, and industry over the interrelationship between greenhouse gas emissions and global climate change. The students will acquire knowledge, which will enable them to critically evaluate any energy-related concerns of the society. This is important for any college graduate for responsible citizenship and stewardship. The main objectives of this course are to: provide basic understanding and appreciation of energy and environmental concepts and interconnectedness; analyze energy consumption patterns; discuss various energy resources that power the modern society; examine the energy conversion processes; explore interrelationships between energy use and industrial progress and environmental consequences; discuss future energy alternatives. Student performance will be evaluated continuously through homework assignments, exams, group activities, class participation and a final examination. Position papers or term papers may be used in lieu of homework assignments in some sections. This course is a stand-alone General Education course.

Bachelor of Arts: Natural Sciences

International Cultures (IL)

MATSE 112: Applied Materials Chemistry for Engineers

3 Credits

The goal of this course is to instruct students on how to apply the basic tenants of chemistry towards materials used for a variety of engineering applications as well as to provide an introduction to many of the core concepts of materials science and engineering. The course will begin with an in depth look at the fundamental intermolecular forces that pervade atoms, molecules, ions and dense materials and underlie the observed properties of materials with respect to environment. The course will then continue on to discuss crystal chemistry to teach students how to determine and interpret Miller indices and crystal structures as well as to express the relations between structure and material properties. Thermodynamics and kinetics are then discussed with regard to reactions within inorganic chemistry and properties of inorganic materials with an emphasis on theoretical calculation and understanding of important concepts such as the Gibbs free energy and Fick's laws. The course will then cover electrochemistry, focusing on the fundamentals and relation to battery development and corrosion prevention before concluding with an overview of materials synthesis processing involving many of the previously addressed concepts.

Prerequisite: CHEM 110

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

MATSE 201: Introduction to Materials Science

3 Credits

Concepts of relationships between structure and thermal, optical, magnetic, electrical, and mechanical properties of metals, ceramics, glasses, and polymers.

Prerequisites: CHEM 112 or MATSE 112

MATSE 201H: Introduction to Materials Science

3 Credits

Concepts of relationships between structure and thermal, optical, magnetic, electrical, and mechanical properties of metals, ceramics, glasses, and polymers.

Honors

MATSE 202: Introduction to Polymer Materials

3 Credits

The materials science of organic or soft materials with an emphasis on synthetic and natural polymer. MATSE 202 Introduction to Polymer Materials (3) Materials made from many types of natural organic materials, (cotton, wool, hemp, leather, etc.) have been with us throughout recorded history and have played crucial roles in the rise of civilizations and the economies of tribes and nations. Over the course of the last 100 years or so the development of synthetic organic materials, particularly polymers, has transformed the way we live. Modern transportation systems, much of contemporary medicine and the entire electronics and computer industry would not be possible without these materials. In order to understand their nature and provide a basis for a more in-

depth understanding of these materials provided by courses with a more specific focus, why they are ubiquitous in modern society, this course will provide students with a basic knowledge of the structure, synthesis and properties and processing of these materials, starting with a review of atomic and molecular structure and proceeding through basic elements of the chemical synthesis, structure, mechanical properties and processing of these materials. Students will discover the commonalities and differences between synthetic polymers, such as polyesters and nylons, and natural or biological polymers, such as cotton and silk. A comparison will also be made between the mechanical properties of "hard", inorganic materials such as metals and ceramics, and "soft", organic materials such as polymers. The primary intended audience is undergraduates in Materials Science and Engineering. This course will provide a necessary overview of organic materials for those students who will focus on inorganic materials in the major and also provide an introduction to organic materials for those students who will specialize in polymers and other organic materials. It is also anticipated that students in other disciplines who want to obtain an overview of the science and engineering of organic materials would want to take this course.

Prerequisites: (CHEM 202 or CHEM 210) and (MATH 230 or MATH 231)

MATSE 203: Technical Communications

3 Credits

This course is a 3 credit general education course in technical writing, for undergraduates majoring in Materials Science and Engineering. In it, students will learn how to develop a variety of documents which they will be expected to write during the course of their college and professional careers, including technical/lab reports, posters, fellowship and internship applications, job search documents, progress reports, and formal and informal communications. Other topics would include ethics, literature surveys, critical evaluation of sources, citing of references, and proper data presentation. Embedded within each of these topics and document types will be instruction in the writing process, identifying and assessing your audience, organizing documents, adopting a professional style, learning active and passive voices, and using review and editing techniques.

Prerequisite: ENGL 15 or ENGL 30H or (ENGL 137H and ENGL 138T) and 3rd Semester or above

General Education: Writing/Speaking (GWS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

MATSE 219: Introduction to Materials Informatics

3 Credits

The proposed course has 5 modules. In the first module, the concepts of materials informatics are presented through spreadsheet software (e.g., Microsoft Excel) to enable the students practice with the content in a familiar environment. In the second module, computer programming is introduced (e.g., Python) and students learn to replicate tasks from Module 1 using this new tool. In the third module, various flavors of regression are introduced to model materials data, with special emphasis on ways that materials data is different from other data domains. In the fourth module, students learn to access publicly available materials data such as from published literature and online databases using simple APIs. In the final module, the concepts are linked to design and analysis of materials experiments including factorial design of experiments, outlier detection, and hypothesis testing. The overall intention is to

provide students with basic skills in analyzing, modeling, and visualizing materials data using a programming language in preparation for the subsequent MATSE 419: Computational Materials Science and Engineering.

Prerequisite: MATH 141 Concurrent: MATSE 201 and MATH 220

MATSE 259: Properties and Processing of Engineering Materials

3 Credits

Relationship of structure and processing variables to the properties and service behavior of metals, polymers, and ceramics.

Prerequisite: EMCH 213 or EMCH 210

MATSE 259H: Properties and Processing of Engineering Materials

3 Credits

Relationship of structure and processing variables to the properties and service behavior of metals, polymers, and ceramics.

Honors

MATSE 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MATSE 400: Crystal Chemistry

3 Credits

Principles of crystal chemistry applied to structures, structural defects and properties of organic, inorganic, intermetallic, and metallic crystals.

Prerequisite: MATSE 201, MATSE 202, MATH 220, MATH 231, MATH 251

MATSE 401: Thermodynamics of Materials

3 Credits

The course starts with the first law of thermodynamics and its applications to the calculations of heat involved in various materials processes such as chemical reactions and phase transformations. Second law of thermodynamics and the concept of entropy are then introduced. The application of maximum work theorem to engine efficiency is briefly discussed. Various thermodynamic potentials are defined to determine the equilibrium of a system under various thermodynamic conditions, with an emphasis on the Gibbs free energy functions at constant temperature and pressure conditions. The relationships among thermodynamic properties are derived using the Maxwell relations. Phase diagrams of single-component systems are constructed from the Gibbs free energy function, and the Clapeyron equation is applied to describe the phase boundaries. Applications of thermodynamics to the determination of chemical equilibrium and to the calculation of the voltages of electrochemical reactions are also discussed. The last part of the course is focused on the solution thermodynamics and its application to binary phase-diagrams.

Prerequisite: MATSE 201 and MATSE 202 and (MATH 251 or (MATH 250 and MATH 252))

MATSE 401H: Thermodynamics of Materials

3 Credits

Review of equilibrium thermodynamics and applications to metallurgical and material systems.

Honors

MATSE 402: Materials Process Kinetics

3 Credits

A treatment of process kinetics including chemical reaction kinetics and momentum, energy and mass transport.

Prerequisites: MATSE 201 and MATSE 202 and MATH 251

MATSE 403: Biomedical Materials

3 Credits

Describe properties of materials and composites and their in vivo interactions. BME 443 (MATSE 403) Biomedical Materials (3) Metals, polymers, and ceramics, and their composites, which are capable of emulating the functions of hard and soft tissues, are the subjects of this course. The subject matter shall be confined to implanted materials; external appliances, such as casts, braces, etc are not considered. The topical content of this course will be grouped into four areas. A general introduction to selected aspects of physiology will be presented. This will provide the background necessary to appreciate the factors which govern the selection of biomedical materials. Specific emphases will be placed on polymerization of biopolymers (polypeptides and polysaccharides) and the general relationships between conformation and biological function, the biochemistry of blood and blood surface interactions, the formation of teeth and bone and the relationships between microstructure, composition and function, the immune responses to implanted materials, the resorption of bone (osteoporosis) and the development of caries. The perspective placed on these topics will be that of materials science. The selection of ceramics for hard tissue prosthesis will be discussed. Orthopaedic and dental applications for ceramics will be discussed. Specific ceramic materials to be treated include dental porcelain, alumina- and zirconia-based ceramics, and bioglasses and pyrolytic carbons. Various classes of inorganic cements, gypsum, zinc phosphates, zinc carboxylates, silicates, and glassionomer cements will also be considered as ceramics. Hydroxyapatite, Hap-based composites and Hap-metal interactions will be discussed in particular. Relationships among physical properties, mechanical properties, and chemical interactions with biological fluids will be described. Dental and orthopedic applications of metals will be described. The fracture toughness of metals, their electrochemical responses in vivo, and the nature of the interfacial interactions with hard tissues will be treated. Dental amalgams and the noble metals for dental applications will be considered. Metals and alloys, such as Ti, Co-Cr, and vitallium, used in prosthetic applications, will be described and their properties and limitations discussed. The phenomenon of stress shielding and the immune responses associated with the accumulation of metallic and polymeric particular debris in the vicinity of an implant will be discussed in particular. Polymeric materials are important in a broad range of biomedical applications. Among these are soft tissue prostheses, hemostatic agents, dental restoratives, bone replacement materials, and surgical adhesives. In some applications it is desirable that a polymeric material biodegrade while in others property retention is desirable.

Enforced Prerequisite at Enrollment: (MATSE 201 or CHEM 112) and (MATH 230 or MATH 231)

Cross-listed with: BME 443

MATSE 404: Surfaces and the Biological Response to Materials

3 Credits

Focus is on special properties of surface as an important causative and mediating agent in the biological response to materials.

Enforced Prerequisite at Enrollment: CHEM 112 or MATSE 112

Cross-listed with: BME 444

International Cultures (IL)

MATSE 409: Nuclear Materials

3 Credits

Nuclear reactor materials: relationship between changes in material properties and microstructural evolution of nuclear cladding and fuel under irradiation. NUC E (MATSE) 409 Nuclear Materials (3) NUC E/ MATSE 409 provides a background on the types of materials used in nuclear reactors and their response to neutron irradiation. Most of the materials problems encountered in the operation of nuclear power reactors for energy production are discussed here. The objective of the course is to give nuclear engineering students a background in materials, so they understand the limitations put on reactor operations and reactor design by materials performance. In the first part of the course, we review basic concepts of physical metallurgy, to develop a mechanistic and microstructurally based view of material properties. In the second part of the course, we present the methods to calculate displacement damage to the material produced by exposure to neutron irradiation. The microstructural evolution that results from the reactor exposure (including radiation damage and defect cluster evolution, and changes) is described. The aim is to create a linkage between these changes at the atomistic level and the changes in macroscopic behavior of the material. Special attention is given to property changes that affect fuel performance and operational safety. Both mathematical methods and experimental techniques are emphasized so that theoretical modeling is instructed by experimental data. Students use the TRIM and SPECTER codes to quantitatively evaluate neutron damage, as well as learn simple analytical models that describe microstructural evolution and property changes under irradiation.

Enforced Prerequisite at Enrollment: PHYS 214

Cross-listed with: NUCE 409

MATSE 410: Phase Relations in Materials Systems

3 Credits

Phase rule; construction and interpretations of equilibrium diagrams; importance of nonequilibrium in materials. MATSE 410 Phase Relations in Materials Systems (3) This course integrates three core components of materials science and engineering: thermodynamics, kinetics, and interface crystallography in understanding processing and development of inorganic materials. It is the key course bridging the fundamentals to practical materials processing. Phase equilibria, phase diagrams, phase transformations and heat treatments are addressed in great details through nucleation, transformation kinetics, crystal interface and diffusion. The complexity of materials is discussed in hierarchy from pure elements, binaries, ternaries to multicomponents.

Prerequisite: MATSE 201, MATSE 401

MATSE 411: Processing of Ceramics

3 Credits

Principles of ceramic processing, including powder preparation and characterization, forming operations, and the basic phenomena underlying these operations. MATSE 411 Processing of Ceramics (3) This course covers the scientific and engineering principles of manufacturing of ceramic products. The course covers powder synthesis and characterization; surface and colloid chemistry; fabrication; and densification by sintering. There is an emphasis on the physical chemistry of particulate systems as relates to the various stages processing. The course is offered every fall semester and is required for BS graduates of the Ceramic Science and Engineering option in Materials Science and Engineering. The course objectives are for the student to (1) become knowledgeable of all steps involved in ceramic manufacture from powder synthesis through final densification by sintering, (2) understand the rationale and compromises for selecting a given processing route, (3) understand and be able to apply the parametric relations for manufacture of a ceramic with a specified microstructure, and (4) understand the physical chemistry fundamentals responsible for the unique properties of fine powders.

Prerequisite: MATSE 400, MATSE 402

MATSE 412: Thermal Properties of Materials

3 Credits

Generation of high temperatures, measurement of temperature, heat transfer and furnace design, thermal stability of ceramic materials, applied thermodynamics. MATSE 412 Thermal Properties of Materials (3) The fundamentals of achieving, measuring, and controlling high temperature for materials processing are addressed. The crystal physics underlying heat capacity, internal energy, phonon and photon conduction, and thermal expansion is used to rationalize the behavior of a wide variety of ceramic and metallic materials in severe thermal environments. Micro- and macroscopic thermal transport, thermal shock and fatigue behavior, and thermochemical durability are addressed insofar as their impact on the design of, and with, high performance materials in thermostructural applications. Case studies on materials selection and design using the fundamentals of inorganic crystal chemistry, physics, thermodynamics, kinetics, elastic, and mechanical properties are widely employed. Students interested in disciplines such as metallurgy, ceramic science, electronic and photonic materials, mechanical engineering, aerospace engineering, industrial engineering, engineering science, and chemical engineering will benefit significantly from this course.

Prerequisite: MATSE 201 and MATSE 401

MATSE 413: Solid-State Materials

3 Credits

The main course objective is to provide sufficient background for the understanding of fundamental phenomena in solid state materials. Mathematical description of periodic arrays and the concept of reciprocal space are introduced, lattice vibrations are discussed. An introduction to quantum mechanics is given and the solution of the stationary Schrödinger Equation for various problems relevant in nanostructured materials is presented. A semi-quantitative approach is taken how the electronic structure of isolated atoms is changed as they bond and form molecules and solids. Emphasis is placed how such bonding

influences whether the resulting material will be a metal, an insulator or a semiconductor. The goal is to master the modern framework in solid state materials that describes materials phenomena at an atomic level, such as electronic band structure and electronic transport, the vibrational properties of solid state materials and to prepare the audience for higher level quantum mechanical problems.

Prerequisites: MATSE 201 and MATH 220 and (MATH 231 or MATH 230)

MATSE 415: Introduction to Glass Science

3 Credits

Composition, melting, fabrication, properties, and uses of glass; combinations of glass with metals and other materials. MATSE 415 Introduction to Glass Science (3) This course aims to explain the unique characteristics of the glassy state, and to describe their role in the processing, application, and engineering performance of amorphous materials and glass products. The course teaches fundamental concepts of amorphous structure, and then utilizes them to establish structure-property relations in various glass systems. The viscosity, thermal expansion, chemical durability, strength behavior, and optical properties of silicate-based glasses are emphasized, although the important properties of phosphate, halide, and chalcogenide glasses are not overlooked. Also included are phenomenological descriptions of glass formation, liquid-liquid immiscibility, viscous flow, structural relaxation, stress relaxation, and crystallization in glass. Various methods for the synthesis of glass are reviewed (melting, CVD, and sol/gel), along with important manufacturing processes for commercial glass products. Throughout the course, the applications of glass and glass components in electronics, photonics, biomedicine, transportation, and energy are described to rationalize the use of glass (i.e., the materials selection), the specific glass composition, and the associated processing method.

Prerequisite: MATSE 401

MATSE 417: Electrical and Magnetic Properties

3 Credits

Electrical conductivity, dielectric properties, piezoelectric and ferroelectric phenomena; magnetic properties of ceramics. ESC 417 / MATSE 417 Electrical and Magnetic Properties (3) is designed to provide students with a fundamental understanding of the different responses a material can have to crapped electrical or magnetic fields. Important properties are introduced and correlated with knowledge of material chemistry, crystal structure, and microstructure to provide an understanding of the mechanisms responsible for controlling the observed properties, as well as the ways in which properties can be engineered. Electronic and magnetic properties encompass dielectric, ferroelectric, conductor, superconductor, and ferromagnetic materials. Material properties and structures are related to sensors, energy storage and conversion devices, biomedical devices and electronic components in telecommunications.

Enforced Concurrent at Enrollment: MATSE 400 and MATSE 413
Cross-listed with: ESC 417

MATSE 419: Computational Materials Science and Engineering

3 Credits

Introduction to computational material science and engineering. Overview of the computational methods for materials, from atomistic to the continuum scale. MATSE 419 Computational Materials Science and Engineering (3) Modeling is a critically important tool in the field of

materials. This course is designed to inform students about all areas of materials modeling, and to explore the use of modeling in different research areas. This is a hands-on undergraduate level course, mandatory for all MATSE students, covering current methods for modeling soft and hard matter, at the atomistic, meso and continuum scale levels. It consists of an overview of individual techniques of modeling from atomistic molecular dynamics and Monte Carlo, coarse-grained molecular dynamics, and multiscale modeling, to the continuum (e.g. SAFT, CALPHAD). It also includes a computer laboratory component with hands-on exercises. At the conclusion of the course, students will understand the physical basis and basic procedures of each technique. Students will be able to understand the general literature in modeling and its connection with experimental work, as well as to communicate with experts in the field. From the laboratory practices, they will learn how the individual modeling techniques contribute to knowledge in each area, and to interconnect them with experimental information.

Prerequisite: CMPSC 200 and MATSE 201 and MATSE 202 and MATH 220 and (MATH 231 or MATH 230) and MATH 251
Cross-listed with: CMPMT 419

MATSE 421: Corrosion Engineering

3 Credits/Maximum of 3

Industrial forms of corrosion and preventive methods, and their description in terms of basic thermodynamic and kinetic considerations. MATSE 421 Corrosion Engineering (3) This 3-credit course is an introduction to the corrosion field and more broadly to the principles of electrochemistry and to the electrode reactions that occur during the undesirable corrosive degradation of metal, and also in various important commercial processes such as electroplating, electroless plating, battery and fuel cell operation, aqueous extraction metallurgy and corrosion prevention techniques. The objectives of this course are to introduce the student to the (1) principles of electrode reactions, (2) nature of commercial corrosion resistant alloys and their compositions, (3) various forms of corrosion and preventative measures, and (4) design of electrochemical laboratory and field procedures for detecting corrosion processes and determining their rates. Thermodynamic and rate data are used to make engineering decisions relative to the occurrence of corrosion, to the effectiveness of the various preventative measures, and to electrochemical design. Corrosion processes and electrode reactions more generally are primarily concerned with the surface properties of materials, but the bulk properties, such as microstructure, grain size, hardness, and composition, are discussed in terms of their impact on materials degradation. In-class closed-book exams and problem sets, and homework that allow student collaboration, are used for evaluation. Computer access to the course is available and includes all lecture material, old exams with answers, home works, and syllabus on the Web. This course is offered every year with typical class size of less than 20 students.

Prerequisites: PHYS 212, MATSE 401, MATSE 402

MATSE 422: Thermochemical Processing

3 Credits

Physico-chemical aspects of high temperature extraction and processing of metals and alloys. Design and evaluation of processes and process options. MATSE 422 MATSE 422 Thermochemical Processing (3) An important goal of materials engineering is to efficiently produce metals and alloys of specific composition. Familiar examples include the tonnage production of metals and alloys, the production of ultra

high purity electronic materials such as silicon and germanium, and the deposition of thin films for various applications. In this course the students get an understanding of the physical and chemical principles underlying these operations and how these principles are applied in industrial practice. The students get ample opportunities to apply thermodynamics, kinetics, and transport phenomena to understand why the processes currently in use work. Furthermore, they learn how to marshal information for the design of projected new processes and process options. Broadly stated, the topics include solid-state reactions, production of liquid metals, and processing, all carried out at high temperatures. The topics are covered in a set of lecture notes available from the instructor. The lectures are accompanied by about fifteen problems sets in the form of home work and class work so that the students experience first-hand how the principles of thermodynamics and rate processes are applied in solving important problems in thermochemical processing.

Prerequisite: MATSE 401, MATSE 402

MATSE 425: Processing of Metals

3 Credits

Modern methods of shaping metals in liquid and solid states: casting, joining, powder and deformation processing. Design of new technology. MATSE 425 Processing of Metals (3) This course focuses on how metals and alloys may be processed into different shapes and how those processing procedures affect the metallurgical microstructure and properties. Consideration of shape, the alloy composition, and property goals are all factors in selecting an optimum processing 'window'. Such carefully selected processing conditions not only produce the desired component shape in a cost-efficient manner but also ensure acceptable properties and safe in-service performance. This course surveys the following metal processing procedures: (a) solidification processing, (b) heat

Prerequisite: MATSE 402

MATSE 426: Aqueous Processing

3 Credits

A study of the chemical and engineering principles pertinent to metal processing in aqueous systems: hydrometallurgical extraction, plating, materials preparation. MATSE (MN PR) 426 Aqueous Processing (3) This 3-credit course deals with the chemical and engineering principles underlying the aqueous processing of metals: metal extraction from primary and secondary sources, electroplating, and metal finishing, powder synthesis, energy storage and conversion, and treatment of recycling of metal-containing toxic wastes.1. Physico-Chemical Principles - Thermodynamic, chemical kinetic and transport factors which control hydrochemical processes (leaching; precipitation; adsorption; solvent extraction; ion exchange; electrowinning, electrorefining and electroplating; membrane processes; energy storage and conversion); graphical representation of homogeneous and solid/solution equilibria; chemical reagents.2. Engineering Principles - Reactor design and staged operations; ideal batch, continuous stirred-tank and plug-flow reactors; fluidized bed reactors; electrochemical reactors; multistage separation processes (solid-liquid, liquid-liquid, and gas-liquid systems).3. Process Synthesis - Design of metal separation (extraction, refining, waste treatment) materials synthesis, metal finishing, and energy storage/conversion processes and system-integration of unit operations,

industrial practice. Emphasis on closing circuits to minimize or eliminate waste effluents.

Enforced Prerequisite at Enrollment: EME 301 or MATSE 401
Cross-listed with: MNPR 426

MATSE 427: Microstructure Design of Structural Materials

3 Credits

The focus of this course is on understanding the microstructure development and design of structural ferrous metals. The course will begin with understanding the basic physical metallurgy concepts of ferrous metals and applying these principles to understanding their processing/structure/property relationships. Specifically, the alloying principles, phase transformation behavior, and transformation kinetics steels will be considered in detail. Heat treatment practices (annealing, normalizing, quenching, tempering, and precipitation hardening) and their effects on the microstructure and mechanical properties of each of these metals will also be studied.

Prerequisite: MATSE 201 or MATSE 259

MATSE 429: Non-Ferrous Structural Metals

3 Credits

The focus of this course is to understand the phases, microstructures, and mechanical properties of non ferrous structural metals; specifically the alloys of aluminum, titanium, nickel, and copper. The alloying principles, phase transformation behavior, and transformation kinetics for each metal system will be considered in detail. Heat treatment practices (annealing, normalizing, tempering, aging, and precipitation hardening) and their effects on the microstructure and mechanical properties of each of these metals will also be studied. Corrosion resistance, weldability, and sustainability will also be considered for the alloy systems.

Prerequisite: (MATSE 201 or MATSE 259) and 6th semester standing

MATSE 430: Materials Characterization

3 Credits

Elements of crystallography and the characterization of crystalline and non- crystalline materials using x-ray diffraction, electron microscopic, and other instrumental techniques. MATSE 430 Materials Characterization (3) This course will introduce students to characterization techniques for quantifying microstructure, chemistry and atomic structure of solid state materials. Elastic and inelastic interactions of radiation (e.g. electromagnetic and electrons) with solid state materials are the basis for most characterization techniques. Utilizing these interactions it is possible to obtain structural and chemical information from materials, often at small length scales. In this course, students will be introduced to the most common imaging, diffraction and spectroscopy techniques used for materials characterization. They will develop an understanding of the underlying physics behind the techniques to enable interpretation of the data. The course will be beneficial for any student interested in solid-state materials, as it provides a key component of the processing-structure-properties process.

Prerequisites: MATSE 201 and MATSE 202 and MATH 220 and (MATH 230 or MATH 231) and MATH 251

MATSE 430H: Materials Characterization

3 Credits

Elements of crystallography and the characterization of crystalline and non- crystalline materials using x-ray diffraction, electron microscopic, and other instrumental techniques.

Honors

MATSE 435: Optical Properties of Materials

3 Credits

Electromagnetic spectrum, interaction of light with materials, color, thin film optical coatings, electro-, integrated and nonlinear optics.

Prerequisite: MATSE 400

MATSE 436: Mechanical Properties of Materials

3 Credits

Fundamental relationships between structure and mechanical behavior of materials. MATSE 436 Mechanical Properties of Materials (3) The topics covered in this course are essential to students in the Materials Science and Engineering options, and these are also required for materials engineering courses nationally accredited by the professional societies. The course is taught at the 400 level because it requires the fundamental courses in mathematics and physics to be completed. The course also requires completion of an introductory course in materials science. This new course typically fits into the junior or senior year, when students in the major are understanding how the properties of materials can be changed by controlling the structure of materials. The course has also been designed such that students in other engineering majors can take this course as a technical elective. Some of the information in this course is used in laboratory courses for the major. The course is not required as a prerequisite for other courses.

Prerequisite: (MATSE 201 or MATSE 259) and MATSE 202 and MATH 220 and (MATH 231 or MATH 230) and MATH 251 and PHYS 211

MATSE 440: Nondestructive Evaluation of Flaws

3 Credits

Methods and limitations of nondestructive evaluation of mechanical flaws; optical, acoustical, electromagnetic, x-ray, radiography, thermography, and dye techniques.

Enforced Prerequisite at Enrollment: EMCH 213 or EMCH 210H or EMCH 210

Cross-listed with: EMCH 440

MATSE 441: Polymeric Materials I

3 Credits

This 3-credit course focuses on about 50 commercially most important polymers together with the discussion of synthesis routes, industrial production processes, processing methods, physical and chemical properties, and applications. They are classified into 10 families of polymeric materials, which are taught along with introduction of polymeric materials and synthesis of polymers in the beginning of the class.

Prerequisite: (CHEM 202 or CHEM 210) and MATSE 202 and (MATH 231 or MATH 230)

MATSE 445: Thermodynamics, Microstructure, and Characterization of Polymers

3 Credits

The properties of individual polymer chains will be studied and characterized, including theoretical and experimental techniques pertaining to the characterization of polymeric microstructure. This course develops fundamental understanding of microstructures and chain conformations of polymers. Polymer synthesis, including step-growth and chain polymerizations. The kinetics of polymerization will be considered along with the thermodynamics of polymer solutions and blends.

Prerequisite: MATSE 202

MATSE 446: Mechanical and Electrical Properties of Polymers and Composites

3 Credits

This course is an introduction to the mechanical and electrical properties of polymers and polymer-based composites: The main focus is on the importance of molecular structure, rubber elasticity, mechanisms of yielding, viscoelasticity, and the manifestation of the static and ac dielectric properties, as well as conduction. The course topics include polymer chain structures and characterization methods, the amorphous state (glass transition), the crystalline state (including X-ray diffraction, degree of crystallinity, and kinetics), polymer networks and gels, mechanical properties, and electrical properties.

Prerequisite: MATSE 202

MATSE 447: Rheology and Processing of Polymers

3 Credits

Fluid Mechanics: Stress, strain, tensors, viscosity, modulus, conservation of mass, momentum transfer, Navier-Stokes equations, Reynolds number, creeping flow, Poiseuille flow, Couette flow, dimensional analysis and scaling. Rheology: Linear viscoelasticity, stress relaxation, oscillatory shear, creep and creep recovery, Boltzmann superposition, nonlinear viscoelasticity, steady shear, normal stresses, transient shear flows, rotational rheometers, capillary/slit rheometers, simple nonlinear viscosity models, time-temperature superposition, molecular models, entanglement, crosslinking reactions (gelation), extensional flows. Processing: Extrusion, pumping, mixing, screw design, die design, die swell, injection molding, mold filling, computer-aided mold design, weld lines, compression molding, sheet extrusion, thermoforming, pipe extrusion, blow molding, film blowing, rotational molding, fiber spinning, profile extrusion, coating reaction injection molding.

Prerequisite: MATSE 202

MATSE 449: Fundamentals of Composite Materials Science and Engineering

3 Credits

MATSE449 Fundamentals of Composite Materials Science and Engineering covers the fundamental science and engineering of multicomponent materials, with special emphasis on Polymer Matrix Composites. Topics include the design, materials selection, interfaces/

interphases, processing, life cycle analysis (of environmental impacts), and properties of these materials. The course works up from atomic and molecular forces, through interfacial interactions, towards stress transfer at interfaces and mechanical properties of composites. Advanced Topics are a major part of the course and are selected from current industrial and commercial examples of composites, such as nanocomposites and nanofillers in composites, non-thermoplastic (rubber/ceramic/metal) matrix composites, life cycle analysis of specific systems, biomimetic and biopolymer composites, etc.

Enforced Prerequisite at Enrollment: MATSE 201 and MATSE 202 (or equivalent introductory course on materials)

MATSE 450: Synthesis and Processing of Electronic and Photonic Materials

3 Credits

The materials science of applying thin film coatings, etching, and bulk crystal growth; includes materials transport, accumulation, epitaxy, and defects.

Enforced Prerequisite at Enrollment: (MATSE 201 or ESC 414M) and Sixth Semester standing

Cross-listed with: ESC 450

MATSE 455: Properties and Characterization of Electronic and Photonic Materials

3 Credits

Materials characterization in general; electrical properties of crystals, contacts, films; optical properties of single phase materials, waveguide, and multilayer stacks.

Prerequisite: MATSE 201 or ESC 414M, ESC 314

MATSE 460: Introductory Laboratory in Materials

1 Credits

An introduction to comparative physical properties and characteristics of various materials including mechanical, electrical thermal, and structure/morphology. MATSE 460 Introductory Laboratory in Materials (1) This is a lab course whose goal is to provide an integrated approach to materials science and engineering. Any individual lab will consist of a number of elements, initially students will be provided with a presentation summary of the proposed lab. This could be film, video, web delivery, hard copy or live presentation. Presentation time will be limited but should be reviewed before students attempt the hands-on lab. All labs will examine a variety of different materials including metal, ceramics and polymers. Labs will be integrative in the sense that they will include use of spreadsheets, data plotting, and presentation of results as written reports and/or as a "PowerPoint" presentation. The labs selected have been chosen specifically because they cut across all current basic materials disciplines. These labs are intended to provide students with a broad appreciation of the range and contrast of material structures and properties, in order that students more fully appreciate the breadth of material science and engineering.

Prerequisite: MATSE 201 and MATSE 202

MATSE 462: General Properties Laboratory in Materials

1 Credits

An introduction to comparative physical properties of various materials including mechanical, thermal electrical properties and the measurement of said properties. MATSE 462 General Properties Laboratory in Materials (1) This is a lab course whose goal is to provide an integrated approach to physical property measurements in materials science and engineering. Any individual lab will consist of a number of elements, initially students will be provided with a presentation summary of the proposed lab. This could be film, video, web delivery, hard copy or live presentation. Presentation time will be limited but should be reviewed before students attempt the hands-on lab. All labs will examine a variety of different materials including metal, ceramics, polymers and composites. Labs will be integrative in the sense that they will include use of spreadsheets, data plotting, and presentation of results as written reports and/or as a 'PowerPoint' presentation. The labs selected have been chosen specifically because they cut across all current basic materials disciplines. These labs are intended to provide students with a broad appreciation of the range and contrast of material properties and the measurement of such properties, in order that students more fully appreciate the breadth of material science and engineering.

Prerequisite: MATSE 460**MATSE 463: Characterization and Processing of Electronic and Photonic Materials Laboratory**

1 Credits/Maximum of 1

Provides experience with key processing methods for EPM materials and advanced characterization methods for EPM materials and simple device structures.

Prerequisite: MATSE 400, MATSE 430, MATSE 450, MATSE 455, MATSE 460; Concurrent: MATSE 450, MATSE 455**MATSE 468: Ceramics Laboratory III**

1 Credits

Ceramic processing and powder characteristics. MATSE 468 Ceramics Laboratory III (1) This course will demonstrate to students the experimental techniques by which the key powder characteristics and powder processes are determined, how to analyze the data from the measurements, and to reveal the interaction between properties, processing and structure. The course concentrates on the importance of powder characterization, forming techniques, sintering and microstructure characterization in the processing of ceramics.

Prerequisite: MATSE 462 Concurrent Courses: MATSE 411**MATSE 471: Metallurgy Processing Laboratory**

1 Credits

A laboratory integrating experimental aspects of the material contained in MATSE 425, casting, solidification micro-structures heat treating, welding, etc. MATSE 471 Metallurgy Laboratory I (1) This course is largely a metals processing laboratory focused on casting, metal deformation, heat treating, and welding. Understanding how these processes affect microstructure and properties will be studied.

Prerequisite: MATSE 462 Enforced Concurrent at Enrollment: MATSE 425**MATSE 473: Polymeric Materials Laboratory**

1 Credits

Principles and practices of polymerization, including condensation, free radical (bulk, solution, suspension, emulsion), ionic, and Zeigler-Natta procedures. MATSE 473 Polymeric Materials Laboratory--Synthesis (1) This laboratory course provides students exposure to a variety of synthetic techniques basic to Polymer Science. From the polymerization of styrene to the preparation of urethane foams, students will see the role varied synthetic methods and chemistries play in determining the final form and properties of a given polymer. Students also learn the polymer structure characterization by examining the produced polymers with proper tools and instruments.

Prerequisite: MATSE 202 and MATSE 462**MATSE 475: Particulate Materials Processing**

3 Credits

Fundamentals of processing particulate materials including production, characterization, handling, compaction, and sintering of metal, carbide, intermetallic, and composite powders.

Enforced Prerequisite at Enrollment: EMCH 315 or ESC 414M or MATSE 259

Cross-listed with: ESC 475

MATSE 483: Simulation and Design of Nanostructures

3 Credits

Introduction to computer simulation techniques and their applications at the physical/life sciences interface. E SC (MATSE) 483 Simulation and Design of Nanostructures (3) Students will learn the simulation techniques and the design rules of nanostructures. Basic concepts of computer modeling will be introduced using quantum and classical approaches. Fundamental physical phenomena encountered in the molecular fields of computational physics, chemistry, and biology will be studied. Applications are drawn from a broad range of fields including soft and condensed matter to build an understanding of nanostructures. The course will assume knowledge and skill developed in the prerequisite courses of PHYS 214 and MATH 230. Students are expected to combine knowledge from other courses with information presented here to develop sophisticated interpretations and understanding of physical and chemical principles of nanostructures and their design rules. Evaluation methods to be used in this course will be two in-class examinations and one final period examination. The course contains a computer code generation and implementation component. Students will use commercial or educational computer codes (e.g. Matlab, Mathematica, AMBER, CHARMM, VASP, etc.) which are available at our high performance computing clusters (<http://gears.aset.psu.edu/hpc/>) Students will use the computing clusters to perform simulations which are accessible from any classroom or laboratory at Penn State. The principal objectives of the course is to learn the fundamental physics of nanostructures and to design them with computer simulations. This approach starts from classical molecular dynamics that apply on the large scale biological and synthetic assemblies and encompasses quantum mechanics for the molecular and atomic sizes. This course will give a broad scientific picture of simulation techniques in the area of nano-science and technology.

Prerequisite: PHYS 214 or ESC 312, MATH 230

Cross-listed with: ESC 483

MATSE 492W: Materials Engineering Methodology and Design

3 Credits

Designed to familiarize students with the literature and technology developments in the use of, and design with, materials in industrial applications. MATSE 492 Materials Engineering Methodology and Design (3) The objective of this course is to teach students the skills to solve realistic problems related to the use of materials in industrial practice. This will be accomplished by considering alternatives for materials design or selection and proposing the most effective scientific or engineering solutions. The methodology will take into account other forces acting on the design process, such as economic, environmental, sustainability, manufacturability, ethical, health and safety, social and political concerns. Students will develop these design skills by working in teams on projects defined by industry, and will learn to communicate their solutions in verbal and written form. Students will also learn the key features needed in developing a team approach to solving problems. Typically, evaluation is based on written reports, performance in presentations, and instructors's assessment of the student's participation in design team activities. At the conclusion of the course, each student will select a design or independent research topic for their capstone senior-year design project.

Prerequisite: MATSE 201, MATSE 202, MATSE 436, sixth semester standing in Materials Science and Engineering
Writing Across the Curriculum

MATSE 493W: Materials Science and Engineering Multidisciplinary Capstone Design Project

3 Credits

This course focuses on multidisciplinary industry-sponsored and community service-based design projects offered in conjunction with the College of Engineering's Learning Factory. MATSE 493W Materials Science and Engineering Multidisciplinary Capstone Design Project (3) This course will provide students with the opportunity to learn the design process in the context of an industry-sponsored or community service-based design project that demands they produce a working solution. The design projects in this course will be structured for students from two or more different engineering majors, as defined by the project sponsors in collaboration with the instructor and departmental project coordinators. The project sponsor will provide the technical expertise for the project, a clear definition of all project deliverables that are expected, and the financial support to cover needed materials and supplies and travel costs. Project sponsors will be invited to attend the Project Kickoff at the start of the semester to present their ideas and answer questions from the students as well as the Design Showcase at the end of the semester where teams display their results to the project sponsors and the public. The Center for Engineering Design and Entrepreneurship (CEDE) in Hammond Building and the Bernard M. Gordon Learning Factory will provide the facilities where the design teams can work together to develop the design concept and prototype solutions. Faculty members in the School of Engineering Design, Technology, and Professional Programs (SEDAPP) will administer the course, including reading, evaluating, and grading the final project report, provide lectures on topics including on project management, design, product manufacturing, intellectual property, engineering ethics, societal/global/contemporary/professional issues, and related technical topics, and organize invited technical lectures related to industry projects. In accordance with standard Learning Factory procedures, specific multidisciplinary projects will

be selected for this course to provide challenging senior-year design experiences for all students, and the Director of the Learning Factory will coordinate the selection of these projects with the course instructor prior to the start of each semester of the course offering. Multidisciplinary teams will be formed based on specific project needs (i.e., expertise from two or more disciplines based on the project scope).

Prerequisite: MATSE 492W
Writing Across the Curriculum

MATSE 494M: Research and Design Senior Project

1-3 Credits/Maximum of 3

Continuation of a research problem in materials culminating in a bound thesis describing the work.

Honors
Writing Across the Curriculum

MATSE 494W: Research and Design Senior Project

1-3 Credits/Maximum of 3

MATSE 494W Research and Design Senior Project (2) This course continues the senior thesis research topic addressed by the student in MATSE 493W. This is a capstone research/design project which integrates: a) background literature search with articulation of a research hypothesis, b) design and implementation of an experimental plan to test the hypothesis, and c) conclusions regarding the validity of the hypothesis based on the experimental data obtained in the course of the research. The main characteristic of this course is the performance of the research plan articulated in MATSE 493W, followed by interpretation of the data in the context of the original hypothesis(es). Laboratory research is generally performed in collaboration with faculty and graduate research assistants, using equipment and facilities in a wide range of laboratories throughout campus. Occasionally, the nature of the research may require the student to collaborate with researchers outside of Penn State, perhaps even spending some time in residence at other facilities. The course culminates in the preparation of a bound thesis detailing the relevance and findings of the research. Assessment of the student's progress is via grading of all components of the thesis (literature review/background, statement of the problem, design of the experimental plan, results and discussion, conclusions, recommendations for future work, and references/appendices), as well as the diligence of the student in performing the experimental research in a professional and timely fashion. The course is offered each semester to allow for differing schedules for students following the conventional MATSE curriculum versus those who have elected to participate in the Cooperative Education program.

Writing Across the Curriculum

MATSE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MATSE 496H: Independent Studies

1-3 Credits/Maximum of 3

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

MATSE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Mathematics (MATH)

MATH 2: Elementary Geometry With Problem Solving

4 Credits

Geometric congruence, similarity, area, surface area, volume, introductory trigonometry; emphasis on logical reasoning skills and the solution of applied problems. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

MATH 3: Basic Skills

3 Credits

Natural numbers; integers; rational numbers; decimals; ratio, proportion; percent; graphs; applications. Students who have passed MATH 001 may not schedule this course for credit. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

Enforced Prerequisite at Enrollment: Satisfactory performance on the mathematics placement examination.

MATH 4: Intermediate Algebra

3 Credits

Algebraic expressions; linear, absolute value equations and inequalities; lines; systems of linear equations; integral exponents; polynomials; factoring. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

Enforced Prerequisite at Enrollment: MATH 3 or satisfactory performance on the mathematics placement examination.

MATH 10: Preparation Skills for Success in Mathematics

1 Credits/Maximum of 4

A foundation course that emphasizes study skills and reviews basic mathematical principles.

Concurrent: math 003-201**MATH 21: College Algebra with Analytic Geometry with Applications I**

3 Credits

This course satisfies the General Education Qualification. Topics covered include visualizing and graphing data; evaluating the average rate of change; solving linear equations and inequalities; solving linear absolute value equations and inequalities; modeling with linear functions and discussion of interpolation; solving quadratic equations using different solution methods; solving quadratic inequalities; modeling with quadratic functions.

Enforced Prerequisite at Enrollment: MATH 4 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

MATH 22: College Algebra With Analytic Geometry and Applications II

3 Credits

This course covers topics that include functions and their representations; distinguishing between types of functions; evaluating the average rate of change; factoring polynomials of general degree; solving polynomial inequalities; solving rational equations and inequalities; solving radical equations; modeling with polynomial and rational functions; finding and interpreting the meaning of inverse functions; solving exponential and logarithmic equations; modeling with exponential and logarithmic functions.

Enforced Prerequisite at Enrollment: MATH 21 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

MATH 26: Plane Trigonometry and Applications of Trigonometry

3 Credits

This course satisfies the General Education Qualification. Topics covered include angles and their measures; right triangle trigonometry; all six trigonometric functions and their representations; angle addition/subtraction and double angle identities; modeling with sine and cosine; applications of trigonometric functions; simple harmonic motions and other applications of trigonometric functions; inverse trigonometric functions; solving trigonometric equations; verifying identities; law of sines and law of cosines; vectors; polar equations; trigonometric form of complex numbers; other related topics as time permits.

Enforced Prerequisite at Enrollment: MATH 21 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

MATH 26H: Plane Trigonometry

3 Credits

Trigonometric functions; solutions of triangles; trigonometric equations; identities.

General Education: Quantification (GQ)

Honors

MATH 30: Problem Solving

3 Credits

Concepts in problem solving; reducing new problems to old ones; techniques for attacking problems; building mathematical models.

Bachelor of Arts: Quantification

MATH 32: Math for Allied Health Professions

3 Credits

This course is intended to build the specific quantitative reasoning skills needed by workers in Allied Health Professions, such as nurses or therapists. Students will become fluent in proportional reasoning in a variety of contexts, including unit conversion, drug dosage calculations, probability, and logarithmic scales. Students gain the tools to communicate and reason about covariation in scenarios such as exponential growth and decay. Student will also apply tools of probability and descriptive statistics to gain literacy in risk and uncertainty in health settings, such as making sense of effect sizes in research literature.

Enforced Prerequisite at Enrollment: MATH 4 or satisfactory performance on the math placement exam

General Education: Quantification (GQ)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Key Literacies

MATH 33: Mathematics for Sustainability

3 Credits

Mathematical analysis of sustainability: measurement, flows, networks, rates of change, uncertainty and risk, applying analysis in decision making; using quantitative evidence to support arguments; examples.

MATH 033 Mathematics for Sustainability (3) (GQ) This course is one of several offered by the mathematics department with the goal of helping students from non-technical majors partially satisfy their general education quantification requirement. It is designed to provide an introduction to various mathematical modeling techniques, with an emphasis on examples related to environmental and economic sustainability. The course may be used to fulfill three credits of the GQ requirement for some majors, but it does not serve as a prerequisite for any mathematics courses and should be treated as a terminal course. The course provides students with the mathematical background and quantitative reasoning skills necessary to engage as informed citizens in discussions of sustainability related to climate change, resources, pollution, recycling, economic change, and similar matters of public interest. Students apply these skills through writing projects that require quantitative evidence to support an argument. The mathematical content

of the course spans six key areas: "measuring" (representing information by numbers, problems of measurement, units, estimation skills); "flowing" (building and analyzing stock-flow models, calculations using units of energy and power, dynamic equilibria in stock-flow systems, the energy balance of the earth-sun system and the greenhouse effect); "connecting" (networks, the bystander effect, feedbacks in stock-flow models); "changing" (out-of-equilibrium stock-flow systems, exponential models, stability of equilibria in stock-flow systems, sensitivity of equilibria to changes in a parameter, tipping points in stock-flow models); "risking" (probability, expectation, bayesian inference, risk vs uncertainty); "deciding" (discounting, uses and limitations of cost-benefit analysis, introduction to game theory and the tragedy of the commons, market-based mechanisms for pollution abatement, ethical considerations).

RECOMMENDED PREPARATIONS: ENGL 15

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

MATH 34: The Mathematics of Money

3 Credits

This course will provide students with the mathematical background and quantitative skills needed to make sound financial decisions. This course introduces personal finance topics including simple interest, simple discount, compound interest, annuities, investments, retirement plans, inflation, depreciation, taxes, credit cards, mortgages, and car leasing. Students will learn how to use linear equations, exponential and logarithmic equations, and arithmetic and geometric sequences to solve real world financial problems. Students will answer questions such as, What is the most they can afford to pay for a car? How much do they need to invest in their 401(k) account each month to retire comfortably? What credit card is the best option? In a society where consumers are presented with a vast array of financial products and providers, students are enabled to evaluate options and make informed, strategic decisions. This course may be used by students from non-technical majors to satisfy 3 credits of their General Education Quantification (GQ) requirement. This course does not serve as a prerequisite for any mathematics courses and should be treated as a terminal course.

Enforced Prerequisite at Enrollment: MATH 4 or satisfactory performance on the mathematics placement exam

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 35: General View of Mathematics

3 Credits

This course presents a general view of a number of mathematical topics to a non-technical audience, often relating the mathematical topics to a historical context, and providing students with an opportunity to engage with the mathematics at an introductory level. Although some variation in topics covered may take place among different instructors at different campuses, an example of such a course focuses on a number theory theme throughout the course, beginning with the Greeks' view of integers,

the concept of divisors, the calculation of greatest common divisors (which originates with Euclid), the significance of the prime numbers, the infinitude of the set of prime numbers (also known to the ancient Greeks), work on perfect numbers (which continues to be a topic of research today), and the work of Pythagoras and his famous Theorem. The course then transitions to the work of European mathematicians such as Euler and Gauss, including work on sums of two squares (which generalizes the Pythagorean Theorem), and then considering Euler's phi function, congruences, and applications to cryptography.

Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MATH 36: Insights Into Mathematics

3 Credits

This course will provide students the mathematical background and quantitative skills in various mathematical applications in such areas which are related to voting, fair divisions which includes apportionment methods, and the understanding and application of basic graph theory such as Euler and Hamilton circuits. This course may be used by students from non-technical majors to satisfy 3 credits of their General Education Quantification (GQ) requirement. This course does not serve as a prerequisite for any mathematics courses and should be treated as a terminal course.

Prerequisite: one unit of algebra or MATH 004
Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MATH 37: Finite Mathematics

3 Credits

Finite math includes topics of mathematics which deal with finite sets. Sets and formal logic are modern concepts created by mathematicians in the mid 19th and early 20th centuries to provide a foundation for mathematical reasoning. Sets and formal logic have led to profound mathematical discoveries and have helped to create the field of computer science in the 20th century. Today, sets and formal logic are taught as core concepts upon which all mathematics can be built. In this course, students learn the elementary mathematics of logic and sets. Logic is the symbolic, algebraic way of representing and analyzing statements and sentences. While students will get just a brief introduction to logic, the mathematics used in logic are found at the heart of computer programming and in designing electrical circuits. Problems of counting various kinds of sets lead to the study of combinatorics, the art of advanced counting. For example, if a room has twenty chairs and twelve people, in how many ways can these people occupy the chairs? And are you accounting for differences in who sits in particular chairs, or does it only matter whether a chair has a body in it? These kinds of counting problems are the basis for probability. In order to calculate the chance of a particular event occurring you must be able to count all the possible outcomes. MATH 37 is intended for students seeking core knowledge in combinatorics, probability and mathematical logic but not requiring further course work in mathematics. Students entering the class will benefit from having some experience with basic algebra and solving

word problems. The course may be used to fulfill three credits of the quantification portion of the general education requirement for some majors, but does not serve as a prerequisite for any mathematics courses and should be treated as a terminal course. Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MATH 38: Elementary Linear Algebra

3 Credits

Many problems we have to solve in day-to-day practice require the simultaneous determination of several different but interrelated unknowns. Although many problems of this form have been studied throughout the long history of mathematics, only in the early 20th century did the systematic approach we now refer to as linear algebra emerge. Matrices and linear algebra are now accepted as the single most essential tool need for the solution of these problems. In addition, linear algebra provides students their first introduction to the concept of dimension in an abstract setting where things with 4, 5, or even more dimensions are often encountered. In the simplest situations, many of these problems can be represented as $Ax = b$, where x is our vector of unknowns, A is a matrix, and b is a vector of constants. MATH 38 is intended for students requiring some understanding of the concepts of linear algebra for their major, but not requiring any calculus course work. Students who are also required to take calculus course work should instead take MATH 220 after completion of an appropriate prerequisite.

Prerequisite: 2 units of high school mathematics
Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MATH 40: Algebra, Trigonometry, and Analytic Geometry

5 Credits

Concepts of algebra; equations; inequalities; functions; graphs; polynomial and rational functions; exponential and logarithmic functions; trigonometry; analytic geometry; complex numbers.

Enforced Prerequisite at Enrollment: Satisfactory performance on the mathematics placement examination.
Bachelor of Arts: Quantification
General Education: Quantification (GQ)

MATH 41: Trigonometry and Analytic Geometry

4 Credits

Topics covered include functions and their representations; distinguishing between types of functions; evaluating the average rate of change; graphs and rate of change; end behavior of graphs; modeling with polynomial and rational functions and discussing extrema; finding and interpreting the meaning of inverse functions; solving exponential and logarithmic equations; modeling with exponential and logarithmic functions; angles and their measures; right triangle trigonometry; all six

trigonometric functions and their representations; modeling with sine and cosine; applications of trigonometric functions; simple harmonic motion and other applications of trigonometric functions; inverse trigonometric functions; solving trigonometric equations; verifying identities; law of sines and law of cosines; and further topics, such as elementary limits, as time permits.

Enforced Prerequisite at Enrollment: MATH 21 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

MATH 81: Technical Mathematics I

3 Credits

Math 81 is the first course in an applied mathematics sequence. The course includes a review of algebra, study of functions, study of systems of linear equations, and an introduction to trigonometry. It addresses the needs of engineering technology majors, and emphasizes technology and applications.

Prerequisite: MATH 004 or satisfactory performance on the mathematics placement examination

Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

MATH 82: Technical Mathematics II

3 Credits

Exponents, radicals, complex numbers, theory of equations, inequalities, half angle and double angle formulas, inverse trigonometric functions, exponential, logarithm, conic sections.

Enforced Prerequisite at Enrollment: MATH 81

Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

MATH 83: Technical Calculus

4 Credits

Math 83 is the third course in an applied mathematics sequence. Math 81; Math 82; Math 83; Math 210; Math 211. It addresses the needs of engineering technology majors, and emphasizes technology and applications. Math 83 is an introduction to differential and integral calculus, with some differential equations. Specific course topics include: limits: derivatives; implicit differentiation; related rates and extrema problems; curve sketching; numerical and symbolic integration; applications of differentiation; and differential equations.

Enforced Prerequisite at Enrollment: MATH 82 or MATH 41

Bachelor of Arts: Quantification
General Education: Quantification (GQ)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

MATH 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MATH 97N: Special Topics - InterDomain

1-9 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an GenEd course.

MATH 102: Bridge to Calculus

3-4 Credits

This summer course aims to provide incoming students with the tools needed to be successful wherever they place in the calculus sequence. Specific content is tailored to individual students, based on their existing skill set and expected entry point in the calculus sequence, but ranges from algebra and trigonometry to the real analysis which underlies calculus. The course emphasizes teamwork, communication skills, growth mindset, self-assessment (e.g., metacognition) and building a community of scholars. This is achieved through evidence-based, student-centered pedagogical practices such as collaborative and active learning, scaffolded instruction, extensive group work, metacognitive reflections, and exploratory projects and presentations.

MATH 110: Techniques of Calculus I

4 Credits

Business Calculus is a critical component in the education of any business, financial, or economics professional who uses quantitative analysis. This course introduces and develops the mathematical skills required for analyzing change, and the underlying mathematical behaviors that model real-life economics and financial applications. The primary goal of our business calculus courses is to develop the students' knowledge of calculus techniques, and to use a calculus framework to develop critical thinking and problem solving skills. The concept of a limit of a function/model is central to differential calculus; MATH 110 begins with a study of this concept, its geometric and analytical interpretation, and its use in the definition of the derivative. Differential calculus topics include: derivatives and their applications to rates of change, related rates, optimization, and graphing techniques. Target applications focus mainly on business applications, e.g. supply/demand models, elasticity, logistical growth, and marginal analysis within Cost, Revenue, and Profit models. Integral Calculus begins with the Fundamental Theorem of Calculus, integrating the fields of differential and integral calculus. Antidifferentiation techniques are used in applications focused on finding areas enclosed by functions, consumer and producer surplus, present and future values of income streams, annuities, and perpetuities, and the resolution of initial value problems within a business context. Students may only take one course for credit from MATH 110, 140, 140A, 140B, and 140H.

Enforced Prerequisite at Enrollment: MATH 22 or MATH 40 or MATH 41 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 111: Techniques of Calculus II

2 Credits

MATH 111 is the second course in a sequence of calculus content tailored primarily to first year business students with an emphasis on economics, business, social science, and/or ecology applications. Although it provides standalone instruction in the core elements of differential and integral calculus, applications are chosen to dovetail with typical models discussed in first year finance, economics, social science and/or ecology coursework.

Enforced Prerequisite at Enrollment: MATH 110

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 140: Calculus With Analytic Geometry I

4 Credits

Calculus is an important building block in the education of any professional who uses quantitative analysis. This course introduces and develops the mathematical skills required for analyzing change and creating mathematical models that replicate real-life phenomena. The goals of our calculus courses include to develop the students' knowledge of calculus techniques and to use the calculus environment to develop critical thinking and problem solving skills. The concept of limit is central to calculus; MATH 140 begins with a study of this concept. Differential calculus topics include derivatives and their applications to rates of change, related rates, linearization, optimization, and graphing techniques. The Fundamental Theorem of Calculus, relating differential and integral calculus begins the study of Integral Calculus. Antidifferentiation and the technique of substitution is used in integration applications of finding areas of plane figures and volumes of solids of revolution. Trigonometric functions are included in every topic. Students may only take one course for credit from MATH 110, 140, 140A, 140B, and 140H.

Enforced Prerequisite at Enrollment: Math 22 and Math 26 or Math 26 and satisfactory performance on the mathematics placement examination or Math 40 or Math 41 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 140B: Calculus and Biology I

4 Credits

Calculus is an important building block in the education of any professional who uses quantitative analysis. This course introduces and develops the mathematical skills required for analyzing change

and creating mathematical models that replicate real-life phenomena. The goals of our calculus courses include to develop the students' knowledge of calculus techniques and to use the calculus environment to develop critical thinking and problem solving skills. The concept of limit is central to calculus; this concept is studied early in the course. Differential calculus topics include derivatives and their applications to rates of change, related rates, linearization, optimization, and graphing techniques. The Fundamental Theorem of Calculus, relating differential and integral calculus begins the study of Integral Calculus. Antidifferentiation and the technique of substitution is used in integration applications of finding areas of plane figures and volumes of solids of revolution. Trigonometric functions are included in every topic. Students may only take one course for credit from MATH 110, 140, 140A, 140B, and 140H.

Enforced Prerequisite at Enrollment: Math 22 and Math 26 or Math 26 and satisfactory performance on the mathematics placement examination or Math 40 or Math 41 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 140E: Calculus with Engineering Applications I

4 Credits

Calculus is an important building block in the education of any professional who uses quantitative analysis. This course introduces and develops the mathematical skills required for analyzing change and creating mathematical models that replicate real-life phenomena. The goals of our calculus courses include to develop the students' knowledge of calculus techniques and to use the calculus environment to develop critical thinking and problem solving skills. The concept of limit is central to calculus; MATH 140E begins with a study of this concept. Differential calculus topics include derivatives and their applications to rates of change, related rates, linearization, optimization, and graphing techniques. The Fundamental Theorem of Calculus, relating differential and integral calculus begins the study of Integral Calculus. Antidifferentiation and the technique of substitution is used in integration applications of finding areas of plane figures and volumes of solids of revolution. Trigonometric functions are included in every topic.

Enforced Prerequisite at Enrollment: Math 22 and Math 26 or Math 26 and satisfactory performance on the mathematics placement examination or Math 40 or Math 41 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 140G: Calculus with Earth and Mineral Sciences Applications I

4 Credits

This course is the first in a sequence of three calculus courses designed for students in the earth and mineral sciences and related fields. Topics include limits of functions, continuity; the definition of the derivative, various rules for computing derivatives (such as the product rule, quotient rule, and chain rule), implicit differentiation, higher-

order derivatives, solving related rate problems, and applications of differentiation such as curve sketching, optimization problems, and Newton's method; the definition of the definite integral, computation of areas, the Fundamental Theorem of Calculus, integration by substitution, and various applications of integration such as computation of areas between two curves, volumes of solids, and work.

Enforced Prerequisite at Enrollment: Math 22 and Math 26 or Math 26 and satisfactory performance on the mathematics placement examination or Math 40 or Math 41 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 140H: Honors Calculus with Analytic Geometry I

4 Credits

Calculus is an important building block in the education of any professional who uses quantitative analysis. This course introduces and develops the mathematical skills required for analyzing change and creating mathematical models that replicate real-life phenomena. The goals of our calculus courses include to develop the students' knowledge of calculus techniques and to use the calculus environment to develop critical thinking and problem solving skills. The concept of limit is central to calculus; MATH 140 begins with a study of this concept. Differential calculus topics include derivatives and their applications to rates of change, related rates, linearization, optimization, and graphing techniques. The Fundamental Theorem of Calculus, relating differential and integral calculus begins the study of Integral Calculus. Antidifferentiation and the technique of substitution is used in integration applications of finding areas of plane figures and volumes of solids of revolution. Trigonometric functions are included in every topic. Students may only take one course for credit from MATH 110, 140, 140A, 140B, and 140H.

Enforced Prerequisite at Enrollment: Math 22 and Math 26 or Math 26 and satisfactory performance on the mathematics placement examination or Math 40 or Math 41 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

Honors

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 141: Calculus with Analytic Geometry II

4 Credits

MATH 141 is the second course in a two- or three-course calculus sequence for students in science, engineering and related fields. Calculus is an important building block in the education of any professional who uses quantitative analysis. This course further introduces and develops the mathematical skills required for analyzing growth and change and creating mathematical models that replicate real-life phenomena. The goals of our calculus courses include to develop the students' knowledge of calculus techniques and to use the calculus environment to develop critical thinking and problem solving skills. This course covers the following topics: logarithms, exponentials, and inverse trigonometric

functions; applications of the definite integral and techniques of integration; sequences and series; power series and Taylor polynomials; parametric equations and polar functions. Students may take only one course for credit from MATH 141, 141B, and 141H.

Enforced Prerequisite at Enrollment: MATH 140 or MATH 140A or MATH 140B or MATH 140E or MATH 140G or MATH 140H.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 141B: Calculus and Biology II

4 Credits

Techniques of integration and applications to biology; elementary matrix theory, limits of matrices, Markov chains, applications to biology and the natural sciences; elementary and separable differential equations, linear first-order differential equations, linear systems of differential equations, the Lotka-Volterra equations. Students may take only one course for credit from MATH 141, 141B, and 141H.

Enforced Prerequisite at Enrollment: MATH 140 or MATH 140A or MATH 140B or MATH 140E or MATH 140G or MATH 140H.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 141E: Calculus with Engineering Applications II

4 Credits

MATH 141E is the second course in a two- or three-course calculus sequence for students in science, engineering and related fields. Calculus is an important building block in the education of any professional who uses quantitative analysis. This course further introduces and develops the mathematical skills required for analyzing growth and change and creating mathematical models that replicate real-life phenomena. The goals of our calculus courses include to develop the students' knowledge of calculus techniques and to use the calculus environment to develop critical thinking and problem solving skills. This course covers the following topics: logarithms, exponentials, and inverse trigonometric functions; applications of the definite integral and techniques of integration; sequences and series; power series and Taylor polynomials; parametric equations and polar functions.

Enforced Prerequisite at Enrollment: MATH 140 or MATH 140A or MATH 140B or MATH 140E or MATH 140G or MATH 140H.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 141G: Calculus with Earth and Mineral Sciences Applications II

4 Credits

This course is the second in a sequence of three calculus courses designed for students in the earth and mineral sciences and related fields. Topics include inverse functions of exponential, logarithmic, and trigonometric functions; indeterminate forms and L'Hopital's rule; various

techniques of integration, including integration by parts, trigonometric integrals, trigonometric substitution, and partial fractions; improper integration; infinite sequences and series, tests for convergence and divergence of infinite series, including the integral test, comparison tests, ratio test, root test; power series, Taylor and MacLaurin Series.

Enforced Prerequisite at Enrollment: MATH 140 or MATH 140A or MATH 140B or MATH 140E or MATH 140G or MATH 140H.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 141H: Honors Calculus with Analytic Geometry II

4 Credits

MATH 141 is the second course in a two- or three-course calculus sequence for students in science, engineering and related fields. Calculus is an important building block in the education of any professional who uses quantitative analysis. This course further introduces and develops the mathematical skills required for analyzing growth and change and creating mathematical models that replicate real-life phenomena. The goals of our calculus courses include to develop the students' knowledge of calculus techniques and to use the calculus environment to develop critical thinking and problem solving skills. This course covers the following topics: logarithms, exponentials, and inverse trigonometric functions; applications of the definite integral and techniques of integration; sequences and series; power series and Taylor polynomials; parametric equations and polar functions. Students may take only one course for credit from MATH 141, 141B, and 141H.

Enforced Prerequisite at Enrollment: MATH 140 or MATH 140A or MATH 140B or MATH 140E or MATH 140G or MATH 140H.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

Honors

GenEd Learning Objective: Crit and Analytical Think

MATH 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Quantification

MATH 197N: Special Topics - InterDomain

1-9 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GenEd course.

MATH 198: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MATH 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Quantification

International Cultures (IL)

MATH 200: Problem Solving in Mathematics

3 Credits

Fundamental concepts of arithmetic and geometry, including problem solving, number systems, and elementary number theory. For elementary and special education teacher certification candidates only. A student who has passed EDMTH 444 may not take MATH 200 for credit.

MATH 200 Problem Solving in Mathematics (3) (GQ) This is a course in mathematics content for prospective elementary school teachers. Students are assumed to have successfully completed two years of high school algebra and one year of high school geometry. Students are expected to have reasonable arithmetic skills. The content and processes of mathematics are presented in this course to develop mathematical knowledge and skills and to develop positive attitudes toward mathematics. Problem solving is incorporated throughout the topics of number systems, number theory, probability, and geometry, giving future elementary school teachers tools to further explore mathematical content required to convey the usefulness, beauty and power of mathematics to their own students.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 201: Problem Solving in Mathematics II

3 Credits

This course studies the foundations of elementary school mathematics with an emphasis on problem solving. MATH 201 Problem Solving in Mathematics II (3) (GQ) Problem Solving in Mathematics II studies the foundations of elementary school mathematics with an emphasis on problem solving. Mathematical ways of thinking are integrated throughout the study of probability, statistics, graphing, geometric shapes, and measurement. This course is designed for prospective teachers not only to gain the ability to explain the mathematics in elementary school courses, but also to help them comprehend the underlying mathematical concepts. Gaining a deeper understanding will enable them to assist their young students in the classroom since effective mathematical teaching requires understanding what students know, what they need to learn, and then helping them to learn it well.

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 210: Calculus with Engineering Technology Applications

3 Credits

Topics in calculus with an emphasis on applications in engineering technology. MATH 210 Calculus with Engineering Technology

Applications (3) is a three-credit course to be taken either after the MATH 81, MATH 82, MATH 83 sequence or after a semester of college-level calculus. The content of the course is geared toward the needs of engineering technology majors and places a large emphasis on technology and applications. The course provides mathematical tools required in the upper division engineering technology courses. A primary goal is to have students use technology to solve more realistic problems than the standard simplistic ones that can be solved by "pencil and paper." Student evaluation will be performed through exams, quizzes, graded assignments, and a cumulative final exam. It is expected that MTHBD 210 will be offered every semester with an enrollment of 44-80 students.

Enforced Prerequisite at Enrollment: MATH 83 or MATH 140

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

MATH 211: Intermediate Calculus and Differential Equations with Applications

3 Credits

Topics in ordinary differential equations, linear algebra, complex numbers, Eigenvalue solutions and Laplace transform methods. MATH 211 Intermediate Calculus and Differential Equations with Applications (4) MATH 211 is a three-credit course to be taken after MATH 210. The content of the course is geared toward the needs of engineering technology majors and places a large emphasis on technology and applications. The course provides mathematical tools required in the engineering technology courses at the sixth semester and above. A primary goal is to have students use technology to solve more realistic problems than the standard simplistic ones that can be solved by "pencil and paper." Student evaluation will be performed through exams, quizzes, graded assignments, and a cumulative final exam.

Enforced Prerequisite at Enrollment: MATH 210

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

MATH 220: Matrices

2-3 Credits

Systems of linear equations; matrix algebra; eigenvalues and eigenvectors; linear systems of differential equations. MATH 220 Matrices (2-3) (GQ) (BA) This course meets the Bachelor of Arts degree requirements. Systems of linear equations appear everywhere in mathematics and its applications. MATH 220 will give students the basic tools necessary to analyze and understand such systems. The initial portion of the course teaches the fundamentals of solving linear systems. This requires the language and notation of matrices and fundamental techniques for working with matrices such as row and column operations, echelon form, and invertibility. The determinant of a matrix is also introduced; it gives a test for invertibility. In the second part of the course the key ideas of eigenvector and eigenvalue are developed. These allow one to analyze a complicated matrix problem into simpler components and appear in many disguises in physical problems. The course also introduces the concept of a vector space, a crucial element in future linear algebra courses. This course is completed by a wide

variety of students across the university, including students majoring in engineering programs, the sciences, and mathematics. (In case of many of these students, MATH 220 is a required course in their degree program.)

Enforced Prerequisite at Enrollment: MATH 110 or MATH 140 or MATH 140B or MATH 140E or MATH 140G or MATH 140H

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 220H: Honors Matrices

2-3 Credits

Honors course in systems of linear equations; matrix algebra; eigenvalues and eigenvectors; linear systems of differential equations. MATH 220H Honors Matrices (2) (GQ)(BA) This course meets the Bachelor of Arts degree requirements. This course is intended as an introduction to linear algebra with a focus on solving systems for linear equations. Topics include systems of linear equations, row reduction and echelon forms, linear independence, introduction to linear transformations, matrix operations, inverse matrices, dimension and rank, determinants, eigenvalues, eigenvectors, diagonalization, and orthogonality. The typical delivery format for the course is two 50-minute lectures per week, with typical assessment tools including examinations, quizzes, homework, and writing assignments. In contrast to the non-honors version of this course, the honors version is typically more theoretical and will often include more sophisticated problems. Moreover, certain topics are often discussed in more depth and are sometimes expanded to include applications which are not visited in the non-honors version of the course.

Enforced Prerequisite at Enrollment: MATH 110 or MATH 140 or MATH 140B or MATH 140E or MATH 140G or MATH 140H

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

Honors

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MATH 230: Calculus and Vector Analysis

4 Credits

Three-dimensional analytic geometry; vectors in space; partial differentiation; double and triple integrals; integral vector calculus. Students who have passed either Math 231 or MATH 232 may not schedule Math 230 or MATH 230H for credit.

Enforced Prerequisite at Enrollment: MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H

Bachelor of Arts: Quantification

MATH 230H: Honors Calculus and Vector Analysis

4 Credits

Honors course in three-dimensional analytic geometry; vectors in space; partial differentiation; double and triple integrals; integral vector calculus. Students who have passed either MATH 231 or MATH 232 may not schedule MATH 230 or MATH 230H for credit. MATH 230H Honors Calculus and Vector Analysis (4) This course is the third in a

sequence of three calculus courses designed for students in engineering, science, and related fields. Topics include vectors in space, dot products, cross products; vector-valued functions, modeling motion, arc length, curvature; functions of several variables, limits, continuity, partial derivatives, directional derivatives, gradient vectors, Lagrange multipliers; double integrals, triple integrals; line integrals, Green's Theorem, Stokes' Theorem, the Divergence Theorem. The typical delivery format for the course is four 50-minute lectures per week, with typical assessment tools including examinations, quizzes, homework, and writing assignments. In contrast to the non-honors version of this course, the honors version is typically more theoretical and will often include more sophisticated problems. Moreover, certain topics are often discussed in more depth and are sometimes expanded to include applications which are not visited in the non-honors version of the course.

Enforced Prerequisite at Enrollment: MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H
Bachelor of Arts: Quantification
Honors

MATH 231: Calculus of Several Variables

2 Credits

Analytic geometry in space; partial differentiation and applications. Students who have passed MATH 230 or MATH 230H may not schedule this course.

Enforced Prerequisite at Enrollment: MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H
Bachelor of Arts: Quantification

MATH 231H: Honors Calculus of Several Variables

2 Credits

Honors course in analytic geometry in space; partial differentiation and applications. Students who have passed MATH 230 or MATH 230H may not schedule this course. MATH 231H Honors Calculus of Several Variables (2) This course covers a subset of the material found in MATH 230. Topics include vectors in space, dot products, cross products; vector-valued functions, modeling motion, arc length, curvature; functions of several variables, limits, continuity, partial derivatives, directional derivatives, gradient vectors, Lagrange multipliers. The typical delivery format for the course is two 50-minute lectures per week, with typical assessment tools including examinations, quizzes, homework, and writing assignments. In contrast to the non-honors version of this course, the honors version is typically more theoretical and will often include more sophisticated problems. Moreover, certain topics are often discussed in more depth and are sometimes expanded to include applications which are not visited in the non-honors version of the course.

Enforced Prerequisite at Enrollment: MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H
Bachelor of Arts: Quantification
Honors

MATH 232: Integral Vector Calculus

2 Credits

Multidimensional analytic geometry, double and triple integrals; potential fields; flux; Green's, divergence and Stokes' theorems. Students who have passed MATH 230 may not schedule this course for credit.

Enforced Prerequisite at Enrollment: MATH 231 or MATH 231H
Bachelor of Arts: Quantification

MATH 240: Mathematical Methods for Biology and the Life Sciences

4 Credits

This course will cover systems of differential equations, multivariable calculus, and applications to biology and the life sciences. Students will learn about complex numbers, and their relation to oscillations. Analysis of biologically relevant mathematical models will include the linear stability of coupled nonlinear systems, and the method of separation of timescales. The course will also introduce probability theory in a biological context, including conditional probability, Bayes Theorem, probability distributions, and stochastic modeling in the life sciences.

Enforced Prerequisites at Enrollment: MATH 141B or instructor approval

MATH 250: Ordinary Differential Equations

3 Credits

First- and second-order equations; special functions; Laplace transform solutions; higher order equations. Students who have passed MATH 251 may not schedule this course for credit.

Enforced Prerequisite at Enrollment: MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H
Bachelor of Arts: Quantification

MATH 251: Ordinary and Partial Differential Equations

4 Credits

First- and second-order equations; special functions; Laplace transform solutions; higher order equations; Fourier series; partial differential equations.

Enforced Prerequisite at Enrollment: MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H
Bachelor of Arts: Quantification

MATH 251H: Honors Ordinary and Partial Differential Equations

4 Credits

Honors course in first- and second-order equations; special functions; Laplace transform solutions; higher order equations; Fourier series; partial differential equations. MATH 251H Honors Ordinary and Partial Differential Equations (4) This course serves as an introduction to ordinary and partial differential equations. Topics include various techniques for solving first and second order ordinary differential equations, an introduction to numerical methods, solving systems of two ordinary differential equations, nonlinear differential equations and stability, Laplace transforms, Fourier series, and partial differential equations. The typical delivery format for the course is four 50-minute lectures per week, with typical assessment tools including examinations, quizzes, homework, and writing assignments. In contrast to the non-honors version of this course, the honors version is typically more

theoretical and will often include more sophisticated problems. Moreover, certain topics are often discussed in more depth and are sometimes expanded to include applications which are not visited in the non-honors version of the course.

Enforced Prerequisite at Enrollment: MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H
Bachelor of Arts: Quantification
Honors

MATH 252: Partial Differential Equations

1 Credits

Fourier series; partial differential equations. Students who have passed MATH 251 may not schedule this course for credit. This course serves as the continuation of MATH 250 (Ordinary Differential Equations) and provides an elementary treatment of partial differential equations and Fourier series. Once a student completes both MATH 250 (3 credits) and MATH 252 (1 credit), the student will have completed all of the material in MATH 251 (4 credits). In particular, the student will be able to find solutions to given partial differential equations and will be able to utilize the tools from the field of Fourier series in the process.

MATH 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Quantification

MATH 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Quantification

MATH 310: Elementary Combinatorics

3 Credits

Fundamental techniques of enumeration and construction of combinatorial structures, permutations, recurrences, inclusion-exclusion, permanents, 0, 1- matrices, Latin squares, combinatorial designs.

Enforced Prerequisite at Enrollment: MATH 220 or MATH 220H
Bachelor of Arts: Quantification

MATH 310H: Honors Concepts of Combinatorics

3 Credits

Honors version of elementary and enumerative combinatorics.

Prerequisite: MATH 220
Bachelor of Arts: Quantification
Honors

MATH 311M: Honors Concepts of Discrete Mathematics

3 Credits

Basic methods of mathematical thinking and fundamental mathematical structures, primarily in the context of numbers, groups, and symmetries.

Bachelor of Arts: Quantification
Honors
Writing Across the Curriculum

MATH 311W: Concepts of Discrete Mathematics

3-4 Credits

Introduction to mathematical proofs; elementary number theory and group theory. Students who have passed CMPSC 360 may not schedule this course for credit.

Enforced Prerequisite at Enrollment: MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H
Bachelor of Arts: Quantification
Writing Across the Curriculum

MATH 312: Concepts of Real Analysis

3 Credits

An introduction to rigorous analytic proofs involving properties of real numbers, continuity, differentiation, integration, and infinite sequences and series.

Enforced Prerequisite at Enrollment: MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H
Bachelor of Arts: Quantification

MATH 312H: Honors Concepts of Real Analysis

3 Credits

Basic methods of mathematical thinking and fundamental structures, primarily in the context of infinite sets, real numbers, and metric spaces.

Enforced Prerequisite at Enrollment: MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H
Bachelor of Arts: Quantification
Honors

MATH 313H: Concepts of Geometry

3 Credits

Development thorough understanding and technical mastery of foundations of modern geometry. MATH 313H Concepts of Geometry (3) The central aim of this course is to develop thorough understanding and technical mastery of foundations of modern geometry. Basic high school geometry is assumed; axioms are mentioned, but not used to deduce theorems. Approach in development of the Euclidean geometry of the plane and the 3-dimensional space is mostly synthetic with an emphasis on groups of transformations. Linear algebra is invoked to clarify and generalize the results in dimension 2 and 3 to any dimension. It culminates in the last part of the course where six 2-dimensional geometries and their symmetry groups are discussed. This course is a part of a new "pre-MASS" program (PMASS) aimed at freshman/ sophomore level students, which will operate in steady state in the spring semesters. This course is directly linked with a proposed course Math 313R, its 1-credit recitation component. It is highly recommended to all

mathematics, physics and natural sciences majors who are graduate school bound, and is a great opportunity for all Schreyer Scholars. The following topics will be covered: Euclidean geometry of the plane (distance, isometries, scalar product of vectors, examples of isometries: rotations, reflections, translations, orientation, symmetries of planar figures, review of basic notions of group theory, cyclic and dihedral groups, classification of isometries of Euclidean plane, discrete groups of isometries and crystallographic restrictions. similarity transformations, selected results from classical Euclidean geometry); Euclidean geometry of the 3-dimensional space and the sphere (distance, isometries, scalar product of vectors, planes and lines in the 3-dimensional space, normal vectors to planes, classification of pairs of lines, isometries with a fixed point: rotations and reflections, orientation, isometries of the sphere, classification of orientation-reversing isometries with a fixed point, finite groups of isometries of the 3-dimensional space, existence of a fixed point, examples: cyclic, dihedral, and groups of symmetries of Platonic solids, classification of isometries without fixed point: translations and screw-motions, intrinsic geometry of the sphere, elliptic plane: a first example of non-Euclidean geometry); Elements of linear algebra and its application to geometry in 2, 3, and n dimension (real and complex vector spaces. linear independence of vectors, basis and dimension, eigenvalues and eigenvectors, diagonalizable matrices, classification of matrices in dimension 2: elliptic, hyperbolic and parabolic matrices, orthogonal matrices and isometries of the n-dimensional space); Six 2-dimensional geometries (Projective geometry, affine geometry, inversions and conformal geometry, Euclidean geometry revisited, geometry of elliptic plane, hyperbolic geometry). The achievement of educational objectives will be assessed through weekly homework, class participation, and midterm and final exams.

Enforced Prerequisite at Enrollment: MATH 140H and MATH 311M or Concurrent: MATH 312H
Honors

MATH 316: Upperclass Seminar: Careers, Graduate Study, and Opportunities in Mathematics

1 Credits

This course is designed to prepare sophomore, junior and senior mathematics majors to take advantage of opportunities provided by the mathematics department and university in selecting and pursuing a career path. Some class sessions will involve professional development activities and information about career-related resources; others will consist of presentations and discussions with guest lecturers chosen to represent possible career pathways in mathematics and related fields.

Enforced Prerequisite at Enrollment: thirds-semester standing

MATH 318: Elementary Probability

3 Credits

Combinatorial analysis, axioms of probability, conditional probability and independence, discrete and continuous random variables, expectation, limit theorems, additional topics. Students who have passed either MATH(STAT) 414 or 418 may not schedule this course for credit.

Enforced Prerequisite at Enrollment: MATH 141

Cross-listed with: STAT 318

Bachelor of Arts: Quantification

MATH 319: Elementary Mathematical Statistics

3 Credits

Statistical inference: principles and methods, estimation and testing hypotheses, regression and correlation analysis, analysis of variance, computer analysis. Students who have passed STAT (MATH) 415 may not schedule this course for credit.

Enforced Prerequisite at Enrollment: MATH 318 or STAT 318 or MATH 414 or STAT 414 or STAT 418 or MATH 418

Cross-listed with: STAT 319

Bachelor of Arts: Quantification

MATH 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Quantification

MATH 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Quantification

International Cultures (IL)

MATH 400: Teaching in Mathematics

1-2 Credits/Maximum of 6

Mathematics Learning Assistants will participate in the instruction of undergraduate mathematics courses. In MATH 400 Teaching in Mathematics (1-2), students will learn about and gain experience in leading and facilitating in-class and out-of-class group discussions and group problem-solving sessions. Students will be members of a teaching community, interact with a supervising mathematics faculty member, and learn teaching strategies on how to facilitate and help engage undergraduate students in discussions and group work.

Enforced Prerequisite at Enrollment: 4 credits in mathematics and permission of the department Concurrent Course: SC 220

MATH 401: Introduction to Analysis I

3 Credits

Review of calculus, properties of real numbers, infinite series, uniform convergence, power series. Students who have passed Math. 403 may not schedule this course.

Enforced Prerequisite at Enrollment: MATH 230 or MATH 231

Bachelor of Arts: Quantification

MATH 403: Classical Analysis I

3 Credits

Topology of R^n , compactness, continuity of functions, uniform convergence, Arzela-Ascoli theorem in the plane, Stone-Wierstrass theorem.

Enforced Prerequisite at Enrollment: MATH 312

Bachelor of Arts: Quantification

MATH 403H: Honors Classical Analysis I

3 Credits

Development of a thorough understanding and technical mastery of foundations of classical analysis in the framework of metric spaces. MATH 403H Honors Classical Analysis I (3) The central aim of this course is to develop thorough understanding and technical mastery of foundations of classical analysis in the framework of metric spaces rather than multidimensional Euclidean spaces. This level of abstraction is essential since it is in the background of functional analysis, a fundamental tool for modern mathematics and physics. Another motivation for studying analysis in this wider context is that many general results about functions of one or several real variables are more easily grasped at this more abstract level, and, besides, the same methods and techniques are applicable to a wider class of problems, e.g. to the study of function spaces. This approach also brings to high relief some of the fundamental connections between analysis on one hand and (higher) algebra and geometry on the other. This course is a sequel to Math 312H; it is highly recommended to all mathematics, physics and natural sciences majors who are graduate school bound, and is a great opportunity for all Schreyer Scholars. The following topics will be covered: Metric spaces (topology, convergence, Cauchy sequences and completeness); Maps between metric spaces (continuous maps and homeomorphisms, stronger continuity properties: uniform continuity, Hoelder and Lipschitz continuity, contraction mapping principle, points of discontinuity and the Baire Category Theorem); Compact metric spaces (continuity and compactness, connectedness, total boundedness, coverings and Lebesgue number, perfect metric spaces, characterization of Cantor sets, fractals); Function spaces (spaces of continuous maps, uniform continuity and equicontinuity, Arzela-Ascoli Theorem, uniform approximation by polynomials. Stone-Weierstrass Theorem).

Enforced Prerequisite at Enrollment: MATH 311M and MATH 312H

Bachelor of Arts: Quantification
Honors

MATH 404: Classical Analysis II

3 Credits

Differentiation of functions from \mathbb{R}^n to \mathbb{R}^m , implicit function theorem, Riemann integration, Fubini's theorem, Fourier analysis.

Enforced Prerequisite at Enrollment: MATH 403

Bachelor of Arts: Quantification

MATH 405: Advanced Calculus for Engineers and Scientists I

3 Credits

Vector calculus, linear algebra, ordinary and partial differential equations. Students who have passed MATH 411 or 412 may not take this course for credit.

Enforced Prerequisite at Enrollment: (MATH 230 or MATH 231) and (MATH 250 or MATH 251)

Bachelor of Arts: Quantification

MATH 406: Advanced Calculus for Engineers and Scientists II

3 Credits

Complex analytic functions, sequences and series, residues, Fourier and Laplace transforms. Students who have passed MATH 421 may not take this course for credit.

Enforced Prerequisite at Enrollment: MATH 405

Bachelor of Arts: Quantification

MATH 410: Complex Analysis for Mathematics and Engineering

3 Credits

Complex analytic functions; Cauchy-Riemann equations; complex contour integrals; Cauchy's integral formula; Taylor and Laurent series; residue theory; applications in engineering. MATH 410 Complex Analysis for Mathematics and Engineering (3) A succinct stand-alone course description (up to 400 words) to be made available to students through the on-line Bulletin and Schedule of Courses. This is a complex analysis course designed for students in mathematics, applied mathematics, engineering, science, and related fields. Topics include complex numbers; analytic functions, complex differentiability, and the Cauchy-Riemann equations; complex exponential, logarithmic, power, and trigonometric functions; complex contour integrals; Cauchy's theorem; Cauchy's integral formula; Taylor and Laurent series; residue theory; and various applications in areas of science and engineering. This course focuses on the definitions, concepts, calculation techniques, supporting theory, and examples of applications suited to the usage of complex analysis in mathematics, applied mathematics, science, and engineering. Students who have passed MATH 406 or MATH 421 may not take this course for credit.

Enforced Prerequisite at Enrollment: MATH 230 or MATH 232

MATH 411: Ordinary Differential Equations

3 Credits

Linear ordinary differential equations; existence and uniqueness questions; series solutions; special functions; eigenvalue problems; Laplace transforms; additional topics and applications.

Enforced Prerequisite at Enrollment: (MATH 230 or MATH 231) and (MATH 250 or MATH 251)

Bachelor of Arts: Quantification

MATH 412: Fourier Series and Partial Differential Equations

3 Credits

Orthogonal systems and Fourier series; derivation and classification of partial differential equations; eigenvalue function method and its applications; additional topics. MATH 412 Fourier Series and Partial Differential Equations (3) (BA) This course meets the Bachelor of Arts degree requirements. The purpose of MATH 412 is to introduce students to the origins, theory, and applications of partial differential equations. Several basic physical phenomena are considered - including flows, vibrations, and diffusions - and used to derive the relevant equations. The fundamentals of the mathematical theory of partial differential equations are motivated and developed for the students through the systematic exploration of these classic physical systems and their corresponding equations: the Laplace, wave, and heat equations. In addition to treating the physical origins of the equations, this course focuses on solving evolution equations as initial value problems on unbounded domains

(the Cauchy problem), and also on solving partial differential equations on bounded domains (boundary value problems). There is not one but many techniques for solving these equations, and the course presents some aspect of the expansion in orthogonal functions (including Fourier series), eigenvalue theory, functional analysis, and the use of separation of variables, Fourier transforms, and Laplace transforms to solve PDEs by converting them to ordinary differential equations. This course currently serves a cross-section of students at the university with interests or the need for this advanced subject mathematics, including students majoring in the engineering program, meteorology, physics, and mathematics. This typically includes the most advanced physics, engineering, and meteorology students, as well as mathematics majors with interests in applied mathematics.

Enforced Prerequisite at Enrollment: MATH 230 and (MATH 250 or MATH 251)

Bachelor of Arts: Quantification

MATH 414: Introduction to Probability Theory

3 Credits

STAT(MATH) 414 is an introduction to the theory of probability for students in statistics, mathematics, engineering, computer science, and related fields. The course presents students with calculus-based probability concepts and those concepts can be used to describe the uncertainties present in real applications. Topics include probability spaces, discrete and continuous random variables, transformations, expectations, generating functions, conditional distributions, law of large numbers, central limit theorems. Students may take only one course from STAT(MATH) 414 and 418.

Enforced Prerequisite at Enrollment: MATH 230 or Concurrent: MATH 232 or (MATH 231 and RM 214)

Cross-listed with: STAT 414

MATH 415: Introduction to Mathematical Statistics

3 Credits

A theoretical treatment of statistical inference, including sufficiency, estimation, testing, regression, analysis of variance, and chi-square tests.

Enforced Prerequisite at Enrollment: MATH 414 or STAT 414

Cross-listed with: STAT 415

MATH 416: Stochastic Modeling

3 Credits

Review of distribution models, probability generating functions, transforms, convolutions, Markov chains, equilibrium distributions, Poisson process, birth and death processes, estimation.

Enforced Prerequisite at Enrollment: (STAT 318 or MATH 318 or STAT 414 or MATH 414) and (MATH 230 or MATH 232)

Cross-listed with: STAT 416

MATH 417: Qualitative Theory of Differential Equations

3 Credits

Linear differential equations, stability of stationary solutions, ordinary bifurcation, exchange of stability, Hopf bifurcation, stability of periodic solutions, applications. MATH 417 Qualitative Theory of Differential Equations (3) (BA) This course meets the Bachelor of Arts degree

requirements. The main objective of the course is the qualitative theory of ordinary differential equations such as existence and uniqueness of solutions, dependence on initial data and parameters, and basic stability of solutions for both linear and nonlinear equations. It is designed to introduce students to modern concepts including the bifurcation theory, intermittent (transitional) and chaotic behavior of solutions and dynamical system approach to differential equations. Along the way, a number of applications are discussed and students get familiar with some basic examples illustrating main principles of the theory, such as Lorenz attractor, predator-prey models, etc. The course is completed by students majoring in engineering programs, the sciences, and mathematics.

Enforced Prerequisite at Enrollment: MATH 220 and (MATH 250 or MATH 251)

Bachelor of Arts: Quantification

MATH 418: Introduction to Probability and Stochastic Processes for Engineering

3 Credits

Introduction to probability axioms, combinatorics, random variables, limit laws, and stochastic processes. Students may take only one course from MATH414 / STAT 414 and MATH 418 / STAT 418 for credit. STAT 418 / MATH 418 Introduction to Probability and Stochastic Processing for Engineering (3) This course gives an introduction to probability and random processes. The topics are not covered as deeply as in a semester-long course in probability only or in a semester-long course in stochastic processes only. It is intended as a service course primarily for engineering students, though no engineering background is required or assumed. The topics covered include probability axioms, conditional probability, and combinatorics; discrete random variables; random variables with continuous distributions; jointly distributed random variables and random vectors; sums of random variables and moment generating functions; and stochastic processes, including Poisson, Brownian motion, and Gaussian processes.

Enforced Prerequisite at Enrollment: MATH 230 or MATH 231

Cross-listed with: STAT 418

MATH 418H: Probability

3 Credits

Fundamentals and axioms, combinatorial probability, conditional probability and independence, probability laws, random variables, expectation; Chebyshev's inequality. Students may take only one course from MATH(STAT) 414 and 418 for credit.

Cross-Listed

Honors

MATH 419: Theoretical Mechanics

3 Credits

Principles of Newtonian, Lagrangian, and Hamiltonian mechanics of particles with applications to vibrations, rotations, orbital motion, and collisions. PHYS 419 / MATH 419 Theoretical Mechanics (3) A second course in classical mechanics, required of all physics majors who typically take it in their 5th or 6th semester. The course includes a review of relevant mathematics, detailed discussions of advanced topics in Newtonian mechanics, introductions to Lagrangian and Hamiltonian dynamics, and applications to such forced oscillations, orbital motion,

vibrational motion and normal modes, rigid body motion, and collisions. It is a prerequisite for Physics 461, which is a second semester extension. It is also a valuable background for most 400-level physics courses, especially Physics 410.

Enforced Prerequisite at Enrollment: (MATH 230 or MATH 231) and (MATH 250 or MATH 251) and PHYS 212 and PHYS 213 and PHYS 214
Cross-listed with: PHYS 419

MATH 421: Complex Analysis

3 Credits

Infinite sequences and series; algebra and geometry of complex numbers; analytic functions; integration; power series; residue calculus; conformal mapping, applications.

Enforced Prerequisite at Enrollment: (MATH 230 or MATH 232 or MATH 405) and (MATH 401 or MATH 403)
Bachelor of Arts: Quantification

MATH 422: Wavelets and Fourier Analysis: Theory and Applications

3 Credits

Fundamental mathematical issues of the theory of wavelets for senior undergraduate and graduate students in mathematics, engineering, physics, and computer science.

Bachelor of Arts: Quantification

MATH 425: Introduction to Operations Research

3 Credits

Nature of operations research, problem formulation, model construction, deriving solution from models, allocation problems, general linear allocation problem, inventory problems.

Enforced Prerequisite at Enrollment: MATH 141 and MATH 220
Bachelor of Arts: Quantification

MATH 426: Introduction to Modern Geometry

3 Credits

Plane and space curves; space surfaces; curvature; intrinsic geometry of surfaces; Gauss-Bonnet theorem; covariant differentiation; tensor analysis.

Enforced Prerequisite at Enrollment: MATH 401 or MATH 403
Bachelor of Arts: Quantification

MATH 427: Foundations of Geometry

3 Credits

Euclidean and various non-Euclidean geometries and their development from postulate systems. Students who have passed MATH 427 may not schedule MATH 471.

Enforced Prerequisite at Enrollment: MATH 230 or MATH 231
Bachelor of Arts: Quantification

MATH 428: Geometry for Teachers

1 Credits

Research in mathematics education using ideas from Euclidean and non-Euclidean geometry. Students who have passed MATH 471 may not schedule MATH 427. MATH 428 Geometry for Teachers (1) MATH 428 is designed to introduce students to mathematics education and research in education. The student will present topics in written and verbal classroom reports. Students will be evaluated on research papers and classroom presentations of those papers, classroom technology demonstration of geometry topics, and classroom demonstration of teaching geometry. This course supplements MATH 427 by providing the education component that is required by the state of Pennsylvania for obtaining certification in teaching mathematics. This course is offered only at Penn State Erie, The Behrend College.

Enforced Prerequisite at Enrollment: MATH 311W . Prerequisite or concurrent: MATH 427
Bachelor of Arts: Quantification

MATH 429: Introduction to Topology

3 Credits

Metric spaces, topological spaces, separation axioms, product spaces, identification spaces, compactness, connectedness, fundamental group.

Enforced Prerequisite at Enrollment: MATH 311W
Bachelor of Arts: Quantification

MATH 430: Linear Algebra and Discrete Models I

3 Credits

Vector spaces, linear transformations, matrices determinants, characteristic values and vectors, systems of linear equations, applications to discrete models.

Enforced Prerequisite at Enrollment: MATH 220
Bachelor of Arts: Quantification

MATH 435: Basic Abstract Algebra

3 Credits

Elementary theory of groups, rings, and fields. Students who have passed MATH 435 may not schedule MATH 470.

Enforced Prerequisite at Enrollment: MATH 311W or MATH 315
Bachelor of Arts: Quantification

MATH 436: Linear Algebra

3 Credits

Vector spaces and linear transformations, canonical forms of matrices, elementary divisors, invariant factors; applications. Students who have passed MATH 436 may not schedule MATH 441.

Enforced Prerequisite at Enrollment: MATH 311W
Bachelor of Arts: Quantification

MATH 436H: Linear Algebra

3 Credits

Vector spaces and linear transformations, canonical forms of matrices, elementary divisors, invariant factors; applications.

Honors

MATH 437: Algebraic Geometry

3 Credits

Study of curves in the plane defined by polynomial equations $p(x,y)=0$. Projective equivalence, singular points, classification of cubics. MATH 437 Algebraic Geometry (3)(BA) This course meets the Bachelor of Arts degree requirements. The geometric study of algebraic equations is one of the oldest and deepest parts of mathematics, and it lies at the heart of modern developments in geometry, algebra, number theory and physics. Students completing MATH 437 will understand many new algebraic and geometric ideas by studying examples of curves defined by equations of degrees 2 and 3 in the plane. First come conics (given by equations of degree 2 in two variables). Rigid motions, similarities, and affine transformations give different classifications of them. New ideas then show how to get a conic through any five points and prove Pascal's theorem about six points on a conic. Special cases suggest extension of the usual plane to the projective plane, with "points at infinity," homogeneous coordinates, and projective transformations. The main part of the course turns to equations of degree 3 and their singularities, flex points, tangents, and degeneracies. Several new ideas, both algebraic and analytic, are brought in to prove the existence of complex flex points on singular cubics and then real flex points on nonsingular real cubics. There is then a classification on complex projective cubics by a single parameter and finally a full classification of all real projective cubics. As time permits, relations to further topics are sketched: addition of points on a nonsingular cubic, Mordell's theorem, doubly periodic functions, and Fermat's last theorem. The course is typically taken by mathematics majors.

Enforced Prerequisite at Enrollment: (MATH 230 or MATH 231) and MATH 311W

Bachelor of Arts: Quantification

MATH 441: Matrix Algebra

3 Credits

Determinants, matrices, linear equations, characteristic roots, quadratic forms, vector spaces. Students who have passed Math 436 may not schedule this course.

Enforced Prerequisite at Enrollment: MATH 220

Bachelor of Arts: Quantification

MATH 448: Mathematics of Finance

3 Credits

The course provides a foundational knowledge of the mathematics and mathematical models of finance, primarily of option pricing, hedging, and portfolio optimization. The topics include the definition of various financial securities and instruments (e.g. bonds, stocks, forward contracts, and options), the theory of interest, the No-Arbitrage Principle, measures of return and volatility, the Markowitz model of portfolio theory, the Capital Asset Pricing Model, the pricing of forward contracts, option

trading strategies, the pricing of options via binomial models and the Black-Scholes model, and principles of hedging.

Enforced Prerequisite at Enrollment: MATH 141 and (STAT 200 or STAT 301 or MATH 318 or STAT 318 or STAT 401 or MATH 414 or STAT 414)

MATH 449: Applied Ordinary Differential Equations

3 Credits

Differential and difference equations and their application to biology, chemistry, and physics; techniques in dynamical systems theory. MATH 449 Mathematical Modeling (3) Many phenomena that arise in the natural sciences, such as the motion of pendulum or signal conduction in neurons or oscillations in certain chemical reactions, can be modeled using nonlinear differential equations. This course will develop the mathematical techniques needed to investigate such differential equations. These techniques include the study of equilibria, stability, phase plane analysis, bifurcation analysis and chaos. The course will assume prior knowledge of ordinary differential equations at the MATH 250/251 level; this is the only prerequisite for the course. We will focus on understanding and interpreting the behavior of the solutions to the differential equation models rather than on deriving the model equations themselves. Evaluation will be based on midterm exams, a final exam, graded homework, and graded longer projects which may involve computer work. The course should be of interest to any science or engineering major and some models will be chosen to reflect the fields of interest of the class. The goal is for the students to be able to apply the techniques learned in the course to mathematical models that they will encounter in other classes or situations. The class will be offered every other year with an expected enrollment of 10-15 students.

Enforced Prerequisite at Enrollment: MATH 250 or MATH 251

Bachelor of Arts: Quantification

MATH 450: Mathematical Modeling

3 Credits

Constructing mathematical models of physical phenomena; topics include pendulum motion, polymer fluids, chemical reactions, waves, flight, and chaos. MATH 450 Mathematical Modeling (3) The purpose of the course is to introduce mathematical modeling, i.e., the construction of mathematical structures which capture relevant physical phenomena. The course will systematically explore mathematical ideas and tools used to study the natural world. Particular emphasis will be placed on the process of creating a mathematical model starting from a physical scenario. Typically this process will begin with an experiment either demonstrated in the W. G. Pritchard Lab or performed by the students in class. Once a particular model has been developed, students will use mathematical analysis and experimentation to determine the properties and relevance of the model, and to make predictions. Often the model can be satisfactory; however, many times one also finds new features of the system that are not adequately accounted for in the model, and the process begins again. It is this cycle the course will focus on. For a given phenomenon (e.g., flow of viscous fluid, pendulum motion) several models may be compared and contrasted, and possible simplifications will be discussed. A significant aspect of the course is its laboratory component, in which the students will perform experiments or observe demonstrations. However, the main emphasis will be placed on creating and rigorously analyzing the mathematical aspects of the models. Instead of presenting a finely tuned model for a given phenomenon, this course will try to convey some of the heuristic, intuitive, and mathematical ideas employed in modeling. Examples

of physical systems to be considered include: simple and compound pendulum motion, chemical oscillations, water waves, and elastic behavior of polymer solutions. The course is open to a wide range of undergraduate as well as graduate students with majors in mathematics, biology, chemistry, engineering, and physics. The course should be accessible to students with some basic knowledge of mathematical analysis and differential equations. Main topics include: modeling with ordinary differential equations; bifurcation theory and stability; traveling waves in epidemics, chemical reactions, free fluid surfaces, and polymer solutions; fluctuations in nature, stochastic differential equations and chaos.

Enforced Prerequisite at Enrollment: (MATH 315 and MATH 430) or MATH 405 or MATH 412
Bachelor of Arts: Quantification

MATH 451: Numerical Computations

3 Credits

ALGORITHMS FOR INTERPOLATION, APPROXIMATION, INTEGRATION, NONLINEAR EQUATIONS, LINEAR SYSTEMS, FAST FOURIER TRANSFORM, AND DIFFERENTIAL EQUATIONS EMPHASIZING COMPUTATIONAL PROPERTIES AND IMPLEMENTATION. STUDENTS MAY TAKE ONLY ONE COURSE FOR CREDIT FROM MATH 451 AND 455.

Enforced Prerequisite at Enrollment: (CMPSC 101 or CMPSC 121 or CMPSC 131 or CMPSC 200 or CMPSC 201) and (MATH 230 or MATH 231)
Cross-listed with: CMPSC 451
Bachelor of Arts: Quantification

MATH 452: Deep Learning Algorithms and Analysis

3 Credits

This is an undergraduate course on the introduction of basic mathematical, numerical and practical aspects of deep learning techniques. It will provide students with the mathematical background and also practical tools needed to understand, to analyze and to further develop numerical methods for deep learning and applications. The course is simultaneously geared towards math students who want to learn about the emerging technology of deep learning and also towards students from other fields who are interested in deep learning application but would like to strengthen their theoretical foundation and mathematical understanding. This course will allow students to fulfill 400-level math course requirement for Math Majors/Minors (or for other Majors as approved by student advisor). The course will cover some basic deep learning models such as the basic deep neural networks, convolutional neural networks, training algorithms such as stochastic gradient descent methods, popular data bases such as MNIST and CIFAR and specific applications such as image classifications. Traditional numerical methods such as finite element and multigrid method will also be introduced to motivate and to understand how and why deep neural networks work.

Enforced Prerequisite at Enrollment: MATH 220 and (MATH 230 or MATH 231) and (CMPSC 101 or CMPSC 121 or CMPSC 131 or CMPSC 200 or CMPSC 201)

MATH 455: Introduction to Numerical Analysis I

3 Credits

Floating point computation, numerical rootfinding, interpolation, numerical quadrature, direct methods for linear systems. Students may take only one course for credit from MATH 451 and MATH 455.

Enforced Prerequisite at Enrollment: (CMPSC 201 or CMPSC 202 or CMPSC 121 or CMPSC 131) and MATH 220 and (MATH 230 or MATH 231)

Cross-listed with: CMPSC 455

Bachelor of Arts: Quantification

MATH 455H: Introduction To Numerical Analysis I

3 Credits

FLOATING POINT COMPUTATION, NUMERICAL ROOTFINDING, INTERPOLATION, NUMERICAL QUADRATURE, DIRECT METHODS FOR LINEAR SYSTEMS. STUDENTS MAY TAKE ONLY ONE COURSE FOR CREDIT FROM MATH 451 AND MATH 455.

Cross-Listed

Honors

MATH 456: Introduction to Numerical Analysis II

3 Credits

Polynomial and piecewise polynomial approximation, matrix least squares problems, numerical solution of eigenvalue problems, numerical solution of ordinary differential equations.

Enforced Prerequisite at Enrollment: MATH 455

Cross-listed with: CMPSC 456

Bachelor of Arts: Quantification

MATH 457: Introduction to Mathematical Logic

3 Credits

Propositional logic, first-order predicate logic, axioms and rules of inference, structures, models, definability, completeness, compactness. Logic forms the foundation of all mathematical reasoning. To prove a mathematical theorem, one deduces them step by step from basic principles, called axioms, or from other statements previously deduced. Each step of a proof has to be a logically valid rule, such as, for example, the modus ponens: "If A holds, and A implies B, then B holds." In Math 457, students will learn how concepts such as axiom, theorem, proof, and truth can be formulated as a mathematical theory, that is, logical reasoning will be studied as a mathematical subject. The simplest kind of logical system is propositional logic. Here, the basic components are whole statements which are either true or false, and which can be combined using logical connectives such AND, OR, or NOT to form new statements. Its simple nature makes propositional logic a good system to introduce many of the basic ideas: syntax and semantics, proof systems, completeness and compactness. However, propositional logic does not capture mathematical reasoning adequately. Therefore, one considers (first-order) predicate logic. Students will learn how formulas are formed according to syntactical rules. They will also study how a mathematical theory is defined as a set of formulas, how a proof is formally defined, and what constitutes a proof system. The syntactical notions above are contrasted with mathematical semantics, which considers structures over which formulas can be interpreted. This way, one can rigorously define whether a formal statement is true in a given mathematical

structure, in which case we say the structure is a model of the statement. For example, the integers with addition are a model of the statement "for every x there exists a y such that $x+y=0$ ". A central goal of mathematical logic is to explore how the syntactical side (formulas, axioms, proof systems) and the semantical side (mathematical structures such as the additive group of integers) interact. Two fundamental results in this regard will be covered: the completeness theorem says that one can prove a statement from a set of axioms if and only if the statement is true in any structure satisfying all axioms. The compactness theorem, in turn, is an important consequence of the completeness theorem. It has profound implications for the existence and construction of mathematical structures. Students who would like to enroll in Math 457 are required to have some knowledge of mathematical proofs as provided in Math 311W.

Bachelor of Arts: Quantification

MATH 465: Number Theory

3 Credits

Elements, divisibility of numbers, congruences, residues, and forms. MATH 465 Number Theory (3) (BA) This course meets the Bachelor of Arts degree requirements. This course serves as an upper-level introduction to the fundamentals of elementary number theory. A major emphasis in the course is placed on the role that the prime numbers play in the study of properties of the integers along with the related topics of divisibility and factorization of integers. Additional topics covered in the course include congruences (and the theorems of Euler and Fermat which are classics in this area), properties of arithmetic functions including those which are multiplicative, and other topics such as Pythagorean triples and representations of numbers as sums of squares. This course is completed by a wide variety of students across the university, especially those majoring in mathematics. (In many of the options in the MTHBS degree, MATH 465 can be used to satisfy one of the major requirements.) The course is also taken quite frequently by non-mathematics majors who wish to use the course to satisfy an upper-level requirement for the mathematics minor.

Enforced Prerequisite at Enrollment: MATH 311W

Bachelor of Arts: Quantification

MATH 467: Factorization and Primality Testing

3 Credits

Prime sieves, factoring, computer numeration systems, congruences, multiplicative functions, primitive roots, cryptography, quadratic residues. Students who have passed MATH 465 may not schedule this course.

Enforced Prerequisite at Enrollment: CMPSC 360 or MATH 311W

Cross-listed with: CMPSC 467

Bachelor of Arts: Quantification

MATH 467H: Factorization and Primality Testing

3 Credits

Prime sieves, factoring, computer numeration systems, congruences, multiplicative functions, primitive roots, cryptography, quadratic residues. Students who have passed MATH 465 may not schedule this course.

Honors

MATH 468: Mathematical Coding Theory

3 Credits

Shannon's theorem, block codes, linear codes, Hamming codes, Hadamard codes, Golay codes, Reed-Muller codes, bounds on codes, cyclic codes.

Enforced Prerequisite at Enrollment: MATH 311W

Bachelor of Arts: Quantification

MATH 470: Algebra for Teachers

3 Credits

An introduction to algebraic structures and to the axiomatic approach, including the elements of linear algebra. Designed for teachers and prospective teachers. Students who have passed Math 435 may not schedule this course.

Enforced Prerequisite at Enrollment: MATH 311W

Bachelor of Arts: Quantification

MATH 471: Geometry for Teachers

4 Credits

Problem solving oriented introduction to Euclidean and non-Euclidean geometries; construction problems and geometrical transformations via "Geometer's Sketchpad" software. Intended primarily for those seeking teacher certification in secondary mathematics. Students who have passed MATH 427 may not schedule this course.

Enforced Prerequisite at Enrollment: MATH 311W

Bachelor of Arts: Quantification

MATH 475Y: History of Mathematics

3 Credits

A global survey of the history of mathematics as viewed as a human response to cultural, political, economic, and societal pressures. MATH 475W Introduction to the History of Mathematics (3) (DF) The primary goal of this course is to explore where mathematics comes from, how it was labored on, how ideas were perceived, and how theories developed. Development in algebra, geometry, arithmetic and calculus will be discussed. A second goal is to help students understand the importance of written communication in mathematics and to provide opportunities for students to improve the quality of their writing. The primary means for accomplishing this goal will be four papers, 4-8 pages in length. These will be written for an audience of mathematically-knowledgeable readers. In addition, each quiz will contain at least one essay question. Students will be evaluated on quizzes, homework, papers, and a final exam. Quizzes will total 250 points, the papers 200 points, and the final exam 150 points. This course is a required course in the Mathematical Science (MA SC) BS curriculum. This course is also available as an elective for students in the Computer Science (COMP) program. No special facilities are required for this course. This course will be offered once per year, with an expected enrollment of 25-40 students.

Enforced Prerequisite at Enrollment: MATH 315 or MATH 311W

Bachelor of Arts: Quantification

International Cultures (IL)

United States Cultures (US)

Writing Across the Curriculum

MATH 479: Special and General Relativity

3 Credits

Mathematical description, physical concepts, and experimental tests of special and general relativity. MATH 479 / PHYS 479 Special and General Relativity (3) This course is intended as an elective course (within the undergraduate Physics program) for Physics majors to be taken in their senior year. Intended to be cross-listed with MATH, it can also be used in support of a Mathematics minor and, in some options, within the Math program as a program elective as well. The course significantly expands upon the introduction to Special Relativity (SR) seen in PHYS 237, including discussions of experimental tests of SR and applications to relativistic mechanics. It then introduces students to the mathematical machinery required to understand General Relativity (GR), starting with the description of curved spacetimes and geodesics. It discusses solutions to the Einstein equations and surveys the classic tests which established the validity of General Relativity. It concludes with applications of GR in such areas as black hole physics, the generation and detection of gravitational waves, other topics (such as cosmology, relativistic astrophysics, etc.).

Enforced Prerequisite at Enrollment: PHYS 237 and PHYS 400 and PHYS 419 and (MATH 250 or MATH 251) and (MATH 230 or MATH 231)

Cross-listed with: PHYS 479

Bachelor of Arts: Quantification

MATH 482: Mathematical Methods of Operations Research

3 Credits

Survey of linear and nonlinear programming; mathematics of optimization; queues; simulation.

Enforced Prerequisite at Enrollment: MATH 220 and MATH 230 and STAT 301

Bachelor of Arts: Quantification

MATH 484: Linear Programs and Related Problems

3 Credits

Introduction to theory and applications of linear programming; the simplex algorithm and newer methods of solution; duality theory.

Enforced Prerequisite at Enrollment: MATH 220 and (MATH 230 or MATH 231)

Bachelor of Arts: Quantification

MATH 485: Graph Theory

3 Credits

Introduction to the theory and applications of graphs and directed graphs. Emphasis on the fundamental theorems and their proofs.

Enforced Prerequisite at Enrollment: MATH 311W

Bachelor of Arts: Quantification

MATH 486: Mathematical Theory of Games

3 Credits

Basic theorems, concepts, and methods in the mathematical study of games of strategy; determination of optimal play when possible. MATH 486 Mathematical Theory of Games (3) This course covers several major classes of models and methods for analyzing multi-party strategic

interactions, i.e. games. Specific topics include extensive and strategic form games, continuous games, cooperative games, strictly competitive games, repeated games and adaptive learning, and evolutionary models. The effects on outcomes of information, communication, and other modeling assumptions are discussed. Real-world examples drawn from economics, biology, anthropology, management and everyday life are discussed in detail. When appropriate, computer algebra systems are incorporated in the course. The course typically meets during either two 75-minute periods each week or three 50-minute periods each week. Evaluation methods may vary by instructor, but will typically include a combination of examinations, quizzes, homework, and projects.

Enforced Prerequisite at Enrollment: MATH 220

Bachelor of Arts: Quantification

MATH 490H: Honors Student Colloquium

1 Credits/Maximum of 6

The course comprises colloquium style weekly lectures by visitors and by Penn State faculty covering select topics in classical and contemporary mathematics. Some talks will describe math-intense jobs outside of academia and help the students to plan for their future career. The topics of the lectures will be quite advanced, distinguishing it as an honors course. In addition to attending the talks, toward the end of semester, the students will either give a presentation or write an essay on a mathematical topic of their choice or a topic covered in one of the colloquium talks.

Enforced Prerequisite at Enrollment: MATH 220 and MATH 230 and (MATH 250 or MATH 251) and (MATH 311W or MATH 311M)

Honors

MATH 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Quantification

MATH 494H: Thesis Project

3 Credits/Maximum of 6

The honors thesis proposal must be approved by the thesis supervisor and the honors adviser and submitted to the Schreyer Honors College prior to scheduling this course. Honors students in Mathematics should register for Math 494H in one or both of their last two semesters. All Schreyer Scholars are required to complete an undergraduate honors thesis. This work represents the culmination of a student's honors experience. Through the thesis, the student demonstrates a command of relevant scholastic work and a personal contribution to that scholarship. The thesis document should capture the relevant background, methods and techniques, as well as describe the details of the completion of the individual project.

Bachelor of Arts: Quantification

Honors

MATH 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor
Bachelor of Arts: Quantification

MATH 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Quantification

MATH 496A: **SPECIAL TOPICS**

1-6 Credits

Bachelor of Arts: Quantification

MATH 496H: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

MATH 497: Special Topics

1-9 Credits/Maximum of 999

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Quantification

MATH 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Quantification
International Cultures (IL)

Mathematics Education (MTHED)

MTHED 197: Special Topics

1-9 Credits/Maximum of 18

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest

MTHED 240: Mathematics in Elementary School

3 Credits

This course focuses on the development of content and pedagogy for teaching mathematics to children in elementary school. In this course, future educators consider mathematics from the learner and teacher perspectives. It is intended to help them become knowledgeable of

relevant mathematics concepts. Grounded in contemporary education research, the course will use a variety of instructional strategies, practices, methods, and models to teach and learn mathematics that is appropriate for diverse students with multiple and varied needs. Students engage in mathematical problem solving to support understandings of selected topics of arithmetic, algebra, and geometry, providing future educators the foundation for understanding current curricula and standards. This course is designed to improve mathematical thinking and understanding; make sense of student work and thinking; recognize the challenges diverse children face when learning mathematics; and foster an inquiry stance toward the learning and teaching of mathematics.

MTHED 297: Special Topics

1-6 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MTHED 298: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MTHED 411: Teaching Secondary Mathematics I

3 Credits

Conditions for learning mathematics; problem solving; subject matter types; curriculum; learning goals; nature and history of mathematics at secondary level MTHED 411 Teaching Secondary Mathematics I (3) This is the first of two secondary mathematics methods courses. In this course, participants look at mathematics teaching and learning from a teacher's perspective as well as from a student's perspective. Course participants engage in mathematical problem solving and in the study of the history and nature of mathematics as the foundation for understanding current curriculum and standards. Lesson planning follows from the consideration of different types of mathematical content, including skills and concepts. Looking specifically at the learning of mathematics and questioning to promote higher-level thinking prepares students for field experiences in subsequent semesters. The goals for the course are: - To improve understanding of some of the mathematical concepts which are important in secondary school mathematics. - To improve understanding of the nature of mathematics: what is important, how it is practiced, how mathematical validity is determined. - To improve understanding of the historical development of selected topics from secondary school mathematics. - To develop a vision of good school mathematics. - To see mathematics, mathematics learning, and mathematics teaching as problematic and to develop an inquiry approach to and an ability to reflect on these domains. - To increase understanding of secondary school students' mathematical thinking and understanding. - To increase ability to specify subject matter involved in a specific mathematics topic and make distinctions among them. - To improve understanding of various teaching strategies and their strengths and weaknesses. - To increase ability to choose among lessons and curriculum materials based on the intended mathematical subject matter and the current understandings of the students. - To increase insight into creating a thriving, supportive mathematics classroom culture. Students are evaluated through written assignments, examinations, classroom performance, presentations, and lesson plans.

Prerequisites: Acceptance into SECED and CI 295, CMPSC 101, MATH 140, MATH 141, MATH 220, MATH 311W Corequisite: MTHED 427

MTHED 412W: Teaching Secondary Mathematics II

3 Credits

Assessing learning and instruction; methods of evaluation and grading; long-term planning; accommodating needs of diverse learners; connecting theory and practice. MTHED 412 Teaching Secondary Mathematics II (3) MTHED 412 is an inherently cumulative experience. This course builds upon ideas developed in MTHED 411 and MTHED 427. In particular, students continue to consider types of subject matter, problem solving, lesson planning, technology use, questioning, history and nature of mathematics, and curriculum and standards. MTHED 412 then links understanding of mathematics education with other education courses and with field experiences as well as with understanding of K-16 mathematics. Students focus on lesson and unit development and implementation, assessment and evaluation, classroom management and organization within school communities, and continued professional growth as reflective practitioners. Students are encouraged to draw whenever possible on education psychology, adolescent psychology, educational theory and policy, mathematics, and other bodies of knowledge. In other words, course participants live as teachers with a wealth of knowledge and responsibility to draw on that knowledge in the service of their students. Student goals are to: * Develop an expanded view of the process of teaching mathematics; * Develop a deeper understanding of what it means to learn mathematics and the processes by which mathematics is learned; * Be able to reflect on the instruction and one's learning in MTHED 412 and to relate it to students' learning of secondary mathematics; * Be able to plan and teach appropriate mathematics lessons and reflect on one's teaching; * Be familiar with and be able to draw on a variety of teaching resources; * Investigate current issues influencing evaluation in the secondary mathematics curriculum; * Choose goals and content for middle school and high school mathematics courses; * Develop strategies for assessing and evaluating what students have learned * Create and implement assessment instruments for middle school and high school mathematics courses; * Develop insights into student understanding, especially in relationship to exceptional students as well as to mathematically talented and challenged students; * Identify the needs of diverse learners and to develop strategies to address these needs; * Create classroom environments that are conducive to learning; and * Incorporate appropriate technology in the teaching and learning of mathematics. Students are evaluated through written assignments, examinations, classroom performance, unit lesson and evaluation plans. Throughout the course writing is a process to help students learn course content as well as to help students learn ways of writing needed in the work of the secondary mathematics teacher. The course is offered each Fall and Spring semester with typical enrollment of 20-25 students in each of 1 or 2 sections. Through co-requisite course, CI 495C, students spend approximately five full weeks in secondary school classrooms.

Prerequisites: MTHED 411 Corequisites: CI 495C Recommended Preparation: Recommend Grade of C or better in MTHED 411 Writing Across the Curriculum

MTHED 420: Teaching Mathematics In The Elementary Schools

3 Credits

MTHED 420 is designed to help teacher candidates: 1) to come to see mathematics, mathematics learning, and mathematics teaching as complex and to develop an inquiry approach to these domains; 2)

to improve their understanding of the mathematical concepts and procedures they will teach, and to improve their understanding of children's mathematical learning and thinking about these concepts and procedures; 3) to increase their ability to choose among tasks, lessons, and curriculum materials from a variety of print and electronic sources based on intended mathematical understandings; 4) to develop a productive mathematics culture in the classroom; and 5) to explore key educational issues, such as equity, assessment, and technology, with respect to mathematics teaching and learning. In the course, teacher candidates explore important mathematical ideas and their development. They will become familiar with important pedagogical principles and questions. To help candidates develop an inquiry approach toward teaching mathematics, course assignments engage them in reflecting on readings and class discussions, their previous experiences as a learner of mathematics, and their ongoing experiences observing and teaching in classroom settings. MTHED 420 is a part of a block of courses in a PSU teacher education program that is unified by a basic set of principles and a field experience component.

Prerequisites: 4th Semester standing and MATH 200

MTHED 427: Teaching Mathematics in Technology-Intensive Environments

3 Credits

Interaction among pedagogy, content, and technology in mathematics teaching and learning in technology-intensive environments; secondary, early college curricula; laboratory experience. MTHED 427 Teaching Mathematics in Technology-Intensive Environments (3) Students should expect to learn something about each of several common types of mathematics software, new things about secondary school mathematics, and a lot about how to make decisions about how to use technology as an effective mathematics teacher. Students will also use communication software (e.g., word processors, e-mail, PowerPoint) not as objects of our discussion but in simple ways to generate and share products, assignments, and ideas. The course has a significant lab component. Students will be assessed based on written assignments, lesson plans, oral presentations, class participation, and examinations. The course is offered each fall and spring semester with an approximate enrollment of 20 students per semester. Students must enroll concurrently in MTHED 411.

Prerequisites: Acceptance into SECED and CI 295, CMPSC 101, MATH 140, MATH 141, MATH 220, MATH 311 Corequisite: MTHED 411

MTHED 428: Fundamentals of Middle Grades Mathematics 1

3 Credits

This course develops essential understanding of number and algebra for teaching middle grades mathematics and builds on earlier mathematics courses. MTHED 428 Fundamentals of Middle Grades Mathematics 1 (3) MTHED 428 builds upon experiences in early undergraduate courses to enhance prospective and/or practicing teachers' mathematical knowledge by supporting them to build deep and connected understandings of rational number, ratio, proportion, variable, expressions, and equations and be able to call upon those understandings in order to interpret grades 4-8 students' mathematical understandings. In particular, students in this course will learn that rational number arise as an extension of whole numbers and can be represented in many forms and interpreted as ratios, measures, quotients, operators, and part-whole relationships. Students will also build understandings of equivalence and the mathematical concepts and

relationships that underlie previously learned computational algorithms. Students will understand that ratios involve coordinating two quantities and multiplicative relationships, and that a proportion is a statement of equality between two ratios. Students will learn how number concepts in prekindergarten-grade 4 connect to algebra topics in grades 4-8. Topics in this area include different views and uses of variable, the nature of and use of algebraic expressions and how expressions and equations differ, multiple strategies for manipulating and representing algebraic expressions and equations, and how expressions and equations can be used to represent real-world situations. Students will also learn what research has documented about how the concepts of rational number, ratio, proportion, variable, expressions, and equations develop in grades 4-8; the challenges that grades 4-8 learners face in learning this content; connections to previously-learned mathematical content from grades PreK-3; and how grades 4-8 students' understandings of the targeted concepts form essential foundational understandings for mathematical learning in grades 9-12. Students will engage in mathematical reasoning and justification and utilize technological tools appropriate for use in grades 4-8 mathematics.

Prerequisites: 4th semester standing

MTHED 429: Fundamentals of Middle Grades Mathematics 2

3 Credits

This course develops essential understanding of geometry and probability for teaching middle grades mathematics and builds on earlier mathematics courses.

Prerequisites: 4th semester standing

MTHED 430: Students' Mathematical Thinking

3-6 Credits

Develop abilities in planning, conducting, and interpreting mathematics interviews to gain an understanding of students' thinking processes and current knowledge.

Prerequisites: 7th Semester standing Recommended Preparations: Prior or current teaching experience is recommended

MTHED 431: Data Analysis in Secondary School Mathematics

3 Credits

Intense development of foundations of data analysis for secondary mathematics as a process using statistical concepts for predictions and inferences. MTHED 431 Data Analysis in Secondary School Mathematics (3) As prospective secondary mathematics teachers, students will develop broad and deep understanding of measures of and representations for center, measures of spread, distribution, and correlation. They will become fluent in using dynamic statistics programs, various physical models, and representations to convey the essence of these statistical concepts to secondary school students. They will compare various statistical methods and measures and make and defend claims both in terms of the discipline and in terms of how these ideas unfold for learners in school mathematics. They will connect these statistical concepts to the broader study of secondary school mathematics. In particular, students will see data analysis as a process. It involves the systematic application of statistical techniques, as well as logical techniques, to summarize, interpret, and compare data. Although the emphasis of the course will be on statistical concepts, one of the main themes of the course will involve understandings the mathematical

structure of these statistical concepts. For example, students should be able to answer, from a mathematical perspective, why some data analysis techniques are more useful than other techniques. Intended as an elective for students in Secondary Education/Mathematics Education, the course helps students both to enrich and apply the pedagogical ideas and technology uses from their methods courses and to connect their collegiate mathematics experiences to school curricula. In particular, it helps to build prospective teachers' understanding of statistics as a vital part of secondary mathematics. Class activities involve use of physical manipulatives and mathematics technology (e.g., spreadsheets, dynamic statistics environments, and graphing calculators), as appropriate. Students in this course would be expected to complete weekly assignments and exams and to participate in classroom investigations of statistical concepts. Course grades depend on students' performance on all of these measures.

Prerequisites: Acceptance into SECED or MLVED, MATH 140, MATH 141

MTHED 432: Mathematical Modeling in Secondary School Mathematics

3 Credits

Students work from teaching and curricular perspective to explore and apply school and undergraduate mathematics to model real-world phenomena. MTHED 432 Mathematical Modeling in Secondary School Mathematics (3) Given the attention to mathematical modeling and applications in secondary school mathematics, prospective teachers need to be able to recognize situations that allow secondary school students to use relevant mathematics to apply mathematics and to model real-world phenomena as a means to learn about various mathematical topics. This course provides experiences in generating, interpreting, and evaluating geometric, discrete, stochastic, and function models. The course also helps prospective teachers develop an understanding of how mathematical modeling arises in school mathematics and how students learn mathematics through modeling. Intended as an elective for students in Secondary Education/Mathematics Education, the course helps students both to enrich and apply the pedagogical ideas and technology uses from their methods courses and to connect their collegiate mathematics experiences to school curricula. Class activities involve use of physical manipulatives and mathematics technology (e.g., spreadsheets, geometry construction environments, and graphing calculators), as appropriate. Students in this course would be expected to complete a major modeling project and paper in addition to weekly assignments, exams, quizzes, and written reflections of classroom participation. Course grades depend on students' performance on all of these measures.

Prerequisites: Acceptance into SECED or MLVED, MATH 140, MATH 141

MTHED 433: Function Concept in Secondary School Mathematics

3 Credits

This course develops the concept of function as an essential topic that underlies and connects school and collegiate mathematics. MTHED 433 Function Concept in Secondary School Mathematics (3) Prospective teachers as students need to understand the concept of function deeply as an essential topic of school and collegiate mathematics. In this course, they develop greater facility in using multiple representations and encounter function ideas as they unfold in multiple areas of mathematics, thus extending their understanding of collegiate mathematics and its connection to school mathematics. The students become conversant in current state and national expectations about functions as a mathematical entity. They plan appropriate instruction to develop

secondary school student's understanding of function. Intended as an elective for students in Secondary Education/Mathematics Education, the course helps students both to enrich and apply the pedagogical ideas and technology uses from their methods courses and to connect their collegiate mathematics experiences to school curricula. In particular, it helps to build prospective teacher's conceptual understanding of function so that they may draw more strongly on this understanding to engage secondary students in mathematics. Class activities involve use of physical manipulatives and mathematics technology (e.g., spreadsheets, geometry construction environments, and graphing calculators), as appropriate. Students in this course would be expected to complete a major project and paper in addition to weekly assignments, exams, quizzes, and written reflections of classroom participation. Course grades depend on students' performance on all of these measures.

Prerequisites: Acceptance into SECED or MLVED, MATH 140, MATH 141

MTHED 460: Trends and Issues in Science, Technology, Engineering, and Mathematics (STEM) Education

3 Credits/Maximum of 3

Develops understandings of Science, Technology, Engineering, and Mathematics (STEM) education research and practices for PreK-12 teaching and learning

Prerequisite: 7th Semester Standing
Cross-listed with: SCIED 460

MTHED 481: Building Relationships and Resources to Address Inequities in Mathematics Teaching and Learning

1 Credits

To teach mathematics in equitable ways requires teachers to value students' out-of-school life and be partners with families and communities in supporting students' identity development and mathematics learning. We start the course with acknowledging and challenging our own biases about communities and cultures. We then see how we can build caring relationships with students and enact care for students through effective and equitable mathematics pedagogy that values students' cultures and interests. We consider families and communities as partners with knowledge and resources that support students' learning and help students to build positive mathematics identities as learners. We learn ways to act beyond our classrooms to challenge a history of power, privilege, and oppression in mathematics education. Readings for this course integrate topics beyond mathematics teaching and learning. For example, we learn about the nuanced roles of community in rural and urban areas, the nature of caring relationships with adults that encourage and guide students, and the ways in which people in a community engage in democratic citizenship. The readings include both theory and lived examples from educators. To complement readings, we invite classroom teachers and other educators via virtual visits to share specific events or practices through which they have developed supportive relationships with parents and families. We also ask them to share how they engage in their local communities to form productive relationships as they come to see families and communities as resources and partners in supporting students. Drawing on theory, empirical findings, and practice, we work to answer such questions as: What do you do to communicate with your students in a way that shows you care about their lives both as mathematicians and as individuals outside the classroom? How do you engage with parents and families of your students in ways that support students' learning and well-being? How do you work as a member of your students' community? What

are strategies and tools that teachers use to connect with parents and communities?

Prerequisite: 5th Semester standing Recommended Preparation: Introductory courses in education (e.g., CI 280, CI 295, EDPSY 14, EDTHP 115)

MTHED 482: Using Content in Context to Address Inequities While Teaching Mathematics

1 Credits

We start with a look at how context is used in developing course material, starting with mathematics word problems. We first draw attention to attempts to add context to content. We turn then to activities that are based on content in rich cultural contexts. The focus then moves to mathematical practices, especially justification and mathematical modeling. We end with using mathematical modeling as a tool by which students and we can explore social justice issues and formulate action. We will learn about authentic examples of both mathematics problems and projects for students. We will also consider what it means to have students join with us in choosing contexts and creating mathematics problems. Readings about actual examples created and used by educators in learning spaces are complemented by related research and opportunities to design materials. We call upon educators to share their practice as they write and talk about the activities that they developed and how they have used those activities with students. We will find opportunities to learn powerful ways of using real-world settings in mathematics teaching, to develop mathematics problems and activities that embrace local community and cultures, and to review or preview ideas that are elaborated in your other education and mathematics courses. This course will address key questions about curriculum materials to use in teaching mathematics, such as: How do seemingly uneventful curriculum materials embody cultural biases and give students the message they are not people who do math? How can each and every student see mathematics as relevant to their lives? How can mathematics be used as a tool to understand and address social injustices? How can problems such as these coexist with the prescribed content of school mathematics?

Prerequisite: 5th Semester standing Recommended Preparation: Introductory courses in education (e.g., CI 280, CI 295, EDPSY 14, EDTHP 115)

MTHED 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MTHED 496H: Independent Studies (Honors)

1 Credits/Maximum of 1

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MTHED 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MTHED 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Mechanical Engineering (ME)

ME 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ME 101: Toy Fundamentals: First-Year Seminar

1 Credits

First-Year Seminar focusing on toy design and manufacture. M E 101S Toy Fundamentals (1)(FYS) Toy Fundamentals is a First-Year Seminar intending to be an introduction to engineering design and prototyping through a product type everyone has used: toys! This five-week class explores the history of toys, marketing, toy design for different ages, and includes toy dissection, design, prototyping and field testing. It will run in the first 5 weeks of the semester.

First-Year Seminar

ME 102: Smart Lego Robots & Design

1 Credits

First-Year Seminar focusing on the development of technology exploration kits for middle-school-aged children. M E 102S Toys for Technology Exploration: First-Year Seminar (1) This is a First-Year Seminar that focuses on an important sub-group of toys. 'Learning-by-doing' is a recognized method for improving student's learning in grades K-12 (and in college!). As part of 'Toys for Technology Exploration', existing hands-on kits used for science and math education for ages 10-14 will be reviewed. The new standards for science and technology education in Pennsylvania are used to guide new hands-on kit designs, and these designs will be prototyped and field-tested with public school students. Note: Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

First-Year Seminar

ME 103: HYBRID ELECTRIC VEHICLES

1 Credits

Students in this first-year seminar will be exposed to the design, fabrication, and testing of advanced powertrain vehicles and other cutting-edge automotive technologies. This project-based, group-based course gives students the opportunity to become a member of one of the technical departments within the overall Penn State Advanced Vehicle student team and encourages students to interact with upper-class

members of that department. In addition to technical skills, emphasis is placed on soft skills required of today's professional engineers including: presentation creation, public speaking, and technical writing.

First-Year Seminar

ME 109S: Explore Mechanical Engineering Research

1 Credits

Students will discuss the wide breadth of research topics in mechanical engineering and how to prepare for a research position. Throughout the course students will participate in tours of state-of-the-art research labs in the Mechanical and Nuclear Engineering department, interact with undergraduate students currently involved in conducting research in the Mechanical and Nuclear Engineering department, practice writing correspondence and making presentations.

First-Year Seminar

ME 190: Special Topics in Mechanical Engineering: First-Year Seminar

1 Credits

A First-Year Seminar focusing on issues related to Mechanical Engineering. M E 190S M E 190S Special Topics in Mechanical Engineering: First-Year Seminar (1) (FYS) In this First-Year Seminar, students will explore the Mechanical Engineering profession by means of treatment of a particular topic in M E. Students will be assigned pertinent readings and the professor will lead discussions on the ethical, professional, and societal aspects of the topic area. The seminar will also feature group activities and encourage participation in the classroom setting.

First-Year Seminar

ME 201: Introduction to Thermal Science

3 Credits

Application of the basic concepts of thermodynamics, fluid dynamics, and heat transfer to the solution of engineering problems.

Enforced Prerequisite at Enrollment: CHEM 110

ME 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ME 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ME 300: Engineering Thermodynamics I

3 Credits

Basic thermodynamics concepts, properties of pure substances, first and second law analysis of systems and control volumes. M E 300 Engineering Thermodynamics I (3) This course is designed to develop an understanding of thermodynamic concepts and their application for

the student by providing an integrative modeling and analysis approach to thermal-fluids systems. The course emphasizes the integration and application of fundamental principles of mass and energy conservation and fundamental ideal gas and non-ideal working fluids concepts to fundamental engineering systems. These systems include basic spark-ignition engines and turbojet engines as well as basic and extended Rankine and refrigeration cycles. Emphasis is on creating engineering models of these systems and indicating how the idealized versions of these systems can be extended to more realistic descriptions. Besides these mass and energy conservation concepts the course introduces the basic concepts of heat transfer and mass flow, providing a foundation in these subjects to be further expanded in later courses. The course aims to develop knowledge and initiate skills for "thinking like an engineer."

Enforced Prerequisite at Enrollment: CHEM 110 Enforced Concurrent at Enrollment: MATH 141

ME 308: Fluid Flow and Heat Transfer Laboratory

1 Credits

Experimental work to enhance understanding of thermodynamics, fluid dynamics, and heat transfer.

Enforced Prerequisite at Enrollment: ME 320 Enforced Concurrent at Enrollment: ME 410

ME 315: Heat Transfer Laboratory

1 Credits

This one-credit laboratory course is structured to reinforce the various principles taught in the corresponding 3-credit lecture course - M E 410, Heat Transfer. The laboratory includes several different experiments whose objective is to reintroduce and reinforce the various principles associated with conduction, convection, radiation and heat exchangers. Each laboratory session begins with a thorough review of the relevant material covered in the lecture course, including the use of energy conservation on control volumes related to the experiment and related simplifications. Prior to conducting any experiment, the students are informed about the particular safety issues that vary from one experiment to another. The students are then briefed about the setup of the data acquisition systems, what type of data the need to be collected, and how the data then is coupled to the review of the specific laboratory topic. At the end of the semester, the students should be able to interface a typical data acquisition system with those used in industry and elsewhere. The students generally work in groups to collect data, with reports prepared individually after an experiment is completed.

Enforced Concurrent at Enrollment: (ME 345 or ME 348) and ME 410

ME 320: Fluid Flow

3 Credits

This course is an introduction to fluid mechanics, and emphasizes fundamental concepts and problem-solving techniques. Topics to be covered include fluid properties (density, viscosity, vapor pressure, surface tension); fluid statics (hydrostatic pressure, pressure forces on planar and curved surfaces); fluid kinematics (flow visualization, vorticity, Reynolds transport theorem); control volume analysis (conservation laws of mass, momentum, and energy, Bernoulli equation); dimensional analysis (dimensional homogeneity, method of repeating variables, experimental testing, similarity); internal flows (pipe flows, major and minor losses, piping networks, matching pumps to systems); differential

analysis (Navier-Stokes equation, creeping flow, potential flow, boundary layers); external flows (lift and drag, pressure vs. friction drag); and compressible flow (isentropic flow through nozzles, shock waves). Brief introductions to computational fluid dynamics (CFD), and turbomachinery (pumps and turbines) will also be provided.

Enforced Prerequisite at Enrollment: EMCH 212 and MATH 251 and (ME 201 or ME 300) and (MATH 230 or MATH 231)

ME 325: Fluids Laboratory

1 Credits

The course is designed for students to understand basic concepts of fluid mechanics through analysis of experimental data from various sources. The course emphasizes hands-on experience to take measurements, analyze and interpret experimental data. An important component of this course fosters an ability to write laboratory reports and to creatively generate independent ideas that involve the study of fluid mechanics through development and execution of final project. The course aims to develop teamwork (no hyphen needed, this is one word) skills and advanced proficiency in professional communications and interactions.

Enforced Prerequisite at Enrollment: ME 320 and (ME 345 or ME 348)

ME 330: Computational Tools

3 Credits

This course gives students physical insights as well as introductory skills on the use of modern computational tools in solving mechanical engineering problems. The course has two main thrusts: 1) finite element analysis for structural/thermal mechanics and 2) computational fluid dynamics for fluid flows. Students will use commercial codes to solve fundamental problems associated with statics, dynamics, mechanics of materials, heat transfer, and fluid dynamics. Particular emphasis will be placed on comparing simulation results to analytical solutions. Students will also use the computational tools to parametrically study the solution space that enable informed design strategies. This class will prepare mechanical engineering students to solve technical problems in their courses, summer internships, and ultimately in their engineering career.

Enforced Prerequisite at Enrollment: EMCH 212 and EMCH 213 and MATH 251 and PHYS 212

ME 340: Mechanical Engineering Design Methodology

3 Credits

The design process; problem definition, conceptual design, system design, detail design, evaluation and test, implementation, documentation and communication. M E 340 Mechanical Engineering Design Methodology (3) This course is intended to provide mechanical engineering students with the fundamental tools to produce an effective design solution in a realistic professional environment with conflicting customer needs and technical capabilities. The students will identify the system design targets through interaction with the 'customer', develop multiple conceptual designs, select the best design solution and produce a functional prototype. The course is project driven with significant input from the students in defining the work objectives and goals. Initially several mini-projects will be assigned with specific objectives such as identifying customer needs, quantifying technical design specifications and decision making. The course culminates with a student team based

design competition. The competition provides an opportunity to apply the design process to an open-ended mechanical engineering problem.

Enforced Prerequisite at Enrollment: EDSGN 100 and Concurrent at Enrollment: (ME 320 or BME 409) and ME 360

ME 345: Instrumentation, Measurements, and Statistics

4 Credits

Fundamentals of statistics, sensors, instrumentation, and measurement of mechanical phenomena such as temperature, flow, pressure, force, stress, displacement, and acceleration. M E 345 Instrumentation, Measurements, and Statistics (4) This course is required for all mechanical engineering students. It serves as an introduction to the fundamental principles of instrumentation and measurement, along with statistics, and integrates and applies what the students have learned in their electrical engineering course. The course includes a 3-hour-per-week hands-on laboratory where students apply the material learned in the lecture. For many students this is the first time they have actual hands-on experience with electronics and measurement equipment, such as oscilloscopes, breadboards, function generators, digital data acquisition systems, integrated circuits strain gages, displacement meters, thermocouples, tachometers, dynamometers, filters, volume flow meters, velocity meters, pressure transducers, etc. Students learn not only how to use these devices in the lab, but also the fundamental principles of their operation. Statistical analysis is integrated into the course, especially in the hands-on laboratories, where statistics is used to analyze and interpret acquired data.

Enforced Prerequisite at Enrollment: EE 211 or EE 212 or EE 210

ME 345W: Instrumentation, Measurements, and Statistics

4 Credits

Measurement concepts, probability and statistics, error analysis; electro- mechanical transducers, applied electrical and mechanical measurements, electrical and electronics instruments, data acquisition and instrumentation systems.

Enforced Concurrent at Enrollment: EE 212 or EE 211 or equivalent Writing Across the Curriculum

ME 348: Circuit Analysis, Instrumentation, and Statistics

3 Credits

ME 348 Circuit Analysis, Instrumentation, and Statistics (4) This course is required for all mechanical engineering students, and is taken in the junior year. It serves as an introduction to the fundamental principles of circuit analysis, instrumentation and measurement, as well as statistics. The course includes a 3-hour-per-week, hands-on laboratory where students explore the concepts taught in the lecture. For many students this is the first time they have actual hands-on experience with electronics and measurement equipment, such as oscilloscopes, breadboards, function generators, digital data acquisition systems, integrated circuits strain gages, displacement meters, thermocouples, tachometers, dynamometers, filters, volume flow meters, velocity meters, pressure transducers, etc. Students learn not only how to use these devices in the lab, but also the fundamental principles of their operation. Statistical analysis is integrated into the course, especially in the hands-on laboratories, where statistics is used to analyze and interpret acquired data.

Enforced Prerequisite at Enrollment: MATH 251 and PHYS 212

ME 349: Intermediate Mechanics of Materials

3 Credits

Intermediate topics in mechanics of materials with computer applications. M E 349 Intermediate Mechanics of Materials (3) This course introduces students to intermediate and applied topics in mechanical behavior of materials with an emphasis on design and computation. This course will give students the tools to do practical analysis and the foundation needed to prepare them for other mechanical engineering courses in design and other elective courses. Subjects covered include stress analysis, deformation & deflection, material failure and finite element analysis. Stress analysis includes the study of stress concentrations, stress transformations and principal stresses. Stress-based static failure theories for brittle and ductile materials are investigated. Two-way bending of beams is covered as well as torsional deformation of non-circular cross sections. Buckling and pressure vessels are introduced as separate topics while the finite element analysis is introduced as a computational tool to study stress and deformation. Throughout the course students will use a commercial finite element program to verify and visualize results from analysis of the various topics. During the course, students are introduced to the basic theory of the finite element method.

Enforced Prerequisite at Enrollment: EMCH 213 and EDSGN100S
Enforced Concurrent at Enrollment: CMPSC 200 and MATH 220

ME 355: Dynamic Systems Laboratory

1 Credits

Experimental investigation of simple position, velocity, and temperature control systems with analog and digital controllers. M E 355 Dynamic Systems Laboratory (1) The objective of the Dynamic Systems Laboratory is to enable students to experimentally investigate the calibration, response characteristics, modeling, and control of mechanical and fluid systems. This course is intended to allow students to develop some hands-on experience and working knowledge of basic dynamic and control systems. Specifically, to 1. Identify the actuators, sensors, plants, and controllers of physical control systems.2. Calibrate encoders, temperature, laser displacement, and flow sensors.3. Measure steady state, step, and frequency response of thermal, fluid, and mechanical systems.4. Compare simulation and experimental results to validate theoretical model.5. Design PID controllers for thermal, fluid, and mechanical systems.6. Implement and test PID controllers for thermal, fluid, and mechanical systems.

Enforced Prerequisite at Enrollment: ME 345 or ME 348 Enforced Concurrent at Enrollment: (ME 357 or ME 450)

ME 357: System Dynamics

3 Credits

Mathematical modeling and analysis of linear dynamic systems; performance and design of simple controllers. M E 357 System Dynamics (3) This course is to explore the modeling of linear systems via transfer functions and state-space models; analysis of systems in the time and frequency domain using transfer functions and state-space models; development of control techniques based on PID. The use of software Matlab and Simulink is another emphasis. Students are evaluated through the use of written exams during the semester, a comprehensive written final, weekly homework assignments, and a design project. This

course is required in the ME BD program at Behrend, integrates material from a number of previous courses, and provides the student with tools that will be used in a number of subsequent courses.

Enforced Prerequisite at Enrollment: CMPSC 200 and (EE 211 or EE 212) and MATH 251

ME 360: Mechanical Design

3 Credits

Specification of components such as shafts, bearings, and power transformers; optimal designs for operational, environmental, and manufacturing requirements. ME 360 Mechanical Design (3) This course is required for all mechanical engineering students. It is an introduction to analysis and design of mechanical components. It helps provide practical insight into theory provided by prerequisites in engineering mechanics and materials science. Students initially perform yielding and fatigue failure predictions for general structural elements and then focus on specific mechanical components such as gears, fluid film bearing, rolling element bearings, screws, shafts, and springs. Use and interpretation of finite element analyses (FEA) are also introduced. The overall goals are for students to learn to make basic design decisions regarding the suitability of different materials in mechanical components (e.g. steel versus aluminum), and to make basic design decisions regarding the suitability of different components in a mechanical system (e.g. ball bearings versus fluid film bearings).

Enforced Prerequisite at Enrollment: EMCH 213 Enforced Concurrent at Enrollment: CMPSC 200 or CMPSC 201

ME 360H: Mechanical Design

3 Credits

Specification of components such as shafts, bearings, and power transformers; optimal designs for operational, environmental, and manufacturing requirements.

Honors

ME 365: Materials Testing Laboratory

1 Credits

Laboratory for materials testing, property identification and modification, failure analysis, and metallurgical testing. ME 365 Materials Testing Laboratory (1) This laboratory course provides an integrated approach to materials science and engineering. The laboratory examines the important relationships between processing, microstructure, and the properties of materials. The course provides an introduction to basic characterization techniques for materials, such as microscopy, hardness testing, fracture testing and analysis, fatigue testing, and impact testing. In addition, material selection and heat treatment topics are covered. The course requires hands-on involvement by the students in the planning of experiments as well as data manipulation and analysis of results. The laboratory exercises are intended to provide students with a broad appreciation of the breadth of material science and engineering and the principles behind material characterization and property modification. Students work in groups, and written reports are the primary basis for grading.

Enforced Concurrent at Enrollment: MATSE 259

ME 367: Machine Design

3 Credits

Design and selection of machine components and connections. Stress analysis and modes of failure of materials used in machine components. ME 367 Machine Design (3) This course introduces students to the process for selection, design and failure analysis of various common machine elements. This course will give students the foundation to design mechanical systems and the tools to design, select, or analyze machine components for practical applications necessary for their design projects and other mechanical engineering electives. Subjects include the reliability, safety factors, and the design of machine elements including shafts, roller bearings, brakes, clutches, gears, belt and chain drives, and additional topics such as screws, springs, journal bearings, and connections. Both static and cyclic loading are considered as part of the design and analysis process. Extensive use is made of material properties, design tables, figures and graphs to assist in the design and analysis process. The course includes a comprehensive project that incorporates several of the topics covered in the course in the design of a mechanical system. The goal of the project is for students to learn how various machine

Enforced Prerequisite at Enrollment: ME 349 Enforced Concurrent at Enrollment: MATSE 259

ME 370: Vibration of Mechanical Systems

3 Credits

Modeling and analysis of vibration characteristics of mechanical systems with single degree and multiple degrees of freedom. Vibration control by isolation, absorption and balancing. ME 370 Vibration of Mechanical Systems (3) The course studies vibration characteristics of mechanical systems and vibration control. It is divided into four main topics. Fundamental aspects of mechanical vibrations are studied first. Types and causes of various vibratory motions are described. The concepts of mathematical modeling of the vibratory systems are presented. Model elements including mass/inertia, spring and damper elements and their corresponding describing equations are studied. Single degree-of-freedom vibrations are modeled and analyzed. Equations describing free vibrations of undamped and damped systems are derived. Natural frequency and damping ratio are defined and their physical significance discussed. Harmonically excited vibrations are studied with many practical application problems; resonance and its physical significance are emphasized. The theoretical aspects of general periodic vibrations and non-periodic vibrations are formulated by means of Fourier analysis and convolution integral. Vibrations of multiple degrees-of-freedom systems are studied. Mathematical models governing free vibrations are formulated. Equations determining the natural frequencies and mode shapes of the system are derived with relation to eigenvalue problems. Harmonically excited vibrations are analyzed with practical applications. Vibration control in relation to engineering design is the last topic studied. Various vibration control concepts and techniques are presented including vibration isolation, vibration absorption and balancing to reduce the intensity of the source of excitation.

Enforced Prerequisite at Enrollment: EMCH 212 and (CMPSC 200 or CMPSC 201) and MATH 220 and MATH 251

ME 375: Vibrations Laboratory

1 Credits

Experimental measurement and analysis of mechanical system dynamics. This laboratory course provides an opportunity to apply the fundamental vibrations theory taught in ME 370 to actual mechanical hardware. The experiments illustrate fundamental concepts from an experimental vibration perspective. Experimental vibration measurement methods are applied to estimate simplified dynamic models for vibrating mechanical systems. The students compare analytical to experimental results to gain a sense of the limitations of both modeling and experimentation. Experiments include: free vibration of linear and nonlinear systems, response, measurement of translational and rotational, forced harmonic vibration, spectral analysis of vibration signals, experimental data uncertainty and comparison of finite element model dynamic results to experimental data. Throughout the course the students will: 1. Plan, implement and debug instrumentation to measure vibrations of mechanical systems. 2. Implement experimental test systems using vibration transducers and data acquisition to maximize measurement quality. 3. Recognize the dominant behavior seen in many larger, more complicated engineering systems. 4. Estimate the system vibration parameters 5. Use software to compare measured and predicted dynamic behavior. 6. Recognize dominant nonlinear behavior and implement a nonlinear simulation using software. 7. Verify the results of computer analyses of dynamic systems by various methods including experimental measurement and analytical modeling.

Enforced Concurrent at Enrollment: ME 370 and (ME 345 or ME 348)

ME 380: Machine Dynamics

3 Credits

Kinematic analysis of mechanisms such as linkages, flywheels, cams and gears. Dynamic forces and vibrations of mechanisms. ME 380 Machine Dynamics (3) In this course students learn how to apply the techniques of dynamics to analyze both the motion and forces associated with planar mechanisms. Students learn how to model and solve for the position, velocity, acceleration and forces on linkages using vectors. They also study the kinematics of gears, flywheels and cams. Machine vibrations is introduced as an integral part of Machine Dynamics. Students learn how to model simple mechanical systems as vibrating systems and then analyze the vibratory response of these systems. Once these analytical skills have been developed, the students can apply these skills to the design of linkages, internal combustion engines, gears, shafts and cams. Several in-class exams are used to evaluate students' performance. Computer problems are assigned so students can experience the solution methods to some of the more complex problems. This required course integrates material from calculus and dynamics to provide the student with tools that can be used to analyze the motion of machinery and can be used in the design of machinery and machine components. It is offered annually in the Fall semester and occasionally in the Spring semester.

Enforced Prerequisite at Enrollment: EMCH 212 and MATH 251

ME 390: Academic and Career Development for Mechanical Engineers

0.5 Credits

ME 390 Academic and Career Development for Mechanical Engineers (0.5) guides students through the process of tailoring their academic studies to suit their individual career goals. Students will look at career

opportunities within mechanical engineering as well as the many other professions that are available to BSME degree holders. Students will be prepared to participate successfully in recruiting events such as the Penn State career fairs

Enforced Prerequisite at Enrollment: Fifth Semester standing in Mechanical Engineering

ME 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor
Full-Time Equivalent Course

ME 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ME 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ME 400: Thermodynamics of Propulsion and Power Systems

3 Credits

Analysis and modeling of propulsion and power systems, including combustion, compressible flow through nozzles, chemical equilibrium, and moist air systems. ME 400 Thermodynamics of Propulsion and Power Systems (3) This course is specifically designed to provide an integrative modeling and analysis approach to thermal-fluids systems. The course emphasizes the integration and application of fundamental principles of mass, momentum, and energy conservation to relatively complex systems. These systems include spark-ignition and diesel engines, gas-turbine engines for power production, and turbojet engines. The integration of the topics of combustion, compressible flow, and psychrometrics allow these systems to be analyzed in their totality. Emphasis is on creating engineering models of these systems. The course aims to integrate previous knowledge and develop skill in 'thinking like an engineer.'

Enforced Concurrent at Enrollment: ME 410

ME 401: Refrigeration and Air Conditioning

3 Credits

Theoretical principles, design, performance, and selection of various refrigeration and air-conditioning systems; building heat and cooling loads; solar heating.

Enforced Prerequisite at Enrollment: ME 410

ME 402: Power Plants

3 Credits

A study of fossil-fuel steam generation and utility plants, including cogeneration, gas turbine, and combined cycles. M E 402 Power Plants (3) This course serves as an introduction to fossil-fuel plants for both steam generation and electricity production. Following an overview of an entire plant and an introduction to combustion processes, each subsystem of a fossil-fuel plant will be considered. The subsystems include fuel preparation and handling, boiler types and the fundamentals of steam generation, water systems (condensate-feedwater, makeup, cooling, and waste), and turbomachinery. Consideration will be given to environmental aspects of steam and power generation as well as operations, maintenance, and controls issues. Students will spend time at the West Campus Steam Plant (WCSP) to observe the various systems discussed in class. Data taken from the WCSP will be used in problem solving and in an assessment of the plant. Course Objectives: To acquaint students with both steam generation and electricity production and to present some of the engineering calculations encountered in practice. Objectives that students will meet at the end of the course: 1. list the subsystems of a plant, indicating the function of each subsystem 2. sketch typical subsystems of a power plant (example: sketch the coal and ash handling system) 3. perform basic analyses associated with each subsystem 4. sketch the flow of water-steam, fuel, and air through a plant 5. analyze a heat balance, perform an availability analysis, and interpret the results of those analyses 6. select the type of plant appropriate for a given application 7. perform an energy audit on the auxiliary systems 8. perform a water audit on the plant 9. use DoE Best Practices (or equivalent program) to assess a steam plant Students will be required to draw on material from core undergraduate courses in thermodynamics (M E 030 and M E 031), fluid mechanics (M E 033), and heat transfer (M E 412). Students must be able to: ♦ sketch the configuration and draw a T-s diagram for a Rankine cycle and a Brayton cycle ♦ indicate the general trends for the ideal cycles (example: for a Brayton cycle, how does the efficiency depend on the pressure ratio, inlet temperature, etc.) ♦ define the basic modifications to the simple Rankine cycle and simple Brayton cycle ♦ discuss the significance of the modifications ♦ state the definition of the adiabatic efficiency for turbines and pumps ♦ perform an energy balance given a particular cycle ♦ use the Darcy-Weisbach equation to determine the friction losses in pipes and ducts ♦ perform simple analysis of a heat exchanger

Enforced Prerequisite at Enrollment: ME 410

ME 403: Polymer Electrolyte Fuel Cell Engines

3 Credits

Introduction to Fundamentals of Polymer Electrolyte Fuel Cells (PEFCs). Includes fundamentals of electrochemistry, thermodynamics, fluid mechanics, heat transfer materials, and manufacturing issues of PEFCs. A brief survey of other fuel cell types is also included. M E 403 Polymer Electrolyte Fuel Cell Engines (3) This course is intended for the engineering student interested in obtaining a fundamental background required for polymer electrolyte fuel cell (PEFC) modeling and diagnosis. Those students with interest in the basic design, operation, and characteristics of PEFC systems should also benefit. This course serves as an introduction to the fundamental principles of electrochemistry, thermodynamics, heat and mass transfer, materials and manufacturing issues related to PEFC engines. The various types of PEFC components and technologies are dissected in detail, including direct inject alternative fuel systems. A survey of cutting-edge issues in fuel cell technology

including the future direction of PEFC technology will be presented as time permits. The student will also participate in an experimental lab study to aide in the understanding of these systems, a computer-based simulation project, and a group-based fuel cell system design project. Issues of specific interest to mechanical engineers, including water management and heat and mass transfer in thin film porous media, will be dealt with in depth. A brief survey of other fuel cell types is also presented.

Enforced Concurrent at Enrollment: ME 410

ME 404: Gas Turbines

3 Credits

This course enables students with the proper background to gain specialized knowledge as a step towards becoming practitioners in the field of gas turbines. The information imparted covers from basic cycles to properties of materials required to put together these impressive machines. Competent course performance requires knowledge of basic thermodynamics, fluids and heat transfer. The homework is carefully graduated in order to highlight key aspects already covered in the lectures, with new thinking an unavoidable part. As an optional part of the course, students can run and acquire data in an actual gas turbine. Additionally, those with a strong background in fluids can design blades and study the flow around them with CFD. Course Objectives: Upon completion of this course, students should be able to: 1. Analyze cogeneration plants. 2. Analyze turbofans, jets and turbojets. 3. Specify a typical gas turbine installation, including auxiliaries. 4. Carry out conceptual design of gas turbine engines for different applications. 5. Specify construction materials to withstand typical operating conditions. 6. Demonstrate professionalism in interactions with colleagues, faculty, and staff. Program Objectives: This course covers the following program objectives: 1. demonstrate ability to solve differential equations 2. demonstrate familiarity with linear algebra 3. perform analysis of thermal/fluids components 4. perform analysis of thermal/fluids systems 5. work effectively on multidisciplinary teams 6. demonstrate ability to communicate effectively with the written word 7. demonstrate ability to communicate effectively in oral communications 8. demonstrate professionalism in interactions with colleagues, faculty, and staff

Enforced Prerequisite at Enrollment: ME 300

ME 405: Indoor Air Quality Engineering

3 Credits

Prediction of the motion of contaminants (both gaseous particulate) in gas streams; analysis of ventilation systems and air pollution control systems; comparison of experimental sampling techniques. M E 405 Indoor Air Quality Engineering (3) This course serves as an introduction to environmental health engineering, which presents the quantitative relationships describing generation, movement, and control of pollutants inside the workplace. Although some aspects of the course can be applied to outdoor air pollution, the course concentrates on applications related to indoor air quality. In particular, students are taught how to measure and predict concentrations of air pollutants, both gaseous and particulate, in rooms. In addition, they are taught how to design both local and general ventilation systems to maintain acceptable indoor air quality. In addition, the design of air pollution control systems that remove both gaseous and particulate contaminants from the air is discussed. The relationships are described by mass and energy balances that relate pollutant generation and movement to process parameters. The course is designed for seniors and graduate students in Mechanical,

Chemical, Environmental and Civil Engineering, and Meteorology. To work effectively in environmental health engineering, students must be proficient in applying the thermal sciences. The course uses principles of mathematics and thermal sciences included in accredited programs of engineering. Most students will have mastered some of these principles, but few will have mastered them all. The course reviews all the necessary thermal science principles before using them, but some students will need to review this material in more detail than others. This course is offered once per year. Course Objectives: a. Demonstrate the ability to analyze and compare risks associated with various activities and with exposure to hazardous chemicals. b. Demonstrate a working knowledge of the physiology and function of the respiratory system, including diseases of the lung. c. Demonstrate the ability to estimate pollutant emission rates using emission factors and fundamental mass balance techniques. d. Analyze practical problems of general and local ventilation requirements. e. Design local ventilation systems using standard guidelines from ACGIH and ASHRAE. f. Predict the motion of particles in air, and analyze pollution control devices which remove particles from the air. g. Demonstrate professionalism in interactions with colleagues, faculty, and staff. Program Objectives: a. demonstrate knowledge of chemistry. b. demonstrate ability to solve differential equations. c. demonstrate familiarity with statistics. d. perform analysis of thermal/fluids components and thermal/fluids systems. e. demonstrate an appreciation of the economic, global, social, and ethical context of their work. f. demonstrate professionalism in interactions with colleagues, faculty, and staff. g. make effective use of spreadsheets as an analysis and design tool. h. use software such as Matlab and MathCAD to solve engineering problems including ODE'S, systems of linear equations, and numerical integration

Enforced Prerequisite at Enrollment: ME 320

ME 406: Introduction to Statistical Thermodynamics

3 Credits

Statistical description of systems composed of large numbers of particles in the context of classical and quantum mechanics; basic concepts of probability theory and thermodynamics as they relate to statistical mechanics. ME (NUCE) 406 Introduction to Statistical Thermodynamics (3) This course is an introduction to probabilistic and statistical concepts in the physical sciences, which we refer to as 'statistical thermodynamics'. In areas such as design and processing of electronic devices, materials engineering, chemical engineering, and combustion engineering, the science of statistical mechanics is a particularly necessary, powerful, and important tool for the engineer. The underlying foundation of statistical mechanics is developed by (1) reviewing the basic ideas from probability theory, (2) deriving the binomial, Poisson, and Gaussian probability distributions, and (3) using these models to analyze several examples taken from science and engineering. To make a connection between macroscopic quantities and the corresponding probabilistic representation, classical thermodynamics is reviewed using the internal energy, entropy, and free energy functions in the context of the first and second laws. Statistical mechanics for classical and quantum-mechanical systems is presented via the micro-canonical, canonical, and grand canonical ensembles using the associated partition functions. During the syntheses of ideas, applications from various branches of science are presented. Some examples of applications are the Einstein crystal, the Debye crystal, the ideal gas, and black body radiation. This course covers the following program objectives: 1. Demonstrate knowledge of basic chemistry and physics. 2. Demonstrate a knowledge of atomic and nuclear physics. 3. Demonstrate a knowledge of thermodynamics, heat transfer, and fluid

flow. 4. Understand and apply the basic concepts of particle transport. 5. Understand and apply thermodynamics and heat transfer principles to the analysis of nuclear power components and systems.

Enforced Prerequisite at Enrollment: (ME 300 or ME 201) and (MATH 230 or MATH 231)

Cross-listed with: NUCE 406

ME 408: Energy Systems

3 Credits

Theory, analysis, design, selection, and application of energy conversion systems. This course is intended for mechanical engineering students to reinforce the topics taught in thermodynamics, fluid mechanics, and heat and mass transfer; gives students familiarity with energy conversion systems using traditional and renewable energy sources which are typically encountered by mechanical engineers, and improves students' analytical and design skills. Coverage of materials include heat exchanger analysis, selection, and design with respect to heat transfer, pressure drop, and fluid pumping requirements; analysis and design of power cycles based on thermodynamic principles; fundamentals of combustion processes; introduction to wind energy and wind turbine aerodynamic analysis; fuel cell fundamentals and analysis of fuel cell problems and systems based on thermodynamics and heat transfer principles. Students will be evaluated by homework assignments; individual and small team projects; and exams.

Enforced Prerequisite at Enrollment: ME 410

ME 410: Heat Transfer

3 Credits

Thermal energy transfer mechanisms: conduction (steady, transient), convection (internal, external), radiation; lumped parameter method; heat exchangers; introduction to numerical methods. ME 410, Heat Transfer, is a required course for mechanical and nuclear engineering students. The course presents the three modes of heat transfer: conduction, convection, and radiation. One-dimensional steady and transient conduction is studied for planar, cylindrical, and spherical geometries. The lumped capacitance analysis is used for transient conduction when appropriate. Analytical and numerical methods are presented for two-dimensional conduction problems, including the analysis of extended surfaces. Convection heat transfer is studied in both internal and external geometries and under laminar and turbulent flow regimes. External flows include cooling on flat plates due to laminar and turbulent boundary layer flows, and cooling of cylinders due to cross flow. The convection heat transfer analysis in internal flows considers laminar and turbulent pipe flows. Free convection is also considered where heat transfer is due to flow induced by fluid buoyancy. Boiling and condensation considers the effect of two-phase flows on surface heat transfer. Radiation heat transfer is studied by considering both the general characteristics of radiation as well as the properties of radiating surfaces and radiation heat transfer between surfaces. Methods for solving multi-mode heat transfer are presented throughout the course. Heat exchangers and heat transfer from extended surfaces are two applications studied in the course

Enforced Prerequisite at Enrollment: (ME 320 or BME 409) and (CMPSC 200 or CMPSC 201) and (MATH 220 or NUCE 309)

ME 410H: Heat Transfer

3 Credits

Transient heat conduction; convection in laminar and turbulent flow; heat exchanger devices; boiling and condensation; radiation.

Honors

ME 411: Heat-Exchanger Design

3 Credits

Thermal design and application of different heat-exchanger types, including surface selection and design optimization.

Enforced Prerequisite at Enrollment: ME 410

ME 420: Compressible Flow I

3 Credits

This course is a technical elective. We cover several unique concepts and applications of compressible flow, including: speed of sound and Mach number, isentropic 1-D flow in variable area ducts, converging nozzles, choking, converging-diverging nozzles, moving shocks, blast waves, shock tubes, Rayleigh flow (duct flow with heat transfer), Fanno flow (duct flow with friction), normal and oblique shock waves, expansion fans, and other topics to be announced, time permitting. Course Objectives: Upon completion of this course, students should be able to: 1. Solve a range of compressible-flow problems often encountered in engineering practice, including adiabatic isentropic flow in ducts and normal and oblique shock wave analysis. 2. Apply physical thinking and problem-solving techniques to practical problems using fluid mechanics and thermodynamics. 3. Integrate previous course material in fluids and thermodynamics into the study of compressible flow. 4. Apply computer programs (Matlab, Excel, EES, Javascript calculators, etc.) to compressible-flow problems. 5. Identify and utilize the strong visual nature of flow patterns in engineering practice in the thermal sciences. 6. Demonstrate practical design skills such as design of supersonic nozzles and wind tunnels. 7. Demonstrate professionalism and respectful interaction with faculty and colleagues.

Enforced Prerequisite at Enrollment: ME 320

ME 421: Viscous Flow Analysis and Computation

3 Credits

Apply analytical and computational methods to solve the differential equations describing fluid flow. Incompressible external flows past objects and internal flows in pipes and ducts are some problems considered. M E 421 Viscous Flow Analysis and Computation (3) M E 421 is an intermediate course in fluids mechanics that bridges between the required undergraduate fluid mechanics course and the graduate fluid mechanics courses. Steady and unsteady flows are considered past objects and in pipes, ducts, and annuli. Analytical and numerical methods are used to solve the boundary layer and Navier-Stokes equations that describe fluid motion. Analytical methods include solutions for steady and unsteady internal flows with heat transfer. Similarity equations for boundary layer flows are derived and then solved numerically using the Runge-Kutta method. Finite difference methods for viscous flows are introduced and applied. Turbulence modeling is presented and applied in a boundary layer code. The stages of transition from laminar to turbulent flow and methods for the prediction of transition are introduced. Topics in M E 421 include: 1. Analytical solutions for one-dimensional viscous flows

in Cartesian and cylindrical coordinates with heat transfer. 2. Unsteady viscous flow solutions using Separation of Variables. 3. Boundary layer similarity solutions using the Runge-Kutta method. 4. Panel method for incompressible inviscid flows. 5. Finite-differenced equations for viscous flows and the accuracy and stability of the schemes. 6. Using a commercial CFD code for a simple geometry. 7. Algebraic turbulence models and the approximations of each. 8. Higher-order turbulence models and the approximations used. 9. Stages of transition from laminar to turbulent flow. 10. Methods to predict boundary layer stability and transition.

Enforced Prerequisite at Enrollment: (ME 201 or ME 320 or AERSP 308 or AERSP 311) and (CMPSC 200 or CMPSC 201) and MATH 220 and (MATH 250 or MATH 251)

ME 422: Principles of Turbomachinery

3 Credits

Conservation laws pertinent to energy conversion and fluid mechanics are applied to pumps, centrifugal compressors, axial compressors and turbines, hydro turbines and wind turbines. Ideal performance is established, and conventional loss correlations are applied to define potential performance of turbomachinery. The applications of similarity and dimensionless parameters towards characterizing turbomachines are outlined. The course objectives are; 1. Review/acquire thermofluids concepts applicable to turbomachinery such as Reynolds transport theorem, First and Second laws, isentropic efficiencies, potential flow, dissipative flows. 2. Develop an understanding of working principles applicable to centrifugal, axial and mixed flow machinery. Extend concepts applicable to hydro and wind turbines. Develop approximations for both compressible and incompressible flows. 3. Gain an understanding of loss calculations.

Enforced Prerequisite at Enrollment: ME 320

ME 423: Introduction to Numerical Methods in Fluid Dynamics

3 Credits

This course provides an introduction to the important and growing field of Computational Fluid Dynamics (CFD). The student will become familiar with a short history and relevance of CFD, the basic differential models of fluid dynamics, discretization and linearization practices, and solution strategies of CFD. Fundamentals of algorithm classification, error and stability analysis will be covered. Also, several advanced topics of relevance to modern CFD analysis will be covered. A term project will involve coding a CFD model of one of several choices including: 2D shallow wave equations for application to a tsunami, unsteady conjugate flow+heat transfer analysis of a pin array, and others per the instructor's discretion.

Enforced Prerequisite at Enrollment: (AERSP 312 or ME 320) and (MATH 250 or MATH 251) and (CMPSC 200 or CMPSC 201)

Cross-listed with: AERSP 423

ME 424: Additive Manufacturing Lab

1 Credits

Explore various aspects of 3D printing. Topics will vary by semester, depending on the current technology and advancements in the field. This laboratory course provides an integrated approach to additive manufacturing and reverse engineering. The course introduces basic operating procedures for Fused Deposition Modeling (FDM) printers

and gives instruction on repair, troubleshooting, and print optimization techniques. The laboratory examines the important relationships between 3D printing parameters and the final object's material properties. In addition, reverse engineering and rapid prototyping topics are covered. The laboratory exercises provide students with a broad appreciation of the current technological capabilities of FDM 3D printing and an understanding of when to implement the technology over a traditional manufacturing technique. Written technical and research reports and proposals, Inventor models, and 3D printed models are the primary basis for grading.

Enforced Prerequisite at Enrollment: ME 349

ME 427: Aerodynamics for Mechanical Engineers

3 Credits

The primary objective of this course is to teach students how to apply concepts relating to incompressible flows to solve aerodynamic design problems. In incompressible aerodynamics, fundamental concepts such as lift, drag, aerodynamic moment, induced drag, viscous drag, pressure drag, separation, stall, circulation, downwash, camber, thickness ratio, and lift distribution are discussed. Students use these concepts primarily to determine aerodynamic lift and drag using a variety of techniques, including potential flow theory and wind tunnel testing. Based on instructor preference and expertise, additional topics relating to incompressible and/or compressible aerodynamics may be also discussed. Students will be evaluated through the use of written exams during the semester, a comprehensive written final, and weekly homework assignments. This course is a technical elective in the ME programs at the Behrend, Berks and Harrisburg campuses and allows students who have completed ME 320, Elementary Fluid Mechanics, to improve their understanding of fluids and thermodynamics by covering the subject in more detail and applying it specifically to aerodynamic problems. It will usually be offered annually.

Enforced Prerequisite at Enrollment: ME 320

ME 428: Applied Computational Fluid Dynamics

3 Credits

Introduction to theory and application of computational techniques for solving fluid flow and heat transfer. ME 428 Applied Computational Fluid Dynamics (3) The purpose of this course is to teach students how to use a commercial CFD code to solve real-world engineering fluid flow problems. The definition of appropriate problem domain, set of governing equations, boundary conditions, and fluid properties is discussed. Sufficient theory of CFD is covered so that students are able to select appropriate elements or interpolation techniques and options, mesh size, pressure-correction technique and solution technique. Students are also taught how to interpret the results of a CFD simulation, including determination that the solution is physically realistic, conforms to the governing equations, is converged and grid independent, and determination of important engineering quantities such as net force, pressure drop and flow rate. Students are evaluated through the use of written exams during the semester, a comprehensive written final, weekly homework assignments, and a semester project. This course is a technical elective in the Mechanical Engineering program and allows students who are interested in fluid mechanics and heat transfer to further their study. It is offered periodically.

Enforced Prerequisite at Enrollment: ME 320 and ME 410

ME 430: Introduction to Combustion

3 Credits

Concepts related to laminar and turbulent premixed and nonpremixed combustion with applications to propulsion and stationary systems. EGEE (M E) 430 Introduction to Combustion (3) This course provides an introductory treatment of combustion science. The objectives of the course are to develop in the students an understanding of combustion kinetics, combustion thermochemistry, flame dynamics, flame stability, and pollutant formation. Coverage includes laminar and turbulent flames, premixed and diffusion flames, and detonations. Emphasis is placed on the role that Kinetics, heat transfer, mass transfer, and fluid dynamics have on flame structure and flame stability. The course includes some laboratory demonstrations of flat flame and diffusion flame burners, and incorporates numerical calculations of thermodynamic and kinetic combustion phenomena. The course begins with a review of transport phenomena, physical gas dynamics, and thermochemistry. Then, the concept of the laminar flame speed is introduced in the context of a one-dimensional flame and a propagating chemical wave. Issues of premixed flame structure and stability are presented along with a discussion of flammability limits. Next, laminar diffusion flames are presented via the Burke-Schumann analysis. From laminar flames, the emphasis shifts to turbulent premixed and diffusion flames, and the concepts of flame stretch and strain. Detonations are considered, with emphasis on thermodynamic analysis of the detonation and the structure of the detonation wave. Details of chemical kinetics for the hydrogen-oxygen and hydrocarbon-air reaction systems are presented, with linkage back to earlier topics such as flame stabilization and flammability limits. After kinetic phenomena, the course then considers pollutant formation focusing on soot and NOx. The fundamental aspects of combustion are applied to analysis of the combustion process and pollutant formation in internal combustion engines and catalytic combustors. The course wraps up with discussion of atmospheric chemistry, the fate of pollutants, and the formation of secondary pollutants.

Enforced Prerequisite at Enrollment: ME 201 or ME 300 or EME 301

Cross-listed with: EGEE 430

ME 431: Internal Combustion Engines

3 Credits

This course is specifically designed to provide an integrative modeling and analysis approach to thermal-fluids systems. The course emphasizes the integration and application of fundamental principles of mass, momentum, and energy conservation to relatively complex systems. These systems include spark-ignition and diesel engines, gas-turbine engines for power production, and turbojet engines. The integration of the topics of combustion, compressible flow, and psychrometrics allow these systems to be analyzed in their totality. Emphasis is on creating engineering models of these systems. The course aims to integrate previous knowledge and develop skill in "thinking like an engineer."

Enforced Prerequisite at Enrollment: ME 300 and ME 320

ME 432: Rocket Propulsion

3 Credits

Overview of underlying theories and design practices of chemical and non-chemical rocket propulsion systems. The topical areas include basic thermodynamics and gas dynamics, propellant formulation and characterization, component and system designs, and test evaluation. At

the conclusion of this course, students will have obtained fundamental knowledge and design rules of various rocket propulsion systems, including solid, liquid, and hybrid rockets, as well as electric propulsion engines.

Enforced Prerequisite at Enrollment: ME 410

ME 433: Fundamentals of Air Pollution

3 Credits

Natural and man-made sources of pollution; atmospheric dispersion; biological and health effects; control systems; legislation and regulations. This course is an introduction to air pollution, with an emphasis on outdoor rather than indoor air pollution. Topics to be covered include sources (emissions) of air pollution, both gaseous and particulate, interaction of air pollution with our bodies and the environment, and methods of measuring, quantifying, analyzing, and controlling air pollution. A brief introduction to government regulations related to air pollution will also be provided. Students are expected to be proficient in applying mathematics (e.g., integration, differentiation, and application of differential equations), and some basic chemistry, statistics, thermodynamics, and fluid mechanics.

Enforced Prerequisite at Enrollment: ME 201 or ME 300

ME 435: Mechanical Engineering Systems Lab

3 Credits

This course studies fundamental mechanical engineering subjects, including mechanics, dynamics, heat transfer, fluid mechanics, material science, and control in a holistic approach, through real-world systems in topics, such as energy and sustainability, autonomy and robotics, and big data. Students will analyze and divide complex thermal and mechanical problems into manageable subtasks, devise, and conduct hands-on experiments to solve engineering problems. This course will give students experience with data acquisition and analysis, evaluating the strength and limitations of theoretical predictions using computational tools, and interpreting data to support a conclusion. In particular, the course emphasizes helping students develop skills in observation, problem-solving, analysis, and critical thinking. This course has weekly laboratory sessions as well as two weekly lectures to provide project background, reinforce knowledge, reflect and discuss experimental observations, and train communication, documentation, and presentation skills.

Enforced Prerequisite at Enrollment: (ME 345 or ME 348) and ME 330 and ME 320 Enforced Concurrent at Enrollment: ME 370

ME 440W: Mechanical Systems Design Project

3 Credits

Design and analysis of mechanical components and systems. Application of fundamental design and analysis methods to open ended engineering problems. Students develop and practice skills and techniques for managing and executing engineering design projects. These skills are applied to an industry-sponsored project. Project teams perform all facets of product and process design. This includes problem identification, planning of the project, formulation of design specifications, the development and evaluation of alternative conceptual designs, the development of detailed designs, the specification of manufacturing processes, prototyping of manufacturing processes and parts, and analysis and documentation of results. Students will

visit industrial sites to gain an understanding of existing processes and problems and to assess the customer's needs. Students will present their design process and final design in several formats: oral presentations, poster presentations, web pages, and reports.

Enforced Prerequisite at Enrollment: ME 340 and Enforced Concurrent at Enrollment: IE 312 and ENGL 202C

Writing Across the Curriculum

ME 441W: Thermal Systems Design Project

3 Credits

Design of thermal systems through component design and/or selection, system simulation and optimization. Assessment of system economics and energy efficiency. ME 441 Thermal Systems Design Project (3) Students develop and practice skills and techniques for managing and executing engineering design projects related more to thermal design but not excluding mechanical design. These skills are applied to projects mostly sponsored by the industry. Project teams perform all facets of product and process design either on paper via use of computer models and/or as a physical product. This includes problem identification, planning of the project, formulation of design specifications, the development and evaluation of alternative conceptual designs, the development of detailed designs, the specification of manufacturing processes, prototyping of manufacturing processes and parts, design computations, drawings and performance via use of CFD and analysis and documentation of results. Students will visit industrial sites when possible to gain an understanding of existing processes and problems and to assess the customer's needs. Students will present their design process and final design in several formats: oral presentations, poster presentations, web pages and reports.

Enforced Prerequisite at Enrollment: ME 340 and ME 410 Enforced Concurrent at Enrollment: ENGL 202C

Writing Across the Curriculum

ME 442W: Advanced Vehicle Design I

2 Credits

Part one of a two course sequence; applications of design and analysis methods to open-ended advanced transportation vehicles. Two semester course; satisfies Senior Design or ME Technical Elective requirements (when combined with ME 443W). Students develop and practice skills and techniques for managing and executing engineering design projects. This is done in the context of an international University-level engineering design competition that is sponsored by government agencies and/or by industry. The competitions are structured to span a full calendar year, with the competition itself taking place in late Spring. For that reason, the course is spread over two semesters. In the Fall semester, there is approximately equal emphasis on classroom lectures and hands-on laboratory activities; in the Spring semester, the emphasis is on hands-on laboratory activities. The focus is advanced powertrain technology for personal transportation vehicles. Broader aspects of energy efficiency, security, and sustainability also will be discussed. The specific technologies that are targeted will evolve with time to remain ahead of what is available in current production vehicles. Project teams perform all facets of product and process design. This includes problem identification, planning of the project, formulation of design specifications, the development and evaluation of alternative conceptual designs, the development of detailed designs, the specification of manufacturing processes, prototyping of manufacturing processes and parts, and analysis and documentation of results. Students also

will participate in broader aspects of the design competition. This may include securing sponsorship and funding, participating in outreach and public relations events, developing a business plan, developing a web site, and traveling to competition workshops and to the annual competition. Students will present their design process and final design in several formats: oral presentations, poster presentations, web pages, and reports.

Enforced Prerequisite at Enrollment: ME 340 Enforced Concurrent at Enrollment: IE 312 and ENGL 202C Writing Across the Curriculum

ME 443W: Advanced Vehicle Design II

1 Credits

Part two of a two course sequence; applications of design and analysis methods to open-ended advanced transportation vehicles. Two semester course; satisfies Senior Design or ME Technical Elective requirements (when combined with ME 442). ME 443 Advanced Vehicle Design II (1) Students develop and practice skills and techniques for managing and executing engineering design projects. This is done in the context of an international University-level engineering design competition that is sponsored by government agencies and/or by industry. The competitions are structured to span a full calendar year, with the competition itself taking place in late Spring. For that reason, the course is spread over two semesters. In the Fall semester, there is approximately equal emphasis on classroom lectures and hands-on laboratory activities; in the Spring semester, the emphasis is on hands-on laboratory activities. The focus is advanced powertrain technology for personal transportation vehicles. Broader aspects of energy efficiency, security, and sustainability also will be discussed. The specific technologies that are targeted will evolve with time to remain ahead of what is available in current production vehicles. Project teams perform all facets of product and process design. This includes problem identification, planning of the project, formulation of design specifications, the development and evaluation of alternative conceptual designs, the development of detailed designs, the specification of manufacturing processes, prototyping of manufacturing processes and parts, and analysis and documentation of results. Students also will participate in broader aspects of the design competition. This may include securing sponsorship and funding, participating in outreach and public relations events, developing a business plan, developing a web site, and traveling to competition workshops and to the annual competition. Students will present their design process and final design in several formats: oral presentations, poster presentations, web pages, and reports.

Enforced Prerequisite at Enrollment: ME 340 Enforced Concurrent at Enrollment: ENGL 202C and IE 312 Writing Across the Curriculum

ME 444: Engineering Optimization

3 Credits

Problem formulation, algorithms and computer solution of various engineering optimization problems. M E 444 Engineering Optimization (3) Students will learn to formulate and solve a variety of engineering optimization problems. Basic concepts, problem formulation, scaling, use of different optimizers, effect of tuning parameters and starting points and solution interpretation will be taught. Example problems will be taken from mechanical, aerospace, nuclear, civil, chemical, electrical and other engineering disciplines. This course will complement other engineering design courses, such as capstone design. Students will learn how

optimization can reduce product turnaround time, and to make decisions involving weight, stiffness, strength, performance, energy utilization, and other attributes. Pedagogy will focus on hands-on experience through computational problem-solving and graphical understanding. Technology classrooms and computer labs for instruction will be used. A by-product of this course is increased math and computer skills.

Enforced Prerequisite at Enrollment: MATH 220 and (MATH 230 or MATH 231) and (CMPSC 201 or CMPSC 200)

ME 445: Microcomputer Interfacing for Mechanical Engineers

4 Credits

Interfacing of electro-mechanical systems to microcomputers for data acquisition, data analysis and digital control.

Enforced Prerequisite at Enrollment: (ME 345 or ME 348) and seventh-semester standing

ME 446: Reliability and Risk Concepts in Design

3 Credits

Introduction to reliability mathematics. Failure data collection and analysis. Components and systems reliability prediction. Effects of maintenance on reliability. Risk Analysis. Case studies in engineering applications. ME 446 / NUCE 446 Reliability and Risk Concepts in Design (3) The course covers materials reliability in design including mechanical, electrical and system aspects. Five main topics will be studied. The course starts by introducing engineering risk and reliability, highlighting its interdisciplinary nature and its significance in system design. The concept of reliability as a probability is introduced and the basic laws of probability are reviewed. The discussion centers on the mathematics needed to understand and analyze complex systems including components in series and parallel. The topics include the independence, mutual exclusivity, truth tables and Venn diagrams. These concepts are then applied to simple systems consisting of one, two and three components in various configurations. The equivalency of the various methods is discussed. The effect of maintenance on a system's reliability is presented along with discussions of various maintenance strategies. Then, the failure modes and effects analysis is introduced and examples discussed. The concept of fault trees and event trees and their application to reliability analysis are presented. Risk analysis is then introduced as a case study in the application of reliability analysis. A nuclear power plant system is analyzed to quantify the risk to the public from its operation.

Enforced Prerequisite at Enrollment: (MATH 250 or MATH 251) and (ME 345 or ME 348 or NUCE 309)
Cross-listed with: NUCE 446

ME 448: Engineering Design Concepts

3 Credits

Engineering design and modelling, engineering economic analysis techniques, technical communication skills, project planning and design. M E 448 Engineering Design Concepts (3) This course is the first of a two-part sequence of courses that make up the capstone design experience in the ME BD major (the second course is M E 449, Mechanical Design Projects). In this course students study the engineering design process, begin working on their design project, and learn about professional topics related to industry. Topics in the engineering design process include customer needs identification, development of engineering specifications,

concept generation, concept selection, costing, and project planning. Professional topics include communication, team work, ethics, safety, sustainability, globalization, and engineering economics. Students are evaluated on the design process and professional topics through assignments and quizzes. A major component of the course is to begin work on a capstone design project. Students work in teams of 3 to 4 on an industrially-sponsored project or other project approved by the faculty. The student teams work with the sponsor to develop specifications and a project plan, perform background research necessary to fully understand the project, begin to solve the problem, and make two presentations during the semester. The first presentation is a formal project proposal; the second presentation at the end of the semester is a progress report. Students are evaluated on both their technical and presentation skills, as well as their ability to function as a team. This course is required in the Behrend Mechanical Engineering (ME BD) program, and integrates material from a number of previous courses.

Enforced Prerequisite at Enrollment: ME 380 and seventh-semester standing. **Enforced Concurrent at Enrollment:** ME 367 and ME 410

ME 449: Mechanical Design Projects

3 Credits

Group or individual design projects in the areas of mechanical engineering.

Enforced Prerequisite at Enrollment: ME 448 and eighth-semester standing

ME 450: Modeling of Dynamic Systems

3 Credits

Modeling and analysis of dynamic interactions in engineering systems. Classical and state variable methods; digital simulation; stability and dynamic response. M E 450 Modeling of Dynamics Systems (3) This course covers modeling, analysis, and control of single and multiple degree-of-freedom dynamical systems, including mechanical, electrical, thermal, fluid systems and their combinations (mixed systems). The processes of energy storage and dissipation, which are common for different kinds of dynamic systems, will be emphasized in investigating general principles for modeling various dynamic systems. Basic concepts in system theory such as state variables and stability notions will be introduced. Most of the content will be restricted to linear-time-invariant systems (LTIs); however, local linearization around nominal operating points will be taught to analyze nonlinear systems. Introduction to classical control analysis and design methods will also be given.

Enforced Prerequisite at Enrollment: ME 370 Enforced Concurrent at Enrollment: ME 345 or ME 348

ME 452: Vehicle Road Dynamics

3 Credits

This course conducts investigations of one-dimensional, two-dimensional, and three-dimensional dynamics, kinematics and design integrated into the study of vehicle dynamics. Topics include body kinematics, steady state body dynamics, transient stability, tire forces, suspension, automatic control, and driver interaction. The emphasis is on the analysis of a vehicle as a complex system, recognizing how to abstract observed behaviors into appropriate mathematical models, how to decompose behaviors into subsystems, how to construct and perform numerical simulations, and how to design and analyze experiments

to test models and simulations to gain insights into design goals and tradeoffs.

Enforced Concurrent at Enrollment: ME 450

ME 453: Powertrain System Modeling, Simulation, and Control

3 Credits

This course introduces students to the control-oriented state-space and transfer function modeling of powertrain components and systems. Relevant application domains include conventional automotive powertrains, hybrid powertrains, locomotive propulsion systems, marine and submarine propulsion systems, and stationary power generation systems. The course introduces students to the use of fundamental principles from thermodynamics, fluid mechanics, and rigid body mechanics for powertrain modeling. Simple, control-oriented models are emphasized. Model integration and simulation topics, including numerical stiffness, solver selection, and integration step size selection are emphasized. Applications of powertrain modeling and control covered in the course include servo-control problems (e.g., air-fuel ratio control) and supervisory power management in hybrid powertrains.

Enforced Prerequisite at Enrollment: ME 370 Enforced Concurrent at Enrollment: ME 357 or ME 450

ME 454: Mechatronics

3 Credits

Interfacing of electro-mechanical hardware to microcomputers and microcontrollers for data acquisition, data analysis, and digital control. The course addresses the need for today's mechanical engineer to understand the architecture of engineering systems and not just the mechanical hardware. The course has a significant lab component in the form of weekly, two-hour labs. Examples of lab topics include the design and building of a complete autonomous vehicle including the drive system, steering, sensors, obstacle avoidance, and computer control.

Enforced Prerequisite at Enrollment: ME 345 or ME 348

ME 455: Automatic Control Systems

3 Credits

This course covers the characterization and feedback control of linear time invariant (LTI) dynamic systems, classical feedback control theories will be emphasized. Basic concepts of analyzing, predicting and specifying the performance of dynamic systems, including transfer functions, dynamic response, block diagram, stability notions and sensitivity will be introduced. A thorough treatment of feedback controller design via Root-Locus method will be provided, which includes the design of lead/lag compensation and PID controller. Frequency domain controller design will also be introduced thoroughly, from the characterization of open-loop frequency response using Bode plot to the analysis of closed-loop frequency response. In this process, the notions of gain-phase relationship, Nyquist stability criterion, and stability margin will be discussed. Finally, the method of adding dynamic compensation to adjust the frequency response and improve the stability and performance of the system will be introduced.

Enforced Prerequisite at Enrollment: ME 320 and (ME 450 or ME 357)

ME 456: Introduction to Robotics

3 Credits

This course is a technical elective where students learn about the present and future status of robot applications, and are required to apply fundamental knowledge of physics, mechanics, and mathematics to develop software to analyze and control robots. The course deals with mechanics and control of mobile robots, flying robots and robot manipulators. First, students are taught to describe position and orientation of a rigid body, including rotation matrix, roll-pitch-yaw angles and Euler angles. In addition, a brief introduction to feedback control system is provided. After these background materials, students learn about the following topics: a. kinematics and control of wheeled mobile robots, car-like mobile robots and quadrotor and b. 3-D kinematics, statics, dynamics and control of robot manipulators. Sensors, actuators and software used in industrial robots are discussed.

Enforced Prerequisite at Enrollment: EMCH 212 and (ME 360 or ME 367)

ME 460: Advanced Machine Design Problems

3 Credits

This course is designed to approach and analyze fundamental problems in the design of advanced level machine components and systems. It integrates advanced concepts in fatigue, vibrations, mechanics of materials and tribology for component and system level reliability. The course emphasizes elements of power transmission through detailed discussion on kinematics and reliability-based design of cams, flywheels, transmission couplings and gear chains. Example cases involve single and multiple cylinder automotive engine system with analysis of dynamics and balancing, power transmission through both flexible and rigid elements as well as different kinds of differentials built of spur, helical, bevel and worm gears. Another thrust is the application of tribology on machine design with special focus on hydrostatic and hydrodynamic bearings. Through case studies drawn from design and failure from real life systems, the course develops knowledge and skills for translating design concepts from components to system level.

ME 461: Finite Elements in Engineering

3 Credits

Computer modeling and fundamental analysis of solid, fluid, and heat flow problems using existing computer codes. E MCH (M E) 461 Finite Elements in Engineering (3) This is an introductory course in the Finite Element Method. Through this course, students gain knowledge in finite element theory and problem modeling. The mathematical formulation of the method is presented and then applied to problems in elasticity and heat transfer. Projects are assigned to demonstrate the finite element method in simplified problems using hand- calculations and computer programs such as Matlab. The use of commercial FEA programs is introduced and problems of increased complexity are assigned to demonstrate their use in a computer lab. Finally, problems of realistic complexity are assigned such that students can practice solving, documenting and presenting their use of commercial FEA programs.

Enforced Prerequisite at Enrollment: (EMCH 213 or EMCH 210H or EMCH 210) and (CMPSC 201 or CMPSC 200)

Cross-listed with: EMCH 461

ME 462: Lubrication in Machine Design

3 Credits

Lubricants and lubrication with applications to design aspects of machines and mechanisms including bearings, gears, cams, and automotive engines. M E 462 Lubrication in Machine Design (3) The course covers interdisciplinary materials on lubrication in machine design including mechanical, mechanics and chemistry aspects. Six main topics will be studied. The course starts by introducing engineering tribology, highlighting its interdisciplinary nature and its significance in machine design. Surfaces of machine components in contact are studied, including surface physiochemistry, surface topography, topographical measurements and characterization and classification of regimes of lubrication. Lubricants used in machine design are discussed in length, including types of industrial lubricants, properties of lubricating oils: compositions, viscosity and additives, synthetic lubricants and engine oils. The course will develop the theory of fluid-film lubrication, including the mechanisms of pressure generation, configuration of tribo-contacts and the Reynolds equation. Hydrodynamic lubrication is studied. The topics include the machine components with hydrodynamic lubrication, thrust bearings, journal bearings and design considerations of these devices. The last topic to be covered is the theory and application of Elastohydrodynamic lubrication (EHL). First, the machine components with concentrated contacts are introduced. Then, the Hertz theory of contact is studied and the governing equations for EHL are derived. Thermal EHL and traction are studied, and design calculations for rolling bearings, cams and gears are developed in relation to the geometrical and kinematic features of these components.

Enforced Prerequisite at Enrollment: MATH 251 and ME 360

ME 465: Introduction to Manufacturing Laboratory

1 Credits

A laboratory-based introduction to manufacturing processes including material removal, forming, casting and joining for metals and non-metals. M E 465 Introduction to Manufacturing Laboratory (1) This laboratory course provides an integrated approach to Manufacturing Science and Engineering. The laboratory examines common techniques for fabricating parts; providing an introduction to several basic processes for creating both metallic and polymeric parts. As a part of this course, students will be exposed to compressive, tensile, sheet, bending, casting and powder metal processes. Using basic material science principles, students will examine concepts such as material flow, springback, and cold working. The course requires hands-on involvement by the students in the planning of experiments as well as data manipulation and analysis of results. The laboratory exercises are intended to provide students with a broad appreciation of the breadth of Manufacturing Science and Engineering. Students work in groups. Written reports and in-class exercises are the primary basis for grading. This course is a technical elective.

Enforced Concurrent at Enrollment: ME 468

ME 467: Applied Finite Element Analysis

3 Credits

Review of matrix algebra; discretization; finite element formulation; application of finite element computer codes.

Enforced Prerequisite at Enrollment: ME 349 Enforced Concurrent at Enrollment: ME 410

ME 468: Engineering for Manufacturing

3 Credits

Manufacturability, the selection of the most effective materials and processes, and quality assurance. M E 468 Engineering for Manufacturing (3) This course will present an overview of the various manufacturing techniques that are currently used within industry. The advantages and disadvantages of each manufacturing technique will be discussed along with common defects that occur with each process. The start-up, operating, maintenance, and labor costs of each process will be presented along with general manufacturing economical concerns. Statistics and Quality assurance topics will also be covered, along with manufacturability and design for manufacturing concepts.

Enforced Prerequisite at Enrollment: MATSE 259

ME 468H: Engineering for Manufacturing

3 Credits

Manufacturability, the selection of the most effective materials and processes, and quality assurance. M E 468 Engineering for Manufacturing (3) This course will present an overview of the various manufacturing techniques that are currently used within industry. The advantages and disadvantages of each manufacturing technique will be discussed along with common defects that occur with each process. The start-up, operating, maintenance, and labor costs of each process will be presented along with general manufacturing economical concerns. Statistics and Quality assurance topics will also be covered, along with manufacturability and design for manufacturing concepts.

ME 469: Metallic Manufacturing Processes

3 Credits

Principles of metal working and introduction to current theories; analysis of deformation, joining, and metal removal processes. M E 469 Metallic Manufacturing Processes (3) In this integrated lecture/laboratory course students will learn a) metal deformations techniques such as: forging, rolling, extrusion and drawing, b) metal removal techniques for single, multi and infinite point cutting, and c) metal fastening techniques, including bolts, rivets and welds. As a part of the learning process, students will directly compare existing standards and theories to actual laboratory results. Students will learn how to assess the accuracy of both theoretical derivations and experimental procedures by first deriving theoretical equations in the classroom and then directly examining the ability of the equations to predict the given behavior by actually performing the manufacturing operation in the laboratory. Based on in-depth discussions regarding assumptions, approximations, and experimental error, students will assess the ability of the current state-of-the-art techniques to accurately predict the forces generated/required during various manufacturing metal working operations. In addition, students will derive their own theories by removing/improving some assumptions within the existing theories. For processes where multiple theories exist, students will compare and contrast the predictive abilities of the various techniques to those found through controlled laboratory experiments. Similar comparisons will also be made for processes where both engineering standards and theoretical techniques exist.

Enforced Prerequisite at Enrollment: ME 349 Enforced Concurrent at Enrollment: ME 468

ME 470: Analysis and Design in Vibration Engineering

3 Credits

Application of Lagrange's equations to mechanical system modeling, multiple-degree-of-freedom systems, experimental and computer methods; some emphasis on design applications. In this course, students will learn basic techniques for modeling and analyzing linear multidegree-of-freedom (MDOF) mechanical systems, and will learn how to use these techniques for mechanical design. Students will learn to obtain equations of motion using energy methods (Lagrange's equations), with emphasis on the efficient formulation and reduction to the linear case. The basic theory of MDOF systems will be presented, including: eigenvalue problems; natural frequencies and normal modes; superposition and modal analysis; and frequency response. Numerical methods for solving static, dynamic and eigenvalue problems will be presented. Introductions to the theory of linear continuous systems and experimental methods of vibrations will be presented. A substantial portion of the course will be spent discussing design applications of the basic theory, such as: finite element numerical analysis and experimental modal analysis of beams and plates; vehicle suspension design; and vibration isolation and absorption.

Enforced Prerequisite at Enrollment: (EMCH 212 or EMCH 212H) and (ME 370 or ESC 407 or EMCH 407)
Cross-listed with: EMCH 470

ME 471: Noise Control in Machinery

3 Credits

Nature of noise sources in machine elements and systems. Propagation and reduction of noise. Effects of noise on man. M E 471 Noise Control in Machinery (3) Course Objectives: This course prepares students to perform effectively as noise control engineers in industries with noise and vibration applications, e.g., during the early stages in product design or environmental noise control in industrial settings. Much of the material presented builds on second and third year courses covering such topics as dynamics, vibration, fluid mechanics and electrical components. Hands-on laboratory experiments (both programmed and open-ended) coordinated with focused lectures provide students with a working knowledge of the disciplines associated with noise and vibration and their practical applications for identifying, analyzing, and solving real world problems. The first part of the course centers on learning modules that cover the fundamentals of acoustics and noise control. Each module consists of two lectures followed with a laboratory experiment that demonstrates the relevant principles. These take place in small group settings (8 students maximum). Students are required to write individual reports based on the results of each of the laboratory experiments. The modules are followed with a laboratory project competition wherein each small group is given a noisy, small machine with the challenge to reduce its noise and vibration signatures. The course concludes with formal Power Point presentations of the results from each small group to an assessment team consisting of the industrial sponsors and selected professors and graduate students. This course is offered annually during the fall semester with an enrollment limited to 32 students (8/laboratory group).

Enforced Prerequisite at Enrollment: ME 320 and ME 370

ME 480: Mechanism Design and Analysis

3 Credits

Design and analysis of mechanical linkages including kinematic synthesis and dynamic analysis. Linkages for a variety of applications are considered. M E 480 Mechanism Design and Analysis (3) The student who takes this course will develop a basic understanding of the analysis and synthesis of planar linkage mechanisms. Students will develop the ability to model real linkage mechanisms using kinematic diagrams, including identification of links and joints. They will also learn to use Gruebler's equation to calculate the mobility or number of degrees of freedom of linkages based on the kinematic diagram. Students will also become familiar with real mechanism applications in the context of mechanism synthesis, where they will learn to determine the required dimensions of a mechanism for a specific application. Students will apply these dimensional synthesis methods in a design project which includes building a simple linkage prototype. They will learn kinematic analysis methods, i.e., analysis of position, velocity, and acceleration of planar linkages. These methods consist of graphical, algebraic, and complex number approaches. Students will also learn to use commercial software packages, e.g. Working Model, to predict position, velocity, and acceleration of planar linkages, and will compare their predictions to those using analytical approaches. Finally, students will learn to do dynamic force analysis of planar linkages to predict joint forces and motor torques. They will use commercial software packages to predict joint forces and motor torques of planar linkages, and will compare their predictions to those using analytical approaches.

Enforced Prerequisite at Enrollment: (EMCH 212 or EMCH 212H) and (CMPSC 201 or CMPSC 200 or ESC 261)
Cross-listed with: EMCH 480

ME 481: Introduction to Computer-Aided Analysis of Machine Dynamics

3 Credits

Techniques and formulations for computer based kinematic and dynamic analyses of machines. M E 481 Introduction to Computer-Aided Analysis of Machine Dynamics (3) This course addresses computer methods for kinematic and dynamic analyses of two-dimensional (2D) multi-body machines at the advanced undergraduate and introductory graduate level. The course introduces the formalism of kinematic mobility and topology to help students recognize constrained kinematic chains embedded in larger engineering systems. Classic kinematic and Newtonian dynamic methods are reformulated using modern matrix methods. The latter half of the course focuses on underlying algorithms and theory behind commercially available mechanism analysis software packages that employ differential-algebraic equation (DAE) solvers. Students program their own numerical integration methods for time domain simulation of forward dynamics of a simple system to reinforce the theory. The overall goals are for students to be able to identify forward versus inverse dynamic problems; and to be able to plan, implement and debug an appropriate computer-based design tool to analyze kinematics and dynamics of 2D constrained mechanisms.

Enforced Prerequisite at Enrollment: EMCH 212 Enforced Concurrent at Enrollment: CMPSC 200 or CMPSC 201

ME 490: Professional Development for Mechanical Engineers

0.5 Credits

ME 490 Professional Development for Mechanical Engineers (0.5) provides a look at foundational business issues of importance to new engineers: creating value, organizational models, financial statements, and intellectual property. Students will get a preview of their role in today's global workplace and how they can position themselves for success. Strategies for recognizing opportunities and continually growing skills and knowledge is emphasized. The course meets once weekly for 8 weeks.

Enforced Prerequisite at Enrollment: ME 390

ME 491: Bioengineering Applications of Mechanical Engineering

3 Credits

Application of mechanical engineering knowledge in the context of life sciences. M E 491 Bioengineering Applications of Mechanical Engineering (3)The primary objective of this course is to teach students how to apply mechanical engineering knowledge in the context of life sciences. Fundamental mechanical engineering knowledge such as solid mechanics, fluid mechanics and system dynamics will be reviewed first. Then, different topics in bioengineering, such as motion biomechanics, physiological fluid mechanics, modeling of physiological systems, and rehabilitation engineering will be discussed. Throughout the semester, students also work in groups to solve several simplified real-life bioengineering projects. Students will be evaluated through these projects plus a final project presentation, an application presentation and several homework assignments. This course is a technical elective in the ME BD program and allows students who have completed their third-year to learn the application of mechanical engineering knowledge in the life science context.

Enforced Prerequisite at Enrollment: EE 211 and ME 320 and ME 357 and EMCH 213 and ME 349 or permission of program

ME 493: ME Honors Thesis Writing Preparation

1 Credits

The goal of this course is to prepare mechanical engineering Schreyer honors scholars for their final honors thesis. The course helps students identify a thesis supervisor if the student has not already found a thesis supervisor and project. The main body of the course focuses on writing the literature review. Identifying different types of literature and their uses, finding appropriate literature online and on databases, and writing about the literature are all covered extensively. Students are given detailed feedback on outlines and drafts of their literature review throughout the semester, resulting in a final literature review for their honors thesis at the end. In addition to the literature review, two presentations - one elevator pitch and one final presentation - are required to practice oral communication of research topics. Finally, the topics of research ethics, research in teams, and career planning are discussed throughout the course to prepare students for future research and career opportunities. Class meets once per week and class times are highly interactive, with activities to practice the skills learned in the course with the help of peers and faculty. The grade is comprised of several assignments, including pre-class assignments, in-class assignments, and thesis-related assignments.

Honors

ME 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

ME 494H: Senior Thesis

1-9 Credits/Maximum of 9

Students must have approval of a thesis adviser before scheduling this course. M E 494H Senior Thesis (1-9) All Schreyer Scholars are required to complete an undergraduate honors thesis. This work represents the culmination of a student's honors experience. Through the thesis, the student demonstrates a command of relevant scholastic work and a personal contribution to that scholarship. The thesis project can take many forms - from laboratory experiments all the way to artistic creations. The thesis document captures the relevant background, methods and techniques, as well as describing the details of the completion of the individual project. Two Penn State faculty members judge the merits of this Scholar's honors thesis, the student's self-selected thesis supervisor and the department-selected honors adviser in the student's area of honors.

Honors

ME 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

ME 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ME 496A: **SPECIAL TOPICS**

1-6 Credits

ME 496H: Honors Research

1-6 Credits

Honors research that fulfills Shreyer's Honor College requirements. This research will serve as a basis for my honors thesis. Research regarding the development and manufacturing of micro fuel cells. Course will be graded on a scale similar to a traditional class.

Honors

ME 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ME 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Mechanical Engineering Technology (MET)

MET 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MET 105: Mechanical Systems

3 Credits

Mechanical Systems with Laboratory is an introductory course for Engineering Technology major students to broadly introduce Mechanical Engineering Technology. MET 105 Mechanical Systems (3) MET 105 includes mechanical engineering technology profession, United States Customary System and Metric System, communication skills; structures and mechanics including the resultant of a system of forces, moment of a force, and the requirements for equilibrium; Materials and Stress including a stress-strain curve, the material properties for metals and their alloys, ceramics, polymers, and composite materials, a factor of safety; Fluids Engineering including the application of fluids engineering, a fluid's density and viscosity properties, laminar and turbulent fluid flows, buoyancy, drag, and lift, the volumetric flow rate and pressure drop of fluids through pipes. Thermal and Energy system including various energy, heat, work, and power quantities in the SI and USCS, the principle of energy conversion, the basic operating principles of various engines; Motion and Power Transmission including the design and operation of power-transmission equipment, rotational velocity, work, power, belts, and gears.

MET 107: Computer Applications for Technologists

3 Credits

Programming spreadsheets, data bases and presentation software for solutions of technical problems; introduction to languages allowing creation of program macros.

Enforced Concurrent at Enrollment: MATH 81 or MATH 22 or MATH 26

MET 111: Mechanics for Technology: Statics

3 Credits

Forces; moments; resultants; two- and three-dimensional equilibrium of force systems; friction; centroids and moments of inertial of areas. MET 111 Mechanics for Technology: Statics (3) MET 111 will provide practical and compressive coverage of elementary statics. In addition to the theoretical approach, the course will demonstrate the practical applications of statics concepts. Students entering this course should have basic knowledge of algebra as well as geometry and trigonometry. Course will introduce the definition of scalar and vector quantities. This will be followed by vector addition, vector subtraction, resolution of vectors, addition of systems of coplanar forces, rectangular components

of a vector, etc. Course will also introduce the concept of moments and couples. This will be followed by introducing free-body diagrams as a tool for solving statics problems. Emphasis will be placed on equations of equilibrium for particles and rigid bodies. Students will be exposed to 2D and 3D equilibrium. Course will put emphasis on truss and frame analysis as well as pulleys. Distributed loads will also be discussed. Course will also introduce the concept of friction, angle of friction, wedges, etc. Belt friction and rolling resistance as well as friction in bearings will also be discussed. Course will also introduce the concept of centroids, center of gravity, and moment of inertia of an area. Emphasis will be put on calculating centroidal moment of inertia of composite areas. Polar moment of inertia and mass moment of inertia will also be introduced. Student will learn not only problem solving strategy but also develop ability to present results in clear manner.

Enforced Prerequisite at Enrollment: MATH 26 or MATH 81

MET 112: Statics Laboratory

1 Credits

Laboratory experimentation associated with basic engineering mechanics principles and concepts including forces, moments, equilibrium, trusses, frames, friction, and centroids. MET 112 Statics Laboratory (1) MET 112 facilitates the basic understanding of certain principles and concepts of elementary engineering mechanics. The course provides the hands-on experience essential to learn the fundamental engineering mechanics topics including forces, moments, equilibrium, frames, trusses, friction, and centroids. Laboratory experiments will be supported by lectures presented in MET 111 (taken concurrently), demonstrations, and associated computer software utilization.

Enforced Prerequisite at Enrollment: MATH 26 or MATH 81
Enforced Concurrent at Enrollment: MET 111

MET 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MET 206: Dynamics

3 Credits

Kinematics (particles and rigid bodies), kinetics, work-energy, impulse-momentum, and mechanisms. MET 206 Dynamics (3) Instructional, Educational, and Course Objectives - To introduce students to the basic principles of dynamics as applied to practical problems which include such topics as friction, kinetics of particles and rigid bodies, laws of force and motion, using methods of work-energy and impulse-momentum. Further, students will consider mechanisms which are typical in manufacturing industries and mechanical design. These goals serve to satisfy the following course objectives: -Students should be able to demonstrate proficiency in applied design, manufacturing processes, and mechanics. -Students should be able to apply concepts of applied mathematics and science in solving technical problems.

Enforced Prerequisite at Enrollment: MET 111 and (MATH 82 or MATH 22)

MET 210W: Machine Design

3 Credits

Design machine elements including bearings, springs, levers, shafts, gears, belts, and small mechanical devices; writing skills and computer applications. MET 210W Machine Design (3) MET 210W is designed to provide students with the necessary concepts and procedures to properly design machine elements in mechanical systems. The course starts with the study of the properties of various engineering materials, including various types of steel, aluminum, and plastics. Heat treating of steels is also covered. Machine design criteria are presented along with discussions of various types of stresses, concepts of principle stress, combined stresses, and methods of stress analysis. Failure theories and their application to brittle and ductile materials are covered along with the relationship of these concepts to design factors. The influence of dynamic loads on design and design margins is also covered. Welded and bolted connections and their design requirements are also studied, along with the application of buckling and beam deflection analysis to the design of support columns and beams. The course also examines the design of various types of springs and gears, the calculation of shaft stresses, and the design of clutches, brakes, belts, and chains. The writing component of the MET 210W course is satisfied by having students choose a design project which is completed over the course of the semester. Instructors introduce the design project early in the semester and discuss how writing exercises will be used to complete the project. Students write an initial proposal that is graded and returned. Subsequently, students prepare and present progress reports at various times through the semester. These are also graded. The project ends with students preparing a draft final project report, which is critiqued and returned. Based on the critique, a final design report is prepared and is a significant component of the final course grade. Both the progress reports and the final design report activities involve both written and oral exercises.

Enforced Prerequisite at Enrollment: (MET 206 or EMCH 212 or PHYS 150 or PHYS 250 or PHYS 211) and (MET 213 or EMCH 213 or ET 322)
Writing Across the Curriculum

MET 213: Strength and Properties of Materials

3 Credits

Axial stress and strain; shear; torsion; beam stresses and deflections; combined axial and bending stresses; columns, ductility, resilience, and toughness. MET 213 Strength and Properties of Materials (3) MET 213 includes analysis and computations of axial stress and strain, shear and bearing stress; stress-strain diagrams, mechanical properties of materials including yield strength, ultimate strength, modulus of elasticity, percent elongation, poisson's ratio; stress concentration, axial deformations, statically-indeterminate axially loaded members, thermal stress and strain; torsion analysis including shear stress, angle of twist, power, rotational speed; beam bending analysis including shear force and bending moment diagrams, flexure stress, beam shear stress, beam deflections; combined axial and bending stresses; columns.

Enforced Prerequisite at Enrollment: MET 111 and (MATH 26 or MATH 81)

MET 214: Strength and Properties of Materials Laboratory

1 Credits

Measurement of mechanical properties of materials; structural testing, data acquisition and analysis; technical laboratory report writing.

Enforced Concurrent at Enrollment: MET 213 or EMET 222

MET 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

MET 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MET 306: Computer-Aided Design

3 Credits

Computer-aided drafting and design; computer software solutions to mechanical engineering technology design problems. MET 306 Computer-Aided Design (3) This course is designed to be the third CAD course in a Mechanical Engineering Technology program. Students will be exposed to modeling industry specific geometry using solid and surface modeling techniques. Sheet metal modeling, tool path generation and material removal simulation for CNC operations as well as mechanism analysis are taught, Automation and optimization techniques using CAD packages are also covered in lab assignments. Students are expected to document their designs by producing industrial quality working drawings. Lecture material is directly related to the laboratory assignments and topics in understanding hardware and CAD software bench marking as well as associated costs and their relationship to the engineering design process are also covered. Experience in basic CAD modeling is required as well as a working knowledge of Statics, Dynamics and Strength of Materials. Evaluation is based on laboratory assignments, homework assignments, quizzes and a final project.

Enforced Prerequisite at Enrollment: (MET 107 and EGT 121) or (EGT 201 and EGT 205)

MET 308: Computer Aided Solid Modeling and Analysis

3 Credits

Basic techniques necessary to perform Computer Aided Design and Analysis in three dimensions for machine components. MET 308 Computer Aided Solid Modeling and Analysis (3) To introduce students to the theory and practice of creating computer aided design files for mechanical components, drawings, layout of multiview drawings, detailing design projects, assemble parts, and create assembly drawings and sections. Although it is highly recommended that the students have basic knowledge of finite element analysis FEA theory, the very user friendly interfaces and CAD interactive modes available in the market together with appropriate introductory training will enable students to perform reasonable and reliable structural, thermal, and motion analysis. This analysis is at the core of every day assignments for design engineers working in modern industrial firms with concurrent engineering

culture. With the advent of very powerful desktop workstations, FEA is now available at a practical cost to virtually all engineers and designers.

MET 320: Strength of Materials II

3 Credits

Principles of stress and strain in 3D, indeterminate structures, failure theory, and energy methods in solid mechanics. MET 320 Strength of Materials II (3) This course consists of three main subject areas; a study of statically indeterminate structures, a study of stresses and strains in three dimensions, and a study of energy methods in solid mechanics. Statically indeterminate structures are studied for stresses and deformations. The types of indeterminate structures studied are axially loaded members, including temperature changes; torsionally loaded members, including geared connections; and bending members. Stresses and strains are studied in three dimensions with Mohr's Circle to identify principal stresses and absolute maximum shear stress, to understand Hooke's Law and other material property relationships, and to apply various failure or yield theories. Energy methods are studied so that stresses and deformations from impact loading of structures can be analyzed and included in the design of axial, torsion, and bending structures. Energy methods are also used to determine the static deformation of complicated structures. Other miscellaneous topics may include unsymmetric bending, bending of multi-material beams including reinforced concrete, bending of curved beams, shear center, combined loadings, torsion of non-circular members, columns, and true stress and true strain.

Enforced Prerequisite at Enrollment: EMCH 213 or MET 213

MET 321: Analytical Techniques

2 Credits

A study of engineering methods of problem formulation and solution; includes differential methods, dimensional analysis, and graphical analysis.

Enforced Prerequisite at Enrollment: MATH 140 and (ET 321 or EMCH 212 or MET 206)

MET 330: Thermodynamics

3 Credits

Introduction for technologists to the basic concepts and applications of thermodynamics. MET 330 Thermodynamics (3) This course is designed as the first thermal sciences course in a series of three. Students are introduced to the basic thermodynamic units and concepts, the properties of pure substances, first law of thermodynamics for open and closed systems, second law of thermodynamics, ideal cycles, performance and efficiency, entropy, power and refrigeration cycles. Evaluation is based on homework assignments, quizzes and examinations. Students need a background that includes inorganic chemistry and calculus to succeed in this course.

Enforced Prerequisite at Enrollment: PHYS 250 or PHYS 211 or PHYS 150
Enforced Concurrent at Enrollment: CHEM 110 and (MATH 83 or MATH 140)

MET 331W: Heat Transfer

4 Credits

Introduction for technologists to the basic concepts and applications of heat transfer. Includes a thermodynamics and heat transfer laboratory.

Enforced Prerequisite at Enrollment: ME 300 or MET 330 Enforced Concurrent at Enrollment: MET 341 Writing Across the Curriculum

MET 332: Thermal Engineering A

3 Credits

Basic thermodynamic units, concepts, properties of ideal gases and vapors, first and second laws, gaseous mixtures, one-dimensional compressible flow.

Enforced Prerequisite at Enrollment: MATH 140 and CHEM 110

MET 336: Engineering Fluid Mechanics

3 Credits

This course introduces mechanical engineering technology students to the development of basic fluid mechanics relationships. Course topics include such as fluid properties, pressure measurement, hydrostatic forces on plane and curved surfaces, buoyancy and stability, conservation of mass, conservation of momentum, and conservation of energy. Specific, Bernoulli's equation, internal and external flow, friction in pipes and fittings, Reynold's number, laminar and turbulent flow, boundary layer theory, Minor losses, Major losses, and Drag forces are discussed. Students use differential and integral calculus and draw free body diagrams to solve applied fluid flow problems.

Enforced Prerequisite at Enrollment: ET 321

MET 338: Thermal/Fluids Laboratory

1 Credits

The objective of the Thermal/Fluids Lab course is to provide Mechanical Engineering Technology students with practical experience in thermal-fluid applications. Students will develop experience in making fluid velocity, flow rate, temperature, and power measurements. Exercises will cover a range of applications and may include: power generation, refrigeration cycles, duct flows, and other thermal-fluid phenomena. Laboratory experiments will be performed in groups. Typically, students will prepare individual written lab reports to present their findings and demonstrate their understanding of each laboratory experiment.

Enforced Corequisite at Enrollment: MET 332 and MET 336

MET 341: Mechanical Measurements and Instrumentation

3 Credits

Measurement concepts, transducers, electronic-aided measurement, mechanical and electrical measurements. Intended for mechanical engineering technologists. MET 341 Mechanical Measurements and Instrumentation (3) This course serves as an introduction to the fundamental principles of instrumentation and measurements. Subjects covered in this course may include the responses of first and second order systems, the concept of time constant and rise time, calibration, standards, design of experiment, and lectures on the design and function of different types of sensors and instruments. Topics may be added or

removed, as needed to meet Program Outcomes. The course includes lectures alternating with hands-on laboratory where students apply the material learned in the lectures. For many students this is the first time they have actual hands-on experience with electronic and measurement equipment, such as oscilloscopes, breadboards, function generators, digital data acquisition systems, integrated circuits, strain gauges, displacement sensors, thermocouples, tachometers, force sensors, accelerometers, velocity meters, pressure transducers, flow measurements, etc. Students learn not only how to use these devices in the lab, but also the fundamental principles of their operation.

Enforced Prerequisite at Enrollment: EET 105 or EET 100 or EE 211 or EET 320 Enforced Concurrent at Enrollment: PHYS 151 or PHYS 212 or PHYS 251

MET 358: Process Design Engineering

3 Credits

Introduction to process design for production applications from job shop to world-class manufacturing environments. MET 358 Process Design Engineering (3) Process design engineering includes the theory and application of principles and practices for economical tool design. Students will learn and demonstrate the use of basic engineering metrology tools. Students will learn and apply the principles of geometric dimensioning and tolerancing to datum systems. Students will learn the elements of process design for a variety of manufacturing processes currently used in industry with a focus on material removal methods including computer numerical control machining. Students will learn the fundamentals of process specification, planning, and fixture design for high-volume material removal operations. Students will participate in a team project to design and build a production machining fixture. The project teams will document and present their designs. This course is the second of a three-course sequence with a focus on manufacturing. The first two courses, Introduction to Manufacturing Processes and Process Design Engineering, are required in the Mechanical Engineering Technology program at Penn State Capital College. The third course, Manufacturing Engineering, is a senior-level technical elective. The course in this proposal will be offered every spring semester with a projected enrollment of 30. All lab work will be done in the Engineering Lab Building. Students are evaluated based on their individual performance as well as their participation as a team member. Evaluation opportunities are both lecture and lab-related. There are two exams and a couple of short projects that each student will complete. Student teams will conduct a machining experiment, which each student will analyze in a formal lab report. Project teams will document their fixture designs with drawings and supporting descriptions. Also, each team will prepare a formal presentation showcasing their fixtures and present it to the class.

Enforced Prerequisite at Enrollment: IET 321 or (IET 215 and IET 216)

MET 365: Design of Machine Elements

3 Credits

Design of structural and mechanical elements with emphasis on theories of fatigue failure. MET 365 Design of Machine Elements (3) Design of Machine Elements covers a wide array of mechanical engineering principles. The course draws heavily on the knowledge gained in the strength of materials lecture and laboratory courses. Failure Theory is covered for both static and dynamic loading conditions. The study of failure under 'low stress' cyclic loading, also called fatigue, is a feature of failure theory study. Finally, the theories are applied to the design of

machine and structural elements that include beams, columns, pressure vessels, shafts, keys, couplings, belt and chain drives, fasteners, springs, gears, brakes, and clutches. The effects of wear and lubrication on machine design are also examined.

Enforced Prerequisite at Enrollment: ET 322 or EMCH 213 or MET 213

MET 370: Engineering Materials Laboratory

1 Credits

Materials Science and Engineering is an organized investigation of engineering materials, including their classification, properties, and means of testing to determine their properties. In materials courses different topics such as atomic bonding, crystalline structure of materials, structural imperfections, solid state diffusion, plastic deformation, mechanical properties of engineering materials, systematic analysis of materials failure, phase diagrams and kinetics are discussed. The application of materials in manufactured products and construction, and the effects of both manufacturing processes and in-service stress on materials are considered. The laboratory subjects combine hands-on experiments with the materials which will be discussed in the lecture. Sample preparation, tension tests, hardness test, impact resistance, heat treatment, fatigue testing, torsion, shear, bending, etc. are some of the experiments which may be performed in the lab sessions. The report for the lab session is a necessary component which is a practice for written technical communication.

Enforced Corequisite at Enrollment: IET 311 or IET 101

MET 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

MET 403: Advanced Mechanical Design

3 Credits

Continuation of strength of materials and machine design, with emphasis on advanced methods of design and analysis of machine elements.

Enforced Prerequisite at Enrollment: MET 365

MET 415: Finite Element Analysis Applications I

3 Credits

Solutions of advanced engineering design problems using finite elements. Intended for engineering technologists. MET 415 Finite Element Analysis Applications I (3) Finite Element Analysis Applications I is a required course for junior or senior-level students in the Mechanical Engineering Technology (METBD) baccalaureate degree program. Finite element analysis (FEA) is a computer-simulation tool which is frequently used in engineering practice. Students study fundamental topics in static, structural FEA with the goal of mastering the usage of this software tool to become efficient and effective users of FEA technology in their engineering careers. Emphasis is placed on appropriate modeling (symmetry, simplifying assumptions, etc.), clear communication of analysis findings, and verification of results.

Enforced Prerequisite at Enrollment: MET 320 and (EGT 121 or EGT 205)

MET 417: Finite Element Analysis

3 Credits

Formulation and computer implementation of finite element models for solving problems in heat transfer, fluid flow, and solid mechanics.

Enforced Prerequisite at Enrollment: MET 365

MET 418: Finite Element Analysis for Plastics Design

3 Credits

Solutions of advanced engineering problems using finite element and finite difference techniques; advanced topics in computer-aided manufacturing; problems in optimization and design.

Enforced Prerequisite at Enrollment: EGT 120 and PLET 232 and MET 213

MET 425: Finite Element Analysis Applications II

3 Credits

Solutions of advanced engineering design problems using finite element methods. MET 425 Finite Element Analysis Applications II (3) Students study advanced topics in finite element analysis (FEA), including CAD interfaces, non-linear behavior, heat transfer analysis, dynamic analysis, optimization and/or design of experiments (DOE), and design and analysis to code. Emphasis is placed on efficient models (symmetry, simplifying assumptions, etc.) and verification of results.

Enforced Prerequisite at Enrollment: MET 415

MET 431: Heat Transfer

3 Credits

Basic principles of conduction, convection, and radiation with applications.

Enforced Prerequisite at Enrollment: MET 332

MET 432: Fluid Power

3 Credits

Principles of fluid flow, hydraulic components, and hydraulic circuits having application to industry. MET 432 Fluid Power (3) This course studies fluid motion, flow, and energy losses, as well as, fluid storage and distribution. Specific devices are examined, including hydraulic pumps and air compressors; hydraulic and pneumatic actuators such as motors and cylinders; and fluid power circuit valves and other ancillary devices. Heat transfer in fluid power circuits is evaluated. Fluid power circuit design is presented using electrical and electronic controls with ladder logic programming.

Enforced Prerequisite at Enrollment: ME 300 or MET 330 or MET 332
Enforced Concurrent at Enrollment: MET 331W or MET 431

MET 435: Building Energy Systems

3 Credits

Analysis and design of components and systems for building heating and cooling; emphasis on applying the thermal sciences.

Enforced Prerequisite at Enrollment: MET 332 and MET 336

MET 436: Energy Conservation Systems

3 Credits

Analysis of processes and systems for energy conversion, including power, refrigeration and air conditioning cycles, thermoelectric etc.

Enforced Prerequisite at Enrollment: ME 300 or MET 330 or MET 332

MET 438: Thermal Engineering B

3 Credits

Applied thermodynamics of power cycles; refrigeration and air conditioning cycles; combustion; psychometrics; and gas mixtures.

Enforced Prerequisite at Enrollment: MET 332

MET 440: Vibrations for Technologists

3 Credits

Principles of basic vibration theory, vibration measurement, data acquisition and analysis, and the effective presentation of vibration data. MET 440 Vibrations for Technologists (3) This course will introduce students to basic vibration theory. The theoretical topics will include lumped parameter, single degree-of-freedom and multi degree-of-freedom systems with descriptions of damping models, transmissibility, and transient behavior. Simple continuous systems will also be described. The focus of the course will be on data acquisition and data analysis and on practical vibration solutions. Students learn how to install various measurement devices and how to discriminatively process vibration signals. They also learn effective ways of presenting data to engineering and management. The practical vibration solutions presented will allow the student to understand and solve general problems typically encountered by a technologist in industry. Student performance will be evaluated by exams, graded homework, assignments, and laboratory reports.

Enforced Prerequisite at Enrollment: (MET 206 or EMCH 212) and (MATH 211 or MATH 250) and MET 341 Enforced Concurrent at Enrollment: MET 415

MET 452: Rapid Prototyping

3 Credits

Introduction to the production of prototypes directly from computer models.

Enforced Prerequisite at Enrollment: IET 216 and MET 306

MET 454: Automatic Controls

3 Credits

An introduction to basic automatic control theory, practical applications of automatic controls to typical industrial machinery, HVAC equipment, etc. MET 454 Automatic Controls (3) This course is intended for mechanical engineering technology students. It provides the student with a spectrum of knowledge about process controls and control systems. The course will cover some of the theoretical and practical concepts that underline the analysis and response of linear control systems. A brief coverage of industrial and electronic components used in modern control engineering is also necessary. Examples include microprocessors, Operational amplifiers, Solid state switches, relays, filters, PLC's, motors, etc. Principles of closed-loop control systems and stability analysis using

the Laplace transform are also discussed. Laboratory demonstration on PLC's and the use of computer simulation for modeling control systems are available.

Enforced Prerequisite at Enrollment: (EMCH 212 or ET 321 or MET 206) and MET 321

MET 455: Mechatronics

3 Credits

Integration of mechanical and electronic systems implemented using data acquisition systems, sensors, actuators, signal conditioning, feedback controls, and programmable logic controllers. MET 455 Mechatronics (3) Mechatronics is essential to the design and manufacture of modern products and processes. Mechatronics design is an approach where mechanical, electronic, computer, and control subsystems are designed simultaneously to function as an integrated system forcing the designer to be familiar with several disciplines. The course offers an integrated approach to engineering, incorporating product design, microprocessor-based control, manufacturing systems, modeling, and simulation. Mechatronic systems depend for their unique functionality on computer software; whether PC or PLC. This course studies mechatronics at both the theoretical and practical level using in-class lectures with formal concepts and laboratory simulations to prove out design concepts. Emphasis in the course is placed on physical understanding of the system rather than on mathematical formalities. Lecture topics include the fundamental aspects such as automation safety, logic functions, Boolean algebra, system input and output sources, flow charting, PLC programming and system design. Each of the lecture topics are reinforced using lab assignments based on software simulations or physical hardware configurations designed to stimulate the student's involvement and interest.

Enforced Prerequisite at Enrollment: (EET 100 or EET 105 or EET 101 or EE 211) and (MET 210W or ME 367) and (MET 341 or ME 345W) and (MET 432 or ME 320)

MET 457: Lean Manufacturing

3 Credits

Principles and methods of Lean Manufacturing currently used in modern industries. MET 457 Lean Manufacturing (3) This course introduces the students to the methods of Lean Manufacturing used currently in the manufacturing industry. The basic Lean Manufacturing topics covered in the lecture include its history, the commitment required by a company to start and sustain Lean Mfg, team building, and the training required by both management and the employees. To aid in the organization of the many Lean topics lectured on and to give the students a structured guideline for analyzing a process, the method of Value Stream Management is used. This method, when used on either a manufacturing or office environment, maps the manufacturing process and analyzes it for opportunities to reduce waste. Once the process mapping has been accomplished, the more advanced Lean topics are then covered which introduces the student to methods of reducing or eliminating waste in the manufacturing process. These topics include fast setup (SMED), plant floor organization (5S), improving equipment uptime (TPM), improving product quality, error proofing a process (Poka-Yoke), work balancing and cellular layout. Additionally, the most advanced topics of automation, just-in-time (JIT), flexible or agile manufacturing, and Kanban are covered. In order for the student to fully comprehend the material presented, the students are placed into teams that are sponsored by local industries to work on a manufacturing process. The

students are given the opportunity to explore a manufacturing process and develop ways to eliminate problems, issues, and waste in an actual situation rather than a simulation.

Enforced Prerequisite at Enrollment: Seventh semester standing and (IET 215 or ME 468) or permission of program

MET 458: Controls Laboratory

1 Credits

Introduction to open loop, closed loop, error analysis, and main components of a control loop. Analysis concepts cover first and second-order systems, stability criterion, and transfer functions. Application of electronics, analog/digital convertors, and electrical circuits. Properties of systems, time constant, process gain, natural and damped frequency, transient and steady state responses. Design of proportional, derivative and integral controllers based on closed-loop specifications. Microprocessor selection, programming and interfacing for system automation and control. Software design and implementation for process monitoring and logic control. Examples of mechanical systems utilizing sensors and actuator technologies, including amplifiers. Laboratory experiments give hands-on experience with components and equipment used in the design of mechatronics product. Emphasis on interpretation of experimental data, group dynamics, experimental design, and report writing.

Enforced Corequisite at Enrollment: MET 454

MET 461: Advanced Machine Design

3 Credits

Stress analysis, material selection, design of machine elements, design of connections, and computer-aided design.

Enforced Prerequisite at Enrollment: MET 210W and MET 415

MET 462: Internal Combustion Engine Design

3 Credits

The effect of operation requirements on design and construction of internal combustion engines; study of support systems and emissions control.

Enforced Prerequisite at Enrollment: MET 332

MET 470: Materials Engineering

3 Credits

Study of material selection, material properties, material test methods, and special topics.

Enforced Prerequisite at Enrollment: CHEM 110 and CHEM 111 Enforced Concurrent at Enrollment: MET 415

MET 480: Senior Capstone

1 Credits

Career and professional topics; development of year-long senior project with industry. MET 480 Senior Capstone (1) Senior Capstone is a required course for senior-level students in the Mechanical Engineering Technology (METBD) baccalaureate degree program. The purpose of the course is to introduce students to the practices associated with

managing an industrial-based project. Student teams begin working on a capstone project. Project definition, specification development, scheduling, engineering constraints, and budgeting of both time and money are discussed. Other issues of career development are presented, such as interviewing, resume preparation, and career opportunities. Ethical issues related to the discipline are discussed. Engineering economy, OSHA, and safety are introduced.

Enforced Prerequisite at Enrollment: IET 216 and MET 210W and MET 306 and (ME 300 or MET 330) Enforced Concurrent at Enrollment: MET 415 and MET 470

MET 481: Project Design

3 Credits

This course is the first of a two-part course sequence that comprises the capstone design experience in the MET major (the second course is MET 486, Project Design). In this course students study the engineering design process, begin working on their senior design project, and learn about professional topics related to industry. Topics in the engineering design process include needs identification, concept generation, concept selection, costing, and project planning. Professional topics include communication, team work, ethics, safety, and sustainability. Engineering economics and its application to the capstone design project is a featured topic. Students are evaluated through assignments and quizzes. One major component of the course is to begin work on a capstone design project. Students typically work in teams of 3 to 4 on an industrially-sponsored project or other project approved by the faculty. The student teams work with the sponsor to develop a project scope and plan, perform background research, begin to solve the problem, and present their project proposal orally and in written form. Students are evaluated on both their technical and presentation skills, as well as their ability to function as a team. This capstone course is required in the Mechanical Engineering Technology (MET) program.

Enforced Prerequisite at Enrollment: MET 365 or MET 210W

MET 485: Senior Industrial Project

3 Credits

Individual or group design projects in mechanical design or materials.

Enforced Prerequisite at Enrollment: MET 331W and MET 470 and MET 480 Enforced Concurrent at Enrollment: MET 425

MET 486: Project Design

3 Credits

Design of system or machine, including decision making, engineering analysis, layout, detail drawings, specifications, construction.

Enforced Prerequisite at Enrollment: MET 481

MET 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor
Full-Time Equivalent Course

MET 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MET 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Medieval Studies (MEDVL)

MEDVL 107: Medieval Europe

3 Credits

HIST 107 / MEDVL 107 examines the history of Europe from c. 300-c. 1400 CE. The many themes of this course include: the development of political, judicial and diplomatic institutions; the role of religion, especially that of Christianity in all its forms - orthodox, heretical, and popular - as a significant element of medieval society; the development of royal houses; and changes in economic and social life of medieval Europe. Within these primary themes, the course addresses many subjects, including the development of both secular and ecclesiastical authority, various efforts to control or wield violence, and the importance of a number of agricultural and economic changes that transformed Europe.

MEDVL 108: Medieval Civilization

3 Credits

MEDVL 108 offers an interdisciplinary introduction to the culture and society of medieval Europe from c. 400-1500 CE. The course examines the literature, history, art, and thought of medieval society, focusing on a geographical area that includes Europe, the Mediterranean, the Levant, and North America. Many modern concepts—such as those involving love, honor, town planning, literature, warfare, religion, and science—have their origins in medieval Europe. This course begins with a brief look at the chronological progression of events in the Middle Ages, particularly the connection of political events with cultural ideals and scientific progress, and then proceeds to broader elements of medieval society; these themes are focused on everyday life, art and literature, religious thought, and the organization of society.

Meteorology (METEO)

METEO 3: Weather Revealed: Introductory Meteorology

3 Credits

Nontechnical treatment of fundamentals of modern meteorology and the effects of weather and climate. Weather Revealed: Introductory Meteorology meets the Bachelor of Arts degree requirements. The objectives of the course are for students to gain a better understanding of atmospheric structure and processes so they can better apply the weather information they encounter - in essence, to help students become better weather consumers. Students will learn to read the sky so they can make their own short-term forecasts and adjust their behavior accordingly. When presented with a weather forecast containing caveats, students will have a better feeling for what controls the evolution of a developing system so they can understand why a certain degree of hedging is necessary. Students will acquire the foundation to evaluate, in a scientifically rigorous way, the veracity of many claims about weather and climate that they might see on television or the internet.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

METEO 4: Weather and Risk

3 Credits

Non-technical introduction to the science and historical development of meteorology, and the role of weather forecasting as a tool for risk management by individuals, businesses, and societies. METEO 4 traces the development of weather forecasting as both a scientific discipline and as a tool for risk management. Beginning from the pre-modern history of weather forecasting as a diverse set of folkloric and ritualistic practices, the emergence of meteorology as a genuine science has enabled the development of powerful tools for managing risks faced by individuals, businesses and societies. Students will learn about the fundamental principles that govern the global atmospheric circulation, and how this circulation shapes weather and climate. They will learn how this scientific understanding has served as the foundation of a global system of weather observation and forecasting, encompassing a worldwide network of atmospheric observing instruments, powerful computer modeling systems, and a highly elaborate system for disseminating information to diverse users. Demand for weather forecasts is driven by the need to manage weather risks confronting agriculture, transportation, the military, insurance, humanitarian relief, and virtually every other sector of society. Examples will be given of how forecasts are incorporated into the decision-making of businesses. This topic leads to a discussion of the economic value of weather information, and the role of public and private providers of information. The treatment

is organized around three themes. First, the possibility of generating a forecast of future conditions requires the adoption of the perspective that the natural world has an underlying regularity, and that this regularity can be discovered and organized through research. The second theme is the critical role of instrumentation in providing the quantitative basis for formal scientific forecasting models. Third, developments in weather forecasting have not proceeded solely from improvements in scientific knowledge: rather, society's demand for risk management tools has acted as a constant spur on efforts to improve forecasting techniques, as part of a feedback loop between the producers and consumers of forecasts.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

METEO 5: Severe and Unusual Weather

3 Credits

Non-technical introduction to the physical processes important in the formation of various severe and unusual weather phenomena. METEO 5 provides a current, relevant, and scientifically accurate discussion of a wide range of severe and unusual weather. Severe weather has made a major imprint on the world's cultures and economies throughout history (e.g., the drought of the 1930s led to westward migration and changes in agriculture practices in the U.S., utilities in East Coast cities were placed underground after the Blizzard of 1888, and the severe winter of 1941-1942 helped change the momentum of World War II), and also has been prominent in our literature and entertainment (e.g., *The Wizard of Oz*, *The Grapes of Wrath*, *Twister*, *The Perfect Storm*). Students will learn about the fundamental principles that govern severe and unusual weather. Concepts are taught in a descriptive manner without relying heavily on mathematics; thus, the material is highly accessible to students with a wide variety of backgrounds. It is believed that learning about weather is enhanced by experiencing weather. For this reason, the class frequently draws upon examples of significant historical and recent severe weather events. Students will be able to apply what they have learned immediately to weather events occurring near their homes or around the world. The course has four major themes. The unit on hazardous cold-season phenomena treats the formation of freezing and frozen precipitation, lake-effect snowstorms, and blizzards. The unit on hazardous warm-season weather treats thunderstorms and larger-scale conglomerations of thunderstorms known as convective systems, including hurricanes. Students also will learn about flash floods, lightning, tornadoes, downbursts, and hailstorms. The unit on hazardous weather triggered by mountainous terrain deals with topographically-forced gravity waves, downslope windstorms, and rotors. The final unit treats a wide variety of unusual atmospheric optical phenomena resulting from the interaction of light with raindrops or ice crystals, such as rainbows, glories, and haloes.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

METEO 6N: History and Weather: How Weather Played an Instrumental Role in Great World Events

3 Credits

In HIST 6N / METEO 6N, we'll survey how weather and history are integrated throughout time. Moving from past to present, the course will use case studies to navigate historical moments where weather shaped the outcome. Each case study will have a historical, cultural, and meteorological analysis of the event so students gain a deeper understanding of the national or international event and the integration of science and history. Weather has shaped the outcome of major world events. For example, a weather forecast led to the delay of the Allied invasion of Normandy (D-Day), record cold weather in Florida led to the Challenger Space Shuttle explosion, General George Washington used fog to conceal the withdrawal of his troops at the Battle of Long Island, and the list goes on. The case studies range from the Revolutionary War through present day, and this period of history has been selected because there are firsthand accounts of the weather and/or recorded weather data for each event. The meteorological study examines the event's atmospheric conditions. How or why did they occur? How did they affect the event? Therefore, students will learn basic meteorology and climatology. They will also analyze weather maps and scientific data. The historical study provides context for the event. What led to the event? What happened during the event? What are the event's lasting impacts? To better understand the decisions that leaders faced, students will be asked to assess risk and make decisions based on the same weather data or information leaders at the time had. Students will also explain the context, cause, and effects of major historical moments in everyday language to an audience of their peers through discussions and/or projects. The cultural study examines each event from a psychological and sociological point of view. What were the mindsets of the people and cultures involved in the event? How does the event connect to or parallel things in today's society? How would a present day culture react? This study will give students a better understanding of cultural differences in the world and how those cultural differences can alter the course of history. Time in the course is equally split between United States and international topics, and there will be frequent discussion of current events.

METEO 7: An Introduction to Climate Sciences: Climate change, Variability, and Society

3 Credits

This course provides an overview of factors that serve as the basis for understanding climate change and climate variability. METEO 007: An Introduction to Climate Science: Climate Change, Climate Variability, and Society use an interdisciplinary scientific approach to provide a foundation for understanding the climate system. This course considers changes in the physical climate system over Earth System. It provides

insights on past and present climate variability; anthropogenic forcing and their sources; climate feedbacks; climate model projections during the 21st century; impacts of climate change on society; environmental and climate justice; treaties, protocols and policies to address adaptation, mitigation of greenhouse gases and geoengineering.

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

METEO 51N: Meteorology and Visual Arts: To Know is to See

3 Credits

This course examines the inter-relationship between what we know and what we see, through an introductory exploration of art and science. Engaging students in the study of weather formation, mainly clouds, artistic depictions within the genre of landscape, and the expressed practice of painting; fosters the development of observational skills necessary for reading the landscape and interpreting collected data. What we know and what we see is an on-going evolution of development; syncing the old with the new. Therefore, observation and interpretation are essential to critical thinking, making the intersection between art and science a fertile ground for discovery and learning. The exciting part of the course is the large amount of overlap in the general ideas and thought processes used in meteorology and art, especially when using clouds as the connective tissue. Scientists and artists are both detail oriented and worry about the quality of their work. Both involve collecting data to find the best approaches to a problem, and reasoning through challenges that arise. Students will be challenged throughout the course to seek these connections and how perspectives from each discipline inform the other. Meteorology and art have long been aligned in a common quest to understand how the world works, each seeking interpretations and explanations using a range of complementary and contrasting practices and perspectives. Clouds come in a vast array of sizes and shapes, and are depicted in art using a variety of techniques, creating a shared focus for a deeper understanding of both areas of endeavor. Students will learn about the concept of mixing, which is important to cloud formation and to painting. Students will conduct experiments to learn about cloud processes, and will learn and practice artistic techniques to convey atmospheric conditions. Ideas from both perspectives will be integrated in analysis and discussion. Data from instruments and the individual artist will be collected, shared, and analyzed. Learning how clouds form will help with painting, and questions and perspectives that arise from painting will increase the understanding of cloud processes. The common threads in this approach are a curious mind, a strong detail-oriented focus, effective communication, and respect for the creative tension between ambiguity and assurance in the search for a better sense of causes, connections, and incessant changes.

METEO 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

METEO 101: Understanding Weather Forecasting

3 Credits

Fundamental principles of synoptic and physical meteorology, satellite and radar imagery, and data analysis in the setting of mid-latitude weather forecasting. METEO 101 Introduction to Weather Forecasting (3) (BA) This course meets the Bachelor of Arts degree requirements. Never before has the quantity of available weather information so far exceeded the quality of the public's understanding of atmospheric science. Meteorology 101: Understanding Weather Forecasting aims to help correct this imbalance by helping students develop the knowledge and skills they need to become critical consumers of weather information. Students who successfully complete Meteorology 101 will be able to apply knowledge of fundamental concepts of atmospheric science to discriminate between reliable and unreliable weather forecasts, and to explain what makes one forecast better than another. To ensure that students develop the knowledge and skills required to critically assess public weather forecasts, Meteorology 101 will provide an apprentice-training environment that will encourage students to learn forecast mid-latitude weather themselves. They will discover that weather forecasting involves sophisticated data analysis techniques, a thorough understanding of atmospheric science, and strong verbal and graphic communication skills. As it develops these competencies, METEO 101 will fulfill the goals established for Penn State General Education courses in the Natural Science knowledge domain. The intended audience includes undergraduate students at University Park and other Penn State campuses, as well as adult learners in the weather information industry and weather hobbyists worldwide. To reach this diverse audience, METEO 101 will be offered through the University's World Campus in a Web-based, instructor-led format. Currently in development in collaboration between the Department of Meteorology, the EMS e-Education Institute, and the World Campus, METEO 101 will combine digital video, audio, simulation models, virtual field trips to on-line weather data resources, text, and interactive quizzes that provide instantaneous feedback. The course will provide unprecedented access to one of the world's most distinguished meteorology programs. METEO 101 will be offered three times each year during the spring, summer, and fall semesters to an expected audience of about 300 annually.

Bachelor of Arts: Natural Sciences

METEO 122: Atmospheric Environment: Growing in the Wind

3 Credits

Atmospheric Environment: Growing in the Wind is for students who are interested in learning about the dynamic effects of weather on plants and animals. It is about how processes at the ground surface and in the air govern weather conditions on Earth. Growing in the Wind focuses on five major weather elements: energy, temperature, moisture, pressure and wind and how these factors influence ecosystems and habitation of our planet. Emphasis is also given to human impacts on weather and climate, and current environmental issues involving the atmosphere. The lectures are organized around the central theme that the unequal

distribution of incoming solar energy (both spatially and temporally) produce temperature and pressure contrasts at the Earth's surface and in the atmosphere that in turn cause storms and control the weather and climate.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

METEEO 133N: Ethics of Climate Change

3 Credits

Climate change is not only a political, economic, and social crisis, it presents one of the great moral problems of our time. This course will cover the science, policy, and ethics of climate change. It fulfills general science requirements by giving an overview of the role played by such diverse scientific disciplines as chemistry, earth systems, ecology, and geology in understanding our changing climate while also exploring mitigation and adaptation strategies being developed in the fields of engineering, forestry, agriculture, and others. It fulfills humanities requirements by delving into the ethical dimensions of climate change, including religious and humanistic theories of human flourishing, deontological and teleological theories of ethics, and analysis of specific choices addressed by international negotiators. A hallmark of this course is using Penn State as a 'living laboratory' by taking advantage of both faculty expertise and the realworld activities of the Office of Physical Plant. Every week, students will interact with experts from various quarters of the University in order to see how climate change is being approached in a multi-disciplinary fashion. The first third of the course will feature guest lectures by EMS faculty working on paleoclimate, modeling, carbon sinks, ocean acidification and other aspects of climate science. The second portion will engage humanists, economists, historians, and artists at Penn State. The third will include tours of Penn State facilities, such as the East Campus Power Plant, and interviews with researchers developing new energy and sequestration technologies. In addition to exams and papers, students will prepare for a mock negotiation by learning about the energy profile and history of assigned countries. They will then have to set specific CO2 and temperature goals and come up with solutions to achieve these. The goal is to understand the role placed by ethical ideals in the pragmatic process of producing an equitable solution. In short, this course will give students the tools to understand the basic science of climate change and its ethical implications. Students will come away with a better sense of the moral dimensions of this phenomenon and the implications for human civilization and for the biosphere.

METEEO 201: Introduction to Weather Analysis

3 Credits

Introduction to the collection, display, and application of weather observations and numerical forecasts used by the operational meteorologists. Students who have passed both METEO 200A and 200B may not schedule this course for credit.

METEEO 215: Weather Forecast Preparation Laboratory

0.5 Credits/Maximum of 4

Forecast methods/data discussed prior to nightly weather forecast entry. Satisfactory performance will be determined by attendance and forecast accuracy. METEO 215 Weather Forecast Preparation Laboratory (0.5 per semester/maximum of 4) Students will learn basic weather forecasting techniques and identify appropriate sources of weather information that will assist them in weather forecast preparation. Forecast accuracy will be judged against peer groups at Penn State and several other institutions of higher learning across the U.S. and Canada through WxChallenge (or a similarly run program), a national weather forecasting contest. The bulk of the class time will be spent preparing weather forecasts for five different U.S. cities, each for two consecutive weeks. Cities from different climate regimes will help familiarize students with forecasting challenges from across the country. In addition, the previous day's weather forecast difficulties and ways to improve forecast accuracy will be discussed. The remaining weeks of the semester will be devoted to in-depth analysis of forecast errors and ways to keep improving forecast quality. Satisfactory performance is determined through attendance records and weather forecast contest results. The course should be taken in BOTH the fall and spring semesters each year for maximum learning potential. METEO 215 may be repeated up to 8 times.

Concurrent: METEO101, METEO200A and METEO200B , or METEO201

METEEO 241: Fundamentals of Tropical Forecasting

3 Credits

Applying atmospheric principles to the tropics, with an emphasis on the development, structure, prediction and destructive impact of hurricanes. METEO 241 Fundamentals of Tropical Forecasting (3) Worldwide, approximately 80 tropical cyclones develop each year. This global annual average of tropical cyclones is small in comparison to the thousands of low-pressure systems that routinely parade across the middle latitudes each year. Yet tropical storms and hurricanes garner far greater attention from meteorologists and the media. The obvious reason for this lopsided focus is that tropical cyclones can inflict great devastation to life and property. One of the primary goals of Meteorology 241: Fundamentals of Tropical Forecasting is to give students a working knowledge of hurricanes and tropical storms so that they can become critical weather consumers. For example, when a hurricane bears down on the coast of the United States, the media often portray the storm as a monster capable of laying waste to anything in its path. In METEO 241, students will understand that the initial fury of a land-falling hurricane is focused within a swath of coastal area approximately 30 miles long or less. To ensure that students develop the knowledge and skills required to critically assess weather forecasts issued by the National Hurricane Center, METEO 241 will provide, like METEO 101, an apprentice-training environment. Under the tutelage of professional weather forecasters, students, in their role as apprentices, will also work toward the goal of creating their own tropical-weather forecasts. In the process, students

in METEO 241 will learn about the pitfalls of forecasting the tracks and intensities of tropical storms and hurricanes as they actively work with output from sophisticated numerical models available on the Internet. Moreover, successful students will apply their knowledge of the fundamental concepts of atmospheric science in order to competently evaluate forecasts issued by the National Hurricane Center in Miami and the Joint Typhoon Warning Center in Honolulu. Students will also gain a broad perspective of the general weather and oceanic patterns in the tropics. For example, students will learn about El Niño and La Niña. In the process, they will discover that El Niño and La Niña are not to blame for every unusual weather event that occurs anywhere in the world. It should be noted here that METEO 241 will be one of four courses required for students to earn a Certificate of achievement in Weather Forecasting, a unique online program offered through Penn State's World Campus. The three other courses that will comprise this online program are METEO 101: Understanding Weather Forecasting, METEO 361: Fundamentals of Mesoscale Weather Forecasting and METEO 410: Advanced Topics in Weather Forecasting. To facilitate the learning objectives, METEO 241 will include the use of digital video, audio, simulation models, virtual field trips to on-line resources for weather data, text, and interactive quizzes that provide timely feedback. To demonstrate their mastery of the learning objectives, students will complete automated online quizzes, actively engage in online discussion groups focusing on real-time weather, and publish, to a personal 'e-portfolio', four comprehensive projects that will explore timely case studies related to weather forecasting. The e-portfolio will take the form of a Web site that students initially create during the second course of the program (METEO 241 or METEO 361). Students will augment their e-portfolio as part of the requirements for METEO 241, METEO 361 and METEO 410. They will also use the space to reflect on their learning. At the end of the program, students will make a final e-portfolio entry that highlights their program accomplishments. In this way, the e-portfolio will serve both as a showcase of a student's work for the purpose of course assessment and as a chronicle of a student's achievements during the program. By using their Penn State personal Web space to host their e-portfolios, students will be able to share their work not only with program faculty and students, but also with external audiences, including potential employers. Upon successful completion of the program, graduates will receive a copy of their final e-portfolio on CD-ROM.

Prerequisite: METEO101

METEO 273: Introduction to Programming Techniques for Meteorology

3 Credits/Maximum of 3

Algorithm design and implementation for meteorological analysis and forecasting. Algorithm design and implementation for meteorological analysis and forecasting, including access to datasets in meteorological common data formats. The objectives of this course are to introduce the student to fundamental programming concepts, such as variables, flow control, and syntax, to apply those concepts to solve meteorological problems couched in the analysis of datasets in meteorologically-relevant common data formats, and to familiarize students with appropriate programming languages and their application to meteorological analysis or forecasting problems on regional and/or global scales.

Prerequisite: METEO 101 or 201

METEO 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

METEO 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

METEO 300: Fundamentals of Atmospheric Science

4 Credits

An introduction to the fundamentals of atmospheric dynamics, physics, and chemistry. METEO 300 Fundamentals of Atmospheric Science (4) This course prepares students for their 400-level meteorology courses by laying a solid foundation in the application of physical, chemical, and mathematical principles to a broad range of atmospheric phenomena. Students are introduced to fundamental concepts and applications of atmospheric thermodynamics, radiative transfer, atmospheric chemistry, cloud microphysics, atmospheric dynamics, and the atmospheric boundary layer. These topics are covered broadly but in enough depth to introduce students to the methods atmospheric scientists use to describe and predict atmospheric phenomena. The course is designed to be taken by sophomore meteorology students as well as by students in related disciplines who have an adequate mathematical and physical background.

Prerequisite: CHEM 110, MATH 141, PHYS 211; Concurrent: MATH 230 or MATH 231

METEO 332N: Science and policy of global greenhouse gas emissions and management

3 Credits

This interdomain course introduces students to the science and policy of greenhouse gas emissions. The course focuses on emissions from natural sources, energy production and food production. Policy components will introduce students to the fundamentals of environmental policy and examine key policy options for mitigating and managing emissions. Global in scope, the course will also address how emissions and policy options differ in developed and developing countries. Topics will include overviews of the global carbon cycle, agriculture and land use change emissions, history of global energy use and production, overview of global climate change policy, frontiers in climate, energy and agriculture policy, amongst others.

Enforced Prerequisite at Enrollment: ENGL 15

Cross-listed with: ANSC 332N, GEOG 332N

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

METEO 361: Fundamentals of Mesoscale Weather Forecasting

3 Credits

Applying atmospheric principles to small-scale weather systems, with an emphasis on the conceptual modeling and short-range prediction of severe thunderstorms. METEO 361 Fundamentals of Mesoscale Weather Forecasting (3) When outbreaks of severe weather occur, dire warnings for tornadoes, large hail or damaging straight-line winds urgently scroll across the bottoms of television screens. Simultaneously, television weathercasters warn viewers to "take cover immediately". Yet, because of the limited spatial and time scales of severe thunderstorms, the areas affected by tornadoes, large hail and damaging straight-line winds often turns out to be relatively small (sometimes as small a tenth of one percent of the original "watch area"). There is no doubt that people should be prepared to take definitive action to protect their lives and the lives of their families when outbreaks of severe weather occur. But the overall impression that entire counties or cities will be destroyed by severe weather can be, and frequently is, misleading. One of the primary goals of METEO 361: Fundamentals of Mesoscale Weather Forecasting is to give students a scientifically grounded perspective of the spatial and time scales of typical outbreaks of severe weather. In the process, students will become better weather consumers. To gain such insights, students will learn conceptual models of the life cycles of severe thunderstorms and will then apply them in real-time outbreaks of severe weather. In the final analysis, students will be able to more accurately weigh the information being disseminated by the media and the Storm Prediction Center in Norman, Oklahoma. To ensure that students develop the knowledge and skills required to critically assess public weather forecasts, METEO 361 will provide, like METEO 101, an apprentice-training environment that will guide students, under the tutelage of professional weather forecasters, to actively learn how to create their own mesoscale-weather forecasts. In the process, METEO 361 will reinforce the notion that weather forecasting involves sophisticated techniques of data analysis and a thorough understanding of atmospheric science. METEO 361 will also stress that the clear communication of the forecast requires strong verbal and graphic communication skills. Using conceptual models and real-time radar and satellite imagery in concert with output from numerical models designed specifically for mesoscale forecasting, students will predict severe weather on time scales of a few hours to one day. For example, students will be given a litany of web-based tools and asked to place their own "watch box" for severe weather. Students will then be asked to verify and discuss the outcomes of their forecasts. For more general outlooks of severe weather (time scales of one to two days), students will use output from the numerical models that were introduced in METEO 101 to identify the areas likely to be at risk for severe weather. It should be noted here that METEO 361 will be one of four courses required for students to earn a Certificate of Achievement in Weather Forecasting, a unique online program offered through Penn State's World Campus. The three other courses that will comprise this online program are METEO 101: Understanding Weather Forecasting, METEO 241: Fundamentals of Tropical Forecasting and METEO 410: Advanced Topics in Weather Forecasting. To facilitate the learning objectives, METEO 361 will include the use of digital video, audio, simulation models, virtual field trips to online resources for weather data, text, and interactive quizzes that provide timely feedback. To demonstrate their mastery of the learning objectives, students will complete automated online quizzes, actively engage in online discussion groups focusing on real-time weather, and publish, to a personal 'e-portfolio', four comprehensive projects that will explore timely case studies related to weather forecasting. The e-portfolio will take the form of a Web site that students initially create during the second course

of the program (METEO 241 or METEO 361). Students will augment their e-portfolio as part of the requirements for METEO 241, METEO 361 and METEO 410. They will also use the space to reflect on their learning. At the end of the program, students will make a final e-portfolio entry that highlights their program accomplishments. In this way, the e-portfolio will serve both as a showcase of a student's work for the purpose of course assessment and as a chronicle of a student's achievements during the program. By using their Penn State personal Web space to host their e-portfolios, students will be able to share their work not only with program faculty and students, but also with external audiences, including potential employers. Upon successful completion of the program, graduates will receive a copy of their final e-portfolio on CD-ROM.

Prerequisite: METEO101

METEO 395: **SPECIAL TOPICS**

3 Credits/Maximum of 6

METEO 395A: Internship in Meteorological Communication

3 Credits/Maximum of 6

METEO 395A Internship in Meteorological Communication (3 per semester/maximum of 6) A student participates for at least 100 hours in an internship with an agency or company that focuses on communication of weather forecasts or other atmospheric information. This internship is normally completed after the sophomore year. Given the focus of this internship and the paper requirement to relate the internship experience to meteorology coursework, students must have completed the first two required courses covering weather analysis or forecasting and fundamentals of atmospheric science. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

Prerequisite: METEO101 , or METEO200A and METEO200B , or METEO201 , and METEO300

METEO 395B: Private Sector Meteorology Internship

3 Credits/Maximum of 6

METEO 395B Private Sector Meteorology Internship (3) A student participates for at least 100 hours in an internship with a private sector company that focuses on problems or applications that use meteorological information. This internship is normally completed after the sophomore year. Given the focus of this internship and the paper requirement to relate the internship experience to meteorology coursework, students must have completed the first two required courses covering weather analysis or forecasting and fundamentals of atmospheric science. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

Prerequisite: METEO101 , or METEO200A and METEO200B , or METEO201 , and METEO300

METEO 395C: Internship in Meteorological Operations

3 Credits/Maximum of 6

METEO 395C Internship in Meteorological Operations (3 per semester/maximum of 6)A student participates for at least 100 hours in an internship in an operational setting that focuses on the creation of time-sensitive meteorological products such as weather or climate forecasts. This internship is normally completed after the sophomore year. Given the focus of this internship and the paper requirement to relate the internship experience to meteorology coursework, students must have completed the first two required courses covering weather analysis or forecasting and fundamentals of atmospheric science. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

Prerequisite: METEO101 , or METEO200A and METEO200B , or METEO201 , and METEO300

METEO 395D: International Meteorological Internship

3 Credits/Maximum of 6

METEO 395D International Meteorological Internship (3)A student participates for at least 100 hours in an internship in an international setting that focuses on applying meteorological knowledge. This internship is normally completed after the sophomore year. Given the focus of this internship and the paper requirement to relate the internship experience to meteorology coursework, students must have completed the first two required courses covering weather analysis or forecasting and fundamentals of atmospheric science. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

Prerequisite: METEO101 , or METEO200A and METEO200B , or METEO201 , and METEO300

METEO 395E: Off-Campus Meteorological Research Internship

3 Credits/Maximum of 6

METEO 395E Off-Campus Meteorological Research Internship (3 per semester/maximum of 6)A student participates for at least 100 hours in an internship whose focus is a research project requiring applications of meteorological knowledge. This internship is normally completed after the sophomore year. Given the focus of this internship and the paper requirement to relate the internship experience to meteorology coursework, students must have completed the first two required courses covering weather analysis or forecasting and fundamentals of atmospheric science. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

Prerequisite: METEO101 , METEO200A and METEO200B , or METEO201 , and METEO300

METEO 410: Advanced Topics in Weather Forecasting

3 Credits

Exploring highly specialized topics and techniques in weather forecasting that span from mesoscale to planetary spatial scales and short-term to long-range time scales. METEO 410 Advanced Topics in Weather Forecasting (3) T.H. Huxley's passage from Biogenesis and Abiogenesis – 'The great tragedy of Science - the slaying of a beautiful hypothesis by an ugly fact' (1870) – will serve as the springboard for learning in METEO 410. In the spirit of a 'beautiful hypothesis,' forecasters' diagnoses of the present state of the atmosphere and their prognoses for how the atmosphere will evolve with time may be scientifically sound. Yet, local weather can turn out dramatically different than the intent of the forecast (the ugly fact). To compound this 'great tragedy of Science,' weather forecasters routinely spend most of their preparation time on local details, particularly when the weather tends to get more interesting. Nonetheless, there are 'master forecasters' who regularly avoid great tragedies in weather forecasting. Master forecasters will prudently weigh the length of the forecast time as well as interactions between weather features on the hemispheric, synoptic, meso and local scales while, at the same time, they will adroitly use an array of forecasting tools to arrive at a high-quality local forecast. With the prudent and seasoned approach of the master forecaster in mind, METEO 410 will provide students with a master apprenticeship in weather forecasting. As master apprentices, students will learn highly specialized tools and techniques that will help them to hone and expand their overall forecasting skills. For example, students will learn a new technique for forecasting rare and extreme weather that is based on assessing departures of specific meteorological fields from climatological norms. In the process, students will study rare historic events, such as the great ice storm across northern New England and eastern Canada in 1998. Along the way, students will learn some basic statistics, including climatological means and standard deviations. As master apprentices, students will also learn about medium-range forecasting (three to seven days into the future) and medium-range computer models. Students will learn how to implement modern prediction techniques, such as ensemble forecasts from computer models. Master forecasters increasingly take advantage of this avant-garde technique in short to medium-range forecasting. Unique learning modules, which run the gamut from forecasting wildfires to learning about the influence of the North Atlantic Oscillation on long-range forecasts (seven days or more), will provide students with the tools to understand the bases for all the forecasts they see on television, hear on the radio, read in publications such as *Weatherwise*, or access on the World Wide Web. For example, students will learn about the forecasting products issued by the Climate Prediction Center, which include seasonal outlooks that focus on the seasonal impacts of La Nina and El Nino. To facilitate the learning objectives, METEO 410 will include the use of digital video, audio, simulation models, virtual field trips to on-line resources for weather data, text, and interactive quizzes that provide timely feedback. It should be noted here that METEO 410 will be one of four courses required for students to earn a Certificate of Achievement in Weather Forecasting, a unique online program offered through Penn State's World Campus. The three other courses that will comprise this online program are METEO 101: Understanding Weather Forecasting, METEO 241: Fundamentals of Tropical Forecasting and METEO 361: Fundamentals of Mesoscale Weather Forecasting. To demonstrate their mastery of the learning objectives, students will complete automated online quizzes, actively engage in online discussion groups focusing on real-time weather, and publish, to a personal 'e-portfolio,' four comprehensive projects that will explore timely case studies related to weather forecasting. The e-portfolio will take the form

of a Web site that students initially create during the second course of the program (METEO 241 or METEO 361). Students will augment their e-portfolio as part of the requirements for METEO 241, METEO 361 and METEO 410. They will also use the space to reflect on their learning. At the end of the program, students will make a final e-portfolio entry that highlights their program accomplishments. In this way, the e-portfolio will serve both as a showcase of a student's work for the purpose of course assessment and as a chronicle of a student's achievements during the program. By using their Penn State personal Web space to host their e-portfolios, students will be able to share their work not only with program faculty and students, but also with external audiences, including potential employers. Upon successful completion of the program, graduates will receive a copy of their final e-portfolio on CD-ROM.

Prerequisite: METEO101 , METEO241 , METEO361

METEO 411: Synoptic Meteorology Laboratory

4 Credits

Meteo 411 focuses on the description, analysis, evolution, and prediction of large-scale weather systems such as extratropical cyclones, jet streams, and fronts, with an emphasis on techniques for analyzing synoptic-scale weather situations in three dimensions. Students will develop an understanding of the fundamental underlying processes that lead to the large-scale motions that modulate weather on synoptic scales. Though not intended as a course in weather forecasting, Meteo 411 provides a solid foundation for future forecasting courses. A fundamental goal of Meteo 411 is to provide students with a framework for visualizing the vertical motion field in the atmosphere, both qualitatively and quantitatively. The vertical motion field ultimately determines, depending on the availability of water vapor, where clouds and precipitation form. To that end, students become familiar with the Norwegian cyclone model as a conceptual framework for understanding synoptic-scale weather systems, as well as the role of the upper-level flow in the development and evolution of extratropical cyclones. The principles of conservation of mass, energy, and momentum are also applied as instruments for assessing synoptic-scale motions. Finally, students will develop an understanding of quasi-geostrophy and how this framework can be used to explain the evolution of synoptic-scale weather systems. The course begins with a review of the fundamental assumptions that are commonly invoked on the synoptic scale, including the hydrostatic and geostrophic approximations. The topic of numerical weather prediction is revisited from both the theoretical and the operational standpoints, comparing and contrasting the deterministic and ensemble frameworks. To visualize the structure of synoptic-scale weather systems, a variety of analysis techniques are employed, including cross sections, plan views, three-dimensional models, and satellite and radar imagery. Pattern recognition techniques for identifying synoptic-scale regimes are explored and quantified using various zonal indices and global teleconnection patterns. These techniques are employed in each lab period where students lead a daily weather briefing that includes both an analysis of the current weather situation and a forecast of its future. Students will be able to link the mathematical descriptions of atmospheric motion with a qualitative understanding of physical processes, and apply them to the analysis and prediction of the atmosphere. Within the course framework, the following topics are also covered: thickness and its applications, thermal wind balance, potential temperature, pressure tendency equation, frontogenesis equation, ageostrophic processes, gradient wind, jet streaks, vorticity and vorticity advection, conveyor belts, self-development, quasi-geostrophic theory,

potential vorticity and its applications, and the synoptic setup for severe weather.

Prerequisite: METEO 101 or METEO 201; Concurrent: METEO 421 and METEO 431

METEO 413: Map Analysis

3 Credits

Analysis of actual surface weather observations, with emphasis on the Norwegian cyclone model, missing or bad data, and mesoscale phenomena. METEO 413 Map Analysis (3) METEO 413, Map Analysis, is designed as a professional elective for Meteorology majors and as such it is primarily taken by fourth-year students. Third-year students who have completed METEO 411 may also register for Map Analysis. The course encourages students to tie together concepts learned in prior meteorology courses through analysis of numerous weather maps from across the northern hemisphere both at the surface and above. This is accomplished by improving the student's understanding of the cyclone model and applying that knowledge to 'real-life' analyses where data quality may be compromised and topographic and other mesoscale factors may be important. Grades are based upon the best 13 of 14 lab assignments, 2 or more quizzes, and in-class assignments. Class participation is rewarded on an extra-credit basis. METEO 413 is offered each spring; enrollment is limited to 15 students.

Prerequisite: METEO411

METEO 414: Mesoscale Meteorology

4 Credits

A survey of conceptual models and analysis techniques for mesoscale atmospheric features.

Prerequisite: METEO411

METEO 415: Forecasting Practicum

3 Credits

Modern techniques in weather analysis and forecasting.

Prerequisite: METEO411

METEO 416: Advanced Forecasting

3 Credits

Competitive, simulated, operational, real-time forecasting is covered.

Prerequisite: METEO 415; Concurrent METEO 414

METEO 419: Air Quality Forecasting

3 Credits

Issues relating to the prediction and dispersion of air pollutants are discussed. METEO 419 Air Quality Forecasting (3) Prediction of air quality is discussed from the perspective of operational weather forecasting. The chemical properties of pollutants for which public forecasts are currently made, fine-scale particulate matter and ozone, are summarized to provide the physical background for making forecasts. The impacts of weather on pollutant concentrations are discussed. Current techniques for forecasting air quality are presented and used by the students to create their own air quality forecasts. Students present air quality weather

briefings and post-analysis of significant historical air quality events. To take this course, students must have the background provided in a basic course in chemistry and a basic course in meteorology that covers weather systems governing the transport of air pollution.

Prerequisite: CHEM 110 and METEO 003 , or METEO101 , or METEO 200A and METEO 200B , or METEO 201

METEO 421: Atmospheric Dynamics

4 Credits

Balanced and unbalanced flows, vorticity, circulation and potential vorticity, an introduction to wave dynamics and stability analysis, and a quantitative discussion of the general circulation. Meteo 421 Atmospheric Dynamics (4) This course builds on the foundation laid in METEO 300, Fundamentals of Atmospheric Science, by presenting applications of the equations of motion to the description of a variety of atmospheric motions. The intrinsically rotational aspects of large-scale atmospheric motions are presented through a discussion of vorticity dynamics (including both relative and planetary vorticity) and the related circulation theorems of Kelvin and Bjerknes that culminate in potential vorticity thinking. The contrast between oscillating and unstable atmospheric systems is highlighted using the examples of gravitational, inertial, and shear instability, and the parcel and perturbation methods are introduced for studying these systems. An introduction to wave dynamics presents the concepts of phase and group velocity with applications to gravity, inertial, and Rossby waves, and to geostrophic adjustment. Finally, the general circulation, including the major zonal wind systems (e.g., the mid-latitude westerlies) and the major overturning cells (Hadley and Ferrel cells) is discussed quantitatively to provide a description of planetary-scale motions.

Prerequisite: METEO 300, PHYS 212, MATH 230 or MATH 231 and MATH 232; Concurrent: METEO 431, MATH 251

METEO 422: Advanced Atmospheric Dynamics

3 Credits

Survey of advanced dynamical topics including instabilities, numerical modeling, and others of current interest. METEO 422 Advanced Atmospheric Dynamics (3) This course in atmospheric dynamics covers advanced topics, including instabilities that lead to the development of various atmospheric phenomena at the synoptic and smaller scales, numerical modeling principles and applications, topographic gravity and Rossby waves, understanding of the general circulation that can be used for extended-range forecasting, and frontal structure and frontogenesis. Some additional topics will vary at the discretion of the instructor.

Prerequisite: METEO421

METEO 422H: Dynamic Meteorology II

4 Credits

Generalized vertical coordinate systems, vorticity and theory applications, conservation principles and energetics, quasi-geostrophic processes, boundary layer dynamics.

Honors

METEO 426: Inside Numerical Weather Prediction Models

3 Credits

METEO 426 will provide students with a practical understanding of the structure of numerical weather prediction (NWP) models in the context of their application to real world precipitation forecasting. The course combines lecture material on the inner workings of NWP models with a forecasting module that applies the lecture material to daily precipitation forecasts. The course begins with a full description of the mathematical backbone of NWP models - the primitive, or governing, equations. The primitive equations that describe the future state of the atmosphere, given some initial state, are a set of non-linear, partial differential equations that are only solvable by numerical methods. The sophistication of numerical methods, in turn, depends on available computing capacity. A discussion of the historical development of simplified NWP models in the context of limited computing resources follows. While the advent of modern computers allowed for the explicit computation of the primitive equations, their use in operational forecast settings uncovered additional important theoretical limitations on forecast skill. In particular, the future state of the atmosphere is extremely sensitive to initial conditions yet there are insufficient observations to fully initialize an NWP model. Techniques for initializing NWP models - called data assimilation - were and continue to be a key source of model error. As a result, we cover these methods in detail. Beyond initial condition uncertainty, there are fundamental limits on the predictive skill of NWP models. These limits, a consequence of the fundamentally non-linear dynamics of the atmosphere, were first described by Edward Lorenz and usually referred to as "chaos theory." For operational weather forecasting, the implication is that single, deterministic models are necessarily limited in skill, even with near-perfect initial conditions. As a result, operational forecast centers have moved towards ensemble-based forecasting. The development and use of ensemble models are discussed in detail in this class. Next, the model must be moved forward in time. Basic numerical methods used to advance the model in time, typically using finite difference techniques, are described and the recent shift to finite volume methods are introduced and discussed in the context of the latest NWP models. We then describe parameterization schemes that NWP models use to account for phenomena not directly resolved by the model. We discuss several important schemes relevant to precipitation, including convective parameterizations and microphysics, and the planetary boundary layer. The course concludes with a review of one of the latest operational NWP models.

Prerequisite: METEO 411, METEO 421

METEO 431: Atmospheric Thermodynamics

3 Credits

Classical thermodynamics applied to both the dry and the moist atmosphere.

Prerequisite: METEO 101 or METEO 201, PHYS 212; Concurrent: METEO 300

METEO 434: Radar Meteorology

3 Credits

In METEO 434, students will learn the basic operating principles and applications of weather radar, a primary observing platform for both operational and research meteorologists. In particular, students will

learn the fundamentals of radar data acquisition, signal processing, and interpretation for measurements of weather phenomena. In order to successfully achieve these skills, students will master the following concepts: the basics of radar engineering, design, and operation; the physics of electromagnetic radiation, its propagation through the stratified atmosphere, polarization and phase shifts, and scattering from various hydrometeors; the physical properties of atmospheric scatterers, and how the physical properties of hydrometeors (e.g., size, shape, dielectric constant, orientation) affect the scattering signal. Lectures will frequently involve real-world data examples, theoretical considerations, and practice problems. In addition, several lectures will be devoted to recent technological or scientific advances published within the last 1-2 years, in order to provide students with an updated and working knowledge of the field. When practical, the course will include a field trip to a National Weather Service Doppler radar facility, most likely the system in Moshannon State Forest in central Pennsylvania. With this knowledge and these tools in hand, the remainder of the class will heavily focus on the interpretation of radar signals in weather phenomena, with particular emphasis on the interpretation and applications of dual-polarization weather radar data. To this end, one class per week will involve the discussion and interpretation of student-provided radar images. As the semester progresses, the students are expected to incorporate additional depth of understanding and newly discussed radar variables into these discussions. Students will actively participate in the course through bringing real-world examples of radar observations to class for presentation and discussion. They will be required to access data from the internet or smart phone app, organize it for a computer-based presentation, write a brief description, give the in-class presentation, and lead the subsequent discussion. In addition, the students will work towards a term project that is a case study of a high-impact weather event of their choosing. This project provides students the opportunity to master ordering data from the internet, downloading it, processing it, reading it into common coding languages, and creating graphics for display. In addition, part of the project will involve quantitative data analysis or manipulation, emphasizing computer coding and data handling skills. The semester-long project will culminate in a final presentation and report synthesizing their newly acquired knowledge and skillsets.

Concurrent: MATH 251 and METEO 414

METEO 436: Radiation and Climate

3 Credits

Elements of earth-sun geometry, radiative transfer, photochemistry, remote sensing of the atmosphere, physical climatology, climate forcing. METEO 436 Radiation and Climate (3) This course covers radiation and how it interacts with the atmosphere and earth's surface to drive motions in the atmosphere. The fundamentals of radiative transfer at the molecular level, including absorption, scattering, transmission, and emission of radiation by matter, are discussed and applied to help describe the earth's energy budget. Crucial to understanding these processes in the atmosphere are the interactions of radiation with water in the vapor, liquid, and solid states. Applications of radiative transfer to the understanding of seasons and of climate and climate change are presented as well.

Prerequisite: METEO300; **Concurrent:** METEO431

METEO 437: Atmospheric Chemistry and Cloud Physics

3 Credits

Properties of aerosols and clouds, cloud nucleation and precipitation processes, atmospheric electricity, cloud and precipitation chemistry, biogeochemical cycles. METEO 437 Atmospheric Chemistry and Cloud Physics (3) This course develops an understanding of how the physical and chemical properties of the atmosphere influence cloud and precipitation formation, as well as how clouds in turn affect the properties of the atmosphere. The roles that chemistry and clouds play in modulating weather, climate, and atmospheric electricity are also treated.

Prerequisite: METEO300 and METEO431

METEO 440W: Principles of Atmospheric Measurements

3 Credits

Theory and practices used in measurement and analysis of meteorological variables. METEO 440W Principles of Atmospheric Measurements (3) The standard theories and practices used in measurement and analysis of atmospheric variables are surveyed in the lecture portion of the course. The laboratory portion of the course provides students hands-on experience with using standard and self-produced instruments to make reliable measurements and with analyzing meteorological observations to determine their significance. In the laboratory reports, students learn the fundamentals of appropriate scientific writing to summarize the objectives of the lab exercise, to provide an analysis of the observations, and to critique the results. The initial drafts of these reports are evaluated critically by the instructors and teaching assistants and then are revised by the students based on these evaluations. Discussion of scientific writing and of proper report protocols are presented in the course as well.

Prerequisite: METEO300 , METEO431 , STAT 301 or STAT 401 or E B F472 Writing Across the Curriculum

METEO 451: Introduction to Physical Oceanography

3 Credits

Air-sea interaction, wind-driven and thermohaline circulations, upwelling, El Nino, waves, and tides. METEO 451 Elements of Physical Oceanography (3) The primary objective of this course is to describe the circulation of the ocean and present a theoretical basis for understanding it. The focus is on the large-scale, basin-wide features of the ocean circulation, such as: 1) the subtropical ocean gyres that contain the wind-driven western boundary currents like the Gulf Stream, 2) the equatorial oceans that respond rapidly to external forcing to produce phenomena like El Nino, and 3) the thermohaline circulation that acts as a slow regulator of the earth's climate. A main goal is to demonstrate to meteorology students that the ocean is not a static, passive lower boundary to the atmosphere but a dynamic, evolving entity that is intimately coupled to the atmosphere through the exchange of heat, momentum, and water. Thus the oceans affect weather and climate. Students are evaluated on their comprehension of the relevant physical processes (as determined by written examinations) and by term papers and laboratory reports or a combination of the two. This course will be offered annually with an enrollment of about 12 students. Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

Prerequisite: METEO421

METEO 452: Tropical Meteorology

3 Credits

Atmospheric processes in the tropics; mass, heat, energy, momentum, and water vapor budgets, cumulus convection, hurricanes and other disturbances.

Prerequisite: METEO411 , METEO421

METEO 454: Introduction to Micrometeorology

3 Credits

Physical processes and their measurement in the lowest layers of the atmosphere; application to hydrology, plant systems, and air pollution. METEO 454 Introduction to Micrometeorology (3) Students will learn the basic fluid mechanics and thermodynamics of the atmospheric boundary layer (ABL), the lowest few hundred meters to few kilometers of the atmosphere. Specific topics covered include: 1. Introduction to micrometeorology 2. The surface energy budget 3. Radiation balance near the surface 4. Soil heat transfer 5. Air temperature and humidity in the boundary layer 6. Wind distribution in the boundary layer 7. Introduction to viscous flows 8. Introduction to turbulence in the boundary layer 9. Semi-empirical theories of turbulence

Prerequisite: METEO421 and METEO431 or EME 301

METEO 455: Atmospheric Dispersion

3 Credits

The basic principles of atmospheric flow, introduction to the modeling of turbulent diffusion, and the use of EPA dispersion models. METEO 455 Atmospheric Dispersion (3) Students will learn both the theory and current practice of numerical modeling of the turbulent dispersion of effluents from sources in the atmospheric boundary layer. Lab sessions involve hands-on experience with the numerical models used in the applied dispersion community. Classroom sessions cover the boundary-layer meteorology and dispersion theory on which these models are based. In laboratory sessions, students become acquainted with the present practice of short-range atmospheric dispersion modeling through: * exploring the air-quality resources available on the World Wide Web * examining the design of the air-quality models used today in permitting and hazardous-release applications *discussing the input data needed by the models, the nature and reliability of their predictions and the advantages of improved models including AERMOD * running the models SCREEN3 and ISC (the U.S. EPA's Industrial Source Complex model). Lectures on boundary-layer meteorology include: * the atmospheric boundary layer, turbulence, and the surface energy budget * buoyancy, stability and their influence on the atmospheric boundary layer * mass conservation in fluid motion, turbulent and molecular fluxes and their roles in atmospheric dispersion * the contrast between instantaneous and average properties of turbulent flow, the convergence of averages and implications for dispersion models.

Prerequisite: EME 301 , C E 360 , M E 320 , METEO454 or EGEE 470

METEO 460: Weather Risk and Financial Markets

3 Credits

This course will introduce the role that weather plays as a source of financial and operational risk for businesses, market and other institutions. METEO 460 Weather Risk and Financial Markets (3)The course introduces students to the role that weather plays as a source

of financial and operational risk for business, markets, and other institutions. It also introduces the tools and concepts for weather risk management-the insurance products, financial instruments, and decision tools that organizations use to manage, reduce, and transfer their weather-related risks. Major topics include: (i) The concept of risk and the role of weather as a driver of economic risk; (ii) Probabilistic approaches to weather forecasting; (iii) Techniques for valuation of weather derivatives; (iv) Links between weather and markets for energy and agricultural commodities; and (v) Management of catastrophic hurricane risks. Weekly assignments culminate in a major student project on weather risk management.

Prerequisite: METEO411 ; E B F472 or STAT 301 or STAT 401 ; E B F301 or E B F473

METEO 465: Middle Atmosphere Meteorology

3 Credits

A topical survey of physical, chemical, and dynamical processes at work in the stratosphere and mesosphere (middle atmosphere).

Prerequisite: METEO421 , METEO431

METEO 466: Planetary Atmospheres

3 Credits

A survey of planetary atmospheres and the chemical and physical processes by which they form and evolve.

Prerequisite: MATH 141 , PHYS 211

METEO 469: From Meteorology to Mitigation: Understanding Global Warming

3 Credits

Examination of global warming and climate change: the basic science, projects, impacts, and approaches to mitigation. METEO 469 From Meteorology to Mitigation: Understanding Global Warming (3) Human-caused climate change represents one of the great environmental challenges of our time. As it is inextricably linked with issues of energy policy, a familiarity with the fundamentals of climate change is therefore critical for those looking to careers in the energy field. To appreciate the societal, environmental, and economic implications of policies governing greenhouse gas emissions, one must further understand the basic underlying science. METEO 469 serves to lay down the fundamental scientific principles behind climate change and global warming. A firm grounding in the science is then used as a launching point for exploring issues involving climate change impacts and mitigation. METEO 469 will introduce students to the basic information necessary for understanding Earth's climate, including the relevant atmospheric processes, and aspects of other key components of the climate system such as the cryosphere, hydrosphere, and biosphere. Students will learn how to do basic computations and to use theoretical models of the climate system of varying complexity to address questions regarding future climate change. Students, further, will explore the impacts of various alternative greenhouse gas emissions scenarios and investigate policies that would allow for appropriate stabilization of future greenhouse gas concentrations. The structure of the course roughly parallels the treatment of the subject matter by the reports of the Intergovernmental Panel on Climate Change (IPCC), focusing first on the basic science, then the future projections and their potential impacts, and finally issues involving adaptation, vulnerability, and mitigation. METEO 469

will combine digital video, audio, simulation models, virtual field trips to on-line data resources, text, and interactive quizzes that provide instantaneous feedback.

Prerequisite: STAT 200 or MATH 110 or MATH 140

METEO 470: Climate Dynamics

3 Credits

The fundamental principles that govern Earth's climate and their relevance to past and future climate change. METEO 470 Climate Dynamics (3) Climate Dynamics delves into the fundamental processes that control the earth's climate of the past, present, and future. Fundamentals are developed from concepts of basic dynamic meteorology, radiative transfer, and thermodynamics. Basic atmospheric radioactive transfer, the surface energy and hydrologic budgets, and the atmospheric and oceanic circulation are covered. A survey of the earth's climate through geologic history is also covered, including extinction events and the impacts on climate. The concepts developed in this course are applied to the topic of anthropogenic climate change and how various aspects of the system could be influenced by global warming.

Prerequisite: METEO300 , METEO421 , METEO431

METEO 471W: Atmospheric Optics

3 Credits

This upper-level undergraduate course will cover the fundamental physics of light and scattering of light by atmospheric particles. Knowledge of these processes will be applied to understand how they result in optical displays in the sky, including colors in the sky, phenomena associated with refraction of light, scattering by liquid drops and ice crystals, and electrification. The course will guide students to observe, document, and understand these beautiful and sometimes bizarre atmospheric optical phenomena. Students will make their own observations using their eyes, optical cameras, and polarization filters. The students will document their observations through regular written sky journal entries to hone their writing skills. By working together through hands-on activities and discussions, students will unlock the mysteries of these phenomena through applying the fundamental physical principles that underly all topics covered in the course. Throughout the semester, students will research a phenomenon of interest to them, culminating in a final paper on this topic. Students who have completed this course will understand the physical concepts associated with atmospheric optical phenomena and where/how to look for them, observe them, and document them.

Prerequisites: METEO 411 Recommended Preparation: METEO 436; METEO 437; METEO 454 Writing Across the Curriculum

METEO 473: Application of Computers to Meteorology

3 Credits

Application of statistical and numerical methods to practical problems in meteorology.

Prerequisite: CMPSC 101, CMPSC 201, CMPSC 202 or METEO 273

METEO 473H: Application of Computers to Meteorology

3 Credits

APPLICATION OF STATISTICAL AND NUMERICAL METHODS TO PRACTICAL PROBLEMS IN METEOROLOGY.

Honors

METEO 474: Computer Methods of Meteorological Analysis and Forecasting

3 Credits

Distribution of scalars and vectors; sampling; regression and correlation in two and three dimensions; time series, statistical forecasting; forecast verification. METEO 474 Computer Methods of Meteorological Analysis and Forecasting (3) Meteorology 474: Computer Methods of Meteorological Analysis and Forecasting explores the computationally intensive statistical methods used in the development of automated weather analysis and forecasting systems. The focus of the course is on learning to develop and use artificially intelligent automated systems to perform data quality control, quantitative analysis of large meteorological data sets, and weather forecasting. Coverage will include the relevant statistical, mathematical, and computational methods including matrix operations, data quality control, regression analysis, neural network construction, decision tree growth, and forecast system verification. Students will leave the course with an understanding of how to efficiently develop accurate and robust statistical weather analysis and prediction systems. Thus, the course serves as a professional elective for those students wishing to pursue careers in statistical weather forecasting, meteorological data analysis, and associated fields. Meteorology 474 uses a project oriented lecture/lab format to provide students with hands-on experience in developing and testing weather analysis and forecast systems. Students will both code their own forecast system development programs and use off-the-shelf software designed for rapid development and testing of forecast systems. To tackle these assignments, students will team up in pairs using the computer laboratory facilities of the Meteorology Department and meteorological data sets of current interest. A key element of the resulting project reports will be an investigation into the origin of the observed forecast system errors. One section of Meteorology 474 will be offered each year with a capacity of approximately 20 students. The class size is tailored to in-class training with the software tools and open discussion with the instructor and classmates. Grading will be based on the team assignments and on a mid-term and final examination.

Prerequisite: STAT 301 or STAT 401 or E B F472

METEO 477: Fundamentals of Remote Sensing Systems

3 Credits

The review of fundamental physical properties leads into discussions of various techniques, including imaging, spectroscopy, radiometry, and active sensing.

Enforced Prerequisite at Enrollment: (C or better in EE 330) or METEO 436 Cross-listed with: EE 477

METEO 480M: Undergraduate Research

3 Credits

Undergraduate Research METEO 480M Undergraduate Research (3) The lecture portion of the course, which accounts for one-third of the course

grade, covers topics such as the elements of good scientific writing, the structure of scientific manuscripts, the mechanics of oral and poster presentations at science meetings, scientific peer review, and ethics in science. For the remaining two-thirds of the course grade, students perform research under the guidance of a faculty member. Students select the faculty member based on matching general research interests. A student's academic adviser typically assists in the process of matching a student to a research project supervisor. In consultation with their research project supervisor, students then decide on a specific research topic.

Prerequisite: junior or senior standing as a Meteorology Major Honors
Writing Across the Curriculum

METEO 480W: Undergraduate Research

3 Credits

A research thesis will be prepared. A written and oral presentation required.

Prerequisite: junior or senior standing as a Meteorology Major
Writing Across the Curriculum

METEO 481: Weather Communications I

3 Credits

Multi-instructor weather communications survey including forecasting, science teaching and writing, television and radio broadcasting, climate studies, forensics, industrial applications.

Prerequisite: METEO201 or METEO101

METEO 482: Weather Communications II

3 Credits

Multi-instructor workshop designed to mimic real-life applications of weather communications in industry, broadcasting, the courtroom, and the classroom.

Prerequisite: METEO481

METEO 483: Weather Communications III

3 Credits

Individualized course designed for in-depth study of weather communications in industry, broadcasting, the courtroom and/or the classroom.

Prerequisite: METEO411 , METEO482

METEO 486: Pennsylvania Climate Studies

1-2 Credits/Maximum of 3

An overview of the Pennsylvania State Climate Office and an introduction to various aspects of its operations. METEO 486 Pennsylvania Climate Studies (1-2) Those interested in climate topics will become thoroughly acquainted with the important process of acquiring and assessing the quality of climate observations. Students will be introduced to the various observational networks and data formats. They will learn to manipulate large climate data fields using both flat and relational database management systems. Each student will contribute to the

state climate web page and will conduct a research project during the second half of the semester. This course will be offered in fall and spring semesters.

Prerequisite: METEO101 , or METEO200A and METEO200B , or METEO201

METEO 491: Professional Development

1 Credits

Geared towards rising juniors and seniors, this one-credit course will offer practical advice and ample opportunities for reflection about one's future career within Meteorology and Atmospheric Science. The course will help to develop you professionally for a career in the atmospheric sciences and help to put you in the best possible position for your next step after graduation, be it a job or graduate school. You will develop a better understanding of the range of diversities and commonalities in the atmospheric sciences, the value of improving presentation and writing skills, the importance of developing professional references and networks, and strategies for applying to graduate schools and searching for a job. There will be guest speakers, including alumni and university staff whose participation will enhance the value of the class.

Prerequisite: 5th Semester standing

METEO 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

METEO 494H: Research Project

1-12 Credits/Maximum of 999

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

METEO 494M: Thesis Research

3 Credits

METEO 494M Thesis Research (3). In this course, students will write a professionally structured thesis that is grounded in a solid research foundation. In the process, students will learn the elements of excellent technical science writing and effective oral presentation. This course continues the thesis research topic developed in Meteo 494H. This capstone course integrates the key elements of any well-conceived research project: a) a thorough background literature search that identifies the current understanding of a question or topic; b) the articulation of a research hypothesis that is informed by the literature search; c) the design and implementation of a plan to test the hypothesis using theoretical, experimental, and/or computational approaches; and d) conclusions regarding the validity of the hypothesis based on the data obtained in the course of the research. The main characteristic of this course is the execution of the research plan articulated in METEO 494H, interpretation of the data generated by the research in the context of the original hypothesis, and the preparation of the thesis. Research is generally performed in collaboration with faculty and graduate research assistants, using equipment and facilities in the Meteorology and Atmospheric Science department or other departments involved in the research endeavor. Occasionally, the nature of the research may

require the student to collaborate with researchers outside of Penn State, perhaps even spending some time in residence at other facilities. The course culminates in the preparation of a thesis detailing the relevance and findings of the research and, at the discretion of the thesis advisor, an oral presentation about the research findings. Close coordination with the thesis advisor is a key to success in METEO 494M. Ideally, a student should meet with the advisor regularly and drafts of parts of the thesis should be shared with the advisor for feedback. Assessment of the student's progress is via grading of all components of the thesis which include the literature review and background, the statement of the problem, the design of the experimental plan, the results and discussion, the conclusions, any recommendations for future work, the reference list, and any appendices and figures. The diligence of the student in performing the research in a professional and timely fashion will also be considered.

Prerequisite: METEO 494H; junior or senior standing as a Meteorology and Atmospheric Science major
Honors
Writing Across the Curriculum

METEO 495: ****SPECIAL TOPICS****

3 Credits/Maximum of 6

METEO 495A: Meteorology Communications Internship

3 Credits/Maximum of 6

METEO 495A Meteorology Communications Internship (3 per semester, maximum of 6) A student participates for at least 100 hours in an internship with an agency or company that focuses on communication of weather forecasts or other meteorological information. This internship is normally completed after the junior year. Given the focus of this internship and the paper requirement to relate the internship experience to a 400-level meteorology course, students must have completed the required course on synoptic meteorology. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

Prerequisite: METEO411

METEO 495B: Meteorology Private Sector Internship

3 Credits/Maximum of 6

METEO 495B Meteorology Private Sector Internship (3 per semester/ maximum of 6) A student participates for at least 100 hours in an internship with a private sector company that focuses on problems or applications that use meteorological information. This internship is normally completed after the junior year. Given the focus of this internship and the paper requirement to relate the internship experience to a 400-level meteorology course, students must have completed the required course on synoptic meteorology. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

Prerequisite: METEO411

METEO 495C: Meteorological Operations Internship

3 Credits/Maximum of 6

METEO 495C Meteorological Operations Internship (3 per semester/ maximum of 6) A student participates for at least 100 hours in an internship in an operational setting that focuses on the creation of time-sensitive meteorological products such as weather or climate forecasts. This internship is normally completed after the junior year. Given the focus of this internship and the paper requirement to relate the internship experience to a 400-level meteorology course, students must have completed the required course on synoptic meteorology. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

Prerequisite: METEO411

METEO 495D: Meteorological International Internship

3 Credits/Maximum of 6

METEO 495D Meteorological International Internship (3 per semester/ maximum of 6) A student participates for at least 100 hours in an internship in an international setting that focuses on applying meteorological knowledge. This internship is normally completed after the junior year. Given the focus of this internship and the paper requirement to relate the internship experience to 400-level meteorology coursework, students must have completed at least six credits of Meteorology courses. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

Prerequisite: 6 credits of 400-level Meteorology coursework

METEO 495E: Meteorological Off-Campus Research Internship

3 Credits/Maximum of 6

METEO 495E Meteorological Off-Campus Research Internship (3 per semester/maximum of 6) A student participates for at least 100 hours in an internship whose focus is a research project requiring applications of meteorological knowledge. This internship is normally completed after the junior year. To provide sufficient background for performing atmospheric research successfully, students must have completed at least nine credits of 400-level Meteorology courses. After the internship has been completed, the student writes a paper based on the contract posted on the Department of Meteorology website. This paper normally is evaluated by the student's Meteorology Department academic advisor. The course grade depends on this evaluation combined with the assessment provided to the advisor by the student's internship supervisor.

Prerequisite: 9 credits of 400-level Meteorology coursework

METEO 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

METEO 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

METEO 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Microbiology (MICRB)

MICRB 106: Elementary Microbiology

3 Credits

A survey course in microbiology for non-majors, this course focuses on the roles of microbes in human health and disease, agriculture, biotechnology, and other areas of societal impact. Topics include the mechanisms and natural history of microbial evolution; microbial growth and the control of microbial growth; the staggering diversity of microbial diversity, microbial metabolism, and microbial genetics; the unique biology of viruses; biotechnology its social impacts; pathogenesis and immunity; and explicit connections between each of these topics and their public health impacts.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MICRB 107: Elementary Microbiology Laboratory

1 Credits

MICRB 107 is an introductory laboratory course designed for students who do not intend to pursue further study in the field. The course demonstrates the use and practice importance of microbes in everyday life. Instruction begins with the proper handling and visualization of microorganisms. Almost by definition, the vast majority of microorganisms are too small to be seen with the naked eye. Therefore, students must learn the correct use of the light microscope. Instruction in the proper care and maintenance of the microscope is provided. Students prepare and stain specimens using a number of methods designed to characterize microorganisms. The importance of working safely in a laboratory setting is emphasized throughout the course. Many skills are developed in this laboratory course. Aseptic technique skills allow for the transfer organisms properly from one culture medium to another. A variety of media are used and the reasons for their use are explained. Students also learn how to quantify the number of bacteria in specimens such as water, soil or food. The course demonstrates ways to control microbial growth by various means for example, temperature, osmotic pressure, pH, exposure to ultraviolet light and use of disinfectants.

Students learn the importance of controlling microbial growth on their person and how failure to do so can lead to the spread of disease, especially in hospital settings. Other experiments illustrate methods used to preserve food products and test water for contamination and may include molecular techniques to study microbial genomes. While students learn to isolate and identify organisms from their own body, other common bacteria found in or on the human body are also studied. A variety of diagnostic cultural and physiological tests are employed to identify organisms students have isolated. This simulates in a very real way the process physicians depend on for diagnosis of infectious diseases. A related experiment demonstrates how antibiotics that are likely to be effective in treating an infection are selected. Taken together, most of the experiments conducted in MICRB 107 are designed to encourage students to investigate the many important roles microorganisms play in the living world. The specific examples covered each semester may vary based on student and instructor interest. As a course that meets general education (GN) requirements, students will increase their scientific literacy in the field of microbiology and develop critical and analytical thinking skills.

Enforced Prerequisite or concurrent at Enrollment: MICRB 106

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MICRB 150: Introductory Medical Laboratory Technology

4 Credits

Introduction to basic principles and procedures of clinical laboratory work. Practicum emphasizes proper collection, handling, and preparation of biological samples.

Enforced Prerequisite at Enrollment: Admission to 2MLT program

MICRB 151A: Clinical Chemistry for Medical Laboratory Technicians

5 Credits

Basic principles and procedures for measuring chemical components of blood and other body fluids. MICRB 151A Clinical Chemistry for Medical Laboratory Technicians (5) This course is taken with (or before) MICRB 151D - Clinical Chemistry Practicum. Topics include: laboratory safety; phlebotomy; quality assurance; lab math; instrumentation in clinical chemistry; measurement of carbohydrates, proteins, electrolytes, lipids, hormones, enzymes, tests of kidney and liver function, and their clinical significance. Laboratory sessions focus on basic measurement techniques, using spectrophotometry.

Enforced Prerequisite at Enrollment: [(BIOL 163 and BIOL 164) or BIOL 240] and all of the following: CHEM 202 and MICBR 150 and MICRB 201 and MICRB 202

MICRB 151B: Hematology for Medical Laboratory Technicians

5 Credits

Blood cell identification and analysis. Related procedures for diagnosing normal or disease states of blood cells and coagulation. MICRB 151B Hematology for Medical Laboratory Technicians (5) This course is taken with (or before) MICRB 151E - Hematology Practicum. Topics include: hematopoiesis; measurement of red cells, white blood cells, and platelets; significance of hematology results in the diagnosis of hematological diseases; principles of coagulation and related disease states, with

emphasis on common factor deficiencies and platelet abnormalities. Laboratory sessions focus on manual techniques, and microscopic identification of blood cells. A capstone project requires the student to research and present a patient case study to the class.

Enforced Prerequisite at Enrollment: [(BIOL 163 and BIOL 164) or BIOL 240] and all of the following: CHEM 202 and MICBR 150 and MICRB 201 and MICRB 202

MICRB 151C: Immunohematology and Serology for Medical Laboratory Technicians

4 Credits

Antigen-antibody interactions of diagnostic importance. Immunologic principles and procedures necessary for the transfusion of blood products. This course is taken with (or before) MICRB 151F - Immunohematology Practicum. Topics include: principles of normal immune function, with emphasis on humoral immunity; common serology tests used to diagnose infection and disorders of the immune system; selection and testing of donors and preparation of blood components; testing required to determine blood types and detect unexpected antibodies that impact selection of blood products; transfusion practice, transfusion reactions; hemolytic disease of the fetus and newborn. Laboratory sessions focus on manual techniques, ABO and Rh testing, antibody identification.

Enforced Prerequisite at Enrollment: [(BIOL 163 and BIOL 164) or BIOL 240] and all of the following: CHEM 202 and MICBR 150 and MICRB 201 and MICRB 202

MICRB 151D: Clinical Chemistry Practicum

2 Credits

Supervised experience at affiliated clinical laboratory. Focus is on the practical application of clinical chemistry procedures. Phlebotomy. MICRB 151D Clinical Chemistry Practicum (2) This clinical practicum enables the 2MLT student to gain experience in clinical chemistry, and includes approx. 110 hours of supervised experience in an affiliated clinical laboratory. The course is taken concurrently or after the lecture course Micrb 151A - Clinical Chemistry for Medical Laboratory Technicians. Topics include: specimen handling; common chemical analyses of blood and other body fluids; principles of operation, use, maintenance, and troubleshooting of clinical chemistry analyzers; quality control; safety; phlebotomy. Upon completion of Micrb 151D, the student will be able to:1. Demonstrate mathematical calculations necessary to prepare reagents, gather data, calculate results, and analyze specimens in the clinical chemistry department.2. Recognize errors in the collection of specimens for chemical analysis.3. Demonstrate the use of basic chemistry instruments; participate in the maintenance, and troubleshooting of these instruments.4. Interpret the clinical significance of common chemical analyses.5. Assess the validity of patient results by correlating laboratory data with quality control results.6. Perform phlebotomy and routine chemistry procedures at appropriate mastery levels.7. Demonstrate methods of maintaining a safe working environment in the chemistry department of the clinical laboratory.8. Achieve specific standards of attitude and work habits at the clinical bench.

Enforced Prerequisite or concurrent at Enrollment: MICRB 151A

MICRB 151E: Hematology Practicum

2 Credits

Supervised experience at affiliated clinical laboratory. Focus is on the practical application of hematology and coagulation procedures. MICRB 151E Hematology Practicum (2) This clinical practicum enables the 2MLT student to gain experience in hematology and coagulation, and includes approx. 120 hours of supervised experience in an affiliated clinical laboratory. The course is taken concurrently or after the lecture course Micrb 151B - Hematology for Medical Laboratory Technicians. Topics include: hematopoiesis; hemostasis; common hematology and coagulation methods; the principles of operation, use, maintenance, and troubleshooting of hematology analyzers; microscopic examination of blood smears; quality control. Upon completion of Micrb 151E, the student will be able to:1. Recognize pre-analytical factors affecting hematology and coagulation results.2. Perform routine hematology and coagulation procedures at specific mastery levels.3. Demonstrate the use of common hematology and coagulation analyzers, and participate in the maintenance and troubleshooting of these instruments.4. Interpret the clinical significance of hematology and coagulation results.5. Demonstrate methods of maintaining a safe working environment in the hematology department of the clinical laboratory.6. Identify normal and abnormal red cell, white cell, and platelet morphology in peripheral blood smears.7. Follow protocol when reporting patient results.8. Assess the validity of patient results by correlating laboratory data with quality control results.9. Achieve specified standards of attitude and work habits at the clinical bench.

Enforced Prerequisite or concurrent at Enrollment: MICRB 151B

MICRB 151F: Immunohematology Practicum

2 Credits

Supervised experience at affiliated clinical laboratory. Focus is on the practical application of immunohematology procedures. MICRB 151F Immunohematology Practicum (2) This clinical practicum enables the 2MLT student to gain experience in pre-transfusion testing and serology, and includes approx. 110 hours of supervised experience in an affiliated clinical laboratory. The course is taken concurrently or after the lecture course Micrb 151C - Immunohematology and Serology for Medical Laboratory Technicians. Topics include: routine procedures for determining ABO and Rh blood type; antibody identification; crossmatching techniques; handling and storage of donor products; common serology tests; quality control. Upon completion of Micrb 151F, the student will be able to:1. Perform routine immunohematology and serology procedures at specific mastery levels.2. Follow protocol required for the handling, storage and the issue of blood products.3. Interpret the clinical significance of common serology and immunology tests.4. Maintain a safe working environment in the immunohematology and serology departments in the clinical laboratory.5. Assess the validity of patient results by correlating laboratory data with quality control results.6. Achieve specified standards of attitude and work habits at the clinical bench.

Enforced Prerequisite or concurrent at Enrollment: MICRB 151C

MICRB 151G: Clinical Microbiology and Body Fluids Practicum

2 Credits

Supervised experience at affiliated clinical laboratory. Focus is on the practical application of microbiology procedures and body fluid analysis.

MICRB 151G Clinical Microbiology and Body Fluids Practicum (2) This clinical practicum enables the 2MLT student to gain experience in clinical microbiology and body fluid analysis, and includes approx. 150 hours of supervised experience in an affiliated clinical laboratory. The course is taken concurrently or after the lecture course Micrb 151W. Topics include: specimen handling; cultivation and identification of bacteria with a minor emphasis on parasitology and mycology; antibiotic sensitivity techniques; chemical and microscopic analysis of urine and body fluids; toxicology and therapeutic drug monitoring. Upon completion of Micrb 151G, the student will be able to: 1. Demonstrate methods of maintaining a safe working environment in the microbiology and urinalysis departments of the clinical laboratory. 2. Select and inoculate appropriate media for the culture of patient specimens. 3. Perform common biochemical, microscopic, serological, and molecular-based methods to identify microorganisms, at specified mastery levels. 4. Identify normal and abnormal physical properties of urine and other body fluids. 5. Recognize discrepant results when reviewing urinalysis findings. 6. Perform routine urinalysis and body fluid analysis at specified mastery levels. 7. Perform therapeutic drug monitoring and common tests for drugs of abuse. 8. Assess the validity of patient results by correlating laboratory data with quality control results. 9. Achieve specified standards of attitude and work habits in the clinical laboratory.

Enforced Prerequisite or concurrent at Enrollment: MICRB 151W

MICRB 151W: Clinical Microbiology and Body Fluid Analysis for Medical Laboratory Technicians

5 Credits

This course is taken with (or before) MICRB 151G - Clinical Microbiology and Body Fluids Practicum. Topics include: analysis of urine and body fluids; tests of renal function; collection of patient specimens; cultivation, identification and clinical significance of bacteria, with a minor emphasis on parasitology, mycology and virology; techniques to determine antibiotic susceptibility. Laboratory sessions include specimen collection, urine and spinal fluid testing, manual identification of common pathogenic and non-pathogenic bacteria, and concentration of ova and parasites. The student prepares a research paper on a topic related to clinical microbiology; this semester-long process includes instruction on library research techniques, and the writing of several documents in preparation for writing the research paper. This course is writing-intensive.

Enforced Prerequisite at Enrollment: [(BIOL 163 and BIOL 164) or BIOL 240] and all of the following CHEM 202 and MICRB 150 and MICRB 201 and MICRB 202

Writing Across the Curriculum

MICRB 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MICRB 201: Introductory Microbiology

3 Credits

Elementary principles of microbial and viral structure, reproduction, genetics and physiology; relationship to food, water, soil, industrial and disease processes. MICRB 201 Introductory Microbiology (3) MICRB 201, Introductory Microbiology, is a survey course that touches

on the full range of topics generally considered to fall within the scope of microbiology. After a short overview of the origins of microbiology and the ways in which forms of life too small to be seen with the naked eye can be studied, the course launches into the following basic topics: 1) structure and function of the bacterial cell as compared with plant and animal cells 2) care, feeding, and controlling the growth of bacteria 3) how bacteria acquire and use energy 4) how energy and nutrients are used to make cell components and carry out life processes 5) how bacteria organize, replicate and control the expression of genetic information 6) how viruses differ organizationally and reproductively from bacteria, and finally 7) how bacteria are classified and why various classification schemes are important. The remainder of the course is concerned with specific roles bacteria and viruses play in nature. Issues addressed include: 1) role of bacteria in the cycling of elements in the terrestrial environment 2) importance of bacteria in aquatic environments, including the safety of drinking water and treatment of waste water 3) the role of bacteria and viruses in human health and disease. Bacteria existed long before higher life forms, so animals, including humans, evolved means to protect themselves from harmful bacteria while forming relationships with bacteria that are beneficial. These harmful and beneficial relationships are intimately connected to immunology, a field that has long been included in the study of microbiology. The study of disease-causing microbes includes the topics of how these organisms are spread and how they can be controlled using anti-bacterial and anti-viral agents. Selected diseases are used to explain the various mechanisms by which microbes are able to cause illness. Finally, the course also covers the role microorganisms play in the spoilage of foods and, more importantly, the myriad ways in which bacteria, yeast and fungi are used to manufacture such popular foods as breads, cheeses, wines, beers and many other fermented food and dairy products. At some point in the course, there is discussion of how microbes are used in the rapidly-expanding area of biotechnology and their potential for yielding products of benefit to agriculture and humankind. This topic also treats the controversial issues connected with biotechnology, including ethical, theoretical and practical issues that are or will eventually need to be addressed by society.

Enforced Prerequisite at Enrollment: CHEM 110 or CHEM 110H

MICRB 201H: Introductory Microbiology

3 Credits

Elementary principles of microbial and viral structure, reproduction, genetics and physiology; relationship to food, water, soil, industrial and disease processes. MICRB 201H Introductory Microbiology (3) MICRB 201H, Introductory Honors Microbiology, is a survey course that touches on the full range of topics generally considered to fall within the scope of microbiology. After a short overview of the origins of microbiology as a science and the ways in which forms of life too small to be seen with the naked eye can be studied, the course covers the following basic topics: 1) the tree of life and the position of microbes in the biological world, 2) structure and function of the bacterial cell as compared with plant and animal cells, 3) microbial nutrition and growth, 4) molecular biology and gene regulation in microbes, 5) microbial genetics, 6) an overview of microbial classification and diversity, and 7) the principles of how microbes interact with their environment. Unlike the standard sections of MICRB 201, the honors course then moves on to an integrated description of microbial diversity and ecology in association with topics such as carbon metabolism, energy acquisition and utilization including photosynthesis, and the environmental impacts of microbial utilization of inorganic chemicals. This is followed by a section concerning eukaryotic or non-bacterial microbes, a section

concerning the use of microbes in industry, and then a basic overview of viruses and how they work. The last part of the course deals with microbial interactions with other organisms with an emphasis on their interactions with man. This starts with a discussion of how microbial growth can be controlled, and then the various kinds of relationships that can exist between microbes and other organisms are covered. This is followed by a section on immunology or the mechanisms animals possess to defend themselves against potentially harmful microbes. The final section concerning a broad range of microbially-caused diseases is preceded by a description of microbial analysis in the clinical or medical laboratory as well as a discussion of how disease-causing microbes are spread in animal populations. MICRB 201H is taught so as to emphasize the impact of microbes on our everyday lives. One way this is accomplished is by class presentations made by small groups of students on topics of current interest in the community at large. Students also write a term paper that can involve any aspect of microbiology using an article from the popular press as their starting point. All students are also required to make a short in-class presentation in which they provide an overview of their term paper. While much of the instruction involves the standard lecture format, classroom discussion is encouraged at all times.

Enforced Prerequisite at Enrollment: CHEM 110 or CHEM 110H Honors

MICRB 202: Introductory Microbiology Laboratory

2 Credits

The goal of MICRB 202 is to inspire excitement and enthusiasm for the important science of microbiology, and to provide students with foundational knowledge of how microbiology techniques can be used to study key aspects of microbial biology such as antibiotic resistance, metabolism, cell structure, and genetics. Specifically, this course will introduce students to the techniques used in microbiology labs to isolate, stain, characterize, identify and control microorganisms. Through the exercises performed in this lab course, students will learn microbiology methods which have many uses and applications in science, medicine and industry. In addition, the exercises performed will help students appreciate the important role microbes play in the lives of all individuals.

Enforced Concurrent at Enrollment: MICRB 201 or MICRB 201H

MICRB 203: Inquiry-based Microbiology Laboratory

2 Credits

In this course, students learn the scientific method and important microbiological concepts and techniques by designing and executing experiments. Through a series of experimental modules, students will practice and hone their skills at formulating interesting questions, developing testable hypotheses, designing experiments, and analyzing results. Module topics will cover identification and characterization of microbes, interactions between microbes and their environment, pathogenesis, and microbial communities. At the end of the course, students will be prepared to participate in engaged scholarship opportunities, such as performing independent research.

MICRB 251: Molecular and Cell Biology I

3 Credits

BMB 251 Molecular and Cell Biology I (3) is an introduction to the fundamental principles of molecular and cellular biology, with a primary focus on eukaryotic cells. Topics covered will include elementary

biochemistry; structure and function of biological macromolecules, the cell and its organelles; the role of biological membranes in bioenergetics and sub-cellular compartments. There will be a particular emphasis on the molecular mechanism of heredity; the organization and expression of genetic information; experimental methods used in the analysis of gene expression and the relationship between gene/protein structure and function.

Enforced Prerequisite at Enrollment: CHEM 112 or CHEM 112H
Recommended preparations MICRB 201 or MICRB 201H
Cross-listed with: BMB 251

MICRB 252: Molecular and Cell Biology II

3 Credits

Continuation of BMB 251 / MICRB 251 ; cytoskeleton, cell growth, division, adhesion, signalling, germ cells, differentiation, immune system, nervous system, plant cells. BMB 252 / MICRB 252 Molecular and Cell Biology II (3) focuses on the internal organization on eukaryotic cells and their organization in multi-cellular organisms. Topics covered include cell communication, the cytoskeleton, cell cycle, fertilization and development of multi-cellular organisms, genesis of tissues, and the molecular mechanisms of cancer and immunity.

Enforced Prerequisite at Enrollment: BMB 251 or MICRB 251 or BMB 251H or BIOL 230W or BIOL 230M
Cross-listed with: BMB 252

MICRB 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

MICRB 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

MICRB 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MICRB 401: Microbial Physiology and Structure

3 Credits

Physiology and structure of bacteria important in microbiological research. Designed for science majors.

Enforced Prerequisite at Enrollment: (CHEM 202 or CHEM 202H or CHEM 210 or CHEM 210H) and (MICRB 201 or MICRB 201H) and (MICRB 202 or MICRB 203). Recommended Preparation: BMB 401 or BMB 401H

MICRB 405A: Seminar and Practicum in Medical Technology

8 Credits

Chemistry. Fundamental principles and the quantitative measurement of chemical components in the blood and other body fluids.

MICRB 405B: Seminar and Practicum in Medical Technology

1 Credits

Urinalysis. Identification of cellular and noncellular urinary sediments. Qualitative chemical analysis of urine.

MICRB 405C: Seminar and Practicum in Medical Technology

6 Credits

Hematology. Principles of red and white blood cell development. Identification of normal and pathological conditions.

MICRB 405D: Seminar and Practicum in Medical Technology

5 Credits

Immunohematology. Immunologic and genetic principles governing the transfusion of blood and blood products.

MICRB 405E: Seminar and Practicum in Medical Technology

7 Credits

Microbiology. Identification of normal and abnormal microbial flora from various locations on and within the human body.

MICRB 405F: Seminar and Practicum in Medical Technology

3 Credits

Serology-Immunology. Immunological principles and their application in the identification of present or past disease states of the human.

MICRB 408: Laboratory Instructional Practice

1-2 Credits/Maximum of 2

Participation in the instruction of undergraduate laboratory courses, including classroom preparation; discussion of principles and objectives of each exercise.

Enforced Prerequisite at Enrollment: 8 credits in microbiology and permission of department head

MICRB 410: Principles of Immunology

3 Credits

The MICRB 410 / VBSC 410 Theories of immunity (3cr.) course provides a basic foundation in immunology with a focus on the progression from antigen recognition and innate immune responses to the development of acquired immunity. During the course, students will have the opportunity to learn about key topics that lead to an understanding of the how the human immune system functions. Such topics include the primary cells and anatomical sites of the immune system as well as the activation and processes of innate immunity. In addition, students will learn about the organization and generation of lymphocyte antigen receptors, major histocompatibility complexes, and antigen presentation. Topics will also be presented that allow students to build an understanding of

how antigen recognition and presentation leads to the development, selection, and survival of B and T lymphocytes. T-cell mediated immunity, humoral immunity, and the dynamics of the immune response will also be discussed in depth. Topics such as the immunobiology of allergy, transplantation, autoimmunity, immunodeficiency, diseases, vaccines, and/or cancer will also be presented in order to help students build an understanding of the interplay between the immune system and health and disease will be discussed throughout the semester.

Enforced Prerequisite at Enrollment: (MICRB 201 or MICRB 201H) and (BMB 251 or MICRB 251 or BMB 251H or BIOL 230W or BIOL 230M)
Cross-listed with: VBSC 410

MICRB 411: Survey of Microbiology Literature

1 Credits/Maximum of 99

An introduction to readings and oral presentations in microbiology.

Enforced Prerequisite at Enrollment: 8 credits in MICRB courses

MICRB 412: Medical Microbiology

3 Credits

Characteristics, methods of identification, and pathogenesis of bacteria that cause human disease; principles of disease dynamics and control.

Enforced Prerequisite at Enrollment: MICRB 201 or MICRB 201H

MICRB 415: General Virology: Bacterial and Animal Viruses

3 Credits

The interaction of different types of viruses with bacterial and animal cells, including mechanisms of infection and viral synthesis. MICRB 415 General Virology: Bacterial and Animal Viruses (3) General Virology: Bacterial and Animal Viruses covers the interactions of different types of viruses with animal and bacterial cells, emphasizing molecular and genetic concepts of viral infection and viral replication. Students are expected to apply basic concepts of microbiology as well as molecular and cell biology to understanding selected viral life cycles, particularly at the molecular level. Lectures are augmented by in-class discussion and homework assignments. Typically, students are evaluated by two hourly exams and a final exam that assess their knowledge of virology and their ability to apply basic concepts of gene expression and cell biology to explaining viral life cycles. This course builds on the common requirements of MICRB 201 and BMB 251/ MICRB 251 BMB 252 / MICRB 252. The instruction expands into the cellular and molecular bases of viral life cycles with regular reference to and comparison with cellular and molecular biology of uninfected cells. The content of this course complements those on the basic mechanisms of gene expression (BMB 400) and prepares the student for understanding the molecular basis of viral pathogenesis covered in BMB 435 / MICRB 435 / VBSC 435.

Enforced Prerequisite at Enrollment: (BMB 252 or MICRB 252 or BMB 252H or BIOL 230W or BIOL 230M) and (MICRB 201 or MICRB 201H)

MICRB 416: Microbial Biotechnology

3 Credits

The overall goal of Microbial Biotechnology (3 cr.) is to provide students with an opportunity to apply their knowledge of microbiology and biotechnology to the synthesis of biologically important and industrially useful products. The course will focus on the application of the tools of

Microbiology, Molecular Biology, Biochemistry, Forensics, Environmental Biology and Bioinformatics to exploit microbes as "vessels" to create an array of products to benefit humans, animals and the environment. For example, discussions may address the use of microbes in the cleanup of polluted environments (bioremediation) as well as their role in producing drugs (vaccines, antibiotics, etc.), industrially important enzymes (rennet, meat tenderizers, indigo production etc.), and biodegradable plastics. Furthermore, ethics and regulations surrounding the production, marketing, and distribution of these biologics will be discussed. Students in the course will also participate in a project wherein they conceive of an idea for a value-added product, research steps necessary to bring said product to market, investigate aspects related to intellectual property, and develop a marketing plan. The student project will culminate in a class competition where students will choose to invest their "biotech bucks" in a fellow student's proposed company. Throughout the entirety of the course, the concepts of entrepreneurship and innovation will be at the forefront of class discussions.

Enforced Prerequisite at Enrollment: (BMB 442 or BIOTC 459 or HORT 459 pr BIOL 459) and (MICRB 201 or MICRB 201H) and (MICRB 202 or MICRB 203)

Cross-listed with: BIOTC 416

MICRB 421M: Laboratory of General and Applied Microbiology

3 Credits

Laboratory exercises demonstrating fundamental techniques and principles of experimentation of general and applied microbiology.

Honors

Writing Across the Curriculum

MICRB 421W: Laboratory of General and Applied Microbiology

3 Credits

Laboratory exercises demonstrating fundamental techniques and principles of experimentation of general and applied microbiology.

Enforced Prerequisite at Enrollment: (MICRB 201 or MICRB 201H) and (MICRB 202 or MICRB 203)

Writing Across the Curriculum

MICRB 422: Medical Microbiology Laboratory

2 Credits

Advanced level microbiology laboratory course centered on medically important microorganisms including bacteria, fungi and parasites. Course content covers pathology and current techniques for identification of each microorganism, as well as the underlying concepts, such as physiological and biochemical properties.

Enforced Prerequisite at Enrollment: MICRB 202 or MICRB 203

Concurrent Courses: MICRB 412

MICRB 432: Advanced Immunology: Signaling in the Immune System

3 Credits

The study of signaling pathways that regulate the immune response. BMB 432 / MICRB 432 / VBSC 432 Advanced Immunology: Signaling in the Immune System (3) This course will use the immune system as a model in which to study how cells communicate in order to coordinate an immune response. We will focus on signaling mechanisms

that regulate such immune responses as T cell activation, Th1/Th2 differentiation, macrophage activation, and migration of immune cells to sites of inflammation. All lectures are based on recent reviews by key investigators in each field, as well as primary articles to present students with the most recent advances, techniques, and approaches used. The goal of the course will be to convey a basis understanding of intracellular signaling mechanisms that will pertain to all areas of biology, an appreciation for current questions and future directions in the field, and an in depth understanding of the signals that govern immune responses. The material presented will build on the basic concepts learned in BMB 400 and MICRB 410, and will lay the foundation for more advanced courses at the graduate level.

Enforced Prerequisite at Enrollment: (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M) and (MICRB 410 or VBSC 410)
Cross-listed with: BMB 432, VBSC 432

MICRB 435: Viral Pathogenesis

3 Credits

Viral Pathogenesis provides students with a general knowledge of medically relevant viruses, with a specific focus on important human viral pathogens. The course is meant to help students understand how viruses cause diseases in humans and animals. Lectures and in-class discussions will focus both on the fundamentals of viral infection and disease mechanisms, and on contemporary virology-related topics in the scientific literature. Topics discussed can be divided into two main areas: (1) general concepts related to viral pathogenesis and the control of viral infections; and (2) specific viruses that cause human disease including HIV-1, herpes viruses, papillomaviruses, influenza virus, West Nile virus, Ebola virus, and SARS virus. Although prior knowledge of virology is not required for taking this course, a working knowledge of molecular biology, cell biology, immunology, and some microbiology is helpful.

Enforced Prerequisite at Enrollment: (MICRB 201 or MICRB 201H) and (BMB 252 or MICRB 252 or BMB 252H) or (BIOL 230W or BIOL 230M)

Cross-listed with: BMB 435, VBSC 435

MICRB 447: Laboratory in Molecular Immunology

1 Credits

Immunology laboratory course that centers on current molecular techniques that utilize immunological components. Students will learn to purify and label antibodies, detect antigens and titer antibodies. Example techniques taught in this course are Dot Blot, Western Blot and ELISA. Most techniques will be taught in a diagnostics or inquiry-based context.

RECOMMENDED PREPARATIONS: MICRB 410 or VBSC 410

MICRB 450: Bacterial Genetics

3 Credits

Emphasis will be on the role of mutations in the analysis of gene function; a detailed analysis of replication, transcription, translation, recombination and DNA repair. The course will also delve into the mechanisms involved in the regulation of gene expression both at the individual gene level as well as on a "global" scale. The course will examine the structure, replication and utilization of plasmids, transposons and bacteriophages, particularly focusing on their roles in the horizontal transfer of DNA between bacteria. The course will include both formal lecture presentations by the instructor as well as

presentations of published research related to the field of bacterial genetics whenever possible.

Enforced Prerequisite At Enrollment: (BMB 251 or MICRB 251 or BMB 251H or BIOL 230W or BIOL 230M) and (MICRB 201 or MICRB 201H)
Cross-listed with: BMB 450

MICRB 460: Cell Growth and Differentiation

3 Credits

Mechanisms and regulation of protein trafficking, organelle biosynthesis, cell development, signaling and cell cycle control. Emphasizes experimental design and analysis. BMB 460 / MICRB 460 Cell Growth and Differentiation (3) is a unique course that uses the primary literature to teach significant content in advanced cell biology while simultaneously exposing students to the scientific craft of experimental design and analysis. In addition to exploring historical and current cell biology research articles, students will develop two vital scientific skills; critical thinking as applied to experimental data and creative thinking about solving unresolved questions in cell biology. In this course students will read from journals to explore questions about cell biology and how cell biologists decipher cell functions. Instead of a general survey of cell biology, we delve into specific issues, often looking at "classic" papers describing how a specific phenomenon was first investigated to place current questions in context before progressing to the latest publications exploring how innovative techniques have been applied to deciphering cell function. The course is divided into units, each of which emphasizes content in a different area. Actual content may vary from year to year as the course is updated to reflect progress in a field of research. We have previously explored the general areas of cell membrane dynamics, intracellular protein trafficking, cell cycle regulation, cell signaling pathways and cancer cell biology. Finally, the course ends with a unit on stem cells and therapeutic cloning technology. A portion of the final unit is also devoted to discussing the ethical implications of stem cell research with an emphasis on how to make personal decisions about how our society should approach these issues. Reading guides are provided for each assignment to help students find and understand important points in reading assignments. Class periods are devoted to explanations and instructor-led discussions about the readings with an emphasis on understanding the questions, the methods used to approach the questions, the experimental results and the interpretations of the results. Furthermore, periodic class periods are dedicated to experimental approach exercises where students work in groups to practice posing new questions as suggested by our readings and proposing experiments to answer these questions. These skills are vital part of what cell biologists do daily, and these exercises provide practice in thinking like a scientist. Students have previously reported that by taking this course they acquired the ability to read and understand the primary literature and have gained an in-depth understanding about how to use various experimental techniques.

Enforced Prerequisite at Enrollment: BMB 252 or MICRB 252 or BMB 252H or BIOL 230W or BIOL 230M
Cross-listed with: BMB 460

MICRB 480: Cancer Development and Progression

3 Credits

BMB 480 / MICRB 480 Cancer Development and Progression (3) explores how cancer initiates and progresses with a focus on the interactions between tumor cells and normal tissues in the body. The goal of the course is to build fundamental knowledge of the mechanisms that drive

cancer, and the current advances and challenges in cancer treatment. Genetic, biochemical, mechanical, and metabolic aspects of cancer will all be discussed along with relevant experimental techniques. RNA and DNA viruses that cause cancer will be highlighted as agents leading to the discovery of oncogene and tumor suppressor signaling pathways, and as ongoing contributors to cancer-related death. Significant attention will be given to the role of the immune system in cancer development, prevention, and treatment. By understanding mechanisms leading to the disruption of signaling pathways in cancer, students will develop a framework of how hallmark features of cancer arise and what corresponding therapeutic strategies have been developed to target them. Students are expected to participate in lectures and take part in discussion and analysis of scientific literature. This course applies core concepts from genetics, biochemistry, and cell biology to the study of cancer and provides a useful foundation for students interested in pursuing related graduate research or medical studies

Enforced Prerequisite at Enrollment: (BMB 252 or MICRB 252 or BMB 252H or BIOL 230W or BIOL 230M) and (BIOL 222 or BIOL 322)
RECOMMENDED PREPARATIONS MICRB 410 and BMB 460 and MICRB 415

Cross-listed with: BMB 480

MICRB 496: Independent Studies

1-18 Credits/Maximum of 18

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MICRB 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

MICRB 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Mineral Processing (MNPR)

MNPR 301: Elements of Mineral Processing

3 Credits

Introduction to mineral process engineering. Sampling, sizing, comminution, physical and chemical processes, applications to industrial practice. Pollution control.

Enforced Prerequisite at Enrollment: (CHEM 110 or CHEM 106) and MATH 141

MNPR 401: Mineral Process Engineering

3 Credits

Unit operations for processing particulate materials: comminution, screening, classification, slurry pumping, thickening, filtration, etc.; application to mineral processing plant design.

Enforced Prerequisite at Enrollment: MNPR 301 and (MATH 250 or MATH 251)

MNPR 401H: Mineral Process Engineering

3 Credits

Unit operations for processing particulate materials: comminution, screening, classification, slurry pumping, thickening, filtration, etc.; application to mineral processing plant design.

Honors

MNPR 413: Mineral Processing Laboratory

1 Credits

A laboratory study of the chemical and physical principles involved in practical mineral processing operations.

Enforced Prerequisite or Concurrent at Enrollment: MNPR 301

MNPR 426: Aqueous Processing

3 Credits

A study of the chemical and engineering principles pertinent to metal processing in aqueous systems: hydrometallurgical extraction, plating, materials preparation. MATSE (MN PR) 426 Aqueous Processing (3) This 3-credit course deals with the chemical and engineering principles underlying the aqueous processing of metals: metal extraction from primary and secondary sources, electroplating, and metal finishing, powder synthesis, energy storage and conversion, and treatment of recycling of metal-containing toxic wastes.1. Physico-Chemical Principles - Thermodynamic, chemical kinetic and transport factors which control hydrochemical processes (leaching; precipitation; adsorption; solvent extraction; ion exchange; electrowinning, electrorefining and electroplating; membrane processes; energy storage and conversion); graphical representation of homogeneous and solid/solution equilibria; chemical reagents.2. Engineering Principles - Reactor design and staged operations; ideal batch, continuous stirred-tank and plug-flow reactors; fluidized bed reactors; electrochemical reactors; multistage separation processes (solid-liquid, liquid-liquid, and gas-liquid systems).3. Process Synthesis - Design of metal separation (extraction, refining, waste treatment) materials synthesis, metal finishing, and energy storage/conversion processes and system-integration of unit operations, industrial practice. Emphasis on closing circuits to minimize or eliminate waste effluents.

Enforced Prerequisite at Enrollment: EME 301 or MATSE 401

Cross-listed with: MATSE 426

MNPR 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MNPR 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Mining (MNG)

MNG 223: Mineral Land and Mine Surveying

2 Credits

Surveying theory and practice applied to mineral lands and mines, traversing, leveling, mapping, underground surveying, microcomputer drafting and graphics. MNG 223 Mineral Land and Mine Surveying (2) The objective of this course is to introduce students to mine surveying principles, techniques, and products. Topics covered include a brief history of surveying; a brief review of trigonometry and related math needed in applications; review and application of AutoCAD needed for completing assignments; review of coordinate systems in the U.S.; discussion of types of measurements, units, and conversions that will be done; methods for doing the different types of measurements; introduction of surveying equipment and how to operate them; and use of GPS, laser scanning, 3-D imaging and photogrammetric systems. Laboratory assignments emphasize learning by doing, where students perform basic surveying functions by performing field surveying on campus and at a nearby mine, and then perform necessary calculations and plotting. Students will learn about various measurement methods and devices, error calculations, performing field surveying for topographic mapping, construction control, and volume/area measurement in surface and underground environment.

Prerequisite: 2nd semester standing; 1/2 unit of secondary school trigonometry

MNG 230: Introduction to Mining Engineering

3 Credits

Examination, development, and exploitation of mineral deposits; mining methods; unit operations; mining equipment; fundamentals of explosives.

MNG 302: Mine Electrical Systems

3 Credits

The infrastructure of mines includes power systems, communication and tracking systems, and monitoring systems. Larger surface and underground mines often have power systems of similar size and complexity to a large town, but with additional engineering challenges created by the need to move the power system as mining advances, the confined spaces of underground mines, and the possible presence of combustible ores or explosive gases. Specialized communication systems are required in many underground mines because radio waves propagate poorly in these spaces. Personnel tracking systems are sometimes used to provide location information for all miners. Mine-wide monitoring systems are becoming increasingly common to improve personnel safety and equipment maintainability. In total, these mine electrical systems are a vital component of modern mines. Mining engineers take the lead role in the design and specification of these systems, just as they would for the materials handling, ventilation, and other ancillary systems of the mine. The goal of this course is to develop the necessary knowledge and engineering skills so that this work can be performed in a competent and safe manner. Circuit laws and network theorems are reviewed and the analysis of circuits is presented. The use of phasors and impedance diagrams, and the concepts of complex power and the power triangle are introduced. Models for two and three-winding transformers are presented, and the fundamental electromechanical concepts for motors and generators are given. The analysis of balanced three-phase is studied. Next, the basic concepts of power system

protection are addressed. Grounding, ground bed design, and related topics are presented. Shock, fire, and explosion hazards are an everyday concern in mines, and the basic approaches for mitigating these hazards are covered. Distribution and utilization system arrangements, and the typical equipment for providing power within mines, are studied. Case studies from surface and underground mines are used to illustrate the concepts. The role of load flow and fault analyses in the design and operation of mine power systems is explained, and these concepts are applied using software tools. The application fundamentals of communications, tracking, and monitoring systems are presented, along with their operational advantages and limitations. The course culminates in a final project in which the mine electrical systems for a specific mine are designed.

Enforced Prerequisite at Enrollment: PHYS 212

MNG 331: Rock Mechanics

3 Credits

Ground stresses, laboratory rock properties, laboratory and field instrumentation, rock mass characteristics, subsidence, slope stability, design of mine workings. MNG 331 Rock Mechanics (3) This course was designed to introduce the student to the subject of rock mechanics. It includes an introduction to experimental stress analysis, the physical properties of rock, underground stresses, laboratory and field instrumentation, model studies, rock mass properties, and the discussion of a number of rock mechanics field applications associated with mining, petroleum and civil engineering, and geoscience. A technical paper written on some field related to the laboratory and/or theoretical aspect of rock mechanics is required. A series of eight laboratory sessions are included. These give the students hands-on experience relative to the concepts and instrumentation problems discussed in lectures.

Enforced Prerequisite at Enrollment: EMCH 210

MNG 401: Introduction to Mining Operations

1 Credits

The mining industry consists of various stages of prospecting, exploration, beneficiation, development, and processing of naturally occurred solid minerals. These minerals include both metals (copper, iron, zinc, etc.) and nonmetals (coal, potash, limestone etc.), and all of these minerals are closely related to our daily life. For example, the coal still accounts for more than 50% of the electrical energy production. Both surface and underground mining has a long history globally. Modern techniques and large equipment have been applied in mining industry to increase the production effectiveness and create a healthy and safety environment in mining industry. This course offers an introduction to mining operations and related issues. The course will start with the role of minerals and mining in our daily lives and modern society. How should we classify and recognize different types of minerals beneath the earth? The course examines various stages of mining including prospecting, exploration, development, exploitation, and reclamation. From a mining engineer perspective, how to design a mining system form the beginning to the end. Common unit operations in mining, mining equipment, and some of the auxiliary processes are covered. Surface mining methods and surface mine development will be presented, as well the underground mining methods and the development of underground mines. The objective of this course is to introduce students to mining operations through study of basic concepts and equipment that facilitate the extraction of mineral resources. This includes learning about the stages of a mining project and life cycle of a mine, understanding

the concepts of ore grades and reserves, mine development, mining methods, and unit operations that are essential to the operation of a mine. Through this course, students should build up the basic structure of mining industry, master the primary stages of developing a surface and underground mine, and enable to select a proper mining method based on the information of geology, deposit condition, mineral properties and so on. Equipment selection and capacity calculation at different mining stages is expected through learning in this course as well.

Enforced Prerequisite at Enrollment: MATH 141

MNG 404: Mine Materials Handling Systems

2 Credits/Maximum of 2

The objective of this course is to provide students with the basic principles and methodology involved in design of material handling systems used in the mining industry. The course will cover various types of material handling methods and equipment including continuous and cyclic loading and transportation systems. The course will review surface mining equipment including loaders, shovels, draglines, trucks, rail, dozers and scrapers. It will also discuss underground mining and various equipment such as loaders, rail, shuttle cars and coal haulers, panel conveyance and vertical transportation including hoisting and vertical conveyor. The design approaches will be discussed including the calculation of cycles, capacity of the system and equipment selection.

Enforced Concurrent at Enrollment: MNG 230

MNG 410: Underground Mining

3 Credits

Underground mine design; extraction techniques; description of auxiliary operations as they relate to the mining methods. MNG 410 Underground Mining (3) The purpose of this course is to describe the logic and discuss the steps taken in the planning and design of an underground mine. Since every underground mine incorporates a unique combination of technological, economic, legal, social, and environmental factors, the course will stress the auxiliary operations (ventilation, ground control, etc.) which must be accommodated, as well as the unit operations and equipment dealing with resource extraction.

Enforced Prerequisite at Enrollment: MNG 404 and MNG 422 and MNG 331

MNG 410H: Underground Coal Extraction

2 Credits

Underground coal-mine design; extraction techniques; description of the various auxiliary operations as they relate to the mining methods.

Honors

MNG 411: Mine Systems Engineering

2 Credits

This course is aimed at applying operations research and systems methods for decision making in mine operations to improve productivity. The course is designed to introduce the student to the subject of applied operations research and systems methods for efficiently solving various problems in mine design and operations analysis. The major topics include linear programming, the simplex method, transportation problem, network models, critical path method, engineering statistics,

regression analysis, simulation techniques. The course uses various mining production and optimization case studies to demonstrate the importance of operation research in the mining production management. The course also use introduce the concept of time study for the multi-process mining operation and use the statistical method for the data analysis.

Enforced Prerequisite at Enrollment: MNG 230 and MNG 404

MNG 412: Mineral Property Evaluation

3 Credits

Ore reserve estimation using statistics and geostatistics, mine cost estimation, engineering economy concepts applied to mineral deposits. Students are prepared for a comprehensive understanding of how a resource or reserve is assessed in the mining industry. The students learn the following topics: background of mineral exploration (requirements for exploration and data collection, as well as exploration tools and techniques), manual techniques for ore reserve evaluation, computer methods for geostatistics (inverse distance, kriging, and block modeling concepts), reporting (scoping, prefeasibility study, and feasibility study), the time value of money (present, annual, and future value; and rate or return), project evaluation (mutually exclusive and non-mutually exclusive projects), depreciation, depletion, amortization, after tax cash flow, discounted cash flow analysis, after tax investment decision, and uncertainty and risk analysis.

Enforced Prerequisite at Enrollment: STAT 401 Enforced Concurrent at Enrollment: MNG 230

MNG 422: Mine Ventilation and Air Conditioning

3 Credits

The objective of this course is to develop for students a thorough understanding and working knowledge of the health, safety, legal, economic, and reliability aspects of mine ventilation and air conditioning systems and their design and analysis. Strong emphasis is placed on engineering design of mine ventilation systems for underground mines. Mining Engineers working in underground mines must have the skills to design, implement, monitor and maintain the ventilation systems in place to ensure a comfortable working environment. The course provides you with the knowledge necessary to do so. This course also includes an overview of basics of thermodynamics. After completing this course, you will be able to decide on fan size, airway geometry, monitor ventilation performance, determine heat loads and design future ventilation plans. The following topics are covered in this course: (1) The Mechanics of Mine Ventilation: Introduction and history of the subject; airflow systems, forcing, exhausting and push-pull configuration; determination of air quantity requirements and measurement of airflow in mine openings; laws of airflow; airway and circuit resistance; ventilation economics; (2) Airflow Planning: Air quantity surveys; pressure surveys, gauge and tube, barometer techniques; ventilation network analysis, numerical methods; simulation programs; (3) Thermodynamics of Mine Ventilation: Basics of thermodynamics, steady-flow relationships; laws of thermodynamics; frictional flow, isothermal, isentropic and polytropic processes; thermodynamics cycles in mine circuits, downcast and upcast shafts, workings, natural ventilation and natural/fan ventilation combined.

Enforced Prerequisite at Enrollment: (CE 360 or EME 303) and MNG 230

MNG 441: Surface Mining Systems and Design

3 Credits

Design of surface mining for non-coal and coal minerals, emphasis on open pit, quarry and strip mining planning parameters: unit operations, systems, haul roads, draglines, spoil stability, reclamation, legal requirements, and health and safety. The objective of this course is to provide students with the basic principles and methodology involved in surface mining and design. The topics covered in this course include: 1- surface mining methods, 2- mine design and planning including slope stability, road design and construction, stripping ratio calculations, pit limits, production planning, 3- surface mining operations including overburden removal, drilling and blasting, loading and hauling operation, 4- mine reclamation, environmental consideration, legal requirements, health and safety. The students learn how to utilize software packages for mine design and planning.

Enforced Prerequisite at Enrollment: MNG 230 and MNG 404

MNG 451W: Mining Engineering Project

1-5 Credits/Maximum of 5

Independent and integrative design and report of specific mine evaluation, layout, equipment selection, environmental control, permitting, and financial analysis.

Enforced Prerequisite at Enrollment: MNG 331 and MNG 404 and MNG 412 and MNG 422 Enforced Concurrent at Enrollment: MNG 410 and MNG 441

Writing Across the Curriculum

MNG 494H: Thesis Research

1-6 Credits/Maximum of 6

Independent research under the supervision of the Mining Engineering program.

Enforced Prerequisite at Enrollment: Prior approval of program Honors

MNG 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

MNG 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

Mining Technology (MNGT)

MNGT 100: Mining Technology Orientation

1 Credits

Introduction to the underground mining industry including history, terminology, current mining equipment and methods, regulations, organization. MNG T 100 Mining Technology Orientation (1) *Mining

Technology Orientation' is a first semester introduction to the underground mining industry from past to present. The student will be introduced to basic mining systems and their evolution over the last century. Mining terminology and its unique application will be discussed. The impact of mining regulations will be reviewed. Possible career paths and the organization of mining companies will be included in this orientation. Visits producing coal mines will be required. Students who successfully complete this course will be able to: a. Discuss changes in mining methods over the years. b. Demonstrate knowledge of terminology used in mining industry. c. Explain how state and federal regulations impact mine operation. d. List several career options in mining, and the skills required by each.

MNGT 110: Mining Administration and Law

3 Credits

Introduction to mine organization and management structure, and government regulations regarding permitting, reporting and recordkeeping. MNG T 110 Mining Administration and Law (3) 'Mining Administration and Law' is a second semester course that provides a framework for the student to understand the mine organization and management structure and organization. It will also introduce the student to the state and federal regulations regarding permitting, and reporting, and record keeping. This course provides a background for and is a prerequisite for MNG T 216. Students who successfully complete this course will be able to: a. Explain the basic organization of a mining operation from the general superintendent to the laborer. b. Know and understand the basic concepts of a safety program. c. Use and apply accident analysis statistics to further improve a safety program. d. Discuss the development of rules and regulations with focus on those that impact the first line supervisor. e. Understand the process for promulgating new rules and regulations. f. Demonstrate basic management techniques that a first line supervisor will use in performance of his/her job.

MNGT 202: Mining Ventilation

3 Credits/Maximum of 3

Introduction to mine ventilation systems at mine face, mine gases and use of gas detection equipment, state and federal regulations. MNG T 202 Mining Ventilation (3) 'Mining Ventilation' is an introduction course in mine ventilation systems, equipment and mine gases for students in the productions emphasis only. The course will emphasize ventilation systems used in mining sections at the mine faces. Gas detection devices will be demonstrated and students will become proficient in their uses. The requirements of both state and federal regulations will be discussed and reviewed. General complete mine ventilation will be discussed. CHEM 011 provides a background in combustion and gas reactions, while PHYS 150 provides a background on the static and dynamic forces of moving air. This course requires MNG T 030 as a prerequisite to ensure that students have a basic understanding of background mining methods and equipment. Students who successfully complete this course will be able to: a. Explain role of ventilation in the mining environment. b. Explain and understand section ventilation and long-wall ventilation systems. c. Demonstrate proper use of instruments to measure air pressure, flow rate and air quality, and interpret measured results. d. Describe and interpret federal and state regulations related to mine ventilation. e. Understand ventilation mapping and explain how flow is affected by various mining methods. f. Explain ventilation flow through a mine complex. g. Know all of the mine gases.

Prerequisite: CHEM 101 , PHYS 150 , MNG T030

MNGT 204: Mine Plant Technology

3 Credits

Electrical, transportation, ventilation, and other systems required to operate underground coal mine, and to transport and process coal.

Prerequisite: PHYS 150

MNGT 205W: Mining Systems Technology

3 Credits

Comparison of mining methods with focus on preventative maintenance, coal transport, and estimating production and manpower needs. MNG T 205W Mining Systems Technology (3) Review of the impact of various methods of room & pillar and longwall mining on the mining operation, the systems required to transport coal from the mine, and the needs for preventative maintenance for each. Quantitative methods for evaluating the production capabilities and manpower requirements of each will also be explored.

Prerequisite: MNG T030

Writing Across the Curriculum

MNGT 207: Electric Mine Machine Circuits

3 Credits

Application of electric power and safety issues related to the installation and maintenance of circuits and various power control devices. MNG T 207 Electric Mine Machine Circuits (3) 'Electric Mine Machine Circuits' is a fourth semester course for students in the maintenance emphasis only and provides a basic foundation in the application of electric power and safety issues related to the installation and maintenance of circuits and various power control devices from the transformer to the mine face. MNG T 204 is a prerequisite to ensure students have a basic understanding of mine plant equipment. Students who successfully complete this course will be able to: a. Explain the application of AC and DC power in mining, their effect on motors, and the advantages and disadvantages of each. b. Use electrical equations to determine AC and DC power requirements, voltage, amperage, and power factor. c. Understand and use of electrical cables and battery power in the mining industry, the maintenance requirements of each, and the advantages and disadvantages of each. d. Read electrical wiring schematics and identify symbols. Be able to identify differences between schematic and actual wiring. e. Determine the maintenance and record keeping required for electrical face equipment to maintain permissible condition and regulatory compliance.

Prerequisite: MNG T204

MNGT 208: Mine Power Distribution

3 Credits

Topics of high voltage circuits, underground transmission, power stations, power conversion, safety regulations and power devices. MNG T 208 Mine Power Distribution (3) 'Mine Power Distribution' is a fourth semester course for students in the maintenance emphasis only and provides a background into how to distribute and adequately protect the high voltage electricity supply throughout the mining environment to serve the underground transformer for distribution to the variety of electrical systems used. MNG T 204 is a prerequisite to ensure students

have a basic understanding of mine plant equipment. Students who successfully complete this course will be able to: a. Explain state and federal safety requirements in relation to high-voltage mine power systems. b. Calculate total power requirements for given section of connected equipment, including recommended sectionalizing equipment and overload settings. c. Demonstrate knowledge of typical mine power distribution systems, identify the key components and how they function. d. Examine the requirements for splicing and terminating high-voltage mine power cables, and effects of improperly made repairs.

Prerequisite: MNG T204

MNGT 209: Mine Machinery Control Methods

2 Credits

Basic principles and applications of solid state, variable frequency, PLC, electro hydraulic and networked controls in mine machinery. MNG T 209 Mine Machinery Control Methods (2) 'Mine Machinery Control Methods' is a third semester course for students in the Maintenance emphasis and provides information on the current methods used to operate and control the various driven functions of speed in rotating mining equipment. The interface between motors and computer controls, including the safety and automated interlocks will be covered. MNG T 030 is a required prerequisite to provide a technical functional understanding of the operation of the equipment being controlled. MATH 082 and PHYS 150 are required prerequisites to ensure that the students can perform the required performance calculations. Students who successfully complete this course will be able to: a. Investigate various types of networked controls, their function and capability, and list the advantages and disadvantages of each. b. Explain the applicable state and federal regulations related to low, medium, and high voltage systems. c. Troubleshoot various types of control circuits to identify faulty wiring, components, or software. d. Demonstrate ability to install software, set operating parameters, default values, and recommend adjustments to optimize system reliability. e. Investigate the ramification of automated systems in the underground environment, both positive and negative.

Prerequisite: PHYS 150 , MNG T030 , MATH 082

MNGT 210: Mine Machine Dynamics

3 Credits

Operation and interaction of mechanized equipment used at the coal face including common electrical, hydraulic and mechanical systems.

Prerequisite: PHYS 150

MNGT 211: Practicum in Mining Technology

3 Credits

Field and shop techniques in procedures of electrical, mechanical and ventilation phases of mine maintenance MNG T 211 Practicum in Mining Technology (3) 'Practicum in Mining Technology' is a fourth semester course that provides students with the practical application of modern equipment and techniques used during the installation, relocation, and repair of complex mining equipment and systems as they are applied in the underground environment. MNG T 204 is a prerequisite to ensure students have a basic understanding of mine plant equipment. Students who successfully complete this course will be able to: a. Plan the installation of all equipment required to successfully install a complete continuous miner section. b. Plan the successful relocation of a modern long-wall mining section from a completed panel to a new panel. c.

Demonstrate an ability to conduct or supervise the safe repair of low, medium, and high-voltage equipment in compliance with all regulatory requirements. d. Explain and demonstrate how to safely troubleshoot and/or repair high-pressure mine hydraulic systems. e. Discuss and demonstrate the steps required to conduct ox-acetylene and electric arc-welding repair of equipment in compliance with regulatory requirements. f. Practice the application and safe operation of manual lifting aides and devices used to facilitate the repair of large mining components.

Prerequisite: MNG T204

MNGT 213: Strata Control Methods

3 Credits

Introduce pillar-design parameters, roof control planning, roof bolting, standing supports, rib stability, floor condition problems, and longwall strata control. MNGT 213 Strata Control Methods (3) Strata Control Methods is designed to introduce pillar-design parameters, roof control planning, roof bolting, standing supports, rib stability, floor condition problems, and longwall strata control in the Mining Environment. Pillar-design parameters, take into account the structural geology features related to mining. The impact of Geologic Data being extremely useful in assessing mining conditions and aiding in indicating necessary control measures to be taken with increased width, destructive stresses resulting in failure may be produced in the mine roof, bottom, and pillars causing serious limitations on pillar width. The effects of pillar design by incorporating Pillar Collapse through Failure Characteristics, Failure Mechanisms, and Failure Prevention, and the impact that may be contributed to Coal Bumps and Gas Outbursts. A review of the basic strata control theories and applications which incorporates Environmental Impacts of both Subsidence and Reclamation. Roof Control Planning reviews the strata control theories and applications by introducing the inter-related system of the mines roof, ribs and floor. The introduction of roof control theory and fundamentals with emphasis placed on ground control being a three part process of proper sizing of openings, proper sizing of pillars and selection of proper artificial supports. Also, within the element of roof control planning, MSHA requirements are introduced and incorporated. Roof Bolting and Standing Supports are brought to the forefront while maintaining an understanding of the three mechanisms of roof bolting which are: Beam Building, Suspension and Keying. Depending on conditions and applications, bolting may range from resin-anchored combination bolts, tensioned rebar, mechanically-anchored resin-assisted systems, cable bolts, and other specialty supplemental supports. The applications of standing supports are discussed in roof support planning as they are used either as remedial measures or throughout gate roads where bolting systems must be coupled with roof-to-floor supports. Rib Stability and Floor Condition Problems are addressed through rib stabilization methods and proper support installation along with floor condition problems, prevention and control. With the sources of Roof/Rib Hazards in Underground coal mines being associated with the two broad categories being Natural and Mining Related, Geologic hazards and high stresses associated with deep cover are addressed allowing for appropriate action to be identified and proper supports to be utilized. Longwall Strata Control theories and methods are discussed as they require special precautions to be taken in response to the elevated stress levels encountered. This is done through properly designed gate entry chain pillars to achieve roof/floor stability and mitigate bumps. Also, included are shields as roof support mechanisms and guarding installation on longwall equipment.

Prerequisite: GEOSC020

MNGT 214: Mining Management I

3 Credits

Leadership skill development for supervisors, managing change, tools to plan, organize, control, communicate and monitor effectively. MNG T 214 Mining Management I (3) 'Mine Management I' will provide students with the introductory skills for individual, group and one-on-one leadership skills to keep up with evolving management roles and responsibilities. This course will explore how supervisors can maintain technical expertise while demonstrating effective leadership. This process includes the tools supervisors use to plan, organize, control communicate and monitor effectively. This course serves as a prerequisite to MNG T 215. Students who successfully complete this course will be able to: a. Succeed in a rapidly changing environment b. Plan, organize, communicate and monitor c. Apply the most appropriate supervisory style to individuals and situations d. Apply appropriate motivational techniques e. Use delegation for effective employee performance and development, time management and motivation f. Create an action plan g. Develop interpersonal skills that help communicate, listen, and handle conflicts h. Analyze their own behavior style and recognize strengths and weaknesses i. Given a labor situation, describe a plan of action toward resolution j. Identify the characteristics of A & B personalities and explain how they might be managed differently k. Explain a given organizational chart and the focus and function at different management levels l. Given an emergency situation at a mining operation, recommend a hypothetical course of action to avoid loss of life and personal injury, and minimize impact on production capability and reserves

MNGT 215: Mining Management II

3 Credits

Financial management, effective meeting management, critical thinking, project management and cost and risk control. MNG T 215 Mining Management II (3) 'Mine Management II' is a follow-up to Mine Management I (Mining Technology 214) for students in production emphasis only. The primary goals of the course are to further explore and develop management skills to be an effective leader in an ever-changing industry. This process includes financial management, effective meeting management, critical thinking, project management and cost and risk control. Students who successfully complete this course will be able to: a. Get a firm grasp of the financial side of the job. b. Understand the business dynamics of dollars and cents. c. Set and meet goals for your projects. d. Understand the principles of process management. e. Apply process management to process issues and customer satisfaction. f. Reduce the need for crisis supplies. g. Identify the actions/approaches you can take to avoid or mitigate risk. h. Build the trust and rapport necessary for effective coaching. i. Effectively conduct meetings. j. Interpret typical income and expense balance sheets. k. Produce preliminary cost estimate (+/- 10%) for given application. l. Demonstrate appropriate oral and written communication skills. m. Prepare hypothetical request for capital improvements required to maintain or improve productivity, complete with financial justification.

Prerequisite: MNG T214

MNGT 216: Mine Regulations and Laws

3 Credits

State and federal mining regulations and application to underground coal mines. Relationship with company policies and consequences of non-compliance. MNG T 216 'Mine Regulations and Laws' (3) 'Mine Regulations and Laws' is a fourth semester course that builds on the knowledge gained in the prerequisite, MNG T 110, by providing more advanced study into state and federal regulations and company policies regarding equipment and electrical inspection, personnel safety and egress, and measurement of related environmental conditions within the mine. This class includes discussions on the interaction of state and federal regulation and the conflicts created by applying each. The consequences of non-compliance are also discussed. Students who successfully complete this course will be able to: a. This course is designed to familiarize the student with the applicable underground coal mining regulations and how they are interpreted and enforced. b. For a specified situation, find and interpret appropriate sections of PA Bituminous Coal Mining Act. c. Develop and evaluate alternative solutions to a proposed regulatory issue. d. Conduct a discussion with a mining inspector, in regards to a violation and potential monetary penalty.

Prerequisite: MNG T110

Music (MUSIC)

MUSIC 4: Film Music

3 Credits

An introductory examination of music's role in Hollywood narrative film from the classic era (1930s and 1940s) to the present. MUSIC 4 Film Music (3) (GA)The course examines the role of music in narrative film, the premier art form of the twentieth and twenty-first centuries. The popularity, significance, and value of film art would not be what it is today if music had not become an integral—indeed, indispensable—part of motion pictures from the outset. Preliminary objectives will include basic musical information (the fundamental elements of music; the broad stylistic eras of western music and their associated characteristics; the culturally encoded language of tonal music and associated musical meaning) and the main techniques of narrative film. The main objectives of the course are: to identify and recognize the principles of nondiegetic music in narrative film; to identify and recognize the purpose and functions of music in narrative film; to recognize some of the historic eras/genres/trends in Hollywood film making; to identify and recognize selected films, directors and composers; to analyze and articulate the role of music in a given scene and in a given film; and to recognize underlying assumptions and values of the culture conveyed through the diegesis. These objectives will be met by addressing such questions as: What are the underlying principles of music in film? What are the functions of music/sound within a particular scene and how does it achieve those functions? What do we see of what we hear, and what do we hear of what we see—and why? What secrets does music tell? To what extent does music influence—even control—our interpretation of a film? More broadly, to what extent do films reflect our culture, past and present—our interests, our values?

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

MUSIC 5: An Introduction to Western Music

3 Credits

MUSIC 5 is a course on listening, with emphasis on the relationship between musical style and historical context. Students will learn the basic skills of informed music-listening: how to hear and describe melody (phrase structure; motive; developmental strategies), harmony (the basic principles of the tonal system), rhythm (meter, tempo, and their application), timbre (including a full knowledge of the instrumental families [strings, winds, brass, percussion] and voice types), and texture (monophony, homophony, polyphony). Students will also become familiar with the eras of western musical history, and to consider relationships between musical style and non-musical developments (e.g. the intellectual environment of the Enlightenment and the Classical style in music). The course begins with an introduction to the elements of music. The goal of this section is to give all students, whether or not they have previous experience as performers, the basic skills necessary to approach any musical work as informed listeners. This activity takes four weeks. The remaining portion of the course is spent surveying the history of western music, with that history treated as a series of case studies: particular works are considered stylistically but also with regard to the historical circumstances of their production and consumption. From this activity students gain experience considering artworks in discipline-specific terms, even as they learn to relate particular artistic features to non-musical factors of culture and society. Two methods of evaluation are used. Examinations (the number determined by the instructor) test the students' mastery of the course material. Concert reports (again in a number determined by the instructor) give students the opportunity to apply that knowledge to the act of listening in an authentic performance setting. Ample time is provided in lectures for questions and discussion of the course material and of repertoire and issues suggested by the students.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MUSIC 7: Evolution of Jazz

3 Credits

Study of the origins and development of jazz as an art form. MUSIC 7 Evolution of Jazz (3) (GA;US)(BA) This course meets the Bachelor of Arts degree requirements. Evolution of Jazz is a course designed to examine the historical and sociological aspects of the American art form: jazz. This general education course is for non-music majors. The material covered in this course begins with the precursors of jazz and then emphasizes the African American musical traditions and white American (initially European) influences that have shaped jazz as an American art form. This is followed by period studies of the various jazz styles: New Orleans Dixieland, Chicago Style, Swing, Bebop, Cool, Hard Bop, Modal Jazz, Free Jazz, Fusion Jazz, Neo-Bop, Latin Jazz, and the globalization of jazz. The various jazz styles are examined from musical, sociological, and economical perspectives. The major innovators and performers are identified and studied. As new styles are presented, a careful comparison to the previous style is done to help with classification. A major component of the course is listening. Early

in the course listening skills are taught. Students learn how to recognize certain instruments, hear the various sections within a group, and identify forms. Evaluation methods may include quizzes, tests, open forums, discussion boards, a live jazz concert review, and a reflection paper. Students will receive GA credit for this course, as well as US designation. The course will not satisfy any requirements for the major or minor in music. For in-class sections of MUSIC 7, the course requires high-quality audio playback equipment, computer/projection, and keyboard/piano availability. For those sections of MUSIC 7 offered online, all pieces, excerpts, examples, videos, and texts will be made available to students online.

Bachelor of Arts: Arts

United States Cultures (US)

General Education: Arts (GA)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

MUSIC 8: Rudiments of Music

3 Credits

Introduction to the elements of music: notation, scales, meter, rhythm, intervals; basic chord structure, cadences. MUSIC 8 Rudiments of Music (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Learning the rudiments of music can be compared to the learning of a language. Students must learn to hear melodic, harmonic, and rhythmic patterns (audiation) before they sing, play or write in notation. In this introductory class, students are introduced to melodic, harmonic and rhythmic patterns by imitating the instructor who establishes these patterns at the piano, or by singing or as in the case of rhythm by striking a drum head. Eventually students will take turns "tossing" these patterns to teach other. Basic skills of improvisation can also be taught at this level of audiation by having students expand upon the basic patterns. As a result of these creative and aesthetic experiences, students will be able to translate the audiation of patterns into musical notation - moving from the smallest unit of a rhythmic motive towards the creation of a coherent rhythmic phrase. Similarly, at the melodic level, the student will begin with intervallic patterns and move towards the creation of a coherent melodic phrase. Intervals are then combined vertically to form harmonies. At the next stage of learning, students will learn to identify and to write that which they are hearing in dictation. This course in "musical literacy" enables students: (1) to deepen their appreciation of music (2) to begin studying a musical instrument and (3) to enter the rigorous study of music theory required of music majors.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MUSIC 8H: Rudiments of Music

3 Credits

Introduction to the elements of music: notation, scales, meter, rhythm, intervals; basic chord structure.

Bachelor of Arts: Arts

Honors

MUSIC 9: Introduction to World Musics

3 Credits

This course introduces students to the study of world music as a cultural phenomenon through an examination of the music of Asia, Africa, West Asia, the Americas, and European folk. The course begins with an introduction to methods of examining world music and reframes the study of music as a cultural phenomenon, comprised not only of the music itself but also behavior and conception. This approach helps students move beyond their preconceived understanding of music in order to open their ears and minds to a wide variety of music and cultural concepts, forming the basis for the case studies that follow. The remainder of the course focuses on cultural conceptions of music, examined through the lens of a selection of case studies, including, but not limited to, the music of the Celtic nations, the African continent, Central and West Asia, India, Indonesia, Japan, and the Native American culture groups. The music of these cultures is explored both as a product and reflection of culture and as an aesthetic art form. Through this approach, students not only develop a basic fluency in the characteristics of selected world musics but also gain a broader understanding of the general classifications and geographical divisions of world music and the ways in which music relates to and is a part of all world cultures.

Assigned analyses and a final project provide students with the opportunity to explore particular types of world music not covered in the lessons in greater depth, examining both the music itself and the social context in which it is found. These analyses require students to think actively about contemporary musical developments around the world, including how they are affected by current socio-political events and cultural trends. World musics are best understood when students engage in the music and in discussions of the music and culture; thus there is also a class participation/discussion component for the purposes of evaluation. The course utilizes an interactive, multimedia online curriculum, including video-recorded performances, audio examples, and music notation files. The text and all musical examples are available to students online. The course is available for GA credit and also meets the definition of an International Cultures course. It does not satisfy any requirements for the major or minor in music.

Bachelor of Arts: Arts
International Cultures (IL)
General Education: Arts (GA)
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

MUSIC 11: Under the Hood: How Classical Music Works

3 Credits

This course examines selected works from twenty of the greatest composers of western art music, with emphasis on the baroque, classical and romantic eras. The curriculum combines aspects of two existing courses, Rudiments of Music (MUSIC 8) and Introduction to Western Music (MUSIC 5). Preliminary objectives will include basic musical information associated with tonality (the fundamental elements of music; the broad stylistic eras of western music and their associated characteristics). The main objectives of the course are: to explore techniques of tonal composition in detail, with an emphasis on conceptual understanding; to hear and recognize musical sounds and compositional devices within such comparative contexts as scales v. modes, diatonic v. chromatic, consonance v. dissonance, polyphony v.

homophony; to hear and recognize fundamental harmonic relationships between tonic and dominant, as well as their importance in the formal design of tonal music; to enhance appreciation for classical music and to encourage attendance of live performances. While students will necessarily acquire knowledge of fundamental elements of music, they will not be required to learn to read or write notated music to the same extent that is required of students in MUSIC 8. And while students will necessarily acquire knowledge of western music history, they will not study as many composers nor as many pieces as is customary in MUSIC 5. Instead, students will be drawn closer to a smaller number of works, and closer to the performances and the performers. Specific compositional devices (e.g., suspension, sequence, textures, rhythms, harmonies) will be highlighted in detail. These objectives will be met by utilizing an interactive, multimedia online curriculum, including demonstration videos by the author, a virtual keyboard and music notation files (e.g., Sibelius). An essential component of the online curriculum will be the inclusion of selected video-recorded performances, along with commentary from the performers. Twelve members of our performance faculty have been video-recorded in studio performance, allowing students a close-up view of a substantial portion of the repertoire to be examined. The course will be available for GA credit. It will not satisfy any requirements for the major or minor in music. All musical pieces and excerpts will be made available to students online.

MUSIC 40: First-Year Seminar in Music Education

1 Credits

Introduction to the University, the School of Music, the music education degree program, and the music teaching profession. MUSIC 040S First-Year Seminar in Music Education (1)(BA) This course meets the Bachelor of Arts degree requirements. This course is offered to music majors during their first semester who are intending to apply to the Teacher Certification Degree Program in Music Education. It provides prospective music teachers with an opportunity to: - learn about aspects of and opportunities available at the University in general. - learn about aspects of and opportunities available specifically at the PSU School of Music. - learn about the PSU music education curriculum and program. - gain a general understanding of the music teaching profession. - begin and develop a professional relationship with his/her advisor.

Bachelor of Arts: Arts
First-Year Seminar

MUSIC 50: Beginning Piano: Non-Music Major

1 Credits

Introduction to the keyboard, notation, chord progressions, transposition, improvisation, and simple accompanying techniques for the non-music major. An additional fee is required for this course. MUSIC 050 Beginning Piano: Non-Music Major (1) (GA)(BA) This course meets the Bachelor of Arts degree requirements. MUSIC 050 is a course designed to provide the beginning non-music major student with strategies for developing some of the basic skills required for playing the piano. No knowledge of music or piano is assumed and there are no prerequisites for the course. The course emphasizes strategies for learning to read and interpret

musical notation from two clefs and musically realize the notation in real time with a healthy physical approach to the keyboard. Practice of these strategies outside the class is expected and checked. Objectives include learning to accurately sight-play a single voice divided between the hands with some extensions and shifts beyond a five-finger position. Special facilities required to teach the course include a 17-keyboard Midi piano lab with visual displays for teacher demonstrations. The course is offered Fall and Spring semesters, often with multiple sections.

MUSIC 51: Intermediate Class Piano: Non-Music Major

1 Credits

Music 51 is course designed to provide the intermediate non-music major student with strategies for developing some of the advanced skills required for playing the piano. Some knowledge of music or piano is assumed and Music 50 or a placement audition is a prerequisite for this course. The course emphasizes strategies for learning to read and interpret musical notation from two clefs and musically realize the notation in real time with a healthy physical approach to the keyboard. Practice of these strategies outside the class is expected and checked. Objectives include learning to accurately sight-play a multiple voice musical texture with many extensions and shifts beyond a five-finger position. Special facilities required to teach the course include a 17-keyboard midi piano lab with visual displays for teacher demonstrations. The course is offered every Fall and Spring semester.

Enforced Prerequisite at Enrollment: MUSIC 50

Bachelor of Arts: Arts

MUSIC 52: Voice Class: Non-Music Major

1 Credits

Group study emphasizing development of rudimentary skills and their recreational use in a range of popular and art music. MUSIC 052 Voice Class: Non-Music Major (1) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to present and apply basic principles of singing. Students learn songs, and address topics such as posture, breathing, tone production, expressiveness, and vocal health. Objectives are proficiency of breath management, a resonant vocal timbre, and effective communication in song. Evaluation is based on accuracy of music learning, improvement in technique and expressiveness, possible writing or listening assignments, and possible written quizzes. The course is offered every spring semester. The maximum enrollment is fifteen.

Bachelor of Arts: Arts

General Education: Arts (GA)

MUSIC 53: Class Voice Practicum

1 Credits

Voice study in group and individual formats, consisting of in-class lessons and discussions, enhanced by individual applied instruction from advanced voice pedagogy students. MUSIC 53 Class Voice Practicum (1) (GA)(BA) This course meets the Bachelor of Arts degree requirements. MUSIC 53 is a voice class experience that affords the enrolled student instruction in a class setting and in individual lessons. The weekly class meetings feature demonstration lessons between the enrolled student and his or her teacher (an advanced voice pedagogy student from the voice pedagogy curriculum). These lessons give the course instructor the opportunity to monitor the progress of the enrolled students, supervise and evaluate the teaching of the advanced voice pedagogy students, and make suggestions for further growth. Enrolled students and advanced voice pedagogy students also have the opportunity to learn by observing the demonstration lessons of others in the class. Lesson evaluation forms are completed and turned in at the end of each meeting. Class concerts typically occur at mid-term and at the end of the semester. These performances give the enrolled students the opportunity to display their vocal and musical progress. Individual lessons that enrolled students may receive out-of-class with the advanced voice pedagogy students give them an occasion for concentrated work in a more relaxed atmosphere. It may be of interest that this is the only course offering individual voice instruction in the School of Music that does not carry an additional applied music fee. In addition to the vocal and musical advancement for students enrolled in MUSIC 53, this course also serves as a progressive training ground in teaching for advanced voice pedagogy students. They gain important teaching experience in a closely supervised forum.

MUSIC 54: Beginning Class Guitar: Non-Music Major

1 Credits

Class instruction in guitar for non-music majors. MUSIC 54 Beginning Class Guitar: Non-Music Major (1) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course provides opportunity to explore various styles of music while developing basic skills for playing guitar. Students will learn to play solo guitar, to perform basic accompaniment techniques, and to read music notation, tablature, and chord symbols. Meter, tonality, harmonic progressions, texture, and form as well as stylistic features of various strumming techniques comprise the core knowledge that is developed through the process of playing guitar. The course assumes no previous formal study of music. Assessments are performance-based with students demonstrating knowledge and skill acquired through individual playing tests scheduled throughout the semester.

MUSIC 76: Chamber Orchestra

1 Credits/Maximum of 8

Chamber orchestra rehearsal and performance.

Bachelor of Arts: Arts

MUSIC 77: Philharmonic Orchestra

1 Credits/Maximum of 8

Orchestra rehearsal and performance. MUSIC 77 Philharmonic Orchestra (1 per semester/maximum of 8 (GA)(BA) This course meets the Bachelor of Arts degree requirements. The Philharmonic Orchestra is an auditioned instrumental ensemble that rehearses two times per week to develop student instrumental and musicianship skills as well as to develop individual and ensemble musicality and expression. Repertoire includes the standard literature from the 19th and 20th centuries as well as new music written for symphony orchestra. The ensemble presents at least two on-campus performances per semester, and off-campus performances are scheduled each year. The goals of this course are to develop the instrumental performing skills, music reading abilities, and interpretive capabilities of the class members within a large symphonic orchestra context. Students will be assessed by the use of performance evaluation and assessment of participation and contribution to established goals of the ensemble. The course is for students who have advanced performance skills on standard orchestral string, wind, and percussion instruments. An audition is required.

MUSIC 78: Symphonic Wind Ensemble

1 Credits/Maximum of 8

Rehearsal and performance of wind repertoire and concert band literature. MUSIC 78 Symphonic Wind Ensemble (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The goals of this course are to develop the instrumental performance skills, music reading abilities, and interpretive capabilities of the class members within a wind ensemble (one player per part) concert band setting. The repertoire includes original concert band literature, transcriptions, and concert marches. The available literature covers a range of historical time periods from pre-Baroque to the present. Students are assessed by the use of performance evaluations, assessment of participation and contribution to established goals of the ensemble, and attendance at rehearsals and concerts. The course is designed for those students who have advanced performance skills on standard wind and percussion instruments. The Symphonic Wind Ensemble has performed at the Eastern Division Conference of the College Band Directors National Association, the Pennsylvania Music Educators Association In-Service Conference and the National Association for Music Educators Eastern Division Conference. It was also invited to open the 2005 Flicorno D'Oro international band festival in Riva del Garda, Italy, the first American band to be so honored. The ensemble has concertized in some of the country's most prestigious performing venues, including Heinz Hall (Pittsburgh), the John F. Kennedy Center for the Performing Arts (Washington D.C.), the Kimmel Center (Philadelphia),

The Music Center at Strathmore (North Bethesda, MD) and Lincoln Center (New York). An audition is required.

MUSIC 84: Jazz Ensemble

1 Credits/Maximum of 8

Survey and performance of historic and contemporary big band styles. MUSIC 84 Jazz Ensemble (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. MUSIC 84, Jazz Ensemble may include as many as three sections at some campuses. For example, at a large campus there could be: Centre Dimensions (001), Inner Dimensions (002), and Outer Dimension (003). Each section of MUSIC 84 will consist of a performance groups of 16 to 20 members. Admission to the groups may be by audition. Students may be placed into sections by ability level. The course consists of the study and performance of big band jazz from the mid 1920s to the present. Important composers of the idiom are routinely represented as well as newer contributors. There is a focus on ensemble group sound as well as individual solo improvisation. Part of the learning process includes working on the fundamentals of jazz playing, rhythm, articulation, and harmony. Each learning segment, or unit, is concluded with public performance of the music studied and learned. At some campuses that may mean one performance at the end of the semester. In addition, at a campus with a School of Music, an ensemble such as Centre Dimensions may represent the School of Music at collegiate jazz festivals as an advanced enhancement of the learning experience. Members are expected to learn their individual parts, attend sectionals and rehearsals, and participate in the performances. Music 84 is offered each fall and spring semester at some campuses; at others, less frequently. Details will vary by campus.

MUSIC 86: Percussion Ensemble

1 Credits/Maximum of 8

Study and performance of percussion chamber music in various instrumental combinations, focusing on the classical and contemporary repertoire. MUSIC 86 Percussion Ensemble (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Percussion Ensemble involves the rehearsal and performance of works for various combinations of percussion instruments in a chamber music setting. It also involves the group study of the various percussion instruments and techniques as described by or demonstrated by the conductor of the ensemble (percussion faculty member). The objectives of the course are to teach the art of ensemble performing (i.e., performing music well in a collaborative sense rather than just individually), to augment the understanding of the role of percussion within the discipline of music, and to foster the skills of organization and cooperation through rehearsal and performance of music requiring (generally) three to twelve players. Due to the nature of this type of musical organization and given the wide variety and large number of instruments which may be involved at any given time, there is also an inherent study of logistics involved when setting up or moving the instruments from one venue to another. Students performing in Percussion Ensemble are generally also involved in performing in other larger heterogeneous instrumental

performing groups such as the bands and orchestras. Skills learned in the Percussion Ensemble setting directly affect the ability of these students to contribute a highly developed sense of musical unity in the larger performing groups. They also learn specific skills which are necessary for successfully entry and acceptance into professional music performance circles. The course is offered each semester and the enrollment is generally between six and twelve performers.

MUSIC 90: Glee Club

1 Credits/Maximum of 8

Rehearsal and performance of music composed for lower voices from the sixteenth to the twentieth centuries, including sacred and secular compositions. MUSIC 90 Glee Club (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The Glee Club is an auditioned ensemble of 50-65 tenor/bass voices singing music from medieval chant to commissioned twenty-first century choral works. The Glee Club performs on campus at least once per semester, tours yearly and has performed throughout Pennsylvania, the United States, Europe and New Zealand. The goal of the ensemble is to provide artistic, meaningful, and successful choral performances. To achieve this goal, the learning objectives for individual students include attention toward individual vocal development, increased musicianship skill, and the discovery of new means of artistic expression. In addition to these individual objectives, the conductor of the ensemble also teaches directly toward the objectives of ensemble tone, blend, balance, intonation, dynamics, diction, phrasing, etc. Grades are determined by a combination of vocal and musicianship assessments (both written and aural) and attendance at rehearsals and performances.

MUSIC 91: Oriana Singers

1 Credits/Maximum of 8

Rehearsal and performance of choral repertoire for treble voices from the sixteenth to twentieth centuries, including sacred and secular compositions. MUSIC 091 Oriana Singers (1.0 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Oriana Singers was founded in 1994 to serve the musical needs of highly

talented undergraduate and graduate women. The 65-voice ensemble performs repertoire representing every musical period, genre and style in its two campus concerts per semester. The choir has been invited to perform at prestigious regional and national music conferences and has participated in tours within the state of Pennsylvania. Membership is determined by audition. The goal of the ensemble is to provide artistic, meaningful, and successful choral performances. To achieve this goal, the learning objectives for individual students include attention toward individual vocal development, increased musicianship skill, and the discovery of new means of artistic expression. In addition to these individual objectives, the conductor of the ensemble also teaches directly toward the objectives of ensemble tone, blend, balance, intonation, dynamics, diction, phrasing, etc. Grades are determined by a combination of vocal and musicianship assessments (both written and aural) and attendance at rehearsals and performances.

MUSIC 92: Chamber Music for Voices

1 Credits/Maximum of 8

Select groups of singers performing choral chamber music. MUSIC 92 Chamber Music for Voices (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Chamber Music for Voices is a course which includes three small auditioned chamber choirs comprising of members of four large ensembles. The repertoire of these 9-16 member ensembles is selected from a wide range of choral literature. Membership in Section 1 is open to University Choir members. The goal of the ensembles is to provide artistic, meaningful, and successful choral performances. To achieve this goal, the learning objectives for individual students include attention toward individual vocal development, increased musicianship skill, discovery of new means of artistic expression, and the specific skills necessary to sing in a small ensemble with only two or three singers per voice part. In addition to these individual objectives, the conductor of the ensemble also teaches directly toward the objectives of ensemble tone, blend, balance, intonation, dynamics, diction, phrasing, etc. Grades are determined by a combination of vocal and musicianship assessments (both written and aural) and attendance at rehearsals and performances.

MUSIC 93: Essence of Joy

1 Credits/Maximum of 8

Rehearsal and performance of choral repertoire from the African/American tradition. MUSIC 093 Essence of Joy (3) (GA;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. Essence of Joy is a highly selective mixed choral ensemble that specializes in repertoire written by African-Americans. The repertoire of the 45-voiced ensemble includes all art, folk, and sacred genres within this large field of study. Essence of Joy has performed at numerous prestigious national and regional meetings of music educators and choral conductors. In

addition, the choir tours extensively and has presented performances throughout Pennsylvania, the eastern region, the southern region, and eastern Europe. Membership is open to undergraduate and graduate students. The goal of the ensemble is to provide artistic, meaningful, and successful choral performances of African-American choral music. To achieve this goal, the learning objectives for individual students include attention toward individual vocal development, increased musicianship skill, and the discovery of new means of artistic expression. In addition to these individual objectives, the conductor of the ensemble also teaches directly toward the objectives of ensemble tone, blend, balance, intonation, dynamics, diction, phrasing, etc. Grades are determined by a combination of vocal and musicianship assessments (both written and aural) and attendance at rehearsals and performances.

MUSIC 106: Early Music Ensemble

1 Credits/Maximum of 8

Ensemble for the performance and study of Baroque or early music on instruments of the era. MUSIC 106 Early Music Ensemble (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The Early Music Ensemble will meet for a single two-hour rehearsal each week. Extra rehearsals may be scheduled when circumstances warrant them, i.e., when visiting ensembles come to Penn State. Membership of the ensemble will remain essentially constant from one semester to the next. Vacancies arising when a student leaves or graduates will be filled as needed. It is integral to the ensemble's activities that faculty and students perform along side each other; thereby providing a unique learning opportunity for the students. A constant membership encourages performers' understanding of early music performance practice. The ensemble will give concerts on campus. Off-campus performances may be considered outreach opportunities and as valuable experiences for the students.

Bachelor of Arts: Arts

MUSIC 109: The Music of the Beatles

3 Credits

The Beatles are the most significant musical group in the history of popular music. Their songs are derived from diverse sources, such as rhythm and blues, country and western, rockabilly, rock and roll, Motown, soul, folk rock, the British music hall, and the classical music traditions of Europe and India. MUSIC 109: The Music of the Beatles, an online course, will consider the music of the Fab Four by examining how John Lennon, Paul McCartney, and George Harrison developed as songwriters. Besides an exploration of the Beatles' music, including the artists and styles of music that influenced them, this online course will include a study of the socio-cultural contexts from which the Fab Four emerged and in which they thrived. Finally, the course will introduce students to the fundamentals of music, as well as ways to integrate that knowledge with the interpretation of song texts.

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MUSIC 110: Keyboard Skills I: Music Major

1 Credits

Introduction to the keyboard, chord progressions, transposition, improvisation, and simple accompanying techniques.

Bachelor of Arts: Arts

MUSIC 112: Guitar Techniques I

0.5 Credits

Performance and teaching techniques for guitar. MUSIC 112 Guitar Techniques I (.5)(BA) This course meets the Bachelor of Arts degree requirements. MUSIC 112 is offered for students who are tracking acceptance into the Teacher Education Degree Program in Music. The focus of the course is learning to play the guitar in order to accompany and learning techniques on how to teach the guitar in classroom settings. Topics include: beginning level guitar pedagogy, instrument care and maintenance, classroom structure and materials. The instructional format includes: performance, lecture, large and small group discussion, readings, and musical and teaching examples. Students complete several practical assignments, and present summations of small group discussions. Two practice performances and a final playing and written exam are given.

Bachelor of Arts: Arts

MUSIC 113: Music Theatre–Class Voice I

1 Credits

Group study emphasizing development of sound vocal and musicianship skills fundamental for music theatre. This class is designed for freshman BFA Musical Theatre majors and freshman BFA Acting majors and is the start of a year long exploration of vocal musical production for the stage. The purpose of this class is to lay introductory foundations in singing techniques and skills currently required for a career in the theatre. Students become familiar with the basic concepts of voice production, as well developing an understanding and awareness of vocal health issues. Additionally, students are exposed to a variety of musical theatre and classical sung repertory while they are encouraged to develop perceptive listening skills by interacting and responding to their peers in class and other performers. In MUSIC 113, students are encouraged and required to develop an appreciation of all genres of sung performance from classical to contemporary. Another important element of the course is helping students develop the necessary vocabulary to respond in writing to vocal performance. Toward that goal, attendance at vocal events scheduled around campus and the community is required. These vocal events will include performances by professionals in many genres. Faculty will provide students with lists of approved events. To help students develop their music performance vocabulary, students are required to respond to some vocal events with written critiques. Aesthetically, students are encouraged to appreciate and practice vocal performance in a variety of stage genres. On the practical side, students learn effective practice skills, music reading, and appreciation of all areas of vocal performance. Students are evaluated based on readings, short writing assignments, evaluations of a number of memorized song performances, and classroom attendance and participation.

Bachelor of Arts: Arts

MUSIC 114: Music Theatre–Class Voice II

1 Credits

Group study emphasizing development of sound vocal and musicianship skills fundamental for music theatre.

Bachelor of Arts: Arts

MUSIC 115: Beginning Voice Class

1 Credits

Class voice emphasizing the fundamentals of healthy singing technique. For Music Majors only. MUSIC 115 Beginning Voice Class (1) Intended for instrumental music education majors. Introduces instrumental music education majors to the basic skills of singing in preparation for MUSIC 116. Focus will be on intonation, tone production, breathing and posture, as well as rudimentary presentation and interpretation skills. Enrollment dependent upon the results of the voice proficiency exam and the recommendation of the music education and voice area faculties. Strongly suggested for the first semester of the music education degree.

Bachelor of Arts: Arts

MUSIC 116: Intermediate Voice Class

1 Credits/Maximum of 4

Class voice, emphasizing pedagogical experiences and techniques for public school music classrooms. For Music Majors only.

Bachelor of Arts: Arts

MUSIC 119: First-Year Music Seminar

2 Credits

Individual applied instruction and group activities; orientation, area recitals, and studio classes as required by instructor.

Bachelor of Arts: Arts

First-Year Seminar

MUSIC 121: Basic Musicianship I

1 Credits

Elementary sight singing and dictation.

Bachelor of Arts: Arts

MUSIC 122: Basic Musicianship II

1 Credits

Continuation of Music 121.

Enforced Prerequisite at Enrollment: MUSIC 121 Enforced Concurrent at Enrollment: MUSIC 132

Bachelor of Arts: Arts

MUSIC 127: Introduction to Music Technology

1 Credits

Course Content and Expectations: Introduction to Music Technology is a course designed for freshman or first-year students in the BA Music Technology, BFA Sound Design, or BM Music Composition degree programs at Penn State. This course will provide an introduction and overview to the use of technology in creative music making, live sound, and recording engineering. At the completion of this course, students will have a working fundamental knowledge of audio recording hardware and software, concepts in live sound reinforcement, MIDI sequencing, and an understanding of the various ways technology is used in creative music making. These skills will provide students with a foundation for success in future music technology courses. Course Goals and Objectives:

Students will complete 13 weekly assignments and one final project. Weekly assignments are sequential and design to gradual build upon the students' knowledge and experience in the field of music technology. These include live sound, recording, mixing, editing, and MIDI sequencing. The final project will demonstrate the students' ability to combine these skills to create a short original composition/recording.

MUSIC 129S: First-Year Performance Seminar

3 Credits

Individual applied instruction and group activities; orientation, area recitals, and studio classes as required by instructor.

Bachelor of Arts: Arts
First-Year Seminar

MUSIC 131: Music Theory I

2 Credits

Review of rudiments; introduction to the fundamental linear and vertical features of tonal music, integration of written and aural skills.

Bachelor of Arts: Arts

MUSIC 131H: Music Theory I

2 Credits

Review of rudiments; introduction to the fundamental linear and vertical features of tonal music, integration of written and aural skills.

Honors

MUSIC 132: Music Theory II

2 Credits

Continuation of Music 131.

Enforced Prerequisite at Enrollment: MUSIC 131 Enforced Concurrent at Enrollment: MUSIC 122
Bachelor of Arts: Arts

MUSIC 151: Brass Techniques I

1 Credits

Introduction to basic performance techniques on brass instruments; teaching strategies and materials for use in a heterogeneous instrument setting. MUSIC 151 Brass Techniques I (1)(BA) This course meets the Bachelor of Arts degree requirements. Introduction to basic brass instrument performance techniques taught in a heterogeneous (mixed group of brass instruments) class setting. The course will provide students with basic introduction to embouchure formation, tone production, and executive skills on two brass instruments. Instructor and student modeled teaching strategies and methods for use in elementary school mixed instrument classes will be demonstrated. Published heterogeneous method books will be investigated and procedures for applying research-based tonal and rhythmic development activities to beginning instrumental instruction will be applied.

Bachelor of Arts: Arts

MUSIC 152: Percussion Techniques I

1 Credits

Introduction to basic performance techniques on percussion instruments; teaching strategies and materials for use in a heterogeneous instrument setting. MUSIC 152 Percussion Techniques I (1)(BA) This course meets the Bachelor of Arts degree requirements. Introduction to basic percussion instrument performance techniques. The course will provide students with a basic introduction to playing techniques for a variety of percussion instruments. Instructor and student modeled teaching strategies and methods for use in elementary and secondary school mixed instrument classes will be demonstrated. Published method books will be investigated.

Bachelor of Arts: Arts

MUSIC 153: String Techniques I

1 Credits

Performance techniques on stringed instruments for music education majors. MUSIC 153 String Techniques I (1)(BA) This course meets the Bachelor of Arts degree requirements. This course is required for students working toward entrance to the Bachelor of Music Education degree program. The purpose of the course is to allow students to develop proper performance techniques on two of the four orchestral bowed stringed instruments (violin, viola, cello, and double bass) at a sufficient level so that they can provide a desirable aural model for beginning and intermediate string students. Grades will be based on students' musical achievement on the instruments. There will be two performance assessments (one midterm and one final) for each instrument during the course. Required repertoire lists and evaluation tools will be provided prior to all assessments. Students must receive a passing grade for both instruments in order to receive an overall passing grade for the course.

Bachelor of Arts: Arts

MUSIC 154: Woodwind Techniques I

1 Credits

Performance and teaching techniques for woodwind instruments. MUSIC 154 Woodwind Techniques I (1)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed for students pursuing a degree in music education. Principles of teaching public school students to begin to play woodwind instruments will be covered and applied to the five woodwind instruments. Students will have the opportunity to perform on each instrument, and teach their peers using the principles of woodwind pedagogy and instrument-specific techniques. This course is part of a block of courses covering all band and orchestra instruments traditionally offered in public school music programs. Students can elect to take more courses with more in-depth instruction on each instrument in order to further prepare them to teach the instruments in the public schools. Students will be advised to take such courses if their career goals include teaching band and/or orchestra in the public schools. Students will observe teaching techniques for teaching instrument-specific pedagogy through being students themselves. They will keep a journal of observed teaching techniques and instrument resources for future reference as a teacher. They will perform playing tests on their instrument to demonstrate proficiency on the instrument, and engage in peer-teaching activities to demonstrate understanding of pedagogical techniques. Music education

majors will take this course as part of a sequence of music education courses. This course is offered as one of the early music education courses, and serves as a model and introduction for the pedagogical techniques and concepts the students will master in future courses.

Bachelor of Arts: Arts

MUSIC 162: Introduction to Music History

2 Credits

An introduction to the discipline of music history through the study of representative works. MUSIC 162 Introduction to Music History (2) This course introduces students to the discipline of music history, through study of the core repertoire from the common-practice era: the music of the High Baroque (especially Bach and Handel) through the end of the Classical period and the beginnings of Romanticism (Beethoven). The course objectives focus on acquisition of skills necessary for thinking historically about music. Students learn 1) to describe the main stylistic features of a work (melodic, harmonic, rhythmic, textural, timbral, formal); 2) to associate these features with particular composers and eras; 3) to compare and contrast works from the same period and from different periods; and 4) to relate stylistic features to historical context, social function, performance conditions, and listeners' experience. The course thus emphasizes agents—the people who created, performed, listened to, and paid for the music—in order to illuminate both the musical works and the historical and social factors that shaped those works' distinctive features.

Enforced Concurrent at Enrollment: MUSIC 132

MUSIC 170: Keyboard Skills II: Music Major

1 Credits

Instruction in secondary chord progressions, transposition, improvisation, accompanying techniques, simple score reading.

Bachelor of Arts: Arts

MUSIC 173: First-Year Composition Seminar

2 Credits

Individual composition instruction for freshman composition majors (Fall semester) and group activities.

Bachelor of Arts: Arts

First-Year Seminar

MUSIC 174: Composition II

2 Credits

Composition instruction for first-year composition majors.

Bachelor of Arts: Arts

MUSIC 177: ROARS lab

1-3 Credits/Maximum of 9

ROARS (Research of the Arts, Recording, and Sound) lab is a place to do individualized work with students on their areas of focus in music technology and for music technology students as a whole to learn from one another, in a consistent way over time. The learning style will be mixed, resembling at times a masterclass, an engineering lab, an applied

lesson, a mathematics lecture, a prototype demonstration, an ensemble performance, or a software tutorial. Students will normally take ROARS lab for 1 credit, but in the event that transfer students need to do extra work to make up for class time, they can work with the instructor within or outside of class to accomplish this & have their work reflected in greater credit hours earned.

MUSIC 181: Jazz Improvisation I

2 Credits

A study of the fundamentals of jazz theory, harmonic functions, and their applications to jazz improvisation.

Bachelor of Arts: Arts

MUSIC 182: Jazz Improvisation II

2 Credits

A study of advanced harmonic concepts and their application to jazz improvisation.

Enforced Prerequisite at Enrollment: MUSIC 181

Bachelor of Arts: Arts

MUSIC 188: Chamber Music for Mixed Ensemble

1 Credits/Maximum of 8

MUSIC 188 Chamber Music for Mixed Ensemble (maximum of 8) (BA). This course is designed to prepare and perform mixed ensemble music from all periods and styles (e.g., piano quintet, rock ensemble, early music ensemble, new music ensemble, open music ensemble, etc.). Course objectives include, but are not limited to, the development of rehearsal and ensemble skills, increased awareness of musical styles, public performance(s) of works prepared, and the development of the interpersonal skills necessary for the players to collaborate in a small ensemble setting. Chamber music is an integral part of instrumental musical training. Evaluation of student work is based on participation in rehearsals, the progress made by the ensemble, and the quality of the ensemble's performances.

Bachelor of Arts: Arts

MUSIC 189: Studio Ensemble

1 Credits/Maximum of 8

Preparation and performance of music for like-instrument ensembles such as Clarinet Ensemble, Saxophone Ensemble, Cello Choir, Horn Ensemble, etc. Development of rehearsal and ensemble skills, an increased awareness of musical styles, public performance(s) of works prepared, and the development of the interpersonal skills necessary for the players to operate as a unit. Time allocated to each of these topics will vary depending on the performance level, experience and needs of the ensemble.

Enforced Prerequisite at Enrollment: Permission of program

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MUSIC 190: Chamber Music for Strings

1 Credits/Maximum of 8

Preparation for performance of chamber music literature involving string instruments. MUSIC 190 Chamber Music for Strings (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Chamber Music for Strings meets at least two hours per week - once with the instructor for coaching and at least once for an additional rehearsal without the instructor's presence. Course objectives include, but are not limited to, the development of rehearsal and ensemble skills, an increased awareness of musical styles, public performance(s) of works prepared, and the development of the interpersonal skills necessary for the players to operate as a unit. Chamber music is an integral part of instrumental musical training. It is an important partner with conducted ensembles in the performance preparation of musicians. Evaluation of student work is based on participation in rehearsals, the progress made by the ensemble, and the quality of the ensemble's performances. The course is offered during fall and spring semesters.

Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Creative Thinking
GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

MUSIC 193: Sonata Duos

1 Credits/Maximum of 8

Preparation for performance of advanced sonata literature for various individual instruments with keyboard.

Bachelor of Arts: Arts

MUSIC 194: Studio and Recital Accompanying

1 Credits/Maximum of 8

Keyboard accompaniment of student soloists in the studio and in public performance under faculty supervision.

Enforced Prerequisite at Enrollment: KEYBD 120 or KEYBD 130 or consent of supervising faculty member
Bachelor of Arts: Arts

MUSIC 197: **SPECIAL TOPICS**

1 Credits

MUSIC 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MUSIC 207N: Jazz and the African American Experience

3 Credits

The history and evolution of jazz is a significant cultural manifestation of the African American experience. The music and its artists provide a lens through which to examine questions surrounding the African American experience and what it means to be Black in America, engaging with questions about identity, authenticity, freedom, activism, gender, and sexuality, as well as the role of music in African American life. Drawing upon curricular elements from MUSIC 7, Evolution of Jazz, and AFAM 100, Living While Black: Themes in African American Thought and Experience, this course traces the history of jazz through an examination of the lives and art of thirty great jazz artists, juxtaposed with an examination of seminal writings of twenty African American

poets, playwrights, novelists, critics, activists, philosophers, and scholars. Preliminary objectives will include basic musical information associated with tonality and with jazz. The main objectives of the course are: to explore the antecedents of jazz and the social-historical contexts in which they developed; to explore the pioneering artistry of selected twentieth-century jazz musicians, tracing the evolution of jazz styles in the process; to delve into the lives of these jazz artists and the social-historical contexts in which they lived; to explore the writings of historically contemporary African Americans, which articulate many of the major issues that have shaped black life in America; to enhance appreciation for the art of jazz and for the musical and literary contributions of African Americans; to encourage reflection, empathy, and a greater understanding of the cultural-historical circumstances that have informed the lives and art of African Americans. The narrowing of scope allows for a more detailed examination of the selected jazz artists, their music, and their lives. Similarly, the selected writings will allow students to reflect on the relationships and connections between these writings and the artistry and life experiences of the selected jazz artists. These objectives will be met by utilizing an interactive, multimedia online curriculum, including demonstration videos, a virtual keyboard, music notation files (e.g., Sibelius), audio recordings, audio-video recordings, selected readings, open forums, and discussion boards. Evaluation methods will include quizzes, tests, open forums, discussion boards, and reflection papers. Students will receive GA and GS credit for this course, as well as US designation. The course will not satisfy any requirements for the major or minor in music. All pieces, excerpts, examples, videos, and texts will be made available to students online.

MUSIC 209N: The Music of the Beatles and American Popular Culture

3 Credits

The Beatles are the most significant musical group in the history of popular music. Their songs are derived from diverse sources, such as rhythm 'n' blues, rock 'n' roll, country 'n' western, Motown, soul, folk music, folk rock, the British Music Hall, and European and Indian classical music traditions. Two ideas define their work: an emphasis on freedom, and how song texts can be interpreted in different ways. The Beatles had a great impact not only on American popular music during their heyday in the 1960s but also on the country's popular culture in which they were considered philosopher kings. Beatle albums mirrored changing trends in the culture, from the pre-Vietnam War youthfulness of A Hard Day's Night, to the psychedelia of Revolver and Sgt. Pepper, to the countercultural mindset of The White Album. This inter-domain course will focus on how the Beatles influenced American popular culture from the 1960s to the present day. It will examine how the Beatles were a part of a mid-twentieth-century British youth subculture that was shaped by the cultural attitudes of American rock 'n' roll. The course will then turn its attention to the seismic shift initiated by the Fab Four in both music and pop culture in the US from 1964 to 1970, demonstrating how it has permeated the popular culture of the 1970s to the present day. The course will enhance the appreciation of the Beatles and their music

through its interdisciplinary focus, contextualizing the Fab Four's work in order to show how both popular music and culture can influence one another. One way the course will facilitate this goal is through the inclusion of selected readings from English literature and popular culture upon which students will write reflection essays.

MUSIC 210: Keyboard Skills III: Music Major

1 Credits

Playing accompaniments from chord symbols and full notation, transposition, improvisation, modulation, score-reading, and standard literature.

Bachelor of Arts: Arts

MUSIC 212: Guitar Techniques II

1 Credits

Intermediate performance and teaching techniques for guitar. MUSIC 212 Guitar Techniques II (1) MUSIC 212 is offered as an Individual Emphasis course for students who have been accepted into the Teacher Education Degree Program in Music. The focus of the course is on learning to play the guitar in a group class setting in order to accompany oneself and learning techniques for how to teach the guitar in classroom settings. Topics include: intermediate level guitar pedagogy, instrument care and maintenance, classroom structure and materials. The instructional format includes: performance, lecture, large and small group discussion, readings, and musical and teaching examples. Students complete several practical assignments and present summations of small group discussions. Two practice performances, a final playing and written exam are given, and a formal concert is performed.

Enforced Prerequisite at Enrollment: MUSIC 112

MUSIC 215: The Craft of Singing

3 Credits

Vocal/respiratory anatomy and function, vocal health, voice classification, and techniques that enhance and develop acting and movement from the singer perspective. Anatomy of the larynx and respiratory system are studied and strengthened through in-class work on vocal and breathing exercises. Focus is placed on good tone production and resonance. Basic differences between Classical and Musical Theatre vocal styles are introduced. Techniques that enhance and develop acting and movement choices are also studied through individual and group exercises and through the performance of songs. This course is designed for students in the INART major, and also for students who are interested in singing but are not MUSIC or THEATRE majors.

MUSIC 216: Care and Nurture of Young Singing Voices

0.5 Credits

The nature of singing voices in children from birth through adolescence; strategies for helping all children become successful singers. MUSIC 216 Care and Nurture of Young Singing Voices (.5) The focus of this course is the nature of child and adolescent singing voices and strategies for assisting all children in learning to sing. Aural identification of various stages of vocal development or children and adolescents will be highlighted as well as strategies for nurturing the young singing voice in a classroom and rehearsal setting. Observations of teachers working with children will be included in the course experiences. This course is for music majors intending to apply to the Teacher Education Degree Program in Music and must be taken prior to entrance to the Degree program, typically during the sophomore year.

MUSIC 240: Introduction to Music Education

2 Credits

MUSIC 240 Introduction to Music Education (2)(BA) This course meets the Bachelor of Music Education degree requirements. MUSIC 240 is offered every fall semester for students who are considering the Teacher Certification program in Music Education. This course provides prospective music teachers with an opportunity to develop basic music teaching skills; identify behaviors of effective music teachers; identify their own strengths and weaknesses as a teacher, set goals based on those traits, and apply strategies to improve; develop their ability to reflect on their own teaching; and to understand and apply educational

and music education theory to a variety of musical developmental levels. Students complete several practical assignments, present summations of small group discussions, and present micro-teaching lessons with peers in class. A midterm and final exam are typically given.

Bachelor of Arts: Arts

MUSIC 241: Music for Classroom Teachers

3 Credits

Development of competencies for guiding musical experiences of children in the elementary classroom.

Bachelor of Arts: Arts

MUSIC 251A: Brass Techniques II: Trumpet

0.5 Credits

A class setting in which trumpet performance techniques, teaching/diagnostic strategies, instructional materials, and literature are taught, practiced, and developed. MUSIC 251A Brass Techniques II: Trumpet (.5) This course develops proper performance techniques on the trumpet in a class setting. Teaching techniques and materials specific to the trumpet are demonstrated and applied. Students will develop a performance level that will enable them to provide a desirable aural model for intermediate and advanced trumpet students. Students are introduced to appropriate trumpet teaching techniques; standard trumpet teaching materials including method books, etudes, and solo literature; effective strategies for diagnosing problems in student performances; and recommended instruments and equipment for all levels of trumpet study. Class meetings will occur twice per week for 1/2 semester. Students will be expected to practice outside of class meeting times. Grades will be based on students' musical achievement on the trumpet and understanding of material presented. There will be multiple performance assessments throughout the course. This course is recommended for students working toward entrance to the Teacher Education Program in Music and the Bachelor of Music Education degree.

Enforced Prerequisite at Enrollment: MUSIC 151

MUSIC 251B: Brass Techniques II: Horn

0.5 Credits

A class setting in which horn performance techniques, teaching/diagnostic strategies, instructional materials, and literature are taught, practiced, and developed. MUSIC 251B Brass Techniques II: Horn (.5) This course develops proper performance techniques on the horn in a class setting. Teaching techniques and materials specific to the horn are demonstrated and applied. Students will develop a performance level that will enable them to provide a desirable aural model for intermediate and advanced horn students. Students are introduced to appropriate horn teaching techniques; standard horn teaching materials including method books, etudes, and solo literature; effective strategies for diagnosing problems in student performances; and recommended instruments and equipment for all levels of horn study. Class meetings will occur twice per week for 1/2 semester. Students will be expected to practice outside of class meeting times. Grades will be based on students' musical achievement on the horn and understanding of material presented. There will be multiple performance assessments throughout the course. This course is recommended for students working toward entrance to

the Teacher Education Program in Music and the Bachelor of Music Education degree.

Enforced Prerequisite at Enrollment: MUSIC 151

MUSIC 251C: Brass Techniques II: Trombone

0.5 Credits

A class setting in which trombone performance techniques, teaching/diagnostic strategies, instructional materials, and literature are taught, practiced, and developed. MUSIC 251C Brass Techniques II: Trombone (.5) This course develops proper performance techniques on the trombone in a class setting. Teaching techniques and materials specific to the trombone are demonstrated and applied. Students will develop a performance level that will enable them to provide a desirable aural model for intermediate and advanced trombone students. Students are introduced to appropriate trombone teaching techniques; standard trombone teaching materials including method books, etudes, and solo literature; effective strategies for diagnosing problems in student performances; and recommended instruments and equipment for all levels of trombone study. Class meetings will occur twice per week for 1/2 semester. Students will be expected to practice outside of class meeting times. Grades will be based on students' musical achievement on the trombone and understanding of material presented. There will be multiple performance assessments throughout the course. This course is recommended for students working toward entrance to the Teacher Education Program in Music and the Bachelor of Music Education degree.

Enforced Prerequisite at Enrollment: MUSIC 151

MUSIC 251D: Brass Techniques II: Euphonium/Tuba

0.5 Credits

A class setting in which euphonium and tuba performance techniques, teaching/diagnostic strategies, instructional materials, and literature are taught, practiced, and developed. MUSIC 251D Brass Techniques II: Euphonium/Tuba (.5) This course develops proper performance techniques on the euphonium and tuba in a class setting. Teaching techniques and materials specific to the euphonium and tuba are demonstrated and applied. Students will develop a performance level that will enable them to provide a desirable aural model for intermediate and advanced euphonium and tuba students. Students are introduced to appropriate euphonium and tuba teaching techniques; standard euphonium and tuba teaching materials including method books, etudes, and solo literature; effective strategies for diagnosing problems in student performances; and recommended instruments and equipment for all levels of euphonium and tuba study. Class meetings will occur twice per week for 1/2 semester. Students will be expected to practice outside of class meeting times. Grades will be based on students' musical achievement on the euphonium and/or tuba and understanding of material presented. There will be multiple performance assessments throughout the course. This course is recommended for students working toward entrance to the Teacher Education Program in Music and the Bachelor of Music Education degree.

Enforced Prerequisite at Enrollment: MUSIC 151

MUSIC 253: String Techniques II

0.5-1 Credits/Maximum of 2

Performance techniques on violin, viola, cello or string bass for music education majors. MUSIC 253 String Techniques II (0.5 - 1 per semester/

maximum of 2) This course is recommended for students working toward the Bachelor of Music Education degree program, and who hope to teach string/orchestra classes. The purpose of the course is to allow students to develop proper performance techniques on the violin, viola, cello, or string bass at a sufficient level so that they can provide a desirable aural model for intermediate and advanced string students. Grades will be based on students' musical achievement on the instrument(s). There will be multiple performance assessments throughout the course. Required repertoire lists and evaluation tools will be provided prior to all assessments.

Enforced Prerequisite at Enrollment: MUSIC 153

MUSIC 254A: Woodwind Techniques II: Flute

0.5 Credits

Performance and teaching techniques and materials selection for flute. MUSIC 254A Woodwind Techniques II: Flute (.5) This course is intended for music majors working toward the Teacher Education Degree Program in Music. This course may serve as a music education elective, and is best taken during the junior year. It should only be taken following successful completion of MUSIC 154 Woodwind Techniques I. The purpose of the course is to allow students to develop proper performance techniques in order to produce a characteristic sound on the flute at a sufficient level so that they can provide a desirable aural model for beginning and intermediate string students. Grades will be based largely on the performance achievement on the flute, in addition to development of resources for flute pedagogy and demonstration of appropriate diagnosis and prescription for flute performance problems. There will be two performance assessments during the course. There will be one midterm and one final assessment, weighted as listed: Midterm Assessment (performance and diagnosis) 30% Final Assessment (performance and diagnosis) 50% Resource journal 10% The required repertoire list will be provided approximately two weeks prior to each assessment. Students will also be provided with a copy of the measurement tool to be used in evaluating their performance. Students must receive a passing grade for both assessments in order to receive an overall passing grade for the course.

Enforced Prerequisite at Enrollment: MUSIC 154

MUSIC 254B: Woodwind Techniques II: Oboe

0.5 Credits

Performance and teaching techniques and materials selection for oboe. MUSIC 254B Woodwind Techniques II: Oboe (.5) This course is intended for music majors working toward the Teacher Education Degree Program in Music. This course may serve as a music education elective, and is best taken during the junior year. It should only be taken following successful completion of MUSIC 154 Woodwind Techniques I. The purpose of the course is to allow students to develop proper performance techniques in order to produce a characteristic sound on the oboe at a sufficient level so that they can provide a desirable aural model for beginning and intermediate string students. Grades will be based largely on the performance achievement on the oboe, in addition to development of resources for oboe pedagogy and demonstration of appropriate diagnosis and prescription for oboe performance problems. There will be two performance assessments during the course. There will be one midterm and one final assessment, weighted as listed: Midterm Assessment (performance and diagnosis) 30% Final Assessment (performance and diagnosis) 50% Resource journal 10% The required repertoire list will be provided approximately two weeks prior

to each assessment. Students will also be provided with a copy of the measurement tool to be used in evaluating their performance. Students must receive a passing grade for both assessments in order to receive an overall passing grade for the course.

Enforced Prerequisite at Enrollment: MUSIC 154

MUSIC 254C: Woodwind Techniques II: Clarinet

0.5 Credits

Performance and teaching techniques and materials selection for clarinet. MUSIC 254C Woodwind Techniques II: Clarinet (.5) This course is intended for music majors working toward the Teacher Education Degree Program in Music. This course may serve as a music education elective, and is best taken during the junior year. It should only be taken following successful completion of MUSIC 154 Woodwind Techniques I. The purpose of the course is to allow students to develop proper performance techniques in order to produce a characteristic sound on the clarinet at a sufficient level so that they can provide a desirable aural model for beginning and intermediate string students. Grades will be based largely on the performance achievement on the clarinet, in addition to development of resources for clarinet pedagogy and demonstration of appropriate diagnosis and prescription for clarinet performance problems. There will be two performance assessments during the course. There will be one midterm and one final assessment, weighted as listed: Midterm Assessment (performance and diagnosis) 30% Final Assessment (performance and diagnosis) 50% Resource journal 10% The required repertoire list will be provided approximately two weeks prior to each assessment. Students will also be provided with a copy of the measurement tool to be used in evaluating their performance. Students must receive a passing grade for both assessments in order to receive an overall passing grade for the course.

Enforced Prerequisite at Enrollment: MUSIC 154

MUSIC 254D: Woodwind Techniques II: Saxophone

0.5 Credits

Performance and teaching techniques and materials selection for saxophone. MUSIC 254D Woodwind Techniques II: Saxophone (.5) This course is intended for music majors working toward the Teacher Education Degree Program in Music. This course may serve as a music education elective, and is best taken during the junior year. It should only be taken following successful completion of MUSIC 154 Woodwind Techniques I. The purpose of the course is to allow students to develop proper performance techniques in order to produce a characteristic sound on the saxophone at a sufficient level so that they can provide a desirable aural model for beginning and intermediate string students. Grades will be based largely on the performance achievement on the saxophone, in addition to development of resources for saxophone pedagogy and demonstration of appropriate diagnosis and prescription for saxophone performance problems. There will be two performance assessments during the course. There will be one midterm and one final assessment, weighted as listed: Midterm Assessment (performance and diagnosis) 30% Final Assessment (performance and diagnosis) 50% Resource journal 10% The required repertoire list will be provided approximately two weeks prior to each assessment. Students will also be provided with a copy of the measurement tool to be used in evaluating their performance. Students must receive a passing grade for both assessments in order to receive an overall passing grade for the course.

Enforced Prerequisite at Enrollment: MUSIC 154

MUSIC 254E: Woodwind Techniques II: Bassoon

0.5 Credits

Performance and teaching techniques and materials selection for bassoon. MUSIC 254E Woodwind Techniques II: Bassoon (.5) This course is intended for music majors working toward the Teacher Education Degree Program in Music. This course may serve as a music education elective, and is best taken during the junior year. It should only be taken following successful completion of MUSIC 154 Woodwind Techniques I. The purpose of the course is to allow students to develop proper performance techniques in order to produce a characteristic sound on the bassoon at a sufficient level so that they can provide a desirable aural model for beginning and intermediate string students. Grades will be based largely on the performance achievement on the bassoon, in addition to development of resources for bassoon pedagogy and demonstration of appropriate diagnosis and prescription for bassoon performance problems. There will be two performance assessments during the course. There will be one midterm and one final assessment, weighted as listed: Midterm Assessment (performance) 33% Final Assessment (performance and written exam) 66%

Enforced Prerequisite at Enrollment: MUSIC 154

MUSIC 255: Intermediate Theory I

3 Credits

Continuation of Music 244 with emphasis on keyboard, harmony, chromaticism, analysis, sight-singing and dictation.

MUSIC 261: Survey of Music History I

3 Credits

The course is a survey of music history from antiquity through the Baroque period, with readings, listening, and lecture. The principal objectives are: to acquaint students with important musical works from this period of European and American history; to place these works in their larger social, cultural, economic, and intellectual contexts; and to introduce analytical methods useful for describing technical musical features and relating those features to extra-musical concerns. As the second course in the music history sequence designed for music majors and minors, Music 261 forms a part of the core music curriculum required for advanced (400-level) study in the discipline. Assignments and evaluation methods are designed to help students develop their critical faculties and communication skills, through listening, reading, in-class discussion, examinations, and writing. There is significant emphasis on intercultural and international competence through study of music from a range of European countries. Musical analysis is integrated with consideration of the historical, social, cultural, religious, and economic circumstances of the works' production. The course stresses development of criteria of aesthetic judgment, with respect to musical style (deployment of the various musical elements: melody, harmony, rhythm, texture, timbre) and the relationship of style to non-musical historical factors.

Enforced Prerequisite at Enrollment: MUSIC 131 and MUSIC 162

Bachelor of Arts: Arts

International Cultures (IL)

General Education: Arts (GA)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MUSIC 262: Survey of Music History II

3 Credits

The course is a survey of music history from ca. 1750 to the present, with readings, listening, and lecture. The principal objectives are: to acquaint students with important musical works from this period of European and American history; to place these works in their larger social, cultural, economic, and intellectual contexts; and to introduce analytical methods useful for describing technical musical features and relating those features to extra-musical concerns. As the third course in the music history sequence designed for music majors and minors, Music 262 forms a part of the core music curriculum required for advanced (400-level) study in the discipline. Assignments and evaluation methods are designed to help students develop their critical faculties and communication skills, through listening, reading, in-class discussion, examinations, and writing. There is significant emphasis on intercultural and international competence through study of music from a range of European countries and the United States. Musical analysis is integrated with consideration of the historical, social, cultural, religious, and economic circumstances of the works' production. The course stresses development of criteria of aesthetic judgment, with respect to musical style (deployment of the various musical elements: melody, harmony, rhythm, texture, timbre) and the relationship of style to non-musical historical factors.

Enforced Prerequisite at Enrollment: MUSIC 132 and MUSIC 162

Bachelor of Arts: Arts

International Cultures (IL)

General Education: Arts (GA)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

MUSIC 262H: Survey of Music History II

3 Credits

A survey of music history from 1750 to the present, with readings, listening, and lecture.

Honors

MUSIC 266: Basic Conducting

1 Credits

Basic instruction and practicum in conducting, both choral and instrumental.

Enforced Prerequisite at Enrollment: MUSIC 221 and MUSIC 231

Bachelor of Arts: Arts

MUSIC 267: Techniques of Composition

2 Credits

Basic instruction in the techniques of composition in all idioms.

Enforced Prerequisite at Enrollment: MUSIC 231

Bachelor of Arts: Arts

MUSIC 270: Keyboard Skills IV: Music Major

1 Credits

Instruction in secondary chord progressions, transposition, improvisation, accompanying techniques, score reading.

Bachelor of Arts: Arts

MUSIC 273: Composition III

2 Credits

Composition instruction for second-year composition majors.

Bachelor of Arts: Arts

MUSIC 274: Composition IV

2 Credits

Composition instruction for second-year composition majors.

Bachelor of Arts: Arts

MUSIC 295A: Early Field Experience in Music Education

1 Credits/Maximum of 1

MUSIC 295A Early Field Experience in Music Education (1)(BA) This course meets the Bachelor of Arts degree requirements. This course is offered to music majors during their fourth semester who are intending to apply to the Teacher Education Degree Program in Music. It provides prospective music teachers with an opportunity to observe various components involved in the music teaching process; develop basic music teaching skills; identify behaviors of effective music teachers; identify their own strengths and weaknesses as a teacher, set goals based on those traits, and apply strategies to improve; develop their ability to reflect on their own teaching; observe and interact with children of varying races, religious beliefs, national origins and socioeconomic backgrounds, particularly children for whom English is a second language and who are considered in need of early intervention; continue developing their own sight-singing and piano skills.

Enforced Prerequisite at Enrollment: MUSIC 240 and 4th semester standing

Bachelor of Arts: Arts

MUSIC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts

MUSIC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Arts

MUSIC 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (1L)

MUSIC 312: Performance of Diverse Musical Styles

1 Credits

Exploration of world instruments and singing through performance and study. MUSIC 312 Performance of Diverse Musical Styles (1) The focus of the course is participation in a non-Western based music ensemble to gain knowledge of global music traditions and how to apply world music ensemble practices into K-12 teaching. Topics include: cultural knowledge and significance, playing technique and pedagogy, and applications for teaching. The instructional format includes: performance, lecture, small group discussion, readings, and musical examples. Students complete several practical assignments and present summations of small group discussions. A final playing and written exam are given, and a formal concert is performed.

MUSIC 325: Music Entrepreneurship

3 Credits

This course teaches students how to use entrepreneurship as a tool in service to their career goal of becoming a music professional. For students who create their own music in some capacity (composing, arranging, performing) or non-creators who desire to support the production and consumption of music in some way, this course provides a solid understanding of entrepreneurial theory and shows how to apply it to the specific goals and interests of each student. This course takes an in-depth look at how the music industry works and helps you, the student, to create a career in music.

MUSIC 331: Tonal Analysis

2 Credits

Introduction to standard procedures of tonal analysis, including concepts of form and structure.

Enforced Prerequisite at Enrollment: MUSIC 221 and MUSIC 231
Bachelor of Arts: Arts

MUSIC 332: Analysis of Twentieth Century Music

2 Credits

Application of analytical techniques and compositional theories to music of the twentieth century.

Enforced Prerequisite at Enrollment: MUSIC 231
Bachelor of Arts: Arts

MUSIC 336: Orchestration

2 Credits

Scoring for the orchestra.

Enforced Prerequisite at Enrollment: MUSIC 222 and MUSIC 332
Bachelor of Arts: Arts

MUSIC 341: Instructional Materials in Music

2 Credits

Exploration of instructional materials and repertoire for use in K-12 music settings. Limited to Music Education majors who have been accepted into the Teacher Education Degree Program in Music. MUSIC 341 Instructional Materials in Music (2) MUSIC 341 is offered to students who have been accepted into the Teacher Education Degree Program in Music. The focus of this course is to gain knowledge through exploration of the process for selecting instructional materials and repertoire for K-12 music across all settings, choral, general, and instrumental settings. Topics include: the exploration of instructional materials, the criteria for selection of materials, and strategies for arranging musical materials to meet the needs of students. The instructional format includes: lecture, large and small group discussion, readings, and musical examples. Students complete several practical assignments and present summations of small group discussions. A written midterm and final evaluation will be given to assess student learning.

Enforced Prerequisite at Enrollment: MUSIC 240 and MUSIC 295A

MUSIC 341B: Instructional Practices in General Music

1.5 Credits

This course provides students with the opportunity to explore instructional materials and repertoire through in-class sessions and observation of Pre- K-12 teachers. Topics include: singing voices of children/youth, music literacy, classroom instruments, musical movement, and issues of curriculum, planning, and assessment. The instructional format includes: large and small group discussion, readings, and musical and teaching examples and experiences. Students complete several practical assignments including off campus observations and development of materials for use in teaching.

MUSIC 345: Instructional Practices in Music

2 Credits

For music education students to learn about instructional techniques and practices for music performance and general music classes. MUSIC 345 Instructional Practices in Music (2) This course is designed to cover general principles in planning and delivery of instruction for, and assessment of the learning of, students in public school K-12 music rehearsals and classrooms. Further, this course will focus on application and implementation of strategies to specific settings in which students will be certified to teach. Course objectives enable students to develop an understanding of the interaction of planning and delivery of instruction and the assessment of student learning; develop an understanding of principles of presenting and leading students in music activities and performance experiences; develop strategies for planning music lessons and rehearsals; and develop strategies for assessing student learning. Students in the course will select appropriate instructional strategies reflecting technical and musical objectives and needs of the students; plan music lessons and rehearsals reflecting technical and musical objectives and needs of the students; and develop valid tools and procedures for assessing students' music learning. The students in this course will be evaluated on their effectiveness in writing task analyses, lesson and rehearsal plans, designing assessment tools, and implementing plans and assessments in a variety of music settings in peer-teaching situations. Music education majors will take this course as part of a sequence of music education courses. This course is preceded by courses concerning musical development, teaching experiences, and

courses in selection and design of instructional materials, and this course precedes a capstone course (MUSIC 441W, MUSIC 442W, MUSIC 443W, MUSIC 444W, MUSIC 445W, or MUSIC 446W) in which students study one instructional setting and curriculum level (choral, band, orchestra, general music; elementary middle school, high school) in greater depth, depending on their future career goals. Approximately 25 students will be enrolled.

Enforced Prerequisite at Enrollment: MUSIC 240 and MUSIC 341.
Enforced Concurrent at Enrollment: MUSIC 395B

MUSIC 366: Intermediate Conducting

1 Credits

Intermediate instruction in conducting; conducting techniques specific to instrumental or choral music; introduction to rehearsal technique. MUSIC 366 Intermediate Conducting (1)(BA) This course meets the Bachelor of Arts degree requirements. MUSIC 366 focuses on the development of more advanced physical skills and gestures appropriate for conducting expressive performances and rehearsals of music ensembles. The instructional format includes instructor demonstrations, student conducting of the class ensemble, and active participation as a performer and observer for peer conductors. Outside of class, students are expected to practice conducting gestures and use basic score study skills as preparation for conducting assigned music. Students prepare several music scores and conduct the class ensemble in practice episodes and instructor-evaluated performances. Students receive feedback and peer feedback on their performances in both practice and evaluated conducting episodes. Students are graded through instructor evaluation of conducting performances, completion of self-assessments involving review of a video of their performances, and participation in providing feedback for peers.

Enforced Prerequisite at Enrollment: MUSIC 266 and MUSIC 332
 Bachelor of Arts: Arts

MUSIC 373: Composition V

3 Credits

Composition instruction for third-year position majors.

Bachelor of Arts: Arts

MUSIC 374: Composition VI

3 Credits

Composition instruction for third-year composition majors.

Bachelor of Arts: Arts

MUSIC 387: Language Diction for Singers: Italian and English

1 Credits

Intensive drill in the pronunciation, phonetic transcription, and singing of Italian and English.

Bachelor of Arts: Arts

MUSIC 388: Language Diction for Singers: French

1 Credits

Intensive drill in the pronunciation, phonetic transcription, and singing of French.

Bachelor of Arts: Arts

MUSIC 389: Language Diction for Singers: German

1 Credits

Intensive drill in the pronunciation, phonetic transcription, and singing of German.

Bachelor of Arts: Arts

MUSIC 395: **SPECIAL TOPICS**

0.5-1 Credits

Bachelor of Arts: Arts

MUSIC 395A: Cohort Practicum I

1 Credits/Maximum of 1

MUSIC 395A Cohort Practicum I (1)(BA) This course meets the Bachelor of Arts degree requirements. MUSIC 395A is offered for students who are tracking acceptance into the Teacher Education Degree Program in Music. Students will enroll concurrently with the proposed course MUSIC 341 and the revised course MUSIC 340. The focus of the course is to provide students with opportunity to explore instructional materials and repertoire through interviews and observation of K-12 teachers. Topics include: the design and implementation of observational tools, and the leading and teaching of songs in a variety of settings. The instructional format includes: large and small group discussion, readings, and musical and teaching examples and experiences. Students complete several practical assignments including off campus observations, and present summations of small group discussions.

Enforced Prerequisite at Enrollment: MUSIC 240 Enforced Concurrent at Enrollment: MUSIC 341

Bachelor of Arts: Arts

MUSIC 395B: Cohort Practicum II

1 Credits/Maximum of 1

Observation and teaching experiences in a variety of musical instruction settings.

Enforced Prerequisite at Enrollment: MUSIC 341 and MUSIC 395A

Bachelor of Arts: Arts

MUSIC 395C: Practicum in Music Teaching

1-5 Credits/Maximum of 5

Field experiences in music teaching for undergraduate music education majors.

Bachelor of Arts: Arts

MUSIC 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

MUSIC 400: Solo Recital

1 Credits

Required recital for Performer's Certificate.

Bachelor of Arts: Arts

MUSIC 404: Adv Chamber Singer

3 Credits/Maximum of 9

This course enables the participation of non-music majors in a choral ensemble at the 400 level. The course will meet concurrently with EITHER Music 089 or Music 104. The repertoire of the ensemble is selected from a wide range of choral literature from medieval chant to commissioned twenty-first century choral works. The goal of the ensemble is to provide artistic, meaningful, and successful choral performances. To achieve this goal, the learning objectives for individual students include attention toward individual vocal development, increased musicianship skill, and the discovery of new means of artistic expression. In addition to these individual objectives, the conductor of the ensemble also teaches directly toward the objectives of ensemble tone, blend, balance, intonation, dynamics, diction, phrasing, etc. Music 404 students are also required to engage in significant research and/or performance projects, the subject matter of which will be catered towards the students' individual research interests and/or the repertoire being studied each semester. These projects may include the study of the art of choral conducting that will culminate in leading the choir in a concert, the study of a specific composer, composition, performance practice or musical style that is featured in the semester's repertoire that will culminate in a major research paper, class presentations, and program notes on the choir's concerts, or other subject matter approved by the instructor. In addition to this requirement, Music 404 students will analyze and summarize bi-weekly scholarly articles chosen by the instructor, the information in which will be presented in class presentations. In addition, Music 404 students must take on a leadership role within the group by choosing and leading warm-ups and technical exercises under the supervision of the instructor, serving as section leaders, and/or serving as vocal soloists in the repertoire.

Enforced Prerequisite at Enrollment: MUSIC 89 or MUSIC 104

MUSIC 412: Jazz Pedagogy

2 Credits

The development of advanced skills in pedagogy for teaching jazz bands.

Bachelor of Arts: Arts

MUSIC 414: String Pedagogy

1-2 Credits/Maximum of 2

The development of skills in pedagogy for teaching strings.

Enforced Concurrent at Enrollment: STRNG 320 or STRNG 321 or STRNG 322 or STRNG 323 or STRNG 324 or STRNG 330 or STRNG 331 or STRNG 332 or STRNG 333 or STRNG 334

Bachelor of Arts: Arts

MUSIC 415: Woodwind Pedagogy

1-2 Credits/Maximum of 2

The development of skills in pedagogy for teaching woodwinds.

Enforced Concurrent at Enrollment: WWNDS 320 or WWNDS 321 or WWNDS 322 or WWNDS 323 or WWNDS 324 or WWNDS 330 or WWNDS 331 or WWNDS 332 or WWNDS 333 or WWNDS 334

Bachelor of Arts: Arts

MUSIC 416: Brass Pedagogy

1-2 Credits/Maximum of 2

The development of skills in pedagogy for teaching brass.

Enforced Concurrent at Enrollment: BRASS 320 or BRASS 321 or BRASS 322 or BRASS 323 or BRASS 324 or BRASS 330 or BRASS 331 or BRASS 332 or BRASS 333 or BRASS 334

Bachelor of Arts: Arts

MUSIC 417: Percussion Pedagogy

1-2 Credits/Maximum of 2

The development of advanced skills in pedagogy for teaching percussion.

Enforced Prerequisite at Enrollment: MUSIC152 or PERCN 320 or PERCN 330 or permission of instructor

Bachelor of Arts: Arts

MUSIC 418: Voice Pedagogy

2 Credits

Analysis of techniques of teaching voice and studies of related music literature and pedagogical writings.

Enforced Prerequisite at Enrollment: VOICE 270 or VOICE 280 or permission of instructor

Bachelor of Arts: Arts

MUSIC 419: Piano Pedagogy I

2 Credits

Analysis of beginning teaching methods and teaching strategies for children.

Enforced Prerequisite at Enrollment: KEYBD 270 or KEYBD 280 or MUSIC 332

Bachelor of Arts: Arts

MUSIC 420: Song Writing and Recording

3 Credits

Song composition, arranging and recording in a variety of style genres. MUSIC 420 Song Writing and Recording (3) This course will take the student through the process of composing and producing a recorded song. The class will consist of a combination of class meetings and individual instruction. Topics will include form, lyric writing, arranging,

audio/MIDI recording and sequencing. Familiarity with basic audio sequencing software and music theory concepts is essential. The focus of the class is vernacular song as opposed to classical art song, but all the basic concepts discussed in the class apply to either genre. The course requires the composition of original songs and the creation of high-quality recordings of them and their conversion to MP3 format. The student are expected to enter the class with a basic knowledge of digital audio and MIDI (MUSIC/INART 258 or equivalent).

Enforced Prerequisite at Enrollment: INART 258A or INART 258B

MUSIC 420H: Vocal Accompanying Techniques

2 Credits/Maximum of 4

Instruction focusing on the accompanist's problems of balance, interpretation, and musical communication.

Honors

MUSIC 421: Jazz Combo Class

1 Credits/Maximum of 8

Study and performance of small group jazz.

Bachelor of Arts: Arts

MUSIC 422: Jazz Harmony and Arranging

3 Credits

Analysis and composition of jazz tunes and chord progressions; instrumental and vocal arranging in the jazz idiom.

Enforced Prerequisite at Enrollment: MUSIC 222 and MUSIC 332

Bachelor of Arts: Arts

MUSIC 424: Piano Pedagogy II

2 Credits

Analysis of techniques of teaching intermediate-early advanced level piano and studies of music literature and pedagogical writings.

Enforced Prerequisite at Enrollment: KEYBD 270 or KEYBD 280 or MUSIC 332

Bachelor of Arts: Arts

MUSIC 425: Advanced Voice Pedagogy

2 Credits

Analysis of techniques of teaching voice, supervised teaching, studies of studio materials and related topics.

Enforced Prerequisite at Enrollment: MUSIC 418

Bachelor of Arts: Arts

MUSIC 429: Aural Review for Graduate Students

1 Credits

An intensive review of the aural skills required for a theoretical understanding of 18th- and 19th-century music.

Bachelor of Arts: Arts

MUSIC 431: Advanced Tonal Analysis

2-3 Credits

Advanced techniques of musical analysis.

Enforced Prerequisite at Enrollment: MUSIC 332

Bachelor of Arts: Arts

MUSIC 432: Graduate Review of Twentieth-Century Analysis

2-3 Credits/Maximum of 3

The theory and analysis of style in music of the twentieth century.

Enforced Prerequisite at Enrollment: MUSIC 262 and MUSIC 332

Bachelor of Arts: Arts

MUSIC 433: Advanced Analysis of Twentieth-Century Music

2-3 Credits

In-depth studies of selected twentieth-century repertoires and/or analytical models.

Enforced Prerequisite at Enrollment: MUSIC 262 and MUSIC 332

Bachelor of Arts: Arts

MUSIC 434: History of Electroacoustic Music

3 Credits/Maximum of 3

A HISTORY OF ELECTROACOUSTIC MUSIC AS A CONSEQUENCE OF DEVELOPMENTS IN CULTURE AND TECHNOLOGY FROM 1880 to PRESENT. HISTORY OF ELECTROACOUSTIC MUSIC (3) is an introduction to the development of music based in electronics, beginning with the invention of the phonograph and ending with current electronic dance music. The course traces interrelated developments in technology, art, culture, and music, and investigates music through written listening analyses.

Enforced Prerequisite at Enrollment: INART 258A or INART 258B

MUSIC 435: Score Reading

1 Credits

Introduction in score reading at the keyboard.

Enforced Prerequisite at Enrollment: MUSIC 332

Bachelor of Arts: Arts

MUSIC 437: Music Information Retrieval and Computer-Assisted Music

3 Credits

Music Information Retrieval and Computer-Assisted Music have become quite important to electronic musicians recently and will increase in importance over time. The common threads that run through the topics of this course are, first, the mathematics & software that have entered the popular imagination as "big data" & "modeling" and, second, music. An application of these ideas might look like software in which one can search all of Beethoven's works to determine exactly how often he followed a V7 chord with a vi chord; this would be called Music Information Retrieval (MIR). Using a computer to calculate the possible solutions to a species counterpoint exercise might be computer-assisted

music theory. The course will have a seminar-like format in which current research is reviewed and students undertake projects in MIR or CAM.

Recommended Preparations: INART 50Z

MUSIC 438: The Business of Music

1 Credits/Maximum of 1

This course is a survey of topics related to a career in classical music performance, private teaching, and educational institution teaching. These are the principal means by which the freelance musician earns a living. Topics include résumé writing, biography writing, repertoire list writing, press release writing, website and flyer design, audio and video recordings, auditions, competitions, performance opportunities, networking, professional finances, fundraising, managing all aspects of a private teaching enterprise, and applying for institutional teaching positions. Panel discussions with professional musicians will be scheduled.

Enforced Prerequisite at Enrollment: 5th semester standing

MUSIC 441W: Emphasis in Elementary General Music

3 Credits

This course is intended for Music Education majors in their senior year who have particular interest in working with elementary school children in a general music or choral setting and will involve off-site practicum experiences. Students in this course will develop teaching skills as applied to the elementary general music classroom including the teaching of singing, movement, classroom instruments, creative endeavors, and rhythmic and melodic literacy.

Enforced Prerequisite at Enrollment: MUSIC 345 and MUSIC 395B
Writing Across the Curriculum

MUSIC 442W: Emphasis in Secondary General Music

3 Credits

Emphasis in teaching in secondary general music settings. MUSIC 442W Emphasis in Secondary General Music (3) MUSIC 442W is offered to students who have been accepted into the Teacher Certification program in Music Education. The focus of this course is to provide students with opportunity to explore secondary general music settings under the close supervision of a faculty member. Topics include: the design and implementation of curriculum in secondary general music, the leading and teaching of songs in these settings, and specific grade-level appropriate pedagogy. The instructional format includes: lecture, small group discussion, readings, musical and teaching examples, and off campus observation and teaching in middle and high school classrooms. Students complete several practical assignments including off campus observations, presentation of the summations of small group discussions, curriculum planning and models, and teaching within public schools in grades 5-12. This is a writing intensive course with focus on a detailed, multi-drafted topic paper relating to specific elements of teaching choral and general music at the secondary level.

Enforced Prerequisite at Enrollment: MUSIC 345 and MUSIC 395B
Bachelor of Arts: Arts
Writing Across the Curriculum

MUSIC 443W: Choral Emphasis in Secondary Music Education

3 Credits

MUSIC 443W Choral Emphasis in Secondary Music Education (3). This course meets the Bachelor of Music (Music Education) degree requirements. The course is intended to prepare pre-service teachers to teach secondary choral (vocal) music. Preparation will include observation of current public school teachers and teaching techniques and methods, preparation and implementation of appropriate lessons including assessments, in-depth analysis (case study) of a student currently in the public schools, development of a written philosophy of music education and choir instruction, and consideration of practical matters associated with teaching in the public schools such as scheduling, recruitment and parent interaction. The course serves as a capstone to the prior courses in the music education curriculum. Previous courses in instructional planning, instructional materials, instrument techniques, conducting, piano and vocal technique will have developed necessary prior skills. Skills and concepts from these classes will be applied in this authentic context in the collegiate and public school classrooms. The students will be assessed according to their effectiveness in observation, teaching preparation, teaching and research. Evaluation will be in the form of written and verbal feedback, and completion of rubrics by the instructor and the students themselves (self- and peer-evaluation). Students will complete a field experience component in local middle or high schools.

Enforced Prerequisite at Enrollment: MUSIC 345 and MUSIC 387 and MUSIC 395B
Writing Across the Curriculum

MUSIC 444W: Emphasis in Elementary and Intermediate Band

3 Credits

Examination and application of teaching strategies and materials for students planning to teach band in the elementary and middle schools. MUSIC 444W Capstone Experiences in Elementary and Intermediate Band (3)(BA) This course meets the Bachelor of Arts degree requirements. The course is intended to prepare pre-service teachers to teach beginning through intermediate instrumental (band) music. Preparation will include observation of current public school teachers and teaching techniques and methods, preparation and implementation of appropriate lessons including assessments, in-depth analysis (case study) of a student currently in the public schools, development of a written philosophy of music education and band instruction, and consideration of practical matters associated with teaching in the public schools such as scheduling, recruitment and parent interaction. The course serves as a capstone to the prior courses in the music education curriculum. Previous courses in instructional planning, instructional materials, instrument techniques, conducting piano and voice use will have developed necessary prior skills. Skills and concepts from these classes will be applied in this authentic context in the collegiate and public school classrooms. The students will be assessed according to their effectiveness in observation, teaching preparation, teaching and research. Evaluation will be in the form of written and verbal feedback, and completion of rubrics by the instructor and the students themselves (self- and peer-evaluation). Enrollment will likely be approximately 5 students each time the course is offered. The students will be spending considerable class time in local elementary and middle schools for field work.

Enforced Prerequisite at Enrollment: MUSIC 395B and MUSIC 345

Writing Across the Curriculum

MUSIC 445W: Emphasis in High School Band

3 Credits

Examination and application of teaching strategies and materials for students planning to teach high school bands. MUSIC 445W Capstone Experiences in High School Band (3) This course is intended to prepare pre-service teachers to teach high school band. Students will observe, analyze, and discuss the teaching techniques, methods, and materials used by public school teachers in high school band instructional settings. Students will prepare and implement rehearsal plans including assessments, in-depth investigation of appropriate repertoire for use in high school bands and concert programming. Students will develop score analysis skills necessary to plan and guide music making and learning in the band rehearsal. Students will develop materials and strategies that strengthen the connection of instrumental performance to the public school curriculum. Students will develop a written philosophy of music education and the role instrumental performance in band within the music education of high school students. Students will consider practical matters associated with teaching in the public schools such as: scheduling, interaction with parents/teachers/administrators, parental support organizations (music boosters), advocacy, community/school support, and long-range instrumental music program development plans.

Enforced Prerequisite at Enrollment: MUSIC 395B and MUSIC 345 Writing Across the Curriculum

MUSIC 446W: Emphasis in Strings and Orchestra

3 Credits

Development of teaching techniques for instructing elementary and secondary string/orchestra student musicians for music education majors. MUSIC 446W Capstone Experiences in Strings and Orchestra (3) This course is intended to prepare pre-service teachers to teach elementary and secondary string instrumental (orchestra) music. Preparation will include observation of current public school teachers and teaching techniques and methods, preparation and implementation of appropriate lessons including assessments, in-depth analysis (case study) of a student currently in the public schools, development of a written philosophy of music education and string/orchestra instruction, and consideration of practical matters associated with teaching in the public schools such as scheduling, recruitment and parent interaction. The course serves as a capstone to the prior courses in the music education curriculum. Previous courses in instructional planning, instructional materials, instrument techniques, conducting, piano and voice use will have developed necessary prior skills. Skills and concepts from these classes will be applied in this authentic context in the collegiate and public school classrooms. The students will be assessed according to their effectiveness in observation, teaching preparation, teaching, and research. Evaluation will be in the form of written and verbal feedback, and completion of rubrics by the instructor and the students themselves (self- and peer-evaluation). Enrollment will likely be approximately 5 students each fall semester. Students will spend considerable class time in local public schools for fieldwork.

Enforced Prerequisite at Enrollment: MUSIC 345 and MUSIC 395B Writing Across the Curriculum

MUSIC 450: Teaching Marching Band

2 Credits

Traditional and contemporary drill design principles, show development strategies, instructional techniques, and organizational procedures involved in teaching marching band. MUSIC 450 Teaching Marching Band (2)(BA) This course meets the Bachelor of Arts degree requirements. MUSIC 450 is a marching band technique course for music education majors, band directors, and experienced marching band members. This course develops knowledge and skills required to organize and teach marching band with an emphasis on traditional and contemporary drill design and charting. Students are taught an eclectic understanding of drill systems, contemporary drill design, and visual design theory with opportunities to apply drill design computer software (Pyware Java 3D) in developing effective movements for marching units. Course topics include philosophy and role of marching band in the music program, historical perspectives, marching band styles, administration and organization of the marching band and auxiliary units and teaching techniques.

Enforced Prerequisite at Enrollment: MUSIC 345 or permission of program
Bachelor of Arts: Arts

MUSIC 451: Computer Programming for Musicians

3 Credits/Maximum of 12

In-depth study of music programming techniques. MUSIC 451 Computer Programming for Musicians (3 per semester/maximum of 12) This is an in-depth study of a given music programming language or environment. The language/environment will vary from semester to semester, to include languages such as SuperCollider and Max/MSP. Students will be expected to work independently on a series of projects that require increasing levels of difficulty in programming methodology. The course may be repeated for credit. Students will be acquainted with the basics of how the programming environment treats fundamental matters such as signal flow, defining functions, variables and arguments, and music synthesis techniques. These principles will be expanded, with added layers of complexity to the types of problems presented. More complex instruments, processing, and filtering will be covered, along with real-time capabilities (ability of the program to respond to input from audio input or data from an external controller) and the creation of graphical user interfaces (GUIs). Advanced topics will include algorithmic composition and the creation of plug-ins that may be used by other programs. As this is an upper division class, students will be expected to be self-motivated and work independently. Assignments will present problems that may be approached in a number of ways - there is no single right answer; putting it another way, the correct answer is the one that works. Students pursuing the minor in Music Technology (MUTEC) are required to complete two elective courses, one of them upper division. This course will serve those students wishing to apply the minor to areas of software development. Along with MUSIC 455 Technology in Music, this course may also serve as the second part of an elective music technology cognate for students in the graduate and IUG programs in music theory.

Enforced Prerequisite at Enrollment: INART 258A or permission of program

MUSIC 452: Computer Music Synthesis

3 Credits

Use of sound synthesis software for music creation.

Enforced Prerequisite at Enrollment: INART 258A and INART 50Z
Bachelor of Arts: Arts

MUSIC 453: Recording Studio Training

1 Credits

Training in how to use a professional multi-track recording studio. MUSIC 453 Recording Studio Training (1)(BA) This course meets the Bachelor of Arts degree requirements. This is a course in recording studio engineering, directed at students who wish to learn how to operate a professional level multi-track recording studio. Topics include microphone theory, signal flow, audio mixing and mastering, and maintenance issues.

Bachelor of Arts: Arts

MUSIC 455: Technology in Music

1-3 Credits/Maximum of 3

Survey of how musical information is stored and processed in computer systems. MUSIC 455 Technology in Music (3)(BA) This course meets the Bachelor of Arts degree requirements. This course provides a survey of how musical information is stored and transmitted in digital devices. It will be divided into three sections. Weeks 1 and 2 are an introduction to acoustical principles such as the nature of sound transmission and measurements of frequency, sound power level, phase, timbre, and localization. Computer basics will also be covered, with topics to include binary number representation and basic computer operation. Weeks 3 through 8 cover the MIDI transmission protocol that enables musical information to be stored and transmitted efficiently. Topics include the nature of the MIDI data structure, the types of messages that may be passed, and the suitability of MIDI for expressive performance. MIDI software is discussed, including notation software, editor/librarian software, and sequencers. The bulk of the course's project component involves working with sequencing programs. Students are also exposed to using MIDI on the web, downloading files and importing them into various applications. Weeks 9 through 15 cover digital audio so that students may understand how instruments capable of understanding MIDI messages are able to translate the instructions into audio signals. Topics include sampling theory, digital vs. analog recording, filters, signal processing, and editing sound files. Projects involving digital audio also use a sequencing program that is able to combine MIDI and audio data. The students are expected to work independently to complete reading assignments according to the schedule outlined in the course syllabus. While due attention will be given to discussion of this material in class, the primary focus of class sessions will be hands-on application, to ensure that students master a set of skills on the computer.

Enforced Prerequisite at Enrollment: INART 258A
Bachelor of Arts: Arts

MUSIC 458: Electronic Music Composition I

3 Credits

An introduction to the art of composition in the electronic audio medium. MUSIC 458 Electronic Music Composition (3)(BA) This course meets the Bachelor of Arts degree requirements. Music 458 will focus on the

creative craft of musical composition in the medium of electronic audio. Topics covered will include but not be limited to: recording, MIDI and digital audio techniques, study of literature and the investigation of the creative process in musical composition. Students are expected to enter the class with strong fundamentals in both music theory and MIDI and digital audio. The student will be expected to complete several projects that demonstrate both their creativity and their technical competence in the medium.

Enforced Prerequisite at Enrollment: INART 258A
Bachelor of Arts: Arts

MUSIC 459: Electronic Music Composition II

3 Credits

Electronic Music Composition II is the second course of a two-semester sequence focused on composition for electronic media. The projects in this course focus on spatial and interactive aspects of computer music, in addition to how these works are realized through the course of performance. The pieces created by students in the course will range from interactive electro-acoustic works realized in real-time to a work for electronic instrument ensemble. Students will become familiar with a variety of software tools and programming languages. The aim of the course is to focus equally on the artistic/compositional merits of your work and provide each student with a thorough knowledge of the technical skills needed to create unique work-specific programs. We will explore a ground-up approach and each student will design distinctive computer tools that support their individual voice as a composer.

MUSIC 460: Teaching Musical Cultures

2 Credits

Exploration of the world's musical cultures and the implication of and procedures for teaching multicultural music. Limited to upper division music majors or permission of program.

Enforced Prerequisite at Enrollment: MUSIC 262 or permission of program

MUSIC 461W: Studies in Music History: Antiquity to 1600

3 Credits/Maximum of 6

In-depth study of selected aspects of music and culture from antiquity to 1600, with emphasis on writing and research.

Enforced Prerequisite at Enrollment: MUSIC 261 and MUSIC 332
Bachelor of Arts: Arts
Writing Across the Curriculum

MUSIC 462W: Studies in Music History: 1550-1750

3 Credits/Maximum of 6

In-depth study of selected aspects of music and culture from 1550-1750, with emphasis on writing and research.

Enforced Prerequisite at Enrollment: MUSIC 261 and MUSIC 332
Bachelor of Arts: Arts
Writing Across the Curriculum

MUSIC 463W: Studies in Music History: 1700-1900

3 Credits/Maximum of 6

In-depth study of selected aspects of music and culture from 1700-1900, with emphasis on writing and research.

Enforced Prerequisite at Enrollment: MUSIC 261 and MUSIC 332

Bachelor of Arts: Arts

Writing Across the Curriculum

MUSIC 464W: Studies in Music History: 1850-Present

3 Credits/Maximum of 6

In-depth study of selected aspects of music and culture from 1850 to the present, with emphasis on writing and research.

Enforced Prerequisite at Enrollment: MUSIC 262 and MUSIC 332

Bachelor of Arts: Arts

Writing Across the Curriculum

MUSIC 465: Advanced Conducting I

2 Credits

Advanced instruction in conducting; conducting techniques specific to instrumental or choral music; emphasis on score study and rehearsal technique.

Enforced Prerequisite at Enrollment: MUSIC 366

Bachelor of Arts: Arts

MUSIC 466: Advanced Conducting II

2 Credits/Maximum of 8

Standard scores of symphonies, tone poems, operas, oratorios, and shorter vocal and instrumental works studied from the viewpoint of the conductor.

Enforced Prerequisite at Enrollment: MUSIC 366

Bachelor of Arts: Arts

MUSIC 467: Opera Workshop

1-3 Credits/Maximum of 6

History, analysis, and production of operas from sixteenth century to present.

Bachelor of Arts: Arts

MUSIC 468: Acting for Singers

2 Credits/Maximum of 4

To help students develop authentic and specific characters/portrayals on stage through physical and emotional awareness. MUSIC 468 Acting for Singers (2) This is a course teaching singers the fundamentals of acting. All types of stage work related to vocal music will be explored from performing in recitals and concerts to the opera and excerpted scenes. The objective of the course is to make singers more comfortable on stage and more realistic/believable in their performances/presentations. This course differs from acting courses offered in other areas because the singer has restrictions placed upon him due to the requirements of the music, especially in regard to timing and the sense of time, and the use of texts which are often in foreign languages. The course is an

elective 2 credit course which students may repeat for a maximum of 4 credits. An accompanist will be present to accompany students in their song/aria presentations. Every class meeting will begin with warm-up exercises and then continue with further exercises focusing on helping students develop a sense of timing and enabling them to explore the 'beats' (or central topic) of a scene. Emphasis will be placed on learning how to prepare for a scene, analyze it, and determining the goal(s) of the character. The students will be encouraged to learn how to be specific in their acting and to learn what will 'read' to an audience while accurately reflecting the portrayed emotion. Some work will be solo work, but there will also be opportunities to work with partners. Improvisation will also be incorporated.

MUSIC 471: Structural and Sixteenth-Century Counterpoint

2 Credits

Advanced species counterpoint and its application to the sixteenth-century style.

Enforced Prerequisite at Enrollment: MUSIC 222 and MUSIC 332

Bachelor of Arts: Arts

MUSIC 472: Eighteenth-Century Counterpoint

2 Credits

Imitative and nonimitative counterpoint in the style of Bach.

Enforced Prerequisite at Enrollment: MUSIC 221 and MUSIC 231

Bachelor of Arts: Arts

MUSIC 473: Composition VII

3 Credits

Composition instruction for fourth-year composition majors.

Bachelor of Arts: Arts

MUSIC 474: Composition VIII

3 Credits

Composition instruction for fourth-year composition majors.

Bachelor of Arts: Arts

MUSIC 476W: B.A. Senior Project

3 Credits

A semester project appropriate to student's option in B.A. program (e.g., research paper, performance with program notes, or related paper).

Enforced Prerequisite at Enrollment: Seventh-semester standing

Bachelor of Arts: Arts

Writing Across the Curriculum

MUSIC 478: Vocal Literature

3 Credits

Introduction to the literature for solo voice in opera, oratorio, cantata, art song, and chamber music from the baroque to the present.

Enforced Prerequisite at Enrollment: MUSIC 262 and MUSIC 332

Bachelor of Arts: Arts

MUSIC 480: Opera Literature

3 Credits

Studies in the development of the opera from 1600 to the present, treating both libretto and music.

Enforced Prerequisite at Enrollment: MUSIC 231 and MUSIC 262
Bachelor of Arts: Arts

MUSIC 481: Keyboard Literature

3 Credits

Studies in the development of keyboard music and instruments; a survey of all eras using listening, analysis, and performance.

Enforced Prerequisite at Enrollment: MUSIC 262 and MUSIC 332
Bachelor of Arts: Arts

MUSIC 483: Seminar in Voice Pedagogy

2 Credits

Survey of literature relevant to the teaching of voice from historical sources through recent pedagogical scholarship.

Enforced Prerequisite at Enrollment: MUSIC 418
Bachelor of Arts: Arts

MUSIC 485: Chamber Music Literature

3 Credits

Survey of chamber music for strings, winds, and brass instruments from the mid-16th century to the present day.

Enforced Prerequisite at Enrollment: MUSIC 262 and MUSIC 332
Bachelor of Arts: Arts

MUSIC 487: Orchestral Literature

3 Credits

Survey of orchestral literature.

Enforced Prerequisite at Enrollment: MUSIC 262 and MUSIC 332
Bachelor of Arts: Arts

MUSIC 488: Studies in the Major Performance Area

1-2 Credits

Selected studies in music literature specific to the student's major performance area. Will include research, analysis and performance. MUSIC 488 Studies in the Major Performance Area (1-2) The objective of Music 488 is to create a thorough knowledge of the literature and resources in the students' major performance area. The course will be taught in a seminar format. Students will be grouped according by general performance area: i.e., keyboard, strings, woodwinds, brass, percussion, voice. The course will include lectures, research, class presentations and performance. The course will be offered for variable credit in order to meet varying conditions of scheduling and credit requirements. Specific evaluation methods will be determined by the instructor, to include class presentations, class participation, exams and/or written work.

MUSIC 489: Studio and Recital Accompaniment

1 Credits/Maximum of 4

Advanced keyboard accompaniment of student soloists in the studio and in public performance under faculty supervision.

Enforced Prerequisite at Enrollment: MUSIC 194 or permission of instructor
Bachelor of Arts: Arts

MUSIC 491: Advanced Chamber Ensemble

1 Credits/Maximum of 4

Preparation and performance of advanced chamber music. MUSIC 491 Advanced Chamber Ensemble (1 per semester/maximum of 4) Advanced Chamber Ensemble meets at least two hours per week - once with the instructor for coaching and at least once for an additional rehearsal without the instructor's presence. Course objectives include, but are not limited to, the development of rehearsal and ensemble skills, an increased awareness of musical styles, public performance(s) of works prepared, and the development of the interpersonal skills necessary for the players to operate as a unit. Chamber music is an integral part of instrumental musical training. It is an important partner with conducted ensembles in the performance preparation of musicians. Evaluation of student work is based on participation in rehearsals, the progress made by the ensemble, and the quality of the ensemble's performances. The course is offered during fall and spring semesters.

Enforced Prerequisite at Enrollment: (MUSIC 190 or MUSIC 191 or MUSIC 192) and 5th semester standing

MUSIC 493: Sonata Duos

1 Credits/Maximum of 4

Preparation for performance of advanced sonata literature for various individual instruments with keyboard.

Enforced Prerequisite at Enrollment: MUSIC 193 or equivalent or permission of instructor
Bachelor of Arts: Arts

MUSIC 494: Research Topics

1-3 Credits/Maximum of 6

Supervised research leading to senior thesis or project.

Bachelor of Arts: Arts

MUSIC 494H: Research Topics

1-3 Credits/Maximum of 6

Supervised research leading to senior thesis or project.

Bachelor of Arts: Arts
Honors

MUSIC 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Bachelor of Arts: Arts

MUSIC 495A: Student Teaching: General Music

5-7 Credits/Maximum of 7

MUSIC 495A Student Teaching: General Music (6-8)(BA) This course meets the Bachelor of Arts degree requirements. As required by the Pennsylvania Department of Education, all music education students seeking certification must enroll in a culminating student teaching experience which closely approximates a full-time working experience in the public schools of Pennsylvania. The objective of this course is to offer a transition between student life and professional life directly prior to graduation. This total immersion in the field of GENERAL MUSIC allows the student to learn from and work with a mentor teacher in an off-campus setting. During the semester prior to the course, cooperating music teachers and school districts are contacted requesting their participation and music education students interview with the teachers. The students then move to the community in which they will be student teaching and adopt the practices of that mentor teacher within that specific school district. Students are evaluated by both the mentor teacher and a Penn State supervisor who visits a minimum of four times per semester. This course is offered every semester.

Enforced Prerequisite at Enrollment: MUSIC 441W or MUSIC 442W or MUSIC 443W or MUSIC 444W or MUSIC 445W or MUSIC 446W
Bachelor of Arts: Arts

MUSIC 495B: Student Teaching: Choral Music

5-7 Credits/Maximum of 7

MUSIC 495B Student Teaching: Choral Music (5-7)(BA) This course meets the Bachelor of Arts degree requirements. As required by the Pennsylvania Department of Education, all music education students seeking certification must enroll in a culminating student teaching experience which closely approximates a full-time working experience in the public schools of Pennsylvania. The objective of this course is to offer a transition between student life and professional life directly prior to graduation. This total immersion in the field of CHORAL MUSIC allows the student to learn from and work with a mentor teacher in an off-campus setting. During the semester prior to the course, cooperating music teachers and school districts are contacted requesting their participation and music education students interview with the teachers. The students then move to the community in which they will be student teaching and adopt the practices of that mentor teacher within that specific school district. Students are evaluated by both the mentor teacher and a Penn State supervisor who visits a minimum of four times per semester. This course is offered every semester.

Enforced Prerequisite at Enrollment: MUSIC 441W or MUSIC 442W or MUSIC 443W or MUSIC 444W or MUSIC 445W or MUSIC 446W
Bachelor of Arts: Arts

MUSIC 495C: Student Teaching: Instrumental Music

5-7 Credits/Maximum of 7

MUSIC 495C Student Teaching: Instrumental Music (5-7)(BA) This course meets the Bachelor of Arts degree requirements. As required by the Pennsylvania Department of Education, all music education students seeking certification must enroll in a culminating student teaching experience which closely approximates a full-time working experience in the public schools of Pennsylvania. The objective of this course is to offer a transition between student life and professional life directly prior

to graduation. This total immersion in the field of INSTRUMENTAL MUSIC allows the student to learn from and work with a mentor teacher in an off-campus setting. During the semester prior to the course, cooperating music teachers and school districts are contacted requesting their participation and music education students interview with the teachers. The students then move to the community in which they will be student teaching and adopt the practices of that mentor teacher within that specific school district. Students are evaluated by both the mentor teacher and a Penn State supervisor who visits a minimum of four times per semester. This course is offered every semester.

Enforced Prerequisite at Enrollment: MUSIC 441W or MUSIC 442W or MUSIC 443W or MUSIC 444W or MUSIC 445W or MUSIC 446W
Bachelor of Arts: Arts

MUSIC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts

MUSIC 496H: Independent Studies - Honors

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts
Honors

MUSIC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Arts

MUSIC 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Music-Brass (BRASS)

BRASS 100: Trumpet: Secondary

1 Credits/Maximum of 8

Individual instruction in trumpet one-half hour per week. BRASS 100 Trumpet: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The goals of this course are to introduce, define, and develop the musical and technical skills required to play the trumpet well in a variety of musical settings. The instrument is active in orchestral, band, jazz, chamber, and solo settings. Therefore, the basic goal for serious trumpet students as well as amateur trumpet students is to be proficient and versatile. The repertoire studied includes a variety of musical genre including the use

of technical etudes, lyrical studies and standard solo works in a variety of styles. This course directly affects the student's ability to participate and contribute in the various ensembles on campus. The teacher and the student evaluate the student's progress and performance. Suggestions for improvement are agreed upon and developed. The course is offered to both music majors and non-majors. Students receive a one-half hour lesson per week, presuming at least 5 hours of practice.

Bachelor of Arts: Arts
 General Education: Arts (GA)
 GenEd Learning Objective: Creative Thinking
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

BRASS 101: French Horn: Secondary

1 Credits/Maximum of 8

Individual instruction in French horn one-half hour per week. For students who qualify. BRASS 101 French Horn: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. The goals of this course are to introduce, define, and develop the musical and technical skills required to play the French horn well in a variety of musical settings. The instrument is active in orchestral, band, chamber, and solo settings. Therefore, the basic goal for serious horn students as well as amateur horn students is to be proficient and versatile. The repertoire studied includes a variety of musical genre including the use of technical etudes, lyrical studies and standard solo works in a variety of styles. This course directly affects the student's ability to participate and contribute in the various ensembles on campus. The teacher and the student evaluate the student's progress and performance. Suggestions for improvement are agreed upon and developed. The course is offered to both music majors and non-majors. Students receive a one-half hour lesson per week, assuming at least 5 hours of practice. Enrollment can range from 5-8 per semester depending on the availability of staffing.

BRASS 120: Trumpet: Primary I

2 Credits/Maximum of 2

Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 121: French Horn: Primary I

2 Credits/Maximum of 2

Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 121H: French Horn: Primary I

2 Credits/Maximum of 2

Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 122: Trombone: Primary I

2 Credits/Maximum of 2

Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 123: Euphonium: Primary I

2 Credits/Maximum of 2

Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 124: Tuba: Primary I

2 Credits/Maximum of 2

Individual instruction in tuba one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 130: Trumpet: Performance I

3 Credits/Maximum of 3

Individual instruction in trumpet one hour per week. For B.Mus. trumpet performance majors.

BRASS 131: French Horn: Performance I

3 Credits/Maximum of 3

Individual instruction in French horn one hour per week. For B.Mus. French horn performance majors.

BRASS 132: Trombone: Performance I

3 Credits/Maximum of 3

Individual instruction in trombone one hour per week. For B.Mus. trombone majors.

BRASS 133: Euphonium: Performance I

3 Credits/Maximum of 3

Individual instruction in euphonium/baritone one hour per week. For B.Mus. euphonium/baritone majors.

BRASS 134: Tuba: Performance I

3 Credits/Maximum of 3

Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

BRASS 170: Trumpet: Primary II

2 Credits/Maximum of 2

Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 171: French Horn: Primary II

2 Credits/Maximum of 2

Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 172: Trombone: Primary II

2 Credits/Maximum of 2

Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 173: Euphonium: Primary II

2 Credits/Maximum of 2

Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 174: Tuba: Primary II

2 Credits/Maximum of 2

Individual instruction in tuba one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 180: Trumpet: Performance II

3 Credits/Maximum of 3

Individual instruction in trumpet one hour per week. For B.Mus. trumpet performance majors.

BRASS 181: French Horn: Performance II

3 Credits/Maximum of 3

Individual instruction in French horn one hour per week. For B.Mus. French horn performance majors.

BRASS 182: Trombone: Performance II

3 Credits/Maximum of 3

Individual instruction in trombone one hour per week. For B.Mus. trombone majors.

BRASS 183: Euphonium: Performance II

3 Credits/Maximum of 3

Individual instruction in euphonium/baritone one hour per week. For B.Mus. euphonium/baritone majors.

BRASS 184: Tuba: Performance II

3 Credits/Maximum of 3

Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

BRASS 220: Trumpet: Primary III

2 Credits/Maximum of 2

Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors.

BRASS 221: French Horn: Primary III

2 Credits/Maximum of 2

Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors.

BRASS 222: Trombone: Primary III

2 Credits/Maximum of 2

Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors.

BRASS 223: Euphonium: Primary III

2 Credits/Maximum of 2

Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors.

BRASS 224: Tuba: Primary III

2 Credits/Maximum of 2

Individual instruction in tuba one hour per week. For School of Music B.A. and B. S. majors.

BRASS 230: Trumpet: Performance III

3 Credits/Maximum of 3

Individual instruction in trumpet one hour per week. For B.Mus. trumpet performance majors.

BRASS 231: French Horn: Performance III

3 Credits/Maximum of 3

Individual instruction in French horn one hour per week. For B.Mus. French horn performance majors.

BRASS 232: Trombone: Performance III

3 Credits/Maximum of 3

Individual instruction in trombone one hour per week. For B.Mus. trombone majors.

BRASS 233: Euphonium: Performance III

3 Credits/Maximum of 3

Individual instruction in euphonium/baritone one hour per week. For B.Mus. euphonium/baritone majors.

BRASS 234: Tuba: Performance III

3 Credits/Maximum of 3

Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

BRASS 270: Trumpet: Primary IV

2 Credits/Maximum of 2

Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 271: French Horn: Primary IV

2 Credits/Maximum of 2

Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 272: Trombone: Primary IV

2 Credits/Maximum of 2

Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 273: Euphonium: Primary IV

2 Credits/Maximum of 2

Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 274: Tuba: Primary IV

2 Credits/Maximum of 2

Individual instruction in tuba one hour per week. For School of Music B.A. and B.S. majors.

BRASS 280: Trumpet: Performance IV

3 Credits/Maximum of 3

Individual instruction in trumpet one hour per week. For B.Mus. trumpet performance majors.

BRASS 281: French Horn: Performance IV

3 Credits/Maximum of 3

Individual instruction in French Horn one hour per week. For B.Mus. French Horn performance majors.

BRASS 282: Trombone: Performance IV

3 Credits/Maximum of 3

Individual instruction in trombone one hour per week. For B.Mus. trombone majors.

BRASS 283: Euphonium: Performance IV

3 Credits/Maximum of 3

Individual instruction in euphonium/baritone one hour per week. For B.Mus euphonium/baritone majors.

BRASS 284: Tuba: Performance IV

3 Credits/Maximum of 3

Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

BRASS 320: Trumpet: Primary V

2 Credits/Maximum of 2

Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors.

BRASS 321: French Horn: Primary V

2 Credits/Maximum of 2

Individual instruction in French Horn one hour per week. For School of Music B.A. and B.S. majors.

BRASS 322: Trombone: Primary V

2 Credits/Maximum of 2

Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors.

BRASS 323: Euphonium: Primary V

2 Credits/Maximum of 2

Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors.

BRASS 324: Tuba: Primary V

2 Credits/Maximum of 2

Individual instruction in tuba one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 330: Trumpet: Performance V

3 Credits/Maximum of 3

Individual instruction in trumpet one hour per week. For B.Mus. trumpet performance majors.

BRASS 331: French Horn: Performance V

3 Credits/Maximum of 3

Individual instruction in French horn one hour per week. For B.Mus. French horn performance majors.

BRASS 332: Trombone: Performance V

3 Credits/Maximum of 3

Individual instruction in trombone one hour per week. For B.Mus. trombone majors.

BRASS 333: Euphonium: Performance V

3 Credits/Maximum of 3

Individual instruction in euphonium/baritone one hour per week. For B.Mus. euphonium/baritone majors.

BRASS 334: Tuba: Performance V

3 Credits/Maximum of 3

Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

BRASS 370: Trumpet: Primary VI

2 Credits/Maximum of 2

Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 371: French Horn: Primary VI

2 Credits/Maximum of 2

Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 372: Trombone: Primary VI

2 Credits/Maximum of 2

Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 373: Euphonium: Primary VI

2 Credits/Maximum of 2

Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 374: Tuba: Primary VI

2 Credits/Maximum of 2

Individual instruction in tuba one hour per week. For School of Music B.A. and B.S. majors.

BRASS 380: Trumpet: Performance VI

3 Credits/Maximum of 3

Individual instruction in trumpet one hour per week. For B.Mus. trumpet performance majors.

BRASS 381: French Horn: Performance VI

3 Credits/Maximum of 3

Individual instruction of French horn one hour per week. For B.Mus. French horn performance majors.

BRASS 382: Trombone: Performance VI

3 Credits/Maximum of 3

Individual instruction in trombone one hour per week. For B.Mus. trombone majors.

BRASS 383: Euphonium: Performance VI

3 Credits/Maximum of 3

Individual instruction in euphonium/baritone one hour per week. For B.Mus. euphonium/baritone majors.

BRASS 384: Tuba: Performance VI

3 Credits/Maximum of 3

Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

BRASS 420: Trumpet: Primary VII

2 Credits/Maximum of 2

Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors.

BRASS 421: French Horn: Primary VII

2 Credits/Maximum of 2

Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors.

BRASS 422: Trombone: Primary VII

2 Credits/Maximum of 2

Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors.

BRASS 423: Euphonium: Primary VII

2 Credits/Maximum of 2

Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 424: Tuba: Primary VII

2 Credits/Maximum of 2

Individual instruction in tuba one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

BRASS 430: Trumpet: Performance VII

3 Credits/Maximum of 3

Individual instruction in trumpet one hour per week. For B.Mus. trumpet performance majors.

BRASS 431: French Horn: Performance VII

3 Credits/Maximum of 3

Individual instruction in French horn one hour per week. For B.Mus. French horn performance majors.

BRASS 432: Trombone: Performance VII

3 Credits/Maximum of 3

Individual instruction in trombone one hour per week. For B.Mus. trombone majors.

BRASS 433: Euphonium: Performance VII

3 Credits/Maximum of 3

Individual instruction in euphonium/baritone one hour per week. For B.Mus. euphonium/baritone majors.

BRASS 434: Tuba: Performance VII

3 Credits/Maximum of 3

Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

BRASS 470: Trumpet: Primary VIII

2 Credits/Maximum of 2

Individual instruction in trumpet one hour per week. For School of Music B.A. and B.S. majors.

BRASS 471: French Horn: Primary VIII

2 Credits/Maximum of 2

Individual instruction in French horn one hour per week. For School of Music B.A. and B.S. majors.

BRASS 472: Trombone: Primary VIII

2 Credits/Maximum of 2

Individual instruction in trombone one hour per week. For School of Music B.A. and B.S. majors.

BRASS 473: Euphonium: Primary VIII

2 Credits/Maximum of 2

Individual instruction in euphonium/baritone one hour per week. For School of Music B.A. and B.S. majors.

BRASS 474: Tuba: Primary VIII

2 Credits/Maximum of 2

Individual instruction in tuba one hour per week. For School of Music B.A. and B.S. majors.

BRASS 480: Trumpet: Performance VIII

3 Credits/Maximum of 3

Individual instruction in trumpet one hour per week. For B.Mus. trumpet performance majors.

BRASS 481: French Horn: Performance VIII

3 Credits/Maximum of 3

Individual instruction in French horn one hour per week. For B.Mus. French horn performance majors.

BRASS 482: Trombone: Performance VIII

3 Credits/Maximum of 3

Individual instruction in trombone one hour per week. For B.Mus. trombone majors.

BRASS 483: Euphonium: Performance VIII

3 Credits/Maximum of 3

Individual instruction in euphonium/baritone one hour per week. For B.Mus. euphonium/baritone majors.

BRASS 484: Tuba: Performance VIII

3 Credits/Maximum of 3

Individual instruction in tuba one hour per week. For B.Mus. tuba majors.

Music-Jazz (JAZZ)

JAZZ 100: Jazz Performance Studies

1 Credits/Maximum of 8

Jazz Performance provides individual instruction for vocal and instrumental musicians to develop theoretical, technical, and aural skills required by selected jazz performance styles. The style(s) to be studied are agreed upon between the student and instructor; these are drawn from Blues, Dixieland, Swing, Bebop, Cool Jazz, Modal Jazz, Jazz-Rock Fusion. The initial third of the semester is devoted to studying the technical norms of a given style: melodic materials (scales, modes), harmonic structure (vocabulary, norms of harmonic motion), characteristic rhythmic practices (with particular attention to syncopation), special aural requirements (the ability to connect musical hearing and musical thought) and typical frameworks of contrapuntal organization in the appropriate types of ensemble. The final two thirds of the course then deal with applications of these materials in improvisational contexts, with a short section during the last two weeks devoted to developing keyboard skills, an important area of musical competence for any jazz performer. This course is appropriate for any music major or minor with an interest in jazz. Instruction will be delivered in one half-hour lesson per week. Occasional performance in a combo will be a regular part of the course. Applied music fees are required for individualized instruction: \$175 for 1-credit course; \$250 for a 2-credit course

JAZZ 110: Jazz Performance Studies

2 Credits/Maximum of 16

Jazz Performance provides individual instruction for vocal and instrumental musicians to develop theoretical, technical, and aural skills required by selected jazz performance styles. The style(s) to be studied are agreed upon between the student and instructor; these are drawn from Blues, Dixieland, Swing, Bebop, Cool Jazz, Modal Jazz, Jazz-Rock Fusion. The initial third of the semester is devoted to studying the technical norms of a given style: melodic materials (scales, modes), harmonic structure (vocabulary, norms of harmonic motion), characteristic rhythmic practices (with particular attention to syncopation), special aural requirements (the ability to connect musical hearing and musical thought) and typical frameworks of contrapuntal organization in the appropriate types of ensemble. This course is appropriate for any music major or minor with an interest in jazz. Instruction will be delivered in one hour-long lesson per week. Occasional performance in a combo will be a regular part of the course. Applied music fees are required for individualized instruction: \$175 for a 1-credit course; \$250 for a 2-credit course

Music-Keyboard (KEYBD)

KEYBD 100: Piano: Secondary

1 Credits/Maximum of 8

Individual instruction in piano one-half hour per week. KEYBD 100 Piano: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. KEYBD 100 is designed to provide the intermediate non-music major and/or music major student with strategies for developing some of the advanced skills required for playing the piano. Some knowledge of music or piano is assumed. Admission to the course is controlled by the piano faculty. Music 50, 51 (for non-music majors), completion of the piano proficiency (for music majors), or permission of the instructor is a prerequisite for this course. Students learn repertoire, sight-playing, score analysis, interpretive techniques, how to practice to the fullest possible communication of the composer's intent, scales, and a proper and healthy physical approach to the keyboard. Practice of these elements outside the class is expected. Objectives include learning score analysis and interpretive rendering of great masterworks of the piano. Evaluation is based on accuracy of music learning, improvement in technique and expressiveness, possible listening assignments, attendance at studio class and specific concerts. Special facilities required to teach the course are two well-maintained grand pianos for student performance and teacher demonstration. The course is offered every semester.

Music-Percussion (PERCN)

PERCN 100: Percussion: Secondary

1 Credits/Maximum of 8

Individual instruction in percussion one-half hour per week. For both music and non-music majors. PERCN 100 Percussion: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course consists of private instruction in selected areas of percussion performance. Individualized instruction will guide the student toward competence playing the instrument(s), the study of appropriate repertoire, developing interpretive insights, acquisition of music reading skills, and acquiring both tonal and technical command. Skill building will enable the student to be active as a performer, participating in Penn State music ensembles by competitive audition. Evaluation of the student's progress will be graded by the instructor according to the criteria stated in the course syllabus and will include: preparation of weekly assignments; solo and/or ensemble performances as assigned; attendance at recitals, concerts, and masterclasses, as assigned; acquisition of assigned material (music, etude books, etc.), essential accessories (metronome, practice pad, etc.), and appropriate instrumental needs (sticks, mallets, small instruments, etc.); attendance at lessons (as stipulated in the course syllabus). The course is offered fall and spring semesters by permission of the instructor, depending on studio enrollments and availability of staff.

Individual instruction in percussion one hour per week. For School of Music B.A. and B.S. majors.

PERCN 230: Percussion: Performance III

3 Credits

Individual instruction in percussion one hour per week. For B.Mus. percussion majors.

PERCN 270: Percussion: Primary IV

2 Credits

Individual instruction in percussion one hour per week. For School of Music B.A. and B.S. majors.

PERCN 280: Percussion: Performance IV

3 Credits

Individual instruction in percussion one hour per week. For B.Mus. percussion majors.

PERCN 320: Percussion: Primary V

2 Credits

Individual instruction in percussion one hour per week. For School of Music B.A. and B.S. majors.

PERCN 330: Percussion: Performance V

3 Credits

Individual instruction in percussion one hour per week. For B.Mus. percussion majors.

PERCN 370: Percussion: Primary VI

2 Credits

Individual instruction in percussion one hour per week. For School of Music B.A. and B.S. majors.

PERCN 380: Percussion: Performance VI

3 Credits

Individual instruction in percussion one hour per week. For B.Mus. percussion majors.

PERCN 420: Percussion: Primary VII

2 Credits

Individual instruction in percussion one hour per week. For School of Music B.A. and B.S. majors.

PERCN 430: Percussion: Performance VII

3 Credits

Individual instruction in percussion one hour per week. For B.Mus. percussion majors.

PERCN 470: Percussion: Primary VIII

2 Credits

Individual instruction in percussion one hour per week. For School of Music B.A. and B.S. majors.

PERCN 480: Percussion: Performance VIII

3 Credits

Individual instruction in percussion one hour per week. For B.Mus. percussion majors.

Music-Strings (STRNG)

STRNG 100: Violin: Secondary

1 Credits/Maximum of 8

Individual instruction in violin one-half hour per week. STRNG 100 Violin: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to introduce, define, and develop the musical and technical skills required to play the violin in a variety of musical contexts. Fundamentals of technique are addressed through the study of scales and other technical studies or etudes. These are then applied in various musical settings, including solo, chamber, and orchestral works. Students receive one-half hour of private instruction per week. The course is open to Music majors and nonmajors and is offered every semester. Enrollment can range from 10-20 students per semester.

Bachelor of Arts: Arts
 General Education: Arts (GA)
 GenEd Learning Objective: Creative Thinking
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

STRNG 101: Viola: Secondary

1 Credits/Maximum of 8

Individual instruction in viola one-half hour per week. STRNG 101 Viola: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to introduce, define, and develop the musical and technical skills required to play the viola in a variety of musical contexts. Fundamentals of technique are addressed through the study of scales and other technical studies or etudes. These are then applied in various musical settings, including solo, chamber, and orchestral works. Students receive one-half hour of private instruction per week. The course is open to Music majors and non-majors and is offered every semester. Enrollment can range from 1-10 students per semester.

Bachelor of Arts: Arts

STRNG 120: Violin: Primary I

2 Credits

Individual instruction in violin one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 121: Viola: Primary I

2 Credits

Individual instruction in viola one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 122: Violoncello: Primary I

2 Credits

Individualized instruction in violoncello one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 123: Double Bass: Primary I

2 Credits

Individual instruction in double bass one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

STRNG 124: Guitar: Primary I

2 Credits

Individual instruction in guitar one hour per week. For School of Music B.A. majors; other qualified students. STRNG 124J Guitar: Primary I (2)
Individual instruction in guitar one hour per week. For music majors in the BA program.

STRNG 125: Harp: Primary I

2 Credits

Individual instruction in harp one hour per week. STRNG125 Harp: Primary(1 per semester/maximum of 8) Individualized instruction will guide the student toward mastery of the instrument, the study of repertoire, development of interpretive insights, and acquisition of both tonal and technical command. Skill building will enable the student to be active as a performer, participating in Penn State ensembles by competitive audition. Evaluation of the student's progress will be graded by the instructor according to the criteria stated in the course syllabus and will include: preparation of weekly assignments; solo and/or ensemble performances as assigned; attendance at recitals, concerts, and masterclasses, as assigned; acquisition of assigned materials (music, books, etc.), essential accessories (metronome, tuner, etc.); attendance at lessons (as stipulated in the course syllabus) and a performance jury exam at the end of the semester. The course is offered fall and spring semesters by permission of the instructor, depending on studio enrollments and availability of staff.

Prerequisite: Permission of Program

STRNG 130: Violin: Performance I

3 Credits

Individual instruction in violin one hour per week. For B.Mus. violin performance majors.

STRNG 131: Viola: Performance I

3 Credits

Individual instruction in viola one hour per week. For B.Mus. guitar performance majors.

STRNG 132: Violoncello: Performance I

3 Credits

Individual instruction in violoncello one hour per week. For B.Mus. violoncello performance majors.

STRNG 133: Double Bass: Performance I

3 Credits

Individual instruction in double bass one hour per week. For B.Mus. double bass performance majors.

STRNG 134: Guitar: Performance I

3 Credits

Individual instruction in guitar one hour per week. For B.Mus. guitar performance majors. The study of technique and musical interpretation on the guitar. Grounded in classical guitar pedagogy, yet delving into Jazz & Latin styles as well.

STRNG 170: Violin: Primary II

2 Credits

Individual instruction in violin one hour per week. For School of Music B.A. and B.S. majors; other qualified students.

3 Credits

Individual instruction in voice one hour per week. For B.Music voice performance majors.

VOICE 270: Voice: Primary IV

2 Credits

Individual instruction in voice one hour per week. For School of Music B.A. and B.S. majors.

VOICE 280: Voice: Performance IV

3 Credits

Individual instruction in voice one hour per week. For B.Mus. voice performance majors.

VOICE 320: Voice: Primary V

2 Credits

Individual instruction in voice one hour per week. For School of Music B.A. and B.S. majors.

VOICE 330: Voice: Performance V

3 Credits

Individual instruction in voice one hour per week. For B.Mus. voice performance majors.

VOICE 370: Voice: Primary VI

2 Credits

Individual instruction in voice one hour per week. For School of Music B.A. and B.S. majors.

VOICE 380: Voice: Performance VI

3 Credits

Individual instruction in voice one hour per week. For B.Mus. voice performance majors.

VOICE 412: Musical Theatre Voice V

2 Credits

Individual instruction in voice. Intended for Theatre BFA in Music Theatre students. VOICE 412J Musical Theatre Voice V (2) VOICE 412J continues to develop a vocal approach and technique to musical theatre repertoire. It is required of fourth-year musical theatre students. All aspects of vocal production are explored. The voice sequence is a required element of the B.F.A. musical theatre training program. Grading will be based on attendance, preparation, and attitude. These are all critical factors for entering the profession and for successfully completing this course. Deadlines and appointments must be kept. Students must do adequate outside preparation. VOICE 412J is a requirement for the B.F.A. in musical theatre. It is offered every fall semester with an enrollment of approximately 15 students.

VOICE 420: Voice: Primary VII

2 Credits

Individual instruction in voice one hour per week. For School of Music B.A. and B.S. majors.

VOICE 430: Voice: Performance VII

3 Credits

Individual instruction in voice one hour per week. For B.Mus. voice performance majors.

VOICE 462: Musical Theatre Voice VI

2 Credits

Individual instruction in voice. Intended for Theatre BFA in Music Theatre students. VOICE 462J Musical Theatre Voice VI (2) VOICE 462J continues to develop a vocal approach and technique to musical theatre repertoire studied in Musical Theatre Voice V. It is required of fourth-year musical theatre students. All aspects of vocal production are explored. The voice sequence is a required element of the B.F.A musical theatre training program. Grading will be based on attendance, preparation, and attitude. These are all critical factors for entering the profession and for successfully completing this course. Deadlines and appointments must be kept. Students must do adequate outside preparation. This course is a requirement for the B.F.A. in musical theatre. It is offered every spring semester with an enrollment of approximately 15.

VOICE 470: Voice: Primary VIII

2 Credits

Individual instruction in voice one hour per week. For School of Music B.A. and B.S. majors.

VOICE 480: Voice: Performance VIII

3 Credits

Individual instruction in voice one hour per week. For B.Mus. voice performance majors.

Music-Woodwinds (WWNDS)

WWNDS 100: Flute: Secondary

1 Credits/Maximum of 8

Individual instruction in flute one-half hour per week. For both music and non-music majors. WWNDS 100 Flute: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Individualized instruction will guide the student toward mastery of the instrument, the study of repertoire, the development of interpretive insights, and acquisition of both tonal and technical command. Skill building will enable the student to be active as a performer, participating in Penn State ensembles by competitive audition. Evaluation of the student's progress will be graded by the instructor according to the criteria stated in the course syllabus and will include: preparation of weekly assignments; solo and/or ensemble performances as assigned; attendance at recitals, concerts, and masterclasses, as assigned; acquisition of assigned materials (music, books, etc.), essential accessories (metronome, tuner, etc.); attendance at lessons (as stipulated in the course syllabus). The course is offered fall and spring semesters by permission of the instructor, depending on studio enrollments and availability of staff.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

WWNDS 101: Oboe: Secondary

1 Credits/Maximum of 8

Individual instruction in oboe one-half hour per week. For both music and non-music students. WWNDS 101 OBOE: Secondary (1 per semester/maximum of 8) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Individualized instruction will guide the student toward mastery of the instrument, the study of repertoire, development of interpretive insights, and acquisition of both tonal and technical command. Skill building will enable the student to be active as a performer, participating in Penn State ensembles by competitive audition. Evaluation of the student's progress will be graded by the instructor according to the criteria stated in the course syllabus and will include: preparation of weekly assignments; solo and/or ensemble performances as assigned; attendance at recitals, concerts, and masterclasses, as assigned; acquisition of assigned materials (music, books, etc.), essential accessories (metronome, tuner, etc.); attendance at lessons (as stipulated in the course syllabus). Individual instruction in clarinet one hour per week. For B.Mus. clarinet majors.

WWNDS 483: Bassoon: Performance VIII

3 Credits

Individual instruction in bassoon one hour per week. For B.Mus. bassoon performance majors.

WWNDS 484: Saxophone: Performance VIII

3 Credits

Individual instruction in saxophone one hour per week. For B.Mus. saxophone performance majors.

Naval Science (NAVSC)

NAVSC 101: Introduction to Naval Science

3 Credits

Introduction to naval organization, customs, military law, ships, aircraft, and Marine Corps and Navy career paths. NAVSC 101 Introduction to Naval Science (3) The curriculum for Introduction to Naval Science is designed to provide midshipmen and interested university students a broad overview of the United States Navy and Marine Corps, their missions, organization, customs, traditions and the duties required of today's junior officers. It also provides each student with basic information concerning shipboard procedures, safety, damage control and organization. In addition, this course teaches Department of Defense and Navy policies providing students the start-point to succeed as future naval officers.

NAVSC 102: Sea Power and Maritime Affairs

3 Credits

Historical evolution of sea power and its effects on world history; current U.S. maritime strategy for employment of naval forces. NAVSC 201 Sea Power and Maritime Affairs (3) The curriculum for Sea Power and Maritime Affairs provides a U.S. Naval history survey emphasizing major developments in strategy, tactics, technology and the effects of political climate thereon. Primary topics include: significant naval engagements and milestones, prominent leaders and their contributions, the role of sea power in national policy and diplomacy in both peacetime and war through the present day. The course also studies Mahan's naval strategy along with the effects of maritime policy on global stability and the importance of Joint Warfare and power projection.

NAVSC 200: Leadership and Management

3 Credits

Managerial thought and behavioral theories, with emphasis on how they apply to the naval organization. NAVSC 103 Leadership and Management (3) The curriculum for Leadership and Management provides the basis for the development of effective leadership and managerial competence. Underscoring interactive learning and designed to be taught by experienced, commissioned officers of the U.S. Navy and Marine Corps in order to provide Fleet-based examples, this course examines fundamental tenets of leadership and management in the context of the theories and principles of individual and group leadership with emphasis on how they apply to naval forces. Topics include self-leadership, self-management and team leadership while students refine and further develop their understanding of personal strengths, values and growth opportunities in the context of team, group and organizational leadership,

as well as through the creation of a leadership vision and professional development plan. Students will develop knowledge, abilities and skills that will assist them as future officers to successfully operate in the context of complex military environments around the globe

NAVSC 202: Naval Ships Systems I–Naval Engineering

3 Credits

Principles and applications of engineering concepts to ship construction, stability, and propulsion and auxiliary systems. NAVSC 202 Naval Ships Systems I-Naval Engineering (3) The Naval Ships Systems I: Naval Engineering curriculum educates students on the construction and operation of naval ships, submarines, and aircraft exploring and discussing principles and applications of engineering concepts with regards to construction, stability, propulsion and auxiliary systems. Taught by an experienced naval officer, this course is designed to assist in the professional development of future leaders in the U.S. Navy. A background in calculus and physics is recommended as the student will perform various assignments in thermodynamics, fluid dynamics and nuclear fundamentals. Emphasis on theory-to-practice will be demonstrated throughout the curriculum and students will receive live demonstrations of engineering examples.

NAVSC 301: Naval Ships Systems II–Weapons

3 Credits

An analysis of electromagnetic wave theory, principles of underwater sound propagation, electro-optic theory, and weapons control systems. NAVSC 301 Naval Ships Systems II-Weapons (3) A continuation of Naval Ships Systems I: Naval Engineering, Naval Ships Systems II: Weapons educates students on the employment and basic operation of military weaponry and fire control technology. An analysis of electromagnetic wave theory, principles of underwater sound propagation, electro-optic theory and weapons control systems establishes the student's basic understanding and prepares them for a future career as a naval officer. Students will routinely participate in small group discussions over practical application of weapon technology and trends in future design. The course will culminate with a final project of the student's choosing over a germane topic.

Prerequisite: NAVSC 202

NAVSC 302: Navigation

3 Credits

Theory and principles of all types of piloting and navigation, including a practicum emphasizing correct documentation and plotting. NAVSC 302 Navigation (3) The curriculum for Navigation provides the basis for maritime focused ship piloting. Designed to be taught by a commissioned officer in the U.S. Navy with a Surface Warfare background, the course focuses on the theory and principles of various types of piloting and navigation while employing numerous practical exercises and case studies to aid learning. Primary topics of study include: Precision visual and electronic piloting, tides and currents, maneuvering boards and relative motion theory, international piloting laws and best practices.

NAVSC 313: Fundamentals of Maneuver Warfare

3 Credits

The purpose of this course is to introduce the student to the foundational concepts and history of the United States Marine Corps and its place in

history as a Maneuver Warfighting Organization. It is a theoretical class that utilizes both historical examples from previous military operations as well as current doctrine, developing an individual who is both a critical thinker and scholar in the profession of arms. The goal is to educate the student to read military history analytically, not to memorize facts. The foundation for the course occurs in Module One - Fundamental concepts and Themes. Module Two lays out the doctrine of maneuver warfare and Module Three describes the future of the Marine Corps and how it will continue to apply and advance the maneuver warfare philosophy and concept. While it is important for the students to read and understand historical case studies, it is more important that they comprehend and be able to assess the foundational principles therein. The ultimate aim of this class is to bolster the student's professional development; creating officers that can think in a dynamic, rapidly deteriorating situation while maintaining an analytical approach to problem solving.

NAVSC 401: Naval Operations and Seamanship

3 Credits

Introduction to naval operations; the theory and principles of the rules of the road; use of the maneuvering board. NAVSC 401 Naval Operations and Seamanship (3) The curriculum for Naval Operations and Seamanship provides for an in-depth study of shipboard procedures in the United States Navy. Designed to be taught by a warfare qualified commissioned officer in the U.S. Navy, the course focuses on advanced navigational practices, communications, naval warfare doctrine, joint operations and advanced shipboard evolutions. The course is primarily lecture based, but also employs practical laboratories and case studies to reinforce advanced topics.

Prerequisite: NAVSC 302

NAVSC 402: Leadership and Ethics

3 Credits

The Navy's Resource Management Program (personnel management), counseling techniques, military justice, prevention of substance abuse, and naval correspondence and publications. NAVSC 402 Leadership and Ethics II (3) NAVSCI 402 Leadership and Ethics (3) - A capstone course building upon the foundation of previous Naval Science courses, Leadership and Ethics ensures students have a solid understanding of and an appreciation for ethical standards and decision making. It provides midshipmen with the ethical foundation and basic leadership tools needed to be effective junior officers and provide the high quality leadership our country and Department of Defense will need in the 21st Century. The curriculum is divided into two distinct but overlapping sections; the first focused on ethical theory and major Western ethical philosophy followed by the practical application of leadership as it pertains to a junior officer's duties and responsibilities. Ethical theory is introduced in an academic, discussion-oriented format in order to provide midshipmen with a solid foundation and understanding of various moral, ethical and leadership philosophies. This serves to guide, refine and strengthen a junior officer's character and increase one's awareness of different ethical decision-making tools. The latter portion of the course challenges the midshipmen to apply the first part of the course (i.e. ethical leadership theory) in discussions and practical application exercises of their future duties, responsibilities and expectations of a junior officer in the United States Navy or Marine Corps. Extensive use of case studies throughout the curriculum reinforces the importance of ethical decision-making by naval leaders.

Prerequisite: NAVSC 200 and (NAVSC 401 or 411)

NAVSC 411: Evolution of Warfare

3 Credits

The purpose of the Evolution of Warfare course is to provide the Marine student with a basic understanding of the art, science, and concepts of warfare. The flow of the course starts with USMC warfare theory foundations (MCDP-1 Warfighting) to ensure students are introduced to concepts that are integral to being a Marine Corps officer. Next, the course presents historical battles that present a notable progression in warfare. These periods illuminate the effects of both innovative and stale leadership and the resulting major transformations in warfare. Each battle study relates doctrine (tactics, techniques, and procedures - TTPs), organization, training, material (equipment), leadership, and personnel; to the leadership decisions made by the commanders. Each student will be challenged to view warfare not through the lens of a historian but as a military professional. Furthermore, the curriculum laces modern day shifts in warfare with sections for irregular and cyber warfare. The course then proceeds to relate these teachings to today's USMC doctrine, thus coming full circle with the introductory section. Moving forward, the courseware then shifts to cover the basics of Marine Corps amphibious doctrine. This doctrine is then used as a lens to analyze amphibious case studies from ancient through modern times. Finally, the course conducts an in-depth analysis of OIF bringing the course to a fitting, contemporary conclusion that uses everything learned in the course thus far thereby ensuring the student's mastery of the material.

Prerequisite: 6 credits of Navy ROTC courses

Nuclear Engineering (NUCE)

NUCE 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NUCE 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

NUCE 301: Fundamentals of Reactor Physics

4 Credits

Nuclear reactions and interactions relevant to nuclear engineering including fission, cross-sections, reaction rate calculations, energy deposition rates, and radioactive decay. This course is designed to acquaint junior-level undergraduate students with knowledge essential to the reactor physics and nuclear reactor systems. Students will learn nuclear reactions including radioactive decay, fission and fusion, reaction rates, energy deposition rates, various nuclear systems, and introductory diffusion theory.

Enforced Prerequisite at Enrollment: MATH 251 Enforced Concurrent at Enrollment: (MATH 230 or MATH 232) and PHYS 214

NUCE 302: Introduction to Reactor Design

4 Credits

Static and dynamic reactor theory applied to basic reactor design problems.

Enforced Prerequisite at Enrollment: NUCE 301 and NUCE 309

NUCE 309: Analytical Techniques for Nuclear Concept

3 Credits

This course is structured to provide students with the necessary analytical techniques and terminology for radiation science, nuclear reactor design, and power system simulation. Students will be taught the basic mathematical methods needed for such topics as simplified reactor physics, fluid mechanics, heat and mass transfer, control theory, shielding, radiation detection, fission product decay, and risk assessment. The course will cover four general mathematical areas: partial differential equations, linear algebra, systems of ordinary differential equations, and probability and statistics. Linear ordinary differential equations are solved using Reduction to Separable Form, Superposition of Solutions, Laplace Transforms, and Numerical Methods. Linear partial differential equations are solved using Separation of Variables. Linear algebra is used to solve sets of linear equations, Least Squares Fit, and Finite Difference Methods. Eigenvalues and Eigenvectors found for a matrix are used to rotate a function to principle coordinates and to solve systems of ordinary differential equations. Probability and statistics includes sampling, permutations and combinations, binomial, Poisson, hypergeometric, and normal distributions. These statistical methods are then applied to radiation counting statistics.

Enforced Prerequisite at Enrollment: MATH 251 Enforced Concurrent at Enrollment: MATH 230 or MATH 232

NUCE 310W: Issues in Nuclear Engineering

2 Credits

Societal and technical issues facing nuclear engineers, including safety, operations, waste, regulation, public acceptance, economics, ethics, and radiation.

Enforced Prerequisite at Enrollment: Fifth-semester standing Writing Across the Curriculum

NUCE 321: Introduction to Thermal-Fluid Sciences for Nuclear Engineers - I

3 Credits

This course is intended to provide nuclear engineers with fundamentals in thermal-fluid sciences. This course is designed to develop an understanding of thermodynamic concepts and their application to nuclear thermal-fluid systems such as nuclear reactors and power plants. The course also emphasizes the study of fundamental principles of fluid mechanics including mass, energy and momentum conservation and their applications in nuclear engineering systems.

Enforced Prerequisite at Enrollment: CHEM 110 Enforced Concurrent at Enrollment: EMCH 212 and MATH 251 and (MATH 230 or MATH 231)

NUCE 322: Introduction to Thermal-Fluid Sciences for Nuclear Engineers - II

3 Credits

This course is intended to provide nuclear engineers with fundamentals in thermal-fluids sciences. The course starts with an introduction of Similitude and Dimensional analysis (Buckingham Pi Theorem) and its application of fluid dynamics and heat transfer. Internal and external flows are reviewed, including the evaluation of friction losses. Finally, the course covers the fundamentals of heat transfer. While maintaining generality, throughout the course topics of greater importance in nuclear engineering are emphasized. These include in particular: pressure drop in internal flows, conduction in cylindrical geometries, convection heat transfer and heat exchanger design. Moreover, the connection to nuclear engineering applications is emphasized.

Enforced Prerequisite at Enrollment: NUCE 321 or ME 320

NUCE 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NUCE 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

NUCE 401: Introduction to Nuclear Engineering

3 Credits

Fundamental concepts of nuclear engineering, including fission, reactor theory, shielding, and radioisotopes; intended for other than nuclear engineering students.

Enforced Prerequisite at Enrollment: MATH 250 or MATH 251

NUCE 403: Advanced Reactor Design

3 Credits

Physical principles and computational methods for reactor analysis and design. Multigroup diffusion theory; determination of fast and thermal group constants; cell calculations for heterogeneous core lattices.

Enforced Prerequisite at Enrollment: NUCE 302

NUCE 403H: Advanced Reactor Design

3 Credits

Physical principles and computational methods for reactor analysis and design. Multigroup diffusion theory; determination of fast and thermal group constants; cell calculations for heterogeneous core lattices.

Honors

NUCE 405: Nuclear and Radiochemistry

3 Credits

Theory of radioactive decay processes, nuclear properties and structure, nuclear reactions, interactions of radiation with matter, biological effects of radiation. CHEM 406 Nuclear and Radiochemistry (3) CHEM 406 provides a basic introduction to many of the important physical phenomena in nuclear and radiochemistry and the theories that describe them. The exposition of both experimental phenomena and theory complements the content of other upper-level courses in physical chemistry such as CHEM 450 and 452. Specifically, the types of radioactive decay are described, and, using this information, the equations that relate the growth and decay, i. e., the kinetics, of radioactive nuclei are derived. In parallel, a variety of types of nuclear reactions, such as neutron capture are introduced and used to develop the equations that governing the kinetics of nuclear reactions, including the concept of cross section. To describe the nature of nuclear matter, the relationships between energy, binding energy, and mass, are developed and augmented with the introduction of related quantities including the nuclear magnetic-dipole moment, total angular momentum of the nucleus, and Fermi-Dirac and Bose-Einstein statistics. A basic introduction to quantum mechanics, including several problems of increasing complexity, namely, the one-dimensional particle-in-a-box, the three-dimensional particle-in-a-cubic-box, and the particle-in-a-spherical box is then provided. The latter problem forms the basis for developing the single-particle shell-model of the nucleus, which is compared to the single-particle shell-model of the atom, namely, the hydrogen-atom problem. The barrier-penetration theory of alpha-decay, Fermi's phase-space theory of beta-decay, and the selection rules for gamma-ray decay are then presented. Final topics include the interactions of radiation with matter and the biological effects of radiation.

Enforced Prerequisite at Enrollment: CHEM 452 or PHYS 237 or NUCE 301

Cross-listed with: CHEM 406

NUCE 406: Introduction to Statistical Thermodynamics

3 Credits

Statistical description of systems composed of large numbers of particles in the context of classical and quantum mechanics; basic concepts of probability theory and thermodynamics as they relate to statistical mechanics. M E (NUC E) 406 Introduction to Statistical Thermodynamics (3) This course is an introduction to probabilistic and statistical concepts in the physical sciences, which we refer to as 'statistical thermodynamics.' In areas such as design and processing of electronic devices, materials engineering, chemical engineering, and combustion engineering, the science of statistical mechanics is a particularly necessary, powerful, and important tool for the engineer. The underlying foundation of statistical mechanics is developed by (1) reviewing the basic ideas from probability theory, (2) deriving the binomial, Poisson, and Gaussian probability distributions, and (3) using these models to analyze several examples taken from science and engineering. To make a connection between macroscopic quantities and the corresponding probabilistic representation, classical thermodynamics is reviewed using the internal energy, entropy, and free energy functions in the context of the first and second laws. Statistical mechanics for classical and quantum-mechanical systems is presented via the micro-canonical, canonical, and grand canonical ensembles using the associated partition functions. During the syntheses of ideas, applications from various branches of science are presented. Some

examples of applications are the Einstein crystal, the Debye crystal, the ideal gas, and black body radiation. This course covers the following program objectives: 1. Demonstrate knowledge of basic chemistry and physics. 2. Demonstrate a knowledge of atomic and nuclear physics. 3. Demonstrate a knowledge of thermodynamics, heat transfer, and fluid flow. 4. Understand and apply the basic concepts of particle transport. 5. Understand and apply thermodynamics and heat transfer principles to the analysis of nuclear power components and systems.

Enforced Prerequisite at Enrollment: (ME 300 or ME 201) and (MATH 230 or MATH 231)

Cross-listed with: ME 406

NUCE 408: Radiation Shielding

3 Credits

Radiation sources in reactor systems; attenuation of gamma rays and neutrons; point kernel methods; deep penetration theories; Monte Carlo methods.

Enforced Prerequisite at Enrollment: NUCE 301

NUCE 409: Nuclear Materials

3 Credits

Nuclear reactor materials: relationship between changes in material properties and microstructural evolution of nuclear cladding and fuel under irradiation. NUC E (MATSE) 409 Nuclear Materials (3) NUC E/ MATSE 409 provides a background on the types of materials used in nuclear reactors and their response to neutron irradiation. Most of the materials problems encountered in the operation of nuclear power reactors for energy production are discussed here. The objective of the course is to give nuclear engineering students a background in materials, so they understand the limitations put on reactor operations and reactor design by materials performance. In the first part of the course, we review basic concepts of physical metallurgy, to develop a mechanistic and microstructurally based view of material properties. In the second part of the course, we present the methods to calculate displacement damage to the material produced by exposure to neutron irradiation. The microstructural evolution that results from the reactor exposure (including radiation damage and defect cluster evolution, and changes) is described. The aim is to create a linkage between these changes at the atomistic level and the changes in macroscopic behavior of the material. Special attention is given to property changes that affect fuel performance and operational safety. Both mathematical methods and experimental techniques are emphasized so that theoretical modeling is instructed by experimental data. Students use the TRIM and SPECTER codes to quantitatively evaluate neutron damage, as well as learn simple analytical models that describe microstructural evolution and property changes under irradiation.

Enforced Prerequisite at Enrollment: PHYS 214

Cross-listed with: MATSE 409

NUCE 420: Radiological Safety

3 Credits

Ionizing radiation, biological effects, radiation measurement, dose computational techniques, local and federal regulations, exposure control.

Enforced Prerequisite at Enrollment: NUCE 301 or NUCE 405

NUCE 428: Radioactive Waste Control

3 Credits

Nature, sources, and control of radioactive wastes; theory and practice of disposal processes.

Enforced Prerequisite at Enrollment: NUCE 301 or NUCE 405

NUCE 430: Design Principles of Reactor Systems

3 Credits

Nuclear power cycles; heat removal problems; kinetic behavior of nuclear systems; material and structural design problems. NUC E 430 Design Principles of Reactor Systems (3) This course is designed to provide students in Nuclear Engineering with sufficient background to (a) understand the design of nuclear power reactors, how they work and why, (b) understand and apply design criteria which determine the power level and system efficiency in power reactor cores, (c) become familiar with and understand appropriate power reactor terminology and use, (d) learn how to perform thermal/hydraulic analysis for various reactor operation conditions, (e) learn the different accident classifications and reactor operating limits, and (f) become familiar with basic concepts on the analysis of two-phase flow.

Enforced Prerequisite at Enrollment: NUCE 302 Enforced Concurrent at Enrollment: ME 410

NUCE 431W: Nuclear Reactor Core Design Synthesis

4 Credits

Technical and economic optimization of nuclear systems. NUC E 431W Nuclear Reactor Core Design Synthesis (4) This course provides a capstone design experience that will give the student an understanding of the design methodology and considerations applied to systems or components used in nuclear power reactors and/or in nuclear science. Students will learn design principles, understand and apply design criteria to create a synthesized design product, become familiar with and understand appropriate technical and design terminology and its use, and learn how to prepare technical reports and make technical presentations.

Enforced Prerequisite at Enrollment: NUCE 403 and NUCE 430 Enforced Concurrent at Enrollment: ENGL 202C Writing Across the Curriculum

NUCE 441: Nuclear Security Threat Analysis and Assessments

3 Credits

Nuclear threat assessment and analysis for non-state actors to nuclear and radiological facilities and supply lines. NUC E 441 Nuclear Security Threat Analysis and Assessments (3) The primary goal of this course is to educate the student in such a manner that on completion they are able to conduct a threat assessment and analysis for non-state actors (i.e., terrorist and criminal organizations) and the threat which they present to nuclear and radiological facilities and supply lines. Approaching the subject matter in this way forces a student to efficiently and effectively identify security threats and ultimately craft and articulate plausible policy responses to such threats. Specifically, students will focus on threats emanating from nuclear weapons, radiological material, and related technology. After completing this course, the student should be able to: - Analyze current and future nuclear threats from countries and nonstate or sub-state actors and provide recommendations on how to address these security issues.- Define and analyze the various types

of transnational threats and targets in order to craft effective policy responses.- Describe nuclear weapons proliferation, including incentives and disincentives for proliferation.- Analyze smuggling methods and counter-proliferation strategies.- Identify materials of concern and the physical characteristics of these materials. Also prioritize these materials based on their attractiveness, location, and the threat they pose.- Understand the history of terrorism, including its causes, motivations, strategies, and tactics, particularly regarding nuclear terrorism.- Explain counterterrorism strategies and policies and the role of intelligence in counterterrorism, with a particular emphasis on the efforts of the United States Government.

Enforced Prerequisite at Enrollment: NUCE 301

NUCE 442: Nuclear Security System Design

3 Credits

Science and engineering associated with the design, evaluation, and implementation of systems to secure nuclear and radiological materials. NUC E 442 Nuclear Security System Design (3) The primary goal of this course is to educate the student to think with a security perspective such that they can design and evaluate systems to deter, detect, interdict, and respond to threats to the security of nuclear and radiological materials. After completing this course, the student should be able to: -Analyze motivations and capabilities of adversaries (terrorists, criminal groups, protesters, etc.) and be able to characterize a Design Basis Threat (DBT) that can be used to perform a threat-informed security evaluation. - Describe and explain the operation of detection, delay, and response technologies. Understand how to complete a performance evaluation of these technologies. -Evaluate insider threats to nuclear and radiological facilities and incorporate the insider threat in a DBT. -Formulate different response strategies (including deterrence, denial, containment, pursuit, and recapture) for different facilities and considering on-site and/or off-site response. -Use nuclear or radiological material facility characteristics and a DBT to design a performance-based security system for a facility that will be threat-informed, provide defense in depth, and achieve balanced protection while minimizing risk to an acceptable level. - Apply engineering principles to produce a cost benefit analysis for upgrade options for an existing nuclear facility. -Understand the unique security characteristics associated with transportation of nuclear materials, smuggling of nuclear materials, and protection of major public events and be able to apply a risk- and performance-based engineering approach to security systems for these scenarios. -Understand nuclear forensics as a component of a nuclear security system and be able to use nuclear forensics interpretation of measured data to predict infer actor involvement in a nuclear security incident. -Discuss and critique the deterrence characteristics of nuclear security systems.

Enforced Prerequisite at Enrollment: NUCE 302

NUCE 446: Reliability and Risk Concepts in Design

3 Credits

Introduction to reliability mathematics. Failure data collection and analysis. Components and systems reliability prediction. Effects of maintenance on reliability. Risk Analysis. Case studies in engineering applications. ME 446 / NUCE 446 Reliability and Risk Concepts in Design (3) The course covers materials reliability in design including mechanical, electrical and system aspects. Five main topics will be studied. The course starts by introducing engineering risk and reliability, highlighting its interdisciplinary nature and its significance in system design. The concept of reliability as a probability is introduced and the

basic laws of probability are reviewed. The discussion centers on the mathematics needed to understand and analyze complex systems including components in series and parallel. The topics include the independence, mutual exclusivity, truth tables and Venn diagrams. These concepts are then applied to simple systems consisting of one, two and three components in various configurations. The equivalency of the various methods is discussed. The effect of maintenance on a system's reliability is presented along with discussions of various maintenance strategies. Then, the failure modes and effects analysis is introduced and examples discussed. The concept of fault trees and event trees and their application to reliability analysis are presented. Risk analysis is then introduced as a case study in the application of reliability analysis. A nuclear power plant system is analyzed to quantify the risk to the public from its operation.

Enforced Prerequisite at Enrollment: (MATH 250 or MATH 251) and (ME 345 or ME 348 or NUCE 309)

Cross-listed with: ME 446

NUCE 450: Radiation Detection and Measurement

3 Credits

Theory and laboratory applications of radiation detectors, including proton, neutron, charged particle detectors, NIM devices, and pulse-height analysis.

Enforced Prerequisite at Enrollment: (NUCE 301 or NUCE 405) and NUCE 309

NUCE 451: Experiments in Reactor Physics

3 Credits

Acquisition and processing of nuclear and atomic data; application to nucleonic phenomena of importance in nuclear engineering.

Enforced Prerequisite at Enrollment: EE 212 and NUCE 450

NUCE 470: Power Plant Simulation

3 Credits

Basic knowledge necessary for intelligent simulation and interpretation of simulations of transients in nuclear power plants.

Enforced Prerequisite at Enrollment: ME 320 and MATH 251 and NUCE 302

NUCE 480: Foundations of Nuclear Engineering

3 Credits

This course is designed as an intensive course providing an introduction to nuclear engineering for graduate students with a non-nuclear background. The course starts with an introduction to fundamental concepts of atomic and nuclear physics and the interaction of radiation with matter which are then used to develop static and dynamic reactor theory applied to basic reactor design problems.

Enforced Prerequisite at Enrollment: MATH 251 and Grad Standing. Enforced Concurrent at Enrollment: (MATH 230 or MATH 232) and PHYS 214

NUCE 490: Introduction to Plasmas

3 Credits

This course provides the education on models that are used for description of plasma phenomena as applicable to plasma confinement, plasma assisted materials processing, astrophysical plasmas and plasmas in the near Earth's space environment. It provides practical training in solution of problems involving collisional and collisionless plasmas. In particular, it investigates dynamics of charged particles in specified uniform, non-uniform and time varying electric and magnetic fields. It explores collective behavior of plasmas, including various electrostatic and electromagnetic waves that can be excited and propagate in plasmas parallel and perpendicular to the externally applied magnetic field. The course considers non-linear effects in plasmas, as typically occurring in the sheath regions near the plasma confining walls. It discusses concepts of equilibrium and stability of plasmas, and various models of unstable plasma motions, especially in relation to plasma confinement.

Enforced Prerequisite at Enrollment: (C or better in EE 330) or PHYS 400
Cross-listed with: AERSP 490, EE 471

NUCE 494: Senior Thesis

1-9 Credits/Maximum of 9

Students must have approval of a thesis adviser before scheduling this course. NUC E 494H Senior Thesis (1-9) All Schreyer Scholars are required to complete an undergraduate honors thesis. This work represents the culmination of a student's honors experience. Through the thesis, the student demonstrates a command of relevant scholastic work and a personal contribution to that scholarship. The thesis project can take many forms - from laboratory experiments all the way to artistic creations. The thesis document captures the relevant background, methods and techniques, as well as describing the details of the completion of the individual project. Two Penn State faculty members judge the merits of this Scholar's honors thesis, the student's self-selected thesis supervisor and the department-selected honors adviser in the student's area of honors.

Enforced Prerequisite at Enrollment: Junior or senior status in the University Scholars Program Honors

NUCE 496: Independent studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

NUCE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NUCE 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Nursing (NURS)

NURS 100: First Year Seminar in Nursing

1 Credits

First year seminars in Nursing will introduce the student to the University and the College of Nursing. The primary focus will be engaging students in learning and orienting them to the scholarly community from the outset of their undergraduate studies in a way that will bridge to later experiences in the nursing major and facilitate the high expectations, demanding workload and other aspects of transition to college life. The course content will focus on enhancing opportunities that enable students to provide a holistic focus on the promotion of human health and initiatives that enhance quality of life.

First-Year Seminar

NURS 115: Medications and the Elderly Client

1 Credits

Nursing implications of medication therapy with the elderly client.

NURS 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NURS 200M: Principles of Nursing Research and Evidence-Based Practice-Honors

3 Credits

NURS 200M is an introduction to principles and methods of nursing research and application of research evidence to practice. The course is a writing intensive Honors course. Students will work individually and in cooperative learning groups to analyze and discuss nursing research from multiple viewpoints with a focus on integrity, global perspectives and leadership in nursing research. Each honor student will identify an evidence-based practice topic that could potentially lead to an undergraduate thesis to study in depth. Every in-class and out-of-class assignment is tailored to their topic. The students though, a series of writing intensive assignments, will be taught how to conduct a written peer review; will practice this in formative written review sessions on their peer's projects. NURS 200M will culminate with the development of evidenced based practice paper, which will be delivered to their peers as they would at a scientific meeting. This paper will also serve as the first draft of their thesis proposal. Upon completion of the course students will be able to: Discuss the roles and responsibilities of the nurse related to research and evidence-based practice (EBP); compare and contrast the research process and EBP process; explain the interrelationship among nursing theory, practice, and research; identify sources of evidence as a basis for EBP; describe the process in formulating EBP questions; formulate EBP questions; describe basic concepts and steps of research process; interpret research findings; appraise current issue relevant to nursing; and critically appraise published research studies.

Recommended preparation: (STAT 200 or STAT 250) and NURS 225 and NURS 390

Honors

Writing Across the Curriculum

NURS 200W: Principles of Nursing Research and Evidence-Based Practice

3 Credits

Introduction to principles and methods of nursing research and application of , research evidence to practice. , NURS 200W is the introduction to principles and methods of nursing research and the application of research evidence to practice. The course is a writing intensive course with the goal to help the student communicate clearly and effectively while learning the basics of nursing research and its application to developing evidence based practice. Upon completion of this course the student will be able to: Discuss the roles and responsibilities of the nurse related to research and evidence-based practice (EBP); Compare and contrast the research process and the EBP process; Explain the interrelationships among nursing theory, practice, and research; Identify sources of evidence as a basis for EBP; Describe the process by which an EBP question is formulated; Formulate EBP questions that relate to relevant clinical problems and demonstrate critical thinking; Describe basic concepts and steps of the research process in nursing; Interpret research findings to determine statistical and clinical significance; Appraise current issues relevant to nursing research (such as cultural diversity issues and ethical conduct of research); Critically appraise published research studies.

Recommended preparation: (STAT 200 or STAT 250) and NURS 225 and NURS 390

Writing Across the Curriculum

NURS 203: First Aid and CPR

3 Credits

NURS 203 An introductory first aid course designed to provide the basic knowledge and skills to assist someone who is injured or ill. The course covers safety precautions of the responders including legal and ethical issues, teaches one-person CPR and airway obstruction, common injuries resulting in bleeding and how to control bleeding, common medical emergencies i.e. bleeding, water, ice, shock, thermal injuries. Heart attack, stroke and head injuries are a focus and the proper way to transfer individuals with injuries. Environmental emergencies includes disaster preparation, terrorism and triage.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

NURS 225: Pathophysiology

3 Credits

Designed to explore the illness component of health with emphasis on the pathophysiological and psychosocial aspects. NURS 225 NURS 225 Pathophysiology (3) NURS 225 is designed to explore the illness component of health, with emphasis on the pathophysiological and psychosocial aspects. The required 3-credit course is a foundational course for all succeeding nursing courses. Upon completion of this course, the student will be able to identify knowledge from nursing and contributing disciplines as a foundation for the understanding of illness; describe selected theories of stress and adaptation; identify basic pathophysiological and psychosocial aspects of illness; relate common manifestations of illness to the underlying pathophysiological and psychosocial processes; identify physical environmental factors associated with the development of illness; recognize the significance

of research to the evidence base of nursing practice related to illness; recognize the different pathological changes related to human variation and lifespan. Teaching strategies include lecture, audiovisual, case studies/discussion. Enrollment is limited to sophomore level nursing students. The course is offered each spring semester and successful completion is required prior to advancing to the Junior level nursing courses.

Enforced Prerequisite at Enrollment: NURS 250 and NURS 251

NURS 230: Introduction to the Fundamentals of Nursing

4 Credits

Introduction to the nursing process, clinical competencies and psychosocial skills. NURS 230 NURS 230 Introduction to Fundamentals of Nursing (4) NURS 230 incorporates the analysis of the nursing process and introduction to clinical competencies and psychosocial skills. Students demonstrate beginning skills in utilizing the nursing process in the clinical setting to meet basic physical and psychosocial individual client needs. Upon completion of the course, students will be able to describe the characteristics of each step of the nursing process; demonstrate beginning skills in utilizing the nursing process in the clinical setting to meet basic physical and psychosocial individual client needs; demonstrate safe and competent performance of basic psychomotor nursing skills; demonstrate the ability to practice the principles of health and safety; perform basic interviewing techniques in collecting health status data; demonstrate communication skills that enable the student to establish appropriate interpersonal relationships; recognize variables influencing health status; recognize the psychosocial needs of individuals including basic needs related to loss, grief and the death experience; demonstrate a personal professional philosophy which addresses the individuality, dignity, values, beliefs, and culture of all clients; recognize the significance of evidence based practice as the basis for the use of the nursing process; recognize the importance of health teaching and health promotion across the life span; identify purposes and functions of appropriate community resources. Teaching strategies include lecture, discussion, audiovisuals, clinical experience, simulation laboratory demonstration and practice, self-learning medication and math mathematics packet. The course is offered each spring semester with an enrollment of approximately 120 nursing students divided into clinical sections limited to 10 students each.

Enforced Prerequisite at Enrollment: NURS 250 and NURS 251 and
Enforced Concurrent: NURS 225

NURS 230H: Introduction to the Fundamentals of Nursing

4 Credits

Introduction to the nursing process, clinical competencies and psychosocial skills.

Honors

NURS 240: Medication Calculations for Nurses

1 Credits

Application of mathematical methods for drug calculations that support safe administration of the correctly calculated dosages of medications. This course is designed to help prepare student nurses for safe medication administration, successful completion of math

competency exam throughout the curriculum, and build confidence in mathematical skills.

Enforced Prerequisite at Enrollment: Enrollment in GNURS or SCND Option of the Baccalaureate Nursing Program

NURS 245: Violence and the Impact on Society

3 Credits

The NURS 245 goal is to facilitate an interdisciplinary and cross-theoretical approach to (1) raise awareness to the prevalence, causes, consequences of the different types of violence impacting societies; (2) to help students learn how to apply knowledge of human behavior and social change strategies; (3) to encourage students to inform and communicate professional judgement and participate in prevention of violence for the safety and security of vulnerable individuals, families and populations.

General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Soc Resp and Ethic Reason

NURS 250: Professional Role Dev I: Intro to Professional Issues in Nursing Practice and Nursing Informatics

2 Credits

NURS 250 Professional Role Dev I: Intro to Professional Issues in Nursing Practice and Nursing Informatics (2) (US)NURS 250US is the first course in the baccalaureate nursing program and introduces the students to the profession of nursing, the science of nursing and the use of information technology in health care. Designed to explore the wellness component of health and the role that informatics plays in the planning and delivery of health care. Upon completion of the course, the student will be able to Identify concepts of health and wellness that contribute to a foundation for nursing practice, Discuss the importance of cultural competency in the health care delivery systems and utilization of services, Identify the roles of the professional nurse in the delivery of health care to patients, families, communities and populations, Define elements that contribute to professional, evidence-based nursing practice. Describe nursing theory's relationship to the development of clinical judgment, Describe current and future nursing informatics' applications in the planning and delivery of health care and Apply ethical and legal concepts to the use of information technology/nursing informatics in health care. The concepts of diversity and cultural competence are emphasized and integrated within each major topic discussed. Teaching strategies emphasize inquiry-based learning, competency in informatics and promote critical thinking and include lecture, selected readings, exploration of internet sites on health and nursing, case studies, small group activities, group discussions, audiovisuals, role playing, journaling, self-reflection, and field trips. Enrollment is limited to sophomore level nursing students. The course is offered fall semester.

Enforced Prerequisite at Enrollment: BIOL 161 and BIOL 163 United States Cultures (US)

NURS 251: Health Assessment

3 Credits

Designed to broaden the student's knowledge and skills in health assessment and physical examination across the lifespan. NURS 251 Health Assessment (3) NURS 251 is designed to broaden the student's

knowledge and skills in health assessment. The course enables the student to learn the methods of interviewing patients for completing a health history and the tools and techniques necessary to conduct a physical examination. Upon completion of this course, the student will be able to identify psychosocial, cultural and developmental factors affecting the health assessment process; demonstrate appropriate communication and interviewing techniques (including the use of new technology) with clients of all ages to facilitate the health assessment; demonstrate the ability to obtain a holistic, systematic and comprehensive health history and assessment; promote an environment of safety and caring to maximize client care outcomes; participate in education and activities that would promote cultural competency in nursing assessment; document the health history and current health status and the physical exam according to accepted standards; demonstrate competency in the use of inspection, palpation, percussion and auscultation when performing physical examination; demonstrate the ability to recognize and interpret signs of normal and abnormal health assessment findings; demonstrate critical thinking in the analysis of physical findings; demonstrate the ability to assess risk and promote security and safety in the clinical environment; recognize and document health assessment variations in clients throughout the life span. Teaching strategies include lecture, discussion, demonstration, hands-on practice, audiovisuals, simulation laboratory experiences. NURS 251 is the first required clinical course; is offered each fall semester; and is limited to nursing students. Clinical experience with sections of 14 students is conducted in the Simulation Laboratory where students receive the individualized attention to facilitate learning the techniques of physical assessment. Annual enrollment is approximately 120 students who must successfully complete the course to progress in the nursing program.

Enforced Prerequisite at Enrollment: BIOL 161 and BIOL 163

NURS 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

NURS 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NURS 300: Honors Seminar in Nursing

3 Credits

Seminar activities on selected topics in nursing. NURS 300H Honors Seminar in Nursing (3) NURS 300H is designed to follow the introduction to nursing research course for honor students only. Each class session focuses on a different element of the honors thesis proposal. Objectives for the course include: Appraise strengths and opportunities for improvement in proposals for nursing research studies and systematic reviews; Apply strategies for establishing and sustaining effective mentor-mentee relationships; Describe the ethical issues involved in clinical research, with emphasis on investigators' responsibilities and participants' rights; Discuss current priority focus areas in nursing science; Compare and contrast thesis alternatives; Discuss selected research designs used for clinical research; Analyze opportunities for replication of clinical studies; Develop a three-chapter written

proposal that lays the foundation for and establishes the approach to a relevant scholastic project for the honors thesis; Identify key factors to consider when planning for research dissemination The course is taught in the spring semester only and is open only to nursing honor students. Teaching strategies include lecture, student presentations, handouts, individual conferences, and written research consent forms and proposals. Evaluation criteria of the course include a critique, protection of human subject packet preparation, class participation, and at the end of this course, students will be expected to have a fully developed honors thesis proposal. Proposals will be evaluated on how convincing the argument is for the proposed research (literature review and identified knowledge gaps), the logical procession of the thinking, the clarity of the writing, and the significance of the proposed research to nursing.

Enforced Prerequisite at Enrollment: NURS 200M and NURS 225 and Admission to the Honors Program
Honors

NURS 301: Nursing Care of the Adult Client Requiring Medical-Surgical Intervention

4 Credits

Therapeutic nursing care of the adult client in a variety of primarily medical-surgical settings. NURS 301 Nursing Care of the Adult Client Requiring Medical-Surgical Intervention (4) NURS 301 focuses on nursing care of adult client requiring medical-surgical intervention including. The course is placed in the junior year and is considered a beginning level medical-surgical course. Upon completion of this course, the student will be able to assess risks and promote the health and safety of the adult client throughout the lifespan; formulate nursing actions that are based on scientific principles and concepts from contributing disciplines in caring for the adult client to maximize outcomes; recognize pathophysiological and pharmacological aspects related to the nursing care of the adult medical surgical client; recognize the impact of stress on the adult client to incorporate health promotional and health educational activities; demonstrate the ability to communicate effectively across the health care delivery system; promote factors that create a culture of safety and caring for the adult medical-surgical client; utilize assessment data and technology to plan, implement and evaluate interventions specific to the health of the adult client; practice legal, ethical and professional accountability in the delivery of care to the adult client; demonstrate the ability to practice in a holistic, culturally competent and caring manner; demonstrate the ability to utilize evidence based practice and technology to assess and critically respond to the needs of the adult client; demonstrate with guidance the role of the professional nurse in caring for the adult client. Teaching strategies include lectures, discussions, audiovisuals, clinical experiences, and simulation laboratory. Clinical sections of 8-10 students spend 90 hours (2 credits) caring for medical surgical adult clients. Enrollment is approximately 120 nursing students split between University Park and Hershey Medical Center Campus and is offered fall semester of the junior year.

Enforced Prerequisite at Enrollment: NURS 225 and NURS 230.
Recommended Corequisite: NURS 305 and NURS 310

NURS 302: Clinical Judgement in Nursing

1 Credits

NURS 302 is a one-credit - 45 hour faculty supervised clinical experience that focuses on the care of the adult medical surgical patient population.

Upon completion of the course, the student will be able to analyze pathophysiological and pharmacological concepts when the planning the care and education of adult medical-surgical clients, demonstrate the continued ability to systematically approach the care and treatment of adult medical-surgical clients through a variety of methods, evaluate client outcomes of care and create new goals and interventions to promote positive client outcomes, incorporate the concepts of delegation and prioritization in the care of adult medical-surgical clients, and demonstrate effective intra-professional and inter-professional communication in planning and delivering safe and effective care of adult medical-surgical clients. Overall, course provides the concepts necessary for the student to better understand the clinical judgment and clinical reasoning needed to deliver safe, competent and comprehensive care to adult medical-surgical patients. The course is offered each spring semester.

Enforced Prerequisite at Enrollment: 6th semester standing and NURS 225 and NURS 301 and NURS 305

NURS 303: Clinical Application of Laboratory Tests

1 Credits

A study of the background, meaning, and nursing implications of laboratory test results. NURS 303 Clinical Application of Laboratory Tests (1) NURS 303 is a study of the background, meaning, and nursing implications of laboratory test results. It is designed to assist the nursing student in comprehending the patient's laboratory results in a clinical setting. Lab values are correlated to patient's condition and physiology of the disease process. Physical assessment data are compared to the various blood and urine lab test results also. Students are evaluated through written examination and the interpretation of case study scenarios. The course is offered in the spring semester and is open to all nursing students who have completed the introductory nursing course at the 200 level. Enrollment is not limited. The course objectives follow. Upon completion of this course, the student will be able to: a. Identify important clinical implications associated with a wide variety of blood and urine tests. b. Correlate lab data with physical assessment findings and other indicators of patient status. c. Recognize constellations of changes that may precede deterioration in clinical status. d. Discriminate between changes in lab values that require immediate reporting to the physician and those changes that do not require immediate reporting. e. Synthesize laboratory test results with assessment findings and pathophysiology and identify appropriate nursing actions.

Recommended Preparation: NURS 250, NURS 225, NURS 230, and NURS 251

NURS 305: Introduction to Pharmacological Concepts

3 Credits

Study of basic concepts of pharmacology and relevant nursing implications. NURS 305 Introduction to Pharmacological Concepts (3) NURS 305 is the introduction to pharmacological concepts and identifies the pharmacodynamics of major classifications of drugs. Prototypes or original drug models from which subsequent types arise are summarized. This course is closely linked to pathophysiology (a prerequisite) as most medications are administered based on a pathophysiologic condition. Pharmacologic principles covered in the course have practical application for students administering medications to clients in the clinical setting during the junior and senior years. Upon completion of this course, the student will be able to identify the measures taken in the United States to ensure drug safety; describe the process of drug development and

evaluation; describe the methods of drug standardization; differentiate official and unofficial drug information sources; recognize the legal aspects and nursing responsibilities relative to the administration of drugs to ensure client safety; identify the pharmacodynamics of major classifications of drugs; recognize characteristics and nursing implications of the various types of pharmaceutical preparations and identify research related to pharmacology which influences nursing practice. Teaching strategies include videos, lectures, handouts and power point slides. Enrollment is limited to junior level nursing students or special permission from the instructor for non-nursing majors. The course is offered yearly during the fall semester.

Enforced Prerequisite at Enrollment: (NURS 225 and NURS 230) or approval of program. Recommended Corequisites: NURS 301 and NURS 310

NURS 306: Nursing Care of Children and Adolescents

3 Credits

Common health problems and nursing intervention for children and adolescents. NURS 306 Nursing Care of Children and Adolescents (3) NURS 306 focuses on common health problems and nursing intervention for children and adolescents. Upon completion of this course, the student will be able to formulate nursing actions that are based on scientific principles and concepts from contributing disciplines in caring for children and adolescents to maximize client care outcomes; develop interpersonal skills in responding in a humanistic manner to the unique needs of children, adolescents, and their families; recognize pathophysiological and pharmacological aspects related to the nursing care of the adult medical surgical client; assess the health needs of diverse populations of children and adolescents based on an understanding of the developmental, psychosocial, environmental, and cultural variables with an emphasis on health promotion; evaluate nursing care in a variety of settings to meet the health needs of children of various ages; utilize assessment data and technology to plan, implement, and evaluate interventions specific to the health care needs relevant to the characteristics of the child and adolescent client in interaction with the personal and suprapersonal environments; evaluate nursing care in a variety of settings to meet the health needs of children of various ages and promote healthy lifestyles; collaborate with colleagues in nursing and other health professions to promote the well being of children and adolescents in a variety of settings including the community; relate relevant research findings to child health nursing practice; practice legal, ethical and professional accountability in the delivery of child health care; participate in activities that advance personal and professional development, cultural competency, and the professional specialty of pediatric nursing and promote factors that create a culture of safety and caring for children and adolescents. Teaching strategies include lecture, discussion, audiovisuals, hands-on clinical care, laboratory simulation experiences. Emphasis is placed on delivery of safe and competent nursing care. Clinical sections of 8-10 students spend 45 hours caring for child/adolescent clients in a variety of settings (clinics, day care centers, elementary schools, and hospitals). Enrollment is approximately 120 nursing students (split between UP and HMC) and the course is offered each spring semester of the junior year.

Enforced Prerequisite at Enrollment: NURS 305 and NURS 225 and NURS 230

NURS 310: Therapeutic Nursing Care of the Older Adult Client in a Variety of Settings

3 Credits

Nursing concerns and intervention in promoting the health of the older adult. NURS 310 NURS 310 Therapeutic Nursing Care of the Older Adult Client in a Variety of Settings (3) NURS 310 focuses on nursing concerns and interventions in promoting the health of older clients. Upon completion of the course, the student will be able to utilize knowledge about aging from nursing and contributing disciplines as a foundation for nursing practice with the older adult client; recognize pathophysiological and pharmacological aspects related to the nursing care of the older adult client; demonstrate progressive development of communication skills including technology which supports the health care needs of the older adult client; promote factors that create a culture of safety and caring for the older adult client; utilize assessment data and technology to plan, implement, and evaluate interventions specific to the health of the older adult client; evaluate nursing care in a variety of settings to meet the health needs of the older adult client and promote healthy lifestyles; communicate pertinent client information, plan of care, and evaluation of goals to staff, instructors and other members of the health team; apply evidence based practice to maximize client outcomes in health promotional and educational activities for the older adult client; demonstrate with guidance the role of the professional nurse in caring for the older adult client; participate in activities that advance the personal and professional development, cultural competency in the professional specialty of gerontological nursing; practice legal, ethical and professional accountability in the delivery of care to the older adult client; recognize the importance of interdisciplinary care in meeting the bio-psycho-social needs of patients and families receiving end-of-life care. Teaching strategies include lecture, discussion, hands-on clinical care and simulation laboratory experiences. Clinical sections of 8-10 students spend 45 hours caring for clients in nursing homes and community settings with the focus on environmental assessment, individual health teaching and group health teaching. The course is offered fall semester and enrollment is approximately 120 nursing student (60 at UP and 60 at HMC).

Enforced Prerequisite at Enrollment: NURS 225 and NURS 230. Recommended Corequisites: NURS 301 and NURS 305

NURS 320: Nursing Care of the Childbearing Family and Gynecological Client

3 Credits

Therapeutic nursing care of the childbearing family and gynecological client. NURS 320 NURS 320 Nursing Care of the Child Bearing Family and Gynecological Client (3) NURS 320 focuses on providing therapeutic nursing care of child-bearing family and gynecological client. Upon completion of this course, the student will be able to utilize knowledge from nursing and contributing disciplines related to reproductive health concerns, life events and health alterations of the child bearing family and gynecological client to maximize client care outcomes; recognize pathophysiological and pharmacological aspects related to the nursing care of the child bearing and gynecological client; demonstrate progressive development of communication skills including technology which supports the child bearing family and gynecological client; promote factors that create a culture of safety and caring for the child bearing family and gynecological client; assess the reproductive health of the child bearing family and gynecological client within the context of the developmental process and the personal and suprapersonal

environments; utilize assessment data and technology to plan, implement, and evaluate interventions specific to the health of the child bearing family and gynecological client; evaluate nursing care in a variety of settings to meet the health needs of the child bearing family and promote healthy lifestyles; communicate pertinent client information, plan of care, and evaluation of goals to staff, instructors and other members of the health team; apply evidence based practice to maximize client outcomes in health promotional and educational activities for the child bearing family and gynecological client; demonstrate with guidance the role of the professional nurse in caring for child bearing families and gynecological client; participate in activities that advance the personal and professional development and cultural competency in the professional specialty of obstetric and gynecological nursing; practice legal, ethical and professional accountability in the delivery of care to the child bearing family and gynecological patient. Teaching strategies include lecture, clinical experiences and laboratory simulation, discussion, post clinical conferences, audiovisuals-slides and case studies. The course is offered spring semester of the junior year with an approximate enrollment of 120 nursing students (split between UP and HMC) and with clinical sections limited to 10 students per section.

Enforced Prerequisite at Enrollment: NURS 305

NURS 325N: Health and Environmental Sustainability

3 Credits

NURS / SUST 325N: Health in Environmental Sustainability; 3 credits. (Inter-Domain), (GHW), (GN). People live in constant contact with the environment: the built environment of homes, offices, and industrial facilities, as well as in cities or less developed areas such as farms or in nature / the outdoors. How do the air we breathe, the water we drink, the land we live on, the food we eat, and the materials and chemicals we use in these environments impact our health? At a time when nations are spending up to 1/6th of their budgets on healthcare, it is critical to understand how we impact the environment and how it impacts us back. This course covers the importance of environmental health on individual and community health, the effects of environmental hazards on diverse populations and the impact of climate change on disease. It also reviews best practices for environmental health, for building healthy communities, and introduces students to environmental health advocacy. A beneficial environment sustains human health and the well-being of all species on the planet.

Cross-listed with: SUST 325N

General Education: Health and Wellness (GHW)

General Education: Natural Sciences (GN)

General Education - Integrative: Interdomain

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

NURS 350: Professional Role Development II: Ethics, Legal and Genomic Issues

2 Credits

The study of the interaction of ethical, legal, and genomic concepts as they apply to current health care practice. NURS 350 Professional Role Development II: Ethics, Legal and Genomic Issues (2) NURS 350 is the second of three professional role development courses and addresses the interaction of ethical, legal and genomic concepts as they apply

to current health care practice. Upon completion of the course the student will be able to define the fundamental ethical theories; define and integrate into evidence based practice the basic ethical concepts as they relate to nursing; state the American Nurses' Association Code of Ethics for Nurses; demonstrate ethical behaviors such as honesty, integrity, responsibility, and dependability in clinical practice and everyday life; define and describe the concepts of standards of care and scope of practice; analyze nurse practice acts as they pertain to licensure and scope of practice; define the concepts of negligence verses malpractice; define and distinguish between the concepts of informed consent, patient selfdetermination, right of refusal, and advance directives (such as living wills, durable power of attorney, and do not resuscitate orders); analyze the role of advocacy from an ethical and legal perspective; communicate effectively (including the use of new technologies) with patients and families regarding legal, ethical, and genomic issues; describe the concept of confidentiality from ethical and legal perspectives; identify the impact genomics has played in the practice of health care; describe the historical to current research findings in genomics that have or may change health care practice guidelines; identify the role ethics, legal issues, and genomics plays in providing health care to culturally sensitive populations; analyze and discuss historical and current biomedical dilemmas utilizing various ethical, legal and genomic perspectives. Teaching strategies include lecture, discussion, audiovisuals, small group activities, role- playing and group presentations. The course is offered fall semester and enrollment is limited to nursing majors.

Enforced Prerequisite at Enrollment: (NURS 225 and NURS 230)

NURS 352: Advanced Health Assessment for the Registered Nurse

3 Credits

RECOMMENDED PREPARATION: NURS MAJOR CONTROL NURS 352 is a course designed to extend the RN student's knowledge and skills in health assessment and physical examination across the lifespan. The course includes 45 hours of clinical and is intended for students who are already nurses and who have relevant basic education of health and physical assessment. This course enhances the RN student's knowledge base with more advanced techniques of interview and examination. The course demands higher-level thinking about complex health assessment challenges and prepares RN students for health assessment study at the graduate level.

Recommended Preparation: NURS Major

NURS 357: Introduction to Nursing Informatics

3 Credits

NURS 357 is an introduction to nursing informatics focusing on technology applications to the nursing profession. This course provides a broad overview of nursing informatics and the various applications of informatics principles in the healthcare setting. Students will explore the data-information-knowledge-wisdom paradigm of informatics and gain an appreciation of how informatics principles contribute to nursing knowledge and practice. Students will assess personal informatics competencies and set goals for building informatics skills, and explore future trends in healthcare technologies.

Recommended Preparation: NURS major and NURS 301 and NURS 310 and NURS 306 and NURS 320

NURS 390: Transition and the Professional Nursing Role

3 Credits

Transition to baccalaureate education and professional nursing practice, emphasizing leadership, management, and issues influencing nursing education and practice. NURS 390 Transition and the Professional Nursing Role (3) (US) NURS 390 is the first nursing course that the registered nurse (RN) student completes. The course's intent is to set the groundwork for transition of the RN to baccalaureate education and professional nursing practice. With the emphasis being on leadership, management, and issues influencing nursing education and practice, the RN has the foundation on which to build nursing expertise as nursing courses progress. The course prerequisite is a current and valid RN license. Teaching strategies include: lecture, discussion, audiovisuals, self-assessment, reflective analysis, critical thinking/problem solving, computer assignments and active/collaborative learning. Evaluation of the course is by grading of written assignments, presentations, and testing. The course is offered in fall, spring or summer semesters of the junior year with a projected enrollment of 10 - 15 students, and is a prerequisite to other nursing courses. Upon completion of this course, the student will be able to: 1. Explain the processes inherent in successful transition to the role of the baccalaureate prepared nurse. 2. Analyze the influences that impact role development and nursing practice, especially self-regulation and accountability. 3. Appraise the health care environment as it relates to nursing roles and nursing practice. 4. Measure the impact of nursing theory and research on baccalaureate level nursing practice. 5. Evaluate the importance of nursing research to nursing practice and the legislative arena. 6. Critically analyze issues that influence nursing education and practice today and in the future.

Recommended Preparation: NURS Major
United States Cultures (US)

NURS 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NURS 401: Concepts of Health

3 Credits

Exploration of current and ancient concepts of health and their respective modes of intervention.

Recommended Preparation: PSYCH 100 or SOC 001
International Cultures (IL)

NURS 402: Holistic Health

3 Credits

Examination of emerging conceptualizations of health and therapy based on a holistic view of human beings.

Recommended Preparation: NURS 401
International Cultures (IL)
United States Cultures (US)

NURS 403: School Health and Emergency Care of Children and Adolescents

3 Credits

Techniques for higher-level care for school health and emergency situations and application-based education. NURS 403 School Health and Emergency Care of Children and Adolescents (3) This course is a part of the school nurse series and will provide participants with advanced techniques for school health professionals that respond to health and emergency situations. The topics covered will include abdominal, genitourinary, head, musculoskeletal, and sports-related injuries. Students also will review shock, respiratory, neurologic, psychological and behavioral emergencies, and a wide array of issues facing students with special needs. Additionally, the participant will review disaster planning, preparation, and response activities. The course will review major medical and accidental situations facing the school nurse including the inter-agency coordination with emergency response systems and community entities. Students will learn what to include in a report for the communication center and emergency medical services. Skills stations for orthopedic injuries, trauma, and medical situations will allow students to practice skills and receive immediate feedback. Students will participate in application based education that utilizes case studies to pull the concepts together. Students will be asked to provide return demonstration for skills reviewed in this course.

Recommended Preparations: (BIOL 161, BIOL 163)

NURS 404: Cardiac Dysrhythmias: Interpretation, Treatment, and Nursing Management

1 Credits

An introductory course with a focus on dysrhythmia recognition and interpretation of abnormal 12-lead electrocardiograms (EKG, ECG). NURS 404 Cardiac Dysrhythmias: Interpretation, Treatment, and Nursing Management NURS 404 (Cardiac Dysrhythmias: Interpretation, Treatment, and Nursing Management) is an introductory course in dysrhythmia recognition and interpretation of normal and abnormal rhythm strips and 12-lead electrocardiograms. The course involves integration of electrophysiology principles, anatomy, physiology, and arrhythmogenesis in interpretation of dysrhythmias. The diagnosis, medical treatment, and nursing management will be incorporated through case study analysis. Evaluation of course content will be done through exams, in class worksheets, and case study analysis. The class is open to nursing and non-nursing majors desiring introductory understanding of cardiac dysrhythmias. NURS 404 is a good course for nursing majors interested in critical care and non-nursing majors interested in emergency medical services associated with any major (e.g., Kinesiology). The class is offered fall and/or spring semester with enrollment limited (20 students) to allow interactive hands-on interpretation of dysrhythmias.

Recommended Preparations: (BIOL 161, BIOL 163)

NURS 405A: Nursing Care of the Adult Client with Complex Health Problems: Part A

4 Credits

In-depth study of care of patients with acute and complex health problems, utilizing evidence based practice. NURS 405A - Nursing Care of the Adult Client with Complex Health Problems: Part A (4) NURS 405A focuses on nursing care of adult clients with acute and complex health problems related to all major systems of the body. Upon completion

of this course, the student will be able to synthesize knowledge from nursing and contributing discipline to maximize client care outcomes; recognize pathophysiological and pharmacological aspects related to the nursing care of the adult client; demonstrate the ability to communicate effectively including the use of technology with patients, families and the health care team; promote factors that create a culture of safety and caring for the adult client; demonstrate the ability to perform a comprehensive and systematic assessment and take appropriate nursing actions for the client with complex health problems; collaborate with colleagues from nursing and related disciplines using empirical and theoretical resources when defining nursing care priorities and determining nursing actions; utilize assessment data and technology to plan, implement, and evaluate interventions specific to the complex health problems of the adult client; participate in activities that advance the personal and professional developmental and cultural competency in the professional specialty of adult medical-surgical nursing; practice legal, ethical and professional accountability in the delivery of care to the adult medical-surgical client; apply evidence based practice to maximize client outcomes in health promotional and educational activities for the complex health needs of the adult client; demonstrate current and relevant knowledge of the social, health, behavioral and psychological sciences that can be applied to nursing practice for the adult client; demonstrate increasing self direction and confidence in providing nursing care for the adult client with complex health needs; demonstrate the role of professional nurse as a client advocate; demonstrate the ability to assess risk and actively promote the well being, safety, and security (patients and coworkers) in the work environment; demonstrate the ability with guidance to lead and coordinate a team, delegating care appropriately and safely; demonstrate the ability to respond appropriately to the emotional, psychological and spiritual needs of the adult client with complex care needs. Teaching strategies include lecture, discussion, laboratory simulation and clinical experiences. Evaluation methods include examinations, scholarly papers, simulation laboratory experiences, preclinical preparatory written work, and mid-course and final clinical performance evaluations.

Enforced Prerequisite at Enrollment: NURS 305

NURS 405B: Nursing Care of the Adult Client with Complex Health Problems: Part B

4 Credits

In-depth study of care of patients with acute and complex health problems, utilizing evidence based practice. NURS 405B - Nursing Care of the Adult Client with Complex Health Problems: Part B (4) NURS 405B focuses on nursing care of adult clients with acute and complex health problems related to all major systems of the body. The emphasis is on enhancing critical thinking skills necessary for making sound nursing judgments and the demonstration of self-direction in providing nursing care for clients with complex medical surgical problems.

Upon completion of this course, the student will be able to: Synthesize knowledge from nursing and contributing discipline to maximize client care outcomes; Recognize pathophysiological and pharmacological aspects related to the nursing care of the adult client; Demonstrate the ability to communicate effectively including the use of technology with patients, families and the health care team; Promote factors that create a culture of safety and caring for the adult client; Demonstrate the ability to perform a comprehensive and systematic assessment and take appropriate nursing actions for the client with complex health problems; Collaborate with colleagues from nursing and related disciplines using empirical and theoretical resources when defining nursing care priorities and determining nursing actions; Utilize assessment data and technology

to plan, implement, and evaluate interventions specific to the complex health problems of the adult client; Participate in activities that advance the personal and professional specialty of adult medical-surgical nursing; Practice legal, ethical and professional accountability in the delivery of care to the adult medical-surgical client; Apply evidence based practice to maximize client outcomes in health promotional and educational activities for the complex health needs of the adult client; Demonstrate current and relevant knowledge of the social, health, behavioral and psychological sciences that can be applied to nursing practice for the adult client; Demonstrate increasing self direction and confidence in providing nursing care for the adult client with complex health needs; Demonstrate the role of professional nurse as a client advocate; Demonstrate the ability to assess risk and actively promote the well being, safety, and security (patients and coworkers) in the work environment; Demonstrate the ability with guidance to lead and coordinate a team, delegating care appropriately and safely; Demonstrate the ability to respond appropriately to the emotional, psychological and spiritual needs of the adult client with complex care needs. Teaching strategies include lecture, discussion, laboratory simulation and clinical experiences. The course is offered fall semester with approximately 120 students enrolled (60 at UP and 60 at HMC) with clinical sections limited to 10 students per section.

Enforced Prerequisite at Enrollment: NURS 305 and NURS 350

NURS 407: Drugs of Abuse and Mental Health Issues

3 Credits

RECOMMENDED PREPARATION FOR NURS 407 IS BB H 143 OR PSYCH 100. NURS 407 examines the issue of substance abuse in today's society. It looks closely into the health care needs across the lifespan of clients who have an alcohol or other drug disorder in combination with a psychiatric disorder. Pharmacological, behavioral, biological, and sociocultural characteristics, along with factors and patterns of addiction, are discussed and then how these factors and characteristics relate to mental illnesses are further explored. The different classes of habit-forming drugs (alcohol, stimulants, marijuana, hallucinogens, inhalants and prescription drugs) are covered and various treatment options are examined.

Recommended Preparation: BBH 143 or PSYCH 100

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

NURS 408: Clinical Application of Pharmacological Concepts

1 Credits

Study of the application of pharmacological concepts to the clinical setting. NURS 408 Clinical Application of Pharmacological Concepts (1) NURS 408 is an elective course designed to provide the interested student an in-depth review of pharmacology. The application of pharmacological concepts in relation to the clinical setting is a primary focus of the course. The various drug classes are discussed with emphasis placed on care of the patient while administering different types of medications. Discussion of pharmacological principles and patient care requires knowledge and integration of anatomy, physiology, pathophysiology, and medical and nursing treatments for various disorders. NURS 408 provides an excellent review of medication classes as related to medical condition in preparation of the nursing student

taking the NCLEX licensure examination upon graduation. The student is evaluated by written examination and/or case study interpretation. NURS 408 is placed in the spring semester and is open to all nursing students who have successfully completed administering medications in the 300 level nursing courses and are concurrently enrolled in the 400 level nursing courses. Enrollment is not limited in numbers. Course objectives are as follows. Upon completion of this course, the student will be able to: a. Categorize commonly used medications by major classifications of drugs. b. Predict classifications of medications given to specific clinical conditions. c. Develop patient teaching plans relevant to medication administration. d. Discuss research related to pharmacology which influences nursing practice.

Recommended Preparation: NURS 305

NURS 409: Introduction to Forensic Nursing

3 Credits

Provides an introduction to the forensic health sciences, forensic nursing, and the nursing role in the scientific investigation of violence. RECOMMENDED PREPARATION FOR NURS 409 IS NURS225, NURS 230, NURS 250. NURS 409 is an elective course and the first of three courses in a forensic nursing certificate. The course is designed to provide an introduction to the forensic health sciences, forensic nursing, and the nursing role in the scientific investigation of violence. The course focus is on the principles and philosophy of forensic nursing in acute care and community settings and the roles of the forensic science professional. The responsibilities of the advanced practice forensic nurse are explored. The course requires that the student have a basic understanding of the professional healthcare role, specifically that of the nurse. The course is appropriate for non-nursing majors interested in forensic health sciences.

Recommended Preparation: NURS 250, NURS 225, and NURS 230

NURS 410: Forensic Evidence Collection and Preservation

3 Credits/Maximum of 3

Examines nurses' role of recognizing patterns of injury. Evidence collection procedures are examined from collection to courtroom presentation, includes autopsy. Forensic Evidence Collection and Preservation examines the forensic nurse's role recognizing injuries/patterns of injury. Evidence collection procedures are examined from collection to courtroom presentation. NURS 410 will guide the student through a prerecorded autopsy, teaching general evidence identification, collection, preservation, and documentation techniques as well as a complete sexual assault kit evaluation. Students will be immersed in a case study allowing them to learn and then demonstrate their understanding of forensic procedures and protocols. Students follow actual forensic protocol used in practice including policies, procedures, and documentation tools. The final course evaluation includes an interactive assessment that draws upon the techniques taught in the course and prepares the student for employment in a forensic role.

Recommended preparation or concurrent: NURS 245 and NURS 409

NURS 411: Seminar in Forensic Nursing

3 Credits

Seminar to discuss current topics, trends and research related to forensic nursing.

Recommended preparation or concurrent: NURS 410

NURS 415: Community and Family Health Nursing

4 Credits

NURS 415 Community and Family Health Nursing - Concepts and Applications (4) (US;IL) NURS 415 US;IL focuses on nursing care of clients in the community and the family. This course allows students to work independently providing and improving health care of population groups within a diverse society. Upon completion of this course, the student will be able to synthesize knowledge from nursing, public health, family, and community theory as a foundation for culturally congruent community health nursing practice; utilize the nursing process and principles of primary, secondary, and tertiary prevention that are culturally appropriate in the care of community based clients who differ in terms of age, developmental stage, health beliefs values and practices; demonstrate interpersonal skills necessary for collaboration with and among culturally diverse consumers, community agencies, health professionals, and health related resources in the community; demonstrate the management and safety of client, family, and community care through appropriate use of concepts of leadership, case management, and group process; demonstrate understanding of epidemiological methods in gathering, analyzing, and utilizing data and be able to apply to diverse populations in the community; use coherent comprehensive, culturally sensitive and age appropriate communication in oral and written form; analyze biostatistical/epidemiological data and nursing evidence-based research findings to improve/enhance the delivery of nursing care to diverse populations in the community; identify recommended health screenings and immunizations and health promotional strategies throughout the life span; analyze the impact of culture as a significant influence on the health perceptions, interpretations, and behaviors of diverse groups; demonstrate the ability to perform comprehensive and risk assessments, to make critical decisions, and to take appropriate nursing actions in the area of community health; demonstrates the ability to practice the principles of health and safety in a caring manner to maximize client care outcomes across the lifespan. Teaching strategies include lecture, audiovisuals, student presentations, discussion, clinical experiences, guest speakers, laboratory simulation and clinical experiences in varied clinical settings where the students are responsible for assessing, planning, implementing, and evaluating the care of families within the context of a community. Students have the opportunity to analyze the impact of culture on health perceptions, interpretations, and behaviors of diverse groups.

Enforced Prerequisite at Enrollment: NURS 305

International Cultures (IL)

United States Cultures (US)

NURS 417: Family and Community Health Concepts

4 Credits

Study of the concepts of family and community based nursing care emphasizing multicultural influences on health practices. NURS 417 Family and Community Health Concepts (4) (US;IL) Upon completion of the course the student will be able to (a) Synthesize knowledge from nursing, public health, family, and community theory as a foundation for culturally congruent community health nursing practice that is sensitive to race, religion, gender, disability and sexual orientation; (b) Utilize the nursing process and principles of primary, secondary and tertiary prevention that are culturally appropriate in the care of community based clients who differ in terms of health beliefs, values, and practices; (c) Develop skill in the use of independent/interdependent nursing actions

to deliver care to clients across the life span; (d) Demonstrate the management of client, family, and community care through appropriate use of concepts of leadership, case management and group process; (e) Describe collaboration at the collegial level with nurses and other members of the health care team to provide continuity of care through culturally appropriate communication, consultation, and referral; (f) Use coherent, comprehensive and culturally sensitive communication in oral and written form; (g) Analyze biostatistical/epidemiological data and nursing research findings to improve/enhance the delivery of nursing care to diverse populations in the community; (h) Analyze the impact of culture as a significant influence on the health perceptions, interpretations, and behaviors of diverse groups. Students will spend 40 hours practicing in a clinical setting. In that setting they will be responsible for assessing, planning, implementing and evaluating the care of families within the context of a community. Students will have the opportunity to analyze the impact of culture on health perceptions, interpretations, and behaviors of diverse groups. Evaluation methods: Students will be evaluated both theoretically and clinically by use of the following: (a) Guided study of complex family and community health patterns using collaboration case analysis; (b) Case findings and analysis; (c) Direct care to culturally diverse families in the community setting. Relationship/linkage of course to other courses: This course applies and integrates family and community nursing concepts to culturally diverse clients in the community. It is offered at the senior level and incorporates previously learned theoretical and clinical nursing knowledge with an appreciation for how diversity influences the health care behaviors of families and communities as they relate to the health care system. Relationship of course to major: This senior level nursing course is one of the components of the Advanced Standing Option. It is a required course that provides students with the opportunity to develop skill in delivery of health services to globally diverse populations across the life span. It is also designed to increase the student's knowledge base related to the community based client including relationships, lifestyle and kinship patterns. Lastly, it provides an arena for community health planning for diverse populations. Special facilities required to teach the course: The clinical arena which will be used to teach this course includes but is not limited to high risk populations in the community, senior or special housing projects, prisons and missions. Frequency of offering an enrollment: The course will be offered every semester and enrollment varies from 10 to 20 students.

Recommended Preparation: NURS major and NURS 390 and NURS 357 International Cultures (IL)
United States Cultures (US)

NURS 420: Mental Health Nursing

4 Credits

Emphasizes clinical application of mental health theory in nursing care of patients with acute and chronic mental health problems. NURS 420 NURS 420 Mental Health Nursing (4) NURS 420 focuses on care of clients experiencing mental health problems and emphasizes the clinical application of mental health theory in nursing care of patients with acute and chronic mental health problems. Upon completion of this course, the student will be able to synthesize knowledge from nursing and the social, health and behavioral sciences to describe the nature of mental adaptations throughout the lifespan; demonstrate effective therapeutic communication skills when dealing with clients, groups and families experiencing maladaptive responses to stress; assess the strengths and weaknesses of the client and family in the context of a group and community environment; demonstrate the ability to perform comprehensive and risk assessments, to make critical decisions, and to

take appropriate nursing actions in the area of psychiatric mental health; utilize the nursing process as related to the Standards of Psychiatric and Mental Health Nursing practice; collaborate with nursing colleagues, mental health professionals and consumers in the practice of psychiatric mental health nursing; analyze individual and societal forces that effect nursing research and evidence based practice in the area of psychiatric mental health nursing; demonstrate the knowledge of self needed to be an effective therapeutic agent and a client advocate; demonstrate culturally competency and the ability to provide holistic psychiatric mental health nursing care; perform the principles of psychiatric mental health and safety in a caring, nonjudgmental manner; demonstrate a current and relevant knowledge base of legal and ethical issues that can be applied to psychiatric mental health nursing; identify and support mental health promotion and mental health educational activities to maximize client care outcomes and evaluate psychiatric mental health nursing as a professional specialty. Teaching Strategies include lecture, process recordings, discussion, selected readings, audiovisuals, laboratory simulation and clinical experiences. NURS 420 is offered fall and spring semesters with an annual enrollment of approximately 120 students (60 at UP and 60 at HMC) with clinical sections limited to 10 students each.

Enforced Prerequisite at Enrollment: NURS 305 and NURS 350

NURS 430: Organization and Administration for the Nurse Manager

3 Credits

Introduction to organizational theory and principles of practice in the administration of nursing services and patient care. NURS 430 Organization and Administration for the Nurse Manager (3) NURS 430 is the first of four courses included in the nursing management series, which focuses on leadership and management in nursing. NURS 430 includes a study of the history of American management and the influences on management styles and approaches. Topics covered in the course includes: Leadership theory, Change theory, Health care organizational structure and functions, Legal and Ethical issues, Nursing Management structure, function, and roles, Power and politics; Communication; and Nursing care delivery systems.

NURS 431: Data Management for Nurse Managers

3 Credits

Analysis of information systems to manage nursing service organizations; includes financial management, the budgeting processes, and productivity measurement. NURS 431 NURS 431 Data Management for Nurse Managers (3) NURS 431 is the second of four courses included in the nursing management series, which focuses on leadership and management in nursing. NURS 431 includes a study of information systems and financial aspects of managing health care organizations and patient care delivery. Topics covered in the course include: Information systems in health care, Electronic medical record, Security and portability of health care information. Topics related to budget and finance include, operating and capital budget management, nurse staffing systems and productivity. Lab activities enable students to develop proficiencies with spreadsheet software. The course is offered in traditional classroom instruction, on-line through ANGEL at selected campus sites and through World Campus. Course evaluation criteria may include examination, case studies, and student projects or presentations as assigned by the faculty. Upon completion of all 4 courses, students receive a certificate of completion of the Nursing Management Series from the school of nursing.

Recommended Preparation or Concurrent: NURS 430

NURS 432: Nursing Management of Human Resources

3 Credits

Human resource management and related factors in nursing service organizations. NURS 432 NURS 432 Nursing Management of Human Resources (3) NURS 432 is the third of four courses included in the nursing management series, which focuses on leadership and management in nursing. NURS 432 includes a study of human resource management with an emphasis on application to nursing and health care organizations. Topics covered in the course include: Employment laws, hiring, termination and managing staff turnover, conflict management, staff development and productivity, organized labor and unions, the impaired nurse, and discussion of nursing standards, ethics, delegation and the nursing shortage. The course is offered in traditional classroom instruction, on-line through ANGEL at selected campus sites and through World Campus. Course evaluation criteria may include examinations, case studies, and student projects or presentations as assigned by the faculty. Upon completion of all 4 courses, students receive a certificate of completion of the Nursing Management Series from the school of nursing.

Recommended Preparations: NURS 430

NURS 433: Seminar for Nurse Managers

3 Credits

Course focuses on the application of management principles in the role of the nurse manager. NURS 433 NURS 433 Seminar for Nurse Managers (3) NURS 433 is the fourth of four courses included in the nursing management series, which focuses on leadership and management in nursing. NURS 433 is designed to allow the student to explore issues that challenges individuals in the nurse manager role. Designed with a seminar approach the student will study the following topics: The future of nursing leadership, mentoring, networking, stress management for the nurse manager and avoiding burnout, managing patient care quality and regulatory compliance, and implementing change. Students also complete a field observational study with a nurse manager or nurse executive in a health care organization. It is recommended that students complete at least one of the previous nursing management (NURS 430, NURS 431, NURS 432) courses prior to enrolling in this course. The course is offered in traditional classroom instruction, on-line through ANGEL at selected campus sites and through World Campus. Course evaluation criteria may include examinations, case studies, and student projects or presentations as assigned by the faculty. Upon completion of all 4 courses, students receive a certificate of completion of the Nursing Management Series from the school of nursing.

Enforced Prerequisite at Enrollment: NURS 430

NURS 440: Trauma/Critical Care Nursing

3 Credits

Focuses on the impact of and the nursing care of persons experiencing acute trauma and/or critical illness. NURS 440 NURS 440 Trauma/Critical Care Nursing (3) NURS 440 is designed as an introductory study of the impact of like-threatening physical problems across the life-span utilizing the nursing process. The course focuses on problems encountered in the hospital critical care setting and is a nursing elective. Upon completion of this course, the student will be able to meet the following objectives: Integrate knowledge from nursing and related

disciplines into case study format for persons with life-threatening illnesses; Explore practice, ethical, legal and interpersonal dimensions within the critical care setting. Identify problems for nursing critical care research. Study the most common illnesses in the critical care setting for the neurological, respiratory, cardiac, renal, gastro-intestinal, trauma and multiple system organ failure systems. Students incorporate academic learning with some case study review to simulate the critical care setting. Success in the course is evaluated by in-class examinations, assigned research readings, and written critiques. NURS 440 is offered in the spring semester only, with an average enrollment of 40 students.

Enforced Prerequisite at Enrollment: NURS 305 or NURS major

NURS 441: Nursing Care of America's Veterans: An Introduction Into the Care of Military Veterans

3 Credits

This course offers information on caring for the unique population of United States military veterans. NURS 441 Nursing Care of America's Veterans: An Introduction Into the Care of Military Veterans (3) This course provides in-depth information on the American Veteran population from a nursing perspective. Nursing education focusing on the needs of this specific culture will result in improved patient care and outcomes for veterans. Health care needs are reviewed from the physical, emotional, social, and cultural aspects of care. The history of the Veterans Health Administration (VHA)/Veterans Administration (VA) system will be discussed as well as the benefits available for eligible veterans. Through addressing current events surrounding the VA quality care issues and access to care, nursing students will gain insight into the health care and health maintenance challenges experienced by many veterans in the United States.

Recommended Preparation: PSYCH 100 or SOC 1 or HDFS 129 or (NURS 230 and NURS 251)

NURS 442: Introduction to Perioperative Nursing

1 Credits

Perioperative nursing is a growing field with significant career opportunities for professional nurses. This course is designed to introduce undergraduate nursing students to the specialty of perioperative nursing through didactic teaching and simulation experiences. Throughout this course, students will experience the roles and responsibilities of the circulating and scrub nurse and the other members of the surgical team while applying the nursing process. Students will integrate knowledge from the sciences along with universal nursing principals to assure safe and effective nursing care in this clinical setting. In addition, students will have opportunities to explore the career opportunities found within the specialty while supporting the development of more specialized knowledge and skills required in the care of the surgical client.

Enforced Prerequisite at Enrollment: NURS 230

NURS 450A: Professional Role Development III: Leadership and Management

2 Credits

Study of leadership roles and various styles of nursing management and their implications for the professional nurse. NURS 450A - Professional Role Development III: Leadership and Management (2) NURS 450A is the senior level professional role development course that focuses on

delegation of care, leadership and management. Upon completion of the course, the student will be able to analyze influences which impact on role development and nursing practice; recognize the significance of professional, ethical, regulatory and legal codes within the context of nursing practice; recognize nursing skills necessary to respond to the client's needs throughout the life span including end of life issues; recognize current and relevant knowledge of leadership and management theory as it relates to the health care environment; recognize current and relevant knowledge of ethical, legal, national and international policies as it relates to the health care environment; demonstrates current knowledge of nursing research and modern technologies to recognize nursing care that is rigorous and evidence based; assess the nursing profession's responsibility for self-regulation and accountability in order to maximize client care outcomes; demonstrates the ability to promote, support, and facilitate the health, well being, and comfort of vulnerable populations as to enhance the quality of service delivery; recognize the principles of leadership, accountability and delegation that promote the well being, safety and security of patients and coworkers; recognize and promote the ability to communicate effectively (including the use of technology) with patients, families, social groups and the health care team; demonstrates increased awareness of the nurse generalist role and the value of life-long learning. Teaching strategies include lecture, audiovisuals, student presentations, discussion, guest speakers, simulation and role-playing. The course is offered each fall semester with approximately 120 students enrolled.

Enforced Prerequisite at Enrollment: NURS 305 and NURS 350

NURS 450B: Professional Role Development III: Clinical Capstone

3 Credits

Senior level clinical capstone course that emphasizes the integration and application of theory and evidence based practice. NURS 450B is the clinical capstone course for the Nursing Program and provides a total of 135 clinical hours. Ninety (90) clinical hours will be spent with a preceptor in a clinical setting, where the student will be responsible for assessing, planning, implementing and evaluating the care of clients and will have the opportunity to employ management and delegation skills in the care of clients. The remaining 45 clinical hours will be obtained from simulation, case studies and other course work such as NCLEX review. All clinical hours focus on preparing the student to transition into the Registered Nurse role. Upon completion of this course, the student will be able to demonstrate the ability to practice in a holistic, culturally competent and caring manner; demonstrate the ability to practice within the context of professional, ethical, regulatory and legal codes of nursing practice; demonstrate the ability to promote, support, and facilitate the health, well-being, and comfort of vulnerable populations so as to enhance the quality of service delivery; demonstrate the ability to perform comprehensive and systematic assessments and take appropriate actions; demonstrate the ability to utilize evidence based practice and modern technologies to assess and respond appropriately to patient needs; utilize nursing skills to provide optimum care and to practice principles of health and safety in a caring, nonjudgmental manner; utilize nursing skills to respond to a person's needs throughout the life span, i.e. life choices, disability, and end of life issues; demonstrate current and relevant knowledge of the social, health, and behavioral sciences that can be applied to nursing practice; demonstrate current and relevant knowledge of ethical, legal, national, and international policies that can be applied to nursing practice; demonstrate current knowledge of nursing research to provide nursing care that is rigorous and evidence based; demonstrate the ability to communicate effectively (including the use of technology) with patients, families, social groups and the

health care team; identify, manages and support health promotion and health educational activities to optimize patient safety and well-being; demonstrate the ability to lead and coordinate a team, delegating care appropriately; demonstrate the ability to assess risk and actively promote the well-being, safety, and security (patients and coworkers) in the work environment; demonstrate increased confidence in the nurse generalist role and in the value of life-long learning.

Enforced Prerequisite at Enrollment: NURS 305 and NURS 350

NURS 452: Women's Health Issues

3 Credits

The course provides the opportunity to explore priority health issues impacting the well being of women through a holistic lens including the physiologic, psychological, social, economic, political and cultural considerations. Issues affecting women in the United States and globally will be discussed. The lifespan from adolescence throughout later adulthood will be included. In depth exploration and critical analysis of key topics related to women's health will be incorporated into the course work and assignments. Students will be challenged to consider the health disparities influencing women and the impact these disparities have on the health of families and communities.

Recommended Preparation: BIOL 141 or PSYCH 100 or WMNST 100

Cross-listed with: BBH 452

United States Cultures (US)

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

NURS 452H: Women's Health Issues

3 Credits

Exploration of major health issues concerning women today, with an emphasis on social, cultural, and medical influences.

Cross-Listed

Honors

NURS 458: Ethical Challenges in Healthcare Informatics

3 Credits

A case based laboratory designed for the exploration and analysis of the ethical dilemmas facing healthcare informatics practitioners. NURS 458 focuses on the challenges associated with managing private healthcare information as health informatics technologies evolve. Students explore and apply principles of ethical decision-making and professional codes of conduct and laws governing information privacy to selected case scenarios and then compare and contrast their reasoning with expert opinions. Students gain an appreciation for the benefits of healthcare technologies and the potential for inadvertent and negligent breaches in information security.

NURS 460: Advanced Concepts in Clinical Nursing Informatics

3 Credits

An exploration of clinical informatics tools to support informatics practice. NURS 460 Advanced Concepts in Clinical Nursing Informatics (3) Advanced Concepts in Clinical Nursing Informatics prepares nurses to support, promote, and assist in the implementation and efficient and

safe use of informatics tools in the fast-paced, technology rich clinical healthcare environment. Students will explore electronic health records, clinical decision support tools, database management and data mining, patient safety technologies, and the clinical workflow implications and meaningful use of each. Students will learn principles of health care organizational culture, change theory, and the System Development Life Cycle (SDLC) to prepare them to assist with project management as informatics tools are introduced in the clinical environment. The use of informatics tools to support knowledge management in an organization is also emphasized. Students will discover the benefits and barriers of Health Information Exchange (HIE) in the promotion of public health. Finally, students will discover the competencies, skills, roles, and standards of informatics nursing practice.

Enforced Prerequisite at Enrollment: NURS 357. Recommended Concurrent: NURS 458

NURS 463: Compassionate Counseling for Children/Adolescents Dealing with Dying, Death, Other Life Crises

3 Credits

Explores issues involving dying, death and life crises which occur in today's world and affect school communities. RECOMMENDED PREPARATION FOR NURS 463 IS PSYCH 100 OR SOC 001 OR HD FS 129. NURS 463 explores the complex issues involving death in today's world as faced by children and adolescents. Content includes: counseling skills for nurses; child and adolescent development in the understanding of dying, death, and other life crises; exploring dying, death, and crises that are present in the lives of children and adolescents in the modern world; discussions of risks of death in the modern world including suicide, accidents, disasters, violence, war, and communicable diseases; description of death rituals and how societies cope with dying and death; identifying effective strategies to assist children and adolescents in coping with dying, death, and other life crises. The societal and school issues that affect not only an individual student but the milieu of the school and other students, parents, teachers, advisers, and administrators are inherent in the content. This course expands knowledge and interventions for those working with children and adolescents in the school setting.

Recommended Preparation: PSYCH 100 or SOC 1 or HDFS 129

NURS 464: Dying and Death

3 Credits

NURS 464 focuses on the exploration of attitudes toward death and dying, concept of grief, responsibilities to the dying person and the family across cultures. The student will explore theories and research related to death and dying, identify one's individual attitudes and beliefs about death, identify effective strategies to assist individuals and families to cope with death. Course topics include thanatology, expressions of attitudes toward death, factors affecting familiarity with death, learning about death, socialization, understanding death through the lifespan, a mature concept of death, death of a companion animal, social and cultural influences, cross-cultural and historical perspectives and inter faith dimensions and religious rituals, including traditional culture, western culture and cultural viewpoints and diversity. The course focuses on an overall understanding of the experience of loss, bereavement, grief and mourning as it relates to different populations and different methods of death including suicide, war, illness and violence.

Recommended Preparation: PSYCH 100 or SOC 1
International Cultures (IL)
United States Cultures (US)
General Education: Health and Wellness (GHW)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Soc Resp and Ethic Reason

NURS 465: Health Concepts for Adults with Complex Health Care Needs

3 Credits

In-depth study and application of the theoretical principles and roles of adult clients and families with complex healthcare needs. NURS 465 focuses on the application of concepts that relate to the adult high-risk client, family, or significant other in a complex health care setting. Upon completion of this course, the student will be able to: integrate theory and knowledge of nursing and related disciplines as a basis for professional nursing practice with adult high-risk clients; demonstrate interpersonal skills to support and guide clients/families/significant others in the selection of appropriate health patterns; utilize the nursing process to analyze complex adult high-risk situations occurring in acute care, transitional care, and/or community settings; apply critical thinking skills to clinical nursing practice situations involving the high-risk client/families/significant others; collaborate with colleagues in the design, implementation, and evaluation of nursing interventions; demonstrate in the clinical nursing practice setting the role of the professional nurse as case manager, change agent, advocate and researcher with the adult high-risk client/families/ significant others; demonstrate a comprehensive understanding of opportunities for clinical nursing research with the adult high-risk client/families/significant others; and demonstrate nursing practice within the professional legal and ethical guidelines. The RN student selects a clinical nursing practice experience related to complex health care of the adult high-risk client and, based on course objectives, develops clinical practice objectives in collaboration with the course faculty.

Recommended Preparation: NURS major and NURS 390 and NURS 357

NURS 466: Systems and Community Responses

3 Credits

An exploration of the multidisciplinary response to child maltreatment. CMAS 466 / NURS 466 Systems and Community Responses (3) An exploration of the multidisciplinary response to child maltreatment. The roles, responsibilities, and interconnected relationships between the systems that interact when responding to child maltreatment issues will be analyzed. The forensic medical response, challenges, and multidisciplinary team best practices to child maltreatment case are examined. Students will explore responses and best practices within the health care, judicial, child protection, social service, educational, mental health, human service, and community systems. This course provides students with the opportunity to work with a variety of majors and understand more clearly the interdisciplinary nature of child maltreatment prevention, advocacy, and response.

Recommended Preparation: CMAS 258
Cross-listed with: CMAS 466

NURS 468: Client Education Strategies for Nurses and Other Health Care Providers

3 Credits

Explores current and emerging roles of client education in the knowledge era. RECOMMENDED PREPARATION FOR NURS 468 IS PSYCH 100 OR SOC 001 OR HD FS 129. NURS 468 explores current and emerging roles of client (patient) education in the knowledge era. Emphasis is placed on the application of teaching and learning strategies that deliver empowering and engaging health education to promote wellness, prevent health problems, and manage chronic illness. Upon completion of this course, the student will be able to: assess the challenges and issues facing nurses and health care providers enacting the role of client educator in the knowledge era; explore the promotion of client health at all levels of prevention: primary, secondary, tertiary; integrate the client education process for individuals, families, groups, and communities; assess learner motivation, readiness, and situational impacts such as psychosocial factors and cultural beliefs that affect the client education process; implement sound, effective teaching and learning strategies in selected clinical settings with special populations; develop teaching plans using taxonomies of educational objectives; select specific teaching strategies and delivery systems, including technology, appropriate for the developmental stage and needs of the learner; describe methods for evaluation of teaching; identify appropriate communication and documentation of the process and outcomes; and list topics in client education which can be further explored through research. This course may be used as a nursing elective or by nurses or other health care workers to increase knowledge and promote successful health teaching to clients.

Recommended Preparation: PSYCH 100 or SOC 1 or HDFS 129**NURS 472: Relational Aggression in the Healthcare Setting**

3 Credits

An exploration of research and interventions for relational aggression in the healthcare setting. RECOMMENDED PREPARATION FOR NURS 472 IS NURN MAJOR OR NURS 350. NURS 472 focuses on the problem of workplace bullying, also known as relational aggression. The course addresses the problem as it occurs within the healthcare professions, with a primary focus on the nursing profession and the nursing education process. The history, roles, and cultural influences of relational aggression will be explored. Students will also learn about related concepts such as horizontal violence and lateral violence. The psychological and physiological impact on the recipients of relational aggression will be reviewed. The consequences of relational aggression on patient care quality, safety, and the recruitment and retention of staff will be explored. Strategies and interventions designed for use by an individual, the work group, and management will be presented. Factors, such as education, mentoring, and leadership in combating relational aggression, will be emphasized.

Recommended Preparation: NURS major or NURS 350**NURS 475: Integrated Concepts in Nursing Practice**

3 Credits

Project-based capstone course for application of nursing concepts to health promotion/disease prevention in populations. RECOMMENDED CONCURRENT FOR NURS 475 IS NURS 417 OR NURS 465. NURN MAJOR CONTROL. NURS 475 is a project-based capstone clinical course for

the RN student with a focus on the application of nursing concepts and the RN's development of future career goals. The course is designed to provide opportunity for students to synthesize and apply the art and science of nursing to health promotion and disease prevention in culturally diverse populations in varied clinical settings of the global community. Upon completion of this course, the student will be able to synthesize knowledge from nursing and related sciences for application to evidence based nursing practice; interpret legislative and regulatory processes relevant to the capstone project; collaborate with members of the health team to provide continuity of care through appropriate communication, consultation, and referral; communicate effectively using written, verbal, nonverbal and emerging technology methods; apply biostatistical, epidemiological, and research findings to enhance the delivery of evidence based nursing care; provide evidence based nursing care that contributes to safe and high quality patient outcomes within healthcare Microsystems; participate in the development and implementation of theory-based and a population-focused health promotion project; facilitate change in the healthcare microsystems affecting the provision of nursing care to diverse populations throughout the lifespan; demonstrate accountability in the delivery of professional nursing care; and integrate the concept of life-long learning into professional nursing practice.

Recommended Preparation: NURS major and concurrent NURS 417 or NURS 465**NURS 480: NCLEX Prep**

2 Credits

This course is designed to prepare nursing majors who are in their final semester to take the National Council Licensure Exam (NCLEX®) exam. Passing this exam is required to obtain licensure as a registered nurse (RN) in all US states and territories. Major topics include the structure and format of the exam, the NCLEX® test plan, test taking strategies, and review of key nursing concepts from across the curriculum that will be tested on the exam. The course is intended to be interactive and students are given extensive practice answering NCLEX®-style questions. Students are encouraged to identify areas in which they need further study to prepare for the exam. At the end of the course students are expected to develop a personal study plan to guide their preparation for the exam.

Enforced Prerequisite at Enrollment: NURS 405A and enforced concurrent NURS 405B**NURS 492: Emergency Care and Safety**

3 Credits

NURS 492 is a comprehensive emergency care and safety course that incorporates basic first aid skills and knowledge and advanced topics such as oxygen therapy, hazardous materials, farm/rural incidents, disaster planning, incident command, triage, and mass casualty incidents. The course includes discussion of infectious diseases and the standard precautions utilized by rescuers to prevent the transmission of disease. Critical thinking and decision-making skills are enhanced through practical exercises using various scenarios to improve the rescuers response in emergency situations. Students successfully passing the practical skill testing receives cards in First Aid/Emergency Care and CPR for the Healthcare Provider/Professional CPR. NURS 492 is a complimentary course to NURS 203, which is a basic first aid/community CPR general education elective course designed for the non-nursing major who is required to have first aid/CPR certification for their

course of study. NURS 492 provides emergency care at a higher level of training and is an excellent course for nursing students with advanced health care knowledge, community health care providers (i.e., school nurses), and any non-nursing major interested in emergency medical services (i.e., Kinesiology).

Recommended Preparations: BIOL 161 BIOL 163

NURS 494: Honors Thesis

1-6 Credits/Maximum of 6

Independent honors research project related to student's interests directed by faculty supervisor and culminating in production of thesis. NURS 494H is the vehicle by which scholars in the Schreyer Honors College who are conducting honors research with a faculty member in the College of Nursing will register for the senior honors thesis credits. The course facilitates the development of an independent honors research project related to student's interests directed by faculty supervisor and culminating in production of thesis.

Honors

NURS 495: Nursing Study in Specialized Setting

1-12 Credits/Maximum of 12

Designed to provide student with in-depth study and practice in clinical specialty area of choice. COURSE CONTROL. NURS 495 is designed to provide students with in-depth study and practice in clinical specialty area of choice. Students work with a faculty member in the development of course objectives and goals and with a clinical preceptor to accomplish them. Student evaluation is provided by both the faculty and clinical preceptor. All clinical hours focus on increasing the student's self-confidence in transitioning into the Registered Nurse role and in the value of life-long learning that supports high quality care and evidence-based practice.

NURS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

NURS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NURS 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NURS 499: Foreign Study–Nursing

1-9 Credits/Maximum of 9

Study of nursing issues in a foreign country.

International Cultures (IL)

Nutrition (NUTR)

NUTR 100: Nutrition Applications for a Healthy Lifestyle

3 Credits

This course introduces students to nutrition principles necessary to promote a healthy lifestyle through assessment and application. Students will be better prepared to evaluate nutrition-related issues presented in the media and to make informed choices about their diet in order to promote health throughout their lives. Information about nutrients (proteins, carbohydrates, fat, vitamins, water, and minerals) and the physiological processes used to digest, absorb, and utilize them is presented and related to such topics as maintenance of ideal body weight, improvement in physical performance, and the role of nutrients in various disease states such as heart disease, diabetes, cancer, and osteoporosis. Topical issues such as alcohol ingestion, food insecurity, and consumer concerns will be utilized to integrate and critically analyze information presented by various media outlets. This course is intended for non-nutrition major students and will fulfill 3 credits of the GHW requirement of general education. Students who have earned credit for NUTR 251 may not schedule this course.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

NUTR 119: Elementary Foods

3 Credits

Basic principles and fundamental processes underlying food preparation. For non-nutrition majors only.

NUTR 120H: Food Preparation

3 Credits

Scientific principles of basic food preparation, with an emphasis on the physical and chemical aspects.

Honors

NUTR 123S: First Year Seminar in Nutritional Sciences

1 Credits

The course will meet once weekly to provide first year students with a basic understanding of why nutrition is important and how to improve their own diet and that of their friends and families. The course will explain the 3 options in nutritional sciences, promote discussions and learning about popular diets that may or may not offer health benefits, and explore important discoveries and advances in the nutritional sciences that underpin the current state of knowledge.

Enforced Corequisite at Enrollment: PSU 14 co-required (linked) course First-Year Seminar

NUTR 144: Our Plates: Exploring Food and Healthy Eating Patterns Through Cooking

3 Credits

This class teaches students how to plan and prepare recipes and meals through the lens of the Dietary Guidelines for Americans (DGFA) and the dietary guidelines of other countries and cultures. Students will explore the relationship between diet and health, with an emphasis on the food groups that make up the MyPlate, Mediterranean diet and Vegetarian eating patterns, as well as other established eating patterns in the US and other countries. Current US eating practices will be evaluated and compared with the guidelines to understand how well Americans and students are meeting current recommendations. Students will also attend a cooking lab where they will learn basic cooking skills and apply the concepts covered in the course through recipe analysis, meal plan creation, and hands-on cooking sessions.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Key Literacies

NUTR 170: Careers in Nutrition

1 Credits

Nutrition professionals describe career paths and opportunities for graduates in applied and science options; strategies for making effective career decisions.

NUTR 175N: Healthy Food for All: Factors that Influence What we Eat in the US

3 Credits

This course explores factors that influence food intake, how individuals make food choices within their communities, and how these choices impact health and wellness. Topics include an overview of what Americans tend to eat, factors that influence food intake (e.g., economics, food environment, advertising/marketing), and the impact of poverty on food security, hunger, and health outcomes including obesity. This course also discusses how nutrition-policy influences food intake and health and food assistance programs. Students will be encouraged to examine their beliefs and understanding of how ethnic status, race, and socio-economic status, etc., affects individuals and their family's access to low-cost, healthy food. Students will enhance their understanding of the nature of social justice and equity by examining whether access to healthy food through federally funded programs is a right or a privilege and how a country capable of feeding the world has hungry citizens. This course includes hands-on interactive learning activities in the foods laboratory that teach food budgeting skills across income levels that provide perspective to eating healthy on a budget.

NUTR 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

NUTR 211R: Applying Biochemistry to Nutrition

1 Credits

The course provides the student with a beginning understanding of how the biochemistry and metabolism under instruction applies to the human body. This includes the localization of biochemical processes within tissues and organs, the organ specific utilization of macronutrients as fuel sources, organ-specific specialization of macronutrient metabolism, and the anatomical features that accommodate and facilitate these functions. This course is supplemental to BMB 211: Elementary Biochemistry, and helps the student apply the biochemical activities taught in BMB 211 in the context of human physiology and nutrition. The beginning level coverage offered in both BMB 211 and NUTR 211R will prepare students for NUTR 445, Energy and Macronutrient Metabolism.

Enforced Prerequisite at Enrollment: (CHEM 202 or CHEM 202H or CHEM 210 or CHEM 210H) Corequisites: BMB 211

NUTR 251: Introductory Principles of Nutrition

3 Credits

NUTR 251 Introductory Principles of Nutrition (GHW) is a 3-credit course. This course is designed for nutrition majors and non-majors to provide a broad understanding of general principles of nutrition. Concepts covered include the essential nutrients, digestion, absorption, transport, and food sources. Additionally, major health issues related to some nutrients that are of public health concern in the United States are discussed in more detail giving insight into cause, treatment and prevention. Of major importance to students' lives are health and nutrition implications of overweight and obesity, heart disease, diabetes, bone health, and energy balance as affected by diet and physical activity. Lastly, understanding of nutritional needs throughout the life span is introduced, with emphasis on pregnancy, lactation, and infant nutrition. All of these concepts at this introductory level are important for students in the major so that they are prepared for upper division courses.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

NUTR 251H: Introd Prin Nutrition (honors)

3 Credits

NUTR 251H, Introductory Principles of Nutrition (GHW) is a 3-credit General Education honors course. This course is designed for honors-seeking nutrition majors and non-majors in the pre-health fields to provide a broad understanding of general principles of nutrition. Concepts covered include the essential nutrients, digestion, absorption, transport, and food sources. Additionally, major health issues related to some nutrients that are of public health concern in the United States are discussed in more detail giving insight into cause, treatment and prevention. Of major importance to students' lives are health and nutrition

implications of overweight and obesity, heart disease, diabetes, bone health, and energy balance as affected by diet and physical activity. Lastly, understanding of nutritional needs throughout the life span is introduced, with emphasis on pregnancy, lactation, and infant nutrition. All of these concepts at this introductory level are important for students in the major so that they are prepared for upper division courses. All of these concepts at this introductory level are important for students in the major so that they are prepared for upper division courses and are relevant to preparation for medicine, dentistry, and other allied health fields.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Key Literacies

NUTR 291N: Drugs and Nutrition: Social and Scientific Interactions

3 Credits

Drugs and Nutrition: Social and Scientific Interactions is a General Education Integrative Studies (N) course intended for all undergraduates looking to learn more about nutrition in the context of drugs. In this survey course, learners will explore relevant terminology and connections between nutrition and drugs, as well as, the historical context and cultural significance of plant medicines, drugs and nutrition. Learners will also acquire requisite knowledge about current perspectives surrounding plant medicines, harm reduction and health equity. Common themes across drug-nutrition interactions including historical context, cultural significance, nutritional impacts and concerns, harm reduction and health equity as well as considerations for special populations will be covered.

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

NUTR 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

NUTR 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

NUTR 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NUTR 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

NUTR 320: Science and Methods of Food Preparation

4 Credits

The purpose of this course is to teach students the science of food preparation, to develop culinary skills, to learn how to preserve the nutritional content of plant and animal foods, and how to apply food safety principles during food preparation. Additionally, for each food preparation method, students will learn the underlying chemical and physical principles responsible for the recipe outcome and apply these principles in the cooking lab. Students will gain an understanding of production methods used by food manufacturers and the source of food additives used to make processed foods. Students will apply scientific principles of food preparation by modifying recipes to improve the nutritional quality of prepared foods while maintaining product quality. During the lab sessions, students will learn basic culinary techniques and apply these techniques by reading recipes, preparing foods, and using sensory evaluation to analyze the prepared foods.

Enforced Prerequisites at Enrollment: (NUTR 251 and CHEM 202) or (NUTR 251 and CHEM 210)

NUTR 358: Assessment of Nutritional Status

3 Credits

NUTR 358 is an introduction to the purpose, methods, and scientific basis for assessment of nutritional status in total health care for individuals and groups. Students will learn the role of nutritional assessment within the Nutrition Care Process model. Information is presented regarding current standards of food and nutrient intake adequacies and the use of these reference standards in nutritional assessment. Laboratory and case study assignments are included in the course to apply nutrition assessment principles and understand the role of anthropometric, biochemical, clinical, and dietary intake measurements as part of the nutritional assessment. Students will learn to measure, calculate, and interpret personal anthropometric and dietary intake variables. The course will teach students to collect and interpret personal nutritional assessment data and assess nutritional status.

Enforced Prerequisite at Enrollment: NUTR 251

NUTR 360: Nutrition Education and Behavior Change Theory

3 Credits

This course covers a range of topics related to providing evidence-based nutrition information to individuals as well as population-level health. It is designed to be an introductory course in nutrition education and theory within the Nutritional Sciences major. Students will explore the tenets of communication, education, and behavioral theories and models pertinent to the development and dissemination of nutrition information. Exploration of the fundamentals of food behavior, basic communication strategies essential to the nutrition counseling relationship, group facilitation, and working with diverse population groups will be examined through didactic lecture, individual practice, and project-based learning. Using current technologies to locate and understand evidence-based research, guidelines and protocols will be emphasized. Students will

apply information discussed to the development of culturally sensitive nutrition education materials that are appropriate for the target population that is being addressed.

Enforced Prerequisite at Enrollment: NUTR 251

NUTR 361: Community and Public Health Nutrition

3 Credits

This course covers a range of topics around nutritional issues related to population-level health. Community or public health work appeals to many graduates of Nutritional Sciences because it allows them to directly affect the nutritional status of large groups of people. Many nutritionists are drawn to community and public health work because it allows them to practice a variety of skills, such as assessing the nutritional needs, planning interventions, designing educational programs, and conducting program evaluation. In this course, students learn the theory behind community assessment, policy development, intervention planning, and program management and will have an opportunity to practice the skills necessary to carry out these activities through in-class activities and assignments. By the end of this course, students will have a deeper understanding of which population groups in the US benefit from federal food and nutrition assistance programs; what these programs are; what laws and policies regulate them; and how they operate.

Enforced Prerequisite at Enrollment: NUTR 251 Concurrent Courses:
NUTR 360
United States Cultures (US)

NUTR 372: Nutrient Metabolism

3 Credits

NUTR 372 provides a foundation in principles involved in human nutrient metabolism. Particular focus will be placed on macronutrients (protein, carbohydrates, and fats) and relevant micronutrients (e.g., water- and fat-soluble vitamins, and minerals). Language around nutritional biochemistry and physiology: digestion, absorption, distribution, metabolism and excretion will be covered for all relevant nutrients. This course will prepare students for advanced courses in nutritional sciences.

Enforced Prerequisite at Enrollment: NUTR 251 and (CHEM 110 or CHEM 130)

NUTR 386: Managing Quality in Food and Nutrition Services

3 Credits

NUTR 386 Managing Quality in Food and Nutrition Services (3) This course is designed to foster the integration of management principles in the profession of nutrition and dietetics. Topics include strategic application of principles of management and systems in the provision of food and nutrition services to individuals and organizations, quality management, health care systems, leadership theory, corporate culture and communication, fiscal management in food and nutrition services, employee staffing, counseling and retention, and marketing. A business plan is also developed incorporating key operating indicators for organizational structure, marketing and financial objectives.

Enforced Concurrent at Enrollment: HM 230

NUTR 390: Nutritional Biochemistry and Physiology

4 Credits

NUTR 390 is an upper-level undergraduate course that provides a solid foundation in principles of biochemistry, anatomy, physiology in the context of nutrition. Particular focus will be placed on macronutrients (protein, carbohydrate and fats), in conjunction with relevant micronutrients. Gene regulation related to nutrition will be covered. Concepts from pharmacology and toxicology are introduced as a way to build language around nutritional biochemistry. Absorption, distribution, metabolism and excretion will be covered for all relevant nutrients. NUTR 390 does not meet degree requirements for the Nutritional Sciences major or minor.

Enforced Prerequisite at Enrollment: CHEM 202 and NUTR 251

NUTR 391: Professional Preparation in Nutrition and Dietetics

2 Credits

This course provides students with an introduction to current issues in public health, the healthcare industry, professional practice and consumer trends that impact nutrition and health careers. Students will participate in activities during class to explore current topics in public health and issues related to improving access, quality of care and affordability in health care. Ethics scenarios will be presented and discussed that are relevant to nutrition and other healthcare practitioners. This course also prepares students to develop a set of professional skills necessary to initiate a career in the field of dietetics and their required field experience. This course is designed to help students increase self-awareness, become cognizant of strengths and weaknesses, and develop more effective communication skills. Students will use these skills to obtain and successfully complete an advanced field experience in nutrition (NUTR 495).

Enforced Prerequisite at Enrollment: NUTR 360 Concurrent at Enrollment:
NUTR 361 and NUTR 358

NUTR 393: Dietetic Internship Application Development

1 Credits

This course is designed to assist students with the critical thinking skills required to prepare and implement post-graduate educational plans required to progress in the field of nutrition and dietetics. Students wishing to become a Registered Dietitian Nutritionist (RDN) must apply to and be selected for a post-baccalaureate professional supervised learning experience, also known as a dietetic internship, following graduation. The process is competitive, complex and requires self-awareness of professional strengths and weaknesses as well as knowledge of the individual characteristics and objectives of specific dietetic internships. This course will introduce students to this process and help them with the skills needed to clarify their goals and complete the materials needed for a dietetic internship application.

Enforced Prerequisite at Enrollment: NUTR 391

NUTR 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

NUTR 400: Introduction to Nutrition Counseling

2 Credits

This course introduces students to the principles and issues present in the nutrition counseling relationship. Topics will include techniques designed to promote and support nutrition behavior change such as motivational interviewing, cognitive behavior change, working with resistance, transference, countertransference, how to conduct a nutrition counseling session, ADIME charting, coding, and billing issues. Students will learn how to give advice effectively, improve their listening and self-reflection skills as they progress through the course. Challenging situations such as eating disorders, dual diagnosis, and obesity will be explored through role-playing and simulation. The dietitian's role within the healthcare team, skill development through practical application and an introduction to Interprofessional interactions will be emphasized.

Enforced Prerequisite at Enrollment: NUTR 358 Concurrent Courses: NUTR 446

NUTR 407: Nutrition for Exercise and Sports

3 Credits

Interactions between nutrition, food selection, and timing of eating as they apply to exercise training and recreational physical activity.

Enforced Prerequisite at Enrollment: NUTR 251

NUTR 409: Addressing and intervening on social determinants of nutrition inequity

3 Credits

This course will ask students to look above and beyond the individual level for societal factors influencing population- and individual-level nutritional status. It will discuss people's nutrition behaviors, dietary choices, and nutritional status in the context of the larger social environments wherein they live and work every day. Approaches that consider policy, systems, and environmental change for improving nutrition will be introduced using both domestic and international case studies. Students will be asked to understand, apply, and make connections among the social gradients that characterize health and nutrition in both clinical and public health programs or interventions. Students will be taught how to develop tailored nutrition programs or interventions using social and behavioral information underlying a nutrition situation, as well as evidence-based characteristics of effective campaigns.

Enforced Prerequisite at Enrollment: NUTR 251 and (NUTR 360 or BBH 316 or HDFS/SOC 210)

NUTR 410: Eating and Weight Disorders

3 Credits

Eating behaviors vary widely across individuals, but only the extremes of these behaviors are considered pathological. This course provides an opportunity for students to attain a theoretical overview of eating and weight-related disorders, including anorexia nervosa, binge eating disorder, bulimia nervosa, obesity, and dieting. The course will discuss theories and current literature on the causes, diagnosis, symptoms, and treatment of eating and weight-related disorders. In addition, the course will also provide an overview of the differences in the prevalence, manifestations, and treatment of disordered eating in special populations, including men, children, athletes, and minorities. For each

topic discussed, students will have related readings to provide insight on the history, theory, research and challenges related to this topic. At the end of this course, students will have an understanding of the history, definition, causes and controversies in eating and weight disorders. In addition, students will be able to define the various eating disorders and critically discuss research regarding their causes, consequences, treatment, and prevention.

Enforced Prerequisite at Enrollment: 5th semester standing NUTR 358

NUTR 421: Biocultural Perspectives on Public Health Nutrition

3 Credits

NUTR 421 (3) (1L) takes a public health perspective whereby the biocultural influences on health and nutrition are examined across global contexts. It will challenge students to consider the extent to which social and cultural factors contribute to food behaviors and nutritional status, particularly among vulnerable populations in low- and middle-income settings. The application of the social sciences, including key principles from nutritional anthropology, are a critical yet often overlooked aspect of public health nutrition interventions; this course will ask students to critique both over- and under-nutrition interventions through both biomedical and ethnomedical lenses. Students will describe key considerations for culturally-appropriate nutrition intervention development, implementation, and evaluation within the public health sphere.

Enforced Prerequisite at Enrollment: NUTR 251 International Cultures (1L)

NUTR 425: Global Nutrition Problems: Health, Science, and Ethics

3 Credits

This course is a survey of topics with a focus on an examination of the underlying reasons for malnutrition in developing countries and the nutrition-related health problems facing developing country populations, particularly women and children. The topics will range from climate change, clean water supply, and health, to micronutrient deficiencies during pregnancy and child development. Identification of ethical issues and the underlying values/principles of situations relevant to the lives of poor people in developing countries will be discussed, including the right to food in the context of humanitarian aid. Discussion of interventions and current solutions involving multi-country cooperation and agencies meant to alleviate these problems will be explored.

Enforced Prerequisite at Enrollment: NUTR 175Z or NUTR 175 International Cultures (1L)

NUTR 445: Energy and Macronutrient Metabolism

3 Credits

This course is designed to provide a foundation in the chemistry and metabolism of the macronutrients. Building on a knowledge base in biochemistry, physiology, and nutrition, this course will focus on the metabolism of proteins, carbohydrates, and lipids, and the integration of these metabolic pathways. The course provides the student with a sufficient application of biochemical processes, cellular molecules and their metabolism to serve as a basis for an advanced study of nutrition.

Enforced Prerequisite at Enrollment: BMB 211 and NUTR 251 and NUTR 211R and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164

NUTR 445H: Nutrient Metabolism I

3 Credits

Nutrients, their sources, metabolism, interrelationships and requirements with focus on carbohydrates, lipids, and proteins.

Honors

NUTR 446: Micronutrient Metabolism

3 Credits

Nutrition 446 is designed to provide a foundation in integrated metabolism, metabolic functions, biochemistry, as well as cellular and molecular biology of the micronutrients (vitamins and minerals). It is an advanced nutrition course that will build upon your basic knowledge in physiology, biology, chemistry and nutrition. Students need to have a solid understanding of macronutrient metabolism (NUTR 445) in order to fully understand the micronutrient metabolism material presented in this course.

Enforced Prerequisite at Enrollment: NUTR 445**NUTR 451: Nutrition throughout the Life Cycle**

3 Credits

This course will take a lifecycle approach to the study of nutritional needs, status, conditions, and interventions. The same nutrients are needed from birth to older age, but the requirements change along with a plethora of other factors including food preferences, chewing ability, digestion, absorption, metabolism, growth, behaviors, and barriers to healthy eating. The course will be divided into nine life stages and will cover what is nutritionally important at each stage. The student will also learn how nutritional status at one stage can impact health in later stages. By the end of this course, the student will have in-depth knowledge of nutritional needs and issues at each stage of life.

Enforced Prerequisite at Enrollment: NUTR 358 Concurrent Courses: NUTR 446**NUTR 452: Nutritional Aspects of Disease**

3 Credits

This course will review the underlying nutritional components and pathophysiology of common human diseases/disorders. The focus is on the metabolic disturbances and nutritional interventions for the prevention of these diseases. Topics include nutritional aspects of obesity, diabetes, cardiovascular disease, GI and renal diseases, immunity and viral diseases, and cancer. The overall goal of this course is to expose students to the integrated nature of the disease process with a focus on nutritionally based or related diseases.

Enforced Prerequisite at Enrollment: NUTR 445 PreRequisite or Concurrent Courses: NUTR 446**NUTR 453: Medical Nutrition Therapy**

3 Credits

This Medical Nutrition Therapy course provides students with a strong understanding of how to best prescribe diets for patients, depending on the specific disease profile of the individual. This understanding comes from integrating knowledge of disease pathophysiology with nutrient roles and requirements. This knowledge of disease process informs

dietary recommendations. In each case, students use the Nutrition Care Process to assess individual patient needs to determine best practice. Strong assessment skills will allow students to prioritize treatment for best outcomes at an individual level. This course covers prescribed medical nutrition therapy for major disease states encountered in clinical practice. Background pathophysiology lays the foundation for interpreting research and prescribing best practice diets for diseases including obesity, diabetes mellitus, cardiovascular disease, renal failure, and liver disease among others. Additionally, planning and usage of enteral and parenteral nutrition is covered. In each unit, students use their understanding of disease states to provide nutrition recommendations in case study examples. Prescriptive diets must reflect physiological states as well as individual patient preferences.

Enforced Concurrent at Enrollment: NUTR 452**NUTR 460: Nutritional Neuroscience**

3 Credits

This course explores how food affects behavior and the brain, and vice versa: how neural circuits and gut hormones control eating and other behaviors. Throughout the course we will dissect the proverb “You are what you eat,” and examine the effect of diet and body weight on behavior and cognition. Links between pathology and dysfunction in the gut and neurological and psychiatric diseases, including addiction, autism or Alzheimer’s will also be explored. This course will cover current nutritional neuroscience findings from both animal models and human studies. We will also emphasize critical evaluation of nutritional neuroscience topics.

Enforced Prerequisite at Enrollment: (NUTR 251 or BIOL 161) and (BIOL 163 or BIOL 141 or PSYCH 260 or PSYCH 260A) Recommended Preparation: At least 4 semesters of nutrition or physiology or neuroscience or psychology courses.**NUTR 487: Advanced Performance Nutrition**

3 Credits

This course will provide a review of metabolism as it relates to performance nutrition, and go greater in-depth on substrate utilization including supplements, hormones, and hydration during performance, recovery, and rest. Students will learn about the nutritional considerations for special populations (e.g., those with eating disorders, celiac disease/ other autoimmune diseases, tactical groups, specific sports, etc). Students will be asked to apply the Nutrition Care Process to these populations. Students will have the opportunity to also apply nutrition timing, periodization, and menu planning for specific performance needs as they apply performance nutrition to specific populations. Students in this course may help provide meals, snacks, and/or taste tests to student athletes.

Enforced Prerequisite at Enrollment: NUTR 407**NUTR 490W: Nutrition Seminar**

3 Credits

It is essential for nutrition professionals to keep up with the latest discoveries in the field. In this course, students will learn how to review published literature, integrate and evaluate the information, and disseminate their findings to others both verbally and in writing. A major focus of the course is the preparation of the paper in which students will critically evaluate original research papers and other evidenced-based

documents, summarize the findings, and provide conclusions based on a careful analysis of the cited literature. From these exercises, students will acquire skills in interpreting research results and communicate their findings of a nutrition-related topic in a professional manner in both written and oral formats. The overall goal of this class is to empower students to sort fact from fiction in nutrition information and to be able to communicate their findings effectively.

Enforced Concurrent at Enrollment: NUTR 452 Recommended
Preparations: ENGL 202A or ENGL 202C
Writing Across the Curriculum

NUTR 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

NUTR 494H: Honors Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research identified on an individual or small-group basis.

Honors

NUTR 495: Advanced Field Experience in Nutrition

3 Credits

NUTR 495 is intended for students to earn academic credit through a supervised field experience in a dietetics or nutrition-related field. Students will complete 240 hours at a site agreed upon between the student, the field experience preceptor, and NUTR faculty member as a result of the Field Experience Proposal developed in NUTR 391. The primary focus of the field experience is both observational and participatory experiential learning accompanied by onsite supervision, as well as University-based instruction.

Enforced Prerequisite at Enrollment: NUTR 391

NUTR 495B: Advanced Field Experience in Nutrition

3 Credits

NUTR 495B: Advanced Field Experience in Nutrition is intended for students to earn academic credit through a supervised field experience in a dietetics or nutrition-related field. Students will complete 120 to 160 supervised practice hours at a site agreed upon between the student, the field experience preceptor, and Nutritional Sciences faculty member. The primary focus of the field experience is both observational and participatory experiential learning accompanied by onsite supervision, as well as University-based instruction.

NUTR 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

NUTR 496H: Independent Studies

3 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

NUTR 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NUTR 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

NUTR 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Occupational Science (OS)

OS 410: Foundations of Occupational Science and Therapy

4 Credits

Foundations of occupational science including the human drive to remain occupied, creation of identity through meaningful activity and enhancing health through occupation will be explored. Understanding engagement in daily occupations from the lens of occupational science dovetailed with practice will be the focus of the course.

Prerequisite: 6 credits in any psychology course and 3 credits in any sociology or anthropology course.

OS 420: Occupational Constructs: Habits, Routines, Roles & Rituals

3 Credits

Habits, routines, roles, and rituals are occupational constructs for occupational science and occupational therapy practice. These will be examined as catalysts or deterrents in daily living for people, communities, and society. Occupational constructs will be explored across time, place, and cultures. Exploration and practical application of how occupational constructs inform transformation of habits, routines, roles, and rituals as related to identity, health, and well-being across the lifespan will be addressed.

Prerequisite: 6 credits in any psychology course and 3 credits in either sociology or anthropology

OS 430: Perspectives of Culture, Equity & Spirituality

3 Credits

Exploration of ways individuals and groups create, manage, and shift identities through their choice of and participation in occupations within

society. This course specifically considers identity through occupations by examining through the lens of equity, inclusion, and discourse, while considering the intersection of notions and constructs of cultural values and beliefs in constructing the self.

Prerequisite: 6 credits of psychology courses and 3 credits of sociology or anthropology

OS 440: Human Behavior: Creativity and Flow

3 Credits

This course delves into the complex nature of occupation and how it contributes to the experience of being human. Drawing on a wide range of material, from scientific research to literary analysis, students will study three major themes: factors that impact occupation, understanding the influence of creativity and flow on behavior and occupations, and the function of occupations on well-being. This course enables self-discovery as well as expanding knowledge about the power and importance of creativity on occupations.

Prerequisite: 6 credits of psychology and 3 credits of either sociology or anthropology

OS 450: Applied Occupational Science Capstone

5 Credits

The capstone Occupational Science course will offer the student time to enhance skills in advanced scholarship, leadership, advocacy, program and policy development, education, or theory development in occupational science and occupational therapy practice. Topic and design will be driven by student with guidance from capstone advisor.

Prerequisite: 9 credits in psychology courses and 3 credits of either sociology or anthropology courses.

Occupational Therapy (OT)

OT 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

OT 100: Structural Foundations of Occupational Therapy

1 Credits

An overview of the structural foundations of the occupational therapy profession.

First-Year Seminar

OT 101: Conceptual Foundations of Occupational Therapy Practice

2 Credits

An overview of the conceptual foundations of occupational therapy practice. Observation of therapists in treatment settings. O T 101 Conceptual Foundations of Occupational Therapy Practice (3) The focus of the course is to provide students with the conceptual foundations of occupational therapy. These foundations form the basis for subsequent occupational therapy courses and are expanded upon in those courses. Topics will include: clinical reasoning, diversity issues, ethics and conflict management, occupation, models of O T, the Practice Framework,

principles of management, and occupational therapy literature.

Upon successful completion of OT 101 the student will be able to:

1. Describe occupation from the perspective of an occupational therapy practitioner. 2. Identify the critical differences between the models of OT theory: cognitive, biomechanical, Person Environment Occupation, and sensory integration. 3. Identify cultural, contextual, and diversity issues which impact the practice of occupational therapy in a variety of practice settings and describe their impact. 4. Identify and define types of clinical reasoning utilized in occupational therapy. 5. Identify professional literature appropriate to the practice of occupational therapy; read and summarize selected articles. 6. Demonstrate knowledge of liability issues related to OT and the AOTA Code of Ethics and apply the code to given situations which present ethical dilemmas. 7. Identify issues common to the management of occupational therapy departments and the role of the OTA in these issues.

Enforced Prerequisite or Concurrent at Enrollment: OT 100S

OT 103: Occupational Performance Across the Life Span

3 Credits

Analysis of occupations from birth to death including descriptions of occupational performance and factors which influence performance. O T 103 Occupational Performance Across the Life Span (3) The focus of this course is an in-depth understanding of occupations across the life span. Students engage in an analysis of occupations including: activities of daily living, instrumental activities of daily living, education, work, play, leisure, and social participation. Specific descriptors are used to discuss occupational performance from the perspective of the Occupational Therapy Practice Framework. Areas which influence performance skills and patterns are studied and applied. Topics include: areas of occupations engaged in by individuals from birth to death; performance skills and patterns, context, activity demands, and client factors which impact occupational performance, definitions of grading, adapting, and analyzing occupational performance to support meaningful and socially relevant participation in day-to-day occupations. This course is required in the accredited 20T major and provides the foundation for understanding and applying the concepts related to occupations within the occupational therapy assistant intervention courses which follow. Evaluation methods include: written examination, and graded written/oral assignments. Enrollment is limited to students admitted to the 20T major.

Enforced Prerequisite at Enrollment: OT 100S and OT 101 United States Cultures (US)

OT 195E: Fieldwork Level I Experience in Occupational Therapy

1 Credits

This is the first fieldwork level I experience. It involves observation and engagement with individuals and/or groups to develop a better understanding of occupational performance, challenges and occupation-based interventions. The purpose is to process the information learned in didactic coursework as related practice. An emphasis is placed on peer collaboration, professionalism and interactions with clients, on-site providers, and/or family members.

OT 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

OT 205: Group Process Across The Lifespan

3 Credits

The course addresses concepts & theories related to group processes and dynamics within the OT therapeutic context. Topics addressed in the course, include but are not limited to: types of groups, group roles, leadership styles, theory of group development & implementation, group norms, and the selection of appropriate activities based on age and occupational performance areas or components, safety, management of the environment, and time management.

Enforced Prerequisite at Enrollment: OT 103 and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164 and Concurrent Courses: OT 207 and OT 209

OT 207: Assistive Technologies and Methods of Adaptation

3 Credits

Addresses a variety of assistive technology and assistive devices people use to assist them in completing daily and life occupations. Students engage several assistive technologies and learn to identify, create, and practice implementation of adaptations for clients that optimize occupational performance. Students will be expected to identify, describe, explain, and demonstrate knowledge and skills related to assistive technology and methods of adaptation along with client and caregiver safety.

Enforced Prerequisite at Enrollment: OT 103 and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164 and Concurrent Courses: OT 205 and OT 209

OT 209: Management, Leadership and Ethics in Occupational Therapy

3 Credits

Focus on management, leadership and ethics in occupational therapy practice will be addressed. Importance of intraprofessional and interprofessional collaboration, as well as, reimbursement and policies related to the delivery of services will be emphasized. A keen understanding of the occupational therapy practitioner-client relationship driven by therapeutic use of self will be applied to all aspects the teaching-learning process. Interprofessional and intraprofessional collaborative practice will be addressed, as well as, the essentials of advocacy and professionalism.

Enforced Prerequisite at Enrollment: OT 103 and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164 and Concurrent Courses: OT 205 and OT 207

OT 210W: Clinical Reasoning and Documentation in Occupational Therapy

3 Credits

This courses entails a broad scope experience in clinical reasoning strategies, proficient writing and documentation skills required by the occupational therapy assistant across a wide variety of practice settings. The objective of this course is to provide intensive & rigorous teaching-learning opportunities for students to utilize verbal and written clinical reasoning to facilitate occupation-based assessments, interventions and discharge planning. Additionally, student will be able to demonstrate knowledge of the use of technology in practice for electronic documentation, virtual environments, and telehealth platforms.

Enforced Prerequisite at Enrollment: OT 205 and OT 207 and OT 209 and OT 195E Concurrent Courses: OT 212 and OT 214 and OT 216 and OT 295E

Writing Across the Curriculum

OT 212: Occupational Therapy for Child & Adolescent Health

4 Credits

Students will utilize clinical reasoning to facilitate occupation-based interventions that address client factors as related to conditions associated or the prevention of such with children and adolescents. Focused interventions will include areas of Course Justification occupation, performance skills, performance patterns, contexts and environments. Students learn about and gain skills related to occupational therapy evaluation, intervention, and documentation related to conditions associated with children & adolescents.

Enforced Prerequisite at Enrollment: OT 205 and OT 207 and OT 209 and OT 195E Concurrent Courses: OT 210W and OT 214 and OT 216 and OT 295E

OT 214: Occupational Therapy for Psychosocial and Behavioral Health

4 Credits

Students will utilize clinical reasoning to facilitate occupation-based interventions that address client factors as related to psychosocial and behavioral health. Focused interventions will include areas of occupation, performance skills, performance patterns, contexts and environments. In-depth work will be engaged, as related to psychosocial and behavioral health interventions and programming in various clinical and community settings with individuals and groups. Overall, students will learn about and gain skills related to occupational therapy evaluation, intervention, doc

Enforced Prerequisite at Enrollment: OT 205 and OT 207 and OT 209 and OT 195E Concurrent Courses: OT 210W and OT 212 and OT 216 and OT 295E

OT 216: Occupational Therapy for Physical Health and Rehabilitation

4 Credits

Students will utilize clinical reasoning to facilitate occupation-based interventions that address client factors as related to physical health and rehabilitation. Focused interventions will include areas of occupation, performance skills, performance patterns, contexts and environments. Students learn about and gain skills related to occupational therapy evaluation, intervention, and documentation related to physical health and rehabilitation. Students will be expected to identify, describe, explain, and demonstrate knowledge and skills related to physical health and rehabilitation along with client and caregiver safety.

Enforced Prerequisite at Enrollment: OT 205 and OT 207 and OT 209 and OT 195E Concurrent Courses: OT 210W and OT 212 and OT 214 and OT 295E

OT 295: **SPECIAL TOPICS**

1-12 Credits/Maximum of 6

OT 295B: Field Experience in Occupational Therapy II

1-6 Credits

Part II of supervised experience in select occupational therapy settings in the role of an occupational therapy assistant; seminars included.

Enforced Prerequisite at Enrollment: successful completion of all didactic course work and successful completion of OT 295A

OT 295E: Fieldwork Level I Experience in Occupational Therapy

2 Credits

This is the second fieldwork level I experience taken alongside of coursework during the 4th semester. It involves observation and engagement with individuals and/or groups to develop a better understanding of occupational performance, challenges and occupation-based interventions. The purpose is to apply knowledge and skills learned in didactic coursework to practice. An emphasis is placed on peer collaboration, professionalism and interactions with clients, on-site providers, and/or family members.

Enforced Prerequisite at Enrollment: OT 195E Concurrent Courses: OT 210W and OT 212 and OT 214 and OT 216

OT 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

OT 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

OT 395A: Fieldwork Level II Experience in Occupational Therapy

1-6 Credits

This is the first 8-week supervised fieldwork experience in a community or clinical based setting. Level II fieldwork may be completed in acute care facilities, rehabilitation facilities, out-patient centers, behavioral/mental health facilities, school systems, home health agencies, outpatient centers, or skilled nursing facilities. Level II fieldwork includes hands-on experience with individuals and/or groups. Knowledge of the occupational therapy processes, professional conduct, and effective communication between supervisor and student is essential to accomplish fieldwork goals and objectives. The goal of Level II Fieldwork is to develop competent, entry-level, generalist occupational therapy assistants.

OT 395B: Fieldwork Level II Experience in Occupational Therapy

1-6 Credits

This is the second 8-week supervised fieldwork experience in a community or clinical based setting. Level II fieldwork may be completed in acute care facilities, rehabilitation facilities, out-patient centers, behavioral/mental health facilities, school systems, home health agencies, outpatient centers, or skilled nursing facilities. Level II fieldwork includes hands-on experience with individuals and/or groups. Knowledge of the occupational therapy processes, professional conduct, and effective communication between supervisor and student is essential to accomplish fieldwork goals and objectives. The goal of Level II Fieldwork is to develop competent, entry-level, generalist occupational therapy assistants.

Enforced Prerequisite at Enrollment: OT 395A

OT 495: **SPECIAL TOPICS**

1-6 Credits/Maximum of 6

OT 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

OT 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Organizational Leadership (OLEAD)

OLEAD 100: Introduction to Leadership

3 Credits

The ability to lead others is increasingly valued in today's world of work, and this course introduces key leadership concepts and practices based on current theory and research from both a social science and humanities perspective to prepare students for either the Bachelor of Science or the Bachelor of Arts as well as serve as a general education social science requirement. Whether or not a person is in a formal position of leadership, Introduction to Leadership will help students to discover the knowledge and skills necessary for effective leadership. The course will view leadership from an interactional framework that analyzes leadership from the perspective of the leader, the followers, and the situation. In particular, the unit on the leader will introduce traits, behaviors, gender, leadership development, personal strengths, developing leadership skills, creating a vision, addressing ethics, power, influence, and character. The unit on the leader-follower dynamic will introduce the concepts of followership, motivation, job performance, job satisfaction, engagement, embracing diversity and inclusion, listening to out-group members, managing conflict, overcoming obstacles, as well as leading group and teams. The final unit will focus the impact of the situation on leadership and will introduce students to organizational culture and climate, contingency theories of leadership, change, innovation, and will revisit the interactional framework in total to have students reflect on what they have learned.

Bachelor of Arts: Humanities

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

OLEAD 201: Organizational Theory and Functions for Leaders

3 Credits

Organizational theory and functions will explore the various functions of organizations in order to prepare students for future coursework. In particular the nature of organizations themselves will be examined along with various functions such as leadership, financial, communications, technology, production, sales, etc. Students will then use organizational

theory to see how the various functions interconnect and support the overall goals of the organization.

General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Creative Thinking
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

OLEAD 210: Evidence-Based Leadership

3 Credits

In evidenced-based leadership, students will learn how to use strong information and facts to increase the likelihood of success of leadership in organizations. In particular, this course starts by examining different kinds of evidence and analyzing their quality and usefulness. From there students will learn how to use that evidence to improve their leadership. Also covered will be convincing others to use strong evidence as well as implementing strategies based on that evidence to improve organizational effectiveness and success.

General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

OLEAD 220: Emotional, Social, and Cultural Intelligences and the Implications for Leadership

3 Credits

This course focuses on emotional intelligence, social, cultural intelligence competencies used to develop the leadership capacity to be self-aware, understand oneself and others, and to work across cultural differences to effectively meet the demands of work. Relevant theoretical models, key concepts, and scientific research are explored. The growing body of research relating emotional, social, and cultural intelligences to high work performance and leadership effectiveness will be explored as well as neuroscience research explaining how these competencies can be developed through practices to focus attention enhanced by awareness. The course relates theory and research to practical application by focusing on the development of competencies and their effective use in increasing self-knowledge, motivating and influencing others, demonstrating empathy, effective problem solving, applying decision-making skills, stress management strategies, enhanced well-being as well as leading across cultural differences.

General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

OLEAD 230: Leadership Across Industries

3 Credits

Leadership across industries compares and contrasts leadership in different types of industries. In this course students will learn about the various types of organizations and examine why leadership in those organizations have some leadership characteristics that are similar and others that are different. Industries such as private sector, government, education, healthcare, military, law enforcement, small business, and others will be used as examples to demonstrate those similarities and differences. This comparative analysis will help students learn

about other styles of leadership that they may access for their own organizations as well as allow for some career exploration.

OLEAD 409: Leadership Development: A Life-Long Learning Perspective

3 Credits

The course examines the continuing influence of social and environmental factors in shaping leadership and leadership development. OLEAD (LER) 409 Leadership Development: A Life-Long Learning Perspective (3)(BA) This course meets the Bachelor of Arts degree requirements. Current social conditions, such as financial crises, ineffective solutions to local, national, and international problems and corrupt leaders, call for more effective and ethical leadership on a broad scale. The positive and moral transformation of social institutions requires active participation and leadership of more authentic transformational leaders. This course will discuss authentic transformational leadership development from a life span developmental perspective. More specifically, it will focus on how an individual develops his/her leadership skills, potential, and capacity in his/her childhood, school, social organizations, colleges, and work organizations. The primary purpose of this course is to help students understand how family, educational, and other environmental factors have helped and/or will help them develop their transformational leadership potential and leadership effectiveness, in addition to gaining a better understanding of their strengths and weaknesses in respect to personality, individual difference, motivation, values, emotions, self-awareness, and identity. The fundamental objectives of this course are to help students 1) increase self-awareness; 2) to help students to know more about their sense of self, including self-identity, self-awareness, self-efficacy, and other types of self-concepts; 3) to understand the effect of life span influences in an individual's leadership development.

Prerequisite: 6th semester standing
Cross-Listed
Bachelor of Arts: Social and Behavioral Sciences

OLEAD 410: Leadership in a Global Context

3 Credits

This course explores the science and practice of leadership around the globe through pertinent scholarly literature and related instructional resources. OLEAD 410 Leadership in a Global Context (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will explore the science and practice of leadership across the globe. In particular, cross-cultural differences in leadership styles and methods from around the planet will be examined. Emphasis will be made on gaining knowledge of various cultural perspectives from around the world. That knowledge will then be used to examine successful leadership interactions between diverse cultures. Upon completion of Leadership in a Global Context, students will be able to understand differences within and between cultures, understand how diversity can impact an organization; recognize there are various sources of information to learn about culture; utilize various sources of information to gain knowledge of culture; develop the ability to recognize cultural differences in leadership situations, and think about developing leadership in global situations based on culture.

Prerequisites: OLEAD 100; or 6th Semester standing
Bachelor of Arts: World Cultures
International Cultures (IL)

OLEAD 411: Women and Leadership

3 Credits/Maximum of 3

Skills and competencies needed for effective leadership may change/vary from one era to another, one culture to another and one industry to another. Researchers and leaders themselves do not agree on a definition of "leader" or the skills/competencies that establish an effective leader. One might say that "what it takes to be an effective leader" is relative to the situation. Through the review of literature and research on leadership in general; review of literature and research on women in leadership; problem-solving in leadership scenarios; and self-assessment, students will develop a working definition of leadership and identify and develop leadership traits/competencies to encourage more women to be successful future leaders.

Prerequisites: OLEAD 100; or 6th Semester standing

OLEAD 464: Communication Skills for Leaders in Groups and Organizations

3 Credits

Theory- and research-based communication skills for leaders dealing with work-related problems in contemporary groups and organizations. LHR 464 Communication Skills for Leaders in Groups and Organizations (3)(BA) This course meets the Bachelor of Arts degree requirements. LHR 464 Communication Skills for Leaders in Groups and Organizations is a survey of theory, research, and practice related to the communication processes by which individuals in groups and organizations exercise influence, whether or not they occupy positions of acknowledged leadership, and may be taken as part of an Labor and Industrial Relations major or minor, or as an elective by students in other disciplines. The course is offered once each academic year and has an enrollment limit of 40 students per offering. The course requires no special facilities. It extends to other courses in the major primarily in the areas of Industrial Relations and Human Resources. It is also complementary to courses focusing on groups and organizations in Sociology, Psychology, Management, and Engineering. During the course, students are exposed to a variety of theoretical perspectives on the study of leadership, learn about research illuminating its functions, and become acquainted with communication practices derived from and/or suggested by such theories and research that contribute to the exercise of influence and, thereby, effective group and organizational performance. These terminal outcomes define the objectives of the course. Focus will be on leadership as both role-related behavior and goal-directed behavior, regardless of roles that members of groups and organizations occupy.

Prerequisite: 5th Semester Standing

Cross-listed with: LHR 464

Bachelor of Arts: Social and Behavioral Sciences

OLEAD 465: Collective Decision Making

3 Credits

Application of theories of decision making to work-related issues in groups and organizations requiring collective resolution and action. LHR 465 Collective Decision Making (3)(BA) This course meets the Bachelor of Arts degree requirements. This course presents a broad overview of theories, research, and practices in decision making as related to work-related choice making in groups and organizations and is open to students majoring or minoring in Labor and Industrial Relations, as well as to students who may wish to use the course as an elective. The

course is offered once each academic year and has an enrollment limit of 40 students per offering. It requires no special facilities. LHR 465 extends to other courses in the major, primarily in the areas of Industrial Relations and Human Resources. It is also complementary to courses dealing with decision making in groups and organizations in sociology, psychology, and management. Of particular interest are decision making practices, as well as theories that account for them, in single-motive situations (in which participants in the process are pursuing a common goal) and mixed-motive situations (in which two or more of the participants are competitively related, but must cooperate to achieve their objectives). Hence, the course deals both with (1) conventional decision making, as in the case of boards, task forces, problem-solving groups, and quality circles or teams, appropriate to single-motive situations and (2) processes, such as bargaining, negotiation, and dispute management/resolution, appropriate to mixed-motive situations. The course also deals with the influence of organizational culture on decision-making in both types of situations. Upon completing LHR 465, students will have been exposed to a broad array of theoretical perspectives on decision making in groups and organizations, will be familiar with research testing these theories, and be aware of decision making practices suggested by theory and research that are useful in situations requiring collective choice and action. These terminal outcomes of the course reflect the objectives.

Prerequisite: 5th Semester Standing

Cross-listed with: LHR 465

Bachelor of Arts: Social and Behavioral Sciences

OLEAD 495: OLEAD Internship

1-12 Credits/Maximum of 12

Supervised practicum in organizational leadership.

OLEAD 496: Independent Study

1-18 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Prerequisite: OLEAD100

OLEAD 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

Prerequisite: OLEAD100

Petroleum and Natural Gas Engineering (PNG)

PNG 301: Introduction to Petroleum and Natural Gas Engineering

3 Credits/Maximum of 3

The first part of the course will introduce the student to the design and implementation of the systems used in the extraction of oil and gas, including terminology and basic calculations in drilling engineering, geology, production, reservoir, and facilities engineering. The course will give an initial overview of the history of the oil industry and the origins of petroleum and natural gas reservoirs, followed by a description of the conventional and unconventional reservoir types. All aspects of

petroleum engineering from upstream to downstream will be included in this discussion, including transportation, marketing, and environmental impacts. The remainder of the course will present the various key disciplines in petroleum and natural gas engineering in the chronological order of how the disciplines interact. Key problems in each of these disciplines will be reviewed and solved, using Excel and introductory statistics/computer programming (using Matlab). First, the discipline of drilling engineering will be presented. This will focus on the different types of wells, bits, casing designs, and completion techniques. Topics in the discipline of reservoir engineering will be presented next and will include basic petrophysics, reservoir types and fluids, as well as basic extraction methods. The life cycle of a reservoir and its efficient and environmental friendly management will be discussed, including enhanced oil recovery methods, such as carbon dioxide injection and surfactant flooding. Topics in production engineering will be presented next, and will center on tubing design, artificial lift, stimulation using acids and fracturing, and cased-hole logging. Topics in facility engineering, the last discipline to be discussed, will focus on surface facilities such as separators, gas and water gathering systems, pipelines, stock tanks, chokes, and recycle plants. Finally, differences between unconventional and conventional extractions and systems will be described as this is now critical to the energy security of the United States. Focus here will be on shale properties, fluid property changes owing to tiny pores, diffusion, absorption, and hydraulic fracturing. The course will explain how fracturing in shale reservoirs differs from conventional ones. Transport of oil or gas from these tight rock matrixes by diffusion through the fracture network will be presented. Environmental considerations will also be discussed.

Enforced Prerequisite at Enrollment: (PHYS 211 or PHYS 250) Enforced Concurrent at Enrollment: GEOSC 1

PNG 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PNG 405: Rock and Fluid Properties

3 Credits

Reservoir rock properties, rock and fluid properties (interaction between rock and fluids), flow behavior in reservoir, and fluid properties. The objective of this course is to introduce students to basic reservoir rock and fluid properties. The course is divided into three sections: rock properties, rock and fluid properties (interaction between rock and fluids), and fluid properties. In the rock properties, Lithology of Reservoirs, Porosity and Permeability of Rocks, Darcy's Law, and Distribution of Rock Properties are discussed. In Rock and Fluid Properties Section, Existence of Multi-phases, Saturation, Wettability, Capillary Pressure, Effective and Relative Permeability, concepts are covered. Fluid properties topics include Phase Behavior of Single and Multi Component Systems, Compositional and Black-Oil models, Solution Gas-Oil Ratios, Formation Volume Factor, Compressibility, Density, Viscosity, and Interfacial Tension. This is also the first course that Petroleum and Natural Gas Engineering students take in the major. Therefore, an introduction to petroleum and natural gas engineering is also made. This course is a pre-requisite for most of the Petroleum and Natural Gas Engineering major courses. It is an elective course for majors such as Environmental Systems Engineering. It is offered every Fall semester.

Enforced Prerequisite at Enrollment: PHYS 211 and PNG 301

PNG 406: Rock and Fluid Laboratory

1 Credits

Systematic study of oil reservoir rocks and fluids; their interrelation applied to petroleum engineering.

Enforced Prerequisite at Enrollment: PHYS 211 Enforced Concurrent at Enrollment: PNG 405

PNG 410: Applied Reservoir Engineering

3 Credits

The broad course objectives are to introduce and implement techniques for analysis and prediction of reservoir performance by use of material balance and steady and non-steady state flow equations. Some specific objectives are: To introduce students to concept of material balance in oil and gas reservoirs. To learn to identify primary drive mechanisms in oil and gas reservoirs. To recognize important differences between production from conventional and unconventional shale reservoirs. To understand and apply concepts in single-phase transient flow in reservoirs. The course will commence with a discussion of rock and fluid properties including the properties of unconventional shale reservoirs and then move on to the analysis of the performance of dry gas reservoirs. After talking about the behavior of dry gas reservoirs with water influx, the topic of performance of gas condensate reservoirs will be discussed. Various schemes for analyzing the performance of gas condensate reservoirs using data from the field as well as based on laboratory experiments will be presented. This will be followed by a detailed exposition of material balance analysis of undersaturated oil reservoirs. Combination drives including water influx and gas cap expansion will be discussed. Laboratory analysis of pressure-volume-temperature relationships of saturated oils will be discussed. Prior to introducing models for water influx into reservoirs, essential concepts from the dynamics of fluid flow in reservoirs will be presented. This will enable students to better understand the concept of linear superposition that is essential to apply the water influx models.

Enforced Prerequisite at Enrollment: PNG 405 and PNG 406 Enforced Concurrent at Enrollment: EME 301 and EME 303

PNG 411: Introduction to Petroleum and Natural Gas Extraction

1 Credits

Introduction to the design and implementation of the systems used in the extraction of oil and gas. Not intended for petroleum and natural gas engineering majors.

Enforced Prerequisite at Enrollment: PHYS 211

PNG 420: Applied Reservoir Analysis and Secondary Recovery

3 Credits/Maximum of 999

P N G 420 Applied Reservoir Analysis and Secondary Recovery (3) This course addresses two major issues in petroleum engineering: water influx and water flooding. The displacement of oil or gas by water is a complicated physical process that has a great impact on recovery efficiencies. The first objective of the course is to merge the material balance method and transient flow solutions for the aquifer into one analysis tool for understanding and predicting water influx cases. Several analytical and numerical methods are presented including: linear and

radial diffusion equation solutions, super position, Hurst simplified, Schilthuis and Hurst modified. The second objective of the course is to understand the fundamentals of displacement theory and practice. The extension of the Buckley and Leverett water flooding theory is presented for three-phase flow. Three-phase relative permeabilities are determined from experimental data. Several geometrical patterns are discussed in the course including: five spots, staggered line drive, direct line drive, four spots, seven spots, and nine spots. The efficiency of each pattern is determined. Strategies for selecting a pattern for special cases are presented. The behavior of each pattern with time, including oil recover, is an integral part of the course. The students use our computational facility throughout the course. They write material balance models and use large reservoir simulators for studying water influx cases.

Enforced Prerequisite at Enrollment: [MATH 251 or (MATH 250 and MATH 252)] and PNG 410 and (CMPSC 200 or CMPSC 201)

PNG 420H: Applied Reservoir Analysis

2 Credits

Water influx theory. Application of principles of reservoir analysis to the determination of reservoir behavior and education.

Honors

PNG 425: Principles of Well Testing and Evaluation

3 Credits

This course examines the mathematical basis for pressure analysis. Both theory and the practice of pressure testing techniques are considered. The objectives are to: 1) Understand fundamentals of pressure transient analysis (well testing) for estimation of key formation parameters for a variety of flow models, including the line source solution, finite wellbore radius with wellbore storage and skin, naturally fractured reservoirs, and infinite and finite conductivity fractures; 2) Solve pressure transient problems using analytical solutions, computer programs, classical graphical methods, and modern well test software; 3) Understand sources of error and assumptions made; and 4) Learn about practical well test evaluation and well configurations for both tight and conventional reservoirs.

Enforced Prerequisite at Enrollment: [MATH 251 or (MATH 250 and MATH 252)] and PNG 420

PNG 430: Reservoir Modeling

3 Credits

PNG 430 is a senior-level undergraduate class where the student explores the fundamentals of hydrocarbon reservoir simulation as the area of reservoir engineering in which computer power becomes essential for predicting complex processes and fluid behavior involved in fluid transport in porous media. In this class, numerical models are built on the basis of finite-difference and finite-volume approximations of governing equations of fluid flow in porous media, which integrate conservation of mass, isothermal fluid PVT behavior, and Darcy's flow approximations. Topics include the use of Taylor Series, volume integrals, grid types, treatment of external (reservoir limit) and internal (wellbore) boundary conditions, generalized transmissibility calculations, matrix solution methods and solution of systems of simultaneous algebraic equations, treatment of space and time-derivatives, explicit and implicit schemes, stability analysis, and applications to single-phase (incompressible, slightly-compressible and compressible fluid) numerical

simulation. More advanced topics such as black-oil multiphase modeling and compositional modeling are introduced, including multiphase transmissibility calculations and multiphase solution techniques such as IMPES (Implicit-Pressure, Explicit Saturation) and multivariate Newton-Raphson.

Enforced Prerequisite at Enrollment: [MATH 251 or (MATH 250 and MATH 252)] and PNG 410 and (CMPSC 200 or CMPSC 201)

PNG 440W: Formation Evaluation

3 Credits

Formation Evaluation covers the characterization of oil and gas reservoir formations and methods for quantifying the volume of hydrocarbon resources therein. The course focuses on the petrophysical interpretation of wireline logs to meet these objectives, and also covers the operation and underlying physical principles of those tools. Topics covered include: the basic procedure of open hole logging, calculation of a geothermal gradient, understanding raster and digital well log files, quick look interpretation, reservoir volumetrics, understanding the physics of and cultivating the ability to interpret data from the traditional logging suite (gamma ray, spontaneous potential, resistivity devices, density, neutron, and sonic logs), coring, wireline formation testing, nuclear magnetic resonance logging, and interpretation in unconventional reservoirs. Best practices and limitations of the various well log tools are also discussed. Students are expected to perform complex engineering calculations using raw field data gathered from these tools, both from raster and digital well log files. As a "writing across the curriculum" course, students develop their technical writing skills through homework assignments that present their analyses in written reports.

Enforced Concurrent at Enrollment: PNG 405 and PNG 406
Writing Across the Curriculum

PNG 450: Drilling Engineering

3 Credits

PNG 450: Drilling Engineering covers the design and analysis of oil-field drilling operations and equipment. This course addresses a critical issue in petroleum and natural gas engineering: how to drill and complete oil and gas wells in a sound, economical, and environmentally safe manner. Drilling technology has advanced greatly since the first commercial oil well in the U.S. was drilled in northwest Pennsylvania in 1859. The true vertical depth of the well has grown from 69.5 feet from then to more than 15,000 ft, with the deepest at more than 40,000 feet, today. The horizontal length of a well has grown from theoretically zero to more than 10,000 feet, with the longest at 40,000 feet. The temperature and pressure of the formation that petroleum engineers need to drill through could easily reach 350 F and 20,000 psi or higher, and the formation and fracture gradient window becomes narrower, all making drilling and completion more challenging. In summary, it is becoming increasingly more challenging to drill wells. Thus, engineering design becomes more critical. The objectives of this course are to introduce the students to the science of drilling and completion. This includes learning the fundamentals of drilling fluids and drilling fluid design, and applying fluid mechanics and quantifying drilling hydraulics for complex fluid flow through drilling string and annular spaces. The course will also discuss the concepts and quantify the formation pressure and fracture pressure gradients for different methods of drilling. A key task for students will be to learn the methods for characterization, selection and optimization of casing design, and optimized bit design, and finally the course will discuss how to design directional and horizontal

wells to optimize production and recovery from mature fields and unconventional resources, such as coalbed methane, shale gas, and tight oil in Pennsylvania. This course is a prerequisite for petroleum and natural gas engineering major courses. It is an elective course for majors such as chemical engineering, mechanical engineering, civil engineering, etc. The knowledge, methods, and practical skills in this course could also be used in various other industries including geothermal HVAC, ground water drilling, mineral exploration, and scientific research.

Enforced Prerequisite at Enrollment: (EME 303 or CE 360 or ME 320) and [EMCH 210 or (EMCH 211 and EMCH 213)]

PNG 451: Drilling Laboratory

1 Credits

PNG 451: Drilling Laboratory covers common practices in well-control procedures and measurement of drilling fluid properties. This course serves as the laboratory component for PNG 450. Students will apply the concepts and skills gained from lectures and discussions in PNG 450. The aim is for students to become familiar with drilling fluids and how to quantify the fluid properties analytically. Students will also receive practical experience with drilling equipment, and will practice solving practical well-control problems in the laboratory. Students in this course will gain experience using our state-of-the-art rig floor simulator and drilling fluid and cement laboratory, which are equipped with the advanced facilities currently used in the oil and gas industry.

Enforced Prerequisite at Enrollment: (EME 303 or CE 360 or ME 320) and [EMCH 210 or (EMCH 211 and EMCH 213)] Enforced Concurrent at Enrollment: PNG 450

PNG 456: Hydraulic Fracturing Analysis

1 Credits/Maximum of 1

Industry professionals teach hydraulic fracture design and analysis.

PNG 457: Pump Systems for Oil and Gas Production

1 Credits/Maximum of 1

Industry professionals teach about sucker-rod pump technology.

PNG 458: Assessment, Classification, and Reporting of Reserves and Resources

1 Credits/Maximum of 1

Industry professionals teach how to define and estimate reserves.

PNG 459: Well Control Certification

1 Credits/Maximum of 1

Using the most advanced simulator system, industry professionals teach students how to avoid and resolve operational difficulties. Students who successfully complete the course receive a certificate.

PNG 475: Production and Completions Engineering

3 Credits

This course starts with the single phase flow in porous media and then followed with the multi-phase flow in porous media and pipes. Hence a basic understanding of the fluid flow and different flow regimes are required to follow the course. While discussing these issues in the class,

students will learn the role of compressibility on fluid flow in the rock, understanding the concept of compressibility requires some background in strength of materials. Additionally, while discussing tubing and casing design requirements in the course, students need to check burst and collapse loads which cannot be done without any previous knowledge about stress analysis taught in Strength of Materials. Therefore, the instructor is expecting that students have basic understanding of fluid flow and stress concepts and based on this foundation, new concepts about multiphase flow and well construction will be taught. Similarly, textbooks in this subject are prepared by assuming that the reader has a basic knowledge in fluid mechanics and strength of materials.

Enforced Prerequisite at Enrollment: EMCH 210 and Enforced Concurrent at Enrollment: PNG 410

PNG 480: Surface Production Engineering

3 Credits

Analysis and evaluation of surface production processes, fluid separation, storage, measurement, treating, custody transfer, transmission, disposal, corrosion, and other operations. P N G 480 Production Process Engineering (3) Surface production engineering involves the extraction of reservoir fluids, their treatment at the surface and movement to a commercial market via a common carrier. It is the primary objective of this course to provide the fundamentals of surface production operations and underlying operational principles and design criteria for equipment utilized in the surface handling of petroleum production fluids. Surface production facilities are described in detailed as systems in charge of the separation of the wellstream fluids into three single-phase components (oil, gas, water) and of their transport and processing into marketable products or their disposal in an environmentally acceptable manner. A detailed overview of hydrocarbon fluid behavior, analysis of hydrocarbon and water separation processes, analysis and design of surface transportation systems and flow assurance problems is provided along with a comprehensive look at the engineering aspects involved in surface production operations. Topics include purpose and description of onshore and offshore surface production facilities and the function of the equipment used in these processes, including wellheads and Christmas trees, gathering systems, production manifolds, field processing of crude oil, field processing of natural gas, phase separation of gas, oil and water, water-in-crude oil emulsification, heater-treaters and dehydration of crude oil, natural gas dehydration, stock tank batteries and transportation. Discussion includes oil and gas quality checks, oil and gas metering, typical contractual hydrocarbon sales specifications, and typical specifications for produced waters and other by-products. Hydrocarbon fluid behavior topics includes an overview of hydrocarbon thermodynamics, hydrocarbon PVT behavior, thermodynamics of liquid and vapor separation, and fluid behavior prediction models including modern cubic equations of state. In the context of surface facility design, a process simulation or compositional simulation is implemented to predict how the components the make up the well fluids react to changes in pressure and temperature as they are processed through the facility through a succession of phase changes where liquids flash to vapor or vapors condense into liquid. Equipment design topics comprise design of 2-phase and 3-phase vertical and horizontal separators, derivation of design equations, design of crude and condensate stabilization trains, design and operation of glycol dehydrator towers, and flow assurance topics such as hydrate, corrosion, and wax prevention. The ultimate purpose of surface equipment design is to recommend the most suitable and cost-effective equipment type and size that meets the specified service and system condition, contractual

obligations, and industrial health and safety and environmental regulations.

Enforced Prerequisite at Enrollment: EME 301 and EME 303

PNG 482: Production Engineering Laboratory

1 Credits

Measurement and analyses of the physical and chemical properties of hydrocarbon fluid systems in a production environment. P N G 482 Production Engineering Laboratory (1) The task of production engineers is to optimize the extraction, treatment and delivery rate of hydrocarbons. For this optimization to be realistic, quantitative values of some relevant parameters and properties that characterize the system should be known preferably by way of measurements. It is the primary objective of this laboratory course to give the student an understanding of the available measurement techniques; an opportunity to gain hands-on experience in carrying out the experiments as well as operating the apparatus and some practice in the art of technical report writing. The Production Engineering Laboratory has been designed to expose the student to the principles and procedures of production engineering for oil and gas analysis (physicochemical characterization and quality control) and the transport of fluids in pipes and conduits. The main objective is to familiarize students with the basic measurements that must be taken in production monitoring and control, as well as basic production engineering principles. It is also aimed to enhance the error analysis, critical evaluation and technical report writing skills of the student. Major pieces of equipment in this laboratory include: viscosimeters, oxygen bomb calorimeters, gas chromatograph, densitometers, centrifuges, dead weight testers, dew point testers, and a meter run setup. Laboratory experiences include, but are not limited to, the determination of density of clear organic substances and petroleum distillates that can be handled as liquids at test temperatures between 10 and 40 °C using digital density meters, the determination of the API gravity (or specific gravity) of crude oil, petroleum products normally handled as liquids (e.g. stabilized crude oil, stabilized gasoline, naphane, kerosene, gas oils, lubricating oils, and non-waxy fuel oils) and alcohols using hydrometer and pycnometer methods, the calibration of Bourdon type pressure gauges by means of a dead weight testers and constructing of calibration charts for gauges that are not adjustable, the determination of water and sediment in crude oils by means of the centrifuge procedure, the determination of the heat of combustion of organic substances ranging in volatility including oil samples with volatiles ranging from that of distillates to that of residuals, the measurement of viscosity of crude oil and liquid petroleum products by means of measuring the time for a volume of liquid to flow under gravity through a calibrated glass capillary viscosimeter, the determination of water vapor content of gases by measurement of the dew point temperature and the calculation there from of the water vapor content, and the determination of a gas flow rates in pipelines by means of orifice plates and axial full-flow turbine meters.

Enforced Prerequisite at Enrollment: EME 301 and EME 303. **Enforced Concurrent at Enrollment:** PNG 480

PNG 488: Unconventional Wells

3 Credits/Maximum of 3

The course starts with a general overview of different types of unconventional reservoirs and their geological and petrophysical properties. Then, due to the significance of natural fractures in economic production from these reservoirs, special attention will be given to

natural fracture characterization. In the next step, drilling and completion techniques adopted for these formations will be discussed. In the second part of the course, the emphasis will be on hydraulic fracturing design and collecting data (such as in situ stresses and rock mechanical properties) for a proper fracture design. Injection tests and Nolte-Smith analysis will be introduced toward the end of the course for fracture assessment purposes. The course will be finished with an overview of fractured well productivity analysis and decline curve analysis in unconventional oil and gas reservoirs.

Enforced Prerequisite at Enrollment: EME 303 and **Enforced Concurrent:** EMCH 210

PNG 490: Introduction to Petroleum Engineering Design

1 Credits

P N G 490 Introduction to Petroleum Engineering Design (1) The objective of this course is to introduce to the students the principles of engineering design as applied to petroleum and natural gas projects. The course focuses on the analysis of physical data with respect to error and use of this data in design. Other topics to be visited include a definition of what is a project deliverable and establishment of timelines for their implementation. The salient points of the course are as follows: (1) This course is the first capstone engineering design course in the sequence of three courses. In this portion of the course students' principal goal is to characterize the reservoir. In this process necessary basic sciences and engineering skills are utilized. (2) In reservoir characterization, students typically collect and analyze the data available in the literature and other related data provided by the operators. (3) In making a preliminary assessment towards field development students consider factors involving economic, environmental, social, ethical, health and safety considerations. (4) In this course, students work in teams. In each team, team members assume responsibilities as petrophysicist, drilling engineer, geologist, geophysicist production engineer, reservoir engineer and implement the necessary technical skill to fulfill their obligations. (5) This project starts from the ground level and ends with a complete field development plan. Within the context of the project (reservoir characterization) students have the opportunity to use the necessary skills to identify and formulate and solve the engineering problems and challenges that are faced. (6) In selecting the lease area the potential impact of project on the social and physical environments is considered and all the ethical responsibilities are studied in depth. (7) During every phase of the project the impact of decisions are considered within the framework of global, economic, environmental and societal context. (8) In this course the main contemporary issue the need for unconventional energy resources is the driving force behind the project. (9) In every phase of the project students are exposed to contemporary methodologies and engineering tools including forecasting, scenario planning and reservoir simulation. Also, whenever applicable the necessary engineering software is also incorporated in the development of the project.

Enforced Prerequisite at Enrollment: PNG 405 and PNG 406

PNG 491: Capstone Design in Drilling and Completions

1 Credits

Application of the concepts of reservoir, production, drilling and completions, and economics to petroleum engineering design projects. Engineering design by definition is the integration of knowledge and skills acquired through experience, reading and formal instruction into a final product, the design. To that end, this course is the second course

of a 3-course, 3-semester, sequence that will result in a comprehensive capstone-engineering project. As such, PNG 491 will utilize the knowledge gained from PNG 450, 451, and 475 to the project design initiated in PNG 490. The class will be divided into teams and students will be evaluated on the basis of their contribution to the team effort. All reports and presentations will be presented as a product of the team.

Enforced Prerequisite at Enrollment: PNG 450 and PNG 475 and PNG 490

PNG 492: Petroleum Engineering Capstone Design

1 Credits

Integration of petroleum and natural gas engineering concepts to project design. Engineering design by definition is the integration of knowledge and skills acquired through experience, reading and formal instruction into a final product, the design. To that end, this course is the third course of a 3-course, 3-semester, sequence that will result in a comprehensive capstone-engineering project. As such, P N G 492 will utilize the knowledge gained from three semesters of formal instruction to the project design initiated in P N G 490 and continued on in P N G 491. Course material will include the application of spreadsheet programming to petroleum and natural gas project design and its use in project economic analysis and risk analysis. The class will be divided into teams and students will be evaluated on the basis of their contribution to the team effort. All reports and presentations will be presented to the class as a product of the team.

Enforced Prerequisite at Enrollment: PNG 491 and EME 460

PNG 492H: Petroleum Engineering Capstone Design

1 Credits

Integration of petroleum and natural gas engineering concepts to project design. P N G 492 Petroleum Engineering Capstone Design (1) Engineering design by definition is the integration of knowledge and skills acquired through experience, reading and formal instruction into a final product, the design. To that end, this course is the third course of a 3-course, 3-semester, sequence that will result in a comprehensive capstone-engineering project. As such, P N G 492 will utilize the knowledge gained from three semesters of formal instruction to the project design initiated in P N G 490 and continued on in P N G 491. Course material will include the application of spreadsheet programming to petroleum and natural gas project design and its use in project economic analysis and risk analysis. The class will be divided into teams and students will be evaluated on the basis of their contribution to the team effort. All reports and presentations will be presented to the class as a product of the team.

Honors

PNG 494: Thesis

1-6 Credits/Maximum of 6

A problem in petroleum engineering involving review of the literature and experimental data obtained in the field or laboratory.

PNG 494H: Thesis

1-6 Credits/Maximum of 6

A problem in petroleum engineering involving review of the literature and experimental data obtained in the field or laboratory.

Honors

PNG 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

PNG 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Philosophy (PHIL)

PHIL 1: The Big Questions

3 Credits

This course plunges students into the deepest philosophical questions: Why is there something rather than nothing? Can I be sure about anything? What is the purpose of life? Is morality real or conventional? Can the existence of God be proven or disproven? Can science explain everything? Students will meet a range of historical and contemporary formulations of philosophical questions such as these, study various types of response, and acquire the analytical and expository skills to develop and defend their own perspectives. The course proceeds through discussion, reading, writing, and other assignments

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

PHIL 2: Individuals in Society

3 Credits

This course provides a philosophical introduction to pressing social and political issues. We will ask, for example, what justifies having a government; whether inequality is ever justified; what obligations citizens have toward each other and toward non-citizens; what exactly is wrong with racism, sexism, and other injustices and what we should do about them; the limits and benefits of privacy; and the role of families, schools, churches, clubs, and employers in public life. We study prominent philosophers and theorists on these questions, and address recent events or policies. Students will develop an appreciation for thinking about values in the context of conflicting political visions, and the analytical and expository skills for examining and discussing them.

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 3: Ethical Life

3 Credits

This course offers students an overview of ethical issues, moral reasoning, and questions concerning the good and flourishing life for

individuals and groups. It engages the work and critical interpretation of major figures in moral thinking, and enters into the full complexity of contemporary moral problems. Students will study and evaluate competing accounts of the right way to live, including their overall plausibility, their background assumptions, and their practical implementation.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 4: The Human Condition

3 Credits

This course introduces central philosophical questions about the lives we humans live: Can our lives have meaning, and does their value depend on it? Does each of us have a true self to be discovered, or a shared human nature we cannot escape? What do we mean by "authenticity," is it worth striving for, and can it be achieved? What difference does recognizing your mortality make to anything? We explore these questions in conversation with influential historical perspectives and contemporary theories, while approaching them from everyday concerns. Doing so provides a path for introducing philosophical ideas and evaluations into ordinary life.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 5: Film and Philosophy

3 Credits

This course serves both as an introduction to philosophy through critical viewing of film, and as an introduction to film aesthetics and the discussion of art experience, the nature of creativity and beauty, and the role of film and moving images in cultural critique. It offers an examination of historical and contemporary thought through films and videos, in-class presentations, readings, discussions, and student writings. These activities allow students to gain an understanding of diverse, often competing, perspectives on basic human problems and the influence of film and images in contemporary life.

Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 6: Literature and Philosophy

3 Credits

This course serves as an introduction to philosophy through the critical and analytic reading of popular, classic, and insightful literature - novels, plays, poetry, and creative non-fiction - from both Western and Non-western authors and cultures. We ask questions about the experience, purpose, and value of reading these works: Why do we sympathize with fictional characters? What do "coming of age" books contribute to our own maturity? Does literature give us insight into other people, and even into ourselves, unavailable in any other way? What is happening when

someone says that a work belongs to the "canon"? What does a literary artist need to know to create the works of great insight she or he creates?

Cross-listed with: CMLIT 6
Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

PHIL 7: Asian Philosophy

3 Credits

This class is an introduction to the major intellectual philosophical traditions of Asia: Hinduism, Buddhism and Zen Buddhism, Jainism, Confucianism and Neo-Confucianism, and Taoism. It proceeds through careful study of major, representative texts and authors of each of these traditions, and may range from foundational works to modern and contemporary developments.

Bachelor of Arts: Humanities
Bachelor of Arts: World Cultures
International Cultures (IL)
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

PHIL 8: Gender Matters

3 Credits

Feminism is one approach to addressing systematic oppressions of both women and men. This course examines various feminist philosophical approaches to issues such as the construction of gender, sex, and sexuality, the nature of gender injustice, and the intersectionality of oppressions. It also addresses contemporary issues, including sexual harassment and assault, abortion, explicit and implicit bias, and discrimination and exclusion.

Cross-listed with: WMNST 8
Bachelor of Arts: Humanities
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 9: Race, Racism, and Diversity

3 Credits

This course offers a critical examination of the ways we today often think about race and racism, the latter considered in its cultural, institutional, and systemic forms, as well as in its individual manifestations as slurs, beliefs, and attitudes. This course also takes up the philosophical issues raised by the concept of race in intersection with class, gender, and related concepts. It aims to promote diversity by fostering an appreciation and respect of differences especially in respect of race, ethnicity, gender, and religious affiliation.

Bachelor of Arts: Humanities
United States Cultures (US)
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

PHIL 10: Critical Thinking

3 Credits

This course provides a critical awareness of the function, nature, strengths, and weaknesses of argumentation in its various real-world and academic forms and contexts. Students examine the construction of persuasive arguments, discover types of fallacy, and learn how to evaluate reasoning for validity and soundness (that is, logic and truth).

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

PHIL 11: Science and Truth

3 Credits

This course investigates the nature of science, scientific reasoning, and the "scientific method." The value of objectivity and explanation will be considered in relation to our knowledge of the world and ourselves. Students will compare scientific truth claims to others, such as those from common sense, religion, the humanities, and pseudo-science. Key concepts include hypothesis, falsification, evidence, models, and theory. We ask: How do facts relate to proofs? What is the role of subjectivity in interpreting data? Does science progress? Are there questions science cannot answer? The goal of the course is for students to understand better the meaning, value, and limitations of the scientific enterprise.

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

PHIL 12: Symbolic Logic

3 Credits

This course is an introduction to symbolic logic. Logic is the science of correct reasoning, and symbolic logic is a particular branch of logic that studies correct reasoning using a formal or artificial language. In this course, students will first learn basic vocabulary for argument analysis, standards for evaluating arguments that are expressed in English, and basic methods for testing these arguments along with the shortcomings of said methods. The deficiencies of the more natural approach to evaluating and testing arguments motivates a turn to learning symbolic logic as it purports to provide a more precise way of evaluating arguments. To this end, students will learn the symbols, syntax, and semantics of two different logical (formal, symbolic) languages (propositional and first-order predicate logic) and how to translate sentences from English into these formal languages. Once the languages are formulated, students will learn how to make use of mechanical tests (truth tables and/or truth trees) that allow for evaluating arguments for validity as well as testing propositions and sets of propositions for other logical properties (e.g. consistency, tautology, etc.). In addition to mechanical tests, students will learn how to solve proofs in two different languages. That is, they will learn a set of inference,

derivation, or "proof" rules and use these rules to show that a conclusion follows from a set of premises.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

PHIL 13: Nature and Environment

3 Credits

What is nature, and what is the appropriate human relationship with it? What are our obligations toward non-human animals, endangered species, or ecosystems? Is contemporary industrial society alienated from nature, and, if so, what should be done about this? What alternatives for living differently are genuinely available to us today? These questions are addressed through discussion of current environmental issues (e.g., consumerism, agriculture, wilderness protection, environmental justice, climate change, environmental activism) as well as influential historical and contemporary philosophical approaches, such as deep ecology, social ecology, ecofeminism, bioregionalism, and eco-phenomenology.

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 14: Love and Sex

3 Credits

This course examines the dominant philosophical and theological theories of love and sexuality in the Western world; historical and recent critiques of those theories; and the relevance of gender, race/ethnicity, and sexual orientation to all such thinking about love and sex. Related ethical issues include monogamy, same-sex marriage, cultural differences, pornography, and consent, especially in contemporary US context.

Bachelor of Arts: Humanities

United States Cultures (US)

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

PHIL 15: How to Live

3 Credits

Philosophy considers how best to live. This is valuable, since there is a lot that is uncertain. Should one mostly eliminate superstition and fear and practice mental tranquility? Or control bodily desires and practice endurance? Or examine one's beliefs and practice modesty? Or think about your every action and practice justice? Or change how others think and practice institutional change? Different philosophical and reflective cultures have focused on one or another of these possibilities, or proposed yet others. This course studies a range of cultures that have formulated the question, "How should I/we live?" and have developed a set of candidate answers. Ancient or medieval cultures studied - for 1-3 weeks each - include those from ancient Greece, Rome, other areas around the Mediterranean, Indian, and Chinese. Modern cultures studied, as comparison cases, vary by instructor. Class-time focuses on historical

context, literary content, and philosophical argument. Outside-of-class work includes reading, for instance Socratic dialogues, Stoic handbooks, meditation mantras, existential dramas, political manifestos, nature journals, or book reviews. It also includes, as the distinctive element of this course, a practical experience for each unit. Students track, process, and evaluate their experiences through journaling and discussion with other students. At the semester's end, students develop their own philosophical "best way of life," formulating and justifying rules, models, or virtues to live by, and engage in conversation with other students on this topic. Students should leave the class recognizing the diversity and challenge of a range of way-of-life ideals, their historical context and contemporary promise, how to decide on their appropriateness for themselves, and what it would mean to adopt, refine, and support their own "philosophy" of life.

PHIL 83: First-Year Seminar in Philosophy

3 Credits

First-year seminars in philosophy provide critical introductions to fundamental philosophical issues and problems. Each first-year seminar develops a broad overview of historical and contemporary thought through readings, discussions, and student writings. In this way, students will gain an understanding of important figures, ideas, problems, and theories that have shaped and continued to influence thought and practice around the world. Students will examine diverse viewpoints that will allow them to understand a wide range of views and challenge them to defend their own positions. First-year seminars involve active use of writing, speaking, and group projects. They provide opportunities for gathering information, analyzing problems, and synthesizing diverse perspectives. Finally, each first year seminar in philosophy allows students to link theory to their own lives.

PHIL 98: Special topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Bachelor of Arts: Humanities

PHIL 102: Existentialism

3 Credits

This course introduces students to the evolution of Existentialism, with its kernel in mid-nineteenth century reflection on Christianity's loosening grip on culture, its influence by the early-twentieth century experience of war's utter and widespread destructiveness, and its development in mid-twentieth century industrial and capitalist modernity. It concerns especially what it means to define one's own life in light of social pressures, interpersonal conflict, and economic forces, with or without the aid of traditional or religious guidance. This that means the course focuses on metaphysical, moral, and social issues concerning reality, the nature of the self, the basis of values, and the relations between individuality and community, and studies philosophical treatises, imaginative literature, and other genres of writing. Representative authors include Kierkegaard, Nietzsche, Marcel, Wright, Ellison, Jaspers, Fanon, Camus, Beauvoir, Sartre, and Lorraine Hansberry.

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

PHIL 103: Ethics

3 Credits

Through reading and discussion of classical and contemporary sources, this course provides an introduction to the basic questions of ethics, the major currents in traditional ethical theory (virtue ethics, deontology, consequentialism), and more recent developments (e.g., care ethics). These schools of thought offer distinct answers about how we should decide what to do and about what makes a character, a decision, an action good or bad, right or wrong. Students will gain a basic understanding of concepts such as agency, autonomy, and moral responsibility, while also reflecting on the foundations, scope, and limits of moral reasoning: Are ethical norms universal, particular, or culturally relative? How is the moral life of the individual related to political life? Are there moral solutions to social problems or vice versa?

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 103H: Honors Ethics

3 Credits

Through reading and discussion of classical and contemporary sources, this Honors course provides an introduction to the basic questions of ethics, the major currents in traditional ethical theory (virtue ethics, deontology, consequentialism), and more recent developments (e.g., care ethics). These schools of thought offer distinct answers about how we should decide what to do and about what makes a character, a decision, an action good or bad, right or wrong. Students will gain a basic understanding of concepts such as agency, autonomy, and moral responsibility, while also reflecting on the foundations, scope, and limits of moral reasoning: Are ethical norms universal, particular, or culturally relative? How is the moral life of the individual related to political life? Are there moral solutions to social problems or vice versa?

PHIL 105: Philosophy of Law

3 Credits

This course surveys philosophical questions concerning any legal system. What counts as a law? Do judges interpret or create new law? How can laws be unfair? What kinds of punishment, if any, are appropriate? When is civil disobedience justified? Could there be international law, and how can rights be enforced? These questions will often be asked in the context of the American system of common law and statutes, and thus will overlap with questions of federalism, constitutionalism, democracy, the police and prison systems, and social and economic structures. They will also require investigating the views of human nature underlying various philosophical positions. In general, the course examines the relations between human values, ethics, and

law and the way these relations affect the organization of broader social, political, and religious institutions.

General Education: Humanities (GH)

Honors

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 106: Business Ethics

3 Credits

Business ethics is not just about CEOs behaving badly. Even if sweatshops treat humans poorly, do they deserve thanks for their labor market expansion? Must corporate trustees seek only profit for their shareholders, or also benefit their surrounding communities? Who picks up the cost of environmental degradation by airlines, factories, and farms? What exactly does 'truth in advertising' mean, and how limited should marketing be to children, or about alcohol and pharmaceuticals? How should the imperatives of the 'free market' or 'capitalism' be treated in democratic decision-making? The course will develop a student's critical skills in evaluating the philosophical foundations and justifications for business and economic systems, the relation between morality and contemporary business practices, and central positions and figures in the history of philosophical analysis of these questions.

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 107: Philosophy of Technology

3 Credits

This course surveys different views about technology: what counts as technology, what role it plays in society and human development, what benefits it might promote, and what obvious or hidden effects deserve criticism. The course's readings and discussions prompt reflection on

the purpose and consequences of technology for your own life, what possibilities it opens and forecloses, and how it modifies, sometimes irreversibly, your environment. Required readings may include current news articles and blog posts, science fiction, historical analyses of technological change, and philosophical investigations of the concept of technology.

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 108: Social and Political Philosophy

3 Credits

This course studies philosophical views about large-scale human relations: in groups, communities, populations, nations, and countries. By studying prominent philosophers and positions it investigates the following kinds of questions: Why might anarchy give way to government? How do political arrangements differ from domestic, friendship, or business obligations? Ought people organize to pursue a common good or goal? What does fundamental opposition about religion, morality, financial interest, and human sentiment mean for integration into a public realm? Is the personal always political, and what deserves to be kept private? Such questions have animated philosophy since its origins, is of vibrant contemporary interest, requires development of a view of human nature, and relates to ethics, psychology, sociology, law and criminology, economics, and political science. By the course's end, students should have a greater critical understanding of the nature of social and political organization, influences on human values, and the traditional philosophical problem concerning the good society.

GenEd Learning Objective: Soc Resp and Ethic Reason

Writing Across the Curriculum

PHIL 109: Aesthetics

3 Credits

Aesthetics is the philosophical study of our experience of certain natural and artistic objects that incite pleasure or displeasure in us, and which we judge to be beautiful, ugly, or sublime. Aesthetics asks: What makes something beautiful? Are our judgments of beauty universal? What counts as art? What are the relations between beauty, morality, and truth? The objective of this course will be to provide students with a survey of historical and contemporary perspectives on these questions. The students should leave the course with a good grounding in aesthetic theory as well as an understanding of how the theoretical considerations apply in art criticism.

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

PHIL 110: Philosophy of Science

3 Credits

This course examines core philosophical questions about science, scientific reasoning and scientific practice. What is scientific method, and what role do deduction, induction and abduction play in it? How does scientific method differ from one science to another? What role do mathematics, mathematical models and computation play in the various sciences? How does reductionism (the claim that parts determine the whole according to specified laws) help science develop but also limits it? Why must philosophical reflection on science also encompass the history of science? If we pay close attention to the role of science in culture, we

find that it has ethical as well as epistemological aspects, as it interacts with religion and politics.

Bachelor of Arts: Humanities
 General Education: Humanities (GH)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Integrative Thinking

PHIL 113: Philosophy of Literature

3 Credits

This course investigates the expression of philosophical ideas in literary form and, likewise, literature's contributions to a philosophical inquiry into fundamental questions of human existence. Its central themes may include the nature of love and desire, personal identity and relationships with others, and ethical concerns of good and evil. Readings are drawn from the history of world literature and philosophy, from Classical Greek texts to contemporary science fiction.

Bachelor of Arts: Humanities
 General Education: Humanities (GH)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

PHIL 114: Feminist Philosophy

3 Credits

This course familiarizes students with concepts and challenges in feminist philosophies. Students will investigate the intersections of gender, race, sexuality, class, and other dimensions of identity through feminist analysis of epistemological and metaphysical assumptions (e.g., What is a woman? Does one's sex and/or gender provide special access to certain types of knowledge?), social structures, language, and the character of power.

Bachelor of Arts: Humanities
 General Education: Humanities (GH)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 115: Philosophy and Education

3 Credits

This course surveys the core philosophical questions that arise when thinking about education and teaching: What ought people to learn? How are instruction and experience related? What counts as knowledge and truth? How do we discover the human nature that underlies our educational theories? What are the moral implications of leading young people out of innocence or ignorance? What is there to education beyond classrooms, schooling, and reading? How much education ought a society to require or expect of its population? How important is intellectual and moral maturity? The course also considers the historical contexts from which philosophical theories about education have arisen and their ideological, political, social, and economic implications.

Bachelor of Arts: Humanities
 General Education: Humanities (GH)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 118: Environmental Philosophy

3 Credits

This course explores current environmental problems and human development in the context of historical and contemporary views of the relation of humans and nature. It examines differing conceptions of nature's value, human values, and the human condition more generally. It also investigates how distinct social, economic, and political ideologies and systems affect the human relation to nature, and how the ethical problems that arise from such systems may be critically evaluated and potentially resolved.

Bachelor of Arts: Humanities
 General Education: Humanities (GH)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 119: Ethical Leadership

3 Credits

Leaders, in whatever context, make difficult decisions, distribute scarce resources, direct and influence the conduct of others, and represent the goals of the enterprise they lead. Thus they ought to exemplify prudence, fairness, integrity, honesty, trustworthiness, sincerity, and morally upright behavior. This course investigates these concepts and the moral dilemmas that arise in developing or applying them. It also explores, philosophically as well as practically, the ways leaders might identify ethical challenges, analyze them, imagine possible solutions, and be motivated to do the right thing. Students may read a variety of literature, from classic plays and novels, to prominent philosophical texts, to recent studies of ethics and leadership.

Bachelor of Arts: Humanities
 General Education: Humanities (GH)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies
 GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 120N: Knowing Right from Wrong

3 Credits

"Knowing Right from Wrong" provides a comprehensive understanding of the nature of moral ideas, beliefs, and behaviors in contemporary contexts. What roles do nature and nurture play in the development of moral sensibilities? How do moral emotions and moral reasoning interact to produce moral behavior? What defines moral character and how does it influence what we do? Is it possible to derive what ought to be done from what is known about the world? How do we respond when moral demands compete with another? How do our moral convictions color our perceptions of world events? Can individuals and groups with differing moral commitments communicate with one another and live together peacefully? The course integrates perspectives from philosophy, psychology, and sociology, and prepares students to think about (and act in) a world in which morality (and its linked concepts, such as judgment of others) plays an increasingly important social and political role. The course treats morality as both an aspirational concept and as an actual social practice, and focuses on three major themes: (1) the origins and development of moral reasoning and ethical systems, (2) the influence of moral emotions and moral intuitions on moral reasoning and behavior,

and (3) the influence of social and contextual factors on moral behavior and expression. Integrating the philosopher's interest in ethics, with the psychologist's interest in the mind and body, and the sociologist's interest in groups, the course provides a comprehensive introduction to morality in contemporary society, and the ways in which it shapes the lives of people in everyday situations.

PHIL 122: Philosophy of History

3 Credits

This course surveys the core questions that arise when thinking about history, the relevance of the past, and the writing of history: How can we know history? What does it explain and what does it teach? Are those who don't know it doomed to repeat it? Is it objective? How is it related to human nature and progress? And what exactly is history – is it simply everything that has happened, or specific sequence of events, or a narrative we apply to make sense of some aspect of the past or present? In addressing these questions, the course emphasizes the thought of influential figures, including Hume, Vico, Hegel, Marx, Mill, Rickert, Dilthey, Croce, Collingwood, and Hempel. In general this course helps students think philosophically about the fact that humans live essentially through time and across generations. It also contributes to understanding the practice of studying, research, writing, and talking about history.

Bachelor of Arts: Humanities
 General Education: Humanities (GH)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

PHIL 123: Media Ethics

3 Credits

This course surveys the core philosophical questions connected with mass media: What is newsworthy? What is the whole story, and what makes it true? How ought media's form influence the power of its content? What authorizes journalists to interpret the facts? How much does individual self-understanding and social organization depend on media images and tropes? Does it make sense to speak of "the media" as a unified phenomenon? As we work to formulate and answer these questions, students will acquire ethical understanding, media literacy, and an appreciation for the role media plays in the formation of cultural expectations about knowledge, values, and technology.

Bachelor of Arts: Humanities
 General Education: Humanities (GH)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies
 GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 124: Philosophy of Religion

3 Credits

This course surveys perennial philosophical questions connected with religion: What is God, deity, or divinity? What is the nature and significance of religious experience? Is it rational to hold religious beliefs? How persuasive are arguments about the existence of God? How compatible is religion with modern science? What are the meanings of miracles, immortality, and creation? In what ways might morality depend on religion? What role ought religion to play in society and the public sphere? What lesson should we draw from profound religious experiences? Ought religious tolerance to be limited at all? Through the reading and discussion of relevant historical and contemporary texts, students will be encouraged to reflect on such questions from a variety of perspectives.

PHIL 125: Theories of Knowledge

3 Credits

This course surveys the core questions in epistemology: What do we mean when we claim to know something, as opposed to merely having an opinion about it? What sorts of things, if anything, are ultimately knowable? What role ought sensation, perception, observation, experience, authority, testimony, or reason play in forming, changing, justifying, or defending claims to knowledge? Are such claims to knowledge always conditioned by the social and historical situation, and limited by the knowers' standpoint, or are there universal standards to establish them? Through analysis and discussion of classical historical and contemporary texts, the course introduces students to these and related problems of knowledge and acquaints them with the most influential strategies that philosophers have developed in response to them.

Writing Across the Curriculum

PHIL 126: Metaphysics

3 Credits

This course considers key concepts, problems, and figures in metaphysics, the investigation into the nature of reality. We will ask the deepest questions about what exists and how things relate to one another on a fundamental level. For example: Does everything ultimately reduce to simple substances, or is reality organized into types? Does time exist objectively, or is it dependent on the mind? Does effect follow cause as a matter of universal law or only as a statistical probability? What factors determine whether a thing is the same over time or differs at every instance? We will also query the most basic assumptions about reality, that a pencil will not fall through a desktop, the sun will rise tomorrow, and the world was not created a minute ago. Students will develop skills in reading difficult texts, evaluating arguments, and formulating their own philosophical views through discussion and in writing.

GenEd Learning Objective: Key Literacies

Writing Across the Curriculum

PHIL 127: Philosophy of Mind

3 Credits

The course wonders, "What is a mind?" - especially in its relationship to the brain, the person, and the world. We study whether consciousness defines a mind, what limitations if any subjectivity places on the scientific investigation of the mind, and how to build a robot with a mind. Readings may include texts from the history of philosophy and contemporary philosophy, as well as neuroscience and psychology. Students will learn a broad range of skills needed to understand and synthesize the variety of information relevant to the mind.

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

PHIL 129: Philosophy of Language

3 Credits

Philosophy of language asks the following sorts of questions: What makes a system of symbols a language? What is meaning? How does a term or a symbol refer to an object? In what way is speech also an action? How does language affect the way we see the world? This course offers a critical survey of key concepts, topics, and texts from Classical authors (e.g., Plato and Aristotle) and more recent thinkers, in the post-Fregean analytic tradition, the Peircean pragmatic tradition, and the post-Husserlian or Saussurean continental tradition. It shows how the debates about language and its relation to the world shed light on other major problems of philosophy. Due to the formal nature of its subject-matter, the course helps students develop skill in the logical analysis of sentences and descriptions.

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

PHIL 131N: BS: Identifying Bias and Falsehood

3 Credits

The course will consider the ways statements are used for aims other than to convey accurate information. This disregard for truth results in the increasingly difficult task of identifying bias and falsehood in the age of information. There are three areas most corrosive to knowledge: language, science, and statistics. The course will examine the appeal of rhetorical arguments and the role of bias in assessing claims; various ways evidence fails to support a conclusion; and the manipulation of data to make information appear more compelling than it is. Students will learn to evaluate the truth of arguments based on philosophical and scientific criteria, and use a variety of skills to identify bias and falsehood in the media.

PHIL 133N: Ethics of Climate Change

3 Credits

Climate change is not only a political, economic, and social crisis, it presents one of the great moral problems of our time. This course will cover the science, policy, and ethics of climate change. It fulfills general science requirements by giving an overview of the role played by such diverse scientific disciplines as chemistry, earth systems, ecology, and geology in understanding our changing climate while also exploring mitigation and adaptation strategies being developed in the fields of engineering, forestry, agriculture, and others. It fulfills humanities requirements by delving into the ethical dimensions of climate change, including religious and humanistic theories of human flourishing, deontological and teleological theories of ethics, and analysis of specific choices addressed by international negotiators. A hallmark of this course is using Penn State as a 'living laboratory' by taking advantage of both faculty expertise and the realworld activities of the Office of Physical Plant. Every week, students will interact with experts from various quarters of the University in order to see how climate change is being approached in a multi-disciplinary fashion. The first third of the course will feature guest lectures by EMS faculty working on paleoclimate, modeling, carbon sinks, ocean acidification and other aspects of climate science. The second portion will engage humanists, economists, historians, and artists at Penn State. The third will include tours of Penn State facilities, such as the East Campus Power Plant, and interviews with researchers developing new energy and sequestration technologies. In addition to exams and papers, students will prepare for a mock negotiation by learning about the energy profile and history of assigned countries. They will then have to set specific CO2 and temperature goals and come up with solutions to achieve these. The goal is to understand the role placed by ethical ideals in the pragmatic process of producing an equitable solution. In short, this course will give students the tools to understand the basic science of climate change and its ethical implications. Students will come away with a better sense of the moral dimensions of this phenomenon and the implications for human civilization and for the biosphere.

PHIL 134: Food, Values, and Health

3 Credits/Maximum of 3

This course studies the ethical and social issues connected to food, personal and cultural eating habits, body image and ideas of health, and agricultural practices and industrialized food production. We will discuss the following sorts of questions: In what ways are cooking and eating central to our human identity? What do judgments about being anorexic, overweight, or eating unhealthily mean and do? How strong are the arguments for vegetarianism, veganism, or raw-food-ism? Ought we to eat as our Paleolithic ancestors did? If the future holds engineered meat, GMO fruit, and Soylent shakes, what are we to think? Should food-companies be allowed to advertise to children? Is alcohol more like food, like medicine, or like drugs? Students will pursue answers to such food-ethical questions by learning relevant moral and social theory, discussing past and contemporary approaches to these issues, and analyzing case studies. We will pay particular attention to food as a symbol with psychological, social, and spiritual meanings and effects.

GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 135: Ethics in Jewish Tradition and Thought

3 Credits

This course takes as its starting point the idea that modern ethical frameworks are deeply rooted in the soil of older traditions. By examining the development of Jewish intellectual traditions and their roots in the Bible, it provides students with an opportunity to study ethics in a philosophically textured, culturally rich, and historically informed way. And by focusing on Jewish engagement with the Bible, the course illuminates other traditions that derive from biblical monotheism: for example, those associated with Christianity, Islam, and the Enlightenment. The first part of the course takes up the idea of tradition and includes a study of biblical texts that serve as the foundation for key moral concepts. Following the traditional division of the scriptures, it examines questions of human identity and responsibility in the Torah, social ethics in the Prophets, and the quest for wisdom in the Writings. The final topic in this unit is the development of ethical tradition among the great sages of Jewish antiquity. The second unit shifts focus to the appropriation of tradition in modern Jewish thought. After reviewing important developments in Jewish thought in the medieval and early modern periods, it turns attention to the ways that some recent figures have addressed perennial concerns in light of commitments and ways of being that are integral to Jewish identity. By reading closely the works of such seminal thinkers as James Kugel, Joseph Soloveitchik, and Abraham Heschel, we will gain a deep acquaintance not only with important vocabulary but also with the ways that traditional words and

concepts may be used dynamically to produce fresh ways of looking at questions in moral philosophy.

PHIL 136N: Art and Philosophy in Ancient Greece

3 Credits

Ancient Greece provided Western Civilization much in terms of art and philosophy. The influence of the Greeks can be seen in such areas as architecture, sculpture, concepts of beauty, literature, etc. These are independent domains, but there is often integration between the two disciplines. This course will uncover the ways in which philosophy informed Greek ideals and the role played by both visual art and literary art. To that end, sections will focus on each of those two disciplines. Study will also display how the disciplines come together in the following areas: 1) Beauty and 2) The interrelation of art, religion, philosophy and the state. Early in the course, students will thoroughly examine the concept of Beauty, with an emphasis on Ideal Beauty. Students will explore objective and subjective definitions by developing models of each and then synthesizing competing ideas in their own unconventional definitions of Beauty. Foundational work will include study of specific Greek artists/thinkers, and involve students in working toward identifying traces of early thinking in contemporary society. This will include both written and visual work. Analyses will target philosophical thought, sculpture and architecture primarily from Early Classical and High Classical/Golden Age works as students explore the Greek search for perfection. The periods and styles that will be covered include: Geometric which includes the Orientalizing period; Archaic; Classical (Early, High, and Late); and Hellenistic. Next students will examine and discuss different philosophical topics such as metaphysics, epistemology, aesthetics, etc. An emphasis will be placed on Plato and Aristotle but the Pre-Socratics may also be considered. Art and philosophy are also integrated in Ancient Greece. Plato considered beauty, art, the artist and tragedy in works such as *The Republic*, *Philebus*, *Ion* and *Hippias Major*. Aristotle's major contribution to aesthetics is in the *Poetics*. The last section will consider the relationship between literary art (plays) and the Greek understanding of authority, particularly the gods, the state and the individual. Much of the art in the Greek culture (as it is in most cultures) is best understood in terms of the dominant religion. The themes developed gave rise to a great deal of philosophical reflection in terms of the place of religion, and how the individual saw themselves in relation to the gods and the state. Through an examination of plays and philosophical texts, students will explore this relation between the individual and an authority (gods or rulers).

PHIL 137N: Introduction to Philosophy through Health and Sport

3 Credits/Maximum of 3

Introduction to Philosophy through Health and Sport (PHIL137N). 3 credits. (Inter-Domain), (GH), (GHW) is a general education interdomain course that introduces students to the major branches, ideas, theories, and arguments of philosophy. This introduction is contextual insofar as it provides an overview of core philosophical ideas by relating them to a multidimensional conception of health, specifically focusing on positive health (wellness) and thinking about both philosophy and health in relation to sport. This is an Inter-Domain ("N") course containing two general education domains (GH/GHW). Successful completion of the course fulfills 3 credits of Integrative Studies in General Education.

PHIL 139: Latino/a Philosophy

3 Credits

This introduction to Latino/a Philosophy covers the historical experience of Latino/a peoples and the impact that those experiences have had and can have on "American" philosophy. It also covers race, class, gender, and ethnicity in relation to the Latino/a experience, and thus ethics, political theory, legal theory, critical philosophy of race, and feminist philosophy. In the process it offers an introduction to key themes in contemporary philosophy. The course includes comparisons with African American, Asian, and Native American philosophies.

PHIL 200: Ancient Philosophy

3 Credits

This course examines key themes, texts, and persons in ancient Greek philosophy, with the works of Plato and Aristotle at the core. We ask: What did Socrates mean when he said "the unexamined life is not livable by humans"? Or when Thales said "All begins in water"? Or when Epicurus said "Only pleasure is valuable"? Or when Parmenides said "You cannot speak of what is not"? To answer these questions, we examine the cultural background of philosophical thinking (Homer and Hesiod; Near Eastern traditions; trade and empire), and we survey views about, for example, the universe's structure and origin, the nature of reality and change, the status of knowledge and opinion, the best way of life for individuals and for societies, and the value of reason, persuasion, argument, and logic. We also give close attention to the formation, meaning, and purpose of philosophy, wisdom, and sophistry. This includes analysis of the "myth reason" hypothesis, Milesian inquiry into basic principles (archai), physical vs. ethical inquiry, and the development of doctrine, discipline, and disagreement. In addition to the figures mentioned above, figures studied may come from the periods of the Presocratics (e.g., Pythagoras, Heraclitus, Xenophanes), Hellenism (Stoic, Epicurean, Cynic, and Skeptic), the Romans (e.g., Cicero, Seneca), and the Neoplatonists (e.g., Plotinus).

PHIL 201: Medieval Philosophy

3 Credits

This course examines key themes developed by the philosophers from the long millennium between the fall of Rome and the rise of the Renaissance, many of whom responded to ancient Greek philosophy in the context of their theological commitments (Christian, Jewish, Muslim). The works of Augustine and Aquinas are at the core; readings may also include works by Boethius, Anselm, Abelard, Occam, Scotus, Avicenna, Al-Kindi, Maimonides, and Averroes. We ask: What is the fundamental nature of reality, and where do humans fit in? How ought we to understand essence and existence? Do abstract concepts correspond to real "universals" or are they mere names? What does a belief in free will and evil commit us to? What should we make of the arguments for God's existence? What are laws of nature, and in what respect might natural law govern our lives? To answer these questions, we examine the cultural and Greek/Roman background of medieval philosophy, and give close study to the significant philosophical and related texts of the tradition.

GenEd Learning Objective: Key Literacies

PHIL 202: Modern Philosophy: 1600-1800

3 Credits

This course surveys major philosophical issues of the seventeenth and eighteenth centuries, a vibrant era of scientific revolution, religious and political upheaval, and Europe's rise to global power. In its quest for a method of scientific discovery, philosophy breaks with the Aristotelian tradition that had dominated it for centuries; it ends up confronting remarkably new questions and modes of explanation. We focus on the works of the major thinkers of this era, such as Descartes, Spinoza, Leibniz, Locke, Berkeley, Hume, and Kant. Although with different priorities and conclusions, each takes up the implications of the new, mechanistic conception of nature. We study their investigations into the following types of questions: What is "substance" and what are the genuine qualities of things? What is the nature of the mind, and how is it related to the "material body"? How do we acquire knowledge of reality, and can we ever be certain of this knowledge? Are natural phenomena determined by causal laws? Does God exist and, if so, what is his role in relation to a material world governed by causal laws? The lively debates over these questions gave birth to two rival schools of thought, one seeking answers in the innate principles of the mind (rationalism), the other in our experience of the world (empiricism).

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

PHIL 203: Nineteenth Century Philosophy

3 Credits

The nineteenth century is a period of political upheaval and ongoing social, cultural, and scientific transformation, shaped in equal parts by the French Revolution and the Industrial Revolution. This transformative character is reflected by the epoch's most influential philosophers. Kant's "critical" philosophy emphasizes the primacy of practice and the subject's active role in constructing reality. Hegel focuses on the rationality implicit in the historical growth of religion and the political institutions of the state. As the century wears on, escalating social and political conflicts lend credibility to outspoken critics of such optimistic rationalism. Schopenhauer's pessimism, Kierkegaard's existentialist focus on the irrationality of faith, Marx's historical materialism and emphasis on class struggle, Nietzsche's "genealogical" anti-realism and philosophy of power are prominent examples. The embrace of new paradigms in morality (Mill), natural science (Bergson), and psychology (Freud, James) round out the picture of a century in transition from "classical" European modes of thought to the self-conscious secularism and dynamism of the 20th century. By reading a broad selection of representative texts, students will learn about the major figures and streams of thought that shaped the course of this eventful period in the history of Western philosophy.

PHIL 204: Twentieth Century Philosophy

3 Credits

The 20th century can be characterized as a crisis of foundations, doubt about the ultimate grounding or demonstrability of our beliefs concerning the world and ourselves. So-called continental philosophy sought a ground of knowledge in phenomenology, the view that human subjective experience ("phenomena") reveals essences, how things actually are. By mid-century, deconstructionist critique shattered confidence about the underlying distinctions assumed here. So-called analytic philosophy began the century with a commitment to eliminating metaphysical speculation in favor of narrowly empirical truths, on the model of scientific investigation; but the eventual unconvincingness of this view led to theories of knowledge and metaphysics that allowed for the absence of foundations. Rooted in this and earlier rejections of foundations, so-called pragmatism began as way to assess competing ideas by the difference they make in human action. A crisis in political foundations generated the social and philosophical movements of Marxism, critical race theory, and feminism. The ramifications of these crises continue to be acutely felt in contemporary philosophy, making the 20th century a period of particularly diverse and relevant resources. This course satisfies BA and GH requirements.

Bachelor of Arts: Humanities
 General Education: Humanities (GH)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 205: American Philosophy: 1840-Present

3 Credits

American philosophy comes into its own in the mid-nineteenth century, emancipating itself both from its origins in Protestant religion and from the tutelage of European role-models. The 1840s see the rise of the New England Transcendentalists (Emerson, Thoreau), who emphasized imagination, individualism, equality, and moral progress. During the decades of national reconsolidation following the Civil War, Pragmatism arises (Peirce, James, Dewey, Royce). Its practitioners innovations help set the tone for many twentieth-century intellectual developments: the emphasis on history, practice, and pluralism; the break with metaphysics and intellectualistic approaches to science, morality, and society; and the commitment to a "radical empiricism" broad enough to embrace scientific observation, religious experience, and social experimentation. Fuller's early feminism, Addams's social progressivism, and Du Bois's reflections on racial inequality constitute uniquely American moments in the history of philosophy. Certain more recent philosophers (Putnam, Rorty, Cavell, and Brandom) have renewed and extended the pragmatist legacy. The course evaluates the problems raised by these philosophers and traces their influences on American society, politics, and culture. One of the principal goals is to enable students to understand better this rich philosophical tradition and its importance-both critical and constructive-in the contemporary American landscape.

 General Education: Humanities (GH)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

PHIL 208: Contemporary Philosophy

3 Credits

Treating contemporary philosophy as history encourages us to ask what current ideas are likely to resonate in the future. The course focuses on philosophical work that crosses disciplinary boundaries, addresses new social and political problems, introduces experimental styles, and opens novel areas of investigation. By engaging with the ideas of philosophers who are writing and thinking right now, students gain the opportunity to consider how well philosophy addresses issues of concern to a world that they themselves belong to. Examples include climate change, racism, posthumanism, globalization, gender and sexual identity, and the science of the mind. Working with living philosophers also affords the opportunity to see the authors speak about their work on video or, when practical, in person.

Bachelor of Arts: Humanities
 General Education: Humanities (GH)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 233: Ethics and the Design of Technology

3 Credits

Humans have always created artifacts and artificial environments to aid us in our survival and to help fulfill our needs and desires. Moreover, today technology is all pervasive, transforming and conditioning our social and political relations, our cultural understanding of ourselves, and our relationship with other animals and the natural environment. Designers make important choices concerning the creation, development, and deployment of many if not most technological innovations. Consequently, the task of the designer is an ethical one. It is therefore important to give future designers the opportunity to reflect upon the meaning of technology, particularly in its moral dimensions. Two means will be used to achieve our course goals. Much of the time will be spent thinking about and discussing the various impacts that particular technologies have upon the social, cultural, and political lives of human beings and upon the natural environment. To facilitate thoughtful discussion, we will read a number of authors, writing short papers in preparation for critical discussion in class. The second means is aimed at putting our ideas into practice by working in teams on several design projects. These design projects will require the integration of readings, discussion, and research and their synthesis to resolve the moral aspect of a design problem. Student teams will work cooperatively on these projects and make oral progress reports as well as final written and oral reports.

 GenEd Learning Objective: Soc Resp and Ethic Reason

PHIL 242N: Happiness and Well-Being

3 Credits

PHIL 242N : Happiness and Well-Being. 3 credits. (Inter-Domain), (GH), (GS), (BA). This course provides a general introduction to the topics of

human happiness and well-being as these topics are both approached from the humanities discipline of philosophy and the social and behavioral science discipline of psychology. The course will introduce the distinct methods of inquiry into the topic of well-being in philosophy and psychology and highlight the disciplinary commitments of the two fields more generally. Students will understand and evaluate the empirical research into well-being and positive psychology in psychology. Students will understand and evaluate the three major theories of well-being in philosophy: hedonism, the desire satisfaction theory, and the objective theory. We will appraise whether the empirical results affect the viability of the philosophical theories. We will appraise whether the philosophical theories affect the significance of the empirical results. We will consider such questions as: What are the strengths, weaknesses, and complementarities of the philosophical and psychological approaches to well-being? Are psychologists and philosophers talking past each other, or can the two disciplines learn from each other's research results and philosophical theories? What implications do the results and theories studied have for concrete choices I should make in order to increase my well-being? Are there implications for choices of social policies aiming to increase well-being?

International Cultures (IL)

PHIL 401: American Philosophy

3 Credits

A distinctively American school of philosophy emerged in the early part of the nineteenth century and remains influential in the present day. American transcendentalism, philosophical applications of evolutionary theory (e.g., social Darwinism), the abolition of slavery (Garrison, Douglass), and equality for women (e.g. Grimké, Stanton,

Fuller) dominated the early part of the nineteenth century. By far the most well-known philosophical movement in the later nineteenth and early twentieth century was pragmatism (Peirce, James, Dewey). Its proponents developed new approaches to a range of traditional philosophical topics, including truth and knowledge, ethics, the nature of reality and the mind, religion, and education. "American philosophy" is characterized by its emphasis on the decisive value of practice and its guiding role in relation to theory; by its metaphysical pluralism, anti-Cartesian fallibilism, and rejection of intellectualism; its constructive criticism of racial and gender inequalities (e.g. Du Bois, Addams, Ladd-Franklin), and its commitment to a conception of experience ("radical empiricism") broad enough to embrace both science and religion. In more recent times, influential neopragmatists such as Richard Rorty and Robert Brandom have further advanced the tradition and demonstrated its continuing philosophical and social relevance. This course builds on its precursor (Phil 205), focusing on specific topics, works, or figures.

Prerequisites: 9 credits of philosophy; or 6 credits of philosophy where three are from PHIL 205; or 6 credits in philosophy where all are at the 200-level.

Bachelor of Arts: Humanities

PHIL 402: Seminar in European Philosophy

3 Credits/Maximum of 6

Among the most important movements to emerge in the decades around 1900 are phenomenology (Husserl, Merleau-Ponty) and neoKantianism (Natorp, Cassirer), which make important contributions in metaphysics, epistemology, and to research in the foundations of logic, mathematics, and science. Hermeneutical thought (Dilthey), by contrast, emphasized "historicity" over the ostensibly timeless objects of traditional philosophical thought, insisting that interpretive "understanding" of historically situated subjectivity was a kind of knowledge distinct from the "explanation" of purely objective phenomena, while Marxism urged attention to historical development in the name of social critique and political change. These productive tensions are evident in the major movements that dominate mid-twentieth century Continental philosophy: existentialism (Heidegger, Sartre), critical theory (Adorno, Horkheimer), and structuralism (Jacobson, Lacan, Althusser). Beginning in the 1960s, French Continental philosophy enters a phase of self-criticism that gives rise to innovative and challenging forms of discourse, often referred to collectively as post-structuralism (Derrida, Foucault, Deleuze). These thinkers challenge basic assumptions of classical Continental philosophy, e.g., the centrality of subjectivity; the privileging of identity over difference; the non-violent sovereignty of reason; the unity, continuity, and progressive character of history; the possibility and desirability of totalizing "structures" of collective power, action, and intelligibility. At the same time, secondgeneration critical theorists (e.g., Habermas) seek to revise their teachers' overly rigid commitment to Marxism and outmoded psychological and sociological conceptions in favor of more nuanced theory of "communicative action" and the structural transformation of the public sphere. Building on its survey-oriented precursor (PHIL 102), this course provides an opportunity for more focused engagement with selected authors and works, or with particular topics or streams of thought pursued through attention to a variety of authors and works.

Prerequisites: 9 credits of philosophy; or 6 credits of philosophy where at least three are from PHIL 102 or 204; or 6 credits in philosophy where all are at the 200-level.

Bachelor of Arts: Humanities

PHIL 403: Seminar in Environmental Ethics

3 Credits

How do and should human beings relate to the natural world - and what is the natural world? What moral obligations or considerations for non-human animals, plants, and other parts or features of nature? What do we owe to other human beings, and future humans, with respect to the environment? This course examines such questions in light of current ethical and social-political theories and uses such questions to assess the adequacy of those theories (which were often formulated without explicit concern to answer such questions about the environment). We can then assess the pressing environmental issues of today - climate change, conservation, pollution, sustainability, and population - in light of those theoretical perspectives.

Prerequisites: PHIL 118
Bachelor of Arts: Humanities

PHIL 405: Seminar in Philosophy of Law

3 Credits

This course gives close attention to key themes in the philosophical analysis of legal systems, either historical or contemporary. Relevant issues may include the nature of law and its relation to morality, custom, and politics; the nature of constitutional interpretation and the role of judges; the purpose and limits of punishment; the possibility of international law and rights-enforcement; the connection between legal arrangements and social or economic inequality; the differences between types of legal system (e.g., common law, statutory, ecclesiastical); and the idea of progress in law. Students will gain a deeper understanding of select issues they may have studied in PHIL 105; develop skills of reading, comprehension, critique, and expression; and continue to appreciate the value of philosophical approaches to (at times problematic) human institutions.

Prerequisites: 9 credits of philosophy; or 6 credits of philosophy where three are PHIL 105; or 6 credits in philosophy where all are at the 200-level
Bachelor of Arts: Humanities

PHIL 407: Seminar in Philosophy of Technology

3 Credits

The human condition may very well be a technological condition. Developing and refining technology have proven central to cultural and perhaps even evolutionary history, the development of science, our economic practices, and-most importantly-our selfunderstanding. Should we understand the co-development of humanity and technology as a continuous history? Or have the past two centuries-with the development of industrial mechanization, the computer, and now the Internet-marked a radical shift of some kind? This course will explore the philosophy of technology in more focused and rigorous ways than the department's lower-division course, PHIL 107, seeking to understand the way in which technology is transforming our relationships to ourselves, to other people, and to our world. Guiding questions for the course include: What is technology? How does it inform and inflect human flourishing and the human condition? What are its ramifications for ethical thought?

Prerequisites: 9 credits of philosophy; or 6 credits of philosophy where three are from PHIL 107; or 6 credits in philosophy where all are at the 200-level

Bachelor of Arts: Humanities

PHIL 408W: Seminar in Social and Political Philosophy

3 Credits

This course builds on lower level courses in social and political philosophy (e.g., 108) to provide an in-depth examination of philosophical issues relating to political institutions and social practices. These issues may include questions concerning the justification of government; the nature of equality, freedom, democracy and other modes of political organization; or issues concerning the evaluation of social life such as race and racism, cultural identity, power, and violence. Assigned readings will typically include historical and contemporary philosophical work on these questions as well as material on current events, social controversies, historical material, and other works that expand and reflect upon these core issues.

Prerequisites: 9 credits of philosophy; or 6 credits of philosophy where at least three are from PHIL 002 or 108; or 6 credits in philosophy where all are at the 200-level
Bachelor of Arts: Humanities
Writing Across the Curriculum

PHIL 409: Seminar in Aesthetics

3 Credits

Aesthetics examines questions related to the nature of art and beauty as well as the nature of aesthetic judgment and experience. Building on its precursor (PHIL 109), this course explores selected topics in traditional or contemporary aesthetics in greater depth. Typical issues include the distinction between beauty, sublimity, and ugliness; the nature of aesthetic experience and artistic value and their relation to knowledge; the basis and validity of aesthetic judgments; the relationship between art, morality, and society; and the influence of social identities (race, class, gender, sexuality, ability, etc.) on the production and reception of art. In addition to familiarizing themselves with theoretical approaches, students will typically also engage in the discussion and critical interpretation of specific artworks (e.g. paintings, sculptures, photographs, films, musical compositions or performances, literary works), both as a way of exemplifying particular aesthetic issues and approaches, and with a view to enhancing students' aesthetic perception and experience.

Prerequisite: 9 credits of philosophy, including PHIL 109 or 6 credits of philosophy at the 200 level, or 3 credits of art or 5th semester standing
Bachelor of Arts: Humanities

PHIL 410: Seminar in Philosophy of Science

3 Credits

This course reviews the development of philosophy of science in the past century and studies its development once it turns its attention to modern cosmology and biology in this century. We begin with the Vienna School, which took physics to be the most important science, and analyzed deductive thought by means of predicate logic. Then we will look at the work of Thomas Kuhn, who insists on the importance of the history of science for philosophy: we must look at how the sciences develop over time. This makes biology especially interesting: we begin with Darwin, and trace developments to the discovery of DNA and the importance of genetics, and consider the way biology combines the microscopic, the macroscopic, and the study of biological systems. This leads science to interact with politics, as the issue of global warming becomes apparent.

How does theory intersect with practical deliberation? The development of modern cosmology also reminds us that the whole universe has a history, and changes our sense of our environment. So it seems that the philosophy of science must include not just deductive thought, but also historical thought and practical deliberation.

Prerequisites: 9 credits of philosophy; or 6 credits of philosophy where at least 3 credits are from PHIL 011 or 110; or 6 credits in philosophy where all are at the 200-level.

Bachelor of Arts: Humanities

PHIL 413: Seminar in Philosophy of Literature

3 Credits

This course builds on its precursor (PHIL 113) to provide a deeper, more focused perspective on specific topics and issues, for example the nature of fiction and its relation to fact, the value of literary works of art (aesthetic, cognitive, educational, and social), and the nature and proper norms of literary interpretation, translation, analysis, and historiography. Assigned readings will typically be philosophical or (more broadly) theoretical in character, though the instructor may incorporate works of literature into the syllabus. In addition to skills in both the writing and the critical analysis of texts, students will deepen their appreciation of the value of literary representation and its relation to the distinct but closely related field of philosophical reflection.

Prerequisites: 9 credits of philosophy; or 6 credits in philosophy where three credits are from PHIL 006 or 109 or 113; or 6 credits in philosophy where all six are at the 200-level

Bachelor of Arts: Humanities

PHIL 416: Philosophy of Social Science

3 Credits

This course focuses on the methods and epistemological bases for work in the social sciences, which include any field that focuses on explanations of human behavior, psychology or social activity. Topics include questions of objectivity, meaning and interpretation, and the grounds for knowledge of the human condition. Issues may also include whether such sciences are best seen as empirical (even quantitative) accounts of human behavior or interpretive and qualitative understandings of those phenomena.

Prerequisites: 9 credits of philosophy; or 6 credits in philosophy where three credits are from PHIL 108; or 6 credits in philosophy where all six are at the 200-level.

Bachelor of Arts: Humanities

PHIL 418: Seminar in Ethical Theory

3 Credits

This course builds on lower level courses in ethics and value theory (e.g., PHIL 103). It goes deeper into questions of the meaning, justification, and motivational grounding of ethical judgments. Topics may include "normative ethical systems" such as utilitarianism, Kantian ethics, Aristotelian virtue theory, and feminist care ethics. Also included are more abstract issues in "meta-ethics" such as whether ethical statements can be true or false, whether they stand in logical relation to each other as do other propositions, what connection do such judgments have to the psychological make-up of human beings, and the like. Also considered are questions such as the objectivity (or relativity) of ethical judgments

and their relation to the meaning and evaluation of social practices and institutions.

Prerequisites: 9 credits of philosophy; or 6 credits of philosophy, to include either PHIL 003 or 103; or 6 credits in philosophy at the 200-level
Bachelor of Arts: Humanities

PHIL 418W: Seminar in Ethical Theory

3 Credits/Maximum of 6

This course builds on lower level courses in ethics and value theory (e.g., PHIL 103). This class goes deeper into questions of the meaning, justification, and motivational grounding of ethical judgments. Topics may include "normative ethical systems" such as utilitarianism, Kantian ethics, Aristotelian virtue theory, and feminist care ethics. Also included are more abstract issues in "meta-ethics" such as whether ethical statements can be true or false, whether they stand in logical relation to each other as do other propositions, what connection do such judgments have to the psychological make-up of human beings, and the like. Also considered are questions such as the objectivity (or relativity) of ethical judgments and their relation to the meaning and evaluation of social practices and institutions.

Prerequisite: 9 credits of philosophy, including PHIL 103 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

Writing Across the Curriculum

PHIL 424: Seminar in Philosophy of Religion

3 Credits

This course builds on its precursor (PHIL 124) to provide a deeper perspective on specific topics and issues, typically through discussion of classical or contemporary writings by recognized philosophers of religion. Though the course will typically focus on one or a few selected questions, these may range as broadly as the field itself, for example: how and to what extent is religious faith compatible with reason, scientific rationality, and our knowledge of history? Are there universal types of religious experience and what is their human value and objective significance? Are religion and morality mutually independent or does one rest on or constrain the other? Arguments concerning the existence of God, the interaction between religion, society, and politics, and religious pluralism are further possible topics. Beyond gaining familiarity with canonical texts and honing their skills as critical readers and writers, students will find opportunities to reflect both on religion's historical, social, and moral significance as a dimension of human life, and on the specific challenges it raises.

Prerequisite: 9 credits of philosophy, including PHIL 124 or 6 credits of philosophy at the 200 level or 5th semester standing
Bachelor of Arts: Humanities

PHIL 425W: Seminar in Epistemology

3 Credits

The nature of cognition and perception, the conditions of experience, and the justification and truth of belief.

Prerequisite: 9 credits of philosophy, including PHIL 125 or 6 credits of philosophy at the 200 level; in addition to ENGL 15 or ENGL 30H
Bachelor of Arts: Humanities
Writing Across the Curriculum

PHIL 426W: Seminar in Metaphysics

3 Credits/Maximum of 6

Examines the nature of reality, the existence of freedom, and the nature of matter, mind, and values.

Prerequisite: 9 credits in philosophy, including PHIL 126 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities
Writing Across the Curriculum

PHIL 427: Seminar in Philosophy of Mind

3 Credits

The nature of the mind and its relation to the physical world is the focus of this course, which builds on its precursor (PHIL 127). Topics include the definition of consciousness, what constitutes a self, and whether artificial constructions like robots could have minds. Views on these topics, as formulated by a range of (largely twentieth-century) movements - logical behaviorism, functionalism, (physicalist) reductionism, eliminativism, dualism, mind-brain identity theory, and enactivism - have significant metaphysical and ethical consequences. If consciousness is separate from the body, physical theories of causation cannot explain the effect of thought on action. If robots can have minds, there are reasons to be concerned about exploitation of robots as well as the possibility of robot domination. Students will investigate these topics in greater depth, typically either by selecting one or two for careful study or by focusing on the thought of one or two selected authors, e.g., Ryle, Smart, Millikan, Fodor, Block, Churchland, and Chalmers. Texts will challenge students to read and analyze contemporary and historical scholarly work on the topic. The issues discussed will encourage reflection on the assumptions students have about themselves and how their minds shape and are shaped by the world.

Prerequisites: 9 credits of philosophy; or 6 credits in philosophy where three credits are from PHIL 127; or 6 credits in philosophy where both are at the 200-level
Bachelor of Arts: Humanities

PHIL 432: Medical and Health Care Ethics

3 Credits

This course examines ethical, social, legal, and policy issues related to the research, implementation, and practice of medicine, medical technologies, and healthcare. It uses secular ethical theories, frameworks, and concepts, as well as health/medical humanities methodologies.

Enforced Prerequisite at Enrollment: fifth-semester standing
Cross-listed with: BIOET 432
Bachelor of Arts: Humanities

PHIL 433: Ethics in Science and Engineering

3 Credits

Ethical issues arising in the practice of science and engineering and their philosophical analysis.

Cross-listed with: STS 433
Bachelor of Arts: Humanities
Bachelor of Arts: Social and Behavioral Sciences

PHIL 435: Science and Religion

3 Credits

This course offers an intensive examination of the complex relationship between religion, science, and philosophy in different traditions and historical periods. How did science and religion emerge as distinct ways of understanding the universe? Were the two always in conflict? What is the nature of this conflict - is it historical, cultural, conceptual, linguistic, or methodological? Are there ways to make them compatible? Do they constitute separate realms with clear-cut borders and jurisdictions? In pursuit of wellinformed answers to these questions, the specific topics of this course will typically include modern scientific conceptions of the natural world and human life (e.g., cosmology, the origin and value of life, evolution) and the contemporary impact of these conceptions on religious belief; ethical questions stemming from scientific methods and biotechnology (e.g., cloning and genetic engineering and the religious responses to such acts of "playing God"), and examples of contemporary scientific approaches to explaining religious experience (e.g., cognitive science, neuroscience, and evolutionary psychology). The instructor may use discretion in selecting representative texts by religious studies scholars, philosophers, scientists, and historians of science with a view to offering a diverse set of authoritative and sometimes controversial approaches to the subject.

Prerequisites: 9 credits of philosophy; or 6 credits of philosophy including either PHIL 011 or PHIL 110 or PHIL 124; or 6 credits of philosophy where all are from 200-level courses.
Bachelor of Arts: Humanities

PHIL 437: World Philosophies

3 Credits/Maximum of 6

Philosophical traditions, problems, and authors in African, Asian, Middle-Eastern, Native American, or other non-Western cultures and intellectual traditions.

Prerequisite: 9 credits of philosophy, including 6 credits of philosophy at the 200 level or 5th semester standing
Bachelor of Arts: Humanities
International Cultures (IL)

PHIL 438: Seminar in Feminist Philosophy

3 Credits

This course will explore some of the influential theories and texts in the field of feminist philosophy. Feminist philosophy encompasses a broad range of inquiry, from political and ethical issues to foundational metaphysical and epistemological problems - e.g., What is a woman? What is the relationship between knowledge, epistemology, and power? Feminist philosophical approaches are diverse and include thinkers from all approaches to philosophy and are often richly influenced by work in women of color feminisms (e.g., intersectionality, Latinx), approaches to sexuality studies (e.g., LBGT studies and Queer Theory), post- and decolonial studies, and disability studies. Assigned readings will typically offer a range of approaches to feminist philosophy. While a majority of the readings will cover issues discussed by contemporary thinkers, a few historically significant feminist philosophers will often be included. Through reading and discussion, this course will introduce students to some of the central approaches to feminism, some of the most pressing issues, as well as the central controversies of feminist philosophy. Students will develop their interpretative and philosophical skills, while

gaining a deeper understanding of the importance of feminist philosophy to the tradition of philosophy as well as to the general betterment of society.

Prerequisites: 9 credits of philosophy; or 6 credits in philosophy where three credits are from PHIL 008 or 114; or 6 credits in philosophy where all six are at the 200-level

Cross-listed with: WMNST 438

Bachelor of Arts: Humanities

PHIL 439: Seminar in Asian Philosophy

3 Credits/Maximum of 6

Exploration of the traditions, problems, and authors of one or more of the philosophical systems of Buddhism, Hinduism, Taoism, and Confucianism.

Prerequisite: 9 credits in PHIL; or 3 credits of PHIL 7 plus any 3 additional credits of PHIL; or 9 credits of ASIA

International Cultures (IL)

PHIL 441: Capstone Course in Philosophy

3 Credits

This course is intended as the Capstone Course for Philosophy majors and is to be taken during their senior year or during the last semester of their junior year.

Prerequisite: 6th semester standing and up

PHIL 453: Seminar in Ancient Philosophy

3 Credits/Maximum of 6

This course allows intensive study of select authors, traditions, works, or questions from ancient Greek and Roman philosophy. Focal authors may include, for instance, the Presocratics, Socrates, Plato, Aristotle, Epicurus, Lucretius, Cicero, Seneca, Augustine, or Plotinus. Key traditions may include Stoicism, Hedonism, Platonism, Skepticism, Jewish, Roman, and Christian reception, or Neoplatonism and Neopythagoreanism. Focal works may include Nicomachean Ethics, On the Nature of Things, Confessions, or Enneads. Focal themes may include ethics (e.g., virtue, human flourishing, and pleasure), psychology (e.g., emotion, character, immortality of the soul), epistemology (e.g., imagination, knowledge, wisdom), metaphysics (e.g., atomism, teleology, dualism), theology, logic, aesthetics, or history. This course may also include intellectual and cultural context for claims or trends in ancient philosophy. Students will develop in-depth experience with parts of ancient philosophy that go beyond what they receive in Philosophy/CAMS 200: Ancient Philosophy. They will also hone reading, interpretative, argumentative, and creative philosophical skills on the relevant texts, which are among the most fascinating, puzzling, and frequently referenced of the Western philosophical tradition.

Prerequisite: 9 credits of philosophy, including either PHIL 200 or 6 credits of philosophy at the 200 level; or 9 credits of any combination of CAMS/GREEK/LATIN (or 6 credits if three come from CAMS 200

Cross-listed with: CAMS 453

Bachelor of Arts: Humanities

International Cultures (IL)

PHIL 455: Seminar in Modern Philosophy

3 Credits/Maximum of 6

This course builds on its precursor (PHIL 202) to focus on specific topics in philosophy between 1600 and 1800. This includes the nature of substance; the mind-body problem; the method of knowledge acquisition; and the tensions between freedom, causal determinism, and a teleological conception of nature. Assigned readings typically include selections from the canonical texts of major figures such as Descartes, Spinoza, Leibniz, Locke, Berkeley, and Hume. The instructor may also choose to incorporate less studied figures such as Malebranche, Gassendi, Bacon, or women philosophers of the era, such as Lady Conway, Wollstonecraft, and Princess Elizabeth. Students will improve their skills in reading historical texts, reconstructing the arguments in writing, and deepen their appreciation of history of philosophy as a method of analyzing philosophical concepts and problems.

Prerequisites: 9 credits of philosophy, which is to include either PHIL 202 or 6 credits of philosophy at the 200 level

Bachelor of Arts: Humanities

PHIL 456: Seminar in Nineteenth Century Philosophy

3 Credits/Maximum of 6

This course builds on its precursor (PHIL 203: Nineteenth Century Philosophy) to focus on specific topics and issues of the nineteenth century. These may typically include the moral and practical implications of Kant's critical philosophy; Hegel's conception of history, religion and society; the socially progressive and socially conservative appropriations of Hegelian philosophy (e.g., Feuerbach's "projection theory" of religion, Marx's historical materialism and labor theory of value, and Kierkegaard's radical separation of faith and reason); Nietzsche's critique of realism, rationalism, and classical theories of the origin and value of morality; Mill's utilitarianism and liberalist conception of freedom; and Freud's theory of the unconscious. The instructor may choose a selection of representative texts or excerpts, for example Kant's Critique of Pure Reason, Hegel's Phenomenology of Spirit, Marx's Economic and Philosophic Manuscripts of 1844 and Capital, Kierkegaard's Concluding Unscientific Postscript, Nietzsche's Birth of Tragedy or Genealogy of Morals, and Mill's On Liberty.

Prerequisites: 9 credits of philosophy, which include either PHIL 203 or 6 credits of philosophy at the 200 level

Bachelor of Arts: Humanities

PHIL 457: Seminar in Twentieth Century Philosophy

3 Credits/Maximum of 6

This course builds on its precursor (PHIL 204: Twentieth Century Philosophy) to provide a more focused understanding of selected trends, topics, and questions specific to the period. The twentieth century is marked by a parting of the ways among rival (and often mutually hostile) approaches with distinct questions, styles, and agendas. Analytic philosophy of language emerges as a synthesis of Frege's formal logic with an empiricist theory of meaning; its early proponents (e.g., Russell, Moore, Carnap) aim to expose much of traditional philosophy as futile engagement with "pseudo-problems" and replace it a logically perfect language in which genuine problems can be posed and scientifically resolved. Phenomenology (e.g., Husserl, Merleau-Ponty) and existentialism (e.g. Heidegger, Sartre) revolt against the nineteenth century's overblown metaphysical systems and assert

the importance of returning to an intuitive engagement with "things themselves" and with the lived experience of the human condition. Critical theory (e.g. Benjamin, Adorno) emerges as a synthesis of Marxism, aesthetic criticism, psychoanalytically informed sociology. Around mid-century, each of these streams of thought undergoes a period of crisis and renewal, associated with names such Wittgenstein and Quine in the case of analytic philosophy, Derrida, Foucault, and Deleuze in that of phenomenology and existentialism. Newly emergent critical philosophies such as feminism and decolonial thought heighten the sense of intellectual ferment. Students will emerge from the course both with a deepened understanding of one or more of twentieth century philosophy's key concerns (e.g., language and logic, history, power, the structure of reality, the nature of value and normativity, the relation of theory and practice, art and aesthetic experience, gender and identity) and canonical authors, and a sense of how they relate to the rival schools of thought.

Prerequisites: 9 credits of philosophy, which includes either PHIL 204 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 458: Seminar in Contemporary Philosophy

3 Credits/Maximum of 6

This course will explore some of the influential theories and texts in contemporary philosophy. Contemporary philosophy encompasses a broad range of inquiry, from attention to the treatment of knowledge, reason, and the subject; to ethical and political issues; and to aesthetics and metaphysical problems. Themes may include such questions as: What is the status of the human subject in relation to the world? What is the status of truth once we recognize the radical contingency of our historically-bound existence? What is the relation between aesthetic value and ethical value? What does it mean to exist as a temporal agent? What forms does the exercise of power assume in late-modern societies and what resources does philosophy provide for a critique of societies of control? What resources are there in recent developments in philosophy for revitalizing the ancient ideal of philosophy as a way of life, including the concern with the flourishing life? Through reading and discussion, this course will introduce students to some of the central approaches to contemporary philosophy, some of the most pressing issues, as well as the central controversies of contemporary philosophy. Students will develop their interpretative and philosophical skills, while gaining a deeper understanding of central themes and figures in philosophy over the past century.

Prerequisites: 9 credits of philosophy, which are to include either PHIL 208 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 460: African American Philosophy

3 Credits

This course will explore central questions and themes guiding the evolution of African American philosophy in the 19th and 20th centuries. Our course will study three different movements from the era. We begin with slavery and questions of reason, civility, and nationality. We move on to philosophies of value and culture in the early twentieth century, with the focus on secularization and the historical nature of philosophical truth. Finally, we will read the work of black political philosophers, and the turn to Marxism and Hegelianism. Issues to be discussed include the foundation and source of race as knowledge of the world, the nature of blackness and identity, the nation as a locus of consciousness

and action, God's role in the universe, and the possibility of an Afro-Pessimism about these things.

Prerequisites: AFAM 100 or PHIL 009 and 5th semester standing
Cross-listed with: AFAM 460
International Cultures (IL)
United States Cultures (US)

PHIL 461: Plato

3 Credits/Maximum of 6

Plato has had, along with his student Aristotle, the greatest influence on the history of Western philosophy of any writer. He synthesized politics and ethics, pedagogy and dialectics, psychology and epistemology, metaphysics and ontology, and even cosmology and theology. He founded Europe's first research institute, which cultivated mathematicians, astronomers, psychologists, rhetoricians, literary scholars, and of course philosophers. He lived at a time of profound political upheaval, in a democratic Athens that had just lost a war of imperial expansion. He wrote dozens of dramatic dialogues, among the greatest works of prose ever, celebrating his teacher Socrates, stunning his readers into puzzlement, and posing problems of self-understanding that would set the philosophical agenda for centuries to come. His works have appealed to skeptics and mystics, formal theorists and creative writers, Jews, Christians, and Muslims, and philosophers of a wide range of sensibilities. This course studies a variable range of his dialogues, with the goal of getting a broad and deep understanding of this author, his intellectual context, and his philosophical reception. Students will also learn about the features of Plato's thought and world that remain culturally salient - the Academy, the Forms, Platonic love, Socratic ignorance, the dialogue form, Platonism and Neoplatonism, and the distinctiveness of Greek philosophy.

Prerequisite: 9 credits of philosophy, where 3 of those credits are PHIL 200 or 6 of those credits are PHIL 200-level courses or 9 credits of any combination of CAMS/GREEK/LATIN courses.

Cross-listed with: CAMS 461
Bachelor of Arts: Humanities

PHIL 468: Jewish Philosophy

3 Credits

This course explores the rich history of Jewish philosophy since the Medieval Ages through to the 20th-century. Attention will be paid to debates about the relation between Judaism and Christianity, ethics and religion, what is specific about Jewish identity and religious experience, the challenges of secularism, and the issue of Zionism. Authors studied in the course include Maimonides, Mendelssohn, Heine, Cohen, Rosenzweig, Benjamin, Buber, Levinas, and Derrida.

Prerequisites: 9 credits of philosophy, including PHIL 135 or 6 credits at the 200 level

Cross-Listed
Bachelor of Arts: Humanities
International Cultures (IL)

PHIL 472: Islamic Philosophy

3 Credits

A survey of major texts from the Islamic philosophical tradition, focusing primarily on the classical period (ninth to twelfth centuries) and its influence on modern thinkers.

Prerequisites: 9 credits in RLST and/or PHIL, or 6 credits of PHIL at the 200-level

Cross-listed with: RLST 472

Bachelor of Arts: Humanities

Bachelor of Arts: World Cultures

International Cultures (IL)

PHIL 473: German Idealism

3 Credits/Maximum of 6

Critically examines the philosophy of central German idealists, including Kant, Fichte, Schelling, and Hegel, and its impact on later philosophy.

Prerequisite: 9 credits of philosophy, including either PHIL 202 or PHIL 203, or 6 credits of philosophy at the 200 level

Bachelor of Arts: Humanities

PHIL 474: Kant

3-6 Credits/Maximum of 6

Critical examination of the metaphysics, epistemology, aesthetics, legal and moral philosophy, and influence of Immanuel Kant.

Prerequisite: 9 credits in philosophy, including PHIL 202 or 6 credits of philosophy at the 200 level

Bachelor of Arts: Humanities

PHIL 476: Hegel

3-6 Credits/Maximum of 6

Critical examination of the metaphysics, moral theory, epistemology, and philosophy of history of this central figure of 19th-century philosophy.

Prerequisite: 9 credits of philosophy, including PHIL 203 or 6 credits of philosophy at the 200 level

Bachelor of Arts: Humanities

PHIL 478: Ethics After the Holocaust

3 Credits

The aim of this course is to explore various ways in which philosophers have responded to Auschwitz (a signifier, or name, which is in turn not without controversy and complexity). It will examine, in particular, the promise and failure of post-Holocaust ethical theory, with attention to evil, suffering, goodness, witnessing, testimony, trauma, and human rights. Authors include Levi, Agamben, Arendt, Adorno, Levinas, Jonas, and Jankelevitch. Through reading and discussion of primary sources, this course introduces students to these philosophers' leading questions, methods, and conclusions, with reference to their historical context and their impact on later philosophy. The course will make these writings accessible to students without unduly presupposing prior knowledge, while also encouraging students to rise to the challenge with their own critical analysis and creative interpretations.

Prerequisite: One course in either JST or PHIL

Cross-listed with: JST 478, RLST 478

Bachelor of Arts: Humanities

PHIL 479: Critical Theory

3 Credits/Maximum of 6

In this course, the term Critical Theory refers to a distinctive approach to social, cultural, and political theory associated with the Institute for Social Research in Frankfurt am Main, Germany, which was founded in 1923. Members of what came to be called the Frankfurt School were sharply critical of the political structures, social institutions, and culture of late capitalist societies such as Germany and the United States (where they lived and worked in exile during the Second World War). They were heavily influenced by the post-Kantian German philosophical tradition, especially the work of Hegel, Marx, Nietzsche, and Freud. This course will focus on the historical development of Critical Theory, with an emphasis on the major figures of the early Frankfurt School: Theodor Adorno, Max Horkheimer, Walter Benjamin, and Herbert Marcuse. However, since Critical Theory is also an ongoing theoretical project, we will also study some contemporary representatives of this tradition, as well as some of its trenchant critics. After some introductory material, including discussion of the Marxist background of early Critical Theory, the course will focus on the following themes: Modernity, History, and Progress; Psychoanalysis and Critique; Culture and Art; and Race, Antisemitism, and Imperialism. In addition to the authors mentioned above, we will discuss work by such thinkers as Jürgen Habermas, Axel Honneth, Nancy Fraser, Seyla Benhabib, Enrique Dussel, and Angela Davis.

Prerequisite: 9 credits of philosophy, including either PHIL 203 or 6 credits of philosophy at the 200 level

Bachelor of Arts: Humanities

PHIL 485: Heidegger

3 Credits/Maximum of 6

Martin Heidegger's masterpiece, *Being and Time*, is among the fundamental philosophical texts of the 20th century, taking up questions of metaphysics, religion, temporality, ontology, the history of philosophy, language, technology, and aesthetics. His thinking there influenced the development of hermeneutics, existentialism, and postmodernism, and continues to inform contemporary approaches to these topics. This course thus gives pride of place to *Being and Time*, potentially including also the related *The Concept of Time* (1924) and *The Basic Problems of Phenomenology* (1927). Major topics studied will be the primacy of the question of the meaning of being, the ontological difference, the phenomenological method, the critique against Cartesian subjectivity, and the existential characteristics of humans such as "being-in-the-world," temporality, spatiality, historicity, sociality, thrownness, authenticity, inauthenticity, everydayness, and death. Further themes of the course may include the relationship between Heidegger's "early" and "later" works; the political question in Heidegger, especially after the publication of the *Black Notebooks*; Heidegger's refusal to apologize for his allegiance to National Socialism; the problematic of ethics within the Heideggerian existential phenomenological account; Heidegger's critique of the metaphysics of presence; Heidegger's critique of technology; the Heideggerian conception of art; Heidegger's understanding of the poetic; and historical and contemporary critiques of Heidegger's thought.

Prerequisites: 9 credits of philosophy, including PHIL 102 or 204 or 402 or 457

Bachelor of Arts: Humanities

PHIL 486: Wittgenstein

3-6 Credits/Maximum of 6

Examines Wittgenstein's early and late work, including logical atomism, meaning, language games, forms of life, and the private-language argument.

Prerequisite: 9 credits of philosophy, including PHIL 204 or 6 credits of philosophy at the 200 level
Bachelor of Arts: Humanities

PHIL 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

PHIL 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities
Honors

PHIL 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

PHIL 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

PHOTO 100: Introduction to Photography

3 Credits

An introduction to the aesthetics, history, and science of photography including practical and critical approaches to the art of photography. PHOTO 100 Introduction to Photography (3) (GA) PHOTO 100 is an introduction to the aesthetics, history, and science of photography including practical and critical approaches to the art of photography for beginning students. The course will introduce students to photography as an art form and as an important medium in commercial applications, news and journalism, science, and industry. The course will look at photography in a social/historical context and showcase the work of important photographers. The course will examine the impact of technological, economic, and cultural forces on photography and, in turn, the role that it plays in our daily life, culture, and society. The course will also expose students to the various styles and techniques used in making photographs and give them the opportunity to gain experience and practical know-how in creating their own photographs. Through the process of assembling and critically examining their own work and the work of others, they will be encouraged to develop a more informed critical point of view about photography as an art and important form of human expression. Students will be required to have access to a digital camera and the internet.

Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Creative Thinking
GenEd Learning Objective: Key Literacies

PHOTO 101: Culture of Photography

3 Credits

This is a non-technical introductory photography course where students photographically and intellectually examine the role of photography in modern culture. PHOTO 101 expands students' depth of appreciation, knowledge, and understanding of the medium by providing them with a creative and intellectual background to realize its broad cultural scope. The course accomplishes this through photographic and written explorations of social, political and ethical issues relevant to photography. Photography wields unprecedented influence as a primary visual medium and students constantly use photography in their personal lives as both a communications tool and as a creative outlet. The ubiquitous smart phones with built in cameras are responsible for much of this explosive popularity with social media providing appealing venues for publicly displaying photography. Over the first decade of the new millennium, social media sites saw the volume of photo uploads increase dramatically, eventually exceeding 10 billion per month. In light of photography being a key medium students use to share and communicate information about themselves to the world at large, the course is designed to help them to think critically and ethically about the photographs they take, share, view and use. The major course teaching topics will address a broad range of contemporary issues relevant to how photography and culture affect one another. Students will become aware of photography as a constantly evolving medium, whose relatively short historical trajectory has culminated in the development of an easily accessible egalitarian art form that bridged the digital divide to interact intimately with personal computing, cell phone communications, the Internet, and social media. In the course, students will take photographs to fulfill photographic assignments, share them with peer audiences, and then engage in critical conversations regarding the aesthetic and

communicative meaning and effectiveness of the photos. They will also engage in written assignments where the course presents them with case studies regarding current issues in photography such as, the impact of technological developments in the medium, ethical uses of photography, photography as free speech, and photography as social media. Students will conduct research on the topics and develop informed written position statements, which they will share with their classmates for peer evaluation and feedback. In addition, students will engage with selected readings regarding aspects of photography addressed in the major teaching topics.

PHOTO 200: Photo Studio I

3 Credits

A beginning level course that explores the fundamentals of photography. PHOTO 200 Photo Studio I (3) PHOTO 200 is a beginning level course focused on the aesthetics and practical application of photography. Employing lectures, demonstrations and hands-on photographic assignments, it concentrates on teaching basic photographic techniques. Digital and film camera use, imaging software, basic digital scanning, digital printing methods, and basic darkroom practice are covered. A digital camera and access to a 35mm film camera is required. Grading is based on the quality of work in required creative projects (70%) and tests/quizzes (30%). PHOTO 200 will be offered fall and spring semesters. PHOTO 100 is the prerequisite for PHOTO 200.

Enforced Prerequisite at Enrollment: PHOTO 100

PHOTO 201: A Chronological Survey of Photography

3 Credits

A survey of photography's place and influence in a social, cultural, and historical context. ART H 250 A Chronological Survey of Photography (3) This course explores the role played by photography over time in providing understanding and insight in a social, cultural, and historical context of the impact of the development of the photographic medium and its effect on social, political, cultural and technological events. Emphasis will be given to understanding the context that surrounds the scientific and aesthetic development of photography. This is a survey of the chronology of events in western culture that transpires from the inception of photography until the year 2000. It includes the influences and outcomes of photographers and those associated with the medium on our culture. Emphasis will be placed on the influence of photography on the world around it, and significant events and individuals in the development of the medium as a vital art form. The structure of the course will consist of research and discussion of events and individuals that characterized years selected for examination. Each week one or two decades of western culture will be highlighted. Although the thrust of research will relate to photographic subject matter, the events studied will span the culture. We will explore the development of art, literature, music,

and photography, as well as, historic landmarks, and the events that have shaped present society. Each week a selection of visual material will be presented highlighting selected events, students will read literature from the period of discussion, significant pieces of music will be introduced, and accounts of periodic events will be surveyed. Each week, a group of students will be assigned to research at least one decade. Each student will gather information about a significant figure or event that occurred in the course of a given period. The student will be expected to prepare a short paper and give a five-minute oral presentation about his/her assigned year, historical figure or event. As each student presents, the chronology of events becomes clear and the multiple threads of history weaves a brilliant tapestry of our culture. For the final presentation the student will prepare a ten-page research paper about a historical figure or event. Students will be graded on the quality of the weekly oral presentations and the demonstrated level of commitment to research. Another significant part of their grade will be derived from the length of committed scholarship given to the ten-page term paper. Students must exhibit a level of originality, clarity, and insight. The student must demonstrate the capacity for the assimilation of facts and events relative to their subject and demonstrate how their subject relates to other events that occurred around the same time of their event. Toward this end students will be encouraged to work together to illustrate the interconnection of the chronology.

Cross-listed with: ARTH 250

PHOTO 202: Fundamentals of Professional Photography

3 Credits

This professionally oriented photography course gives students a foundation in the techniques and other competencies relevant to professional photography. PHOTO 202 Fundamentals of Professional Photography is a professionally oriented problem based learning class where students are introduced to the fundamental technical and creative aspects of client centered photography relevant to careers in photography and photography related or dependent fields. Students will be introduced to the photographic techniques; professional practices; creative sensibilities; and cultural knowledge significant to the work of a professional photographer and fields reliant on or related to professional photography. The course content focuses student attention on mastering the technical fundamentals of professional photography in the context of the photographer/client relationship. The learning problems place emphasis on the communication, collaboration, and cooperation necessary to solve visual photographic problems in a professionally oriented setting. Under these conditions, students must collaborate with their clients to foster creatively productive relationships and meet their photographic needs. This problem requires developing communication and interpersonal relation skills, which require clearly understanding the clients' needs and educating them about the creative possibilities and limitations. Under this teaching and learning model, students must learn to merge their own creative vision with the needs and desires of their professional clients. These skills are directly applicable to the real world problems students will encounter in professionally oriented circumstances after they graduate. In the learning problems student peers, with the instructor's guidance, will play dual roles of clients and photographers with the goal of concentrating the photographers' attentions on communicating with their clients to create effective and creative purpose-driven images. Consequently, the course places a greater emphasis on communication, collaboration, and cooperation than it does on personally and individually motivated expression. Since the advent of digital photography, the medium has undergone

an unprecedented period of technological, creative, and cultural flux. Digital photography, computer technology, and social media have had dramatic impact on the medium, which we expect will continue into the future. Consequently, we have used a problem based learning approach to ensure we can continuously address the most relevant and current topics and information. We have also chosen major teaching and learning topics, which will continue to meet the fundamental needs of the students even as technology continues to shift. At the beginning of each semester, students and the instructors will work collaboratively to develop five student learning-problems. These problems or projects will address the major teaching and learning topics under a variety of conditions designed to reinforce the subject matter, encourage flexibly creative thinking, and allow students to pursue the subject with greater critical depth and awareness.

PHOTO 300: Photo Studio II

4 Credits

An intermediate course that explores advanced processes and applications in digital photography, digital image processing, and photographic inkjet printing. PHOTO 300 Photo Studio II (4) PHOTO 300 is an intermediate course in the aesthetics, processes, and practical

applications of digital photography, digital image processing, and photographic inkjet printing. A digital camera is required. Students will employ digital photographic applications and techniques to create images and expand their personal photographic vision. The course will help students to: 1. Gain a deeper understanding of the medium of digital photography artistically, critically, and as a technical process. 2. Explore the potential of the medium's ability to express ideas in new ways. 3. Understand advanced digital camera methods. 4. Learn advanced skills in the use and application of Adobe Photoshop. 5. Learn high quality film and object scanning procedures. 6. Learn to make photographic quality color archival inkjet prints and develop critical color awareness. Grading is based on the quality of work in required creative projects (80%) and presentations / participation in formal critique sessions / tests-quizzes (20%). The final course grade will be dropped one full grade for each absence or late submission beginning with the second late submission or absence. The prerequisite for PHOTO 300 is PHOTO 200. PHOTO 300 will be offered fall and spring semesters.

Enforced Prerequisite at Enrollment: PHOTO 200

PHOTO 301: Beyond Photoshop: Techniques in Digital Photographic Imaging

3 Credits/Maximum of 6

Students will learn aspects of photographic image making by capturing, processing, editing, retouching, digital printing, archiving, using digital images in the traditional darkroom, and manipulating of digital photographs with the emphasis on learning specialized software techniques beyond the usual Photoshop fare. Through a series of learning problems, students will focus on developing new skills and knowledge needed to accomplish techniques used in the creation of photo-based digital imagery. These skills include previsualization of images, camera techniques for images that require post-processing (such as stacking), shooting practices for enhanced digital workflow and choosing the image post-processing techniques most appropriate for the end-use of images, color management, digital printing and the use of digital images in the traditional darkroom. With awareness and knowledge of the total process, they will synthesize photographic shooting practices with computer-based image post-processing for creative, and professionally oriented image-making results. They will develop creative, critical and conceptual sensibilities needed to discuss and evaluate their work and the work of others using these methods. Students will identify, research, and analyze effective professional and creative practices in the field of photography with emphasis on developing skillful digital post-processing techniques. The shift to digital imaging has raised ethical challenges in photography-reliant fields such as the arts, sciences, advertising, and journalism. Students will analyze and assess factors necessary to recognize in making ethical image-making decisions. In the darkroom, students will learn to integrate their digital photography with traditional and historic photographic processes blending digital and analog techniques.

Enforced Prerequisite at Enrollment: PHOTO 202

PHOTO 303: Professional Photography: Studio Technique and Photocomposition

3 Credits/Maximum of 6

PHOTO 303 Professional Photography: Studio Technique and Photocomposition is an intermediate-level problem-based learning class where students acquire practical skills, and learn creative techniques relevant to professional photographic image making.

The course focuses on building and synthesizing career oriented competencies in the areas of intermediate to advanced digital photography, photocomposition, studio lighting, and image processing related to professional photography. This is a technically oriented course, which emphasizes image making for professional purposes such as for clients or specific audiences. Using this approach, students will practice methods to tailor their own creative vision to the needs of collaborators such as art directors or other professionals. Students will focus on using lighting, cameras & lenses, and creative design techniques as tools to achieve professional quality photographs appropriate for creative artist portfolios used for photography and related careers. Students will develop the skills necessary to recognize and deconstruct lighting, camera, and design techniques in professional photography they may encounter in advertising, magazines, websites and other places where professional photography is used. After they graduate, students will be able to continue using these critical skills to learn and experiment with new techniques, which drive the constantly changing styles in photographic design and thus keep their work looking fresh and current. They will additionally develop and hone visual and verbal skills necessary to critically analyze their own photos and the photos of their peers. The course will culminate with students producing professional portfolios of their work suitable for career purposes.

Enforced Prerequisite at Enrollment: PHOTO 200 or PHOTO 202

PHOTO 321N: Flow Visualization: The Art and Physics of Fluid Motion

3 Credits/Maximum of 3

In this course, student will explore techniques for the visualization of the physics of fluid flows including seeding with dyes and particles. Students will also gain technical expertise in a range of flow visualization and photographic techniques drawn from the course topics, such as photographing atmospheric clouds. Assignments are student-driven, to individuals and mixed teams of undergrad students from different majors. This course will reveal the techniques of making laboratory and everyday fluid flows visible for both scientific and aesthetic purposes. Students will create images using photographic techniques, and document their work in written reports. Questions such as "what makes an image scientific?" and "what makes an image art?" will be explored.

PHOTO 400: Digital Photography in the Studio

4 Credits

Concepts and technology of the digital photography studio; large format digital cameras, electronic studio lighting and digital printing. PHOTO 400 Digital Photography in the Studio (4) PHOTO 400 is a wholly digital, in-depth course in photography that explores the visual, technical, and creative application of digital photographic technologies in a studio setting. Students will employ digital photographic applications and techniques to create images and expand their personal photographic vision. The course will help students to: 1. Gain a deeper understanding of the medium of digital photography artistically, critically, and as a technical process. 2. Explore the potential of the medium's ability to express ideas in new ways 3. Master the fundamental studio practices and technologies of digital photography o Professional large format digital view cameras o Professional electronic studio lighting o Adobe Photoshop o Digital printing o DVD-CD-Rom storage o Presentation and distribution utilizing the World Wide Web PHOTO 400 follows a workshop/critique format. A collaborative team approach is utilized to enhance students' abilities in working together to solve creative problems. Students will have to think critically, develop strategies to solve problems, and engage in class critiques as a normal expectation of the course. Grading is based on the quality of work in required creative projects (80%) and participation in formal critique sessions (20%). The final course grade will be dropped one full grade for each absence or late submission beginning with the second late submission or absence. PHOTO 400 will be offered spring semesters.

Enforced Prerequisite at Enrollment: PHOTO 200

Bachelor of Arts: Arts

PHOTO 401: Fashion Photography

3 Credits/Maximum of 6

Students will learn the primary technical, aesthetic, and stylistic photographic techniques and knowledge required for the creation, presentation, and marketing of professional fashion photographs. The course will additionally address the relevant business practices associated with the field. Other essential material covered in the course will involve student research culminating in presentation projects relating to the history, aesthetics, and ethics of fashion photography. The course features a problem based learning approach where students and instructors work collaboratively to develop five student learning-problems. These problems or projects will address the major teaching and learning topics under a variety of conditions designed to reinforce the subject matter, encourage flexibly creative thinking, and allow students to pursue the subject with greater critical depth and awareness. Like fashion itself, fashion photography is subject to constant aesthetic, stylistic, and cultural change. To address these problems practitioners need to develop an awareness of style and trends in both the fashion industry and the fashion publishing industry, which are dependent on photography for marketing and advertising. Photography additionally adds historic value as a stylistic and creative archive for these industries. Fashion photographers must have the skills and mindset necessary to constantly learn and experiment with new techniques, which keep their work technically proficient and stylistically innovative and fresh. This problem based learning approach will allow the course to remain dynamic and address, in real-time, changing issues relevant to the industry and our students.

Enforced Prerequisite at Enrollment: PHOTO 200 or PHOTO 202

PHOTO 402: Photographic Narratives

4 Credits/Maximum of 8

The development of a photographic project that leads to the creation of narrative visual stories. PHOTO 402 Photographic Narratives (4) PHOTO 402 is a project course in photography focused on the construction of visual narratives that feature a student's photographs as the central content. The course gives the student the opportunity to choose a subject and explore it through photographic means over an extended period of time, in this case, an entire semester. Emphasis is placed on the quality of photography and the organization of those photographs into print and digital forms of display. Students will be evaluated on their abilities to understand the medium through classroom instruction. Evaluation will also be determined by a student's imaginative capabilities through visualization and through the completion of a series of finished pieces.

Enforced Prerequisite at Enrollment: PHOTO 200 or PHOTO 202
Bachelor of Arts: Arts

PHOTO 402H: Photographic Narratives

4 Credits/Maximum of 8

The development of a photographic project that leads to the creation of a handmade book. PHOTO 402 Photographic Narratives (4 per semester/maximum of 8) PHOTO 402 is a project course in photography focused on the construction of a handmade book that features a student's photographs as the central content of that book. The course gives the student the opportunity to choose a subject and explore it through photographic means over an extended period of time, in this case, an entire semester. Emphasis is placed on the quality of photography and the organization of those photographs in a book for their display. Students will be evaluated on their abilities to understand the medium through classroom instruction. Evaluation will also be determined by a student's imaginative capabilities through visualization and through the completion of a series of finished pieces. The prerequisite to PHOTO 402 is PHOTO 200. PHOTO 402 will be offered fall and spring semesters.

Bachelor of Arts: Arts

PHOTO 404: Professional Photography Capstone Seminar: Self-Marketing and Professional Presence

4 Credits

PHOTO 404: Professional Photography Capstone: Self-Marketing and Professional Presence is a culminating problem based learning course where students analyze, synthesize, and organize their creative, academic, co-curricular, internship and photographic experiences to present to audiences of potential clients and employers in preparation for careers in professional photography or related fields. Trends in effective self-marketing and professional presence change over time with shifts in cultures, styles, and technologies. The Internet has given rise to global niche markets as well, which photographers often accommodate. As a result, there is no clear one-size-fits-all approach to this inconstant problem. We have chosen to apply a problem-based learning approach to this course with the intent that students will work with their instructors and peers to tailor the course learning problems to be relevant to each individual student and still meet the course learning objectives. To achieve that, in collaboration with their instructor and peers, every student will design five individualized capstone projects specifically

pertinent to his or her situation. Each project will directly address at least two of the course major teaching topics. Much of the work of the capstone course will focus on reflection, refinement, and synthesis.

Enforced Prerequisite at Enrollment: PHOTO 300 or PHOTO 303

PHOTO 405: Creative Projects in Photography

4 Credits/Maximum of 8

Special individual problems related to photographic vision. PHOTO 405 Creative Projects in Photography (4 per semester/maximum of 8) PHOTO 405 is a project course in photography designed to challenge students and engage them in photographic assignments that expand their personal and individual vision. Projects may be developed using either digital or photochemical process (or a combination of the two) and may be organized as either group or individual assignments. PHOTO 405 will be offered fall and spring semesters.

Enforced Prerequisite at Enrollment: PHOTO 202
Bachelor of Arts: Arts

PHOTO 406: Product Photography

2 Credits/Maximum of 4

This advanced level course will explore the practices of photographing products for print and product advertising. PHOTO 406 Product Photography (2) This advanced level course will introduce the practice of photographing products with a focus on advertising. The development of the photographers' problem solving abilities, when lighting varied surfaces, will be considered. The importance of lighting for scale will be examined along with how or when to contribute to the context of a product by introducing appropriate set propping. Aesthetic and intellectual concepts of rendering of products for specific end uses will be explored. Theory will be applied and practiced by the student in a studio environment. As a practical course, lectures and studio demonstrations are major elements of the instruction. The lecture time will modify throughout the course to allow each student the flexibility to practice learned skills. Students will be responsible for scheduling individual studio time with the Integrative Arts Photo Services unit. A digital camera and a laptop computer with a copy of Adobe Photoshop installed are required.

Enforced Prerequisite at Enrollment: PHOTO 200 or PHOTO 202

PHOTO 407: Portrait Photography

2 Credits/Maximum of 4

This advanced level course investigates contemporary portrait photography and traditional and modern styles of photographic lighting. PHOTO 407 Portrait Photography (2) This advanced level course will investigate what portrait photography is and how portrait lighting evolved from the influences of early painting. Throughout the course there will be an ongoing investigation of the successes of historic, contemporary & influential photographers. Styles of photographic lighting will be explored as well as natural and artificial light sources. Why posing is important to portrait photography will be considered as well as how or when to suggest or direct a subject to acquire a pleasing pose will be examined and practiced. Theory will be applied and practiced by the student in environmental and studio locations. Through the study of character and expression, the student Portrait Photographer will introduce their style to portrait making. The course will enable the student to make intellectual and aesthetic choices when choosing appropriate equipment

and technique, command the application of skillful lighting, develop sensitivities of interaction in prelude to the direction of the photo session and understand the incorporation of space or environment and it's relationship to the individual subject. A digital camera and a laptop computer with a copy of Adobe Photoshop installed are required.

Enforced Prerequisite at Enrollment: PHOTO 200 or PHOTO 202

PHOTO 410: Photographing Motion and Athletic Events

2 Credits/Maximum of 4

A practicum course in photographing sports and athletic events.

Enforced Prerequisite at Enrollment: PHOTO 200 or PHOTO 202

PHOTO 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

PHOTO 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

PHOTO 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PHOTO 499: Foreign Studies--Photo

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Physical Therapy (PT)

PT 100: Physical Therapist Assistant--Introduction

3 Credits

This course is a general introduction into the field of physical therapy. The definition, role and function of physical therapists (PTs), physical therapist assistants (PTAs), and other health care providers as members of the health care team will be covered. The history of physical therapy and the PTA will be presented. The organizational structure and operation of physical therapy service in a variety of settings will be studied. Students will become familiar with values-based behaviors that are essential for PTAs as well as the components of legal, ethical, and safe physical therapy practice. Medical terminology and abbreviations commonly used in physical therapy will be studied and an overview of the diseases/disorders specific to each body system will be presented. Students will become acquainted with the responsibilities of the PTA, including communication, interventions, documentation, and billing. Laboratory topics include basic patient care, infection control procedures, data collection techniques, and mobility and guarding techniques. There are lecture and laboratory components in this class, and students

will be expected to pass both written examinations and lab practical examinations. Enrollment is limited to students accepted into the PTA major.

PT 100S: Physical Therapist Assistant-Introduction

3 Credits

This course is a general introduction into the field of physical therapy. The definition, role and function of physical therapists (PTs), physical therapist assistants (PTAs), and other health care providers as members of the health care team will be covered. The history of physical therapy and the PTA will be presented. The organization of physical therapy departments and health care teams will be studied. Students will become familiar with values-based behaviors that are essential for PTAs as well as the components of legal, ethical, and safe physical therapy practice. Medical terminology and abbreviations commonly used in physical therapy will be studied and an overview of the diseases/disorders specific to each body system will be presented. Students will become acquainted with the responsibilities of the PTA, including communication, interventions, documentation, and billing. Laboratory topics include basic patient care, infection control procedures, as well as mobility and guarding techniques. The course will include an introduction to campus resources and personnel to help students adjust to student life. This course should help students develop strategies to lead to success in the PTA major. Enrollment is limited to students accepted into the PTA major.

First-Year Seminar

PT 101: Introduction to Computer Skills for the PTA

1 Credits

Introduction to basic computer skills for the physical therapist assistant.

First-Year Seminar

PT 120: Human Musculature and Functional Anatomy

2 Credits

This course is designed to give the learner a clear understanding of the locations, actions, and innervations of muscles in the human body and provide a foundation for learning and applying the principles of muscle strength testing. Course objectives include: demonstrating knowledge in the properties of muscle tissue and the basic mechanisms for muscle contraction; identifying and naming attachments and innervations of the muscles of the trunk and extremities; demonstrating competence in identifying muscle strength and weakness through manual muscle testing of trunk and skeletal musculature; and identifying different types of muscle contraction and interaction. The specific muscles involved in movement and stability of the appendicular and axial skeleton will be studied in detail. The information in this course is foundational to the application of physical therapy modalities and exercise, which are included in the PTA curriculum. The course will include lecture and laboratory components. Course content will be delivered in lecture and on-line materials. Enrollment is limited to students admitted to the 2PTA major.

Enforced Concurrent at Enrollment: (PT 100 or PT 100S) and BIOL 161 and BIOL 162

PT 150: Physical Therapist Assistant Procedures I

2 Credits/Maximum of 2

This course is an introductory study of the general principles for physical therapy interventions including massage, thermal modalities, therapeutic light, ultrasound, and compression therapies. Introductory information regarding modalities and relevant information regarding inflammation and healing will also be covered. The course is designed to give the PTA student a working knowledge in the application and theory of physical agents in order to enhance the rehabilitation process. Interventions will be discussed and practiced in relation to the overall clinical management of patients and their specific disorders. Data collection skills associated with the interventions covered in this course will also be included.

By the completion of this course, students should be able to discuss the rationale for and demonstrate the application of various thermal modalities, ultrasound, light therapies, compressive therapies and massage. Course content will be delivered in lecture, laboratory, and on-line materials. This course is available only to students enrolled in the 2 PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better required in (PT 100 or PT 100S) and PT 120 **Enforced Concurrent at Enrollment:** PT 384 and (PT 270 or PT 270W or PT 271 or PT 271W)

PT 160: Therapeutic Exercise I

3 Credits

This course provides an introduction to the principles of exercise in the management of disease and injury which will help prepare the student for the application of therapeutic exercise during Physical Therapy clinical affiliations which follow the completion of this course. Course content will include, but is not limited to, some or all of the following topics: introduction to therapeutic exercise, range of motion, stretching, manual therapy and peripheral joint mobilization, resistance training, therapeutic protocols for specific conditions, balance and coordination training, interventions for cardiovascular and cardiopulmonary conditions, bony and soft tissue disorders, and specific data collection techniques associated with conditions discussed in this course. Indications and contraindications for the various forms of exercises and equipment will be incorporated in content of this course. This course includes both lecture and lab components. Students will be expected to demonstrate competence in both written and practical examinations. A variety of evaluation tools will be used to assess student performance in this course. Written examinations, quizzes, written assignments, including homework may be utilized to assess cognitive understanding of course content. For assessment of psychomotor skills, lab practical examinations, skill evaluations, and oral questioning may be used. Group projects and peer assessment might also be included at some campuses. Enrollment is limited to students admitted to the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in (PT 100 or PT 100S) and PT 120 **Enforced Concurrent at Enrollment:** PT 384

PT 201: Licensure Preparation for the PTA

1 Credits

Preparation for the national PTA licensure examination. P T 201 Licensure Preparation for the PTA (1) This course is an elective course for PTA students, in preparation for the national licensure examination. The course will consist of a review of the entire PTA curriculum through the use of licensure examination practice tests. The course will also include

practice sessions with the computerized licensure tests. A review of strategies for succeeding on multiple choice tests will be presented. Prerequisites for this course are a C or better in the P T 100 and P T 384 courses. Class size, frequency of offering, and evaluation methods will vary by location and instructor, For these details, check the specific course syllabus.

Enforced Prerequisite or Concurrent at Enrollment: PT 250 and PT 260 and PT 395E and [PT 280 or PT 280W or (PT 281 and PT 282) or (PT 281 and PT 282W)]

PT 202: Pediatric PT

1 Credits

A study of physical therapy as it applies to pediatric patients. P T 202 Pediatric PT (1) This course is an elective course for those Physical Therapists Assistant students interested in further study in pediatric physical therapy. The course will focus on various conditions affecting children, which may include cerebral palsy, spina bifida, and Down syndrome. The students will be given the opportunity to learn about pediatric physical therapy in lecture/discussion sessions and/or laboratory settings, some of which will take place at PSMA and some which may take place at other locations where they will observe children with various disabilities.

Enforced Prerequisite at Enrollment: Grade of C or better in PT 384 and (PT 270 or PT 270A or PT 270W). **Enforced Prerequisite or Concurrent:** PT 280 or PT 280W or (PT 281 and PT 282) or (PT 281 and PT 282W) and PT 260

PT 204: Seminar in Physical Therapy

1 Credits

Specialized physical therapy topics investigated in the framework of clinic visitations and presentations by clinical experts. P T 204 Seminar in Physical Therapy (1) The purpose of P T 204 is to provide Physical Therapist Assistant students with an opportunity to explore special topics in physical therapy. The format of the course will be seminar based. The course will consist of a series of presentations led by faculty or outside lecturers and may involve travel to hospitals and clinics. Evaluation of student performance will be based on attendance, completion of all criterion and assignments. This course will typically be offered in the last semester of classroom instruction, before the students begin their final clinical affiliations. This class will be limited to 12-16 students per section. This is an optional PTA course, which may be taken to satisfy the elective requirements of the PTA program. Prerequisites for this course are a C or better in the P T 100 and P T 384 courses. Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

Enforced Prerequisite at Enrollment: Grade of C or better in PT 384 and (PT 270 or PT 270A or PT 270W). **Enforced Prerequisite or Concurrent:** PT 280 or PT 280W or (PT 281 and PT 282) or (PT 281 and PT 282W) and PT 260

PT 205: Human Musculature

1-2 Credits

Comprehensive review of Human Musculature. P T 205 Human Musculature (1) This course is an elective course for those PTA students interested in a review of human musculature. The course is designed to provide advanced students with a comprehensive review of the human

muscles including identification of the muscles, their actions, insertions, origins, and innervations. Students will be graded on preparation, participation, class attendance, and completion of self-assessments. Prerequisites for this course are a C or better in the P T 100, P T 384 and BIOL 129 courses. Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details, check the specific course syllabus.

Enforced Prerequisite at Enrollment: Grade of C or better in BIOL 129

PT 250: Physical Therapist Assistant--Procedures II

3 Credits

The student will be introduced to the basic concepts and principles of spinal traction, neuromuscular excitation, nociception, electrical currents, and electromagnetic fields. The student will develop satisfactory skills in applying electrical stimulation systems, electromyographic biofeedback, iontophoresis, and supine/prone pelvic and cervical traction techniques. Wound care interventions, including the use of electrical stimulation, products and dressings will be addressed. Treatment methods will be discussed and practiced in relation to the overall clinical management of patients and their specific disorders. Data collection skills associated with the interventions covered in this course will also be included. By the completion of this course, students should be able to articulate the basic concepts behind the use of selected physical therapy modalities and demonstrate the safe and effective use of the modalities. In addition, they should be able to discuss and demonstrate appropriate interventions for the PTA regarding wound care. Course content will be delivered in lecture, laboratory, and on-line materials. Enrollment is limited to students accepted in the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in PT 150

PT 260: Therapeutic Exercise--II

3 Credits

Advanced principles and application of exercise in the treatment of disease and injury will be explored. Students will learn concepts and skills necessary to promote healing through exercise and will be able to apply these skills appropriately for a variety of populations. Topics of instruction may include but are not limited to: pre/post-surgical interventions for specific conditions, exercise as a conservative intervention for orthopedic conditions, women's health, cardiovascular endurance exercise, postural dysfunction, industrial medicine, exercise and interventions for respiratory problems, and aquatic exercise. Specific objectives for this course include students' gaining competence in performing therapeutic skill and discussing the relevance of, indications, contraindications and precautions for interventions in the following areas: soft tissue injuries and disorders, bony and joint disorders, neck and back pain and postural dysfunction, disorders of the peripheral nervous system, respiratory dysfunction, cardiovascular dysfunction, women's health issues, aquatic exercise, industrial medicine, and data collection. This course includes both lecture and lab components and students will be expected to demonstrate competence in both written and practical examinations. Enrollment is limited to students admitted to the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in PT 160

PT 270: Pathophysiology

5 Credits

This course is designed to give the PTA student a working knowledge of the physiology of disease and conditions commonly seen in physical therapy. Basic signs, symptoms, causes, and processes of disease and conditions will be covered. Diagnostic criteria, progression, and interventions, including physical therapy interventions, medical and surgical interventions, and pharmaceutical interventions will be addressed. Areas of study in the course may include, but are not limited to, inflammation and healing, inflection, immunity and immune disorders, and disorders of the following systems: cardiovascular, respiratory, musculoskeletal, integumentary, endocrine, lymphatic, neurological, hematologic, hepatic, gastrointestinal, hepatic and biliary, renal and urological, genital and reproductive. Genetic disorders, cancer, and mental health will also be addressed.. By the completion of this course, a student should be able to: (1) Define and apply terminology used in Pathophysiology and the ICF Disablement Model (2) Discuss inflammation and healing, (3) Discuss the immune system in terms of its function and possible disorders (4) Identify infectious conditions and describe their transmission and progression (5) List and describe conditions affecting the integumentary system and discuss the role of physical therapy in treating skin conditions (6) Discuss conditions of and applications for physical therapy for the following systems: cardiovascular, respiratory, lymphatic, musculoskeletal, neurological, and endocrine. (7) Identify conditions, diseases, and problems with the body systems, including the neurological, hematologic, gastrointestinal, hepatic, biliary, renal and urological, genital and reproductive. (8) Discuss cancer in terms of pathophysiology, risk factors, and various types of cancer. (9) Discuss special considerations for the PTA when working with patients who are geriatric, in specialized acute care units, and with various comorbidities. (10) Identify mental health issues and appropriate interactions and interventions with patients with mental or emotional health issues. Course content will be delivered in lecture and on-line materials. Enrollment is limited to students accepted in the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in: (PT 100 or PT 100S) and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164

PT 270W: Pathophysiology

5 Credits

This course is designed to give the PTA student a working knowledge of the physiology of disease and conditions commonly seen in physical therapy. Basic signs, symptoms, causes, and processes of disease and conditions will be covered. Diagnostic criteria, progression, and interventions, including physical therapy interventions, medical and surgical interventions, and pharmaceutical interventions will be addressed. Areas of study in the course may include, but are not limited to, inflammation and healing, inflection, immunity and immune disorders, and disorders of the following systems: cardiovascular, respiratory, musculoskeletal, integumentary, endocrine, lymphatic, neurological, hematologic, hepatic, gastrointestinal, hepatic and biliary, renal and urological, genital and reproductive. Genetic disorders, cancer, and mental health will also be addressed.. By the completion of this course, a student should be able to: (1) Define and apply terminology used in Pathophysiology and the ICF Disablement Model (2) Discuss inflammation and healing, (3) Discuss the immune system in terms of its function and possible disorders (4) Identify infectious conditions and describe their transmission and progression (5) List and describe conditions affecting the integumentary system and discuss the role

of physical therapy in treating skin conditions (6) Discuss conditions of and applications for physical therapy for the following systems: cardiovascular, respiratory, lymphatic, musculoskeletal, neurological, and endocrine. (7) Identify conditions, diseases, and problems with the body systems, including the neurological, hematologic, gastrointestinal, hepatic, biliary, renal and urological, genital and reproductive. (8) Discuss cancer in terms of pathophysiology, risk factors, and various types of cancer. (9) Discuss special considerations for the PTA when working with patients who are geriatric, in specialized acute care units, and with various comorbidities. (10) Identify mental health issues and appropriate interactions and interventions with patients with mental or emotional health issues. This is a writing intensive course that will include instructor written evaluation and feedback of student's writing. The student writing will be specific to the Physical Therapy discipline and include multiple and varied assignments. Writing will be a factor in the final grade for this course. Course content will be delivered in lecture and on-line materials. Assessment of mastery of content will be determined through any or all of the following methods: written tests and quizzes, papers, individual or group projects, homework, in-class assignments. Enrollment is limited to students accepted in the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in: (PT 100 or PT 100S) and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164 Writing Across the Curriculum

PT 271: Pathophysiology I

3 Credits

This course is designed to give the PTA student a working knowledge of the physiology of disease and conditions commonly seen in physical therapy. Basic signs, symptoms, causes, and processes of disease and conditions will be covered. Diagnostic criteria, progression, and interventions, including physical therapy interventions, medical and surgical interventions, and pharmaceutical interventions will be addressed. Areas of study in the course may include, but are not limited to, inflammation and healing, inflection, immunity and immune disorders, and disorders of the following systems: cardiovascular, respiratory, musculoskeletal, integumentary, endocrine, lymphatic, and neurological. By the completion of this course, a student should be able to: (1) Define and apply terminology used in Pathophysiology and the ICF Disablement Model (2) Discuss inflammation and healing, (3) Discuss the immune system in terms of its function and possible disorders (4) Identify infectious conditions and describe their transmission and progression (5) List and describe conditions affecting the integumentary system and discuss the role of physical therapy in treating skin conditions (6) Discuss conditions of and applications for physical therapy for the following systems: cardiovascular, respiratory, lymphatic, musculoskeletal, neurological, and endocrine. This course is available to students enrolled in the PTA major. Course content will be delivered in lecture and on-line materials.

Enforced Prerequisite at Enrollment: Grade of C or better in: (PT 100 or PT 100S) and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164

PT 271W: Pathophysiology I

3 Credits

This course is designed to give the PTA student a working knowledge of the physiology of disease and conditions commonly seen in physical therapy. Basic signs, symptoms, causes, and processes of disease and conditions will be covered. Diagnostic criteria, progression, and interventions, including physical therapy interventions, medical and

surgical interventions, and pharmaceutical interventions will be addressed. Areas of study in the course may include, but are not limited to, inflammation and healing, inflection, immunity and immune disorders, and disorders of the following systems: cardiovascular, respiratory, musculoskeletal, integumentary, endocrine, lymphatic, and neurological. By the completion of this course, a student should be able to: (1) Define and apply terminology used in Pathophysiology and the ICF Disablement Model (2) Discuss inflammation and healing, (3) Discuss the immune system in terms of its function and possible disorders (4) Identify infectious conditions and describe their transmission and progression (5) List and describe conditions affecting the integumentary system and discuss the role of physical therapy in treating skin conditions (6) Discuss conditions of and applications for physical therapy for the following systems: cardiovascular, respiratory, lymphatic, musculoskeletal, neurological, and endocrine. This is a writing-intensive course that will include instructor written evaluation and feedback of student writing. Writing assignments will be specific to the Physical Therapy discipline and include multiple and varied assignments. Writing will be a factor in the final grade for this course. Course content will be delivered in lecture and on-line materials. Assessment of mastery of content will be determined through any or all of the following methods: written tests and quizzes, papers, individual or group projects, homework, in-class assignments. This course is available to students enrolled in the PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in: (PT 100 or PT 100S) and BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164 Writing Across the Curriculum

PT 272: Pathophysiology II

2 Credits

This course is designed to give the PTA student a working knowledge of the physiology of disease states and conditions commonly seen in physical therapy. Basic signs, symptoms, causes, and processes of disease and conditions will be covered. Diagnostic criteria, progression, and interventions, including physical therapy interventions, medical and surgical interventions, and pharmaceutical interventions will be addressed. Areas of study in the course may include, but are not limited to, disorders of the following systems: neurological, hematologic, hepatic, gastrointestinal, hepatic and biliary, renal and urological, genital and reproductive. Genetic disorders, cancer, and mental health will also be addressed. By the completion of this course, students should be able to: (1) Identify conditions, diseases, and problems with the body systems, including the neurological, hematologic, gastrointestinal, hepatic, biliary, renal and urological, genital and reproductive. (2) Discuss cancer in terms of pathophysiology, risk factors, and various types of cancer. (3) Discuss special considerations for the PTA when working with patients who are geriatric, in specialized acute care units, and with various comorbidities. (4) Identify mental health issues and appropriate interactions and interventions with patients with mental or emotional health issues. Course content will be delivered in lecture and on-line materials. This course is available to students enrolled in the PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in: PT 271 or PT 271W

PT 280: Rehabilitation

5 Credits

This course introduces the basic principles, diagnoses, impairments, and treatment interventions utilized by the PTA in the rehabilitation setting.

Participants will review basic skills necessary for treating rehabilitation patients safely and overview common mobility equipment used in a rehabilitation setting. The following topics will be addressed in lecture and/or lab sessions: basic principles of normal movement and neuro-rehabilitation, teaching and learning theories, and motor relearning; data collection techniques and tools associated with neurological rehabilitation; functional mobility and motor function training techniques for patients with varying levels of disability; wheelchair mobility training and appropriate fitting and adaptations; environmental assessment and ADA considerations; gait deviations and training with and without assistive devices; orthotics; amputations and prosthetics; selected diagnoses in neuro-rehabilitation. This course will address rehabilitation techniques for patients with selected conditions seen in physical therapy neurological and rehabilitation settings. Selected neurological conditions will be covered, including etiology, clinical presentation, medical management, and physical therapy interventions. Neurologic conditions and developmental delays associated with pediatric clients will also be included. In this course, neuroanatomy and neurophysiology will be reviewed and principles of specific neuro-rehabilitation techniques, and neuromotor development will be explored. By the completion of this course, students should be able to recognize and verbalize general signs and symptoms of neurological deficit and demonstrate basic skills used in physical therapy for patients with selected neurological disorders and amputations. Students should also be able to identify specific areas in the brain, spinal cord, and peripheral nervous system associated with neurological signs, symptoms, and conditions; perform and discuss the value and use of various data collection tools associated with neuro-rehabilitation; demonstrate safe and effective physical therapy interventions as applied to patients with neurological disorders; discuss and demonstrate basic physical therapy interventions for patients with vestibular dysfunction; discuss the basic developmental milestones associated with human growth and development; and demonstrate and discuss safe and effective handling and positioning principles used with pediatric patients. Gait deviations and interventions, wheelchair fitting and use, and specific physical therapy interventions for various diagnoses will be covered. Using extensive examples, exercises, and real life scenarios, this course teaches students skills to assess, treat and document functional outcomes in a clear and logical progression. Lecture, lab activities, and written assignments will be used to discuss clinical decision-making and intervention strategies for related impairments. Enrollment is limited to students admitted to the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in (PT 100 or PT 100S) and PT 120. Concurrent Courses: PT 384 and (PT 270 or PT 270W or PT 271W)

PT 280W: Rehabilitation

5 Credits

This course introduces the basic principles, diagnoses, impairments, and treatment interventions utilized by the PTA in the rehabilitation setting. Participants will review basic skills necessary for treating rehabilitation patients safely and overview common mobility equipment used in a rehabilitation setting. The following topics will be addressed in lecture and/or lab sessions: basic principles of normal movement and neuro-rehabilitation, teaching and learning theories, and motor relearning; data collection techniques and tools associated with neurological rehabilitation; functional mobility and motor function training techniques for patients with varying levels of disability; wheelchair mobility training and appropriate fitting and adaptations; environmental assessment and ADA considerations; gait deviations and training with and without

assistive devices; orthotics; amputations and prosthetics; selected diagnoses in neuro-rehabilitation. This course will address rehabilitation techniques for patients with selected conditions seen in physical therapy neurological and rehabilitation settings. Selected neurological conditions will be covered, including etiology, clinical presentation, medical management, and physical therapy interventions. Neurologic conditions and developmental delays associated with pediatric clients will also be included. In this course, neuroanatomy and neurophysiology will be reviewed and principles of specific neuro-rehabilitation techniques, and neuromotor development will be explored. By the completion of this course, students should be able to recognize and verbalize general signs and symptoms of neurological deficit and demonstrate basic skills used in physical therapy for patients with selected neurological disorders and amputations. Students should also be able to identify specific areas in the brain, spinal cord, and peripheral nervous system associated with neurological signs, symptoms, and conditions; perform and discuss the value and use of various data collection tools associated with neuro-rehabilitation; demonstrate safe and effective physical therapy interventions as applied to patients with neurological disorders; discuss and demonstrate basic physical therapy interventions for patients with vestibular dysfunction; discuss the basic developmental milestones associated with human growth and development; and demonstrate and discuss safe and effective handling and positioning principles used with pediatric patients. Gait deviations and interventions, wheelchair fitting and use, and specific physical therapy interventions for various diagnoses will be covered. Using extensive examples, exercises, and real life scenarios, this course teaches students skills to assess, treat and document functional outcomes in a clear and logical progression. Lecture, lab activities, and written assignments will be used to discuss clinical decision-making and intervention strategies for related impairments. This is a writing-intensive course that will include instructor written evaluation and feedback of student writing. Writing assignments will be specific to the Physical Therapy discipline and include multiple and varied assignments. Writing will be a factor in the final grade for this course. Course content will be delivered in lecture and/or on-line materials. A variety of evaluation tools will be used to assess student performance in this course. Written examinations, quizzes, written assignments, including homework may be utilized to assess cognitive understanding of course content. For assessment of psychomotor skills, lab practical examinations, skill evaluations, and oral questioning may be used. Group projects and peer assessment might also be included at some campuses. Enrollment is limited to students admitted to the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in (PT 100 or PT 100S) and PT 120. Concurrent Courses: PT 384 and (PT 270 or PT 271)

Writing Across the Curriculum

PT 281: Rehabilitation-1

2 Credits

This course introduces the basic principles, diagnoses, impairments, and treatment interventions utilized by the PTA in the rehabilitation setting. Participants will review basic skills necessary for treating rehabilitation patients safely and overview common mobility equipment used in a rehabilitation setting. The following topics will be addressed in lecture and/or lab sessions: basic principles of normal movement and neuro-rehabilitation, teaching and learning theories, and motor relearning; data collection techniques and tools associated with neurological rehabilitation; functional mobility and motor function training techniques for patients with varying levels of disability; wheelchair mobility training

and appropriate fitting and adaptations; environmental assessment and ADA considerations; gait deviations and training with and without assistive devices; orthotics; amputations and prosthetics; selected diagnoses in neuro-rehabilitation. By the completion of this course, students should be able to recognize and verbalize general signs and symptoms of neurological deficit and demonstrate basic skills used in physical therapy for patients with selected neurological disorders and amputations. This course includes both lecture and lab components and students will be expected to demonstrate competence in both written and practical examinations. Enrollment is limited to students admitted to the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in (PT 100 or PT 100S) and PT 120 Concurrent Courses: PT 384 and (PT 270 or PT 270W or PT 271 or PT 271W)

PT 282: Rehabilitation-2

3 Credits

In this course, neuroanatomy and neurophysiology will be reviewed and principles of specific neuro-rehabilitation techniques, and neuromotor development will be explored. This course will address rehabilitation techniques for patients with selected conditions seen in physical therapy neurological and rehabilitation settings. Selected neurological conditions will be covered, including etiology, clinical presentation, medical management, and physical therapy interventions. Neurologic conditions and developmental delays associated with pediatric clients will also be included. By the completion of this course, students should be able to identify specific areas in the brain, spinal cord, and peripheral nervous system associated with neurological signs, symptoms, and conditions; perform and discuss the value and use of various data collection tools associated with neuro-rehabilitation; demonstrate safe and effective physical therapy interventions as applied to patients with neurological disorders; discuss and demonstrate basic physical therapy interventions for patients with vestibular dysfunction; discuss the basic developmental milestones associated with human growth and development; and demonstrate and discuss safe and effective handling and positioning principles used with pediatric patients. PT 285: Clinical Reasoning for the PTA

2 Credits

This course will provide PTA students with opportunities to synthesize, prioritize, and apply rehabilitation principles from many different PTA courses. Students will learn strategies to combine data collection skills, interventions, and techniques in an integrated manner. Communication, documentation skills and therapeutic intervention skills will be developed through activities and class assignments. Patient scenarios will be utilized to afford students opportunities to develop their skills in choosing and applying effective treatment strategies for patients with complex diagnoses and/or cultural or intellectual differences, all while simultaneously addressing their patient's comorbidities, past medical history, family dynamics and anticipated discharge destination. Using extensive examples, exercises, and real life scenarios, this course teaches students skills to assess, treat and document functional outcomes in a clear and logical progression. Additionally, concepts, principles, skills and techniques will be reviewed in preparation for the final clinical experiences and the PTA licensure examination. This course is available to students enrolled in the PTA major.

Enforced Prerequisite at Enrollment: C or better is required: PT 150 and PT 160 and PT 290 and one of the following: PT 270 or PT 270W or PT 271 or PT 271W or PT 272 Concurrent: PT 395E and PT 250 and PT 260 and PT 280 or PT 280W or PT 282 or PT 282W

PT 290: Professional Issues in Clinical Practice

2 Credits

This course is an introduction to the professional issues related to the physical therapist assistant's role in the current health care environment. The course is designed to foster professional development of the physical therapist assistant student and to prepare the student to complete essential competencies and behaviors of health care related to the field of physical therapy. The course will guide the student in preparing the necessary documents for clinical practicum. Areas of study in the course may include but are not limited to, the role of the physical therapist assistant as defined by the American Physical Therapy Association and state practice acts, Values-Based Behaviors for the Physical Therapist Assistant, Standards of Ethical Conduct for the Physical Therapist Assistant, ethical problem solving in healthcare including recognizing and discussing legal and ethical issues in physical therapy, cultural diversity and cultural competence, lifelong learning and continuing competence, professional communication in clinical situations including HIPAA, billing and reimbursement in physical therapy, and medical documentation including the value and necessity of thorough documentation, recognition of the PTA role in documentation, completion of appropriate medical documentation and appropriate use of medical abbreviations. Enrollment is limited to students admitted to the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in PT 100 or PT 100S and Concurrent Courses: PT 150 and PT 160 and (PT 270 or PT 270W or PT 271 or PT 271W)

PT 290W: Professional Issues in Clinical Practice

3 Credits

This course is an introduction to the professional issues related to the physical therapist assistant's role in the current health care environment. The course is designed to foster professional development of the physical therapist assistant student and to prepare the student to complete essential competencies and behaviors of health care related to the field of physical therapy. The course will guide the student in preparing the necessary documents for clinical practicum. Areas of study in the course may include but are not limited to, the role of the physical therapist assistant as defined by the American Physical Therapy Association and state practice acts, Values-Based Behaviors for the Physical Therapist Assistant, Standards of Ethical Conduct for the Physical Therapist Assistant, ethical problem solving in healthcare including recognizing and discussing legal and ethical issues in physical therapy, cultural diversity and cultural competence, lifelong learning and continuing competence, professional communication in clinical situations including HIPAA, billing and reimbursement in physical therapy, and medical documentation including the value and necessity of thorough documentation, recognition of the PTA role in documentation, completion of appropriate medical documentation and appropriate use of medical abbreviations. Since this course is a writing-intensive ("W") course, students will be expected to successfully complete written assignments, focusing on appropriate medical documentation for clinical situations. Written work will constitute 25% or more of a student's final grade in the course. Enrollment is limited to students admitted to the 2PTA major.

Enforced Prerequisite at Enrollment: PT 100 or PT 100S (grade of C or better required) **Enforced Concurrent at Enrollment:** PT 150, PT 160, PT 270 or PT 271 or PT 271W **Recommended Preparation:** PT 120, PT 384

Writing Across the Curriculum

PT 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

PT 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PT 384: Applied Kinesiology

3 Credits

The focus of PT 384, Applied Kinesiology, is to incorporate anatomical structure of the human body, principles of biomechanics, kinetics, and kinematics with the study of human motion and mobility. Areas of instruction include: joint structure and function; arthro- and osteokinematics; muscular kinesiology; posture; normal gait; leverage systems and the forces involved in moving the human body; and joint motion assessment through goniometry and functional measures. This course prepares PTA students for integration of kinesiological concepts into the application of physical therapy interventions. Course objectives include: defining key kinesiological and biomechanical terms and applying concepts to human movement scenarios; demonstrating understanding of: joint configuration and movement; joint motion measurement; muscular kinesiology; posture; and gait. Course content will be delivered in the classroom, laboratory and on-line. The course will include lecture and laboratory components and students will be expected to demonstrate competence in both written and practical examinations. Enrollment is limited to students admitted to the 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in BIOL 161 and BIOL 162 and Concurrent Course: PT 120

PT 395E: Physical Therapist Assistant--Practicum I

3 Credits

PT 395E is the beginner level practice of physical therapist assistant skills in a clinical setting under the direction and supervision of a licensed physical therapist and/or physical therapist/physical therapist assistant team. Course expectations include, but are not limited to: understanding and adhering to the Standards of Ethical Conduct for the Physical Therapist Assistant and the Values-Based Behaviors for the Physical Therapist Assistant, demonstration of appropriate verbal, non-verbal and written beginner level communication, safe implementation of beginner level therapeutic interventions and data collection skills with non-complex patients as outlined in the plan of care established by the physical therapist. This course includes both clinical experience and online learning activities that students will be expected to complete. Enrollment is limited to 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in (PT 100 or PT 100S) and PT 120 and Concurrent Courses: PT 150 and PT 160 and PT 384 and PT 290 and (PT 270 or PT 270W or PT 271 or PT 271W)

PT 395F: Physical Therapist Assistant–Practicum II

4 Credits

PT 395F is the intermediate level practice of physical therapist assistant skills in a clinical setting under the direction and supervision of a licensed physical therapist and/or physical therapist/physical therapist assistant team. Course expectations include, but are not limited to: understanding and adhering to the Standards of Ethical Conduct for the Physical Therapist Assistant and the Values-Based Behaviors for the Physical Therapist Assistant, demonstration of appropriate verbal, non-verbal and written communication, safe and effective implementation at an intermediate skill level with associated therapeutic interventions and data collection with patients of varying complexities as outlined in the plan of care established by the physical therapist. Students will be guided to apply current knowledge, theory and clinical judgement to progress or modify patient treatment within the established plan of care. This course includes both clinical experience and online learning activities that students will be expected to complete. Enrollment is limited to 2PTA major.

Enforced Prerequisite at Enrollment: Grade of C or better in PT 250 and PT 260 and (PT 280 or PT 280W or PT 282 or PT 282W) and (PT 270 or PT 270W or PT 272) and PT 285 and PT 395E

PT 395G: Physical Therapist Assistant–Practicum III

4 Credits

PT 395G is the terminal clinical experience of the practice of physical therapist assistant skills under the direction and supervision of a licensed physical therapist and/or physical therapist/physical therapist assistant team culminating in entry level practice. Course expectations include, but are not limited to: understanding and adhering to the Standards of Ethical Conduct for the Physical Therapist Assistant and the Values-Based Behaviors for the Physical Therapist Assistant, demonstration of appropriate verbal, non-verbal and written communication, safe, effective and efficient implementation of therapeutic interventions and data collection with patients of varying complexities as outlined in the plan of care established by the physical therapist. Students will be expected to apply current knowledge, theory and clinical judgement to progress or modify patient treatment within the established plan of care. Essential skills for clinical practice will be emphasized in preparation for career entry into the current healthcare environment. This course includes both clinical experience and online learning activities that students will be expected to complete. Enrollment is limited to 2PTA major.

Enforced Prerequisite at Enrollment: A grade of C or better in PT 395F or (PT 395H and PT 395I)

PT 395H: Physical Therapist Assistant–Practicum II Part 1

2 Credits

PT 395H is the intermediate level practice of physical therapist assistant skills in a clinical setting under the direction and supervision of a licensed physical therapist and/or physical therapist/physical therapist assistant team. Course expectations include, but are not limited to: understanding and adhering to the Standards of Ethical Conduct for the Physical Therapist Assistant and the Values-Based Behaviors for the Physical Therapist Assistant, demonstration of appropriate verbal, non-verbal and written communication, safe and effective implementation at an intermediate skill level with associated therapeutic interventions and data collection with patients of varying complexities as outlined in the

plan of care established by the physical therapist. Students will be guided to apply current knowledge, theory and clinical judgement to progress or modify patient treatment within the established plan of care. This course includes both clinical experience and online learning activities that students will be expected to complete. Enrollment is limited to 2PTA major.

Prerequisites: Grade of C or higher in PT 290 PT 395E; Concurrent Courses: PT 250 PT 260 PT 270; or PT 270W; or PT 272 PT 280; or PT 280W or PT 282; or PT 282W PT 285

PT 395I: Physical Therapist Assistant–Practicum II Part 2

2 Credits

PT 395 I is the advanced intermediate level practice of physical therapist assistant skills in a clinical setting under the direction and supervision of a licensed physical therapist and/or physical therapist/physical therapist assistant team. Course expectations include, but are not limited to: understanding and adhering to the Standards of Ethical Conduct for the Physical Therapist Assistant and the Core Values of the PT and PTA, demonstration of appropriate verbal, non-verbal and written communication, safe and effective implementation at an intermediate skill level with associated therapeutic interventions and data collection with patients of varying complexities as outlined in the plan of care established by the physical therapist. Students will be guided to apply current knowledge, theory and clinical judgement to progress or modify patient treatment within the established plan of care. This course includes both clinical experience and online learning activities that students will be expected to complete. Enrollment is limited to 2PTA major.

Prerequisites: Grade of C or higher in PT 395H

Physics (PHYS)

PHYS 1: The Science of Physics

3 Credits

PHYS 1 The Science of Physics (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Introduction to the basic concepts of physics at a conceptual level for students in non-technical majors. This course provides a broad survey of the history, concepts, and applications of physics including topics such as classical mechanics in one- and two-dimensions, Newton's laws of motion, work and energy, momentum, rotational motion, vibration, sound, waves, heat and the laws of thermodynamics, electricity and magnetism (including simple electrical circuits), and topics in 20th century physics, including relativity and quantum mechanics. Course objectives include the development of an understanding of the scientific method, and its application to physics problems of historical interest, and modern physics applications; providing an appreciation of the historical role played by physics in the development of modern science, its role in important cultural and societal issues, and in understanding the basic laws of nature, as applied to everyday experience, natural phenomena, or applications technologies (old and new); the development of scientific literacy, to help motivate the many connections of physics to other fundamental scientific fields and applications disciplines; providing experience in problem solving and the conceptual understanding of physics, and emphasizing the recurring role of a few important concepts, cutting across many scientific disciplines, such as the fundamental laws of classical mechanics, the basic laws of thermodynamics (including conservation of energy), and applications of

modern quantum theory. PHYS 001 The Science of Physics (3) (GN)(BA)

PHYS 10: Physics Behind the Headlines

3 Credits

Select topics in modern physics with emphasis on understanding science related articles in the news (For students in non-mathematical fields.) PHYS 10 Physics Behind the Headlines (3) (GN) Introduction for non-science majors to select topics in the modern physics of quantum mechanics and relativity with the goal of understanding recent technological advances, scientific breakthroughs and social events related to science as they appear in the news. These range from the discovery of the Higgs boson and dark energy to developments in lasers or superconductors. Social events in the news where science played a large role such as the Roswell "UFO" event in 1947 or the Fukushima nuclear crisis in 2011 will also be discussed. Course objectives include the understanding of the scientific method and scientific reporting; learning the conceptual aspects of the structure of matter from atoms to quarks, waves, energy and light; quantum mechanics and its applications to high tech such as computers and lasers; relativity $E=mc^2$, nuclear forces, gravity and the Big-Bang theory. Particular emphasis will be put on learning the scientific standards for a hypothesis to be truly established as a working theory and how the simple laws of physics apply broadly to many different systems. This class will emphasize conceptual aspects and there is no mathematics prerequisite.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

PHYS 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PHYS 114: Sound and Light for Educators

4 Credits/Maximum of 4

Waves, sound, and light concepts highlighted by evidence-based explanations and scientific discourse in preparation for K-6 science teaching. This course has two main focus areas: physics content typically addressed in elementary science curriculum and effective pedagogy for supporting children's meaningful science learning. An introduction to waves is used to construct an initial model, which is applied to sound phenomena and elaborated. The more robust model is then applied to understanding light phenomena and again elaborated. As the model develops across units of instruction, students are engaged in constructing explanations from evidence, model-based reasoning, and scientific discourse. Instructional approaches that are grounded in research on children's learning are used to engage education majors in their own learning, while teaching applications provide opportunities for them to unpack their experiences and apply them to school science teaching.

Cross-listed with: SCIED 114

PHYS 150: Technical Physics I

3 Credits/Maximum of 3

Elementary treatment of topics in mechanics, heat, wave motion, and sound leading toward an understanding of technical applications. PHYS 150 Technical Physics I (3) (GN) (BA) This course meets the Bachelor of Arts degree requirements. Technical Physics provides an algebra-based introduction to mechanics, heat, wave motion, and sound exemplifying scientific method and leading toward an understanding of technical applications. PHYS 150 is the first course in a two-course sequence with PHYS 151 surveying all of physics. It includes topics such as measurement, dimensional analysis, systems of units, describing motion in one dimension, scalars and vectors, describing motion in two and three dimensions, projectile motion, circular motion, particle dynamics via Newton's Laws of Motion, forces, work and energy, momentum, systems of particles, collisions, rotational motion of rigid bodies, torque, moment of inertia, static equilibrium, mechanical advantage, mechanical properties of materials, fluids, vibrations, wave motion, sound, temperature, heat, thermodynamics, and heat transfer. Students attend two lecture/recitation classes and one two-hour laboratory/activity period per week. Classes emphasize conceptualizing the basic ideas, terminology, and principles of the physical phenomena of nature; their quantitative expression through algebra and trigonometry; their relation to applications in science and technology; and their use in quantitative problem solving. Both computer-based and traditional lab exercises and activities illustrate class material and scientific method while giving students experience with a variety of measuring tools and the general principles of measurement, including the analysis of error. Students work collaboratively in small groups to plan their measurements, collect and analyze data, make judgments based on their results, and communicate their efforts and conclusions in a written lab/activity report. This course requires some algebra as a prerequisite. It is a prerequisite for PHYS 151 and is a required course for many engineering

technology programs. It is offered at least once per academic year at all Penn State locations with engineering technology programs. Course evaluation is based on a combination of assessment including homework assignments and/or quizzes, written lab/activity reports, and exams.

Prerequisite: 1 1/2 units of algebra. Prerequisite or concurrent: MATH 021 or MATH 081

Bachelor of Arts: Natural Sciences

GenEd Learning Objective: Key Literacies

PHYS 151: Technical Physics II

3 Credits/Maximum of 3

PHYS 151 Technical Physics II (3) (GN) provides an algebra-based introduction to electricity, light, and modern physics exemplifying scientific method and leading toward an understanding of technical applications. It is the second course in a two-course sequence with PHYS 150 surveying all of physics. It includes topics such as electric charge, electric force, electric field, electric potential difference, capacitance, cathode-ray tube, electric current, Ohm's Law, batteries, direct current circuits, resistors, ammeters, voltmeters, magnetic force, magnetic field, electromagnetic induction, motors, generators, transformers, inductors, alternating current circuits, electromagnetic waves, light, reflection, refraction, interference, diffraction, atomic physics, atoms in combination, and the nucleus. Students attend two lecture/recitation classes and one two-hour laboratory/activity period per week. Classes emphasize conceptualizing the basic ideas, terminology, and principles of the physical phenomena of nature; their quantitative expression through algebra and trigonometry; their relation to applications in science and technology; and their use in quantitative problem solving. Both computer-based and traditional lab exercises and activities illustrate class material and scientific method while giving students experience with a variety of measuring tools and the general principles of measurement, including the analysis of error. Students work collaboratively in small groups to plan their measurements, collect and analyze data (often using modern computer hardware and software), make judgments based on their results, and communicate their efforts and conclusions in a written lab/activity report. The prerequisite for this course is PHYS 150. It is a required course for many engineering technology programs. It is offered at least once per academic year at all Penn State locations with engineering technology programs. Course evaluation is based on a combination of regular homework assignments and/or quizzes, written lab/activity reports, two or three exams, and a final exam.

International Cultures (IL)

PHYS 211: General Physics: Mechanics

4 Credits

PHYS 211 General Physics: Mechanics (4) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Calculus-based introduction to classical mechanics, including such topics as: measurement, dimensional analysis, motion in one-dimension, vectors, motion in 2 and 3 dimensions, relative and circular motion, force and dynamics, Newton's Laws, friction, kinetic energy, work, potential energy, energy conservation, systems of particles, center of mass and momentum, elastic and inelastic collisions, rotation (moments of inertia), rolling motion, torque, angular momentum, static equilibrium, gravitational force and Kepler's laws, gravitational potential energy, oscillations, waves (transverse and longitudinal, superposition of waves). This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications, and to enhance their conceptual understanding of physical laws. The exact model of instruction varies at different campuses due to different resources and class sizes. Students attend several class meetings including at least one lab or activity period per week. Use of a combination of computer-based and traditional lab exercises is expected and collaborative learning exercises will be used in both small class sessions. The introduction of data acquisition and analysis methods (often making use of modern computer tools) will be stressed in the laboratory/activity period. Course evaluation is based on a combination assessments such as homework, quizzes, lab reports, midterm and final exams, and other evaluative tools. The course is an important prerequisite for later work in many science and engineering disciplines.

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

PHYS 212H: General Physics: Electricity and Magnetism

4 Credits/Maximum of 4

Calculus-based introduction to classical electricity and magnetism, including such topics as, electric charge and electric fields, Gauss's

law, electric potential, capacitance, current, resistance, and circuits, magnetic fields, and fields due to currents, induction and inductance, magnetism of matter, Maxwell's equations, and electromagnetic oscillations. This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications, and to enhance their conceptual understanding of physical laws. The exact model varies at different campuses due to different resources and class sizes. Students attend several class meetings including at least one lab or activity period per week. Use of a combination of computer-based and traditional lab exercises is expected and collaborative learning exercises will be used in both small class session. Use of a combination of computer-based and traditional lab exercises is expected and collaborative learning exercises will be used in both small class settings. The introduction of data acquisition and analysis methods (often making use of modern computer tools) will be stressed in the laboratory/activity period. As an honors course, compared to PHYS 212, in this course, examples from the current research literature and more applications to physics research/applications can be made. The course is an important prerequisite for later work in many science and engineering disciplines.

Enforced Prerequisite at Enrollment: MATH 140 and PHYS 211

Concurrent Courses: MATH 141

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

Honors

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

PHYS 213: General Physics: Fluids and Thermal Physics

2 Credits

Calculus-based study of the basic concepts of fluids and sound, heat, kinetic theory, and entropy. PHYS 213 General Physics: Fluids and Thermal Physics (2) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Calculus-based introduction to the basic concepts of fluids and sound, heat, kinetic theory, and entropy, including such topics as: fluid mechanics and motion, sound Waves: speed, harmonic waves, intensity, temperature and heat: thermal expansion, heat capacity, conduction and radiation, kinetic theory of gases: First Law of Thermodynamics, internal energy of a gas, heat capacities, adiabatic expansion, entropy and the Second Law: concept of equilibrium and entropy, heat engines, efficiency of heat engines and refrigerators, introduction to statistical mechanics. This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications, and to enhance their conceptual understanding of physical laws. The exact model of course instruction varies at different campuses due to different resources and class sizes. Students attend several class meetings including at least one lab or activity period per week. Use of a combination of computer-based and traditional lab exercises is expected and collaborative learning exercises will be used in small class settings. The introduction of data acquisition and analysis methods (often making use of modern computer tools) will be stressed in the laboratory/activity period. Course evaluation is based on a combination assessments such as homework, quizzes, lab reports, midterm and final exams, and other evaluative tools. The course is an important prerequisite for later work in many science and engineering disciplines.

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

PHYS 214: General Physics: Wave Motion and Quantum Physics

2 Credits

Calculus-based study of the basic concepts of wave motion, geometrical optics, interference phenomena, photons, wave mechanics, and the structure of matter. PHYS 214 General Physics: Wave Motion and Quantum Physics (2) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Calculus-based introduction to the basic concepts of wave motion, geometrical optics, interference phenomena, photons, wave mechanics, and the structure of matter, including such topics as: electromagnetic waves: Poynting Vector, polarization and reflection, geometrical optics: mirrors, refraction, lenses, optical instruments, interference and diffraction, photons and matter waves, energy quantization, structure of matter: hydrogen atom, conduction of electrons in solids, and nuclear physics and nuclear energy. This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications, and to enhance their conceptual understanding of physical laws. The exact model of course instruction varies at different campuses due to different resources and class sizes. Students attend several class meetings including at least one lab or activity period per week. Use of a combination of computer-based and traditional lab exercises is expected and collaborative learning exercises will be used in small class settings. Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

PHYS 230: Introduction to Relativity

3 Credits

Introduction to special and general relativity including space-time diagrams and relativistic kinematics, length contraction, time dilation, equivalence principles, curved space and cosmology. PHYS 230 Introduction to Relativity (3) This course is designed for science or engineering students who have successfully completed calculus-based physics courses through electricity and magnetism (PHYS 212), and differential and integral calculus (MATH 140 and MATH 141). Concurrent courses of linear algebra (MATH 220) and vector calculus (MATH 230 or MATH 231) are required. This course should provide the student with a mathematical and physical understanding of relativity theory beyond that which one encounters in semi-popular treatments of the subject. The mathematical skills which this course will develop, e.g. tensors and tensor analysis, should be especially useful to students in a wide range

of science and engineering fields from computer science to physics and electrical engineering.

Enforced Prerequisite at Enrollment: PHYS 212 and MATH 141

Prerequisite or concurrent: MATH 220 and (MATH 230 or MATH 231)

PHYS 237: Introduction to Modern Physics

3-4 Credits

Relativity and quantum theory with applications to selected topics in atomic, molecular, solid state, or nuclear physics. This course covers much of the modern physics curriculum focusing on special relativity, the concepts and mathematical formalism of quantum mechanics in one- and three-dimensional model systems, and some applications of quantum theory to modern topics such as atomic/molecular, nuclear, particle, condensed matter physics or astrophysics as time permits. The course is a prerequisite for upper level courses in physics and astronomy majors, and in particular quantum mechanics.

Enforced Prerequisite at Enrollment: PHYS 212 or Concurrent: PHYS 214

PHYS 237H: Introduction to Modern Physics

3 Credits

Relativity and quantum theory applied to selected topics in atomic, molecular, solid state, and nuclear physics. PHYS 237H Introduction to Modern Physics (3) The course covers much of the modern physics curriculum including topics such as special relativity, the concepts and mathematical formalism of quantum mechanics, both in one- and three-dimensional model systems, and the applications of quantum theory to topics ranging from atomic/molecular, nuclear, particle, and condensed matter physics to astrophysics. In contrast to the non-honors version, PHYS 237H typically makes more frequent use of higher level mathematical concepts and involves the solution of more sophisticated problems. A number of topics are considered in more depth, and these often focus on connections of the material to real-life science research applications.

Prerequisite: PHYS 212

Honors

PHYS 250: Introductory Physics I

4 Credits

PHYS 250 Introductory Physics I (4) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Algebra-based introduction to classical mechanics, including such topics as one- and two-dimensional motion, vectors, relative and circular motion, force and dynamics, Newton's laws of motion, work and kinetic energy, potential energy and energy conservation, momentum, rotational motion and angular velocity, static equilibrium and properties of materials, static and moving fluids, vibrations, simple harmonic motion, general properties of waves, sound and human hearing, temperature and kinetic theory, heat and calorimetry, and the basic laws of thermodynamics. This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications to everyday phenomena and to the life sciences, to enhance their conceptual understanding of physical laws, and to increase their problem solving abilities especially as applied to physical systems. The mathematical prerequisites for this course (and the subsequent PHYS 251) are mathematics at the level of algebra and trigonometry, demonstrated by suitable coursework

or demonstration of satisfactory performance on the mathematical proficiency exam. The exact model of course instruction varies at different campuses due to different resources and class sizes. Students attend several class meetings including at least one lab or activity period per week. Students perform laboratory experiments, discuss their results, and write up their conclusions in weekly lab reports. The course is a prerequisite for the second semester continuation, PHYS 251.

Enforced Prerequisite at Enrollment: (MATH 22 and MATH 26) or MATH 40 or MATH 41 or MATH 81 or MATH 82 or MATH 140 or satisfactory performance on the mathematics proficiency examination.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

PHYS 251: Introductory Physics II

4 Credits

Selected topics in light, electricity, and magnetism. PHYS 251 Introductory Physics II (4) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Algebra-based introduction to classical electricity and magnetism, optics, and areas of modern physics, including such topics as electric charge and fields, electrical potential and energy, electric currents and resistance, direct current (DC) circuits, magnetism, electromagnetic induction and applications to devices, electromagnetic waves, light and geometrical optics, wave nature of light, basic optical instruments (microscopes, telescopes, etc.), basics of quantum mechanics, applications of quantum theory to atoms, molecules, and solids, nuclear physics and radioactivity, applications of nuclear energy and radiation. This course is designed to provide students with a working knowledge of the elementary physics principles mentioned above, as well as their applications to everyday phenomena and to the life sciences, to enhance their conceptual understanding of physical laws, and to increase their problem solving abilities, especially as applied to physical systems. The mathematical prerequisites for this course (and the prerequisite PHYS 250) are mathematics at the level of algebra and trigonometry, demonstrated by suitable coursework or demonstration of satisfactory performance on the mathematical proficiency exam. The exact model of instruction varies at different campuses due to different resources and class sizes. Students attend several class meetings including at least one lab or activity period per week. Students perform laboratory experiments, discuss their results, and write up their conclusions in weekly lab reports. The course is a continuation of the first-semester course PHYS 250.

Enforced Prerequisite at Enrollment: PHYS 250 or PHYS 211

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

PHYS 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PHYS 296H: Study of the Historical Background, Formulation and Consequences of Einstein's Theory of Relativity

1 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

PHYS 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

PHYS 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

PHYS 337: Introduction to Quantum Information Science and Engineering

3 Credits

This course will introduce quantum mechanics from the perspective of quantum information science and engineering, focusing on two-level systems and the concepts of entanglement and decoherence. It will educate students on how quantum information can be used in quantum communication and quantum computing, both in theory and experiment. The course covers basic concepts such as two-level systems, Schrodinger equation, Bloch sphere, superposition, entanglement, quantum bits, quantum gates, Bell's inequalities, and mixed states. Covering these basic concepts prepare the students for more advanced courses in the minor where they learn in depth about quantum algorithms, physical implementation of different quantum systems, and how to compute with existing quantum computers.

Enforced Prerequisite at Enrollment: MATH 220 and PHYS 214

Cross-listed with: EE 337, ESC 337

PHYS 400: Intermediate Electricity and Magnetism

3-4 Credits

Electrostatics and magnetostatics in vacuum; electrical and magnetic properties of matter; electrodynamics, Maxwell's equations, conservation laws, electromagnetic waves and radiation. PHYS 400 Intermediate Electricity and Magnetism I (3-4) A second undergraduate course in electricity and magnetism, required of all physics majors who typically take it in their fifth or sixth semester. The course includes a review of vector calculus, and in-depth discussions of electrostatics, magnetostatics, in vacuum and in matter, time-varying electric and magnetic fields and electrodynamics, leading to Maxwell's equations. Discussions of conservation laws for charge, energy, and momentum, electromagnetic waves (in vacuum and in matter and at boundaries), electromagnetic vector and scalar potentials and fields, and an introduction to radiation are included.

Enforced Prerequisite at Enrollment: PHYS 212 and PHYS 213 and PHYS 214 and (MATH 250 or MATH 251) and (MATH 230 or MATH 231)

PHYS 400H: Intermediate Electricity and Magnetism I

3 Credits

Electrostatics, steady-state magnetic field; electrical and magnetic properties of matter; Maxwell's equations, boundary-value problems, and wave propagation.

Honors

PHYS 402: Electronics for Scientists

4 Credits

Circuit and network theory; active devices; amplifiers; introduction to digital electronics; noise theory. PHYS 402 Electronics for Scientists (4) A junior-senior theory/laboratory course providing a survey of modern electronics from a data acquisition and analysis point of view. One of several possible lab-based courses taken by physics majors in several options to satisfy a lab requirement, typically taken by physics majors in their senior year. This course is very useful for students interested in experimental research work and includes examples such as digital data acquisition, the lab study of various electronic devices, fast Fourier transform methods and other topics.

Enforced Prerequisite at Enrollment: (MATH 250 or MATH 251) and PHYS 212 and PHYS 213 and PHYS 214

PHYS 406: Subatomic Physics

3 Credits

Introductory treatment of elementary particles, fundamental strong and electroweak interactions, nuclear structure, accelerators, particle detection, nuclear astrophysics.

Enforced Prerequisite at Enrollment: PHYS 410

PHYS 410: Introduction to Quantum Mechanics I

3-4 Credits

Basic postulates; Schrodinger wave equation; stationary states; variational method; scattering in one dimension; orbital angular momentum; hydrogen atom; numerical methods.

Enforced Prerequisite at Enrollment: (MATH 250 or MATH 251) and (MATH 230 or MATH 231) and PHYS 237

PHYS 410H: Introduction to Quantum Mechanics I

4 Credits

Basic postulates; Schrodinger wave equation; stationary states; variational method; scattering in one dimension; orbital angular momentum; hydrogen atom; numerical methods.

Honors

PHYS 411: Introduction to Quantum Mechanics II

3 Credits

General theory of angular momentum; approximation methods; scattering theory; radiation theory; applications to atomic, molecular, condensed matter, nuclear and particle physics.

Enforced Prerequisite at Enrollment: PHYS 410

PHYS 412: Solid State Physics I

3 Credits

This course provides an introduction to solid-state physics, which is the study of quantum, thermal, electrical, magnetic and structural properties of solids. Specific topics include crystal symmetry, X-ray structure analysis, lattice vibrations, thermal properties and phonons, free electron transport theory, elementary one-electron quantum theory of solids.

Enforced Prerequisite at Enrollment: MATH 230 or MATH 231 Concurrent at Enrollment: PHYS 410

PHYS 412H: Solid State Physics I

3 Credits

Crystal symmetry, x-ray structure analysis, lattice vibrations, thermal properties, free electron transport theory, elementary one-electron quantum theory of solids.

Honors

PHYS 414: Solid State Physics

3 Credits

Crystal structure; reciprocal lattice; X-ray diffraction; lattice vibrations; thermal properties; free electron gas model; energy bands; semiconductors; magnetism.

Enforced Prerequisite at Enrollment: MATH 230 and PHYS 237

PHYS 419: Theoretical Mechanics

3 Credits

Principles of Newtonian, Lagrangian, and Hamiltonian mechanics of particles with applications to vibrations, rotations, orbital motion, and collisions. PHYS 419 / MATH 419 Theoretical Mechanics (3) A second course in classical mechanics, required of all physics majors who typically take it in their 5th or 6th semester. The course includes a review of relevant mathematics, detailed discussions of advanced topics in Newtonian mechanics, introductions to Lagrangian and Hamiltonian dynamics, and applications to such forced oscillations, orbital motion, vibrational motion and normal modes, rigid body motion, and collisions. It is a prerequisite for Physics 461, which is a second semester extension. It is also a valuable background for most 400-level physics courses, especially Physics 410.

Enforced Prerequisite at Enrollment: (MATH 230 or MATH 231) and (MATH 250 or MATH 251) and PHYS 212 and PHYS 213 and PHYS 214
Cross-listed with: MATH 419

PHYS 419H: Theoretical Mechanics

3 Credits

Principles of Newtonian, Lagrangian, and Hamiltonian mechanics of particles with applications to vibrations, rotations, orbital motion, and collisions.

Cross-Listed
Honors

PHYS 420: Thermal Physics

3 Credits

Basic postulates of statistical mechanics and thermodynamics, microscopic quantum states and macroscopic parameters; partition functions; Maxwell-Boltzmann and quantum statistics.

Enforced Prerequisite at Enrollment: (MATH 250 or MATH 251) and (MATH 230 or MATH 231) and PHYS 237

PHYS 421W: Research Methods in Physics

3 Credits

Methodology focusing on the theory of measurement and experiment design.

Enforced Prerequisite at Enrollment: PHYS 237
Writing Across the Curriculum

PHYS 430: Introduction to Computational Physics

3 Credits

This course will cover basic techniques for writing computational simulations of systems of interest to physicists. The course will aim to provide tools and techniques necessary for simulating initial value problems, chaotic systems, particle distributions on a grid or in the continuum, random processes (Monte Carlo), phase transitions, and numerical solution of equations. Numerical techniques which will also be covered include numerical differentiation (ordinary and partial differential equations), numerical integration, Fourier transforms, linear and nonlinear fitting, root finding, plotting and data presentation. Physical systems to study can include chaotic pendulum motion, diffusion driven motion, the Ising spin model, and dilute gas molecular dynamics. Students will learn to simulate multiple physical systems, and analyze their simulated data using multiple numerical techniques in order to compare their results to expected theoretical behavior. Students' competency in simulation, analysis and presentation of simulated results will be assessed through independently designed programming projects using learned techniques.

Enforced Prerequisite at Enrollment: (CMPSC 200 or CMPSC 201 or CMPSC 121 or CMPSC 131) and (MATH 230 or MATH 231) and (MATH 250 or MATH 251) and PHYS 237 Corequisite or prerequisite: PHYS 420

PHYS 437: Physical implementation of qubits

3 Credits

Introduction to the physical implementation of quantum bits (qubits) based on state-of-the-art technologies. The course will consider issues in quantum information technology from an experimental point of view. The various types of qubits that will be discussed include those made with superconducting circuits, atoms (including ions, atoms and molecules), electron spins, and photons. In each case, the goal will be to develop a physical understanding of the various approaches, to get a sense of their strengths and weaknesses, and to learn about the state of the art and future prospects.

Enforced Prerequisite at Enrollment: PHYS 337
Cross-listed with: EE 437, ESC 437

PHYS 444: Topics in Contemporary Physics

2 Credits

Modern research topics and career opportunities in physics; employment, graduate education, and tailoring the physics curriculum to meet career goals. PHYS 444 Topics in Contemporary Physics (2) A course required of all Physics majors, designed to be taken in the Spring semester of the junior year. Introduces students to modern research areas in physics at Penn State and elsewhere. Provides background on career choices available with an undergraduate physics degree, including employment opportunities, planning for graduate study, and tailoring the physics curriculum to meet career goals. The course structure is typically comprised of talks by Penn State faculty, outside visitors, students panels, and other information speakers, with students writing short and long reports using the class presentations discussions, and research from outside sources (research journals, internet, etc.) as background material.

Prerequisite: PHYS 237 and 3 credits of physics at the 400 level

PHYS 457W: Experimental Physics

3 Credits

Selected experiments in various fields in physics. PHYS 457W PHYS 457W Experimental Physics (3) An intermediate laboratory course, required of all Physics majors and taken by other students, typically in their junior/senior years, this course provides an introduction to modern laboratory techniques and instrumentation used in research labs. Typical 'short' experiments include X-ray diffraction, Compton scattering, velocity of light determination, high-temperature superconductors, Raman scattering, Hall effect, scanning tunneling microscopy (STM), and many others, as well as long experiments. This three-credit course also serves as the writing-intensive course at the 400-level for most Physics majors. One- and two-credit versions of Physics 457 (without the writing-intensive component) are taken by science and education students outside of Physics.

Enforced Prerequisite at Enrollment: PHYS 212 and PHYS 213 and PHYS 214 and PHYS 237
Writing Across the Curriculum

PHYS 458: Intermediate Optics

4 Credits

Geometrical and physical optics: theory of lens systems, aberrations, apertures, interference, diffraction, polarization. PHYS 458 Intermediate Optics (4) An intermediate optics course which builds on the wave and optics used in the 200-level introductory course, this course (which includes a lab component) focuses on physical and geometrical optics, propagation of light and its interaction with matter, polarization, interference, and diffraction. Optical components such as lenses, mirrors, prisms, fiber optics, spectrometers, and interferometers are discussed and employed. The laboratory component includes a number of 1-2 period experiments designed to illustrate the principles of applied geometrical and physical optics. Longer (5 period) experiments are also included which utilize modern, computer-controlled multi-channel detection systems and are applied to such systems as thin-film optics and the optics of semi-conductors.

Enforced Prerequisite at Enrollment: PHYS 212 and PHYS 213 and PHYS 214 and (MATH 250 or MATH 251) and (MATH 230 or MATH 231)

PHYS 462: Applications of Physics in Medicine

3 Credits

Recommended Preparations: (PHYS 212, PHYS 213, PHYS 214,) PHYS 251; Applications of physics in human physiology and in instrumentation for medical diagnosis and treatment. PHYS 462 Applications of Physics in Medicine (3) This course is a general survey of applications of physics in understanding the physiology of the human body and the physical principles behind diagnostic medical measurement, including imaging modalities: X-ray, nuclear, magnetic resonance, and ultrasound. Treatment applications such as laser surgery and radiation therapy are also covered. The course is appropriate for students intending work in a health profession.

Enforced Prerequisite at Enrollment: PHYS 211 or PHYS 250

PHYS 465: Network analysis of biological systems

3 Credits/Maximum of 3

The survival of a cell, organism or population in a variable environment depends on mounting specific responses to external stimuli. Each of these responses is governed by the coordinated action of multiple (potentially numerous) individual functional components. Understanding the collective behavior of such a complex interacting system is enabled by representing the system as a network, where we denote the components of the system with nodes and their interactions by edges. The properties of these interaction networks can then be analyzed by computational methods. This analysis can lead to important conclusions and predictions about the possible collective, dynamical behaviors of the system. The course will cover examples of network analysis and modeling in biology and medicine, focusing on systems at the molecular and cellular level. After taking this course students will be able to integrate information to construct a network model corresponding to a biological system, to use graph theoretical measures to describe this network, and to use mathematical or computational methods to model the dynamic processes that take place in this system. These skills are important for careers in life science and medical research, in bioengineering and biotechnology.

Enforced Prerequisite at Enrollment: MATH 140 or BIOL 230W or BMB 251 or BME 201. Recommended Preparation: MATH 140B or MATH 141B or MATH 297.
Cross-listed with: BIOL 465

PHYS 472: Elements of Nuclear Physics and its Applications to Medical Imaging and Treatments

3 Credits

Introduction to the theory of nuclei, interactions with fast particles, and applications to medical imaging and radiation oncology. PHYS 472 Elements of Nuclear Physics and its Applications to Medical Imaging and Treatments (3) Modern physics tools are used now in numerous medical diagnostic methods, for various treatments of tumors, and so on. The class will focus several aspects of modern physics relevant to medical applications: (i) mechanisms of interaction of high energy particles, i.e. photons, electrons, protons, neutrons, and nuclei, with materials and methods of generating beams of such particles, (ii) applications of such beams for obtaining images of the body, (iii) radioactive decays of nuclei and use of the nuclear decays for imaging of dynamical processes in the body, (iv) shell structure of nuclei and applications of nuclear magnetic resonance in imaging. The course will allow students to understand

the physics underlying the medical application of modern physics and physics of a wide range of new tools used in medicine, including computer tomography, positron emission tomography, and magnetic resonance imaging, as well as use of photon, proton and nuclear beams for tumor treatments.

Enforced Prerequisite at Enrollment: PHYS 211 and PHYS 212 and PHYS 213 and PHYS 214 and PHYS 237

PHYS 479: Special and General Relativity

3 Credits

Mathematical description, physical concepts, and experimental tests of special and general relativity. MATH 479 / PHYS 479 Special and General Relativity (3) This course is intended as an elective course (within the undergraduate Physics program) for Physics majors to be taken in their senior year. Intended to be cross-listed with MATH, it can also be used in support of a Mathematics minor and, in some options, within the Math program as a program elective as well. The course significantly expands upon the introduction to Special Relativity (SR) seen in PHYS 237, including discussions of experimental tests of SR and applications to relativistic mechanics. It then introduces students to the mathematical machinery required to understand General Relativity (GR), starting with the description of curved spacetimes and geodesics. It discusses solutions to the Einstein equations and surveys the classic tests which established the validity of General Relativity. It concludes with applications of GR in such areas as black hole physics, the generation and detection of gravitational waves, other topics (such as cosmology, relativistic astrophysics, etc.).

Enforced Prerequisite at Enrollment: PHYS 237 and PHYS 400 and PHYS 419 and (MATH 250 or MATH 251) and (MATH 230 or MATH 231)
Cross-listed with: MATH 479
Bachelor of Arts: Quantification

PHYS 494: Physics Research Project

1-12 Credits/Maximum of 12

Investigation of an original research problem, including a literature search. Preparation of a formal thesis is optional.

PHYS 494H: Physics Research Project

1-12 Credits/Maximum of 12

Investigation of an original research problem, including a literature search. Preparation of a formal thesis is optional.

Honors

PHYS 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

PHYS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PHYS 496H: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

PHYS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

PHYS 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Plant (PLANT)

PLANT 129N: Chocolate Worlds

3 Credits

This course will examine the "world" of chocolate throughout human history. First cultivated by the ancient peoples of the Americas and then manufactured by Europeans and Pennsylvanians alike, chocolate has played a privileged role as a luxury good. An interdomain course, "Chocolate Worlds" is interdisciplinary, taught by faculty in the departments of Plant Science, Anthropology, and History. As a team we investigate the how diverse societies have differentially interacted with this crop. Rather than be organized chronologically, this course will be divided into course Units, such as the history of cocoa uses and cultivation, cocoa plant science and farming issues, chocolate making and markets, and the state of the global chocolate industry. The course's lectures and assigned readings work in concert equally directed by scientific inquiry and the queries of the social sciences and humanities. Assignments will address real world questions relating to contemporary cocoa cultivation and production, and its role in international development and social justice. As a class we will take field trips to sites such as local chocolate manufacturing facilities and cocoa research sites and laboratories. The learning objectives of this course include students' broad knowledge of cacao production, its history, and ethnical issues surrounding its cultivation in today's global economy. Additionally, students will gain an historical appreciation for the role this crop has played in diverse human societies and a scientific understanding of its genetic structure.

PLANT 150S: Plant Science First Year Seminar

2 Credits

Plant 150S is the First Year Engagement course for first-year students in the Department of Plant Science majors of Plant Sciences, Turfgrass Science, and Landscape Contracting at University Park campus. First Year DUS students may enroll. Students will explore the various academic fields of the plant sciences (horticulture and agronomy), turfgrass science and management, and landscape contracting through literature review, library searches, field studies, critical thinking, exercises, and exposure to appropriate Penn State faculty and staff. Students will also be introduced to the breadth of University resources at their disposal.

First-Year Seminar

PLANT 200: Introduction to Agricultural Crop Growth, Form, and Function

3 Credits

About 12,000 years ago, humans began harvesting their food from the natural biological diversity that surrounded them, resulting eventually to domesticated agricultural crops. Over thousands of years farmers selected for desirable traits in crops, and thus improved the plants for agricultural purposes. Agricultural Crop Growth, Form, and Function is a required introductory course for options in the Plant Science major. This course provides fundamental information on agricultural crop growth needed for understanding course content of upper level courses within the major. The major focus areas will include general crop growth and function, environmental and plant interactions in agriculture, Pests of agricultural crops, and breeding and genetics of agriculturally important crops. Upon successful completion of the course students should have a better understanding of the following topics: structural components of cells and plants; growth of tissue systems; plant interactions with their environment; physiological processes in plant growth; basic components of plant genetics; and the impact of human selection, genetic engineering, and climate modifications on plant development and food production.

Enforced Prerequisite at Enrollment: BIOL 110 or SOILS 101

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

PLANT 217: Landscape Soil and Water Management

3 Credits

PLANT 217 Landscape Soil and Water Management (3) PLANT 217 is a course developed to meet the needs of the Landscape Contractors program. This course covers the following topics: Influence of weather on irrigation management; design, layout and management of residential and commercial landscape irrigation systems; sprinkler selection, scheduling and irrigation system management; irrigation uniformity and control systems; the importance of drip and subsurface irrigation; the effects of rainfall and irrigation on soil erosion and sedimentation on landscape sites especially under construction. The course also includes

short field trips to various local industry-related facilities for educational evaluation.

PLANT 220: Gardening for Fun and Profit

3 Credits

The objective of PLANT 220 (GN), Gardening for Fun and Profit is to provide students with science-based fundamentals of establishing and maintaining residential landscapes and gardens. The course provides information that is especially useful to those with minimal to intermediate knowledge of horticultural plants. A background in gardening or landscaping is not needed. Class topics are presented by guest speakers who are scientists and experts in the topic area. Major topics include proper plant selection, soil preparation for establishing plantings, the basics of seeding, growing transplants and planting, the basics of planting and maintaining trees and shrubs, avoiding common mistakes in the garden and landscape, gardening resources, storage and processing fruits and vegetables for home use and ideas for making profit from gardening activities. This course includes a weekly laboratory session where students gain practical skills needed for developing and maintaining residential landscapes and edible gardens through hands-on activities and field trips.

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

PLANT 240: Fundamentals of Cannabis: An Introduction to the Botany, Cultivation, and Harvesting of Hemp

3 Credits

Fundamentals of Cannabis provides a broad overview of hemp's natural ecosystem, biology, domestication, phenotypic plasticity, industrial cultivation, and business models within the hemp industry that foster bioeconomic empowerment for growers. The course starts with the basic biology of Cannabis species the effects of light on the production of cannabinoids, the various uses in the economic fabric of industrialized nations, and concludes with what makes hemp (THC < 0.3%) a unique plant for industrial production. Despite the legalization of hemp, optimal conditions for indoor and outdoor cultivation of cannabis remain not well understood. The purpose of this course is to introduce students to basic principles, best horticultural practices, and specific concepts for getting started in industrial hemp production. Throughout this course, potential business opportunities are emphasized for various aspects of the hemp industry.

Enforced Prerequisite at Enrollment: HORT 101 or PLANT 200

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

PLANT 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PLANT 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

PLANT 427: Pennsylvania Pesticide Applicator Exam Preparation

1 Credits

Graduates from the Crop Production option within the Plant Sciences Major may desire to have professional licenses related to their anticipated area of employment. This course will assist students as they prepare for the licensing exam which will allow them to legally apply pesticides. Professionals in the field will provide study materials and guide students as they study and prepare to take the licensing exam. Students will be guided through the technical material and requirements necessary to successfully complete the exam. This course and successful passing of the exam will make the graduate more employable than students that have not obtained this professional license. The course is intended for students in the Crop Production option, but students outside the option and with the necessary prerequisite may take the course. Upon completion of this course, students will be prepared to take the exam for the Pesticide Applicators License offered by the Pennsylvania Department of Agriculture.

Enforced Prerequisite at Enrollment: AGRO 28

PLANT 428: Certified Crop Advisor Exam Preparation

1 Credits

Graduates from the Crop Production option within the Plant Sciences Major may desire to have professional certifications and licenses related to their anticipated area of employment. This course will assist students as they prepare for the exam to become Certified Crop Advisors. Professionals in the field will provide study materials and guide students as they study and prepare for the exam. Students will be guided through the technical material and requirements necessary to successfully complete the exam. This course and successful completion of the exam will make the graduate more employable than students that have not obtained this professional certificate. The course is intended for students in the Crop Production option, but students outside the option and with the necessary prerequisites may take the course. Upon completion of this course, students can take the licensing exam offered by the American Society of Agronomy to become a Certified Crop Advisor.

Enforced Concurrent at Enrollment: AGRO 423 and AGRO 425 and AGRO 438

PLANT 461: Emerging Issues in Plant Sciences

3 Credits

Emerging Issues in Plant Sciences is a capstone course designed for the Plant Sciences, and is also available to students from other majors. This highly participatory course emphasizes many of the interdisciplinary topics in the plant sciences today, with a focus on balancing plant production with environmental conservation. Topics include: conservation cropping systems and tillage, soil health; transgenic crops; managing landscapes for ecosystem services, climate change, pest and nutrient management alternatives; biofuels; urbanization and regional food systems. It is a team taught course with guest lectures by experts on specific topics and includes student analysis and discussion with the guidance of the instructors. Students

will read and write about publications from the peer reviewed literature and research and present about an emerging issue.

Enforced Prerequisite at Enrollment: 6th Semester standing and (AGRO 28 or HORT 101) and (AGECO 201 or PLANT 200 or HORT 202) and ENT 313 and SOILS 101

PLANT 494: Undergraduate Research

1-6 Credits/Maximum of 6

Independent study directed by faculty supervisor a Plant Science faculty member.

Enforced Prerequisite at Enrollment: Junior or senior status, approval of a Plant Science faculty supervisor, and approval of the Undergraduate Program Coordinator

PLANT 494H: Honors Thesis Research

1-6 Credits/Maximum of 6

Independent study directed by faculty supervisor culminating in a Plant Science honors thesis.

Enforced Prerequisite at Enrollment: Junior or senior status in the Schreyer Honors College and permission of a Plant Science honors advisor
Honors

PLANT 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Plant Pathology and Environmental Microbiology (PPEM)

PPEM 120: The Fungal Jungle: A Mycological Safari From Truffles to Slime Molds

3 Credits

This course is an introduction to the world of fungi and their impact on humans and the environment around us. Fungi represent one of five or one of sixteen Kingdoms of biological organisms depending on the system used. Either way the Fungi are an integral and essential component of the biological world worthy of study by scientists and non-scientists alike. However, despite their importance to the ecosystem and to human affairs Fungi are among the least studied groups of biological organisms. This is unfortunate since Fungi are often quite beautiful and impact everyone's life. The goal of the proposed course is to provide a framework and context for students to become familiar with the Fungi and their importance to other life forms including humans. For example, food production is both positively and negatively impacted by Fungi in quite profound ways from serving a source of highly sought-after products such as truffles to plant pathogens such as wheat rust destroying crops. This course explores questions such as: What are Fungi? Why are they important? How do they work in the ecosystem? How have humans harnessed the unique capabilities of Fungi? How are Fungi portrayed in the media, and are these accounts accurate? Students will also practice using their fungal knowledge to evaluate the potential efficacy of consumer products aimed at control of Fungi. Some

course concepts will be explored through hands on activities and visits to relevant campus locations. At course conclusion students will have a deeper understanding of the fascinating Kingdom Fungi, and a greater appreciation for their importance, diversity, and beauty.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

PPEM 170N: Plant and Microbial Art

3 Credits

This inter-domain general education course provides a cross-disciplinary platform for plant- and microbe-facilitated creative production and art-mediated scientific learning. The course balances studio art activities with lecture- and discussion-based learning about integrated science and art topics. Students use the media of plant and microbial pigments, growth, and biology in a hybrid studio-lab environment. The biology, chemistry, and physics of these living and life-derived media are expected to form integral parts of student presentations. Lectures will provide information about broad scientific principles and in-depth learning about specific phenomena underlying the biologically-based media as well as relevant bio-art issues and contexts in which work is produced. Student projects will represent an integration of natural science understanding with artistic expression. Students will be encouraged to go in various directions with their creative efforts, including visual mechanics (light, color, composition), mark making (painting, drawing), meaning making (metaphors, allegories, cultural appropriations), storytelling, sensing (ways of seeing, phenomenology), and new media issues (e.g., post-humanism). Some example types of bio-media and their scientific connections include: plant pigments, which facilitate discussion of light, photosynthesis, basic chemistry and chromatography; bacterial cultures, which facilitate discussion of microbiology, cell biology, and cellular movements; and fluorescent proteins, which facilitate discussion of DNA, RNA, protein structure, mutations, species concepts, and genetic engineering. Student projects integrate the scientific basis of the bio-art media used such that the media become part of the message of the art.

General Education: Natural Sciences (GN)

General Education - Integrative: Interdomain

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Integrative Thinking

PPEM 225: Mushroom Cultivation

3 Credits

Students will learn about commercial production of edible mushrooms and how to cultivate them on both a small and commercial scale. PPEM 225 Mushroom Cultivation (3) Pennsylvania's growers account for nearly 2/3 of the US total mushroom production. The production of the button mushroom, *Agaricus bisporus*, is a technically challenging process that requires a thorough understanding of substrate preparation and pasteurization (Phase I and Phase II composting) to be successful. The class will follow an *Agaricus bisporus* crop, at the Mushroom Research Center on campus, for the 11 week cropping cycle, participating in all aspects of button mushroom production. The course will also cover specialty mushroom production (including shiitake, oyster, maitake, enoki), which can be achieved on a small scale with some basic training and understanding of the different nutritional and substrate preparation

techniques. Because cultivation of many specialty mushrooms is easier than button mushroom production, we will cultivate shiitake mushrooms both on sawdust logs as well as traditional oak logs. The class will have the opportunity to cultivate at least one other specialty mushroom, such as the oyster or lion's mane, in lab as well. We will schedule one Saturday field trip to visit several commercial mushroom farms in southeast Pennsylvania. Though this trip is not mandatory, it will be a good chance to view all aspects of commercial mushroom farming.

PPEM 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PPEM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

PPEM 300: Horticultural Crop Diseases

3 Credits

The concepts of plant pathology are introduced to describe how plants, the environment, and biotic and abiotic plant pathogens interact over time to cause disease. Understanding these relationships can help to prevent disease problems or increase management and control options. Students learn how plant pathogens survive, reproduce, and spread. The role that plant pathogen distribution and regulation have played in shaping history and their influence on our economics, trade, and the environment is discussed. Common and significant plant diseases are illustrated to explain their causes, diagnosis, management, and national and international importance. All information is presented in online modules and all assessments are submitted online. Students should be able to recognize common garden plants in the NE United States such as maples, oaks, roses, crabapples, lilacs, peony, pachysandra, etc. Internet access and a digital camera are required (phone cameras are usually fine). Weekly assignments, quizzes, and labs are all submitted online. Several diagnosis exercises reinforce the practical aspects of identifying and controlling plant pathogens and the Plant Disease Assessment Report provides experience in plant disease site evaluation and management. Students customize many assignments to use their favorite plant materials and locations. The online modules supply course content but students apply the lessons in their own local area. Original student photographs are needed for diagnoses and the Plant Disease Assessment Report. Plant diseases have significant influences on plant aesthetics, economics, edibility, and viability. They have had profound influences on world history, and roles in modern national and international trade and bio-security. Students will gain an appreciation of the impact that horticultural crop diseases can have on society and the environment, including how the global trade of horticultural crops has resulted in the spread of pathogens important to agricultural crops and native plants.

Recommended Preparation: 3 credits of high school biology are recommended

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

PPEM 318: Diseases of Forest and Shade Trees

2 Credits

Introduction to diagnosis and management of forest and shade tree diseases. PPEM 318 Diseases of Forest and Shade Trees (2) Diseases of Forest and Shade Trees, is a practical, hands-on, lab and lecture course designed primarily for forestry and landscape-contracting students. However, the course is also appropriate for any student interested in tree diseases, or for any student who simply wants to know "What is wrong with my tree?" The course content covers the important tree diseases of Pennsylvania, with emphasis on tree diseases that also have national and international implications. New and emerging tree diseases are discussed during the last two weeks of the semester.

PPEM 318H: Diseases of Forest and Shade Trees

2 Credits

Introduction to diagnosis and management of forest and shade tree diseases. PPEM 318 Diseases of Forest and Shade Trees (2) Diseases of Forest and Shade Trees, is a practical, hands-on, lab and lecture course designed primarily for forestry and landscape-contracting students. However, the course is also appropriate for any student interested in tree diseases, or for any student who simply wants to know "What is wrong with my tree?" The course content covers the important tree diseases of Pennsylvania, with emphasis on tree diseases that also have national and international implications. New and emerging tree diseases are discussed during the last two weeks of the semester.

Honors

PPEM 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PPEM 405: Microbe-Plant Interactions: Plant Disease and Biological Control

3 Credits

Survey of microbe-plant interactions causing plant disease, mechanisms of pathogenesis, disease management, and microbial and molecular biological control strategies. PPEM 405 Microbe-Plant Interactions: Plant Disease and Biological Control (3) Plant health in both natural and agricultural ecosystems is essential for sustaining human society and all other life forms on Earth. Plant disease epidemics are common and diverse and can have devastating effects on our population and economy by debilitating the ecosystems on which we depend. This course focuses on biological and environmental factors that influence microbe-plant interactions which in turn determine plant health and initiate plant disease epidemics. Developing strategies for maintaining healthy plants in both natural and agricultural ecosystems requires an understanding of pathogen and host biology, as well as the role of the environment in disease epidemiology. Students will learn about the survival and spread of important plant-infecting fungi, bacteria, phytoplasma, and viruses and how mechanisms for microbial pathogenicity are influenced by the environment. The final section of the course will focus on the use of beneficial microorganisms to maintain and improve plant health. Grades

will be based on student performance on a wide variety of activities including labs, quizzes, seminar reports, and exams.

Enforced Prerequisite at Enrollment: BIOL 110

PPEM 412: Turfgrass Disease Management

3 Credits

PPEM 412 Turfgrass Disease Management (3) This course will provide an introduction to concepts of disease processes in plants and biology of plant pathogens, principles of turfgrass disease diagnosis based on symptom development, recognition of signs and microscopic structures of the pathogens, environmental and cultural management factors influencing disease development, significance of pathogen life cycle in disease epidemic development, and integrated turfgrass disease management practices for root and foliar disease. Disease of various turf types for golf courses, residential lawns, landscapes, and athletic fields will be discussed. Disease topics will include diseases that commonly occur in winter, disease that develop in spring and persist into summer, and disease that initiate in summer and remain active until late fall in most regions of North America. A number of non-infectious disorders of turf caused by extreme environmental conditions and improper cultural practices will also be discussed.

Enforced Prerequisite at Enrollment: TURF 235

PPEM 416: Plant Virology: Molecules to Populations

3 Credits

An exploration of the molecular biology and population dynamics of the virus-plant interaction. PPEM 416 Plant Virology: Molecules to Populations (3) This will be the departmental foundation course for plant viruses, one of the four major pathogen groups. The course will entail an exploration of the history, nature, cause, socioeconomics, symptomatology, physiology, diagnosis, ecology, epidemiology, and control of viral diseases on plants. Special emphases will be placed on replication, and evolution of plant viruses, molecular biology of the virus-plant interaction, replication, virus-like agents (viroids & prions), natural and genetically engineered disease resistance, virus-vector relationship, and population dynamics.

Enforced Prerequisite at Enrollment: BIOL 110 and SC 120N

PPEM 417W: Mechanisms of Bacterial Pathogenesis in Plants

3 Credits

This course covers the mechanisms that certain bacteria use to infect and cause disease in plants. We will consider the molecular, genetic, biochemical, and physiological systems that are used by plant-pathogenic bacteria to move about and infect plants, cause disease symptoms, evade plant immune responses, and derive nutrition from the plant. We will cover these topics through a combination of lectures and close readings of current and classic primary research articles. The course also has a major, hands-on laboratory component that includes experiments on bacterial genetics related to disease, bacterial physiology and behavior, and the stimulation of plant immune responses during bacterial infection. Students taking this class can expect to gain experience reading primary plant bacteriology research literature and designing and implementing experiments in plant-bacterial interaction.

Enforced Prerequisite at Enrollment: BIOL 110
Writing Across the Curriculum

PPEM 425: Biology of Fungi

4 Credits

BIOL 425 / PPEM 425 (4 cr.) is a lecture and laboratory survey of the diversity of Fungi, consisting of two 75-minute lecture and two 180-minute laboratory/field activity periods per week. The course moves from branch to branch in the Fungal tree of life, covering aspects of ecology, morphology, physiology and life history, as well as current and historical importance to human affairs in medicine, agriculture and industry. Topics covered as students move through the Fungal tree include: 1) Macrofungi seen in the field; 2) Fungal evolution; 3) Fungal reproduction and dispersal; 4) Fungal growth, development and structure; 5) Fungal genetics and genomics; 6) Fungi as mutualistic symbionts of plants, animals and other organisms; 7) Fungal diseases of plants, animals and humans; 8) Fungi as toxin producers; 9) Fungi as sources of food, pharmaceuticals and enzymes; and 10) Fungi as research organisms used to understand basic biological processes. Some laboratory sessions consist of field trips to local forests to observe and collect Fungi for observation in the laboratory.

Enforced Prerequisite at Enrollment: BIOL 110 and (AGECO 201 or BIOL 127 or BIOL 220W or BIOL 220M or BIOL 222 or BIOL 230W or BIOL 230M or BIOL 240W or BIOL 240M or MICRB 251 or HORT 232 or PPEM 120 or PPEM 225 or PPEM 405)

Cross-listed with: BIOL 425

PPEM 427: Mycotoxins: Effects of Fungal Toxins on Human and Animal Health

3 Credits

Description and history of mycotoxicoses. Mycotoxin formation, occurrence, control, economic and social impacts, and regulatory issues. PPEM 427 Mycotoxins: Effects of Fungal Toxins on Human and Animal Health (3) This course will provide a comprehensive overview of the multi-disciplinary subject of mycotoxicology. Mycotoxins are chemicals produced by fungi that are toxic to humans and animals. Students will become familiar with the history and description of mycotoxins and mycotoxicoses, formation of mycotoxins, biology of mycotoxigenic fungi, methods of mycotoxin analysis, fate of mycotoxins in food processing, management and prevention of mycotoxins, regulations, and economic and social impacts. This course is appropriate for students who wish to learn more about fungi beyond the introductory level, as well as for those with interests in animal science and husbandry. The subject of mycotoxicology involves most aspects of the agriculture-food system so students of food science, crop and soil science, entomology and plant pathology will find relevant topics in mycotoxicology. Biology and microbiology students especially those with interests in plant-associated microbes and ecology will also benefit from this course. Course format will be two lectures per week and one period of discussion that will include laboratory activities, field trips, case study discussions, and student presentations.

Enforced Prerequisite at Enrollment: BIOL 110 or (BIOL 11 and BIOL 12) or (CHEM 112 and CHEM 113)

PPEM 430: Air Pollution Impacts to Terrestrial Ecosystems

3 Credits

This course introduces student to air pollutant sources, transport, meteorology, and temporal and spatial trends of pollution dispersion and deposition. An overview is presented of the direct and indirect

effects of air pollutants on terrestrial ecosystems with an emphasis on plant life. The effects of ozone, sulfur dioxide, nitrogen oxides, particulate matter, halogens, and combined pollutants leading to acidic atmospheric depositions are presented. Emphasis is placed on air pollutants as plant pathogens leading to symptoms and eventual long-term accumulative effects to entire ecosystems. Methods of diagnostics, factors affecting plant response, ecosystem decline and resiliency, pest interactions, assessment of loss and cost/benefit analysis leading to abatement follows. Final parts of the course include perspectives of public awareness, development of National Ambient Air Quality Standards, compliance prevention of significant deterioration, and the Clean Air Act reforms of 1990.

Enforced Prerequisite at Enrollment: (BIOL 110 or FOR 308) and 5th Semester standing or higher
Cross-listed with: ERM 430

PPEM 440: Introduction to Microbiome Analysis

3 Credits

The development of next-generation sequencing (NGS) technologies was initially spurred by the desire for a human genome sequence, but these tools are now essential to all areas of biology. The amount of data produced by NGS allows us to ask questions about processes that occur across genomes, communities, and even landscapes. In particular, NGS has revolutionized the study of environmental microbiology, allowing us to investigate the thousands of microbial "species" that co-occur in a given environment, even though most of these microorganisms have not been captured or observed in culture. The entire complement of microorganisms (and their genes) that occur in a particular environment is frequently referred to as the "microbiome" of that environment. The field of microbiome research is evolving rapidly, which means that there are many opportunities to contribute to exciting new discoveries. However, this fast pace of change has made it difficult to properly prepare students for microbiome-focused graduate work. In this course, students will learn about the development of NGS techniques, as well as recent applications of NGS to natural and agricultural soil systems, including how these tools can be used to understand both targeted and unintentional human-induced changes to microbiomes. Students will also develop the ability to interpret microbiome-related literature and to work with NGS data using freely available software. In the second assignment, students will explore additional software not used in class, in order to learn how to learn to use unfamiliar bioinformatics tools. This course is intended for students with very little background in programming or bioinformatics, but with a strong understanding of microbiology, molecular biology, and/or ecology. At the conclusion of this course, students will be able to: - Interpret microbiome terminology and figures. - Understand and present a summary of a microbiome-based journal article. - Analyze microbiome-based high-throughput sequencing data using freely available software. - Apply microbiome analysis tools to unknown data. - Express their interpretation of microbiome data in oral, written, and graphical contexts.

Enforced Prerequisite at Enrollment: BIOL 220W and MICRB 201
Recommended Preparations: BIOL 463 or MICRB 413

PPEM 454: Virus Ecology

3 Credits

Virus ecology describes how viruses interact with their hosts, and how those interactions modulate the hosts' interactions with their environment. PPEM 454 Virus Ecology (3) In this course students will

learn about the interplay among viruses, hosts and the environment. The diversity of viruses, which infect all known life forms, will be explored. The important role viruses play in the ecology of the planet, including carbon cycles, host adaptation to extreme environments, host health or disease, and host evolution will be discussed in depth using specific examples. Students also will learn to critically read the scientific literature. Learning will be assessed through a combination of written and oral assignments and exams.

Enforced Prerequisite at Enrollment: BIOL 110 or equivalent

PPEM 456: Applied Microbial Ecology

3 Credits

This is a lecture based course that will broaden students' understanding of the diverse biotic and abiotic interactions relevant to microbes in diverse environments. In particular, this course focuses on ecological interactions between microbes in a common environment or between microbes and their eukaryotic hosts (e.g. plants and animals). In addition to learning about ecological theory as it applies to microbes, students will learn about historical and contemporary approaches to studying microbes in different environments. This will include substantial focus on cutting edge 'omics', microscopic, and direct functional analytical approaches to understand both the distribution of microbial taxa (i.e. who's there) and what processes they carry out in their natural environments (i.e. what they're doing). In the latter portions of the class, students will apply the theory and techniques to understanding the ecology of specific environments, including environmental, agricultural, and food environments. The objectives of this course include: provide students with a firm understanding of contemporary microbial ecology and environmental microbiology; conceptually link processes that occur in disparate environments, such as plant roots, termite guts, and cheese rinds; provide students with the language to discuss these concepts and processes; make students familiar with and conversant in 'omic' and other cutting edge functional techniques used to study microbes in their natural environments; provide select examples of how humans take advantage of microbial ecology for our benefit (such as suppression of pathogens or promotion of waste decomposition). The course will conclude with a research and writing project where students will review the microbial ecology of a specific environment. This course expects students to have an understanding of basic microbiological concepts.

Enforced Prerequisite at Enrollment: MICRB 201 or MICRB 201H

PPEM 494: RESEARCH PROJECT

1-6 Credits/Maximum of 6

Supervised student activities on research projects identified on an individual or small-group basis.

PPEM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PPEM 496H: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

PPEM 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Plastics Engineering Technology - BC (PLET)

PLET 50: Computer Applications for Plastics Engineering Technology

2 Credits

Programming, spreadsheets for the solution of technical problems, internet access for background and support information, formatting professional reports, creating presentations. PL ET 050 Computer Applications for Plastics Engineering Technology (3) This course will acquaint first semester students with a variety of computer software programs that will be used in upper level classes. Extensive hands-on laboratory problems are designed to reinforce the lecture. After completing this course, the students should be able to access plastic related information on the Internet, prepare a formal report complete with footnotes or endnotes, create a computer generated technical presentation, import and export data between different software packages, and program technical spreadsheets for solving engineering problems. Student competency will be assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

PLET 205: Introduction to Plastics

3 Credits

Introduction to the plastics industry including fundamental aspects of plastic materials and processing; introduces the chemical influence on mechanical and flow properties of plastic materials. PL ET 205 Introduction to Plastics (3) Introduction to the plastics industry including fundamental aspects of plastic materials and processing; introduces the chemical influence on mechanical and flow properties of plastic materials.

Enforced Prerequisite at Enrollment: (MATH 081 and MATH 041) or MATH 140 or Prerequisite or concurrent: CHEM 110

PLET 206M: Plastic Materials and Properties

3 Credits

Coverage of the most common commercial plastics including their additives, fillers, and fibers; includes common physical tests used to determine material characteristics.

Honors

Writing Across the Curriculum

PLET 206W: Plastic Materials and Properties

3 Credits

Coverage of the most common commercial plastics including their additives, fillers, and fibers; includes common physical tests used to determine material characteristics; writing intensive.

Enforced Prerequisite at Enrollment: PLET 205
Writing Across the Curriculum

PLET 222: Introduction to Plastics Processing

4 Credits

Introduction to plastic processing methods, materials, tooling, design, and equipment. Safe operation and practices are emphasized. PL ET 222 Introduction to Plastics Processing (4) This course provides an introduction to plastics processing and is intended to provide broad foundational knowledge of the different types of plastics processing methods, equipment, and materials. The educational objectives are to develop competency in the determination of potential methods for manufacturing various component designs and the determination of cost effectiveness for the possible process alternatives selected. After completing this course, the student should have a basic understanding of a multitude of plastic processing methods and have knowledge of the interrelationship of part and tool design as it impacts manufacturing. The student should also understand materials and material flow phenomena as it affects processing and should understand the processing and troubleshooting techniques typically found in the industry.

Enforced Concurrent at Enrollment: PLET 205

PLET 227: Plastics Processing & Statistical Methods

4 Credits

Study of advanced issues in plastics processing, such as design of experiments and SPC/SQC will be covered. PL ET 227 Plastics Processing & Statistical Methods (4) The course is intended to give the students the basic tools needed to identify and troubleshoot plastic processing problems. Injection molding will be the primary focus. The course objectives are: to introduce the student to the root cause of injection molding problems both at the start-up of a new mold and during production runs, to identify when a process has changed and to monitor the effects of attempts to improve the process using statistical process control and other statistical methods, to identify and minimize the sources of process variation; to ascertain the capability of measurement systems, and to gain understanding in the use of designed experiments techniques for developing cause and effect information. During the course, students will build upon knowledge gained in earlier courses in plastics materials and plastics processing.

Enforced Prerequisite at Enrollment: (PLET 50 or EDSGN 100S) and PLET 205 and PLET 222

PLET 232: Introduction to Part and Tool Design

3 Credits

CAD techniques for designing plastic products and related tooling. PL ET 232 Introduction to Part and Tool Design (3) This is the introductory course for designing plastic parts using CAD solids modeling techniques. This course builds upon fundamental CAD modeling skills developed during earlier courses and initially focuses on the fundamental techniques needed to construct solids models for thin walled plastic parts. Focus then shifts toward using similar solids and surface modeling techniques for designing molds for plastic parts. The course objective is to provide the basic knowledge to construct solid models of plastic parts and related tooling and to lay the foundation for more advanced plastic part and mold design courses.

Enforced Prerequisite at Enrollment: PLET 222 or Prerequisite or concurrent: EGT 121

PLET 235: Tool Design & Machining

2 Credits

Study of the methods used to create the tooling used in plastics fabrication and the methods of maintaining tooling. PL ET 235 Tool Design & Machining (2) This course will provide the students with an understanding of the construction methods and materials used in the creation of plastics tooling. Various methods of mold manufacture are introduced along with the fabrication practices needed to permit successful mold operation. The course concludes with a study of the materials used in mold construction and plastics tooling preventative maintenance practices. The course objective is to provide the knowledge needed to properly design parts for manufacturability. Students will also learn how to set up a system to maintain tooling to reduce catastrophic failures. Through the lab portion of this class, the students will obtain hands-on experience in the actual construction methods. This course uses knowledge gained in earlier plastics materials and processing courses to guide tooling design and fabrication decisions.

Enforced Prerequisite at Enrollment: Prerequisite or concurrent: PLET 232

PLET 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PLET 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

PLET 304: Plastic Material Properties and Applications

3 Credits

Synthesis, polymerization, and characterization of thermoplastic and thermoset polymeric materials. PL ET 304 Plastic Material Properties and Applications (3) This course studies the fabrication of polymers and macromolecules. Current commercial techniques are covered in detail and encompass the reactions and processes currently being used in the plastics industry today. Also covered is the technology for creating different grades of polymers by using various fillers, additives, and blends to create variations within the known polymers. This is supplemented by laboratory exercises that draw together theory and practice. Polymer synthesis is a key link between the atoms present before they become a part of a polymer molecule and the molded article, the end produce of the molding operation. The course objective is to establish a basic knowledge of these processes to enable a deeper understanding of the capabilities of molding, designing, and the performance of polymer articles. Students will be able to start with a handful of carbon atoms, a synthesis procedure, and an injection molding machine, and understand what affects the polymer at each stage, rather than being limited to understanding a given molding process. It will allow students to adapt to industrial needs and the push towards a scientific approach to problem solving, rather than acting as traditional molding machine processors. Students will also be able to correlate the polymerization process to the performance derived in plastics processes and molded articles. Student

competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

Enforced Prerequisite at Enrollment: PLET 206W

PLET 323: Packaging Processes

3 Credits

In-depth studies and laboratory experiments will be conducted on processes such as blow molding, thermoforming, extrusion, and rotational molding, and other packaging processes. PLET 323 Packaging Processes (3) In this course the student will learn about plastic packaging processes of blow molding, thermoforming, extrusion. Other minor processes will be presented. The course objectives are to develop student proficiencies in identifying the polymer material requirements for each process, in identifying the mold design and construction techniques for each process, and knowing how plastic packaging processes differ from injection molding. The laboratory will include experiments that show the advantages of each process and to develop student competency in running equipment for each process explored. The students shall also develop competency in conducting elementary process troubleshooting for each process. Student competency is assessed by graded lab reports and projects.

Enforced Prerequisite at Enrollment: PLET 227 and PLET 304 Enforced Concurrent at Enrollment: PLET 350 and MET 418

PLET 330: Advanced Tooling & Rheology

4 Credits

Tooling design strategies are developed considering a material's physical and rheological influences on processing and part formation. PL ET 330 Advanced Tooling & Rheology (4) This course is intended to allow the student to develop an understanding of the critical relationship between the physical and rheological properties of plastic materials and their influence upon processing and part formation. The course objective is to establish this relationship since it is the basis of establishing tooling design strategies for optimizing part quality, moldability, and productivity. Upon completing the course, the student will have proficiency in the use of injection molding analysis software (Moldflow) and be able to develop strategies for its efficient and effective application. The software is used as a means to accelerate and enhance the students understanding of the injection molding process. Students will learn how software usage can be interwoven with knowledge of polymer melt rheology, shrinkage, warpage, residual stresses and their relationship to tooling to enable proper process and molded part design. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

Enforced Prerequisite at Enrollment: PLET 206W and PLET 227 and PLET 232 and PLET 235 and PHYS 250

PLET 345: Heat Transfer

3 Credits

Fundamentals of heat transfer including conduction, convection, and radiation. PL ET 345 Heat Transfer (2) The course is intended to allow the student to develop the ability to conceptually evaluate heat transfer problems, and solve practical problems that might be encountered in the plastics industry including those that relate to energy management in plastic materials or processes. The course objectives are accomplished

by establishing the concepts of the three principle mechanisms of heat transfer, solving plastics related problems illustrative of each mechanism, and reinforcing theoretical concepts learned through the use of simulation software and hands-on laboratory experiments. During this course students will build upon the knowledge gained in an earlier course in the thermal and fluid sciences. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

Enforced Prerequisite at Enrollment: PLET 366

PLET 350: Design of Plastic Parts

4 Credits

Designing plastic parts utilizing CAD, FEA, and CAE technologies for the design and for structural, dimensional, and process evaluation and optimization. PL ET 350 Design of Plastic Parts (4) The educational object of this course is to develop knowledge in the process of designing plastic parts and products. The course focuses on the critical relationship between the part design and the plastic material, tooling and the specific manufacturing methods used to produce the part. Use of CAE technologies are used for enhancing concurrent engineering strategies and evaluating manufacturability of a design. The course develops special design guidelines to accommodate plastic material characteristics and production requirements. The course also addresses issues of assembly and decoration of plastic parts. Upon completing the course students will demonstrate competency in relating how engineering properties of plastic materials and their unique characteristics relate to product design. This includes understanding viscoelasticity and the effects of time, strain, rate, temperature and environment on plastic materials and the product. During this course students will build upon the knowledge gained in previous courses on strength of materials, plastic materials, part and tool design and finite element methods. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40-50 students.

Enforced Prerequisite at Enrollment: MET 213 and PLET232 and PLET304 and PLET330. Prerequisite or concurrent: MET 418

PLET 366: Fluid and Thermal Sciences

3 Credits

Fundamentals of thermodynamic principles, fluid statics, and fluid dynamics. PL ET 366 Fluid and Thermal Sciences (3) This course is intended to develop the student's ability to conceptually evaluate thermal or fluid problems, and solve practical problems that might be encountered in the plastics industry. The course objectives are: to introduce the fundamentals of thermodynamic behavior by defining pertinent material properties that define an equilibrium state based on temperature and pressure, to study internal energy, enthalpy, and the specific heats of liquids, solids, and gases, including ideal gas behavior and changes in energy level as a result of phase changes, and to introduce mechanical and electrical work leading to applications of the First Law of Thermodynamics. Other objectives are to study fluid static principles involving submerged body behavior by investigating topics of buoyancy and centers of pressure. Fluid dynamics studies explore the Bernoulli and Energy equations, head losses, and calculation of pump requirements from pressure drop and volumetric flow data. Criteria for determining laminar and turbulent flow are established. Viscosity of fluids and fluid rheology topics are also introduced. Students will apply the lessons learned in a subsequent course on heat transfer. Student

competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year with an enrollment of 40 to 50 students.

Enforced Prerequisite at Enrollment: MATH 083 and PHYS 250 and PLET 222 and PLET 227. Prerequisite or concurrent: PLET 330

PLET 380: Introduction to Plastic Medical Devices

1 Credits

Introduction to plastic medical devices and their manufacture. Also covers the regulatory requirements of plastic medical devices. PL ET 380 Introduction to Plastic Medical Devices (1) This course serves as the introductory course required for the new Certificate in Medical Plastics. It will provide students with an overview of the medical plastics industry. This will be accomplished by providing students with an understanding of the medical device regulatory environment and its impact on medical plastics design, manufacture and material selection.

Enforced Prerequisite at Enrollment: PLET 205 and PLET 222

PLET 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

PLET 464: Plastics Failure Analysis

3 Credits

Fundamentals of Plastics Materials Process and Design Failure Analysis. PL ET 464 Plastics Failure Analysis (3) This course is intended to give the student an introduction to failure analysis for plastic articles. Course objectives are to: provide methods for the identification of common failure problems associated with modern molded plastic parts, perform a causal analysis for each failure type, provide an introduction, instruction, and allow operation of several analytical tools used to establish failure mechanisms, and review the relevant polymer physics and chemistry concepts involved in failure analysis. During the course students will be using concepts studied earlier in plastic material properties and applications. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year as a technical elective with an enrollment of 15 to 20 students.

Enforced Prerequisite at Enrollment PLET 350 and MET 418

PLET 466: Thermoplastic Composites

3 Credits

This class will explore both well-established and emerging composite plastic systems, including the basic chemistries and driving forces to explain composite material properties from micro to nanoscale composite systems. Microcomposites are discussed in terms of both common commercial materials (Glass/nylon, polypropylene/talc, for examples) as well as for cutting-edge composite systems that are explained through the use of current technical literature. The common theme of chemistry to promote interfacial adhesion is developed for each system. Characterization techniques that are common to composite evaluation are taught. Nanocomposites are considered in light of the

greatly enhanced surface area of the filler relative to the microcomposite analogue.

Prerequisites: PLET 304

PLET 468: Rapid Commercialization

3 Credits

Techniques to help get plastic products to market quicker and to build solids and surface modeling skills. PL ET 468 Rapid Commercialization (3) The educational objective of this course is to develop the student's ability in using techniques to reduce the time to design a product and get it into production. The course objectives are to enable students to understand how to evaluate the differing points of view of each group during the concurrent engineering of plastic products and to analyze various rapid prototyping and tooling methods to determine their applicability to plastic products. Several simulations packages will be used to show their use in the preliminary design stages. During the course students will be using concepts studied earlier in plastic part design. Student competency is assessed by graded quizzes, examinations, homework, and special assignments. The course is offered once per year as a technical elective with an enrollment of 15 to 20 students.

Enforced Prerequisite at Enrollment: PLET 350

PLET 481: Plastic Product Development

3 Credits

This course provides students with an in-depth overview of the integrated new product development process. PL ET 481 Plastic Product Development (3) Current product development trends have moved toward an integrated and interdisciplinary development process that includes team members from all aspects of the corporation. This course serves as an overview of that integrated product development process. Prior to this course, students will have studied methods and processes for the detailed and structural design requirements for plastic components. In this course, the students will be taught how their detailed design process fits into the remainder of the overall product development process. This will be accomplished by traditional lectures on the process and is underscored by a semester long project in which the students will form teams, invent a product idea, and develop that idea to a prototype state. Among the topics addressed are: -Concept development and selection -Working in a interdisciplinary team environment -Gathering and organizing customer needs -Translating customer needs into product specifications -Product development economics -Prototyping methods and purpose -Industrial design -Intellectual property

Enforced Prerequisite at Enrollment: PLET 350

PLET 482: Medical Product Development

1 Credits

This course provides students with medical device development requirements and processes. The course is to be taken in conjunction with PL ET 481 as both courses will utilize a semester project to invent and design a new product. Over the course of the semester students will review the FDA classifications, filing requirements, and recommended practices for medical device development. This knowledge will be applied and practiced through the semester projects. Students will learn techniques for Failure Modes and Effects Analysis and how to properly document and manage product change through the development

process. PL ET 482 Medical Product Development (1) This course provides students with medical device development requirements and processes. The course is to be taken in conjunction with PL ET 481 as both courses will utilize a semester project to invent and design a new product. Over the course of the semester students will review the FDA classifications, filing requirements, and recommended practices for medical device development. This knowledge will be applied and practiced through the semester project. Students will learn techniques for Failure Modes and Effects Analysis and how to properly document and manage product change through the development process.

Enforced Prerequisite at Enrollment: PLET 380 and PLET 350 or Concurrent: PLET 481

PLET 483: Plastics in Medical Applications

3 Credits

This course focuses on plastics materials and properties and how they meet the unique medical application and device requirements. PL ET 483 Plastics in Medical Applications (3) This course studies plastics materials in medical applications and devices. The course focuses on the properties that are important to medical devices such as chemical resistance, sterilization and biocompatibility. A broad range of polymers will be reviewed including commodity resins, such as polyolefins, engineering resins such as polycarbonates, acrylics, nylons and advanced polymers including polysulfones, polyetherether ketones and aramids. The synthesis, production and structure property relationships will be studied with particular emphasis on the effect on sterilization, biocompatibility and FDA regulatory requirements. The effect of additives, stabilizers, fillers and blends will also be reviewed.

Enforced Prerequisite at Enrollment: PLET 304 and PLET 380

PLET 484: Medical Manufacturing Methods

3 Credits

This course provides instruction in the methods and practices used in the manufacturing of plastic devices in the medical industry. PL ET 484 Medical Manufacturing Methods (3) This course provides instruction in the methods and practices used in the manufacturing of plastic devices in the medical industry. The course includes both manufacturing and regulatory requirements. A large portion of the class will involve a simulated process validation exercise. The concepts will be introduced in lecture, parts will be manufactured and measured in the processing lab, and data analysis will be completed in a computer lab. Injection molding will be emphasized as the major plastic part production method, but other processes will be used as needed. Clean room requirements, sterilization and material handling, and common assembly methods will also be covered.

Enforced Prerequisite at Enrollment: PLET 380

PLET 494: **SPECIAL TOPICS**

1-12 Credits/Maximum of 12

PLET 494A: Plastics Projects

1-12 Credits/Maximum of 12

Supervised student activities on research and/or design projects identified on an individual or small group basis. A specific title may be used in each instance and will be entered on the student's transcript.

Enforced Prerequisite at Enrollment or Concurrent: MET 418 and PLET 350 and PLET 323

PLET 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor
Full-Time Equivalent Course

PLET 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PLET 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

PLET 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Polish (POL)

POL 1: Level One Polish A

4 Credits

This course will provide an introduction to and basic understanding of Polish language. The objective of the course is to provide a comprehensive introduction to Polish language. Students are able to command a functional vocabulary of at least 500 words by end of semester; read basic Polish texts with understanding; engage in simple everyday dialogues; and write in elementary Polish by the end of semester. Adopting the communicative approach, instruction begins with simple in-classroom phrases to enable interaction exclusively in Polish from day one; and proceeds through building situational vocabulary and grammar, as well as activities and authentic materials that put it to immediate use. Students will be introduced to listening, speaking, reading, and writing in the Polish language, with equal emphasis on all the skills. Along with special Polish characters in the alphabet and Polish grammar, basic conversation involving real-life situational dialogues will be presented. Students will be exposed to some aspects of Polish culture via e.g. level-appropriate films and canonical children's poems. Because learning a new language requires not just regular attendance in class, but also considerable effort and preparation outside the classroom, students will be encouraged to practice vocabulary skills, pronunciation, and grammar on a regular basis as an aid to language acquisition.

Bachelor of Arts: World Language (All)

POL 2: Level One Polish B

4 Credits

The course will build on the basic knowledge of reading, grammar and vocabulary acquired in the introductory course to impart fluency and command over written and oral expression; and to introduce further points of basic grammar and idiomatic usage. Students will practice reading, writing, listening and speaking in Polish through a series of structured exercises involving stories, news, grammar books, songs, games, situational dialogues and role-playing in an interactive classroom environment in which everyone feels comfortable to practice their language skills without hesitation. The objective of the course is to impart functional literacy to students: at the end of the semester, students should be able to read and understand instructions in Polish, carry on everyday conversations such as those involving ordering food, seeking directions, handling a medical emergency and common social situations. Students should be able to participate with understanding in conversations involving idiomatic expressions. Accordingly, an important element of classroom practice is skill with listening comprehension. The course will emphasize the progress on students' oral and written language competencies through constant practice.

Recommended Preparations: Consultation with instructor and prior study of elementary Polish is recommended.
Bachelor of Arts: World Language (All)

POL 3: Level Two Polish A

4 Credits

The course lays equal emphasis on reading, writing, listening and speaking. Nuanced points of grammar and syntax are introduced. More complex reading and cultural exposure includes folk tales, poems, and essays selected from Polish literature and media. Writing and oral assignments focus on the use of culturally appropriate language, in a wide range of expressive settings, ranging from everyday conversation to more formal persuasive or descriptive essays. To encourage oral expression of ideas, class activities and debates are organized. Listening comprehension exercises introduce different styles of speaking popular in media and news.

Recommended Preparations: Equivalent of one year of Polish study - recommended consultation with instructor
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)

POL 197: Special topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

POL 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Political Science (PLSC)

PLSC 1: American Politics: Principles, Processes and Powers

3 Credits

This course examines the American democracy by looking at the dynamic interaction between the founding ideals of the United States government, the institutions established by the Constitution, and the ongoing contest for power within and through those institutions. Students will learn how Congress, the Presidency and the Supreme Court shape law and public policy; how the electoral process influences the decisions of voters and political parties; and how the media, interest groups, political action committees, and public opinion impact political outcomes. Through these topics the course takes up questions such as, Who has a voice in American politics and why are some political actors more influential than others? Do the electoral and policy making processes uphold democratic values? How responsive is the United States government to public wants? How does the media influence citizens' political preferences and behavior? The course both provides a foundation for further study of politics and equips students with the capacity to act politically on their own behalf and in concert with their communities. Students are empowered to interpret and pursue their interests, rights, and opportunities within the US political system in relation to the values of democratic equality and liberty the system was organized to secure, and to influence the process through which policies that shape their lives in critical ways are made.

PLSC 3: Comparing Politics around the Globe

3 Credits

This course examines the variety of ways that people seek and wield power around the world. Through cross national comparison and individual country analysis, the course considers different forms of

democratic and authoritarian regimes, sources of stability and change in different regime types, and the relationship between cultural, economic, and social factors and political processes. Students are introduced to the central questions in comparative politics, including What is the state and where did it come from? What is democracy? Why are some countries democracies whereas others are dictatorships? Does the kind of regime a country has affect the prosperity and well-being of its citizens? Why are ethnic groups politicized in some countries but not in others? Why do some countries have many parties whereas some have only a few? How do governments form, and what determines the type of government that takes office? What are the material and normative implications associated with different types of government? The course examines competing answers to questions such as these and evaluates the explanations for their logical consistency and empirical accuracy. Students learn to compare political phenomena across disparate contexts and how to use such comparisons to test claims about the political world. In doing so, they learn about the similarities and differences among countries and a range of approaches to analyzing the political world.

PLSC 7N: Contemporary Political Ideologies

3 Credits

This course provides a comparative analysis of the beliefs, values and ideas that constitute the major political ideologies in contemporary politics, such as liberalism, conservatism, socialism, anarchism, fascism and environmentalism. The course focuses on ideologies as traditions of thought developed through contentious political action with attention both to the unique features of each ideology and the ways that they overlap in theory and practice. It considers what ideologies are, what they do, and how we can study them. Each ideology is examined with respect to its historical origin; the major ideas, thinkers, events and political activists associated with its genesis; and how it has developed and changed in response to new circumstances. Students learn to think about ideologies as distinct from parties, regimes and political actors, and to establish criteria for classifying them in order to observe their influence on and through political action and organization. As the belief systems that underlie or justify political action, ideologies include views about human nature, history, and the scope and purpose of government. Ideologies implicitly or explicitly suggest an ideal form of socio-political organization that articulates who owes what to whom and establishes criteria for evaluating the status quo. The course will investigate how different ideologies understand the political community, the role of government, access to knowledge, institutional legitimacy and change. Students will learn to identify the value commitments various ideologies entail, as well as how those values shape the perception of political problems and the actions they necessitate.

PLSC 10: Scientific Study of Politics

3 Credits

This course introduces students to both the scientific study of politics, and the way that a scientific approach to political phenomena advances our understanding of political actors, events, processes, and institutions. It provides information about the elements of scientific reasoning, and introduces systematic approaches to studying politics through the lens of important puzzles and questions about international relations, comparative politics, and American politics. Students learn about relevant data sources, as well as how to interpret data appearing in graphs and tables. The course consists of three parts. The first part of the course offers an overview of the elements of scientific inquiry including causal explanation, empirical verification, theories and hypotheses, and dependent and independent variables. The second part of the course examines dominant approaches to studying politics, including experiments; observational methods such as surveys and

elite interviewing; formal models; archival research; and computational methods such as text analysis. Each approach will be presented using a similar format. Students will be introduced to the approach through a combination of lectures and assigned readings. They will then look at and learn about data sources suited to and consider questions or puzzles that can be addressed by each approach. Careers that make use of the analytic skills associated with each approach also will be discussed. The final part of the course considers the benefits of scientific approaches over less systematic analysis and the challenges inherent in trying to explain complex political behavior, institutions, and events. By the end of the course, students will understand what it means to "do" political science: i.e., to ask questions about political phenomena, form theories related to those questions, collect data, pick an approach to analyze the data, and draw inferences from the analysis.

PLSC 14: International Relations

3 Credits

What causes war and what makes it stop? When is international aid or military intervention effective? Why are some states wealthy and others plagued by poverty and underdevelopment? How does international trade affect developing countries? What can and should states do to protect human rights around the world? This course provides students with the background and conceptual tools to answer these and similar questions. It teaches students to think systematically about the complex relationships that constitute world politics and to critically engage prevailing academic and policy arguments about global affairs. Students are introduced to the international political system as the arena in which states develop foreign policies of cooperation and competition to pursue power, enhance security and develop economically. They explore how various non-state actors (NGOs, social movements, corporations) and international governmental organizations (UN, IMF, World Bank, WHO) influence interactions among states and between states and their citizens in matters such as interstate and civil wars, terrorism, ethnic conflict, human rights, inequality, global trade, resource scarcity and climate change.

PLSC 17N: Introduction to Political Theory

3 Credits

This course focuses on the concepts, principles and values used to explain, justify and challenge the organization and use of collective power. It introduces the field of political theory as an intellectual tradition that combines reflection on what political life is and what it should accomplish with investigation of the values manifest through existing political institutions and how those institutions can be best organized to achieve desired outcomes. Through analysis of selected works of major thinkers, beginning with the Ancient Greeks and extending through the contemporary period, students consider questions and problems that philosophers, political leaders and citizens have grappled with for millennia: What is a political community? What is justice? Who is included in the realm of justice? What is the best form of government? What do I owe to the state? What does the state owe to me? What is the proper purpose and scope of government? Students learn to critically engage arguments in canonical texts to understand both how they contributed to debates in their own time and how subsequent theorists and activists have interpreted them to articulate and challenge various forms of exclusion and oppression. Ultimately, students are invited to see political theory as a conversation across time to clarify concepts that are fundamental to the study and practice of politics yet remain contested, such as freedom, equality, democracy and justice, and to distinguish between the legitimate purposes of government and the arbitrary use of power. Through the course students will learn to employ and evaluate political concepts with care and precision so they can participate in that conversation productively as democratic citizens as well as in further study of political theory. Students may not get credit for both PLSC 17N and PLSC 17W

PLSC 17W: Introduction to Political Theory

3 Credits

This WAC course focuses on the concepts, principles and values used to explain, justify and challenge the organization and use of collective power. It introduces the field of political theory as an intellectual tradition that combines reflection on what political life is and what it should accomplish with investigation of the values manifest through existing political institutions and how those institutions can be best organized to achieve desired outcomes. Through analysis of selected works of major thinkers, beginning with the Ancient Greeks and extending through the contemporary period, students consider questions and problems that philosophers, political leaders and citizens have grappled with for millennia: What is a political community? What is justice? Who is included in the realm of justice? What is the best form of government? What do I owe to the state? What does the state owe to me? What is the proper purpose and scope of government? Students learn to critically engage arguments in canonical texts to understand both how they contributed to debates in their own time and how subsequent theorists and activists have interpreted them to articulate and challenge various forms of exclusion and oppression. Ultimately, students are invited to see political theory as a conversation across time to clarify concepts that are fundamental to the study and practice of politics yet remain contested, such as freedom, equality, democracy and justice, and to distinguish between the legitimate purposes of government and the arbitrary use of power. Through the course students will learn to employ and evaluate political concepts with care and precision so they can participate in that conversation productively as democratic citizens as well as in further study of political theory. Students may not get credit for both PLSC 17N and PLSC 17W

 Writing Across the Curriculum

PLSC 60N: Society and Cultures in Modern Israel

3 Credits

Israel is often portrayed in media and popular society in incomplete or distorted terms. In some cases, it is presented as a troubled, violent, dangerous place, as a place permeated by long-standing hatred between Jews and Muslims, Israelis and Arabs, Israelis and Palestinians. In others, the focus is on the state's role as the center of Judaism—a home of the "chosen people" and the source of inspiration for one of the world's great monotheistic religions. Some present it as a model for how a democracy can succeed under trying demographic, historic, and geopolitical circumstances. Others frame Israel as a place of conflagration (armageddon) that will usher in a messianic period or as a nation-state with a discriminatory regime that privileges its majority

population over its minority and administers oppressive policies over Palestinians in the occupied territories it captured in the 1967 War. While there are elements of truth in each of these presentations, the full picture of Israeli society is much richer and more complex. This course teaches students to cut through the mythology, and develop a more accurate understanding of what Israel is in the 21st century. Since Israel is a culturally, ethnically, and religiously diverse society, it is only possible to understand the true nature of modern Israel through exploring the many sub-groups that comprise the Israeli citizenry. The course looks at Ashkenazi and Mizrahi Jews (both religious and secular), Muslim and Christian Palestinian Arab citizens of Israel, Ethiopian-Israelis, Russian-Israelis, Bedouins, and Druze. For each group, it looks at demographics, background histories, migration patterns, institutions, cultural norms, values, and practices. We will look at what is important to each group, how they see and organize themselves, and how they understand and experience the world around them. The course aims to convey an understanding of the geographic, demographic, and social-historical context in which Israelis live as well as the diversity of Israeli culture. Students will be challenged to be critical readers of Israeli society and the way it is represented and to strive for measured, evidence-based analyses.

PLSC 83S: First-Year Seminar in Political Science

3 Credits

Exploration of current topics of interest in political science, international relations, and/or political theory. Every first-year seminar in Political Science focuses on several of the major questions of the field. Many of these questions concern the constitutional arrangements of governments: What is it that we want governments to do, and what is the ideal government arrangement? Why does every nation (and every state and city) have somewhat different constitutional provisions for legislation, judicial, military and executive functions of government? What can we learn from careful comparisons of different types of government? What is unique to the American system and what are the consequences of this uniqueness? Other questions concern power: To what extent do wealthy individuals and wealthy organizations have disproportionate power in society? Is this appropriate or not? What is the impact of governmental attempts to limit the influence of the wealthy? We are also very much interested in the international system: What types of foreign policies and diplomatic strategies reduce the likelihood of war? What is the role of international organizations (such as the UN or World Bank) and multinational corporations in shaping conflicts between nations? Finally, we are interested in ordinary citizens: Do citizens know enough to formulate rational opinions on public issues? Why are many citizens apathetic? What motivates citizens to support one candidate over another or to favor particular policies and philosophies? Each first-year seminar will select a special topic of interest and use that topic to explore a subset of these questions in order to provide a challenging introduction to political science. In the course of doing so, each first-year seminar in political science will also introduce students to specialized materials (such as government documents), library resources, and

appropriate electronic media. In addition, each seminar will emphasize the standards of evidence, logic, and critical thinking required to develop effective and persuasive reports and oral presentations. Students will write essay exams and one or more written reports on the relevant topic of their own choices. Class participation is required. The course fulfills both a first-year seminar and a general education or Bachelor of Arts social/behavioral science requirement. The course will be offered three times per year with a maximum of 20 seats per offering. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests.

PLSC 90: Introduction to Security

3 Credits

The study of security issues is more critical than ever, considering a series of global trends. Those reach from violent radicalization to arctic transformation, as well as include technology trends. All of those have an impact on security in our daily lives, in the public sector, and in the private sector. Together, both states and individuals are confronted with many pressing and often competing local, national, and global security challenges that demand thoughtful responses and solutions. Particularly challenging is the need to put in place security measures while ensuring that they do not infringe on the values they aim to protect. The multifaceted security crises of our time is rooted in a broad spectrum of hazards. It among other things stretches across lone wolf terrorists, natural disasters, public health emergencies, transnational organized crime, and cyber attacks; and it includes global counterterrorism, counterproliferation, and environmental change. All of those represent significant problems facing our world today. At the same time, they provide opportunities for us to bring about changes that will significantly increase the ongoing quality of life around the world. In order to do so, it is essential to develop analytical skills for risk assessment, policy analysis and strategy development. Critical thinking skills are also crucial since we need to be able to identify security gaps, unreasonable securitization trends, and point out fallacies of reasoning and misrepresentation of facts that may occur when responding to security threats. In this course, we will review the historical evolution of security studies, national and international security policies and strategies, human security and security management in business and industry. Further, in the rapidly changing world of security studies, it is important to understand the critical differences between concepts like strategic security, counterterrorism, protection, intelligence, homeland security, criminal justice, conflict studies, emergency management, threat assessment, human security, crisis management, disaster management, and related terms. Based on this, students will learn how security issues relate to their chosen academic discipline and professional goals. Using real-world examples, students will develop understanding of the academic, historical, and technological evolutions that gave rise to the

field of security studies, and go in-depth to examine the main areas in which security strategists, analysts, and practitioners work.

General Education: Social and Behavioral Science (GS)
GenEd Learning Objective: Critical and Analytical Thinking
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Social Responsibility and Ethical Reasoning

PLSC 111: Debating the Purpose of Government

3 Credits

Students will become acquainted with a variety of political theories and debate their usefulness in considering contemporary political controversies in the US. and another country. PLSC 111 Debating the Purpose of Government (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. Although governments must always attend to urgent matters that cannot be put off, government attention is, and perhaps should be, directed as well toward matters that are of fundamental importance. However, there is substantial disagreement about what those matters are. In this course, through brief summarizing readings and through lectures, students will encounter the arguments of various political philosophers making the case that one or another purpose is most essential to government. Among the candidates for the status of primary purpose of government will be civic and moral education, the defense of life and property, the dismantling of the economic foundations of inequality, and the institution of justice in accordance with universal moral principles. The compatibility of the various conceptions of the purpose of government with the experiences and aspirations of women will receive special attention. After a brief exposure to each perspective, teams of two students each will research and debate the pros and cons of each perspective in light of what it can contribute to our understanding of contemporary political events and controversies (if there are more than twenty- six students enrolled, some time will be taken from lectures to accommodate debates). Each student will take a turn as debater and a turn at researching, composing, and organizing the content of the team's opening statement. Approximately twenty minutes after each debate will be allocated to questions and comments from students who were not part of either team that day.

PLSC 112N: Ethics in Citizenship, Politics, and Government

3 Credits

This course meets the Bachelor of Arts degree requirements. It is often said that politics is a dirty business, meaning that unethical behavior is prevalent in politics. But this is often said with a twinge of disappointment, sometimes with bitterness or anger. We wish that it were not so. One part of an effort to improve the ethical character of politics is to strive for a clear understanding of what ethical political action is. This course endeavors to arrive at that understanding by considering some of the most profound and influential ways of understanding ethical action. One example is that which is derived from Aristotle and supplemented by Martha Nussbaum. Another example is that which is derived from the writings of Immanuel Kant. We will use perspectives written at this level

of generality in the analysis of detailed case studies of ethical choices made by citizens, government employees, and elected officials.

PLSC 114: Winning Political Support Through Persuasion

3 Credits/Maximum of 3

The purposes of this course are to introduce students to the comparative study of political systems, some of their parts, and the functioning of those parts, and to develop a capacity for effective, ethical citizenship. Real-world attempts to convince various audiences will be analyzed with respect to their appeals to the emotions of their respective audiences, often through framing the candidacy or policy under consideration in ways intended to stimulate fear, hope, or anxiety in order to command the attention of audiences. The use of words, other symbols, and non-verbal stimuli with strong emotional and normative content will be highlighted. The class will also evaluate efforts to establish credibility with audiences through references to endorsements, demonstrations or claims of expertise, goodwill, and good sense. Lastly, the logical validity of inferences and deductions made in the attempts to convince will be considered so that flattery, manipulation, bargaining, deception, and intimidation can be distinguished from genuine persuasion. So that students might see how characterizations of attempts to convince might be placed into a provisional context, the study is comparative. It will look at attempts in the U.S. as well as some other country. In general, so that the attempts at winning over audiences might be as comparable and as comprehensible as possible, the issue should be as similar as possible and the other country should be Anglophone. Although systems of elections and governance and controversial issues inevitably vary within and between countries, it is possible to find elections and policy controversies with sufficient similarities to make cross-national comparisons of attempts at convincing their respective audiences a fruitful exercise. For example, one might build the course around the televised debates and campaign ads for the mayoral elections in Vancouver and Seattle and the efforts to generate support and opposition to oil pipelines in the two countries. By looking at the different strategies used in attempts to convince elites, the citizenry and parts of the citizenry in the two countries, it is possible to raise questions about the workings of the political systems in the two countries. Specifically, students can examine some of the ways that historical geopolitical, constitutional, economic, and demographic differences between and within the two countries are manifested in the political processes of the two countries. By leading students to consider such questions, this course can induce them to undertake further study that will equip them with the methodological tools to investigate these issues in greater depth. Moreover, by providing students with the basic outlines of well-supported valid inference and challenging them to detect of the most common informal fallacies in efforts to convince and create an outline for their own attempt at political persuasion, PLSC 114 (GS) will help build capabilities that are necessary for responsible and effective and ethical citizenship.

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

PLSC 120N: State, Society, and Public Policy

3 Credits

Alexis de Tocqueville called association the “mother science” of politics and saw voluntary associations as a pillar of American democracy. These associations must compete in what might be called a moral economy of public policy that preserves the value of equality. This course brings together ideas from political philosophy, history, political science, communication, sociology and economics to address an important question: How have voluntary, nongovernmental associations come to shape and implement public policy? The class begins with the core concepts in political thought and traces them through to contemporary ideas about civil society that span the political spectrum. After critically assessing these ideas, we integrate them into a framework for understanding the process of making public policy.

PLSC 132: The Politics of International Intolerance

3 Credits

Introductory course emphasizing psychological, historical, and political aspects of global intolerance towards minorities. PLSC 132 The Politics of International Intolerance (3) (GS;IL)(BA) This course meets the Bachelor of Arts degree requirements. PLSC 132 is an introductory survey concerning the social phenomenon of “intolerance” i. e., attitudes or behaviors that seek to exclude or eliminate groups perceived to be different. Here “differences” encompasses such features as nationality, belief, race, gender, or sexual orientation. Often these aspects of the human condition are the targets of majority discrimination or collective violence. The course presumes the following assumptions: (1) Intolerant attitudes are not just “another point of view” but also an utterly destructive form of behavior inimical to civilized values. (2) Few, if any, societies have existed without some forms of intolerance. (3) The causes of intolerance are usually multi-causal (economic, political, and psychological) and are understood through social science. (4) “Politics” implies both the ideology and organization of intolerant movements

and the relation of such movements to public authorities. Students should expect fairly extensive readings involving primary source material, analyses of intolerant behavior drawn from different disciplines, and comparison of intolerance phenomena from a global perspective.

PLSC 178: Organized Crime, Law, and Politics

3 Credits

This course will address laws, politics, and policies related to organized crime issues. PL SC 178 Organized Crime, Law, and Politics (3) This course addresses the role and impact of organized crime in US laws, politics, and policies over the past century, with particular attention to modern organized crime groups. The course will look at how organized crime syndicates influenced and often cooperated with some political leaders and law enforcement agencies in the twentieth century, while other political leaders became famous for prosecutions of organized crime figures. Modern legal tools in the fight against organized crime will be discussed, such as RICO and witness protection programs. And the course will look at many examples of modern organized crime groups that originated in Europe, Asia, or Latin America, but which now have an impact on US society, and the policies that attempt to limit the influence of modern organized crime. Included in the examination of modern organized crime will be the connection to modern terrorist activities.

PLSC 183N: The Cold War in Literature, Politics, and History

3 Credits

The course will focus on the history and politics of the Cold War and its depiction in literature and film, especially in British and American literature, but also in that of other countries. Students will read political science and history texts, novels, short stories, and poetry, and view films. Students will analyze the reasons that the Cold War has been and continues to be a major inspiration for literary production and a transformative influence on literary style. Students will be encouraged to explore alternative methodologies for research on cold war topics including the use of primary sources, for ex. documents from the intelligence community archives that have since been declassified. In addition to a class field trip, students will be encouraged to make additional site visits to appropriate institutions in U.S. intelligence history. They'll be making a series of visits to relevant sites.

PLSC 200N: Government and Politics of Europe

3 Credits

This course introduces students to the politics and governing institutions of European countries through an historical and comparative perspective. It examines the development of the political systems in Europe during the 20th Century by applying the tools of political science to significant historical events, such as the rise of Nazism, transitions to democracy in Southern Europe, and the collapse of state socialism in Eastern Europe. Students will learn the structure, rules and key actors in different contemporary systems across Europe and in the European Union. They will explore how the design of democratic institutions impacts political representation and a government's accountability to citizens. They will discuss theories of voting, the development of the party system, and non-electoral politics such as protest and social movements. Cross national comparisons enable students to understand differences in voting patterns, types and consequences of collective action, social and economic policy, orientation toward Europe, and business and legal environments among European countries as well as to see the political issues that are relevant to Europe as a whole. The course is a good choice for any student preparing to live and work in a globally interconnected world. It will be particularly appealing to students interested in the organization, development and breakdown of democratic systems and politics – including US politics as a fruitful point of comparison. For majors, the specific focus on the European context is an effective follow up to PLSC 3, PLSC 14 or PLSC 7.

PLSC 201N: Politics & Religion: Controversies Around the World

3 Credits

Exposes students to the relationship between religion and politics around the world and examines trends in the influence of religion and religious parties on governments and public policy. The relationship and trends will be informed by multiple perspectives from political science, sociology, philosophy, and religion. Students will familiarize themselves with the basic tenets, historical backgrounds, and comparative differences of the main religions that are involved in the political conflicts that will be examined in the course. Students will first examine the principles and values of Christianity (Catholic, Protestant, and Orthodox); Islam; Judaism; Hinduism; and Buddhism. The different religions will be discussed in terms of their beliefs as well as their function in national identities. Discussion of religion will also examine secular critique

of religion, from the Enlightenment and the French Revolution to the present. This will include a comparative look at the ways in which science and rational thought have challenged religions' place in different societies and how religions have sought to counter this challenge. Students will then examine political parties, movements, and actors and their role in affecting public policies in different countries in the twentieth and twenty-first centuries. Students will analyze instances where religious disagreements led to internal policy clashes between members of the same religion as well as conflicts between adherents of different religions within the same country. The power of religious parties' and their secular political rivals will be a central part of this discussion. Students will explore instances in a variety of countries, including but not limited to Turkey, Israel, India, Myanmar, Latin America, France, Eastern Europe, and the United States. These examples will serve to elucidate clashes between religious and secular powers within different countries and between majority and minority religions. The discussion will also include the topic of how religion affects policies concerned with gender equality.

PLSC 209: Democratic Leadership

1 Credits

Penn State has a special opportunity to create new leaders who learn deliberative approaches to politics and public life. This one-credit course provides a background for this approach to democratic leadership, and it also prepares students for the Nevins Fellows paid internship program. Those who complete this course will have first priority when

awarding these internships each year. The centerpiece of this course are day-long workshops that introduce students to effective civic leaders in government or the non-profit sector. Bracketing these workshops are a handful of seminars, which introduce ideas, discuss reading assignments, and reflect on the workshops. In addition to short reaction papers, students will produce a narrative essay at the end of the course that describes how they could see themselves advancing democracy in the United States (or elsewhere) and what kind of internship experience will help them prepare for such a career. For those who opt to seek an internship, this essay will supplement their formal application. Credit for the course requires attendance at every class meeting and workshop, or equivalent makeup assignments, if permitted.

Honors

PLSC 210N: Rights in America

3 Credits

This course is an introduction to the emergence and enforcement of rights in the United States. The course provides an overview of how rights have been codified into law and interpreted by the courts. The primary focus is how and why the conception of rights has changed over time. Emphasis is placed on the rights of groups that were denied equal citizenship when the Constitution was ratified. We will examine how these marginalized groups have engaged in a continual struggle for basic rights since the American founding. The course begins with an overview of different types of rights and the role of the legal system in articulating and enforcing them. Students are introduced to debates about the sources of rights, including the implications of conceptions of rights as grounded in natural law and as arising from positive law. They look specifically at the role of rights in the founding documents of United States and how civil rights are interpreted through pivotal Supreme Court cases as ascribing - or denying - particular powers and responsibilities to individuals and groups. The second section of the course focuses on the rights of African Americans and women. It progresses chronologically from slavery to the modern civil rights movement, from coverture to women's rights. Particular attention is given to the NAACP's campaign against racial discrimination in housing, education, and in the criminal justice system. The final part of the course emphasizes campaigns for rights recognition in modern times, including LGBTQ rights and disability rights. The course concludes with a discussion of how context impacts rights, including students' rights and rights during wartime, and examination of the potential and limitations of rights as a basis for political protection. Throughout the course students are introduced to the interdependent political, legal and philosophical dimension of rights and how rights in the United States have come to be recognized and enforced through political action, legal codification, and judicial interpretation.

PLSC 220: Politics of the Developing World

3 Credits

The developing world refers to countries with a weak or emerging industrial economy; low per capita income; and low scores on measures of human well-being such as health, education, and human rights security. The developing world includes countries in Africa, Asia, Latin America, and the Middle East. It encompasses a large portion of the world's population and considerable diversity with respect to economic development, political systems, and social conditions. Developing countries often share a history of colonization and problems of poverty, inequality, authoritarianism, corruption, and political instability. This course focuses on the common patterns and differences among these countries in an effort to answer questions such as, Why do some countries develop robust economies and stable democracies while others do not? What is the connection between economic development and democracy? How do ethnic, religious, and cultural divisions interact with development? The course begins by introducing different ways of conceptualizing development. It describes the most prominent explanations of the differences between developing and developed countries and among developing countries. Students will learn the key domestic and international institutions and processes shaping political and economic development. They will explore the sources and consequences of democratization and authoritarianism, and consider the relationship between development and factors such as religion, ethnicity, and gender.

PLSC 222N: Science and Politics of the Female Athlete

3 Credits

The purpose of this course is to explore gender differences in sport and politics that emerge from physiology, culture, history, politics, and policy. The engagement of women in sport has unique physiological considerations and ethical dilemmas as well as a rich history of defining moments and important ties to feminism and politics. In this course, students will learn how physiology differences affect female athletic performance and the effects of exercise on the female body, as well as how cultural, historical, and political forces shaped women's participation in sport. Students will also see how similar historical, cultural, and political forces affect women's involvement in politics. Combined, students will understand how similar forces shape gender norms and participation two different, yet related, aspects of society. Additionally, students will learn about the push for evidence-based policymaking and apply that knowledge to topics including doping, pregnancy, and gender verification. Students will integrate physiology and policy in a final assignment advocating for evidence-based sport policy. They will also educate their peers through a public education project.

PLSC 223N: Ethnic and Racial Politics

3 Credits

This course explores the roles race and ethnicity play in politics and government. Students will learn how social groups organize to achieve political goals, how and why opposition to those goals arises in plural societies, and what policies governments can pursue to defuse tensions between groups. Students will be introduced to research explaining the historical and cultural basis of ethnic identities. Additionally, students will examine and compare case studies of political disputes that arise when groups differentiate themselves from one another. Ethnic and racial politics in the United States will be compared to ethnic and racial politics in other countries, such as Canada, Indonesia, Bosnia, Switzerland, Rwanda, and South Africa, with attention to political movements and government policies. The course will also explore the complex relationship between government and social groups by looking at immigration policy, the role of ethnic groups in shaping foreign policy, and the legacy of settlement and conquest. Through individual cases and cross national comparison, students will critically assess the sources of inter-group conflict, coexistence, and integration to identify best practices in order to achieve peaceful and inclusive plural societies. The course draws upon resources from a variety of disciplines, including political science, anthropology, sociology, economics, history, linguistics, and religious studies.

 GenEd Learning Objective: Integrative Thinking
 GenEd Learning Objective: Soc Resp and Ethic Reason

PLSC 230: American Political Campaigns and Elections

3 Credits

Campaigns and elections are the mechanisms used to place people into office in American government. Electoral outcomes are the product of rules that govern who can run and participate in voting, the choices made by candidates and their campaigns, and the individual decisions rendered by voters at the ballot box. This course explores each of these items to provide a comprehensive understanding of how campaigns and elections operate in the United States. The topics covered include how candidates are selected and elected, ballot propositions, election laws and administration, how voters choose among candidates, campaign strategies and advertising, campaign fundraising and spending, and proposed reforms to the American election process. Students are introduced to different types of election systems in the United States and in democratic countries around the world. They will discuss alternatives to the election systems currently used in Pennsylvania and in most

places in the United States. The electoral college method of selecting a president will be examined in depth. Various laws that either make it easier or more difficult to vote will be addressed. Students will examine some recent examples of the ballot initiative process and discuss its role in democratic governance. A substantial portion of the course will address which political parties various voter groups tend to prefer and why, how party bases have changed in American history, and why parties other than Democrats and Republicans have had limited success in the past century. Key components of campaign strategies and how candidates raise money, as well as famous political advertisements, will be presented.

Prerequisites: PLSC 1

Bachelor of Arts: Social and Behavioral Sciences
 United States Cultures (US)
 General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Crit and Analytical Think

PLSC 235: Environmental Politics

3 Credits

This course explores the political implications of climate change and the increasing scarcity of many of the world's resources. It provides students with an understanding of the actors and issues driving debates over decision-making and the use of natural and economic resources, with a focus on the American political process. The first part of the course presents the frameworks, actions and interests of various policy actors who affect environmental decision-making and the formation and implementation of environmental policies. The second part develops specific environmental issues, including climate change, resource scarcity and waste management. Much of the reading assumes that our civilization faces the twin problems of increasingly serious shortages of resources and a growing ecological crisis that threatens the basis of life. Further, it argues that these twin crises feed upon each other, and that together they pose serious short and long run challenges to survival. Some readings attribute these problems to the dominant values that characterize modern Western society. The course does consider some dissents from this perspective, arguments that things will be just fine. However, it concentrates on problems and predictions of trouble. It recognizes that most of what we learn, read, and see supports the status quo and assumes our civilization and energy-dependent way of life will continue. Consequently, it emphasizes the less frequently argued position that we may be headed for disaster. The class aspires to appeal to students regardless of major or college – to scientists, engineers, students of the humanities, and even economists and political scientists. It fulfills the University-wide general education requirement in Social Science. Although it discusses the role of politics in general and the role of the American political system in particular in discussing the "twin crises," it mostly grapples with fundamental questions of value that underlie and guide the play of power in our political system and with how the massive changes now taking place globally both affect and are affected by politics.

PLSC 267N: Government and Politics of the Middle East

3 Credits

This course provides an introductory overview of the politics of the Middle East. It introduces students to the political development of Middle Eastern countries and the construction of the Middle Eastern state system through a historical examination of the period of Islamic Empires through Colonialism and Independence. It discusses the major political ideological factors that have influenced political development in the Middle East. It examines the political economy of Middle Eastern states as well as the political economy of development of the region. The course studies the politics of gender, ethnicity and other identities in the region. It also covers major political conflicts within the Middle East and between Middle Eastern countries and the outside world.

PLSC 290N: Comparative Violence: Political and Criminological Perspectives

3 Credits

This course will cater to the interests of anyone who has ever asked oneself: what are the origins of individual and mass violence and why some parts of the world or one's own country have more of it than others? This course is designed to critically approach this question, based on the broad, cross-disciplinary perspective of security research and new security studies. This course will enable students to understand the distinctions and overlaps between political and criminal violence, analyze the levels from individual to mass violent behaviors, and assess theoretical approaches to studying violence. Students will engage in comparative exploration of different disciplinary perspectives on the origins and types of violent behaviors, including political science, criminal justice, international relations, and others. The course will provide the critical basis (theoretical and empirical) for students to evaluate the puzzle from multiple angles.

PLSC 291: Introduction to Peace and Conflict Studies

3 Credits

This course is an examination of how human beings get into and out of violent conflicts, and how conflicts transform. It sizes up the costs of war, examines the processes and challenges of peace, and reflects on the characteristics of human conflicts at all levels. The course is interdisciplinary, drawing together perspectives from political science, global and international studies, cultural anthropology, psychology, sociology, economics, military history, war game theory, and studies of literature and expressive culture. Course modules engage with diplomacy, nonviolence, failed states, ethnic struggle, gender mainstreaming, psychology and sociology of human aggression, economics of war and peace, globalization and conflict, and cyber warfare.

PLSC 306: Senior Thesis Writing Workshop

1-3 Credits/Maximum of 3

This seminar supports the writing and editing of senior honors theses. PL SC 306H Senior Thesis Writing Workshop (1-3)(BA) This course meets the Bachelor of Arts degree requirements. This is a workshop for honors students in their senior year writing their thesis in political science.

There are no assigned readings or written assignments outside of those necessary for the completion of your thesis. Participants are expected to make progress on their own thesis and to contribute to the collaborative enterprise of discussing thesis progress and problems while critiquing one another's work. Each participant is expected to make progress on their thesis, to collectively discuss and consider the research process during workshop sessions, and come prepared to offer useful feedback and criticism on other participants' research.

Bachelor of Arts: Social and Behavioral Sciences
Honors

PLSC 308: Introduction to Political Research

3 Credits

Introduction to conceptualization, research design, and measurement in political research. PL SC 308 Introduction to Political Research (3) This course introduces students to the research process in political science. The course can be taken by itself or as the first in a two course sequence with PL SC 309. It is intended to give political science majors the skills needed to conduct research in political science, or in related fields such as public policy. The course introduces students to the scientific approach to accumulating knowledge, it examines conceptual and theoretical thinking about politics (e.g. understanding what concepts, variables and hypotheses are), it covers different methods of collecting social science data (interviews, surveys, observation, experiments, analysis of documents, etc.) and it provides an introduction to the interpretation of that data. Ethical issues in research are discussed, and students are also introduced to basic statistical concepts. The course typically includes multiple take home and/or in-class assignments that require students to utilize different data collection methods and practice the generation and interpretation of those data.

Prerequisite: any 3 credits in Political Science

PLSC 309: Quantitative Political Analysis

3 Credits

Data analysis and statistical applications in political research, including data processing; inferential statistics; contingency analysis; correlation and regression; multivariate analysis. PL SC 309 Quantitative Political Analysis (3) This course introduces students to the basic statistical techniques used to study politics quantitatively. It can be taken by itself or as the second course in a two course sequence with PL SC 308. It is required for all Liberal Arts Fellows. Students in 309 learn about developing questions suited to empirical research; constructing hypotheses; measuring political concepts; and conducting basic univariate and multivariate analyses. The course includes sections on the basic principles of probability, sampling, and statistical inference so that students can understand and implement statistical techniques for describing and explaining political phenomena. There is also extensive coverage of the use and application of various statistical techniques. Exercises both in and out of class will require students to engage with and apply various social science concepts, and to undertake quantitative analyses of political and policy-relevant data.

Prerequisite: any 3 credits in political science
Bachelor of Arts: Social and Behavioral Sciences

PLSC 309H: Quantitative Political Analysis

3 Credits

This course introduces students to research design and quantitative analysis techniques used in political science with an aim toward developing transferrable skills for future coursework in the political science major, especially the senior thesis process. Students will learn how to construct theories and design studies, how to quantify concepts, and how to test theories using a variety of statistical techniques, including descriptive analysis, correlation, hypothesis testing, and regression analysis. The course will include classroom lectures and computer lab time to enable students to work hands-on with datasets. This course is the first in a three-course sequence for students interested in writing an honors thesis in political science.

Prerequisite: ANY 3 CREDITS IN POLITICAL SCIENCE

Bachelor of Arts: Social and Behavioral Sciences
Honors

PLSC 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

Bachelor of Arts: Social and Behavioral Sciences

PLSC 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PLSC 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

PLSC 403: The Legislative Process

3 Credits

Analysis of the policy process within the legislative system; the effects of environmental factors on policy alternatives and legislative decision making.

Prerequisite: PL SC001 or PL SC003

Bachelor of Arts: Social and Behavioral Sciences

PLSC 404: Analyzing Public Policy in the American States

3 Credits

This course provides students with the tools to empirically evaluate policy proposals and outcomes in the American states. PL SC 404 Analyzing Public Policy in the American States (3) Developing public policies is the proximate goal of any government. In the United States national, state, and local lawmakers steeped in their own traditions,

procedures, and political environments establish rules that determine their citizen's quality of life. In the states specifically, laws affect citizens's access to and their ability to afford an education; the quality of the roads they travel on; the wages they earn; whether and to what extent they qualify for subsidized health care; how they cast their ballot in elections; and myriad other aspects of their lives. This course focuses on policymaking in the American states and how those policies can be evaluated using social science methods. The course begins with a discussion of what makes states distinct from one another & their populations, governmental institutions, and political values. The focus then shifts to how statistical techniques can be used to describe variation in state policy; to develop causal arguments to explain variation; and to assess the efficacy and value of different approaches to the same social problems. Students learn how to measure and gather data relevant to public policy debates, to describe and categorize policy, to model policy outcomes, and to draw conclusions about alternative approaches to solving the policy problems being addressed. Students then apply this knowledge to major policy debates in state government. The course concludes by with an exploration of the ethical implications of using data to make policy decisions and with attention to how technical and statistical information can be effectively communicated to professional and nonprofessional audiences. Students are required to have an understanding of introductory statistics (equivalent to the knowledge they would gain from PL SC 309 or STAT 200) prior to taking this course.

Prerequisite: PL SC001 , PL SC309
Bachelor of Arts: Social and Behavioral Sciences

PLSC 405: The American Presidency

3 Credits

An examination of the selection methods for, and powers of, the American presidency, as well as other chief executives.

Prerequisite: PL SC001
Bachelor of Arts: Social and Behavioral Sciences

PLSC 405H: The American Presidency

3 Credits

An examination of the selection methods for, and powers of, the American presidency, as well as other chief executives.

Honors

PLSC 408: Democracy and Its Impacts

3 Credits/Maximum of 3

This course examines advances in democratization around the globe, and compares the performance of democratic and authoritarian governments. This course examines the impacts of international democracy aid around the globe, and compares the performance of democratic and authoritarian governments in promoting citizens' well-being. Democracy assistance for activities such as conducting elections and strengthening civil society has become a key component of foreign aid provided by longstanding democracies. Its use is based on a widespread belief that democracies perform better than autocracies in a number of policy domains. The course focuses on how such aid affects recipient countries, and how performance of democratic and authoritarian regimes actually differs. It traces the expansion of international democracy aid, explores the different types of assistance that donor countries provide, and reviews empirical research on the impacts in recipient countries. It then

turns to a comparison of the performance of democratic vs. authoritarian regime type in generating public goods such as economic prosperity, socioeconomic equality, and civic peace.

Prerequisite: PL SC 001; PL SC 003; PL SC 014; or PL SC 022

PLSC 409: Democratic Deliberation

3 Credits

Explores the theory and practice of democratic deliberation in elections, town meetings, juries, legislatures, and other public institutions. CAS (PL SC) 409 Democratic Deliberation (3) Many modern democracies have made strides to become more deliberative in how they make decisions. This course looks closely at the most promising innovations in self-government while also reviewing the persistent anti-deliberative and undemocratic features of modern societies and governments. Topics covered in the course include deliberative democratic theory, political conversation, common forms of public meetings, mediated deliberation, campaigns and elections, the jury system, and deliberative democracy on larger social scales.

Enforced Prerequisite at Enrollment: PLSC 1 or PLSC 7 or CAS 101N or CAS 137H or ENGL 137H or CAS 215 or CAS 303
Cross-listed with: CAS 409

PLSC 410: Strategy and Politics

3 Credits

This course examines political behavior using social choice theory and game theory. PL SC 410 Strategy and Politics (3)(BA) This course meets the Bachelor of Arts degree requirements. Strategic behavior is central to politics. It is common for political outcomes to be determined by the interaction of individuals seeking goals in an environment in which goal attainment is complicated by the choices of other actors. This course introduces various methods for analyzing strategic behavior using social choice and game theories. We will employ these approaches to better understand a wide range of political phenomena in international politics, comparative politics, and American politics, such as war, terrorism, voting, electoral competition, government formation, and democratic transitions. By the end of the course, students will, among other things, have experience using games to analyze a range of political behaviors and institutions. The course assumes no prior knowledge of social choice theory or game theory.

Prerequisite: PL SC001 , PL SC003 , or PL SC014
Bachelor of Arts: Social and Behavioral Sciences

PLSC 412: International Political Economy

3 Credits

The transnational politics of trade, investment, aid, raw materials, and the environment; nation-states, multinational corporations, and the U.N. PL SC 412 International Political Economy (3)(BA) This course meets the Bachelor of Arts degree requirements. This course is an introduction to the scientific study of international political economy (IPE), an interdisciplinary field related to international politics and international economics. Some exemplary issues IPE addresses include the collective action problem among nation states, the management and openness of international economy, the determinants of foreign economic policies, and the causes and consequences of economic globalization. IPE examines the interaction between politics and economics at the international level as well as between the international

and domestic levels, involving various political and economic actors (governments, MNSs, interest groups, as well as individuals). The course aims to develop the analytical skills of students in explaining theoretically international political and economic events.

Prerequisite: ECON 102 , ECON 104 , ECON 014 , I B 303 , or BUS 364
Bachelor of Arts: Social and Behavioral Sciences

PLSC 413: The Rise and Fall of the Soviet Union

3 Credits

Background, organization, and operation of the Communist Party and the government of the Soviet Union.

Prerequisite: 3 credits from: PL SC003 , PL SC014 , PL SC155 , or RUS 100
Bachelor of Arts: Social and Behavioral Sciences

PLSC 414: Dictators and Their Demise

3 Credits/Maximum of 3

Dictators and Their Demise examines the political economy of authoritarian rule. PL SC 414 Dictators and Their Demise (3) Dictators and Their Demise provides a broad exploration about how non-democratic governments throughout the world rule. We examine: the conditions that give rise to authoritarianism; the variety of authoritarian regimes; the strategies authoritarian leaders use to stay in power; the consequences of different types of authoritarianism for outcomes such as economic growth and human development; and the domestic and international sources of authoritarian demise. The course covers cases of authoritarian rule in: Chile, the Dominican Republic, Egypt, Malaysia, Mexico, and the former Zaire (now the Democratic Republic of the Congo or DRC). The course builds knowledge about the governments under which most people in the Global South lived during the 20th century. Even today, roughly half of the world's population lives under some form of non-democratic government. Yet almost all courses currently in the curriculum, particularly in the field of comparative politics, focus exclusively on democratic forms of government. This course therefore examines a new topic not currently offered in the curriculum. In addition to learning about different types of authoritarian rule, students form an understanding of how common foreign policy tools, such as economic sanctions, foreign aid, and human rights shaming, are likely to affect domestic politics in these countries. This knowledge helps students critically evaluate foreign policy relationships between democracies, such as the United States, and dictatorships. Course materials cover theoretical approaches to the study of authoritarian rule, in-depth case studies (including novels, biographies, and documentary), and empirical research. This course requires student presentations, weekly reading assignments, descriptive analysis of quantitative data in graphs, multiple written assignments, and a final take-home essay exam. Students develop analytic skills through the weekly written homework assignments in which they apply the broad theoretical concepts to analyze counterfactual situations from specific cases of authoritarian rule. Oral presentations develop inter-personal skills and require students to research specific cases of authoritarian rule currently in the news. This helps students critically evaluate current events. Finally, the written assignments require students to develop skills working with real data. Students collect and graphically present basic descriptive data about economic and human development in non-democratic countries: economic data, infant mortality, literacy, and indicators of women's well-being. Using real world data to make international comparisons helps

students develop skills to form and articulate complex arguments, and teaches them the basics of research design.

Bachelor of Arts: Social and Behavioral Sciences

PLSC 418: International Relations Theory

3 Credits

A survey of traditional and contemporary conceptual frameworks and theoretical approaches for the analysis of international relations.

Prerequisite: PL SC014

Bachelor of Arts: Social and Behavioral Sciences

PLSC 418H: International Relations Theory

3 Credits

A survey of traditional and contemporary conceptual frameworks and theoretical approaches for the analysis of international relations.

Bachelor of Arts: Social and Behavioral Sciences
Honors

PLSC 418W: International Relations Theory

3 Credits

A survey of traditional and contemporary conceptual frameworks and theoretical approaches for the analysis of international relations.

Prerequisite: PL SC014

Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

PLSC 419: The Bureaucratic State

3 Credits

Overview of structural, technological, decision-making, behavioral, and political subsystems of bureaucracy; emphasis on bureaucratic dynamics within larger environmental, interorganizational contexts.

Prerequisite: PL SC001 , PL SC002 , or PUBPL304W

Bachelor of Arts: Social and Behavioral Sciences

PLSC 420: State Making

3 Credits

Students learn about how national states arise, expand the territory and population they control, and persist or fail.

Prerequisite: PL SC003 or PL SC014

PLSC 421: Analysis of International Political Economy

3 Credits

Why and how do governments regulate cross-border flows of goods, capital, and people? What are the benefits and costs of globalization? What are the social tensions resulting from countries' integration into the world economy? This course examines the complex interplay between politics and the global economy using data and empirical analysis. It has two objectives. First, it will introduce students to topics on international trade, foreign investment and multinational corporations, international finance, economic development, etc. Second, it will teach students

quantitative methods to analyze issues related to globalization. The goal of this course is to provide students with substantive knowledge and analytical skills that are necessary to understand the politics of globalization.

Prerequisite: PLSC 309

PLSC 422: Comparative Urban Politics

3 Credits

Relationships between structure and evolution of city systems and patterns of political behavior.

Prerequisite: PL SC003 , PL SC020 , PL SC022 , or PL SC417
Bachelor of Arts: Social and Behavioral Sciences

PLSC 423: Post-Soviet Politics

3 Credits

Aspects of political transition and institutions of the fifteen Soviet successor republics; emphasis on Russia and republican confederation.

Prerequisite: PL SC003 , PL SC155 , or RUS 100
Bachelor of Arts: Social and Behavioral Sciences

PLSC 424: Topics in Comparative Government and Institutions

3 Credits

Topics in the comparative analysis of representative contemporary Western and non-Western governmental institutions.

Prerequisite: 3 credits from PL SC003 , PL SC020 , PL SC022
Bachelor of Arts: Social and Behavioral Sciences

PLSC 425: Government and Politics of the American States

3 Credits

Comparative analysis of political processes; executive, legislative, and judicial decision making and behavior; examination of systems functioning; selected public policies.

Prerequisite: PL SC001
Bachelor of Arts: Social and Behavioral Sciences

PLSC 426: Political Parties and Interest Groups

3 Credits

Interest group basis of American politics, analysis of party and group behavior in electoral politics and the policy process.

Prerequisite: PL SC001
Bachelor of Arts: Social and Behavioral Sciences

PLSC 427: Political Opinion

3 Credits

Nature and development of mass attitudes and opinions; political socialization; voting behavior; relation between opinions and public policy.

Prerequisite: PL SC001
Bachelor of Arts: Social and Behavioral Sciences

PLSC 428: Gender and Politics

3 Credits

Gender in politics in the United States and around the world; major areas of women and politics research. PL SC (WMNST) 428 Gender and Politics (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed as an overview to the field of women and politics. It examines the role that women play in politics in the United States and around the world. Students will begin by examining how women are socialized differently from men and how that socialization effects women's political attitudes and participation. Then students will focus on women in different political offices and how their behavior compares to that of their male counterparts. Students will then analyze the women's movement in the United States. Finally, students will turn to different theories of the ideal position of women and men in politics and use those theories to explore the issue of pornography. Students will be evaluated on a final exam, short essays (4 3-5 page essays), class participation, and a research paper (15 pages). This is an advanced course with 6 credits prerequisite in Women's Studies or Political Science. This course fulfills the American Politics and Comparative Politics distribution as well as the advanced course requirement for the Political Science major. It is an elective for a Women's Studies major. It also fulfills an International/Intercultural competency requirement. This course will be offered once a year with 35 seats per offering.

Prerequisite: 3 credits in political science or women's studies

Cross-listed with: WMNST 428

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

United States Cultures (US)

PLSC 429: Analysis of Electoral Politics

3 Credits

The new politics, its technology, and the strategic perspectives that underlie it. PL SC 429 Analysis of Electoral Politics (3)(BA) This course meets the Bachelor of Arts degree requirements. This course engages students in the empirical study of electoral politics in the United States. Elections in the U.S. are about voters, candidates and the rules that determine what these actors do to structure the course of the election and that lead to the final outcome. In empirical political science, analysis involves the systematic examination and evaluation of relevant data to solve a problem or answer a question. In this course, then, students use data about voters to systematically analyze their actions and decisions in U.S. presidential elections, with an emphasis on understanding why they make the choices they do to produce the resulting election outcomes. Throughout the course, students will draw on a range of publicly available data and use statistical analyses to investigate the "cost" of voting; evaluate competing theories of voter choice; examine how candidate evaluations, candidates' issue stances and retrospective evaluations of candidates influence voter choice; assess how vote choice is shaped by an individual's partisan identification; and evaluate how social demographic trends shape election outcomes. At the conclusion of the course, students will have the substantive knowledge and analytic skills to evaluate the assertions and conclusions of politicians, pundits, and political scientists as they contemplate campaigns and election outcomes. Students are required to have an understanding of introductory statistics (equivalent to the knowledge they would gain from PL SC 309 or STAT 200) prior to taking this course.

Prerequisite: PL SC001 , and PL SC309

Bachelor of Arts: Social and Behavioral Sciences

PLSC 430: Selected Works in the History of Political Theory

3 Credits

Detailed examination and analysis of a selected major work, thinker, or tradition in the history of political theory.

Prerequisite: PL SC017 or PL SC007

Bachelor of Arts: Social and Behavioral Sciences

PLSC 430W: Selected Works in the History of Political Theory

3 Credits

Detailed examination and analysis of a selected major work, thinker, or tradition in the history of political theory. PL SC 430W Selected Works in the History of Political Theory (3)The course will examine the tradition of 'liberal' political philosophy, focusing principally on the social contract tradition in Western political philosophy. We will examine the work of the 'classic' social contract theorists -Hobbes, Locke, Rousseau, and Kant - and discuss some more recent variants. We will then consider broad contemporary critiques of this tradition. In particular, we will consider charges of exclusion, parochialism, and biased conceptions of the self allegedly manifested in liberal theories, especially as those charges that center on considerations of race and gender.

Prerequisite: PL SC017 or PL SC007

Bachelor of Arts: Social and Behavioral Sciences

Writing Across the Curriculum

PLSC 431: Ancient, Medieval, and Renaissance Political Theories

3 Credits

Political theories of Plato and Aristotle; selected Greek, Roman, medieval, and Renaissance theorists through Machiavelli.

Prerequisite: PL SC017 or PL SC007

Bachelor of Arts: Social and Behavioral Sciences

PLSC 432: Modern and Contemporary Political Theories

3 Credits

Political theories of the seventeenth through the twentieth centuries, including Hobbes, Locke, Rousseau, Marx, Mill, Mosca, Weber, and selected theorists.

Prerequisite: PL SC017 or PL SC007

Bachelor of Arts: Social and Behavioral Sciences

PLSC 433: Political Foundations of the Early American Republic

3 Credits

The course introduces students to the major political and philosophical movements that influenced the founders of the early American republic. PL SC 433 Political Foundations of the Early American Republic (3)The course introduces students to the major political and philosophical movements that influenced the founders of the early American republic. The first section of the course, set in the ancient world, will examine the earliest experiments in democratic government in both Greece and the Roman Republic. In addition to studying the structure and traditions of ancient governments, students will consider competing theories for why these early democratic experiments ultimately failed. The second section

of the course traces the gradual evolution of representative democracy in Britain from the signing of Magna Carta to the quiet subjugation of the monarchy in the 19th Century. Recognizing that the theoretical structures of political power remain somewhat fixed in this period, students will consider how legal precedent can gradually transform seemingly static political institutions. The third section of the course examines American efforts to establish stable representative institutions in the aftermath of the Revolutionary War. Looking back at both ancient and modern constitutional traditions, students will examine how prior democratic experiments heavily influenced the deliberations of the founders both at the Constitutional Convention and in the establishment of the new federal republic.

Prerequisite: PL SC001 or HIST 020 or PL SC017

PLSC 434: War and Development in Africa

3 Credits

This course will examine the relationship between war and development in sub-Saharan Africa in the post colonial era. PLSC 434 / AFR 434 War and Development in Africa (3) (IL) This course will examine the relationship between development and war in sub-Saharan Africa in the modern era. Specifically, it will analyze the extent to which the processes of state building, nation building, and international intervention have contributed to the incidence of both civil war and international conflict in Africa. We will begin with a review of several theoretical arguments on the causes of warfare in Africa and then turn to a discussion of theses on African political development. This course complements present offerings in international relations and comparative politics in the PLSC department and can serve as an advanced undergraduate offering in the African Studies concentration in AFR. The course directly complements our present offerings in international conflict given that we don't have a regularly offered course that focuses on conflict in a specific region. In addition, it will augment our comparative politics offerings with an examination of prominent issues in comparative politics such as political development, democracy, and modernization. The course will fulfill the IL requirement and encourage students understanding of the historical background as well as the political, economic, and cultural factors that influence African politics. African conflicts are often viewed as "ethnic conflicts" and in this class students have an opportunity to assess the extent to which ethnic, linguistic, or religious factors influence the likelihood of conflict and contribute to development in African states. Students will also be required to write essays evaluating the contribution of a range of theoretical arguments on Africa's conflicts in order to assess the degree to which cultural more than political or economic factors contribute to their onset. Students will then have the opportunity to conduct more extensive research on a specific African case to develop their analyses further. These exercises will often require that students reevaluate their beliefs about social identities such as race (e.g. in Rwanda the difference between Tutsi and Hutu is often viewed as a "racial" difference between black Africans, which is at odds with most Western conceptions of race). They also require students to challenge stereotypes regarding the subordination of African values in conflicts to a simple concern with "tribe". Students will gain a broader knowledge and appreciation of the different values, traditions, and cultures evident in Africa and understand how these can both exacerbate and mitigate conflict. Evaluation in the course will consist largely of examination of the students' brief expository essays and larger case studies for which students will be encouraged to conduct original research. The course should be offered biannually with a class limit of about 40 students.

Prerequisite: PL SC014 , PL SC003 , AFR 110

Cross-listed with: AFR 434

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

PLSC 435: Foundations of American Political Theory

3 Credits

Political theories of colonial, revolutionary, and constitutional periods presented through works of selected thinkers and analysis of particular political problems.

Prerequisite: PL SC001 , PL SC017 , or PL SC007
Bachelor of Arts: Social and Behavioral Sciences

PLSC 436: Civil Wars

3 Credits

This course examines factors influencing the onset, duration, severity, termination, recurrence, and consequences of civil wars around the world. PL SC 436 Civil Wars (3) This course provides a broad exploration of the causes, characteristics, and consequences of civil wars. In particular, it investigates what makes civil wars more likely to occur, what influences how long they last, how severe they are, and how likely they are to recur, while also considering their consequences for the states that experience them. It considers the scholarly research on this topic over the past decade or more, and builds an awareness both for what are the known regularities as well as what are the continuing uncertainties about the place of civil war in the contemporary international system. It does this specifically within the context of scientific research about civil wars, and thus also advances student knowledge about how social scientists learn what they know about how the world works. Building on this perspective, and after absorbing the lessons to be learned from the literature, students will gain even greater appreciation for the quality of knowledge about civil wars by conducting their own detailed analysis of a civil war (each student will study one civil war of their choosing) asking how well the civil war they study fits patterns identified by the literature. This course complements, without duplicating, existing political science courses about militarized political conflict, and qualifies as one course majors can take to satisfy their 400-level course hours requirement. In addition to political science majors, it should be of interest to international politics majors, students in other social science majors, and perhaps Masters students in the School of International Affairs as well.

Prerequisite: PL SC003 or PL SC014

PLSC 437: War in World Politics

3 Credits

Causes, resolution, and consequences of crises and wars; testing theories of conflict using both case and statistical studies.

Prerequisite: PL SC014
Bachelor of Arts: Social and Behavioral Sciences

PLSC 438: National Security Policies

3 Credits

Impact of national security on U.S. government and foreign policy; roles and interaction of President, Congress, government agencies, interest groups.

Prerequisite: PL SC001 or PL SC014

Bachelor of Arts: Social and Behavioral Sciences

PLSC 439: The Politics of Terrorism

3 Credits

Analysis of political terrorism as a violent alternative for peaceful change and traditional warfare in the nuclear age.

Prerequisite: CRIMJ100 or PL SC014 , or permission of program
Cross-listed with: CRIMJ 439
Bachelor of Arts: Social and Behavioral Sciences

PLSC 439H: The Politics of Terrorism

3 Credits

Analysis of political terrorism as a violent alternative for peaceful change and traditional warfare in the nuclear age.

Cross-Listed
Honors

PLSC 440: Globalization and Its Implications

3 Credits

This course explores the socioeconomic implications of globalization.

Enforced Prerequisite at Enrollment: AFAM 100N or AFR 110 or PLSC 3 or PLSC 14 or PLSC 200N or PLSC 220
Cross-listed with: AFR 440, IB 440
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

PLSC 442: American Foreign Policy

3 Credits

Principles of American foreign policy; processes of policy formulation; roles of the President, Congress, the State Department, and other government agencies.

Prerequisite: PL SC014
Bachelor of Arts: Social and Behavioral Sciences

PLSC 443: Ethnic Conflict in Africa

3 Credits

This course explores the various causes and impacts of ethnic conflicts in the African context.

Prerequisite: AFR 110N; PLSC 1; PLSC 3; PLSC 7N; PLSC 14; PLSC 17N; PLSC 20
Cross-listed with: AFR 443
Bachelor of Arts: World Cultures
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

PLSC 444: Government and the Economy

3 Credits

Interactions of governmental and economic activity in American life. Survey of governmental (national, state, local) promotional, regulatory, and ownership policies.

Prerequisite: 3 credits in political science or economics
Bachelor of Arts: Social and Behavioral Sciences

PLSC 445Y: Politics of Affirmative Action

3 Credits

Examines history, politics, and economics of the use of special programs to advance racial interests in the U.S. PLSC 445Y / AFAM 445Y / LER 445Y Politics of Affirmative Action (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. The objectives of this course are to introduce students to the relationship between affirmative action and other policies purportedly designed to end racial inequality in the U.S. This course approaches the study of affirmative action in the context of the historic racial discrimination and inequality that Black Americans have faced since the founding of the Nation. The purpose of this course is to help students think about how contemporary and historic affirmative action policies relate to race, concepts racial inequality, the historic and continuing causes for racial inequality, public opinion, American politics and economic thought. The course materials will lead students through scholarly and popular articles, books and video presentations on the topic. It is hoped that students will become familiar with the history of affirmative action from its conception. Students will gain an intimate understanding of affirmative action economic and social outcomes on various racial groups. No prior knowledge is assumed, however a knowledge of civil rights history, quantitative methods, and constitutional law will be useful. The Politics of Affirmative Action satisfies the requirements for major and minor electives for the African American Studies, and major and minor electives for Political Science, and Labor Studies and Industrial Relations. Students are evaluated on the basis of an examination, term paper, class participation and class presentations of papers.

Prerequisite: AAA S 100 level course and PL SC001 or PL SC007

Cross-listed with: AFAM 445Y, LER 445Y

Bachelor of Arts: Social and Behavioral Sciences

United States Cultures (US)

Writing Across the Curriculum

PLSC 446: Business and Government Relations

3 Credits

An examination of the interaction between business and government across different types of political systems. PL SC 446 Business and Government Relations (3) This course examines the interaction between business and government across different types of political systems. Intellectual approaches from various disciplines will be used to understand different dimensions of business and government interactions. Models of interaction to be covered in the course include pluralism, corporatism, business as capital, business as firm models, sectoral models, network models, and clientalism. Particular attention will be given to the interactions of business and government during the policy process, from formation to implementation. Case studies from developed and developing countries, and examples of specific policy proposals will be utilized to help students analyze business interactions

with government, and political interactions with business. Specifically, students will analyze variation in the structure of business-government relations across countries' different political systems, economic systems, and development levels. Through this course, students will be able to construct an appropriate framework to evaluate the business and political implications of adopting different business-government models, and construct analytical frameworks to understand the policy implications of adopting different models for the same policy.

Prerequisite: PL SC001 ; PL SC003 ; or PL SC014

PLSC 447: Analysis of Public Opinion and Political Attitudes

3 Credits

This course engages students in the empirical study of public opinion. PL SC 447 Analysis of Public Opinion and Political Attitudes (3) The essence of democracy is popular sovereignty. The voice of the people must be freely expressed and send a clear message to elected officials. In turn, those officials must be responsive to citizens. This class focuses on the voice of the people with particular attention to several analytic questions: How do we measure public opinion? Do public opinion polls and other methods provide an accurate measure of public sentiment? How can we know if public opinion has changed? How can we utilize public opinion data to assess political polarization, civic competence, and levels of the public's trust in government? In this course, students will learn how to answer questions like these using the same data reported by the press, utilized by government officials, and examined by political scientists to assess the success of democracy in the United States and throughout the world. The course is organized around a series of contemporary policy topics (such as foreign policy, welfare or education) integrated with specific analytic techniques. By the end of the semester, students will be familiar with public opinion on many contemporary policy debates and they will learn a series of data analytic skills that can be applied to any topic. Students are required to have an understanding of introductory statistics (equivalent to the knowledge they would gain from PL SC 309 or STAT 200) prior to taking this course.

Prerequisite: PL SC001 and PL SC309

PLSC 449: Psychology of Terrorism

3 Credits

This course examines the fundamental attributes of terrorist psychology, including the motivations, strategies and behaviors of terrorists; the efforts to counter them; and the psychological impact of terrorism on the public. The course operates from a multidisciplinary perspective to consider a variety of topics, including: terrorist ideologies; how people come to join terrorist groups; the making and characteristics of a terrorist; recruitment methods; the leadership of terrorist groups; terrorism tactics, including the use of media and technology; the psychological consequences of terrorism on individuals, communities and global societies; psychological counterterrorism; blowback from counterterrorism; prevention tactics; and disengagement from terrorism. Prior course work in Psychology is not required. This course does not count toward the requirements of the Psychology major or minor.

Prerequisite: PLSC 14

PLSC 450H: Genocide and Tyranny

3 Credits

This course focuses on the conceptualization and socio-political determinants of genocide and tyrannical regimes, with an emphasis on the Holocaust.

Prerequisite: PL SC003 , PL SC007 or PL SC014 or HIST 121

Cross-listed with: JST 450H

Honors

PLSC 451: The Politics of Human Rights

3 Credits

This course examines the politics of human rights and repression, focusing on the causes and consequences of state sponsored violence and human rights violations.

Prerequisite: PL SC001 , PL SC003 , or PL SC014

Bachelor of Arts: Social and Behavioral Sciences

PLSC 452: Government and Politics of Central Europe

3 Credits

Politics and society in the Communist Era, the revolutions of 1989, and problems of adjustment to democracy and market.

Prerequisite: PL SC003 , PL SC020 , PL SC022 , or PL SC155

Bachelor of Arts: Social and Behavioral Sciences

PLSC 453: Political Processes in Underdeveloped Systems

3 Credits

Comparative analysis of the political, social, and economic problems characteristic of underdeveloped systems.

Prerequisite: PL SC003 , PL SC020 , or PL SC022

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

PLSC 454: Government and Politics of Africa

3 Credits

Contemporary African politics, institutions, and ideologies; patterns of change, social forces, and nation building in selected African states. PLSC 454 / AFR 454 Government and Politics of Africa (3) (IL)(BA)
This course meets the Bachelor of Arts degree requirements. In this course, we will discuss the current democratization trend in Africa by focusing on the experiences of African countries. The course is divided into three sections. Part One considers a range of factors that affect politics in Africa. We will discuss in depth the following factors: colonialism, nationalism, the relationship between state and society, ruler-ship, the military, political parties, and economic development. Then, we will consider the experiences of our four cases, to gain a historical background. In part two, we will focus on democratic transitions. We will discuss the factors that enable transitions to occur, as well as the process that transitions follow. Then, we will consider four transitions: two that resulted in the installation of a democratic government (Nigeria in 1979, Sudan in 1986) and two that ended in continued authoritarianism (Angola in 1992, Kenya in 1978). Part three considers the prospects of democracy. We will discuss the probability of a democratic transition occurring in the near future. The goals of this class are four fold. First,

students will gain detailed knowledge about four African countries. Second, we will learn how to compare countries. Third, students will have a better understanding of the democratization process in general, and will be able to explain or predict democratization beyond the four cases discussed in this class. Finally, the experiences of these four countries offer a deeper understanding of what democracy is and provide students with greater flexibility to fulfill requirements in either the African and African American Studies major or the Political Science/International Politics major. PLSC 454 / AFR 454 will be offered once per year with 35-50 seats per offering.

Prerequisite: 3 credits from: AFR 110 , PL SC003 , PL SC020 , or PL SC022

Cross-listed with: AFR 454

Bachelor of Arts: World Cultures

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

PLSC 455: Governments and Politics of Western Europe

3 Credits

Comparative analysis of political and governmental structures of major West European nations; main functions and processes of such structures.

Prerequisite: PL SC003 or PL SC020

Bachelor of Arts: Social and Behavioral Sciences

PLSC 456: Politics and Institutions of Latin-American Nations

3 Credits

Social forces and processes, governmental institutions, foreign policies of major states of Latin America.

Prerequisite: HIST 179 , PL SC003 , PL SC020 , or PL SC022

Bachelor of Arts: Social and Behavioral Sciences

PLSC 458: Government and Politics of East Asia

3 Credits/Maximum of 3

This course examines the political systems, institutions, and leadership of East Asian countries. This course examines the political systems, institutions, and leadership of East Asian countries. Students will learn about the nature and extent of political change that has occurred across East Asia, with particular attention to the history of the region, and the regime changes that have occurred in East Asian countries. Students also will compare the political development and experiences of different countries in the region, and consider how their development and experiences compare to countries beyond East Asia. Upon completion of the course, students will have knowledge of the government and politics of East Asian regimes, and the region's role in global politics.

Prerequisite: 3 credits from PL SC003 , PL SC020 , PL SC022

Bachelor of Arts: World Cultures

Bachelor of Arts: Social and Behavioral Sciences

PLSC 459: Culture and World Politics

3 Credits

Role of culture in world politics.

Prerequisite: PL SC014

Cross-listed with: AFR 459

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

PLSC 460: Science, Technology, and Public Policy

3 Credits

The all-pervasive importance of science and technology policy in modern societies and mechanisms and processes by which it is made.

Prerequisite: 3 credits in natural sciences or engineering, 3 credits in social and behavioral sciences

Cross-listed with: STS 460

Bachelor of Arts: Social and Behavioral Sciences

PLSC 461: Politics of the European Union

3 Credits

This course introduces students to the history, institutions and politics of the European Union. PL SC 461 Politics of the European Union (3) (IL) This course introduces students to the history, institutions and politics of the European Union. We will survey the central theories of political and economic integration, and compare them to how European integration has unfolded. We will analyze the EU's institutions and political processes, and review major EU policy areas.

Prerequisite: PL SC003 or PL SC020
International Cultures (IL)

PLSC 462: Marxist and Socialist Political Theory

3 Credits

Analysis of major problems and key works in the Marxist and Socialist tradition; dialectical materialism, alienation, class warfare, etc.

Prerequisite: PL SC017 , PL SC007 , PL SC413 , or PL SC452
Bachelor of Arts: Social and Behavioral Sciences

PLSC 464: Extractive Industries in Africa

3 Credits

Socioeconomic and environmental impacts of extractive industries in Africa.

Prerequisite: AFR 110 or at least one of the following: PL SC003 or PL SC014 or PL SC022

Cross-listed with: AFR 464
International Cultures (IL)

PLSC 465Y: Democratization in Asia

3 Credits

A course which identifies components of democracy, such as definitions, measures, datasets, and the democratization process. PL SC (ASIA) 465Y Democratization in Asia (3) (IL) This class is an upper-level seminar on democratization in Asia. How do countries move from having an authoritarian regime to a democratic government? Why are some democratic governments stable while others are not? In this class, we will focus on democratization theory and how it applies to countries in Asia. This course is organized into two parts. In the first part of the course, we will discuss democracy and democratization theory. We will cover such components as: definitions, measures, datasets, and the different stages of the democratization process. In the second part

of the course, we will apply these concepts and measures to specific Asian countries. Course topics will be explored through readings from textbooks, articles, datasets, and media sources. By the end of the course, students will have a deep knowledge about a wide range of Asian countries. Students will develop the skills to compare countries, will understand the democratization process within Asia, and will be able to generalize from their knowledge to evaluate democratization events around the world. Finally, students will gain a deeper understanding of what is democracy and how easy or difficult it is to install and maintain. This course fulfills the distribution requirement for comparative politics, as well as the advanced and related course requirements for Political Science majors. In addition, the course fulfills the supporting course requirement for International Politics majors and the related areas requirement for Asian Studies majors. Finally, the course fulfills the requirements for writing across the curriculum and other cultures.

International Cultures (IL)

Writing Across the Curriculum

PLSC 466: Political Psychology

3 Credits

An interdisciplinary investigation of the major topics and debates characterizing the subfield of political psychology. PL SC 466 Political Psychology (3) This course offers an interdisciplinary investigation of the major topics and debates characterizing the subfield of political psychology. It draws on research being done in a variety of disciplines and disciplinary subfields including social, developmental and clinical psychology; the cognitive neurosciences; biological anthropology; genetics; evolution; and behavioral economics to examine political behavior. Specifically, the course will examine the thinking and actions of both political elites and the mass public, and consider the reasoning processes they employ in order to make sense of the political world. Topics to be covered include how emotions (e.g., fear, lust) shape human reasoning; how preferences develop; how differences in cognition, emotion and personality inform political judgment and shape political leadership; how prejudices develop and affect war and other conflicts; how political and social identities develop and how they affect individuals' political judgments and decisions; how neurobiological influences operate in conjunction with social and cultural factors to affect how individuals process information; and how genetics and hormones affect individuals political development and behavior. Through these and other topics covered in the course, students will develop an understanding of how political elites and ordinary citizens process information, develop preferences and make decisions, and why, as a consequence, they act as they do. This course fulfills the distribution requirement for American politics and comparative politics, as well as the advanced and related course requirements for Political Science majors. The course also fulfills the supporting course requirement for International Politics majors.

Prerequisite: PL SC001 , PL SC003 , PL SC014 , or PSYCH100
Bachelor of Arts: Social and Behavioral Sciences

PLSC 467: International Relations of the Middle East

3 Credits

The international relations of the Middle East, stressing national security policies of regional and outside actors, and major contemporary conflicts.

Prerequisite: PL SC014 or HIST 181

Bachelor of Arts: Social and Behavioral Sciences

PLSC 468: Politics and the Media

3 Credits

An examination of how politics and public policy affect and are shaped by the news media, as a political institution, in America.

Prerequisite: PL SC001 , PL SC003 , PL SC022 , PL SC409 , CAS 409 , CAS 175 , CAS 201 , CAS 272 , COMM 100 or COMM 110

Bachelor of Arts: World Cultures

Bachelor of Arts: Social and Behavioral Sciences

PLSC 469: Government and Politics of South Asia

3 Credits

This course offers an overview of the politics of modern South Asia with specific focus on Afghanistan, India and Pakistan. ASIA (PL SC) 469 Government and Politics of South Asia (3) (IL) This course provides an overview of the politics of modern South Asia with particular attention to the experiences of Afghanistan, India and Pakistan. It examines theories of political and economic development and ethnic politics, the impact of the British colonial experience on South Asia, the rise of nationalism, and the emergence of independent nation states in the region. Three important themes are explored throughout the course: (1) the state of economic development in the three countries; (2) the relationship between identity politics and violence; and (3) the international relations of these countries, with particular attention to terrorism and nuclear policy. Course topics will be explored through readings from textbooks and assigned articles, articles from current news sources and, documentary films from the three countries. By the end of the course, students will have knowledge of the politics of Afghanistan, India and Pakistan and the political factors that have shaped their development over the past century. Students will acquire the tools necessary to evaluate critically the impact of war, the legacy of colonialism, and the challenge in building durable democratic institutions. This course fulfills the distribution requirement for comparative politics, as well as the advanced and related course requirements for Political Science majors. The course also fulfills the supporting course requirement for International Politics majors and the related areas requirement for Asian Studies majors.

Prerequisite: PL SC003 , PL SC014 , PL SC022 or ASIA 100

Cross-listed with: ASIA 469

International Cultures (IL)

PLSC 471: American Constitutional Law

3 Credits

The origins of judicial review, landmark decisions of the Supreme Court, and their impact on the American form of government.

Prerequisite: PL SC001

Bachelor of Arts: Social and Behavioral Sciences

PLSC 471H: American Constitutional Law

3 Credits

The origins of judicial review, landmark decisions of the Supreme Court, and their impact on the American form of government.

Bachelor of Arts: Social and Behavioral Sciences

PLSC 472: The American Legal Process

3 Credits

Analysis of the roles, procedures, and policies characterizing the American legal system.

Prerequisite: PL SC001

Bachelor of Arts: Social and Behavioral Sciences

PLSC 473: American Judicial Behavior

3 Credits

Analyzes behavior of judges and other participants in the legal process; examines how and why courts function as policymaking bodies.

Prerequisite: PL SC001

Bachelor of Arts: Social and Behavioral Sciences

PLSC 474: Civil Liberties and Due Process

3 Credits

Fundamental problems relating to civil liberties and due process.

Prerequisite: PL SC001

Bachelor of Arts: Social and Behavioral Sciences

PLSC 476: Empirical Legal Studies

3 Credits

This course engages students in the empirical study of law and the courts. PL SC 476 Empirical Legal Studies (3) The tools of social science affect both how scholars understand the workings of the judicial system and how lawyers practice law. This course engages students in the empirical study of law and the courts. It provides them with the substantive knowledge, and statistical and analytic skills they need to understand both (1) how social scientists use empirical evidence to make inferences about laws, judges, and legal institutions and (2) how statistical methods are used in legal practice. Through the course, students will undertake statistical analyses and learn how to present these analyses to nontechnical audiences, such as jurors, employers, and the general public. The course begins with an overview of the social scientific study of law and the courts, and then investigates a series of topics, including how social science and empirical evidence are used to make legal claims and establish legal standards, to provide a context for judicial decisions, and to litigate cases.

Prerequisite: PL SC001 , and PL SC309

PLSC 477: Sex, Race, & Justice: The U.S. Supreme Court and Equality

3 Credits

The American judicial system has played an active role in policing the rights of disadvantaged groups in American history. In this course, we will draw upon political science and legal approaches to examine the judiciary's approach to ensuring equality through an examination of cases involving same-sex rights, affirmative action, and voting rights. We will explore difficult questions such as: How does the Court define equality? Are justices' decisions driven by law, ideology, or both? Is the current Supreme Court particularly activist? Readings include court

cases, newspaper articles, and essays from political science and law journals.

Prerequisite: PLSC 1
United States Cultures (US)

PLSC 478: China and the World

3 Credits

This course examines China's economic reform and development and its engagement with the world since 1978. It pays close attention to the interplay of politics and economics. The course first examines the initiation and process of China's economic reform. This part of course covers topics including state-owned enterprise reform, township and village enterprises, fiscal decentralization, and tax reform. Then the course explores China's interactions with the world, paying special attention to trade, foreign investment, and development aid. Finally, the course addresses the issues and challenges that China faces for sustainable development, including corruption, income inequality, and environmental deterioration. The goal of this course is to give students a comprehensive view of the political economy of contemporary China and its relationship with the world and to develop students' understanding of economic reform and development in the developing world.

Prerequisite: PLSC 3 or PLSC 14 or ASIA 100Z
Cross-listed with: ASIA 478, GLIS 478
International Cultures (IL)

PLSC 479: Nuclear Weapons in International Relations

3 Credits

This course introduces students to the role of nuclear weapons in international relations. It covers the origins of nuclear weapons; the reasons for nuclear proliferation; nuclear deterrence; nuclear strategy; the consequences of nuclear weapons for global stability and security; and counterproliferation and disarmament efforts. In addressing these issues, we will study a variety of countries that have pursued or attained nuclear weapons. The objective of the course is to give students a comprehensive understanding of how nuclear weapons have affected international relations since their development and to enable students to analyze current debates about nuclear issues in a critical and informed way.

Prerequisite: PLSC 14
Bachelor of Arts: Social and Behavioral Sciences

PLSC 480W: Congress and the Presidency

3 Credits

Basic characteristics and processes of the national legislature and executive; roles and interaction of these institutions in the policy process.

Prerequisite: PL SC001
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

PLSC 481: Global Political Economy

3 Credits

This course examines states, markets, power, production, and the relations between the various transnational agents who act in these areas. Students may not receive credit for PL SC 481 and PL SC 412.

PL SC 481 Global Political Economy (3) Changes in the international system in the 1970s led to increased interest on the part of students of international relations in the political economic processes underlying change. Important debates among scholars in both mainstream theoretical traditions and in critical theory gave rise to International Political Economy as an increasingly visible sub-field in International Relations. This seminar tracks the historical relations between the development of capitalism as an economic system and the emergence and transformation of global politics, using concepts developed in the study of political economy. Seminar discussion, examinations, and a short research paper will be used to evaluate students' learning.

Prerequisite: PL SC014 or INTST100
Bachelor of Arts: Social and Behavioral Sciences

PLSC 482: American State and Urban Politics

3 Credits

Explores basic characteristics and processes of American state and urban politics; nature of intergovernmental relations involving these governmental levels.

Prerequisite: PL SC001
Bachelor of Arts: Social and Behavioral Sciences

PLSC 483: Seminar in National Security Policy

3 Credits

This course provides a comprehensive overview of the process of U.S. national security policy - the principles, practices, and participants in the development and implementation of security strategy and policy. It applies theories and models to the bureaucratic policy making structure of the Executive Branch, looks at the roles of other governmental participants, and evaluates the many factors that constrain decision making. It assesses the impact of non-governmental entities such as the media, interest groups, and public opinion, and considers the effect of changing domestic factors on the process. Finally, it prepares students to be knowledgeable and effective participants in the process and presents them with a practitioner's framework for policymaking. The main themes of this course are that the U.S. Constitution established a federal government of separate institutions sharing powers within an intentionally inefficient system of checks and balances that has evolved by virtue of a dynamic process of Constitutional Amendments, legislative statutes, judicial decisions, and executive actions; and, that national security decisions are best understood by considering the bureaucratic context in which they are made within the Executive Branch, and as a result of the interaction of other governmental and non-governmental participants.

Prerequisite: seventh-semester standing
Cross-listed with: HLS 483, PUBPL 483

PLSC 484W: The Foreign Policy of Soviet Successor States

3 Credits

Relations between Russia and The Newly Independent States (NIS); Russia's relations with selected foreign states and political Institutions; regional impact of the NIS in Baltic, Asian, and Central Asian areas.

Prerequisite: PL SC003
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

PLSC 485: International Migration

3 Credits

International migration relates to the mobility of humans across international borders for protection, settlement, and/or labor. Over the late 20th century, international migration (both viewed as immigration and emigration) has become a salient issue of national politics across most countries in the world, and different regional and global forums of governance. This course sets to contextualize the political discussion of migration by systematically analyzing the history, theories, and categories of migration. It presents a survey of the many subtopics discussed by the interdisciplinary migration literature that directly relates to broader political issues, including issues of development, immigration, and border control politics, citizenship and integration, the Migration state, migrants' agency, environmental and climate change-induced migration, etc. While covering important aspects of immigration in the United States, and more broadly in the West, it also intentionally looks at migration in the global South, where most migration and displacement occurs. This course also addresses directly ethical and methodological issues related to the study and representation of migration.

Prerequisites: PLSC 14 or PLSC 3

PLSC 486: International Culture in East Asia

3 Credits

Study of the role of culture in East Asian regional and East-West international relations. ASIA 400 (PL SC 486/HIST 489) International Culture in East Asia (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the place of culture in international history through a comparative look at the role of cultural circulation and exchange in relations among China, Korea, and Japan (and between East Asia and the West) from the propagation of Buddhism in the first century A.D. to present-day circulation of popular music, movies, and comics. We will explore the international politics of culture and the politics of international culture, considering questions of what constitutes culture, whether it is ever entirely separate from politics, and how that separation has evolved over time. These larger themes of the course will be tackled by following the historical movement of concrete objects and people throughout the region. This is a course in international history, but it also seeks to explore aspects of international relations. The goals of the class are not only to gain an understanding of the uses and impact of culture in international relations, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will think critically about assigned texts to develop their own interpretations of their meanings. Through readings, discussions, presentations, and the final project, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students' appreciation of the assigned readings, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytic and expressive abilities.

Prerequisite: ASIA 100; ASIA 101; ASIA 102; ASIA 103; ASIA 104; ASIA 172; ASIA 174; ASIA 175; ASIA 197; JAPNS 120; JAPNS 121; CHNS 120; CHNS 121; KOR 120; KOR 121
Cross-listed with: ASIA 400
Bachelor of Arts: World Cultures

International Cultures (IL)

PLSC 487: International Law and Organizations

3 Credits

Major topics and issues of international law with special attention to institutional arrangements (international organizations) through which that law operates. PL SC 487 International Law and Organizations (3) The course is useful in two distinct ways. First, it aids in the understanding of how countries conduct their relations with one another. Second, studying international law-it is a distinct system of law-- helps students to assess whether they might be suited for law school. The course introduces international law and international governmental organizations (the two are closely linked) and their role in the management of peaceful relations among countries as well as during international conflict. Both the contributions and limitations of international law will be analyzed. International law is viewed both as a body of norms countries feel an obligation to follow and as a means of communication among countries. Major topics covered include sources of international law, human rights law, environmental law, economic law, law of the sea, and the use of force. There are several hundred major intergovernmental organizations. Several of the most prominent will be discussed including the UN, the WTO, the European Union, the International Labor Organization, and the International Court of Justice. Examinations are principally of the essay variety although a command of factual information is essential to success in the course. Students also prepare critiques of important international legal cases (many of which have been decided by national courts) and of treaties (the principal modern manifestation of international law).

Prerequisite: PL SC003 or PL SC014

Bachelor of Arts: Social and Behavioral Sciences

PLSC 488: Comparative Public Policy

3 Credits

Comparative methodology and public policy implementation in postindustrial societies; selected case studies of policy output. PL SC 488 Comparative Public Policy (3) Comparative Public Policy is an upper level political science course that includes components of comparative politics, public administration, and descriptive economics. The course presumes that developed industrial democracies confront common challenges in meeting human needs and that policy comparison is worthwhile despite distinctive societies and political cultures. For example, government involvement in the provision of health care varies widely from Britain's National Health Service to the largely private approach of the United States. Nevertheless all health care systems confront rising technology costs, an ageing population, and rising performance expectations. A primary purpose of the course is to consider the origin and development of individual country programs while assessing the common challenges. Cross national comparison becomes relevant to the course by including some available data on costs, implementation and outcomes. Because the course includes about six distinct areas, e.g., education, taxation, urban planning income support, and overall macroeconomic policy, the course will depict profiles of policymaking in Europe, North America and Japan. Ideally comparison should help students to evaluate the effectiveness of policy choices of a particular country and government. A second objective of the course will be to examine the national approaches to the relationship between the state and private economic activity. Not only does government expenditure amount to nearly half of some country's total output, government choices create distinctive legal environments for business

activity. Antitrust, health, wage, and consumer regulation offer an excellent point of comparing different incentives for economic activity in the United States and Europe. Apart from policy choices mentioned in the first paragraph, the regulation of economic activity has cumulative results for employment and the distribution of income. This portion of the course is intended to be somewhat more elementary than the first because of the probability that students will be less familiar with its content. The primary objective will be to help students understand the variations among market economies and reasons for their description as "neoliberal," "social market," or "corporatist." Finally, the course will examine some current ideas about recent changes in the global economy and their consequences for national policy. Clearly "globalization" has become a matter of political concern owing to its consequences for the creation of wealth, employment, growth and distribution. While the course cannot devote detailed or exclusive to the European Union, Europe's response to rapid movements in short term capital and investment presents an interesting point of comparison with the United States and Japan. The course should enable students to understand the meaning and criticism of "globalization" as a factor in shaping some national policies.

Prerequisite: PL SC003

Bachelor of Arts: Social and Behavioral Sciences

PLSC 489: Public Administration

3 Credits

A survey of the major approaches to the management of most governmental agencies. PL SC 489 Public Administration (3) Government Management is a three-credit Political Science course that teaches the role and function of bureaucracy. Although some investigation is made about state and local government functions, the primary focus of the course is on the federal bureaucracy. In particular, the course illustrates how the interrelationship between the three branches of government exists using the various federal agencies as functionaries. The course first examines the basic functions of bureaucratic agencies in the modern world; primarily their distributive, re-distributive and regulatory activities. In addition to these functions, the various external and internal political forces that form the mission of the agencies are examined. Next the internal function of a bureaucracy is examined by highlighting the various roles of the people who comprise a typical large agency. The roles of the political appointee, the career professional, the general civil servant and the union laborer are examined, with the GS system of the federal government used as a guide to show the hierarchy that exists in a large agency. By highlighting both the functions of a typical agency and examining its role in the larger government structure, and by looking inside the bureaucracy to see the various short and long term roles of the people who comprise those agencies, the student appreciates how large bureaucracies are at the same time always changing, and always staying the same.

Prerequisite: PL SC001

Bachelor of Arts: Social and Behavioral Sciences

PLSC 490: Policy Making and Evaluation

3 Credits

Advanced analysis of public policy, emphasizing policy evaluation and the factors that determine policy success and failure.

Prerequisite: PL SC001 , PL SC002 , or PUBPL304W

Bachelor of Arts: Social and Behavioral Sciences

PLSC 491: Peace and Conflict Studies Seminar

3 Credits

Advanced study of major contemporary issues of peace and conflict; includes anthropological, technological, psychological, and economic perspectives.

Prerequisite: PL SC014 , PL SC091

Bachelor of Arts: Social and Behavioral Sciences

PLSC 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

PLSC 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

Honors

PLSC 495: Political Science Internship

1-6 Credits/Maximum of 6

Combining experience in government offices, related agencies, or law firms, with appropriate readings and a research paper/report.

Prerequisite: prior consent of supervisor, adviser, or department head; applicable departmental internship requirements such as satisfactory completion of required 300- or 400-level courses appropriate for the internship program selected

Bachelor of Arts: Social and Behavioral Sciences

PLSC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Social and Behavioral Sciences

PLSC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

PLSC 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

PLSC 499: Foreign Study--Government

1-12 Credits/Maximum of 12

Study, in selected foreign countries, of political institutions.

Prerequisite: PL SC003 , 3 credits in economics, history, political science, or sociology

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

Polymer Engineering Science (PES)

PES 213: Polymer Chemistry Lab

2 Credits

This lab is designed to provide a practical and theoretical understanding of polymer synthesis and the analysis of those polymers. Students will prepare different classes of polymers learning techniques of addition and condensation reactions. These will include solution and melt polymerization processes. Syntheses will provide direct exposure to concepts such as reaction initiation, propagation and termination as well as reaction kinetics. The effects of time, temperature, pressure, catalysts, stoichiometric ratio and agitation rates will be studied to understand the different polymerization processes. Students will learn polymer analyses and techniques -thermal (Differential Scanning Calorimetry, Thermal Gravimetric Analysis), molecular weight, viscosity/rheology tests, Fourier Transformation Infrared spectroscopy- to understand both the process and the polymers prepared.

Enforced Prerequisite at Enrollment: CHEM 210 Enforced Corequisite at Enrollment: MATSE 202

PES 305: Fluids/Heat Transfer

3 Credits

This course covers fluid mechanics and heat transfer topics that the Plastic Engineering Science students are most likely to need in their professional lives. Students can gain a basic understanding of energy and energy interactions, various mechanisms of heat transfer, and fundamentals of fluid flow. The course was designed to present the basic principles of fluid mechanics and heat transfer as well as illustrate numerous and diverse real-world engineering examples to give students a feel for how thermal-fluid sciences are applied in engineering practice. The course was also designed to develop an intuitive understanding of thermal-fluid sciences by emphasizing the physics and physical arguments. Such a course can also instill in students the confidence and the background to do further reading of their own and to be able to communicate effectively with specialists in thermal-fluid sciences.

Enforced Prerequisite at Enrollment: MATSE 445

PES 320: Polymer Sustainability

3 Credits

This course will address the problem of environmentally-persistent plastic pollution. The environmental science of plastic pollution, including quantification techniques, consequences for specific ecosystems, and the incorporation of microplastics in the environment will be taught. Commercial and new biobased and biodegradable polymers will be taught, with a focus on the environmental requirements for total degradation, and the potential impacts of degradation products. Finally,

life cycle analysis and the concept of designing plastic materials and components for a circular economy will be introduced through case-study analysis.

Enforced Corequisite at Enrollment: PES 340

PES 323: Rheology Lab

2 Credits

This lab is designed to provide a practical and theoretical understanding of the rheological behaviors of thermoplastic polymers, curing kinetics of chemical and physical crosslink polymers, as well as the crystallization kinetics of semi-crystalline polymers. Evaluation and characterization of phase separation in binary miscible polymer blends and order-disorder transition in block copolymer will be studied rheologically for different blends and block copolymers, respectively. In addition, the students will learn the practical and fundamental aspects of rheology in the linear and non-linear viscoelastic regimes under wide range of temperature, shear rate, and strain amplitude. Student will be trained to operate, calibrate and maintain a number of rheometers, such as rotational rheometer and capillary rheometer. Selection of the right geometry (e.g. parallel plate, cone-plate, concentric cylinders, rectangular torsion, three-point bending, etc.) for specific rheological measurements is very crucial and will have significant effect on the accuracy of the data. The selection of geometry is also related to the different states of the material (e.g. solid, liquid, and gel). The advantages and disadvantages or limitation of each geometry will be studied. Analysis and theoretical fitting to the experimental data will be an essential part of this lab course. Several rheological principles and models will be studied in this course, such as WLF or Time-Temperature Superposition Principle, Cox-Merz Rule, classical theories of Maxwell, Rouse, and Doi-Edwards as well as Cross, Carreau-Yasuda, and Palierne models.

Enforced Prerequisite at Enrollment: MATSE 445 Enforced Concurrent at Enrollment: MATSE 447

PES 340: Polymer Characterization

2 Credits

The standard techniques used to investigate and identify polymer systems will be discussed in detail. The fundamental theory that drive each technique will be taught, including Bragg's law and the use of Fourier transforms in data analysis. Lectures and demonstrations using molecular level characterization methods will teach the students the state of the art in determining molecular weight and molecular weight distributions, defining end groups, and assessing additives in a polymer formulation. Microstructural level analysis instruction will enable the students to select the proper technique to assess polymer microstructural features such as crystalline content and phase identification, local (micro, nano) properties such as hardness, the distribution of nanoparticles in a composite material, and the hierarchy of structure that can develop in complex polymer blend systems such as phase separation and interphase development. Thermal analysis techniques will emphasize the relationships between heating/cooling rates to final morphology formed during processing as well as more traditional aspects such as identifying the glass transition and melting enthalpy of polymers. X-Ray techniques will be introduced as a means to explore the micro, nanostructure, and orientation of semicrystalline polymers.

Enforced Prerequisite at Enrollment: PES 213 Enforced Corequisite at Enrollment: PES 341

PES 341: Polymer Characterization Lab

1 Credits

This lab will parallel the content taught in PES 340, Materials Characterization. Focus on sample preparation, variables in characterization techniques, and results interpretation will be emphasized. Both neat (unfilled) polymers and polymer composites will be used to teach several important polymer characterization techniques. Molecular/atomic characterization techniques will include nuclear magnetic resonance, chromatography, and Fourier transform infrared and mass spectroscopy. Microstructural characterization techniques include visible and polarized light microscopy for the characterization of semicrystalline microstructure and composite dispersion, environmental scanning electron microscopy, thermal analysis including differential scanning and fast scanning calorimetry, thermogravimetric analysis and dynamic mechanical analysis. Data interpretation from X-Ray diffraction techniques will also be completed.

Enforced Prerequisite at Enrollment: PES 213 Enforced Corequisite at Enrollment: PES 340

PES 351: Polymer Processing Lab

1 Credits

This lab covers basic melt processing techniques including injection molding, extrusion, blow molding, thermoforming, compression molding and twin screw extrusion. The course will focus on the relationship between processing parameters and the quality of the polymer sample produced from all fabrication techniques. After fabricating samples (tensile bars, impact bars) mechanical properties and material degradation as a result of processing will be assessed. Twin screw compounding will be used to produce experimental polymer composite material that will then be injection molded, and the physical properties of these materials assessed and compared as a function of both material composition and compounding conditions.

Enforced Prerequisite at Enrollment: MATSE 202 Enforced Corequisite at Enrollment: MATSE 445 and PES 365

PES 365: Processing for Polymer Product Performance

3 Credits

This course is designed to complement the fundamental understanding of viscoelastic polymer behavior both in the melt and in the solid state, with an emphasis on properly considering these properties in quality plastic part design. The student will be introduced to plastic part design, plastic mold and die design, and polymer flow simulation as it relates to injection molding. Part design will emphasize the importance of designing to accommodate the ultimate manufacturing technique; concepts such as gating location and part draft will be introduced. Mold design will be introduced in order that students will understand the importance of proper cooling line placement, runner design, and realistic gating location and melt delivery options. Flow simulation is introduced as a tool to anticipate the influence of the molding process on the final part properties, including dimensional stability. Solid part models will be considered in both flow analysis and subsequent finite element analysis for the prediction of mechanical properties, which are ultimately a product of part design, processing conditions, and material properties. Finally, the course will introduce the students to the influence

of part geometry and processing conditions on final part properties by conducting a series of labs where the students test and compare the mechanical properties of a complex molded sample (such as a bearing cage or a drill housing) to a standard test specimen, highlighting the deviation from "data sheet" properties that results from processing and geometric effects.

Enforced Prerequisite at Enrollment: PES 213

PES 440: Failure Analysis and Characterization

3 Credits

This course will teach a responsible, thorough approach to failure analysis of polymer materials and products. In polymer product failure, the root cause analysis requires the engineer to consider material science (composition and degradation), mechanical design and loading, processing history, and user interaction with the product. This requires a disciplined and interdisciplinary approach to problem solving. In this course, techniques such as microscopy, FTIR, and mechanical testing will be used strategically to develop data-driven approach to failure analysis. Real case studies will be used (obtained from the literature or industry) to augment theoretical learning, and these case studies will be analyzed with regard to the quality of the investigative approach. Strong emphasis will be placed on teaching the importance of adopting proper accelerated aging theory.

Enforced Prerequisite at Enrollment: MATSE 447 and PES 365 Enforced Corequisite at Enrollment: PES 460

PES 441: Failure Analysis Lab

1 Credits

This course will cover the laboratory techniques required to carry out responsible, thorough approach to failure analysis of polymer materials and products. In polymer product failure, the root cause analysis requires the engineer to consider material science (composition and degradation), mechanical design and loading, processing history, and user interaction with the product. This requires a disciplined and interdisciplinary approach to problem solving. In this course, techniques such as microscopy, FTIR, and mechanical testing will be used strategically to develop data-driven approach to failure analysis. Real product failures, including recycled materials and degraded natural products, will be used to ensure the student develops relevant experience applying laboratory techniques to real-life failure analysis.

Enforced Corequisite at Enrollment: PES 440

PES 446W: Senior Project 1

1 Credits

Supervised student activities on research and/or design projects identified on an individual or small group basis. The combination of PES 446W, PES 447W and PES 448W fulfills the degree requirement for Writing Across the Curriculum as well as constituting the required Capstone Experience for students in Polymer Engineering and Science. Writing Across the Curriculum courses include writing assignments that relate clearly to the course objectives and serve as effective instruments for learning the subject matter of the course. In writing-intensive courses, assignments are designed to help students investigate the course subject matter, gain experience in interpreting data or the results of research, shape writing for a particular audience, or practice the type of writing associated with a given profession or discipline. Therefore,

in this course, and the two subsequent Senior Design Courses, each written assignment will be evaluated, and feedback will be provided to the student, either in written or verbal form. In all instances, students will provide draft copies of reporting assignments and will be given the opportunity to revise their work to incorporate revisions and receive additional points. This iterative process is designed to provide the student with continuous feedback on quality and effectiveness of written communication. In PES 446, students are required to complete a comprehensive review of published literature that pertains to their senior project. This activity will support the formulation and succinct statement of a project hypothesis that will then be justified and defended (Justification) in the project report. Based on these activities a project plan, represented by a Gantt Chart with anticipated milestones and deliverables will be developed. The draft literature review provided at the beginning of the course will be updated prior to the final presentation, to be delivered at the end of the semester. Report sections will be due in draft form on an approximately bi-weekly basis. Preliminary grading will be provided along with critique of written communication. Revised versions will be due for final grading approximately one week after faculty feedback.

Prerequisites: PES 365
Writing Across the Curriculum

PES 447W: Senior Project 2

1 Credits

Supervised student activities on research and/or design projects identified on an individual or small group basis. The combination of PES 446W, PES 447W and PES 448W fulfills the degree requirement for Writing Across the Curriculum. Writing Across the Curriculum courses include writing assignments that relate clearly to the course objectives and serve as effective instruments for learning the subject matter of the course. In writing-intensive courses, assignments are designed to help students investigate the course subject matter, gain experience in interpreting data or the results of research, shape writing for a particular audience, or practice the type of writing associated with a given profession or discipline. Therefore, in this course, and the two subsequent Senior Design Courses, each written assignment will be evaluated, and feedback will be provided to the student, either in written or verbal form. In all instances, students will provide draft copies of reporting assignments and will be given the opportunity to revise their work to incorporate revisions and receive additional points. This iterative process is designed to provide the student with continuous feedback on quality and effectiveness of written communication. In PES 447W, students are required to update a comprehensive literature review initiated in PES 446W pertaining to their senior project. The primary focus of this course will be on establishing and maintaining an effective program of research activity that makes consistent progress toward verification or invalidation of the project hypothesis. Students will be instructed on best practices of research writing, with an emphasis on development of appropriate representation of research data, contextualization of results and evolution and/or adaptation of the program of investigation based on developed experimental data. Preliminary grading will be provided along with critique of written communication. Cumulative findings will be submitted in an end of semester report. Report sections will be due in draft form on an approximately bi-weekly basis. Preliminary grading will be provided along with critique of written communication. Revised versions will be due for final grading approximately one week after faculty feedback.

Prerequisites: PES 365 PES 446W

Writing Across the Curriculum

PES 448W: Senior Project 3

1 Credits

Supervised student activities on research and/or design projects identified on an individual or small group basis. The combination of PES 446W, PES 447W and PES 448W fulfills the degree requirement for Writing Across the Curriculum. Writing Across the Curriculum courses include writing assignments that relate clearly to the course objectives and serve as effective instruments for learning the subject matter of the course. In writing-intensive courses, assignments are designed to help students investigate the course subject matter, gain experience in interpreting data or the results of research, shape writing for a particular audience, or practice the type of writing associated with a given profession or discipline. Therefore, in this course, and the two subsequent Senior Design Courses, each written assignment will be evaluated, and feedback will be provided to the student, either in written or verbal form. In all instances, students will provide draft copies of reporting assignments and will be given the opportunity to revise their work to incorporate revisions and receive additional points. This iterative process is designed to provide the student with continuous feedback on quality and effectiveness of written communication. In PES 448W, students are required to update a comprehensive literature pertaining to their project that was initiated in PES 446W and further expanded in PES 447W. The primary focus of this course will be on synthesizing the accumulated results from all three courses that constitute the senior design project and presenting data and findings in a comprehensive final report. Students will be instructed on best practices of drafting, editing and finalizing a project report, with clear statements of hypotheses, objectives, methods, analysis and conclusions. The ultimate goal is to provide the students an opportunity to produce a publication-worthy scholarly work. Cumulative findings will be submitted in an end of project report. Report sections will be due in draft form on an approximately bi-weekly basis. Preliminary grading will be provided along with critique of written communication. Revised versions will be due for final grading approximately one week after faculty feedback.

Prerequisites: PES 365 PES 447W
Writing Across the Curriculum

PES 460: Polymer Formulation for Processing and Design

3 Credits

This course is designed for senior-level PES students that are prepared to learn the inter-relationships between part design and specifications, processing constraints, and final material formulation requirements. This course requires the student to critically examine a commercial part of complex geometry intended for a challenging application environment, and then formulate a polymer system that can be used to produce an injection molded part that will meet specifications. The course is not limited to theoretical discussion; the students are expected to produce and test their material formulation, using twin screw extrusion, injection molding and a variety of testing capabilities available in the Penn State Plastics Laboratory. Real material properties will be assessed and applied to FEA analysis, and the simulated performance (tensile and compression strength) of the part will be compared to the actual molded properties as assessed in the lab. This lab requires faculty to select and work with an existing but retired industrial injection mold and geometry in order to provide students with a realistic level of complexity in their study.

Enforced Prerequisite at Enrollment: MATSE 447 and PES 365

Portuguese (PORT)

PORT 1: Elementary Portuguese I

4 Credits

For beginners. Grammar, with reading and writing of simple Portuguese; oral and aural work stressed.

Bachelor of Arts: World Language (All)

PORT 2: Elementary Portuguese II

4 Credits

Grammar, reading, and conversation continued; special emphasis on the language, literature, and life of Brazil.

Prerequisite: PORT 001

Bachelor of Arts: World Language (All)

PORT 3: Intermediate Portuguese

4 Credits

Grammar, reading, composition, and conversation.

Prerequisite: PORT 002

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

PORT 51: Elementary Intensive Portuguese for Graduate Students I

3 Credits

Intensive introduction to Portuguese: first half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. PORT 051 Elementary Intensive Portuguese for Graduate Students I (3) This is the first in a series of three courses designed to give students an intensive introduction to Portuguese. This is the first half of elementary sequence in reading, writing, speaking, listening, and cultural contexts. Students will learn the Portuguese vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

Prerequisite: graduate standing

PORT 52: Elementary Intensive Portuguese for Graduate Students II

3 Credits

Intensive introduction to Portuguese: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. PORT 052 Elementary Intensive Portuguese for Graduate Students II (3) This is the second in a series of three courses designed to give students an intensive introduction to Portuguese. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the Portuguese vocabulary. Lessons are taught in an authentic cultural context.

Prerequisite: PORT 051 and graduate standing

PORT 53: Intermediate Intensive Portuguese for Graduate Students

3 Credits

Continued intensive study of Portuguese at the intermediate level: reading, writing, speaking, listening, cultural contexts. PORT 053 Intermediate Intensive Portuguese for Graduate Students (3) This is the third in a series of three courses designed to give students an intermediate intensive knowledge of Portuguese. Continued intensive study of Portuguese at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

Prerequisite: PORT 052 or equivalent, and graduate standing

PORT 123: Portuguese for Romance-language Speakers

2-3 Credits

This course offers an introduction to Brazilian Portuguese for students who already have a good grasp of grammar and vocabulary in Spanish, French, Italian, or Latin. This course will cover the topics of the basic language sequence (PORT 1, 2, 3) in one semester to prepare you for advanced Portuguese courses, study abroad, or research. Our focus will be on acquiring linguistic fluency and developing speaking, listening, reading, and writing skills. Along the way we will also gain insight into aspects of Brazilian culture through our analysis of song lyrics, journalistic texts, and TV shows. Register for this course if: your parents or other family members speak Portuguese and you have some ability in the language but have never formally studied the grammar or writing; you grew up speaking Spanish or another Romance language; or you have taken Spanish, French, Italian, or Latin 3 or higher. This class counts for the 2nd foreign/world language and the 12th unit of foreign/world language. This course counts as 3 credits for undergraduate students and 2 credits for graduate students in the M.A. programs in Spanish literature and Spanish linguistics. Students are asked to register accordingly with the appropriate number of credits.

Recommended Preparation: Students should have a high level of proficiency in, or be native or heritage speakers of, a Romance language
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Exceeds 12th Unit of World Language

PORT 197: Special topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Bachelor of Arts: Humanities

PORT 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities
International Cultures (IL)

PORT 200: Advanced Portuguese via the Arts

3 Credits

This course provides a more detailed study of the Portuguese language that builds upon the grammar, vocabulary, and communicative abilities developed in the basic language sequence. Students will review and extend their abilities in all four language skills (listening, speaking, reading, and writing) as they learn more about the linguistic and cultural diversity of the Portuguese-speaking world. The course uses a textbook paired with written, audio, and video workbook activities and supplemented by authentic language materials and artistic works that generate communicative exercises that allow students to practice and refine their spoken and written Portuguese. As students improve their understanding of the Portuguese language, they also gain insight into Luso-Afro-Brazilian cultures by analyzing music, films, videos, paintings, photos, essays, chronicles, news articles, short stories, and poems. Students learn about the distinct contexts in which Portuguese is spoken as they examine artistic works and linguistic variations that develop within specific countries and region. This class serves as a transition course between basic and intermediate language classes and more advanced composition, literature, and culture courses taught at the 300 and 400-level. The class is conducted entirely in Portuguese. Students must have taken Portuguese 3 or 123, or received permission of the instructor, in order to enroll in this course.

Prerequisites: PORT 3; PORT 123;
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Exceeds 12th Unit of World Language

PORT 210N: Multilingual and Intercultural Communication

3 Credits/Maximum of 6

SPAN 210N Multilingual and Intercultural Communication course will showcase the fundamental components of the intersection of language and culture through humanities and social science. The purpose of this course is to teach the underlying mechanisms of multilingualism through language science principles and develop an understanding of intercultural communication through humanistic approaches. The content of this course focuses on linguistic strategies for succeeding in multilingual environments (e.g. dialect variation, second language acquisition strategies) as well as intercultural communication practices for navigating new environments (e.g. understanding cultural norms, skills for global leadership). The course requires an introductory level understanding of language. Students will learn how language and culture inform each other through the examination of cultures within the United States and internationally, including non-Western cultures.

Prerequisites: SPAN 3 or SPAN 3H or SPAN 20 or IT 3 or IT 20 or PORT 3 or PORT 123
Cross-listed with: IT 210N, SPAN 210N
Bachelor of Arts: Humanities
Bachelor of Arts: World Cultures
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
General Education: Humanities (GH)
General Education: Social and Behavioral Scien (GS)
General Education - Integrative: Interdomain
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

PORT 297: SPECIAL TOPICS

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

PORT 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities
International Cultures (IL)

PORT 365: Imagining Brazilian Cities

3 Credits

This course traces the transformation of Brazilian cities, as represented in literature and the arts, from the modernization projects of the late 19th century through the exponential growth of urban areas in recent decades. Studying these urban transformations will provide students with insight into how contemporary Brazil developed into an urban nation with seventeen of its cities featuring populations of one million or more. This class focuses primarily on artistic representations of the global metropolises of Rio de Janeiro and São Paulo, the modernist capital of Brasília, and the northeastern city of Recife. Readings will highlight the diverse experiences and expressions of urban life in essays, poems, short stories, and avant-garde novels. Music, film, and photography will complement students' literary tour of an urban Brazil. Critical readings from urban studies, architecture, anthropology, history, and other interdisciplinary fields will allow us to further explore the question of the city in Brazil. This course will be conducted in Portuguese. Students must be able to complete the readings, informal and formal written assignments, and in-class discussion and activities in Portuguese.

Prerequisite: PORT 200 or PORT 405 Concurrent: PORT 405
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Bachelor of Arts: Humanities
Exceeds 12th Unit of World Language

PORT 397: SPECIAL TOPICS

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

PORT 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities
International Cultures (IL)

PORT 405: Advanced Composition and Conversation

3 Credits

The course uses essays, news articles, short stories, music, films, and other cultural materials to review key grammatical concepts, to expand vocabulary, and to deepen understanding of the language. Through these activities, students will improve their ability to speak and to write about a variety of topics in Portuguese at an advanced level. Time is divided between the four language skills (writing, speaking, reading, listening) with a particular emphasis on conversation and composition. These skills are addressed every week throughout the semester with more complexity and nuance.

Prerequisite: PORT 3 or PORT 123

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

Bachelor of Arts: Humanities

Exceeds 12th Unit of World Language

PORT 473: Luso-Brazilian Cinema

3 Credits

This course studies social, political, economic, and cultural issues in the Portuguese-speaking world through the lens of film. This course meets the Bachelor of Arts degree attributes in Humanities and the International Cultures requirement. Through examinations of feature films and documentaries, the class explores how cinema approaches social, cultural, political, and economic realities in Brazil, Portugal, and Lusophone Africa. Students will learn about national histories, political struggles, social movements, and cultural practices of the Luso-Afro-Brazilian world as they gain the skills and appropriate vocabulary to analyze and discuss film. The course materials will invite students to consider how films examine legacies of imperialism, colonialism, and dictatorial regimes, as well as ongoing divisions and injustices on the basis of race, class, gender, and sexuality. Questions to be considered in this course include: How do filmmakers grapple with traumas of the past, questions of memory, and debates around truth and reconciliation? How do forms of fiction and documentary intersect, serve as complements, or contradict each other in film? How does film represent the convergences and divergences between different parts of the Portuguese-speaking world? What are the possibilities and limitations of studying these works in a comparative Lusophone framework? Readings on film, history, and Luso-Afro-Brazilian culture, and interviews with filmmakers will complement our studies of the films. The course will be conducted in English. No prior knowledge of Portuguese is necessary, as the films will have subtitles and required readings will all be in English. Students pursuing the Portuguese minor may receive credit for the minor if they complete all of their written assignments in Portuguese.

Prerequisite: Minimum 4th semester standing. Students counting this course toward their Portuguese minor must have taken or be concurrently enrolled in PORT 200 or PORT 405

Bachelor of Arts: Humanities

Bachelor of Arts: World Cultures

International Cultures (IL)

PORT 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

PORT 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

Honors

PORT 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PORT 496A: **SPECIAL TOPICS**

3-4 Credits

Bachelor of Arts: Humanities

PORT 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

PORT 497N: Special Topics - Inter Domain

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest. This Special Topics is an Inter-Domain GenEd course

PSU First-Year Seminar (PSU)

PSU 1: First-Year Seminar Abington

1 Credits

Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life.

First-Year Seminar

PSU 3: First-Year Seminar Altoona

1 Credits

Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life.

First-Year Seminar

PSU 5: First-Year Seminar Berks

1 Credits

Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life.

First-Year Seminar

PSU 6: First-Year Seminar Business

1-3 Credits

Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life. PSU 006 First Year Seminar in Business Administration (1-3 credits) This course is designed to assist students in examining several areas of the college transition: awareness of self and others; career exploration; majors offered in the Smeal College; and current issues in business. The skills learned in this course will be presented as life-long skills, applicable in the university setting and the corporate environment. The nature of the course requires cooperation, participation, and interaction. This course facilitates learning through experience, lectures and class discussion. The course contains assignments dealing with: 1). Leadership 2). Ethics 3). Celebrating Diversity 4). Diversity in the Workplace 5). Community Service 6). Major and Career Exploration 7). Time Management and Goal Setting 8). Business Case Study

First-Year Seminar

PSU 6T: First-Year Seminar Business

1-3 Credits

Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life.

First-Year Seminar

Honors

PSU 7: First-Year Seminar Behrend

1 Credits

Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life.

First-Year Seminar

PSU 8: First-Year Seminar University College

1-3 Credits

Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life. PSU 008 First-Year Seminar University College (1-3) From a practical perspective this course will provide an advanced introduction to university life at Penn State, highlighting the many resources available to help students succeed. Topics covered will include the challenges of balancing life and school, academic success strategies, dealing with financial aid, choosing a major, as well as understanding academic discourse and university policy and procedure. In addition, we will read and discuss some of the latest research on the experiences of

first year college students. We will think about the particular challenges first year students face, and consider what steps could be taken to address those challenges at the level of university and governmental policy. This is a student-led, discussion-oriented course where we talk about a range of issues in a small, informal setting, and our goal will be to create a collaborative environment in which everyone is comfortable participating. In addition to discussions, we will explore university resources and the pragmatic issues of college through lectures, guest speakers, and hands-on practice.

First-Year Seminar

PSU 8T: First-Year Seminar University College

1-3 Credits

Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life. PSU 008T First-Year Seminar University College (1-3) Proposed PSU 008 as variable 1-3 credit course is designed to introduce the entering college student to the academic side of college life for honors students, and to help prepare students to negotiate the academic environment from their standpoint. In addition, its purpose is for honor students to look beyond college life to wider communities, gear up skills to focus on Honors level students, societal issues, and toward a considered discernment of one's potential contribution in our complex global society. Accordingly, this course emphasizes academic proficiency; the mission and the values of Penn State University; the application of acquired knowledge; higher level thinking; and social awareness. This is a personal development course focusing on strategies of academic success and the development of related living skills, which go beyond the academic environment. From a practical perspective this course will provide a major focus on in-depth career exploration, also an advanced introduction to university life at Penn State, highlighting the many resources available to help honor students succeed. Topics covered will include the challenges of balancing life and school, academic success strategies, dealing with financial aid, choosing a major, as well as understanding academic discourse and university policy and procedure. Furthermore, we will read and discuss some of the latest research on the experiences of first year honors college students. We will think about the particular challenges first year honors students face, and consider what steps could be taken to address those challenges at the level of university and governmental policy. This is a student-led, discussion-oriented course where we talk about a range of issues in a small, informal setting, and our goal will be to create a collaborative environment in which everyone is comfortable participating. In addition to discussions, we will explore university resources and the pragmatic issues of college through lectures, guest speakers, and hands-on practices.

First-Year Seminar

Honors

PSU 9: First-Year Seminar Communications

1 Credits

Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life.

First-Year Seminar

PSU 12: First-Year Seminar Engineering

1 Credits

Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life.

First-Year Seminar

PSU 14: First-Year Seminar Health and Human Development

1 Credits

Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life.

First-Year Seminar

PSU 15: First-Year Seminar Liberal Arts

1 Credits

Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life.

First-Year Seminar

PSU 16: First-Year Seminar Science

1 Credits

Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life.

First-Year Seminar

PSU 17: First-Year Seminar College of Information Sciences and Technology

1 Credits

Facilitate student's adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life. PSU 017 First-Year Seminar College of Information Sciences and Technology (1) This course will help students be successful in the College of Information Sciences and Technology (IST) at Penn State University. It involves two elements: how to be a successful learner in general; and how to explore the academic challenges of the information sciences and related technologies. Through lectures, class discussions, assignments, and guest presentations students learn what it takes to be successful in college. Through a group project they learn what IST is about, the majors in the College, the learning formats that they will encounter, and what is expected of them as students and citizens in the College. More broadly, this course is centered on learning: learning about learning and learning about what it means to be a student in IST.

First-Year Seminar

PSU 18: PSU 18 First-Year Seminar Interdisciplinary and Exploratory

1 Credits

First year seminar for interdisciplinary and exploratory topics.

First-Year Seminar

PSU 97: Special Topics

1-3 Credits

Formal courses given infrequently to explore a topical of special interest in the context of transitioning to university life.

First-Year Seminar

Psychology (PSYCH)

PSYCH 83S: First-Year Seminar in Psychology

3 Credits

Implications of contemporary psychological research and theory. PSYCH 83S First-Year Seminar in Psychology (3) (GS;FYS) (BA) This course meets the Bachelor of Arts degree requirements. Modern science provides perspectives on human beings that may conflict with our intuitive and conventional views of ourselves as individuals capable of free choice and responsibility. These perspectives raise important questions for how we understand ourselves and others. The goal of this course is to help students to understand the basis of these contemporary scientific views of human beings, and to think critically about the ways in which these views shape human experience. The specific research and theories discussed will vary by section. Students will read selections from the scholarly literature in psychology, as well as popular or media selections related to the topic. The class format will be open discussion, and students will be expected to come to class prepared to discuss the assigned readings. Evaluation will be based on short writing assignments, exams, in-class presentations, and class participation. Writing assignments will generally require that students apply concepts discussed in class to particular topics, or that they use library and Web resources to find relevant material. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them including the opportunity to develop relationships with faculty and other students who share their academic interests. This course fulfills the first-year seminar requirement as well as a general education or Bachelor of Arts social/behavioral science requirement.

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PSYCH 100: Introductory Psychology

3 Credits

This course is required and foundational for students who are majoring or minoring in psychology and it is a prerequisite for other psychology courses. Psychology is a scholarly discipline, a scientific field, and a professional activity. Its overall focus is the scientific study of behavior and experience, and of associated mental and physiological processes. As a scholarly discipline, psychology represents a major field of study in academic settings, with an emphasis on theories and principles of behavior and experience. As a science, psychology is a domain of research in which investigators analytically and systematically study behavior and experience to develop theories and principles and to understand their application to real-world situations. As a profession, psychology involves the practical application of knowledge, skills, and techniques for enhancing well-being and quality of life, as well as solving or preventing individual and social problems. This course provides an overview of the field of psychology, including research, theory, and application. Specific topics include the biological bases of behavior, sensation and perception, learning, cognition, motivation and emotion, development, social cognition and social influence, personality and individual differences, and mental disorders and therapy. Content is presented through a combination of lectures, readings, and demonstrations. Evaluation is primarily based on objective exams. A major goal of the course is to show how questions within these areas are addressed through empirical research. The course introduces students to theories, research, and procedures used in psychological research and practice and encourages them to apply this knowledge to enhance their lives. After taking this course, students should be able to make informed decisions about participation in future psychology courses and have a better understanding of psychology as a science and of human behavior.

Bachelor of Arts: Social and Behavioral Sciences
 General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Integrative Thinking
 GenEd Learning Objective: Soc Resp and Ethic Reason

PSYCH 100H: Honors Introductory Psychology

3 Credits

Psychology is a scholarly discipline, a scientific field, and a professional activity. Its overall focus is the scientific study of behavior and experience, and of associated mental and physiological processes. As a scholarly discipline, psychology represents a major field of study in academic settings, with an emphasis on theories and principles of behavior and experience. As a science, psychology is a domain of research in which investigators analytically and systematically study behavior and experience to develop theories and principles and to understand their application to real-world situations. As a profession, psychology involves the practical application of knowledge, skills, and techniques for enhancing well-being and quality of life, as well as solving or preventing individual and social problems. This course, which serves

as a prerequisite for most upper-level psychology courses, provides an overview of the field of psychology, including research, theory, and application, and promotes thinking about how students can apply psychology to enhance their lives. Specific topics include the biological bases of behavior, sensation and perception, learning, cognition, motivation and emotion, development, social cognition and social influence, personality and individual differences, and mental disorders and therapy. Evaluation is primarily through exams, papers, projects, or presentations and assesses psychological knowledge, skills, conceptual thinking, and critical analysis. After taking this course, students should be able to make more-informed decisions about participating in future psychology courses and have a better understanding of both psychology as a science and human behavior. Introductory Psychology is required for the Psychology major and minor. This honors version of the course is designed to provide the opportunity for students to engage with the material at greater depth and with greater emphasis on the scientific basis for the content.

General Education: Social and Behavioral Scien (GS)
 Honors
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Integrative Thinking
 GenEd Learning Objective: Soc Resp and Ethic Reason

PSYCH 100S: Introductory Psychology

3 Credits

Introduction to general psychology; principles of human behavior and their applications.

Bachelor of Arts: Social and Behavioral Sciences
 First-Year Seminar
 General Education: Social and Behavioral Scien (GS)

PSYCH 105: Psychology as a Science and Profession

3 Credits

Overview of history and methods of psychology as a science and profession; applications and ethical issues in psychology. PSYCH 105 Psychology as a Science and Profession (3)(BA) This course meets the Bachelor of Arts degree requirements. The purpose of this course is to introduce Psychology majors and prospective majors to basic principles of research and practice in scientific psychology. The course provides a survey of the subfields of psychology, their history, and their current importance in both academic and applied settings. The focus is on common principles and issues important across these subfields. Students will learn how psychological research is conducted, survey applications of psychological research, consider ethical issues in psychological research and practice, and learn about careers in a variety of subfields in psychology. Students will be evaluated on the basis of multiple-choice exams (75%), in-class activities (10%), and short writing assignments (15%). The course will be required for the Psychology B.A. and Psychology B.S. (all options) majors, but will not be a prerequisite for any other course. The course will be offered each fall and spring semester in large sections of 300-350 students.

Enforced Prerequisite at Enrollment: PSYCH 100
 Bachelor of Arts: Social and Behavioral Sciences

PSYCH 109N: The Psychology of Artistic Creativity

3 Credits

Creativity is an essential component of people's lives. It plays a critical part in advancing our society via art, design, and science. However, what is creativity? What contributes to it? Moreover, how can one become more creative? The goal of this introductory course is to answer these questions by integrating art and psychology. The course begins with a discussion of what is creativity. In the process, the class will discuss how context, culture, and narrative play a key role in answering this question. Next, the course will examine who is creative. Here, the class will discuss what, if anything, contributes toward a creative personality, what role developmental factors play in the creative process, and if there is a link between mental illness and creativity. Lastly, the course will discuss the creative process. Here, students will learn how the brain and body help people process, understand, and create information, how emotions influence thought and are conveyed to others, how motivational processes can both encourage and hinder creative endeavors, and how inter- and intra-personal processes can facilitate and destroy creative expression. Students will learn about these processes by examining creativity via two perspectives: the perspectives of various artists, art scholars, and art educators and from the perspectives of various disciplines within psychology, including personality, clinical, development, and social psychology. Students also will complete exercises that encourage critically evaluating these perspectives and actively applying their potential insights to their own artistic endeavors. Thus, a key element of this course is not only to understand more about creativity, but to be able to apply artistic and psychological practices and knowledge to better understand and improve one's own and other's creative potential.

General Education: Arts (GA)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

PSYCH 120N: Knowing Right from Wrong

3 Credits

"Knowing Right from Wrong" provides a comprehensive understanding of the nature of moral ideas, beliefs, and behaviors in contemporary contexts. What roles do nature and nurture play in the development of moral sensibilities? How do moral emotions and moral reasoning interact to produce moral behavior? What defines moral character and how does it influence what we do? Is it possible to derive what ought to be done from what is known about the world? How do we respond when moral demands compete with another? How do our moral convictions color our perceptions of world events? Can individuals and groups with differing moral commitments communicate with one another and live together peacefully? The course integrates perspectives from philosophy, psychology, and sociology, and prepares students to think about (and act in) a world in which morality (and its linked concepts, such as judgment of others) plays an increasingly important social and political role. The course treats morality as both an aspirational concept and as an actual social practice, and focuses on three major themes: (1) the origins and development of moral reasoning and ethical systems, (2) the influence of moral emotions and moral intuitions on moral reasoning and behavior, and (3) the influence of social and contextual factors on moral behavior and expression. Integrating the philosopher's interest in ethics, with the

psychologist's interest in the mind and body, and the sociologist's interest in groups, the course provides a comprehensive introduction to morality in contemporary society, and the ways in which it shapes the lives of people in everyday situations.

PSYCH 144: Climate Change: Individual Behaviors and Group Attitudes

3 Credits

PSYCH 144: Climate Change - Individual Behaviors and Group Attitudes is intended to be an introduction to environmental attitudes and behavior research within the social sciences, especially the fields of social and environmental psychology. This course allows students to understand the varied psychological processes, including individual attitudes, societal values, and personality traits, that shape a person's interactions with and feelings toward the physical environment within the context of global climate change. Drawing on methodology and theory in the areas of attitude change, social cognition, environmental perception, pro-social behavior, and emotions, this course will provide students with insight into how individual and group actions and mental processes can impact beliefs and actions toward global climate change while also providing a foundation for ways to alter those behaviors in meaningful ways.

PSYCH 150N: Human Nature: The Science of Extreme Altruism and Violence

3 Credits

Why do humans so readily help strangers in some circumstances and not others? Why does our species have a tragic history of war, genocide, and violence? Just how flexible is our tendency for altruism and violence? Human Nature: The science of extreme altruism and violence surveys and synthesizes two of the most fascinating and unusual features of humans: our extremely high levels of altruism alongside our tragic propensity for violence. Treating humans as both biological and cultural creatures, we use the tools of anthropology, biology, and psychology to explore some of the most vexing questions in the social sciences and humanities. We will consider the role of the brain, hormones, genetics, social context, and evolution in producing the best and worst our species is capable of. While there are no prerequisites, you will gain a foundation in basic neurobiology and behavioral endocrinology alongside familiarity with leading theories of violence and altruism. We will use a combination of lectures, readings, and discussions to understand the science of altruism and violence. Throughout the course, we will use well-known current events and cross-culture case studies to anchor theory in real social contexts. By the end of this course, you will have the tools to evaluate behavior as the product of a complex interaction between biological,

physiological, and social structures. You will never look at the world the same again!

PSYCH 169N: What it means to be human

3 Credits

This course will investigate the distinctiveness of Homo sapiens, using fossil and non-human animal comparisons to highlight how modern humans are both similar to and different from other species. Basic elements from the fields of biology, genetics, anatomy, physiology, ecology, cognition, neuroscience, social psychology, and anthropology will be integrated for a complete and robust picture of humans and their place in the animal world. Furthermore, students will expand upon this

integration of fields to make inferences about how an individual's or society's perspective on human uniqueness, or the lack thereof, impacts decisions and behaviors relevant to research ethics, environmental policy, educational policy, religion, and/or social issues.

PSYCH 175N: Mental Illness and the Movies

3 Credits

This course serves as an introduction to the integration of psychology and film analysis, with a focus upon mental health. PSYCH 175N / COMM 175N seeks to help students understand the extent to which cinema can influence our perceptions of mental illness, and how the experience of mental illness can influence cinema. Students will be guided to critically analyze and discover how cinema can build or break the stigma and stereotypes regarding various types of mental illnesses and their treatments. The course is designed to familiarize students with various mental disorders (e.g., autism, schizophrenia, bipolar disorder, dissociative identity disorder, anxiety disorders, substance abuse, and dementia), aspects of their treatment (e.g., psychotherapy, medication, and ECT), and the creative ways in which filmmakers can choose to portray mental illness and its treatment (e.g., camera angles, lighting, music, costuming, casting, editing, method acting, and marketing) across cinema formats (e.g., in feature, independent, and documentary films). Students will be guided to consider how the cinema has shaped their own perceptions of mental illness, and how they could guide a filmmaker to generate a creative, compelling, and accurate portrayal of various types of mental illness and their treatments. PSYCH 175N / COMM 175N emphasizes integrative thinking, and seeks to help students develop critical reading, viewing, and thinking skills. The course incorporates lectures and assigned readings with the viewing of feature films during a weekly practicum period. Most lectures incorporate case examples and video clips to help students exercise their critical thinking skills. Introductory lectures provide a critical social and historical context for each week's film screening. Follow-up lectures and discussions offer critical and integrative analysis. Course assessment includes both objective measures and essay exams. PSYCH 175N / COMM 175N is an Interdomain General Education course that incorporates student learning criteria from both the arts (GA) and the social sciences (GS). It assumes to prior exposure to psychology or to film studies. As such, the course is designed to have broad accessibility, primarily for introductory level students.

PSYCH 200: Elementary Statistics in Psychology

4 Credits

This course provides an introduction to the descriptive and inferential statistics commonly used in psychology, and to hypothesis testing as a method of scientific investigation. It also explores the ways in which the assumptions of statistical tests place constraints on experimental design and, conversely, how the design of experiments can dictate the statistical test appropriate for data analysis. The ability to understand and perform statistical analyses, and to evaluate the match between statistical analysis and experimental procedures, is critical to reading and understanding the empirical research that psychology is based upon, and that will be covered in upper-level psychology courses such as PSYCH 301W, for which PSYCH 200 is a pre-requisite, most 400-level courses, and certain lower-level psychology courses. In addition to performing some statistical tests by hand, students may also conduct statistical tests via statistical software packages commonly used by psychologists, such as SPSS or R. Finally, this course will include material on the responsible and effective communication of statistical results to a scientific audience according to APA guidelines. Specific topics covered include probability theory, scales of measurement, measures of variability and central tendency, normal curves, graphical displays (e.g., histograms, bar charts), the relation between samples and populations, correlations, simple regression, basic mean differences tests (e.g., t-tests), effect sizes, and confidence intervals. Classes may also cover z-tests, simple and factorial ANOVA, non-parametric tests (e.g., Chi Square, Mann-Whitney U, Wilcoxon), statistical power, or other statistical techniques commonly used in psychology.

Enforced Prerequisite at Enrollment: PSYCH 100 and MATH 42

General Education: Quantification (GQ)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

PSYCH 212: Introduction to Developmental Psychology

3 Credits

Developmental psychology involves the scientific study of the social, emotional, and intellectual changes that enable progression from infancy to adulthood. As part of a scholarly discipline, scientific field, and professional activity, the overall focus of developmental psychology is the scientific study of age-related changes in emotions, cognitions, language, personality and social relations and the relationships of these changes to familial, peer, and cultural experiences, biological development, and personal efforts to make sense of the social and object worlds. As an

important area of psychological science, developmental psychology is a domain of research in which investigators analytically and systematically study behavior and experience to develop theories and principles and to understand their application to real-world situations. As part of a profession, developmental psychology involves the practical application of knowledge, skills, and techniques for enhancing the well-being and quality of life of children, adolescents, and their families, as well as the development of age-relevant solutions to and strategies for the prevention of individual and social problems. This course provides an overview of the field of developmental psychology, including its history, research methodologies, theories, and applications. Specific topics include but are not limited to the biological bases of development, parent-infant attachment, the development of sensation and perception, cognition and linguistic development, emotional development, moral development, and identity development. Content is presented through a combination of lectures, readings, activities, and demonstrations. Evaluation is primarily on the basis of objective exams.

Enforced Prerequisite at Enrollment: PSYCH 100

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

PSYCH 217N: The Science of Human Resilience

3 Credits/Maximum of 3

This course provides a comprehensive understanding of resilience from both a biological and psychological perspective. It provides students with an integrative approach to understand the dynamic interplay between nature and nurture in understanding children's at-risk behaviors as well as understanding children's resilient behaviors. The study of resilience will be examined with a systems approach using a strengths-based framework of positive youth development. Topics will include brain development, the biology of stress, environmental factors influencing resilience, children's mental health, growth mindset, and the science of resiliency. Specific attention will be directed towards understanding the neuroplasticity of resilience. Content will be presented using interactive lectures, in-class activities, readings, and small group discussions. After taking this course, students will increase their understanding of how specific environmental factors interact with biological underpinnings to affect children's levels of resilient and at-risk behaviors (e.g., depression). Strategies to optimize children's positive developmental outcomes will be emphasized throughout. This course includes a service learning component where students have the opportunity to apply newly acquired skills to mentor children in supervised school/community settings.

Enforced Prerequisite at Enrollment: PSYCH 100 Recommended

Preparation: Due to the service learning component of this course, students will have to complete their clearances.

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

PSYCH 220: Community Psychology

3 Credits

The purpose of this course is to provide an overview of the history and development of Community Psychology as field. In addition, you will be exposed to key concepts and values associated with Community Psychology, as well as examples of Community Psychology in action. You will learn about multiple levels of intervention, including the individual, small group, community, and societal levels, as well as the interrelationship between these levels. You will also learn to examine psychological phenomena in context. Course Goals: In this course, you will: 1. understand what Community Psychology is, including being able to explain the seven core values of Community Psychology; 2. develop a deeper understanding of what working with communities entails; 3. analyze what kinds of issues Community Psychologists must be aware of when working with diverse populations; 4. analyze how human diversity impacts our everyday life; 5. evaluate problems that might arise around human diversity and pose possible solutions to problems.

Enforced Prerequisite at Enrollment: PSYCH 100 Recommended Preparations: PSYCH 270

PSYCH 221: Introduction to Social Psychology

3 Credits

Introduction to Social Psychology discusses how people's thoughts, feelings, and behaviors are influenced by other people (real or imagined). The course will provide an overview of the field, potentially covering such topics as: attitudes, persuasion, person perception, automatic vs. conscious thought, the self, prosocial behavior, aggression, interpersonal attribution, conformity, obedience, culture, groups, prejudice and discrimination from a psychological perspective.

Enforced Prerequisite at Enrollment: PSYCH 100
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

PSYCH 230: Introduction to Psychologies of Religion

3 Credits

This course will act as an overview of the many ways that religious and spiritual beliefs can and do influence our daily lives, including an individual's attitudes, motivations, cognitions, emotions, and behaviors (and vice versa). We will explore concepts of religion and various religious perspectives as they relate to psychology, and the social and cultural implications of religion. The focus of this course will not be on any religious affiliation in particular, but instead on how people view religion and spirituality and use those beliefs in both positive and negative ways. Do not expect that we will answer such questions as "Does God exist" or "Which religion is right?" This is not what the course is about. We will, however, explore the psychological factors related to believing, or not believing, in "God" and to following particular religious traditions. The course mostly involves mini-lectures, presentations, quizzes, readings, and seminar-based classroom discussions, and some videos. You will be strongly encouraged to think about and share your opinions, beliefs, and experiences. By the end of the course you will have an increased understanding of the complexity, richness and psychological basis for religious beliefs and behaviors, be better able to understand your own

religious life, explore the importance of religious phenomena for the field of psychology, analyze the strengths and weaknesses of a psychological approach to studying and interpreting religion, and understand the interaction of personal and social dimensions of religion. Hopefully students will also think more critically about how religious and spiritual beliefs influence actions in their everyday lives.

Enforced Prerequisite at Enrollment: PSYCH 100
Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

PSYCH 231: Introduction to the Psychology of Gender

3 Credits

The focus of this course in general is on the psychological study of gender in historical and contemporary perspective. The historical roots of gender studies in women's studies, as a correction to a traditional focus on male and masculine perspectives, will be covered. Through both traditional and feminist research methods, psychologists have sought to clarify what is general among genders, and what may be individualized to specific persons or groups. Conceptions of gender and gender identity are examined in relation to other social identities in the United States, and beyond the US with cross-cultural comparisons. Historical changes in the US and outside the US are also discussed. Major topics include the role of gender in development, self-concept, social relations, and mental health. Relevant major theories of gender development and behavior are covered, such as gender schema theory. Emphasis of study is upon those experiences that are specifically related to gender, such as stereotypes and expectations of femininity and masculinity, violence against women, economic and work-related constraints, and pregnancy and childbirth.

Enforced Prerequisite at Enrollment: PSYCH 100
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

PSYCH 232: Cross-Cultural Psychology

3 Credits

PSYCH 232 provides a comprehensive overview of cross-cultural research in a broad range of areas including human development, perception, emotion, motivation, social behavior, personality, cognition, and abnormal behavior. It investigates the similarities and differences in individual psychological functioning among various cultural groups and explores the interaction of psychological, socio-cultural, and biological influences on human thought and behavior. In addition, the course addresses important international applications to acculturation, ethnic and minority groups, work, and communication. By studying psychology from a cross-cultural perspective, you should become more aware of the diversity of the international community and develop an increased understanding and tolerance of attitudes and viewpoints different from your own.

Enforced Prerequisite at Enrollment: PSYCH 100
Bachelor of Arts: World Cultures
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

United States Cultures (US)

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

PSYCH 238: Introduction to Personality Psychology

3 Credits

Personality psychology involves examining theories of human nature and evaluating them in an empirical fashion. Personality psychology begins with the observation that each person is (to paraphrase Harvard psychologists Kluckhohn and Murray) in certain respects (a) like all other persons, (b) like some other persons, and (c) like no other person. In other words, personality psychology concerns itself with the study of (a) universal aspects of human nature, (b) psychological traits and types, and (c) individual uniqueness. Principal goals of the discipline include constructing descriptive taxonomies of personality, inquiring into the evolutionary and developmental origins of human universals and individual differences, and assessing the impact of personality on the life course. This course aims to cultivate in students a breadth of understanding through an analysis of some of the major intellectual statements concerning human nature. Psychoanalysis, humanism, existentialism, symbolic interactionism, biological, and neuropsychological are primary perspectives that may be examined. Questions considered within the course include: How can we determine what might be a part of fundamental human nature? What are the relative contributions of conscious rationality and unconscious irrationality to human behavior? Can human behavior be explained by a finite set of motives? Do explanations in psychology differ in kind from explanations in the natural sciences? Can personality be quantified? Short-answer examinations and class participation are used to evaluate the degree to which students have successfully comprehended course material. Students should understand why it is difficult for a theorist to create a view of human nature that transcends the theorist's own personality and cultural/historical context, and how empirical research can help overcome these obstacles. Students are to learn how to identify and evaluate the assumptions (either implicit or explicit) about human nature and individual differences that underlie any social or behavioral science. By the end of the course, students should be able to describe the basic tenets of the major theories, to be able to compare and contrast the theories, and to be able to evaluate the strengths and weaknesses of each theory. A good understanding of the course material will prepare students for advanced study in personality theory and measurement, as well providing a useful context for courses in abnormal, clinical, developmental, health, historical/philosophical, industrial/organizational, and social psychology, as well as for courses in other social sciences, certain humanities, and some applied fields such as business which at least tacitly presuppose some view of personality.

Enforced Prerequisite at Enrollment: PSYCH 100

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

PSYCH 243: Introduction to Well-being and Positive Psychology

3 Credits

The introduction to well-being and positive psychology involves the application of empirically derived principles of psychology to address everyday experiences and focuses on ways to enhance one's life. More specifically, students will be introduced to the field and learn that positive psychology encompasses much more than the study of happiness, a common misconception. Students will learn to embrace strengths, fosters personal growth, and enhance well-being based on scientific research. As part of a scholarly discipline, scientific field, and professional activity, the overall focus of the course is the study of the psychological processes that relate to enhancing one's life. As an important area of psychological science, positive psychology is an area of research in which investigators develop and systematically test theories about the "good life." As part of a profession, it involves the application of this empirically gained knowledge to enable people to cultivate areas of their lives that will lead to greater contentment and fulfillment. This course provides an overview of the field of positive psychology. It introduces the field by exploring its history and considers its place in the field of psychology more generally. Topics discussed include but are not limited to positive emotions, positive thinking, character strengths, values, relationships (intimate and friendships), and the meaning of life. Cultural considerations within the field are also explored. Content is presented through a combination of lectures, readings, active learning activities, and demonstrations. Assessment is based on objective exams and writing assignments (which includes the use of scientific research to support personal experiences). Discussion and questions are encouraged in all sections to facilitate students' understanding of the material. After taking this course, students should have a better understanding of the field of positive psychology and what it encompasses and will acquire tools for applying the concepts learned to their own lives.

Enforced Prerequisite at Enrollment: PSYCH 100

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Integrative Thinking

PSYCH 244: Introduction to the Psychology of Human Factors Engineering

3 Credits

Human Factors Psychology is an area of psychology where the overall focus is the scientific study of human behavior and how it can be applied to the use, design and development of products and systems. Students will learn basic principles of how people process information, perceive and interact with the world in various circumstances. They will learn how psychologists conduct research on human thought and behavior in an effort to measure peoples' perceptions, attitudes, and behaviors. These basic principles will be illustrated and explored with a series of hands-on activities that relate the material to everyday life. Topics to be covered include research design and methods, sensation and perception, memory and language, and social psychology. Psychological principles from these areas will be used to discuss ways to improve the safety of tools and systems, reduce human error and increase user satisfaction. Students will also gain a better understanding of the influence of stress and workload on human performance. A major topic will be ways to develop

reliable and valid evaluation techniques for assessing performance, safety and ease of use of systems. In order to design effective systems, individual differences in age, gender and culture must be taken into account. People in different regions of the world have cultural differences that influence the way they perceive the world and process information. These individual differences will be addressed throughout the semester. Topics are presented through a combination of lectures, readings, demonstrations, and in-class activities. Active learning elements such as library/internet research, writing activities, and collaborate learning experiences will be applied. Evaluation is on the basis of content-based quizzes, objective exams, brief written reports of hands-on exercises, and collaborative assignments.

Prerequisite: PSYCH100 or 3 credits of GS
 General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Creative Thinking
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Integrative Thinking
 GenEd Learning Objective: Key Literacies

PSYCH 246N: Human Factors in Design & Art

3 Credits

Within human factors engineering, a critical component to the design of products is understanding the physical and cognitive elements of the human. Within artistic design are fundamental elements to all visual expression. Thus, every artist, designer and visual communicator needs an awareness of formal elements and principles, variations within forms, relationships among forms. We must be aware of the impact evoked within viewers and users by formal conditions. This course and topics within it are inherently interdisciplinary in nature and could not be accomplished as effectively on their own. Without art, we cannot understand the design process effectively. Without human factors psychology, we cannot understand the human behavior effectively. Human factors is a discipline within psychology that deals with how humans interact and understand their world. This is necessary in product design. Art focuses on the creative process of design and is essential as well.

General Education: Arts (GA)
 General Education: Social and Behavioral Scien (GS)
 General Education - Integrative: Interdomain
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Integrative Thinking
 GenEd Learning Objective: Key Literacies

PSYCH 253: Introduction to Psychology of Perception

3 Credits

The goal of this course is to give students a detailed introduction to the basic questions in the study of how the energies and information in the external world become part of our immediate experience. This includes questions about how patterned energies (such as light, sound, etc.) are coded by our sensory systems and how those codes are used to support psychological experience. These are fundamental and fascinating questions and concern the most basic ways in which we interact with and experience the physical world. Students will consider these questions in detail with respect to the visual and auditory systems, and time permitting, with other sensory systems. Because these questions are such fundamental questions, they have long intellectual histories.

Philosophers and scientists have been working on these questions for centuries, and the scientific study of them forms the basis for much of contemporary scientific psychology. We will be examining some of this intellectual history and be discussing the connection between the scientific study of sensation and perception and the other natural sciences, including biology, chemistry, physics, and mathematics (including computer science). The class will also focus on some of the tools and techniques that have been developed for the study of sensation and perception. The course will show that these tools and techniques are very general and have application to a broad range of issues in human psychology. Students will learn the basic procedures for data collection and analysis, and the procedures for evaluating inferences on the basis of that data. The study of perception requires the integration of techniques, methods, and tools from a variety of other sciences, including mathematics. Physics, algebra, and geometry are involved in understanding light as a source of information. Chemistry is involved in the absorption of light by photoreceptors as well as the mechanisms of neural communication in all sensory systems. Probability and electrical engineering contribute the tools used to conduct signal detection analyses of perceptual performance. It is not assumed that students are experts in any of these fields, nor do we expect that students will be when the course is complete, however, we do expect students to be willing to consider their importance to perceptual psychology.

Enforced Prerequisite at Enrollment: PSYCH 100
 Bachelor of Arts: Social and Behavioral Sciences
 General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Integrative Thinking

PSYCH 256: Introduction to Cognitive Psychology

3 Credits

This course is an introduction to cognition, an area of psychology that investigates the ways in which we acquire, store, create and use knowledge. Cognition includes a wide range of mental processes that are used every day in almost all human activities. These include neuroscience, attention, perception, memory, imagery, language, problem solving, creativity, and reasoning. Cognition refers to a theoretical approach in psychology that emphasizes the role of people's knowledge, reasoning, and expectations and this approach has had a broad influence on all areas of psychology. It also involves developing sophisticated methodologies to study processes that are not always observable. Cognitive research can be applied in order to improve mental functioning, e.g., developing programs for improving memory or cognitive rehabilitation for brain injury. It can also be used to address serious societal issues and problems such as understanding how people develop and use stereotypes, or why distraction by a cell phone is dangerous. Cognitive psychology has applications to many fields including medicine, the legal system, education, and understanding mental disorders. In addition, cognitive psychology is part of the active interdisciplinary field of cognitive science that also includes disciplines such as philosophy, neuroscience and artificial intelligence. This course provides an overview of the field of cognitive psychology, including its research, theory, and application. Content is presented through a combination of lectures, readings, activities, and demonstrations. A major goal of the course is to show how the major questions in cognition are addressed through empirical research. It also promotes critical thinking and encourages students to apply this knowledge to enhance their lives.

Enforced Prerequisite at Enrollment: PSYCH 100

Bachelor of Arts: Social and Behavioral Sciences
 General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Integrative Thinking

PSYCH 260: Neurological Bases of Human Behavior

3 Credits

An introduction to biopsychology, emphasizing the structure and function of the human brain. BB H (PSYCH 260) 203 Neurological Bases of Human Behavior (3) The nervous system provides the biological underpinning of behavior, and several scientific fields are concerned with the relationship between the nervous system and behavior. The goal of this course is to introduce the principle methods, findings, and theories of these scientific fields. Topics include (a) the anatomy and physiology of the nervous system, (b) how the nervous system gives rise to perception, action, language, memory, emotion and reproductive behavior, and (c) how drugs and mental illnesses affect the nervous system and alter normal perceptual, cognitive, and emotional behavior. The course prepares students for a number of more advanced courses in Psychology and Biobehavioral Health that address specialized topics in neuroscience, and may satisfy a requirement of these majors.

Cross-listed with: BBH 203

PSYCH 260A: Neurological Bases of Human Behavior

3 Credits

Biological Psychology is an area of psychology where the overall focus is the scientific study of behavior and experience, and underlying associated neurological and physiological processes. This course provides an overview of the biological bases of behavior and includes a presentation of the research, theory, and application of this knowledge. Specific topics include the basic anatomy and physiology of the central and peripheral nervous system, neural transmission and the function of various neurotransmitters. The majority of the course will focus on how these basic processes contribute to the processing of information from the senses, simple and complex learning, and cognitive processes such as memory, and language. Topics will include cover brain development, developmental and acquired neuropsychological disorders and therapeutic techniques. Content is presented through a combination of lectures, readings, demonstrations, and in-class activities. A major goal of the course is to show how questions relating brain and neural function to behavior are addressed through empirical research. The course introduces students to theories, research, and procedures used in psychological research and practice. It also promotes thinking about how students can apply this knowledge to enhance their lives. After taking this course students will be able to explain the relationship between brain and behavior. They will make more informed decisions about participating in future psychology courses and gain a better appreciation of the science and profession of psychology.

Enforced Prerequisite at Enrollment: PSYCH 100
 Bachelor of Arts: Social and Behavioral Sciences
 General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Integrative Thinking
 GenEd Learning Objective: Key Literacies

PSYCH 261: Introduction to Psychology of Learning

3 Credits

This course provides a general survey of the study of learning and behavior. It will focus on investigating historical and current learning perspectives, their respective research methods, and how each contributes to our understanding of both human and animal behavior. The course also provides an investigation of human and animal experiments and how those studies inform our understanding of learning principles. Students should expect to learn about the processes of classical and operant conditioning and other related phenomena. The course provides a foundation for further understanding of learning principles and prepares students to analyze and distinguish between different types of learning they will witness in their everyday life. Questions discussed would include, How are behaviors and habits formed or changed? How are many of our social behaviors reinforced or weakened? What are the limits of learning, if any? How do learning principles help us with devising clinical interventions and treatments? Students will be able to encounter new situations, both social and otherwise, apply learning principles they have studied, and have an enriched experience because of the application of that knowledge.

Enforced Prerequisite at Enrollment: PSYCH 100
 Bachelor of Arts: Social and Behavioral Sciences
 General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Integrative Thinking
 GenEd Learning Objective: Soc Resp and Ethic Reason

PSYCH 263N: Science of Learning

3 Credits

This course is an introduction to the field of cognitive and learning sciences. It provides an integrative approach to how we learn and remember with particular emphases on the scientific approach to the concepts and application of the theory to education. Learning science is an interdisciplinary field that examines learning from many perspectives and applies the knowledge gained from such studies to improving learning, instruction, and learning environments. This field draws upon contributions from areas of psychology (cognitive, developmental, educational and biological psychology), neuroscience, computer science, as well as sociology and anthropology. Learning scientists use a scientific approach to understand learning, those who do the learning, and the context in which learning occurs. Many learning scientists also seek to apply this information to improve the learning environment, educational practices, and inform educational policies. In this course, students will learn the foundations of learning theory, the important neurological bases of learning, and current information on relevant aspects of cognition. Material will demonstrate the application of this information to educational settings. Course content will be presented in lectures, readings, activities, and demonstrations. As a science-based laboratory course, students will study the scientific method and complete a series of laboratory exercises. This course is designed for primarily for education and psychology majors. It will fulfill the laboratory requirement for education majors. For psychology majors at Penn State Erie it may fulfill category 3. cognitive/experimental or be applied to the Science Option in the BS Major, it may fulfill Category B. developmental, cognitive, learning at Berks Lehigh Valley college and the Commonwealth College. It may be used to fulfill the Social

Behavior sciences requirements. Evaluation will be through examinations, laboratory reports, and additional activity assignments. This course will be offered once a year at Penn State Erie. As a laboratory course, sections will be capped at 25.

Recommended Preparation: EDPSY 14 or PSYCH 100

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

PSYCH 268: Animal Minds

3 Credits

This course considers the cognitive and communicative abilities of animals, especially primates, as compared with humans. PSYCH 268 Animal Minds (3) This course covers select topics in animal cognition and communication. This course will focus mostly on the behavioral level. It will focus on observations and controlled behavioral experiments rather than on neurophysiological experiments (though it will cover some mechanisms that are implicated through behavioral research). One of the main goals of this course is to discuss how we can scientifically approach the study of animal minds. One of the recurring themes of the course will be methodological: how can we pose a question to a being that does not have language? Another goal of the course is to teach critical thinking about experiments in this field. It will discuss how to run a well-controlled experiment and closely examine the claims that are made by each experimenter. Through a class project, students will gain some experience trying to observe behavior and designing experiments. This course addresses an active research area in psychology, of broad interest to students in Psychology and other disciplines. Because of this broad appeal, no background in psychology is assumed, and no prerequisite is required. The course will fulfill a 200-level requirement for students in the PSY majors and minors. Students typically will be evaluated by two midterm exams (25% each), a final exam (35%), and a research project (15%). The course will typically be offered once each academic year with an enrollment limit of 50.

PSYCH 269: Evolutionary Psychology

3 Credits

Survey of evolutionary perspectives in current psychological research. PSYCH 269 Evolutionary Psychology (3) (BA) This course meets the Bachelor of Arts degree requirements. This course demonstrates how knowledge and principles from evolutionary biology are used to conduct research on the design of the human mind. The course explains how evolutionary psychologists identify adaptive problems faced by our ancestors and test hypotheses about psychological mechanisms designed by natural selection to solve these adaptive problems. The psychological mechanisms discussed are involved in phenomena such as perception and the control of activity, learning and cognition, mate selection and courting, development and parenting, altruism, aggression, and social structure. Evolutionary psychology is thus not a topic area such as perception, learning, or motivation, but rather a way of thinking that can be applied to any topic within psychology. The course, therefore, shows how evolutionary psychology is (1) changing how scientists approach old topics, (2) opening up new areas of research, and (3) beginning to provide a unifying framework for integrating the various subdisciplines of psychology. Students will learn to understand and evaluate evolutionary hypotheses about a range of topics in psychology

and related social sciences. Evaluation will be based on a combination of methods, including for example traditional exams, written homework, papers, and participation in class and group discussions. The course is offered as a perspective that can be used to think about the subject matter in any particular content course in psychology. Students may choose this course to fulfill a requirement in the major.

Enforced Prerequisite at Enrollment: PSYCH 100 and (ANTH 21 or BISC 2 or BIOL 133 or BIOL 222)

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 270: Introduction to Abnormal Psychology

3 Credits

Overview of assessment, causes, and treatments of psychological disorders. PSYCH 270 Introduction to Abnormal Psychology (3)(BA) This course meets the Bachelor of Arts degree requirements. This course focuses on some of the topics and questions people most commonly ask about psychology: What are the different psychological disorders, and what are they like? How do clinicians diagnose someone with a disorder? What do therapists actually do in therapy? Course objectives include: (a) examine historical and current conceptions of normal and abnormal behavior; (b) survey the origins, symptoms, and characteristics of several adult psychological disorders; and (c) introduce the main treatment approaches for psychological disorders. The course is designed to be accessible to both Psychology majors and others. Psychology B.A. and Psychology B.S. majors may use the course toward the 200-level breadth requirement of the major. Students will be assessed primarily with objective exams.

Enforced Prerequisite at Enrollment: PSYCH 100

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 281: Introduction to Industrial-Organizational Psychology

3 Credits

This course introduces the concepts and methods used to study people within and as they relate to the world of work. This is a survey course that provides an introduction to many topics ranging from determining what individuals do in their jobs, to the design and operation of organizations. Topics include (but are not necessarily limited to): recruitment, selection, training, teamwork, employee motivation, leadership, and organizational culture.

Enforced Prerequisite at Enrollment: PSYCH 100

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

PSYCH 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 295: Internship

1-18 Credits/Maximum of 18

Supervised off-campus nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PSYCH 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

PSYCH 300: Honors Course in Psychology

1-6 Credits/Maximum of 6

Individual study and seminar in selected phases of psychology.

Enforced Prerequisite at Enrollment: Invitation of Program Honors Committee

Bachelor of Arts: Social and Behavioral Sciences
Honors

PSYCH 301M: Honors Research Methods in Psychology

4 Credits

This is an advanced undergraduate-level research methods course for honors students. The course will emphasize the basics of research (generating researchable ideas, hypothesis testing, scientific writing, reliability and validity) and major types of research. It is assumed that students have had an introductory class in statistical methods (or quantitative methods) and introductory psychology courses prior to their participation in this course. The primary goals of this course are for students to (1) learn how to critique and generate research, (2) develop critical thinking and communication skills, and (3) generate and develop independent research projects. Attempts to achieve these goals require knowledge of basic concepts, techniques, language and logic of research methods and data analyses in psychology. This course is structured around the belief that one of the best ways to obtain these objectives is through active participation in the research process. The course is designed incrementally, so that skills learned early in the course are critical for success at subsequent assignments. In the end, a successful student will be (a) able to communicate and think critically about research, (b) have experience designing research and analyzing data,

and (c) will have confidence in one's ability to generate interesting and testable research ideas. As a result, the successful student will be well prepared for advanced psychology courses and prepared to complete one's honors thesis.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 200 or STAT 200)

Honors
Writing Across the Curriculum

PSYCH 301W: Basic Research Methods in Psychology

4 Credits

Introduction to methods of psychological research, with special attention to hypothesis formation and testing, threats to validity, and data presentation.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 200 or STAT 200)

Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

PSYCH 370: Psychology of the Differently-Abled

3 Credits

This course familiarizes students with the needs and abilities of people with varying physical challenges through academic and experimental exercises. PSYCH 370 Psychology of Differently-Abled (3) (US) In 1991 President Bush signed the Americans with Disabilities Act (ADA) which recognized that the hundreds of thousands of Americans living with disabling conditions form a class which should receive protection under the law. Many people look at the ADA as civil rights legislation which is intended to offer disabled Americans the same legal rights to access as the Civil Rights legislation of the 60s offered to Americans of color. While discrimination in the workplace, in housing, and in other areas based on race is no longer openly practiced, people with different physical abilities are still fighting an uphill battle. Often the barriers they face are due to ignorance of their needs. The intent of this course is to increase awareness and sensitivity to the needs of people who are different in the physical dimension. Additionally, policy and economic implications will be studied. The content will include multiple modalities, such as mobility and visual differences. The focus will be positive, emphasizing how differences in one area are overshadowed by similarities in most areas. Language in the course will focus on the positive as well, hence Psychology of the 'Differently-Abled' rather than 'Disabled'. Accomplishments of people such as FDR and Mozart will be discussed in the context of significant contributions made by people who were physically different. Finally direct experience with people will be obtained through a community service component of the course. The objectives of this course are to first familiarize students with the causes and consequences of different physical challenges. The long term objective is to increase sensitivity to the needs of people who are different from most of us in some ways, but very similar to us in most ways. Research has shown that familiarity is a critical tool in raising comfort levels and decreasing discriminatory and hurtful acts. Evaluation Methods: Examinations 40%, mid-term and final Community Service 30%, this will be assigned through the same form Internship supervisors use to evaluate students for PSYCH 395 Research Paper 25% Oral Presentation 5%, 15 minute presentation to class regarding their community service experience. This course will draw on materials covered in General Psychology. No other course preparation will be needed. The course is

an Intercultural and International Competence (GI) course, focusing on intercultural aspects only.

Enforced Prerequisite at Enrollment: PSYCH 100
United States Cultures (US)

PSYCH 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

PSYCH 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PSYCH 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

PSYCH 404: Principles of Measurement

3 Credits

This is an introductory course about properties of test scores such as reliability and validity. In addition, the course focuses on the construction and evaluation of measurement instruments used in educational and psychological settings and may include topics such as test development, score reporting, and interpretation. Basic statistics are introduced throughout the course to interpret the psychometric properties of scores.

Enforced Prerequisite at Enrollment: PSYCH 100 or STAT 200 or PSYCH 200 or EDPSY 101 or Graduate Status

Cross-listed with: EDPSY 450

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 406W: Advanced Research Projects in Psychology

4 Credits

Advanced methodology focusing on the logic and practice of research culminating in the completion of a student designed research project.

Enforced Prerequisite at Enrollment: PSYCH 301W
Writing Across the Curriculum

PSYCH 407: Advanced Research Methods in Psychology

3 Credits

Advanced methodology focusing on the logic and practice of research in a selected content area of psychology.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 200 or STAT 200) and PSYCH 301W

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 408: Program Evaluation

3 Credits

Examination of the theories and practice of program evaluation; emphasis on applied work utilizing a wide range of evaluation approaches. PSYCH 408 Program Evaluation (3) This course will introduce the student to the basic procedures and design methodologies of program evaluation. The student will learn about the purposes of evaluation, types, applications, and ethical issues involved in evaluation. A history of programmatic theory design will be reviewed with the purpose of clarifying the linkages between goals, objectives, and the hypothesized relationships between specific programmatic elements and desired outcomes. The student will be challenged to identify and understand the normative assumptions specific to organizations about their basic program design, implementation, and assessment processes. Students will be evaluated by a combination of the following: evaluation proposal, short written assignments, exams, oral presentation, and attendance. The prerequisites for this course include satisfactory completion of PSYCH 100, SOC 001, PSYCH 200, STAT 200, and PSY 201. This course presupposes critical thinking skills and basic competencies in statistics and research methods. For the Psychology major (PSHBS or PSHBA) at Penn State Erie, this course is important for students who will be entering graduate school or going into practice in the areas including, but not limited to: community psychology, social psychology, industrial-organizational psychology, sports psychology, or the general social services field. This course can count towards: a) the advanced course requirement, b) the special interest course requirement, or c) elective credit. Psychology minors at Penn State Erie can apply this course toward the 15 credits in psychology beyond the PSYCH 100 requirement. Students in other majors should consult with their academic advisers to determine how this course fits into their program of study. This course will be offered once annually (fall semester).

Enforced Prerequisite at Enrollment: (PSYCH 100 or SOC 1) and (PSYCH 200 or STAT 200) and PSYCH 301W

PSYCH 410: Child Development

3 Credits

Study of the psychology of the growing person from conception through adolescence, focusing more on periods up to middle childhood. PSYCH 410 Child Development (3) PSYCH 410 Child Development is intended for undergraduate students majoring in psychology, education and related disciplines. The purpose of this course is to introduce students to the theories and the influences on child development from conception through adolescence. Students will be introduced to research concerns in developmental psychology, including descriptions of research designs and ethical considerations in research with children and adolescents. Course content will include an in depth review of prevailing theories and influences on development from conception through adolescence. Application of the principles and influences will be applied to the physical, cognitive, and social development of children. Requirements for the course will include objective examinations, as well as written assignments. Written assignments will involve comparisons and critiques of major developmental theories. Examples of such assignments include descriptions of the key points of a major developmental theory or process of child development, detailed description of an observation of a child and how the child's behavior relates to a major developmental theory, descriptions of how application of developmental theory apply to the student's chosen major or occupation, or comparisons and critiques of developmental theory.

Enforced Prerequisite at Enrollment: PSYCH 100 and 6 credits of PSYCH

PSYCH 412: Adolescence

3 Credits

Physical, cognitive, and personality development during adolescence.

Enforced Prerequisite at Enrollment: PSYCH 100

PSYCH 413: Cognitive Development

3 Credits

Development of reasoning and related cognitive skills, such as perception and language.

Enforced Prerequisite at Enrollment: PSYCH 100 and PSYCH 212

PSYCH 414: Social and Personality Development

3 Credits

Development of social and personality attributes.

Enforced Prerequisite at Enrollment: PSYCH 100 and PSYCH 212

PSYCH 414H: Social and Personality Development

3 Credits

Development of social and personality attributes.

Honors

PSYCH 415: Topics in Developmental Psychology

3 Credits

Special topics in developmental psychology.

Enforced Prerequisite at Enrollment: PSYCH 413 or PSYCH 414

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 416: Development Throughout Adulthood

3 Credits

Processes of development and change of behavior from early adulthood through old age, emphasizing theory, method, and empirical research.

Enforced Prerequisite at Enrollment: HDFS 249 and (HDFS 312W or PSYCH 301W) and (PSYCH 200 or STAT 200 or 3 credits in STAT) and (6 credits in HDFS or PSYCH or SOC)

Cross-listed with: HDFS 445

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 419: Psychology and a Sustainable World

3 Credits

Students study relationships between humans and the natural world and psychological factors contributing to environmental problems and sustainable solutions. PSYCH 419 Psychology and a Sustainable World (3) This course examines psychological dimensions of humans' connection to the natural world, causes of human contributions to environmental problems, and psychological approaches for encouraging sustainable behavior. The course draws on the new field of conservation psychology and responds to the University's commitment to becoming a

leader in sustainability education. This course is designed for upper-level undergraduate students to satisfy requirements for Psychology degree programs, the Psychology minor, and the Sustainability Leadership minor. Major topics covered include psychological foundations of environmental problems (psychological understanding of unsustainable behavior, psychological perspectives on ethical dimensions of environmental problems, people's place in nature, psychological approaches to promoting sustainable behavior), and the application of psychological principles to specific environmental topics (consumerism and sustainable lifestyles, population overshoot, climate change, land use, water use, energy use, food production and consumption, pollution and waste). Students will be able to apply concepts, theories, and findings to change cognition, motivation, and behavior, with the goal of reducing negative human impacts on the environment. They will be able to write and communicate about their work in the form of a final paper and a class presentation that conform to the standards of psychological research. Assessment methods include weekly journal assignments that document students' application of lecture and reading material to their experiences with nature, their observations about their own negative impacts on the environment, and their actions to reduce negative impacts on the environment. In addition, students will develop a conservation intervention program that targets a specific problem on campus or in a community, for which students review relevant literature, design an intervention program, give a presentation of the program, and submit a final paper on the program.

Enforced Prerequisite at Enrollment: PSYCH 100 and PSYCH 221

PSYCH 420: Advanced Social Psychology

3 Credits

In depth study of selected research areas in human social behavior.

Enforced Prerequisite at Enrollment: PSYCH 100 and PSYCH 221

PSYCH 421: Self and Social Judgment

3 Credits

Individual's perceptions, evaluations, and decision-making strategies about themselves, others, and social situations or issues.

Enforced Prerequisite at Enrollment: PSYCH 100 and PSYCH 221

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 422: Human Sexuality

3 Credits

Psychological influences on human sexual behavior such as love, sexual orientation, gender, intercourse, contraception, sexually transmitted diseases, dysfunctions, and paraphilias. PSYCH 422 Human Sexuality (3) PSYCH 422, Human Sexuality, is intended to examine the influence of psychological factors on human sexual behavior. Information on male & female anatomy, on the roles/influences of hormones, and on conception/pregnancy will be covered as well as information on gender, sexual orientation, communication, love, sexual harassment, paraphilias, sexually explicit material, and sexual dysfunction. Evaluation will be by means of exams (60% of grade), papers (15% of grade), small group projects (10% of grade), and a poster presentation (15% of grade). The prerequisite for this course is satisfactory completion of PSYCH 100. As the course presupposes critical thinking skills and an awareness of research methods in psychology, it is an advanced undergraduate level course requiring junior/senior level standing. For the Psychology

major (PSHBS or PSHBA) at Penn State Erie, this course can count either toward (a) the diversity basic course requirement, (b) the advanced course requirement, (c) the special interest course requirement, or (d) elective credit. Psychology minors at Penn State Erie can apply this course toward the 15 credits in psychology beyond PSYCH 100 requirement. Students in other majors should consult with their academic advisors to determine how this course fits into their program of study. No special facilities are required for this course, though students will need to prepare a poster for presentation. This course is expected to be offered at least once every four semesters.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 212 or PSYCH 221 or PSYCH 231 or PSYCH 238 or PSYCH 243 or PSYCH 270)

PSYCH 423: Social Psychology of Interpersonal/Intergroup Relationships

3 Credits

In-depth study of relationships among individuals (e.g., intimate relationships) or groups (e.g., prejudice, cooperation, competition, aggression, and negotiation).

Enforced Prerequisite at Enrollment: PSYCH 100 and PSYCH 221
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 424: Applied Social Psychology

3 Credits

Application of social psychological theories and research methods to field settings and to the study of social issues.

Enforced Prerequisite at Enrollment: PSYCH 100 and PSYCH 221
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 425: Psychology of Human Emotion

3 Credits

Reviews, critiques, and applies major historical and contemporary psychological theories of emotion experience, understanding, and expression.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 221 or PSYCH 232 or PSYCH 238 or PSYCH 243 or PSYCH 260)
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 426: Language and Thought

3 Credits

Relations between language and cognition; cognitive implications of normal and impaired language development; cognition and bilingualism. LING (PSYCH 426) 429 Language and Thought (3)(BA) This course meets the Bachelor of Arts degree requirements. Is language a special and uniquely human ability that develops and functions independently of other cognitive processes? Do individuals who speak different languages also have different concepts about the meaning of objects and ideas? Does language development depend on exposure to spoken language? In this course we will examine the relation between language and thought by considering evidence on language and cognition in both children and adults. Topics to be covered include the typical development and use of language as well as language and cognition in individuals whose language and/or cognition is impaired in some form. The latter include individuals with aphasia who have sustained brain damage following stroke or head injury, schizophrenics whose language reflects

aspects of their disorder, children diagnosed with Williams Syndrome who appear to have good or even precocious language abilities in the face of severe cognitive impairment, and Alzheimer's patients in whom semantic memory has begun to deteriorate. The course will also discuss the acquisition of sign language among deaf individuals and the consequences of bilingualism for children raised with two languages and for adults with proficiency in more than a single language. The purpose of this course is to provide a survey of current scholarship on the relation of language and thought, including a review of recent developments in the primary literature. The necessary background is covered in introductory Psychology and Linguistics courses, which serve as alternative prerequisites. Students will learn about the consequences of typical and impaired development for relations between cognition and language ability. It is distinguished from PSYCH 457, Psychology of Language, by a focus on the implications of language, language development, and language impairment, for cognitive processes. It covers some topics also addressed by current courses in Linguistics and in Communications Sciences and Disorders, but is distinguished from those courses by its focus on perspectives and theories from cognitive psychology. This course may be used toward the 400-level PSY requirements of the PSYBA and PSYBS majors, and toward the PSY minor. Students typically will be assessed on the basis of class participation and discussion (20%), four papers (total 60%), and an in-class presentation based on reading original research literature (20%). The course typically will be offered once each year at the University Park campus with an enrollment limit of 50.

Enforced Prerequisite at Enrollment: PSYCH 100 or LING 1 or LING 100
Cross-listed with: LING 429
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 427: L1 Acquisition

3 Credits

How children learn their first language; psycholinguistic aspects of lexical, syntactic, semantic, and phonological development. LING 446 (PSYCH 427) L1 Acquisition (3) (BA) This course meets the Bachelor of Arts degree requirements. This course focuses on how children learn their first language from the theoretical perspectives of imitation theories, social construction theories, and innateness theories. In addition, the course covers the various stages of language acquisition including phonological (sound system), morphological (word meaning), syntactical (grammar) and semantic (meaning) development from birth to adulthood. Other related subfields covered in the course include the acquisition of Pidgin and Creole languages, bilingual and multilingual acquisition, and language acquisition and linguistic change.

Enforced Prerequisite at Enrollment: PSYCH 100 or LING 100
Cross-listed with: LING 446
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 432: Multicultural Psychology in America

3 Credits

This course focuses on the central role of culture, race, and ethnicity in the human condition.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 212 or PSYCH 221 or PSYCH 232 or PSYCH 238 or PSYCH 243 or PSYCH 270)
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)

PSYCH 434: Psychology of Gaming

3 Credits

Upper level course examining the core psychological principles as they apply to the topic of games. GAME 434 / PSYCH 434 Psychology of Gaming (3) This course looks at how the field of psychology can be applied to understand and improve the world of games. This requires the application of theories and research based in experimental, cognitive and several other disciplines within psychology, including but not limited to cognitive, social, motivation & emotion, and experimental psychology. By applying different theories within these disciplines we can start to understand how humans interact with games and in turn how games have evolved as a result. This course addresses an active research area in psychology, of broad interest to students in Psychology and other disciplines. The course will fulfill a 400-level requirement for students in the PSYCH majors and minors as well as those in the GAME minor. Students typically will be evaluated by exams, research project, in-class activities, homework, and article discussions.

Enforced Prerequisite at Enrollment: PSYCH 100
Cross-listed with: GAME 434

PSYCH 436: Humanistic, Existential, and Religious Approaches to Psychology

3 Credits

Existential, humanistic, and religious approaches to the psychology of experience, consciousness and will.

Enforced Prerequisite at Enrollment: PSYCH 100 or RLST 1
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 438: Personality Theory

3 Credits

Personality theories and their application to social and personality development and personality dynamics.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 212 or PSYCH 221 or PSYCH 238 or PSYCH 243 or PSYCH 269 or PSYCH 270)

PSYCH 439: History and Systems of Psychology

3 Credits

Historical antecedents to scientific psychology; development of contemporary psychological theories and research areas from the formal establishment of psychology.

Enforced Prerequisite at Enrollment: PSYCH 100

PSYCH 441: Health Psychology

3 Credits

Overview of the field with an emphasis on how psychological research contributes to an understanding of health and behavior.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 212 or PSYCH 221 or PSYCH 232 or PSYCH 238 or PSYCH 243 or PSYCH 261 or PSYCH 270)
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 442: Trauma and Resiliency

3 Credits

This course will provide an overview of the current state of knowledge and research on traumatic stress, resiliency, and treatment.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 212 or PSYCH 238 or PSYCH 243 or PSYCH 270)

PSYCH 443: Treatment and Education in Developmental Disabilities

3 Credits

Covers etiology, classification, intervention (treatment and education), ethical and legal issues related to individuals with developmental disabilities.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 212 or PSYCH 238 or PSYCH 243 or PSYCH 270)

PSYCH 444: Engineering Psychology

3 Credits

Methods and results of experimental psychology pertinent to problems which involve man-machine relationships.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 200 or PSYCH 253 or PSYCH 256 or STAT 200)
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 445: Forensic Psychology

3 Credits

Relations between psychological theory and research and the law, legal processes, and social policy. PSYCH 445 Forensic Psychology (3)(BA) This course meets the Bachelor of Arts degree requirements. This course focuses on the interplay between psychological theory and research and the law, legal processes, and social policy. Students will be exposed to the dilemmas faced in the law and how overlap with the knowledge base and expertise of psychologists. Students will learn about the roles psychologists might play in the court system and the history of their involvement. This will include roles of consultant, policy evaluator, expert witness, assessor, and advocate. Legal issues that emerge in psychological practice will also be covered (e.g., limits to confidentiality, duty to warn, consent issues). Students will gain an understanding of the basic theories of the law and how psychological theories may intersect with these. The emphasis of discussion will be on those affecting children, youth and families. These will include topics such as divorce, child maltreatment, juvenile delinquency, domestic violence, and social welfare. Other topics of the law will also be highlighted (insanity plea, civil commitment). Particular attention will be paid to issues dealing with race, ethnicity, and social class and law and social policy. This course expands the PSY curriculum at the 400-level to include a popular and socially significant topic, and will fulfill a 400-level PSY requirement for Psychology majors and minors. It addresses in detail legal and social policy implications of topics covered in other psychology courses. Significant background in psychology is assumed; thus PSYCH 270 (Introduction to Abnormal Psychology) is a prerequisite. Students typically will be assessed on the basis of three exams (20% each), a paper (30%), and class participation (10%).

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 238 or PSYCH 243 or PSYCH 270)

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 448: Psychology of Female Serial Killers

3 Credits

In this course, students will examine means, motives, and makings of female serial killers. We will discuss perpetrators, crimes, and victims to delve into the psychology of the female perpetrator of serial homicide. Factors discussed include traumagenic experiences, mental illness, substance use, brain and neurological considerations, evolutionary psychology, and historical, gender, and cultural influences. We will also compare the backgrounds and crimes of female serial killers to those of male serial killers to elucidate similarities and differences. Course work is based on scientific readings, valid, nonbiased media reports, court documents, and other well-referenced resources.

Prerequisite: PSYCH 100 and PSYCH 301W and fourth-semester standing

PSYCH 449: Basic Counseling Skills

3 Credits

This course provides an introduction to specific counseling and helping skills used by various counseling/psychotherapy models across the major theoretical orientations. During the course, an emphasis will be placed on the skills and techniques that a counselor uses to establish and maintain an effective counseling relationship. In both content and process, the focus is on integration of theory with practice through experiential learning. Students will learn and apply skills that range from basic attending and listening skills to interviewing skills. In order to facilitate learning, a variety of instructional strategies are to be used including: 1) Lectures and demonstration by the instructor, 2) video-taping of students as they are practicing their skills and providing feedback, 3) small group work for the purpose of practicing skills, analyzing other students' performances, and sharing reactions to the counseling process, and 4) completion of exercises/worksheets handed out in class. Upon successfully completing this course, the learner is expected to be able to engage in basic counseling and interviewing, demonstrate ethical counseling principles relevant to the content of the course, describe a model that represents the counseling process, including the stages of counseling, assess the role of nonverbal communication in counseling, identify and demonstrate basic listening skills, probing, interpretation skills, challenging skills, summarizing skills, and informing skills, assess the use of each basic skill in a multicultural environment, evaluate personal and peer mastery of basic skills, and conduct a brief one-session counseling intervention that facilitates client development and change.

Enforced Prerequisite at Enrollment: PSYCH 100

PSYCH 451: Psychology of Action

3 Credits

Basic and applied science of action, from psychological, computational, and physiological perspectives. PSYCH 451 Psychology of Action (3) In all walks of life, people must adaptively control their physical movements. Whether in industrial settings, on the highway, in the kitchen, in the studio, in the concert hall, or on the football field, skillful physical action is essential. This course will focus on the means by which skilled physical behaviors are learned, planned, and controlled. The course will focus on a broad range of basic behaviors (e.g., reaching, walking, looking, speaking, and typewriting) as analyzed from several perspectives (physiologically, psycho-logically, and computationally). Basic science as well as practical

applications will be emphasized, as will links between movement control and other, related topics such as perception, cognitive development, and robotics. This course addresses topics in an active research area in cognitive psychology. It assumes some prior knowledge of cognitive psychology, requiring PSYCH 100 and PSYCH 256 as a prerequisite. The course will cover some topics addressed in several Kinesiology courses, but does so from the perspective of cognitive psychology. It will fulfill a 400-level PSY requirement for Psychology majors and minors. Students typically will be assessed on the basis of midterm (25%) and final (35%) exams, brief writing assignments and in-class activities (15%) and research papers or projects (25%). The course will normally be offered once each academic year.

Enforced Prerequisite at Enrollment: PSYCH 100 and PSYCH 256

PSYCH 452: Learning and Memory

3 Credits

General survey of learning and memory processes as revealed in experimental work with animals and humans.

Enforced Prerequisite at Enrollment: PSYCH 100 and PSYCH 256

PSYCH 455: Cognitive Neuroscience

3 Credits

Cognitive Neuroscience strives to understand the brain bases of cognition. This course is intended to provide an overview of the cognitive and neural processes that support major components of cognition such as attention, vision, language, motor control, navigation, and memory. The course will introduce students to basic neuroanatomy, functional imaging techniques including electrophysiology and functional Magnetic Resonance Imaging (fMRI), as well as behavioral measures of cognition. We will discuss the experimental techniques and the ways in which inferences about the brain bases of cognition are made. We will consider evidence from healthy adults, as well as from patients with neurological diseases such as Alzheimer's disease, Parkinson's disease, Huntington's disease, amnesia, and stroke.

Enforced Prerequisite at Enrollment: PSYCH 256 or PSYCH 260A

Recommended Preparation: PSYCH 200 or STAT 200

PSYCH 456: Advanced Cognitive Psychology

3 Credits

In depth study of complex mental processes: thinking, problem-solving, imagery, symbolic behavior, information-processing, attention, artificial intelligence, and language.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 253 or PSYCH 256 or PSYCH 260)

PSYCH 457: Psychology of Language

3 Credits

Overview of psychological research and theory on language processes, including speech perception, word recognition, meaning representation, comprehension, and language acquisition. LING (PSYCH) 457 Psychology of Language (3)(BA) This course meets the Bachelor of Arts degree requirements. How do we process language? Why do we easily adjust to a speaker with a foreign accent? How do young children come to speak the language to which they are exposed? Why is it difficult to

learn a second language as an adult? This course focuses on the cognitive processes engaged by language use. Topics to be covered include speech perception, word recognition, representation of word meaning, comprehension of sentences, spoken production of words and sentences, and first and second language acquisition. In addition, the role of language in the study of thought and the role of biological mechanisms in theories of language learning will be discussed, as well as ways in which research on the language of special populations (e.g., deaf signers, dyslexics, aphasics) can inform theories of language processing and representation.

Enforced Prerequisite at Enrollment: PSYCH 100 or LING 100

Cross-listed with: LING 457

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 458: Visual Cognition

3 Credits

Overview of concepts and methods in cognitive visual-spatial processing.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 253 or PSYCH 256 or PSYCH 260)

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 460: Comparative Psychology

3 Credits

Behavior from standpoint of phylogenetic growth and development; biological implications; comparison of different types of animals, including man.

Enforced Prerequisite at Enrollment: PSYCH 100 or PSYCH 260

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 461: Advanced Conditioning and Learning

3 Credits

An examination of basic learning processes that have been determined within the context of classical, instrumental, and operant learning situations.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 253 or PSYCH 256 or PSYCH 261)

PSYCH 462: Physiological Psychology

3 Credits

Study of the biological bases of behavior and experience, including the anatomy and physiology of the brain and nervous system.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 260 or BIOL 110)

PSYCH 464: Behavior Genetics

3 Credits

Survey of gene mechanisms and gene-environment interactions in the determination of behavior; emphasis on deviant human behavior.

Enforced Prerequisite at Enrollment: PSYCH 100 and (ANTH 21 or BISC 2 or BIOL 133 or BIOL 222)

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 466: The Psychology of Evil

3 Credits

This seminar will provide a critical study of evil from a psychological science perspective: how to define evil; popular perceptions about evil; the motivations people have to commit evil acts; the situational and personal factors that remove restraints to commit evil acts; and, the process of healing (forgiveness/reconciliation) after evil. By reading primary and secondary literature, we will critically think about these important, empirical questions about human nature. This course will wrestle with provocative questions about human nature. Are humans basically motivated to be good, evil, or both? Who should we trust more in recounting evil actions: victims or perpetrators (or neither)? Does "pure evil" exist? Can we ever completely stop evil from happening? How do we heal after experiencing evil?

Enforced Prerequisite at Enrollment: PSYCH 100 Recommended

Preparation: PSYCH 200 and PSYCH 301W

PSYCH 467: Psychology of Serial and Mass Murderers

3 Credits

It is essential in understanding human behavior for students to include the darker side, murder - without conscience. This course will enable students to understand the definition of murder, within various classifications of it used in the United States, in particular the phenomenon of serial and mass murder. Students will be able to examine and understand within a historical context the cultural development of monsters, demons and evil and this relationship to serial and mass murder. Importantly, students will explore the biological and genetic foundations of human behavior, develop an understanding of the Diagnostic and Statistical manual (DSM-V) spectrum of personality disorders and how these disorders relate to violent behavior. Hare's PCL-R (Psychopathy Check List- Revised) factors will be examined alongside the examination of serial murder committed by legally insane offenders. Some, but not all serial killers have documented cases of mental illness (e.g. schizophrenia), personality disorders (e.g. borderline and antisocial), and psychopathy, albeit most mass murderers suffer from various psychoses. In addition, students will be able to understand sociological theories as they pertain to violent behavior and include factors such as, the role of the family, sexual and physical abuse, and maladaptive childhood behaviors. Often serial murders are preceded by perpetrators' (i.e., males) use of various types of criminal paraphilia (violent or non-violent). These are examined by students to understand the roles these play in the sexual fantasy development of (i.e., males) perpetrators and specific types of sex crimes. The healthcare industry, a hidden, but important environment for serial murderers, is examined by students in order to understand how occupations are important to serial murderers, as by way of their employment, many have easy access to victims. There are numerous differences between male and female serial killers, and team killers. These differences are explored by students by reviewing case studies of each, which include their profiles, mobility and techniques. Finally, global mass and serial murder is to be explored by students, which compare methods, motives and demographics. Numerous case studies of serial and mass murderers will be reviewed to link the psychological, biological and sociological factors to enable students to construct their own profile of a serial or mass murder by researching particular murderers and their psychological, biological and sociological factors.

Enforced Prerequisite at Enrollment: PSYCH 100 Recommended
Preparation: PSYCH 270

PSYCH 470: Abnormal Psychology

3 Credits

Causes, dynamics, symptoms, and treatment of neuroses, psychoses, personality disorders, and other psychological disorders of adulthood.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 238 or PSYCH 243 or PSYCH 270)

PSYCH 471: Psychology of Adjustment and Social Relationships

3 Credits

Theory and application of psychological principles to problems in personal and social adjustment.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 212 or PSYCH 221 or PSYCH 238 or PSYCH 243 or PSYCH 269 or PSYCH 270)

PSYCH 472: Human Development, Health, & Education From A Global Perspective

3 Credits/Maximum of 3

Intended to address the University's global community objectives and provide scholarly background on human development in other cultures.

Prerequisites: PSYCH 110
Cross-listed with: SPSY 472
International Cultures (IL)

PSYCH 473: Behavior Modification

3 Credits

Principles of advanced behavior modification techniques.

Enforced Prerequisite at Enrollment: PSYCH 100 and PSYCH 261

PSYCH 474: Psychological Intervention in Childhood

3 Credits

Psychology of personal relationships in school situations.

Enforced Prerequisite at Enrollment: PSYCH100 and (PSYCH 212 or PSYCH 238 or PSYCH 243 or PSYCH 270)
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 475: Psychology of Fear and Stress

3 Credits

Description and evaluation of major trends in research on stress and fear in humans and other animals.

Enforced Prerequisite at Enrollment: PSYCH 100 and PSYCH 260
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 476: Child Psychopathology

3 Credits

Etiology, diagnosis, and facilitation of adjustment of the intellectually disabled, gifted, physically handicapped, and emotionally disturbed child.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 212 or PSYCH 238 or PSYCH 243 or PSYCH 270)
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 477: Mental Health Practicum with Children

3 Credits

Overview of interventions for children at risk for mental health disorders; emphasis on intervention strategies, program evaluation, and applied skills.

Enforced Prerequisite at Enrollment: PSYCH 100
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 478: Clinical Neuropsychology

3 Credits

Overview of functional human neuroanatomy and clinical neuropsychology, with emphasis on origin, assessment, and treatment of human brain damage.

Enforced Prerequisite at Enrollment: PSYCH 100 and PSYCH 260
Bachelor of Arts: Social and Behavioral Sciences

PSYCH 479: The Psychology of Gender

3 Credits

Theories and research on gender differences and gender roles. Emphasis on women's and men's current positions in society.

Enforced Prerequisite at Enrollment: PSYCH 100 and PSYCH 221
Cross-listed with: WMNST 471
United States Cultures (US)

PSYCH 480: Advanced Mental Health Practicum with Children

3 Credits

This course involves a continuation and extension of the training and practicum work initiated in PSYCH 477 Mental Health Practicum with Children. The advanced training provided in this course extends understanding of intervention and prevention program logic models and implementation strategies, and includes a focus on tailoring interventions to account for individual, contextual, and cultural factors. Students began their practicum working with children in PSYCH 477 and continue to receive training and supervision for ongoing, linked practicum work in this course. The key goals of this course are to help students: 1) build up a "toolbox" of therapeutic skills, techniques, and intervention approaches to use in the accompanying practicum and to use in future work with high-risk children, 2) understand how therapeutic group interventions with high-risk children are organized and conducted, and identify the key mechanisms of action that inform intervention design and drive positive child benefits, and 3) become familiar with the resource-base of evidence-based prevention programs and implementation supports to foster dissemination in communities. Lectures, class discussions, and presentations are included, along with practicum work review and supervision; accompanying practicum work with children is required. The

class requires a commitment of 9 hours per week, which includes class sessions, practicum work, and assignments.

Enforced Prerequisite at Enrollment: PSYCH 477

PSYCH 481: Introduction to Clinical Psychology

3 Credits

Diagnostic procedures, treatment approaches, occupational settings, and ethical considerations relevant to the profession of the clinical psychologist.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 238 or PSYCH 243 or PSYCH 270)

PSYCH 482: Selection and Assessment in Organizations

3 Credits

Background in personnel testing, performance measurement, selection strategies, with emphasis on validity and measurement reliability.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 200 or STAT 200) and PSYCH 281

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 484: Work Attitudes and Motivation

3 Credits

Survey of theory and research with respect to attitudes, morale, and motivation of employees and management.

Enforced Prerequisite at Enrollment: PSYCH 100 and (PSYCH 200 or STAT 200)

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 485: Leadership in Work Settings

3 Credits

Review of research and application of behavior principles in the areas of management and supervision.

Enforced Prerequisite at Enrollment: PSYCH 100 and PSYCH 281

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 489: Professional Development in Psychology

1 Credits

Develop post-graduation plan for use of psychology major; develop professional presentation style.

Enforced Prerequisite at Enrollment: PSYCH 301W Enforced Concurrent at Enrollment: PSYCH 406W or PSYCH 490

PSYCH 490: Senior Seminar in Psychology

3 Credits

Capstone experience for senior psychology majors; review of current research literature; topics vary.

Enforced Prerequisite at Enrollment: PSYCH 301W

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 491: Honors Thesis

3 Credits/Maximum of 3

An opportunity to pursue an advanced research thesis or project to integrate studies within psychology.

Enforced Prerequisite at Enrollment: PSYCH 300 or PSYCH 301W Honors

PSYCH 492: Current Topics in Psychology

3 Credits

Current topics addressing significant contemporary developments in psychology.

Enforced Prerequisite at Enrollment: PSYCH 100

PSYCH 493: Senior Thesis

3-6 Credits/Maximum of 6

Supervised senior thesis research in psychology.

Enforced Prerequisite at Enrollment: PSYCH 300 or PSYCH 301W Bachelor of Arts: Social and Behavioral Sciences

PSYCH 494: Research Projects

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

PSYCH 494H: Research Projects

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences Honors

PSYCH 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: PSYCH 100

PSYCH 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

PSYCH 496A: **SPECIAL TOPICS**

1-6 Credits

PSYCH 496B: **SPECIAL TOPICS**

3 Credits

PSYCH 496F: **SPECIAL TOPICS**

1-6 Credits

PSYCH 496H: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

PSYCH 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PSYCH 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

Public Policy (PUBPL)

PUBPL 120N: State, Society, and Public Policy

3 Credits

Alexis de Tocqueville called association the “mother science” of politics and saw voluntary associations as a pillar of American democracy. These associations must compete in what might be called a moral economy of public policy that preserves the value of equality. This course brings together ideas from political philosophy, history, political science, communication, sociology and economics to address an important question: How have voluntary, nongovernmental associations come to shape and implement public policy? The class begins with the core concepts in political thought and traces them through to contemporary ideas about civil society that span the political spectrum. After critically assessing these ideas, we integrate them into a framework for understanding the process of making public policy.

Recommended Preparations: Any humanities or social sciences course, prior or current registration

Cross-listed with: PLSC 120N, SOC 180N

Bachelor of Arts: Social and Behavioral Sciences

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

PUBPL 197: Special Topics

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

PUBPL 201: Introduction to Homeland Security

3 Credits

An introduction to homeland security, and defense, with a focus on policy, legal issues, organization, and administration. PUBPL 201 Introduction to Homeland Security (3) Introduction to Homeland Security provides a baseline of common knowledge for understanding the nature of homeland security. The course achieves this goal by focusing on homeland security, the motivation and nature of terrorists, the policies established by governments, pertinent governmental plans to meet homeland security goals, who the key players are in homeland security, and the relevant legal issues framing efforts to defend the nation's security. As an introduction to the broad area of study, this course serves as a basis for specialized study such as critical infrastructure protection, emergency response management (including natural disasters), border security, security administration, national security, and terrorism. Understanding key principles of homeland security will be expected from students who complete this course.

Cross-listed with: HLS 201

PUBPL 222N: Science and Politics of the Female Athlete

3 Credits

The purpose of this course is to explore gender differences in sport and politics that emerge from physiology, culture, history, politics, and policy. The engagement of women in sport has unique physiological considerations and ethical dilemmas as well as a rich history of defining moments and important ties to feminism and politics. In this course, students will learn how physiology differences affect female athletic performance and the effects of exercise on the female body, as well as how cultural, historical, and political forces shaped women's participation in sport. Students will also see how similar historical, cultural, and political forces affect women's involvement in politics. Combined, students will understand how similar forces shape gender norms and participation two different, yet related, aspects of society. Additionally, students will learn about the push for evidence-based policymaking and apply that knowledge to topics including doping, pregnancy, and gender verification. Students will integrate physiology and policy in a final assignment advocating for evidence-based sport policy. They will also educate their peers through a public education project.

PUBPL 241: Computer Applications in Public Affairs/Criminal Justice

3 Credits

Introduction to computer applications for criminal justice and public affairs agencies. CRIMJ 241 CRIMJ (PUBPL) 241 Computer Applications in Public Affairs (3) The student will gain a working knowledge of microcomputer and Internet applications to utilize them in course and/or job functions. The class will be treated primarily as a lab. The purpose is to make the student familiar with popular computer applications in current use. Applications covered include: Word Processing (Microsoft Word); Spreadsheet (Microsoft Excel); Presentation Package (Microsoft PowerPoint); Database (Microsoft Access). Internet Applications include: email - Webmail; World Wide Web Browser - Netscape Communicator and Internet Explorer; and creating a Homepage.

Cross-listed with: CRIMJ 241

PUBPL 304W: Public Policy Analysis

3 Credits

The use of analytic models for describing and explaining the forces shaping policy and the consequence of policy decisions. PUBPL 304W Public Policy Analysis (3) This course provides an overview of the policy process and an examination of specific policy areas in the American political system. We will focus on what constitutes public policy and basic aspects of the policy process, including agenda setting, implementation, and policy evaluation. The course covers important contemporary policies such as health care, education, energy, welfare reform, and defense. It also will provide us with an opportunity to consider the utility of policy studies, and the various ways knowledge about particular issues is put to use by academics, partisan political figures, journalists, policy advocates, and policy makers.

Cross-Listed

Writing Across the Curriculum

PUBPL 305: Leadership Studies

3 Credits

Exposure to a wide range of leadership issues that will bring students to a new understanding of leadership as responsibility.

Prerequisite: fourth-semester standing

PUBPL 306: Introduction to Crisis and Emergency Management

3 Credits

An introduction to emergency management in mitigating, preparing for, responding to and recovering from hazards. PUBPL 306 Introduction to Crisis and Emergency Management (3) The course offers an overview of the field of emergency management in dealing with routine emergencies, crises or disasters, and mega disasters. Specific topics emphasized include: the roles and interactions of the public, nonprofit, and private sectors in emergency management; the legal and organizational structure of the national emergency management system; and the problems and policy issues associated with emergency management. This is done by examining the four phases of emergency management: mitigation, preparedness, response and recovery as they relate to resilience, the attempt to; and an overview, including case studies, of various human-made and, technological disasters as well as disasters related to natural hazards. Emergency management as conducted within the U.S. integrated emergency management system (IEMS) by local state

and national emergency management agencies, not terrorist incidents, is the course focus rather than the emerging field of homeland security and terrorist events.

Cross-listed with: HLS 306

PUBPL 419: Race and Public Policy

3 Credits

Seminar format course in which sociological theory and research are applied to current race policy issues. The course examines a number of different aspects of race relations and public policy, including the social and biological constructs of race, historical race policy, modern race policy, affirmative action, criminal justice and other issues regarding race.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Cross-listed with: SOC 419

Bachelor of Arts: Social and Behavioral Sciences

United States Cultures (US)

PUBPL 471: Economic Inequality and Public Policy

3 Credits

Why is the United States among the most unequal affluent democracies and what role does public policy play in this? What policies successfully reduce wealth and income inequalities? How does economic inequality feed back into the policy process to shape subsequent responses to inequality? These are among the questions that we will examine in this course, which will look at the interrelationship between public policy, economic inequality and power differentials in the policy process. We will focus mostly on affluent democracies, and especially the United States.

Concurrent: PUBPL 304W

PUBPL 475: Critical Infrastructure Protection

3 Credits

This course provides knowledge about protection of critical infrastructure as an aspect of homeland security. PUBPL 475 Critical Infrastructure Protection (3) Critical Infrastructure Protection provides a definition of critical infrastructure and examines the importance of protecting it in the post-9/11 era. The course focuses on policies and programs designed to prevent catastrophic events and to protect and maintain the nation's critical infrastructure. It examines such activity through an understanding of the network of organizations at all levels of government and in the private sector responsible for protecting infrastructure. Case examples are provided of catastrophic events to provide an understanding of risks involved in infrastructure protection. Understanding key principles will be measured through preparation of a written analysis of a key homeland security/defense issue with alternative strategies consistent with current policy and legal constraints.

Prerequisite: PLSC 201; HLS 404

Cross-listed with: HLS 475

PUBPL 476: Homeland Security Intelligence

3 Credits/Maximum of 3

The Homeland Security Intelligence course provides a depth of knowledge of key intelligence issues for homeland security professionals.

Prerequisite: PLSC 201; HLS 404

Cross-listed with: HLS 476

PUBPL 481: Seminar in Environmental Policy

3 Credits

Fundamentals of evolution; impacts on natural resources; interaction of environmental issues, current decision-making process policy, enforcement mechanisms; future actions.

Prerequisite: seventh-semester standing

PUBPL 482: Seminar in Health Policy

3 Credits

Introduction to policy analysis of issues of current interest and importance to public administrators in the health industry.

Prerequisite: seventh-semester standing

PUBPL 483: Seminar in National Security Policy

3 Credits

This course provides a comprehensive overview of the process of U.S. national security policy - the principles, practices, and participants in the development and implementation of security strategy and policy. It applies theories and models to the bureaucratic policy making structure of the Executive Branch, looks at the roles of other governmental participants, and evaluates the many factors that constrain decision making. It assesses the impact of non-governmental entities such as the media, interest groups, and public opinion, and considers the effect of changing domestic factors on the process. Finally, it prepares students to be knowledgeable and effective participants in the process and presents them with a practitioner's framework for policymaking. The main themes of this course are that the U.S. Constitution established a federal government of separate institutions sharing powers within an intentionally inefficient system of checks and balances that has evolved by virtue of a dynamic process of Constitutional Amendments, legislative statutes, judicial decisions, and executive actions; and, that national security decisions are best understood by considering the bureaucratic context in which they are made within the Executive Branch, and as a result of the interaction of other governmental and non-governmental participants.

Prerequisite: seventh-semester standing

Cross-listed with: HLS 483, PLSC 483

PUBPL 490: Seminar in Public Policy

3 Credits/Maximum of 99

A survey of the major policy issues, actors and institutions involved in the policy-making system of contemporary society. (May be repeated for credit.)

Prerequisite: seventh-semester standing

PUBPL 495: Internship

1-12 Credits/Maximum of 12

Experience in a public service agency related to knowledge gained through academic course work, reading, and discussion.

Prerequisite: fifth-semester standing

PUBPL 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

PUBPL 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Radiological Sciences (RADSC)

RADSC 101: Radiographic Introduction and Procedures/Lab I

4 Credits

Radiology history, basic radiation protection principles, medical terminology, introduction to radiography and radiographic procedures/lab. As is consistent with the core courses in the Radiography program, a passing grade for enrolled radiography students is 75%.

Enforced Co-requisite at Enrollment: BIOL 161 and BIOL 162

RADSC 102: Radiographic Procedures/Lab II

4 Credits

Continuation of Radiographic Procedures/Lab I to include finish appendicular skeleton, axial skeleton and introduction to skull anatomy and positioning.

Enforced Prerequisite at Enrollment: RADSC 101 and RADSC 110 Co-requisites: BIOL 163 and BIOL 164 and RADSC 295B

RADSC 103: Radiographic Procedures/Lab III

3 Credits

Continuation of Radiographic Procedures/Lab II to include digestive, urinary, and biliary systems and facial bone work.

Enforced Prerequisite at Enrollment: RADSC 102 Co-requisites: RADSC 295C

RADSC 110: Patient Care in Radiologic Sciences

3 Credits

This course includes the basic concepts of patient care, including consideration for the physical and psychological needs of the patient and the family. Routine and emergency patient care procedures are addressed from the radiographer's perspective. Students will learn proper infection control techniques and will prove competency in CPR for healthcare workers. Students will learn drug nomenclature, legend drugs and different types of contrast used for procedures. As is consistent with the core courses in Radiological Sciences, students must achieve a grade of "C" or better

Enforced Co-requisite at Enrollment: RADSC 101 Concurrent Courses: BIOL 161 and BIOL 162. Recommended Preparation: Clinical orientation on campus

RADSC 204: Radiographic Exposure I

3 Credits

This course establishes a knowledge base in factors that govern and influence the production and recording of radiographic images. Topics include the importance of imaging standards, discussion of technique problem-solving for image evaluation and the factors that affect image quality. As is consistent with the core courses in Radiological Sciences students must achieve a grade of "C" (minimum of 75% average) or better for successful completion of the course.

Enforced Prerequisite at Enrollment: RADSC 103**RADSC 205: Radiographic Exposure II**

3 Credits

This course is a continuation of Radiographic Exposure I, with emphasis on electronic imaging, image formation, quality assurance, & related areas. As is consistent with the core courses in Radiological Sciences, students must achieve a grade of "C" or better.

Enforced Prerequisite at Enrollment: RADSC 204**RADSC 206: Advanced Radiographic Procedures**

3 Credits

Emphasis on specialized positioning and advanced radiographic procedures; includes introduction to cross-sectional anatomy. As is consistent with the core courses in the Radiography program, a passing grade for enrolled radiography students is 75%.

Enforced Prerequisite at Enrollment: BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164 Co-requisites: RADSC 295E**RADSC 207: Registry Review**

2-4 Credits/Maximum of 4

Registry Review includes material from all radiological science courses, with emphasis on National Certification Examination, and career planning.

Enforced Concurrent at Enrollment: RADSC 206**RADSC 210W: Radiographic Pathology**

3 Credits

RADSC 210W Radiographic Pathology (3) A writing-intensive study of the basic fundamentals of pathology (disease process) with emphasis placed on radiographic presentation. Material covered includes the basic concepts of disease and terms related to pathology, systemic classifications of disease including etiology, examples, complications and prognosis, radiographic procedures and presentation, and the health process. Writing requirements include shorter and longer sequenced papers. All papers will receive instructor feedback and subsequent submission of a final revised paper. An informal writing assignment with peer review is also required. The writing process evolves throughout the course as the student applies knowledge learned to current assignments. This course is a requirement of the radiography (radiological sciences) curriculum and could be utilized as an option for students interested in a visual study of disease process such as health science and biology majors or for students in need of a writing-intensive course. As is

consistent with the core courses in the Radiography program, a passing grade of a C or higher is required for all RADSC majors.

Enforced Prerequisite at Enrollment: BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164

Writing Across the Curriculum

RADSC 220: Radiation Biology and Protection

3 Credits

Study the principles of interaction of radiation with living systems, effects on cells and tissues, biological response, and radiation protection. The content of this course includes the basic fundamentals of radiation interactions, basic biology with emphasis placed on effects of radiation exposure on cells and on radiation protection mandates and techniques. This course is a requirement of the radiography (radiologic technology) curriculum and could be utilized as an option for other students interested in radiation effects such as health science, biomedical engineering, health physics or physics and biology majors. As is consistent with the core courses in the Radiography program, a passing grade for enrolled radiography students is 75%.

Enforced Prerequisite at Enrollment: RADSC 101**RADSC 230: Radiographic Physics**

3 Credits

Basic knowledge of atomic structure, characteristics of radiation, x-ray production, photon interactions, circuitry, imaging equipment and quality control. This course is a requirement of the radiography curriculum and could be utilized as an option for other students interested in radiation interactions and imaging equipment such as health science, biomedical engineering, health physics or physics majors. As is consistent with the core courses in the radiography program, a passing grade for enrolled radiography students is 75%.

RADSC 295: **SPECIAL TOPICS**

1-2 Credits/Maximum of 2

RADSC 295A: Radiologic Science Clinical Internship I

1.5 Credits/Maximum of 1.5

Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: admission to 2RCC program; Concurrent: RADSC 101 and RADSC 110**RADSC 295B: Radiological Sciences Clinical Internship II**

1 Credits/Maximum of 1

Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: RADSC 295A Co-requisites: RADSC 102

RADSC 295C: Radiological Sciences Clinical Internship III

1.5 Credits

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: RADSC 102 and RADSC 295B

RADSC 295D: Radiologic Science Clinical Internship IV

1 Credits/Maximum of 1

Supervised off-campus group instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: RADSC 103 and RADSC 295C

RADSC 295E: Radiologic Science Clinical Internship V

1.5 Credits

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: RADSC 295D Co-requisites: RADSC 206

RADSC 295F: Radiologic Science Clinical Internship VI

1.5 Credits

Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: RADSC 295E

RADSC 295G: Radiologic Science Clinical Internship VI-A

1 Credits

Supervised clinical education activities under the direction of registered radiologic technologists.

Enforced Prerequisite at Enrollment: RADSC 295E

Railroad Transportation Engineering (RTE)

RTE 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

RTE 301: Railroad Industry Overview and Economic Regulation

3 Credits

This course explores the relationship between railroads and customers, competitors, and the political, regulatory, and economic environment.

Prerequisite: ECON 102; Concurrent: RTE 303

RTE 302: Railroad Track Location, Construction and Maintenance

3 Credits

Principles of railroad track location, alignment, elements and safety regulations.

Prerequisite: C E 310 , C E 336; Concurrent: C E 335, C E 360

RTE 303: Railroad Operation and Safety

3 Credits

Basics of rail operations, including the role of terminals and safety principles.

Concurrent: RTE 301

RTE 305: Railroad Communications and Signals

3 Credits

Principles of the separation of trains, including signals, interlocking, and communications.

Prerequisite: PHYS 212 , CMPSC201 or CMPSC202; Concurrent: RTE 303

RTE 402: Railroad Operations Practicum

3 Credits

Practicum (lectures, supervised field work, laboratories) exploring practical problems in rail operations and safety.

Prerequisite: RTE 303 , RTE 305

RTE 403: Railroad Track Practicum

3 Credits

Practicum (lectures, labs, supervised field experiences) exploring the construction and repair of track.

Prerequisite: RTE 302 , C E 310; Concurrent: C E 333W, C E 335

RTE 404: Railroad Mechanical Practicum

3 Credits

Practicum (lectures, labs, supervised field experiences) examining the repair of locomotives and cars.

Prerequisite: RTE 303 , PHYS 211 , PHYS 212 , E MCH213

RTE 406: Railroad Capstone Project

4 Credits

Capstone project to integrate course knowledge in a team-based project.

Prerequisite: C E 333W , RTE 305 , RTE 402 , RTE 403 , RTE 404 , C E 332 , 7th semester standing

RTE 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

RTE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

RTE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Recreation, Park, and Tourism Management (RPTM)

RPTM 1: Introduction to Outdoor Pursuits

1.5-3 Credits/Maximum of 12

Introduction to Outdoor Pursuits (KINES 1/ RPTM 1) is a course that is designed to introduce the student to selected outdoor pursuit activities. The selected activities will depend on the time of the year and availability of resources. The activities could include but are not limited trail day hiking, mountain biking, backpacking, orienteering, kayaking, canoeing, cross country skiing, or to rock climbing experiences. All selected activities will follow the same basic format of skill development and training procedures, history and philosophical underpinnings of the activity, available written resources and professional organizations related to the activity, logistical equipment preparation, appreciation of environmental impact of partaking in the selected activity, safety management / risk assessment and future opportunities to participate in the activity. It is a purpose of this course to allow the student to explore different outdoor pursuit activities and then to make a more informed decision as to which activities they might choose to further develop their skill base and competency necessary to partake in the activity at a more advanced level on a life long basis. Through opportunities to develop camaraderie through collaborative work/ teamwork, students practice safe participation in the selected activities with attention to environmental impact. Students will experience a common skill base from which to engage in the activities. After completion of the course, students are encouraged to engage in adventure recreation programs, and other appropriate courses to help with the continued development of life skills. This course fulfills credits toward the GHW General Education requirement.

Cross-listed with: KINES 1

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

RPTM 98: Special Topics

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest

RPTM 100A: PGA Tournament Golf A

3 Credits/Maximum of 12

For students enrolled in the PGA Accredited Golf Management Option in RPTM This is a course that will be offered in the fall semester only for students pursuing Professional Golf Management which seeks to provide students with the knowledge and skills necessary to play golf at a high enough level to become a PGA Professional. The primary focus of the course will be on golf movement skills, on-course performance, and mental training for performance. At the completion of this course, students will be equipped to better evaluate each aspect of their golf game and design effective practice strategies that ultimately lead to his/her tournament performance. In addition, students will have the necessary knowledge of how to track his/her performance, and also how to most effectively implement proper practice and training programs that result in improved performance. There are a couple of other unique features of this course. The PGA requires this course to have an 8 to 1 student to PGA instructor ratio. Because of this, the students work with the faculty members and PGA Professionals from the Professional Golf Management Program and also the PGA Professionals from the Penn State Golf Courses. Additionally, students have regular access to the Golf Teaching and Research Center and the Penn State Golf Courses and their practice facilities, also a PGA accreditation requirement.

RPTM 100B: PGA Tournament Golf B

3 Credits/Maximum of 12

For students enrolled in the PGA Accredited Golf Management Option in RPTM This is a course that will be offered in the spring semester only for students pursuing Professional Golf Management which seeks to provide students with the knowledge and skills necessary to play golf at a level high enough to become a PGA Professional. The primary focus of the course will be on golf movement skills, on-course performance, and mental training for performance. At the completion of this course, students will be equipped to better evaluate each aspect of their golf game and design effective practice strategies that ultimately lead to his/her tournament performance. In addition, students will have the necessary knowledge of how to track his/her performance, and also how to most effectively implement proper practice and training programs that result in improved performance. RPTM 100S: Introduction to Golf Management

2 Credits

First year seminar for students enrolled in the Professional Golf Management option of RPTM. RPTM 100S Introduction to Golf Management (2) This course is designed to provide 1st year students enrolled in RPTM - Professional Golf Management Option, an introduction to the University, to their major / option, and to the Professional Golfers' Association of America. The course objectives are to introduce students to active learning as a way to make the transition to a more demanding academic environment. Students in the class will participate in collaborative group projects, which should also provide opportunities for them to establish relationships with faculty and peers. Students will

investigate career opportunities within their field, as well as develop cover letters, resumes and reference sheets that will be necessary in obtaining internships for the summer session following their first year. Course content will also include information to help students become better students, by introducing them to available resources at the University, as well as develop skills in areas such as time management, study skills, note-taking etc. In addition, information will be introduced to help students become responsible members of the University community.

Enforced Corequisite At Enrollment: PSU 14
First-Year Seminar

RPTM 101: Introduction to Recreation Services

3 Credits

Introduction to discipline and exploration of professional career models/ paths, historical development of profession, expectations and opportunities in recreation services. The primary objective of this course is to provide students with an understanding of the historical and contemporary perspectives of the recreation and park profession. In addition, the course will provide an exploration of careers in leisure, recreation and parks, or related services with emphasis on the various leisure delivery systems. Main topics typically include: understanding of the roles and significance of leisure and recreation in past and present societies; awareness of the factors contributing to the emergence of specific movements, delivery systems, and agencies within the recreation and parks movement; knowledge of the specific roles assumed by public, private, nonprofit, community and commercial agencies in providing resources and contributing to contemporary participation patterns and lifestyles; awareness of professional career models, expectations, and opportunities; and, an understanding of issues and trends currently affecting the delivery of leisure services. This is a required course for the Recreation, Park and Tourism Management major, usually taken during the freshman or sophomore year. Students in other majors who are exploring Recreation, Park and Tourism Management are encouraged to enroll.

RPTM 102A: PGA Golf Operations Best Practices

3 Credits/Maximum of 12

RPTM 102A is a course designed to take a deep look into the success of some of the world's best golf operations, including but not limited to facility design and management, business planning, customer experiences, sales and merchandising, tournament operations, and golf tourism. The travel component for this course takes place over the spring break week each year and provides students with the opportunity to experience the facilities, region, and cultures first-hand, while also meeting with the management and staff of each facility. The out-of-class travel option will give the students an opportunity to experience different cultures, and to apply what was learned in class.

RPTM 115: Leadership Development in Snowsports

3 Credits

Leadership Development in Snowsports develops students understanding and skills in becoming a Snowsports industry professional. The course focuses on integrating knowledge across core business areas in Snowsport area management. Students will learn to identify and understand content, proficiencies and skills relevant to Snowsport operations by drawing on multidisciplinary aspects from hospitality and guest experience to physiology and sports training principles. The

course will provide students the opportunity to evaluate information and learn to guide decisions using critical analysis and problem solving skills based on students experiences. Case studies will be utilized to promote dialogue and develop reflective capacities. The course prepares students to work in the Snowsports industry and to understand the complexity of resort staffing and structures.

Recommended Preparation: Experience or current in snowsports, consider RPTM 120 and/or RPTM 215 Snowsports Education

RPTM 120: Leisure and Human Behavior

3 Credits

Leisure and Human Development introduces global concepts regarding leisure and health, from historical and contemporary perspectives, including forces shaping leisure behavior, and relationships among leisure, the environment, social institutions, and holistic well-being. Special attention is given to the role of leisure in individual and societal health and wellness, with applied examples from a U.S. context as well as international perspective. Main topics include: the role of leisure in past and present societies; the ways in which leisure, recreation, and play relate to personal health and wellness, the economy, personal identity, work, religion, sexuality, race, class, socio-economic status, time use patterns, and education; leisure's contribution to human development throughout the life course; the role of leisure in one's life, specialization in leisure activities, leisure careers, serious forms of leisure, and leisure and addiction; and trends in the world economy and culture, technology, urbanization and suburbanization, governance, and demography and how they may influence leisure behavior. Student performance is evaluated through exams and concept maps undertaken in class. Students also examine their own leisure by analyzing their use of time through various reflective writing assignments.

RPTM 140: Outdoor School Field Experience

2 Credits/Maximum of 6

To provide students with educational leadership skills and teaching opportunities working with children in an outdoor residential camp setting. RPTM 140 Outdoor School Field Experience (2 per semester/ maximum of 4) is cross listed as SCIED 140. The Outdoor School Field Experience course allows students to observe, learn, and apply leadership techniques and teaching methodologies in an experiential, residential education program that occurs off campus. This field-based experience provides students with numerous opportunities to practice and refine their leadership and teaching skills through active participation in one week of Outdoor School Field Experience. Students are provided with the opportunity to explore personal values related to the natural environment, sustainable practices, health and wellness and technology, and to practice behavioral changes as they role model those values to the residential campers.

Enforced Prerequisite at Enrollment: Students must apply for and be accepted into the Outdoor School Field Experience.

Cross-listed with: SCIED 140

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

RPTM 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest

RPTM 198: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

RPTM 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

RPTM 201: Introduction to Community Recreation

3 Credits

This course introduces students to the role of community and non-profit recreation agencies in generating benefits for individuals and

communities. Using experience industry design/management and social justice perspectives, this course focuses on designing meaningful experiences that serve people from a variety of backgrounds and circumstances. Topics covered in this course include: the history of community and non profit recreation; environmental, economic, health, social and human development benefits of recreation; access and equity issues in recreation and community sport; engaging communities in decision making; the experience industry; and designing community recreation programs and spaces for meaningful experiences. Students will develop their ability to describe the benefits of community and non-profit recreation to individuals and society; identify disparities in access to recreation and the role of community and non-profit recreation in addressing these; describe methods and techniques for engaging community members in decision making; explain how theory informs the design of meaningful experiences; describe ways in which programs and places can be designed to facilitate meaningful experiences; and explain how individual and group characteristics should influence design to result in greater benefits.

RPTM 210: Introduction to Commercial Recreation and Tourism

3 Credits

Introduction to Commercial Recreation and Tourism is designed to introduce students to the historical and contemporary perspectives of the field of commercial recreation and tourism, and to serve as an introduction to the 'Commercial Recreation and Tourism' option within the Recreation, Park, and Tourism Management curriculum. The course will begin by offering a broad overview of this multifaceted field, highlighting the various roles that commercial recreation and tourism play locally, regionally, nationally, and globally. The course then shifts to focus on managerial considerations for practitioners in the field, preparing students to pursue a career in this expansive and exciting field.

RPTM 215: Snowsports Education

3 Credits

Snowsports Education is designed to guide students to become a certified snowsports educator. The course introduces students to materials and experiences which help to prepare them to undertake the Level I certification in any discipline of the Professional Ski Instructors of America & American Association of Snowboard Instructors (PSIA-AASI). The course is composed of three segments: 1) Introducing snowsports education, 2) Instructor certification process, and 3) Planning for continued professional development. The major topics of the first segment focus on the fundamentals of snowsports instruction, The Learning Connection Model, and on how to facilitate a learning experience for beginner and novice skiers and snowboarders. The second segment entails independent preparation for the PSIA-AASI Level I certification assessment and successful completion of the assessment. The final part of the course helps students interpret and reflect on their assessment feedback and prepare next steps as snowsports educators. Course activities include preparing written summaries and analyses of course topics, self-assessments and reflections of student's own instructing and professional experiences, and completing the PSIA-AASI Level I certification assessment. Students will need to join PSIA-AASI and pay for their level I assessment in addition to tuition fees. Membership with PSIA-AASI includes digital access to required course materials.

Recommended Preparation: Experience or current employment in snowsports is recommended. Students may also wish to complete

RPTM 120 and/or RPTM 115, Leadership Development in Snowsports for successful completion of the course.

RPTM 220: Sustainability, Society, and Well-being

3 Credits

We live in a world increasingly connected via global trade, political alliances and frameworks, transportation, vast and rapid digital, telecommunication, and traditional social and communication networks. Human health and well-being and ecological integrity face the challenging demands of exponential human growth that tax our planet's finite environmental resources. These challenges, framed as "the great acceleration of the Anthropocene" that pushes on planetary boundaries, demands sustainability become more of an imperative each day. But what exactly is sustainability? How does it relate to a career in Recreation, Park and Tourism Management (RPTM) or to your studies in other departments at Penn State? How does sustainability play into this career in the United States, on different continents and in different cultures? This course is designed to provide students with strong foundational knowledge about sustainability and how it relates to their career in RPTM. To develop students' understanding of the concept of sustainability, the course explores how interconnected social, economic, and environmental systems have resulted in the contemporary sustainability challenges we face at multiple scales and in multiple contexts, from the local to the national to the global. Each week students are presented with the large-scale, global status of a particular issue related to sustainability before then exploring these challenges in increasingly local contexts, including African and Asian nation, the U.S. and Pennsylvania, and a career path in RPTM. In contemplating the broad scope of sustainability, students will become better informed about the many ways that their career in RPTM is influenced by this multiscalar context of challenges to social, environmental, and economic sustainability and partnerships among organizations that face sustainability challenges. In exploring how RPTM activities exert an influence on sustainability goals articulated through the targets and indicators of the United Nations Agenda 2030: The Sustainable Development Goals and other frameworks, students will be better equipped to address sustainability challenges within the organizations in which they work and the communities where they work, live, and play.

RPTM 230: Teambuilding Facilitation

3 Credits

Learn leadership and teambuilding skills to facilitate group dynamics and adventure, team activities. RPTM 230 Teambuilding Facilitation (3)Through hands-on experience, discussion, and observation students will develop a sound background to the basics of teambuilding. This course will focus on the philosophy of team activities and experiential education, and the skills required to lead and facilitate teambuilding events. In addition to learning skills, the students will be asked to apply their knowledge of teambuilding to lead actual activities for their peers. Finally, students will be exposed to information about career opportunities in the field of teambuilding and adventure education.

Main topics include: An introduction to teambuilding philosophy and its relation to the outdoor education field. General concepts to be covered include: challenge by choice, full value contracts, the experiential learning cycle and the adventure wave. Activity understanding to include icebreakers, problem solving activities and trust events; Programming and activity sequencing; Leadership skills and the role of the facilitator; Stages of group development; Debriefing activities, transfer of learning and metaphoric transfer; Activity safety: emotional and physical; Risk Management and the elements of good judgment; Group assessment and program creation; Program evaluation. This course is one of the selections for RPTM majors in the adventure-based programming emphasis of the Outdoor Recreation Option. Students in other majors are welcome after RPTM majors have scheduled.

RPTM 236: Leadership and Group Dynamics in Recreation Services

3 Credits

Supervision in recreation services, including theories, strategies, group dynamics, applied leadership and decision-making skills. RPTM 236 Leadership and Group Dynamics in Recreation Services (3)The primary objectives of RPTM 236 are for students to examine both leadership and group dynamics as a function of leisure and recreation services. Students in RPTM 236 will be given a variety of leadership opportunities, both in and out of class, to begin to develop leadership skills as well as observe others in recreation leadership positions. Information on leadership theory and group dynamics (group development, roles in groups, group decision making) will be provided through group exercises and hands on experiences. Main topics include: Leadership theory; Approaches to leadership; leadership styles; Definition of group including characteristics and effective group management; Group decision making and problem solving; Recreation leadership skills including behavior management, interpersonal skills and motivation; Teaching as a leadership skill; learning theory; Communication as a leadership skill; Teambuilding RPTM 236 is a required course for RPTM majors. Students in other majors are welcome. It is strongly suggested that RPTM 236 be taken prior to, not concurrent with RPTM 356.

RPTM 240: Instruction and Leadership in Environmental Education

3 Credits

Outdoor School is a residential outdoor environmental education program attended by upper elementary-aged school children from school districts throughout central Pennsylvania. While serving as Outdoor School Leaders, RPTM 240 provides students with experience in two main areas, leadership/mentorship as well as residential outdoor environmental education lesson planning and delivery. They are approached in the following manner: - Group management and leadership techniques will be examined regarding working with peers (students taking RPTM 140 who are serving as Outdoor School Counselors) and effectively guiding youth participants in an outdoor setting. Outdoor School Leaders will explore what effective mentorship looks like, working with the Counselors to help them work towards their personal developmental goals by the end of the week. Outdoor School Leaders will also explore the intricacies of teaching outdoors, using the environment to keep the group focused and engaged in the learning process. By stepping into this broader leadership role, students taking this course expand the breadth of their responsibilities compared to RPTM 140. - Students will enhance their residential outdoor environmental education skills by designing lesson plans on natural history topics and implementing these lesson plans in an outdoor setting. Class sessions and assignments are designed to develop skills prior to the immersive field experience of applying these

techniques as an Outdoor School Leader. Outdoor School lesson plans include topics such as ecosystem science, sensory experiences in the outdoors, teambuilding, and the basic biology of native Pennsylvania fauna (sometimes taught using live animals). Students build upon the initial teaching experience provided in RPTM 140 by extending the creative process, granting students flexibility in how they plan and deliver lesson content as they develop a personal teaching style. While working towards mastery in the previous two areas, Outdoor School Leaders are also expected to contribute to the daily operations and logistics of their Outdoor School week. This includes items such as understanding relevant emergency protocols, applying sound risk assessment methodologies, and helping general programming run smoothly and safely.

Enforced Prerequisite at Enrollment: RPTM 140

RPTM 250: PGA Facility Management 1

2 Credits

For students enrolled in the PGA Accredited Golf Management Option in RPTM The PGA of America promotes its members as experts in the game and business of golf. Based on our current PGA Accreditation, RPTM 250 (PGA Facility Management) is a course designed to explore the various responsibilities and tasks associated with administering a full-service golf facility. Students will explore and apply management strategies to Business Planning, Customer Relations, Merchandising & Inventory Management, Tournament Operations, Rules of Golf, Golf Car Fleet Management, and Turfgrass Management. The course focuses on managing the golf operation in a way that delivers upon the business plan, offering the desired level of service to customers while also maintaining a viable, sustainable business. Students learn about the PGA Business Planning Model and use case studies to apply business planning concepts. The course also utilizes the PGA Work Experience Portfolio to document relevant training and experience. Students learn the business value of customer service and describe the components of the PGA Customer Relations Model. The course highlights the information about the importance of the golf car to the customer, the golf professional, and the facility. The course utilizes policies and procedures necessary for the operation of a safe and efficient golf car program. Students learn how golf shop design affects merchandise sales. Students will also learn the key terms used in the Rules of Golf and locate and apply Rules to frequently encountered situations. We will examine staff requirements for tournament operations, how to prepare for an event, and communicate tasks required for tournament execution. Students will also learn the types of grasses and soils, nutrient needs and the impact of climate and traffic stress. The course will also focus on common practices for maintaining healthy turfgrass including mowing, watering, fertilizing, aerating, pest control, and disease management.

RPTM 254: PGA Teaching and Coaching 2

2 Credits

RPTM 254 is the second course in the PGA of America's education program in the subjects of golf teaching and coaching. This is a required course for program accreditation. Upon successful completion of the course, students will understand how various types of feedback function and influence performance, the effects of various communication styles, design appropriate practice conditions including the use of various swing methodologies, assess physical capabilities of golfers, and make necessary basic golf equipment adjustments. Students will have the knowledge to proficiently teach the game of golf to a variety of populations, knowledge required of all Professional Golf Management

graduates. The final major topic, player development programs, teaches students how to identify the components of comprehensive player development programs and understand the needs and interests of diverse populations. This course continues to build upon the learning objectives of the PGA Teaching and Coaching 1 course (KINES 93), and is followed up by the PGA Teaching and Coaching 3 course (RPTM 354).

Enforced Prerequisite at Enrollment: KINES 93 Recommended

Preparation: For students enrolled in the PGA accredited Golf Management option in Recreation, Park, and Tourism Management

RPTM 277: Inclusive Leisure Services

3 Credits

The course provides a review of leisure services and programs designed to be inclusive of individuals from underrepresented groups and an overview of professional, legal, and ethical issues. Students receive information about the history of social movements toward inclusive leisure services and acquire knowledge about people who experience oppression, marginalization, and are disenfranchised as well as strategies to enhance their leisure. The course highlights information about the psychological and sociological significance of discretionary time, recreation, and leisure for all people. In addition, the course provides details on social, psychological and physical circumstances that create barriers to leisure engagement. The course addresses current issues related to inclusive leisure services and ethical and professional behavior in the reduction of barriers and subsequent delivery of such services. The course focuses on increasing students' awareness of the needs and interests of diverse populations as well as promotes understanding of principles and procedures for effective social, cultural and environmental design of leisure services, areas, and facilities that facilitate inclusion. Students learn about legal foundations and responsibilities of leisure service providers in serving all people and develop an understanding of ways to comply with professional, legal, and regulatory standards. The course provides students with guidelines to follow so that they help people experience the psychological, social, and physical benefits of leisure. Students receive information on ways to endorse people's culture, with culture used broadly to include characteristics such as ethnicity, religion, sexual orientation, and race. In this course, students explore various characteristics such as people's abilities, age, gender, economic resources, and family and the influence that these aspects of their lives have on their leisure and how to design community leisure services that address challenges in any of these areas. The course is based on ethical principles including the belief that everyone is deserving of respect and has right to be self-determined and that no one can be reduced to a single characteristic. Another cluster of ethical principles focus on the notion that inclusion is good and diversity enriches our world. Finally, since service providers have substantial power and responsibility, they are encouraged to have ethical beliefs drive their behaviors as they consider perspectives other than their own and engage in critical and constructive thinking to contribute to a more just society. Students are exposed to the historical background, development, and current configurations of various groups in our pluralistic American culture. Such exposure will promote an understanding of complex issues of inter-group relations and many kinds of cultural contributions that have shaped our nation. The course strives to increase students' understanding of contemporary United States society.

United States Cultures (US)

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Soc Resp and Ethic Reason

RPTM 280: Wilderness First Aid

1 Credits

Wilderness First Aid focuses on the basic skills of Response and Assessment, Musculoskeletal Injuries, Environmental Emergencies, Survival Skills, Soft Tissue Injuries, and Medical Emergencies. Successful completion of this course includes a certification in Wilderness First Aid by an outside, certifying organization.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

RPTM 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

RPTM 295: ****SPECIAL TOPICS****

1-4 Credits

RPTM 295A Introduction to Golf Management (1)The primary objective of this course is to complete a 40-hour per week internship at an approved golf property. While on internship the student will complete assignments involving the United States Golf Association's rules of golf. The student will also complete a variety of assignments associated with tournament operations and the teaching of the game of golf to both adults and juniors. Another primary objective involves golfer development programs. Main topics include: *Rules of Golf: officiating, rules clinic, newsletters, tips, and course clinic * Tournament Operations: budgeting, staffing, publicity, course preparation, health and safety issues, tournament operations software, and evaluation * Introduction to Teaching Golf: research teaching styles, lesson observation, and conducting a series of lessons * Development of Golfer Programs: program design, planning, budgeting, scheduling, problem solving, and program evaluation This is a required course for all students in the Golf Management Option that are majoring in Recreation, Park and Tourism Management. The internship is not open to students of other majors.

RPTM 295A: Introduction to Golf Management

1-4 Credits/Maximum of 4

Introduction to various phases of golf operations in public, private, municipal, or military settings.

Enforced Prerequisite at Enrollment: 2.00 cumulative grade point average Full-Time Equivalent Course

RPTM 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

RPTM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

RPTM 299: Foreign Studies

1-12 Credits/Maximum of 12

Foreign Studies in RPTM.

Enforced Prerequisite at Enrollment: RPTM 199 International Cultures (IL)

RPTM 300Y: Tourism and Leisure Behavior

3 Credits

Examination of the impact of recreational sociocultural, governmental, economic, and physical environment on the leisure traveler within the tourism industry. RPTM 300 Tourism and Leisure Behavior (3) (IL)The objective of this course is to help students understand the tourism concept from a national and international perspective. The students will debate the motivations that lead people to engage in tourism and in hosting tourists. They will also examine the social, economic and ecological impacts that tourism development can bring to host communities and to tourists. The students will finally apply all the learned materials to conceptualize sustainable development strategies that aim at improving the quality of live of host communities, provide quality experiences to visitors, and protect the existing cultural and ecological resources of the destination. Main topics typically include:; History - How people engage in tourism throughout all periods of history and the influence of major historic events on modern tourism; Socio-cultural impacts - How host cultures are transformed through tourism; Economic impacts - Revenues and costs to host economies due to tourism; Ecological impacts - Ways in which tourism helps and hurts the environment; International terrorism and peace - Why tourism is called the peace industry and how it is affected by terrorism and political instability; Sex tourism - Why tourism can alleviate or aggravate the exploitation of vulnerable segments of society; Tourism planning and policy - How to plan and manage tourism in ways that it produces sustainable benefits to the host community This is a required course for RPTM majors in the Community and Commercial Recreation option. Students in other majors are welcome.

International Cultures (IL)

Writing Across the Curriculum

RPTM 310: Experience Design and Event Management

3 Credits

The Experience Design and Events Management course prepares students to practice strategic event management, project management, and program budgeting and develop a knowledge base in event technologies. Students will also focus on experience design, learning and applying human-centered design processes (e.g., elements of experience and experience mapping and creating personas) that lead to purposeful audience-centered experiences. Finally, students participate in a global and cultural engagement experience to explore these ideas in and outside the classroom. Using the latest communication and social media tools, students engage with event/programmed experiences in locations and with people who offer diverse perspectives on events and experiences.

RPTM 320: Recreation Resource Planning and Management

3 Credits

Relationship between leisure behavior and natural environment. Exploration of natural resources which enhance leisure. RPTM 320 Recreation Resource Planning and Management (3) This course is an introduction to managing the recreational use of U.S. lands, waters, and wildlife. Course objectives include providing students with an awareness of the scope of outdoor recreation resources and major outdoor activities; knowledge about outdoor recreation resource agencies, their mandates, and their resources; an understanding of key outdoor recreation issues and impacts and their relationships to activity type and visitor behavior; knowledge about appropriate management tools for addressing impacts; and an understanding of the contribution of planning to effective recreation resource management. Main topics typically include: Introduction to the scope of outdoor recreation in the U.S., key characteristics of major user groups, visitor motivations and benefits, and phases of the recreation experience; The recreation resource base; Federal, state, local, and private recreation resource providers; Ecological impacts of outdoor recreation; Conflict, crowding, and equal access in outdoor recreation; Recreation carrying capacity, direct and indirect management techniques, and concentrating versus dispersing; visitor use; Facilities and design of recreation sites; Visitor use limits, permits, and fees; Information, education, and programs for visitors; Visitor use monitoring; Planning frameworks for outdoor recreation. This is a required course for RPTM majors in the Outdoor Recreation Option. The course is open to students in all majors.

RPTM 325: Principles of Environmental Interpretation

3 Credits

Introduction, history, practice, and principles of contemporary interpretive activities common to natural and cultural history program sites. RPTM 325 Principles of Environmental Interpretation (3) The primary objective of this course is to provide students with an overview of the field of environmental interpretation with special emphasis in understanding and applying the principles inherent in effective programs and presentations. The second objective is to provide information about career opportunities in the interpretive profession. The third objective is to provide students with a variety of service learning opportunities to help them refine their career aspirations. Main topics typically include: Becoming aware of the history, professional resources and best practices in the field of environmental interpretation; Creating and using effective interpretive materials including exhibits and visual aids in non-formal programs; Demonstrating sound interpretive methods and techniques by conducting short presentations; Gaining an awareness of the operation of a visitor center and the experience of using live animals in interpretive programming; Demonstrating a competency in program development by participating in the planning, presenting and evaluation of the Children's Halloween Trail at Shaver's Creek Environment Center. This course is one of the selections for RPTM majors in the Environmental Interpretation emphasis and the Adventure-based Programming emphasis of the Outdoor Recreation Option. Students in other majors are welcome. This course is a pre-requisite for RPTM 326, 327, 425, and 430.

RPTM 326: Natural History Interpretation

3 Credits

Methods, techniques, resources to acquire knowledge of natural history. Field identification, projects of an applied nature, and seasonal application. RPTM 326 Natural History Interpretation (3) The primary

objective of this course is to give students the basic skills and resources to research and interpret the natural history of a given park or natural area. Building on the prerequisite course (RPTM 325: Principles of Environmental Interpretation), students continue to apply and practice principles that help create effective outdoor programming. The second objective is to provide students with a variety of service learning opportunities to help them refine their career aspirations. Main topics typically include: *Learning the skills and available resources to identify common fauna and flora found in Central PA including birds, mammals, amphibians, trees and wildflowers *Imparting a basic understanding of the ecology of the Eastern Forest landscape and the ability to interpret that understanding to a general audience. *Writing a short natural history interpretive article for a general audience. *Demonstrating sound interpretive methods and techniques by conducting short presentations. *Gaining an awareness of the operation of a visitor center and the experience of using live birds of prey in interpretive programming. *Demonstrating a competency in program development by planning, researching, and presenting a natural history program in an outdoor setting to their peers. This course is one of the selections for RPTM majors in the Environmental Interpretation emphasis of the Outdoor Recreation Option. Students in other majors are welcome providing they have met the pre-requisite (RPTM 325).

Enforced Prerequisite at Enrollment: RPTM 325**RPTM 327: Cultural History Interpretation**

3 Credits

Methods, skills, and techniques necessary for the programming of historical sites and areas. RPTM 327 Cultural History Interpretation (3) The purpose of this course is to provide students with an understanding of the cultural resources within central Pennsylvania and to learn how to effectively interpret these resources through interactive programs and experiences. Building on the prerequisite course (RPTM 325: Principles of Environmental Interpretation), students continue to apply and practice principles that help create effective outdoor programming. Main topics typically include: *Demonstrating sound interpretive methods and techniques by conducting short presentations *Demonstrating a competency in program development by planning, researching, and presenting two different 1st Person Interpretation -living history programs in an outdoor setting to the general public and to school groups. *Participation, planning and presenting a Maple Sugaring Lesson at the community attended Maple Harvest Festival. *Engaging in research and writing of a Historical Character Paper. Learning how and where to conduct cultural history research in any community by utilizing historical societies, historical sites, libraries, and personal interviews. *Observation of professional cultural history interpreters. This course is one of three selections for RPTM majors in the environmental interpretation emphasis of the Outdoor Recreation Option. It is included as part of the 'Discovery Semester' block of courses taught by faculty at the Shaver's Creek Environmental Center.

Enforced Prerequisite at Enrollment: RPTM 325**RPTM 330: Adventure-Based Program Leadership**

3 Credits

Both theoretical and experiential components are included as the role of the leader in adventure-based programs is examined. This course will focus on the philosophy, leadership techniques, ethics, and current practices in the area of adventure-based programming. Focus of instruction will be upon developing skills for facilitating personal

growth and providing leadership for outdoor pursuits within a plethora of different outdoor pursuits. Main topics to be covered: outdoor leadership skills and behavioral styles and they pertain to leading groups, creating community through team building and debriefing activities, understanding the value of balancing technical with interpersonal and judgement skills, decision making, conflict management, and assessing and planning for risk in the field. A one-night retreat is included in the course curriculum. RPTM 330 is one of the selections for RPTM majors in the Adventure Recreation Pathway of the Outdoor Recreation Option. The course is open to students from all majors.

RPTM 334: Non-profit Recreation Agency Operations

3 Credits

Recreation agencies in voluntary and semiprivate sectors will be investigated through membership strategies, fund raising, volunteer management, etc. case studies. RPTM 334 Non-Profit Recreation Agency Operations (3) The primary objective of this course is to expose students to the operational practices and missions of nonprofit recreation and tourism organizations. In particular, this course will allow students to investigate voluntary and semi-private sectors through membership strategies, fundraising and development roles, and volunteer management. Primary topics taught in this course will typically include the following: *The role of non-profit organizations in providing park, recreation and tourism opportunities *Missions, governance procedures, and societal roles associated with non-profit organizations *Program support functions and non-profit fundraising strategies *Skills and roles of professional staff in non-profit organizations This course is a requirement for RPTM majors in the park management emphasis of the Outdoor Recreation Option. This is also a supporting course (i.e., department list) for RPTM majors in the Commercial and Community Recreation Management Option. Students in other majors are welcome after all RPTM majors have been scheduled.

RPTM 335: Outdoor Recreation Consortium

3 Credits

The purpose of the Outdoor Recreation Consortium is to provide students with hands-on exposure to outdoor recreation resources management in a National Park. It is designed to increase students' understanding and appreciation of outdoor recreation resources, the agencies managing those resources, the management strategies used, and the factors affecting management, including issues related to the nearby "gateway communities" and the park's broader environment. The course format is one which focuses on problem solving, encourages a high level of interaction among participating students, faculty, managers, and gives participants an opportunity to connect with nature.

RPTM 336: Accounting in Recreation, Park, and Tourism Management

3 Credits

This course provides the student with the core knowledge needed to understand the kinds of data generated by the financial systems of recreation operations, prepare budgets, perform forecasting and breakeven analysis, and provide control over the financial aspects of the recreation/park/tourism business. Main topics typically include: Introduction to managerial decision-making; Cost behavior analysis; Cost, volume and profit analysis; Pricing decisions; Preparation of operational budgets; Calculation and interpretation of cost and revenue variances; Preparation of cash budgets and control over cash; Preparation of the

statement of cash flows; and Preparation of financial statements in the recreation/park/tourism industry.

RPTM 345: Guest Activities Practicum

3-6 Credits/Maximum of 6

The purpose of the Guest Activities Practicum is to provide students with hands-on exposure to the guest experiences industry within commercial recreation settings. Students interact with faculty, other students and professionals from industry in the collaboration and sharing of ideas. The course is designed to increase students' understanding and appreciation of the guest experience, the issues related to delivering recreation services in commercial recreation settings, principles of tourism, management strategies, and the factors affecting guest services. The course format is one that focuses on problem solving, encourages a high level of interaction among participating students, faculty, industry partners, and gives participants an opportunity to actively engage with customers. The course includes an embedded travel component in which students and faculty visit a guest experiences focused commercial recreation such as a resort or cruise ship and then work with industry partners on a designated project with student recommendations that might be implemented on site. The course includes course fees for travel.

Enforced Prerequisite at Enrollment: RPTM 120, Permission of program through application Recommended Preparation: Permission of program through application.

RPTM 350: PGA Facility Management Level 3

2 Credits

Based on our current PGA Accreditation Standards and Criteria, RPTM 350 (PGA Facility Management Level 3) is a course designed to continue to explore the various responsibilities and tasks associated with administering a full-service golf facility. Students will explore and apply management strategies to business planning, golf operations, merchandising and inventory management, golf car fleet management, supervising and delegating, turfgrass management, food and beverage control, and career enhancement. The course focuses on managing the golf operation in a way that delivers upon the business plan, implementing operational policies and procedures while maintaining a viable, sustainable business. Students learn about assessing the current state of business and analyze financial history to create a financial forecast and operating budget. The course aligns and implements operational policies and procedures and technology systems to support the business plan. Students will learn about merchandise assortment plans, ordering and receiving merchandise, and promotional campaigns and events to sell through merchandise. Students will also learn to project golf car fleet revenue, cost, and profit, and identify how budgeting changes will impact the bottom line. Students will learn how to describe the performance system for supervising and delegating and use elements to the performance system to delegate assignments and how performance problems are managed appropriately. The course will also examine practices that improve the golf course while protecting the environment and students will learn about the process to design a new golf course or renovate an existing course. We will examine the features and benefits of a successful food and beverage operation and identify areas where food services and the golf operations should coordinate efforts. Students will also learn the components of an employment agreement or contract, negotiation strategies for compensation packages, and how to access PGA employment resources.

Enforced Prerequisite at Enrollment: RPTM 250 Recommended

Preparation: For students enrolled in the PGA Accredited Golf Management Option in RPTM

RPTM 354: PGA Teaching and Coaching 3

2 Credits

Based on our current PGA accreditation standards and criteria, RPTM 354 is the final course in the PGA of America's education program in the subject of golf instruction. This is a required course for program accreditation. Upon successful completion of the course, students will be able to explain how learning occurs in the process of golf skill development as well as the theories and factors that influence the transfer of learning. Students will be able to use a variety of techniques to measure performance levels of golfers and also understand the effects of golf club fitting on ball flight and golfer performance. The final major topic, player development programs, teaches students how player development programs contribute to facility operations and will be able to develop, market, and promote comprehensive player development programs.

Enforced Prerequisite at Enrollment: RPTM 254 Recommended

Preparation: For students enrolled in the PGA Accredited Golf Management Option in RPTM

RPTM 360: Golf Operations Management

3 Credits

The course will focus on business planning, budgeting, inventory management, and financial controls within golf operations. RPTM 360 Golf Operations Management (3) The primary purpose of this course is to prepare a student in the fundamentals of retail management pertaining to effectively operating a golf shop. Although successful retail management of a golf shop requires many different considerations, this course specifically emphasizes the planning and controlling of both the operational and merchandising effort. The first objective is to teach the student about the planning process that is necessary to effectively manage a retail business. The second objective is to provide a student with an understanding of the practices and procedures in operating a golf shop. The third objective is to teach the student effective merchandising and pricing techniques. Main topics typically include: Types of plans that are needed in order to operate a retail business effectively; Developing strategic plans and business plans; Effective merchandising techniques for purchasing, pricing and selling; Planning techniques concerning both the purchasing and selling process; Quantitative open-to-buy planning as well as effective assortment planning procedures; Vendor selection and relations as well as negotiable terms of sale; Techniques regarding pricing, merchandise presentation and promotion. This is a required course for RPTM majors in the Golf Management Option. It is usually scheduled during the student's sixth semester. Students from other majors may enroll after RPTM majors have registered.

Enforced Prerequisite at Enrollment: BA 304

RPTM 370: Introduction to Arena Management

3 Credits

Introduction to arena and facilities management including operations, budgeting, marketing and staffing. Course is taught on site at a sports/ entertainment arena (ex: the Bryce Jordan Center). RPTM 370 Introduction to Arena Management (3) Introduction to Arena Management introduces students to the complex skills and duties

required to manage a sports/entertainment arena. The course is taught on-site at the Bryce Jordan Center at University Park. Main topics include: facility design and facility law; event planning and production; history of the touring industry; entertainment and sports booking; ticketing; marketing and public relations; crowd management, safety and implications of the Americans with Disabilities Act; technology and ticketing systems; professional and collegiate sports management; and partner agencies i.e. food and beverage. Student performance is evaluated through exams and special projects, including a formal small group presentation. Students are provided with exposure to a variety of experiential learning opportunities in service departments throughout the arena. Assignments are targeted to current events in the arena management industry.

Enforced Prerequisite at Enrollment: RPTM 120

RPTM 390: Political and Legal Aspects of Recreation Services

3 Credits

The primary objective of this course is to examine the governmental systems that influence the delivery of recreational services. The formal structure of government is considered along with the day-to-day political processes that determine public policy. All three levels of government- federal, state, and local are studied. Particular attention is given to the judicial systems of these governments. The course also gives considerable attention to tort liability by examining case law as it relates to recreation facilities and services. The course also explores federal and state laws pertaining to employer/employee relations and administrative responsibilities. Main topics include: The Court Systems, legislative branches; planning and development: historical perspective, land use, zoning, mandatory dedication, easements, building codes; liability: elements of negligence, situations giving rise to law suit, product liability, defenses & risk management, review; personnel laws; Federal laws, State Human Relations Acts, Civil Service, Hatch Act, FLSA, finance, garnishment & bankruptcy; the Americans with Disabilities Act; Public Relations Law: copyright, photography, lotteries, libel, slander, privacy; Administrative Law: purchasing, entrepreneurship, Federal Tax laws. This is a required course for all students majoring in Recreation, Park and Tourism Management. It is open to students of other majors, providing they have met the pre-requisite.

Enforced Prerequisite at Enrollment: RPTM 120

RPTM 394: Orientation to Internship

1 Credits

Plan and prepare for internship in Recreation Services. Analyze career opportunities, internship process, and associated requirements. For RPTM majors only. RPTM 394 Orientation to Internship (1) The primary objective of this course is to assist students with planning and preparing for their professional Practicum experience. The supporting objectives are: to provide awareness of the role and significance of the Practicum experience, including its relationship with professional practice; assist students in their understanding of the placement process, including prerequisites for placement; provide students with a working knowledge of their requirements while on Practicum, including contractual arrangements, on-site professional conduct, written assignments, evaluation procedures and evaluation criteria; and to provide the students with knowledge of post-practicum concerns, including resources for professional employment and professional certifications. Main topics typically include: ♦ Introduction to the practicum experience and pre-requisite requirements ♦ Personal and professional needs assessments

and the importance of determining deficit skill and competency areas as related to the student's intended career. ♦ Development of career and practicum goals and their relative importance to practicum site research and selection. ♦ Preparation of a professional cover letter and resume. ♦ Searching for and selecting possible practicum sites ♦ Professional approaches to contacting, communicating and following-up with prospective practicum agencies. ♦ Interviewing skills, including various interview formats, commonly asked questions, appropriate body language, and professionalism. ♦ Practicum requirements, including assignments, communication with the university and agency supervisor, and academic and performance evaluation. ♦ Post-practicum concerns, including graduation, employment, and professional certifications. This course is required of RPTM majors (except Golf Management Option), and is usually taken two semesters prior to the semester that a student plans to participate in RPTM 495A (Internship in Recreation Services). The course is not open to students from other majors. Students are evaluated by performance on written assignments and quizzes. This course is offered both spring and fall semesters with typical enrollments of 70-90 in the fall and 50-70 in the spring.

Enforced Prerequisite at Enrollment: 5th semester standing

RPTM 395A: Internship in recreational services

1-3 Credits

The internship provides a paraprofessional experience in which students simultaneously acquire skills in the field while using classroom knowledge to solve problems and generate new ideas in a commercial recreation, event or tourism setting. Under the guidance of the agency supervisor and the faculty coordinator, students will develop management and leadership skills as well as be exposed to strategic planning. The internships provide opportunities to increase knowledge and develop skills in event and program design, site and program management and approaches to assessments and evaluation. In addition, students will practice the art of customer service and stakeholder management. In addition to developing professional knowledge, students have the opportunity to develop professional performance (e.g. goal setting and achieving, time management, problem-solving), professional demeanor (e.g. professional courtesy, appearance, interpersonal communication) and professional attitudes (e.g. professional curiosity, respecting departmental policies, accepting direction and constructive criticism, and maintaining productivity and efficiency in age of distraction).

RPTM 395B: Participation in Golf Management

1-4 Credits/Maximum of 4

RPTM 395B Participation in Golf Management (1-4) The primary objective of this course is to complete a 40-hour per week internship at an approved golf property. While on internship the student will complete assignments involving: turfgrass management, analysis of the golf swing, and pre-work in merchandising and inventory management. Main topics include: Turfgrass Management: routine and non-routine maintenance, practices, traffic management, environmental issues, pest control, communications with superintendent. Analysis of the Golf Swing: video lessons, business plan for teaching, clubfitting systems. Merchandising and Inventory Management (pre-work): explore OTB practices, compare product lines, profile vendors, pricing methods, and evaluation of merchandise displays This is a required course for RPTM majors in the Golf Management Option. The internship is not open to students in other majors.

Enforced Prerequisite at Enrollment: RPTM 295A or 2.00 cumulative grade point average
Full-Time Equivalent Course

RPTM 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

RPTM 399: Foreign Studies

1-12 Credits

Foreign Studies in RPTM.

International Cultures (IL)

RPTM 410: Marketing of Recreation Services

3 Credits

Theoretical/practical application of marketing/advertising strategies in the development/delivery of recreation services. RPTM 410 Marketing of Recreation Services (3) The primary objective of this course is to provide students with an overview of marketing in general and recreation/tourism marketing in particular. Supplemental objectives are to (a) provide students with a review of different marketing theories and practices and (b) help students apply marketing principles to practical recreation/tourism situations. Main topics typically include: Introduction to marketing and its evolution; Parameters of the recreation/tourism experience and how this affects marketing practices; Defining and segmenting the consumer market; The marketing mix; Conducting marketing research in an effort to develop effective marketing strategy; Service quality and its impact on marketing strategy; Customer loyalty and its impact on marketing strategy; Recognizing and responding to the changing needs of consumer markets. This is a required course for RPTM majors, generally taken after completion of the introductory courses in the major. Students in other majors, including those pursuing the Liberal Arts Business minor, are welcome after RPTM majors have scheduled.

Enforced Prerequisite at Enrollment: 5th semester standing

RPTM 415: Commercial Recreation Management

3 Credits

Planning, developing, and managing profit-oriented recreation opportunities. RPTM 415 Commercial Recreation Management (3) Building upon subject matter presented in many of the core RPTM courses, the primary objective of this course is to provide students with an understanding of strategic management processes and how they apply to recreation/tourism businesses. A second objective is to develop students' decision-making and analytical abilities. Main topics typically include: An overview of the strategic management process; Having the mindset of an entrepreneur/intrapreneur; The "ins and outs" of conducting feasibility studies; The pros and cons of different forms of business; Generating and setting short- and long-term goals and objectives for recreation/tourism businesses; Capitalizing, financing and budgeting for recreation/tourism businesses; Planning, organizing, managing and controlling recreation/tourism businesses; Regulations, taxation and licensure of recreation/tourism businesses; Recognizing the importance of developing and maintaining relationships with various constituencies; Options for strategic growth This course is required of RPTM majors in the Commercial and Community Recreation

Management option. Students take this course after or concurrent with RPTM 410. Students in other majors who have met the pre-requisites, including those pursuing the Liberal Arts Business minor, are welcome after RPTM majors have scheduled.

Enforced Prerequisite at Enrollment: RPTM 210 and RPTM 410 and 5th Semester standing

RPTM 425: Principles of Interpretive Materials

3 Credits
