Focused study of a particular genre, theme, or problem in British literature. (May be repeated for credit.) ENGL 455 Topics in British Literature (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will allow faculty and students to focus a semester's study on a particular genre, theme, or problem in British literature. The flexibility of a topics course will allow faculty a forum in which to share current scholarship or to relate issues in British literature to larger School-wide themes in a classroom environment. Offering such focused studies under a British literature umbrella will allow majors to apply these offerings to their upper-level British literature requirement. Because of the potential variety of topics and faculty members, specific evaluation methods will be determined by the instructor and specified in the syllabus. This course will be offered once every two years, with an expected enrollment of 20-25 students.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 456: British Fiction, 1900-1945

3 Credits

Study of writers and traditions in British short fiction and novels, 1900-1945.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 457: British Fiction Since 1945

3 Credits

Readings in British fiction since World War II.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 458: Twentieth-Century Poetry

3 Credits

Study of poetry written in English during the twentieth and twenty-first centuries, with attention to different writers, forms, and traditions.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 459: Writing Palestine-Israel

3 Credits

Study of literary writing of and about the Israel-Palestine conflict. This course examines the Israel-Palestine conflict through an analysis of literature written by participants, victims, bystanders, and observers. We will read literature by Arabs, Jews, and Christian; by Israelis, Palestinians, and other populations affected by the conflict; and by writers in the Arab World, Europe, and the Americas in order to develop a nuanced understanding of the conflict, its history, what's at stake for its participants, antagonists, and victims. The course will emphasize close reading and aesthetic analysis, but it will also pay attention to the ways in which literature can be used to think about history, experience, and politics. The course will survey a wide array of writing from a diverse set of global traditions, including significant figures, themes, and histories, and the course will pay attention to literature's intersections with migration history, international politics, faith, nationalism, and revolutionary liberation. The course will showcase national and religious diversity. We will focus on the relationship of writing of and about the Israel-Palestine conflict to other subfields and literary study more generally, including issues such as ethnicity, culture, religion, diaspora, gender, politics, and identity. A major emphasis of the course will be on analyzing literary texts as lenses to reflect, refract, and focus on Arab, Jewish, and Palestinian identity. In addition, by way of analyzing the

interrelationships between literary representation and experience, the course will attend to a number of key themes in how we think about Diaspora, with some special emphasis on American literature about the Israel-Palestine conflict: how have American writers, and especially American writers of Arab, Jewish, and Muslim heritage, articulated their identities in relation to the Israel-Palestine conflict and the Middle East more generally, including the long history of US involvement in the Middle East? The course will cover both English-language literature and literature in translation from other languages.

Enforced Prerequisite at Enrollment: Prerequisites: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H Recommended Preparations: Some knowledge of the Israel-Palestine conflict would be helpful.

ENGL 460: Business and Literature

3 Credits/Maximum of 3

An investigation into how writers and the cultures in which they write have represented business and those engaged in it. For many people, literature and business could not have less to do with each other. According to this view, literature escapes from reality to the imaginative, while nothing could be more focused on the real than business and its buying and selling of commodities and services. The problem is that no one told literary writers of this mutual incompatibility. For centuries, writers have peered into the world of business and brought back stories intended to document, inspire, and warn. True, writers have often, and sometimes unthinkingly, condemned business and those who follow it, but they have just as often had genuine insights into its workings. In this course, we will follow the relationship between literature and business over the course of modern history. Although one version of the course would begin with literature that dates back to the invention of capitalism in (more or less) the sixteenth century, our course will begin at the turn of the nineteenth century with the Industrial Revolution in England and the United States and follow the literature of business up to the present. Our aim in reading is not just to understand how writers have represented business and those who pursue it, which, it has to be admitted, has often been with contempt. But, rather, in reading more sympathetic works, to understand the drama of business, why those who pursue it find it so invigorating. Money, of course, is one answer to that question, but it is neither the only nor the most important one. Texts may vary, but they are almost certain to include Charles Dickens's *Dombey and Son* (1847); Herman Melville's "Bartleby the Scrivener" (1853); the "Economy" chapter of Henry David Thoreau's *Walden* (1854); Anthony Trollope's *The Way We Live Now* (1875); Thorstein Veblen's *Theory of the Leisure Class* (1899); George Bernard Shaw's *Major Barbara* (1905); Theodore Dreiser's *The Financier* (1912); Sinclair Lewis's *Babbitt* (1922); Edwin Lefevre's *Reminiscences of a Stock Operator* (1922); James M. Cain's hardboiled masterpiece *Mildred Pierce* (1941); F. Scott Fitzgerald's unfinished novel *The Love of the Last Tycoon* (1941); Arthur Miller's *Death of a Salesman* (1949); Sloan Wilson's *The Man in the Gray Flannel Suit* (1955); Ayn Rand's *Atlas Shrugged* (1957); Ken Kesey's *Sometimes a Great Notion* (1962); Joseph Heller's *Something Happened* (1974); William Gaddis's *J R*

(1975); David Mamet's *Glengarry Glen Ross* (1984); Michael Lewis's *Liars Poker* (1987); and Richard Powers' *Gain* (1998).

United States Cultures (US)

ENGL 463: African American Autobiography

3 Credits

The African American literary quest for identity and its adaptation to Euro-American culture and autobiographies. ENGL 463 African American Autobiography (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. Starting with the slave narratives which initiate the literary quest of African Americans for identity, this upper-division course will examine the trope of writing (the "talking" book) as the (w)rite of passage into the dominant Euro-American culture. The course will identify, describe, and analyze how the major elements of the "quest" found in the slave autobiographies have been adapted as textual strategies by many contemporary African American writers of autobiography, semi-autobiography, and fictional autobiography. Authors under consideration will vary from class to class, but may include writers such as Frederick Douglass, Harriet Jacobs, W. E. B. Du Bois, Ida B. Wells, Richard Wright, Zora Neale Hurston, Maya Angelou, Martin Luther King, Alex Haley, Harriet E. Wilson, James Weldon Johnson, and Ernest Gaines. Topics explored will vary from class to class, but will likely consider slave narratives, the role of autobiography in the fashioning of identity and self, gender issues, genre questions, and the historical development of the genre and its shifting preoccupation from slave times through the early twentieth-century, the pre-Civil Rights era, the Civil Rights Movement, the Black Power Movement, and the present. The course will prepare students for other courses that engage in the verbal and written analysis of complex written texts, and will also prepare students to consider the social and cultural issues involved in the role of race in American history. Students will be evaluated by means of essays written out of class, essay and short answer exams, a term-long reading journal reflecting upon issues of the student's own "autobiography," an oral class presentation, and class participation. The course may be used as English Major elective credit or as credit towards the English Minor and will be offered once a year, with 40 seats per offering.

ENGL 464M: Honors Seminar in English: Multicultural

3-12 Credits/Maximum of 12

This advanced Honors Seminar in multicultural literature, rhetoric, and cultural studies allows students to explore and research a topic related to race, gender, ethnicity, sexuality, queer theory, post-colonialism, disability, minority literature, women's literature, world rhetorics, or other literatures reflecting the diversity of cultures and perspectives important to the English major. Topics will vary depending on the course instructor. Recent topics have included disability and literature, post-racial America, revolutionary writing, cognitive disability in literature, and early modern women authors. Department approval required (for more special information please refer to the notes section in LionPATH).

Writing Across the Curriculum

ENGL 466: African American Novel I

3 Credits

This course examines the origins of the African American novel and follows the genre's evolution into the early twentieth century, outlining the relationships among the texts that form the body of African American narrative as well as the relationships of those texts to the constantly shifting cultural and political realities surrounding their writing. From the earliest novels, written during the period of slavery, through the Reconstruction era, the nadir of Black Codes and Jim Crow Supreme Court decisions, and into the Renaissance heralded by Alain Locke and others, course readings encompass a broad range of styles and genres, from early proto-documentary modes, through the realism and naturalism of a later time. The course takes up Robert S. Levine's claim that "the history of the early African American novel is not fixed or stable" by mapping the genre's early history and by developing an understanding of the novel as genre according to both early African American authors and later scholars. It addresses the fact that this history continues to be updated and that some texts whether in part or in whole remain lost. Authors covered in the course might include William Wells Brown, Frederick Douglass, Frank J. Webb, Julia C. Collins, Hannah Crafts, Martin Delany, Frances Ellen Watkins Harper, Charles Chesnutt, Pauline Hopkins, Paul Laurence Dunbar, Sutton Griggs, James Weldon Johnson, Oscar Micheaux, Nella Larsen, Jessie Fauset, and others. Scholarly readings accompany primary texts in order to give students a sense of the critical work that has gone into and continues to go on in the study of African American literature. Course topics may include the issue of firsts; the challenges of publication and the attendant realities of early African American print cultures; questions of tradition and influence; and the political, social, religious, and philosophical aims of early African American novels. Readings and discussions also attend to questions of form, specifically regarding intertextuality and generic blurring and hybridity. The study of early African American novels necessarily includes attention to issues of race, identity, nation, diaspora, and the question of authenticity, and each is taken up in turn. Course assignments and discussions engage students in critical work that demands careful attention to both content and context in order that all students might

strengthen their close reading capabilities and engage with course figures and materials within their historical milieu.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

United States Cultures (US)

ENGL 467: African American Novel II

3 Credits

This course examines the African American novel, its forms, and its traditions starting during the Harlem Renaissance. It follows the genre's evolution into the twenty-first century, outlining the relationships among the texts that form the body of African American narrative as well as the relationships of those texts to the constantly shifting cultural and political realities surrounding their writing. From the Renaissance heralded by Alain Locke, through the Civil Rights and Black Power Movements -and their attendant Black Arts Movement- and into the era of the Movement for Black Lives, course readings encompass a broad range of styles and genres, from realism, naturalism, and naturalist primitivism, through the experimental forms, magical realism, and "postrace aesthetics" of later times. The course invites students to think critically about the African American novel as a socially and politically engaged form, and to identify and analyze the long tradition of resistance that variously informs its development. Authors covered in the course might include major figures such as Claude McKay, Zora Neale Hurston, Nella Larsen, Wallace Thurman, Richard Wright, Ralph Ellison, Ann Petry, James Baldwin, Ishmael Reed, Ernest Gaines, Alice Walker, Toni Morrison, Toni Cade Bambara, Octavia Butler, Gayle Jones, Samuel Delany, Charles Johnson, John Edgar Wideman, Colson Whitehead, and others. Still, the course gives due attention to lesser known/studied materials from the period, including graphic novels, satire, speculative fiction, performance novels, and various other experimental forms. Course readings and instruction give particular attention to how African American novels of the twentieth and twenty-first centuries variously engage social identity categories, like race, gender, class, and sexuality, and how they engage and resist various literary conventions associated with naturalism, modernism, and postmodernism. The course also traces the development of new thematic and aesthetic interests in a generation of writers whose fiction has been influenced by the explosion of interest in the graphic novel, the popularity of cultural forms such as hip hop, and the ascendancy of the digital age. Scholarly readings accompany primary texts to give students a sense of the critical work that has gone into and continues to go on in the study of African American literature. In this course, students learn how to analyze literature, do close and careful readings of texts, conduct related research, and write persuasively about literary works. Assignments and discussions are designed such that students may engage with course figures and materials within their historical milieu.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

ENGL 468: African American Poetry

3 Credits

Meta duEwa Jones argues, "We cannot afford to continue to treat black poetry and poetics as loose change among the more highly valued paper currency of fiction and nonfiction prose. . . . The myriad aesthetic forms and concomitant political functions of black poetry and poetics should be seriously considered as grounds for broader and more nuanced theoretical and sociocultural claims." This course takes as its subject matter these aesthetic forms and political functions of the poetry of black America. It surveys the broad history of African American poetry and poetics, tracing the evolution of formal structures and aesthetics, but also taking a critical view of the reception of African American verse. Whether reading Phillis Wheatley or the contemporary poet Ed Roberson, all the poets included in this course have contended within the writing itself with the racially striated nature of the literary spaces they occupy. Course readings may come from poets including Wheatley, Frances Ellen Watkins Harper, Paul Laurence Dunbar, Alice Dunbar Nelson, Claude McKay, Langston Hughes, Robert Hayden, Melvin Tolson, Gwendolyn Brooks, Amiri Baraka, John Coltrane, Ishmael Reed, Nathaniel Mackey, Rita Dove, Maya Angelou, Audre Lorde, Natasha Trethewey, Sonia Sanchez, Nikki Giovanni, Nikky Finney, Roberson, Claudia Rankine, and others. The course addresses works by many of the key figures of this American literary tradition so that students may develop an understanding of the various contributions and legacies formal, musical, cultural, critical, political of African American poetry from the eighteenth century to today. Scholarly readings accompany primary texts to give students a sense of the critical work that has gone into and continues to go on in the study of African American poetry and poetics. The course surveys early African American poetry through works from the Harlem Renaissance and the Black Arts Movement, and through contemporary movements and formations. Topics will cover a range of thematic and formal issues relevant to individual poets, to major movements and periods, to regions, and to various smaller organizations and collectives. Course assignments, lectures, and discussions engage students in critical work that requires careful attention to form, content, and context such that all students might strengthen their explicatory skills and approach course figures and texts from an informed, analytical perspective.

ENGL 469: Slavery and the Literary Imagination

3 Credits

The impact of slavery on the petitions, poetry, slave narratives, autobiographies, and novels of African Americans. ENGL 469 / AFAM 469 Slavery and the Literary Imagination (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. ENGL 469 /AFAM 469 provides an opportunity for undergraduate students to examine African American petitions, poetry, slave narratives, autobiographies, and novels as literary reconstructions of the economics, politics, ethics, and poetics of slavery. Authors under consideration will vary from class to class, but may include writers such as Paul Laurence Dunbar, Phillis Wheatley, F. Harper, James Weldon Johnson, Langston Hughes, Claude McKay, Sterling Brown, Booker T. Washington, Harriet Jacobs, W. W. Brown, Harriet

Wilson, Margaret Walker, Arna Bontemps, D. Bradley, S. A. Williams, Toni Morrison, Ishmael Reed, and Charles Johnson. The course will focus on the complex relationship of slavery to the literary imagination of Americans of African descent as they increasingly discovered the limitations and possibilities of reading and writing themselves into freedom, literacy, and wholeness as human beings and American citizens. Topics covered will vary, but will include issues of the legacy of slavery in the west; the political aims and rhetorical conventions of African-American autobiography; the myths and realities of slavery; economic, political, ethical, and aesthetic issues of the representation of slavery; understandings of black consciousness and black culture on the road from slavery to freedom; the rise of African American realism as a response to the legacy of slavery; Black Feminism and issues of slavery; the role of history and memory in the construction of slavery; post-modern configurations of slavery; and the like. This class will prepare students for advanced courses in African American literature, as well as other academic courses that engage in the verbal and written analysis of complex written forms.

ENGL 475: Comics Studies

3 Credits

This course introduces students to the academic field of Comics Studies, that is, the scholarship of comics and graphic novels. The course surveys different methodologies and focuses of comics scholarship, with historical representation of different theorists and critics. In addition to reading widely in comics scholarship, students will also read several comics and graphic novels, for which they will produce their own analyses and criticism. Overall, the course provides a foundation in Comic Studies, with broad reading across primary and secondary texts.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 478: Grant Writing

3 Credits

Grants can do many things. Let's say you are a student who has always dreamed of combining help for food-insecure people with support for the mentally ill homeless. You've written papers about it for classes; you've read lots of research that points to past pitfalls and future innovative possibilities—but now you want to make it real by finding funding for the program you've envisioned. Or maybe you have your sights set on finding an existing non-profit foundation that might serve as a fiscal conduit for grants that will feed the cause you feel passionately about. These

scenarios and many others call for finding and winning a grant. Here's what grants can't do: Write themselves. Given that writers of grants do not have one how-to professional manual to rely on, professional grant-seekers must learn to have flexible responses to a variety of writing situations. Every grant proposal is different, as is every population with a problem to solve, and every organization hoping to help with the solution. A successful grant-writer achieves confidence with hands-on practice-confidence earned from mastering the underlying principles of effective research and outreach; feasible and complete content-generation; and the writing of precise, clear, audience-centered prose. English 478 will provide you with the basic knowledge and practice needed to get you on your way to professional confidence. Six Main Learning Goals: * Comprehensive understanding of the grant-writing field * Strategic use of research skills to match program to foundation, need to grant-maker * Beginning mastery of all elements of the basic proposal, including: mission match, objectives that fill a proven need, evaluation strategies that reliably measure outcome, a feasible budget, and proof of capacity and sustainability * Practice of skills most needed in the current economic and political climate, including collaboration, diversified funding, and innovation within an established organization * Practical use of social media and cultivation skills for sustainability of project * Mastery of applied rhetorical style emphasizing clarity and precision

Enforced Prerequisite at Enrollment: (ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H) and (ENGL 202A or ENGL 202B or ENGL 202C or ENGL 202D)

ENGL 480: Communication Design for Writers

3 Credits

This course explores visual design, non-verbal communication, and software packages used in professional settings to most effectively present written communications. ENGL 480 Communication Design for Writers (3) ENGL 480 is a course designed to familiarize students with an integrated theory of the roles that visual, verbal, and non-verbal communication play in the production of professional documents using the technologies and software applications most widely used in many organizational settings. To this end, the course will focus on employing non-verbal design elements (color, photographs, graphics, page layout, typography, paper) to develop effective communications tailored to a variety of media, audiences, and purposes using software packages such as Quark XPress, Photoshop, Illustrator, InDesign, Excel. Emphasis will be placed on producing clear, insightful, polished, professional documents, both individually and as part of a team. As part of the course, students can expect to a.) Understand the theories, elements, and principles of visual and non-verbal communication. b.) Appreciate the roles of the audience, purpose, and context in planning and composing documents. c.) Value the role of ethos, pathos, and logos when planning and composing documents. d.) Learn basic skills in a variety of software packages most widely used in the professional world. e.) Design and compose a variety of documents for a variety of audiences that display their writing and design skills. f.) Demonstrate through their documents an understanding of the theories of visual, verbal, and non-verbal communication. g.) Assess their own strengths and weaknesses as writers and designers. h.) Demonstrate the ability to reflect critically on their own and others' discourse practices. i.) Gain an understanding of the role and scope of other professionals and other disciplines in creating professional communications.

ENGL 486: The World Novel in English

3 Credits

Studies in the novel, written in English, by writers outside of the United States and Great Britain. ENGL 486 The World Novel in English (3) (IL) This course examines the nature of the novel as written in English by writers outside of the United States and Great Britain. Such a study necessarily involves both an aesthetic and a political perspective, in that the tradition of the novel in these landscapes so often involves the aesthetic and political suppression of native literary forms and voices. Thus, this course looks at the novel as written both by the colonizer and by the colonized. It considers the politics of the aboriginal author writing in an adopted language, and the ways in which such an adoption bears upon related ethnic and gender matters; it also considers the sorts of artistic and political tensions that emerge in the work of writers who write in what might be called the dominant English tradition. This course also studies the work of what might be called the multi-cultural writer, or the writer perforce extracted from a native, non-English-speaking culture and placed within a larger, colonial, English-speaking culture. Matters of novelistic form, as they are related to ethnic and cultural identity, are also discussed. One intent of the course is to reveal the cultural, racial, and gender diversity that naturally adheres to these particular literary traditions.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

3 Credits

A study of selected British women writers. ENGL (WMNST) 489 British Women Writers (3) This course provides the opportunity to study writing by British Women from a historical perspective and to explore the views these women have of themselves as artists. The course will concentrate on a careful reading of works by a variety of authors. It will address the question of the role gender plays in the selection of literary forms and the development of character, theme, symbols, and rhetorical strategies. It will also explore what particular dimensions British women writers have brought to the British literary tradition. Students will be active learners through keeping reading journals, presenting background reports on the history of women in England, participating in small-group discussions about the texts, and writing 2 shorter essays and one longer research essay for the class. This course focuses on an area of British literature, which more traditionally structured courses tend to obscure. The course will be attractive to students from a variety of programs, including English majors, Women's Studies minors, and Interdisciplinary Humanities

students. The course will be offered once every two years. Estimated class size 20.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or (ENGL 137H and ENGL 138T)

Cross-listed with: WMNST 489

Bachelor of Arts: Humanities

ENGL 490: Women Writers and Their Worlds

3 Credits

American and British literature written from the perspective of women. ENGL (WMNST) 490 Women Writers and Their Worlds (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. ENGL/WMNST 490 covers particular aspects of American and British literature written from the perspective of women. The courses stress the diversity of women's authorial worlds, both through time and/or space. The readings and specific focus vary from semester to semester. ENGL/WMNST 490 seeks to make students aware of the extensive body of literature written by women, but, unlike ENGL 194, which is a survey course of women's literature, ENGL/WMNST 490 can be a more intensive course, focusing on selected themes and topics of particular concern to women as reflected in the poetry and fiction of twentieth-century American and British women writers. The class can also be taught in relationship to earlier periods, dealing, for instance, with English women novelists from 1775-1865. In such a class, readings would include fiction by Fanny Burney, Mary Wolistonecraft, Ann Radcliffe, Jane Austen, Mary Shelly, Emily Bronte, Elizabeth Gaskell, and George Eliot. The course would then place each novel in its historical, social, intellectual, and literary context, and explore the various ways in which some of England's best writers transformed their female experience of the world into fiction that extended the range and influenced the development of the novel. Regardless of the particular focus, all sections of the course pose the following questions throughout: Do women use the same myths, archetypes, and literary conventions as male writers? Or do they sometimes have to modify the myths, archetypes, and literary conventions originated by their male precursors in order to adapt them to female experience? Is there such a thing as a distinctively female imagination, with a symbolic language of its own? Is there such a thing as a chain of literary influence linking women writers to each other? What are the strategies for coping with the anxieties of authorship? What is the interaction between gender and genre? In what ways are creativity and procreativity modes of defying prevailing ideologies? Does a woman's psychological development have an effect on the plots a woman novelist conceives? How does women's literature reflect the realities of women's lives? As a course in women's literature, ENGL/WMNST 490 concerns itself with questions of gender. In so far as some of these women writers are black or women of color, it concerns itself with questions of race and ethnicity. In as far as the course looks at women's literature in the context of men's literature, it is concerned with the inter-relationship between dominant (male) and non-dominant (female) culture in the United States as well as in Britain. In so far as the course covers lesbian writers, it is concerned with sexual orientation. Students should expect to complete a minimum of three written assignments in the course, two course papers, and an essay final exam in class. The papers each will ask students to choose a text to analyze in relationship to one of the thematic modules the course has chosen, for instance, to discuss how Virginia Woolf's *Mrs. Dalloway* analyzes the position of upper-middle class women in a particular moment in history when women had achieved the vote, but were still largely constrained by patriarchal social norms. In addition to written assignments, students will be evaluated on class discussion and

general participation. The course not only prepares students for taking up literary and cultural analysis in English classes, but also in any other class that engages in the verbal and written analysis of complex written texts, and in other classes in Women's Studies or in other Penn State departments that address the social, cultural, or ethical issues of gender. The course may be used as English Major elective credit or as credit towards the English Minor; it may also be used in the Women's Studies major and minor. It will be offered once a year with 40 seats per offering.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Cross-listed with: WMNST 490

ENGL 491: The Capstone Course in Professional Writing

3 Credits

This culminating course for Professional Writing majors concentrates on reflective analyses, design, and presentation of documents in the development of professional portfolios.

Enforced Prerequisite at Enrollment: (ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H) and (ENGL 202A or ENGL 202B or ENGL 202C or ENGL 202D) and 7th Semester standing and in the Prof Writing major
Bachelor of Arts: Humanities

ENGL 492: American Women Writers

3 Credits

A study of selected American women writers. ENGL 492 / AMST 476 / WMNST 491 American Women Writers (3) A study of selected women writers, this course provides the opportunity to study writing by American women from an historical perspective and to explore the views these women have of themselves as artists. The course will concentrate on a careful reading of works by a variety of authors. It will raise the question of the role that gender—as well as other differences such as race, class, and ethnicity—play in the selection of literary forms and the development of character, theme, symbol, and rhetorical strategy. It will also explore the dimensions American women have brought to the American literary tradition. The course satisfies the area requirement in culture for American Studies majors and is open to all majors meeting the prerequisite requirements. The course will be offered once every two years and enrollment is 25.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Cross-listed with: AMST 476, WMNST 491

Bachelor of Arts: Humanities

ENGL 494: Senior Thesis in English

1-6 Credits/Maximum of 6

Senior English (ENGL) majors write a thesis arranged with in-charge person and submit it to a faculty committee for appraisal. Departmental approval required (for more special information please refer to the notes section in LionPATH).

Enforced Prerequisite at Enrollment: 7th Semester standing
Bachelor of Arts: Humanities

ENGL 494H: Senior Thesis in English

1-6 Credits/Maximum of 6

Honors Senior English (ENGL) majors write a thesis arranged with in-charge person and submit it to a faculty committee for appraisal. Departmental approval required (for more special information please refer to the notes section in LionPATH).

Enforced Prerequisite at Enrollment: 7th Semester standing
Bachelor of Arts: Humanities
Honors

ENGL 495: Internship

3-12 Credits/Maximum of 12

Supervised practicum in fields appropriate to the English major.

Bachelor of Arts: Humanities
Full-Time Equivalent Course

ENGL 496: Independent Studies

1-18 Credits/Maximum of 18

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

ENGL 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

ENGL 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

ENGL 499: Foreign Study--English

3-6 Credits/Maximum of 6

Studies abroad in English language and/or literature.

Bachelor of Arts: Humanities
International Cultures (IL)

English as a Second Language (ESL)

ESL 4: ESL Composition for American Academic Communication I

3 Credits

For undergraduate students who are beginning-intermediate level non-native speakers of English to improve their grammar and writing skills

in preparation for future American academic writing assignments. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program. ESL 004 ESL/Composition for American Academic Communication I (3) This course is for undergraduate students who are beginning-intermediate level non-native speakers of English. The course is designed to improve their grammar and writing skills in preparation for future American academic writing assignments. Topics to be covered include the following: (a) subject-verb agreement; (b) verb tenses; (c) adjectives and adverbs; (d) independent and dependent clauses; (e) essay and paragraph organization; (f) paragraph development; editing and proof-reading. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

ESL 5: Writing Tutorial

1 Credits/Maximum of 1

This course supplements ESL 015, providing focused instruction for non-native English speaking students in English composition and academic writing. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program

Concurrent: ESL 015

ESL 15: ESL Composition for American Academic Communication II

3 Credits

ESL 15 ESL/Composition for American Academic Communication II (3) This course is for undergraduate students who are intermediate-advanced level non-native speakers of English. Students will become familiar with the various stages in the process of writing and develop strategies for reading and writing various models of American academic discourse. Students will be able to use what they have learned in this course to participate successfully in academic reading and writing tasks throughout their university experiences in the United States. Students will participate in a variety of reading and writing tasks that will enable them to: (a) define the subject, purpose, audience, and appropriate organizational structure for written compositions; (b) revise and reshape their writing to improve ideas, organization, language use, vocabulary and mechanics; (c) identify and correct structural and grammatical errors within their written texts; (d) select sources, take notes, and acknowledge sources to support ideas, using the library to conduct library research; and, (e) become better writers in preparation for their college careers.

Prerequisite: a grade of C or higher required in ESL 004
General Education: Writing/Speaking (GWS)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

ESL 114G: American Oral English for Academic Purposes

3 Credits

Instruction in ESL for graduate students, focusing on the use of oral language skills in an academic setting. ESL 114G American Oral English for Academic Purposes (3) This course is designed for graduate students who are non-native speakers of English in order to develop and improve their oral communication skills for effective interaction in social, as well as academic settings in English-speaking environments. Activities will include: (a) a pre- and post-testing of oral proficiency for diagnostic and achievement purposes; (b) a series of in-class oral presentations

which will be audio-taped and videotaped for self, peer, and instructor evaluation; (c) participation in group discussions, role plays, and impromptu speeches; and, (d) various oral language assignments, including listening and pronunciation activities, transcriptions of recorded speech, and the creation of an audio-taped oral dialogue journal.

ESL 115G: American Oral English for ITAs I

3-9 Credits/Maximum of 9

Initial course in American Oral English for preparation of international teaching assistants. ESL 115G American Oral English for ITAs I (3 per semester/maximum of 9) This course is designed for non-native speakers of English who wish to improve their overall speaking and listening skills in English. Through various oral and aural language activities, students will increase the intelligibility of their speech by improving their pronunciation of American English. They will also develop academic speaking skills in order to engage critically and constructively in the exchange of ideas during discussions of academic content. They will improve their overall listening comprehension, as well as their discrimination of particular sounds in English. By the end of this course, students will have improved their overall speaking and listening skills, in particular their fluency, to participate successfully in academic settings.

Prerequisite: score below 150 on the American English Oral Communicative Proficiency Test (AEOCPT)

ESL 116G: ESL Composition for Academic Disciplines

3 Credits

For international students at the graduate level to engage in scholarly activity in their academic disciplines. ESL 116G ESL Composition for Academic Disciplines (3) This course is designed for international students at the graduate level who are preparing to engage in scholarly activity in their academic disciplines. Through reading and writing selected rhetorical models of academic disclosure, students will be able to analyze and use the organizational structure of various models of academic texts. They will engage in contextualized language activities, which will enable them to match appropriate English linguistic forms to specific rhetorical purposes. Students will be expected to gather appropriate sources, organize information, and compose various models of academic essays and research papers. By the end of the course, students will be able to translate their research activities into written reports that conform to the expectations of the English-speaking academic community.

ESL 117G: American Oral English for ITAs II

3-9 Credits/Maximum of 9

Intermediate course in American Oral English for preparation of international teaching assistants. ESL 117G American Oral English for ITAs II (3 per semester/maximum of 9) This course is designed for intermediate level non-native speakers of English who need to improve their communication effectiveness in order to become teaching assistants (TAs). Through various language related activities, students will increase the intelligibility of their speech by improving their pronunciation of American English. Students will also develop oral presentation skills necessary for different types of classroom interaction. In addition, they will learn about American cultural traits as they pertain to communication in the university-level classroom. By the end of this course, students will have improved their overall communication

effectiveness to participate successfully in a variety of future teaching assistant responsibilities.

Prerequisite: score of 150-199 on the American English Oral Communicative Proficiency Test (AEOCPT) or a grade of A- required in ESL 115G

ESL 118G: American Oral English for ITAs III

3 Credits

Advanced course in American Oral English for preparation of international teaching assistants. ESL 118G American Oral English for ITAs III (3) This course is designed to provide English language instructional support for advanced non-native speakers of English who need to improve their communication effectiveness in order to become teaching assistants. Through various language related activities, students will increase the intelligibility of their speech by improving their pronunciation of American English. To do this, they will develop an acute awareness of their own strengths and weaknesses as a communicator in real and simulated instructional contexts. They will also develop effective oral communication strategies necessary for interaction with individual students, small groups, and large classes. Students will learn about American cultural traits and underlying assumptions as they pertain to communication in the university-level classroom. By the end of this course, students will have improved their overall communication effectiveness to carry out their future teaching assistants responsibilities successfully.

Prerequisite: score of 200-249 on the American English Oral Communicative Proficiency Test (AEOCPT) or a grade of A- required in ESL 117G

ESL 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Enterprise Technology Integration (ETI)

ETI 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ETI 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ETI 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

ETI 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

ETI 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ETI 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ETI 300W: Development and Documentation of Enterprise Web

3 Credits

Organizations utilizing enterprise stack platforms leverage several core components in order to be successful in implementations across system boundaries. Students will draw upon their prior experience in databases, networks, and programming to understand how cloud-based infrastructure solutions are built, the possible choices an analyst will have, and the written communication needed in order to convey these design choices to others. In addition, understanding the development life cycle and workflow needed to create web-based solutions and how they overlap with elastic operations will also be explored. Students will work in teams not only to better understand group collaboration, but to appreciate differences in backgrounds and biases as they relate to solutions development.

Enforced Prerequisite at Enrollment: IST 210 and IST 220 and IST 256 Writing Across the Curriculum

ETI 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ETI 435: Enterprise Analytics

3 Credits

Analytics and big data, enabling analytics through information technology, ROI in analytics, leveraging proprietary data for analytical advantage, analytics on the web, analytics of online engagement, applying analytics at production scale, predictive analytics in the cloud, analytical technology and the business user, using analytics for improved organization performance, organizing analysts, engaging analytical talent, analytics governance, and building a global analytical capability, and analytics case studies in healthcare, manufacturing, HR, financial services, etc.

Enforced Prerequisite at Enrollment: IST 210

ETI 461: Database Management and Administration

3 Credits

A study of advanced topics in database management systems that are fundamental to effective administration of modern enterprise information systems. The objective of the course is to enable a student to comprehend a range of issues in modern database management and administration. The students will learn advanced SQL, database system development lifecycle topic that include: database planning, requirements and design, database selection and application design, prototyping, implementation, testing operational and maintenance; database performance tuning concepts, monitoring the system for improved performance, and DBMS performance tuning; database transaction management covering transactions and the ACID properties, concurrency control techniques, and database recovery management; query processing and optimization techniques via query decomposition and optimization options; introduction to distributed processing and distributed database concepts, components and characteristics of DDBMS, and distributed database design; web connectivity technologies and XML; introduction to Business intelligence and data warehouses; introduction to Big data, NOSQL and cloud databases; and database security and database administration.

Enforced Prerequisite at Enrollment: IST 210 and IST 242

ETI 463: Distributed Database Management Systems

3 Credits

Today, most enterprise databases are no longer a centralized data store that is accessed by thousands of users from multiple locations which may be globally situated. These databases are typically web-based and distributed across multiple sites for availability, low latency and better reliability. This course exclusively focuses on the design and system issues related to such distributed database systems. An initial review of relational DBMS is required in the first week of the course. Students will learn the architectural options and design issues and choices for DDBMSs. Design considerations include fragmentation alternatives (vertical or horizontal), fragment allocation and the data directory. Database integration covers at schema matching, integration, and mapping. Data cleaning is also studied under database integration. Processing distributed queries is challenging, and this topic is studied next by first trying to understand the query processing problem followed by: the objectives for query processing, characterization of query processors and layers of query processing. Query decomposition and localization of distributed data is then studied. The next issue is the problem of optimizing distributed queries using various techniques such as centralized query optimization, join ordering in distributed queries and distributed query optimization using dynamic, static. Semi-join and hybrid approaches. The ACID properties of transactions are studied and different types of transactions, and this is followed by distributed concurrency control using techniques such as locking, timestamps, and optimistic concurrency control algorithms. Deadlock management which is a problem in concurrency control schemes is also studied. Distributed reliability to address failures in DDBMSs is addressed by studying local reliability protocols, distributed reliability protocols, dealing with site failures and network partitioning. Data replication is an important aspect of reliability and various replication update management strategies and replication protocols are studied. Modern databases are web-based and this topic is considered next. Topics studied include: web searches, web querying and distributed XML processing. Many databases have moved

to the cloud and cloud data management covers: cloud deployment models, service models SQL data services, and so on.

Enforced Prerequisite at Enrollment: IST 220 and IST 242 and ETI 461

ETI 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

ETI 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

ETI 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ETI 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Entomology (ENT)

ENT 202N: Insect Connections: Insects, Globalization and Sustainability

3 Credits

An introduction to the diversity of insects and the ways in which they interact with humans and impact our world. ENT 202N is a Science course that will use an interdisciplinary approach to look at the biology and the interplay between nature and society. Major themes of the course will be illustrated by focusing on the world of Insects and the relationships between society and Insects. Emphasis will be placed on critical analysis of both the costs and the benefits of human activities that impact natural systems. Course Learning Goals : 1. Discuss, describe, and give examples of relevant ecological and evolutionary processes and / or phenomena. 2. Apply content knowledge and understanding in novel contexts and situations. 3. Recognize the implications of the two-way dynamic between human activities and insects and how these dynamics differ in different parts of the world. 4. Make predictions associated with likely impacts of human activities on natural systems, ecosystem services, and insect and human populations. 5. Conduct research of relevant literature and utilize empirical evidence to support claims made in a popular press news story about insects. 6. Discuss, describe, and give examples of the two-way relationship between social issues and scientific discovery. 7. Communicate scientific knowledge to a diverse audience.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

ENT 216N: Plagues Through the Ages

3 Credits

This interdomain, general education course examines the major plagues of human history from both a scientific and societal lens. The course will be co-taught by instructors with biology and political science backgrounds who will help the students to integrate across those disciplines. Each week during a single lecture, students will learn the etiology, mode of transmission and treatment/control measures of a different disease. In parallel, students will also read popular press articles on how these diseases had particular cultural, economic or political impacts. These readings, in conjunction with guide questions, will prepare students for a weekly discussion during the second lecture run by both instructors. During the course, students will develop their ability to think critically about diseases and society and demonstrate this skill by designing a novel response to an emerging pathogen in a particular cultural context. This course will develop student communication skills, both oral and written.

General Education: Humanities (GH)

General Education: Natural Sciences (GN)

General Education - Integrative: Interdomain

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

ENT 222N: Honey Bees and Humans

3 Credits

Among more than 1,000,000 known insect species, honey bees are truly unique. No other insect has been harnessed so effectively to benefit humankind: honey bees provide critical pollination services for agricultural crops, and the wax and honey they produce are valuable commodities. Furthermore, their fascinating social life-style has intrigued individuals from hobby beekeepers to scientists studying complex questions about the evolution of sociality. More recently, documented declines in populations of honey bees and wild bees have stimulated interest in many communities, including policymakers, in improving health outcomes for bees. This course will provide students with a strong understanding of (1) honey bee behavior (particularly their complex and sophisticated social systems), biology, and health, (2) the important contributions honey bees and their pollination services make to maintaining natural ecosystems and increasing productivity of many of our key agricultural crops; and (3) the global history of human interactions with honey bees, including how people from many cultures have managed bees to provide honey, wax, and pollination services (4) the social and political context of addressing bee health issues. The course material will be presented in a series of interactive lectures, videos, and discussions, and also include a field trip to the Pollinator Gardens at the Arboretum at Penn State, a field trip to one of the Penn State apiaries, tracking individual honey bees in an observation hive, and dissections of samples in a laboratory exercise.

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Soc Resp and Ethic Reason

ENT 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ENT 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ENT 313: Introduction to Entomology

2 Credits/Maximum of 2

This course is an introduction to entomology addressing issues of insect diversity, morphology and physiology, and identification of the most common groups of adult and immature insects. This course will highlight the beneficial and detrimental roles insects in human society along with responsible methods of pest management. Other topics such as insects as vectors of disease and the ecological and agricultural impact of exotic insect species introduction and climate change will be discussed.

Enforced Prerequisite at Enrollment: 3 credits from AGECO or AGRO or ANSC or ANTH or BIOL or BISC or CHEM or ENT or ERM or FOR or FRNSC or HORT

ENT 314: Management of Insect Pests of Ornamentals

1 Credits

Diagnosis and management of insect pests on shrubs and trees in the landscape or production nursery.

Enforced Prerequisite at Enrollment: ENT 313

ENT 316: Field Crops Entomology

1 Credits

Laboratory-based approach to identification and management of insect pests of agronomic crops.

Enforced Prerequisite at Enrollment: ENT 313

ENT 317: Turfgrass Insect Pest Management

3 Credits

This course will introduce students to a thorough understanding of insects and their relatives, IPM, and control strategies. The course will provide the students the opportunity to review EPA registered turfgrass insecticides and respective Material Safety Data Sheets, the effects of turfgrass insecticides on nontarget organisms, and the Food Quality Protection Act and how this legislation has altered public perception of insecticides. Students will be provided with a fundamental understanding of the ecology, ethology, life history and development of IPM plans for the key surface and subsurface pests of cool- and warm-season turfgrass. Students will be introduced to a wide array of commercial, educational and government web sites to strengthen their understanding of turfgrass entomology. Students also will be encouraged to develop

a web based notebook which they can utilize upon completion of the course. Students will be invited to share their experiences with pest problems and methods they deployed to manage turfgrass insect species in the turfgrass environment. Students will be evaluated by the use of class assignments, quizzes, two hour exams and a final exam, refereed journal reading assignment, and an IPM class project.

Enforced Concurrent at Enrollment: TURF 235

ENT 320: Insects and Natural History Collections

1 Credits

This course focuses on the roles of natural history collections, with an emphasis on arthropods. Through hands-on activities and discussions, students explore insect preservation and collection management techniques, biodiversity data standards, data sharing, insect natural history, and effective exhibit design. Students gain a basic understanding of how research and policy decisions are informed by biodiversity data and natural history collections and how these resources can be used to educate and inspire non-experts.

Recommended Preparation: ENT 313 provides knowledge of insect biology that will help students understand the research concepts discussed in this course. However, the requisite background information will also be provided in this course.

ENT 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ENT 402W: Biology of Animal Parasites

3 Credits/Maximum of 3

An introduction to animal parasitology. Emphasis placed on host/parasite interactions, parasites of zoonotic importance, control programs and taxonomy. VB SC 402W Biology of Animal Parasites (3) This course provides students an opportunity to obtain an introduction to the field of animal parasitology. Material presented emphasizes life cycle patterns of animal parasites, host-parasite interactions and pathology, disease patterns and zoonotic potential of parasites to human disease, economic importance of parasitic diseases, taxonomy and parasite control programs. Information presented in this course will be useful to students interested in pursuing a career in veterinary medicine or careers dealing with animal care and management. Evaluation of student performance is achieved by 6 quizzes, three examinations and 3 writing assignments. The course is offered each spring semester with an enrollment of 15 to 25 students.

Enforced Prerequisite at Enrollment: BIOL 110

Cross-listed with: VBSC 402W

Writing Across the Curriculum

ENT 410: Insect Structure and Function

3 Credits

Integrated physiology and anatomy of insects; emphasis on unique adaptations, genetic regulation of development, insects as model systems, environmental physiology.

Enforced Prerequisite at Enrollment: BIOL 110 and BIOL 220W and BIOL 230W and BIOL 240W

ENT 419W: Pesticide Science

3 Credits

This interdisciplinary course explores the basic science of pesticides from biology, chemistry, and ecology perspectives. Students will learn the basic science of pesticides and their impacts on the environment. The first class meeting each week will be given in lecture format. Lectures will cover topics including an introduction to pesticides and integrated pest management (IPM), pesticide exposure and evaluation of toxicity, chemical classification of pesticides and their modes of action, toxicodynamics, pesticide residue, pesticide resistance, the major classes of synthetic pesticides and biopesticides, genetic engineering of pest resistant crops, environmental toxicology and pesticide regulation. The second class meeting each week will be an active learning paper discussion designed to develop their discussion and critical thinking abilities. Students will read classic and/or current literature papers relevant to that week's lecture. Starting from the first week, students will begin work on their class project by choosing their topic of interest associated with pesticides (due on the third week), writing a literature review paper (with clear guidance step by step), and presenting their review in class at the end of the semester (last 2 weeks or more time if enrolled student number is larger than 12), design to help students develop their oral and written communication skills.

Enforced Prerequisite at Enrollment: BIOL 110 Recommended Preparations: ENGL 15 and (CHEM 110 or CHEM 130) Writing Across the Curriculum

ENT 420: Introduction to Population Dynamics

3 Credits

Principles of population regulation, demographic analysis, modeling of dynamic processes are discussed; laboratories involve the exploration of population growth models.

Enforced Prerequisite at Enrollment: BIOL 110 and BIOL 220W

ENT 424: Sensory Biology of Insects

3 Credits

This course provides students an understanding of insect sensory systems contributing to behaviors performed for survival and reproduction.

Enforced Prerequisite at Enrollment: BIOL 110

ENT 425: Freshwater Entomology

3 Credits/Maximum of 3

Collection and identification of insects and other arthropods in freshwater ecosystems; field study of habitats.

ENT 432: Insect Biodiversity and Evolution

4 Credits

In this course students learn insect taxonomy, evolutionary history, collection and preservation techniques, morphology, fossils, and natural history. ENT 432 Insect Biodiversity and Evolution (4) In this course students learn insect taxonomy, evolutionary history, collection and

preservation techniques, morphology, fossils, and natural history. Lab work focuses on adult forms, especially of insects found in Pennsylvania. Students learn how to handle specimens, use diagnostic keys, and identify insects by sight. Collecting techniques will be honed during field trips. Upon completion of this course students should be able to: (1) teach others how to collect, preserve, and transport insect specimens, (2) name and sight-identify all insect orders and several common local families, (3) label a generalized insect diagram with external anatomy terms, (4) draw a phylogenetic tree of relationships between insect orders, (5) teach others how to read a phylogenetic tree, what kinds of data are used to estimate trees, how those data are analyzed, and what it means to be monophyletic, (6) describe key innovations and life history strategies of major insect lineages, (7) solve taxonomic problems and describe how species and other taxa are named and described, i.e., understand the fundamentals of taxonomic practice, (8) name and briefly describe the latest developments in insect biodiversity research, (9) describe how hexapods inform us about biodiversity and influence our conservation decisions.

Enforced Prerequisite at Enrollment: ENT 313

ENT 440: Plant-Insect Interactions

3 Credits

This course is an introduction to and survey of the major areas of plant-insect interactions. This course explores how plant traits facilitate or deter insect behavior and development, chemical and structural counter-adaptation and co-evolution, and how insects can benefit or adversely affect plant growth and survival. We will consider how plant-insect interactions influence insect population dynamics and plant community ecology. We will also investigate the effect of environmental quality on plant-insect interactions. Undergraduate and graduate students who complete the course will also be introduced to new tools and approaches in studying plant-insect interactions at the molecular level utilizing transcriptome data. Undergraduate students who complete the course will have a firm grounding in these areas. They will be prepared for other upper-division or graduate courses in plant biology and entomology. In addition, these students will gain enough knowledge in this area to be able to read and understand primary literature. Upon completion of this course, students will: (1) Demonstrate knowledge and understanding of plant morphology and chemistry as they relate to plant-insect interactions, including plant biochemistry and insect perception semiochemicals, plant protective phytohormone cascades, and plant-induced resistance. (2) Demonstrate intermediate knowledge and understanding of insect morphology, physiology, and behavior as it pertains to plant-insect interactions, including insect diversity, specialization, physiological adaptations, and protection against plant-induced defenses. (3) Demonstrate knowledge and understanding of interactions between plants, insects, microbial pathogens, parasites, and endophytes. (4) Recognize key evolutionary adaptations of plants and insects in co-evolutionary relationships. (5) Demonstrate knowledge and understanding of biotic and abiotic factors affecting plant-insect interactions, herbivore activity as it pertains to the recycling of nutrients in ecosystems, and how small and large scale geographic variability can affect herbivore diversity.

Enforced Prerequisite at Enrollment: BIOL 110

ENT 450: Medical Entomology

3 Credits/Maximum of 3

Transmission of human and animal pathogens by insects, mites and ticks, including emergent pathogens, envenomization, and forensic entomology. This course presents principles of transmission of human and animal pathogens by insects, mites and ticks. Non-transmission based aspects of medically important arthropods such as envenomization, forensic entomology and genomics will be discussed also. Basic arthropod biology with special attention to biological properties of vectors and their interactions with pathogens will be presented. We will cover basic components of arthropod disease cycles and principles of pathogen transmission dynamics. The major groups of arthropod-borne pathogens and vectors will be discussed. Special topics will include emergent pathogens, vector genetics, traditional and modern disease control strategies and venomous arthropods.

Enforced Prerequisite at Enrollment: ENT 313 or (BIOL 11 and BIOL 12) or BIOL 110 or BIOL 220W
Cross-listed with: VBSC 450

ENT 457: Principles of Integrated Pest Management

3 Credits

Integrated study of pest complexes and their management, emphasizing ecological principles drawing on examples from a range of agricultural, forestry and urban systems. This course is designed for sixth, seventh, and eighth semester students and graduate students. AGECO 457 / ENT 457 Principles of Integrated Pest Management (3) The goal of this course is to introduce upper level undergraduates and graduate students to the principles and practices of integrated pest management (IPM). This course addresses IPM issues concerning insects, plant diseases, and weeds in agriculture, natural systems and urban environments. Rooted in ecology, IPM also addresses the influence of human social, economic and regulatory systems in pest management. Emphasis is placed on the basic tactics and tools of IPM including biological, cultural, legal, mechanical and chemical controls, host plant resistance, pest monitoring and decision making. The overarching goals of environmental protection, economic viability and social welfare are considered throughout the course. In addition, students will learn about IPM program implementation both domestically and internationally, including pest population modeling and the use of internet resources to inform decision makers. Several projects will provide real-world examples. These may include field trips and a semester-long project where students research and solve an actual pest management problem.

Enforced Prerequisite at Enrollment: Must take two or more of the following - ENT 313 or PPEM 405 or PPEM 318 or HORT 238
Cross-listed with: AGECO 457

ENT 484: Insect Behavior

3 Credits

Insects are one of the most ecologically successful and diverse taxonomic groups on the planet, and their success is attributed to the amazing range and complexity of the behaviors they exhibit. This course provides an introduction to fundamental concepts and processes in the study of animal behavior, with an emphasis on insect examples, insect diversity and a theoretical and empirical overview of insect behavior. The course is structured around four complementary categories to study

behavior based on their development, adaptive value, function, and evolution. Students will learn how scientists study insect behavior, why insects behave the way they do, what functions these behaviors serve, and how behavior is shaped by the evolutionary forces of natural and sexual selection.

Enforced Prerequisite at Enrollment: (BIOL 110 or BIOL 110H) and (BIOL 230W or BIOL 230M or BIOL 220W or BIOL 220M)

ENT 495: Entomology Internship

1-18 Credits/Maximum of 18

Supervised non-group instruction, including field experiences, practica, or internships. Written and oral critique of activity required.

ENT 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ENT 496H: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors**ENT 497: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ENT 499: Foreign Studies

1-12 Credits/Maximum of 12

Foreign travel, specific locations and activities will vary by instructor

International Cultures (IL)

Entrepreneurship (ENTR)

ENTR 300: Principles of Entrepreneurship

3 Credits

Overview of the fundamental principles and processes of entrepreneurship including idea generation and opportunity analysis.

Prerequisite: ACCTG211 , ECON 102

ENTR 320: Entrepreneurship and New Venture Creation

3 Credits

Explores the process for starting and growing a new venture including the development of a business plan.

Prerequisite: ENTR 300

ENTR 400: Financing Entrepreneurial Ventures

3 Credits

Overview of alternative forms of financing including seed capital, valuing a company, going public, partnerships, and acquisitions.

Prerequisite: (BA 241 and BA 242) or BA 243 or BLAW 243 and ENTR 320 and FIN 301

ENTR 410: Entrepreneurial Marketing

3 Credits

Principles of Internet marketing and strategies for marketing new ventures on the Web.

Prerequisite: ENTR 320 , MIS 204 , MKTG 301

ENTR 430: Entrepreneurship and New Product Development

3 Credits

Examines the process of designing, testing and launching new products, and developing a strategy for commercialization of the technology.

Prerequisite: ENTR 300

ENTR 440: Entrepreneurship and Franchising

3 Credits

Overview of the entire franchising process with a focus on licensing and distributorship, trade marks, strategy, and growing the enterprise.

Prerequisite: ENTR 300

ENTR 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

ENTR 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Environmental Engineering (ENVE)

ENVE 401: Occupational Safety and Environmental Health

1 Credits

Regulations, management practices, hazard identification, exposure assessment, monitoring, employee protection, and program management for occupational safety and health. ENVE 401

Prerequisite: CHEM 301 and ENVE 301W

ENVE 411: Water Supply and Pollution Control

3 Credits

Water supply, wastewater characteristics, design of unit processes for water and wastewater treatment, sludge processing, and related

new technologies. ENVE 411 Water Supply and Pollution Control (3) Providing safe drinking water to the public and decontamination of wastewater before discharge are the two main functions of municipal water system. Properly designing and operating municipal water and wastewater systems allows safe and sustainable use of this limited resource. This course introduces students to design concepts used in water and wastewater treatment processes. Concepts will be categorized into physical, chemical, and biological processes, and presented through a series of lectures, readings, and problem solving. Subjects covered include: water and wastewater characteristics and flows; unit processes for drinking water treatments, including coagulation, flocculation, sedimentation, water softening, filtration, and disinfection; and unit processes for wastewater treatments, including preliminary headwork, primary sedimentation, secondary treatment, tertiary nutrient removal, final clarifier, and residual digestion and management. After completion of this course, students should have the basic knowledge necessary to select and design water and wastewater treatment processes.

Prerequisite: C E 370 or graduate standing

ENVE 415: Hydrology

3 Credits

Watershed response to rainfall events; hydrologic systems; ground water flow. ENVE 415 Hydrology (3) Hydrology is the study of water's movement over the earth and in the atmosphere, with a particular focus in the class on the processes of precipitation, infiltration and runoff. The general public focuses on hydrology when there either is too much water(flooding) or too little water (drought). Engineers working in the hydrology arena focus on evaluating the timing and location of potential floods, designing structures and sites to minimize the impacts of the site on the hydrologic behavior of an area, and evaluating potential sources of water supply during drought times so that the public impact of a drought is minimal. This course builds on concepts learned in the hydraulic design course in terms of conveyance system design. Course topics include determination of the safe yield of a water supply, calculation of hydrographs in ungaged watersheds, the hydraulics of groundwater wells, and the design of storm water management structures to minimize flooding. The students use currently available models from the U.S. Department of Agriculture, the U.S. EPA and the U.S. Army Corps of Engineers in their watershed evaluations and design of storm water control practices.

Prerequisite: ENVE 417 ; and STAT 301 or STAT 401

ENVE 416: Treatment Plant Design

3 Credits

Design of treatment facilities for water and waste water based on regulatory requirements and standards. ENVE 416 Treatment Plant Design (3) This capstone design course will teach students how to integrate various design concepts they have learned from other environmental engineering courses, including ENVE 411 Water Supply and Pollution Control, ENVE 415 Hydrology, ENVE 417 Hydraulic Design, and ENVE 425 Hazardous Waste Management. Additional design and design related concepts will be introduced through a series of lecturer, seminars, tours, case studies, and design projects. Subjects covered include unit processes for water and wastewater treatment, hydraulic design, sludge handling and disposal, chemical storage and safety, project bidding and management, plant design and retrofitting, and engineering ethics and society impacts. After completion of this capstone design course, students should have basic knowledge in

selection and design of conventional and modern environmental systems, especially water and waste water treatment processes and application of knowledge they learned from various environmental engineering courses in solving real world engineering problems.

Prerequisite: ENVE 411; Concurrent: ENVE 417

ENVE 417: Hydraulic Design

3 Credits

Design of water and waste water conveyance systems and storage facilities. ENVE 417 Hydraulic Design (3) The delivery of clean drinking water and the collection of wastewater are two of the fundamental activities of municipal or regional governments. Installing new systems or rehabilitating old ones are expensive, large-scale infrastructure projects. Therefore, it is important that these projects be designed correctly and address both current population needs and growth projections for the design life of the project, typically 25 or more years. This course builds on the concepts learned in fluid mechanics and applies them to the design of municipal water conveyance systems. Students learn to apply the appropriate pipe flow equation (Darcy-Weisbach, Hazen-Williams, or Chezy-Manning) to the design of the conveyance system, e.g., drinking water supply, sanitary sewer collection and storm sewer collection systems. Their projects focus on the design of small conveyance systems and use currently available EPA models for water supply, sanitary sewer, and storm water piping design. Students also learn to perform basic population projections, design water storage towers and design appurtenances such as manholes and storm sewer inlet structures. Culvert, weir and orifice design also are covered in the class.

Prerequisite: C E 360

ENVE 424: Solid Waste Management

3 Credits

Solid waste collection and disposal techniques; recycling and design optimization; including content analysis, legislation, and planning.

Prerequisite: C E 335

ENVE 425: Hazardous Waste Management

3 Credits

Overview of regulations, risk assessment, waste minimization and pollution prevention, treatment of hazardous waste, and remediation of contaminated sites. ENVE 425 Hazardous Waste Management (3) This course covers concepts and techniques for managing hazardous wastes. Subjects covered include hazardous waste fundamentals (hazardous waste characteristics, regulations, fate and transport, and toxicology), current management practices (environmental audits, and pollution prevention), treatment and disposal methods (physicochemical processes, biological methods, stabilization and solidification, thermal methods, and land disposal) and site remediation (site characterization, and remedial technologies). Additional hazardous waste management related concepts will be introduced through a series of lectures, tours, case studies, and design projects. After completion of this course, students should have basic knowledge in identifying hazardous wastes, understand physical, chemical, and biological factors governing the fate of a compound in the environment, know the fundamental physical, chemical, and biological processes used to treat hazardous wastes.

Prerequisite: ENVE 411

ENVE 430: Sustainable Engineering

3 Credits

A course on engineering which uses ecological principles to minimize waste and maximally use input materials. ENVE 430

Prerequisite: Permission of program

ENVE 460: Environmental Law

3 Credits

This course provides a survey of Federal and State environmental laws, including statutory, common and administrative law. May not be taken for graduate credit by Dickinson School of Law students in the concurrent J.D./EPC programs. ENVE 460

Prerequisite: senior standing, graduate standing or permission of program.

ENVE 470: Air Quality

3 Credits

Overview of air quality issues with regard to the sources, measurements, effects, transport and control of potential air contaminants. ENVE 470 Air Quality (3) The protection of clean air is vital for the health of people. Air pollution has been linked to increased cases of asthma, lung cancer, and other lung diseases. This course, building on concepts covered in the Introduction to Environmental Engineering course, provides an overview of air quality issues with regard to the sources, measurements, effects, transport and control of potential air contaminants. Specifically, the students will learn the fundamental concepts of air pollution generation, modeling and control, plus the impacts of air pollution on human and environmental health and welfare. They will understand the fundamental concepts of acid rain and global climate change. They will learn/be updated on the current regulations that exist to address air quality concerns. Through homework and projects, they will examine and perform preliminary designs on common types of air pollution control equipment. They also will participate in discussions of contemporary air pollution issues (global warming, mobile and stationary air pollution source control, airshed issues in the Chesapeake Bay watershed).

Prerequisite: C E 370

ENVE 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

ENVE 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

Environmental Resource Management (ERM)

ERM 150S: ERM First Year Engagement

1 Credits

This First Year Engagement course is for first-year students intending to major in Environmental Resource Management at University Park campus. First year DUS students may also enroll. Students will explore environmental science, natural resource, and sustainability issues and research methodologies through literature review, library searches, field studies, critical thinking exercises, and exposure to Penn State faculty. Students will also be introduced to the breadth of University resources at their disposal.

First-Year Seminar

ERM 151: Careers and Issues in Environmental Resource Management

1 Credits

ERM 151 introduces students to the environmental sciences and resource management field early in their academic experience. The course is the first prescribed ERM course for students in the Environmental Resource Management major, and is also designed for non-majors (e.g. DUS students) interested in exploring career paths in the environmental sciences. Weekly presentations are made by ERM graduates, Penn State faculty, and upper-level students. Course objectives include discussion of topical issues in environmental sciences and resource management, familiarization with environmental career opportunities for graduates, providing feedback to enhance students' Penn State experience, enhancement of critical thinking and communication skills, and creating an opportunity to address student questions about the ERM program. Weekly writing assignments are designed to enhance the learning process and require students to reflect on the day's speaker and the issues of importance to them. A service learning and seminar assignment are also required to familiarize new students to engagement opportunities outside the classroom. Students also develop a draft and final Personal and Professional Development Plan throughout the semester, which is designed to facilitate the establishment and refinement of career goals and objectives, and to be an action plan for their remaining Penn State experience

ERM 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ERM 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ERM 210: Environmental Factors and Their Effect on Your Food Supply

3 Credits

An exploration of how urban environmental problems influence our ability to obtain food and natural resources. E R M 210E R M 210 Environmental

Factors and Their Effects on Your Food Supply (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Environmental Factors and Their Effect on Your Food Supply will study links between environmental issues and the agricultural systems from an urban perspective. Insects, one the most diverse groups of organisms, will be used to provide examples of human impact on ecosystem structure and function. Differences between sustainable and non-sustainable systems, along with efforts to create sustainable human systems, will be explored. This course looks at the Earth as a single ecosystem composed of interacting biological, chemical and physical systems. The social and economic dimensions of issues will be discussed. We will focus on how non-human systems interact with each other and with the human population. The course focus will be on the principles and concepts from biology, chemistry, geology and physics. Specific topics treated within the context of this interdisciplinary course include but are not limited to: human response to (insecticide use) and influence on (reduction in diversity) insects, the unique and life-giving properties of water, nutrient cycles, energy flows, species diversity, the dose-response relationship, risk assessment and perception, global climate change, and conservation of energy and matter. We will also be learning about how the use of the scientific method an interdisciplinary setting. Scientific situations found in everyday life will be used to explore and practice how to ask questions, gather data, and reach conclusions. Evaluation of student performance will be based upon critical thinking exercises, class discussion, short in-class writing assignments, and examinations. The critical thinking exercises will be assessed by written material submitted by the student. The written material will include the steps undertaken in the exploration (methods), the observations made (results) and description of what was learned (conclusions). These explorations will help students learn to solve problems and think critically using information they have discovered. The explorations will require students to supplement their observations with information found on the Web and in the Library. Students will be required to participate in class discussions using CourseTalk. Contributions will be evaluated for content and quality. Short, in-class, written student feedback will be collected frequently to determine the level of understanding and attendance. Two midterm evaluations and a comprehensive final will be given. These exams will consist of higher-order thinking questions requiring the student to synthesize information to solve problems. Self-quizzes will accompany each unit to help the student determine when they understand the concepts being learned. Environmental Factors and Their Effect on Your Food Supply is an introductory level, general education science course without prerequisites. This course is not a prerequisite for any other course. An introductory level course in sustainable environmental systems will provide a useful context for future course work. Recitation sections will be used to increase the student's understanding of concepts discussed during lecture. Computer exercises develop specifically for this course, the textbook CD-ROM, and data found on the Web will be used to aid students in their understanding of course concepts. The course will be offered annually in the spring. Expected enrollment is 100 students.

Bachelor of Arts: Natural Sciences

ERM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ERM 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ERM 300: Basic Principles and Calculations in Environmental Analysis

3 Credits

This course will demonstrate the dependence of environmental science on biology, chemistry and physics, and provide a contextual link between principles learned in basic science courses and the advanced environmental concepts presented in later required Environmental Resource Management (ERM) courses. Students will integrate the knowledge from each of these disciplines into an interdisciplinary framework. This course will teach Environmental Resource Management students basic problem solving skills while using examples taken from environmental media - air, water, and soil. Students will have many opportunities to examine, manipulate, and solve quantitative problems related to the environment. This is a required course for Environmental Resource Management majors.

Enforced Prerequisite at Enrollment: 3 credits in BIOL and CHEM 111 and (MATH 110 or MATH 140) Enforced Concurrent at Enrollment: PHYS 250 or PHYS 211

ERM 309: Measurement & Monitoring of Hydrologic Systems

3 Credits

This course is an introduction to measurement and monitoring equipment/techniques commonly used in analyses and design of hydrologic systems and will provide students the opportunity to learn and apply basic measurement techniques that serve as critical tools in professional practice in water resources. During the first part of the course, the instruments and techniques commonly used in water resources assessment, including rainfall monitoring, flow monitoring, and interest as part of the Sustainability Institute's Sustainable Communities Collaborative. Data generated over the course of the semester are used to develop a report that is shared, along with the data with a community partner. In the second part of the course, mapping development is explored, which serves as a critical aspect of water resources engineering and planning. ArcGIS serves as a primary software tool used in engineering design and water resources planning, and students will learn to develop maps to present and process various watershed - data including land use data, soils data, and hydrography data. Various aspects of the course will coalesce around the concept of the watershed being the basic unit of water resources analyses and design, and students will experience how various measurement techniques and approaches are necessary tools for practicing professionals. This course will be useful to any undergraduates seeking degrees in a major related to water resources planning, engineering, or technology.

Enforced Prerequisite at Enrollment: CHEM 110. Enforced Concurrent at Enrollment: PHYS 211 or PHYS 250
Cross-listed with: ABSM 309

ERM 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ERM 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ERM 402: Foundations of Sustainable Business

3 Credits

This course will provide students with an understanding of how environmental and sustainability issues are impacting business strategies and ultimately profits. We will also examine the external stakeholders, such as environmental groups, policy-makers, and "green" consumers, that impact business management. Business students will benefit by a better understanding of environmental/sustainability issues that impact their operations and strategies. Non-business students will benefit by understanding how business decisions can impact the natural environment. An emphasis will be on a thorough understanding of making a business case for sustainability. We will also discuss the triple bottom line and its use. Some Specific Issues to Cover: 1. How are organizations shifting business models to work with sustainability trends? 2. How can we make a business case (justification) for being "green"? 3. Can firms differentiate themselves by being responsible/sustainable? Do consumers and other stakeholders care? 4. Thorough understanding of stakeholders and how they impact operations. 5. How can the "business" side of the world work with the "environmental" side? 6. Use of packaging as an example of where parts of the supply chain are working together to be more sustainable. 7. How "waste" in its many forms can be seen as a surrogate for unsustainable practices. 8. Pros and cons of metrics used to measure sustainability. 9. Impacts of business operations on the environment.

Enforced Prerequisite at Enrollment: (AGBM 101 or ECON 102 or ECON 104) and 7th semester standing
Cross-listed with: ABSM 402

ERM 411: Legal Aspects of Resource Management

3 Credits

Legal systems and lawmaking processes; property rights in land, water, and wildlife resources; jurisdictional problems in planning resource use. E R M 411 Legal Aspects of Resource Management (3) This course provides a survey of the basic legal principles, regimes, and issues related to environmental protection and natural resource management. The course is designed for students interested in environmental resource management and related careers, providing them with a basic grounding in core principles of environmental law and regulation. The course will offer instruction, discussion, and practical application of theories of environmental law and basic legal and regulatory regimes related to water, air, and land. Focus will be on core federal legal regimes and statutes and their application in Pennsylvania. These legal regimes will be explored through topical case studies, such as Chesapeake Bay restoration, Marcellus Shale natural gas extraction, and climate change. During the latter half of the course, practical application of

environmental legal issues will be demonstrated in a hands on manner where students will represent private, nonprofit, or government sectors in a hypothetical land development proposal, and will be expected to perform tasks they may be asked to perform during their environmental careers: preparing permit applications, public comment documents, writing permit conditions, and challenging and defending final agency decisions.

Enforced Prerequisite at Enrollment: ECON 102 or AGBM 101
Enforced Concurrent at Enrollment: ERM 151 or CED 152 or EBF 200

ERM 412: Resource Systems Analysis

3 Credits

ERM 412 is a course in problem solving, as it relates to environmental and resource related issues. The course covers a variety of problems within an environmental context, including mass balance, steady-state, dynamic, and statistical problems. Students will gain experience in making assumptions and testing those assumptions in the application of biological, chemical, and physical principles to problem solving. The course is designed to develop experience in quantitative problem solving using spreadsheets, modeling tools, and computer-based statistical analysis.

Enforced Prerequisite at Enrollment: (MATH 111 or MATH 141) and (STAT 200 or STAT 240 or STAT 250)
Enforced Concurrent at Enrollment: ERM 300

ERM 413W: Case Studies in Ecosystem Management

3 Credits

Application of biological, physical, and social science principles to ecosystem management problems; introduction to environmental impact analysis and review.

Enforced Concurrent at Enrollment: ERM 300 and ERM 412
Writing Across the Curriculum

ERM 429: The Chesapeake Bay Watershed: Issues and Careers in Complex Environmental Problem Solving

3 Credits

This course will offer an in-depth exploration of issues related to the health of the Chesapeake Bay and its watershed, with an emphasis on pollutants impacting water quality, and the long history of efforts to improve Bay watershed health. These issues will be explored from a wide variety of perspectives, including environmental, hydrological, historical, social, and political. While the main pollutants of concern are few (nitrogen, phosphorus and sediment), the issues related to addressing them are extremely complex and require a multidisciplinary approach to environmental problem solving. Nutrient pollution represents the leading unsolved water quality issue in the United States and is one of major worldwide significance threatening freshwater, estuarine, and coastal ecosystems. Students will be introduced to the wide variety of environmental career opportunities that exist in "saving the Bay," spanning multiple disciplines, areas of expertise, and job sectors. The depth of complexity of the issues and the diversity of careers will be experienced firsthand through classroom guest lectures, as well as travel throughout the Bay watershed, including overnight travel to the Chesapeake Bay.

Enforced Concurrent at Enrollment: ERM 411

ERM 430: Air Pollution Impacts to Terrestrial Ecosystems

3 Credits

This course introduces student to air pollutant sources, transport, meteorology, and temporal and spatial trends of pollution dispersion and deposition. An overview is presented of the direct and indirect effects of air pollutants on terrestrial ecosystems with an emphasis on plant life. The effects of ozone, sulfur dioxide, nitrogen oxides, particulate matter, halogens, and combined pollutants leading to acidic atmospheric depositions are presented. Emphasis is placed on air pollutants as plant pathogens leading to symptoms and eventual long-term accumulative effects to entire ecosystems. Methods of diagnostics, pest interactions, assessment of loss and cost/benefit analysis leading to abatement follows. Final parts of the course include perspectives of public awareness, development of National Ambient Air Quality Standards, compliance prevention of significant deterioration, and the Clean Air Act reforms of 1990.

Enforced Prerequisite at Enrollment: (BIOL 110 or FOR 308) and 5th Semester standing or higher
Cross-listed with: PPEM 430

ERM 431: Environmental Toxicology

3 Credits

Effects of pollutants on animal health at the chemical, physical, and cellular level.

Enforced Prerequisite at Enrollment: BIOL 110 and CHEM 110 and CHEM 112
Cross-listed with: VBSC 431

ERM 433: Transformation of Pollutants in Soils

3 Credits

The course provides the chemical and biological basis for understanding, predicting and controlling the fate of pollutants added to the soil. The material falls distinctly into two major sections: Section I discusses the fundamental concepts of soil science as they relate to the fate of pollutants in soil systems. Section II provides specific coverage of important classes of soil pollutants. The environmental impacts associated with soil enrichment of these pollutant groups are discussed. Primary emphasis is given to pollutants having adverse effects on human health via water and the food supply, namely, trace elements, trace organic contaminants, pathogens, and radionuclides. The major plant nutrients, nitrogen and phosphorus, warrant coverage because of their potential negative impacts on aquatic systems. Salts can harm soil productivity and structure and thus represent a third distinct pollutant category.

Enforced Prerequisite at Enrollment: CHEM 111 and CHEM 112 and SOILS 101

ERM 435: Limnology

3 Credits

Biogeochemistry and natural history of freshwater ecosystems. W F S (E R M) 435 Limnology (3) This course will define and describe major principles (physical, chemical, biological, and ecological) that govern the structure and function of freshwater ecosystems (ponds, lakes, and rivers). Current scientific literature will be critically reviewed and

discussed in relation to comparative philosophy, methodology, and case studies that cover a range of topics in limnology. The objectives of E R M (W F S) 435 are to familiarize students with the major physical properties, chemical cycles, taxonomic groups of organisms, and ecological interactions that define and describe the natural function of aquatic ecosystems. The course will use case studies to illustrate and examine pertinent issues (e.g., excessive material loading, introduction to exotic species, habitat fragmentation, and climate change) that can alter the structure and function of aquatic ecosystems. Knowledge of these basic ecosystem principles will be applied towards formulating real-life resolutions to the issues identified in class, in order to better manage aquatic resources (methods to reduce material loads, transport controls of exotic species, habitat restoration, and reduction of global gases). This course will be useful to both undergraduate and graduate students seeking degrees in Environmental Resource Management, Wildlife and Fisheries Science, Ecology, and other related subjects. At the undergraduate level, the course will serve as a 400-level selection in both the Environmental Resource Management and Wildlife and Fisheries Science degree programs. At the graduate level, the course will compliment several Wildlife and Fisheries courses that form the compliment of that degree program. Moreover, the course can satisfy the course requirement for ecosystems ecology in the inter-college Ecology graduate program and serve as a breadth course in Water Resources for graduate students in the Watershed Stewardship program.

Enforced Prerequisite at Enrollment: BIOL 110 and BIOL 220W and CHEM 110

Cross-listed with: WFS 435

ERM 436: Limnological Methods

3 Credits

Application of current methodologies to evaluate the biological, chemical, and physical characteristics of aquatic ecosystems. E R M (W F S) 436 Limnological Methods (3) Limnological Methods will instruct students to apply state of the art analytical measurements in order to gain an understanding of how and why ecosystems support specific biodiversity and biogeochemical cycles. The course will help students define key ecological elements (e.g., ecosystem metabolism, resource limitation, predator-prey relations) in both qualitative and quantitative terms, thereby making them tangible, tractable, and readily understandable. The course will use an instructional rubric to integrate conceptual, analytical, and communicative exercises in order to instruct students about how to evaluate variation in natural ecosystems. This course provides experiential training in the scientific process (rubric), so students can learn by doing, thereby internalizing their knowledge. Course content is organized into three 5-week sections, each of which will emphasize one component of the biogeochemical cycle (physical, chemical, biological). In each section, students will carry out a focused group study designed to evaluate how a pertinent environmental perturbation can affect that component of the aquatic biogeochemical cycle. The course content in each five-week block will have students: 1) review the experimental design and hypothesis, 2) implement the experimental design in the field or laboratory, 3 and 4) process and analyze samples in the laboratory, and 5) make statistical and graphical evaluations of the experimental results relative to their hypothesis (in class) and present these findings in written form. Knowledge of these basic ecosystem principles will be applied towards formulating real-life solutions to the issues identified in class, in order to better manage aquatic ecosystems. This course will be useful to undergraduate students seeking degrees in Environmental Resource Management and Wildlife and Fisheries Science, as well as graduate students pursuing degrees in Ecology, Forest Science, Wildlife and

Fisheries Science, Watershed Stewardship, and other related subjects. At the undergraduate level, the course will serve as a 400-level elective in Environmental Resource Management degree program, Wildlife and Fisheries Science degree program, and the inter-college Marine Science option. At the graduate level, the course will complement several Forest Science and Wildlife and Fisheries courses. Moreover, the course can also satisfy the requirements for the ecosystems ecology focus in the inter-college Ecology graduate program. Grades will be based on three research papers, and a final laboratory practical.

Enforced Prerequisite at Enrollment: BIOL 110 and CHEM 110

Cross-listed with: WFS 436

ERM 440: Chemistry of the Environment: Soil, Water, and Air

3 Credits

This course is designed for junior and senior undergraduates with some previous chemistry background. The course will advance students' understanding of chemical concepts and link them to applications in environmental chemistry. The course focuses on topics in environmental soil chemistry such as: soil mineralogy, mineral weathering, sorption and ion exchange, chelation and complex formation, soil pH and acidic/alkaline soils, oxidation/reduction, soil salinity, soil biochemistry, and the dissolution/precipitation of common metals and compounds. The solid phase is emphasized, but solid/solution equilibria, aquatic chemistry, metals in the aqueous environment, and aquatic pollution will also be covered. The course also covers a detailed overview of stratospheric chemistry, tropospheric chemistry, and climate change.

Enforced Prerequisite at Enrollment: (CHEM 110 and CHEM 111 and CHEM 112) or CHEM 202 or CHEM 210

Cross-listed with: SOILS 440

ERM 444: Environmental Biophysics

3 Credits

Analysis of the interaction of living organisms and their microenvironment by applying biophysical principles and engineering methods. E R M 444 Environmental Biophysics (3) This course trains students in the analysis of the interaction of living organisms and their microenvironment by applying biophysical principles and engineering methods. Students will learn to describe the physical environment surrounding the organism (wind, temperature, radiation, humidity) and to calculate biophysical responses of the organisms to these variables in terms of transfer of mass (liquid water, gases) and other processes. Practical examples and accompanying calculations are fundamental components of the course as the students learn to quantitatively explore the links between the environment and features of living organism such as the shape and color of leaves and canopies, the distribution of the rooting system, or the thickness of an animal fur. A laboratory section complements the lectures and introduces the students to basic techniques and equipment utilized in this discipline. This course can be helpful for students in the areas of plant and animal sciences, ecology, entomology, environmental sciences, and agricultural and environmental engineering.

Enforced Prerequisite at Enrollment: BIOL 110 and (MATH 110 or MATH 140) and (PHYS 250 or PHYS 211)

ERM 447: Stream Restoration

3 Credits

Stream restoration will focus on understanding stream impairment by evaluating the stream channel, its floodplain, and the watershed supplying runoff to the stream. A wide variety of stream assessment tools will be introduced along with several stream classifications systems. Students will be introduced to the concepts of stream stability and evolution and how human activities and our infrastructure impact the health of a stream. Various restoration approaches designed to restore impaired stream reaches to stable channels will be introduced. Stream stability and the role of sediment transport in the context of pebble-count data will be introduced along with several sediment transport models. Stream biology, macro-invertebrates, the role of riparian buffers, and desirable plant populations will be introduced. The laboratory experiences will focus on stream assessment tools and stream surveys needed for the stream restoration design process. Students will be responsible for assessing a stream and developing a preliminary design for restoring an impaired local stream reach.

Enforced Prerequisite at Enrollment: ASM 327 or BE 307 or CE 360 or CE 370

ERM 448: Rural Road Ecology and Maintenance

3 Credits

Roads are ubiquitous throughout the landscape and this course is intended for students who anticipate working in natural resource management fields. This course provides students with the fundamental understanding of the interaction of natural systems with unpaved and low volume paved roads in order to economically maintain roadways with minimum impact on the environment. The major focus area will be the road/stream interface, including the fundamentals of hydrology, geology, soils, and erosion processes as they pertain to roads and streams. It is expected that the student will gain a practical understanding of rural road maintenance in order to provide a foundation for real-world application. Emphasis is placed on Environmentally Sensitive Maintenance (ESM) practices for rural roads that are used throughout Pennsylvania. The goal of ESM practices is to minimize the environmental impact of the existing road network by maintaining proper road drainage in order to keep road materials out of the adjacent streams and surrounding landscape. Upon completion the student will be ESM certified under Pennsylvania's Dirt, Gravel and Low Volume Road Maintenance Program.

Enforced Prerequisite at Enrollment: (MATH 22 and MATH 26) or MATH 41 or MATH 110 or MATH 140 Enforced Concurrent at Enrollment: ASM 327 or BE 307 or CE 335 or CE 370 or FOR 308 or FOR 470

ERM 449: Sustainable Water Management: Economics and Policy

3 Credits

Water resource management is of fundamental importance to human societies and natural ecosystems. Yet, despite millennia of human experience in managing water resources, water shortages and water quality degradation harmful to the health and prosperity of people and to ecosystems are common, and stresses on water are expected to increase globally in coming years. Growing populations and incomes are increasing the demand for scarce water while creating new stresses on water quality. Climate change and changes in land use and land cover that accompany population growth and climate change are affecting water supplies and water quality. Addressing existing and emerging

water problems requires understanding the underlying causes, and the development and implementation of remedies that are effective, efficient, resilient, fair. This is a multi-disciplinary problem. This course introduces students to the methods and contributions of economics as a behavioral and decision science to the task. Topics include water supply costs, water demands, ecosystem services and values provided by water, efficiency and fairness in water use, water rights institutions, water markets, water pricing, effluent taxes, pollution permit trading, and methods of water project and policy evaluation.

Enforced Prerequisite at Enrollment: (MATH 22 or MATH 110 or MATH 140) and (AGBM 101 or ECON 102) Recommended Preparation: CED 201 or EBF 200

ERM 450: Wetland Conservation

3 Credits

Wetland types, classification, functions and values; hydrology, soils, and plants; introduction to wetland identification and delineation; wetland regulations. E R M (W F S) 450 Wetland Conservation (3) Wetlands are unique ecosystems, differing in many ways from both terrestrial and aquatic environments. They provide recognized values and functions to society, although these values and functions remain difficult to quantify. The study of wetlands is interdisciplinary, requiring background knowledge in science, management and policy disciplines. This course will explore the variety of wetland types and functions, and emphasize the diverse hydrological, biological, chemical, and physical interactions that occur within wetlands. Because wetlands are recognized as valuable assets in the landscape, issues surrounding wetland management and regulation have taken on increased importance; we will address these issues as well. Topics will also include the restoration of degraded wetlands and wetland creation, along with the construction of wetlands for pollution abatement. Students will become familiar with different wetland types and how they are classified, and will develop skills in understanding the interactions between wetland hydrology, hydric soils and hydrophytic vegetation. They will also develop an understanding of important national and state policies and regulations pertaining to wetlands and their protection and delineation. Classroom assessment will be based on three cumulative exams, homework assignments, and a final project. The course will fulfill 3 credits of electives or technical selections in the Wildlife and Fisheries Science major. Other students university-wide may be interested in the course, and the intention is to develop a course that is accessible to a wide variety of traditional and non-traditional students. For proper instruction, a technology classroom with computer projection equipment will be required. E R M 450 will be offered each fall semester. Enrollment will be limited to 60-80 students.

Enforced Prerequisite at Enrollment: ERM 300 or WFS 209
Cross-listed with: WFS 450

ERM 489: Supervised Experience in College Teaching

1-3 Credits/Maximum of 3

The Supervised Experience in College Teaching course provides select undergraduate students with formal, supervised teaching experience in an Environmental Resource Management (ERM) course. Faculty recruit students who excel in a particular course to serve as undergraduate teaching assistants for subsequent offerings of that course. Duties may include serving as peer tutors, teaching assistants, or laboratory assistants, and developing and/or evaluating course activities and materials. Students participating in this course will develop a deeper understanding of the focus within the course material by actively helping

to teach the material. The course is only available to students who are invited to serve as teaching assistants for an ERM course and enrollment is by permission of the instructor.

Enforced Prerequisite at Enrollment: Permission of program

ERM 494: Undergraduate Research in Environmental Science

1-6 Credits/Maximum of 6

Supervised student activities on research projects identified on an individual or small group basis.

Enforced Prerequisite at Enrollment: Permission of the Environmental Resource Management program

ERM 494H: Honors Thesis

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of an ERM honors thesis.

Enforced Prerequisite at Enrollment: Junior or senior status in the Schreyer Honors College and permission of the ERM honors advisor Honors

ERM 495: Internship

1-12 Credits/Maximum of 12

A supervised practicum in the environmental field. To be offered only for SA/UN grading.

Enforced Prerequisite at Enrollment: Prior approval of assignment by instructor

Full-Time Equivalent Course

ERM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ERM 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ERM 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered with a component in foreign countries, by individual or group instruction.

International Cultures (IL)

Environmental Science (ENVSC)

ENVSC 200: Introduction to Environmental Science

3 Credits

This team-taught course is designed to be the entrance/introduction to major course in Environmental Science. The course consists of seven

modules. The first module is an introduction to research methods, and is designed to teach students the fundamentals of searching the primary literature, reading scientific research papers, and accessing and using available environmental databases. Modules 2-6 address various large issues in environmental science. Each of these issues manifests across spatial and temporal scales from local/short-term to global/long-term. Information in each module will be conveyed via assigned readings from a textbook, student presentations of case studies, computer laboratory exercises in which students will access existing databases with the goal of downloading and analyzing some small data set, reviews of 1-2 papers from the primary literature, and discussions of the readings. These modules cover the breadth of environmental science including population growth/control, climate science and climate change, water resources, energy issues, and pollution. The last module specifically addresses communication skills, science-based policy and resource management, and the critical importance of communication between scientists and non-scientists. This module will include writing exercises and presentation skills. At the end of the course, local environmental professionals (lawyers, regulatory personnel, health department officials, urban planners) will be invited to participate in a panel discussion of careers options.

Prerequisite: BIOL 110, CHEM 110

ENVSC 294: Research in Environmental Science

1-3 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

ENVSC 296: Independent Studies in Environmental Science

1-3 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ENVSC 297: Special Topics in Environmental Science

1-3 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ENVSC 400W: Case Studies in Environmental Analysis and Problem-Solving

3 Credits

A writing-intensive environmental science course comprising review and analysis of field, lab, policy, and management aspects; investigative methods; and projects.

Prerequisite: BIOL 402W ; CHEM 202 ; GEOSC 300/400 level; ENGL 202C ; any PL SC or ECON

Writing Across the Curriculum

ENVSC 494: Research in Environmental Science

1-3 Credits/Maximum of 9

ENVSC 494 is an experiential course that allows undergraduates to design, complete and present a research project in environmental science.

Prerequisite: 3 credits of 400-level coursework; Junior or senior standing

ENVSC 495: Internship in Environmental Science

1-3 Credits/Maximum of 9

ENVSC 495 is an off-campus internship experience with a local, regional, or national environmental organization, government agency, or private-sector business.

Prerequisite: 3 credits of 400-level coursework; Junior or senior standing

ENVSC 496: Independent Studies in Environmental Science

1-3 Credits/Maximum of 9

Creative projects or specialized coursework, supervised on an individual basis, that falls outside the scope of formal ENVSC coursework.

Prerequisite: 3 credits of 400-level coursework; Junior or senior standing

Environmental Studies (ENVST)

ENVST 100N: Visions of Nature

3 Credits

An interdisciplinary introduction to environmental studies, including perspectives from environmental ethics, economics, public policy, art, literature, history, geology, biology, and ecology. This course may be team-taught and include field and laboratory work. Students will be introduced to interdisciplinary study of the environment with an overview of nature's role as subject matter in a variety of academic disciplines. Students will examine the formative value of nature in our cultural history, consider the role of nature in our current value systems and social and economic structure, and be introduced to the theory and practice of ecological science. Students should achieve a broad understanding of the value (not just economic) of living things and their habitats. The course will demonstrate how information from different fields can interconnect. It also serves as the "gateway" course for students intending to major or minor in an interdisciplinary environmental studies program, introducing the program's concerns, aims, and goals and the varied academic perspectives to be built upon in later coursework.

Bachelor of Arts: Humanities

Bachelor of Arts: Natural Sciences

General Education: Humanities (GH)

General Education: Natural Sciences (GN)

General Education - Integrative: Interdomain

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

ENVST 200: Research Methods in Environmental Studies

3 Credits

Focus on interdisciplinary research methodologies from biology, social sciences, and humanities for the study of environmental issues and problems. ENVST 200

Prerequisite: BIOL 110 , ENGL 015 , ENVST100

ENVST 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or group-basis.

ENVST 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

ENVST 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ENVST 299: Foreign Studies in Environmental Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Prerequisite: approval of the program

International Cultures (IL)

ENVST 395: Internship

1-6 Credits/Maximum of 6

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisites INTSP 370

ENVST 400W: Senior Seminar in Environmental Studies

3 Credits

Writing-intensive study of a specified topic in environmental studies integrating approaches and research from a variety of disciplines. ENVST 400W

Prerequisite: ENVST200

Writing Across the Curriculum

ENVST 424: Creative Writing and the Natural World

3 Credits

Creative writing workshop focused on the environment and related issues. ENGL (ENVST) 424 Creative Writing and the Natural World (3) American literature includes a long and rich tradition of writing that focuses on the natural world. From the oral stories of indigenous people to the journals of the first European settlers, many have looked for a way to understand their own place in the world based upon their relationship to the earth and its creatures. While Puritans often discerned the pleasure or wrath of God in the environmental changes they experienced, Transcendentalists like Henry David Thoreau and Ralph Waldo Emerson sought out moments of spiritual enlightenment by immersing themselves in the natural order. More recently, such poets as Galway Kinnell, James Wright, and Robert Bly have attempted to connect with the depths of collective unconsciousness by exploring the natural world, while others, like Mary Oliver, Dan Gerber, Jim Harrison, Gary Snyder and Wendell Berry,

have used transcendental thought and melded it with Christian and Buddhist insights. Still others, like Gary Paul Nabhan, Rachel Carson, and Alison Hawthorne Deming have brought science to bear upon the riches that nature, art, and scientific exploration may offer when joined in the pursuit of a deeper understanding of, and relationship with, the natural world. This course will acquaint students with the tradition of American nature writing, as well as contemporary nature writing, in the genres of nonfiction, poetry and fiction. Students will be introduced to issues of style, philosophy, and content, as they produce their own essays, poems, and stories. The course culminates in the production of a portfolio of nature writing. Much of this work will begin in class with specific assignments, which will include field work, and feedback from other students in the class. As a workshop course in creative writing, the emphasis will be upon the production of literary texts that interact with the natural world and upon the revision of those texts.

Enforced Prerequisite at Enrollment: ENGL 50 or ENVST 100N
Cross-listed with: ENGL 424

ENVST 424H: Creative Writing and the Natural World

3 Credits/Maximum of 3

As a workshop course in creative writing, the emphasis will be upon the production of literary texts that interact with the natural world and upon the revision of those texts.

Honors

ENVST 425: Environmental Communication

3 Credits

ENVST 425W Environmental Communication (3). Environmental communication is an increasingly important specialty within the discipline of communication, and a critical topic for students interested in participating in environment-related discourse as policy advocates, subject-matter experts, journalists, strategic communication

professionals, or citizen-stakeholders. In this course, students will learn (1) how the environment is constructed and contested as an idea in public discourse, via news, current events, and popular culture; (2) how individuals, organizations, and authorities engage in environmental discourse, and to what ends; and (3) how environmental policy advocates and entrepreneurs attempt to enlist and mobilize publics via communication campaigns. Students will learn to design and critique environmental messages. Methods of assessment center on the production of informative, persuasive, and reflective environmental messages in a variety of textual forms and genres to develop practical communication skills. Class size is limited to 10 students. This course may be substituted for ENVST 400W with program approval.

Prerequisite: ENGL 202 CAS 100
Writing Across the Curriculum

ENVST 428: Environmental Economics and Policy

3 Credits

Our free market system has brought us tremendous increases in productivity and innovation over the last century. However, at times the production or consumption of goods or services generates side effects that can lower the welfare of society, or even threaten society's very existence. What should be done? Environmental economics provides one tool to examine this question. There are four broad areas in the field of environmental economics: benefit-cost analysis including the valuation of the environment and the cost of environmental regulation; institutional design in the regulation of the environment; and exhaustible and renewable resource management. This course will provide an overview of these four areas and will examine several applications of the techniques found in the environmental economics literature.

Prerequisite: (ECON 102; ECON 104) and (STAT 200; STAT 250)
Bachelor of Arts: Natural Sciences

ENVST 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or group basis.

ENVST 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

ENVST 497: Special Topics in Environmental Studies

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Prerequisite: 6th semester standing and 6 credits in ENVST or related disciplines

ENVST 499: Foreign Studies in Environmental Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Prerequisite: 6th semester standing, approval of program, and 6 credits in ENVST or related disciplines
International Cultures (IL)

Environmental Systems Engineering (ENVSE)

ENVSE 400: Safety Engineering

3 Credits/Maximum of 3

An introduction to the application of engineering principles for the promotion of safety for workers, consumers, and the public.

Enforced Prerequisite at Enrollment: CHEM 110 and PHYS 211 and MATH 141

ENVSE 404W: Surface and Interfacial Phenomena in Environmental Systems

3 Credits

Principles underlying surface and interfacial phenomena with application to mineral processing and environmental systems.

Enforced Prerequisite or Concurrent at Enrollment: CHEM 110 and MATH 141 and PHYS 212 and EME 301
Writing Across the Curriculum

ENVSE 406: Sampling and Monitoring of the Geo-Environment

3 Credits

Issues of sampling, analysis, monitoring and control techniques for effective environmental management in the extractive industries.

Enforced Prerequisite or Concurrent: MNPR 301

ENVSE 408: Contaminant Hydrology

3 Credits

Mobility of contaminants in aquifers; multiphase flow, transport, retardation and attenuation, vapor mobility, aquifer characterization, mathematical models and aquifer remediation.

Enforced Prerequisite at Enrollment: GEOSC 452

ENVSE 412: Environmental Systems Engineering Laboratory

1 Credits

A laboratory study of the principles involved in the characterization and remediation of process wastes with an emphasis on physical separations.

Enforced Prerequisite at Enrollment or Concurrent: MNPR 301

ENVSE 427: Pollution Control in the Process Industries

3 Credits

The major objective of this course is to teach the design principles for different unit operations commonly employed in environmental pollution control in the mineral, energy, and chemical process industries. The course is required of all ENVSE students, who must score at least a grade of C to graduate. Students will develop the ability to identify, formulate,

and solve complex engineering problems by applying principles of engineering, science, and mathematics. Fundamental principles covered in earlier courses (math, physics and chemistry) will be applied to derive design equations for different unit operations (e.g. sedimentation basins, activated sludge processes, dissolved air flotation, gas absorption and stripping, and precipitation). Students will develop engineering design solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. Student evaluation will be based upon homework assignments, quizzes, in-class tests, and design projects. Some assignments may require students to work in teams.

Enforced Prerequisite at Enrollment: CHEM 110 and CHEM 112 and MATH 141 and MNPR 301 and (EME 303 or CE 360)

ENVSE 440: Industrial Ventilation for Contaminant Control

3 Credits

Ventilation system design and analysis for control of industrial contaminants; measurements, dilution and local exhaust ventilation strategies; laboratory demonstrations included.

Enforced Prerequisite at Enrollment: MATH 141 and PHYS 212 and CHEM 110

ENVSE 450: Environmental Health and Safety

3 Credits

Overview of toxicology, epidemiology, exposure assessment, industrial hygiene, environmental laws, and engineering approaches to protecting workers and the environment.

Enforced Prerequisite at Enrollment: CHEM 110

ENVSE 457: Industrial Hygiene Measurements

3 Credits

Industrial hygiene is the discipline devoted to the anticipation, recognition, evaluation, and control of hazards in the workplace. This course provides an overview of the most common industrial hygiene measurement techniques used to evaluate exposure to chemical, physical, and biological agents in the workplace. Topics will include coverage of basic definitions, exposure standards, and guidelines, and an introduction to the different types of sampling equipment and analytical methods used most often in the evaluation of airborne exposure to gases, vapors, and aerosols. Interpretation of quantitative sample results will be an area of emphasis and students will become familiar with different types of exposure distributions, appropriate sampling strategies, and different statistical tools available for making decisions in occupational exposure assessment.

Enforced Prerequisite at Enrollment: CHEM 110 and ENVSE 450

ENVSE 458: Industrial Hygiene Measurements Laboratory

1 Credits

Industrial hygiene is the discipline devoted to the anticipation, recognition, evaluation, and control of hazards in the workplace. This course provides an overview of the most common industrial hygiene measurement techniques used to evaluate exposure to chemical, physical, and biological agents in the workplace. Topics will include coverage of basic definitions, exposure standards, and guidelines,

and an introduction to the different types of sampling equipment and analytical methods used most often in the evaluation of airborne exposure to gases, vapors, aerosols, and physical agents (noise, heat, ergonomics). Interpretation of quantitative sample results will be an area of emphasis and students will become familiar with different types of exposure distributions, appropriate sampling strategies, and different statistical tools available for making decisions in occupational exposure assessment.

Enforced Concurrent at Enrollment: ENVSE 457

ENVSE 470: Engineering Risk Analysis

3 Credits/Maximum of 3

Quantitative methods of systems analysis, probabilistic risk and reliability analysis, as well cost-benefit, and value of information analysis.

Enforced Prerequisite at Enrollment: MATH 251

ENVSE 480: Environmental Systems Engineering Process Design

3 Credits

ENVSE 480 provides a culminating design experience for students in the Environmental Systems Engineering major. Students develop the skills and techniques for managing and executing engineering design projects with an emphasis on treatment and remediation processes of the basic industries including those involved in the extraction, conversion, and utilization of energy and mineral resources. Engineering science and design skills will be integrated and applied to the solution of realistic open-ended environmental systems engineering problems such as: flue gas desulphurization and mercury removal; treatment of hydraulic fracturing wastewater (produced water); acid mine drainage treatment; phytoremediation of heavy metals; and treatment of industry-specific wastes such as pharmaceutical and refinery wastewater. Students completing this course will have the ability to apply engineering design to develop solutions that meet specified needs while also satisfying constraints related to public health, safety, and welfare, as well as economic, environmental, and social factors. Students will work together in teams to provide leadership in a collaborative and inclusive environment, while establishing goals, planning tasks, and meeting project objectives. The ability to communicate effectively to a range of audiences will be demonstrated through the preparation and delivery of written reports and presentations to peers, faculty, and other project stakeholders.

Enforced Prerequisite at Enrollment: ENVSE 427 and ENVSE 404W and 7th semester standing or higher in Environmental Systems Engineering (ENVSE_BS) major

ENVSE 494: Senior Thesis

1-6 Credits/Maximum of 6

Independent research and/or design projects under the supervision of the Environmental Systems Engineering program.

Enforced Prerequisite at Enrollment: Seventh semester standing or higher in Environmental Systems Engineering (ENVSE_BS) major
Honors

ENVSE 495: Environmental Health and Safety Engineering Internship

2 Credits

Students work with an advisor to prepare technical memos and a final report summarizing the experiential education gained through employment in industry.

Enforced Prerequisite at Enrollment: Fifth semester standing or higher

ENVSE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

ENVSE 497: Special Topics

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Finance (FIN)

FIN 100: Introduction to Finance

3 Credits

The nature, scope, and interdependence of the institutional and individual participants in the financial system. May not be used to satisfy Penn State Business baccalaureate degree requirements. Not available to students who have taken B A 301 or FIN 301.

Enforced Prerequisite at Enrollment: third-semester standing

FIN 108: Personal Finance

3 Credits

Personal management of budgets, bank accounts, loans, credit buying, insurance, real estate and security buying. May not be used to satisfy Smeal College baccalaureate degree requirements.

Enforced Prerequisite at Enrollment: third-semester standing

FIN 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

FIN 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

FIN 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

FIN 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

FIN 301: Corporation Finance

3 Credits

This course provides a basic understanding and framework of how firms acquire, allocate, and control their financial resources. It covers the acquisition and management of corporate capital; analysis of operations, forecasting capital requirements, raising capital, and planning profits. This is a core finance course focusing on basic financial principles and practices essential to managing a business. In addition, this course also covers financial markets, institutions, organizational forms and investments. It relies heavily on accounting and economic principles with a strong emphasis on problem solving and decision making. One objective of this course is to be able to assess the past and present performance of the firm. This can be achieved through vertical and horizontal analysis of the financial statements as well as ratio analysis. Another aspect of this course is the financial planning process. This includes concepts such as pro forma statements, developing the statement of cash flows, as well as the budgeting process through the preparation of the cash budget. Another facet of this class is to understand how financing and investment decisions are made. Students will learn about the time value of money as well as fundamental techniques for valuing financial assets such as stocks and bonds. Additionally, capital budgeting techniques such as the net present value and internal rate of return are explained. Other important objectives include the management of working capital, the determination of the cost of capital, operating and financial leverage, and risk and return. The concepts and tools covered in this class allow the student to gain a fundamental understanding of how the finance function works within the business environment. The course promotes critical thinking and will enable the student to better integrate the individual functions of a business in order to make good business decisions. A student may receive credit toward graduation for only one of the following; BA 301, FIN 100, FIN 301, or FIN 301H.

Enforced Prerequisite at Enrollment: (ENGL 15 or ENGL 30H or ESL 15 or ENGL 137H or CAS 137H) and ACCTG 211 and (ECON 102 or ECON 104) and (SCM 200 or STAT 200)

FIN 301H: Corporation Finance (Honors)

3 Credits

FIN 301H honors course provides insight into real world issues that are needed to effectively run a business. Students will utilize the fundamental concepts learned in finance (integrated with accounting, marketing, management, logistics, operations, and business law/ethics) as a foundation for running a business in the classroom. The "product" in this business will be a comprehensive strategic business plan for a real, live local, state, national, or international business that will serve not only as an articulation of understanding of core course concepts, but also as a supplement to the existing core package of introductory business courses. The honor students in this course will be building their strategic business plan products in electronic format in closely-knit, high performance teams. The strategic plan product development process in this course inherently involves integration across the functional areas

of business: marketing, logistics, finance, and management. There is also inclusion and integration of courses in accounting, business law, management information systems, and statistics as applicable. Each student team will allocate product development responsibilities according to areas of expertise and interest. An appropriate balance of students from several majors will be assigned to each group. Class time will involve exchanging information within and across groups and coordinating activities between groups where necessary. Students will periodically meet with individual and team-based corporate mentors who will provide one-on-one advice on an as-needed basis. Students will also receive specialized training in team-based processes, leadership, and technology tools required to implement the products under development. Select members of the Penn State faculty and Smeal College alumni will be on hand at times to provide this specialized training and consulting expertise. Company owners and principals will provide periodic (monthly) reviews of honor students' work to assist them in the development of a first-class, professional business plan product.

Enforced Prerequisite at Enrollment: (ENGL 15 or ENGL 30H or ESL 15 or ENGL 137H or CAS 137H) and ACCTG 211 and (ECON 102 or ECON 104) and (SCM 200 or STAT 200)

Honors

FIN 302: Introductory Financial Modeling

3 Credits

This course applies spreadsheets to build financial models and solve numerically intensive problems in finance. FIN 302 Introductory Financial Modeling (3) This course is designed to provide students with an understanding and practical application of spreadsheet skills needed in Finance. The course will introduce students to spreadsheet models and tools to solve finance problems. It will also introduce students to finance databases and data preparation for analysis. These technical skills are necessary for Finance majors to effectively apply concepts learned in advanced finance courses and be successful in their careers. The course is intended to be an introductory level so that students can apply the skills in other courses.

Enforced Prerequisite at Enrollment: ACCTG 211 and ECON 102 and (MATH 110 or MATH 140) and (SCM 200 or STAT 200) and Concurrent FIN 301

FIN 305: Financial Management of the Business Enterprise

3 Credits

Development of advanced practices of financial management and their application to decision making in business firm. FIN 305 Financial Management of the Business Enterprise (3) The objective of this course is to give students an understanding, and working knowledge of the major decisions faced by corporate financial managers. In general, the course will emphasize three major areas: investment and capital budgeting, financing and capital structure, dividend policy and corporate growth. A basic understanding of financial analysis and valuation will be provided. Basic corporate securities markets will be described. Determinants of securities prices, yields, and returns will be discussed. Special emphasis is placed on the role of the capital markets in financing corporate operations and investment, in facilitating corporate reorganizations and financial restructuring, and in reflecting owners wealth and evaluating the performance of corporate management. Within the general framework, a number of special topics will be covered, including mergers and acquisitions and the market for corporate control, international financial management, derivative instruments and their

applications to corporate risk management. Students taking the course should have a working knowledge of elementary statistics, and a basic understanding of accounting and financial statements.

Enforced Prerequisite at Enrollment: BA 301 or FIN 301

FIN 305M: Financial Management of the Business Enterprise (Honors)

3 Credits

Development of advanced practices of financial management and their application to decision making in a business firm. FIN 305M Financial Management of the Business Enterprise (Honors) (3) The objective of this course is to give students an understanding, and working knowledge of the major decisions faced by corporate financial managers. In general, the course will emphasize three major areas: investment and capital budgeting, financing and capital structure, dividend policy and corporate growth. A basic understanding of financial analysis and valuation will be provided. Basic corporate securities markets will be described. Determinants of securities prices, yields, and returns will be discussed. Special emphasis is placed on the role of the capital markets in financing corporate operations and investment, in facilitating corporate reorganizations and financial restructuring, and in reflecting owner's wealth and evaluating the performance of corporate management. Students taking the course should have a working knowledge of elementary statistics, and a basic understanding of accounting and financial statements. As an Honors course, students will study the impact of corporate activities on the market value of its stock, so a common stock pricing model is needed that accounts for factors that matter to investors. FIN 305M looks at these issues through topics such as, time value of money, risk and return, and valuation of stocks and bonds. The course concludes with topics related to specific business activities, such as capital budgeting, capital markets, capital structure, and dividend policy. The level of discussion and critical analysis expected in FIN 305M compliments the expected level of performance for honors students.

Enforced Prerequisite at Enrollment: BA 301 or FIN 301

Honors

Writing Across the Curriculum

FIN 305W: Financial Management of the Business Enterprise

3 Credits

The objective of this course is to give students an understanding, and working knowledge of the major decisions faced by corporate financial managers. In general, the course will emphasize three major areas: investment and capital budgeting, financing and capital structure, dividend policy and corporate growth. A basic understanding of financial analysis and valuation will be provided. Basic corporate securities markets will be described. Determinants of securities prices, yields, and returns will be discussed. Special emphasis is placed on the role of the capital markets in financing corporate operations and investment, in facilitating corporate reorganizations and financial restructuring, and in reflecting owners wealth and evaluating the performance of corporate management. Within the general framework, a number of special topics will be covered, including mergers and acquisitions and the market for corporate control, international financial management, derivative instruments and their applications to corporate risk management. Students taking the course should have a working knowledge of elementary statistics, and a basic understanding of accounting and financial statements.

Enforced Prerequisite at Enrollment: BA 301 or FIN 301

Writing Across the Curriculum

FIN 306W: Investment Valuation

3 Credits

Approaches to investment strategy, investment decisions; valuation of corporate securities, including the impact of dividend policy and capital structure.

Enforced Prerequisite at Enrollment: FIN 301

Writing Across the Curriculum

FIN 330: Personal Financial Planning

3 Credits

Developing financial plans including cash budgets, credit purchases, investments, and insurance.

Enforced Prerequisite at Enrollment: third-semester standing or permission of instructor

FIN 362: Intrieri Family Student Managed Fund - Associate Analyst Practicum

1-4 Credits/Maximum of 4

In this course, students will provide research support for the Officers and Lead Analyst for the Intrieri Family Student Managed Fund, an actual investment fund that currently holds a stock portfolio of approximately \$250,000. The student will serve as economic, industry, and security financial analysts and portfolio managers in concert with the Standards of Practice Handbook from the CFA Institute. These standards are integral to the curriculum for all three levels of the Chartered Financial Analyst exam.

FIN 395A: Nittany Lion Fund - Associate Fund Manager Practicum

3 Credits/Maximum of 6

FIN 395A Nittany Lion Fund - Associate Fund Manager Practicum (3 per semester/maximum of 6) While the Lead Fund Manager is accountable for all work done by a given sector, an Associate Manager often does much of the behind the scenes work. Specific assignments include: putting together the weekly reports for investors, creating reports that are sent out to the Nittany Lion Fund (NLF), and providing assistance with pitches. In general, an Associate Manager is supposed to be well informed about the sector's current holdings and with that, an Associate should be able to provide support for the Lead Manager during a stock pitch or class discussion. Although Associate Fund Managers are the workhorses of the fund, often performing some of the more tedious tasks, the position offers the opportunity to learn from the Lead Managers as well as make an impression by delivering quality work. While Lead Managers are responsible for and have the final say in stock pitches and sector strategies, it is highly encouraged that the Associates provide their Lead Managers with pitch ideas as well as inform them of their opinions about current market trends. Ultimately, the Associate Manager position is more detail and task oriented than the Lead Fund Manager position. However, there is always room to provide high quality insight into the market by asking thought provoking questions during pitches and staying current on market news. Students use financial software, such as Bloomberg Professional, Reuters Station, TradeStation, and FactSet, and must have working knowledge of various forms of financial modeling. The Penn State Investment Association (PSIA), which co-exists with the Nittany Lion Fund, LLC (NLF) assists the NLF in ensuring

students are appropriately trained in these skills. The PSIA is open to students of all majors and experience levels and is the starting point for students interested in participating in the NLF.

Enforced Prerequisite at Enrollment: permission of program

FIN 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

FIN 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

FIN 405: Advanced Financial Management

3 Credits

An examination of the development and application of decision rules for major long-term financial and investment problems of the firm.

Enforced Prerequisite at Enrollment: FIN 305W

FIN 406: Security Analysis and Portfolio Management

3 Credits

Advanced valuation theory; fundamentals of security analysis; portfolio construction and management.

Enforced Prerequisite at Enrollment: BA 301 or FIN 301

FIN 406H: Security Analysis and Portfolio Management (Honors)

3 Credits

Advanced valuation theory; fundamentals of security analysis; portfolio construction and management. FIN 406H - Security Analysis and Portfolio Management (Honors)(3) Finance 406 is about how to invest money in stocks, bonds and derivative securities. The course focus is on creating portfolios of assets rather than on picking individual assets for investment. To create a portfolio of assets, the portfolio manager must have knowledge of the assets available for purchase, the markets the assets are traded in, and the statistical and mathematical techniques needed to assign weights to the assets within the portfolio. The manager must also be able to predict changes in the economy that justify changes in the portfolio, as well as be able to evaluate the performance of the portfolio relative to standard benchmark portfolios such as the S&P500. The course begins with a review of the structure of the asset markets, basic pricing formulas, fundamental and technical analysis, and the tools from previous statistics, economics, and calculus classes needed. Different models relating risk and return such as the CAPM and arbitrage pricing model are covered. These models exemplify how investors are willing to trade-off the variance in returns from investments with the expected value of the investment. The students then learn how to choose the weights to assign to each asset available to maximize the expected return while minimizing risk of the portfolio using the portfolio theory of Markowitz. While the focus of this section of the class is on investing in equities, the portfolio theory learned is applicable to all types of assets. Because there are important differences between

stocks and bonds, the next section of the class focuses on the unique characteristics of fixed income securities. Models explaining the different risk and return characteristics of bonds are examined. Because fixed income securities prices and returns are directly linked to changes in interest rates, theories of what determines interest rates are presented and applied to evaluating the performance of portfolios including fixed income securities. The course concludes with an overview of investment in options and futures contracts. The basic pricing models for these types of assets are reviewed as well as practical concepts of investing in derivatives such as margin accounts and creating synthetic returns using combinations of different types of options. As an Honors course, the level of research and academic investigation is enhanced with outside journal readings in topics such as portfolio theory, anomalies and market efficiency, overpricing, and current topics in Portfolio Management as material is published. This material is incorporated into class discussions and course exams beyond what is covered in the standard version of the class.

Enforced Prerequisite at Enrollment: BA 301 or FIN 301 Honors

FIN 407: Multinational Financial Management

3 Credits

Analysis of the international aspects of managerial finance; emphasis on the impact of the international financial environment on firm operations.

Enforced Prerequisite at Enrollment: FIN 305W

FIN 408: Financial Markets and Institutions

3 Credits

Functional analysis of major credit institutions; sources and uses of funds; impact of government regulation.

Enforced Prerequisite at Enrollment: BA 301 or FIN 301

FIN 408H: Financial Markets and Institutions (Honors)

3 Credits

Introduction to bonds, equities, derivatives, and financial institutions including insurance, pension funds and mutual funds. FIN 408H - Financial Markets and Institutions (Honors) (3) Finance 408H is about financial institutions and markets. The markets section will include approximately 9 classes on debt markets, and another nine classes on equity markets (e.g. NYSE, NASDAQ) and derivatives (options and futures). The primary institutions covered in this course include insurance companies, mutual funds, pension funds, securities firms, and investment banks. We hope to include an analysis of personal financial planning issues as well. Reading assignments at various web sites will be made. The course will include weekly spreadsheet assignments that focus on the course concepts presented in class. These assignments ought to provide a rigorous understanding of the concepts recently presented in class and they will develop and improve the students' Excel skills. The overarching objective is for each student to develop an understanding of markets and institutions that will provide lifetime enjoyment.

Enforced Prerequisite at Enrollment: BA 301 or FIN 301 Honors

FIN 409: Real Estate Finance and Investment

3 Credits

The sources and uses of credit; instruments and methods of financing; the theory and practice of real estate investment analysis. FIN (R EST) 409 Real Estate Finance and Investment (3) Real Estate financial markets are rapidly changing, with new instruments and ideas introduced every day. Therefore, the emphasis of this class will be on preparing the students to tackle any new instrument that might be introduced to the market, understanding why and how people make money in the field, and be able to understand and utilize the innovations that have been introduced and are still being developed. The course will provide a broad coverage of real estate investment, finance, and valuation. We will study different measures of investment performance, the impact of the financing decision on real estate investment risks and return, and various real estate financing techniques. Specific topics include: legal considerations in real estate finance, present value concepts, fixed rate mortgage loans, adjustable rate and variable payment mortgages, underwriting and financing residential properties, income-producing properties and valuation fundamentals, leases, projecting cash flows, investment value, investment and risk analysis, financial leverage and financing alternatives, disposition and renovation of income properties, financing corporate real estate, real estate capital markets, the secondary mortgage market and REITS.

Enforced Prerequisite at Enrollment: BA 301 or FIN 301

FIN 410: Derivative Markets

3 Credits

Functions, techniques, and impact of speculation conducted through forward markets; the nature of speculative transactions, pricing, and methods of trading.

Enforced Prerequisite at Enrollment: FIN 406

FIN 413: Risk Management of Financial Institutions

3 Credits

Measuring and managing risk faced by financial institutions. FIN 413 Risk Management of Financial Institutions (3) This course focuses on measurement and management of risk faced by managers of modern financial institutions. Students will be introduced to various tools and techniques used to measure and analyze risk from traditional balance sheet activities (such as credit risk, liquidity risk, insolvency risk, interest rate risk and market risk) and from off-balance sheet activities. In addition, students will learn strategies for controlling and managing the risks to achieve the best risk-return outcome. This course is designed to be an upper level, undergraduate course. Students will have opportunities to apply fundamental concepts learned in other finance classes. It is recommended for business students, especially finance majors, who wish to have careers in financial service firms or non-financial firms that use financial assets.

Enforced Prerequisite at Enrollment: BA 301 or FIN 301

FIN 414: Financial Trading and Applications

3 Credits

The focus of this course is the application of financial theory and technology to the practice of financial trading. The first half of the class examines tools for constructing and evaluating trading strategies.

After a short review of probability and statistics, attention turns to the analysis of models for valuing options, credit default swaps, and other financial instruments. Emphasis is placed on the assumptions underlying these models and the application of these models in the real-world. This discussion includes approaches for estimating volatility and the use of the models when underlying assumptions do not hold. The first half of the course concludes with a discussion of value-at-risk and tools for evaluating performance. The analysis of these topics highlights commonly used measures of performance and the potential pitfalls using these measures. The second half of the class examines trading strategies commonly used by hedge funds. Strategies discussed include merger arbitrage, relative value, momentum, index arbitrage, and other quantitative based strategies. Students also study accounting based and fundamentally based trading strategies. Application of these strategies in both the equity and fixed income markets is examined. Attention is also paid to the impact of trading on market prices and other aspects of market microstructure. Throughout the second half of the course, students participate in a project in which they form into teams of fund managers who analyze market data with the purpose of constructing and managing a portfolio that applies various trading strategies. The fund is managed using market simulation software that allows students to execute all trades using real-time market prices and allows them to go long or short equity, commodity, fixed income, and foreign exchange instruments, as well as derivative securities. Upon completion of the project, students make a pitch to a group of potential investors (the class) in which they summarize the themes underlying their strategies, provide performance metrics for their fund, and discuss their primary trading strategies if they were to continue as fund managers. The course pedagogy is lectures, case assignments, trading and valuation simulations, and a trading project. The class will make extensive use of Bloomberg, Reuters, trading software, basic programming languages for financial software, and other technology available.

Enforced Prerequisite at Enrollment: FIN 305W and FIN 406

FIN 414H: Financial Trading and Applications

3 Credits/Maximum of 3

This course focuses on financial modeling and analysis of trading strategies. Bloomberg, Reuters, spreadsheets and trading simulations are used extensively.

Honors

FIN 415: Advanced Financial Modeling

3 Credits

Develop financial models using spreadsheets, VBA programming, and trading room applications such as Bloomberg and @Risk. FIN 415 Advanced Financial Modeling (3) Students will develop financial models using spreadsheets, VBA programs, and trading room applications such as Bloomberg and @Risk. Students learn Excel's financial functions, shortcuts, web queries, data analysis capabilities, and optimization techniques. Students use @Risk software to define variable distributions and correlations to run Monte Carlo simulations to evaluate stochastic processes. Students access market data through the internet and proprietary providers such as Bloomberg. Students build models to construct optimal portfolios of securities and asset classes. Students estimate asset returns using CAPM, multi-factor models, and fundamental analysis. Students estimate asset volatility using exponential weighting, GARCH, and Black-Scholes implied volatility. Students model and optimize bond portfolios using portfolio duration,

convexity, leverage, and income. Students value options using Monte Carlo, Black-Scholes, and binomial option pricing models. Students learn to apply Brownian motion models to asset returns and prices. Students construct and test delta-hedging strategies for option portfolios. Students use matrix algebra and Excel matrix functions to compute portfolio return and volatility. Students write VBA functions and macros using VBA code, objects, array functions, loops, matrix operations, and data types. Achievement is measured by assignments, computer-based exams, and a final assignment.

Enforced Prerequisite at Enrollment: FIN 406

FIN 416: Intermediate Financial Modeling

3 Credits

The topics covered in this course build on the foundations of corporate finance presented in FIN 301, Corporate Finance. Specifically, the course focuses primarily on the development of spreadsheet applications and the use of the case method to apply decisionmaking procedures to real-world problems in finance areas. The primary objective of this course is to "marry" corporate finance theory with practice. Students should develop the ability to use finance concepts to solve practical finance problems. Throughout the course, students will be exposed to spreadsheets (e.g., Microsoft Excel) to develop models used in the financial decision-making process. The course will enable students to build a firm foundation in the principles of financial management and an understanding of how to apply concepts in financial management for the valuation process. Students will work as a group for a semester-long project, which will expose students to critical topics such as financial ratio analysis, financial forecasting, regression analysis, portfolio management, asset valuation, capital budgeting decisions via spreadsheets. Students will access market data through the internet and proprietary providers such as Bloomberg and Y-Charts.

Enforced Prerequisite at Enrollment: FIN 301

FIN 418: Energy Finance

3 Credits

This course offers an exploration into energy finance through an examination of the oil, gas, and coal commodity markets, as well as global electricity markets and renewable generation. The course addresses fundamental concepts associated with the complex physical and financial risks faced by firms in the energy industry. Students gain the ability to think critically about the entire energy value chain through an overview of the fundamental practices used by firms in the exploration, production, storage, refining, and processing of hydrocarbon-based energy commodities and the development and distribution of renewable energy and clean-air technologies.

Enforced Prerequisite at Enrollment: FIN 301 or equivalent approved course

FIN 420: Investment and Portfolio Analysis

3 Credits

Investment and risk, types of security investments, sources of investment information, the broker, the stock market, portfolio management.

Enforced Prerequisite at Enrollment: FIN 301

FIN 426: Analysis of Interest Rates and Debt Markets

3 Credits

The course starts off with a review of the time value of money concepts and the pricing of standard cash flows such as annuities, perpetuities. Next, an overview of the Treasury markets is provided with emphasis on both the primary and the secondary markets. In particular, the economics of the Treasury auctions, on-the-run/off-the-run liquidity issues, the presence of the zero lower bound, the economics of inflation-protected bonds, and other topics will be discussed at length. Students will also learn how to interpret the shapes of the nominal and the real yield curves, how to forecast short/long term future directions of rates as well as how to forecast future inflations based on nominal-real rate differentials. The course then moves on to non-Treasury segments of the fixed income markets: forward contracts, repurchasing agreements, floating rate notes, swaps, single stock futures, corporate bonds. For each topic, standard pricing techniques and relevant practical issues will be discussed. For example, how can a fixed income investor price a bond newly issued by a corporation based on their past equity market performance, using techniques typically employed by Moody's KMV? How does an investor gauge the potential illiquidity of a bond when transaction data are sparse? Or how one can extract a measure of the London Inter-bank Offered Rate (LIBOR) from the single stock futures markets? Or how a Chief Financial Officer (CFO) could hedge interest rate risks using standard duration and convexity hedging techniques even in a quick moving environment when assumptions underlying these techniques are likely, to varying degrees, violated. The final third of the course deals with relatively more advanced topics. Students are introduced to the use of risk-neutral probability measures in pricing fixed income derivative products (callable bonds, treasury futures, swaptions) in the context of a binomial tree. For example, students learn how to use calibrated binomial trees of interest rates to accommodate bonds, callable features, how to compute/interpret the options-adjusted spreads, how to account for various institutional features of the Treasury bonds futures markets and why futures and forward prices may differ when bonds are the underlying assets. The class finishes with a topic on Collateralized Debt Obligations (CDOs) and the economics of their mispricing prior to the Great Recession.

Enforced Prerequisite At Enrollment: FIN 406

FIN 427: Derivative Securities

3 Credits

Introduction to futures contracts and options, leading to a working understanding of their importance in financial management applications.

Enforced Prerequisite at Enrollment: FIN 420 or approval of program

FIN 428: Fixed Income Securities

3 Credits

This course develops a framework for the analysis of fixed income securities, one of the largest segments of global financial markets. Valuation and risk-return characteristics of these instruments are examined, in addition to trading and portfolio strategies for bonds, forwards, swaps, and repurchase agreements. Students examine these securities with regard to duration, convexity, credit risk, and formal term structure models. Various data sources and financial software, including Bloomberg Professional®, are used to integrate theoretical concepts with practical applications. The aim of this course is to provide you

with an introduction to the valuation of fixed income securities and the management of fixed income investment portfolios. In their simplest form, fixed income securities are characterized by pre-determined cash-flows that occur at fixed points in time, thus the term "fixed income". Coupon bonds are the most widely recognized fixed income securities. We will start with the basics of bond pricing - the relationship between the price of a bond, measures of return on the bond, and measures of risk. The tools for the valuation of bonds, fixed income derivatives and credit derivatives will be covered. With these building blocks in place, we will discuss bond portfolio management and construction.

Enforced Prerequisite at Enrollment: FIN 301 and FIN 420

FIN 430: Estate Planning

3 Credits

Liquidity planning, titling and transfer of property, trusts, federal unified tax system, gifting, incapacity planning, legal documents. FIN 430 Estate Planning (3) This course addresses estate planning issues for individuals as part of an overall personal financial plan. Personal financial planning encompasses budgeting, credit management, insurance, taxes, investments and retirement planning in addition to estate planning. The objective of this course is identifying and quantifying the goals of an individual regarding their final wishes and determining how best to meet those goals given the current applicable laws and the individual's situation. The estate administration and probate process are discussed along with common estate documents. The titling and transfer of assets as well as asset valuation are covered. Methods used to provide estate liquidity are presented. Common forms of trusts that are used in estate planning are introduced along with an overview of basic methods of transferring family owned businesses. Case studies are emphasized since estate planning is unique to each individual's situation. Some legal research is commonly incorporated into the course because estate planning is based on federal and state law. Student evaluation generally consists of examinations, individual and group assignments, quizzes, and case studies. Students desiring a career in financial services, law, or tax accounting should consider incorporating this course into their program of study.

Enforced Prerequisite at Enrollment: FIN 330 and (ACCTG 310 or ACCTG 405)

FIN 450: Retirement Planning

3 Credits

Retirement planning: qualified and non-qualified plans, characteristics, provisions, regulations administration, application approach with case studies. FIN 450 Retirement Planning (3) This course presents retirement planning from the perspective of a financial services practitioner. Students will develop a working knowledge of both qualified and non-qualified company retirement plans including plan characteristics, provisions, applications, and qualifications. Individual retirement plans will also be covered. Exposure to the regulatory and legal basis for plans will be provided. Application case studies will be integrated throughout the course. Emphasis will be placed on designing an appropriate plan given either an individual or a company situation.

FIN 451: Intermediate Financial Management

3 Credits

Case studies are used to develop skills in solving a variety of financial management problems. FIN 451 Intermediate Financial Management

(3) This course is designed to reinforce and extend the principles from its prerequisite, FIN 301, Corporation Finance. It is a required course for the Finance major. It will also serve as a business supporting course for students in other School of Business majors. Students will develop skills necessary to solve a variety of complex financial problems by applying statistical and analytical techniques and utilizing electronic spreadsheets. The course will enable students to develop a firm foundation in the principles of financial management and an understanding of how concepts in financial management are used in the valuation process. The topics are consistent with the knowledge required to prepare students for the relevant portions of Level I of the Chartered Financial Analysts (CFA) Exam. The course will address important financial management topics, including the methods of analyzing capital budgeting decisions and the unique problems they pose, long-term capital structure and dividend policy decisions, corporate financial analysis and forecasting, working capital management, and additional special topics in financial management.

Enforced Prerequisite at Enrollment: FIN 301

FIN 455: Quantitative Analysis for Business

3 Credits

This course provides students with working knowledge of some widely used quantitative methods, such as Monte Carlo simulations, t-tests, linear regressions, nonlinear regressions, regressions with dummy variables, and regressions with interacting explanatory variables, as well their applications in business. The course will focus on understanding and applying each method, but not on statistical theory or their proof. Monte Carlo simulations will be used to substitute for mathematical proofs. By the end of the course, students should understand the purposes of the above methods and how to use them to solve real estate, financial, marketing, and risk management problems. Students should also be able to interpret results in ways that are correct, insightful, and useful, should be aware of potential problems of each method, such as the omitted variable bias, multicollinearity, heteroskedasticity of regressions, and should know how to make corrections if these problems are present. Students should also have developed working knowledge of R, which is a programming language and software environment widely used by quantitative analysts. Students should know how to use R to conduct basic data manipulation, do simple Monte Carlo simulations, do t-tests, and run linear and non-linear regressions.

Enforced Prerequisite at Enrollment: SCM 200 or STAT 200

Cross-listed with: RM 475

FIN 456: International Capital Markets

3 Credits

This course develops understanding of international capital markets by striking a balance between institutional details, theoretical foundation and practical application. FIN 456 International Capital Markets (3) (IL) This course extends the issues of international finance into a framework for international investing. It is designed for students aspiring to be money managers and investors operating across national boundaries. Foreign travel enables students to contrast the micro-structure of financial markets in the United States. with those in other centers that play important roles in our global financial system. Students are also given an opportunity to learn about business, cultural, and political aspects of international investment. Besides class meetings on campus, students are assigned readings, videos, and research projects to be completed before the foreign experience component of

the course. While abroad, students visit specific sites and attend specific lectures that will enable them to complete further course work upon their return to the United States. Topics include the case for international asset diversification, international asset pricing, international stock, fixed-income, and derivative markets, and the process of international investing. Other materials will be specific to the foreign business center visited during the course. (The initial offering of this course included a visit to London where students toured the stock exchange and financial firms, attended lectures, and met with financial executives; this gave students exposure to a major international financial institution and the largest currency market in the world.) The travel portion requires additional costs to the student beyond tuition.

Enforced Prerequisite at Enrollment: FIN 301
International Cultures (IL)

FIN 460: Real Estate Financial Analysis

3 Credits

Debt and equity financing, capital structure, "creative financing," risk analysis, corporate asset management. FIN (R M) 460 Real Estate Financial Analysis (3) The objective of this course is to provide in-depth coverage of real estate investment and financing decisions. The focus is on the private market, including corporate asset management. Investment analysis moves from the basics of forecasting cash flows, through advanced topics including the impact of real option value on investment and development decisions. Risk measurement is given particular attention with a focus on sensitivity and simulation analysis. There is some coverage of asset pricing models like the Capital Asset Pricing Model, which is critically analyzed with respect to its applicability in real estate markets. The impact of illiquidity, management costs, and the suspicion of non-normally distributed returns are explored, as are the implications of relative market inefficiency. The financing module begins with the basics of mortgage debt mathematics, which is then extended to include comparisons of various repayment programs. Included are interest-only, balloon, shared appreciation, growing equity, graduated payment and reverse annuity loans, as well as various creative financing of commercial properties. The latter include participating mortgages, convertible mortgages, and mezzanine debt. Featured in the corporate asset management section is the lease/buy decision. Other topics may be addresses based on current events. It is anticipated that guest speakers will be invited where appropriate.

Enforced Prerequisite at Enrollment: FIN 305W or RM 303 or RM 330W
Cross-listed with: RM 460

FIN 461: Portfolio Management and Analysis

3 Credits

Investment policy and process, modern portfolio theory, portfolio construction, and portfolio performance measurement and evaluation. FIN 461 Portfolio Management and Analysis (3) The course provides a mix between theories and applications of portfolio management. The content is divided into five sections: (1) implications of the efficient market hypothesis and behavior finance in portfolio management, (2) investment policy and process, (3) diversification and modern portfolio theory, (4) portfolio performance measurement and evaluation and (5) bond portfolio management. After completing the course, students are expected to (1) demonstrate the importance of portfolio management under the efficient market hypothesis and behavior finance, (2) write an investment policy statement, (3) create an optimal portfolio, (4) manage

bond and equity portfolios, and (5) measure and evaluate portfolio performance.

Enforced Prerequisite at Enrollment: FIN 420

FIN 462: Intrieri Family Student Managed Fund - Fund Officer / Lead Analyst Practicum

1-3 Credits/Maximum of 4

Students provide leadership as an Officer or Lead Analyst for the Intrieri Family Student Managed Fund. Students conduct economic, industry, and company financial analysis to recommend investment portfolio decisions. In this course, students will provide leadership as an Officer and/or Lead Analyst for the Intrieri Family Student Managed Fund, an actual investment fund that currently holds a stock portfolio of approximately \$250,000. The student will serve as economic, industry, and security financial analysts and portfolio managers in concert with the Standards of Practice Handbook from the CFA Institute. These standards are integral to the curriculum for all three levels of the Chartered Financial Analyst exam.

Enforced Prerequisite at Enrollment: FIN 461 or approval of program

FIN 470: Real Estate and Capital Markets

3 Credits

Analysis of publicly-traded real estate of both the equity, (REITs) and debt (MBSs) sides. The course also provides international perspectives. FIN 470 / RM 470 Real Estate and Capital Markets (3) The objectives of this course are to expose the student and explore the issues associated with the analysis of "public" ("Wall Street") real estate, including both equities (such as Real Estate Investment Trusts or REITs) and debt vehicles (such as Mortgage-Backed Securities or MBSs). In addition, the course will focus on the increasingly globalization of real estate capital markets as the real estate sector becomes integrated into the global financial system. The differences between private and public real estate analysis will also be explored, including the suitability of traditional asset pricing models for real estate analysis. Topics include the growing impact of institutional real estate forces on the real estate sector, the use of modern financial economics methods to real estate including the concept of market efficiency, modern portfolio theory applications, market measures of risk and return, the use of option-based models, and other advances. The rise of Wall Street's interest in real estate securities is an important institutional development and serves as the underlying background for the analysis of MBSs using fixed-income security techniques. As globalization has spread, the real estate sector has moved with these changes and prospects for a global real estate market are examined and evaluated. This course serves as a compliment to FIN 460, which emphasizes traditional financial analyses of individual real estate projects. In FIN 470, real estate securities are viewed as a natural extension towards the complete integration of real estate and capital markets. In this sense, these courses will enable traditional and modern analyses of the real estate sector for years to come.

Enforced Prerequisite at Enrollment: FIN 305W or RM 303 or RM 330W
Cross-listed with: RM 470

FIN 471: International Finance

3 Credits

Financial decision making in an international environment. Emphasis on topics relevant to small businesses and entrepreneurs. FIN 471

International Finance (3) This course provides an understanding of the basic terminology, structure, and importance of international finance for corporations. It will also help enhance analytical and critical thinking skills. Topics of study include foreign exchange (FX), FX markets, FX instruments, FX risk, hedging of these risks, international debt and equity markets, etc.

Enforced Prerequisite at Enrollment: FIN 301

FIN 475: Financial Decision Making

3 Credits

Problems and cases in financial decision making for non-financial corporations and financial institutions. FIN 475 Financial Decision Making (3) The objective of this course is to tie together the various topics in finance such as corporate finance, investments, and financial institutions & markets. Using the variety of different analytical tools and techniques that students have been exposed to, they will - Evaluate the relationship between profitability and solvency of a firm. - Project the need for short term and long term financing. - Evaluate the various sources of financing and recommend the optimal. - Budget the capital that is raised to identify the profitable projects that capital should be invested in. - Evaluate different dividend policies to maximize value of a firm. - Carefully examine the risk-return tradeoff that portfolio managers face. - Study the relationship between assets and liabilities of financial institutions. - Critically evaluate synergies that are created in mergers and acquisitions.

Enforced Prerequisite at Enrollment: FIN 302 and FIN 420 and senior standing

FIN 476: Financial Ethics

1 Credits

In this one credit course, we explore ethical standards for financial analysts and portfolio managers as a part of the Standards of Practice Handbook from the CFA Institute. In this one credit course, we explore ethical standards for financial analysts and portfolio managers as a part of the Standards of Practice Handbook from the CFA Institute, which also serves as a part of the curriculum for all three levels of the Chartered Financial Analyst exams and both levels of the Chartered Alternative Investment Analyst (CAIA) exams.

Enforced Prerequisite at Enrollment: FIN 301

FIN 477: Behavioral Finance

3 Credits

This course will introduce students to behavioral finance, which is the intersection of psychology, economics, and finance. They will learn how individuals and firms make financial decisions and how these decisions might deviate from perceived rational or traditional choices. Students will explore the existence of psychological biases in financial decision-making and examine their impact on financial markets. The course will also explore the interplay of biases through a stock trading simulation.

Enforced Prerequisite at Enrollment: ECON 102 and PSYCH 100 and (PSYCH 200 or SCM 200 or STAT 200)

FIN 478: Advanced Financial Analysis

3 Credits

This seminar course covers the investment tools necessary to prepare junior professionals in the investment management industry. Students are exposed to economic foundations that underpin financial statement analysis, corporate finance, and portfolio management. The course focuses on advanced applications in traditional asset classes (such as equity and fixed income investments) and alternative investments (such as private equity and hedge funds).

Prerequisite: FIN 301, FIN 420; permission of program

FIN 480: Alternative Investments

3 Credits

This seminar course covers topics necessary for junior professionals to understand how alternative investments operate on a stand-alone and portfolio basis. Students are exposed to economic foundations and statistical properties common in non-traditional investments, the role of asset pricing and risk management, and advanced applications in real assets, commodities, real estate, hedge funds and managed funds, private equity, and structured products.

Enforced Prerequisite at Enrollment: FIN 301 and FIN 420 or Permission of program

FIN 491: Financial Planning Capstone

3 Credits

Critical thinking and decision-making about personal financial planning topics in the context of the financial planning process. FIN 491 Financial Planning Capstone (3) This capstone course is designed to reinforce and extend the principles from each of its prerequisite courses. The CFP Board of Directors are requiring the addition of this financial plan course as a requirement to CFP Board's educational standards to enhance the knowledge, skills and abilities of individuals seeking to attain the CFP® certification to deliver professional and competent financial planning services to the public. This course will engage the student in critical thinking and decision-making about personal financial planning topics in the context of the financial planning process. The purpose of this course is to both refine and develop the skills needed to become successful financial planners when working with individuals, families, and business owners in helping them to meet their financial needs and goals. This course will address the important financial planning topics listed in the previous section.

Enforced Prerequisite at Enrollment: FIN 330 and FIN 420 and FIN 430 and FIN 450

FIN 494: Research Projects

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

FIN 494H: Research Projects

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

FIN 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor

FIN 495A: Lead Fund Manager Practicum

3 Credits/Maximum of 6

FIN 495A Nittany Lion Fund – Lead Fund Manager Practicum (3 per semester/maximum of 6) A Lead Fund Manager is accountable for sector performance as well as sector output. This means that while the Lead Fund Manager has to be an effective delegator of work to his or her Associate(s), the manager must also have great attention to detail when reviewing all aspects of pitches, weekly reports, and earnings reports. A Lead Fund Manager focuses more on knowing the big trends in his or her overall sector and in each subsector. The Lead is the strategist for the sector. He or she has the responsibility of choosing what stocks to pitch in class and at PSIA meetings. This means that the Leads must constantly reevaluate not only their current portfolio, but the sector as a whole, in order to find where to best allocate their respective funds. Another major responsibility that a Lead Fund Manager has is to lead a group of anywhere from 10-50 PSIA members. While there are weekly educations for the PSIA analysts, it is one of the most important responsibilities of a Lead Fund Manager to provide support for the PSIA analysts to help them with their PSIA certification assignments. In addition to helping the analysts understand their weekly assignments, the Lead Fund Managers are also responsible for holding weekly sector meetings to give sector-specific educations to a smaller group of PSIA analysts. The goal for any Lead should be to get as many PSIA analysts as involved and interested as possible in PSIA. The interest generated should draw PSIA analysts to apply for entrance into the Nittany Lion Fund. PSIA is the feeder system for the NLF and making sure there are intelligent and motivated applicants each semester ensures that the investment group will continue to have a strong class going forward. Consequently, once the Lead Manager has developed analysts' interest in applying for the NLF, it is an unwritten responsibility of the Lead to help the applicants to become as best prepared as possible for the interviews (Associates are encouraged to help new applicants as well). In total, the role that the Lead plays is not just that of a figurehead, the Lead must be well informed of current events and trends within their sector, and they must be able to speak eloquently of their investment strategy when speaking in class, at PSIA meetings, or to investors at the yearly investment meeting.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor

FIN 495B: Nittany Lion Fund - Executive Board Practicum

3 Credits/Maximum of 6

FIN 495B - Nittany Lion Fund - Executive Board Practicum (3 per semester/maximum of 6) The Executive Board practicum affords students with intense practical experience in oversight and performance of the Nittany Lion Fund (NLF). Executive Board members and Directors are accountable for all aspects of the NLF. An Associate Fund Manager is responsible for all work that is presented to his or her Lead Fund

Manager and in turn, a Lead Fund Manager is responsible for all work that is submitted for the Nittany Lion Fund (NLF) to view. While those are certainly tremendous responsibilities, an Executive Board Member is ultimately responsible for any and every document that leaves the Nittany Lion Fund, most of which are delivered to investors. It is the responsibility of the Executive Board to make sure that both the weekly news, and quarterly performance releases are flawless. Additionally, although the Lead Fund Managers are responsible for their individual sector's performance, the Executive Board is held responsible for the overall performance of the Nittany Lion Fund. This means that the Executive Board must do a number of things to keep performance awareness and accountability at high levels. Students in these executive positions are expected to ask excellent questions during stock pitches and be, in a sense, a devil's advocate for each pitch, making sure that there was proper due diligence and thought put into the strategy of the pitch. With regard to being accountable to investors, the Executive Board is responsible for conducting weekly conference calls with the NLF's investment committee as well as leading the yearly investor meeting. As for the PSIA, the Executive Board is responsible for booking locations for meetings, handling the funds for all club transactions, and developing and implementing the education for the analysts to become PSIA certified. Education is a very large part of the Nittany Lion Fund. An Executive Board Member is expected to utilize their past experience to provide helpful influence to other members of the Nittany Lion Fund as well as the large group of PSIA members. While the members of the Executive Board all have different responsibilities, in aggregate the group is responsible for the performance of Nittany Lion Fund as a whole, as well as being individual figureheads and spokesmen for the NLF.

FIN 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

FIN 496A: **SPECIAL TOPICS**

1-6 Credits

FIN 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

FIN 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Financial Services (FINSV)

FINSV 420: Estate Planning for the Financial Services Professional

3 Credits

Studies the processes relating to the use, conservation, and transfer of an individual's wealth; emphasizing investments, insurance and taxation. FINSV 420 Estate Planning for the Financial Services Professional (3) This course examines the why and how people plan for their retirement. The course examines the various aspects of estate planning: wills and

trusts, estate and gift tax planning, estate administration and taxation. The course guides the student in a step-by-step process through the entire estate planning process. Critical to the process is gathering the necessary financial facts, setting realistic objectives, and planning the requisite income tax and investment strategies. Students will utilize a range of personal financial statements and planning forms to assist in the gathering, organization, and use of pertinent data. This course has four objectives: (1) To understand the motives for why people plan for their retirement. Related to retirement planning is the disposition of the residual value of their estate in a financial and tax prudent manner. (2) To understand the process by which individuals explore the various decision options. The most frequently cited motivation for estate planning is to minimize the tax burden on beneficiaries and to maintain the integrity of the planning process. (3) Students are motivated to understand how estate planners manage their client's wealth portfolios. The increasing wealth of the baby-boomer generation and those that follow make this process more important than for earlier generations. (4) To help students prepare for the Certified Financial Planner certification exams. FINSV 420 is an additional course in the Financial Services Option of the Bachelor of Science in Business (BSB) program. It is a relatively sophisticated course and students who select FINSV 420 will complete it only after completing courses in investments, insurance, and taxes. Evaluation will normally take the form of examinations, a research project, and class participation. At most campuses, the course will be offered once per year.

Prerequisite: FINSV400, FINSV411

First-Year Seminar (CAP)

CAP 100: Orientation to the Undergraduate Experience

1 Credits

To facilitate transition of new students through active engagement and introduction to university and campus resources. CAP 100s CAP 100S Orientation to the Undergraduate Experience (2) This course, CAP 100S, which is a one-credit course, completes the Penn State Capital College's first year seminar. The overarching goal of the FYS is to provide students with an introduction to Penn State culture and resources, information literacy and collaboration skills needed for academic success, as well as an introduction to majors and careers relevant to the discipline. These core elements of the FYS will aid students in the professional/academic community both inside and outside Penn State University. The instructor will place emphasis on having students work in collaborative groups on academically themed project(s) deemed relevant to the discipline.

First-Year Seminar

Food Science (FDSC)

FDSC 105: Food Facts and Fads

3 Credits

This course is an introduction to the central role of food and food production in all areas of human life. The social and technological bases of various food systems are examined from the hunter-gatherer to the agrarian to the modern industrial system and its discontents. The course also considers how different types of food (e.g., meat, milk, cereals, chocolate) are preserved and distributed, examining both the effects of the development of the science and technology on society and vice versa. The roles of various food components (e.g., proteins, carbohydrates, fats, and vitamins) are examined both within the foods as determinants of

quality, and also in terms of human nutrition and health. Finally, various other ways food may be considered appropriate or inappropriate will be studied including scientifically based reasons (e.g., safety, taste, adulteration) and non-scientifically based reasons (e.g., ethical, legal, religious).

Cross-listed with: STS 105

Bachelor of Arts: Social and Behavioral Sciences

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

FDSC 134: Food, Values, and Health

3 Credits/Maximum of 3

This course studies the ethical and social issues connected to food, personal and cultural eating habits, body image and ideas of health, and agricultural practices and industrialized food production. We will discuss the following sorts of questions: In what ways are cooking and eating central to our human identity? What do judgments about being anorexic, overweight, or eating unhealthily mean and do? How strong are the arguments for vegetarianism, veganism, or raw-food-ism? Ought we to eat as our Paleolithic ancestors did? If the future holds engineered meat, GMO fruit, and Soylent shakes, what are we to think? Should food-companies be allowed to advertise to children? Is alcohol more like food, like medicine, or like drugs? Students will pursue answers to such food-ethical questions by learning relevant moral and social theory, discussing past and contemporary approaches to these issues, and analyzing case studies. We will pay particular attention to food as a symbol with psychological, social, and spiritual meanings and effects.

Cross-listed with: PHIL 134

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

FDSC 150S: Food Science First Year Engagement

2 Credits

This first year seminar course was designed to facilitate transition into college with a particular emphasis on food sciences. This course is structured into two main modules, (1) general academic requirements (such as expectations) and (2) the field of food science. Topics related to fulfilling academic requirements provides students with resources related to academic advising, time management, student support services, getting to know the college, and student affairs. In the first module, our aim is that (1) students will be able to identify and understand opportunities that exist within academic-related support services at Penn State and (2) become familiar with major requirements and understand as well as interpret degree audits. In the second module, our aim is that (1) students understand what food science is, (2) identify and understand extracurricular and curricular opportunities within food science, and (3) identify and understand career opportunities within the food science field. Specific examples of topics related to module two are faculty huddle assignments (series of faculty-driven guest speaker series), hands-on activities related to food microbiology and safety, food engineering, food chemistry, and food choice, and team building challenge tasks (e.g., Chef Microbe and The Food Waste Challenge).

First-Year Seminar

FDSC 175: Careers in Food Science

2 Credits

Graduates in food science have the opportunity to pursue a range of careers in industry, academia or government. In this course students will interact with a range of food science professionals and explore their career paths. They will also develop professional skills relevant to applying for internships and permanent positions (e.g., resume development, interview techniques).

Recommended Preparation: Intended for students enrolled in or considering the Food Science major

FDSC 200: Introductory Food Science

3 Credits

General overview and principles; food constituents and properties; quality and safety; preservation methods; processing animal and plant products.

Enforced Prerequisite at Enrollment: CHEM 110

FDSC 201: Introductory Food Science Practicum

1 Credits

Demonstration to illustrate actual chemical reactions in food systems and visits to campus and area food processing operations.

Enforced Concurrent at Enrollment: FDSC 200

FDSC 205: Food Plant Sanitation

3 Credits

Organization and administration of food plant sanitation with emphasis on the production and maintenance of safe, wholesome food products.

Enforced Prerequisite at Enrollment: FDSC 200

FDSC 206: Improving Food Quality

3 Credits

Modern philosophies coupled with practical information on improving product quality, including topics on HACCP, SPC, recall procedures and customer relations.

Enforced Prerequisite at Enrollment: FDSC 200

FDSC 207: Animal Products Technology

2 Credits

Composition, safety, palatability, preservation, and processing of foods from animals, impact of animal production and handling practices on product properties. FDSC 207 / ANSC 207 Animal Products Technology (2) This course is intended to give students knowledge and understanding of production and processing of foods derived from animals (meat, milk, and eggs). Upon completion of this course students will be able to describe and explain the physical and biochemical characteristics of muscle foods, milk, and eggs. Students will be able to describe and compare harvesting, processing, and preservation procedures used in preparation of animal products for human consumption. Students will be prepared to predict the impact of variations in animal production, handling, harvesting, and product processing on meat, milk, and egg product characteristics. This is one

of a group of courses dealing with foods from animals. Related courses offered in Animal Science covers animal growth and development and evaluation of animals and meat products. Related courses in Food Science cover food microbiology, food chemistry, and meat and dairy processing technology. The content of this course is intended to emphasize the connection between animal production and the resulting food products. FDSC 207 / ANSC 207 is intended to be of general interest to people who produce or eat animal products and thus is an integral part of the Animal Sciences major. This course will also be useful for strengthening meat industry knowledge for students in Food Science. FDSC 207 / ANSC 207 will be offered one semester per year. Student performance will be evaluated through written exams, quizzes, and written reports.

Cross-listed with: ANSC 207

FDSC 208: Animal Products Technology Laboratory

1 Credits

Harvesting and processing of foods from animals; hands-on and demonstration exercises; industry procedures for processing meat, milk, and egg products. FDSC 208 / ANSC 208 Animal Products Technology Laboratory (1) This laboratory is intended to be taken along with or following Animal Products Technology lecture. Providing students with an opportunity to experience the procedures involved in harvesting and processing foods from animals. Upon completion of this course students will be able to describe, demonstrate, and explain procedures commonly used in harvesting and processing of muscle food, milk, and egg products. Students will be able to recognize and predict the impact of incorrect procedures for harvesting and processing muscle food, milk, and egg products. The course includes hands-on exercises and demonstrations that allow students to experience the "look and feel" of industry procedures used in harvesting and processing meat, milk, and egg products for human consumption. Focus on issues related to food safety and food quality. Student performance is evaluated through weekly written reports, and a final lab exam.

Enforced Concurrent at Enrollment: ANSC 207

Cross-listed with: ANSC 208

FDSC 223: Understanding Science Through Wine Beer and Bread

3 Credits

Fermented beverage production has been a driving force for scientific discovery and as such is a wonderful way to introduce areas of scientific knowledge. This course will use beer, wine, and other fermented products, as well as their ingredients to teach core scientific concepts. These concepts will include the biology of fruit development, the microbiology of wine and beer production, the physics of carbonated beverages, and the flavor chemistry induced through fire. Through these areas, students will learn critical thinking skills, as well as apply what they have learned to practical problems including utilizing some of the key mathematical equations used in beer and wine production. Upon completion, students will be expected to be able to understand key elements of fermented beverage production, along with the science behind it, and to be able to apply that knowledge to practical problems.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

FDSC 233: The Science of Winemaking

3 Credits/Maximum of 3

Introduction to the principles of wine production emphasizing basic wine grape biology, fermentation science, wine chemistry, and wine perception. FDSC 233 / HORT 233 provides an interdisciplinary treatment of the science of grape growing, vinification, and wine consumption. Students will learn how viticultural practices translate to wine chemistry, and how key variables associated with that conversion affect consumer perception. The course will cover topics such as basic grapevine physiology, vineyard management practices, vinification, domestic and international wine styles, and consumer interactions with wine (e.g., sensory evaluation, health aspects of wine). Although the course is considered to be introductory, students must have a basic grounding in university-level chemistry and biology. Course material will be primarily transmitted through lectures, reading assignments to be completed outside of class, and brief practical exercises in the Sensory Evaluation Center (Department of Food Science).

Enforced Prerequisite at Enrollment: CHEM 110 or BIOL 110
Cross-listed with: HORT 233

FDSC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

FDSC 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

FDSC 400: Food Chemistry and Analysis (I)

3 Credits

The focus of this course is food macro-components (water, proteins, lipids, carbohydrates) as well as food structure (phase behavior, dispersions). Food micro-components are covered in FDSC 410. Students will enter the class with a basic knowledge of chemistry and leave understanding food as a chemical system. Students will learn the important molecules in foods and how their reactions are influenced by food processing and affect food quality. They will also learn how to select and implement appropriate methods to quantify the composition and reactions of food through chemical analysis. This course has a required laboratory component.

Enforced Prerequisite at Enrollment: FDSC 200 or FDSC 201 or CHEM 202
Enforced Concurrent at Enrollment: BMB 211 and BMB 212

FDSC 402: Supervised Experience in Food Science Teaching

1-3 Credits/Maximum of 5

Theories and experiences of teaching and learning relevant to food science and to the work of a teaching assistant. This course provides an introduction to the ways topics in food science can be effectively taught to diverse populations. Students will serve as a teaching assistant in a food science course and in addition meet regularly as a group to reflect on their experience as learners and teachers in the context of readings

from the educational literature. The focus on the class is on the teaching of food science topics, so special attention will be given on laboratory and project based learning as well as teaching to industry short courses and in the context of cooperative extension. This course is only available to students currently serving as undergraduate teaching assistants in food science and enrollment is by permission of the instructor.

Enforced Prerequisite at Enrollment: Junior or senior standing in food science. Permission of

FDSC 403: Sensory Data Collection & Analysis

3 Credits

The field of Sensory and Consumer Science is primarily focused on responses of consumers to food products and non-food fast-moving consumer goods (e.g., shampoo). These responses may be sensory/perceptual (i.e., how sweet, how bitter, how smooth) or affective (i.e., liking / preference), with the assumption that the former generally drives the later. Numerous tools have been developed by sensory practitioners over the last 70 years, with additional influences from experimental psychology. The course also addresses contemporary research on pedagogy that indicate applied statistics are best taught in context to the field in which students will apply the statistical concepts. Here, students will gain practice applying introductory statistical topics (t-tests, Analysis of Variance, etc) to sensory and consumer data collected from human participants.

Enforced Prerequisite at Enrollment: STAT 250 or STAT 240 or STAT 200

FDSC 404: Sensory Evaluation of Foods

3 Credits

Sensory evaluation of food, methods of test analyses, panel selection and training, taste sensation theory, consumer testing methods. FD SC 404 Sensory Evaluation of Foods (2) This course is designed to demonstrate how the senses function in the perception of tastes, flavors, and textures of foods and how sensory tests are used to measure human perceptions. Students will have the opportunity to design sensory tests and apply statistical methods when interpreting sensory test results. The overall objective of this course is to learn the theories and practical applications of sensory evaluation that will enable students to conduct valid sensory tests and use the test results in the decision making process in food product development. Evaluation will be based on written essay exams, group reports, and written lab reports in which they will be expected to demonstrate their understanding of theoretical issues regarding sensory testing and how to use statistical procedures to effectively interpret the test results. This course is a support course for the Food Science major.

Enforced Prerequisite at Enrollment: STAT 250 and Junior standing

FDSC 405: Food Engineering Principles

3 Credits

Engineering principles of importance to food manufacturing, including units, dimensions, mass and energy balance, fluid flow, rheology, heat transfer, and psychrometrics. FD SC 405 Food Engineering Principles (3) Food engineering will discuss the principles of the various unit operations used in the food processing and manufacturing industry. Topics covered will include: units, dimensions, mass and energy balance, fluid flow, rheology, heat transfer, psychrometrics. Through lectures, the student will learn the principles of fluid flow, heat transfer and mass transfer as applied to food processing and manufacturing operations.

Through practicum sessions, the student will be exposed to practical applications in the above three areas. Additionally, they will learn to analyze experimental data, organize and communicate thoughts in a logical fashion through cooperative and collaborative learning strategies, and to write effective lab reports. Through practicum sessions, they will also learn numerical problem solving and to size and select equipment for fluid flow, heat transfer and drying operations within the food industry. Student evaluation within this course will be conducted through weekly quizzes, home works, lab write-ups and three exams. This is a required course for the food science major. This course serves as a prerequisite for several 4th year required courses within the food science major.

Enforced Prerequisite at Enrollment: MATH 110 and PHYS 250 Enforced Concurrent at Enrollment: FDSC 200 and FDSC 201

FDSC 406W: Physiology of Nutrition

3 Credits

Physiological mechanisms involved in thirst and appetite, digestion, absorption, utilization of nutrients, respiration, and body temperature regulation.

Enforced Prerequisite at Enrollment: BMB 211 Enforced Concurrent at Enrollment: FDSC 200 or FDSC 201
Writing Across the Curriculum

FDSC 407: Food Toxins

3 Credits

Food Toxins focuses on natural and synthetic toxins that are relevant to the food system including those produced by food plants; those introduced by contamination of foods by microbes, non-food plants, or environmental/agricultural chemicals. The course provides an overview of basic principles of toxicology and the approaches used to study the potential toxicity of a compound. Using this foundational information, the course explores the sources, biological effects, and mechanisms of action of various classes of food-relevant toxins including: plant defense molecules, agricultural chemicals (pesticides/herbicides), industrial chemicals, environmental contaminants, microbial toxins, and process-induced toxins. Student knowledge will be assessed using a combination of exams, projects, and in-class discussion activities.

Enforced Prerequisite at Enrollment: BMB 211 and 7th Semester standing or higher

FDSC 408: Food Microbiology

3 Credits

Food Microbiology focuses on the application of microbiological principles to foods and food ingredients. Topics covered include: potential for microbial growth in a particular food or food ingredient based on the following parameters - biological structure, nutrient composition, naturally occurring inhibitors, pH, water activity, oxidation reduction potential, temperature, atmosphere conditions and humidity; choice of appropriate microbial detection methods for groups of organisms and foodborne pathogens; identification of types and the consequence of growth of pathogens and non-pathogens associated with particular commodities; evaluation of the effect of different processing conditions on the destruction, survival and growth of spoilage and pathogenic microorganisms; identification of significant factors affecting the association of pathogens with food and food ingredients, events leading to infection and/or intoxication, and prevention and

control of foodborne illness; comprehension of the importance of food microbiology in everyday living. Student knowledge will be evaluated through examinations and other class activities

Enforced Prerequisite at Enrollment: MICRB 201 Enforced Concurrent at Enrollment: FDSC 200 and FDSC 201

FDSC 409: Laboratory in Food Microbiology

2 Credits/Maximum of 2

Methods of isolation, detection of spoilage, pathogenic microorganisms in foods; effects of processing and preservation on survival of food microorganisms. FD SC 409W Laboratory in Food Microbiology (3) Food Microbiology Laboratory is intended to demonstrate microbiological concepts through the appropriate use of equipment and laboratory procedures. The laboratory focuses on the practical application of microbiological principles to foods and food ingredients based on the following experiences: development of proficiency in using selected microbiological techniques currently employed in regulatory, quality control and research laboratories; performance of specific microbiological analyses of foods to assess numbers and kinds of spoilage organisms or foodborne pathogens; evaluation of the effects of several processing methods on growth and survival of microorganisms. The course emphasizes problem solving and critical thinking as manifested by communication skills (such as writing); scientific analysis of data, including statistics where applicable; and usage of primary scientific sources in the food microbiology literature. Practical laboratory skills are assessed through measurement of proficiency Evaluation will be conducted via projects and examinations throughout the semester. this course is required for Food Science majors. Practical laboratory skills are assessed using written lab reports, projects, and examinations.

Enforced Prerequisite at Enrollment: MICRB 202 Enforced Concurrent at Enrollment: FDSC 200 and FDSC 201 and FDSC 408

FDSC 410: Food Chemistry and Analysis (II)

3 Credits

The focus of this course is food micro-components (enzymes, allergens, secondary metabolites, contaminants, etc.) as well the major chemical reactions occurring in foods (lipid oxidation, thermal reactions). They will also learn how to select and implement appropriate methods to quantify the composition and reactions of food through chemical analysis. This course has a required laboratory component. This is the second part of a two-course sequence with food macro-components and structure being covered in the pre-requisite, FDSC 400.

Enforced Prerequisite at Enrollment: FDSC 200 and FDSC 201 and BMB 212 and FDSC 400

FDSC 411: Managing Food Quality

3 Credits/Maximum of 3

Principles and applications of Hazard Analysis Critical Control Points. Statistical tools for the control and improvement of food quality. FD SC 411 is an introduction to organizational and HACCP concepts related to quality food production. FD SC 200, FD SC 201, STAT 250 and FD SC 408 are the prerequisite courses for FD SC 411. It is expected that students will have a understanding of the following statistical concepts: measures of central tendency and variability, use of histograms, discrete probability distributions (binomial, Poisson), random variables, continuous probability distributions (the normal distribution), the Central

Limit Theorem, confidence interval estimation, means comparison, correlation, simple linear regression, use of scatter diagrams, intrinsic and extrinsic factors governing microbiological growth, the basis of food preservation techniques, knowledge of specific food-borne pathogens and the products they are commonly associated with, and basic microbial testing procedures. The course will include practice in the form of problem sets and "mini-labs" and provide time for recitation. In addition, it will allow the students to pursue the following topics: root cause analysis (1 period), design of experiments (5 periods), and shelf life determination (4 periods).

Enforced Prerequisite at Enrollment: FDSC 200 and FDSC 201 and FDSC 408 and STAT 250

FDSC 413: Science and Technology of Plant Foods

3 Credits/Maximum of 3

Investigate the physical and chemical behavior of plant-based raw materials and ingredients, with emphasis on parameters influencing finished product quality. FD SC 413 Science and Technology of Plant Foods (3) This course focuses on the unique importance of foods produced from plants to human health and wellness. The influence of cultural practices, harvesting and handling methods and processing technology on quality and safety of whole, fresh and processed food products using minimal processing and fermentation to preserve food products from plant sources will be emphasized.

Enforced Prerequisite at Enrollment: FDSC 200 and FDSC 201. And at least 2 of the following 400 level courses: FDSC 400 or FDSC 405 or FDSC 408 or FDSC 410

FDSC 414: Science and Technology of Dairy Foods

3 Credits/Maximum of 3

Investigate the physical and chemical behavior of dairy-based raw materials and ingredients, with emphasis on parameters influencing finished product specifications. FD SC 414 Science and Technology of Dairy Foods (3)FD SC 414 provides students with information about the composition, properties and physiochemical aspects of milk and milk products and an understanding of the changes that occur in milk during processing into a variety of dairy products. Laboratory exercises are held weekly and complement the topic being addressed in lecture. A semester-long group project is conducted during the course to help students integrate knowledge gained throughout the Food Science Curriculum. The project focuses on a "real life" product development problem and requires students to develop problem statements, design experiments, design formula and processing schemes, obtain ingredients and actually manufacture a product. Time is allotted in the laboratory schedule for some group activities; other are scheduled outside of class.

Enforced Prerequisite at Enrollment: FDSC 200 and FDSC 201. And at least 2 of the following 400 level courses: FDSC 400 or FDSC 405 or FDSC 408 or FDSC 410

FDSC 415: Science and Technology of Muscle Foods

3 Credits/Maximum of 3

Investigate the physical and chemical properties of muscle food commodities, with emphasis on muscle-based ingredients in formulated foods. FD SC 415 Science and Technology of Muscle Foods (3)This course applies food science and technology to the processing, storage and handling of red meat, poultry, and seafood products. The course

includes two lectures and one lab session each week. The laboratory sessions are conducted in the Meat Laboratory located on Porter Road. Student performance is evaluated based on exams, lab reports, and homework exercises. Course objectives are set to: 1. help students understand the nature and importance of structure, compositional and quality differences among muscle food ingredients and their impact on product manufacturing, 2. inform students of the basic steps of primary processing for livestock, poultry and seafood species and their impact on meat properties, 3. give students first-hand experience with typical manufacturing steps and processes for fresh, cured, smoked, fermented, dried or cooked meats and help them understand how variations in processing will affect finished product properties, and 4. give students practice in applying the scientific method in answering questions or solving problems that may arise during the manufacture of muscle foods products. Course activities draw on the students' prior knowledge of food chemistry, food engineering, food microbiology and food analysis, applying concepts from those disciplines in the manufacture and evaluation of meat products. Course topics cover the range from meat science through technical and practical aspects of meat product manufacture including product quality, safety, profitability and regulatory issues. There is emphasis on meat industry practices including traditional and recent technology. Through laboratory exercises and independent group projects students gain experience in application of the scientific method for solving product development problems.

Enforced Prerequisite at Enrollment: FDSC 200 and FDSC 201. And at least 2 of the following 400 level courses: FDSC 400 or FDSC 405 or FDSC 408 or FDSC 410

FDSC 417: Food Laws and Regulations

3 Credits

This course provides a perspective to the principles and practice of food law and regulation as they impact the work of a food scientist. Food law will be discussed with reference to the roles of politics, culture, ethics (including social justice issues), science and business. The learning approach to this course uses case studies, problem solving, class discussions, and review of current topics. While some examples will be globally relevant, the focus of the course is on the regulation of food in the US.

Enforced Prerequisite at Enrollment: FDSC 200 and FDSC 201 and 6 credits from FDSC 400, FDSC 404, FDSC 405, FDSC 406, FDSC 408, FDSC 409, FDSC 410, FDSC 411, FDSC 413, FDSC 414, FDSC 415
Recommended Preparation: 7th semester standing

FDSC 422: Communicating Research in Agricultural Sciences

1 Credits

This course provides opportunities to develop effective communication skills within the context of scientific research. Students participating in independent studies with faculty mentors will use their independent research projects as the subject of a series of exercises that will enhance their abilities to share scientific ideals and findings with a variety of audiences including grant writing, poster presentations, and both technical and non-technical oral presentations about research topics. This course will prepare students for graduate school and, importantly, provide students with a set of skills that would be applicable to any career.

Cross-listed with: AG 422

FDSC 430: Unit Operations in Food Processing

3 Credits

Thermal processing, refrigeration, freezing, dehydration, and concentration in the food industry, including effects on food quality; food packaging; waste management. FD SC 430 Unit Operations in Food Processing (3) Unit Operations in Food Processing will discuss major unit operations used in the food processing and manufacturing industry. Topics covered will include: thermal processing, microwave heating, extrusion, food packaging and waste management. Through lectures, the student will learn the principles of selected unit operations in food manufacturing, and the effects of input and operational parameters on performance and food quality. Through practicum sessions, the student will be exposed to practical applications in the above areas. Additionally, they will learn to analyze experimental data, organize and communicate thoughts in a logical fashion through cooperative and collaborative learning strategies, and to write effective lab reports. Through practicum sessions, they will also learn numerical problem solving and to size and select equipment for food manufacturing operations. Student evaluation within this course will be conducted through weekly quizzes, home works, lab write-ups and two exams. This is a required course for the food science major.

Enforced Prerequisite at Enrollment: FDSC 405 and FDSC 400 and FDSC 408

FDSC 444: Arguing about Food

3 Credits

The food science major seeks to educate students in the sciences and technologies important in the industrial manufacture of food and food scientists tend to value foods in this context. Food is good if it can be manufactured at scale, distributed and sold at a profit. The qualities of the food can be defined in largely physical terms (e.g., price and costs, free from pathogens, certain levels of defined nutrients, good sensory scores, stability, and uniform and predictable properties). However, deservedly or not, food attracts more ethical attention than other goods. For food scientists to fail to appreciate the different values, theirs and others, that impact arguments about food is harmful for (i) the food scientists themselves who may feel conflicted if they cannot resolve their personal preferences for food (perhaps local and organic) with the value set of their profession. (ii) the quality of the public conversation around food if scientists and technicians cannot usefully contribute their perspectives and (iii) the food companies that employ the scientists and who seek to make and sell products acceptable to a set of consumers. The first part of the course will focus on some foundational ideas useful to all controversies. A background in toxicology (or, if most of the projects are around the healthfulness as opposed to the risks of food, nutrition), epistemology in science, critiques of sciences, science as a social construct, ethics. The second part of the course will use current controversies to examine the ways different values combine with empirical scientific facts to create arguments about foods. Students are not taught to 'win' arguments but rather examine how they are structured and why they are appealing to different people. Students will use concepts from social science and philosophy (ethics, epistemology) to critique the strong normative opinions of guest speakers and readings. Throughout the course they will work in groups around projects on specific current controversies related to the formulation or manufacture of foods. They will collect and critique the scientific facts available and then respond to the speakers/readings by generating multiple different

arguments reflecting the different perspectives ('how might the speaker think about my case?').

Enforced Prerequisite at Enrollment: FDSC 200

FDSC 450: Food Innovation and Product Design

3 Credits

This course provides upper-level undergraduate students in the Food Science major with project-based learning experience in food innovation and product design. Working in small groups, students will use their foundational and technical knowledge in food science to address a new product challenge of interest to the food industry sponsor or an equivalent client. Student groups will complete their new product design experience based on one of the challenges provided. They will design and produce an actual new product prototype that will be evaluated by the course instructor, industry sponsor and qualified individuals as appropriate. While a large percentage of the work will be performed in a laboratory setting (students will spend an average of 3 hours/week in laboratory engaged in product design-focused projects assigned by company sponsors in the Department of Food Science Wet Pilot Plant), all students enrolled in FDSC 450 will also meet as a group with the course instructor each week. Weekly discussion topics will address themes such as project and team management, market trends, effective teamwork, concept and prototype development, experimental design, recipe management and shelf life as well as what it is like to work in product development in the food industry. Final project reports are due during finals week.

Enforced Prerequisite at Enrollment: FDSC 200 and FDSC 201 and 6 credits from FDSC 400, FDSC 404, FDSC 405, FDSC 406, FDSC 408, FDSC 409, FDSC 410, FDSC 411, FDSC 413, FDSC 414, FDSC 415, FDSC 417

FDSC 460: International Food Production

1 Credits/Maximum of 3

FDSC 460 / INTAG 460 is designed to give food science undergraduate and graduate students an appreciation of how food is produced and processed abroad. Students participate in a number of production facility tours, interact with local food scientists and food technologists, and gain valuable international experience. A major point of emphasis for the course is comparing and contrasting food production norms in the U.S. and the host country or region. The course consists of pre-trip lectures and meetings and culminates in a faculty-guided embedded study tour. Prior to the travel component of the course, students work in small groups to research a specific food product that is of economic and cultural importance to the country or region of interest, then write reports to be presented in-country before a tour of the related product's production facility. The course integrates and builds upon core concepts in food chemistry and food microbiology; as such, FDSC 460 / INTAG 460 is targeted towards upper-level food science undergraduate students, as well as food science graduate students.

Enforced Prerequisite at Enrollment: FDSC 200 and Permission of program

Cross-listed with: INTAG 460
International Cultures (IL)

FDSC 494H: Honors Thesis

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of a Food Science honors thesis.

Enforced Prerequisite at Enrollment: Junior or senior status in the Schreyer Honors College and permission of the Food Science honors advisor
Honors

FDSC 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor
Full-Time Equivalent Course

FDSC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

FDSC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

FDSC 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Food Systems (FDSYS)

FDSYS 407: The Sustainable Fork: Food Systems Decisions for Away-From-Home Eating

3 Credits

The course will incorporate economic and managerial dimensions to the discussion of food decisions in foodservice away-from-home eating contexts, particularly emphasizing the behavioral aspect of decisions - how individuals (consumers, providers, managers) make choices in the food system, and what might be the consequences of these choices. The course will use evidence from multiple farm-to-fork perspectives to allow students to analyze food systems problems and solutions. It will also require students to engage directly with the local food service system through course projects and tours. The major topics of discussion will be organized under each of the value chain components of the farm-to-fork continuum: production, distribution, purchasing, preparation, and consumption. Specific topics under each of these value chain components will include: nutrition, food safety, food waste, sustainable practices, social justice, consumer utility, economic profits, ethics, government policy, and decision-making. In particular,

the course will be motivated by economic theories such as: agency relationship, information asymmetry, transaction cost economics, and behavioral economics topics such as self-rationing, and time discounting.

Enforced Prerequisite at Enrollment: C or better in HM 101 or C or better in AGBM 170 or C or better in AGBM 170N

Cross-listed with: HM 407

FDSYS 442: Changing Food Systems: Comparative Perspectives

3 Credits

The course begins with an overview of the scope of food systems and an orientation to interdisciplinary and community - based approaches for understanding and addressing social and ecological problems and potential changes in food systems. Two weeks are dedicated to reviewing selected challenges facing the food and agricultural system to underscore the complexity of these issues and illustrate how they have been approached and analyzed by different disciplinary fields. The next two weeks of the course are devoted to critical exploration of theoretical and policy models for understanding how food systems function and change. These conceptual and analytical tools are then applied in three subsequent course modules, focused on 1) Changing Agricultural Production Systems; 2) Changing Food and Farm Work; and 3) Changing Food Consumers and Eaters. Each of these three - week modules will focus on 3 - 4 cases of change efforts either led from "above" through government policies or business initiatives or from "below" by grassroots groups or social movements. Cases will be selected to compare and contrast U.S. contexts with other international contexts and to highlight the diverse experiences and perspectives across racial - ethnic, class, cultural and gender differences within the food and agricultural system. The course will conclude by synthesizing ideas and insights about the limitations and potentials of different approaches to food systems change. In the last week of class, students will also give "lightning talks" distilling their learning about food systems change through an individual semester long field - project with a local or regional community group, business, agency or farm.

Enforced Prerequisite at Enrollment: AGBM 170

Cross-listed with: CED 442

FDSYS 490: From Agriculture to Culture: Perspectives on your food from seed to plate

1 Credits

This course explores a diversity of contemporary topics of the food system, as well as current and emergent career opportunities. Emphasis is on the multi-disciplinary and interdisciplinary nature of work inherent to many careers throughout the food value chain. The food system has received greater public attention over the past 15-20 years as we face increasingly complex challenges of environmental resource quality and quantity; climate change impacts; health, hunger and malnutrition; and distributional equity and ethics of the food. Beyond growing public awareness and interest, the need exists for fuller knowledge about complexity and change across the food system. The course provides a framework where students see the food system as a comprehensive value chain encompassing producers, processors and distributors who jointly deliver food to consumers, and do so embedded in community, cultural, institutional and regulatory contexts that are variously supportive or constraining of the multiple goals for the food system. During the course, a combination of in-class presentations by food systems stakeholders, reading of relevant literature and reflection

on students' own immersive experiences in the food system will expose students to issues and opportunities along the entire value chain.

Enforced Prerequisite at Enrollment: FDSYS 495

FDSYS 495: Internship

1-18 Credits/Maximum of 18

FDSYS 495 is an internship experience with a food systems related organization or entity. This individualized course includes three components: a proposal of the individualized internship, developed in conjunction with the sponsor organization, to be approved by a supervising faculty member and the minor coordinator before registering for the course; the completion of the internship experience, monitored by the sponsor organization and supervising faculty member; and a written and/or oral presentation detailing the internship experience. The course is designed to help students refine their skills in problem solving, critical reflection, systems thinking, community engagement, and oral and written communication.

Enforced Prerequisite at Enrollment: Instructor Permission

Forensic Arts (FRNAR)

FRNAR 100: Introduction to Forensic Photography

3 Credits

This course will explore the principles of forensic photography and photographic methods, and discuss the procedures and standards that differentiate forensic photography from "artistic" photography and other methods of documentary photography. Through readings, analysis and photographic practice, this course will explore the fundamentals of photography, including lighting, image quality, composition, and more. Students will then apply and implement these fundamentals in forensic settings, for evidence documentation such as accidents, injuries, fingerprints, footprints, and bloodstains. Students will follow the standards and guidelines created by Scientific Working Groups in the taking of these images.

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

FRNAR 200: Intermediate Forensic Photography

3 Credits

The emphasis of FRNAR 200 is the Category 1 Forensic Photography. This course builds upon FRNAR 100, which focuses on the standards and guidelines for First Responder Forensic Photography. This course requires that the student have access to a DSLR camera with memory, multiple types of lenses and adjustable settings meeting a minimum set of requirements, which will be provided in an updated syllabus each year. In addition, the student must acquire supplies and equipment typically used by the Forensic Photographer. These may include camera accessories, forensic rulers, flashes, and filters. The student will also be responsible for creating forensic photography scenarios and may have to be creative in assembling the necessary items. Through readings, analysis and photographic practice, this course will explore the basics of DSLR photography, and then apply and implement these fundamentals in forensic settings. Students will follow the standards and guidelines

created by the Scientific Working Groups in the taking of images and evidence documentation for crime scenes, motor vehicle accidents, impressions and imprints, and victim photography. In two-week modules, students will take photographs to fulfill assignments; after critique (either peer or instructor), the students will re-take the photographs correcting errors. Successful students will complete the course with images and scenarios that can be used for their forensic photographer portfolio.

Enforced Prerequisite at Enrollment: FRNAR 100

Forensic Science (FRNSC)

FRNSC 100: Introduction to Forensic Science

3 Credits

This course is designed for students to step into the role of a criminalist, one who performs the scientific examination of evidence - as they process a case from start to finish over the semester. Students begin by learning a scientific approach to crime scene investigation, evidence collection, and transport. They then follow the collected evidence as it is disseminated throughout the crime lab for examination and analysis. Disciplines such as forensic serology, trace evidence, impression evidence, drug chemistry, toxicology, and DNA will be discussed. Students will learn about the examinations performed by crime lab professionals; the application of scientific principles from disciplines such as biology, chemistry, physics, and math to those exams; and the instrumentation commonly used in the lab to complete those examinations and analyses. Once the evidence has been processed, students will use critical thinking skills to interpret the evidence within the context of the case. They will reconstruct the crime as it could have occurred guided by the results and conclusions generated from their analyses. Students will also explore the role of various scientific disciplines outside of criminalistics (anthropology, entomology, pathology, etc.) as they are used in modern forensics, as well as the role of forensic science in society and the criminal justice system.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

FRNSC 200: Introduction to Crime Scene Investigation

3 Credits

This course offers an exploration of the science, management, and investigative techniques for the field of crime scene investigation. Students will develop the intellectual skills needed to plan for and organize a crime scene investigation, including crime scene approach and management; how to be tenacious when recovering and developing evidence; prescribing and amending crime scene search plans; making competent use of limited time, human, and other resources; and understanding and accounting for chain of custody. Throughout the course, students will employ the philosophies and practice of science to the investigation of crimes. Each student will understand the nature and value of each kind of physical evidence and how to recognize, collect, and preserve it. They will generate hypotheses of crimes based on evidence and use deduction in a scientific manner. Students will learn to prescribe recovery and development cascades for: fingerprints, trace evidence, impression evidence, and biological evidence, as well gain an understanding of the science behind the methods used for each type of evidence. The advantages, disadvantages, and limitations of these

methods will be discussed. Additionally, students will gain experience by performing crime scene investigation exercises that enhance their understanding of the science and methodology discussed, including processing a mock crime scene.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

FRNSC 210: Essential Practices of Forensic Science

3 Credits

Practices of forensic science including documentation, microscopy, communication of results, and integration of concepts from other sciences, mathematics, and statistics. FRNSC 210 Essential Practices of Forensic Science (3) In this course, students will learn the essential practices of forensic science and criminalistics. The necessity of an objective, rigorous, scientific approach in a forensic investigation will be stressed. This course will prepare students to understand the foundation of forensic science practice including the basic knowledge required to understand the nature and origin of physical evidence, preservation of the physical evidence record, forensic microscopy, and communication of results. This course uses an intensive, problem-solving style and through practical exercises, students will be introduced to * Documentation techniques including measurements, notes, sketches, photography, and other techniques * Basic microscopy and forensic microscopy * Verbal and written communication of forensic findings The primary aims of the course are to * Introduce students to scientific philosophy, integrity, forensic science, criminalistics, basic practices of forensic science/ criminalistics, and the role of the criminalist as they relate to a forensic investigation * Prepare students for advanced 400-level courses in forensic science and criminalistics.

Enforced Prerequisite at Enrollment: FRNSC 100 and CHEM 110 and CHEM 111

FRNSC 294: Research Projects

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

FRNSC 295: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

FRNSC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

FRNSC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

FRNSC 400: Courtroom Proceedings and Testimony

1 Credits

Introduction to courtroom proceedings and testimony as they related to forensic science. FRNSC 400 Courtroom Proceedings and Testimony (1) Classroom discussions will focus on the structure and procedures of the courtroom, the role of its members, admissibility issues, and how testimony is presented in court. Students will read transcripts from actual forensic cases, will discuss how the evidence was presented in court, and will have an opportunity to present data in mock proceedings. At the end of the course, students will have a strong understanding of how courts operate regarding the introduction of forensic evidence. The course is relevant to any forensic science student who has taken FRNSC 201 and 301, and should be taken either concurrent with or before FRNSC 401. Any student in the Forensic Science major who has an interest in obtaining employment in a private forensic company or a local, state or federal law enforcement agency will benefit greatly from this course. This is a 400-level forensics course for students in the Forensic Science major. It will also satisfy a requirement for accreditation by the Forensic Science Education Programs Accreditation Commission (FEPAC).

Enforced Prerequisite at Enrollment: FRNSC 411 and FRNSC 413

FRNSC 410: A Scientific Approach to Crime Scene Investigation

2 Credits

Principles of crime scene investigation with emphasis on scientific philosophy, concepts, and procedures. FRNSC 410 A Scientific Approach to Crime Scene Investigation (2) In this course, students will learn many of the essential principles and techniques of crime scene investigation. The necessity of a rigorous scientific approach will be stressed. This course uses an intensive, problem-solving style to teach scene management and the recognition, evaluation, enhancement, documentation, control, and collection of physical evidence. Students will be introduced to: * Scene management principles * Search techniques * Techniques to recognize, enhance, document, and collect various types of physical evidence * Communication of procedures and results * Scene reconstruction and its role in a scientific investigation The primary aim of the course is to immerse students in the scientific philosophy, integrity, scene investigation procedures, criminalistics, and role of the criminalist as they relate to scene investigation.

Enforced Prerequisite at Enrollment: FRNSC 210 and (STAT 200 or STAT 250)

FRNSC 411: Criminalistics: Trace and Impression Evidence

3 Credits

Laboratory-based examination of forensic evidence; microscopy, classification and identification. FRNSC 411 Criminalistics: Trace and Impression Evidence (3) Laboratory-based examination of physical evidence typically recovered from crime scenes. Examination of physical evidence will occur according to established forensic procedures, including the location of trace evidence and performance of presumptive and confirmatory tests. Students will establish a laboratory notebook to document their findings. Since forensic testing ultimately results in testimony in a courtroom, students will prepare written reports of their findings and learn how to present their findings in a courtroom setting. The course will concentrate on microscopy (stereo, transmitted light, polarized light, and comparison), physical and chemical techniques to classify evidence, and pattern matching techniques to individualize

impression evidence. The course is relevant to any student majoring in Forensic Science or who has an interest in obtaining employment in local, state, or federal law enforcement agencies and crime lab facilities.

Enforced Prerequisite at Enrollment: FRNSC 210 and (STAT 200 or STAT 250) and (PHYS 212 or PHYS 251)

FRNSC 412: Laboratory in Criminalistics: Trace and Impression Evidence

1 Credits

Laboratory-based examination of forensic evidence; microscopy, classification and identification. Criminalistics: Trace and Impression Evidence Laboratory-based examination of physical evidence typically recovered from crime scenes. Examination of physical evidence will occur according to established forensic procedures, including the location of trace evidence and performance of presumptive and confirmatory tests. Students will establish a laboratory notebook to document their findings. Since forensic testing ultimately results in testimony in a courtroom, students will prepare written reports of their findings and learn how to present their findings in a courtroom setting. The course will concentrate on microscopy (stereo, transmitted light, polarized light, and comparison), physical and chemical techniques to classify evidence, and pattern matching techniques to individualize impression evidence. The course is relevant to any student majoring in Forensic Science or who has an interest in obtaining employment in local, state, or federal law enforcement agencies and crime lab facilities.

Enforced Prerequisite at Enrollment: FRNSC 210 and (STAT 200 or STAT 250) and (PHYS 212 or PHYS 251) Enforced Corequisite at Enrollment: FRNSC 411

FRNSC 413: Criminalistics: Biology

3 Credits

Laboratory-based examination of forensic evidence; biological fluid identification, hair microscopy. FRNSC 413 Criminalistics: Biology (3) Laboratory-based examination of biological evidence typically recovered from crime scenes. Examination of biological evidence will occur according to established forensic procedures, including the identification of biological evidence and the performance of presumptive and confirmatory tests. Students will establish a laboratory notebook to document their findings. Since forensic testing ultimately results in testimony in a courtroom, students will prepare written reports of their findings and learn how to present their findings in a courtroom setting. The course will concentrate on the analysis of biological such as human blood, semen, saliva, urine, fecal matter and hair; including the employment of chemical, biological, and biochemical techniques to classify evidence. The course is relevant to any student majoring in Forensic Science or who has an interest in obtaining employment in local, state, or federal law enforcement agencies and crime lab facilities.

Enforced Prerequisite at Enrollment: FRNSC major and FRNSC 210 and (BIOL 230W or MICRB 202 or BMB 251 or BIOL 240W)

FRNSC 415W: Laboratory in Crime Scene Investigation

2 Credits

Laboratory course covering crime scene investigation with emphasis on scientific philosophy, concepts, procedures, problem solving, and hands-on activities.

Enforced Prerequisite at Enrollment: FRNSC 410

Writing Across the Curriculum

FRNSC 419: Firearm and Tool Mark Examination

3 Credits

Laboratory-based examination of forensic evidence; firearms, tool marks, shooting reconstruction and related evidence. FRNSC 419 Firearms and Tool Marks Examination (3) Laboratory-based examination of firearms-related evidence typically recovered from crime scenes. Examination of physical evidence will occur according to established forensic procedures, including the microscopic comparison and performance of chemical enhancement techniques. Students will establish a laboratory notebook to document their findings. Since forensic testing ultimately results in testimony in a courtroom, students will prepare written reports of their findings and learn how to present their findings in a courtroom setting. The course will concentrate on classification and microscopic comparison of impression evidence (bullets, cartridge cases and tool marks), serial number restoration, gunshot residue processing, muzzle-to-target distance estimation and shooting incident reconstruction. The course is relevant to any student majoring in Forensic Science or who has an interest in obtaining employment in local, state, or federal law enforcement agencies and crime lab facilities.

Enforced Prerequisite at Enrollment: FRNSC 210 and FRNSC 411

FRNSC 420: Advanced Molecular Biology for Forensic Scientists

3 Credits/Maximum of 3

Classroom discussions will focus on advanced aspects of molecular biology, including as they relate to forensic DNA analysis. The course will start with an overview of molecular structures (i.e., DNA, RNA, and proteins) and an advanced discussion of DNA topology, macromolecular interactions, and chromatin formation. From there, discussions will move from replication, mutation, mutation repair, and recombination, to transcription and translation, and then to regulation of gene expression. This latter topic will include an advanced discussion of microRNAs and how they can be used to distinguish body fluids in forensic DNA laboratories. At the end of the course, students will have a strong understanding of molecular biology concepts and tool, and how they relate to forensic DNA analysis. Recitation and active learning sessions will be used to reinforce the material. The proposed course is relevant to any forensic science student who has taken BMB 251/MICRB 251, BIOL 230W, BMB 251H, or BIOL 230M and CHEM 212 or CHEM 212H, and is required for Forensic Science majors who elect to complete the biology option. Genetics takes a different lens into molecular biology with a focus on problem-solving that is an important foundation for forensic science and would provide foundations (both skills and concepts) for this proposed course. FRNSC 420 serves as a prerequisite for FRNSC 421W, Forensic Molecular Biology, as it lays the foundation of advanced molecular biology concepts that forensic DNA reply upon, including molecular tools employed by forensic molecular biologists. In addition, this course is for any student who has an interest in obtaining employment in a local, state or federal law enforcement agency and/or crime laboratory facility, as it is a requirement to have a molecular biology course for employment and advancement in a forensic DNA laboratory.

Enforced Prerequisite at Enrollment: (BIOL 222 or BIOL 322) and (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M) and (CHEM 212 or CHEM 212H)

FRNSC 421W: Forensic Molecular Biology

4 Credits

Classroom discussions will focus on the application of molecular biology techniques to forensic DNA analysis. The course will start with a history of forensic biology techniques and move quickly to modern day techniques (e.g., STR analysis). Laboratory analysis will include population samples and mock evidence samples. Students will expand their knowledge of population genetics and fine tune their practical laboratory skills. Students will learn about laboratory safety, quality assurance and control, and ethics. They will evaluate results from actual forensic DNA cases, discuss how evidence is presented in court, and have the opportunity to present their data in mock deposition proceedings. Laboratory exercises will result in the preparation of courtroom ready materials (data, documents, and demonstrations). Many of the classroom discussions will be problem solving exercises designed to emphasize specific applications of laboratory analysis. At the end of the course, students will have a strong understanding of forensic STR analysis on relevant forms of biological evidence, and how to convey their findings in written and oral formats. In the laboratory, students will have analyzed different sample types, interpreted complex DNA profiles, prepared laboratory reports and case files, and presented their findings in mock testimony proceedings. As a result, students will have the basic skills necessary to work in a forensic molecular biology crime laboratory. The proposed course is relevant to any science student who has taken FRNSC 420, BMB 401, and BMB 442, and any student in the Forensic Science major who has an interest in obtaining employment in a local, state or federal law enforcement agency and/or crime laboratory facility. This is a 400-level forensics course that is required for students in the Forensic Science major who elect to complete the biology option.

Enforced Prerequisite at Enrollment: BMB 401 and BMB 442 and FRNSC 413 and FRNSC 420
Enforced Corequisite at Enrollment: FRNSC 400

Writing Across the Curriculum

FRNSC 425: Chromatography and Spectroscopy in Forensic Science

3 Credits

FRNSC 425 will provide the student with understanding in essential instrumentation for chemical analysis. The first section in the course will be dedicated to separation technology which is of paramount importance for further chemical analysis. A thorough understanding of chromatographic theory and practical applications will be gained with respect to High Performance Liquid Chromatography, Gas Chromatography and Solid Phase Extraction techniques. Since forensic determinations (both qualitative and quantitative) require a spectroscopic technique for proof of chemical structure, the second two thirds of the class will be dedicated to Mass Spectrometry followed by Spectroscopic methodologies for chemical analysis. The section on Mass Spectrometry will focus on both Electron Impact Mass Spectrometry which is used for confirmation testing as well as quantitation and soft-ionization Mass Spectrometry including tandem mass spectrometry methodology used with Liquid Chromatography. The final section of the course will provide a theoretical background of the electromagnetic spectrum and how it interacts with matter. Instrumentation techniques to be presented including X-Ray techniques (such as X-ray Photoelectron Spectroscopy, Scanning Electron Microscopy), Ultraviolet techniques (including Atomic Absorption, Ultraviolet (UV) Colorimetric techniques, Inductively Coupled Plasma with Optical Emission detection, General UV detection methods) and Vibrational techniques (Including Raman Spectroscopy and Infrared

Spectroscopy). The student will gain a thorough understanding of instrumental chemical analysis used in forensics laboratories.

Enforced Prerequisite at Enrollment: (CHEM 202 or CHEM 210) and CHEM 227

FRNSC 427W: Forensic Chemistry

4 Credits

Analytical and instrumental methods used in the forensic sciences with special emphasis on the analysis and characterization of trace evidence. Forensic chemistry is a classroom and laboratory based course designed to introduce the student to the forensic analysis of trace evidence according to established forensic procedures. The trace evidence can include paint, fire debris, glass, controlled drug substances, blood alcohol analysis, fibers, smokeless powders, inks/dyes, gunpowder, and low explosives. The focus of the course will be on identifying and understanding the nature of the samples, common sample preparation methods, chemical and analytical instrumental methods, and proper collection and storage of evidence. The course will simulate the methods in a standard forensic chemistry laboratory. The analytical methods will include microscopical, spectroscopic, trace elemental, and chromatographic analytical tools that are commonly used in these laboratories. The course will rely heavily on the students' knowledge and skills that have been learned or acquired during their studies in the pre-requisite course work. The pre-requisite knowledge include, but are not limited to: algebra, calculus, general chemistry, organic chemistry, analytical chemistry, basic statistics, polarizing light microscopy, spectroscopy theory, chromatography theory, proper evidence handling practice, and good writing skills. All of these knowledge areas are represented in the required pre-requisite courses which are CHEM 213 AND CHEM 227 AND (FRNSC 411 OR CHEM 431W).

Enforced Prerequisite at Enrollment: CHEM 213 and CHEM 227 and (FRNSC 411 or CHEM 431W)

Cross-listed with: CHEM 427W

Writing Across the Curriculum

FRNSC 460: Medicolegal Death Investigation

3 Credits

This course will introduce students to the concepts of medicolegal death investigation and the operations of a medical examiner or coroner's office. Topics will include determining cause and manner of death, issuing a death certificate, making death notification, forensic autopsy, typical postmortem findings in common natural and unnatural deaths, mortuary procedures, cultural differences in death rituals, mass casualty events, and others. Relevant learning objectives will be in alignment with the training standards of the American Board of Medicolegal Death Investigators (ABMDI). An optional Saturday field exercise will be conducted in which students can have the opportunity to practice many of the skills learned in class including scene assessment, witness interviewing, family death notification, and transport of the body to the morgue. This may also include a visit to the morgue and/or funeral home. The course will involve much active learning, group activities/discussions, and both individual and group quizzes. Students will be expected to prepare for class by completing assigned readings and pre-lecture activities. Instructor lecturing will be limited to approximately 30% of class time.

Enforced Prerequisite at Enrollment: FRNSC 410 and (FRNSC 411 or FRNSC 413)

FRNSC 475: Forensic Science Seminar

1 Credits

Presentation and discussion of special issues in forensic science; extension and application of background knowledge to unusual topics and cases.

Enforced Prerequisite At Enrollment: FRNSC 411 or FRNSC 413
Recommended Preparation: FRNSC 410

FRNSC 485: The Profession of Forensic Science

2 Credits

This course will prepare students to make the transition to professional careers in forensic science and allied fields. The primary goals of this course are to: · Prepare students for the process of seeking and obtaining professional employment in forensic science or an allied field. In addition to standard employment practices, these activities (lectures and exercises) include behavioral-based mock interviews, preparation for background investigations and civil-service employment practices. · Develop professional standards and practices in forensic science which will not only prepare students to enter the field, but to excel and advance throughout their careers. These activities will include discussions of laboratory operations, quality assurance/quality control, professional conduct, ethical reasoning and laboratory safety. · Finalize students' education in forensic science and criminalistics through activities in case integration. The case integration activities prepare students to incorporate available information into the investigative process and to serve as consultants to the criminal justice system. · Prepare each student to sit for a comprehensive exam, to include the full content of coursework across the scope of the Forensic Science Program. This will be administered using the Forensic Science Assessment Test (FSAT) offered by the American Board of Criminalistics (ABC) or its equivalent.

Enforced Concurrent at Enrollment: FRNSC 421W or FRNSC 427W

FRNSC 485W: Coalescence of Forensic Science Concepts.

4 Credits

Advanced concepts in criminalistics as they apply to criminal and civil investigations.

Enforced Prerequisite at Enrollment: FRNSC 411 and FRNSC 413 and FRNSC 415W or Concurrent: FRNSC 421W and FRNSC 427W
Writing Across the Curriculum

FRNSC 490: Traceology & Event Reconstruction

3 Credits

This course will explore the knowledge and methods relevant to traceology and the scientific reconstruction of events. Traceology will be compared and contrasted with historical and experimental science; rigorous utilization of the scientific method will also be discussed. Philosophical topics will include scientific inductivism and falsificationism, the two primary methods used to evaluate hypotheses, and other epistemological approaches to the pursuit of knowledge and truth. A significant portion of the course will be devoted to the knowledge and techniques necessary to identify and sequence discrete actions

that comprise events including the analysis of blood deposits, firearm evidence including ballistics, and other traces.

Enforced Prerequisite at Enrollment: FRNSC 411 and FRNSC 413 and FRNSC 415W

FRNSC 494: Research Projects

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

FRNSC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

FRNSC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Forest Technology (FORT)

FORT 100: Introduction to Forestry

1 Credits

A general introduction to forest ecology, history, management, and practices.

First-Year Seminar

FORT 105: Forest Measurements

3 Credits/Maximum of 3

FORT 105 is a first year, three credit course required for the completion of the associate degree in Forest Technology. The course covers the techniques, procedures, and equipment used to measure tree and forest parameters, including various forest products. The course also covers statistical concepts and sampling and includes the use of current computer software. The course includes lectures and students improve their skills in weekly field lab exercises. The course objectives include that students learn the principles, techniques, tools, and technologies used in forest measurements, the use of statistics as related to forest measurements, to prepare and write comprehensive, professional reports, and to work cooperatively as a crew member under field conditions by always performing accurate, safe work, and by following directions and assignments of the instructor.

FORT 110: Forest Inventories

3 Credits

Application of forest mensuration, mapping, GIS, sampling, and statistical analysis to the inventory of forest resources. FORT 110 Forest Inventories (3) FORT 110 is a 3-credit, field-lab-oriented course that is a continuation of FORT 105 (Forest Mensuration) and builds upon other forestry, math, and English courses. Students will apply the principles of tree measurements to the inventory of forest resources. The major inventory systems will be covered as well as sampling techniques and statistical

analysis of data. The management and stewardship of forest resources depends upon the collection, analysis, and conveyance of quantitative and qualitative data that describe forest resources. The data is used to make informed, science-based management decisions concerning the growth, health, and/or volume of forest resources. The basis of the course is learning how to plan, conduct, coordinate, and summarize forest inventories. The course objectives are for students to develop an understanding of sampling techniques and statistical analysis in the inventory of forest resources, learn how to use forest inventory systems currently used in natural resource management, conduct inventories that are cost-efficient and that meet predetermined sampling standards, learn to accurately and efficiently process and compute inventory data by hand and computer, learn to prepare and write comprehensive, professional cruise, and inventory reports for supervisors and/or clients, and learn to work well as a member of an inventory crew under field conditions. Conducting accurate and safe work, following directions, and the assignments of supervisors and instructors is imperative. Course grades will be based on lecture exams, a cumulative final, quizzes, lab reports, assignments, and class attendance and participation.

Enforced Prerequisite at Enrollment: FORT 105

FORT 140: Forest Surveying

3 Credits/Maximum of 3

Plane surveying for forestry applications using compass, survey equipment, and GPS; topographic map reading, deed research, and land descriptions. FORT 140 Forest Surveying (3) FORT 140 is a three-credit, field-lab-oriented course that reinforces the skills gained in FORT 130 (Forest Mapping Systems) and MATH 081 (Technical Mathematics). Students will apply the principles of mapping and mathematics to land surveying techniques used by forest technicians and foresters. The course objectives are for students to learn to measure horizontal and vertical angles and distances in the field, perform boundary, topographic, and road surveys, use USGS topographic maps, and become proficient with deed and boundary research. Course grades will be based on exams, quizzes, lab reports, assignments, and class attendance and participation.

Enforced Prerequisite at Enrollment: MATH 21

FORT 150: Dendrology

3 Credits

Taxonomy, identification, ranges, and uses of important U.S. timber species and lesser vegetation of a regional nature. FORT 150 Dendrology (3) FORT 150 is a first-semester, 3-credit course for students in the Forest Technology program as well as interested students in other academic programs. It is a field course that is focused on taxonomy, nomenclature, ecology, and silvics of common forest plant species. Students are exposed to native and introduced to plant species in south central Pennsylvania. Scientific names, common names, geographic ranges, and economic importance are taught. Students learn to identify plants by key characteristics: arrangement, bark, buds, flowers, fruits, general form, and leaves. Basic plant biology as well as ecological relationships are covered. Information learned in this course serves as the foundation for future courses, including FORT 110 (Forest Inventories) and FORT 160 (Silvicultural Practices). Course objectives are for students to gain an understanding of the rules of scientific nomenclature, to know the meanings of scientific terms used in dendrology, to identify 100-plus different woody plant species, to know ranges and site requirements for major species, and to know and be able to spell correctly the common

and scientific names (family, genus, and species) of plants. Grading and course structure will be based on daily field quizzes, a mid-term examination, and field and written final examinations.

FORT 160: Silvicultural Practices

3 Credits

Principles and techniques of forest establishment, culture, and regeneration systems. FORT 160 Silvicultural Practices (3) FORT 160 is a second-semester, three-credit course in the Forest Technology program. It builds upon the knowledge of silvics introduced in FORT 150 (Dendrology). It combines the tools of FORT 105 (Forest Mensuration) with basic ecology and enables students to understand the processes and management alternatives in the forest ecosystem. This is a lecture class supplemented with weekly field laboratory sessions. The lab sessions allow students to experience silvicultural practices through design and implementation. The course objectives are for students to develop an understanding of silvics of North American forests, to understand silvicultural relationships, and to be able to write and administer silvicultural prescriptions. Course grading will be based on lecture exams, a cumulative final, lab reports, assignments, and attendance and participation.

Enforced Prerequisite at Enrollment: FORT 150

FORT 170: Forest Harvesting and Operations

3 Credits

Forest harvesting and intermediate operations: forest worker safety, hand and power tools, harvest planning, and best management practices. FORT 170 Forest Harvesting and Operations (3) FORT 170 is a three-credit, applied field-oriented course in the Forest Technology curriculum. Students will be introduced to woods safety and the identification of hazards; the safety and use of hand and power tools used in forest harvesting and intermediate operations; and logging equipment safety, maintenance, and operation. Axes, crosscut saws, chain saws, heavy logging equipment including logging skidder, bulldozer, and woods tractor will be used. Students will work in crews to complete a forest harvest or thinning operation from beginning to end including forest inventory and stand analysis; the use of best management practices; the development of an erosion and sedimentation plan; harvest planning and layout; forest stand marking; and the harvest of the marked forest stand. Daily performance is evaluated based upon safety, effort, and motivation, skill improvement, cooperation, and attendance. Course grades will be based on quizzes, assignments, and daily performance.

Enforced Concurrent at Enrollment: FORT 110 and FORT 160

FORT 175: Forest Products Industry Tour

1 Credits

Field tour of local and regional forest products industries. FORT 175 Forest Products Industry Tour (1) FORT 175 is a 1-credit, field-based course in the Forest Technology curriculum. The course is offered in the 4-week summer intersession following completion of the second semester. It provides students with the opportunity to visit and tour forest products industries. Tours of sawmills, pulp and paper facilities, plywood factories, and other manufacturing industries are incorporated into a 3-to 4-day field trip in the Mid-Atlantic region. This course provides a basic understanding of forest products industries for FORT 250 (Forest Management Practices). The course objectives are for students to develop an understanding of general industrial and manufacturing

sectors of forestry and to learn and apply basic concepts of business, economics, and management in relation to forest products. Course grades will be determined by the level of participation at each forest products industry visited and by the quality of trip reports.

Enforced Prerequisite at Enrollment: FORT 110 and FORT 160

FORT 200: Wood Identification and Properties

1 Credits

Anatomy of wood and bark; cell wall formation and composition; and identification of wood by gross and microscopic qualities. FORT 200 Wood Identification and Properties (1) FORT 200 is a third-semester, one-credit course at Mont Alto. It will introduce students to the basic concepts of the anatomical properties of wood and bark cells. Students taking this class will learn: basic information on tree form and structure; basic information on cell wall chemical composition, formation, and structure. A significant part of the course will be learning to identify and differentiate selected hardwood and softwood species from gross and microscopic characteristics. The course objectives are for students to gain an understanding of wood formation and structure and to be able to identify assigned wood samples from gross and/or microscopic characteristics. Grades will be determined from weekly quizzes in wood identification and exams on lecture material.

FORT 210: Arboriculture

3 Credits

Selection, planting, care, and maintenance of woody ornamental plants and shade trees grown in urban, suburban, and rural landscapes. FORT 210 Arboriculture (3) FORT 210 is a third-semester, three-credit forestry elective in the Forest Technology curriculum. The course is recommended for students who have a basic knowledge of tree/plant identification and forestry but with the instructor's permission is open to third-semester-standing students interested in arboriculture. A significant portion of the course includes labs where tree-climbing skills are taught using climbing saddles, ropes, and applicable hardware. Course objectives include an understanding of the importance of the urban-community forest, the importance of trees and woody plants, how they grow and how to care for them. Students will gain the basic knowledge and experience needed for employment in the field of urban forestry and arboriculture. Course grades will be based on assignments, lecture exams, a final examination, lab performance, and reports and quizzes.

Enforced Prerequisite at Enrollment: Second-year standing

FORT 220: Forest Ecosystem Protection

4 Credits

Principles and concepts involved in managing the forest ecosystem in regard to fires, insects, and diseases. FORT 220 Forest Ecosystem Protection (4) FORT 220 is a third-semester, four-credit course that builds upon information learned in FORT 150 (Dendrology) and FORT 160 (Silvicultural Practices). This course will provide students with tools to identify and understand the effects of insects, disease, and fire on individual trees, forests, and ecosystems. They will learn signs and symptoms of insects and disease, integrated pest management principles, tactics of fire suppression, and will complete the PA-130 wildland fire training course. Emphasis is placed on recognition, prevention, and control of insects and pathogens. A case-study approach is used for the major pest problems of the northeastern United States. Course objectives include development of assessment

and diagnostic skills for major plant pests, recognition of signs and symptoms of abiotic and biotic disease, knowledge of integrated pest management, basic fire behavior and control techniques, and development of verbal and written communication skills. Course grading will be based on scheduled lecture exams and quizzes, a final comprehensive examination, lab reports, and participation.

FORT 230: Introduction to Remote Sensing

2 Credits

Remote sensing technologies applied to forest resource analysis and management. FORT 230 Introduction to Remote Sensing (2) FORT 230 is a third-semester, two-credit course that explores the applications of aerial photography in forest and natural resource management. Both black-and-white and infrared photographs at diverse scales will be used. Photographic measurements of distance, area, and elevation will be studied. The use of aerial photos in ecological classification, forest vegetation mapping, and forest inventory will also be covered. Lab exercises will include forestry operations such as logging road layout, timber harvest mapping, and property boundary mapping. Linkages with global positioning system (GPS) and geographic information systems (GIS) will be stressed. The course objectives are for students to develop skills in interpreting and using aerial photos for forest resource management. Grading will be based on tests, quizzes, lab exercises, and student participation.

Enforced Prerequisite at Enrollment: GEOG 160 and GEOG 161

FORT 240: Forest Soils and Hydrology

3 Credits

The study of forest soils and hydrology, especially as they are affected by forest management activities. FORT 240 Forest Soils and Hydrology (3) FORT 240 is a fourth-semester, three-credit course in the Forest Technology program. The course includes the study of soils and forest hydrology, especially as they are affected by forest management activities. Land reclamation activities in the reclamation and re-vegetation of disturbed sites found in the coal mining areas of Pennsylvania are also considered. This course uses outdoor and indoor labs to reinforce material discussed in lectures. Course objectives are for students to develop an understanding of the physical, chemical, and organic properties of soils, of forest hydrology, and the impacts of forest management activities of the reclamation process and activities, and of the importance of soil and water resources and their conservation. Course grades will be based on scheduled quizzes, lab reports, assignments, lecture exams, a cumulative final, and attendance and participation.

Enforced Prerequisite at Enrollment: Second-year standing

FORT 250: Forest Management Practices

3 Credits

Practical techniques for implementing management plans for forest stands under various ownerships and management regimes. FORT 250 Forest Management Practices (3) FORT 250 is a capstone course in the forest technology program taught in the fourth semester. It will give students the opportunity to use the various skills they have learned in other courses to develop management plans for forests managed with varying objectives. Concepts of valuation, timber procurement, and discounted cash flow will be covered. Regulatory, management certification, public sector, and private sector management issues will also be explored. The skills will be applied as students work on a

semester-long management plan of a selected forest tract. The objective of the course is for students to develop skills in creating and executing forest management and timber harvesting plans in forest stands. Course grades will be based on quizzes, homework, laboratory exercises, management plans, and exams.

Enforced Prerequisite at Enrollment: FORT 110 and FORT 160

FORT 260: GIS for Natural Resources Management

3 Credits/Maximum of 3

Geographic Information Systems technology including mapping and GIS data management procedures with emphasis on natural resource management applications. FORT 260 GIS for Natural Resources Management (3) In this course, students will acquire the basics of spatial data analysis using geographic information systems technology. The course will cover acquiring data, manipulating databases, and displaying the results to solve spatial analysis problems. Problems will come largely from natural resources sciences and forest management. GIS is rapidly becoming a standard technology in many disciplines that use data having a spatial component. Students with knowledge and experience in GIS may improve their job prospects significantly.

Enforced Prerequisite at Enrollment: GEOG 160 and GEOG 161

FORT 295: Forest Technology Internship

1-4 Credits/Maximum of 4

Supervised field experience related to the student's major.

Enforced Prerequisite at Enrollment: Permission of program

FORT 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

FORT 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest

FORT 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Forestry (FOR)

FOR 150S: First-Year Seminar

2 Credits

The objectives of this first-year seminar course are to: (1) Engage and prepare first-year college students for academic success by orienting them to the scholarly community and introducing them to available academic resources. (2) Introduce students to Pennsylvania's forests and some of the research and other activities currently underway at

Penn State that supports the conservation and management of these resources. (3) Introduce students to strategies they can use while at Penn State to prepare for careers related to forestry, wildlife/fisheries, and other natural resources disciplines.

Cross-listed with: WFS 150S

First-Year Seminar

FOR 200: The Profession of Forestry

1 Credits

Introduction to the profession of forestry and related career opportunities.

FOR 201N: Global Change and Ecosystems

3 Credits

Ecosystems across the planet are facing unprecedented pressures and changes as society seeks to support continued population growth and increasing standards of living. The course provides students with a general understanding of global change, ecosystems, and linkages among them. This course: 1) Surveys the diversity of Earth's ecosystems, considering life on land and water and linkages among terrestrial and aquatic ecosystems. 2) Explores human drivers of global change, including climate, land use, and pollution. 3) Presents major environmental issues confronting humanity and the natural world. 4) Considers ecosystem and societal responses to climate change. 5) Considers options for mitigating and adapting to climate change in ecosystems, toward sustainability. 6) Develops critical thinking skills, considering the many relationships between society and natural systems.

Recommended Preparations: 3 credits of science

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

FOR 203: Field Dendrology

3 Credits

Field identification of native and introduced trees and shrubs. FOR 203 Field Dendrology (3) This course establishes the basic skills of woody plant and tree species identification necessary for students of natural resource management, ecology, and natural history. The objectives of the course are for students to 1) recognize many of the common woody plant species encountered in Pennsylvania (and the region) and the taxonomic traits used in their identification, 2) employ the diagnostic skills useful for woody plant identification, including the use of dichotomous keys, and 3) identify resources for identification and continued study of woody plants in Pennsylvania and the region. This field-based course introduces native, ornamental, and invasive woody plant species in a diversity of landscapes including forested, urban, suburban, and riparian areas.

FOR 204: Dendrology

2 Credits

Taxonomic and silvical characteristics, ranges, genetic relationships, and uses of important forest tree species.

Enforced Prerequisite at Enrollment: FOR 203 or FORT 150

FOR 228: Chainsaw Safety, Maintenance, and Operation in Forest Management

1 Credits

This course covers the detailed use of the modern chainsaw. The course begins with safety and personal protective equipment (PPE), Occupational Safety and Health Agency (OSHA) regulations, saw selection, and an introduction into safe saw handling skills and techniques. The course then transitions to saw maintenance and proper care of the chainsaw, and then to a hazard recognition, mitigation, and avoidance component that addresses both the work site and the resource being harvested and processed. Once these objectives have been understood, the remaining two-thirds of the course focuses on the practice of chainsaw handling skills and techniques that are necessary for safe operation. This course has an extensive hands-on, experiential learning component in actual tree-felling and processing in the forest, including on-site discussion of harvesting as a forest management tool. The course concludes with training in proper log manufacturing, including scaling and grading of the harvested resource. Efficient recovery of the timber resource that minimize damage on the residual stand is emphasized. (In the B.S. program in Forest Ecosystem Management, this course counts only as an Elective.)

FOR 242: Elements of Project Supervision in Forestry

3 Credits

Supervisory techniques developed through an understanding of the behavioral sciences applied to field forestry personnel management.

FOR 255: GPS and GIS Applications for Natural Resources Professionals

3 Credits

FOR 255 GPS and GIS Applications for Natural Resources Professionals (3) FOR 255, GPS and GIS Applications for Natural Resources Professionals, teaches students to apply Global Positioning Systems (GPS) and Geographical Information Systems (GIS) in the management of natural resources. Students learn how GPS works and how to use GPS to find locations in the field and to capture spatial data and transfer it to a GIS system. Students learn how GIS data are structured and how to find, use and edit existing GIS databases and to create new ones. They learn to use various software applications to work with and analyze GIS databases, including both spatial and non-spatial data, to address a variety of natural resources management questions and issues. Finally, they learn to present spatial information in a map that effectively communicates information relevant to a variety of natural resources situations.

FOR 266: Forest Resources Measurements

4 Credits

This course focuses on the collection, analysis, and presentation of quantitative and qualitative data that describe forest resources and are used in the management and stewardship of forest resources. Sampling techniques, procedures, and equipment used to measure trees and forest parameters, including various forest products, are covered, as is statistical analysis of data. Students learn how the data provides the basis for making informed, science-based management decisions concerning the growth, health, and/or volume of forest resources.

Enforced Prerequisite at Enrollment: FOR 203 or FORT 150 Enforced Concurrent at Enrollment: (FOR 255 or FORT 260 or WILDL 211) and (STAT 200 or STAT 240 or STAT 250)

FOR 295: Forestry Internship

1-4 Credits/Maximum of 4

Supervised field experience related to the student's major.

Enforced Prerequisite at Enrollment: Permission of program

FOR 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

FOR 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

FOR 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

FOR 303: Herbaceous Forest Plant Identification and Ecology

3 Credits

This course focuses on developing herbaceous plant identification skills with emphasis on important plant structural features, common taxonomic terms, dichotomous keys, and botanical nomenclature. This course provides a practical, applied approach to understanding biological and ecological concepts relevant to plants occurring in forested environments. Human dimensions and ethnobotany, and relevant economic, management, and conservation issues are also included, along with the methods by which botanists collect and preserve plant specimens for historical documentation and research purposes.

Enforced Prerequisite at Enrollment: 3 credits in BIOL or BISC or FOR or FORT or HORT or PLANT

FOR 308: Forest Ecology

3 Credits

FOR 308 FOR 308 Forest Ecology (3) This class will provide the basic concepts of forest ecology and silvics. The class will emphasize (a) community concepts such as sampling, succession, productivity, disturbance, and animal factors, (b) ecosystem concepts such as nutrient and energy cycles and plant-soil relationships, and (c) environmental factors such as light, temperature, moisture, and pollution, and their effects on individual tree species and community structure and function. Other special topics of interest (allelopathy, seed behavior, tropical forests, etc.) will be included as time permits. The class will also include a field component that allows students to observe the effects of various conditions or treatments on forest community structure and growth, and

to practice field methods commonly used to measure site factors and environmental processes in forest communities.

Enforced Concurrent at Enrollment: FOR 203 or FORT 150

FOR 320: Forest Fire Management

2 Credits

This course will cover the principles and concepts involved in managing forest ecosystems in regard to fire. It will enable students to think analytically and operationally about fire in forested landscapes, taking into account a complex of physical/biological factors, management objectives, and public interest. Fire behavior, fire ecology, and environmental impacts of fire will be studied. This course includes concepts behind both wildfire suppression and prescribed fire planning.

FOR 350: Forest Ecosystem Monitoring and Data Analysis

3 Credits

Quantitative approaches for characterization, monitoring, and comparison of forest ecosystems. FOR 350 Forest Ecosystem Monitoring and Data Analysis (3) The overall goal of this course is to provide students with opportunities to develop a quantitative approach to the management and conservation of forest ecosystems. The course comprises three sections, each of a different length. The first section reviews descriptive statistics and basic concepts needed to understand sampling design in the context of forest ecosystem monitoring and data analysis. The second section addresses concepts and steps for designing a monitoring plan, and sampling designs for forest ecosystem monitoring. Sampling designs discussed include (but are not limited to): simple and stratified random sampling, double sampling, and cluster sampling. The third section covers data analysis and modeling tools. Students are expected to know two-sample inference, correlation analysis, analysis of variance and linear regression. The focus of this third section is on the application of these to forest ecosystem issues. The course also covers concepts of statistical model development, selection, and evaluation. Students will develop an understanding of strengths and limitations of using statistical models for forest ecosystem management and conservation. Finally, a broad overview of spatial statistical analysis will be offered. The objective is for the students to know about available tools and be able to look for more information. Major emphasis is placed on case studies and real-world data.

Enforced Prerequisite at Enrollment: C or higher in STAT 200 or STAT 240 or STAT 250

FOR 370: Watershed Ecohydrology

3 Credits

Watershed Ecohydrology is an interdisciplinary scientific field that studies the interactions between water and ecological systems. This course presents foundational concepts in ecohydrology of watersheds, considers coupled hydrological and ecological processes that shape water quality and watershed health, and explores ecohydrology as a tool for the sustainable management of freshwater resources. Examples will be drawn from forested watersheds at multiple spatial and temporal scales.

Enforced Prerequisite at Enrollment: SOILS 101 or 3 credits of CHEM

FOR 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

FOR 400: Senior Forest Practicum

2 Credits

Application of forest management concepts and principles. Students will collect, analyze, and interpret forest management data and present project solutions.

Enforced Prerequisite at Enrollment: FOR 203 and FOR 255 and FOR 266 and FOR 308 and FOR 421 and ECON 102 and SOILS 101 and (STAT 200 or STAT 240 or STAT 250)

FOR 401: Urban Forest Management

3 Credits/Maximum of 3

Nature's role in community development, landscapes, arboriculture, administering urban forestry programs, land-use planning and regulatory policy, open-space conservation, civic environmentalism. The purpose of this course is to provide a broad exploration of planning for and managing trees and natural landscapes to support development of community. Healthy natural resources such as air, water, soil, and vegetation are critical components of community development. Students will explore arboriculture practices, goal-oriented urban forest management, land use planning and regulatory policy, and civic environmentalism. They will learn about ecosystem services of trees and landscapes; arboricultural practices including tree planting in urban areas, tree pruning, tree risk assessment, and amenity tree valuation; policy development and analysis including street tree ordinances and municipal tree commissions; street and park tree assessments and inventories; development of community tree plans and goal oriented urban forest management; land use planning and regulatory policy to conserve natural resources including zoning, subdivision and land development ordinances, comprehensive plans, and open space conservation; civic environmentalism and volunteerism; and conflict resolution. This course will provide students a practical understanding of planning for, and managing, trees and other natural resources associated with human communities.

Enforced Prerequisite at Enrollment: Fifth-semester standing

FOR 403: Invasive Forest Plants: Identification, Ecology, and Management

3 Credits

This course addresses the impacts and challenges associated with "exotic" plant invasions in eastern North American forests through an interdisciplinary exploration of topics including invasive plant identification and management, ecological interactions and impacts, human roles and influences, and management and policy options. Students are also exposed to a variety of scientific and societal perspectives related to monitoring, managing, and controlling invasive plants.

Enforced Prerequisite at Enrollment: 6 credits in BIOL or BISC or FOR or FORT or HORT or PLANT

FOR 409: Tree Physiology

2 Credits/Maximum of 2

Fundamentals of the relationship of the basic physiological functions of forest trees to form. Tree Physiology is the study of how trees grow and develop in terms of genetics; biochemistry; cellular, tissue, and organ functions; and interaction with environmental factors. While many physiological processes are similar in trees and other plants, trees possess unique properties that help determine their outward appearance. These processes include carbon relations (photosynthesis, carbohydrate allocation), cold and drought resistance, water relations, and mineral nutrition. The characteristics of trees that define their physiology are longevity, height, and simultaneous reproductive and vegetative growth. Trees have physiological processes that are more adaptable than those in other plants. Height allows trees to successfully compete for light, but also creates transport and support problems. This course investigates the anatomy, morphology and physiology of growth, development, and responses of woody plants with particular consideration of the influence of environmental factors on physiological processes. To develop an understanding of tree physiology the following topics will be presented: Organization, development, and function of woody plant tissues Photosynthesis, respiration, and assimilation in forest trees Water relations and mineral nutrition. Tree growth responses to atmospheric and soil condition. Physiology variation among tree species. Herbicides and tree physiology. Methods and tools of tree physiology research.

Enforced Prerequisite at Enrollment: BIOL 110 or BIOL 127

FOR 410: Elements of Forest Ecosystem Management

3 Credits

Changing public attitudes towards the environment during the last several decades have led to a philosophical shift in how we manage our forests. The primary focus of a sound stewardship of many of our public forests has now shifted to the recognition that sustaining ecological integrity of forest ecosystems, including the maintenance and restoration of native biological diversity, may be more important than focusing primarily on commodity production. Ecosystem management has become policy on national forests managed by the U.S. Forest Service and Pennsylvania state forests managed by the Pennsylvania Department of Natural Resources. This course invites students to critically examine the concept of ecosystem management from an ecological, economic, and social perspective. Students will review the evolution of ecosystem management and learn how it is being implemented. Basic questions addressed in this course include: What is ecosystem management? How can concepts such as biodiversity preservation, ecosystem integrity, sustainability, and forest health be achieved in forested landscapes? How can human needs be balanced with ecological goals? How can competing societal goals be balanced? This course is designed for forestry majors and places contemporary management approaches into the larger ecosystem context that uses knowledge of forest history, landscape ecology, conservation biology, forest restoration, and forest certification requirements to develop management solutions that pay particular attention to the maintenance of biodiversity (habitat) and soils. Forest management approaches are investigated with regards to the issue of long-term sustainability, recognizing the often challenging and conflicting demands on forestry to satisfy a diverse set of values given ecological, social, and economic constraints.

Enforced Prerequisite at Enrollment: (BIOL 110 or BIOL 127) and (BIOL 220W or FOR 308) and 7th Semester standing or higher

FOR 418: Agroforestry: Science, Design, and Practice

3 Credits

Agroforestry integrates trees in agricultural landscapes, and/or agriculture products into forested areas for multiple benefits. FOR 418 Agroforestry: Science, Design, and Practice (3) (US;IL) Agroforestry is the intentional design of land use systems that combine tree crops with plants and/or animals in a manner that seeks to promote ecological and economic benefits within the landscape. Two possible arrangements for such systems are (1) the integration of trees within non-forested settings; and/or (2) the introduction of high value 'crop' species into existing forestlands. The objective of the course is to foster a practical working knowledge of agroforestry as it is experienced both in Pennsylvania and throughout the world, so that students from a variety of backgrounds can integrate agroforestry practices and thinking into their own disciplines, interests, and lives. Although agroforestry is an ancient land use approach, it is new in many places, and improvements and adaptations to traditional practices are needed to meet local circumstances. This course will provide a framework for critical assessment and implementation within this context. One of the fundamental aspects of agroforestry is that it is a land use system that operates at a landscape or ecosystem scale. For agroforestry to succeed, many factors, including ones external to the agroforestry practice itself must be considered. Therefore the course is interdisciplinary in nature and topics in ecology, economics, sociology, and policy that are related to agroforestry practices will be discussed. In evaluating the students, the primary emphasis is on class discussion. Students will be expected to review and discuss papers and contribute to the ongoing dialogue and debate about agroforestry as a sustainable land use. Students will be required to carry out critical reviews of agroforestry papers and publications as well as design and develop an agroforestry project pertinent to their individual field of interest and expertise. The course will be offered every Spring semester.

International Cultures (IL)
United States Cultures (US)

FOR 421: Silviculture: Applied Forest Ecology

3 Credits

This course explores the methods available to apply ecological concepts to actively manage forested ecosystems for a variety of societal objectives. It addresses methods used to blend the maintenance of biodiversity in forest ecosystems with extraction of commodities under the paradigms of Ecosystem Management and Ecological Forestry. Course objectives include gaining the ability to 1) apply silvicultural terminology and basic ecological concepts as they relate to forest development and silvicultural practices, 2) predict how silvicultural practices influence soil resources, water issues, forest health, timber production, wildlife habitat, and biodiversity, 3) integrate ecological and social considerations into silvicultural practices, and 4) employ silvicultural concepts to actual forest stands by developing silvicultural prescriptions. Topics include silvicultural systems, silvics, cover types, soil, habitat types, ecological classification systems, growth and yield, stand descriptions, crown classes, the site index, release, precommercial thinning, wood quality and pruning, herbicides and vegetation management, commercial thinning, crop tree management, stocking charts, maintaining forest health, natural and anthropogenic disturbances, forest stand dynamics, succession, regeneration inventories, managing for complexity, natural regeneration, seed-tree and

shelterwood methods, uneven aged silviculture (selection and control methods), coppice, irregular shelterwood, deer browsing, clearcutting, site preparation, direct seeding, planting, ecosystem management across different scales, prescribed fire, and management techniques that maintain critical ecosystem processes and components such as soil, water, and wildlife. This is a core course in forestry, although it is also designed for wildlife professionals, conservation biologists, and natural resource professionals interested in the scientific foundation and practical application and implementation of forest management techniques. Whereas the disciplines of ecology and conservation biology help us understand the biological consequences of human manipulation, it falls upon the field of silviculture to balance the often conflicting demands between ecological integrity and society's demand for forest products in practice.

Enforced Prerequisite at Enrollment: [C or higher in FOR 266 or (C or higher in FORT 105 and FORT 110)] and FOR 308

FOR 430: Conservation Biology

3 Credits

The application of biological principles to issues in the conservation of biodiversity. FOR (W F S) 430 Conservation Biology (3) This course applies basic principles of ecology and genetics to issues regarding the conservation forested ecosystems and their associated fisheries and wildlife. The objective of this course is to provide a broad appreciation of the concepts in conservation biology that are important to solving contemporary natural resources problems. Students will be exposed to the history of conservation biology, values of biodiversity, definitions of species concepts, protecting the genetic structure of species, extinction as a natural process, vulnerability to extinction, biodiversity at the community, ecosystem, and landscape levels, habitat fragmentation, metapopulations, legal aspects of conservation, ecosystem management, exotic species, pollution, human population issues, measuring genetic diversity, attitudes towards nature, ex-situ conservation, and ecosystem restoration.

Enforced Prerequisite at Enrollment: BIOL 220W or FOR 308 or WFS 209
Cross-listed with: WFS 430

FOR 431: Conservation Genetics

3 Credits

This course will provide a comprehensive overview of evolution and conservation genetics, an interdisciplinary science that focuses on understanding the processes that influence genetic diversity at the individual and population levels. Foundational concepts in evolutionary ecology, population, and quantitative genetics, and tools described therein will be applied to conservation design, management, and restoration strategies for species of conservation or commercial importance to address real-world challenges in conservation science. This course will cover issues including inbreeding, climate change, invasive species, conservation of threatened and endangered species, adaptation and climate change, and habitat restoration using examples from a broad range of biological systems.

Enforced Prerequisite at Enrollment: BIOL 110
Cross-listed with: WFS 431

FOR 439: Timber Sale Administration

3 Credits/Maximum of 3

This course provides hands-on experience with all of the activities associated with overseeing a timber sale, including the legal aspects of arranging a sale, marking timber and calculating volume, road and sale layout, best management practices, inspections, harvesting equipment, working with contractors and loggers, and liability issues. The objectives of the course are to 1) obtain and translate a property deed onto the ground and create a professional map of the timber sale area; 2) design a timber sale, including cutting boundaries, skid trails, haul roads, and landings such that site impact is minimized, harvesting efficiency and safety is maximized and productivity is maintained; 3) collect sufficient information for a professional timbersale prospectus, including which harvesting systems would be best suited to the situation; 4) complete an erosion and sedimentation plan, a stream crossing permit, and local harvesting ordinance requirements; 5) develop a timber sale contract and a landowner-consultant contract to protect all parties and address all possible legal scenarios; 6) work with, inspect, supervise and provide meaningful feedback to harvesting, road building, and herbicide application contractors; 7) retire a timber sale area to prevent erosion, create habitat variety and/or recreational opportunities, and maintain aesthetic qualities.

Enforced Prerequisite at Enrollment: (FOR 203 or FORT 150) and [FOR 266 or (FORT 105 and FORT 110)]

FOR 440: Forest and Conservation Economics

3 Credits

This course focuses on economic and financial concepts and tools used in managing forests and natural resources. Specifically, students will: a) use financial tools including cost-benefit analysis to analyze forest investments, b) recognize forest-related business operations and management issues, c) apply economic principles to forest and natural resource management decisions including environmental and nonmarket valuation methods, and d) discuss current issues in forest management and economics such as climate change, bioenergy and tropical deforestation. Students will carry out a case study of a forest-related business.

Enforced Prerequisite at Enrollment: AGBM 101 or ECON 102 or ECON 104

FOR 442: Forest Conservation: Principles and Practices

3 Credits

Forest conservation is the promotion and maintenance of healthy, resilient, and functioning forest ecosystems that ensure the continued provision of high-quality ecosystem services and socio-economic benefits. To achieve desired conservation outcomes, on-the-ground forest practices must comply with minimum standards detailed in regulatory and/or voluntary management guidelines (i.e., Best Management Practices, BMPs) to not be harmful to the environment or local people. Further, many private and public forest management entities follow voluntary global and national third-party forest certification schemes that promote environmentally responsible management of the world's forests. Compliance with certification standards is evaluated through annual field audits as the central element to verify that forest operations meet sustainability criteria. Because timber harvesting now constitutes the predominant disturbance regime in northeastern forests, poorly planned,

timed, and executed logging operations constitute the most serious threat to forest conservation and sustainability in managed forests and thus receive particular scrutiny in field audits. Foresters must therefore ensure that forest practices do not injure advance tree regeneration and ground flora, damage structural legacies such as residual trees and deadwood, reduce the potential to sequester carbon, undermine biodiversity and wildlife goals (e.g., breeding success), or adversely affect soil structure and site productivity (e.g., compaction and soil erosion), water quality, wetlands, riparian areas, visual quality, and cultural and spiritual values. This course traces the evolution of forest conservation and sustainability and introduces students to modern, low impact timber harvest systems and a variety of other forest practices intended to safeguard biodiversity, maintain the productive capacity of forests, and protect soil and water resources. Students will become familiar with BMPs and principles, criteria, and sustainability indicators of common certification schemes. These indicators are the basis for planning and conducting field audits following harvesting operations that evaluate to what extent the intent various BMPs and certification standards have been met.

Enforced Prerequisite at Enrollment: BIOL 220W or FOR 308 or 7th semester standing or higher

FOR 445: Wildlife Habitat Management

3 Credits

This course covers concepts of wildlife habitat ecology and management. Topics include the relationship between wildlife and their habitat, identification of important plant structure and composition, quantifying vegetation structure at both stand and landscape scales, understanding disturbance ecology as a basis for habitat management practices (e.g., silvicultural applications and prescribed burning), and determining how specific management practices can be used to achieve future habitat goals and objectives.

Enforced Prerequisite at Enrollment: FOR 203 or FORT 150
Recommended Preparation: WFS 310 or FOR 421

FOR 450W: Human Dimensions of Natural Resources

3 Credits

Addresses human needs and desires, from individuals to nations, for social, ecological, and economic benefits derived from natural resource decisions.

Prerequisite: 6 credits of social and behavioral sciences
Writing Across the Curriculum

FOR 455: Remote Sensing and Spatial Data Handling

3 Credits

FOR 455 is an advanced remote sensing and geospatial technology course emphasizing the use of remote sensors and geographic information systems to study the Earth's land surface. The course emphasizes the use of these technologies primarily in the context of forestry but also in the broader context of natural resources management. Remote sensing technologies that are emphasized include aircraft and satellite-borne sensors in the visible and near-infrared portions of the electromagnetic spectrum, as well as active sensing devices like lidar (Light-detection and Ranging) technology. Students gain proficiency in the use of advanced remote sensing/image processing and

geographic information systems (GIS) software to display, analyze, and map land surface features.

Enforced Prerequisite at Enrollment: FOR 255 or FORT 260 or GEOG 160 or GEOG 260 or WILDL 211

FOR 465: Restoration Ecology

4 Credits

Restoration ecology is a discipline that integrates principles from ecology, engineering, landscape architecture, economics and other select social sciences to repair ecosystems that have been degraded, damaged, or destroyed. The goal of restoration is to restore the structure of biological communities and the ecological functions and ecosystem services they provide to society. This course will cover the field of restoration ecology for students who see themselves someday practicing or participating in restoration projects during their careers. The course will cover the conceptual and theoretical foundations that underlie restoration efforts and link these to real-world applications in past and ongoing restoration projects in a variety of types of ecosystems. Examples of local and regional restoration projects will be used to reinforce principles discussed in class.

Enforced Prerequisite at Enrollment: BIOL 110 or FOR 203
Enforced Concurrent at Enrollment: BIOL 220W or FOR 308
Recommended Preparation: 3 credits in statistics
Cross-listed with: WFS 465

FOR 466W: Forest Management and Planning

3 Credits

Students learn the rationale, processes, and tools for forest management decision-making and planning. Developing and communicating forest plans for forested properties. FOR 466W Forest Management and Planning (3) Students learn the rationale, processes, and tools for forest management decision-making and planning. They learn to identify and obtain information needed for management decision-making and planning. They learn to develop management alternatives and to use appropriate data and tools to evaluate those alternatives. Students learn to apply financial analysis to evaluate the financial viability of stand-level forest management activities. Students develop and write forest management plans for small (< 250 acres) and large (> 250 acres) forested properties. Students identify how alternative forest management objectives are balanced in developing management plans. Students evaluate and critique public agency forest management plans.

Enforced Prerequisite at Enrollment: (FOR 255 or FORT 260 or WILDL 211) and FOR 421 and FOR 440
Writing Across the Curriculum

FOR 470: Watershed Management

3 Credits

Management of wild land watersheds for control of the amount and timing of water yield, water quality, erosion, and sedimentation. FOR 470 Watershed Management (3) In FOR 470 Watershed Management students are expected to learn the fundamentals of watershed hydrology and how management of natural resources, especially forest resources, can be adapted to protect and enhance the natural flow, quantity and quality of water resources. Emphasis is placed on acquisition of available hydrologic and climatic data over the internet, solving basic hydrologic problems using the proper units, writing short essays

summarizing assigned papers or lectures, and in-class tests on managing impacts of timber harvesting, road construction, application of forest chemicals, and other land uses activities. The course is primarily, but not exclusively, intended as a course for upper-level undergraduate and graduate students in forest resources and wildlife and fisheries majors or other majors such as ERM with related natural resources backgrounds and interests. The course is a Prescribed Course for Forest Resources undergraduates in the Forest Management and Watershed Management options and is a Water Science breadth course for students in the Graduate Option in Watershed Stewardship. A companion one-credit course FOR 471 -Watershed Management Laboratory - may be taken concurrently with or following FOR 470. This course is offered each Spring Semester and generally has an enrollment of about 80-90 students.

Enforced Prerequisite at Enrollment: 3 credits in SOILS

FOR 471: Watershed Management Laboratory

1 Credits

Introduction to hydrologic and climatic measurements and computations useful in watershed management.

Enforced Concurrent at Enrollment: FOR 470

FOR 475: Principles of Forest Soils Management

3 Credits

Effect of current forest management practices on the properties and productive capacity of forest soils.

Enforced Prerequisite at Enrollment: FOR 308 and 3 credits in SOILS

FOR 477: Field Methods in Watershed Ecohydrology

3 Credits

The fields of watershed hydrology and ecohydrology, and the careful management of forested watershed and their water resources, rely heavily on observations and accurate time series data. The collection of reliable data is a career unto itself, and the proper understanding of field methods is equally important in the prudent use of ecohydrological data. This course is intended for upper-level undergraduate students and will give a detailed introduction to and experience with field methods and calculations of important fluxes in watershed ecohydrology. Topics will span the hydrologic cycle from evapotranspiration to the partitioning of precipitation, groundwater, and streamflow, as well as water quality. Detailed units will include measurements of rainfall, evapotranspiration, and streamflow, pipe flow through culverts on forest roads, water quality sampling as well as a host of tree-soil-water fluxes including canopy throughfall, stemflow, and sapflow.

Enforced Prerequisite at Enrollment: FORT 240 or 3 credits in SOILS

Enforced Concurrent at Enrollment: FOR 470

FOR 480: Policy and Administration

3 Credits

Forest resources policy objectives; criteria and goals of society; policy implementation by ownership classes; planning, administration, and evaluation of programs.

Prerequisite: 3 credits of social or behavioral science

FOR 488Y: Global Forest Conservation

3 Credits

Ecological, economic, technological, and political aspects of forested ecosystems in a global context, emphasizing tropical and developing countries. FOR 488Y Global Forest Conservation (3) Forested ecosystems cover one third of world's land area, and about two billion people depend on forest products for their livelihood. Students in this course will learn about trends in global forest cover, human demands on forests in different parts of the world, and how national and international institutions and policies regulate forest use. Topics covered include tropical deforestation, biodiversity, climate change, poverty, forest production and trade. Students come away from the course with an understanding of the diversity of forestry practices around the globe.

Prerequisite: 3 credits in natural sciences, and 3 credits in social and behavioral sciences

International Cultures (IL)

Writing Across the Curriculum

FOR 489: Supervised Experience in College Teaching

1-3 Credits/Maximum of 3

The Supervised Experience in College Teaching course provides select undergraduate students with formal, supervised teaching experience in a Forestry (FOR) course. Faculty recruit students who excel in a particular course to serve as undergraduate teaching assistants for subsequent offerings of that course. Duties may include serving as peer tutors, teaching assistants, or laboratory assistants, and developing and/or evaluating course activities and materials. Students participating in this course will develop a deeper understanding of the focus course material by actively helping to teach the material. The course is only available to students who are invited to serve as teaching assistants for a Forestry course and enrollment is by permission of the instructor.

Enforced Prerequisite at Enrollment: Permission of program

FOR 494: Undergraduate Research

1-12 Credits/Maximum of 999

Supervised student activities on research projects identified on an individual or small group basis.

Enforced Prerequisite at Enrollment: Permission of the Forest Ecosystem Management Program

FOR 494H: Honors Thesis Research

1-6 Credits/Maximum of 999

Independent study directed by a faculty supervisor that culminates in the production of a Forestry honors thesis. This course is the means by which Forest Ecosystem Management honors students receive credit for thesis research. The course involves research and other scholarly activities (such as writing) necessary for completion of an approved honors thesis.

Enforced Prerequisite at Enrollment: Enrollment in the Schreyer Honors College and permission of a Forest Ecosystem Management honors adviser
Honors

FOR 495: Forestry Internship

1-6 Credits/Maximum of 6

Supervised field experience related to the student's major.

Enforced Prerequisite at Enrollment: Approval of proposed assignment by instructor prior to registration
Full-Time Equivalent Course

FOR 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

FOR 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

FOR 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

French (FR)

FR 1: Elementary French I

4 Credits

Grammar, with reading and writing of simple French; oral and aural work stressed. Students who have received high school credit for two or more years of French may not schedule this course for credit, without the permission of the department.

Bachelor of Arts: World Language (All)

FR 2: Elementary French II

4 Credits

Grammar and reading continued; oral and aural phases progressively increased. Students who have received high school credit for four years of French may not schedule this course for credit, without the permission of the department.

Bachelor of Arts: World Language (All)

FR 3: Intermediate French

4 Credits

Grammar, reading, composition, oral and aural exercises.

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

FR 51: Elementary Intensive French I for Graduate Students

3 Credits

Intensive introduction to French: first half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. FR 051 Elementary Intensive French I for Graduate Students (3) This is the first in a series of three courses designed to give students an intensive introduction to French. This is the first half of elementary sequence in reading, writing, speaking, listening, and cultural contexts. Students will learn the French vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

Prerequisite: graduate standing

FR 52: Elementary Intensive French II for Graduate Students

3 Credits

Intensive introduction to French: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. FR 052 Elementary Intensive French II for Graduate Students (3) This is the second in a series of three courses designed to give students an intensive introduction to French. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the French vocabulary. Lessons are taught in an authentic cultural context.

Prerequisite: FR 051 or equivalent, and graduate standing

FR 53: Intermediate Intensive French for Graduate Students

3 Credits

Continued intensive study of French at the intermediate level: reading, writing, speaking, listening, cultural contexts. FR 053 Intermediate Intensive French for Graduate Students (3) This is the third in a series of three courses designed to give students an intermediate intensive knowledge of French. Continued intensive study of French at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

Prerequisite: FR 052 or equivalent, and graduate standing

FR 83: First-Year Seminar in French

3 Credits

Critical approaches to the dimensions and directions in French/ Francophone literatures and cultures. FR 083S First-Year Seminar in French (3) (GH;FYS;L)(BA) This course meets the Bachelor of Arts degree requirements. Through the reading of texts, discussions (in-class, study groups, listservs), debates, and collaborative research projects, students are introduced [a] to French/Francophone literatures and/or cultures; [b] to the humanities and to the nature of research and scholarship; [c] to cross-cultural issues (international); and [d] to scholarly conduct and responsibilities. Students develop international competence by cultivating curiosity about and empathy for other cultures; by recognizing that social variables, such as age, gender, social class, religion, ethnicity, race, sexual orientation, and place of residence, affect the way people view the world, behave, and communicate; and by developing the ability to locate, organize, and evaluate information about the culture(s) from a variety of sources (print, electronic, people, personal observations). The points of departure for the development of all of these competencies are literary and cultural texts from France and French-speaking regions/ countries of the world. All texts are in translation, and knowledge of the

French language is not required. Students will be evaluated through written essays, quizzes, class discussions, and a collaborative group project. This course will prepare the students for other courses in the humanities by giving them the opportunity to gain insights into the study of the humanities through literary and cultural texts. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them including the opportunity to develop relationships with faculty and other students who share their academic interests. The Department of French plans to offer three (twenty student limit per seminar) first-year seminars per academic year. The course fulfills the first-year seminar requirement as well as one of the humanities requirements in general education or a Bachelor of Arts humanities requirement. This course does not require any special facility or equipment to be taught effectively.

Bachelor of Arts: Humanities
International Cultures (IL)
First-Year Seminar

FR 111: Elementary French

6 Credits

Acquisition of basic skills in the active use of French: listening, speaking, reading, and writing.

Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Bachelor of Arts: Humanities
Exceeds 12th Unit of World Language

FR 112: Intermediate French

6 Credits

Reinforcement of basic skills previously acquired in the active use of French in FR 111.

Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Exceeds 12th Unit of World Language

FR 121G: Fundamentals of Reading French

3 Credits

Instruction in fundamental skills required for reading expository French prose, primarily for research purposes. (This course may not be used to satisfy any baccalaureate degree requirements. No graduate credit is given for this course.)

Prerequisite: seventh-semester standing
Bachelor of Arts: Humanities

FR 122G: Practice in Reading French

3 Credits

Development and reinforcement of basic reading skills, with emphasis on the individual student's area of research. (This course may not be used to satisfy any baccalaureate degree requirements. No graduate credit is given for this course.)

Prerequisite: FR 121G

Bachelor of Arts: Humanities

FR 137: Paris: Anatomy of a Global City

3 Credits

Exploration of the cultural, artistic, literary, and social life of the city of Paris. FR 137, taught in English, is an introduction to the cultural, artistic, literary, and social life of the city of Paris that pays particular attention to its transnational influences. We will explore painting, sculpture, architecture, music, dance, theater, literature, and the graphic novel as well as the history and geography of Paris. Looking at pivotal moments both past and present, the course examines what has made the city and its people through the ages. Students will read representative texts from every period and be exposed to artistic and social movements through visual presentations, films, and virtual tour.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)

GenEd Learning Objective: Key Literacies

FR 138N: French Culture Through Film

3 Credits

This course presents a survey of important cultural and historical moments in France with a special emphasis on the ways in which these moments are represented in film. The course has a dual focus: 1.) a chronological and historical overview of major moments in 20th and 21st century French history as they have been represented, imagined and presented through the selected films and 2.) the artistic and cinematic movements and concepts that inform our understanding of these films. Beginning with WWI, the historical trajectory outlined by the course will cover the Interwar period, the Occupation and Liberation, the consumer culture of France in the 1950s, France as a former colonial power and the Algerian war, France in the 60s, May 1968, France in the 1970s and les trente glorieuses, Mitterrand's 1980s, and Immigration and French identity. We will grapple with these historical moments as they have been filtered through the lens of cinema. Our attention will remain focused both on the historical time periods in which the films of the course were made as well as the moments they are representing. Our approach to the filmic corpus of the course will be one that seeks to understand and situate the films within the broader context of the aesthetic movements that have characterized film both within France and in world cinema. Movements and moments such as Poetic Realism, Neorealism, the French New Wave, Left-Bank filmmaking, cinema vérité, documentary filmmaking and le ciné du Look will serve as an artistic backdrop and provide a framework for understanding the cinematic choices of the directors studied. No prior coursework in film is required; FR 138 will introduce students to the special vocabulary and building block concepts that allow them to deeper comprehend and analyze film on a formal basis. Concepts covered include mise en scène, editing, approaches to narrative, dialogue and soundtrack, lighting, set pieces, characterization, camerawork, CGI special effects, and the technology of film making. Students can expect to come away with a set of tools to analyze not only other French films but also visual texts in general.

FR 139: France and the French-speaking World

3 Credits

An introduction to the culture of France and its impact on the world. FR 139 France and the French Speaking World (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. By studying the artistic, social and intellectual components of the French cultural ethos, the undergraduate student will develop an appreciation of a major Western European humanistic tradition and its impact and adaptation on several continents. The notion of a national culture, which has become an international phenomenon integrates a broad spectrum of subject areas in the arts, humanities, and social sciences. The elements to be articulated embrace: socioeconomic, linguistic, and demographic profiles, social stereotypes (internal, external, and colonial), social structures (family, gender, childhood/old age), and selected "high" and "popular" cultural themes (cuisine, architecture, dress, painting, social philosophy). Using today's metropolitan French culture as a point of departure, and its historical legacy, the course will explore the consequences of French cultural hegemony in various French-speaking areas (Belgium, Switzerland, North and West Africa, North America, Maghreb-Middle East, Orient). In brief, the course introduces Penn State students to the dynamics of cultural pluralism, a crucial acquisition in today's "global village."

FR 142: French Fiction, Drama, and Film (In English)

3 Credits

An introduction, in English, to French and francophone literature and cultural history through film, theater, and literature. FR 142 French Fiction, Drama, and Film (in English) (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Taught entirely in English with no assumption of prior knowledge of French, this course is a broad introduction to French/francophone literature and cultural history through a selection from the best-known authors and famous masterpieces of the French-speaking world. The course promotes an informed reflection on narratives, plays, and films; develops critical methods for enjoying all three genres; and may be complemented with FR 137, 138, and/or 139. The course will satisfy a General Education humanities and International Cultures requirement for students in all majors except French and Francophone Studies.

Bachelor of Arts: Humanities
 International Cultures (IL)

FR 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

FR 199: Foreign Study--French

1-12 Credits/Maximum of 12

Intensive postintermediate grammar review, with emphasis on oral skills and vocabulary building.

 Bachelor of Arts: Humanities
 International Cultures (IL)
 Exceeds 12th Unit of World Language

FR 201: Oral Communication and Reading Comprehension

3 Credits

Emphasis on oral skills and reading for total comprehension. FR 201 Oral Communication and Reading Comprehension (4) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to improve French language skills, with an emphasis on speaking and reading. It aims to hone students' ability to understand a wide array of native speakers and to expand their active vocabulary; to foster discussion and debate in a range of formats; to enhance the ability to analyze films and literary texts; and to increase awareness of historical and contemporary cultural issues. It also provides opportunities for reviewing selected grammatical points and for practicing writing short interpretive and imaginative exercises. Students draw on written texts, videos, the Web, and other media to explore cultural and literary aspects of France and the Francophone world from a variety of perspectives. Evaluation methods include individual oral and written exams (30%); formal debates (20%); quizzes and homework assignments (10%); class attendance and participation (20%); and a final oral presentation (20%).

Prerequisite: FR 003 or FR 112

Bachelor of Arts: World Language (All)
 Bachelor of Arts: World Lang (12th Unit)
 International Cultures (IL)
 Exceeds 12th Unit of World Language

FR 202: Grammar and Composition

3 Credits

Grammar review and writing of short essays.

International Cultures (IL)

Exceeds 12th Unit of World Language

FR 301: Advanced Grammar And Conversation

3 Credits

FOR MAJORS, MINORS, AND OTHERS WITH ADEQUATE PREPARATION; INTENSIVE GRAMMAR REVIEW, COMPOSITION, AND CONVERSATION.

FR 316: French Linguistics

3 Credits

Survey of the theory and methods of linguistics as they apply to the major subfields. FR 316 French Linguistics (3) The goal of this course is to provide the undergraduate student with a solid overview of the theory and methods used by linguists seeking to develop a formal account of French grammar. Specifically, the student will become acquainted with the basic assumptions of the field (e.g. the prescriptive/descriptive distinction, the notion of competence versus performance, various methods of data collection, and the notion of Universal Grammar). In addition, a selection of the major subfields of linguistics will be surveyed (these include: phonetics, phonology, syntax, semantics, and morphology with the focus being on the linguistic rules found in the French language).

Prerequisite: FR 201 , FR 202

FR 331: French and Francophone Culture I

3 Credits

French and francophone history and culture from the Middle Ages until the French Revolution. FR 331 French and Francophone Culture I (3) (IL) This course, which fulfills the Humanities requirement within the Bachelor of Arts degree, will present a survey of French and francophone culture and civilization from the Middle Ages up to the French Revolution. The course aims to familiarize students with the major events and themes in French and francophone history of this period; prominent artistic and other cultural developments; and social and daily life. Students will gain a rich appreciation of this time period through frequent exposure to web sites, films, music and other audio-visual materials. Taught in French, the course also aims to help students develop further facility in written and spoken French through a combination of readings, writing assignments, class lectures, conversation and in-class activities. The course is designed as a complement to the French and francophone literature survey sequence. In addition, it serves as an important basis for 400-level language, literature and culture courses.

Prerequisite: FR 201 , FR 202

Bachelor of Arts: Humanities

International Cultures (IL)

FR 332: French and Francophone Culture II

3 Credits

French and francophone history and culture from the French Revolution through the Third Republic. FR 332 French and Francophone Culture II (3) (IL) This course, which fulfills the Humanities requirement within the Bachelor of Arts degree, will present a survey of French and francophone culture and civilization from the French Revolution to the collapse of the Third Republic with the onset of World War II. The course aims to familiarize students with the major events and themes in French and francophone history of this period; prominent artistic and other cultural developments; and French social and daily life. Students will gain a rich appreciation of this period through frequent exposure to web sites, films, music and other audio-visual materials. Taught in French, the course also aims to help students develop further facility in written and spoken French through a combination of readings, writing assignments, class lectures, conversation and in-class activities. The course is designed as a complement to the French literature survey sequence. In addition, it serves as an important basis for 400-level language, literature and culture courses.

Prerequisite: FR 201 , FR 202

Bachelor of Arts: Humanities

International Cultures (IL)

FR 351: French and Francophone Literature I

3 Credits

This course presents a survey of selected works of French and francophone literature from the Middle Ages to 1789. It aims to familiarize students with major literary works of this time period through close textual reading and analysis. Taught in French, it also aims to help students develop an appreciation for a wide variety of styles, genres, themes, literary movements, and historical contexts. It also serves to develop students' written and oral language skills. This course is designed as a complement to the French and francophone culture sequence.

Prerequisite: FR 201 , FR 202

FR 408: French-American Business Translation

3 Credits

Translation from French to English of actual documents from the business world; theoretical consideration and systematic vocabulary building.

International Cultures (IL)

FR 409: French for Professional Purposes

3 Credits

This course prepares students to use French in a variety of professional contexts and situations via a series of interpersonal, interpretive and presentational tasks. The focus is on real world language use and developing language proficiency so that students can interact professionally with French speakers in various business, medical, scientific, environmental and humanitarian contexts. The class will work on creating materials such as a French-language cv, a cover letter and other documents that will be of use to them in their specific careers. Additionally, students will engage in a hands on group simulation project in which they create and market a start up.

Prerequisite: FR 202 or FR 201

Bachelor of Arts: Humanities
 International Cultures (IL)

FR 410: French Press

3 Credits

Extensive readings of selected french daily and weekly newspapers and magazines, along with newscast viewings. FR 410 French Press (3) (IL) This course, which is taught in French, is designed to introduce students to the history and current state of French press and media (including newspapers, magazines, radio and television) while introducing them to French society and culture through media coverage of current and recent events. The course is also designed to help students perfect reading, writing and oral communication in French. The course starts with a brief history of the press in France, including the creation of dailies such as Le Journal de Paris and the impact of some well-known journalists or writers upon events such as the Dreyfus Affair. It will then focus more specifically upon the origins of high-circulation, contemporary newspapers and magazines. Quickly moving to the post-WWII period, students will be introduced to radio and television in France and, as they become more familiar with French and Francophone press and media, will be given several opportunities to study current or recent events of the French and Francophone world, in fields such as sports, politics, culture and economics. Library holdings and internet sites will allow the class to regularly read daily newspapers such as Le Monde and Le Figaro and view newscasts on channels such as TF1 and FR2. Once they are familiar with the available resources, students will share research with fellow classmates through oral presentations, for example in the form of simulated newscasts. Students will also develop with the guidance of the instructor an independent, final paper which will explore some aspect of the French press and media. One of several departmental offerings in the area of French Civilization, FR 410 course can be used to fulfill

a 400-level requirement for the French Business, French-Engineering, Applied French, and French Language and Culture options, as well as for the French minor. By covering the way in which the range of social identities and the cultural beliefs and values of French-speaking peoples are reflected in various media, and by assisting students in finding and assessing information about current events in the Francophone world, the course can also fulfill an 'IL' requirement. Evaluation methods include a series of short quizzes to cover historical and factual data; a short midterm paper based on primary (newspaper-based) research; a longer final paper based on primary and secondary research; other written work of a short-response nature; a group oral presentation summing up the previous week's news and events; and participation, including presence. The course is offered once a year, usually in the spring semester.

Prerequisite: FR 331 or FR 332

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

Bachelor of Arts: Humanities

International Cultures (IL)

Exceeds 12th Unit of World Language

FR 417: French Phonology

3 Credits

A formal study of the sound pattern of French. FR 417 French Phonology (3) (IL) The goal of this course is to present an introduction to the linguistic analysis of the sound pattern of French as it is actually spoken by real speakers. by the end of the semester, the student should be able to: -transcribe French phonetically; -understand the articulatory characteristics of French and how these differ from English; -describe the relationship between French spelling and phonology -examine what gives us accent in French; -discern patterns of pronunciation in different varieties of the language; -analyze real speakers' pronunciation on your own; -create your own teaching/learning unit about some aspect of French phonology
Evaluative Methods: Student performance in this course is generally based on a series of assignments, quizzes, transcriptions, a research project and presentation, an evaluation of other students' presentations, and preparation/participation.

Prerequisite: FR 201 , FR 202

Bachelor of Arts: Humanities

International Cultures (IL)

FR 418: French Syntax

3 Credits

A formal theory of word order and related issues in French grammar. FR 418 French Syntax (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The aim of this course is to provide the upper level undergraduate student with the background needed to understand modern generative syntactic theory, as well as to eventually enable him or her to do creative and informed research in this area. Roughly three-quarters of the semester will be devoted to an in-depth overview of the historical development of generative syntax, focusing particularly on modern Chomskyan theory - the so-called Minimalist Program. The remainder will build upon and round out this knowledge of syntax by exploring in depth a number of topics that any syntactician must be familiar with in order to do informed research in the field. This section of the course will involve lectures based on close readings of articles and book chapters exploring such topics as the syntax of negation, raising verbs, auxiliary verbs, adverbs, middle constructions, and/or verb

movement. (Only a subset of these topics will be discussed, selected on the basis of student interest.)

Prerequisite: FR 201 and FR 202

Bachelor of Arts: Humanities

International Cultures (IL)

FR 419: French Semantics

3 Credits

The study of meaning in human language with a special focus on how it is encoded in French. FR 419 French Semantics (3) The aim of this course is to provide upper level undergraduate students in French with a relatively informal introduction to the field of semantics as it applies to the French language. Semantics is the subfield of theoretical linguistics that seeks to make explicit the rules native speakers use to interpret stable aspects of the meaning of natural language sentences. The course will begin by comparing and contrasting semantic and pragmatic aspects of meaning -an important undertaking since only the former are assumed to be subject to invariable rules of grammar. The conclusions reached in this portion of the course will then be extended to account for a very special type of language -humor -in a particular context, France. That as, it will be shown that a more complete understanding of this linguistic behavior entails recognition of the relative contributions of pragmatics and semantics. We will then turn to a survey of the classic model-theoretic approach to lexical and compositional aspects of semantic meaning, with important (sociolinguistic) refinements to the standard approach to lexical semantics being discussed in detail. With a survey of the fundamentals of the field in place, we will then undertake an investigation of specific topics in semantics, looking first at the status of thematic roles in semantic theory (focusing on work by David Dowty). Here we will examine the important implications his work holds for the initial mapping of arguments into sentence structure, not only for primary transitive verbs, but also unaccusative and psych-verbs. We will then examine current analyses of causation in French, certain aspectual distinctions, and semantic, pragmatic, and syntactic approaches to negative and positive polarity items, n-words, and minimizers.

Prerequisite: FR 316

FR 430: Contemporary France

3 Credits

This course surveys contemporary French historical, cultural, economic, and political changes from the end of WW II to the present day. A significant portion of the course is devoted to examining key events and transformations of the time period. The second half explores major themes that emerge from the evolutions characterizing these tumultuous decades. Taught entirely in French, students will gain an understanding of and an appreciation for modern France through exposure to web sites, films, music, and authentic written texts.

Prerequisites: FR 331; or FR 332; or FR 332H

Bachelor of Arts: Humanities

International Cultures (IL)

FR 436: French and Francophone Theater

International Cultures (IL)

FR 445Y: Self and Society in Eighteenth-Century France

3 Credits

The changing relationship of the individual to society in pre-Revolutionary France will be explored in texts by major writers.

Prerequisite: FR 331 or FR 351 or FR 352 or FR 332
Bachelor of Arts: Humanities
International Cultures (IL)
Writing Across the Curriculum

FR 452Y: Nineteenth-Century French Literature

3 Credits

Selected readings in romanticism, realism, and symbolism, including Balzac, Stendhal, Sand, Baudelaire, and others, with emphasis on cultural issues. FR 452Y Nineteenth-Century French Literature (3) (IL) This course offers an overview of Nineteenth-Century French literature. It includes reading material representative of the major literary movements of the period (romanticism, realism, symbolism). It also gives students a chance to examine a great variety of literary genres (novels, plays, short stories, poems, children's narratives among others). In addition to developing close textual reading skills, emphasis is placed throughout the semester on the larger relationship between literary production, aesthetics and Nineteenth-Century history (political systems, education, social transformations, industries and technologies, etc.). Anthologies and complete texts will be used.

Prerequisite: FR 331 or FR 332 or FR 351 or FR 352
Bachelor of Arts: Humanities
International Cultures (IL)
Writing Across the Curriculum

FR 453Y: La Belle Epoque: Politics, Society, and Culture in France, 1880-1914

3 Credits

Interdisciplinary perspectives on the politics, society, and culture of France, 1880-1914. FR 453Y LaBelle Epoque: Politics, Society, and Culture in France, 1880-1914 (3) (IL) The goal of this course is to present and analyze the period of extraordinary changes in all domains known as the "Belle Epoque." The starting point for an examination of these changes is Guy de Maupassant's novel, *Bel-Ami* (1885), which describes the social and professional ascension of an egotistical Parisian parvenu, Georges Duroy. The reading of this novel will allow us at the same time to study in detail one of the novel's protagonists: Paris. Through our discussions and through consideration of a wide range of primary and secondary texts, we will examine the complex rapport between literature (as well as art) and society at the end of the nineteenth century, and

we will attempt to answer questions such as: how did the changing Parisian landscape inspire the authors, artists et musicians of this era? How did the new Parisian space encourage the development of new "places of pleasure" cafes, cabarets, cafes-concerts, theaters, racetracks, restaurants, etc.? How did innovations in architecture and the decorative arts, which flourished under the name of Art Nouveau, reflect both social developments and the transforming profile of Paris? What was, in fact, the new social and artistic geography of the capital?

Prerequisite: FR 351 or FR 352
Bachelor of Arts: Humanities
International Cultures (IL)
Writing Across the Curriculum

FR 458: African Literature of French Expression

3 Credits

Genesis of Franco-African literature in the 1930s; phases of the negritude movement; colonial and national literature. FR 458 African Literature of French Expression (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. African literature in French is one of the most vigorous of the many new literatures in French that are emerging throughout the vast francophone world. Writers from a variety of countries, from Senegal to Djibouti, from Algeria to Congo, are producing works in French, that reflect their own very distinct cultural experiences. They must often modify both the French language and traditional Western genres such as the novel to convey African ways of speaking and narrating. In this course, students will read novels, poems and an epic that has been translated into French from an African language. The subjects range from autobiographical accounts of growing up in an African town and going off to Europe to study during the colonial era to sharp criticism of both the French colonial regime and the subsequent national governments that took over after independence, an event that occurred in 1960 in most francophone African countries. For the new wave of women writers that has emerged on the literary scene in the last two decades, more personal themes such as love, family, personal freedom, and the task of balancing traditional customs with the needs of contemporary life in large cities have marked their works. Students who take this course will discover the diversity of African literature written in French, the traits that distinguish this literature from metropolitan French literature, the links between the oral tradition and the written tradition, and the changing role of women in society today. Students will be evaluated on written essays, submission of questions in advance of classroom discussion of each work, presentation of a talk in class on some aspect of the works read, a midterm and final exam. French 458 satisfies the literature course requirements in the French major and the 400-level course requirement in the French minor. It can also satisfy the diversity requirement for General Education. FR 458 will be offered once a year with 18 seats per offering.

Prerequisite: FR 331 or FR 332 or FR 351 or FR 352
Bachelor of Arts: Humanities
Bachelor of Arts: World Cultures
International Cultures (IL)

FR 460: Contemporary French Literature

3 Credits

Major authors and movements in French novel, drama, and poetry from Proust to the present. FR 460 Contemporary French Literature (3) This course is designed for advanced undergraduate work and it is taught in French. To function well in this course, students need to have passed

an intermediate introductory course to French literature. The primary goal of FR 460 is to facilitate students acquisition of a coherent view of major contemporary literary movements, from modernism in poetry and drama, through surrealism, both lay and Christian humanistic fiction, and existentialism, to the absurd theatre, the nouveau roman, and post-modernism, écriture feminine, anti-colonial and post-colonial literatures. Major authors are presented thru one of their works, taking into account the cultural, historical context in which they were developed. Instruction also comprises an initiation to basic theoretical notions on genres, literary techniques, and critical reading methodology. Contents will vary according to instructors choices but balance between periods, movements and genres is implied. Multi-media resources abound for the purpose of illustration and interdisciplinary considerations but the primary thrust is cultural/ literary enrichment, and the development of students reading and analytical skills in French. Web resources, excerpts, and shorter whole texts will be incorporated to the reading materials and will supplement the required books. Students are expected to read between ten and thirty pages according to the level of difficulty of the materials. No manual or anthology has been established a satisfactory choices for this course even though such tools exist, they generally do not treat the last third of the period properly. So FR 460 instructors have relied on a variety of primary texts to achieve as comprehensive yet coherent a survey of this overflowing century as possible. Occasionally a thematic approach has been attempted to introduce more cohesiveness in the selected readings but this must be combined with traditional, diacritical approaches so as to facilitate the students ability to see linkages between literature and history as well as other arts, as they pursue their French and other Liberal Arts majors.

Prerequisite: FR 331 or FR 351 or FR 332 or FR 352

Bachelor of Arts: Humanities

International Cultures (IL)

FR 470: Race and Gender Issues in Literatures in French

3 Credits

A critical presentation, taught in French, of changing ideas and values on race and gender in French and Francophone literatures. FR 470 Race and Gender Issues in Literature in French (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. In addition to presenting subject matter that fosters an appreciation of literatures written in French while exploring racial and gender-related aspects of French and Francophone cultures, this course aims at developing a sophisticated, analytical outlook on peoples of different races and cultures and on women as authors, subjects, and literary 'constrictions' evolving over time. It provides a sense of the historical development of these questions and the interconnectedness of literature with society, and culture. One example of the issues and selections is the vindication of women - including Middle Eastern and Biblical figures- in Christine de Pisan's City of the ladies, in the early 15th c.; it is shown to have links with the 1970 modernistic and satirical text by Monique Wittig, Les Guilbres. Other examples can be the famed surrealist negritude poetry of Aim Csaire of Martinique, or a classic saga of European Jews by Andr Schwarz-Bart, or the humorous narrative of an African boy in contemporary Paris by Calixthe Beyala. Evaluation is based on a balance of in-class and take home exams and a final paper. Participation is expected, including electronic communication with the instructor. Attendance and participation are assigned a significant proportion of the grade (20%) as is feasible and desirable in small classes with fifteen students or less. The class is led in French, the language of most materials presented, and it is designed primarily for French majors and minors. The literature is supported and illustrated with video excerpts and films available outside

class. Internet research is encouraged and expected. It is offered every three or four years, alternating with FR 471 (Francophone Women in Literature and Culture), or special topics courses and period-bound, advanced literature courses in French.

Prerequisite: FR 331 or FR 351 or FR 332 or FR 352

Bachelor of Arts: Humanities

International Cultures (IL)

FR 471: Francophone Women in Literature and Culture

3 Credits

Women's issues in literatures and cultures of French-speaking countries in Europe, the mediterranean, Africa, the Caribbean, and Quebec. FR 471 Francophone Women in Literature and Culture (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. In addition to presenting subject matter that fosters an appreciation of documents and literary sources in French by and about women of Francophone countries in the post-colonial and post-modern era, the course initiates students to researching authentic documentation on those cultures. This course aims at developing a sophisticated, analytical outlook on Francophone women of different ethnic backgrounds and cultures and on women as authors, subjects, and literary 'constructions' evolving over time. It provides a sense of the history of colonialism, slavery and Islam where Caribbean or African women are involved. One important component is sociological, demographic research and education. The Internet is a crucial tool for this course. The course contents varies by focussing on particular groups of women such as Caribbean or Islamic Francophone women. Evaluation is based on a balance of in-class and take home exams and a final paper. Participation is expected, including electronic communication with the instructor. Attendance and participation are assigned a significant proportion of the grade (20%) as is feasible and desirable in small classes with fifteen students or less. The class is led in French, the language of most materials presented, and it is designed primarily for French majors and minors. The printed sources and documents are supported and illustrated with video excerpts, films available outside class. Internet research is encouraged and expected. It is offered every three with 18 seats per offering, alternating with FR 470 (Race and Gender Issues in Literatures in French), or special topics courses ('The Francophone Short Story') and period-bound courses ('Twentieth Century French Literature'), advanced literature courses in French. This course fulfills the French major 400-level requirements in either the literature or the culture options, or the French minor similar requirement, and is also meant to fulfill the General Education requirement in race/gender and cultural diversity.

Bachelor of Arts: Humanities

International Cultures (IL)

FR 475: Women's History in Post-Revolutionary France

3-6 Credits/Maximum of 6

Women's history and creativity in post-revolutionary France.

Prerequisite: FR 332 or FR 352

FR 487: Topics in French Film History and Theory I: 1895-1945

3 Credits

Provide background needed to understand the broad outlines of French film history and theory in their first fifty years (1895-1945). FR 487

Topics in French Film History and Theory I: 1895-1945 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The aim of this course is to provide the upper level undergraduate student with the background needed to understand French film in the period up to the end of World War II. This will greatly aid the student in understanding French literature and culture of the period as well. Topics will include the invention of cinema and the early days of French film; adventure serials and commercial films; avant-garde and surrealist film of the 1920s and 30s; and finally, the period often considered the 'golden age' of French film, the 1930s and 40s, and the so-called 'poetic realism' movement. Films will be supplemented with readings in criticism by writers and filmmakers of the period, as well as by the scholarship of critics and theorists writing today. The course would allow upper-level undergraduate students to partially fulfill the 400-level course requirement for French majors and minors. This course may also be used to fulfill a requirement in the newly proposed Film Studies minor. A student's performance in this course will normally be evaluated through an in-class expose, two in-class essay tests, and a short research paper. The class will be offered once a year with 50 seats per offering.

Prerequisite: (COMM 250 or COMM 150) and (FR 331 or FR 332 or FR 351 or FR 352)

Bachelor of Arts: Humanities
International Cultures (IL)

FR 488: Topics in French Film History and Theory II: 1945-2002

3 Credits

Provide background needed to understand the broad outlines of French film history and theory in their second half-century (1945-2002). FR 488 Topics in French Film History and Theory II: 1945-2002 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The aim of this course is to provide the upper level undergraduate student with the background needed to understand French film in the period from the end of World War II to the present. This will greatly aid the student in understanding French literature and culture of the period as well. Topics will include the French commercial film of the early postwar period; the ground breaking film criticism of the 1950s, and the films it spawned (the early 'New Wave'); the later, more experimental films done in the later 1960s and 1970s by other critic-directors; and, finally, films made in more recent years specifically concerned with the historical memory of social trauma-the Occupation and Holocaust-and the possibility of the cultivation and preservation of this memory in and through the film medium. The analysis will include readings by critics (many of the filmmakers) writing at the time the films were made, as well as more recent scholarship and criticism. The course would allow upper-level undergraduate students to partially fulfill the 400-level course requirement for French majors and minors. It will be offered every other year. This course may also be used to fulfill a requirement in the newly proposed Film Studies minor. A student's performance in this course will normally be evaluated through an in-class expose, two in-class essay tests that will determine the student's analytical skills; and a short research paper. This course will be offered once a year with 50 seats per offering.

Prerequisite: FR 351 and FR 352 or COMM 250

Bachelor of Arts: Humanities
International Cultures (IL)

FR 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

FR 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities
Honors

FR 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor
Bachelor of Arts: Humanities

FR 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

FR 496H: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

FR 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

FR 499: Foreign Study--French

1-12 Credits/Maximum of 12

Advanced studies in French language and literature in a study abroad course.

Prerequisite: FR 201 , FR 202

Bachelor of Arts: Humanities
International Cultures (IL)

Fuel Science (FSC)

FSC 401: Introduction to Fuel Technology

3 Credits

An introduction to the scientific and engineering principles of fuel technology. For non-fuel science majors; fuel science majors will not receive credit.

Enforced Prerequisite at Enrollment: CHEM 112 and PHYS 211

FSC 431: The Chemistry of Fuels

3 Credits

Nature and properties of fossil and other fuels, including aerospace, in relation to use; preparation of fuels; by-products; fuel analysis. The course deals with the formation, composition and properties of the principal naturally occurring fossil hydrocarbons (coal, petroleum, natural gas), and their refining, upgrading, and conversion chemistry. The objectives of this course are to equip students with a fundamental knowledge of the chemistry for the fossil hydrocarbon resources and their energy use for transportation and stationary fuels as well as their use as chemical feedstocks. It also helps to prepare students for the challenges, opportunities, and changes in the world of energy and resource-related enterprises. The primary emphasis is on petroleum, natural gas, coal, and liquid transportation fuels. This is a required course for the Energy Engineering Major.

Enforced Prerequisite at Enrollment: (CHEM 202 or CHEM 210) and EGEE 302

FSC 432: Petroleum Processing

3 Credits

Transportation of people and goods in many parts of the world depend almost completely on petroleum fuels, such as gasoline, jet fuel, diesel fuel, and marine fuel. Apart from the fuels, materials that are necessary for operating the combustion engines of cars, trucks, planes, and trains also come from petroleum. These materials include lubricating oils (motor oils), greases, tires on the wheels of the vehicles, and asphalt to pave the roads for smooth rides in transportation vehicles. All petroleum fuels and many materials are produced by processing of crude oil in petroleum refineries. Petroleum refineries also supply feedstock to the petrochemicals and chemical industry for producing all consumer goods from rubber and plastics (polymers) to cosmetics and medicine. This course explains how physical processes and chemical reactions that take place in separate petroleum refinery units are integrated to convert crude oil into desired fuels and materials. Refinery processes are divided into four types that include separation, conversion, finishing, and support. The overall objective of petroleum refining is to convert crude oil into fuels and materials that comply with commercial specifications and environmental regulations. All refining processes and refinery operations are also subjected to the applicable environmental regulations. A historical evolution of process concepts is introduced to demonstrate how the refining efficiency has increased with significant reduction of pollutant emissions from individual refinery processes. The principal objectives of this course are to enable students to: 1. explain the market drivers for the refining industry (ABET student outcome 2). 2. indicate what crude oils consist of and how crude oils are characterized based on their physical properties (ABET 1, 2); 3. express the objectives of petroleum refining and classify the processes used in petroleum refining

(ABET 1, 2, 7); 4. demonstrate how a petroleum refinery works and sketch a flow diagram that integrates all refining processes and the resulting refinery products (ABET 2); 5. examine how each refinery process works and how physical and chemical principles are applied to achieve the objectives of each refinery process (ABET 1, 2, 7); 6. assess implications of changing crude oil feedstocks on refinery configuration and propose strategies to resolve conflicts with degrading crude oil quality and increasingly stringent environmental regulations on petroleum fuels (ABET outcome 4, 7); 7. discuss different sources of natural gas and explain how natural gas is processed at well sites and in processing plants with application of selected refinery processes and other physical operations (ABET 1, 2).

Enforced Prerequisite at Enrollment: CHEM 202 or CHEM 210
Cross-listed with: CHE 432

FSC 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

FSC 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

FSC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Gaming (GAME)

GAME 140: Gaming and Interactive Media

3 Credits

COMM 190 (GAME 140) Gaming and Interactive Media (3) The course is an introduction to the digital interactive media industries for students who may consider seeking employment in that sector, which includes video games and simulations, products for education, training, medicine, business, government/military, and virtual environments for a range of applications. Students will learn about industry structures, basic economics, business models, work flow, types of enterprises, job descriptions, and opportunities. It examines both the national and global markets. It provides students with a factually and theoretically informed appreciation of these industries. The course will build on the students' personal and social experiences of these media, but it is not a course about playing or designing games or mastering individual applications. No special knowledge or experience in playing video games, using "serious games," or experiencing virtual worlds is required. It will provide students with the foundation to make a well-informed choice about careers in this sector and respond to their natural curiosity about this pervasive part of their lives. The course is divided into five segments. The first provides general context: history, scale and scope of the field, information on industry structure, business models and operations, and types of skills required. The second focuses on the video game

industry, including social, regulatory and ethical issues. Video games are now a major media industry, having surpassed in U.S. revenue both the movie and recorded music industries. The third section looks at "serious games." A "serious game" is a game designed for a primary purpose other than pure entertainment, such as education, scientific exploration, health care, emergency management, city planning, military, engineering, religion, etc. The fourth segment looks at simulations and virtual worlds and their multiple models and uses (entertainment, learning, business, research, etc.), and the development of related online communities. The final section will examine the interrelationship of these industries with the other entertainment industries in terms of planning, marketing, finance, production, etc. It will conclude with a look ahead at new technologies, markets, business models, advancements in artificial intelligence and the convergence of virtual and material worlds. The course will employ presentations, class discussions, outside readings, demonstrations, videos, class exercises, online explorations, guest experts (in person and via technology), and experiences in virtual worlds.

Cross-listed with: COMM 190

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

GAME 160N: Introduction to Video Game Culture

3 Credits

This course is a comparative introduction to the nature and history of video games as cultural artifacts, from Pong to online role-playing. It introduces students to academic discussion on and creative work in new digital forms including hypertexts, video games, cell phone novels, machinima, and more. Students will survey major debates over the meaning and value of video games, and study some of the major theoretical terms and perspectives developed to elaborate the cultural and sociological value of video games. The course extends students' skills in literary interpretation to a variety of new objects, and makes them aware of the role medium plays in aesthetic development and production. Students will leave with a far sharper understanding of how the interpretive tools used in the humanities can be extended to include new media, and with a sense of the historical role video games have played and will continue to play in global cultural production. Because the course is historically focused, it will spend significant time looking at the differential development of video games in three major regions: the United States, Europe, and East Asia (especially Japan).

GAME 180N: The Art and Science of Virtual Worlds

3 Credits

GAME 180N is a multidisciplinary course which introduces students to the theories, concepts, and technologies behind virtual worlds. This

course will focus on the myriad ways that narrative arts and physical sciences relate to the development of technologically mediated virtual worlds. Designing the physical and narrative voyages of avatars through virtual worlds is necessarily a team-centered undertaking requiring recursive editing from a macroscopic and microscopic point of view to refocus project goals and deliverables. Besides learning the requisite computing and technical skills involved in virtual world development, students enrolled in this course will produce a world design proposal, and storyboards, interactive fiction graphics, or world maps for their virtual world; in this way, they will explore some of the ways that creative writing, particularly interactive fiction and storytelling techniques drawn from non-VR and VR gaming contribute to the planning, design, and execution of virtual worlds. Students will also learn about the basic science behind virtual world concepts such as the physical environment, physical processes (e.g. kinematics, motion), and light; ultimately, they will produce an immersive time-space experience in their proposed world and reflect on the complexity of integrating design elements in a way that creates a satisfying immersive experience. The objectives of the course include: (1) students will work in teams to design a proposed virtual world using world making principles found in interactive fiction narratology and physical principles that embody the avatar and allow it to move in a virtual world environment; (2) students will work in teams to construct a virtual scene, movement in time/space, from that world using computer software tools and mediated through virtual reality hardware; (3) students will be able to discuss developing immersive technology and applications of virtual worlds in business, society, and academia; (4) students will analyze and critique the virtual world designs of other student teams; (5) students will demonstrate comprehension of interactive fiction scene and level structures and world maps as they relate to designing the voyage of the avatar in a virtual world; and (6) students will demonstrate comprehension of physical principles (e.g. kinematics, light) as they apply to virtual worlds. In addition to directed readings, discussions, and quizzes in computing, narrative arts, and physics (related to concepts inherent in virtual worlds), the course will incorporate hands-on lab exercises and online discussions. A semester-long team project will be the primary means of student evaluation. During this semester-long team project students will design and create their own virtual environment(s) and character(s) using software tools and accepted world design principles. Students will apply a variety of computing concepts in the world creation, including some combination of programming, 360-degree video, and digital imagery. The course will culminate in the oral and visual presentation of their creative and technological works. The semester-long team project will be heavily integrated into the in-class experience and assessed using rubrics that draw on examples and assignment descriptions provided to students.

GAME 220: Introduction to Game Design

3 Credits

Design of games as aesthetic objects and cultural artifacts that people find meaningful and entertaining. In his 2007 book *Persuasive Games*, Professor Ian Bogost writes about the power of digital games in social, political, artistic, and psychological meaning-making through what

he calls 'procedural rhetoric'. 'Procedural rhetoric entails persuasion - to change opinion or action - to convey ideas effectively.' Procedural rhetoric is a subdomain of procedural authorship; its arguments are made not through the construction of worlds or images, but through the authorship of rules and behavior, the construction of dynamic models' (Bogost 2007, 29). As games become cultural objects with artistic value, achieving orchestral performances in the opera houses of the world, permanent exhibits in the Smithsonian, and having numerous charitable organizations entirely devoted to the appreciation of games, their art, and their rhetoric it behooves educators to enable the next generation of students to become literate in this new and emerging form of expression. This course will provide students with an introduction to game design. It will focus on the design of games as aesthetic objects, both inasmuch as video games have significant aesthetic properties (lighting, narrative, animation, sound design) but also, more generally, inasmuch as games are cultural artifacts that people find meaningful and entertaining. Because GAME 220 takes this broad perspective, students will learn design principles that are used not only in video game design but in traditional "pen-and-paper" games, such as board games, card games, role playing games, and so forth. The course will teach students how to design artful, creative games in general.

GenEd Learning Objective: Key Literacies

GAME 250: Technical Game Development

3 Credits

Introduction to the tools and techniques required to implement games in a virtual environment. GAME 250 / CMPSC 208 Technical Game Development. First, students learn about game and player elements by creating characters and objects and the means of user interactivity. Both orthographic and perspective views are introduced to assist in character design. Objects and characters are created using fundamental geometric primitives like scale, rotation, translation and extrusion. The set operations, union, intersection, and subtraction, are applied to create compound objects. Bezier and NURB curves are introduced to create objects with irregular contours. Students also learn to design graphical user interfaces (GUIs) and handle mouse and keyboard events to support user interactions. Second, students are introduced to methods of storytelling and guide them to build narratives for games. Methods of proximity and collision detection in the environment are studied for both static and dynamic objects. Dynamic objects are programmed to move and behave in a deterministically, random, or probabilistically under a variety of lighting methods including ambient, directional, point and diffuse lights are introduced. A number of particle systems are developed with different considerations of randomness, vector direction and velocity. The concept of linear interpolation is illustrated and applied to texture mapping to improve the look and feel of objects. Third, students are introduced to functions, propositional logic, loops, and randomness to model game behavior. Students will learn to combine a series of primitive actions into a function for control and reuse. Propositional logic will guide students to define conditions and develop game rules. Loops are introduced to simplify the implementation of repeated game behavior. Randomness enables the simulation of many life-like object movements. Students will learn and practice how to write concurrent, event drive and sequential processing algorithms for game objects. Fourth, students are introduced to the game development process of pre-production, production and post-condition phases and have them apply it to their own

project. The topic of maintenance will be introduced with an emphasis on refactoring techniques, critical to improving the quality of game and providing flexibility for future updates. This course has a significant applied element. Game engine tools are used to develop prototypes of games and playtest them. Lab assignments are given throughout the semester and a final project requires students to demonstrate mastery of all aspects of the course.

GAME 251: 2D Game Programming

3 Credits

Introduction to programming 2D Games with HTML5 and Javascript. GAME 251 2D Game Programming (3) (GQ) An introductory course on web programming, GAME 251 introduces students to HTML Programming for online, browser-based, and mobile games. HTML is a versatile programming and markup language that allows for a lot of flexibility in game development. Throughout the course, students will learn HTML programming using the Canvas element, programmed in Javascript, using a variety of engines and technologies. Students will receive a primer in database management using MySQL, and will interface that database with their games using AJAX calls through PHP. The versatility and cross-platform nature of the HTML programming standard allows games to be compiled across numerous platforms seamlessly - a practice with which students will become accustomed.

Prerequisites: MATH 21

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Key Literacies

GAME 420: Advanced Game Design

3 Credits

Develop the habits of successful game designers - playing games thoughtfully, and documenting those thoughts. GAME 420 Advanced Game Design (3) Topics covered in this class will include independent game development, marketing, scheduling, and analysis of contemporary games for design choices in something called a "post-mortem." This is done with the intent of training students in the habits of successful game designers- namely, playing games thoughtfully, and then documenting those thoughts. The successful student will have a clear and thoughtful record of at least 15 games he or she has played and analyzed with a critical eye by the end of the semester. These should be peppered with thoughtful critique on the games industry, and musings on trends in game design. This will of course become clear as the course progresses. The culmination of this course will result in the creation of a professional, competent game designer portfolio and blog that can be used in search for a job, to represent oneself as an independent game developer, and to showcase the talents and skills developed over this course and its prerequisite.

Prerequisite: GAME 220

GAME 430: Simulations of Human Behavior

3 Credits

In Modeling and Simulation, students will develop an understanding of the systems, processes, tools, and implications of this field.

Prerequisite: 3 credits of programming; 3 credits of mathematics
Cross-listed with: DIGIT 430

GAME 434: Psychology of Gaming

3 Credits

Upper level course examining the core psychological principles as they apply to the topic of games. GAME 434 / PSYCH 434 Psychology of Gaming (3) This course looks at how the field of psychology can be applied to understand and improve the world of games. This requires the application of theories and research based in experimental, cognitive and several other disciplines within psychology, including but not limited to cognitive, social, motivation & emotion, and experimental psychology. By applying different theories within these disciplines we can start to understand how humans interact with games and in turn how games have evolved as a result. This course addresses an active research area in psychology, of broad interest to students in Psychology and other disciplines. The course will fulfill a 400-level requirement for students in the PSYCH majors and minors as well as those in the GAME minor. Students typically will be evaluated by exams, research project, in-class activities, homework, and article discussions.

Enforced Prerequisite at Enrollment: PSYCH 100
Cross-listed with: PSYCH 434

GAME 450: Advanced Game Programming

3 Credits

Autonomously generating object behavior and content in games. GAME 450 Advanced Game Programming (3) The course is developed in two parts, creating programs to automatically generate object behavior and world content. Students are first introduced to the mathematical basis of vectors and transforms. This is necessary to create engaging characters that properly display behaviors and interact with the player and the world. These behaviors can range from orientating towards the player or pursuing/fleeing from some object in the game. In the presence of obstacles these behaviors require path finding algorithms like A* in order to navigate through the world. Students then learn how to create challenges that adapt their difficulty level based on the user's proficiency and skill in the game. In order to reduce costs and meet the demand to get a product to market, the gaming industry is looking for ways to automate the content generation. Instead of hiring a room-full of artists to generate the layout of a city, a computer can be programmed to dynamically generate this content at run-time, saving not only the work-load of the artists, but also the storage space necessary for the representation of the city. An optimization method like genetic algorithms is presented so that dynamically generated content like the layout of building and streets in a city can be produced at run-time. From the beginning of video games mazes and labyrinths have been a common theme and one of the first examples of run-time generated content. Students are introduced to a variety of maze generation methods using a variety of methods. Fractal geometry is introduced to provide a powerful tool to recursively generate natural looking content like plants and terrain. The mathematical basis of chaotic systems provides the theoretical background necessary to understand the limits of these methods as well

as how to apply them to create new content. In addition to the technical content, students are required to demonstrate effective communication skills in these disciplines. Students are required to read and report out on a research paper of historical note or in an emerging field in content generation. Finally, a final project in the course will demonstrate the application of two or more of the concepts covered in the class.

Prerequisite: GAME 250 , CMPSC122 , and MATH 220

GAME 460: Video Game Lit Studies

3 Credits

A comparative look at the nature and history of video games as cultural artifacts, from Pong to online role-playing. This course meets the Bachelor of Arts degree requirements. The video game industry is larger than the film industry, and yet the academic study of video games has only just begun. This course is a comparative introduction to the nature and history of video games as cultural artifacts, from Pong to online role-playing. It introduces students to academic discussion on and creative work in new digital forms including hypertexts, video games, cell phone novels, machinima, and more. Students will learn basic narrative theory, and study its impact on game studies and game production. They will survey major debates over the meaning and value of video games, and review its history from Pong to contemporary games, including online world-based games. The course extends students' skills in literary interpretation to a variety of new objects, and makes them aware of the role medium plays in aesthetic development and production. Students will leave with a far sharper understanding of how the interpretive tools used in the humanities can be extended to include new media, and with a sense of the historical role video games have played and will continue to play in global cultural production.

Prerequisite: GAME 160 , GAME 140 , or 3 credits in literature; Concurrent: GAME 160 or GAME 140 if desired
Cross-listed with: CMLIT 490
Bachelor of Arts: Humanities

GAME 480: Game Development Project

3 Credits

A team of students manages the production of a game from concept to implementation. GAME 480 Game Development Project (3) In this course students take the entire semester to creating a game that will be published. Students are assembled into teams and will be expected to create a game from conception to publication in a very short period of time. What will result from the completion of this course is a demonstration of the knowledge accumulated in previous GAME courses and in important components of your portfolio to enable you to obtain a job in the industry.

Prerequisite: 3 credits of 400 level GAME classes

GAME 495: Internship

1-18 Credits/Maximum of 999

Supervised off-campus, non-group instruction including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: 3 credits of GAME courses. Prior approval of proposed assignment by instructor

Geography (GEOG)

GEOG 1N: Global Parks and Sustainability

3 Credits

This course uses parks and protected areas - both in the U.S. and globally - as a framework for exploring broad themes of sustainability, conservation, and socio-ecological systems. Case studies that exemplify U.S. and international parks (i.e., parks and protected areas embedded within complex landscapes) are used to convey stories of evolving attitudes and approaches toward conservation and sustainability. These stories help explain the historical, transitioning, and future role of conservation in societies shaped by local ecologies, conflict, and change. The unique geographies of conservation parks - past and future - reinforce and challenge a globally dynamic conservation discourse. Examining the sustainability of conservation activities themselves, as well as the socio-ecological systems in which they are embedded, can provide a lens through which we can begin to understand other cultures, aesthetic values and value systems, and the diverse ecologies of Earth. In this course, we will: - Explore the history of parks and protected areas globally, including the development of the U.S. National Park system, and the globalization of conservation and sustainability policies and approaches - Examine globally representative case-studies to assess how parks and protected areas are part of both social and ecological landscapes ("parks") - Assess new challenges and opportunities for conservation in an era of rapid change and conflict - Evaluate the history, current socio-ecological condition, and future approaches in sustainability for a particular global parkscape By the end of the course students should be able to: - Describe why the idea of 'wilderness' is both influential and contested - Explain temporal and spatial trends in national and international conservation management - Compare and contrast contemporary conservation approaches - Illustrate a parkscape as a coupled socio-ecological system - Identify key drivers of future ecological change affecting conservation management

GEOG 2N: Apocalyptic Geographies: How can we prevent the end of the world?

3 Credits

This course explores various visions of the apocalypse and their relevance for addressing major contemporary social, ecological, and economic issues. These issues include global climate change, nuclear war, the growing refugee crisis, the breakdown of democratic governance, economic recession and forms of everyday violence and social fracture. Students will develop and employ critical and analytical thinking skills to engage a diversity of texts from the humanities (e.g., historical and literary accounts, graphic novels, films and other historical and contemporary media) and contemporary popular culture in order to situate these apocalyptic visions in particular historical, cultural, and

political contexts. Students will utilize integrative thinking skills and an interdisciplinary geographic approach to connect these visions with contemporary social issues in order to consider how we might address these complex problems while imagining and actualizing alternative futures. Students will practice global learning, drawing on course material that engages U.S. and cross-cultural perspectives in recognition of the global reach of the interconnected social, economic, political, and cultural systems that shape humanity's shared fate.

GEOG 3N: Food and the Future Environment

3 Credits

GEOG 3 introduces students to the multiple connections of people and the environment through the dynamics of food and the places where it is produced, processed, and consumed. It introduces an integrated human-environment perspective on food systems in the United States, with emphasis on the Northeast and Western U.S., as well as in diverse locations around the world. The course offers a global perspective on the major challenges and opportunities facing food systems, including the sustainability of agriculture, organization of global food systems and local food initiatives, food insecurity, and the influence of modern diets on human health. This course promotes critical thinking regarding key concepts in Environment and Society Geography such as coupled human-environment systems, the Anthropocene; anthropogenic landscapes and domestication; carrying capacity; ecological footprint; life-cycle analysis; globalization; urbanization, dietary change and land use; soils and society; environmental and social justice; climate change and resilience; agrobiodiversity and adaptive capacity; human-environment interactions involving vulnerability; regional analysis; geography and culture of food systems; development and food security; and social-ecological systems. Students are encouraged to examine their role and responsibilities for the sustainability of the social-ecological systems we inhabit and to take action in their own lives to contribute to a more equitable and sustainable environment. The course will provide students with the opportunity to read, learn, and debate the ways in which humans value, use, affect, and are affected by small-scale and large-scale human-environment interactions. It will provide skills for the critical analysis and evaluation of the ways in which humans have transformed the environment in different parts of the world. Students will also learn how to assess what future pathways are sustainable and ethically sound. One key course goal is to help students increase their sensitivity, awareness, and knowledge concerning the global and international context of human interactions with nature. Upon completion of this course, students will be able to: 1. Survey and analyze environmental resources in relation to systems of food production, land use, and consumption; 2. Survey and analyze how human food systems significantly alter the earth's environmental systems and landscapes; 3. Use environment and society geography to understand the resilience of agri-food systems in contexts of climate change, human population changes, and socioeconomic, cultural and policy factors.

GEOG 4: Earth and Environmental Systems Geography

3 Credits

Earth and Environmental Systems Geography provides a means for understanding how Earth operates naturally and in response to human action. This course takes a holistic, interdisciplinary approach, focusing on the Earth as a series of components that dynamically interact with one another via fluxes of energy and matter, biogeochemical cycles, and feedbacks. Together, the geosphere, atmosphere, hydrosphere, biosphere, and the anthroposphere (humans), make up the Earth system. This course explores these systems individually as well as their interconnections from the perspective of geography, and thus touches upon aspects of more traditional disciplines including atmospheric science, geosciences, hydrology, biology, and ecology. By studying the Earth as an assemblage of interacting parts and processes, this course will provide students with a critical scientific foundation and geographical perspective for understanding some of the most pressing human-environmental issues of the 21st century, including global climate change, environmental degradation, and loss of natural biodiversity.

GEOG 6N: Maps and the Geospatial Revolution

3 Credits

The rapid evolution of digital mapping technology via personalized digital mapping applications and location-aware devices has completely transformed how we use place and space to make decisions about human and environmental problems. This course introduces the fundamentals of cartography, geographic information science, and associated technologies through mapping and spatial analysis to answer key human and environmental problems. The class explores the power and utility of geographic information to transform how we navigate, tell stories about data, and make decisions that impact people and the planet. The course also encourages students to become knowledgeable, critical, and ethical consumers of maps and geographic data produced by government agencies, industry, and the media. Hands-on laboratory exercises, individual creative mapping projects, and course lecture contents are designed to reveal the many ways in which geographic information can play a role in shaping contemporary society. In addition, key course elements focus on the diversity and growth associated with the geospatial industry, an industry that is expected to grow rapidly over the next twenty years. Students who successfully complete Geography 6N will be able to: - Describe and explain fundamental concepts in Geographic Information Science (GIScience) and related technologies for making maps and solving spatial analysis problems; - Explain how and

why organizations create and use geographic data, including reference, thematic, and imagery sources - Demonstrate geographic information literacy to identify the kinds of geographic information needed for a particular task, determine whether needed data are available, use relevant technologies to acquire data, and to interpret and explain maps of the data critically; - Create digital thematic maps to tell stories about geographic phenomena

GEOG 10: Physical Geography: An Introduction

3 Credits/Maximum of 3

Survey and synthesis of processes creating geographical patterns of natural resources, with application of basic environmental processes in resource management. GEOG 010 Introduction to Physical Geography (3) (BA) This course meets the Bachelor of Arts degree requirements. Introduction to Physical Geography systematically examines the spatial patterns and interrelationships among physical elements at the earth's surface. Particular emphasis is given to developing an integrative view of how atmospheric, hydrologic, geomorphic, and biotic processes control the patterns of climate, water, landforms, soils, and biota across a local-to-global continuum. Those physical elements that influence and/or are influenced by people are the primary focus of study. Physical geography does not simply discuss the atmosphere, hydrosphere, lithosphere, and biosphere in isolation; instead, it concentrates on understanding the integration of these realms of the natural world. For example, the study of weathering processes demonstrates how the physical and chemical breakdown of Earth's surface material depends on the interaction of air, water, and biota with rock. The focus of physical geography is unlike the component disciplines from which it draws. On the one, hand, meteorology focuses on the atmosphere above our heads. Hydrology focuses on water in isolation from people. Geology and soil science focus on the Earth beneath our feet. Biology and ecology focus on the plants, animals, and ecosystems in isolation from people. One the other hand, physical geography concentrates on the surface of the Earth where the atmosphere, hydrosphere, lithosphere, and biosphere intersect. Introduction to Physical Geography is concerned with the human habitat-the life layer in which humans interact with their natural world. Like all geography, five recurring themes permeate Introduction to Physical Geography: location, place, regions, movement, and human-environment relationships. Physical geographers not only are interested in where natural phenomena are located on Earth's surface, but also they want to know the answers to such questions as: 1. What is special about the physical processes that take place in a location? 2. How does the physical geography of a place relate to other places in the region? 3. How does energy and mass flow into and out of a region? 4. How do biophysical processes change as we move up and down spatial scales? 5. How do people influence natural processes? How do these processes influence people? Other disciplines typically do not cover these spatial and nature-society themes systematically. Physical geographers have developed and adopted many tools to address these themes. Maps are obvious choices, but geographers also use a wide array of photographic and imaging technologies to study the distribution of Earth processes and the processes themselves. They use geographic information systems

and computer models to manipulate, display, and analyze spatial data. Introduction to Physical Geography acquaints students with many of these tools. When the above points are taken together, physical geography emerges as a unique field of science. Introduction to Physical Geography provides a learning experience that students can get in no other discipline-one that takes an integrated view that makes the nature environment relevant.

Bachelor of Arts: Natural Sciences

GEOG 30N: Environment and Society in a Changing World

3 Credits

GEOG 30N "Environment and Society in a Changing World" introduces students to the relationships between humans and the natural environment, in addition to the theories and methods that geographers employ in addressing them. The course begins with an overview of theories and key concepts to examine the interactions between social and ecological systems, across settings in the United States and globally. The course will provide students with the opportunity to read and learn about the ways in which humans think about, use, and are affected by the natural environment. It will also provide skills for analyzing and evaluating the ways in which humans have transformed the environment in different parts of the world through the integration of knowledge from the natural and social sciences. This class is designed to address big questions in human-environment interactions at the present time, while drawing upon their histories and key conceptual ideas. 1. What is a human-environment system? How does the geographic discipline

contribute towards understanding human-environment systems and sustainability? 2. Why do we conserve what we conserve? Is it possible to conserve natural resources and also meet human needs? 3. What are ways to manage the effects of economic development upon the natural environment? Is sustainable development possible? 4. How is climate change impacting social and ecological systems? Can we adapt to the impacts of climate change? One of the hallmarks of the discipline of geography is attention to how social and ecological processes interact and spread across spatial scales. This means that specific events, such as the consumption of particular product or the emission of greenhouse gases, connect sites within countries and across the globe. GEOG 30N meets the definition for both a US and international cultures course by emphasizing how current human-environment systems developed over time in the U.S. and internationally. GEOG 30N examines how various political, economic, and cultural factors influenced the creation of the different forms of human-environment systems that exist today. Further, it teaches students to see nations, cultures, and social identities in relation to one another, exploring how decisions made in relation to a human-environment system in one place or by one group can impact other people or places.

GEOG 40: World Regional Geography

3 Credits

World Regional Geography examines a world that is undergoing political, economic, social, and environmental transformations at many different spatial scales. Viewing content through the lens of the Six Essential Elements of Geography (National Geographic Society) and other geographic concepts such as scale, place, and human-environment interaction, this course examines international linkages, such as economic globalization, which help to forge a world community. The course also examines more regional and localized manifestations that contradict our understanding of a global community and examines a variety of regions' physical systems, cultures, economic systems, environmental challenges, and political realities. Larger concepts such as North and South, developed and developing, and environmental degradation and climate change, take on new meaning when they are explored at a regional level.

GEOG 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

GEOG 107N: Immersive Technologies - Transforming Society Through Digital Innovation

3 Credits/Maximum of 3

Immersive technologies are an emerging field. Although envisioned and available for several decades, technological challenges of the past made their application in education, research, and everyday life a rather specialized endeavor, restricted to research labs rather than being open to communities. This is changing with the advent of consumer grade VR headsets offered essentially by every major tech company and smartphones becoming devices to augment any physical reality. We refer to these technologies as xR as they comprise everything from augmented to virtual reality. This development is occurring at an incredible pace and is opening new opportunities for the integration of this technology into every aspect of human life. xR is revolutionizing how humans communicate, how we experience spatially and temporally remote places, how we are able to view, understand, and analyze data, and how we train people. Instead of interacting with data on a 2D desktop screen, researchers and decision makers can immerse themselves in virtual environments where geospatial data are represented in intuitive, immersive, and flexible ways. In parallel to developments in xR we are witnessing an incredible increase in creating content for immersive experiences; with the ready availability of massive amounts of environmental data (e.g., LiDAR) and efficient 3D modeling technologies (e.g., SketchUp, CityEngine), realistic immersive scenarios are easier to create than ever before. We are seeing a paradigm shift which enables new methods of environmental decision making from urban planning to climate change. The combination of xR and automated 3D modeling enables models of real-world places to be integrated within data visualization workbenches. This course will provide students with the basics of what xR technologies are and what their history is, it will connect xR to recent developments in 3D modeling and environmental sensing as two sides of the same coin in that one is focusing on content creation and the other on accessing content. The course will theoretically address what the key features of xR are and introduce students to core concepts such as immersion, presence, and reality-trade off. Furthermore, the course will provide students with hands on experiences to create their own xR experiences focusing on entry level technologies such as 360 cameras, modeling using SketchUp, photogrammetry techniques such as structure from motion mapping, and Unity, a game engine flexible to cater to a broad range of needs.

GEOG 110: Climates of the World

3 Credits/Maximum of 3

Introduction to climatology, including principal processes of the global climatic system and their variation over space and time. GEOG 110

Bachelor of Arts: Natural Sciences

GEOG 110H: Climates of the World

3 Credits

Introduction to climatology, including principal processes of the global climatic system and their variation over space and time. GEOG 110

GEOG 115: Landforms of the World

3 Credits/Maximum of 3

Geography 115 World Landforms (GN) provides an introduction to the modern geologic study of landforms and the Earth processes responsible for their creation and modification. Emphasis is placed on internal geophysical processes and external landscape responses to tectonic and climatic forcing. The course is structured into three units. The first unit introduces Earth's atmospheric processes. The second unit examines the relationship of water, weather and climate change to the dynamic equilibrium of landforms. The final and largest unit covers tectonics, weathering, mass movement, and fluvial, coastal and glacial processes and their role in shaping the large-scale details of Earth's topography and the geographic distribution of resources. This course includes 2 lecture discussions and weekly laboratory practicums with emphasis on terrain analysis, natural hazards and human adaptation and contribution to landscape change.

GEOG 124: Elements of Cultural Geography

3 Credits

Locational analysis of changes in non-Western cultures. Problems of plural societies, economic development, population growth, and settlement. GEOG 124 Elements of Cultural Geography (3) (GS;IL)(BA) This course meets the Bachelor of Arts degree requirements. Elements of Cultural Geography, provides an overview of the impact of cultural processes at multiple scales, from the global to the local. Class time will include lectures and discussions in relation to how social identities, such as race and class, just to name a few, impact and are impacted by geographic concepts such as landscape, place and space. The course aims to survey and explore a range of perspectives on the nature of human integration with the environment and the manifestation of human culture on the landscape. The course will engage philosophical and metaphysical questions in addition to those of landscapes and place. The ultimate objective is for participants to develop a deep and multidimensional understanding of how social identities and the environment are inter-related. This course is a selection for majors; it has

no prerequisites and is not a prerequisite for any other course. It provides a foundation for understanding human-environment interactions at a global scale, including the regional interactions involved.

 GenEd Learning Objective: Integrative Thinking

GEOG 128: Geography of International Affairs

3 Credits

Contemporary international affairs in their geographical setting; geographic elements in the development of national power, political groupings, and international disputes. GEOG 128 Geography of International Affairs (3) (GS;IL)(BA) This course meets the Bachelor of Arts degree requirements. Geography of International Affairs uses the organizing principle of geographic scale to examine the spatial patterns of and interrelationships among political processes and institutions. Particular emphasis is given to developing an integrative view of how global, national, local and individual scale processes interact to produce patterns of peace and conflict. The course analyzes how the actions of individuals, states and other political actors are influenced by their dynamic geographical contexts. The political geography approach does not simply discuss the war, peace, nationalism, terrorism, and religious organizations in isolation; instead, it concentrates on understanding the integration of these processes, and how their integration mediates political decisions and outcomes. Geography of International Affairs is concerned with the geopolitical context, broadly defined - the manner in which spaces and places are combinations of the political and the social, the domestic and the international, the global and the local - and how it partially determines the form and outcomes of politics. As a course in geography, Geography of International Affairs encourages students to interpret political problems, actions, and disputes through the lens of the Six Essential Elements of Geography (National Geographic): Places and Regions; Physical Systems; Human Systems: Environment and Society; the World in Spatial Terms; and Uses of Geography. Further, this course also encourages students to examine and interpret international

affairs through the lens of different geopolitical theories, developed by the likes of Ratzel, Mahan, Mackinder, Spykman, Kissinger, Wallerstein, and others. In this sense, students are encouraged to adopt the role of political geographers. Political geographers have developed and adopted many tools to address these themes. Maps are obvious choices, but geographers also use a wide array of statistical and qualitative techniques to study the distribution of political processes and the processes themselves. They use geographic information systems and computer models to manipulate, display, and analyze spatial data. Geography of International Affairs acquaints students with many of these tools. When the above points are taken together, political geography emerges as a unique field of social science. Geography of International Affairs provides a learning experience that students can get in no other discipline - one that takes an integrated view that makes contemporary international affairs relevant and understandable.

GEOG 160: Mapping Our Changing World

3 Credits

Fundamental concepts of GIS, cartography, remote sensing, and GPS in the context of environmental and social problems. GEOG 160 Mapping Our Changing World (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. Mapping involves producing and using geographic data. Geographic data specify the locations and characteristics of people, the objects people create, and the various phenomena of the natural environment with which people interact. Geographic data are produced by several methods, including land surveying, aerial photography and photo grammetry, satellite remote sensing and positioning systems, and social surveys such as those conducted by the U.S. Census Bureau. Geographic information systems (GIS) and related technologies are used to turn data into maps, tables, and other kinds of information people need to make informed decisions. In a rapidly changing world, detailed, up-to-date geographic data are indispensable for governance, for commerce, and for research intended to improve our understanding of social and environmental systems. GEOG 160 helps students begin to develop the knowledge, skills, and dispositions that constitute geographic information literacy - the ability to 'recognize when information is needed and ... to locate, evaluate, and use effectively the needed information' (ALA 1989). Geographic information science (GIScience) is a search enterprise concerned with the design, development, and use of geographic information technologies to help institutions and individuals not only respond to, but ideally to predict, environmental and social change. GEOG 160 is an introduction to GI Science that provides students with the technical and contextual knowledge they need to become knowledgeable consumers of geographic data and information produced by government agencies, industry, and popular media. The course is intended to be of value not only to future specialists in the geographic information enterprise, but also to every student who is concerned with social and environmental research and policy-making. Like other information technologies, GIS is evolving rapidly. People who work with GIS understand that learning is a way of life, not just a prelude to a career. With this in mind, GEOG 160 aims not only to help students

learn about geography and GIS, but also to develop the disposition to become effective lifelong learners.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)

GEOG 161: Applied Geographic Information Systems

1 Credits

An introduction to GIS (Geographic Information Systems) with emphasis on applications and analysis. GEOG 161 GEOG 161 Applied Geographic Information Systems (1) GEOG 161 is a one-credit two-hour laboratory course to be taken concurrently with GEOG 160, Mapping Our Changing World. GEOG 160 and GEOG 161 will be offered concurrently as a required course pair for the proposed Environmental Studies Option within the B.S. Science major (SCNBD) at Behrend College. The courses can also be choices in the 'Supporting Courses and Related Areas' list for the B.S. Science major's General, General Pre-certification, and Earth & Space Science Pre-certification options. The purpose of the course is to familiarize students with GIS and provide them with the ability to use GIS software commonly used by industry, academia, and government agencies. GEOG 161 will provide students with training and experience in computer-based practical applications of concepts and theory learned in GEOG 160. They will analyze and solve 'real-world' problems using hands-on, problem-solving, and inquiry-based approaches to learning. Students will work individually and in small teams in a GIS software-equipped computer laboratory. Students will be evaluated based on the quality of laboratory reports/assignments and on a larger research project with a presentation conducted during the final five weeks of the semester. GEOG161 will be offered at least once per year. Enrollment is expected to be 8-20 students.

Prerequisite: or concurrent GEOG 160

GEOG 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

GEOG 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Prerequisite: prior approval of program
International Cultures (IL)

GEOG 210: Geographic Perspectives on Environmental Systems Science

3 Credits

This lecture, lab and field-based course explores Earth's physical environment and its interactions with human activities. While it is intended primarily for Geography majors and minors, the subject matter and approach are sufficiently broad to be relevant to any student with interests in the environmental and natural sciences. We survey the geographic patterns and physical processes attending Earth's environmental and landscape systems; its climate, hydrology, landforms, soils and vegetation, and their mutual interactions of energy and mass (water, sediment). We adopt both spatial 'map-able' and temporal perspectives; for example, the evidence for, causes of, and impacts from,

past and contemporary environmental changes such as glaciations, pluvials (wet periods), and warming. An important emphasis involves human interactions with the natural environment; how human activities are constrained by, yet also constrain processes and alter features of, the physical landscape across spatial and temporal scales. Representative topics include the burning of fossil fuels and emissions of greenhouse gases and particulates into the atmosphere, natural gas fracking and earthquakes, river diversion and dam construction, ground-water withdrawal and land subsidence, urbanization and the 'heat island' effect, land clearance and deforestation, irrigated agriculture, wildland fire, the introduction of invasive species, and coastal over-development. Our examples will come from across the globe, from areas as diverse as tropical oceans to the polar deserts. An important outcome of the course is that students become better scientific observers of Earth's environmental system and its spatio-temporal variations.

Recommended Preparations: (ENGL 15 or ENGL 30H or ENGL 137 or CAS 137 or ESL 15) or EMSC 100

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

GEOG 220: Perspectives on Human Geography

3 Credits

Why are some countries richer than others? How do consumption patterns in one part of the world affect 'far flung' peoples and environments? How does global warming shape land use patterns and rates of hunger across different regions, and what are the political implications of these patterns? Why do rich economies around the world increasingly depend on the recruitment of low-wage immigrant workers, both "legal" and "illegal"? How do race and gender shape access to services, housing and employment in many large cities? In what ways does drone warfare change the nature of state power in the 21st century? These kinds of questions are ones that animate the work of human geographers. The purpose of this course is to introduce you to the breadth of contemporary human geography. We will explore both the range of topics that geographers study, and some of the key concepts and methods used to study geographic topics. Major themes will investigate how cultural, economic, political, and environmental interactions relate to geographic processes. These general topics will be explored through a detailed examination of case studies in the United States and across the globe

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

GEOG 230: Geographic Perspectives on Environment, Society and Sustainability

3 Credits

Recommended Preparations: Completion of a basic rhetoric and composition course (ENGL 15; ENGL 30 ENG 137 CAS 137 ESL 15) OR completion of College of Earth and Mineral Sciences First-Year

Seminar EMSC 100 is recommended. A major theme in the discipline of geography is the study of the relationships between humans and the natural environment. GEOG 230 introduces students to the multiple ways in which people and the environment are interconnected. From a dynamic systems perspective, we refer to this interconnectedness as 'coupled social-ecological systems.' The course uses a geographic perspective to understand how differently these linkages are shaped in various ecological and cultural settings around the globe. The course follows an interdisciplinary approach, exploring from multiple angles major environmental and societal challenges such as climate change, genetically-modified food, over-consumption, disease, and environmental service provision in the industrialized North and the Global South. It promotes critical thinking regarding key concepts such as carrying capacity, ecological footprints, feedback, stability domains, and resilience. Students are encouraged to examine their role and responsibilities for the sustainability of the social-ecological systems we inhabit and to take action in their own lives to contribute to a more equitable and sustainable environment. The course will provide students with the opportunity to read, learn, and debate about the ways in which humans value, use, affect, and are affected by small-scale and large-scale human-environment interactions. It will provide them with skills for critically analyzing and evaluating the ways in which humans have transformed the environment in different parts of the world. They will also learn how to assess what future pathways are sustainable and ethically sound. One key goal of the course will be to help students increase their sensitivity to the global and international context of human interactions with nature. A discussion section allows students to explore controversial issues such as biotechnology, nature as a commodity, and global warming, and to develop critical positions on such issues. Through attendance of lectures, participation in discussion sections, and completion of reading and writing assignments, successful students will:

- build an interdisciplinary understanding of how biophysical and social environments are intertwined and shape one another
- comprehend the range and importance of different disciplinary approaches to researching human-environment systems
- develop a toolkit of key concepts and theories for understanding human-environment systems and evaluating questions of sustainability
- evaluate and critique different perspectives for intervening in human-environment interactions, including sustainable development, deep ecology and degrowth.

GEOG 260: Geographic Information in a Changing World: Introduction to GIScience

3 Credits

In a rapidly changing world, detailed, up-to-date geographic data are indispensable in governance, commerce, security, public health, and many other domains. These data are also needed to support research intended to improve our understanding of social and environmental systems. Making data useful in these domains requires methods and tools that transform data to information and that make that information accessible where and when it is needed. Geographic data specify the locations and characteristics of people, and objects both natural and anthropogenic in nature. Geographic data are produced by several formal methods, including land surveying, aerial photography and photogrammetry, satellite remote sensing and positioning systems, and social surveys such as those conducted by the U.S. Census Bureau. They also are derived through informal methods that rely on the vast and growing array of location-enabled devices including cell phones, smart watches, credit card transaction records, and RFID tags on packages, along with volunteers compiling input to projects such as the Open Street Map. Geographic information systems (GIS) and related technologies

are used to turn those data into the information people need to make informed decisions. Maps and related graphics generated on a wide array of devices from cell phones to large touch-screen displays then make the information more accessible and by doing so enable those decisions. Geographic Information Science (GIScience) is concerned with the design, development, and use of geographic information and technologies (also called geospatial technologies) to help institutions and individuals respond to, and ideally to predict, environmental and social change. This course provides a broad, practical foundation of Geographic Information Science methods and technologies for aspiring Geography majors and students pursuing the Geographic Information Science minor or undergraduate certificate, as well as students whose academic programs utilize geospatial information and analysis. Course Objectives The overall objectives of GEOG 260 are that students will:

1. gain a broad perspective on geographic information science and related technologies and how those technologies are used to collect, process, and provide access to geographic data;
2. be prepared for more advanced study of GIS, remote sensing, cartography, and spatial analysis. After the course, students will be prepared to demonstrate:

1. Familiarity with the professional, academic, and industry-specific competencies (Positioning & Data Acquisition; Analysis & Modeling; Software & Application Development) specified in the U.S. Department of Labor's Geospatial Technology Competency Model (GTCM).
2. How to appropriately acquire, apply, and communicate geographic data and information
3. Lifelong learning skills, including the ability to investigate topics independently, the ability to work in teams, and the ability to communicate effectively.
4. The ability to use maps and geospatial technology as a story-telling medium.
5. How and why Geographic Information Science matters in a changing world.

Recommended Preparation: (ENGL 15 or ENGL 30H or ENGL 137H or CAS 137H or ESL 15) or EMSC 100S

GEOG 301: Thinking Geographically

3 Credits

Learning to think geographically. GEOG 301 Thinking Geographically (3) The course explores the process of thinking geographically. As a discipline that draws on elements of four intellectual traditions - the physical sciences, the social sciences, the information sciences, and the humanities - geography offers an extensive palette of approaches to the study of the interactions among people, places, and environments. In addition to those traditions, geography also draws on key themes: setting events and activities into multiple spatial and temporal contexts; setting events and activities into multiple spatial scales from the local to the global; seeing complex, multi-way interactions between human and physical systems; recognizing the interconnectedness between places. In terms of methods, the fundamental building block is the idea of geospatial location and the associated spatially- or geo-referenced data. Data, both quantitative and qualitative in character, is increasingly available in terms of amounts and quality. Students must come to appreciate and be able to use this powerful way of thinking about the world. GEOG 301 assumes a beginning understanding of geography, in terms of basic content knowledge, and builds an understanding of how to think geographically, how to ask geographic questions, how to find geographic answers, how to assess the quality of those answers, and how to present and communicate those answers convincingly and compelling in multiple formats. Students will learn how to think geographically and to appreciate the power, applicability, and limitations of the geographic approach. Each year the course is organized around a significant contemporary problem as a commonly shared case study. Students will work in small groups to analyze the case study, presenting their own portfolio of work for 60% of the course grade and collaborating with group colleagues for a collective presentation for 40% of the grade. Work will be submitted in stages through ANGEL. GEOG 301 is required of all geography majors and will be offered Fall and Spring of each academic year with an annual enrollment of approximately 120 students. Preference will be given first to declared Geography majors, then to Geography minors, before places are offered to students from other programs. Geography 301 is a bridge between the knowledge that comes from the broad-based introductory geography courses and the detailed understanding that comes from the focused, advanced-level geography courses. It enables students to learn about and to practice geographical thinking in real-world contexts.

Prerequisite: GEOG 010 , GEOG 020 , GEOG 030 , Prerequisite or concurrent: GEOG 160

GEOG 308: Research and Qualitative Inquiry in Geography

3 Credits

This course examines the theory and practice of research in geography, with particular emphasis on qualitative inquiry commonly used by human as well as environment-society geographers. Students will explore fundamental debates regarding methods and knowledge claims that underlie the research process. Students will also gain hands-on experience developing research questions and using secondary scholarly literature and primary data to explore their question(s) in written and oral formats. Particular emphasis will be paid to the ethics and practices associated with qualitative methods, including the approaches taken by geographers in the collection and analysis of interview, observational, and textual data. Course Objectives and Learning Outcomes By the end of this course students will be able to: - Explain and compare models of knowledge underlying distinct methodological approaches in Geography - Describe research design principles commonly used in qualitative research - Evaluate the appropriate use of interview, observational and textual sources of primary data - Employ qualitative data collection methods to collect interview, observational and textual data. - Explain the ethical dimensions of qualitative research and assess strategies to navigate these constraints both practically and ethically - Find and appraise scholarly, peer-reviewed literature in relation to the student's research topic - Develop a research question, justify it in relation to scholarly literature, and mobilize primary data to provide evidence for your analysis of the question. - Communicate research and analysis in written and oral formats.

GEOG 310: Introduction to Global Climatic Systems

3 Credits

This intermediate-level course in Climatology emphasizes geographic patterns of interannual climate variability (climate variations) and physical processes responsible for those variations (climate dynamics). Interannual climate variations include regional- to large-scale anomalies of temperature, precipitation, cloud cover, etc., that may manifest as extreme weather (drought, floods, heat and cold waves, etc.). The physical processes associated with these fluctuations include the following: interactions among climate-system components (atmosphere, biosphere, cryosphere, hydrosphere); external forcing (e.g., solar variations, volcanic activity); and long-distance interactions involving coupled atmospheric-ocean circulations, or teleconnections (El Niño Southern Oscillation (ENSO), the North Atlantic Oscillation (NAO), the Arctic Oscillation (AO), and the Pacific-North America (PNA) pattern). Climatic teleconnections manifest shifts in the atmospheric pressure "centers of action", storm tracks, long waves, jet stream positions, etc. We study the patterns and processes of regional climate features such as the South Asian and West African monsoons, "nor-easter" snow storms, Arctic/Antarctic sea ice variations, the summer/winter transition in Mediterranean-type climates, the role of "blocking" in middle-latitude climate variations, etc. Also, the course examines the role of human activities in climate, particularly the "global warming" related to increases in greenhouse gases, biomass burning, desertification, deforestation and afforestation, urbanization, irrigation for agriculture, and jet aviation. A key issue addressed is the role of human activities in possibly altering the frequency and intensity of teleconnections, especially ENSO, and of severe storms (thunderstorms, tornadoes) and hurricanes. The possibilities for geo-engineering the climate are also considered. In understanding the physical processes of climate, students are better able to assess the extent humans are a factor in contemporary climate changes. Course Objectives: 1. Understand how climate variables depict

the characteristic patterns of climate and its variations on local/regional to hemispheric/global scales (climate diagnostics); 2. Evaluate the physical processes responsible for those climate and weather variations and their role in regional-scale phenomena (climate dynamics); 3. Assess the role of human activities in contemporary climate changes, on scales of the urban heat island to global warming (human impacts on climate); Upon completing this course, students will understand the geographic patterns (regional to global) and physical processes associated with climate variations, trends and changes on seasonal through interannual to decadal/multi-decadal temporal scales.

Prerequisite: GEOG 210 or GEOG 10; or METEO 3; or METEO 201

GEOG 310W: Introduction to Global Climatic Systems

3 Credits

Introduction to global atmospheric circulation, including tropical, midlatitude and polar subsystems; ocean, land, cryospheric and urban climatic systems and interactions. GEOG 310W GEOG 310W Introduction to Global Climatic Systems (3) Geography 310W is an advanced undergraduate course in Climatology that emphasizes study of the patterns of interannual climate variability (climate fluctuations) and the physical processes responsible for those variations (climate dynamics). Interannual climate variations include regional- to large-scale anomalies of temperature, precipitation, cloud cover, etc., that become manifest as drought, floods, heat and cold waves, etc. The physical processes associated with climate fluctuations include the following: interactions among the climate-system components (atmosphere, biosphere, cryosphere, hydrosphere); external forcing (e.g., solar variations, volcanic activity); and long-distance interactions involving the coupled atmospheric-ocean circulations, or teleconnections (El Niño Southern Oscillation (ENSO), the North Atlantic Oscillation (NAO), the Arctic Oscillation (AO), and the Pacific-North America (PNA) pattern). Climatic teleconnections manifest shifts in the atmospheric pressure "centers of action", storm tracks, jet stream positions, etc. In addition to the study of these climate patterns and processes, the course examines the role of human activities in climate, particularly "global warming", desertification, deforestation and afforestation, urbanization, irrigation for agriculture, and aviation impacts. In this regard, a key issue that is addressed is the potential role of human activities on the frequency and intensity of teleconnections, such as ENSO, and of severe storms (thunderstorms, tornadoes) and hurricanes; possibly the result of modifications to the oceanic Thermo-Haline Circulation. Students write a term paper, as well as critiques of a number of published articles relating to the above topics in climate dynamics. There is a mid-term (essay) exam but no final exam.

Prerequisite: GEOG 010 or METEO003

Writing Across the Curriculum

GEOG 313: Introduction to Field Geography

3 Credits

Introduction to the methods and techniques for collecting spatial and environmental data for physical geography and ecological studies. GEOG 313 GEOG 313 Introduction to Field Geography (3) This course explores a variety of methods used to acquire primary data from field locations. Aspects of physical, chemical, biological, and cultural factors are examined. Fieldwork is often an important component of research and it involves collecting and analyzing data, handling logistical concerns, developing sampling strategies and techniques, and addressing quality assurance and archiving issues. The course objectives are: to explore methods used to collect, analyze, and interpret field data;

to expose students to techniques for sampling physical (geomorphologic, topographic, hydrologic), chemical (water and soil), and biological (flora and fauna) factors; and to explore ways to use field data to interpret geographical and ecological questions and hypotheses. Evaluation involves preparation of written laboratory reports, assignments, and tests. The course is offered every Fall semester with enrollment limited to the number of students supported in a laboratory section.

Prerequisite: GEOG 160

Bachelor of Arts: Social and Behavioral Sciences

GEOG 314: Biogeography and Global Ecology

3 Credits

Dynamics of plant and animal distributions on global, regional, and local scales; their causes and consequences.

Prerequisite: GEOG 010 or BIOL 110 or equivalent

Bachelor of Arts: Social and Behavioral Sciences

GEOG 315: Landforms and Geomorphic Systems in the Anthropocene

3 Credits

Geography 315 builds on concepts presented in the introductory physical geography course to explore the subfield of geomorphology from a geographic perspective. It surveys the various processes shaping Earth's surface and the landforms resulting from those processes. The course relates these processes and landforms and their connection to human activity on Earth's surface. By taking this course, students will be able to: 1. recognize basic geomorphic processes and the resulting landforms and landscapes; 2. identify the observations and measurements used to understand geomorphic processes and landforms; 3. explain the implications for human use and livelihood on Earth's landforms and landscapes For students who are not geography majors, GEOG 315 may satisfy a General Education Natural Science requirement or may be used as a Natural Sciences selection for students pursuing a Bachelor of Arts degree.

Prerequisites: GEOG 210 or GEOG 10

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

GEOG 320: Urban Geography: A Global Perspective

3 Credits

For the first time in human history, urban dwellers came to outnumber rural residents in the year 2000. The influence of cities extends to nearly every point on the globe. Urban areas, however, differ dramatically in their physical structure, economic base, governance patterns and the lived experiences of their residents with diverse work patterns, striking inequalities in living conditions and varied cultural expression. In short, contemporary cities are vibrant and complex phenomenon formed by conflicting social forces and economic processes. This course examines urban settlements and analyzes the processes of urbanization from a global perspective.

Prerequisite: GEOG 20 or GEOG 220

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)
United States Cultures (US)

GEOG 324: Place, Space and Culture

3 Credits

What is culture? Is it good literature, music, art and food? Or is it a full range of learned human behavior? Culture is in itself a very exciting topic; it invokes diverse imaginaries of life, livelihoods, ways of living, languages, and forms of entertaining, consuming, playing, and eating. In this course, we will delve deep to understand the 'how' and 'why' of culture, that is, how is a particular cultural landscape, a mode of living, produced and why? Most importantly, this course will examine how culture is not a stand-alone concept but rather a phenomenon that intersects with other social processes such as politics and economics. This course aims to survey and explore a range of perspectives on the nature of human integration with the environment and the manifestation of human culture on the landscape. The course will engage philosophical and metaphysical questions in addition to those of landscapes and place. The ultimate objective is for participants to develop a deep and multidimensional understanding of human-environment relations, and the manifestation of human activity on the landscape. Learning Outcomes: Through taking this course, students will be able to: 1. analyze the major themes and debates within cultural geography; 2. interpret representations of landscape, space and place in a variety of textual materials, such as academic readings, films, novels, newspaper articles and art; 3. evaluate the landscape, space and place as an expression of cultural forces.

Prerequisites: GEOG 220 or GEOG 20 or GEOG 2N
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Integrative Thinking

GEOG 326: Geographic Perspectives on Economic Systems

3 Credits

This course builds on concepts presented in the introductory human geography course to explore the subfield of economic geography. It serves as a foundation for courses on economic development, political economy, and other offerings in geography. It will provide a balanced view of contemporary economic processes across the world through a geographical lens, focusing on a wide range of topics including the history of globalization, spatial structures of firms and businesses, international trade, and state interventions. The main objective of this course is to give students access to a geographer's lens for analyzing, interpreting, and critiquing information related to the economy. By the end of the course, students should be able to evaluate the role of different abstract principles in the creation of the economic landscape and to incorporate important critiques of these abstractions into their understanding of how and why uneven development is produced in economic systems. This course will also develop students' skills in formulating and presenting written and oral arguments based on their own knowledge in conjunction with various reference materials.

Prerequisite: GEOG 220 or GEOG 20 or GEOG 2N

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Creative Thinking
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

GEOG 328: War, Peace, and Diplomacy: Understanding Contemporary Geopolitics

3 Credits

This course expands on concepts presented in the introductory human geography course, understanding geopolitics and international relations through an examination of the spatial relationships among political processes and institutions. It explores the problems, promises and paradoxes of international violence and the efforts to address violence through human rights initiatives and international peace movements. Particular emphasis is given to developing an integrative view of how global, national and local scale processes interact to produce patterns of peace and conflict. The course analyzes how individuals, the state and other political actors engage with geography to produce violent or peaceful outcomes. GEOG 328 does not simply explore issues of violence and peace from a "top-down" perspective that focuses on the nation-state and international, state actors. Rather, it focuses on the multiplicity of perspectives and actors that come together to create violent or peaceful conditions. As a result, this course explores violence and the broader movement to address violence through human rights initiatives. We will explore violence and peace in the 20th and 21st centuries, the ways the organization of space and place is linked to violence and peace, and how international efforts to address violence and war are linked through time and space. This course also dissects the definition of human rights, the idea of 'just war' and the way peace movements may both sustain and undermine efforts at ending violence. Course Objectives: The overarching goal of this course is to educate us about the legacies of violence and the struggle to construct a more just and peaceful world. At the end of the semester students should be able to: 1) Define and articulate different notions of violence and recognize how the definition of violence is related to diplomatic efforts at addressing human rights violations. 2) Understand the relationship between violence in one area of the world and resulting broader geopolitical power dynamics, especially the human-territorial considerations of violence and peace. Learning Outcomes: At the end of this course students should be able to: 1) Identify and define structural violence. 2) Explain the differences between positive and negative peace. 3) Define human rights, and explain their connection to geopolitics. 4) Explain how truth processes work, and identify their strengths and limitations. 5) Identify how the definition of peace changes at different scales.

Prerequisite: GEOG 220 or GEOG 20

GEOG 330N: Political Ecology

3 Credits

This course introduces students to political ecology as one approach to advanced human-environment studies in geography. Political ecology is an interdisciplinary approach that combines environmental justice, cultural ecology, and other related approaches to undertake an integrated, holistic assessment of the relationships between social and ecological change. In particular, it analyzes the power dynamics at play in social and ecological marginalization and change; the social issues surrounding conservation of protected natural areas and species and conflicts over natural resources; the underlying causes of environmental conflicts;

and issues of justice and distribution as they relate to the production and consumption of environmental goods and services. Students will gain familiarity with a wide range of theories and methods central to contemporary human-environment geography, such as Marxist political economy, Foucauldian governmentality, feminist intersectionality, ethnography, and land change science. Students will increase their knowledge of the world in general, and of approaches to the challenges of environmental policy in particular, by learning how these theories and methods have been put to use in the analysis of case studies from many different countries and continents. They will develop their ability to conduct independent research, work collaboratively, and present their thinking verbally and in writing through a variety of exercises and assignments. Upon completing this course, students will be able to: 1. understand key theories in political ecology 2. evaluate contemporary debates in human-environment studies using political ecology thinking 3. apply political ecology theories and concepts to relevant topics 4. use integrated thinking across the natural and social sciences to analyze and produce possible solutions to complex human-environment challenges

Prerequisite: GEOG 230 or GEOG 30

Bachelor of Arts: Natural Sciences

Bachelor of Arts: Social and Behavioral Sciences

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GEOG 332N: Science and policy of global greenhouse gas emissions and management

3 Credits

This interdomain course introduces students to the science and policy of greenhouse gas emissions. The course focuses on emissions from natural sources, energy production and food production. Policy components will introduce students to the fundamentals of environmental policy and examine key policy options for mitigating and managing emissions. Global in scope, the course will also address how emissions and policy options differ in developed and developing countries. Topics will include overviews of the global carbon cycle, agriculture and land use change emissions, history of global energy use and production, overview of global climate change policy, frontiers in climate, energy and agriculture policy, amongst others.

Enforced Prerequisite at Enrollment: ENGL 15

Cross-listed with: ANSC 332N, METEO 332N

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

GEOG 333: Human Dimensions of Natural Hazards

3 Credits

An introduction to natural hazards, integrating physical and social science perspectives. GEOG 333 Human Dimensions of Natural Hazards (3)(BA) This course meets the Bachelor of Arts degree requirements. Natural hazards -such as earthquakes, tsunamis, volcanoes, and floods

are not simply forces of nature. Their impacts depend on the interaction between the hazardous events and the characteristics of people, their communities, and the human systems in which they operate. The physical dimensions of natural hazards require knowledge of physical science, and the human dimensions of natural hazards call for knowledge of social science. Nevertheless, understanding natural hazards means not only that students know the physical and social sciences, but also that they know how nature and society work together to increase or decrease potential harm posed by these phenomena. This course introduces students to the topic by surveying the range of natural hazards and by applying important social science perspectives, such as risk, vulnerability, and the true costs of hazards, to each of the hazards. Because the study of natural hazards is interdisciplinary, readings, lectures, and discussions address crucial aspects of both natural and social sciences. GEOG 333 has two goals: (1) to develop understanding of a set of issues related to the human dimensions of natural hazards; (2) to develop and apply communication skills by discussing, writing about, and presenting on natural hazards. The specific content of the course will change with the instructor, but the focus on interactions between the natural and human worlds and on skill-development in writing and speaking will be constant. Students will be evaluated on both the course goals: (1) understanding of the human dimensions of natural hazards; (2) application of communication skills. Although exact procedures for determining grades will vary with instructor, the basis for grades will always include a combination of written exams based on lectures and readings, oral presentations and papers, and in-class discussion and participation.

Prerequisite: junior or senior standing

Bachelor of Arts: Social and Behavioral Sciences

GEOG 361: Cartography--Maps and Map Construction

3 Credits/Maximum of 3

The art and science of creating small-scale maps as a medium for communication and research. GEOG 361 GEOG 361 Cartography - Maps and Map Construction (3)(BA) This course meets the Bachelor of Arts degree requirements. Mapping is crucial to exploring and understanding distributions of geographic phenomena. It is also an important phase of many database-intensive analyses because a map is often the best way to visualize results and show them to others. Emphases in this course will be on designing and producing both thematic and reference maps that use symbols and visual hierarchies which allow the content of the maps to be readily understood. In addition to principles of graphic design, students learn about map projections, generalization, and data classification, with the objective of becoming proficient mapmakers. Hands-on computer work for lab sections will involve working with varied digital data sources using GIS software. Maps are often built from existing data created by government mapping agencies, stored as geographic information systems (GIS) databases, and based on remotely-sensing imagery. The prerequisite for GEOG 361 is the 100-level mapping course covering basic principles of these technologies and data sources. The course is typically offered once a year. Evaluation is based on written exams and mapping projects that students produce to map location information and represent social and environmental data.

Prerequisite: GEOG 160

Bachelor of Arts: Social and Behavioral Sciences

GEOG 362: Image Analysis

3 Credits/Maximum of 3

Introduction to the basic principles of remote sensing, and the analysis of aerial and satellite data. GEOG 362 GEOG 362 Image Analysis (3)(BA) This course meets the Bachelor of Arts degree requirements. Geography 362 is a course designed to introduce students to the field of remote sensing. Modern remote sensing is a multi-disciplinary and many-faceted subject encompassing knowledge from a broad array of areas. Remote sensing has steadily grown in importance since the early 1970s and continues to expand as sensing technology improves, as imagery becomes cheaper, as coverage becomes more widespread and as good software for processing the data become readily available. This course is not meant to be an exhaustive treatment of remote sensing. Rather, it is designed to provide an overview of the field. The field of remote sensing is vast and includes several inter-related themes. Remote Sensing as a science primarily involves the extraction of information contained within energy. The engineering component of remote sensing involves the design and construction of instruments and systems capable of capturing and recording energy from a target. Remote Sensing as a vital tool is expressed in myriad applications, from land cover change analysis to weather forecasting. This course will be administered in two parts - The first seven weeks of the semester will focus on three broad topics (Fundamental Principles of Radiative Transfer and Energy-Matter, Remote Sensing Systems, and Applications). This part of the course will expect student to grasp the major laws describing the energy-matter interactions. Recitations will be devoted to reviewing homework problems designed to solidify understanding of radiation concepts central to the construction of remote sensing imagery. -The remainder of the semester will be devoted to image analysis with an emphasis on digital remote sensing, i.e. analyzing data in digital form using computer software. This aspect of the course will have a practical focus on using imagery to analyze land cover and to construct land cover maps, with the expectation that students will be able to become proficient in the handling and processing of remote sensing imagery. Consequently, laboratory work will play a major role in this component of the course.

Prerequisite: GEOG 160

Bachelor of Arts: Social and Behavioral Sciences

GEOG 363: Geographic Information Systems

3 Credits

This course describes and explains the principles of Geographic Information Systems (GIS). Building on the overall introduction in the prerequisite course on the special characteristics of spatial data and how our earth is measured and mapped, Geography 363 focuses on how to use data to develop solutions for geographic representation and analysis tasks using GIS software. Students learn the basics of GIS data acquisition, manipulation, and analysis. Students will learn to gather or create relevant spatial data, clean/recertify/bring the data into the GIS, perform GIS operations, visualize and communicate results in an informative way, and sufficiently answer basic research questions. Upon completion of this course, students will be able to: 1. Understand Geographic Information Science principles. 2. Handle geographic data for a variety of applications. 3. Find, use and evaluate GIS datasets. 4. Describe capabilities and limitations of GIS methods and models. 5. Confidently use capabilities of the ArcMap GIS software package. 6. Demonstrate ability to design and carry out spatial analyses using GIS. 7. Communicate the results of geographic analyses to others, both in oral & written form. 8. Acquire skills to use GIS in a career, or work in a

GIS-related career. 9. Solve spatial problems. 10. Give advice for what problems can be solved and what techniques can be used.

Prerequisite: GEOG 260 or GEOG 160

GEOG 364: Spatial Analysis

3 Credits/Maximum of 3

Geographic measurement, scaling, and classification; analysis of spatial pattern and structure; geographic covariation and autocorrelation. GEOG 364 GEOG 364 Spatial Analysis I (3)(BA) This course meets the Bachelor of Arts degree requirements. Geography 364 is an introduction to spatial analysis that focuses on statistical methods for geographers. You will have an opportunity in this course to: learn how to use statistics in your own work; learn how to consume statistics in everyday life The statistical methods you will learn to use are simple descriptive statistics that we use to summarize complex data, as well as the associated charts, diagrams and maps. From there, we will move on to look at chance and probability theory, and simple inferential statistics. Throughout the course, we will be concerned with "everyday statistics", primarily as it relates to geography. Contemporary media are saturated with statistics, from reports of climatic change, through latest presidential election polls, to batting averages and yards-gained statistics in sports. A lot of the presentation of these statistics is lazy or inaccurate, and often misleading (whether, deliberately or not), and a major theme of this course will be to look at the issues involved. During most lectures we will spend some time working with sample problems, and to discuss practical applications. These activities are meant to build a deeper understanding of the subject matter but it also relies heavily on your active participation. You will often have work to prepare before lectures or other types of lecture homework. Labs will give you experience with statistics functions in Excel before moving onto SPSS as well as other statistical software, and also with mapping statistical data using GIS software.

Prerequisite: STAT 200 and 6 credits in social science
Bachelor of Arts: Social and Behavioral Sciences

GEOG 365: Introduction to GIS Programming

3 Credits

The rate at which geospatial data are being generated exceeds our ability to analyze them. These developments are quickly leading toward a data-rich but knowledge-poor environment. New challenges arise from an unprecedented access to massive amounts of data. Specialized algorithms are needed to address these scientific and computational challenges and provide innovative and effective solutions to analyze these large, often multi-modal, spatio-temporal datasets generated by high-resolution sensors or computational models. Traditional computational frameworks are specialized to serve a single science application, and are not flexible to drive diverse models on changing computational platforms. GEOG 365 addresses this new challenge by introducing specialized algorithms and data structures to analyze and visualize large and rapidly changing Earth science data. The emphasis of this course is on specialized data mining algorithms suitable for spatial data and spatio-temporal data with geoscience and Earth science applications. This course teaches how to automate GIS tasks using scripting languages. Automation can make work easier, faster, and more accurate, and knowledge of a scripting language is a highly desired skill in GIS analysts. This course dedicates time to programming fundamentals so that the skills learned can be applied to languages. Increased ability to adapt to new technologies and programming languages will be the greatest benefit students gain from this course.

Course Objectives and Learning Outcomes By the end of this course, students should be able to: - Design and implement solutions using scripting languages to automate geoprocessing tasks. - Demonstrate an understanding of programming concepts, methods, and approaches such as debugging, error checking, and documentation. - Demonstrate an awareness of advanced concepts such as external libraries. - Be aware of and able to integrate content, examples, and libraries.

Prerequisite: GEOG 260 or GEOG 160

GEOG 390: Professional Development Seminar in Geography

1-3 Credits/Maximum of 4

This course equips geography students with a toolkit for career development as they explore the discipline, develop professional networks, and move into life "beyond" Penn State. It will help students develop a deeper understand of the relationship between careers, research, experiential learning, civic responsibility, transferable skills, and the discipline of geography. Students will come away with a set of career-related competencies as well as a framework for achieving further professional development. Students will hone a resume, engage in professional networking via LinkedIn and informational interviews, and construct an e-portfolio to showcase their accomplishments.

RECOMMENDED PREPARATIONS: 3 credits in geography

GEOG 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

GEOG 398: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

GEOG 398A: **SPECIAL TOPICS**

1-3 Credits

GEOG 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Prerequisite: prior approval of program
International Cultures (IL)

GEOG 411: Forest Geography

3 Credits

This course studies processes that control spatial and temporal change in forests.

Prerequisite: GEOG 010 , GEOG 314 ; or BIOL 220W
Bachelor of Arts: Social and Behavioral Sciences

GEOG 411W: Forest Geography

3 Credits

This course studies processes that control spatial and temporal change in forests.

Prerequisite: GEOG 010 , GEOG 314 ; or BIOL 220W
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

GEOG 412W: Climatic Change and Variability

3 Credits

Theories and observations of past, present, and future climatic change and variability; introduction to techniques used in climatic change research. GEOG 412W Climatic Change and Variability (3)(BA) This course meets the Bachelor of Arts degree requirements. GEOG 412W introduces students to the physical dimensions of climate change and variation. Climate change topics include radiative forcing, greenhouse gases, scenarios, equilibrium models, and time-dependent models. Important Climate variation topics are teleconnections and the El Nino-Southern Oscillation phenomenon. GEOG 412W would appeal to students with interests in Earth and atmospheric sciences, as well as environmental protection. As a writing-intensive course, GEOG 412W aims to help students improve their ability to communicate scientific information. The course devotes considerable class time to the mechanics of reading, writing, speaking, and especially report production. Students not only write, but also learn to edit and critique writing. Because most professional research on climate change and variation involves collaborative science teams, GEOG 412W focus on collaboration and participation. Students form teams, conduct research, and compile formal collaborative reports on climate change and variation. Students document their individual contributions by producing portfolios.

Prerequisite: GEOG 110 or METE0003
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

GEOG 413: Cryosphere and Climate Systems

3 Credits

Earth's cryosphere is undergoing rapid change, with high latitude warming and ice losses among the most prominent signatures of anthropogenic climate change. In turn, cryospheric changes possess global ramifications, including impacts on sea level, the planetary energy balance, and global weather and climate. Addressing climate change begins with understanding its manifestations, and few natural components of the Earth system are changing as quickly and with greater impacts than the cryosphere. This course focuses on the cryosphere and its significance in the global climate system. It provides an introduction to the dynamics of glaciers, ice sheets, and sea ice, including the various feedback mechanisms inherent to these systems. We begin with an exploration of evidence for past variability in ice sheets governed by natural Earth system cycles, before embarking on analysis of interactions between ice and the climate system today, and potential future cryospheric changes in a warming climate. This course combines lecture-based instruction, applied activities, and project-based learning. Emphasizing a data-driven approach, students gain an introduction to Python programming tailored to earth and climate sciences, as well as Jupyter Notebooks for interactive data exploration. The course investigates techniques used in contemporary cryospheric sciences,

including analysis of satellite remotely sensed data, output from regional and global Earth system models, in situ meteorological observations, and climate reanalysis products. Students will build proficiency in practical and transferrable skills essential for modern cryospheric and climatic research.

Prerequisite: GEOG 210 or EARTH 2 or EARTH 103N or EARTH 303 or METEO 101 or METEO 201 Recommended Preparation: Basics of college algebra and physics; experience and/or interest in scientific data analysis, particularly using Python.

GEOG 414: Principles and Applications in Landscape Ecology

1-3 Credits

Landscape ecology is a rapidly evolving discipline that is poised to address contemporary challenges in sustainability science, land management, and conservation. The focus of landscape ecology is on the controls, interactions and outcomes of spatial patterns and processes on ecological dynamics at multiple spatial scales. Landscape ecology explores how energy and nutrients flow across spatially variable patches, how dispersal and migration of aquatic and terrestrial organisms are affected by spatial networks, and how disturbances propagate across complex terrain. Grounded in related fields of ecology, geography, and spatial analysis, landscape ecology provides additional theoretical tools and approaches to guide applied conservation decision-making in a dynamically changing world. The objective of this course is for students to apply the methods, theories, approaches and practical applications of landscape ecology to inform landscape decision-making. Particular emphasis is placed on how humans modify landscapes and how species, ecological communities, and ecosystems have responded to these changes. These objectives will be met through lecture and discussion of prominent landscape ecology topics (scale, pattern quantification, agents of pattern formation, green infrastructure, and conservation biology), computer laboratory exercises, written papers, and group presentations. By the end of the course students will be able to (1) articulate in written and oral form the concepts of scale and pattern, (2) use landscape pattern metrics, spatial statistics, and models to characterize ecological pattern on landscapes, and explain how ecological patterns develop, and (3) apply knowledge of spatial pattern-process interactions to issues of sustainability, conservation, and landscape management.

Prerequisite: BIOL 110; BIOL 220; GEOG 314; FOR 308; WFS 209; LARCH 241

GEOG 417: Satellite Climatology

3 Credits

A discussion of the application of satellite data to current and planned large-scale climate experiments. GEOG 417 GEOG 417 Satellite Climatology (3)(BA) This course meets the Bachelor of Arts degree requirements. Geography 417 presents the theory and practice of satellite remote sensing as applied to the study of climate. Remote sensing refers to the acquisition of information about a target or phenomenon from a distance; climate is the low-frequency signal of weather that involves interactions among Earth's environmental systems (atmosphere, biosphere, cryosphere, hydrosphere). Combining these two disciplines into Satellite Climatology is logical because the fundamental basis of both remote sensing and climate is radiation transfer through Earth's atmosphere. The course emphasizes understanding the different techniques used to determine, from space-borne platforms, the atmospheric, oceanic and land surface conditions important to climate

and its variations, and the interpretation of these remotely sensed data in the context of "climate dynamics" and "synoptic climatology." Specific topics include the following: Satellite systems (platforms, sensors, orbits, data processing); Remote sensing clouds and cloud systems, Retrieval of atmospheric temperature, moisture, and precipitation, the Earth-atmosphere radiation and energy budgets, and Land-surface conditions and their modification by humans. In addition, examples of the different satellite-based climatologies, and their advantages and limitations with respect to conventional observations ("ground truth"), are presented.

Prerequisite: GEOG 362

Bachelor of Arts: Social and Behavioral Sciences

GEOG 420Y: Comparative Urbanism

3 Credits

This course investigates selected urban issues through the lens of comparative urbanism. GEOG 420Y Comparative Urbanism (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. As an upper level urban geography seminar, this course investigates selected urban issues through the lens of comparative urbanism and requires active class participation. Examination of readings from the growing literature on comparative urbanism will introduce students not only to possible ways to design an effective comparative study but also to the varying goals of such work. Other readings, drawn from a wide variety of sources, will target particular issues facing urban areas that may vary from year to year, such as economic restructuring, uneven urban redevelopment, transportation planning, historic preservation, arts districts, the social construction of race and ethnicity, aging in place, and urban poverty. Students in turn will be required to design and carry out a comparative research project focusing on a particular urban issue, highlighting both the similarities and the differences between their selected case study cities and placing them in local, regional, and global contexts. This course is reading and writing intensive and satisfies United States Cultures and International Cultures requirements, as well as the Bachelor of Arts Social and Behavioral Sciences Field.

Prerequisite: GEOG 120, GEOG 160

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

United States Cultures (US)

Writing Across the Curriculum

GEOG 421: Population Geography

3 Credits

This course examines key demographic characteristics of the U.S. population and how they are distributed in space. At the same time, we will look at how individuals come to be part of a population and with what implications. The course will focus on the U.S. with a special emphasis on where people live in U.S. cities. Given this focus we will spend significant time on issues of segregation, gentrification, health disparities, environmental justice, and migration. The class includes a significant lab component and students will have the opportunity to conduct empirical analyses that are common in the fields of planning, epidemiology, social work, and other cognate professional fields. This course meets the social and behavioral components of the BA field. The first goal of this seminar is to prepare students to think critically about the way demography and policy interact to produce outcomes that vary within and across populations and across space. Many of the most critical policy debates of our time hinge on an understanding of subgroups delineated by gender, age, race, and/or immigration status.

Students will learn to identify the role of history, economics, culture and geography in shaping the contexts in which these policy debates now exist and will gain the critical capacity to evaluate changing conditions in the world around them. The second key goal of this course is to train students in some of the basic techniques for analyzing populations. Being able to devise and execute a project that answers basic questions about the distribution of a population is a foundational skill for many careers that geographers might choose to follow, and can be powerful for engagement in the policy process. The emphasis here will be on applying statistical and GIS skills learned elsewhere to the messy world of real-life data. Students will achieve a better understanding of the possibilities and pitfalls of quantitative analysis of demographic information.

Prerequisite: GEOG 020; GEOG 220; SOC 001; R SOC 011 and GEOG 361; GEOG 362; GEOG 363; GEOG 364; SOC 207; CED 404

GEOG 422W: Globalization, Migration, and Displacement

3 Credits

This course explores the economic, political, legal, and socio-cultural dimensions of displacement and migration in the context of globalization. The substantive focus will be transnational low-wage labor migration and refugee flows of the late 20th- early 21st centuries, even as the course situates contemporary processes within histories and geographies of economic modernization, urbanization and colonialism. At a conceptual level, students will engage key theories of migration from sociology, economics, geography, and demography, and they will closely explore how race and gender shape migrant experiences and policy debates. Topics to be examined include: political and economic drivers of labor migration; immigration and border policies and politics; refugee politics and policies; human trafficking; shifting social identities, cultures, and notions of belonging in sending and receiving communities; and the role of race, gender, class and nationalism in these processes. Upon completion of this course students will be able to: - Identify and describe the historical antecedents to contemporary cross-border labor migration and refugee flows - Analyze the economic, political, legal, and social-cultural dimensions of transnational labor migration. - Explain the causes and consequences of labor migration from sending regions - Discuss the causes and consequences of labor migration to regions of reception - Compare the factors generating refugee flows across distinct regions over the 20th century - Integrate scholarly understandings of migrant experiences and identities with broader structural forces generating cross-border flows. - Examine distinct politics and policies of refugee protection and resettlement. - Demonstrate how social hierarchies of race, gender, and class shape cross-border labor migration and refugee resettlement. - Apply theories of migration to specific case studies of cross-border mobility. - Develop a research paper that engages course themes and scholarly debates, linking class concepts and debates to a specific case study. - Demonstrate effective visual and oral presentation skills

Prerequisites: GEOG 20 or GEOG 220 Recommended Preparations: Successful completion of an English composition course: ENGL 15; or ENGL 30H; or ENGL 137; or CAS 137; or ESL 15
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

GEOG 424: Geography of the Global Economy

3 Credits

Focus on industrial location theory, factors in industrial location, studies of selected industries and problems of industrial development. GEOG

424GEOG 424 Geography of the Global Economy (3) This class will conduct research on firms and industries engaged in the global economy. Students learn to conduct industry and firms analyses in the context of international regulation. Students learn about the competitive conditions, governmental context, and technological challenges facing selected industries.

Prerequisite: ECON 102 , ECON 104 , GEOG 126
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

GEOG 424W: Geography of the Global Economy

3 Credits

This course examines the actors, processes, and policies relevant to understanding the global economic system. How does the global economy work? How is it changing? What are the pieces and how do they fit together? What can we do to shape outcomes within this system? In the first section of the course we examine these questions in the context of the 2009 World Development Report produced by the World Bank. The report has as its focus "Economic Geography" with a particular focus on the role of cities in development. We will emphasize the differing assumptions made by economists and geographers with regards to processes of economic development and the impact of globalization. In the second portion of the class we will focus on specific industries, firms, and regions in an attempt to put the broader concepts from Part 1 into an applied context. The focus of this section will be on identifying the complexity of the economic system. In Part 3 of the class we draw from the literature on alternative understandings of the global economy and its possibilities and link this literature to broader debates about global capitalism, international economic policy, and social welfare. Bringing together the broad themes from Part 1 and the applied responses and strategies gleaned from Part 2 we will attempt to synthesize both macro and micro-scale understandings of the present economic system.

Prerequisite: GEOG 326; GEOG 126; or ECON 102; or ECON 104; or EBF 200
Writing Across the Curriculum

GEOG 425: Geography of Race, Class, and Poverty in America

3 Credits

This class examines the spatial interactions of race, class and poverty in the United States. GEOG 425 Geography of Race, Class, and Poverty in America (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. The terms 'race,' 'class,' and 'poverty' are often discussed in the same breath in academic scholarship. Research portrays the interwoven relationships between economic status, economic security, and ethnic heritage. Despite this powerful and abundant literature, few scholars examine the spatial interactions among race, class, and poverty. The class introduces students to a range of literatures on the meaning of race, class, and poverty in the contemporary United States. We will situate these terms in their local spatial context and investigate how location influences perceptions of the meaning of race, class, and poverty. We will blend historical, contemporary, theoretical and empirical scholarship as we investigate the meaning, understanding and manifestation of race, class and poverty in the U.S. Beginning with history, we will move through the 20th century examining how economic and political cycles have influenced social understanding of these terms. There will be a particular focus on deconstructing the measurement and meaning of the terms and their use in public policy discussions based on

perceptual understandings of the terms 'race', 'class', and 'poverty'. We will examine powerful historical and contemporary media images of race, class, and poverty as seen through the lens of place and identity.

Prerequisite: GEOG 126 ; ECON 102 or ECON 104
Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)

GEOG 426W: Gendered Worlds

3 Credits

Gendered Worlds examines how systems of dominance manifest in everyday life. Through an intersectional approach to social differences, such as gender, race, class, ethnicity, age, ability, and sexuality, the course highlights the significance of difference in shaping experiences of space and place in a global context. The course incorporates approaches from cultural, postcolonial, subaltern, queer, gender, and critical race studies, all of which have influenced current debates across the field of geography. Feminist scholars have long been concerned with the spatial politics of cultural difference. As a point of entry to discussions of gender and geography, this course will explore the diverse ways in which geographers have conceived of, analyzed, and redefined gender as a contested spatial practice that intersects with other facets of identity such as race, class, and sexuality. Using contemporary geographic texts, we will explore the gendered dynamics of geographic research, citizenship, violence, security, nationalism, nature, and globalization. The purpose of this course is to examine how gender is understood and utilized in the field of geography. This course also aims to enhance students' ability to engage in first-hand critical research, as well as collaborative learning, through a reflective and on-going process of research and writing over the course of the semester. At the end of the course, the successful student will be able to: 1. Deploy contemporary debates around gender theory, gendered spatial practices, and cultural difference. 2. Critique the cultural and social construction of gender across time and cultures. 3. Analyze representations of gender in social institutions such as the media. 4. Apply theories of gender and cultural difference in the context of critical written analysis.

Prerequisites: (GEOG 220 or GEOG 20 or GEOG 2N or WMNST 100) and (C or higher in ENGL 15 or ENGL 30H or ENGL 137H or CAS 137H or ESL 15) Recommended Preparation: GEOG 324 (preferred) or GEOG 320 or GEOG 326 or GEOG 328
Cross-listed with: WMNST 426W

GEOG 427: Urban Historical Geography

3 Credits

Study of the development and transformation of the historical urban built environment. GEOG 427 Urban Historical Geography (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. Close up, cities can be seen as sets of buildings - some that are lived in, some that are places of work, and others that are places of cultural celebration. The streetscapes created by these sets of buildings can be decoded as a palimpsest of the past. Likewise, the patterns and names of streets, lanes and alleys between buildings contribute to morphological databases of property parcels and land use that help in the analysis of the historical transformations of urban form. Seen at a more distant scale, cities are also nodes - centers for surrounding regional trading systems, and

partners with other places in national and global trading systems - that have evolved over a set of decades or even centuries. This course offers an investigation of such multiple frames on the urban past. Examples will be drawn from the Americas, but many will be from Europe, Africa and Asia. Imperialism and its associated colonial mercantile practices meant that variants of urbanism were mapped on to other parts of the world where they often created hybrid forms of cities over time. In the industrial era, new relations between cities and the countryside emerged, as new forms of production developed and resources were harnessed from a more global hinterland. Radically different types of cities have emerged in the past two centuries. Geography 427 will survey the global urban past and explore ways of decoding urban morphological complexity through historical cartographic record and extant landscape evidence. The ultimate objective is for students to develop an appreciation for the complexity of urban life and landscapes in times past and to understand some of the ways in which American urban forms adapt or draw distinction from urban forms elsewhere. At the same time, the course aims to enhance student oral and written communication skills. To enhance their oral communication skills, each student will be expected to make two presentations on their research and to participate in class workshops. To enhance their written communication skills, students are required to write two papers that include instructor feedback on interim drafts, to craft three article summaries, and to write short log responses to most lectures.

Prerequisite: 6 credits in geography, humanities, or social sciences
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

GEOG 428W: Political Geography

3 Credits

This upper-level undergraduate seminar examines theories and concepts of political geography, with special emphasis on the geographic foundations of power in a globalizing world. The course covers the foundational themes of political geography: state formation; citizenship and nationality; geopolitics; borders; sovereignty; colonialism/postcolonialism; environmental politics; political identity and social movements. The course readings include a balance of theory and case study material and include international and domestic examples. As a writing-intensive course, students will write weekly assignments, workshop their essays in peer-groups, and focus on the techniques of expository writing on political geographic topics. The objective is to develop effective writing skills for presenting analyses of political geographic processes and basing these analyses on investigation, evidence, and clear argumentation in a concise essay format. Students will receive regular feedback and evaluation from the instructor and have several opportunities for presenting their work to their peers. The final project consists of a larger research and writing project and class presentation. After taking this class students will: 1. understand the various linkages between geography and politics 2. be able to apply a multi-scalar framework to understanding politics 3. contextualize concepts of power and resistance in relation to space and time 4. understand how geographic settings simultaneously enable and constrain political agents and options 5. be able to engage quality news media using geographic to gain a broader understanding of what is going on in the world.

Prerequisite: (GEOG 220 or GEOG 20 or GEOG 2N) and (C or higher in ENGL 15 or ENGL 30H or ENGL 137H or CAS 137H or ESL 15)
Bachelor of Arts: Social and Behavioral Sciences

GEOG 429: Geographic Perspectives on Global Urbanization

3 Credits

This course reflects critically on a number of issues related to global urbanization, including the culture and political economy of urban space.

Prerequisite: GEOG 020 , GEOG 126 , or GEOG 120
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

GEOG 430: Human Use of Environment

3 Credits

The human use of resources and ecosystems and social causes and consequences of environmental degradation in different parts of the world; development of environmental policy and management strategies. GEOG 430
GEOG 430 Human Use of Environment (3)(BA) This course meets the Bachelor of Arts degree requirements. Geography 430 examines the human use of resources and ecosystems, the multiple causes and consequences of environmental degradation, and adaptive institutional and policy arrangements as prerequisites for resilient and sustainable management and development in different parts of the world. The major objective of this course is to help geographers, earth scientists, and other professionals to develop an awareness and appreciation of the multiple perspectives that can be brought to studies of human use of the environment and of the ways in which resource-management decisions are made in human society. This is a capstone course that encourages students to place their individual major and technical skills within the context of multiple approaches to environmental decision making and management in complex and dynamic social-ecological systems. GEOG 430 is designed as a collective/social learning experience. This implies that the professor and students share responsibility for the learning process and take advantage of collective skills, insights, experiences, and efforts of each other. As in system dynamics, this requires both commitment and flexibility and the willingness to explore foreign territory. As part of this philosophy, learning consists not only of information flow from professor to student, but also from student to student and student to professor. The course follows a case study approach to explore real life lessons of adaptive management around the globe. To make this process work, attendance and active participation are imperative. The course is run more like a seminar than a lecture course and integrates lectures, in-class discussions, presentations, and interactive activities. Student performance is evaluated based on active participation in all of the above, individual short assignments, group projects, in-class quizzes and exams, and one major writing assignment, varying by faculty teaching. This course is offered every semester.

Prerequisite: GEOG 010 or GEOG 020 or GEOG 030 or GEOG 040 or GEOG 130 or permission of the program
Bachelor of Arts: Social and Behavioral Sciences

GEOG 431: Geography of Water Resources

3 Credits

GEOG 431 is designed for students to understand the natural processes of aquatic ecosystems, management of water resources, and threats

to sustaining water quantity and quality, for all types of freshwater surface, groundwater, rivers, lakes, wetlands. This course should appeal to water resource managers, geographers, ecologists, earth scientists, planners, other environmental professionals as well as non-science majors. This course will develop awareness and appreciation of the multiple perspectives about water as a precious resource, commodity, and sometimes hazard. Students in the course will first examine water. Course Justification characteristics, sources, classification systems, and aquatic ecosystems. Next, we will examine water resource management, including issues surrounding irrigation; floods and dams; provision of safe potable water; threats to water quantity and quality including human and aquatic ecosystem effects; the water economy including virtual water and water footprints; water laws and policy; institutions for water management at the global, national, regional and local scale; and issues of water conflict, security, and climate change. Course Objectives: - Learn how/why water is distributed unevenly in space and time around the Earth. - Examine ways resource management decisions made in human society are strongly related to the availability, quantity, and quality of water. - Examine water characteristics, sources, classification systems, and aquatic ecosystems. - Examine water resource management, including issues surrounding irrigation; floods and dams; provision of safe potable water; threats to water quantity and quality including human and aquatic ecosystem effects; the water economy including virtual water and water footprints; water laws and policy; institutions for water management at the global, national, regional and local scale; and issues of water conflict, security, and climate change. When you successfully complete this course, you will be prepared to: - Identify the unique characteristics of freshwater. - Describe, with a geographic perspective, how and why freshwater is distributed unevenly in space and time around Earth. - Explain the natural processes of aquatic ecosystems. - Discuss why conflicts arise over the vital resource of freshwater. - Identify challenges facing water management in varied climate types around the world. - Compare how humans interact with aquatic ecosystems.

Prerequisite: (GEOG 10; or GEOG 210; or GEOG 30; or GEOG 230) ; or 6 credits natural science

Bachelor of Arts: Social and Behavioral Sciences

GEOG 431H: Geography of Water Resources

3 Credits

Perspectives on water as a resource and hazard for human society; water resource issues in environmental and regional planning.

Bachelor of Arts: Social and Behavioral Sciences
Honors

GEOG 432: Energy Policy

3 Credits

Analysis, formulation, implementation, and impacts of energy-related policies, regulations, and initiatives.

Enforced Prerequisite at Enrollment: EBF 200 and EGEE 120 and PLSC 490

Cross-listed with: EME 432

GEOG 433: Geographies of Justice

3 Credits

The justice concept has been a topic of interest within various academic and policy realms concerned with the inequities experienced by racial

groups, socio-economic class, and ethnicity. The environment justice movement is generally understood to have begun in the early 1980s with a series of events that demonstrated the inequitable distribution of health hazards and risk. While much work in environmental justice has usefully focused on the disproportionate exposure of poor and minority populations to environmental hazards, conceptualizations of justice have expanded in recent years to include systematic and comparative research within urban and rural populations, industrialized and developing contexts, access to and control over resources, as well as unwilling exposure to hazards, processes and institutions of environmental governance. These trends have resulted in greater attention to the social processes that create and perpetuate inequality on the basis of race, gender, income, or other social categories. In exploring the 'fast conceptual transfer' of the environmental justice concept to other settings, Walker and Bulkeley (2006: 655) suggest emerging interest in distribution between nation-states, an expansion of terms to include gender, age and future generations, and intersections with the vulnerability literatures to examine the threat of natural and produced risks. This course engages with the history and future of social and environmental justice. We begin by examining the emergence of the environmental justice movement in the United States and subsequent export of the justice concept to other topics, including sustainable development and climate change, and within other settings, including Sub-Saharan Africa and Latin America. In exploring the diverse ways that justice is being applied at the present time, we will also question the future viability for justice as a conceptual and organizational tool.

Course Objectives This course has four primary objectives: - Examine the history of the concept of environmental justice and the environmental justice movement in the United States; - Consider multiple definitions of environmental justice such as procedural and distributive justice; - Examine the application of the environmental justice concept to other topics, including sustainable development and climate change, and within other settings, including Sub-Saharan Africa and Latin America; and - Consider future directions for environmental justice.

GEOG 434: Politics of the Environment

3 Credits

This course explores politics related to the use, transformation, valuation, and representation of the environment. GEOG 434GEOG 434 Politics of the Environment (3) Scholarship in geography and related disciplines has demonstrated that nature in general and specific environments in particular are unavoidably political. Environmental management can thus never be a purely scientific or technological challenge; it requires critical analysis of cultural, political, and economic contexts, factors, and effects. For instance, effective environmental management requires consideration of how culture shapes how we perceive and value our environments, who wins and who loses in any particular approach to environmental management, and what the relative advantages and disadvantages of competing institutional approaches to environmental management are. This course examines the development of environmental governance, with a primary focus on the United States. It explores both how various groups within society conceive of and value the environment, and multiple approaches to environmental governance and protection. It reviews the history of environmental movements and regulation, and contemporary issues and debates in environmental governance, with particular attention to the effects of institutional forms and social movements. In particular, it examines competing arguments for and against governance approaches centered on state action, market mechanisms, and prominent roles for NGOs and social movements. Students will be evaluated based on: 1) their participation in class discussions, based on critical engagement with material from

course readings and lectures; 2) their performance on a midterm and a final examination; 3) an individual research project on a topic relevant to the course, to be designed and carried out under the supervision of the course instructor.

Prerequisite: 6 credits in social sciences or humanities

GEOG 436: Ecology, Economy, and Society

3 Credits

Analyses of major themes in ecology and economic development, poverty- alleviation, and sustainability. GEOG 436GEOG 436 Ecology, Economy, and Society (3) For many years, it was believed that there was a direct tradeoff between economic growth and a clean environment. Sustainable development has been proposed as a framework within which these two objectives can be pursued in harmony and actually can reinforce one another. This course focuses on sustainability issues at the broader (macroeconomic) level, as opposed to the operation of individual businesses (microeconomic, or industrial ecology) level. The course will have two main emphases: 1) to evaluate the major conceptual ideas surrounding natural resource management and sustainable development, including equity, poverty, fairness, power, knowledge, and community empowerment; 2) to use empirical case studies to examine the practical, material and policy relevance of these concepts. The first part of the semester will be used to untangle and clarify the ideological and theoretical bases (biases) of broad human-environment discourses as they pertain to community empowerment and resource development. The final part of the semester will be used to analyze case studies in order to assess the relevance of existing theoretical framework for resource empowerment and community development in industrialized countries and the Third World, especially Africa.

Prerequisite: upper-division standing

GEOG 437W: Energy Geographies and Policy

3 Credits

This course explores the motivations, key concepts, and contemporary challenges of US and international energy policy. The approach of the course is inherently geographical in that we engage the concepts of scale, place, landscape, and materiality to evaluate energy policy issues. The course addresses the following questions: 1) Why and how is energy governed? 2) How does energy policy differ across political scales and energy sectors? 3) Who are the key stakeholders influencing energy policy? 4) How are the costs and benefits of energy policy distributed? 5) How can a geographic perspective advance energy policy making? 6) How well do existing tools and policy frameworks address emerging challenges in energy policy and governance? The course is designed to explore these questions through interactive discussion, drawing on examples from various political levels and in various geographical contexts. A combination of independent writing and presentations will provide students with the expertise to be careful and critical observers of policy developments, and to prepare students for future roles as policy advisors in business and government settings. The course is divided into four parts: 1) overview of US and international energy policy; 2) key concepts and debates in analyzing energy; 3) case studies; and 4) emerging issues and challenges. After successful completion of this course, students will be able to: 1. Analyze the origins, motivations and distributional impacts of U.S. and international energy policies; 2. Apply key concepts from the energy social sciences to contemporary energy

debates; 3. Critically assess how geographic perspectives can advance energy policy making

Prerequisite: (GEOG 230 or GEOG 30N or EGEE 101 or EBF 200) and C or higher in an English composition course (ENGL 15; ENGL 30H; ENGL 137H; CAS 137H; ESL 15); Recommended Preparation: GEOG 330N or GEOG 332N or ANSC 332N or METEO 332N

Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

GEOG 438W: Human Dimensions of Global Warming

3 Credits

Human dimensions of climate change: human causes, human consequences, and policy implications of global warming. GEOG 438W - Human Dimensions of Global Warming (3)(BA) This course meets the Bachelor of Arts degree requirements. Geography 438W, the Human Dimensions of Global Warming, covers both the human causes and consequences of what many people view as the most significant problem facing society. Humans cause climate change primarily by emitting heat-trapping greenhouse gases through everyday activities associated with industrialized society (such as energy production and consumption, transportation, and manufacturing) and land transformation (such as agriculture and deforestation). People experience the consequences of climate change directly through reduced resources (such as food, fiber, forests, and fisheries) or increased natural hazards (such as droughts, floods, and intense storms). They also experience the consequences indirectly through such mechanisms as higher prices for food or larger insurance premiums. GEOG 438W does not address the physical science of climate change; instead, it concentrates on social science issues surrounding the topic. GEOG 438W has two goals: (1) to develop understanding of a set of issues related to the human dimensions of climate change; (2) to develop and apply communication skills by discussing and writing about the topic. The specific content of the course will change with the instructor, but the focus on the human causes and consequences of climate change and on skill-development in writing will be constant. Students will be evaluated on both the course goals: (1) understanding of the human dimensions of climate change; (2) application of communication skills. Although exact procedures for determining grades will vary with instructor, the basis for grades will always include a combination of written exams based on lectures and readings, regular written assignments with instructor feedback, and in-class discussion and participation.

Prerequisite: EARTH002 , GEOG 010 or METEO003 ; GEOG 030

Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

GEOG 439: Property and the Global Environment

3 Credits

This course reviews theoretical and empirical relationships between multiple legal, economic, and cultural approaches to property, and environmental quality and conflicts. GEOG 439GEOG 439 Property and the Global Environment (3) Property relations are among the most powerful and pervasive institutions in human societies. Fundamental rules governing and legitimating who can do what, and where, they shape and reveal interactions between human societies and physical environments, a concern at the heart of geography. Our own property relations are often all but invisible to us precisely because they are so deeply woven into our perceptions, consciousness, social structures, and everyday experiences of the world. It is thus easy to overlook the fact

that we live within highly specific and contingent property arrangements and that changing circumstances are prompting important changes in contemporary property relations. This course explores these issues with a particular focus on their implications for environmental politics and regulation. We will address questions such as: Is the privatization and commodification of nature a recipe for ecological disaster, or the most effective means of preservation? Can we own the weather? What were the historical-geographical circumstances surrounding the development of major modern property forms, and are those forms adequate to the environmental problems we now confront? Are there property relationships outside of the law? How do property relations and conflicts change in response to changing human control over nature, and how can different kinds of property arrangements lead to, or help to solve, environmental and social problems? Readings will review debates over common property; the benefits and dangers of privatization of environmental goods; distinctions between formal and informal property rights; the development of zoning and other regulation of private property; and contemporary debates over intellectual property rights in nature, and relationships among trade, property rights, and environmental quality. The course will be of interest to students interested in environmental policy, land use planning and management, law, the areas of nature-society relations and historical geography, and environmental history. Students will gain a sophisticated understanding of the central underpinnings of much property and environmental regulation, and familiarity with many cutting-edge debates in these domains, both domestically and internationally. Evaluation methods will include examinations and an independent research paper and presentation by each student. The course will be offered every other year, with enrollment capped at 30 students.

Prerequisite: 6 credits in geography, humanities, or social sciences

GEOG 444: African Resources and Development

3 Credits

Ecological and cultural factors in the geography of Africa; natural resources and development. GEOG 444 / AFR 444 African Resources and Development (3) (BA) This course meets the Bachelor of Arts degree requirements. This course is designed to analyze the ecological, economic, political and cultural factors, which influence development in sub-Saharan Africa. The traditional system, colonialism, modernization, post-colonial philosophies are four conceptual artifacts used to address some of these issues. Within these broad frameworks, the course focuses on existing debates surrounding key development ideologies and narratives in the region, including, poverty, conservation, population, debt, food security, land reform, foreign intervention and global politics. The topics and texts for the course are chosen carefully to provide general factual material as well as exposure to the major discourses surrounding the region's development. The views of many Americans concerning Africa are often both unitary (Africa is a country) and unidimensional (Africa is a place of conflict, poverty, corruption and crisis). Assuming that a number of students are likely to join the class with this general background, the main objectives of the course will be : (i) to provide a broad geographic and historical tutorial to dispel myths and stereotypes about the region; (ii) to explore the literature, which analyzes the historical, geographic and political factors that underlie the region's present status in the global economy; and (iii) to gain insights into the intellectual and ideological dimensions of the "raging" debates surrounding issues like environment, conservation, population, corruption, and poverty in the region. By the end of the semester, students should have acquired the skills to accomplish the following goals: *develop a "mental map" of the broad physiographic, ecological, economic and

political zones (blocs) in the region; *be able to discriminate between stereotype and reality on information pertaining to the region; *be able to interpret and analyze the internal (national, regional) dynamics of the region's development; *be able to interpret and analyze the global factors, which influence the environment, economy, and politics of the region; *develop an informed background on the ideological narratives that guide policy in the region, for example, population, sustainable development, post-colonialism, "empire" (whether, American, European, Indian, Chinese, South African?).

Prerequisite: GEOG 010 or GEOG 020 or GEOG 030 or GEOG 123 or GEOG 124 or GEOG 130 or EARTH105 or AFR 105 or AFR 110

Cross-listed with: AFR 444

Bachelor of Arts: World Cultures

Bachelor of Arts: Social and Behavioral Sciences

GEOG 448: Neighborhoods and Health Equity

3 Credits

This course examines local and regional domains of disease prevention, health behavior and promotion, and health inequities in the context of urban and suburban neighborhoods. We will draw on urban geographic and social theory as well as urban planning, public health, and environmental justice literature to identify ways in which neighborhood and geographic features combine with policies, individual-level behaviors, and social interaction to produce health and disease. We will further apply concepts and issues addressed in course readings and lecture to selected urban areas, large and small, to gain understanding of the tools and methods most often used in evaluating urban spaces for community health and health equity.

Prerequisite: GEOG 220 Recommended Preparations: Successful completion of GEOG 260 and GEOG 320 are recommended but not required

United States Cultures (US)

GEOG 453: Geospatial Applications in Water Resources & Aquatic Ecosystems

3 Credits

This course is designed to expose students to different geospatial analysis applications in water resources. It will emphasize geospatial data acquisition of hydrologic features, spatial analysis, and data representation. Students will learn through projects, lectures and hands-on computer lab exercises to investigate and solve water resource issues. Practical applications will focus on watershed and drainage network delineation, assessment of aquatic ecosystems, and surface generation methods using spatial hydrology models. Students who successfully complete GEOG 453 will be able to manage, analyze, and represent geospatial data by using spatial analysis software and have a vision of hydrological applications used in land use planning and watershed management. Specific objectives include: 1. Review of data sources and structure in hydrology: georeferenced coordinate systems, datum and scale, map projections, and data acquisition and representation. 2. Use digital terrain models to route surface runoff and derive watershed and stream networks. 3. Assess aquatic ecosystems and riparian buffers based on landscape analysis and other sources of hydrologic modeling parameters. 4. Model continuous surfaces from point to raster data structure using interpolation techniques. 5. Practice real-world resource problems in both urban and rural areas by integrating hydrologic calculations and automated geospatial procedures.

Prerequisite: GEOG 363 or GEOG 483 or SOILS 450

GEOG 461W: Dynamic Cartographic Representation

3 Credits

Theory and practice of mapping and geo-representation in a dynamic media context. Applications in science, policy, travel, and education. GEOG 461W GEOG 461W Dynamic Cartographic Representation (3) (BA) This course meets the Bachelor of Arts degree requirements. Most maps produced today are electronic, dynamic, and often ephemeral – with millions of maps generated on the web each day. At the same time, computer graphics technologies developed to enable scientific visualization generally, are being adapted and extended for applications with geographic information. The goal of this course is to provide students with both the conceptual understanding and practical experience needed to design effective dynamic representations and assess their effectiveness. During the term we will explore the potential and implications of recent advances in cartography, exploratory data analysis, and information visualization as they relate to the theory and practice of geographic visualization (geovisualization). A key focus of the course is on 'dynamic' representations of geographically referenced information. Dynamic representations are those that change as a result of user actions or data updates. Topics include: animated and interactive maps, exploratory multivariate spatial data analysis, geovisualization to support knowledge construction, interactive web maps, navigation aids for real and virtual worlds, map-enabled decision-support, collaborative geovisualization, dynamic maps to enable learning, semiotic principles for design of dynamic maps and related geovisualization tools, and perceptual/cognitive issues in dynamic geo-representation (including methods for studying the success of visual displays and interaction devices). As a writing intensive course, particular attention will be given to writing for geographic information science (GIScience). This writing will include laboratory project reports, reviews of published literature, and a term project.

Prerequisite: GEOG 361 or GEOG 362 or GEOG 363

Bachelor of Arts: Social and Behavioral Sciences

Writing Across the Curriculum

GEOG 462: Advanced Observation of Earth and Its Environment

3 Credits

Recommended Preparations: (GEOG 365 AND GEOG 464) OR prior exposure to R programming language This course will provide the requisite materials to understand and apply techniques of remote sensing to study Earth and its environment using the R programming language. Every day numerous satellites from different countries acquire and transmit multispectral high resolution data of Earth and its environment. Such data are used for a variety of operational and research applications, such as weather forecasting, national security, natural hazards, navigation, land use and land cover, surface temperature, climate change, urban planning and many others. Massive amounts of data are received, processed, stored and distributed by several centers around the world, giving an unprecedented access to global high resolution information. Such information can give new insights to study the complementary nature of different parameters of Earth's environment. The first part of the course discusses the R programming language to analyze data, generate maps and plots and general remote sensing methodologies, products availability and characteristics, data types and formats. The second part of the course discusses remote sensing applications for specific tasks including natural hazards, global change, seasonal and interannual studies. Current research issues will

be illustrated, including examples pertaining to the atmosphere, land masses, and oceans, and concluding with a survey of some problems that are at the current frontiers of remote sensing.

Prerequisite: Recommended Preparations: (GEOG 365 and GEOG 464) or prior exposure to R programming language Prerequisite: GEOG 362 or FOR 455 or METEO 477 or EE 477

GEOG 463: Geospatial Information Management

3 Credits

This course examines geospatial data representations and algorithmic techniques that apply to spatially-organized data in digital form.

Prerequisite: GEOG 363

Bachelor of Arts: Social and Behavioral Sciences

GEOG 464: Advanced Spatial Analysis

3 Credits

Skills and knowledge for applying quantitative methods to analyze information with spatial distributions. GEOG 464GEOG 464 Analysis and GIS (3)(BA) This course meets the Bachelor of Arts degree requirements. Geography 464 is a course in methods for analyzing spatial data—methods that can and should be used when the geographic arrangement of a set of measured observations is thought to be of significance in explaining the values of those measurements. The methods of spatial analysis looked at in this course can be distinguished from conventional statistical analysis techniques, and also from many of the analysis functions programmed into many GIS packages. In fact several spatial analysis methods considered in this course the result of attempts to alter and extend conventional statistical techniques to take account of locational similarity and distance measurements (which is why Geography 364 or an equivalent primer in introductory statistical methods is a prerequisite). This means that the techniques that will be introduced in the course are often quite complex mathematically or statistically. Having said this, the overall goal of the course is to provide sufficient conceptual understanding and practical experience so that students become competent in selecting and applying methods appropriate to a variety of frequently-encountered analytical situations.

Prerequisite: GEOG 364

Bachelor of Arts: Social and Behavioral Sciences

GEOG 465: Advanced Geographic Information Systems Modeling

3 Credits

Before taking GEOG 465, students will have learned the fundamentals and principles of GIS. This course extends such knowledge to modeling geospatial scenarios. A GIS model simulates real-world phenomena, including environmental, physical and natural features, as well as social features such as demographic, transportation and origin-destination data. We will model raster and vector data types with an emphasis on multi-criteria GIS operations, using ArcGIS, R and potential other software packages. Upon completion of the course, successful students will have achieved the following objectives and learning outcomes: Students will be able to: a) discuss basic GIS modeling principles; b) find, use, store, retrieve and evaluate GIS datasets; c) describe capabilities and limitations of GIS methods and models; e) implement capabilities, tools and packages in ArcMap GIS and R environments; f) use R for programming tasks such as looping and branching; g) evaluate an external software program and create a model using this software;

h) exhibit ability to design and carry out spatial analyses using GIS; i) communicate the results of geographic analyses to others, both in oral and in written form; j) analyze spatial data sets in terms of predictability and uncertainty; and k) calibrate models based on real-world datasets.

Prerequisite: GEOG 363

GEOG 467: Applied Cartographic Design

3 Credits

Project-based map production problems with emphasis on map design and advanced mapping tools in geographic information systems. GEOG 467 Applied Cartographic Design (3)(BA) This course meets the Bachelor of Arts degree requirements. The course objective is to immerse the student in applied problems of map production and geographic representation. Topics include advanced software methods for labeling and data editing; advanced symbolization and production of extended map series; conversion between software environments; and representation for multiple media, scales and purposes. The challenge of working with clients for mapping is often included in a project. Evaluation is based primarily on meeting draft deadlines, map project quality, written reports on project decisions, and an exam. The 300-level cartography course is a prerequisite for GEOG 467, and an introductory GIS course also provides useful background skills, though it is not a prerequisite.

Prerequisite: GEOG 361

Bachelor of Arts: Social and Behavioral Sciences

GEOG 468: Geographic Information Systems Design and Evaluation

3 Credits

Design and evaluation of Geographic Information Systems and other forms of integrated spatial data systems. GEOG 468GEOG 468 Geographic Information Systems Design and Evaluation (3)(BA) This course meets the Bachelor of Arts degree requirements. This course teaches GIS design, project management and communication skills and an appreciation of the ethical, legal and social issues surrounding maps, GIS and geographical data. It also introduces some of the newer information-technology aspects of handling geographic information, such as location-based services and sensor webs, that affect how GIS data are accessed and used. The bulk of practical component of the course is taken up with a large group project (four to six persons per group). The project gives students the opportunity to engage in an exercise that spans the entire range of GIS design and implementation: from problem inception to solution testing. Outcomes revolve around the experience gained by conducting a GIS project from inception to solution, including specification, design, implementation and evaluation, and specifically: 1. Practical experience with technical writing relating to GIS systems lifecycle, including interviewing, fact finding, description of the contents of the various project deliverables and their importance. 2 An appreciation of legal and ethical issues surrounding GIS, maps and geographic including copyright, responsibility and liability and computing law. 3. An understanding of newer technological innovations that will impact the access and use of geographic information, including: data sharing (interoperability), digital libraries and information portals, web services and grid computing. 4. A portfolio of practical systems development work, that documents all stages in the lifecycle of a GIS project.

Prerequisite: GEOG 363

Bachelor of Arts: Social and Behavioral Sciences

GEOG 469: Energy Industry Applications of GIS

3 Credits

Roles of geographic information systems in energy siting decisions focusing on electric energy transmission networks. GEOG 469 Energy Industry Applications of GIS (3) Over 2 million miles of oil and gas pipeline and nearly 200,000 miles of electric transmission grid currently traverse the U.S. Geographic information systems (GIS) are used to help maintain these far-flung and extremely expensive energy infrastructures. GIS is also used to help determine optimal routes for pipelines and transmission lines as energy demand and production increase, and as the grid is extended to connect to new energy sources and consumers. GEOG 469 provides students with an in-depth exploration of the complexities of siting decisions. The course introduces a variety of siting challenges that confront the energy industry and its customers and neighbors, but focuses on the siting of electrical transmission lines. The course also provides hands-on experience with a common decision support technology, and considers how the technology may be used to facilitate public participation in siting decisions. Students will undertake a term-length project in which they must propose, research, develop and implement a siting recommendation for an electrical transmission line. They will utilize activities from each lesson to develop primary and alternative routes. Using GIS, students will develop overlays, weights and rankings to determine the most suitable location for a proposed transmission line. Students' final product will be maps showing proposed routes based on the siting criteria and rankings developed to minimize the impacts associated with the various siting criteria used. To help students develop the critical thinking skills needed in the energy industry, students will learn to critique their peers' analyses systematically from the perspective of local stakeholders who are most affected by siting decisions. GEOG 469 is designed to help students achieve two of the programmatic educational objectives established for the Energy and Sustainability Policy degree. It fosters energy industry knowledge by illuminating the difficulties intrinsic to facilities siting decisions. And it nurtures analytical skills by familiarizing students with GIS methodology, and by teaching them how to critique GIS analyses systematically.

Prerequisite: GEOG 030 , EGEE 102 , EME 444

GEOG 479: Spatial Data Science for Cyber and Human Social Networks

3 Credits

This course examines the nexus of geospatial intelligence analysis with cyberspace, the geopolitics of cyber threats, the politics of censorship and hacking, public safety, disaster response, and humanitarian relief. Students will utilize a range of cyber data, systems, and spatial sciences to examine human social networks of the Internet. The course will be centered on geospatial intelligence with emphases on technology, information theory, and cyber and human networks.

Prerequisite: GEOG 160 , GEOG 482 , or permission of program

GEOG 480: Exploring Imagery and Elevation Data in GIS Applications

3 Credits

Using imagery and terrain data in typical application scenarios faced by the geospatial professional.

Prerequisite: GEOG 482 or equivalent professional experience

GEOG 481: Topographic Mapping with Lidar

3 Credits

Using airborne topographic lidar to create elevation models for GIS applications.

Prerequisite: GEOG 362 or GEOG 480 ; GEOG 160 or GEOG 482 ; or equivalent professional experience
Bachelor of Arts: Social and Behavioral Sciences

GEOG 482: Making Maps That Matter With GIS

3 Credits

Despite its widespread use in thousands of organizations worldwide, Geographic Information Systems (GIS) remains for many an obscure set of technologies and professional practices. Even practicing GIS professionals may have limited awareness of the breadth of the field and its impacts in government, industry, and non-governmental and non-profit organizations. The course uses case studies of meaningful applications of GIS to reveal key topics across the spectrum of industry sectors defined by the U.S. Department of Labor in its Geospatial Technology Competency Model (GTCM): Positioning and Data Acquisition, Analysis and Modeling, and Software and Application Development. Topics to be mastered include concepts like positioning frameworks, uncertainty, and geo-enablement, methods and techniques including the GPS positioning, spatial modeling, and geo app development, and relevant ethical, legal, and policy issues such as locational privacy. In addition to topical objectives, the course cultivates competencies associated with lifelong learning, a cornerstone of the GTCM. Students achieve educational objectives by searching, discovering, and evaluating information from a variety of sources, including, but not limited to, the Internet. Those with substantial professional experience are encouraged to share their perspectives. Students develop mastery through class discussions in which they collaboratively prepare to demonstrate individual mastery in tests. They also learn to craft case studies of their own by creating and presenting story-telling web apps using cloud-based GIS technology. They gain self-knowledge by assessing their individual competencies in relation to the GTCM. The awareness, knowledge and technical skills they gain prepare them for success in programs such as Penn State's Postbaccalaureate Certificate Program in Geographic Information Systems (GIS) and Master of GIS graduate degree program, and for professional growth.

Prerequisite: admission to the Master of GIS program or Certificate Program in GIS

GEOG 483: Problem-Solving with GIS

3 Credits

How geographic information systems facilitate data analysis and communication to address common geographic problems. GEOG 483

Prerequisite: GEOG 482
Bachelor of Arts: Social and Behavioral Sciences

GEOG 484: GIS Database Development

3 Credits

Database design, creation, maintenance, and data integration using desktop GIS software. GEOG 484

Prerequisite: GEOG 483

Bachelor of Arts: Social and Behavioral Sciences

GEOG 485: GIS Programming and Software Development

3 Credits

The course focuses on solving geographic problems by modifying and automating generic Geographic Information System (GIS) software through programming. In GEOG 485, students use the Python programming language to write and modify scripts that add functionality to desktop GIS tools and to automate geospatial analysis processes. No previous programming experience is assumed. Core topics covered in this class include object-oriented programming, component object model technologies, object model diagrams, loops, if-then constructs, and modular code design, and situates these topics in the geospatial workflow through their integration with maps, layers, spatial data tables, and spatial analysis methods. Students who successfully complete the course can automate repetitive GIS tasks, customize GIS interfaces, and share their geospatial software development work with others.

Prerequisite: Permission of instructor or admission to the program
Bachelor of Arts: Social and Behavioral Sciences

GEOG 486: Cartography and Visualization

3 Credits

Theory and practice of cartographic design emphasizing effective visual thinking and visual communication with geographic information systems.
GEOG 486

Prerequisite: GEOG 484
Bachelor of Arts: Social and Behavioral Sciences

GEOG 487: Environmental Challenges in Spatial Data Science

3 Credits

This course takes a problem-based approach to investigating, evaluating, and communicating the results of spatial analysis applied to a wide variety of environmental challenges. Students will develop competencies related to securing spatial data from reliable sources, designing, developing, executing spatial analysis workflows, and presenting results with contemporary mapping systems. Students gain experience with a variety of spatial data science concepts and technologies that they are likely to encounter as environmental management professionals.

Prerequisite: Enrollment in Post-baccalaureate Certificate in GIS (GIS_C_PCT), Master of GIS (GIS_MGIS), or Master of Science in Spatial Data Science (SDS_MS) program

GEOG 489: Advanced Python Programming for GIS

3 Credits

In GEOG 489, you will learn advanced applications of Python for developing and customizing GIS software, designing user interfaces, and solving complex geoprocessing tasks using both proprietary and open source platforms. Students will also learn the use of version control software for code management and techniques for distributing geospatial Python applications to end users. The course consists of readings, applied projects, quizzes, and discussions about advanced GIS and spatial data science programming concepts and techniques, and it culminates with a term project. GEOG 489 is intended for students who already possess basic geospatial programming knowledge and skills via professional experience or completing GEOG 485. The technology

covered in the course includes: Esri ArcGIS Pro/arcpy, Jupyter Notebook, Esri ArcGIS API for Python, QGIS, and GDAL/OGR.

Prerequisite: GEOG 485

GEOG 493: Service Learning

3-12 Credits/Maximum of 12

Classroom instruction with supervised student activity on a group community service project. GEOG 493GEOG 493 Service Learning (3-12) GEOG 493, Service Learning, provides students with activities that integrate community service with academic study. The aim of service learning is to enrich traditional classroom-based education by getting students into a community, thereby engendering civic responsibility and simultaneously strengthening communities. GEOG 493 has five objectives: (1) to develop understanding of a set of issues; (2) to learn and apply skills associated with those issues; (3) to learn to interpret science issues for dissemination to the public; (4) to develop and apply communication skills by speaking, writing, and/or desktop publishing; and (5) to reflect on personal and career interests in science, the environment, public policy, or related areas. Thus, students will read, write, and talk about a set of issues of importance to a community and engage in a project in that community. The specific service-learning projects will change each semester, although some projects will be ongoing. In addition, more than one GEOG 493 project will be available to students in most semesters and will have alphabetical designations (e.g., 493A or 493B). Students can take GEOG in more than one semester, to a maximum of 12 credits. Depending on the topic of the service-learning project, GEOG 493 can complement courses in most colleges and their majors. The course is available to all Geography majors as elective credits; it is also available to all Geography Minors for credit toward the minor. It counts for credit as an Advanced Physical/Environmental Geography course in the Physical/Environmental Geography Option, and counts for credit as an Advanced Geography course in the General Geography Option. Students will be evaluated on four of the five course objectives: (1) understanding of the issues, (2) learning and application of skills, (3) interpretation of issues for public dissemination, and (4) application of communication skills. Although exact procedures for determining grades will vary with the instructor and service-learning project, the basis for grades will include a combination of written work, oral presentations, in-class participation, and outside-class participation.

Prerequisite: sophomore standing; 6 credits of social or environmental science

GEOG 494: Research Project in Geography

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Prerequisite: prior approval of program

GEOG 494H: Research Project in Geography

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Prerequisite: prior approval of program
Honors

GEOG 495: Internship

1-13 Credits/Maximum of 13

Supervised off-campus, non-group instruction including individual field experience, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor
Bachelor of Arts: Social and Behavioral Sciences

GEOG 495B: Geography Teaching Internship

1-10 Credits/Maximum of 10

GEOG 495B Geography Teaching Internship (1-10)(BA) This course meets the Bachelor of Arts degree requirements. The Teaching Internship provides undergraduate students with formal, supervised teaching experience. Instructors recruit students who excel in a particular course to serve as teaching interns (TIs) in subsequent offerings of the same course. TIs may assist their peers as tutors or as laboratory assistants. They may be assigned to assist faculty members by developing and evaluating new course activities and materials. Although TIs may not evaluate their peers' class work, they can play important roles in the formative course assessment by providing feedback in regular meetings with instructors. In the process of developing the knowledge, skills and dispositions needed to be effective in helping fellow students learn, TIs gain experience that prepares them for leadership roles in their professional careers. TIs also gain respect for the effort and imagination involved in designing and conducting college classes.

Bachelor of Arts: Social and Behavioral Sciences

GEOG 495C: Internship Supervision and Mentoring

1 Credits

GEOG 495C Internship Supervision and Mentoring (1)(BA) This course meets the Bachelor of Arts degree requirements. GEOG 495C enables MGIS students who participate at a distance through the University's World Campus to earn credit through contributions to the Department's resident programs. Qualified MGIS students will be encouraged to earn one credit (up to a maximum of three) for every semester that they supervise a resident Penn State Geography student in GIS-related internship conducted in the MGIS student's place of work. Qualifications will be judged by MGIS students' academic advisors. Advisors will help MGIS students recruit qualified internship candidates. Advisors will also evaluate the quality of supervision on the basis of the documentation provided by both the MGIS student and the student intern he or she supervised. MGIS students unable to provide internships may still contribute by serving as mentors to students enrolled in the resident course EM SC 300: Professional e-Portfolio Development, through the University's LionLink program.

Bachelor of Arts: Social and Behavioral Sciences

GEOG 495G: Giscience Internship

1-10 Credits/Maximum of 10

GEOG 495GGEOG 495G Giscience Internship (1-10)(BA) This course meets the Bachelor of Arts degree requirements. Prospective interns apply directly to faculty members in charge of the Department of Geography's Geo VISTA Center or Gould Center for Geography Education and Outreach, or to persons in charge of appropriate public or private agency external to the University. Students accepted into the internship

program are assigned to research or application projects that involve the development, evaluation and/or use of geographic information technologies under the supervision of an experienced faculty member or professional. Per Faculty Senate rules, interns are expected to devote 40 hours of effort for each credit earned.

Prerequisite: GEOG 160
Bachelor of Arts: Social and Behavioral Sciences

GEOG 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Social and Behavioral Sciences

GEOG 497: Special Topics

1-9 Credits/Maximum of 18

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

GEOG 498: Special Topics

1-9 Credits/Maximum of 18

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

GEOG 498A: **SPECIAL TOPICS**

1-3 Credits

Bachelor of Arts: Social and Behavioral Sciences

GEOG 498B: **SPECIAL TOPICS**

2-3 Credits

Bachelor of Arts: Social and Behavioral Sciences

GEOG 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Prerequisite: prior approval of program
International Cultures (IL)

Geosciences (GEOSC)

GEOSC 1: Physical Geology

3 Credits

Earth processes and their effects on the materials, structure, and morphology of the earth's crust. Practicum includes field work, study of rocks, minerals, dynamic models, and topographic maps. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

GEOSC 2: Historical Geology

3 Credits

History of the earth and its life; fundamentals of evolution, correlation, and paleogeography; practicum includes field trips, study of geologic maps, geologic problems, and fossils, with emphasis on Appalachian geology. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

Bachelor of Arts: Natural Sciences

GEOSC 10: Geology of the National Parks

3 Credits

"Geology of the National Parks" uses the unsurpassed features of national parks to address the key questions of geology and the environment. Each topic is introduced with a virtual field trip to a specially chosen national park (involving pictures of the park, a brief history, other highlights of the park, with supplemental materials and links provided on-line). Key questions about the park (Why has Death Valley been getting wider? Why is much of Mt. St. Helens spread across neighboring states?) then motivate discussion of the topic (here, the spreading or squeezing associated with drifting continents), with special attention to implications for humans (for example, predicting earthquakes and volcanic eruptions associated with these features). A suite of exercises provides the opportunity for analytical experience. There are no prerequisites for the course; however, students must meet the university's technical requirements for running Canvas. This course is offered online during the fall, spring, and summer sessions. The goals of the course are to help students learn how certain common-sense ideas allow science to be such a successful human endeavor, that the Earth efficiently but slowly recycles almost everything, that the Earth's environment has been nearly balanced for very long times, that human-induced changes are among the fastest Earth has ever experienced, and that the National Parks are critical but challenged living laboratories, museums, and repositories of biodiversity. In doing so, the students will see the applications to real-world problems of related fields including physics, chemistry, biology, and mathematics, and will develop a greater appreciation of these other subjects. Students will be challenged to reason from data to generalizations, and from these generalizations back to cases, through exercises, quizzes, and examinations.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Key Literacies

GEOSC 20: Planet Earth

3 Credits

GEOSC 20 is a 3-credit, introductory level course about the Earth, and since you live on the Earth, you will be affected by the topic we will cover this semester. We will emphasize earth processes and materials that affect the landscape of Earth. You will be learning about fundamental geologic processes and how they impact humans and the environment on regional and global scales. Some of these processes are slow, such as the movements of continents, and change the Earth over a period of millions of years. Others are rapid, such as earthquakes and floods. You will learn how these processes are related and interact with each other.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GEOSC 21: Earth and Life: Origin and Evolution

3 Credits

Introduction to the origin and evolution of life on Earth from the perspective of geologic time and the fossil record. GEOSC 021

Bachelor of Arts: Natural Sciences

GEOSC 30: Volcanoes

3 Credits

Basic concepts in Volcanology and Geosciences are explored through a series of virtual field trips to historic eruptions. Since the dawning of history, humankind has been faced with the destructive power of volcanoes. Volcanic eruptions can wipe out entire populations, destroy food supplies, and alter the Earth's climate for years at a time. At the same time, volcanoes provide fertile soil for growing crops and natural geothermal energy. This course uses virtual field trips to one pre-historic and five historic volcanic eruptions to introduce basic concepts in geosciences and volcanology. Each visits a different type of volcano with unique characteristics and impacts - a shield volcano, a cinder cone, a fissure, a stratovolcano, a lava dome, and a supervolcano. We will examine the tectonic driving forces behind these volcanoes as well as their hazards and environmental impacts. Students will use real data from active volcanic fields, as well as original data collected during home experiments, to calculate physical properties of magmas and to interpret the potential impacts of various volcanic hazards. Sidebars will delve into the less obvious interactions between humans and volcanoes from the perspective of mythology, art, and history. Observations and ideas will be logged in virtual field notebooks.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

GEOSC 40: The Sea Around Us

3 Credits

Introduction to marine sciences and the world ocean, including physical, chemical, biological, and geological aspects of oceanography. GEOSC 40 The Sea Around Us (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. The Sea Around Us introduces students to the basic workings of the ocean. The course covers the origin of the ocean's rock-walled boundaries, the evolution of its coastlines, the motion of currents, waves and tides and their destructive power, the source and composition of seawater, and the role of the ocean in local and global climate. The majority of the Earth's surface is covered by water and thus it seems likely that the human race will become increasingly dependent on oceanic resources in the future. This course seeks to illuminate how the ocean will respond to increased anthropogenic pressure. Students are shown how such issues can be addressed through detailed understanding of the complex interplay between the physical, chemical and biological properties of the ocean. Lectures focus on fundamental

principles of natural sciences as related to the ocean using extensive graphics, video clips and demonstrations.

Bachelor of Arts: Natural Sciences
 General Education: Natural Sciences (GN)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Key Literacies

GEOSC 40H: The Sea Around Us

3 Credits

Introduction to marine science, including physical, chemical, biological, and geological aspects of oceanography; the sea as a multipurpose natural resource.

Honors

GEOSC 50: Planetary Geology

3 Credits

Planetary Geology will introduce students to the rocky planets and moons of the solar system. Students will learn the geological processes that are important in the shaping of planetary surfaces and interiors, as well as their ancient or current potential habitability. Throughout the course, students will learn about the various geologic processes that are relevant for each planet and moon, including volcanism, impact cratering, sediment transport, differentiation, and plate tectonics, among others. Students will understand the geologic history of planets using the best available data, but will also learn about the evolution of our knowledge through successive planetary missions to collect more data. The course will couple scientific material and real data with historical perspectives surrounding space and planetary exploration missions.

Bachelor of Arts: Natural Sciences

GEOSC 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GEOSC 107N: Rocks, Minerals, and the History of Art

3 Credits

This online course investigates select rocks and minerals used in the production of art between the Prehistoric Era and the Early Modern period. Topics covered include chemical and physical properties, occurrence in nature, the processes by which natural materials are acquired and worked, their symbolic and monetary value, and specific works of art in which they are found. Each material (ochre, garnet, lapis lazuli, rock crystal [quartz], igneous rocks [basalt, diorite and porphyry], alabaster and marble) is addressed in a 2-week unit. The seven units are split equally between scientific analysis of the materials and art historical case studies. A final project integrates Geosciences and Art History topics to investigate the use of a chosen natural material in a specific work of art. Each material addressed in the course plays a crucial role in the history of art, and each one was particularly prized

for its physical and material properties (color, hardness, etc.). Ochre was the first known pigment, and was in use by early humans for bodily adornment and for drawing and painting in caves and shelters as early as 100,000 years ago for bodily adornment and 40,000 years ago in cave art. Its availability worldwide and in multiple strong colors made it a desirable choice. Lapis lazuli, by contrast, was difficult to obtain, and difficult to refine as a pigment. It was first used to make small sculptures and cylinder seals in the Ancient world, and was prized for its brilliant blue color. The difficulty in grinding and purifying blue pigment from lapis lazuli made it one of the most expensive pigments in the Medieval and Renaissance world—it was worth its weight in silver! Pure blue lapis pigment, when found in a painting, is always a sign of great expense and importance. Rock crystal was valued for its clarity and purity, and its extreme brittleness meant that works made from it were valued for their intricacy and fragility. Nero reportedly destroyed two elaborate crystal goblets in a rage, and in so doing, deprived future generations of masterpieces of the sculptor's art. In the Ancient Near East and Ancient Egypt, rock crystal was frequently used for amulets and other magical objects, while in the Medieval world, its purity was seen as a metaphor for the Virgin Mary. Garnet had a similar symbolic value in the Middle Ages: its red color was related to the blood of Christ, and it was thus used frequently in liturgical vessels. In the Ancient world, the rich red tone of garnets was prized in jewelry and in small-scale relief carvings. Igneous stones like porphyry, basalt and diorite were particularly prized for their extreme hardness and permanence, and thus the Law Code of Hammurabi was inscribed on basalt to ensure its permanence. Other Ancient Near Eastern rulers had images of themselves made from basalt and diorite in order to ensure that those works would survive for centuries. Imperial porphyry, an igneous stone with a rich red-purple color, came from a single remote quarry in the Egyptian mountains. Its use was reserved just for the Imperial family in Rome, and it was used for carved sarcophagi, for columns, for colored veneers on floors and walls, etc., as a sign of Imperial authority. Marble is of course one of the most familiar of all art materials, used frequently for sculpture from the very beginnings of art production. The Greeks and Romans in particular took great pains to obtain different types of marbles with specific colors, veining patterns, etc., for use in both sculpture and architecture. Finally, alabaster is one of the easiest of all stones to work: it is so soft that one can make a mark simply with a fingernail! Its intricate banding and translucency made it a favorite material for thin-walled bowls and vases in the Ancient Near East, Ancient Egypt, and in the Classical world. Later, in Early Christian and Medieval Italy, it was used for windows instead of glass—sun shining through alabaster casts a golden glow into a church interior. By the Late Gothic period, alabaster was being exploited as an easily sculpted material throughout Europe, with major quarries and workshops in England (Nottingham), France, and Northern Spain.

GEOSC 109H: Earthquakes and Society

3 Credits

Introduction to earthquakes and seismology, and their relationship to society, including monitoring for nuclear weapons and seismic hazards.
 GEOSC 109H

Bachelor of Arts: Natural Sciences
Honors

GEOSC 110H: The Science of Gemstones

3 Credits

From Biblical times to the present, gems and precious metals have served as the standard by which empires have measured their worth. Through the ingenious marketing of an international cartel, diamonds have become identified with the oldest and most sacred of human contracts. To what can we attribute the unique allure of beautiful minerals? In this course, students will learn the underlying science of what distinguishes a gemstone from dross. A broad historical introduction will trace the social role that gemstones have played in human history over tens of thousands of years. After a review of the properties of atoms, they will learn the connections between atomic bonds and the physical hardness that has preserved diamonds and other gems against billions of years of abrasive forces. Students also will engage in directed discussions of ethical issues raised by gem materials: Why are gems so costly? Is it moral to purchase an expensive gemstone? What ethical hazards do synthetic gems pose? In addition, the course will explain the surprisingly simple physical processes that account for the magnificent optical properties of gemstones. Students will understand in a quantitative way how the bending of light (refraction) within a gem produces its sparkle: how variation in refraction generates fire (dispersion); how the interference of light rays from periodic structures in some rare gems like opal can yield colors that change with viewing angle (diffraction); and how vanishingly small traces of impurity atoms can generate the deep coloration of rubies, sapphires, and emeralds. In addition, students will learn about the atomic symmetries that govern the physical character of gemstones and allow modern mineralogists to distinguish imposters from real gems.

Prerequisite: MATH 26

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Key Literacies

GEOSC 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GEOSC 201: Earth Materials

4 Credits

Elements of crystallography and crystal chemistry; origin, occurrence, and identification of sedimentary, igneous, and metamorphic rocks and their minerals. This course has one or more required field trips for which a fee is charged to the student.

Prerequisite: CHEM 110, third-semester standing. Prerequisite or concurrent: GEOSC 1 or GEOSC 20

GEOSC 202: Chemical Processes in Geology

4 Credits

An in-depth examination of the application of chemical principles to geological processes.

Prerequisite: GEOSC 1, MATH 140, third-semester standing. Prerequisite or concurrent: CHEM 113

GEOSC 203: Physical Processes in Geology

4 Credits

An in-depth examination of various physical processes that operate within and at the surface of the earth. GEOSC 203 Physical Processes in Geology applies basic principles from physics and mathematics to explore and understand the Earth and the processes that operate within the Earth and at the Earth's surface. The course includes the study of Earth's gravity and magnetic fields, focusing on how they reveal the internal structures and dynamics related to plate tectonics. The basic physics and mathematics of plate motions are also explored in some detail. We will also examine the elastic properties and behaviors of rocks, which form the basis for understanding seismic waves, rock fracture, and fault slip. The next major topic of the class is the flow of heat through the solid Earth system, involving the study of conduction, convection, and advection. The study of heat will provide the basis for understanding the application of simple differential equations with boundary conditions to geological processes; this will also introduce the mathematics of diffusion, which will permeate much of the course. This study of diffusion will enable us to move from steady state conditions to non-steady state conditions that typify most geological settings. We will examine the fluid dynamics relevant to the flow of the mantle and less viscous fluids at the surface such as lava flows and glaciers. The fluid dynamics will also lead us into an exploration of the basic physics of ocean circulation, stream flow, and erosion on land. Throughout the course, students will learn how to use calculus and very simple computer programming in MATLAB to provide a quantitative framework for understanding the physical processes that shape the Earth. The class involves a weekly lab that involves several field trips to make measurements using a variety of geophysical instruments to solve problems related to gravity, stream flow, and heat flow. Other lab activities involve studies of rock friction and fracture, ocean currents, glacial flow, seismology, and plate motions.

Prerequisite: GEOSC 1 or permission of program. Prerequisite or concurrent: PHYS 211, MATH 140

GEOSC 204: Geobiology

4 Credits

An introduction to how biological processes and materials are used to solve geological problems. GEOSC 204

Prerequisite: BIOL 110; GEOSC 1 or GEOSC 20

GEOSC 210: Geoscience Data Analytics

3 Credits

Modern geoscience careers require students to be versatile in managing and analyzing data, solving quantitative problems, comfortable in statistical analysis and projection, and adept in presenting numerical interpretations to stakeholders. The proposed course will provide students with the numerical skills to be successful in their undergraduate

careers and in the workplace and will serve as entry for more advanced quantitative courses in Geosciences and the College of Earth and Mineral Sciences. The course has five major objectives: (1) To give students an overview of the different types of geoscience data and the skills to organize, manipulate and structure them appropriately for conducting simple analyses including regression, import/export, conditional subsetting, creating and using database structures and design, queries, and metadata; (2) To train students in the fundamentals of a widely used programming language (e.g., Python, Matlab), including variables, functions, loops, boolean logic, and arrays; (3) To teach students how to use programming skills to conduct a range of basic numerical and statistical analyses; (4) To show students how to integrate and analyze several related datasets in solving complex geoscience problems; and (5) To train students how to summarize and present data in an effective manner, including appropriate data visualizations, and to communicate interpretations to stakeholders. Instruction will consist of demonstrations followed by hands-on activities in which students learn skills on laptops. Assessment will include these activities and follow-on homework problems. In addition, students will conduct a capstone project in the last few weeks of the course in which they integrate several data sets to interpret a complex geoscience problem. The course map is designed to reinforce key concepts and skills through scaffolding: Unit 2 applies the principles of geoscience data and data analysis introduced in Unit 1 in a basic programming environment. Unit 3 reinforces the programming concepts from Unit 2 while developing more advanced data analytics skills. Unit 4 applies and synthesizes the concepts and skills covered in the previous three units in the completion of a capstone project.

Prerequisite: GEOSC 1 or GEOSC 20

General Education: Quantification (GQ)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

GEOSC 212N: Earthquakes and Human History

3 Credits

A natural disaster is the result of a natural hazard impinging upon human society. In this course we examine seismicity as a geophysical phenomenon and as a natural hazard that interacts with the built environment and the social structures of human societies. Whenever possible, we approach this subject historically. Among other topics, we examine the history of how earthquakes have been understood as well as the impact of earthquakes and seismicity on the history and development of certain societies. Our specific perspectives include: Earthquakes as understood by modern and contemporary earth science Major conceptions of earthquakes in the past Impacts of seismic hazards on the built environment of past societies Impacts of seismic hazards on politics, economic development and social policies of past societies Seismic hazards, earthquake-related technology, and contemporary societies By examining earthquakes in these ways, the study of earthquakes becomes a vehicle for enhancing skills in analytical reasoning. In particular, this course focusses on applications of modern scientific analysis and the approaches commonly employed in historical investigation. Specific skills addressed in this course include, processing and quantifying information, problem solving using evidence and sound reasoning, and expressing ideas with clarity. Immersion in the study of earthquakes affords an opportunity to think more broadly about how people have dealt with natural disasters in the past and to explore the roles that science, technology, and social policy play in defining and addressing natural hazards in contemporary societies and in the future.

Class meetings include lectures, discussions, and in-class activities. We analyze scientific observations that have led to increased understanding of earthquakes, earthquake hazards and risk. We also make extensive use of case studies as concrete examples of different types of earthquakes, the historical evolution of ideas about earthquakes, and the range of social impacts of earthquakes. Reading assignments provide essential background for class sessions.

GEOSC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

GEOSC 296H: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

GEOSC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GEOSC 301: Plate Tectonics

3 Credits

Plate Tectonics plays a primary role in virtually all geologic/tectonic processes, and is the foundation for most disciplines within geosciences. This course will cover plate tectonic topics in depth and will explore the processes that link plate tectonics to the geologic record. The course has two overarching goals: (1) Develop an improved understanding of the Plate Tectonic framework for use in their other geosciences studies, and (2) exploit its broad application across the geosciences to further develop student skills in scientific reasoning, data analysis, science communication, and integrating knowledge across earth science sub-disciplines. Since the development and acceptance of plate tectonic theory in the earth sciences is relatively recent (since - 1970's), students will also be exposed to how science thinking evolves with the addition of new data and new hypotheses. It will combine lectures, labs, case studies, and discussions to address fundamental questions in plate tectonics.

Prerequisite: GEOSC 1 or GEOSC 20; Recommended Preparation: GEOSC 201 and MATH 140 (or MATH 110 as appropriate)

GEOSC 302: Global Biogeochemistry

3 Credits

Biogeochemistry is the exploration of the physical, chemical, and biological processes that govern the exchange of energy and elements between the biosphere and geosphere. This course will examine principal biogeochemical cycles (e.g., C, O, S, N, P) with a focus on geologic processes and geologic origins. Drawing from the primary literature, we will investigate how biogeochemical cycling has changed over Earth's history and as a result of human activities.

Prerequisites: CHEM 112 Concurrents: GEOSC 202

GEOSC 303: Introduction to Environmental Geology

3 Credits

Origin of earth and earth materials; natural resources, geologic barriers and hazards, and relationships to human use of the environment. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

GEOSC 310: Earth History

4 Credits

The principles of stratigraphy and paleontology and their use, in combination with plate tectonics, in reconstructing the earth's history. This course has one or more required field trips for which a fee is charged to the student.

Prerequisite: GEOSC 201

GEOSC 310H: Earth History

4 Credits

The principles of stratigraphy and paleontology and their use, in combination with plate tectonics, in reconstructing the earth's history.

Honors

GEOSC 320: Geology of Climate Change

3 Credits

Geologic evidence for climate change and mechanisms of change, especially from the Ice Age through the near future. GEOSC 320

GEOSC 340: Geomorphology

3 Credits

Physical and chemical processes operating at the earth's surface and their resulting landforms. This course has one or more required field trips for which a fee is charged to the student.

Prerequisite: GEOSC 1; fifth-semester standing

GEOSC 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GEOSC 400: Paleoclimatology

3 Credits

This course will discuss past climate dynamics, as well as touch on what we know about ancient environments, human interactions and responses to changing climates, and methodological developments within the field. We will emphasize topics that span the Earth system (atmosphere-biosphere-geosphere-oceans) and use the paleoclimate record to inform future global change. We will also think about what a proxy and archive mean for a signal being recorded and use real data to extract and interpret past climate signals. The first 2/3 of the semester will be a combination of paired lectures and student-led discussion of foundational and recent exciting scientific literature around topics that help us explore what drives climate change over different timescales. The last 1/3 of the semester will allow students to work with real paleoclimate data by exploring existing datasets that inform their own research or interests and applying statistical techniques common in the field. Student participation is important for success in this course, and paleoclimate datasets will serve as the basis for a capstone project.

Prerequisite: GEOSC 204

GEOSC 401: Geosciences Entrepreneurship: Embrace Change

3 Credits

This course explores the intersection of entrepreneurship and geoscience, focusing on emerging fields and the changing dynamics of traditional industries. Targeted at upper-level undergraduate and graduate students of all majors, the course aims to equip participants with entrepreneurial skills and a mindset that goes beyond starting new companies. By incorporating case studies, guest lectures, and practical exercises, and student led-research, students will gain a comprehensive understanding of the entrepreneurial opportunities within geoscience. The course may cover a range of topics, including critical minerals, geothermal energy, carbon sequestration, and geological hydrogen, which are becoming increasingly important to society. Students will explore the geoscience principles, technological innovations, market dynamics, policy considerations, and environmental impacts associated with these fields. Additionally, the course emphasizes the value of entrepreneurial thinking for researchers and employees within legacy companies, such as the hydrocarbon industry, encouraging them to embrace intrapreneurship and drive innovation. Throughout the course, students will develop essential entrepreneurial skills, including opportunity identification, market analysis, business planning, financing strategies, and ethical considerations. They will also learn about collaboration, networking, and leadership within the entrepreneurial ecosystem. By the end of the course, students will be equipped with the knowledge and mindset to navigate emerging fields, adapt to shifting landscapes, and create value in geoscience-related ventures, whether as entrepreneurs or intrapreneurs and researchers.

Prerequisite: GEOSC 001 or EARTH 002

GEOSC 402Y: Natural Disasters

3 Credits

Case studies of the causes and consequences of natural disasters; analysis of disaster impact in different economic, cultural, and social conditions. GEOSC 402 Natural Disasters (3) (IL)(WAC) Is anywhere safe from natural disasters? Can we hide, or should we learn to live with the hazards around us? This course will explore the causes, effects, and

societal response to disasters. By learning from previous disasters, we can develop strategies to avert the disasters or at a minimum mitigate their affects. We will look at a variety of natural hazards and related disasters including flooding, volcanoes, landslides, earthquakes, hurricanes, and tsunami. By the sue of case studies of recent occurrences of natural disasters, we will determine how damaging disasters can be, and what we can do to minimize their impact on society. This course will provide an in-depth, hands-on study of natural hazards, their geography, and their impact on societies worldwide. We will focus on both the physical processes (e.g. underlying geoglogy or geophysics) of selected natural hazards and the humn systems that have developed to minimize the impact of natural disasters. The course will place emphasis on active learning exercises to investigate processes and responses to natural hazards. We will meet for two periods each week which will include both lecture and group research activities (approximately 30% of time is in lectures, 70% time is in group research activities). Grading will be based on reports for each topic, a disaster diary, and a term report. The term report is an independent project which focuses on a selected city facing significant natural hazards. Cities will be selected from both the developed and developing world to allow comparisons of the impacts of natural disasters under different socio-economic and cultural conditions. The course is offered once each year with a target enrollment of 25-30 students. Prerequisites for the course are at least 6 credits in science courses (including GN courses).

Prerequisite: fourth-semester standing
International Cultures (IL)
Writing Across the Curriculum

GEOSC 405: Hydropedology

3 Credits

Soil and water interactions across scales, integrated studies of landscape- soil-water relationships, fundamental processes of water flow and chemical transport. SOILS (GEOSC) 405 Hydropedology (3)Hydropedology is the study of the fluxes, storages, pathways, residence times, and spatio-temporal organization of water in the root and deep vadose zones, and their relations to climate, ecosystem, land use, and contaminant fate. The aim is to characterize integrated physical, chemical, and biological processes of soil-water interactions across scales (including chemicals and energy transported by water flow). This course embraces interdisciplinary and multiscale studies of interactive pedological and hydrological processes in the earth's surface and subsurface environments. The course will address the fundamental issues and practical applications of hydropedology (as a sister discipline of hydrogeology). This course emphasizes in situ soils that have distinct characteristics of pedogenic features, structures, layers, and soil-landscape relationships in the real world. Students will gain an in-depth understanding of soil and water interactions across scales from point observations to watershed phenomena, and will gain skills in predicting flow pathways and water fluxes in the landscape. This course promotes active learning, critical thinking, and hands-on skills. Course format will consist of two lectures and one laboratory/field exercise each week. The course will utilize a network of local watersheds with different land uses for demonstrations and class projects. Grading will be based on weekly lab/field exercise (20%), class research project (40%), homework (10%), one midterm exams (15%), and one final exam (15%). Since hydropedology is linked to a wide array of environmental, ecological, geological, agricultural, and natural resource issues of societal importance, SOILS (GEOSC) 405 will support interdisciplinary training of students in Soil Science as well as in other disciplines of the College of Agricultural Sciences, especially Agricultural and Biological Engineering,

Agronomy, and Forest Resources. Students in the College of Earth and Mineral Sciences, College of Engineering, Eberly College of Science, and the Intercollege Graduate Degree Program in Ecology also will find this course useful when undertaking research on the vadose zone, the hydrologic cycle, and the earth system.

Enforced Prerequisite at Enrollment: SOILS 101

Cross-listed with: SOILS 405

GEOSC 409W: Geomicrobiology

3 Credits

Investigation of modern and ancient microbial interactions with soils, sediments, the atmosphere, minerals, rocks, nutrients, and pollutants.

Prerequisite: CHEM 112; GEOSC 1, GEOSC 20, GEOSC 40, EARTH 2, BIOL 110 or MICRB 201

Writing Across the Curriculum

GEOSC 410: Marine Biogeochemistry

3 Credits

Exploration of the ways in which life influences and is influenced by chemical, physical, and geological processes in the ocean. GEOSC 410

Prerequisite: CHEM 112; EARTH 2 or GEOSC 1, GEOSC 20, GEOSC 40

GEOSC 412: Water Resources Geochemistry

3 Credits

Aqueous geochemistry of silica, alumina, carbonate minerals, and selected metals; organic species in water; isotope geochemistry applied to water.

Prerequisite: CHEM 110 , CHEM 112

GEOSC 413W: Techniques in Environmental Geochemistry

3 Credits

This course teaches techniques needed for the collection, chemical analysis, and data analysis of environmental geochemical measurements. This course has one or more required field trips for which a fee is charged to the student.

Prerequisite: one of the following: CE 475, CHEM 402, GEOSC 202, GEOSC 412, SOILS 419

Writing Across the Curriculum

GEOSC 414: Carbonate Geochemistry

3 Credits

Carbonate minerals that form in lakes, soils, and oceans help us understand the chemistry and biology of their environment. In this course, we build a foundation of carbonate equilibrium chemistry as a framework for discussions of carbonate-forming environments, the impacts of chemical, thermal, and biological processes on the carbonate rock record, and carbonate-based proxies for ancient Earth conditions.

Prerequisite: CHEM 110 and CHEM 112

GEOSC 415: Geochemistry

3 Credits

Element abundance and genesis, application of chemical principles to earth materials, element fractionation in geologic processes.

Prerequisite: CHEM 112, GEOSC 201

GEOSC 416: Stable and Radioactive Isotopes in Geosciences: Introduction

3 Credits

Discussions on theories for natural isotopic and element variations and their applications to the solution of geologic and cosmologic problems.

Prerequisite: CHEM 110, CHEM 112, CHEM 111, CHEM 113; GEOSC 1 or GEOSC 20

GEOSC 418: Soil Environmental Chemistry

3 Credits

Introduction to chemical constituents and processes occurring in soils. Topics include mineral weathering, soil solution chemistry and adsorption of solutes. GEOSC 418GEOSC 418 (SOILS 419) Soil Environmental Chemistry (3) Upon completion of the course, the students will be able to identify the soil components and properties responsible for the chemical reactivity of soils and will know the fundamental chemical processes that occur in soils. The students will also be able to link theoretical concepts to real life environmental problems. The students will be evaluated on examinations, homework, and class participation. GEOSC 418 (SOILS 419) is offered every Spring semester. Class limit: 25 students.

Enforced Prerequisite at Enrollment: CHEM 112 and SOILS 101

Cross-listed with: SOILS 419

GEOSC 419: The Organic Geochemistry of Natural Waters and Sediments

3 Credits

Composition, sources, and fates of particulate and dissolved organic matter in natural environments; biogeochemical processes; organic geochemistry of anthropogenic contaminants.

Prerequisite: CHEM 110, CHEM 112

GEOSC 420: Paleobotany

3 Credits

Classification, morphology, phylogeny, and stratigraphic occurrence of fossil plants; practicum includes field trips and study of paleobotanical techniques and specimens. GEOSC 420 BIOL (GEOSC) 420 Paleobotany (3) Land plants provide the oxygen, food, and forest structure that make our lives on land possible. They are sensitive indicators of global change in the past as well as today. This course will examine the history of green plants on the dynamic Earth from their beginnings in the Proterozoic oceans to today, with emphasis on central topics such as the colonization of land, the histories and relationships of major plant groups, the evolution of seeds and flowers, the evolution of plant-animal interactions, extinction and diversification, paleoclimates, and the origins of modern biomes such as rainforests and grasslands. This course is strongly recommended to graduate students and advanced undergraduates with interests in paleobiology and/or plant biology.

Specimen observation and field trips will be important course components. Exams, assignments, and class participation will be the primary bases of evaluation.

Prerequisite: any 3 credit introductory course in historical geology or plant biology

Cross-listed with: BIOL 420

GEOSC 422: Vertebrate Paleontology

3 Credits

Course covers scientific thinking and skills in scientific writing, the history of vertebrates, and modern evolutionary theory applied to vertebrates.

Prerequisite: GEOSC 1 and BIOL 110

GEOSC 424: Paleontology and Fossils

3 Credits

Concepts and procedures using fossils to solve problems in systematics, evolution, biostratigraphy, correlation, sedimentation, paleoecology, and global change.

Prerequisite: GEOSC 1 or GEOSC 20

GEOSC 434: Volcanology

3 Credits

Phenomena and products of volcanic eruptions; physical characteristics of lava and pyroclastic material.

Prerequisite: GEOSC 201

GEOSC 435: GEOSCHOLARSHIP

3 Credits

The goal of this class is to learn how to function as a geoscientist engaged in the relentless pursuit of knowledge. This course aims to benefit students in professional development, preparation for advanced courses, and senior thesis research and writing. The most important topic is peer-reviewed scientific literature, the currency of science. Recognizing, accessing, databasing, annotating, writing about, summarizing, critically discussing, and correctly citing peer-reviewed papers are the principal activities. There will be regular assigned activities involving much reading, writing, presenting, and discussion. Other topics will include professionalism, gathering data, how to handle specimens and data, publishing, talking to the media, what graduate programs are looking for and how to approach them, and participation in scientific meetings. There will be a major final paper due during exam week (and no exams). This will be a review article written in the style of a top review journal series such as Annual Reviews. For grading, simply, the strongest possible participation, enthusiasm, completeness, and quality of work is expected at all times, and the professor's perception of this is what the grade will be based on, with a heavy weighting from the term paper. Students will receive comments and other feedback all the way through that will make it clear how they are progressing, and the term paper will receive a formal grade.

Prerequisite: ENGL 15, GEOSC 1, GEOSC 201

General Education: Writing/Speaking (GWS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GEOSC 439: Principles of Stratigraphy

3 Credits

An introduction to the description and genesis of sedimentary rock bodies, the determination of their stratal geometries, and their correlation. (This course includes from one to several field trips for which an additional charge will be made to cover transportation.)

Prerequisite: GEOSC 201

GEOSC 440: Marine Geology

3 Credits

Chemical and physical processes affecting the topography and sediments of the sea floor.

Prerequisite: fourth-semester standing

GEOSC 444: Matlab Applications for Geoscience

2 Credits

An introduction to Matlab: m-file development, descriptive statistics, bootstrapping, Fourier transforms, regression, interpolation, least-squares, differentiation, integration, differential equations, signal analysis, graphics. GEOSC 444 Matlab Application for Geoscience (2) The goal of this class is that students become familiar with Matlab so that they can conduct scientific research without needing to manipulate spreadsheets or other non-mathematically based software. The course is geared towards, beginning graduate and advanced undergraduate students with little or no previous Matlab experience, and examples are focused on applications in the science and engineering with a focus on the geosciences, including problems from groundwater hydrology, tectonics, geochemistry, rock physics, and climate change. Some basic concepts about vectors and matrices will be helpful, but are not required.

Prerequisite: MATH 110 or MATH 140

GEOSC 450: Risk Analysis in the Earth Sciences

3 Credits

An introduction to concepts and methods of quantitative risk analysis with focus on water, climate, and energy related risks. GEOSC 450 Risk Analysis in the Earth Sciences is an introduction to concepts and methods of quantitative risk analysis in the Earth system. Key concepts include probability, impacts, risk, uncertainty, statistical estimation, and decision-making under uncertainty. Important methods to be covered are sensitivity studies, probabilistic prediction, and uncertainty analysis. Examples of risks to be analyzed include: drought, flooding, nuclear waste storage, and anthropogenic climate change. Students will also use simple risk analysis software (provided by the instructor and accessible without prior programming experience) to actively apply these concepts to example problems. The course is designed for advanced undergraduate students with a prior exposure to basic statistics and calculus.

Prerequisite: MATH 140 or MATH 110, Introductory Earth Science or Geoscience class, Introductory Statistics class (e.g. STAT 200, or STAT 301, or ENNEC 473), or permission of program

GEOSC 451: Natural Resources: Origins, Economics and Environmental Impact

3 Credits

Geologic, economic and environmental issues related to exploitation of non-renewable natural resources (metals, minerals, rocks, and fossil fuels). GEOSC 451 GEOSC 451 Natural Resources: Origins, Economics and Environmental Impact (3) All the materials needed for health and prosperity in our complex society come from the earth, such as water, iron and other metals to make steel, silica to make glass, limestone to make concrete, potash and phosphate to make fertilizers, and oil, natural gas, coal and uranium to generate heat and electricity. Most of these natural resources are non-renewable, and easily recoverable quantities are limited. The main purpose of this course is to increase understanding and appreciation of geological, economical and environmental aspects of exploitation of mineral and energy resources. Approximately two-thirds of the lectures/discussions will focus on geological, geochemical and biological processes that have governed the concentration and dispersion of economically important elements and natural materials on Earth, including water, heavy metals (aluminum, iron, copper, zinc, lead, etc.), precious metals (gold, silver, platinum, etc.), industrial minerals and rocks (clays, limestone, gypsum, salts, etc.), nuclear-energy sources (uranium and thorium) and fossil fuels (petroleum, natural gas and coal). The remaining one-third of the lectures/discussions will focus on: (i) exploration methods to discover new mineral (and fossil fuel) deposits; (ii) economic aspect of mineral commodities (usages, production statistics, economic of mining and concentration); and (iii) environmental issues related to mining, nuclear waste disposal, and constructions. There will be two half-day field trips to study the nature of sulfide mineralization and acid-water pollution.

Prerequisite: GEOSC 1 or GEOSC 20

GEOSC 452: Hydrogeology

3 Credits

Hydrologic cycle: occurrence, movement, quality, and quantity of groundwater; solute transport; quantitative hydrogeologic methods; role of water in geologic processes. This course has one or more required field trips for which a fee may be charged to the student. GEOSC 452 GEOSC 452 Hydrogeology (3) GEOSC 452 is the study of the relation between geological and hydrological processes in the earth's surface and subsurface environments. The course will address the fundamental issues and practical applications of natural flow systems, emphasizing the occurrence, movement, quality, and quantity of groundwater and its relations to contaminate fate and transport. The primary objective is to provide students with the fundamental knowledge and tools that are necessary to understand the hydrologic cycle. Students will gain an in-depth understanding of fluid flow across scales from point observations to watershed phenomena, and will gain skills in using mathematics to describe water fluxes. The course format consists of two lectures each week, and includes two field trips. Grading is based on weekly homework assignments, exams, and participation on the field trips. Because hydrogeology is linked to a wide array of environmental, ecological, engineering, and natural resource issues of societal importance, GEOSC 452 will support interdisciplinary training of students in the natural sciences and engineering. Students will find this course useful when undertaking research about fluids in geologic processes.

Prerequisite: CHEM 112; GEOSC 1, GEOSC 20, or GEOSC 71; MATH 140 or MATH 110

GEOSC 454: Geology of Oil and Gas

3 Credits

Properties, origin, migration, and occurrence of oil and gas. This course has one or more required field trips for which a fee is charged to the student.

Prerequisite: GEOSC 1

GEOSC 460: Principles of Igneous and Metamorphic Petrology

3 Credits/Maximum of 3

Igneous and metamorphic processes drive planetary evolution. This course is designed to provide an understanding of the formative processes of igneous and metamorphic rocks through application of simple physical and chemical processes. Through a combination of petrographical observations and applied thermodynamics, students will learn how to treat rocks as chemical systems and, in doing so, equip themselves with a skillset that is of tremendous utility in industry and academia.

Prerequisites: GEOSC 201

GEOSC 465: Structural Geology

4 Credits

Effects and mechanics of deformation of the earth's crust; practicum includes field trips and studies of maps and structural problems. This course has one or more field trips for which a fee is charged to the student.

Prerequisite: or concurrent: GEOSC 203, GEOSC 310

GEOSC 470W: Introduction to Field Geology

3 Credits

Field interpretation of geologic features; principles and techniques of geologic mapping; interpretation of geologic maps and diagrams. This course has one or more required field trips for which a fee is charged to the student.

Prerequisite: GEOSC 1; fifth-semester standing
Writing Across the Curriculum

GEOSC 472A: Field Geology I (Introduction to Field Methods)

3 Credits

Introduction to geologic field methods and the 3-D characterization of earth structure and the reconstruction of geologic histories. This course includes travel outside the University for which an additional charge will be made to cover transportation, food, and lodging.

Prerequisite: GEOSC 310

GEOSC 472B: Field Geology II (Advanced Field Methods)

3 Credits

Advanced application of geologic field methods to the 3-D characterization of earth structure and the reconstruction of geologic

histories. This course includes travel outside the University for which an additional charge will be made to cover transportation, food, and lodging.

Prerequisite: GEOSC 310, GEOSC 465. Prerequisite or concurrent: GEOSC 472A

GEOSC 474: Astrobiology

3 Credits

Astrobiology is the study of life in the universe. Astrobiology has become a major focus of scientific research in the United States and a topic often discussed in popular science literature. The recent interest in astrobiology has resulted in the formation of an Astrobiology Institute at Penn State University. This advanced undergraduate course in astrobiology will cover many topics in the field including, biochemical evolution, the origin and evolution of life on Earth, microbial diversity, protein evolution, and the distribution of life in the universe. This course is intended to provide students of the natural sciences with the opportunity to prepare for a research career in the rapidly expanding field of astrobiology. The course will also present astrobiology as a cross-disciplinary framework that ties together the diverse courses the students have already taken. The students will learn new concepts while having, to draw on their previous knowledge of chemistry, biology, and the geosciences. In summary, this course has the following objectives: (1) to develop the student's literacy in astrobiology so that they can critically evaluate claims that they encounter well after the course has ended; (2) to present a scientific question that requires the sum of the student's previous education to solve; (3) to provide a deep background to some of the astrobiological concepts that are often only briefly mentioned in other classes or in the media; (4) to develop research and communication skills required for a young scientist through a class term paper and short oral presentation; and (5) to prepare the students for graduate research in astrobiology by giving them a broad background of the field and by demonstrating many of the outstanding problems yet to be solved.

Enforced Prerequisite at Enrollment: (BIOL 110 or BIOL 110H) and (CHEM 110 or CHEM 110H)
Cross-listed with: BIOL 474

GEOSC 479: Advanced Stratigraphy

3 Credits

Modern topics of sequence stratigraphy are addressed, with a heavy emphasis on field and laboratory data analysis and interpretation.

Prerequisite: GEOSC 439

GEOSC 480: Planetary Geophysics

3 Credits

GEOSC 480 is an advanced geophysics course that introduces students to the mathematics and physics behind the processes governing planet formation and planet evolution. Students will learn about planet and star formation, and differentiation of planetesimals into cores and mantles. Students will learn about heat transfer by conduction and convection, and apply this knowledge to learn about the temperature distribution within planets, and how they evolve over time. The course also covers the interior structure of planets, and uses basic physical laws to determine the pressure, density, and gravity profiles through planetary interiors. Students will also learn about gravitational interactions between planetary bodies, including tidal interactions between the Earth and moon. We will then cover geophysical techniques for constraining the

interior structure and properties of planets, including moment of inertia, gravity, and lithospheric flexure. Homework problems will be used to hone student's skills, including simple exercises in plotting and modeling with MATLAB. The course will be capped off by a term project, where each student will conduct research on a topic of their choice relevant to planetary interiors and their evolution.

Prerequisites: MATH 140 and PHYS 211; Recommended Preparation: GEOSC 203

GEOSC 481: Petroleum Seismology

4 Credits

The proposed course will be specially designed for undergraduate students (junior or senior) who are eager to pursuing a career in petroleum energy industry or pursuing a grad school in exploration seismology as well as new graduate students who did not have a petroleum seismology class in their previous studies. This course provides an overview of the physical principles of petroleum seismology with emphasis on exploring and characterizing petroleum reservoirs using seismic methods. The content will include the physical basis of the seismic methods, including wave properties, wave propagation in the Earth, seismic reflections & refractions, data processing, seismic migration, seismic interpretation and well logs, and borehole seismology. Hands-on experience working with field data examples will be provided through computer lab exercises throughout the semester.

Prerequisites: GEOSC 203 or GEOSC 454 Recommended Preparations: MATH 141

GEOSC 482: Satellite Remote-Sensing For Earth Observation

4 Credits

Comprehensive introduction to theory and methods in remote-sensing, covering optical, thermal and radar methods and their application in geosciences.

GEOSC 483: Environmental Geophysics

3 Credits

This course presents the principles and applications of the variety of techniques geophysicists use to address environmental problems.

Prerequisite: PHYS 211 , PHYS 212

GEOSC 487: Analysis of Time Series

3 Credits

Nonstatistical approach to data analysis; spectral and correlation analysis; filter theory; signal-to-noise improvement applied to geoscience data.

Prerequisite: MATH 140 and MATH 141

GEOSC 488: An Introduction to Seismology

4 Credits

An overview of the observations, methods, and frameworks used in seismogram analysis for earthquake and earth-structure investigations (includes laboratory). GEOSC 488

Prerequisite: MATH 140 , MATH 141

GEOSC 488H: An Introduction to Seismology

4 Credits

An overview of the observations, methods, and frameworks used in seismogram analysis for earthquake and earth-structure investigations (includes laboratory).

Honors

GEOSC 489: Dynamics of the Earth

4 Credits

Constitution and dynamics of the solid earth; mechanics and consequences of Plate Tectonic processes.

Prerequisite: GEOSC 203, GEOSC 310, PHYS 211

GEOSC 494M: Thesis Research

1-6 Credits/Maximum of 6

Supervised student activities on research projects identified on an individual, or small group basis. ,

Prerequisite: seventh-semester standing

Honors

Writing Across the Curriculum

GEOSC 494W: Senior Thesis

1-4 Credits/Maximum of 4

Supervised student activities on research projects identified on an individual, or small group basis. ,

Prerequisite: seventh-semester standing

Writing Across the Curriculum

GEOSC 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

GEOSC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

GEOSC 496H: Independent Studies

1-18 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

GEOSC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GEOSC 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

German (GER)

GER 1: Elementary German I

4 Credits

Introduction to listening, speaking, reading, and writing with emphasis on the first two skills; cultural aspects through readings and videos. Students who have received high school credit for two or more years of German may not schedule this course for credit, without the permission of the department. GER 001 Elementary German I (4) German 001: Elementary German I is designed to help students develop skills in the interpretation, expression, and negotiation of spoken and written German. In addition to German language skills, students in the course will develop a greater understanding of German-speaking culture. The course requires active student involvement and participation. Attendance is mandatory. Students will be guided by the instructor in working with German-language materials available on the internet. Student evaluation is based on active participation in class, homework, quizzes, oral and mid-term examinations, oral and written final examinations and culture projects. Placement in German 001 is based on Penn State foreign language placement policy (link to: http://bulletins.psu.edu/bulletins/bluebook/general_information.cfm?section=Placement2). Students who have received high school credit for two or more years of German may not schedule this course for credit, without permission of the department. German 001 is offered every semester. Enrollment is capped at 24 students per section.

Bachelor of Arts: World Language (All)

GER 2: Elementary German II

4 Credits

GER 2 is a continuation of GER 1; further introduction of basic structures, culture, and development of four basic skills stressing aural-oral aspects. Students who have received high school credit for four or more years of German may not schedule this course for credit, without the permission of the department. GER 2 Elementary German II is a continuation of German 1 and is designed to help students develop skills in the interpretation, expression, and negotiation of spoken and written German. In addition to German language skills, students in the course will develop a greater understanding of German-speaking culture. The course requires active student involvement and participation. Attendance is mandatory. Students will be guided by the instructor in working with German-language materials available on the internet. Student evaluation is based on class participation, homework, quizzes, oral and mid-term examinations, oral and written final examinations and culture projects. Students who have received high school credit for four or more years of German may not schedule this course for credit, without permission

of the department. German 2 is offered every semester. Enrollment is capped at 24 students per section.

Prerequisite: GER 001

Bachelor of Arts: World Language (All)

GER 3: Intermediate German

4 Credits

Continued four-skill development with increased emphasis on reading, writing, and grammatical accuracy; culturally-oriented reading selections and videos. Students may receive credit for only one of the following: GER 003 or GER 008.

Prerequisite: GER 002

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

GER 11: Intensive Basic German

6 Credits

Listening, speaking, reading, writing, basic structures and vocabulary of German. Taught on an accelerated basis. Students may receive credit for only one of the following: GER 001, 011, or 015.

Bachelor of Arts: World Language (All)

GER 12: Intensive Intermediate German

6 Credits

Continued skill development of structures and vocabulary; listening, speaking, reading, writing. Taught on an accelerated basis. Students may receive credit for only one of the following: GER 002, 003, 012, or 016.

Prerequisite: GER 011

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

GER 51: Elementary Intensive German for Graduate Students I

3 Credits

Intensive introduction to German: first half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. GER 051 Elementary Intensive German for Graduate Students (3) This is the first in a series of three courses designed to give students an intensive introduction to German. This is the first half of elementary sequence in reading, writing, speaking, listening, and cultural contexts. Students will learn the German vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

Prerequisite: graduate standing

GER 52: Elementary Intensive German for Graduate Students II

3 Credits

Intensive introduction to German: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. GER 052 Elementary Intensive German for Graduate Students II (3) This is the second in a series of three courses designed to give students an intensive introduction to German. This is the second half of graduate intensive sequence in elementary reading, writing,

speaking, listening, and cultural contexts. Students will learn the German vocabulary. Lessons are taught in an authentic cultural context.

Prerequisite: GER 051 or equivalent, and graduate standing

GER 53: Intermediate Intensive German for Graduate Students

3 Credits

Continued intensive study of German at the intermediate level: reading, writing, speaking, listening, cultural contexts. GER 053 Intermediate Intensive German for Graduate Students (3) This is the third in a series of three courses designed to give students an intermediate intensive knowledge of German. Continued intensive study of German at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

Prerequisite: GER 052 or equivalent, and graduate standing

GER 83: First-Year Seminar in German

3 Credits

Germany's cultural past and present. GER 083S First-Year Seminar in German (3) (GH;FYS;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to give the student an introductory overview of certain important aspects of German culture and its development during the past 1500 years. The topics selected will give the student an introduction to major periods and representative thinkers that have helped shape the destiny of German-speaking countries and much of Europe as well. As Goethe noted, our views of the past are a mirror in which we dimly see our own reflection. Serious examination of the issues raised in this course also result in learning something about one's self and the world in which s/he live today. This course can be used to fulfill the General Education or Bachelor of Arts Humanities requirement, the Intercultural/International Competence requirement, and the first year seminar requirement. A series of short papers will enable students to develop the skills of information gathering and written expression. The course grade will be based on oral participation and on the grade for the papers, which will be evaluated both for content and writing. This course will help to prepare students for a variety of additional courses in the fields of literature and German-speaking area studies. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests. The course will be offered once per year to an audience of 20 students.

Bachelor of Arts: Humanities

International Cultures (IL)

GER 100: German Culture and Civilization

3 Credits

German 100 provides a cultural history of Germany, Switzerland, and Austria from the Roman Empire to the Nazi defeat. Readings and discussions will be in English. The class examines the role of German tribes in the collapse of Rome, the emergence of a powerful medieval Empire, the architecture and devotions of Romanesque and Gothic cathedrals, the rise of manufacturing cities, the art of the Northern Renaissance, Martin Luther and the Protestant Reformation, Catholic Responses, The Thirty Years War, the Absolute King and the ban on sectarian warfare, the Rise of Prussia as a military monarchy, the Enlightenment, Napoleon and the end of the Holy Roman Empire, German Romanticism and Nationalism, Industrialization, the 1848 Revolution, Unification, Ethnic nationalism in the Austro-Hungarian Empire, World War One, Empires collapse, the Weimar Republic, Inflation, the Versailles Treaty, Modern art, Nazi seizure dictatorship, racial policy and the Holocaust, World War Two, Nazi defeat. Readings will include historical documents and a history textbook. Short discussions of art, architecture, music, literature, and philosophy are included. The class is organized around lectures, with visual aids and class screenings of films. The course is designed to be suitable for all students generally interested in German, or interested in various fields of humanistic study, whether or not they have previously studied the culture of Germany. This course is designed to fulfill General Education GH "General Humanities," IL "International Cultures," and also BA requirements.

GER 115N: Science, Humanity and Catastrophe: Scientific Discovery in Germany

3 Credits

The 20th century was a time of great scientific advancement - advancements that were used both for good and for evil (and for other purposes that lie somewhere in between). Germany and German-speaking scientists played central roles in many of these discoveries. In this course we will take an interdisciplinary approach to discussing key scientific advancements, including the discovery of nuclear fission and the development of the nuclear bomb, the discovery of polymers and the invention of pain medicines such as morphine and oxycodone, learning about the science behind these discoveries alongside the social and historical contexts in which they occurred, and the impact these discoveries had on society. While a majority of the scientific discoveries that we will focus on took place in the first half of the 20th century, we will also discuss the ways in which the long-term consequences

of these discoveries are still relevant today, especially as they relate to current issues on sustainability (e.g., the use of plastics) and the ethical considerations that arise more generally when thinking about the relationship between science, technology, engineering and society. This course will count as an interdomain, GH/GN.

GER 123: Genocide in Global perspectives: Twentieth Century and beyond

3 Credits

The history and memory of the Holocaust, the Armenian, Cambodian and other forms of genocide are often taught separately in different disciplines. This course will examine them together through the various ways different societies dealt with, experienced and understood these. Using the extensive literature on the history of genocide this course further suggests ways in which these tragic events affected and were entangled by each other's. Specific content will vary according to individual instructor, but topics may include victim cultures, ethnic cleansing, trauma, human rights, dark tourism, memorials, architecture as well as the general impact of these tragedies on global politics, or the way the memories of the tragedies were entangled with the civil rights and other struggles in American and global history.

GER 128N: The Holocaust in Film and Literature

3 Credits

This class studies how art, literature, film, and other media can help us to gain a perspective on one of the most horrific events in human history, the Holocaust: the genocidal murder of more than six million men, women, and children (mostly Jewish) under the Nazi regime during World War II. We will also examine the theoretical questions involved in any attempt to capture what appears to be beyond our comprehension, in terms of moral outrage and the sheer scale, inhumanity, and bureaucratic efficiency. To this end we will study literary works, such as Primo Levi's *Survival in Auschwitz*, films such as Steven Spielberg's *Schindler's List*, Roman Polanski's *The Pianist*, and Roberto Benigni's *Life is Beautiful*, as well as photographs, poems, artworks, installations, museum architecture, the design of monuments and other artifacts. We will also examine questions of memorialization (Holocaust museums and memorials), national guilt, survivor's guilt, stigmatization, and the ethics of historical representation.

GER 143: The Culture of Stalinism and Nazism

3 Credits

This course, which is cross-listed between Russian and German, aims to acquaint students with an important and troubling chapter of 20th-century culture. The regimes of Stalin and Hitler have had a decisive impact not only on life in Russia and Germany, but in much of Europe and the world at large. There is no consensus among scholars about how to classify these systems, whether the term "totalitarian" is appropriate to describe them, and whether Stalinist Russia and Nazi Germany are essentially similar or essentially different historical phenomena. Espousing a comparative perspective, this course explores the culture produced by Stalinist Russia and Nazi Germany, taking into account both the culture of daily life and selected works of "high culture," including literature, the visual arts, architecture, music, and film. The ideological underpinnings of both systems will be discussed and compared. The classics of Stalinist Socialist Realism and Nazi propaganda will be analyzed both as political statements and works of art. The course will also include a reading of authors who attempted to create critical representations of life in Stalinist and Nazi societies, such as Lydia Chukovskaya, Varlam Shalamov, Primo Levi, and George Orwell. The course is designed to be suitable for all students generally interested in Russian and/or German culture, or interested in various fields of humanistic study, whether or not they have previously studied the culture of Russia or Germany. A knowledge of Russian or German is not required, as class lectures and discussions as well as all reading assignments will be in English. This course is designed to count as General Education, as a GH "Humanities," and as an IL "International Cultures" course. It meets the BA requirements in the humanities by asking students to demonstrate competence in 20th-century German and Russian history, political philosophy, literature, art and film.

GER 157N: The Amish

3 Credits

This course investigates the history, culture, religion, beliefs, language and society of the Old Order Amish and related Anabaptist sectarian groups in North America. By studying their historical background, their cultural and social life based on their religious beliefs, their economic and political interactions with mainstream American society, students are offered a unique opportunity to learn more about another culture and are enabled to arrive at a better understanding of their own cultural concepts and values. The course will also focus on basic human issues,

such as family, community and economy, and the values that inform the Amish approach to these issues. The ongoing struggle of the Amish and historically-related groups to retain their religious, ethical, and moral values dates back to the Reformation. In particular, the course will discuss the maintenance by the Amish and other Old Order sectarians of their traditional language, beliefs and values after living more than three centuries in North America. Perhaps, surprisingly, the Old Order Amish are thriving economically and demographically in the twenty-first century, and their numbers are doubling approximately every 20 years. This course is designed to be suitable for all students generally interested in the Amish from the perspectives of history, religious studies, anthropology, sociology, agriculture, government, law, or business. This course is designated as Integrated Domain (N) because of the interdependence of humanities and social sciences as fundamental to understanding the Amish. The course is also designated as US "United States Cultures." The course cultivates student knowledge of the social and religious identity of the Amish, and students will learn about the beliefs and values that inform distinctive Amish practices, such as plain dress and the use of horse-and-buggy transportation.

GER 166: Marx, Nietzsche, Freud

3 Credits

This course introduces the thought of three German-language writers (Karl Marx, Friedrich Nietzsche, and Sigmund Freud) who transformed the fields of philosophy, economics, psychology, and have made an immense impact on the fields of history, political science, aesthetics, theology, as well as literature and the arts. We will spend approximately equal time on each thinker, with an emphasis on their most important works as well as on their writings that deal with aesthetics, literature, and the arts. Each thinker will be presented in his respective historical and intellectual context. Students will gain an understanding of how each thinker shaped the course of German intellectual history and history of ideas more broadly. Importance will be placed on identifying each thinker's distinct method, the targets of their critiques, and the stakes of their interventions. Why was each thinker so revolutionary, and why is their thought still important today? Additional materials may include relevant literary and cinematic works. The course fulfills the General Education requirement in the Humanities (GH), as well as the International Cultures (IL) requirement. All texts and discussion in English.

GER 175: Germanic Heroic and Medieval Literature in English Translation

3 Credits

In this course, students will become able to describe the complex cultural history of the German-speaking Middle Ages and its modern reception through analysis of literary and cultural production. The period between the Germanic migrations of the fourth century C.E. (Common Era) and the waning of the high Middle Ages around 1250 C.E. was shaped by a complex convergence of sociocultural, theological, and political forces. A shift from the agrarian society of early Germanic peoples with a minimal government structure, to the stratified socio-political system of the High Middle Ages is reflected in written documents and literary production of the time. Evolving and emerging value systems often clashed. For instance, knights were expected to be the warriors depicted in heroic epic and yet also to behave like the civilized courtiers of Arthurian Romance. Modern retellings of Arthurian and heroic stories are popular in modern film and literature. Newer scholarly approaches such as culture theory, gender studies, critical race theory, and post-colonial studies have expanded the available tools for analysis of Germanic medieval literature and culture. Students will examine historical documents, literary works, visual art, music, as well as secondary articles on history, culture, and literature and will discuss the complexity and diversity of this time period in German-speaking regions. Using modern tools of analysis, students will compare the medieval material with its reception in modern cultural production and will evaluate the relevance of medieval culture to modern society.

GER 189N: German Film

3 Credits

A survey of German film from its beginnings to the present, with emphasis on historical, political, and cultural contexts. GER 189 German Film (3) (GH; GA; IL) This course is an introduction to German cinema, broadly defined as any representation of moving images made in Germany, Switzerland, or Austria, or by filmmakers from these countries working in exile. The course will be both an historical survey of the developments in German film, as well as a general introduction to film analysis. Neither prior knowledge of German culture and language nor of film history and terminology is required. All materials will be supplied in English. Students will learn about the technology of film production as well as fundamental concepts for film analysis (shots, angles, sound, lighting, etc.). The course will be structured around different political and cultural contexts, providing students with a concrete historical perspective on Germany from the late nineteenth to the early twenty-first centuries. Screenings will cover several artistic modes, including comedy, melodrama, propaganda film, experimental film, period drama, crime drama, horror film, and documentary. Readings will complement screenings with seminal writings by filmmakers and theorists, as well as texts that provide historical perspective and close analysis. By examining German film with attention to changing cultural settings, students will investigate such topics as the relation of memory and history, the representation of war and genocide, the roles of propaganda and censorship, the formation (and deformation) of national identity,

the impact of technological and economic changes on culture, and changing gender roles. In addition, students will learn to think critically about the visual medium of film, becoming more engaged and critical spectators in a world saturated with the moving image. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. The course is designed to be suitable for all students generally interested in German, or interested in various fields of humanistic study, whether or not they have previously studied the culture of Germany. As an inter domain course, GER 189 also counts towards the integrative studies requirement.

GER 190: Twentieth-Century German Literature in English Translation

3 Credits

GER 190, German Twentieth-Century German Literature in Translation (GH; IL; BA) offers an introduction to 20th-century literary texts written in Austria, Germany, and Switzerland, or by authors originally from these countries, with emphasis on cultural, historical, and political contexts. No prior knowledge of German, 20th-century German history, or narrative analysis is required. All texts and discussions are in English. Students will gain a historical perspective of 20th-century German-speaking worlds by analyzing works of award-winning authors and a few filmmakers including but not limited to Arthur Schnitzler, Franz Kafka, Ernst Toller, Bert Brecht, Ruth Klüger, Helma Sanders-Brahms, Paul Celan, Max Frisch, and Heinrich Böll. The course draws on diverse genres, such as prose fiction, memoirs, poetry, diaries, short stories, drama, cinematic adaptations of literary works, and film. Short lectures and presentations contextualize the readings about Vienna 1900, two World Wars, the Interwar Years, the Holocaust, and divided and united Germany. Students will engage in an on-going dialogue about the relationships between literature, history, and society. We will explore how literature captures value and belief systems in distinct cultural, social, and political settings. Class discussions focus on the depiction of the individual in modern society, the role of intellectuals as WWI enthusiasts turned pacifists, censorship, the representation of war and the Holocaust, trauma, memory and gender, post-WWII values in a consumer culture, the student movement of 1968, the power of the mass media in the 1970s turning published opinion into public opinion, terrorism, the fall of the Berlin Wall, and German reunification. In German 190, students will critically think about text and context, explore literature as a powerful seismograph of profound cultural and political changes, examine literary works as manifestations of cultural memory and means of social critique, and appreciate writers as keen observers of the world around them. This course is suitable for all students interested in German Studies or the humanities. The course has a GH (General Humanities) and IL (International Cultures) designation and meets the requirement for a BA in the humanities.

GER 200N: Contemporary German Culture

3 Credits

How do we make sense of Germany, the country's history, culture, politics, and economics during the twentieth century? In modern German history, periods of impressive social, political, economic, cultural, and intellectual achievements alternated with times of violence, destruction, two world wars, genocide, and authoritarian structures in politics and society. This course helps students to understand Germany during the 20th century. The main focal points of this course include World War I, the 1918 revolution followed by the short history of the Weimar Republic, the rise of the Nazis and the Third Reich, World War II and the Holocaust, post-war reconstruction, the foundation of two German states in 1949, their development until (re-) unification in 1990, the development of Germany from unification to today, Germany's current dominant economic position within the EU, and the recent rise of radical right-wing politics in Germany for the first time since 1945. These focal areas will be approached from various perspectives: From historical (and historiographical) vantage points, from sociological and economic perspectives, and through the lenses of cultural productions such as novels, movies, and other works of art.

GER 201: Conversation and Composition

4 Credits

Continuation of GER 003; emphasis on reading, writing, and conversational skills; course utilizes short literary selections, a concise novel, videos. GER 201 Conversation and Composition (4) IL Offered in the fall and spring semesters of each academic year, this fourth-semester German language course satisfies International Cultures (IL) requirement and is a required course for the German B.A. degree. For the German B.S. degree and the German minor, students must take either German 201 or German 208. German 201 is designed to help students further develop the four basic language skills (listening, speaking, reading and writing) they have attained in previous language courses with particular emphasis on the advancement of their speaking and writing proficiency in German. Through a task-based approach the course aims to assist students in learning to write and speak German with level-appropriate fluency and accuracy. This course will also provide students with ample opportunity to increase their reading command of German through an authentic literary work and short stories by prominent German-speaking authors. The course language is German and class sessions will consist of communicative activities and practices. The learning of the German language will occur through completion of tasks in which students use the level-specific grammatical structures in different formats and circumstances (e.g. writing and oral projects) while receiving little or no direct lecture on German grammar. The delivery and practice of factual information on grammatical structures are integral to the course and thus instructors will highlight them to the extent to help students achieve the course objectives. The class meets twice in a regular classroom and twice in a computer-lab throughout the semester where students will be exposed to computer-mediated language instruction and work on various computer-based projects. Film viewing and discussions will be incorporated into the course, as deemed necessary by the instructors. Attendance and preparation are mandatory and homework is assigned on a regular basis. The evaluation and grading of students' course performance is based on active class participation, successful completion of a rhetorical portfolio, an orally presented cultural project, four brief interviews, and a semester-end aural-oral test.

Prerequisite: GER 003 or GER 008

GER 245: The Vikings

3 Credits

The Vikings will study the rise and proliferation of Viking culture and society during the Viking Age (c. 793 - c. 1066 CE). This course will examine Norse/Scandinavian culture including their social structure, political and economic systems, technology (especially shipbuilding and navigation), religion, literature, language and of course the raiding, trading and exploration traditionally associated with Vikings. As the course synthesizes and analyzes historical evidence, several themes will be of importance including: social and economic structures, religious belief systems, the place of women and marginalized groups in society, and cultural developments such as art and literature. The overall goal of this course is to use factual and thematic knowledge of this time period and these cultures to analyze and appreciate both change and continuity in the development of Viking history.

Advanced training in German language skills.

International Cultures (IL)

GER 301: Intermediate Speaking and Listening

3 Credits

Intensive practice in spoken German through readings, discussions and video. GER 301 Intermediate Conversation and Composition (3) (IL) German 301 is a continuation of the composition and conversation emphases of both GER 201 and GER 208. Fundamental to the course is a thorough grammar review of both basic and advanced grammatical situations. Much of this review is done outside of class. In class, students devote their time primarily to oral work. GER 301 requires students to use German in various ways: group work, individual presentations, discussion of texts, structured partner drills, etc Student evaluations are based on participation, homework, quizzes, a class room presentation, and essays. GER 301 is required for all German majors and the German minor and will be offered every semester.

Prerequisite: GER 201 or GER 208Y

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

International Cultures (IL)

Exceeds 12th Unit of World Language

GER 302W: Intermediate Composition and Grammar

3 Credits

Continuation of oral and written practice in German with extensive work in composition. GER 302W Intermediate Conversation and Composition II (3)(BA) This course meets the Bachelor of Arts degree requirements. German 302 is a continuation of the language and composition emphases of both GER 201 and 208. Fundamental to the course is a thorough grammar review of both basic and advanced grammatical

situations, with the goal of improving students' grammatical and stylistic precision in written German discourse. GER 302 requires students to use German in various ways: group work, individual presentations, discussion of texts, structured partner drills, etc.

Writing Across the Curriculum

GER 308Y: German Business Communication

3 Credits

Development of German commerce and industry; extensive practice in the major forms of business communications such as business correspondence. GER 308Y German Business Communication (3) (IL) This course provides an introduction to German business and economics. Students will read and respond to a variety of texts about German economic practices and the German business world, as well as texts that introduce and describe more general economic principles. Emphasis is also placed on expanding students' vocabulary and further developing their writing skills in German, especially with regards to economic and business terminology, and writing genres common in business contexts. As this is not intended to be a grammar review course, students are expected to have previously completed or be concurrently enrolled in GER 301 or its equivalent. This course complements other offerings in the German business track and prepares students for the final course in the Business German sequence. This course can also be counted towards either the German minor or the German major. It is offered once a year during the fall semester.

Prerequisite: GER 301 or GER 302W
International Cultures (IL)
Writing Across the Curriculum

GER 310: Introduction to the Study of German Literature

3 Credits

History, methods, and the terminology of literary interpretation and analysis in German.

Prerequisite: GER 301 or GER 302W
Bachelor of Arts: Humanities
International Cultures (IL)

GER 344: Intermediate German Culture

3 Credits

An overview of German culture from the Middle Ages to the present. Conducted in German. GER 344 Intermediate German Culture (3) (IL) This course will be a comprehensive overview of major events and figures in German history that have influenced the development of German culture. This will be a foundational course that will enable students to better situate advanced courses in German literature and culture in the broader context of a cultural tradition that stretches from the Germanic migrations to the present. The course will be taught in German at the intermediate level and will be required of all German majors and minors. It will be a prerequisite for culture courses taught in German at the 400-level. Students will be evaluated on the basis of written tests, an oral presentation and essay on a major cultural figure or event, homework,

and class participation. The course will be offered every semester. The enrollment for each section will be capped at approximately 22.

Prerequisite: GER 301 or GER 302W
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Bachelor of Arts: Humanities
International Cultures (IL)
Exceeds 12th Unit of World Language

GER 399: Foreign Study--German

3-12 Credits/Maximum of 12

Advanced studies in German language and/or literature.

Prerequisite: GER 201
Bachelor of Arts: Humanities
International Cultures (IL)

GER 401Y: Advanced Composition

3 Credits

Intensive practice in writing different text types in German. GER 401Y Advanced Composition (3) (IL) GER 401Y is the writing across the curriculum component of the German language sequence. After thorough discussion of various text types, students will read and practice writing in different genres. GER 401Y concentrates on building other language skills as well. We will do so by reading and discussing short German texts from a variety of sources and watching film and television. In addition, we will review aspects of German grammar that present difficulties to many English speakers. Evaluation will be based on five writing assignments, a writing portfolio, quizzes, and class participation. The course will be offered twice a year with an enrollment of up to twenty students. GER 401Y is required for all German B.A. and B.S. major options as well as for the German minor.

Prerequisite: GER 301 and GER 302W
International Cultures (IL)
Writing Across the Curriculum

GER 408: Advanced German Business Communications

3 Credits

Study of German business organization, forms of business communications, business terminology; writing of reports and abstracts.

Prerequisite: GER 301, GER 302
International Cultures (IL)

GER 411: The Teaching of German

3 Credits

Theory, methods, techniques, materials, bibliography; use of inter-active media; contributions of linguistics or psychology to language learning.

Prerequisite: or concurrent: GER 401Y

GER 412: Contrastive Analysis of Modern German and English

3 Credits

Structural comparison of the German and English grammatical systems: morphology, syntax, phonology.

Prerequisite: or concurrent: GER 401Y
Bachelor of Arts: Humanities
International Cultures (IL)

GER 420: Genre

3-9 Credits/Maximum of 9

Special studies in a particular literary genre in German literature, such as lyrical poetry, drama, or narrative prose.

Prerequisite: GER 401
Bachelor of Arts: Humanities
International Cultures (IL)

GER 430: History of the German Language

3 Credits

Development of German from its earliest stages, including historical and cultural aspects. GER 430 History of the German Language (3) (IL) This course provides an overview of the history of the German language from its origins to the present. Historical changes and dialectal variation in phonology (sound system), morphology (word structure), syntax (sentence structure), lexicon (vocabulary), and semantics (word meaning) will be examined. Particular emphasis is placed on the impact of cultural and historical changes on the development of German, including its standardization. Students will be evaluated on the basis of homework, classroom participation, tests, and an in-class presentation with a written abstract. No prior knowledge of linguistics is required. The class is conducted in German.

Prerequisite: or concurrent: GER 401Y
Bachelor of Arts: Humanities
International Cultures (IL)

GER 431: History of German Literature and Culture I

3 Credits

Significant works of German literature before the mid-eighteenth century considered in their cultural context.

Prerequisite or Concurrent: GER 401
Bachelor of Arts: Humanities
International Cultures (IL)

GER 432: History of German Literature and Culture II

3 Credits

Significant works of German literature from the mid-eighteenth century to the present considered in their cultural context.

Prerequisite or Concurrent: GER 401
Bachelor of Arts: Humanities
International Cultures (IL)

GER 440: Seminar in German Culture

3-6 Credits/Maximum of 6

Seminar devoted to a special topic in the field of German culture and civilization.

Prerequisite: or concurrent: GER 401Y
Bachelor of Arts: Humanities
International Cultures (IL)

GER 472: Romanticism

3 Credits

A study of both early and late romanticism, including such writers as Novalis, the Schlegels, E.T.A. Hoffmann, and Heine.

Prerequisite or Concurrent: GER 401
Bachelor of Arts: Humanities
International Cultures (IL)

GER 489: Introduction to German Film History and Theory in Context

3 Credits

Introduces films in German since the 1960s and addresses issues relevant to German and European cultures and politics. GER 489 Introduction to German Film History and Theory in Context (3) This course focuses on German cinema's development since the 1960s. The course situates the 'Young' and then 'New German Cinema' within contemporaneous European and U.S. film cultures. Thus the course will address the difference between the European cinematic culture of 'auteurs' versus the school of 'genres' in the U.S. The preceding traditions of Italian Neo-realism and of the French nouvelle vague are also engaged alongside a few Hungarian, Czech and/or Polish films. The students will have the opportunity to consider how these other national cinematic productions impacted the German filmmakers who were involved in the creation of a national German cinema that would critically engage Hollywood on the one hand, and distance itself from the Nazi past on the other. The course will be structured around questions about the grounds for a national cinema and its cultural and critical relevance both at the time these films were produced and today. Yet, the national question will not be the only focus of this class, in the course of which students will be able to discuss the historical, political and ethical questions raised by the directors selected. In addition, students in this course will learn about the specificity of cinematic language and will be exposed to some film theory. In conclusion, the course provides upper level undergraduate students with a basic knowledge of the most important New German films, with a confrontation with issues specifically relevant to a study of German culture, and with some familiarity with film theory. The evaluation methods for this course will be based on 1) participation [attendance; reports/worksheets, after each film and in class discussion]: 30%; 2) presentation 20%; 3) take-home mid term essay 20%; and 4) final paper 30%. The course is part of the German Program, in particular of the German Studies curriculum. It teaches students of German culture about German and European contemporary cinema, while situating the cinema within broader historical-political debates concerning Europe. It functions as an excellent complementary course to our GER LIT classes at the 400 level and offers an additional choice to pursue cultural studies to those who are more reticent about reading texts. Enrollment: 25. The course will be offered every other year.

Prerequisite: GER 310 or COMM 250

GER 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

3-12 Credits/Maximum of 12

Advanced studies in German language, literature, and culture.

Prerequisite: any 300-level course in German
Bachelor of Arts: Humanities
International Cultures (IL)

Global and International Studies (GLIS)

GLIS 101N: Globalization

3 Credits

This course provides a broad introduction to the topic of global studies. This course meets the Bachelor of Arts degree requirements. This

interdisciplinary course explores how people and nations confront the phenomenon of globalization, presenting different perspectives for studying and making sense of the world. Students are exposed to a variety of analytical approaches from the arts, humanities and social sciences to allow them to see how different perspectives portray the world, interpret events, and often shape human actions. The course begins from a humanities perspective, exploring the concept of social identity, in particular understanding how people in different cultures develop a sense of their identity and how this is perpetuated over time through a society's products, practices, and perspectives (e.g. artifacts, value systems, traditions). The focus then shifts to organizations in society, comparing how they operate with either national or global identities. This leads to an exploration of how information and communication technologies are tools to create both global connectivity, yet can also be a source of division. Globalization is then considered in terms of its impact on the natural environment, populations, and health. Challenges arising in each of these areas are the concern of all global citizens, and are explored in terms of how interdependencies are increasing their impact. The focus of the course progresses to gender, poverty, and human rights, exploring these in tandem with their literary representations, presented in both global and comparative contexts. Economic development models are also used to uncover trends in gender and poverty. The final focus is on global peace and conflict, highlighting how globalization, in bringing people and nations closer together, can also give rise to conflict and division. This course is one of two 100-level courses that are required for the GLIS major. While this course focuses on a general introduction to global studies as a field of study, GLIS 102N complements the topics raised here, exploring many from a range of different perspectives to prepare students for choosing their options through the major.

GLIS 102N: Global Pathways

3 Credits

This course meets the Bachelor of Arts degree requirements. This course introduces students to five pathways to thinking about global issues today: Global Conflict, Health & Environment, Culture & Identity, Wealth & Inequality, and Human Rights. We will spend three weeks focusing on each problem. Students will complete the course with a stronger sense of many of the major global issues of our time, as well as a sense of how those issues can be approached and studied from a variety of humanistic and social scientific perspectives. Students will also learn how aspects of identity, like race, sexuality, or gender, affect and are affected by global forces. Combined with GLIS 101N, this course will help prepare students for lives and careers in which they will interact with these large-scale global issues on a daily basis; it will allow students to understand how various local or national issues are affected by global ones, and to see ways of intervening in the world to address global problems. 1. Global Conflict: Why do people fight? Is violence inherent to human society? How is it possible to dream of an end to war, as creative writers of many

cultures have done? 2. Health & Environment: How does climate affect human history? How have societies and individuals interacted with their environments, and how have the relations between human beings and the natural world been represented in literature and the arts? How are health issues depicted in narratives and other media, and how do health crises challenge political or cultural norms? 3. Culture & Identity: How do we come to be who we are? How are we shaped by the circumstances we grow up in? What is culture, and how do we understand cultures other than our own? What happens when people move or change cultures, or when cultures move or change people? 4. Wealth & Inequality: Why are some nations, and some people, rich, and others poor? What structural factors help explain those differences? How does the distribution of wealth factor into what counts as a good society? 5. Human Rights: What are the most fundamental properties of being human? Does everyone in a society have the same rights?

GLIS 310: Language Rights, Policy, and Planning

3 Credits

This is a course on language rights, policy, and planning from individual, group, inter-ethnic, and national perspectives. Linguistic minorities are a consequence of colonization by European powers in different regions of the globe. Other effects of colonization and political conflicts include mass movement, migration, and the emergence of nationalism. In such contexts, minorities have made demands for language rights and used language policy and planning as strategies to realize demands for social justice. This course will examine how linguistic minorities secure opportunities to use their own languages and have them accommodated in official legislation as mother tongue, second, or foreign languages. The course will adopt a global perspective and analyze language rights as well as language policy and planning in diverse regions of the globe, including but not restricted to, Africa, Asia, and South America. Analysis will primarily focus on how language policies can be carried out from different perspectives (e.g., literary, linguistic, and political) in different geographical regions. After examining how language policies operate in and influence society, the course will use sociopolitical ideologies to explore the nature of the relationship between language policies and language rights and the ways this relationship enables one to achieve an expanded understanding of the impact of language policies and language rights on local language practices.

Cross-listed with: AFR 310, APLNG 310
 International Cultures (IL)

GLIS 400Y: Seminar in Global and International Studies

3 Credits/Maximum of 3

Capstone Seminar focusing on critical themes and the development of the senior thesis for Global Studies Majors. This interdisciplinary course will offer a seminar on some current event, issue, or phenomenon that involves a significant proportion of the globe. Topics will vary each

year and depend on the faculty member leading the course, but it may include subjects such as the European Union, global economic change, international pop culture, or international response to human rights violations. Students will develop, write, and workshop a global studies research thesis. Both written and oral work will be assigned and graded. Students will discuss material from a variety of academic fields such as political science, economics, sociology, history, anthropology, and cultural studies.

Prerequisite: GLIS 101, GLIS 102
 Bachelor of Arts: World Cultures
 International Cultures (IL)
 Writing Across the Curriculum

GLIS 410: The Global Impact of Education

3 Credits

This course examines the global impact of education on human rights, health, economic development, political mobilization, religion, and environmental sustainability. The education revolution has significantly changed the world's population from one largely unschooled to one mostly schooled in just the last 150 years, yet the full impact of this major transformation is only now emerging through social science research. The course will explore, at both the individual and societal levels, how education changes many dimensions of global society in both positive and negative ways. It also focuses on the use and misuse of educational programs in social and economic development worldwide through Non-Government Organizations (NGO's), national governments, and multinational agencies.

Enforced Prerequisite at Enrollment: 5th semester standing
 Cross-listed with: CIED 410, EDTHP 410, SOC 410

GLIS 478: China and the World

3 Credits

This course examines China's economic reform and development and its engagement with the world since 1978. It pays close attention to the interplay of politics and economics. The course first examines the initiation and process of China's economic reform. This part of course covers topics including state-owned enterprise reform, township and village enterprises, fiscal decentralization, and tax reform. Then the course explores China's interactions with the world, paying special attention to trade, foreign investment, and development aid. Finally, the course addresses the issues and challenges that China faces for sustainable development, including corruption, income inequality, and environmental deterioration. The goal of this course is to give students a comprehensive view of the political economy of contemporary China and its relationship with the world and to develop students' understanding of economic reform and development in the developing world.

Graphic Design (GD)

GD 1S: First-Year Seminar in Graphic Design

1 Credits

An orientation to the historical, social, and professional context of design and an exposure to a variety of ethical, philosophical, and topical ideas from the world of design.

First-Year Seminar

GD 100: Introduction to Graphic Design

3 Credits

A beginning level graphic design course. Instruction touches on the practice, theories, history and processes of the graphic design industry. GD 100 Introduction to Graphic Design (3) (GA) GD 100 (GA) INTRODUCTION TO GRAPHIC DESIGN (3) is a beginning level graphic design course. Instruction touches on the practice, history, theories, and analysis of the design industry. This course places emphasis on problem solving and observing design, while developing intuition and creativity. Projects focus on the process of defining the parameters of a design problem, observing examples within the design industry, and critically evaluating examples of effective and ineffective design. The course will help students to: 1. Understand the graphic design industry and the responsibilities of the profession. 2. Develop an appreciation for the practice of design. 3. Begin to develop the ability to define and solve problems. 4. Increase their knowledge of the history of graphic design and typography. 5. Refine their conceptual skills. 6. Learn and understand the vernacular of the industry. Students will be quizzed on terminology and important facts provided in the readings.

General Education: Arts (GA)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GD 101: Design Foundation

4 Credits

Design Foundation is a beginning-level studio course appropriate for students enrolled in a graphic design program. Through exercises and projects, students will use the elements and principles of design to convey information with clarity and impact. Students will practice thinking critically and acting creatively. Work will focus on key design issues, including process, method, technique, technology, and the production of visual and physical artifacts.

GD 102: Design Foundation 2

3 Credits

Design Foundation 2 continues a student's education in the fundamental practices of graphic design. Students develop greater facility with creative ideation, the fundamentals of visual communication, and the practical application of design principles and elements. Production methods build on the hand-skill of Design Foundation 1, moving into digital platforms.

Enforced Prerequisite at Enrollment: GD 101

GD 107: Graphic Design Studio - Components

4 Credits

GD107 Design Studio - Components is a beginning-level studio course appropriate for students enrolled in Graphic Design. The course serves as an introduction to analysis and form-making in graphic design through investigation of design artifacts as components of larger physical, social, cultural, and technological systems. Students will observe the world around them, define problems, and develop creative solutions. These solutions will be produced with an eye towards clear and effective visual communication. Critiques will build fluency in the language of design and sharpen their evaluation of design choices.

Enforced Prerequisite at Enrollment: GD 101

GD 110: User Experience Design: Concepts and Principles

3 Credits/Maximum of 6

Students in this introductory course will study foundational concepts and methodologies in User Experience (UX) design and thinking. User experience (UX) design is the process designers use to create products that provide meaningful and relevant experiences to users and is rooted in the research and discovery of digital audiences, inclusive of enhancing user engagement and loyalty through usability, accessibility and product satisfaction. GD110 offers practical instruction focused on visual communications perspective, rather than one focused on programming alone. The process of designing user experiences within digital systems and applications will be explored and analyzed, as well as introductory knowledge in constructing design systems for various based on the needs of users. The course will feature iterative design processes to employ basic management techniques in working with product stakeholders for digital planning practices. GD 110 will provide foundation level instruction for concepts and principles that will be applied more broadly in GD 210.

General Education: Arts (GA)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GD 115N: Visualizing Information

3 Credits

The world is awash with complex, dynamic information. With the development of powerful technologies capturing vast amounts of data, the art of visually representing information in ways that increase understanding of complex data and models will become a critical skill. Effective representations can communicate information in ways that maximize comprehension, analysis, exploration, and understanding

of the underlying data. Knowing how to read and interpret visual data is essential to navigating this ocean of information. Those who know how to present data visually employ a powerful communication tool. In this class, you will become an effective reader and creator of visual representations of data. Through critical assessment of examples, interactions with peers, and the generation of your own projects, you will generate visualizations of data and create works using a common visual language to help people analyze and understand the information at hand. Good visualizations not only present a visual interpretation of data, but also do so by improving comprehension, communication, and decision-making. Effectively functional visualizations can offer insights that reveal evidence and truths that may be difficult to otherwise observe. They can often empower readers to explore both the norms that give meaning to the data and the exceptions that convey its complexity or uncertainty. Visualized information can assist in revealing: - Distributions and frequency over time - Changes and trends - Relationships and correlations - Spatial and mapping information Regardless of your major field of study, the ability to effectively visualize information represents a significant and essential skill for effective communication. Whether you are creating representation of your work for your company's leadership board, a general public audience, or a meeting of your peers, the ability to craft a visual display that offers an accurate and insightful interpretation of data is a key capability in the workplace. No prior experience in design or statistics is required for success in this course.

GD 200: Graphic Design Studio I

3 Credits

A beginning graphic design studio course. Instruction focuses on the practical and analytical process of creating graphic designs and their critical evaluation. GD 200GD 200 Graphic Design Studio I (3) This course is a beginning graphic design studio course. Instruction focuses on the practical and analytical process of creating graphic designs and their critical evaluation. Emphasis is on problem solving and technical training while, at the same time, nurturing intuition and creativity. The course will help students to: 1. Develop skills and techniques applicable to graphic design. 2. Become familiar with appropriate computer hardware and software. 3. Develop the ability to define and solve problems. 4. Develop an understanding of graphic design as a profession. 5. Refine their conceptual skills. 6. Develop the work habits and attitudes of design professionals. Grading: 1. Work will be evaluated on the relevance and originality of the design idea, the suitability of the design approach in serving the client's needs, the effectiveness of the design in reading its intended audience, and all pertinent functional parameters. 2. Professional attitude and the development of professional work habits will be evaluated. Students are expected to think for themselves, budget their time, meet deadlines, and adhere to production schedules. 3. Attendance is required. In the case of illness or an emergency, students are required to contact the professor just as they would contact an employer. Three unexcused absences will result in the final semester grade being lowered one full letter grade. 4. Neatness, craft and attention to detail will be considered in the final grade. 5. Visual, verbal and written

communication skills will also be part of the evaluation. GD 200 carries the prerequisite of GD 102.

Enforced Prerequisite at Enrollment: GD 102

GD 201: Typography

4 Credits

GD201 Typography 1 is an intermediate-level studio course appropriate for students enrolled in a graphic design program. This course introduces the practical and analytical application of typography across a range of formats with an emphasis on concept development. Students will develop a strong foundation in typography, including knowledge of typographic principles, terminology and technical application. Students will apply knowledge of grid-based systems, typographic hierarchy, and systems-thinking across multiple formats. Projects introduce studio-based problem-solving using typographic principles and include competencies in formal typographic systems as well as experimental application. This course introduces typographic history as well as contemporary typographic considerations. Critiques will advance students' skills in the critical evaluation of design principles and communication in typographic design.

Enforced Prerequisite at Enrollment: GD 107

GD 202W: The History of Graphic Design

3 Credits

A survey of graphic design, especially emphasizing influential movements, innovative designers and technological advances relevant to contemporary visual communication. GD 202 The History of Graphic Design (3) The History of Graphic Design course provides an overview of design as a vehicle of visual communication. The primary focus of the coursework is on images and styles of image-making as well as on language as a visual, typographic form. The application of images and typography is the basis of design, and its history ranges from Sumerian clay tablets to 21st century digital tablets. Special emphasis is given to periods of innovation and inspiration, including the late Roman period, the Renaissance, the Industrial Era, the rise of Modernism in Europe and America, and the digital revolution. Graphic design is a discipline which embraces its production and delivery technology; therefore, attention is also focused on the evolution of that technology—from the letterpress and metal typography, through the camera and photomechanical reproduction era, to current computer and digital production processes.

Writing Across the Curriculum

GD 203: Typography 2

3 Credits/Maximum of 3

GD 203, Advanced Typography is a course that comprises the study and development of advanced knowledge and skills of typography. Specifically, it includes the study and use of type to accomplish broader knowledge and skills in using type to create meaningful visual narratives, advanced skills of typography in organizing, arranging, and presenting information within multi-page layouts, and gain competent critical analysis skills concerning historical contemporary contextual perspectives.

Enforced Prerequisite at Enrollment: GD 201

GD 207: Graphic Design Studio - Products

4 Credits

Graphic Design Studio - Products is an intermediate-level studio course appropriate for students enrolled in a graphic design program. This course advances concepts and methodologies learned in GD101, GD107, and GD201. Through a series of multifaceted projects, students will analyze complex problems and apply research methodologies to design unique, systems-based solutions. Various modes of image-making will be explored, combining analog and digital techniques to develop fluency across media. Projects will explore the use of type and image in design solutions and expand upon typographic principles from GD201. Students will begin practicing client-designer relationships and addressing real-world problems through studio-based projects. Critiques will advance practical knowledge of critical evaluation and hone oral articulation of design choices.

Enforced Prerequisite at Enrollment: GD 107 and GD 201

GD 210: User Interface Design and Prototyping

3 Credits/Maximum of 6

Students in this course will apply knowledge in User Interface (UI) design and practice designing and prototyping compelling visual interfaces for multiple platforms - from websites to physical spaces to the nuanced interactions in mobile and wearable environments. The relationship of context to concept will be evaluated and applied, with emphasis placed upon designing for desktop and mobile environments through project-based learning and critique. Knowledge acquired in GD 110: User Experience Design: Concepts & Principles will allow students to understand user behavior while applying technical knowledge in learning design systems and standards for desktop and mobile devices. Students will learn user interface design software to increase design capabilities, as well as prototyping software to further interaction design skill sets.

Enforced Prerequisite at Enrollment: GD 110

General Education: Arts (GA)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Key Literacies

GD 211: Design Photo and Motion

4 Credits

Design Photo and Motion is a beginner-level course that introduces students to the technologies and problem-solving skills of photography and motion design. GD211 will explore the theories and methodologies of verbal and visual communication as it relates to still and moving imagery. Through exercises, lectures, and projects, students will be introduced to the relationship between verbal and visual information. The objectives for this course are to provide design students with an understanding of how visuals pair with other design context to create engaging experiences and messages. This course is a required studio course that is additionally a pre-requisite to electives GD 300 Design Photography and GD 400 Time and Sequence.

Enforced Prerequisite at Enrollment: GD 107

GD 295: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

GD 296: Independent Study

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

GD 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GD 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

GD 300: Design Photography

4 Credits

GD 300 Design Photography (4) GD 300 is an intermediate design and photography course that explores the visual and conceptual relationship between typography and photography as it relates to the communication of information.

Enforced Prerequisite at Enrollment: GD 203

Bachelor of Arts: Arts

GD 301: Experience Design Process + Methods

4 Credits/Maximum of 4

GD 301, Experience design process and methods, is an advanced graphic design studio class that provides graphic design students with an in-depth study of the intricate relationship between the professional graphic designer and digital technology. Students will advance their knowledge of design software applications and will be introduced to programming languages that will assist them throughout the design process. From research and ideation to the creation of comprehensive studies and final designs, students will be given the tools that are critical to the completion of a variety of graphic design projects.

GD 302: Applied Communication

4 Credits

Definition and concentrated involvement in problem/audience analysis, with emphasis on understanding symbol and image in evoking audience response. GD 302

Enforced Prerequisite at Enrollment: GD 300 and GD 301

Bachelor of Arts: Arts

GD 303: Applied Experience Design

4 Credits/Maximum of 4

Applied Experience Design, GD 303 explores digital technology as a medium graphic design. Topics include design expressed over time - both linear and nonlinear. The objectives for this course are to give graphic design students experience in the complexities of digital visual communication and to provide students with the opportunity to work with software packages that facilitate digital communication. Students will receive instruction regarding the graphic designer's role in complex, collaborative digital communications.

Enforced Prerequisite at Enrollment: GD 301

GD 304: Practical Communications

3 Credits

GD 304 Practical Communications (3) GD 304 is an advanced course that is intended to offer practical design experiences to graphic design students through assignments for various University and not-for-profit community clients.

Enforced Prerequisite at Enrollment: GD 300 and GD 301
Bachelor of Arts: Arts

GD 307: Graphic Design Studio - Systems

4 Credits

Design practice is evolving-focusing less on physical things and more on the connections between them. Increasingly, design practice is concerned with nodes and links-networks, systems, and communities of systems. This course advances concepts and methodologies learned in GD107, and GD207. The design objectives for third year studio evolve to include not just the physical and digital deliverables but focus on the connections between them. Through a series of comprehensive projects, students will analyze complex problems and address integrating concepts and methods in application through systemsbased solutions.

Enforced Prerequisite at Enrollment: GD 207

GD 308: Graphic Design Seminar

3 Credits

Graphic Design Seminar offers a theoretical and critical examination of contemporary and future-facing design issues. The course includes lectures and discussions of current design strategies and practices. Students will be introduced to critical reading, writing, discussion, and presentation as reflective practices with a focus on diverse perspectives and approaches.

Enforced Concurrent at Enrollment: GD307

GD 310: Studio Apprenticeship

3-6 Credits/Maximum of 6

GD 310 is an advanced course that will offer pragmatic design experiences to graphic design students through direct involvement in the creative process of the designer-teacher in the studio environment.

Bachelor of Arts: Arts

GD 315: Humanizing Data

4 Credits

Humanizing data is an advanced-level studio course for majors and minors in graphic design, analyzing and visualizing data through aesthetic and humanistic approaches.

Enforced Prerequisite at Enrollment: GD 115N

GD 320: Interaction Design

4 Credits

This class advances the concepts, technologies, and languages used to design and build modern interactive experiences learned in GD110 and GD210. GD320 will explore the visual aspects and structural flow of interface design. Through projects, lectures, and workshops students will explore design strategies for web and mobile devices. Students will design screen-based experiences through research and empathy to achieve their user's end-goals and objectives. Core concepts might include content strategy, personas, sitemaps, user flows, wireframes, information architecture, and usability principles. The objectives for this course are to give graphic design students experience in the complexities of digital visual communication in emerging mediums. Students will receive instruction regarding the graphic designer's role in complex, collaborative digital communications.

Enforced Prerequisite at Enrollment: GD 210

GD 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

GD 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GD 400: Time and Sequence

4 Credits

Development of visual sequence as replies to graphic design problems.
GD 400

Enforced Prerequisite at Enrollment: GD 302
Bachelor of Arts: Arts

GD 401: Package Design

3 Credits

Orientation to packaging designs as it relates to the consumer, client, and to societal and environmental concerns. GD 401

Enforced Prerequisite at Enrollment: GD 302
Bachelor of Arts: Arts

GD 402: Senior Problems

4 Credits

GD 402, Senior Problems, allows the senior student to incorporate their knowledge and experience acquired from their years of experimentation, research, and critical thinking. The course focuses on the final preparation of the professional portfolio culminating extensive design projects and the organization and production of senior student design exhibition.

Enforced Prerequisite at Enrollment: GD 400

Bachelor of Arts: Arts

GD 405: Minor Advanced Studio

3 Credits/Maximum of 3

This class introduces the concepts, technologies, and languages used to design and build publications, objects, and complex collaborative digital communications. GD405 provides Graphic Design Minors with an advanced-level design studio, appropriate in rigor, and in keeping with the expectations of the Minor in Graphic Design degree. This will prepare the successful student for the self-guided thesis environment of the Minor in Graphic Design Capstone Course (GD406). Within this advanced studio course, students will continue to develop core professional competencies in their quest for mastery of industry tools and techniques for actual and virtual domains. It will apply the student's existing knowledge of design methodology to the completion of project-based studio coursework. Through research, ideation, and the creation of final designs, students will be given continued experiences in printed mediums, be introduced to the design of physical artifacts, and exposed to the complexities of digital visual communication in emerging mediums. These may include complex long-format publications, commercial product packaging, websites, and digital interfaces. Students will develop an understanding of the graphic designer as a professional communicator, and develop the work habits and attitudes found within this design profession.

Enforced Prerequisite at Enrollment: GD 200 and GD 201

GD 406: Minor Capstone Studio

3 Credits/Maximum of 3

A structured studio for Minors in Graphic Design culminating into a final self-authored project on a topic that engages each student's declared major. The Minor Capstone Studio applies each student's accumulated knowledge of graphic design towards the development of a self-authored project on a topic that engages his or her declared major. Each project will exercise the student's capacity to synthesize visual form and written components through the application of design methodology, and culminate their findings into a completed, presented thesis. Coursework will also include an introduction to communication theory, contemporary communication paradigms, the changing notion of audience and context, and formal research methodology.

Enforced Prerequisite at Enrollment: GD 405

GD 407: Graphic Design Studio - Communities

4 Credits

Design Studio - Communities is an Advanced-level studio course appropriate for students enrolled in a graphic design major. Classes will focus on developing skills to conceive and execute projects for social change with a focus on developing ideas that are rooted in the

community and have the power to impact people's lives. Students will be expected to work in diverse groups, often collaborating with individuals outside of the discipline to solve problems within local and global communities. This course advances concepts and methodologies learned in GD107, GD207, GD307, and other design studios.

GD 409: Exhibition and Portfolio

4 Credits

An in-depth, advanced level course for students enrolled in the graphic design program. Students will prepare for the professional working environment by creating solutions to complex, multi-faceted, systems-based design problems. Students will practice leadership and independence in designer-as-author based projects with an emphasis on clearly defining problems, and developing strong, polished solutions that are clearly presented visually, verbally, and in writing. Students will demonstrate a professional attitude and work habits. This course will culminate in a senior capstone exhibition, which students will organize, brand, and actualize for an audience. There is an emphasis on the transition from school to future career. Students engage in both individual independent projects and collaborative group projects. Readings and discussions of professional practice, guidelines, and ethics are integrated throughout the course.

Enforced Corequisite at Enrollment: GD 407

GD 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

GD 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

GD 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

GD 496: Independent Study

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

GD 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

GD 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Greek (GREEK)

GREEK 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities

International Cultures (IL)

GREEK 101: Introductory Ancient Greek

4 Credits

GREEK 101 is the first course in a two-semester introduction to ancient Greek, the language of Homer, Sophocles, Plato, and the New Testament. Students will begin to learn the grammar and vocabulary necessary for reading Greek literature of different periods. Unlike a modern language, ancient Greek is not a spoken language. Consequently, the class will be devoted to honing reading skills through drills and the translation of short sentences and passages. Students will also be encouraged to compose ancient Greek sentences and passages as they develop their fluency in the language. By the end of the semester, students will be prepared to continue to GREEK 102.

Bachelor of Arts: World Language (All)

Bachelor of Arts: Humanities

GREEK 102: Intermediate Ancient Greek

4 Credits

GREEK 102 continues the work begun in GREEK101, which is prerequisite for enrollment. Students will continue to learn the grammar and vocabulary necessary for reading ancient Greek literature of different periods. During this course, students will begin to read extended, unadapted passages from Plato, Xenophon, the New Testament and other sources. GREEK 102 will prepare students for GREEK 203.

Prerequisite: GREEK 101 or permission of instructor

Bachelor of Arts: World Language (All)

Bachelor of Arts: Humanities

GREEK 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

GREEK 203: Greek Reading and Composition

4 Credits

GREEK 203 is the third course in the introductory ancient Greek language sequence. The aim of this course is to help students increase their familiarity with forms and vocabulary, as well as gain confidence in their

ability to read, appreciate, and interpret ancient Greek literature. Students will be introduced to advanced grammar and syntax and will read extensive passages of ancient Greek prose. Greek prose composition will also comprise a significant component of this course. Possible authors covered in this course may include but are not limited to: Plato, Xenophon, Herodotus, Attic orators, and Lucian. The prerequisite for this course is GREEK 102 or the permission of the instructor.

Prerequisite: GREEK 102 or permission of instructor

Bachelor of Arts: World Language (All)

Bachelor of Arts: Humanities

GREEK 420: Greek Prose Authors

3-12 Credits/Maximum of 12

GREEK 420 is an advanced reading course in ancient Greek, which focuses on the writings of prose authors. The primary aim of the course will be to hone students' ability to read connected passages of Greek prose by a given author or on a particular theme. In addition, students will read and evaluate secondary scholarship in preparation for a final research project. Possible authors/ genres of focus include, but are not limited to: Plato, Xenophon, the Attic Orators, Aristotle, Plutarch, Lucian, the Greek Novel, and the New Testament. The prerequisite for this course is GREEK 203 or the permission of the instruction. This course may be repeated.

Prerequisites: GREEK 203 Or permission of instructor

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

Bachelor of Arts: Humanities

Exceeds 12th Unit of World Language

GREEK 425: Greek Historians

3-6 Credits/Maximum of 6

GREEK 425 is a reading course in ancient Greek focusing on one or more of the major ancient Greek historians. The course is designed to advance the student's fluency in reading Greek prose, while at the same time enriching their understanding of Greek civilization and history by a thematic choice of historical readings. The course may concentrate on one author or may address a thematic issue with readings from a variety of Greek historians (usually Herodotus, Thucydides, or Xenophon, or Polybius). The prerequisite for this course is GREEK 203 or the permission of the instruction. This course may be repeated.

Prerequisites: GREEK 203 Or permission of instructor

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

Bachelor of Arts: Humanities

Exceeds 12th Unit of World Language

GREEK 430: Greek Poetry

3-6 Credits/Maximum of 6

GREEK 430 is an advanced reading course in ancient Greek poetry. The primary aim of the course will be to hone students' ability to read and appreciate Greek poetry. In addition, students will read and evaluate secondary scholarship in preparation for a final research project. Possible poets include but are not limited to: Homer, Hesiod, Sappho & the Lyric poets, Callimachus, and Apollonius Rhodius. The prerequisite for this

course is GREEK 203 or the permission of the instructor. This course may be repeated.

Prerequisites: GREEK 203 Or permission of instructor
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Bachelor of Arts: Humanities
Exceeds 12th Unit of World Language

GREEK 440: Greek Drama

3-6 Credits/Maximum of 6

GREEK 440 is an advanced reading course in ancient Greek Drama (tragedy and comedy). The primary aim of the course will be to hone students' ability to read and appreciate Greek drama. In addition, students will read and evaluate secondary scholarship in preparation for a final research project. Possible poets include: Aeschylus, Sophocles, Euripides, Aristophanes, and Menander. The prerequisite for this course is GREEK 203 or the permission of the instructor. This course may be repeated.

Prerequisites: GREEK 203 Or permission of instructor
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Bachelor of Arts: Humanities
Exceeds 12th Unit of World Language

GREEK 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

GREEK 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities
Honors

GREEK 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

GREEK 496H: Independent Studies (Honors)

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

GREEK 499: Foreign Studies

1-12 Credits/Maximum of 12

International Cultures (IL)

Health and Human Development (HHD)

HHD 100H: Honors Seminar on Longevity, Health, and Human Development

1 Credits

This course aims to provide students with an overview of the impact the growth in human longevity is having on society, viewed through the lens of current research in the fields of health and human development. Students will explore the recent research on growth in the human lifespan and how this is having impacts on individuals, families, employers, governments, and communities. Through readings and discussions with faculty working on research related to aging and longevity, students can see how these issues connect with physical activity, nutrition, communication, health behaviors, health policy, cognition and the effects longer life is having on restaurants, hotels, parks, tourism, health care facilities, schools, and other service industry employers.

Honors

HHD 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

HHD 200N: Addiction Science to Society

3 Credits

Addiction is commonly defined as set of compulsive behaviors that cannot be stopped despite negative consequences. The term itself is controversial and defined differently by various disciplines. This has resulted in skewed perceptions of addiction by society as a whole. This course aims to inform students on the biological, psychological, and sociological viewpoints of addiction and how they interact to form an integrated perspective (the biopsychosocial model). By understanding the current knowledge on the biological and psychological bases of addiction, students will be better prepared to make knowledgeable decisions on their own behaviors, understand the behavior of others, and generate informed opinions on the social aspects of addiction. We will begin by comparing and contrasting the different ways addiction has been defined in various fields and exploring the debate on which substances/behaviors are actually considered addictive. Throughout the course, students will broadly explore basic concepts in biology (cells, neural communication, brain anatomy, use of animal models, pharmacology, genetics, epigenetics, and comorbidity), psychology (memory, conditioning, reward, expectancy, bias, and mental health) and sociology (family systems theory, stress theory, developmental theory, feminist theory). These concepts will be practically applied to various questions concerning 1. The status of addiction as a disease. 2. How addiction is or should be treated. 3. The effects of addiction on

family and society. 4. Policies concerning the criminalization of drugs and compulsive behaviors. In addition, methods and data from primary research in all three domains of the biopsychosocial model will be analyzed. Several assignments using various forms of communication will serve to illustrate the connections and assess integrated learning.

General Education: Natural Sciences (GN)
 General Education: Social and Behavioral Scien (GS)
 General Education - Integrative: Interdomain
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Integrative Thinking
 GenEd Learning Objective: Soc Resp and Ethic Reason

HHD 245N: Health, humanity, and longevity: Conversations with elders

3 Credits

How can a person grow to become more truly themselves? How do our habits inform our future? This course examines current research on happiness, aging, and well-being alongside the lived experience of older adults. Together students and older adult community members discuss research as well as compare perceptions and perspectives of the aging experience. We will use humanities orientation to explore what it means to grow as a human being, how to become the person we would like to be, and how to help others do the same. Students will partner with older adults for conversations and a collaborative project.

General Education: Humanities (GH)
 General Education: Social and Behavioral Scien (GS)
 General Education - Integrative: Interdomain
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Creative Thinking
 GenEd Learning Objective: Soc Resp and Ethic Reason

HHD 294: Research in HHD

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis

HHD 295: Internship in Health and Human Development

1-18 Credits

Supervised internship, field experience, or practicum related to student career objectives.

HHD 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

HHD 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

HHD 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

HHD 401: Women's Leadership Initiative: Leadership Concepts and Competencies I

2 Credits

HHD 401 is the first semester of the year-long program for students selected to participate in the Women's Leadership Initiative (WLI). The course designed to work in concert with WLI activities to support students in their development of the foundational values, knowledge, skills, and confidence to realize their potential as effective, life-long leaders. Through their participation in this course and the spring semester course, students will develop a deeper knowledge of themselves and others, be able to define and critically assess leadership concepts, develop leadership skills, and practice leadership skills in various settings. Students will accomplish these objectives through the completion of assessment tools, discussions with leaders from the campus and the community, mentoring by women leaders, and the delivery of course topics pertaining to leadership. Students will be evaluated through communication skills assignments, reflection assignments, class participation, and completion of assessment tools. Students must apply and be selected to participate in the Women's Leadership Initiative in order to take this course.

HHD 402: Women's Leadership Initiative: Leadership Concepts and Competencies II

2 Credits

HHD 402 is the second semester of the year-long program for students selected to participate in the Women's Leadership Initiative (WLI). The course designed to work in concert with WLI activities to support students in their development of the foundational values, knowledge, skills, and confidence to realize their potential as effective, life-long leaders. Through their participation in this course and the spring semester course, students will develop a deeper knowledge of themselves and others, be able to define and critically assess leadership concepts and incorporate these into a personal leadership philosophy, develop leadership skills, and practice leadership skills in various settings. Students will accomplish these objectives through the completion of assessment tools, discussions with leaders from the campus and the community, mentoring by women leaders, and the delivery of course topics pertaining to leadership. Students must apply and be selected to participate in the Women's Leadership Initiative in order to take this course.

Enforced Prerequisite at Enrollment: HHD 401

HHD 410: Clinical Research Practice

3 Credits

As new molecules progress from the laboratory to the bedside, the clinical trials enterprise needs a fresh generation of professionals with knowledge of the application of research applied to human health and disease; professional skills in regulatory oversight, human subjects' protections, and research administration; and a willingness to share health interventions in communities. In this course students will develop a deeper understanding of clinical research practice including legal

requirements and oversight, good clinical practice, essential elements of clinical practice/operations, data management, the financing/budgeting of clinical trials, and socio-political factors impacting trials; all of which will help prepare students for internships and jobs in clinical research organizations. The course is best suited to students with fifth semester standing or higher who are considering future careers and professional certification in clinical research specialties.

Enforced Prerequisite at Enrollment: (BIOL 161 or KINES 203) and (STAT 250 or STAT 200) Recommended Preparation: Fifth semester standing or higher. Knowledge of the health services enterprise. Cross-listed with: BBH 471

HHD 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects on an individual or small-group basis.

HHD 495: Internship in Health and Human Development

1-18 Credits

Approved experiential learning related to student career objectives

HHD 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

HHD 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

HHD 497I: Intergenerational Communication

3 Credits

How can a person grow to become more truly themselves? How do our habits inform our future? This course examines current research on happiness, aging, and well-being alongside the lived experience of older adults. Together students and older adult community members will discuss research as well as compare perceptions and perspectives of the aging experience. We will use an aging lens to explore what it means to grow as a human being, how to become the person we would like to be, and how to help others do the same. Students will partner with older adults for engagement experiences and a collaborative project.

General Education: Humanities (GH)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

HHD 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

HHD 499H: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Honors

Health Education (HLHED)

HLHED 406: Human Sexuality

3 Credits

Examination of physiology, diseases, attitudes, morality, and controversial topics related to human sexuality.

Prerequisite: 7th semester standing or permission of program

HLHED 415: Planning and Developing Health Education Programs

3 Credits

Premises and strategies for planning, implementing, and evaluating wellness programs in corporate, hospital, and community agency settings.

Prerequisite: permission of program

HLHED 420: Development of Stress Management Programs for Health Education

3 Credits

Planning, development, and implementing strategies for stress management programs for health education professionals in school, community, and corporate settings.

Prerequisite: permission of program

HLHED 443: Alcohol and Drug Education

3 Credits

Principles of integration and coordination of alcohol and drug education programs for health education and other social service professions.

Prerequisite: permission of program

HLHED 456: Advanced Techniques in School and Community Health Education

3 Credits

Public health, mental health, nutrition, dental school health, physical education, accident prevention, health teaching; projects, consultation, visitation, discussions, and resources.

Prerequisite: permission of program

Health Humanities (HHUM)

HHUM 197N: Special Topics - InterDomain

1-9 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GenEd course.

HHUM 220N: Ethics, Society, and Science Fiction

3 Credits

This inter-domain (GH and GS) course will introduce students to the application of technology-ethics and bioethics, as well as the humanities (especially health and medical humanities) and the social sciences, through the lens of science fiction and speculative fiction. As an inter-domain course, it will: (1) develop foundational knowledges across the disciplines of the humanities and the social and behavioral sciences; and (2) encourage an appreciation for the plethora of stakeholders and often-competing values and interests underlying bioethical/technology-ethics concerns. By applying ethics-based, analytical arguments and counterarguments, students will engage in civil, reasoned debate on highly charged, challenging topics using ethical frameworks. In addition, given exposure to a wide range of non-canonical authors and other creators with varied intersectionalities, students will engage with the concepts of diversity, equity, and inclusion.

Cross-listed with: BIOET 220N, ESC 220N

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

HHUM 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

HHUM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

HHUM 494: Research Project

1-6 Credits/Maximum of 6

Supervised student activities on research projects identified on an individual or small-group basis.

HHUM 495: Internship

1-12 Credits/Maximum of 12

Supervised off-campus, nongroup instruction including field experiences, practica, or internships appropriate to the Health Humanities major.

Health Policy and Administration (HPA)

HPA 57: Consumer Choices in Health Care

3 Credits

HPA 57 is designed to provide students with an understanding of the breadth of decisions related to health and health care in the United States. HPA 57 introduces students to the consumers' role in health related decisions, including assessing health risks, health benefits, service choices, and end-of-life care. The growth in available health care information resources, the expansion of for-profit medical care, and increasing cost pressure are transforming the role of the health care consumers from passive recipients to active participants in many health care decisions. The main goal of this course is to educate students to become knowledgeable health care consumers and providing them with opportunities to learn how to gather, analyze, and synthesize information about health and health care to make sound health care choices. Students will learn practical information, key terminology and where/how to find reliable, up-to-date information on different sectors of the health care system (e.g. physicians, hospitals, commercial and public health insurance, mental health, long-term care).

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

HPA 100: Research Careers in Health Policy and Administration

1 Credits

HPA 100 is designed to provide students with an introduction to research as a potential career path in health policy and administration. This course will give students an overview of the research process, the disciplines that contribute to research in health policy and administration, and common themes of research in those disciplines. It will also introduce students to career opportunities in research and the educational paths to those careers.

HPA 101: Introduction to Health Services Organization

3 Credits

Examination of the social, political, historic, and scientific factors in the development and organization of health services.

HPA 123S: Exploring Health Policy and Administration

1 Credits

This course gives an introduction to some of the major academic topics in the Department of Health Policy and Administration with the aim to meet the Penn State first-year seminar goal of orienting students to the scholarly community from the outset of their undergraduate studies in such a way that will bridge to later experiences in a chosen major. The class provides an overview of the key academic topics in Health Policy and Administration as well as more in-depth exploration of several themes in health services research and scholarship consistent with student and faculty interests. The course aims to help students explore their academic interests in health policy and administration as they begin their education at Penn State.

Enforced Corequisite at Enrollment: PSU 14

First-Year Seminar

HPA 200: An Introduction to Data in the Health Care System

3 Credits

This course examines the broad topic of data and healthcare decisions, particularly how to be an astute consumer of data about health, the health care system, and health policy. To work in the health sector means facing a dizzying array of claims based on data with varying levels of quality. To be an informed consumer requires thinking critically about the claims being made, understanding what data are being presented, dissecting the claims, critiquing the methods carefully, and weighing the totality of the evidence to make informed decisions. Some topics of discussion include: 1) what is data? 2) how can we evaluate the quality of data 3) how can data be presented honestly and what are common pitfalls? 4) what is causality? 5) how to evaluate analytic methods, 6) how can data and results be presented visually and fairly? 7) how can a non-researcher understand research, and 8) how can one begin the transition from consumer to producer of data and research.

Recommended Preparation: HPA 101 and STAT 100 or STAT 250

HPA 210: Health Care Payment

3 Credits

This course covers basic concepts and issues related to health insurance and payment of health care services in the United States. Students learn insurance related concepts including factors that influence the purchase of insurance and those insurance companies considered when determining rates. Sources and uses of health care dollars are examined as well as how laws, policies, and regulations influence health insurance and payment. Both public insurance programs and private health insurance are studied. Students explore reimbursement and payment methodologies and assess how health care payment influences provider behavior and care delivery. Budgeting concepts and spreadsheet software are introduced.

Enforced Prerequisite at Enrollment: ECON 102 or HPA 101

HPA 211: Financial Decisions in Health Care Organizations

3 Credits/Maximum of 3

An introduction to financial and economic information to make decisions in health care organizations. Healthcare Finance is at the core of issues surrounding quality healthcare delivery. It involves wisely balancing the need to manage/control costs while simultaneously investing in strategic opportunities. This course will present and allow students to examine the major issues involved in finance, budgeting and strategic planning and the unique applications of these in health care organizations. This course is designed to help you understand the basic concepts of finance and financial management. The objective is to have you become knowledgeable of how health care entities organize and report financial data and use that data to make decisions. The course will focus initially on the conceptual framework of basic accounting techniques such as the preparation of financial reports, annual and capital budgeting, cost accounting and analysis of financial statements. The course builds on these basic concepts to provide students a conceptual and practical knowledge of health care finance, which includes sources of funding, revenue, cost determinants, third party payers, and valuations that have an impact on the health care organization. The course is also designed to provide students with a working knowledge of vocabulary, concepts in financial management and strategy that will help them be prepared

to plan, create, implement and monitor strategic initiatives within a health care organization. Finally, successful completion of this course should equip the student with the tools necessary to be able to effectively communicate with the finance professionals in a health care organization regarding financial decisions being made by that organization.

Enforced Prerequisite at Enrollment: HPA 210

HPA 295: Field Experience

1-3 Credits/Maximum of 3

Field Experience

HPA 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

HPA 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HPA 301: Health Services Policy Issues

3 Credits

This course provides students with a basic framework for health policy analysis and examines major strands of U.S. health policy. Detailed consideration and discussion are given to the relationship of national policy to the planning, implementation, and funding of health care services, with particular emphasis on low-income and minority populations. This course will cover topics such as the healthcare policy environment in the U.S, government-funded health care through Medicaid and Medicare, and contemporary health care reform initiatives.

Enforced Prerequisite at Enrollment: HPA 101 or ECON 102 or PLSC 1

HPA 301H: Health Services Policy Issues

3 Credits

HPA 301H uses a case study method to examine health services policy issues and emphasizes the skills needed to analyze and communicate knowledge about health services policy. The chief goals of the course are to broaden student understanding of selected current policy issues in health care, to deepen student knowledge of the development of health policy issues, and to develop student skills in the areas of information literacy, communication, and teamwork. Students are evaluated on a combination of individual and team work.

Enforced Prerequisite at Enrollment: ECON 102 and HPA 101 and PLSC 1

HPA 301W: Health Services Policy Issues

3 Credits

Analysis of major issues in health services delivery in hospitals, medical practice, public health, mental health, and health professional education. This course provides students with a basic framework for health policy analysis and examines major strands of U.S. health policy. Detailed consideration and discussion are given to the relationship of

national policy to the planning, implementation, and funding of health care services, with particular emphasis on low-income and minority populations. This course will cover topics such as the healthcare policy environment in the U.S, government-funded health care through Medicaid and Medicare, and contemporary health care reform initiatives.

Enforced Prerequisite at Enrollment: ECON 102 and HPA 101 and PLSC 1 Writing Across the Curriculum

HPA 310: Health Care and Medical Needs

3 Credits

HPA 310 introduces students to the use of medical terminology in the context of the structure of the human body, functions of its systems, and disease. Disease processes include development, progression, diagnosis, treatment, and prevention. We will also highlight technological developments in the health care field that are used to assist in diagnosis, treatment, and prevention of diseases. In the process of learning the language of the medical profession and health care industry, students are expected to develop an appreciation for the complex interactions between individual, social, environmental and community factors in the development, growth, and progression of disease processes. Students are also expected to develop skills in accessing and disseminating reliable and relevant information concerning the disease process. On completion of this course students will have a more in depth understanding of 1. The language and terminology of medicine and the health care field; 2. Technologic developments in clinical, diagnostic and therapeutic areas; 3. Anatomy and physiology of organ systems, and how they relate to disease states; 4. Major chronic illnesses prevalent in the U.S.

Enforced Prerequisite at Enrollment: BBH 101 or BISC 4 or BIOL 141 or BIOL 161 Concurrent Courses: HPA 101

HPA 310H: Health Care and Medical Needs

3 Credits

Health care from an individual, family, and community standpoint illustrated with specific diseases and health problems.

Honors

HPA 311: Population Health and Healthcare

3 Credits/Maximum of 3

This course covers fundamental theories, concepts, issues, and strategies related to a population health approach to health and health services

Enforced Prerequisite at Enrollment: HPA 101

HPA 332: Health Systems Management

3 Credits

Health Systems Management provides you with an overview of how health care institutions are organized and governed, the role of the management staff, and the management systems designed for their efficient and effective operation. This course will build student competencies in management. By the end of the semester students will have an appreciation for the complexities in managing a health care organization. They will develop this awareness by both examining their own patterns of behavior and learning about many dynamics common

within organizations, using both conceptual information from the text and by analyzing selected cases. Class activities will primarily focus on the application of concepts in a variety of different situations and settings. By the end of this class students will: 1) Understand management as a balance among competing goals in a variety of situations; 2) Display such critical managerial competencies as listening, providing feedback, managing time effectively and managing conflict; 3) Apply organizational behavior theories to situations in health care management; 4) Solve organizational challenges using quality improvement tools; 5) Synthesize financial and economic information to make decisions in health care organizations; and 6) Understand the process of making ethical decisions.

Enforced Prerequisite at Enrollment: (HPA 211 or ACCTG 211) and HPA 101

HPA 332H: Health Systems Management

3 Credits

Introduction to and analysis of managerial roles and practices in health service organizations.

Honors

HPA 390: Professional Development in Health Policy & Administration

3 Credits

Development of personal understanding and professional skills to prepare students for future employment or study in health policy and administration. HPA 390 Professional Development in Health Policy and Administration The objectives of HPA 390 are to help students understand themselves and the opportunities available in the health care field and professional skills in preparation for their required internship and future profession. In HPA 390 students learn to assess their talents and abilities and how those talents can be best applied in one of the many career settings in health care. They research different types of organizations and opportunities in the health care field. They learn the basic professional skills that are required in the health care industry.

Enforced Prerequisite at Enrollment: HPA 101

HPA 390W: Professional Development in Health Policy & Administration

3 Credits

Development of personal understanding and professional skills to prepare students for future employment or study in health policy and administration. H P A 390 Professional Development in Health Policy and Adiminstration (3) The objectives of H P A 390 are to help students understand themselves and the opportunities available in the health care field and professional skills in preparation for their required internship and future profession. In H P A 390 students learn to assess their talents and abilities and how those talents can be best applied in one of the many career settings in health care. They research different types of organizations and opportunities in the health care field. They learn the basic professional skills that are required in the health care world. Students are evaluated on the basis of a personal self-study exercise, completion of a required planning for several professional development exercises, and a team project on a health care organization. Health Policy Administration students take H P A 390 after they have completed the initial overview of the health care system in H P A 101 and while they are taking their core courses in the major, H P A 301, H P A 310, and H P A 332. The course is a prerequisite for H P A 395, the student's professional

internship, providing the professional development background that students need to have a high-quality internship experience that furthers their education. H P A 390 is a required course in the curriculum. No students from other departments may take the course without H P A permission.

Enforced Prerequisite at Enrollment: HPA 101
Writing Across the Curriculum

HPA 395: Field Experience in Health Policy and Administration

1-13 Credits/Maximum of 13

Professional field experience providing opportunities to apply skills and knowledge in health care setting.

Enforced Prerequisite at Enrollment: HPA 301W and HPA 310 and HPA 332 and HPA 390W
Full-Time Equivalent Course

HPA 401: Comparative Health Systems

3 Credits

Comparative analysis of health services in selected developed and developing countries. H P A 401 Comparative Health Systems (3) (IL) In HPA 401 students will examine health and health services delivery systems as complex and variable entities that reflect individual country's values and beliefs. Health systems influence and are influenced by the various cultures, demographics, geographies, economies, technologies, and political infrastructures of the country. This class will provide students with a tool kit to begin the difficult task of understanding health care outside the U.S. The class will be focusing on the challenges of attempting comparisons before drawing comparative conclusions.

Enforced Prerequisite at Enrollment: HPA 301W
International Cultures (IL)

HPA 401H: Comparative Health Systems

3 Credits

Comparative analysis of health services in selected developed and developing countries.

Honors

HPA 410: Principles of Public Health Administration

3 Credits

This course is an overview of issues pertaining to public health administration and the uses of data analytics in population health. Course content provides the foundational understanding for the organization and function of public health activities within the health care delivery system of the United States. Students are introduced to fundamental concepts, issues, and strategies related to the public health system in the United States. On successful completion of this course students should be able to discuss and analyze policies and population-based interventions related to public health and utilize scientific knowledge base and public policy skills to approach solutions to public health problems.

Enforced Prerequisite at Enrollment: HPA 301W and HPA 311

HPA 420: Principles of Managed Care

3 Credits

Survey of managed health care, including history, typology, current issues, management challenges, and impacts on patients, providers, and special populations. H P A 420 Principles of Managed Care (3) H P A 420 is designed to introduce students to managed health care in the United States, including history, typology, current issues, management challenges, and impacts on patients, providers, and special populations. Participants must have a basic knowledge of the US healthcare system, including key stakeholders, national trends in health delivery, financing, and health policy. Most assignments encourage students to select a focus on the impact of managed care on either the private sector or public sector, allowing them to examine concepts in detail that is relevant to their career path. This course is designed as a seminar and employs team-based learning and other projects to achieve the learning objectives. Students will demonstrate mastery of skills through tests, written assignments, and oral presentations. All students are expected to actively participate in class discussions. Much of the work for this course will be conducted in project teams. All students are expected to participate as full and equal members of their team and are responsible for all research and content developed by the team.

Enforced Prerequisite at Enrollment: HPA 301W

HPA 430: Health Care Leadership

3 Credits

The objectives of HPA 430 are: (1) to help students learn about their own strengths and weaknesses as leaders; (2) to give students an opportunity to build their skills in small group leadership; and, (3) to explore the leadership challenges in health care. On successful completion of the course students should be able to do the following: 1) Describe, compare, and contrast several leadership competency models in current use in health care; 2) Understand the four cornerstones of health care leadership; self-awareness, vision, interpersonal relationships, and execution. Explain two to four significant leadership challenges in the current health care system; 3) Identify their leadership strengths and weaknesses and develop a plan for improving their leadership skills and/or explore ways to improve those skills; 4) Understand the leadership skills required for leading small group projects and discussions.

Enforced Prerequisite at Enrollment: HPA 301W or HPA 311 or HPA 332

HPA 433: Administration of Hospital and Health Service Systems

3 Credits

Analysis of administrative structures and interorganizational arrangements among hospitals and other health care organizations.

Enforced Prerequisite at Enrollment: HPA 332

HPA 435: Safety Net Health Care

3 Credits

This course is designed to provide students with knowledge about what safety net health care is, how it is delivered and financed, and current policy and practice initiatives related to safety net care. A safety net can generally be described as a program that transfers benefits to those who are impoverished. The course will describe how poverty is defined in the United States and other countries. Safety net benefits could be in the form of cash, vouchers, or services. Transferring benefits to the

impoverished can help to limit or prevent future economic shock or vulnerability for them. In health care, safety net is a generic term that is often used to describe services that are available to impoverished individuals, some of whom are insured and some are not. The safety net can also be described as a group of clinics, hospitals, and providers that have decided to provide services to impoverished patients. This decision may be based on altruism, but oftentimes an organization or provider must carefully consider the financial implications of providing this care. Given the challenges that public and private organizations face in providing safety net health care, novel approaches have been developed and students will have an opportunity to examine recent innovative approaches. After learning about the components of the safety net students will consider how these components work together within communities. In the last part of the course students will study marginalized groups that are often served in the safety net. Students will think about how they would manage these groups from a clinical, operational, and patient-centered perspective.

Enforced Prerequisite at Enrollment: HPA 301W and HPA 311

HPA 438: Culturally Competent Health Services for Diverse Populations

3 Credits

This course examines the broad concept of diversity and its impact on health care, particularly on rendering services to patients from diverse groups and about the challenges health care professionals face serving diverse populations. Diversity includes many factors, such as age, ethnicity, race, religion, physical and mental disability, class, gender and sexual orientation. To eradicate health disparities and improve health outcomes, students will explore effective and culturally appropriate strategies and interventions to deliver health care to diverse health care consumers. Some topics of discussion include health disparities, health determinants and health outcomes, cultural competence theories and models, health promotion, research and ethics, and the challenges of diversity within health care with a focus on specific cultural groups and non-ethnic cultures.

Enforced Prerequisite at Enrollment: HPA 311
United States Cultures (US)

HPA 440: Principles of Epidemiology

3 Credits

This course is designed to provide students with a basic understanding of the principles of Epidemiology and to familiarize students with the methods and applications of epidemiology to understanding the bases for heterogeneity of disease and health among populations. The goals of the course are: 1) recognize and use basic principles, concepts, terminology, and techniques in Epidemiology as applied to the study of infectious disease, chronic diseases, and other health-related problems; 2) examine and understand measures of risk and burden of illness on populations defined in terms of age, race, gender, class, time, and other relevant socio-cultural and demographic factors; 3) be able to interpret and critique epidemiological research reports on the identification of risk factors and casual factors for diseases in populations; 4) assess the health status and burden of diseases and health problems of populations at multiple levels of analysis for the purpose of planning health promotion activities and health care services; 5) have a basic understanding of the epidemiology tools for disease screening and other methods for primary and secondary prevention of disease and health problems; 6) examine the validity and applicability of various health interventions used to improve health status and the barriers for successful interventions; and

7) have a basic understanding of the epidemiology of the major causes of morbidity and mortality in the U.S. and for other selected regions and nations of the world. This is a required course in the Biobehavioral Health major and an elective course in the Health Policy and Administration major. The course is also appropriate for students intending to advance to post-baccalaureate graduate and professional programs in medicine, public health, health policy and planning, and other health-related careers. Students will be evaluated based on their performance on a combination of written assignments, a term paper or project, and exams.

Enforced Prerequisite at Enrollment: (BBH 310 or BIOL 230W or HPA 311) and (STAT 200 or STAT 250) Students are required to have a C or better in all prerequisite courses.

Cross-listed with: BBH 440

International Cultures (IL)

United States Cultures (US)

HPA 442: Long-Term Care Management

3 Credits

Management and policy issues for institutional, community, and home settings for chronic care services.

Enforced Prerequisite at Enrollment: HPA 332

HPA 443: Nursing Home Administration

3 Credits

This course provides students who are interested in a career in long-term care to gain an operational knowledge of managing skilled nursing facilities. After mastering the concepts of skilled nursing management, the student can step into a position as an administrator, assistant administrator, or trainee administrator, and find a level of comfort in dealing with operational issues and problems encountered in day-to-day management situations in any type of long-term care organization. To accomplish this, the course incorporates numerous theories, models, illustrations, and examples to help the student grasp the complexities of managing a long-term care facility. Upon course completion students will be able to: Discuss the broad range of operational issues related to the field of nursing home administration; Describe the rules and regulations that impact nursing home operations; and Recognize the professional development needs of nursing home administrators.

Enforced Prerequisite at Enrollment: HPA 332

HPA 444: Aging Policy in the United States

3 Credits

The United States is an aging nation and in the coming decades the number of elders in the United States is expected to grow dramatically. Policymakers faced with growing concern about containing the cost and scope of government face tough questions: Given the current and changing political climate, what course should policy makers chart to meet the challenges of a societies where large numbers of people are moving into old age and living long lives? How will their decisions affect entitlements for older adults now and in the future? What social, economic, political, and cultural factors will influence policymaking? This course will address the impacts of national age-based and age-related policy and programs such as Social Security, Medicare, Medicaid, and the Older Americans Act. In addition, it will examine the implementation of these programs in state and local settings, where implications are tangible for vulnerable groups such as low-income and frail older people

and their families. Policy challenges of issues such as Alzheimer's, long term services and supports, housing, caregiving, transportation, nutrition, emergency management, and disease prevention will be considered.

Enforced Prerequisite at Enrollment: HPA 301W

HPA 445: Health Economics

3 Credits

Economic analysis of U.S. health care system; planning, organization, and financing; current public policy issues and alternatives.

Enforced Prerequisite at Enrollment: ECON 302 or ECON 315 or ECON 323
Cross-listed with: ECON 445

Bachelor of Arts: Social and Behavioral Sciences

HPA 446: Economics and Health In Low- and Middle-Income Countries

3 Credits

In this course, students will learn about health systems and policies in low- and middle-income countries (LMIC). The course begins by exploring the link between health and economic development in LMICs. The majority of the course examines LMICs' performance in the United Nations health-related Sustainable Development Goals (e.g. clean water and sanitation, zero hunger, etc.). Through an in-depth reading of seminal articles, class discussion and guest lectures, student's will attempt to understand policy measures that researchers and policymakers have investigated to address the most pressing health related challenges in these countries.

Enforced Prerequisite at Enrollment: ECON 102 (STAT 200 or STAT 250)

HPA 447: Financing Health Care

3 Credits

This course is to prepare health care administrators for the responsibilities involved in maintaining a well-managed health care organization. The course covers concepts in managerial accounting and finance that are critical to decision-making. Topics covered include types of budgets; considerations for cash flow, payables and receivables; and considerations in working with various types of revenue streams. These topics include evaluation of capital investment decisions, sources of financing, managerial accounting concepts (including cost behavior, profit analysis, and incremental analysis), reimbursement under various third-party payer environments, cost allocation and government program reporting.

Enforced Prerequisite at Enrollment: HPA 332 and HPA 211

HPA 450: Healthcare Policies and Politics

3 Credits

Survey of health care's political contexts: formulation, implementation, and modification stages of policy process; politics of private interests (associations) at national and state levels.

Enforced Prerequisite at Enrollment: HPA 101 and HPA 301W and PLSC 1

HPA 454: Health Care Professional Communication

3 Credits

This course will focus upon the analysis and application of professional communication principles and practices for successful participation in health care organizational and occupational activities. The changing health care industry towards greater coordination and integration of health delivery and the increased emphasis on the active participation of service recipients require that individuals send clear verbal messages, choose effective nonverbal behaviors, listen for desired results, and apply valid critical-thinking and problem-solving processes. Students in this course will be expected to identify, analyze, develop, and evaluate communication skills needed for professional success in interpersonal situations, group interactions, and professional written documents and oral presentations.

Enforced Prerequisite at Enrollment: HPA 301W and HPA 332 and HPA 390W

HPA 455: Strategic Planning and Marketing for Health Services

3 Credits

The history, principles, techniques, and methodologies of health services planning and marketing are studied and students learn how to plan for new or changed health services, programs, or facilities. Students will examine the various stakeholders and explore community and healthcare program specific needs assessments, planning and marketing design. They will apply concepts learned and analyze real-life situations found in the market today. This course will build students' competencies in management, with a focus on application of these concepts to healthcare organizations. By the end of the semester students will have a deepened appreciation for the complex balancing of priorities and responsibilities necessary to effectively manage the strategic priorities within healthcare organizations. They will develop this awareness by both examining their own patterns of behavior and learning about common behavioral and structural dynamics within organizations. By the end of the course students will be able to: 1) identify critical features on an organization's environment and examine the implications of each feature on organizational goals and objectives; 2) Recognize and analyze regulatory, demographic, and policy trends to inform planning and assess potential impact on long-range goals; 3) Differentiate service/product specific markets and identify competitors within each market; 4) Propose comprehensive approaches for distribution network development and marketing/communication plan implementation; 5) Design metrics for evaluating goal attainment; 6) Formulate and defend strategic plans, marketing plans, goals and action steps; 7) Demonstrate the conceptual mastery of team dynamics through effective service as team members.

Enforced Prerequisite at Enrollment: HPA 395

HPA 460: Human Resource Management in Health Care Organizations

3 Credits

Foundations of human resource management applied to health care organizations, including hospitals, long-term care facilities, and community health organizations.

Enforced Prerequisite at Enrollment: HPA 332

HPA 470: Health Care Information Management

3 Credits

This course introduces information systems terminology, data structures, software applications, and their management functions in health services organizations. H P A 470 Health Care Information Management (3) This course introduces the student to information systems terminology, structures, specific applications, and their relationships to management functions in health services organizations. Health providers and health systems are continuing to make multi-million dollar investments in information systems in order to meet new market and regulatory requirements. All health services managers will play a role in the analysis, design, acquisition, installation, operation and ultimate success of information systems necessary to meet organizational goals and objectives. This course exposes students to the IS/IT applications used to support management functions. Further, applications and management issues unique to industry segments (e.g., long-term care, home care, hospital administration, physician practice management) will also be explored. The goal of the course is to ensure that students are schooled in the terminology, conceptual models, applications and opportunities and limitations of information systems in health services to the point that they can ask appropriate questions, recognize and state significant issues, and participate in the discussion and analysis of information systems development and application. The course is one of several elective courses in the Health Policy Administration major that students can complete and is also a required part of the Information Sciences and Technology/Health Policy Administration Minor providing students with an understanding of the basic structures of information systems in health administration; the relationship of these systems to managerial functions such as communications, coordination, control strategic and process planning and decision making, and the important policy and ethical issues associated with privacy, confidentiality, and security in information systems. Since the course represents the capstone of the Information Sciences and Technology/Health Policy Administration minor, it is important for students to have the pre-requisites for the course (H P A 332, IST 210, and IST 220), including an understanding of major issues in the health care system, health care management and information systems. Student's attainment of educational objectives will be assessed through a variety of evaluation methods. Understanding and appropriate application of terminology, management issues, and ethical/privacy concerns will be assessed through examination. Concept integration will be assessed through case-study analysis and project papers. Data presentation and training communication issues will be assessed through individual application projects and presentations. A technology classroom with access to the World Wide Web and Penn State servers is required for effective instruction. We will use these facilities to demonstrate software applications, provide technical support for guest speaker presentations, and facilitate student presentations. The course will be offered once per academic year with an expected enrollment of 20-40 students.

Enforced Prerequisite at Enrollment: HPA 332 and IST 210 and IST 220

HPA 475: Health Care Quality

3 Credits

This course covers the basic principles and techniques of quality management in healthcare: including the definition, measurement, and uses of data for improving the quality of health and health services. The course also covers the organizational responsibilities related to quality assurance. Students will examine methods and tools for managing

quality in health facilities, physician practices, and integrated health systems; including developments in quality assurance and improvement, utilization review, risk management, and patient satisfaction. From this examination students will be able to understand how to benchmark quality indicators using accreditation standards. On the successful completion of the course students will be able to: 1) Define the common terminology related to quality and process improvement; 2) Apply the quality management concepts to the modern health care operating environment; 3) Evaluate the effectiveness of a quality/process improvement program; 3) Define accreditation standards and how they drive quality; 4) Be able to use quality tools to improve quality; 5) Discuss the current issues and future trends associated with quality in the health care environment.

Enforced Prerequisite at Enrollment: HPA 332

HPA 490: Physician Practice Management

3 Credits

Development of skills needed to effectively manage physician practices. Practice management may be defined as the body of knowledge and skills necessary to manage the multiple elements of a specific practice of a physician. These elements include organization, administration, communication, marketing, and patient care. This course provides students an opportunity to develop the knowledge and skills necessary to be successful in the growing field of physician practice management. Topics include management of tasks and responsibilities, supervision and training, practice marketing, service scheduling, accounting processes, benchmarking and receivables, reimbursement and billing related to the physician practice. Upon successful completion of the course, the student will have: 1) A historical knowledge of the origins and evolution of physician practices; 2) An awareness of the legal entities which make up physician practices; 3) A working knowledge of the governance, performance domains, hiring processes, revenue cycles, medical record keeping, and common quality measures used in physician practices.

Enforced Prerequisite at Enrollment: HPA 332 and HPA 211

HPA 494: Undergraduate Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis. HPA 494 is a mentored investigation conducted by undergraduates that seek to make a scholarly contribution. HPA 494 is designed to provide students with the opportunity to develop discipline-specific projects in collaboration with faculty members.

HPA 494H: Senior Honors Thesis

1-6 Credits/Maximum of 6

Independent study related to student's interests directed by a faculty supervisor and culminating in the production of a thesis.

Enforced Prerequisite at Enrollment: approval of honors thesis advisor
Honors

HPA 495: Field Experience

1-12 Credits/Maximum of 12

Field Experience

HPA 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

HPA 496H: Independent Studies

3 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

HPA 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HPA 499: Foreign Study

1-3 Credits/Maximum of 3

Study of health care systems and practices in selected foreign countries.

Enforced Prerequisite at Enrollment: Department approval

Hebrew (HEBR)

HEBR 1: Basic Modern Hebrew I

4 Credits

An introduction to modern Hebrew in its written and spoken forms; oral and aural work stressed.

Bachelor of Arts: World Language (All)

HEBR 2: Basic Modern Hebrew II

4 Credits

Continued study of grammar; emphasis on improving oral-aural facility, with increased attention to reading and writing.

Prerequisite: HEBR 001

Bachelor of Arts: World Language (All)

HEBR 3: Intermediate Modern Hebrew

4 Credits

Grammar, reading, composition, and oral and aural exercises.

Prerequisite: HEBR 002

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

HEBR 10: Jewish Civilization

3 Credits

This course explores the life of the Jewish people from Biblical times on, emphasizing cultural, religious, and institutional developments.

HEBR 10 / HST 10 Jewish Civilization (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Jewish tradition goes back thousands of years, and Jews have resided in many different lands. They have become an integral part of many different cultures, yet have often retained (or been forced to retain) a certain degree of separateness or difference. In this course we will trace continuity and change in Jewish traditions from ancient to modern times, and across different regions. Taking into account inter-cultural contact and historical events – ranging in place from the Middle East to Muslim Spain to Asia, Africa, Europe, and the Americas, and in time from the ancient world to the medieval era, the Holocaust, and contemporary Israel and the U.S. – we will explore developments in Jewish history, literature, and culture. The course considers topics such as the attitudes other groups have had toward Jews (and vice-versa), the question of whether Jewish identity is a race, a religion, or an ethnicity, the dilemmas Jews face today, and the ways that Jews in many diverse settings have balanced change and continuity. We will explore the factors that shape Jewish experience in different times and places, the diversities within and among Jewish lifestyles, and the ways in which events and interactions with other peoples have influenced the development of Jewish civilization. Finally, we will consider the dilemmas Jews face today in terms of the preservation of their identity and traditions. The course includes class discussion. Students are evaluated on the basis of, essay exams, quizzes, in-class discussion and commentaries, and group projects.

HEBR 151: Introductory Biblical Hebrew

3 Credits

Fundamentals of Biblical Hebrew grammar, syntax, and vocabulary. J ST (CAMS/HEBR) 151 Introductory Biblical Hebrew (3) The aim of CAMS/ J ST/HEBR 151 is to introduce students to the fundamentals of Biblical Hebrew as quickly and thoroughly as possible. Biblical Hebrew is the language in which the Old Testament was written, between the period of approximately 1200-200 B.C.E. This focuses primarily on the morphology and syntax of Biblical Hebrew. Drills on each point of grammar, as well as translation of sentences from Hebrew to English and English to Hebrew, and brief passages taken from the Bible are the basis of the student's homework throughout the semester. By the end of the semester, the

students will be prepared to read short, unmodified passages of the Bible. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS/J ST/HEBR 151 will prepare students to continue with CAMS/J ST/HEBR 152 and then 400-level courses. The course goals, in addition to providing the students with a firm grounding in Hebrew grammar and vocabulary, include giving the students a basic understanding of the history of the Biblical text. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to the Biblical texts themselves, which together form such an important piece of literature.

Cross-listed with: CAMS 151, JST 151

HEBR 152: Intermediate Biblical Hebrew

3 Credits

Intermediate study of Biblical Hebrew grammar, syntax, and vocabulary. CAMS (JST/HEBR) 152 Intermediate Biblical Hebrew (3)(BA) This course meets the Bachelor of Arts degree requirements. CAMS/JST/HEBR 152 continues from CAMS/J ST/HEBR 151, which is a prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Hebrew vocabulary, morphology, and syntax to enable them to read unadapted passages from Biblical Hebrew texts (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from actual Hebrew texts, rather than composed sentences by the textbook author, so that when the students enter more advanced classes, they will find the transition to reading Hebrew as smooth as possible. In tandem with the increasing emphasis on Hebrew written by ancient Hebrews, the course will continue to focus on the linguistic and cultural background for the texts that the students read. Students will be evaluated on a combination of written work, including frequent quizzes, tests, homework completion, and course attendance and participation. CAMS/J ST/HEBR 152 will prepare students to continue with courses at the 400-level.

HEBR 451: Advanced Biblical Hebrew

3 Credits

Translation and analysis of selected readings in Biblical Hebrew texts; attention will be paid to grammatical as well as literary details. HEBR 451 Advanced Biblical Hebrew (3) HEBR 451 is a Biblical Hebrew literature course in which students will read selections of various genres and dates from different sections of the Hebrew Bible. The overall goal of this course is to increase the ease and fluency of advanced-level students with Biblical Hebrew. Although students will be expected to enter the class with a comfortable level of reading skill as acquired in HEBR 152 or its equivalent, the course will include grammar and building vocabulary. By the end of the course, it is expected that the students will be able to read a Biblical Hebrew text comfortably and be able to analyze grammatical structures. Students' work in the course will be evaluated on class participation (20%), several in class quizzes (20%), and a mid-term (30%) and final exam (30%). HEBR 451 is part of a series of advanced Hebrew classes that will allow students to gain skill and knowledge about a range of Biblical Hebrew texts. HEBR 451 may be used to fulfill a requirement for the Hebrew minor, as well as for the CAMS major language requirement. The course will be offered every other year, with 20 seats per offering.

Prerequisite: HEBR 152 or equivalent

HEBR 452: Readings in Biblical Hebrew

3 Credits

Translation and analysis of selected readings in Biblical Hebrew texts; attention will be paid to grammatical as well as literary details. HEBR 452 Readings in Biblical Hebrew (3) HEBR 452 is a Biblical Hebrew literature course which students will read selections of various genres and dates from different sections of the Hebrew Bible. The overall goal of this course is to increase the ease and fluency of with which advanced students are able to read all types of Biblical texts. Although students will be expected to enter the class with a comfortable level of reading skill as acquired in HEBR 451 or its equivalent, the course will continue to emphasize grammar and building vocabulary. By the end of the course, it is expected that the students will be able to read any Biblical Hebrew text comfortably and be able to analyze grammatical structures. Students' work in the course will be evaluated on class participation (20%), short in class quizzes (20%), and a mid-term (30%) and final exam (30%). HEBR 452 is part of a series of advanced Hebrew classes that will allow students to gain skill and knowledge about a range of Biblical Hebrew texts. HEBR 451 may be used to fulfill a requirement for the Hebrew minor, as well as for the CAMS major language requirement. The course will be offered every other year, with 20 seats per offering.

Higher Education (HIED)

HIED 200: Leadership, Communication & Outreach Ambassador

1-3 Credits

The Leadership, Communication & Outreach Ambassador course will provide students an opportunity to have a deeper and more impactful interaction with their department, school, college and university. The students will gain more in-depth knowledge of how their school works and all of the different ways students can interact with the educational community as well as industry. The students will become Penn State Behrend ambassadors to the K-12 community, parents, industry, faculty, fellow students and the community at large. This course will promote leadership within the ambassador program with all of their experiences and interactions within Penn State Behrend and with external audiences. Students will be taught the best way to communicate with different audiences and the messaging used. Outreach will include working with the K-12 leader and help with retention efforts with current students. Students need to meet a minimum GPA requirement and criteria to participate in the course and program.

HIED 302: The Role of the Resident Assistant: Theory and Practice

3 Credits

An analysis of the various roles of the resident assistant, including interpersonal facilitator, disciplinarian, program developer, and activities facilitator.

HIED 303: Leadership Development through Orientation

3 Credits

Assisting new students and their parents and family members at New Student Orientation goes far beyond campus tours and providing directions. Today's mentors are charged with teaching new students about issues related to the classroom transition from high school to college, mental health, alcohol and drug use and abuse, sexual assault prevention, diversity and inclusion, and more. Beyond the subject matter knowledge required to facilitate these conversations, mentors must have confidence in their ability to speak publicly, think critically, and manage a group of students their age. The foundation of student development and transition theory provided in this course set the stage for both knowledge and skill acquisition in these areas. Once the foundation exists, students will hone their public speaking, critical thinking and multicultural competency skills. Through classroom discussions, personal reflection, and engaging faculty, staff, and advisers throughout the University, this course is designed to assist students in their journey to being a peer mentor. Students will explore their personal strengths, navigate personal bias in regards to the issues mentioned previously, and understand the role all of these play in a successful academic, social and personal transition to Penn State.

HIED 396: Individual Studies

1-9 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

HIED 397: Special Topics

1-9 Credits/Maximum of 12

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

HIED 490: Exploration of Careers in Higher Education

3 Credits

Foundation of graduate study in the field of higher education. HI ED 490 Master's Professional Seminar (3) This course is an introduction to higher education as a field, and as an orientation to graduate study. Early sessions will provide a brief review of the history of higher education, an introduction to the Carnegie Classification scheme of colleges and universities, and an overview of the structure of public and private higher education. Students will participate in an orientation to the services of the library including internet sources and tools needed to develop research skills. Technical writing skills will be developed through direct instruction, practice writing assignments, and peer review workshops in service of completing a literature review on a topic of the student's choosing. Students will explore a variety of career options through guest lectures and individual projects in areas of potential interest. A final career exploration portfolio will demonstrate what the student has learned regarding career areas. Professional, interpersonal, and ethical skills will be developed through role playing and interviews with actual

higher education practitioners. Written work will include an annotated bibliography, a literature review, and integrative analysis essays. In addition, students will explore various options appropriate for a capstone project for their master's degree: internships, academic papers, portfolios, etc. Readings will reflect current topics and issues.

HIED 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Hindi (HINDI)

HINDI 1: Level One Hindi A

4 Credits

This is an introductory course in Hindi that presents the Devanagari script, elementary grammar and sentence structure.

Bachelor of Arts: World Language (All)

HINDI 2: Level One Hindi B

4 Credits

This intermediate level course seeks to impart functional literacy in oral and written expression in Hindi to students.

Prerequisite: HINDI001 or equivalent competency
Bachelor of Arts: World Language (All)

HINDI 3: Level Two Hindi A

4 Credits

This is an intermediate level course in Hindi that seeks to improve student's skills in oral and written expression.

Prerequisite: HINDI002 or equivalent competency
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)

HINDI 110: Intermediate Hindi

4 Credits/Maximum of 4

Hindi 110 teaches basic intermediate to advanced functional proficiency (ACTFL Standards) in reading, writing, and speaking Hindi.

Prerequisite: HINDI003 or equivalent competency

History (HIST)

HIST 1: Western Civilization I

3 Credits

HIST 1 examines the development of western civilization, beginning with the ancient world of the Mediterranean, Europe, and Mesopotamia, and continuing through Early Modern Europe, which involves the Reformation, the Counter-Reformation, and the early period of the Age of Exploration. The course is intended to introduce aspects of Ancient, Medieval and Early Modern history that has helped to shape the developments of Western Civilization. The examination of written and visual primary

sources, as well as secondary sources, allows this course to examine the political, religious, economic, and cultural development of the western world. The variety of sources used in the course aids the students in learning how to understand and interpret history, and encourages the students to develop a critical method by which to evaluate primary and secondary historical sources.

GenEd Learning Objective: Global Learning
GenEd Learning Objective: Key Literacies

HIST 2: Western Civilization II

3 Credits

This survey examines the history of "Western" civilization from the period of Early Modern Europe to the present. The development of social, political, and religious movements in Europe and the development of European colonies around the world had far-reaching, global repercussions. Among the broad developments of this complex period are the creation and collapse of several political and economic global empires, the development of modern nation states, revolutions in technology and industry, and the rise of nationalism, liberalism, socialism, and neoconservatism. The variety of sources used in this course will aid students in learning how to understand and interpret history and in encouraging them to develop a critical method by which to evaluate primary and secondary historical sources and to examine the political, religious, economic, and cultural developments of the "Western" world in the Early Modern and Modern periods.

HIST 3: The American Nation: Historical Perspectives

3 Credits

HIST/AMST 3 allows for faculty and students to work in a small setting in order to explore the history of the United States through a detailed interdisciplinary examination of a particular theme, institution, or person in American history. Faculty can structure their particular theme for this course, allowing for the incorporation of a wide range of materials, out of class field trips, examination of popular culture, primary source documents, and/or seminar-style discussions. For example, in recent years this course has been structured around the themes of "Utopianism in America" and "The Life, Times, and Legacies of Abraham Lincoln". In-depth examinations of such themes in American history offer students the opportunity to work closely with faculty in their area of interest, and to gain an understanding of American historiography and the historical profession.

HIST 5: Ancient Mediterranean Civilizations

3 Credits

Survey of the history and cultures of ancient Mediterranean civilizations in Mesopotamia, Egypt, Syro-Levant, Anatolia, Greece, and Rome. CAMS (HIST) 5 Ancient Mediterranean Civilizations (3) (GH;IL) This course provides an introduction to the history and cultural traditions of the ancient civilizations of the Mediterranean. From the origins of cities and the invention of writing, it surveys the intellectual, artistic, and political traditions that laid the foundations for the later civilizations of Europe and western Asia. Students will acquire a basic historical framework for the ancient Mediterranean from the third millennium BCE through the end of antiquity in the first millennium CE. Within this framework cross-cultural relationships of time and ideas will be established among religious texts, epic literatures, and political and legal traditions. In the part of the world where the division between Asia and the East and Europe and the West was born, the course will examine the development of regional and ethnic identities along with the historical development of concepts of the universal nature of humanity. This course is designed to serve as the foundation course for all majors in the department of Classics and Ancient Mediterranean Studies (CAMS).

HIST 6N: History and Weather: How Weather Played an Instrumental Role in Great World Events

3 Credits

In HIST 6N / METEO 6N, we'll survey how weather and history are integrated throughout time. Moving from past to present, the course will use case studies to navigate historical moments where weather shaped the outcome. Each case study will have a historical, cultural, and meteorological analysis of the event so students gain a deeper understanding of the national or international event and the integration of science and history. Weather has shaped the outcome of major world events. For example, a weather forecast led to the delay of the Allied invasion of Normandy (D-Day), record cold weather in Florida led to the Challenger Space Shuttle explosion, General George Washington used fog to conceal the withdrawal of his troops at the Battle of Long Island, and the list goes on. The case studies range from the Revolutionary War through present day, and this period of history has been selected because there are firsthand accounts of the weather and/or recorded weather data for each event. The meteorological study examines the event's atmospheric conditions. How or why did they occur? How did they affect the event? Therefore, students will learn basic meteorology and climatology. They will also analyze weather maps and scientific data. The historical study provides context for the event. What led to the event? What happened during the event? What are the event's lasting impacts? To better understand the decisions that leaders faced, students will be asked to assess risk and make decisions based on the same weather data or information leaders at the time had. Students will also explain the context, cause, and effects of major historical moments in everyday language to an audience of their peers through discussions and/or projects. The cultural study examines each event from a psychological and sociological point of view. What were the mindsets of the people and cultures involved in the event? How does the event connect to or parallel things in today's society? How would a present day culture react? This study will give students a better understanding of cultural differences in the world and how those cultural differences can alter the course of history. Time in the course is equally split between United States and international topics, and there will be frequent discussion of current events.

HIST 10: World History to 1500

3 Credits

World Civilizations to 1500 is an introductory survey of the world's major civilizations from the rise of the earliest human communities to the age of global expansion in the sixteenth century. The emphasis will be on the distinctive histories and cultural values that shaped major regions and cross-cultural contacts between those regions. Students will learn how ancient to early modern societies adapted their environments, organized

their political economies, expressed themselves in art and philosophy. The course provides a historical overview of global changes over time.

HIST 12: History of Pennsylvania

3 Credits

The course offers a chronological and topical survey, emphasizing immigration of diverse ethnic groups and religious, political, economic, and social developments, including industrialization and urbanization. This survey of the history of the Commonwealth of Pennsylvania satisfies the Gen Ed GH requirement. Course content features important events and themes in the history of Pennsylvania, including colonial development, the importance of Philadelphia in the Revolutionary and Civil War Eras, immigration and urbanization, and labor unrest, as well as the continuing relevance of history to Pennsylvania today

HIST 20: American Civilization to 1877

3 Credits

An historical survey of the political, social, and economic development of America from colonial settlement through the Civil War and Reconstruction. This course meets the Bachelor of Arts degree requirements. HIST 20 provides a historical overview of change over time in North America before 1877 with a focus on the diverse experiences of different groups of Americans. Students will receive an overview of the most important historical developments in American History from the colonial period through Reconstruction, including the history of American

slavery, the evolution of American political systems, gender roles, and regional differences, changes in immigration, economic development, and the American Civil War and Reconstruction. While "knowing the facts" is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or "order" to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations / arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the diverse histories of the peoples of the United States prior to 1877; (2) Students will gain an understanding and knowledge of the domestic, transnational and global political and economic processes that have shaped the lives, labor, institutions and cultures of the United States before 1877; (3) Students will learn how to "think historically" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of American history prior to 1877. Demonstrate an understanding of the diverse experiences of different groups of Americans prior to 1877. Demonstrate an understanding of the economic, social, and political structures that emerged before 1877 and continue to shape the modern United States.

HIST 20Y: American Civ to 1877Y

3 Credits

This course offers a writing-intensive historical survey of the political, social, and economic development of America from colonial period through the Civil War and Reconstruction, including the history of American slavery, the evolution of American political systems, gender roles, and regional differences, changes in immigration, economic development, and the American Civil War and Reconstruction. HIST 20Y provides a historical overview of change over time in North America before 1877 with a focus on the diverse experiences of different groups of Americans. Students learn how to "think historically", interpreting facts drawn from primary and secondary sources with the goal of understanding how historical events in America unfolded as they did. Students will learn how to recognize the relevance of the past to the present, and how to write to learn in ways that help them think about new material and learn to write in a historical genre.

 Writing Across the Curriculum

HIST 21: American Civilization Since 1877

3 Credits

An historical survey of the American experience from the emergence of urban-industrial society in the late nineteenth century to the present. This course meets the Bachelor of Arts degree requirements. HIST 21 seeks to introduce students to salient events, developments, and themes of United States history since 1877, including westward expansion and the decline of the Native American, the industrial revolution, urbanization, immigration, Gilded Age culture and politics, the labor movement, imperialism, Progressivism, segregation and African-American response, the women's movement, World War I, the Great Depression and New Deal, World War II, post-war prosperity, the Cold War, the Civil Rights movement, the Vietnam War, the disillusionment of the 'Seventies', the Reagan revolution, and America in the post-Cold War era. The social and ideological diversity of the American experience is a prominent theme of HIST 21. Students learn how to "think historically", developing their capacity to identify and analyze key themes and issues from the past, critically assess primary sources, and sharpen their skills in marshaling data and concepts, and expressing them cogently in discussions and in writing.

HIST 66: Survey of British History

3 Credits

This course is a survey of British history, which chronicles the origins and development of Great Britain from its Romano-Celtic past to the present. The course focuses on the long history of Britain, emphasizing its various and ever-changing political, cultural, economic, intellectual developments. The course is designed to instruct students on how to identify recurring trends and notable anomalies in how Britain developed and to recognize Britain's unique impact on broad international developments and on individual nations in both the past and present world.

HIST 83: First-Year Seminar in History

3 Credits

HIST 83, students are expected to master the subject material of this seminar, as well as to acquire basic skills useful to the study of the humanities and Liberal Arts. The topics chosen for these seminars will acquaint students with a major figure, theme, or development in a significant historical area. Through readings, discussions, lectures, and research projects, students will learn to read historical documents and secondary sources, discuss them, formulate effective arguments, and write essays and papers. Historical analysis of this type will provide

students with techniques for appreciating and judging arguments and presentations in many fields of learning.

HIST 100: Ancient Greece

3 Credits

The Greek world from the earliest Aegean cultures to the death of Alexander the Great and the beginnings of Hellenistic civilization. CAMS 100 / HIST 100 Ancient Greece (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. The course presents a survey of ancient Greek history and culture beginning with the Bronze Age palace-states of Crete and Mycenae, examines the emergence of Greek city-states, notably Athens and Sparta, traces their transformation through conflicts among themselves and with the Persian empire, and describes their eventual eclipse by the kingdom of Macedon. Since this course treats the beginnings of historical writing among the Greeks, students learn to evaluate diverse historical texts and their relationship to legend, myth, and poetry. The nature of historical thought itself is emphasized throughout the course. Also emphasized is the debate between the egalitarian Justice of democracy, the sober wisdom of oligarchy, and the overwhelming power of monarchy, as experienced by the Greeks down to the end of the fourth century B.C.E.

HIST 101: The Roman Republic and Empire

3 Credits

History of the Roman Republic and Empire from the origins of Rome to the disintegration of the Empire. CAMS 101 / HIST 101 The Roman Republic and Empire (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements and fulfills 3 credits of the General Education-Humanities (GH) requirement. The course provides an introduction to the ancient Roman empire: how that empire came into being, how it evolved, how it came to govern much of the Mediterranean and European world, and how that empire declined. The course demonstrates the social and legal structures employed by a past society to govern an ethnically and religiously diverse population. The course also introduces students to the sources of our knowledge of the past, and illustrates how these sources are to be critically evaluated. This course complements other courses on the ancient Mediterranean world (such as HIST 100 / CAMS 100) and is a prerequisite to more advanced (400-level) courses in ancient Mediterranean history.

HIST 102: Canaan and Israel in Antiquity

3 Credits

This course is an overview of the ancient history and cultures of Canaan (the Mediterranean Levant of Syria-Palestine) and the emergence of Israel. It involves a critical view of biblical texts (especially the Hebrew Bible, aka Old Testament) in light of other ancient texts, archaeology, and historical methods, in order to explain the nature and the evolution of society, religion, and thought in the prebiblical and biblical era. We will be especially interested in the period from the end of the Late Bronze Age (c. 1200 BCE) to the Persian period (539-332 BCE), and will examine ongoing debates about the Bible and history, as well as the development of Israelite religion from polytheism toward monotheism and a distinctive worldview.

HIST 103: The History of Madness, Mental Illness, and Psychiatry

3 Credits

More than perhaps any other set of human afflictions, the phenomena that have gone under the names of "madness," "insanity," "lunacy," and "mental illness" have historically provoked a wide variety of often contradictory reactions. Those who have been in the throes of "madness" have described experiences ranging from an ecstatic sense of holiness to being beset by undeniable impulses to feelings of unending despair. Observers have sought explanations for the behavior of "touched" and "crazy" individuals by invoking such things as sin, destiny, heredity, moral degeneracy, upbringing, trauma, fatigue, and body chemistry. Those afflicted have been admired, pitied, mocked, hidden from public view, canonized, imprisoned, restrained, operated on, sterilized, hospitalized, killed, counseled, analyzed, and medicated. Why? This course will examine the ideas that have shaped European and American perceptions of madness, insanity, and mental illness. This course will be an introduction to the modern history of "madness" in the Western world. In particular, we will examine the ideas that have shaped European and American perceptions of madness, insanity, and mental illness; the changing experiences of those afflicted; the development of those professions designed to look after those deemed mad, insane, and mentally ill; and the social and cultural assumptions behind treatments, policies, and public opinions.

HIST 104: Ancient Egypt

3 Credits

This course will track the history of Egypt, the first nation state in the world, covering a time span of over 3,000 years. The investigation of the history will focus primarily on the major players (i.e. the pharaohs themselves) and the political events that shaped their reigns. Its history involves not only the Nile Valley, but also that of the entire northeast African continent and lands of Western Asia. The magnificent ruins and artifacts that have survived offer the student a visual examination of the ancients and will provide illustration to a great extent of the specific time periods and dramatic incidents. The student will also be confronted at every turn by textual sources (in translation) and the archaeological evidence. The latter will be addressed at length with introduction to archaeological expeditions. This will serve to teach the student the contribution of archaeological method and interpretation in the knowledge and understanding of the history of the Near East.

HIST 105: The Byzantine Empire

3 Credits

This course examines the development and history of the Byzantine Empire from the decline of the Roman Empire to the fall of Constantinople to the Ottomans in 1453. As the Roman Empire disintegrated, the West slowly developed into smaller kingdoms, while the East survived in a unified empire centered on Constantinople. Modern scholars call this eastern empire, and its culture, Byzantine. This course examines the process by which the Latin imperial culture of Rome was transformed into a profoundly Greek culture, which for centuries represented the model against which other civilizations & the various kingdoms of the Latin West, the Islamic caliphates of Damascus and Baghdad, and the Slavic chieftaincies of eastern Europe & measured themselves.

HIST 106: Early Modern Empires of Islam: The Ottomans, Safavids, and Mughals

3 Credits

This course examines the history of the Ottoman, Safavid, and Mughal empires, from their origins to the Safavid Collapse, a historical time period covering approximately 1300 to 1722. Each week, the class will focus on a major turning point or theme using a combination of regional case studies and primary sources. In the process, students will be exposed to ongoing historiographical debates about a variety of events and trends in Ottoman, Safavid, and Mughal history. Topics covered include war, diplomacy, urbanism, architecture, science, religion, technology, and art. This course focuses on and examines how the Ottoman, Safavid, and Mughal states evolved in a changing global context.

HIST 107: Medieval Europe

3 Credits

HIST 107 / MEDVL 107 examines the history of Europe from c. 300-c. 1400 CE. The many themes of this course include: the development of political, judicial and diplomatic institutions; the role of religion, especially that of Christianity in all its forms - orthodox, heretical, and popular - as a significant element of medieval society; the development of royal houses; and changes in economic and social life of medieval Europe. Within these primary themes, the course addresses many subjects, including the development of both secular and ecclesiastical authority, various efforts to control or wield violence, and the importance of a number of agricultural and economic changes that transformed Europe.

HIST 108: Crusades: Holy War in the Middle Ages

3 Credits

The course examines the social and political history of the "Crusades", one form of holy war in medieval Europe, the Levant, and North Africa, focusing primarily on the period from the 11th through the 14th centuries, but also offering background to, as well the history of later repercussions of, the "Crusades". This warfare of the Central and Late Middle Ages, later called "Crusades", were fought in many geographical regions, including the Levant, the Baltic, the Iberian peninsula, southern France, and North Africa. The course addresses various elements of this kind of medieval warfare, and examines how such "crusading" evolved with complex political, religious, and economic origins.

HIST 109: Introduction to U.S. Environmental History

3 Credits

This course explores the major themes of U.S. Environmental History, examining changes in the American landscape, the development of ideas about nature in the United States, and the history of U.S. environmental activism. Throughout the course, we will be exploring definitions of nature, environment, and environmental history as we investigate the interactions between Americans and their physical worlds. HIST 109 provides an introduction to environmental history as a field of scholarship that examines changing relationships between human beings and the natural world. Environmental history centers on the examination of various questions about such relationships, including exploring how natural forces shape history, how humankind affects nature, and how those ecological changes then reciprocally influence human life. Major themes of the course include: (1) recognizing that American history has a natural context; (2) that relationships between nature and culture change over time; and (3) that knowledge about nature is socially constructed and historically contingent.

HIST 110: Introduction to Global Environmental History

3 Credits

This course provides a broad introduction to the history of human relationships with nature throughout the world. The human relationship with the natural environment the world of plants, animals, and microbes, of air, water, and land is an important historical subject. History 110 provides a broad, thematic description and analysis of major global trends and shifts, with an emphasis on contemporary issues and problem solving. The most important goal of the course is to provide students with the historical context necessary to construct a thoughtful appreciation of the environmental dilemmas of our time. Ecology has contributed a great deal to historical understanding in terms of specific examples or case studies; however, it has also begun to reconstruct the overall structure of the history that we teach. History 110 seeks to leverage this new paradigm by encouraging students to break down the barriers that often divide the humanities and the sciences. This course utilizes environmental science to demonstrate and explain specific human tendencies. Finally, this course is structured to help students better situate the history of the United States in a more global centered view of both the past and contemporary environmental concerns. Particularly in relation to contemporary environmental issues, History 110 will make clear that many environmental problems are local in neither their construction nor impact. The course will focus on several critical points, including: How has the non-human world shaped the course of human history? What were the environmental impacts of historic changes in the ways humans produced and consumed resources? What ideas

shaped the ways different groups of people defined and used specific resources? What role have science and technology played in changing popular attitudes about the human place in the world?

HIST 111: Introduction to U.S. Food History

3 Credits

This course is a historical analysis of agriculture and food production in the United States. It includes examination of the history of food production and consumption patterns, the food industry, food marketing, and the politics and regulation of the American food system. This course explores the food system as a nexus that brings together history, technology, and culture in ways that have significant impacts on human livelihoods and wellbeing. A core theme of the course will be consideration of questions about food ethics and the challenge of improving the sustainability of food systems including the need to maintain or increase improvements in productivity while also addressing social effects and reducing environmental impacts of food production.

HIST 112: Introduction to Public History

3 Credits

Practicing as a historian outside traditional classrooms opens up worlds of diverse professional opportunities. This course is designed to introduce students to that broad world, allowing for learning and experimentation. The course teaches theories of public history practice, audience development, collection management, interpretation, organizational management, finance, and other pillars of practicing history with and for the masses. The course will consider both the past and future of the field. Students should encounter public history at work in society. There are various ways to achieve such aims, including interaction with practicing public historians through field trips and/or in class, preparing a grant application, and presenting a modest public history project in class.

HIST 113: Baseball in Comparative History

3 Credits

This course offers a comparative survey of baseball history from its origins in the nineteenth century to the present. The course uses the broad cultural and geographic diffusion of baseball over time to examine

the diverse and changing social, economic, and political meanings of this activity in different cultural settings, emphasizing the ways in which a common activity may acquire unique meanings in different cultures. Although North America, Cuba, and Japan demand attention as the most striking examples of baseball's pervasive impact, the course will also consider baseball as a global phenomenon, for example, exploring the minimal impact or failure of baseball promotions in many European and African societies.

HIST 115: The American Jewish Experience

3 Credits

Chronological and topical survey of the story of Jewish life in America. We will trace the social, religious, cultural, and political developments in the Jewish community from the Colonial Period to the present. Topics to be covered include immigration, acculturation, ethnicity, gender, politics, and communal and religious innovation. While "knowing the facts" is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or "order" to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations/arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of

the relationship between the experiences of members of the American Jewish community and United States history as a whole. (2) Students will gain an understanding and knowledge of the political, economic, and social processes that shaped the American Jewish experience. (3) Students will learn how to "think historically" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of American Jewish history. Demonstrate an understanding of the diverse experiences of different groups of Americans. Demonstrate an understanding of the social, political, and ideological structures that shaped the American Jewish experience and continue to shape the modern United States.

HIST 118: Modern Jewish History

3 Credits

Modern Jewish history is a complex and fascinating story. Some scholars depicted it as a long period of suffering and isolation that culminated in the Holocaust and only ended with the founding of the state of Israel. In recent decades a more balanced perspective has found wide acceptance. Today scholars highlight Jewish agency and different conditions in the various places Jews settled without downplaying anti-Jewish prejudice and violence. A recurring theme in this course concerns the relationship between individual Jews and Jewish communities, and on a broader level, the perception and treatment of Jews by societies and states. As Jews in Western and Central Europe "left the Ghetto" around 1800 and became citizens of states, they redefined their relationship to Jewish communities in strikingly different ways. Some Jewish women and men emerged as agents of change, others resisted change. We will explore Jewish "responses to modernity," ranging from assimilation, Zionism, and socialism to migration. While many Jews in Western Europe and the United States prospered, the lives of Jews (and their neighbors) in Eastern Europe and the Ottoman Empire were shaped by social and economic crisis (albeit not constantly and not everywhere). For the twentieth century the course will concentrate on three major events that had a dramatic impact on Jews, especially in Europe: the First World War and the collapse of the large multiethnic Empires in Eastern Europe, the Holocaust and the founding of the first modern Jewish state, Israel.

HIST 122: History of Science I

3 Credits

The main goal of this course is to think through and understand major developments, ideas and issues in natural philosophy. "Natural philosophy" is the premodern term for science. The term "science" began to acquire its modern meanings around 1840. The geographic focus of this course is the Mediterranean region and Europe, but we will also investigate early science in China, the Indian subcontinent, and the Islamic world. The temporal coverage of this course is vast: from about 10,000 years ago to the 19th century. As is common in history courses, it will be essential for us temporarily to set aside modern and contemporary biases and ways of thinking. Our goal is to understand the world as ancient and premodern people did. Issues of religion will constantly make appearances in this course. If you have studied world religions already, that is great, but if not, the books and lectures will provide the essential points as we go along. You should also use Wikipedia or similar reference tools to look up any key term or concept that does not make sense to you, whether with respect to lectures or the books. It is your job to make an active effort to master the material. This course is ideal for anyone pursuing a scientific or technical major, but anyone should benefit from it. We will be exploring some of the most important issues that have shaped our world, key developments in the human capacity for creating knowledge and useful technologies, and, in some cases, innovative solutions to vexing problems. We will also examine some of the ways that social institutions, belief systems, and paradigms (models) have helped both to organize and to constrain human knowledge. If all goes reasonably well, this course will enhance your knowledge and open your mind to hitherto unfamiliar ways of thinking and approaches to problems.

HIST 123: History of Science II

3 Credits

A history of science and culture from the scientific revolution to the present. HIST 123 examines the intellectual, social, and cultural history of science from the Scientific Revolution to the present. The course covers a range of theoretical and applied disciplines, including engineering and medicine. In addition to major discoveries and new ideas, methods, and tools, the course examines the effect of social conditions on science as well as the impact science has had on society. Scientific developments in the Western world, broadly defined, constitute the organizing framework of the course, but the course also examines science in non-Western cultures

HIST 124: History of Western Medicine

3 Credits

This course explores the history of health, illness, and medicine in western society from Ancient Egypt through the modern world. Relying

on both primary and secondary sources, the course examines major developments in the understanding of health, illness, medical treatment, and medical practice in western society from Ancient Egypt to the present. The course will explore such themes as the changing status of medical practitioners, the experience of patients in different historical settings, artistic depictions of illness and healing, and the increasingly prominent role of medicine in public policy in order to better understand the links between medicine and its social, cultural, intellectual, and political contexts.

HIST 125N: History of Infectious Disease and Epidemiology

3 Credits

Infectious diseases once thought to be nearly eradicated have seen a resurgence in recent years. The majority of the cases arose from people who deliberately chose not to vaccinate their children against these disease. Even in the twenty-first century the nature of disease and how to prevent it is not merely a matter of science, but an issue laden with cultural, political, and religious concerns. This course charts the history of disease both as a subject of scientific inquiry and a cultural and religious phenomenon. We will begin with early Greek and Egyptian attempts to understand disease as a foreign entity attacking the body and end in the twenty-first century with current ideas surrounding the use of antibiotics, vaccines, and emerging threats throughout the world. Along the way we will discuss the impact of significant epidemics - for example, Bubonic Plague, Syphilis, and Influenza - as well as changing scientific thinking of both how to deal with disease and how to understand the natural world. In tandem with the historical background key scientific ideas necessary for studying disease - including current understanding of the microbial world, microscopy techniques, and modern gene theory - will be presented to the students through classroom instruction and virtual laboratories.

HIST 127: Introduction to U.S. Latina/o History

3 Credits

This course provides an interdisciplinary introduction to the study of Latinas and Latinos in the United States. The course includes a historical overview of the major events in the U.S. Southwest, Mexico, the Caribbean, and Central and South America that led to the creation of Latina/o communities in this country. Students will examine the formation of racial and class hierarchies within U.S. Latina/o communities; the processes of (international and regional) migration; gendered hierarchies and responses to sexism; and the complexities of U.S. Latina/o identity.

HIST 128N: Cultural Perspectives on Mathematics

3 Credits

This course will investigate the development of mathematical thought in multiple Afro-Eurasian cultures from the Bronze Age through the early medieval period, including Mesopotamia, Egypt, Greece, India, China, and the Islamic world. Math will be examined as a cultural product, with specific developments contextualized in the generating civilization's history, socio-political structures, economic systems, artistic and literary movements, and prevailing religious and philosophical ideas. Students will investigate the ways in which specific aspects of a culture influenced the development of specific ideas about, approaches to, and techniques regarding number and mathematical processes. Key themes in this respect will be what social forces encourage the development of practical or theoretical mathematics; how a society determines what is truth; the conception of abstract ideas such as zero and negative, infinite, and irrational numbers; the social status of mathematicians and their relationship with political and social authorities; and what social forces hinder the development of practical and/or theoretical mathematics. Students will also consider how the availability of certain mathematical knowledge enabled the development of particular social systems, architectural achievements, and more. Key themes in this respect will be the mathematical needs of specific political systems (such as the accounting involved in imperial administration), legal systems (such as fair division of goods), and religious systems (such as the calculation of accurate systems of time). At the same time, students will draw connections across time periods and cultures by examining the interactions between civilizations and how those interactions influenced the development of mathematics as a human endeavor. Key themes in this respect will be understanding what political, economic, and other forces cause cultures to come into contact or seek out contact; and how the exchange of knowledge shapes both the receiving culture and the study of mathematics as a whole. As part of this course, students will study both specific mathematical ideas (e.g., number systems, deductive reasoning, geometric algebra, and the motivating problems that spurred development) and the specific ancient and medieval cultures named above.

HIST 129N: Chocolate Worlds

3 Credits

This course will examine the "world" of chocolate throughout human history. First cultivated by the ancient peoples of the Americas and then manufactured by Europeans and Pennsylvanians alike, chocolate has played a privileged role as a luxury good. An interdomain course,

"Chocolate Worlds" is interdisciplinary, taught by faculty in the departments of Plant Science, Anthropology, and History. As a team we investigate the how diverse societies have differentially interacted with this crop. Rather than be organized chronologically, this course will be divided into course Units, such as the history of cocoa uses and cultivation, cocoa plant science and farming issues, chocolate making and markets, and the state of the global chocolate industry. The course's lectures and assigned readings work in concert equally directed by scientific inquiry and the queries of the social sciences and humanities. Assignments will address real world questions relating to contemporary cocoa cultivation and production, and its role in international development and social justice. As a class we will take field trips to sites such as local chocolate manufacturing facilities and cocoa research sites and laboratories. The learning objectives of this course include students' broad knowledge of cacao production, its history, and ethnical issues surrounding its cultivation in today's global economy. Additionally, students will gain an historical appreciation for the role this crop has played in diverse human societies and a scientific understanding of its genetic structure.

HIST 130: Introduction to the Civil War Era, 1848 through 1877

3 Credits

Survey of the causes and consequences of America's deadliest conflict, the Civil War, from the end of the U.S.-Mexican War in 1848 through the end of Reconstruction in 1877. This course meets the Bachelor of Arts degree requirements. HIST 130 is a general survey of the American Civil War Era that satisfies the Gen Ed GH requirement. Course content features the causes of the war, the conflict itself, the consequences for the meaning of freedom in the United States, and the continuing relevance of this conflict today. Students will become familiar with American slavery; Northern and Southern social, cultural, political, and economic composition; the military progress of the war; problems on the home front; the struggle for emancipation; and the creation of a new nation based on free labor.

HIST 131N: Slavery, the Civil War, and Cinema

3 Credits

This course provides a general introduction to two very different modes of thinking about race and slavery in the United States between the 1770s and the 1860s. The first half of the class will present historians' interpretations of the lives of slaves, the politics of slavery, and the Civil War. The other half of the class is devoted to examining cinematic and artistic treatments of slavery and the Civil War. Overall, the course will focus on the differences and tensions between historians' methods and ways of knowing about and understanding the world, versus the essential truths that artists try to present in film while focusing on the specifics of slavery and the Civil War in the United States. Rather than privileging one way of knowing over the other, the course will focus on the strengths and limits of each. In addition, the course will examine how collective historical memories concerning race, slavery, and the Civil War are created and contested. The first half of the class offers an historical analysis of the history of slavery in the United States between the American Revolution in the 1770s and the American Civil War in the 1860s. The second part of the class will focus on cinematic presentations of slavery and the Civil War. The second part of the course will NOT focus on using historical facts to evaluate a film's fidelity to history as a scholarly discipline. It will instead examine film as art, as a commercial endeavor, and as a cultural product. It will then explore how different filmmakers portray slavery and the Civil War in different genres; how films reflect the period of their production and the personality of their producers; the commercial demands of filmmaking and how that limits subject matter; and how films shape collective historical memories. Students will also learn the basics of film criticism.

HIST 134: Great Britain and Ireland in the Early Modern World

3 Credits

This course provides an interdisciplinary introduction to the study of Latinas and Latinos in the United States. The course includes a historical overview of the major events in the U.S. Southwest, Mexico, the Caribbean, and Central and South America that led to the creation of Latina/o communities in this country. Students will examine the formation of racial and class hierarchies within U.S. Latina/o communities; the processes of (international and regional) migration; gendered hierarchies and responses to sexism; and the complexities of U.S. Latina/o identity. HIST 134 provides a survey of the history and cultures of Great Britain and Ireland from 1400 to 1800. The course particularly focuses on the diversity of English, Welsh, Scottish, and Irish cultures and customs, their influence on early forms of nationalism in the British Isles, and their importance in the formation of the modern British nation-state. The relationships between English and Scottish protestants, the importance of translating the Book of Common Prayer from English to Welsh, and the influence of Irish-born families of English descent on the governance of early modern Ireland were all key elements in the emergence of an empire under the authority of an English dynastic state whose practical control over the territories it claimed to govern often remained quite limited. Through an examination of primary and secondary historical sources, students will consider the dynamism of this process, involving complex interrelationships, rather than the simple supremacy of one ethnic group over another.

HIST 140: The History of the Israel-Palestine Conflict (1917-Present)

3 Credits/Maximum of 3

This course covers the origins of the Israeli-Palestinian conflict and how the issues at stake changed over time, up to the present day. The course situates the conflict in the history of the Middle East and the larger context of international relations, including the Cold War and the end of the Cold War. Topics include regional warfare and its significance, efforts at peacemaking, and social, economic, and cultural developments among Israelis and Palestinians.

HIST 141: Medieval and Modern Russia

3 Credits

This course is an introductory survey, including political, social, economic, and cultural development of Kievan, Muscovite, and Imperial Russia.

Tracing the history of Russia from the ninth to early twentieth century, this course examines the central role of the people, politics and culture at the crossroads of Europe and Asia. Particular topics include the rise of the Kievan State, the Mongol rule, the rise of Muscovy, Ivan the Terrible, Peter the Great, relations with Western Europe up until the end of imperial Russia under the last tsar of Russia, Nicholas II. It offers a basic knowledge of the cultural, political, economic, artistic and historical background of this vital region of the world.

HIST 143N: History of Fascism and Nazism

3 Credits

This course studies the developments of right-wing totalitarianism in the twentieth century with special emphasis on Fascist Italy and Nazi Germany, which provided the roots for fascist developments in the modern world. The course concerns itself with understanding the social, political, and economic contexts of fascism, its governing assumptions, ideals, and values, how it worked in practice, and its consequences and historical implications. Another focus will be on the question of why these illiberal, anti-democratic, and ultimately murderous regimes appear to have appealed to many groups during the 1930s and 1940s, not only within Italy and Germany, but also within broader European society.

HIST 144: The World at War: 1939-1945

3 Credits

History 144 provides an in-depth study of World War II, which brought many new aspects to modern warfare: civilians were the majority of casualties, deliberate air attacks were made on cities, research brought the advent of new technologies, and several of the global belligerents represented the participation of militaristic totalitarian states where dictators had risen to power with considerable popular support. Thus, topics of the course include: the origins of the war; political and economic struggles leading to the conflict; actions of both Axis and Allied military forces; broad violence in the forms of rape and genocide; and the aftermath of the struggle.

HIST 145N: The Holocaust and Human Rights

3 Credits

This inter-domain course integrates historical (GH) study of the Holocaust with sociological (GS) perspectives on the Holocaust and human rights. Topical content begins with historical antisemitism ("the longest hatred") and elaborates the history of the Holocaust in German and in Europe. A second half of the course explores consequent definitions of genocide and human rights, globally established by the United Nations through international law. Post-war campaigns to reduce prejudice and to raise 'Holocaust consciousness' are presented along with sociological insights into problems of persecution through eugenics, xenophobia, and racialized inequalities. Survivor testimonies underscore the value of resilience and the ethics of standing up against injustice, including discrimination or persecution based on cultural or another group identification.

HIST 148: History of Pennsylvania State University

3 Credits

This course examines the complex history of Penn State. The time period covered extends from mid-19th century origins as the Farmers' High School to the highly complex, multi-faceted, modern "research university" of the early 21st century. The course will study closely: the conduct,

leadership, perspectives, and educational visions of notable presidents, administrators, and faculty (such as George Atherton, Edwin Sparks, Ralph Hetzel, Milton Eisenhower, Eric Walker, Jesse Arnette, Howard Davidson, Della Durant, Seth Williams among many others); various dimensions of student life (including student protest and the demise of *loci parentis*); race and gender relations; athletics; and the challenges of university life, research, admissions, co-education and achieving diversity in the post-World War II era. The Penn State experience will be examined in the context of larger historical developments in American higher education, student life and attitudes, and the broad political / economic / social and legal environment. Comparisons will be made to other colleges and universities. Using primary and secondary historical sources, this course pursues a distinctly historical angle; particular emphasis will be placed on chronicling and evaluating change over time and thoughtful consideration of a diversity of voices and perspectives

HIST 150: America in the 1960s: An Introduction

3 Credits

This course offers an introduction to the history of the United States in the 1960s. The dual goals of this course are to instill a particular body of knowledge - in this case, America in the 1960s, and to provide students with tools that will help formulate interpretations of this crucial period in U.S. history. Topics covered will include the leadership of John Kennedy, Lyndon Johnson, and Richard Nixon; the struggle for civil rights for people of color; the emergence of student movements across the country; the steady escalation of US involvement in Vietnam; shifting relations across gender lines, and particularly the rise of the modern feminist movement; and, finally, the growing influence of popular culture, such as music, literature, and film.

HIST 151N: Technology and Society in American History

3 Credits

This course examines the development of technology in the United States from the colonial period to the present, and places into a historical context the reception and influence of these technological developments on the social, economic, and political life of the United States. The technologies serving American society—past and present—range widely and include, for example, new harvesting techniques, railroads and motor vehicles, assembly-line mass production, and electricity and its multiple dependent technologies. Technologies have always influenced, and been influenced by, human societies; this course examines how technologies and Americans have interacted and influenced each other.

HIST 152: African American History

3 Credits

Chronological and topical survey of the history of African Americans from the colonial period to the early twenty-first century. This course covers major themes in African American history including the societies and cultures of Africa, the Middle Passage, the Colonial experience, slavery, abolition, and the quest for freedom, Civil War and emancipation, Reconstruction, Jim Crow, the Great Migration, African American cultural expressions, WWII and the seeds of Civil Rights, the Freedom Movement, Black politics and White backlash. While "knowing the facts" is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or "order" to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations/arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the relationship between the experiences of African Americans and United States history as a whole. (2) Students will gain an understanding and knowledge of the political, economic, and social processes that shaped African American history. (3) Students will learn how to "think historically" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of African American history. Demonstrate an understanding of the diverse experiences of different groups of Americans. Demonstrate an understanding of the social, political, and ideological structures that shaped African American history and continue to shape the modern United States.

HIST 155: American Business History

3 Credits

This course examines major developments in the history of modern American business and industry from the colonial period to the present. History 155 introduces students to a number of the main themes, concepts, and events comprising American business history. Although the course has a pronounced big business/large corporation focus, it nonetheless provides a broader perspective than simply one of selected corporate histories. Indeed, the course treats the conduct of business as an integral element of American society and culture. Topics to be discussed include the colonial commitment to commerce, the effects of new technologies, the emergence of modern large-scale industrial production and the changes it brought to business management, and the importance of world events and American businesses.

HIST 157: Railroads and American Society

3 Credits/Maximum of 3

HIST157 shows that, without railroads, the United States would not have become the United States. It provides a panoramic view of 200 years, from the earliest rail lines to the current day and shows how the rail industry affected everything, from the economy to daily life. One of the course's central objectives is to demonstrate how these changes were experienced differently by different communities and social groups.. The first half of the course investigates how and why the American rail network was built and how the public and government reacted to the changes it brought. It reviews the financial, geographical, and legal resources needed to build the first rail lines and why they proved to be superior to roads and canals. During and after the Civil War, the building of the transcontinental lines relied heavily on federal aid and the labor of minorities (including African American, Irish, and Chinese). Although many Americans initially embraced the railroad industry, after experiencing improvements in their local economies and lifestyles, many turned against it in the late nineteenth century. Hard economic times turned labor against management, farmers against the industrial centers, nativist Americans against immigrants, and so on. After two decades of protest, the reformers of the Progressive era passed sweeping legislation to regulate the industry. The second half of the course studies how railroads declined during the twentieth century and how government regulations were relaxed. In addition to the challenges of two world wars and The Great Depression, it explores how railroads experienced new economic and technological pressures. These include competition from motor vehicles and airplanes, which led railroads to lose most of their passengers and much of their freight. The change from steam to diesel locomotives brought difficulties for rail communities and rail workers. The course investigates how demands made by labor often served to alienate public opinion. Although streamlined passenger trains briefly regained public enthusiasm, this soon dwindled in the post-WW2 years, as Americans embraced the automobile and the airplane. By the 1970s, railroad troubles were extreme enough to test America's sense of balance between free enterprise and government aid. Despite public criticism, the federal government intervened, to create Amtrak and then Conrail. The final sections of the course investigate how the relaxation of federal regulations led to a partial rail renaissance. It shows how freight service has been a great success but why inter-city passenger service continues to be unattractive to many American citizens and investors.

HIST 159: History of the FBI

3 Credits

Chronological survey of the History of the FBI since its founding in 1908, focused on the evolution of Federal law enforcement, bureaucracy, the increasing power of the Executive branch, the targeting of various minority groups, civil rights and civil liberties issues, and the growth of a national security role for the federal government over time. In its long history the FBI has intersected with a wide variety of groups and issues, and this reality will further expose students to the histories of African Americans, gays and lesbians, women's groups, Latinos, Native Americans, war protesters, students, various political dissenters, immigrants, targeting of morality, obscenity, and labor organizing. Because the FBI is responsive to both the political and policy interests of presidents and the influences of American society, students will come to appreciate the influences that politics has on bureaucracy and law enforcement, as well as the different social, political, economic, and cultural influences that each historical time period have exerted on the FBI to help shape its priorities and structure.

HIST 162N: The Pursuit of Happiness in American Life: Historical Literature and Modern Practice

3 Credits

When Thomas Jefferson elevated one pursuit to stand with life and liberty as inalienable rights, he eschewed others. The Declaration of Independence features the pursuit of happiness rather than that of amusements, consumer goods, status, money, or ease. Happiness carried a history of deeper meanings in philosophy and religion. In 1776, "happiness" peppered discussions of individualism, rights, civilization, economics, and government, and echoed Ancient Greek dialogues about virtue and civil society. In America, "happiness" joined the religious language of salvation, rapture, and joy to define states of grace. By the twentieth century, happiness became suspect as the term frequently represented a superficial type of enjoyment in needless consumption manipulated through marketing. As happiness came to be twined with wealth and goods, so too did it align increasingly with success in all pursuits. Happiness became a form of winning and a status marker whose overt pursuit was as likely to lead to psychological and social problems as to health. We open with ancient philosophers and modern positive psychologists. The pursuit of happiness reached zenith speed in the history of American literature. From transcendentalists, to pragmatists, self-help, children's fantasy, psychoanalysis, or post-modernism, genres fell out of themselves in the pursuit to merely understand happiness. Novels, poems, memoirs, films, popular psychology, medical literature, memes, and blogs addressed happiness from nearly every conceivable angle to explore strategies such as choosing positive thoughts; stilling thoughts; cultivating enriching interests and habits; influencing our moods and emotions; and optimizing strategies for securing the resources, skill-sets, possessions, and relationships that encourage happiness. Some of these achievements aligned with health and economic benefits and introduced limitations in access or cultural relevance. Bio-behaviorists are exploring correlation vs. causation and ways of assessing social and individual well-being. Bringing modern bio-behavioral methodologies into the chronological narrative creates unprecedented opportunities for integrative study. Experiential elements of wellness fulfill goals of General Health and Wellness, identifying "wellness as a positive state of well-being, not merely the absence of disease." Students will learn the most promising research on generating tangible, healthful benefits in

individuals and communities and be introduced to sources for further learning, continuing to learn and pursue long-term happiness.

HIST 164: The History of Brazil

3 Credits

This course will study the history of Brazil, the only Portuguese-speaking nation in Latin America, from the colonial to the present period. We will examine Brazil's transformation from Portuguese colony to the seat of a nineteenth century transcontinental empire ruled by the only European monarch to rule from the Americas, and discuss developments such as plantation slavery and industrialization that transformed Brazil into an international powerhouse. We will examine political, economic, cultural and racial movements and institutions that defined Brazilian history during the empire, the first republic, the Vargas era, and the military dictatorship. We will conclude with a look at Brazil's struggles with democracy from the 1980s to the present as well as the rise of contemporary populist leaders, Brazil's struggles surrounding policing, political corruption, affirmative action, and its hosting international sporting events in the twenty-first century. This course is designed to introduce students to the making of the modern Brazilian state focusing on the period from the rise of the Brazilian Empire in 1808 through the modern day. We will survey major historical trends in Brazilian society, from its roots as a Portuguese colony and its role at the center of slavery and the slave trade in the Americas to its distinctive patterns of independence and nationhood. Brazil's experience as an independent nation during the nineteenth century (it became the only long-term monarchy in the Americas) offers an interesting point of comparison to the history of republican nationhood elsewhere in North and South America. We will also examine the challenges of state and nation building during the nineteenth and early twentieth century as well as the challenges associated with late industrialization and state-sponsored development.

HIST 166: History of Sexuality

3 Credits

WMNST/HIST 166 History of Sexuality (3) (GH;US) This is a 100-level course on the history of sexuality, spanning several centuries and a wide range of contexts. The study of sexuality offers a particularly good lens for developing students' analytical ability to think historically about something that is often considered both natural and exclusively modern. Topics will include the role of religion, medicine, law, and politics in controlling and shaping sexuality; change and controversy over birth control, abortion, and gender roles; the connections between prescriptive literature and lived experience; the origins and meanings and racial violence in the context of ideas about sexuality; the concept of respectability; and the experiences and conflicts that have shaped the emergence of modern lesbian, gay, and trans identities. Students evaluate large questions about sources, methods, and analysis that historians face, including: How do we recover stories of private life, from societies and eras different from our own? How does our own understanding of what sexuality "is" complicate our historical exploration? What can we learn about gender and sexuality, repression and resistance, deviance and acceptance, identity and community from studying persons of nonconforming gender from the past? How has racism been employed to justify particular reproductive and sexual practices, as well as to limit claims to sexual respectability? To what extent is the study of sexuality inherently a study of gender, sex roles, and feminism? While focused primarily on the United States, the course will offer students opportunities to examine these questions in other, transnational contexts.

HIST 169: The Indian Ocean World

3 Credits

The Indian Ocean has been a zone of human interaction for several millennia facilitating the circulation of individuals, ideas, commodities and technologies from the Mediterranean and Persian Gulf regions to as far as Southeast Asia. This course introduces students to the growing historical field of the Indian Ocean world and to the usefulness of studying oceans as a useful category of historical analysis. It will examine the dynamism of the Indian Ocean world by exploring themes like trade, migration, slavery, piracy, European expansion, and various

kinds of cultural exchange across this vast body of water. The course will also introduce students to a variety of primary sources including travel narratives, personal accounts and diplomatic correspondences.

HIST 170: South Asia to 1500

3 Credits

This course will introduce students to major themes in the history of ancient and medieval South Asia, a region that is now made up of the nation-states of Bangladesh, Bhutan, India, the Maldives, Nepal, Pakistan and Sri Lanka. Students will gain a firm understanding of the key political, economic and socio-cultural traditions and practices that shaped the formation of diverse social groups, sectarian and religious communities and political institutions in the region. While developing a chronological perspective on the history of pre-modern South Asia, this course will encourage students to look beyond the modern nation-state boundaries in order to gain a firm understanding of the region's shared political and cultural past in the period up to 1500. Students will learn to critically read primary sources and secondary literature, to identify historical arguments and take a position in a scholarly conversation in written assignments.

HIST 172: Introduction to Japanese Civilization

3 Credits

This course surveys the development of civilization in Japan from ancient times to the present. Among the key goals of this course is to discuss what is distinctive about "Japanese civilization." As a survey of Japan it includes topics such as external relations and cultural exchanges with Japan's neighbors and the world more broadly; the nature of indigenous beliefs, Shinto and Buddhism; the making of the Japanese bureaucratic state and gentry society; the rise of the commercialized economy; the growth of Japanese culture; Tokugawa Japan. It offers a basic knowledge of the cultural, political, economic, artistic and historical background of this vital region of the world.

HIST 175: East Asia since 1800

3 Credits

This course is a comparative survey of the internal developments and external relations of China, Japan and Korea since the early 1800s. Topics include interaction with the West, internal rebellions and reforms, the importance of certain key figures, the changing roles of women, student protests, and current social problems. Considerable focus will be placed on the transition from imperial to constitutional governments, rise of nationalism, World War II in the East Asian context and the phenomenal role China, Japan and Korea have played in shaping the post-World War II world. It offers a basic knowledge of the cultural, political, economic, artistic and historical background of this vital region of the world.

HIST 176: Survey of Indian History

3 Credits

Survey of cultural, institutional, and political history from ancient times to the present. HIST 176 Survey of Indian History (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course surveys the history and civilization of India or South Asia from the earliest times to the modern period. The goal of the course is to enable students to form a comprehensive conception of the various facets of Indian or, South Asian civilization in a historical context. This course is an excellent foundation for the history of modern India and also complements a variety of existing courses on the history of the non-western world. In addition to satisfying the GI requirement, HIST 175 satisfies the general credit requirements for the history major or minor, including the 'non-western' component of the major. Non-majors may use this course to satisfy a general education humanities selection. Typically, students will be evaluated on in-class quizzes, written exams, participation in class discussions of assigned readings and critical reviews of books. This course is offered once every year and has an enrollment of 50 students.

HIST 178: Latin-American History to 1820

3 Credits

This course examines the history of Latin America from c. 1450 to 1820, a period encompassing Iberia and the New World before and after the conquest; the course is a survey of three centuries, from the initial encounter on New World soil of Iberian, African, and native cultures and races, to the birth of independent culturally- and racially-mixed nations. Historical topics include the conquest of the New World, the development of colonial institutions and their impact on indigenous cultures, the maintenance of slavery and forced labor systems, the development of multi-ethnic communities, and the origins of independence movements. We will also study colonial-era documents produced by or about the people who lived in colonial Latin America (what historians call primary sources), including Spaniards and Portuguese; African slaves and free blacks; Mayas, Nahuas/Aztecs, and Incas; mixed race peoples called castas; wealthy and poor; and women, men, and children. Particular emphases of the course focus on various patterns of conquest and cultural encounters, the processes of colonial rule, the nature of interaction between social groups, and the cultural impact of the colonial experience upon all colonial Latin America's peoples.

HIST 179: Latin-American History Since 1820

3 Credits

This course examines the history of modern Latin America from the period of independence in the early nineteenth century until the present day. Students will learn about the geographic and political development of the region, the development of various economic models, and the widespread extraction of labor focusing on This African slavery and Indigenous exploitation. The course examines significant events and historical trends in local, national, regional and global contexts. The goal of this class is for students to think critically and analytically about important issues and themes in Latin America, and to understand how historical events have shaped this region. We will look mostly chronologically at important historical themes such as social, economic, gender, and racial conditions, as well as politics, focusing on events throughout select Latin American nations and regions. The course will focus on the following periods: the Independence and post-Independence period of the Spanish Americas (1810-1850); the period of Brazilian Empire (1808-1889); the integration of Latin America into the modern world economy (1850-1914); the rise of oligarchic and military governments (1914-86); Latin America and the US in the Cold War (1945-1989); and concludes with the recent rise of the Populist New Left and the Conservative Right backlash and violence that has recently threatened many nations of Latin America. This course fulfills the requirements for Bachelor of Arts: Humanities (BA), International Cultures (IL), General Education: Humanities (GH) and fulfills the requirement for Latin American Studies Major and Minor as well as the general credit requirement for the History Major.

HIST 180: Ancient Warfare

3 Credits

Historical survey of the evolution of warfare in the ancient Mediterranean region from prehistoric times to the Later Roman Empire. CAMS 180 CAMS (HIST) 180 Ancient Warfare (3) (GH;IL) Warfare has occupied a central place in the civilizations of the Mediterranean from the earliest times. The prehistoric origins of warfare is a hotly debated topic and constitutes the starting point for this course. Most scholars are agreed that military culture grew in step with sociopolitical development over the course of the third millennium BCE. In the following centuries, the Egyptians, and later the Assyrians and Persians, took great strides in developing sophisticated tactical systems, using infantry, chariotry, and cavalry. These matters occupy a little over the first third of the course. Across the Aegean Sea, Bronze Age (Mycenaean) Greece was ruled by elites occupying massively walled citadels, their leaders buried surrounded by their weapons. But how did these warriors fight? Do the epic poems of Homer memorialize Bronze Age combat? In the Archaic Period (700-500 BCE) infantry warfare in Greece was transformed by the appearance of the heavily-armored infantryman (the hoplite), deployed in a tight formation (the phalanx). The processes involved in the appearance of this kind of warfare, its nature, and its affects on Greek society and culture will be the focus of our attention for the second third of the course. On the periphery of the Mediterranean basin stood a variety of warrior cultures (the Scythians, Celts, or Germans). Numerous warrior-dominated polities vied with each other in Archaic Italy, but one of them, sitting on a ford of the river Tiber, ultimately rose to be the greatest military power produced by the ancient Mediterranean world: Rome. The Roman legions first won and then ensured the security of a Mediterranean-wide empire that stood for 700 years and evolved ultimately into world's first standing army of professional volunteers. The Roman military system holds our attention for the final third of the course. The course defines warfare broadly to include both tactical and strategic, as well as cultural and ideological, matters. Even this canvas is too vast to be surveyed in all its richness, so the major themes explored are: (i) what is war, where does it come from, and how did it change as civilization spread?; (ii) in what ways did warfare develop in the periods under study, in terms of strategy, tactics, and weapons technology?; (iii) how do different warfare practices reflect essential facets of the various cultures under consideration?

HIST 181: Introduction to the Middle East

3 Credits

The course offers a survey of the history of the Middle East from the rise of Islam to the present day. The course introduces students to structures of power, society, and economy in three distinctive periods: 1) the rise of Islam and the caliph era; 2) the pre-modern Ottoman era; 3) the modern era. The course also introduces students to some of the art, architecture, and literature of each period. Students will thus gain some depth in each period of history and acquire a broad view of change over time.

HIST 182: Asian Trade: Economy, Industrialization and Capitalism in Asia

3 Credits

An historical overview of economy, industrialization, globalization and capitalism in Asia from the 16th century to present. ASIA (HIST) 182 Asian Trade: Economy, Industrialization and Capitalism in Asia (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. Asian economies have experienced spectacular growth in the second half of the 20th century. But this growth is part of a longer story of Asian commerce and trade and its relationship to and integration with (and, in some cases, isolation from) global patterns of exchange. Moreover, these exchanges are best understood alongside the politics, society, and culture—sometimes local, sometimes regional—that shaped trade and business in entrepots, capitals, and hinterlands throughout Asia. This course begins with a historical exploration of the economic development and social change and ends by asking what lies in store for one of the world's fastest growing economic regions. By offering a historical frame for Asian economic experience, students will gain insight into the strengths and weaknesses of prevailing theories that tend to overstate centralized control, market mechanisms, and cultural determination. Asian economies and markets are quite diverse, consisting of emerging and mature markets, making it difficult to view them through a single lens. As a result this course seeks to introduce students to a variety of conceptual frameworks in these countries. Examinations of the major economic players China, India, and Japan form the backbone of the course, but the precise geographic emphasis will vary with instructor, and may also include discussions of Japan, Korea, Vietnam, Singapore, Indonesia, Taiwan, and other Asian states. Themes of the course will vary depending on instructor, but may include industrialization, sustainability and the environment, gender and labor, protest and political reform, and consumerism and advertising, among others. The course will also offer a general introduction to economic theories that underpin the concepts of globalization, capitalism, and socialism as they are understood in an Asian context. This course is intended as an introduction to Asia for those with particular interests in Business, Economics, Global Studies, Labor, and/or Government. Through weekly readings, films and class discussion students will be introduced to the development of Asian economies in the global context.

HIST 183: Gender, Family, and Society in East Asia

3 Credits

This course tracks the changes in East Asian gender roles, relationships, and family life from 1800 to the present, placing private life at the center of the history of China, Japan, and Korea. Among the topics covered are the examination of gender and family life in early modern East Asia, considering topics such as marriage customs, the cult of female chastity, birthing practices, male-male sexuality as well as tracing the remarkable shifts in gender and private life in East Asia beginning in the nineteenth century and continuing to the present. The course will likely also cover issues such as women's liberation, changing expectations for courtship, marriage and sex, homosexuality, cross-dressing and androgyny, gender and revolution, and the state's role in regulating sex and procreation.

HIST 184: Society and Culture in the Pacific War

3 Credits

This course examines will explore the origins, nature, and consequences of World War II in the Pacific. Moving beyond the common American focus on the war as a U.S.-Japanese conflict, it will explore the different nations, political movements, ideologies, and empires that clashed across Asia-Pacific from 1931 to 1945. Topics include the culture and society of modern Asia in the periods immediately before, during and after the Pacific War. This course looks at social and historical roots of the war across Asia from the 1890s to the present to better understand the causes of the war and the affect it had on people throughout Asia.

HIST 186: The Silk Roads

3 Credits

Taking cross-cultural communication and connectivity as its central themes, this course explores the central role that the silk roads and Indian Ocean maritime routes have played throughout Eurasian history. The course provides a historical survey of the land and sea routes and networks connecting Europe and Asia, the peoples and cultures that flourished along these routes, and a variety of exchanges that took place by way of these routes. The course develops insight into trends and patterns over a long period of history, from ancient to modern times; the course also focuses on distinctive periods of history when patterns were

disrupted and reformed, and when relationships changed among the peoples and states involved in the silk roads and maritime routes.

HIST 187: Global Taiwan

3 Credits/Maximum of 3

This course examines the historical, cultural, and ethnic dimensions of Taiwan over several centuries to the present day. Taiwan's rich history and important economic role in contemporary East Asia clashes with its exclusion from international organizations like the UN and WHO and resultant international isolation. This class will examine the history and culture of Taiwan to better understand how it got here and where it might go. Topics covered will include the Dutch incursions in "Formosa," Japanese colonization, years of military dictatorship and cross-straits tension, rebirth as one of the four "Asian Tiger" economies, and its current rowdy democracy and warming ties with the People's Republic of China. We will also explore the literature, film, and culture of this multi-ethnic, multi-lingual, and multi-cultural island.

Cross-listed with: ASIA 187

HIST 188: Tibet: People, Places and Spaces

3 Credits

Few places generate as much curiosity, interest, or controversy, in the Western mind than Tibet. This course examines Tibet from a variety of perspectives from Tibet's political unification under a single ruler in the seventh century up to Tibet's incorporation into the People's Republic of China in the latter half of the twentieth century. Adopting a Tibet-centered focus, this course examines three core dimensions of Tibet namely its people, its religion and its strong sense of place to allow for a more nuanced and comprehensive understanding of Tibet to emerge. No background or specialized knowledge about Tibet is expected though a willingness to read primary documents on a variety of religious, ethnic and political themes will be quite useful. In this course students can expect to gain an appreciation for how religion, history and politics contribute to contemporary portrayals of Tibet, Tibetans and their society.

HIST 194: Jerusalem: Sacred and Profane

3 Credits

Jerusalem, a city sacred to Judaism, Christianity, and Islam, is often depicted as the spiritual and physical center of the world. Throughout its 5000-year history, Jerusalem has attracted diverse cultures, empires, and peoples who have vied for control of this city that is both religiously significant and a very ordinary site of urban life. Jerusalem: Sacred and Profane surveys the archaeological, religious, cultural, political, social, and historical record of Jerusalem in the ancient, medieval, and modern periods. We will explore a series of themes in the city's history: the built urban environment, political power in and over the city, sacred sites and pilgrimage, the everyday experiences of Jerusalemites, the changing cultural meanings of the city across various religious and national traditions, and war, violence, and memory in the urban landscape. The significance of Jerusalem's past, its impact on contemporary society and politics in the modern Middle East, and differing visions for this contested city's future are examined in light of various interpretations of the historical evidence.

Bachelor of Arts: Humanities

United States Cultures (US)

HIST 203N: History of Monsters, Aliens & the Supernatural

3 Credits

HIST 203N course considers the role of the supernatural and otherworldly forces in a variety of human societies. The course focuses on narratives of the supernatural/anomalous, as well as the social power that such stories can afford their tellers, who may include poets, writers, filmmakers, journalists, and camp counselors, among many others. Students will read and analyze texts from history, folklore, anthropology, and popular media. A primary tool for describing and understanding the supernatural in human history is ethnography; as such, ethnographic texts dealing with the supernatural will also form an important component of the course, and students will have the opportunity to conduct ethnographic research of their own. In all cases, supernatural beliefs will be considered in their social contexts, rather than as texts divorced from the lives of groups and individuals.

HIST 210: Freedom's First Generation: African American Life and Work, from the Civil War to World War II

3 Credits

HIST/AFAM 210 explores the context and events that shaped African American life during the post-abolition period from the U.S. Civil War until WW II. The course begins with a comparative examination of the decline of African slavery and of emancipation throughout the Americas, and then focuses on Black lives in the United States. The course explores a wide range of topics, including: Black identity in the U.S., the criminalization and disposability of Black bodies, Reconstruction, Jim Crow Laws, lynching, forced labor, the rise of African American leadership, gender and reproduction under slavery and in freedom, the development of protest strategies, the impact of industrialization and urbanization, and the significance of African American culture and art.

HIST 211: Slavery and Freedom in the Black Atlantic

3 Credits

This course examines the history of African and Afro-descended people throughout the Atlantic world from the 15th through the 21st centuries. Historical topics include African societies before and after the advent of European trade systems, the Atlantic Slave Trade, the role of enslaved Africans in the conquest, establishment, and independence of the Americas, and the role of free and freed Afro-descended people in resistance, in service, and as citizens of American colonies and nations. This course compares and contrasts the systems of slavery that appeared throughout the Americas, the resistance that developed against these systems, and the nations that developed out of these institutions.

HIST 212N: Earthquakes and Human History

3 Credits

A natural disaster is the result of a natural hazard impinging upon human society. In this course we examine seismicity as a geophysical phenomenon and as a natural hazard that interacts with the built environment and the social structures of human societies. Whenever possible, we approach this subject historically. Among other topics, we examine the history of how earthquakes have been understood as well as the impact of earthquakes and seismicity on the history and development of certain societies. Our specific perspectives include: Earthquakes as understood by modern and contemporary earth science Major conceptions of earthquakes in the past Impacts of seismic hazards on the built environment of past societies Impacts of seismic hazards on politics, economic development and social policies of past societies Seismic hazards, earthquake-related technology, and contemporary societies By examining earthquakes in these ways, the study of earthquakes becomes a vehicle for enhancing skills in analytical reasoning. In particular, this course focusses on applications of modern scientific analysis and the approaches commonly employed in historical investigation. Specific skills addressed in this course include, processing and quantifying information, problem solving using evidence and sound reasoning, and expressing ideas with clarity. Immersion in the study of earthquakes affords an opportunity to think more broadly about how people have dealt with natural disasters in the past and to explore the roles that science, technology, and social policy play in defining and addressing natural hazards in contemporary societies and in the future. Class meetings include lectures, discussions, and in-class activities. We analyze scientific observations that have led to increased understanding of earthquakes, earthquake hazards and risk. We also make extensive use of case studies as concrete examples of different types of earthquakes, the historical evolution of ideas about earthquakes, and the range of social impacts of earthquakes. Reading assignments provide essential background for class sessions.

HIST 213Y: African American Women's History

3 Credits

This course examines the social, political, and economic history of African American women in the United States from slavery to the present. Using secondary and primary sources along with film and discussion, we will explore the varied lived experiences of African American women paying special attention to the themes of family, sexuality, labor, politics, and religion. We will examine how the simultaneity of racial and sexual oppression influence African American women's actions. Additionally, we will consider dominant images of African American women in a historical context. While the course is primarily discussion in format, the professor will lecture when necessary. As the course is writing-intensive, papers of various lengths constitute the bulk of student assessment.

HIST 238N: Society and Culture in Palestine/Israel

3 Credits

The course provides students with basic knowledge on major topics in Palestinian and Israeli societies and cultures with a thematic analysis of these topics. It examines the encounter between Palestinians and Israelis from a perspective that questions our ability to understand them separately and it emphasizes interdependency between the Israeli-Palestinian conflict and internal tension within Palestinian and Israeli societies. Some of the major themes under discussion are: the place of religion in defining national identities and boundaries, intra-ethnic divides, competing discourses of citizenship, the fragile status of Palestinian citizens and non-citizens under the Israeli control system, struggles over collective memory, and the place of gender and sexuality in the conflict. The course emphasizes the intersection of politics and culture, demonstrating the political relevance of cultural fields such as music, cinema, and sports.

HIST 240Q: Artistic Patronage in Europe

3 Credits

This course surveys the institutions and social networks in which European fine arts were created, consumed and critiqued. Beginning with the medieval period and ranging to the early 20th century, the course will examine the variety of communities where public and private often intersected and which sponsored innovations in the arts. Often indexing social movements and political change, such communities include convents and cathedrals, royal academies and courts, coffee houses, salons, and theaters. Artists, performers, patrons, politicians, journalists, and others collaborated and competed in these spaces. Such communities could embody political and economic power, or foster resistance to it. This approach to the history of the arts in western culture puts the focus less on the individual creative genius of great composers, writers, painters, and sculptors, and more on the social exchanges and institutions that sponsored and received their work. Such an approach brings to light particularly the ways in which women played significant roles in the production and reception of culture: as salon hostesses, patronesses, and divas, women often enabled and enacted cultural production. Some examples of particular units of study might include: the German convent of Hildegard of Bingen (1098-1179), where monophonic chant and allegorical morality plays developed; the Mantuan (Italy) court of Isabella d'Este, the first lady of the world, (1474-1539) where the roots of the madrigal began and where notable painters found support and sponsorship; the French salons of Mme. Geoffrin (1699-1777) and Mme. de Staël (1766-1817); and the student residences in Madrid where avant-garde writers and artists interacted. Each unit will also consider the relationships between the aesthetic norms and values of a period and the economic and political realities of sponsorship. The course will require that students attend at least one musical performance or concert held on campus during the semester and complete a brief writing project based on that experience. This requirement will encourage students to think about their own university as a contemporary space of cultural sponsorship.

HIST 245: Middle Eastern Cities

3 Credits

This class explores the history of Middle Eastern and North African cities in the 19th-21st centuries. Cities are more than an agglomeration of buildings and bodies; they are also sites of tremendous political, economic, social, and cultural meaning, contestation, and change. The class focuses on the intersection of various urban settings (house, market, street, neighborhood), themes (sacred spaces, gender in the public sphere, sectarianism), and historical forces (nationalism, colonialism, war, revolution). The class draws on a wide range of primary sources such as memoirs, music, poetry, literature, and film, as well as

multidisciplinary scholarship in history, anthropology, sociology, and architecture.

HIST 250: Introduction to the Caribbean

3 Credits

A survey course exploring the emergence and historical evolution of the modern Caribbean. This course will explore the evolution of the Caribbean region from the eve of the arrival of Columbus to the 21st century. It will explore Indigenous societies prior to the arrival of Columbus and the interactions that lead to their destruction and the consolidation of European colonial empires. We will explore the coercive labor systems that emerged in the region including indentureship, Indigenous enslavement, transportation of Europeans, the establishment of African slavery, and the establishment of the plantation system that defined the region until the 20th century using both free and unfree labor to maintain its dominance in these island societies. Themes examined will include revolutions in Haiti and Cuba, the struggle for independence, slavery and racial hierarchy, the rise of U.S. neo-colonialism and hegemonic control in the region, nationalism, tourism, and the economic underdevelopment that defines the Caribbean until today.

HIST 252: Revolutions in the Middle East

3 Credits

The "Arab Spring" of 2011 that spread rapidly across the region and featured movements for democratization, social justice, and minority rights collapsed into authoritarian military rule, struggles over the role of political Islam, sectarian and civil violence, massive refugee flight and urban destruction, and outside intervention. This course places the 21st century Middle Eastern revolutions and their aftermath in a broader historical perspective. What were the political, economic, religious, social, and geopolitical factors that contributed to the outbreak of revolution throughout the region? In which ways were these revolutions new, and in which ways were they extensions of earlier, unresolved struggles? How can we understand the distinct trajectories of revolution and counter-revolution across the region? We will focus on several country case studies framed against their late 19th and 20th century histories. The class integrates extensive interdisciplinary and multi-media sources, including novels and memoirs, movies and songs, websites and twitter feeds.

HIST 255N: History of the Book

3 Credits

HIST 255N studies the global history of the book broadly conceived, from oracle bones to "born digital" materials. The course will examine major developments including the invention of parchment and paper, the prevalence of woodblock printing in East Asia, the influence of printing in early modern Europe, Latin American writing systems, and the rise of the world wide web. Major themes include book-making technologies, the interplay of form and decoration, the social impact of printing, and the social context of reading practices. Students will combine course readings with hands-on experience examining materials in the Penn State Library's Special Collections and the Palmer Museum.

HIST 260: The Middle East in Film

3 Credits

Through the medium of film, HIST/JST 260 examines the contemporary and historical transformation of the Middle East from the Ottoman period, through the British and French mandates, and the eventual establishment of the modern nation-states. This course analyzes the political-religious-social tensions of this region, and through film illuminates many of the conflicts in a different light. This course engages in specific film define certain moments in the contemporary history of the Middle East. The films reveal the culture perception of politics, the Arab-Israeli conflict, views on and of religious and ethnic minorities, women and gender issues, carious elements of political Islam, and the generational shift in politics and culture. The course will watch, analyze and engage in films (with subtitles) from - among other states - Iran before and after the revolution, Turkey, Israel, Palestine, Egypt, and Tunisia.

HIST 266Y: Sexuality and Violence in Nineteenth-Century America

3 Credits

HIST/WMNST 266Y explores the social and cultural history of sexuality and violence in the United States during the nineteenth century. Both

sexuality and violence are extremely broad topics, and the course will focus on a few intriguing elements of sexuality and violence, including courtship, prostitution, the early popular culture of sports, slavery, military violence, exploitative journalism, and sexuality and violence as metaphor. The course also examines the "creation" of homosexuality in the nineteenth century, and manner in which masculinity has been historically constructed.

HIST 292N: Witches and Witchcraft from the Middle Ages to the Present

3 Credits

This course will explore the social and cultural history of witches and witchcraft from the late Middle ages in Europe and the U.S. to the present. The very nature and broad scope of the topic lends itself to an interdisciplinary approach that combines history, folklore, religious studies, criminology, women's studies, art history, English literature and popular culture. Historically, real individuals were accused of witchcraft and suffered persecution and punishment accordingly. Others proclaimed themselves to be witches and the practice continues to attract adherents today such as in the modern Wiccan movement. However, modern consensus views witches as fictions: figures of magical power in folklore, literature, visual art and popular culture. From Shakespeare's Macbeth to the characters in the popular Harry Potter books and films, fictional witches have haunted European and American culture for centuries. This course will explore the complex interplay of fact and fiction in the history of witches and witchcraft. In other words, how do fictions become powerful enough to inform history? The course will also focus on the historical status of witches as a source of power outside of, and in opposition to, established political, religious and social structures. Since those accused of witchcraft were predominately women, how has witchcraft functioned as a means of empowerment for women as well as a tool for their persecution? And how has the representation of witches influenced attitudes towards women both historically and today? The course will begin with an historical inquiry into the belief in witchcraft during the late Middle Ages in Europe and the social and cultural role witches played in society. We will look at texts such as the Malleus Maleficarum (Hammer of Witches) published in 1486 as a guide for hunting and destroying witches, as well as studies on the more constructive role witchcraft may have offered women and communities. The course will be organized chronologically and move back and forth between history, such as the Salem witch trials, and the representations of that history in art, literature and film. Particular emphasis will be placed on the visual arts, from the engravings of German Renaissance artists such as Albrecht Durer and Hans Baldung Grien, the gothic paintings of Francisco Goya during the Romantic period, to contemporary artist Louise Bourgeois' monument to those executed as witches in Norway. The course will end with analysis of images of witches in popular culture, movies and television, and with a discussion of the modern representations of the domesticated witch and the femme fatale.

HIST 302W: Undergraduate Seminar

3 Credits

Thematic or topical investigation; emphasis on historical criticism and analysis. HIST 302W Undergraduate Seminar (3)(BA) This course meets the Bachelor of Arts degree requirements. The principal aim of the course is to assist in training History Majors in writing, analysis, and criticism by pursuing the study of one historical topic in detail. The precise contents of the course may vary in accordance with the teaching and research interests of the instructors. The course is not a conventional lecture course. It is, instead, designed in the seminar format with emphasis on discussion, sequential writing assignments, and further developing the core skills of the historian. Several features reflect its writing intensive designation. The course requires a series of writing exercises (with on-going instructor feedback), attention to relevant methods of research, all leading to the production of a final seminar paper. The final paper should effectively advance a reasoned argument derived from multiple sources (a portion of which must be primary sources when the historical topic permits).

Prerequisite: 4th semester standing
 Bachelor of Arts: Humanities
 Writing Across the Curriculum

HIST 305Y: Middle East Studies Research Workshop

HIST 400: Global History of Food and Famine

3 Credits

This course examines different case studies of agriculture, food production, and food availability in diverse settings to show how access to food and its denial intersects with ethnic and nationalist politics, imperial and colonial encounters, and global asymmetries. The course reveals the close association of food to social and cultural identities and to conflicts in a global history framework. Spanning case studies from the Irish Potato Famine of the mid-nineteenth century to the Russian Famine of early twentieth century to the Bengal Famine of mid-twentieth century, the course focuses on disparity in access to food for social classes. It focuses on discrete social classes (landlords, farmers, labor, women), but also on modernizers, agronomists and scientists, on state, and on global diplomacy and developmentalist perspectives in the post-World War II era to show the embeddedness of food production and consumption in social relations and in emergent political economy contexts.

HIST 402N: Russian Economic History

3 Credits

Russia is the largest country on earth. It has had a major influence on world events, especially during the Soviet period. The Soviet period represents the greatest economic experiment ever undertaken. Russia has had a vast imperial experience, and its economy has proven capable of producing nuclear weapons and space exploration. Yet, its economy remains dependent on natural resources. Russia is a literary, nuclear and geopolitical superpower but not an economic superpower. This juxtaposition is unique. The aim of the course is to provide a review of Russian economic history together with main concepts explaining the peculiarities of economic and institutional development of the country. The course combines historical narrative with formal economic analyses. We will utilize both an economics and a history perspective. We will explore the development of the Russian economy in the Tsarist period, the abolition of serfdom and Russian industrialization before the Russian Revolution, and we will explore the economic history of the Soviet period. We will also explore the interaction of economic history with social history. The course will conclude by examining the myriad economic and social difficulties encountered in transitioning from a socialist to capitalist economy.

HIST 403: Alexander the Great and the Hellenistic World

3 Credits

The career of Alexander, his impact on his own time, and the Hellenistic legacy.

Prerequisite: HIST 100
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 404: Advanced Public History

3 Credits

Public historians build essential bridges between ordinary citizens and the knowledge and understanding of the past required by any self-governing society. Knowing how time has acted upon a society, how things came to be the way they are, helps individuals and groups move toward where they want that society to go, what they want it to become. This class will lay the groundwork for what is expected of public historians in the many professional settings available to them, which include museums, art galleries, national parks, historical societies, non-profit organizations, park and recreation commissions, historic homes, battlefields, foundations, corporations, government departments, preservation organizations, archives, libraries, living history organizations, tourism councils, convention and visitors' bureaus, and universities. This course allows students to experience of some of these roles and places, and more importantly, to develop a lived sense of how they all can fit together in an individual career. The course does this partly in the classroom and partly through direct engagement with doing public history, well-supported by faculty and classmates. The course invites students to meet public historians and to participate in the public history process - mobilizing accurate history to stimulate emotions that then produce citizen engagement. The heart of public history practice involves sharing authority with audiences and confronting the line between entertainment and education. The first several weeks of the course introduce students to specific elements of practice and examples of public history, followed by an extended public history work project that can be actual and/or virtual. After the completion of the project, students gather to reflect on their practice and develop a deeper theoretical understanding of what they have come to know. Together, the three sections of the course create the capacity, and the motivation, to become active public historians either as professionals or as participants in the communities students will encounter in their own lives.

HIST 409Y: Antisemitisms

3 Credits

Surveys the history of anti-Semitism from antiquity through the Middle Ages to the present. HIST (J ST) 409Y (RL ST 407Y) European Anti-Semitism from Antiquity to the Present (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course analyzes major episodes in the history of anti-Semitism and tries to clarify the motives and dynamics involved. It seeks to understand what these episodes have in common and what is unique in each case—is there a single universal, eternal antisemitism? Or are there rather 'anti-Semitismisms' each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates? We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire's essays, German philosophical texts from Kant to Marx, Wagner's racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher. The major part of the grade will depend on a short research paper which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course

to J ST/HIST 416 (Zionist History) and J ST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category.

Bachelor of Arts: Humanities

International Cultures (IL)

Writing Across the Curriculum

HIST 410: Jews in the Medieval World

3 Credits

Trends in medieval Jewish society under Islam and Western Christendom. HIST 410 HIST 410 Jews in the Medieval World (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. The Jews lived in widely scattered communities under Christian and Islamic rule in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new conditions they encountered in Europe and the Mediterranean region from the ninth to the fifteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students' skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-a-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression. Students will be evaluated on the basis of two mid-term exams (the first after the survey of the Muslim world, the second after the examination of the Franco-German region) and a comprehensive final exam. The course will be linked to most of the courses taught in the field of Jewish Studies, especially J ST 111 (Early Judaism), J ST 114 (Modern Judaism), and J ST 118 (Modern Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258). The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major. It will be offered once a year with an enrollment of approximately 60 students.

HIST 412: Intellectual History of the Middle Ages

3 Credits

Intensive study of selected topics, such as philosophy, mysticism, heresy, the church, literary and artistic expression, and science.

Prerequisite: HIST 107

Bachelor of Arts: Humanities

International Cultures (IL)

HIST 413: Medieval Celtic Studies

3 Credits

Celtic civilization from antiquity to the end of the middle ages.

Prerequisite: 3 credits in medieval studies, or in language, literature, or European history of the medieval period

Cross-listed with: MEDVL 413

Bachelor of Arts: Humanities

International Cultures (IL)

HIST 414: Renaissance and Reformation

3 Credits

The transformation of consciousness from medieval to modern times, with special emphasis on Renaissance Italy and Reformation Germany.

Prerequisite: HIST 001

Bachelor of Arts: Humanities

International Cultures (IL)

HIST 416: Zionism

3 Credits

History of Zionist thought and politics to the foundation of Israel 1948.

Cross-listed with: JST 416

Bachelor of Arts: Humanities

HIST 417: The Age of Absolutism

3 Credits

Seventeenth- and eighteenth-century royal absolutism in France, Prussia, and Austria; concurrent economic, social, and scientific developments; the Enlightenment.

Prerequisite: HIST 001

Bachelor of Arts: Humanities

International Cultures (IL)

HIST 418: The French Revolution and the Napoleonic Era

3 Credits

Development of revolutionary France and the First French Empire and their impact on Europe from 1789 to the Vienna settlement.

Prerequisite: HIST 002

Bachelor of Arts: Humanities

International Cultures (IL)

HIST 420: Recent European History

3 Credits

Impact of two World Wars in twentieth century; social conflict and economic catastrophe; political radicalism; post-1945 recovery and cooperation.

Prerequisite: 3 credits in European history

Bachelor of Arts: Humanities

International Cultures (IL)

HIST 421: The History of European Women

3 Credits

European women's lives from the Middle Ages to the present.

Prerequisite: HIST 116 , HIST 117 , WMNST100 , or WMNST106

Bachelor of Arts: Humanities

International Cultures (IL)

HIST 423: Orthodox Christianity: History and Interpretations

3 Credits

Examines Orthodox Christianity from origins to present using critical historical analysis of primary and secondary sources. RLST 423 / HIST 423 Orthodox Christianity: History and Interpretations (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course examines Orthodox Christianity from its origins to the present by focusing on a series of four major problems using critical historical analysis of primary and secondary sources.1) The course provides students with the means to examine Orthodox self-understanding:Orthodox doctrine of God, its anthropology. 2)The issue of a world religion and the relationship of Orthodoxy to other world religions and secular authorities and other forms of Christianity, especially "western"Christians. 3) The challenge of alternate world religions--Judaism, Islam, western Christianities. 4)The challenge of modern Orthodoxy in the context of twentieth and twenty-first century developments and issues.

Prerequisite: HIST 105

Cross-listed with: RLST 423

Bachelor of Arts: Humanities

International Cultures (IL)

General Education: Humanities (GH)

HIST 424: Comparative History of Sports and Politics

3 Credits

Although sport is popularly considered as a sphere separate from other aspects of social and political dynamics, this course illustrates the contrary reality that both active and passive involvements in competitive

sports have taken part in shaping and undermining social structures, political mobilizations, collective identities, patterns of domination, and more. This course takes a global and comparative perspective to follow the processes through which national, racial, ethnic, civic, religious, local, and gender identities have been constructed by sport. Special emphasis is given to: the relation between sports, colonialism, and anti-colonialism; sports as a political battleground for the production of meanings in ethno-national conflicts and colonial contexts; the importance of sport in deeply divided societies; and the implications of sport globalization on various collective identities. Theoretical themes are illustrated through various particular case studies from around the globe, including North America, Latin America, the Caribbean, Europe, Africa, India, the Middle East, and Papua-New Guinea.

Prerequisite: 3 credits in HIST
Bachelor of Arts: Humanities
Bachelor of Arts: World Cultures
International Cultures (IL)

HIST 425: History of the Incas

3 Credits

This course examines the political, social, cultural, environmental and religious history of the Incas and their Andean subjects from the 15th century to the present. Via written and visual primary and secondary sources, the course explores how the Incas built the largest Indigenous empire of the Americas, and how their descendants and subjects experienced that empire's 16th century invasion and takeover by Spain's conquistadors, surviving to shape the world's adoption of their environmental innovations. The course will then survey how Incas and Andeans rose up against Spain in the 18th century, and in the 19th through 21st century fought against their economic marginalization by collaborating in the resurrection of the Incas as national, archaeological, and touristic ancestors in republican Peru, Bolivia, and Ecuador, with varying success.

Prerequisite: 3 credits in HIST
Bachelor of Arts: Humanities
Bachelor of Arts: World Cultures
International Cultures (IL)

HIST 426: Holocaust

3 Credits

This course is an in-depth study of the history of the Holocaust in Europe that puts special emphasis on primary sources. HIST 426 / JST 426 Holocaust (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The Holocaust stands out as the most terrible and challenging phenomenon of the 20th Century. Societies and the scholarship struggled for decades to fully grasp how much the Holocaust has questioned widely shared assumptions about modernity and progress. This course pursues the overarching question how the Holocaust could have taken place. Who were the perpetrators, victims and bystanders? How much agency did they have? How was the Holocaust organized? The course will encourage students to critically engage with the Holocaust, and will consider a variety of different kinds of sources and means of representation, including oral testimony, film and fiction, as well as more conventional documentation. After discussing some of the most important studies about the Holocaust and identifying the main historiographical debates, students will look at the origins and the evolution of the "Final Solution." The class will touch on the function of the "Ghettos," the role of the mobile killing

units, the extermination camps, and Jewish resistance. The course will also deal with Jewish responses to the Holocaust, notably with attempts to enable Jews to emigrate to safe countries; with efforts to alert the public to the systematic killing after 1940; and the support especially of American Jews for Jewish survivors and DPs. Apart from discussing the historiography, students will work mostly with primary sources. Students are expected to do extensive reading for this class and prepare oral presentations on their respective paper topic. The research paper for this course will be based largely on primary sources. Apart from discussing the historiography, the sessions will concentrate on the interpretation of primary sources: - documents created by the perpetrators, bystanders, and victims; - files relating to postwar trials of perpetrators; - photographs; - representations of objects relating to the Holocaust; - memoirs by survivors; - interviews with survivors and bystanders.

Prerequisite: J ST 010 , J ST 121 , or by consent of the program
Cross-listed with: JST 426
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 427: Germany Since 1860

3 Credits

Bismarckian power-state; rise to economic dominance; welfare and warfare under Weimar republic and Hitler; post-1945 reconstruction and democracy.

Prerequisite: 3 credits in European history
Bachelor of Arts: Humanities

3 Credits

Bismarckian power-state; rise to economic dominance; welfare and warfare under Weimar republic and Hitler; post-1945 reconstruction and democracy.

Honors

HIST 428: The Darwinian Revolution

3 Credits

The origins and implications of evolutionary theory.

Prerequisite: an introductory science course and a history course
Cross-listed with: STS 428
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 429: Europe in the Age of Nationalism, 1789-1914

3 Credits

Emphasizing the role of nationalism in European cultural, diplomatic and imperial developments; concurrent economic and social changes.

Prerequisite: HIST 002

HIST 430: Eastern Europe in Modern Times

3 Credits

Influence of geography, economic conditions, and nationalism upon the Eastern European and Balkan peoples; Pan-Slavism, conflicting interests of the great powers.

Prerequisite: HIST 001 or HIST 002

Bachelor of Arts: Humanities

International Cultures (IL)

HIST 431: Black Liberation and American Foreign Policy

3 Credits

This course deals with American foreign policy and Black liberation in Africa since 1945. AFAM 431 / HIST 431 Black Liberation and American Foreign Policy (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. Black Liberation and American Foreign Policy in Africa since 1945 presents an interdisciplinary approach to the study of American foreign policy in Africa. Course readings will consist of both secondary and primary sources to explore the evolution of American policy toward the continent over the last half-century, and the meaning of the American engagement with Africa for American politics and society. The course will also examine the reasons that Africa has served as a focus of concern among African Americans both prior to, and, over the period 1945 to the present. Of particular concern will be the ways in which American policy has reflected pressures from African Americans as a constituency in foreign policy. The focus of the course will be student-centered written research and discussion. Students will be required to select topics from the course outline for presentation in class with the instructor serving as the moderator of discussion and guide to relevant research materials. Students will be encouraged to use both primary and secondary sources for their research. Students will be expected to prepare two individual written presentations which will serve as the basis for class discussion (30% of the grade), a book review (10% of the grade), and a research paper of 15 pages (40% of the grade) on a topic drawn from the areas identified in the course outline. The final 20% of the grade will be awarded for participation in class discussion.

Prerequisite: 3 credits in African history; 3 credits in African political science; or 3 credits in American political science

HIST 432: Between Nation and Empire: The Caribbean in the 20th Century

3 Credits

An exploration of the political evolution of the Caribbean Region over the course of the 20th Century. HIST 432 / AFAM 432 Between Nation and Empire: The Caribbean in the 20th Century (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will explore the political evolution of the Caribbean Region over the course of the 20th century. Its focus will be the ways in which imperial rule and the search for national identity have been the parameters that have shaped Caribbean political history over that period. Students will explore, in written assignments and class presentations, the ways in which the region which has historically been a theatre of confrontation among the major powers in the international system continued to serve that role over the course of the 20th century. The costs that have been borne

by the people of the region from these conflicts have been enormous and crippling for several societies, especially Haiti, Cuba, Jamaica, and the Dominican Republic. Among those costs have also been the continued dependence of these societies upon human migration, limited economic strategies of transformation, increasing levels of poverty, and the emergence of a wide variety of political systems that reflect different historical experiences, demographic diversity, varying levels of political autonomy, and a remarkable level of cultural similarities. Evaluation will be based upon two class presentations; one research paper and class participation. The course will be required for students pursuing the African Diaspora minor and for those seeking to broaden their diversity requirements. It can be used to meet non-Western history requirements in the History major.

Prerequisite: HIST 250

Cross-listed with: AFAM 432

International Cultures (IL)

HIST 438: Great Britain 1867-Present

3 Credits

Social, economic, and political history of Great Britain from the mid-Victorian era to the present.

Prerequisite: HIST 001 or HIST 002
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 439: Women and the Holocaust

3 Credits

Analysis of women's experience in the Holocaust and exploration of the role of gender in Holocaust Studies. J ST (HIST/WMNST) 439 Women and the Holocaust (3) Most of the early study of the Holocaust focused almost exclusively on the experiences of Jewish men. It was men who wrote the first and most widely read Holocaust memoirs and men who produced the first studies of the Holocaust. The first question motivating this class is thus what we can learn from examining women's experiences. Is it possible that the ghetto, the camp, and the forest look different from women's perspectives? Are there factors we miss when we read primary documents written by only half of the participants in these historical events? Beyond this, however, our exploration will also lead us to look more broadly at gender as a category of analysis. What do we gain by bringing questions of gender to bear on our study of the Holocaust? Are there any ethical concerns that should inform our approach?

Prerequisite: J ST 010 or J ST 121 or HIST 121 or consent of program

HIST 442: The Early American Republic, 1783-1850

3 Credits

Confederation and Constitution; the Federalist and Jeffersonian periods; "the Era of Good Feelings"; "the Age of Jackson."

Prerequisite: 3 credits in American history
Bachelor of Arts: Humanities
United States Cultures (US)

HIST 443: Jewish Histories of the Middle East

3 Credits/Maximum of 6

Jews have been part of Middle Eastern societies for thousands of years. They flourished at times and endured hardships at others, but they have been part of every significant social and cultural transformation of the Middle East. In this class, students will discuss the significant contribution of the Jewish community to the development of various Middle Eastern societies throughout the centuries. Students will critically read and analyze primary sources and secondary literature. We will delve into national historiographies of places such as Morocco, Egypt, and Iran-to name a few-and seek to discover a nuanced narrative of Jewish histories of the region. We will also analyze popular culture products, such as documentaries, television, and literature. The course will follow a chronological and thematic order, and will examine Jewish history in conjunction with global and interregional processes in the Middle East and beyond, such as colonialism, imperialism, nationalism, relations with the West, the formation of the modern nation states of the Middle East, and the Israeli-Arab conflict.

Cross-listed with: JST 443

HIST 444: The United States in Civil War and Reconstruction--1850-1877

HIST 447: Recent American History

3 Credits/Maximum of 3

Contemporary economic, social, and political aspects of the United States and its role as a world power since 1945. AMST 447 / HIST 447 Recent American History (3) This course covers the history of the United States from the end of World War II to the present. Topics include but are not limited to the Marshall Plan, the Cold War, the Korean War, the rise of television, atomic power, the Eisenhower presidency, the Civil Rights and Women's Movements, the Vietnam War and protests, the space race, Watergate, the Reagan presidency, the two Iraq Wars, the Dot-com revolution, 9-11 and the War on Terror, and the Obama presidency. While addressing major historical movements, the course will also explore the culture of the period - art, literature, music, sports, television, religion, and film. Even though the course covers a relatively short span of years, students will see that American society has undergone dramatic changes in this period as the result of social movements, immigration, wars, political scandal, and technological innovation. The course will close by speculating on the current direction of the United States in light of the serious challenges the nation faces.

Prerequisite: HIST 021 , 3 additional credits in history, economics, or political science

Cross-listed with: AMST 447
Bachelor of Arts: Humanities

United States Cultures (US)

HIST 450: Constitutional History of the United States Since 1877

3 Credits

Constitutional developments from laissez-faire to the welfare state; imperialism, war, internationalism; the contemporary court, civil liberties, and civil rights.

Prerequisite: HIST 020 or HIST 021 , 3 additional credits in history or political science

Bachelor of Arts: Humanities
United States Cultures (US)

HIST 451: The Consumer Revolution

3 Credits

The origins and impact of American consumer society since 1870. HIST 451 HIST 451 The Consumer Revolution (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This lecture course shows how the United States became a nation of consumers from 1870 to the present. It is designed both for the business and communications student as well as the liberal arts major. The origins of department stores, name-brand goods, fast-food chains, modern advertising, and mass entertainment show us how American business and culture was transformed by the consumer revolution. We will explore how the automobile became the leading consumer good of the 20th century and analyze its impact on how Americans shopped. The rise of advertising and its linkage to home-based mass entertainment through the radio and TV will interest us. We will also consider how events like the Great Depression, World War II, the counter-cultural movement of the 1960s, the energy crisis of the 1970s, and the economic deregulation of the 1980s and 90s shaped consumer attitudes and advertising. " The Consumer Revolution" also briefly explains how American consumer culture has been globalized (with companies like Coca Cola, Disney, and Ford). The course also explores how new consumer goods shaped the experience of childhood, youth, family and home life, and retirement. In particular, we will consider how youth-oriented goods in fashion, foods, and entertainment created a unique youth consumer culture. Also important are the intellectual debates about the meaning and value of consumer society: Is mass consumption the real meaning of American democracy or is it a perversion of it? Are consumer needs unlimited and where does the desire for goods come from? Because consumer society seemed to threaten so many traditional values, we will also analyze movements for restricting consumption. We will consider the origins and impact of Prohibition, dieting and health food crazes, and movements to restrict advertising and sale of goods like cigarettes. In addition to lectures and visual presentations in class, students will read chapters from major studies of the above topics, some of which will be discussed in class. Grades will be based on performance in discussion and essay exams.

Prerequisite: three credits in history, marketing, or advertising

Bachelor of Arts: Humanities
United States Cultures (US)

HIST 452: History of U.S. Foreign Relations

3 Credits

History of U.S. foreign relations since 1789; emphasis on twentieth century.

International Cultures (IL)
United States Cultures (US)

HIST 453: American Environmental History

3 Credits

The history of the ways Americans have used and thought about the environment since 1500.

Prerequisite: GEOG 030 ; and HIST 020 , HIST 021 ; or 6 credits in the humanities or social sciences

Bachelor of Arts: Humanities
Bachelor of Arts: Social and Behavioral Sciences

HIST 454: American Military History

3 Credits

Development of U.S. military policy, 1776 to the present, emphasizing the conduct of our wars, interrelationship of civil and military authority.

Prerequisite: HIST 020 or HIST 021

Bachelor of Arts: Humanities
United States Cultures (US)

HIST 455: The History of Epidemics

3 Credits

This course introduces the history of epidemics from the 1300s to the present day through historical case studies from across the globe, including examples such as the Black eath; Smallpox; Cholera; Influenza; HIV/AIDS; Zika; and most recently, COVID-19. A central focus of the course examines how epidemic and infectious diseases, and human responses to them, have shaped the world history socially, politically, environmentally, medically, and economically to the present day. The analysis of written and visual primary sources, as well as secondary sources, allows this course to ask and answer questions about the experiences of women, men, and children who witnessed epidemics, treated the sick, lived and died during various epidemic outbreaks, and attempted to understand death and disease from a range of perspectives.

Prerequisite: 3 credits in HIST

Bachelor of Arts: Humanities
International Cultures (IL)

HIST 457: Hiroshima & the Holocaust in History and Memory

3 Credits

The history and memory of the Holocaust and Hiroshima and Nagasaki are often taught separately in different disciplines. This course will examine them together through the various ways different societies remembered, understood and commemorated these. Using the extensive

literature on the history of memory, this course further suggests ways in which these memories and histories affected and were entangled by each other. Specific content will vary according to individual instructor, but topics may include victim cultures, cold war nuclear history, trauma, human rights, dark tourism, memorials, architecture as well as the general impact of these tragedies on the fraught politics of memory in East Asia and the Middle East, or the way the memories of the tragedies were entangled with the civil rights and other struggles in American and global history.

Prerequisites: Three credits in JST, HIST, or ASIA

Cross-listed with: ASIA 457, JST 474
International Cultures (IL)

HIST 458Y: History of Work in America

3 Credits

LHR 458Y, "History of Work in America," a writing-intensive course, studies selected problems in the history of work in the United States. This course addresses economic, technological, social, cultural, and political aspects of employment and self-employment. Major topics of concern include methods of producing goods and services, work time, working conditions, the composition of the workforce, the changing functions of managers, the role of the state in shaping labor markets and regulating employment, the formation and actions of unions and other pro-labor organizations, and the relation of work to the family and other social institutions. In addition, students will undertake original research in primary sources and secondary literature, thereby learning something of historical research methods. The essay project is treated as a process, besides regular encouragement of students to submit a paper proposal, rough drafts, and a final draft. Students are advised that the instructor will read and comment on additional drafts as they care to submit. This section of LHR 458Y is a blended course. Some activities take place in the classroom, and other activities are conducted on Canvas.

Prerequisite: 3 credits in HIST or LHR or LHR 100 or 5th Semester standing

International Cultures (IL)
United States Cultures (US)

HIST 465: The Post-World War II Civil Rights Movement

3 Credits

The civil rights struggle and its impact upon American politics. AFAM 465 / HIST 465 The Post-World War II Civil Rights Movement (3) (US) This course focuses on the post-World War II Civil Rights Movement. It begins with a discussion of the "Long Civil Rights Movement," briefly looking at the roots of the movement in the labor movement and social struggles of the Great Depression and World War II. We then turn to the impact of World War II on African Americans, the growing militancy during the war, the struggles over segregation in the military, the growing role of blacks in the labor movement, and the growing link between African Americans and the rising anti-imperial movements that accelerated after the war. We discuss the role of African Americans in the Cold War and the struggles over the role of Communism and Socialism in the emerging Civil Rights Movement. The course is broken down into key topics of the movement years: the rise of localized grassroots movements all over the United States that were led by local people who sought to challenge school segregation, political disfranchisement, poor housing conditions, police brutality, and job discrimination. While legal disfranchisement and segregation existed solely in the southern states, the entire country practiced both and black people suffered the consequences universally. Much time is spent on the more famous southern civil rights movement, with discussions of the Emmett Till Murder of 1955; the Montgomery Bus Boycott and the rise of Martin Luther King, Jr. and the Southern Christian Leadership Conference; and the Little Rock Crisis of 1957. The beginning of the 1960s saw the creation of the Student Non-Violent Coordinating Committee and the emergence of key women leaders in the struggle such as Mrs. Ella Baker, Mrs. Fannie Lou Hamer, Mrs. Rosa Parks, and Mrs. Septima Clark, to name only a few. We discuss key moments in the 1960s, beginning with SNCC and CORE and the Freedom Rides, the SCLC in Birmingham and Albany; the March on Washington, the 1964 Mississippi Freedom Summer and the murders of Chaney, Goodman, Schwerner, and Medgar Evers; the 1965 Selma to Montgomery March, and the final passage of the 1964 Civil Rights Act and the 1965 Voting Rights Act. The emphasis on the southern struggle is on the local, ordinary people who achieved extraordinary things.

Bachelor of Arts: Humanities
United States Cultures (US)

HIST 466: Lesbian and Gay History

3 Credits

Critical exploration of the history of sexuality, focusing especially on the emergence of modern lesbian and gay identities. WMNST (HIST) 466 Lesbian and Gay History (3) (US;IL) This course will explore the relationships in different cultures and historical periods between the

dominant culture and homosexuals, whom the culture deemed, at different times, sinful, deviant, criminal or, more recently, a minority community. Students will confront the very nature of difference, and how it has been played out in European and American history. The course will challenge students to deal with how societies define difference itself; how they isolate or punish deviants; and how the creation of the 'homosexual' helped establish not simply difference but 'normalcy' in a highly sexualized modern culture. Finally, the course will explore notions of identity itself, focusing on the creation of a modern gay and lesbian identity and its impact on broader questions of gender, community, civil rights, and political discourse in the United States. An example of evaluation methods would be: course presented in a seminar format with grades based on class participation, brief analytical papers, and a longer research or historiographic paper.

HIST 469: Drugs and Drug Policy in the United States

3 Credits

Examines the history and dimensions of drug use and analyzes the impact of drug policy. CRIMJ 469 / HIST 469 Drugs and Drug Policy in the United States (3) For nearly a century, the United States has been waging its version of a hundred years' war on drugs, spending billions of dollars and incarcerating thousands of offenders while failing to significantly reduce the use of illicit drugs. This course examines drug use in a historical context while addressing the changing nature and dimension of drug use, including the pharmacology of drugs, patterns of drug use, and sentencing policies. Because drug control is inextricably linked to social, political, and public policy, the course will provide the student with a foundation for critical thinking and rational decision

making relative to the efficacy of the various drug control initiatives. Since drugs seemingly permeate every level of American society and directly or tangentially touch most Americans' lives, issues such as drug testing in the workplace, the use of drug courier profiles, legalized medical marijuana, and needle exchange programs are evaluated. Students will be expected to learn the pharmacology of various drugs, the history of drug use in the United States since the colonial era, the evolution of federal drug agencies, and acquire knowledge about contemporary drug issues. They also will be expected to develop and strengthen their critical thinking skills as they assess the consequences of implementing particular anti-drug policies and their impact on reducing the use of illicit drug use. An example of the evaluation methods would be: students will be evaluated on the basis of three exams and four "think pieces" (requiring students' critical responses to an assigned topic) scheduled throughout the semester. Class attendance also will influence the grade. Faculty Member Proposing Course : John C. McWilliams

HIST 472: The Ottoman Empire

3 Credits

This course examines the history of the Ottoman Empire from its origins to the rise of the Turkish Republic, an historical time period covering approximately 1300 to 1923. Each week, the class will focus on a major turning point or theme using a combination of regional case studies and primary sources. In the process, students will be exposed to ongoing historiographical debates about a variety of events and trends in Ottoman history. Topics covered include war, diplomacy, gender, architecture, science, religion, technology, and slavery. This course focuses on and examines how the Ottoman state evolved in a changing global context.

Prerequisite: 3 credits in HIST

HIST 474: Early Modern Japan

3 Credits

Japanese history from 1580-1880. ASIA 474 (HIST 474, JAPNS 426) Early Modern Japan (3) Japan's Tokugawa period can be difficult to grasp. It resembles a modern society in many respects but operated according to a logic of social organization different from that of most modern states. There was a collective sense of national identity, but its characteristics differed significantly from modern forms of Japanese identity. Moreover, modern ideologies have contributed to the characterization of early modern Japan as a rigid society and of the country as a whole having been isolated from the rest of the world. The main purpose of this course is to afford students the opportunity to study early modern Japan in detail and, insofar as possible, on its own terms. Through readings in primary and secondary sources, and through the evaluation of visual images, this seminar-style course will deepen students' knowledge of Japan and serve as basis for comparative study of other early modern societies. Although the course investigates classic areas of historical study such as institutional development and foreign relations, the emphasis is on social and environmental history. The course encourages students to think about a range of approaches to the past and to think about the ways our contemporary biases influence the ways we understand the past.

Prerequisite: HIST 172 , HIST 174 , JAPNS120 or JAPNS121

Cross-listed with: ASIA 474, JAPNS 426

HIST 475Y: The Making and Emergence of Modern India

3 Credits

India's transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle. ASIA (HIST) 475Y The Making and Emergence of Modern India (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course covers India's transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle. It begins during the early modern period, when European travelers encountered the flourishing Mughal Empire, and moves into the dynamic moment following, when the East India Company was one of various competing forces, both locally and globally. It then examines the rise of British power, and the various responses to it from collaboration to mutiny; the multiple development of nationalisms and anticolonialisms, including secular, socialist, Hindu and Muslim variations; the accompanying social reform visions, including caste abolition and feminism; the turbulent paths toward partition and independence, resulting in the postcolonial states of India, Pakistan, Bangladesh, Nepal, Sri Lanka, and Afghanistan. It then follows the continuing trajectories of these countries after independence, from the Nehruvian years to the neoliberal shift, with attention to emerging social movements and issues including caste and gender relations;

religious and separatist politics; struggles around land and development; urbanization, and labor migration. This course raises important questions about the nature of modernity and its relationship to global interconnectedness, the rise of capitalism and colonialism, industry and technology; while emphasizing South Asian social and cultural contributions and responses to these global shifts. By filling in the context of this part of the world to that global story, the course enables students to grapple with some of the major economic and geopolitical trends of the early 21st century.

HIST 477: American Military History to 1900

3 Credits

Development of United States military policy, 1776-1900, emphasizing conduct of wars, interrelationship of civil and military authority.

Prerequisite: 3 credits in history

HIST 478: American Military History Since 1900

3 Credits

Development of United States military policy in the 20th and 21st centuries, emphasizing conduct of wars, interrelationship of civil and military authority.

Prerequisite: 3 credits in history

HIST 479: History of Imperialism and Nationalism in Africa

3 Credits

A selective overview of the history of imperialism and nationalism in Africa. HIST/AFR 479 History of Imperialism and Nationalism in Africa. This course meets the Bachelor of Arts degree requirements. History/African Studies 479 will provide a selective introduction to major developments and issues concerning Africa's colonial and postcolonial history. The beginning of this course will concentrate on the meanings of imperialism and nationalism and the fact that there is no "single" African experience with either of them. This will be followed by a discussion of 19th and 20th century political history in specific contexts in North, East, West, and Southern Africa. The course concludes with a review of African decolonization and the most notable manifestations of recent nationalism on the continent. Special attention will be given to the methods of colonial takeover, methods of African resistance, the West's role in Africa, and Africa's formative role in the West. Religion, the military, and racial/ethnic identity politics will be recurring themes in the course. The actual time devoted to each topic and the sequence of topics will vary from instructor to instructor. The objective of the course is to introduce to the causes, nature, and consequences of modern imperialism in Africa. In doing so, students will receive a comprehensive history about a region of the world that is often misunderstood and misrepresented. Also, the course emphasizes critical thinking and analytical writing. The course will consist of polls, practice discussions, quizzes, response papers, and a final project. As a general education course, this class will provide an introduction to African political history for students of any major. Students majoring or minoring in History,

African Studies, International Relations, or Political Science will learn vocabulary and information that is basic to the field and broaden their knowledge of History.

HIST 480: Japan in the Age of Warriors

3 Credits

An overview of Japan from the 10th to 17th century, a period of political decentralization, cultural efflorescence, and social change. ASIA (HIST) 480 Japan in the Age of Warriors (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. By the eighth century, Japan had become a centralized state centered on the reign of a sovereign, commonly known in English as an emperor. At the end of the ninth century, the emperor's court relocated to the city of Heian (Kyoto), and soon thereafter, an elegant court culture developed in the capital. The courtly culture was based on civilian values and civilian rule. In the countryside, however, Japan was gradually becoming militarized. Local warlords began rising to prominence and vying with each other for power. One of them, Taira-no-Masakado, rebelled against the central government during the years 939-940, declaring himself "emperor" of several provinces in eastern Japan centered on Hitachi. Although the central government in Kyoto enlisted other warrior groups to put down Taira-no-Masakado's rebellion, the process of militarization was underway. Buddhist temples also participated in this process, using their wealth and influence to assemble monastic armies on occasion. This course examines Japanese history beginning approximately in the 10th century, at time when civilian high culture in the capital was approaching the height of its development. At the same time, the process of militarization of the countryside was beginning to undermine that civilian court culture. The course ends in approximately the seventeenth century with the establishment of a military government under the Tokugawa shoguns. This development was ostensibly the peak of warrior influence, with the samurai (=warrior) class entrenched by law as the elite group within society. However, just as the warriors began their rise to power in the tenth century, by the end of the seventeenth century they were rapidly losing influence and prestige to wealthy merchants as the forces of the market economy spread throughout Japanese society. HIST 480 is a course in medieval Japanese history, broadly defined. Different instructors will emphasize different aspects of Japanese history and culture during this era. Approaches to teaching will also vary depending on the instructor. Class sessions can take the form of lectures or discussions. Assessment methods and learning activities may include debates, discussions, exams, research papers, book review papers, and other similar academic activities.

International Cultures (IL)

HIST 481: Modern Japan Since 1800

3 Credits

The transformation of Japan from a relatively isolated, agricultural nation into a highly industrialized world power. ASIA (HIST) 481 Modern Japan Since 1800 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. In the late 19th century, Japan emerged from relative

seclusion and grew, within the period of a few decades, into one of the world's major powers. Japan's remarkable transformation into an imperialist power ended suddenly with defeat by the Allied powers in August 1945. But the history of prewar and wartime Japanese nation-building and economic growth set the stage for postwar rebuilding. This course examines Japan's development as a powerful modern state, imperialist aggressor, defeated nation, economic power-house, and pop culture super-power. Specific content will vary according to individual instructor, but may include the structures of state and society in the early 19th century, the creation of the Meiji state (1868-1912), the successes and costs of the Meiji government's program of rapid modernization and Westernization, imperialist expansion, the road to war and defeat in World War II, the postwar U.S. occupation of Japan (1945-1952), Japan's resurgence as a global power, and some of the major challenges facing the Japanese state and society today. The goals of the class are not only to gain an understanding of the history of another country, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, and written work, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

Prerequisite: HIST 172 , HIST 174 , or HIST 175

Cross-listed with: ASIA 481
Bachelor of Arts: Humanities
International Cultures (IL)

HIST 482: Confucius and the Great Books of China

3 Credits

This course familiarizes students with the critical texts and intellectual cultures of Warring States and early imperial China. CHNS 418 / ASIA 418 / HIST 482 Confucius and the Great Books of China (3) This course exposes students to the key texts, thinkers, and ideas that form the foundation of the Chinese classics and classical period, providing an integral foundation for the study of Chinese history, culture, or literature. While the emphasis is on the texts and their main themes, the course will encourage historical engagement with the texts by placing them into a context of competing cultural, social, political trends. Readings may be grouped around categories of teachings such as Confucianism, Buddhism, and Daoism, or around thinkers such as "(Confucian) ritualists," "statesmen," "military strategists," "rebels," "recluses," and "spiritual leaders." Students will learn how each of these types of teachings and thinkers related to each other, as well as how they responded to the emergent, centralized political order of the day. This will help students better understand many of the recurrent intellectual, political, and religious themes that arise in later Chinese history as well.

Prerequisite: ASIA 3; ASIA 100; ASIA 104; ASIA 175; ASIA 181; HIST 175; CHNS 120; CHNS 121; ENGL 15; RLST 3; RLST 181; 5th Semester standing

HIST 484Y: History of Chinese Thought

3 Credits

A study of the dynamic historical development of Chinese thought with its diverse expressions from antiquity to the present. ASIA (HIST) 484Y History of Chinese Thought (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the historical developments of Chinese thought and its multifarious expressions from ancient times to the eighteenth century. It explores the unique Chinese ways and means of making sense of the world and the human condition by probing China's philosophical and religious traditions. It reveals the conscious life of the Chinese in matters moral, ethical, aesthetic and metaphysical. Moreover, by showing the unity, diversity, continuity and discontinuity in Chinese thought throughout the ages, this course debunks the popular "Orientalist" myth that Chinese culture had been a hermetically sealed and stagnant monolith until the modern era when Western influences became dominant.

HIST 485Y: China's Last Empire: The Qing Dynasty, 1644-1911

3 Credits

China from 1644 founding of Qing dynasty to 1911 fall; Chinese society and institutions, imperialism and China's internal diversity. ASIA (HIST) 485Y China's Last Empire: The Qing Dynasty, 1644-1911 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the Qing dynasty, the last imperial dynasty to rule China, from the seventeenth to early twentieth centuries. More than doubling the size of the previous Ming dynasty, the empire also included people such as Tibetans, Muslims and Mongols who had never before considered themselves as "Chinese" but were now Qing subjects. The course will examine how Manchu ruling family, a non-Chinese people, outnumbered by the Chinese by about three hundred and fifty to one managed to conquer and rule China for nearly three hundred years. Tracing the political, social and cultural development of china starting with the foundation and consolidation of the Qing in 1644 and concluding with the collapse of the dynastic system in 1911, this course examines the role of the imperial system, internal rebellions, and the impact of

Western colonialism on China. Considerable time will also be focused on China's ethnic, religious and cultural differences in order to allow a deeper understanding of major issues and themes in late imperial Chinese history. Finally, the theme of China's international relations in Asia and the world and China's shifting place in the world will be a prominent thread of the course. Through a blend of primary and secondary sources, students in this class will need to think critically, read broadly and express their ideas clearly regarding the evolving challenges facing China's last empire.

HIST 492: Witchcraft in Early Modern Europe

3 Credits

Survey of the social, economic, political, and religious conditions of accusations and prosecutions of witchcraft in western Europe and north America, from 1500 to 1700.

Prerequisite: HIST 002

International Cultures (IL)

HIST 493: History of Death and Mourning

3 Credits

This seminar will examine the social, cultural, religious, and philosophical attitudes regarding the treatment of death and dying, the care and disposal of the dead, and the processes associated with mourning and commemoration from antiquity to the present. The course will examine the transformations that have taken place in western society's attitudes toward death, modes of dying, relationship with the dead, and ways to remember the dead. While the major emphasis of the course will be on the history of these themes in western cultures, the course also includes comparative analysis of non-western societies and religions so that students will be able to understand death practices within a global context. Various readings and discussion will examine the idea of death, on both macrocosmic (societal) and microcosmic (personal) levels.

Homeland Security (HLS)

HLS 201: Introduction to Homeland Security

3 Credits

An introduction to homeland security, and defense, with a focus on policy, legal issues, organization, and administration. PUBPL 201 Introduction to Homeland Security (3) Introduction to Homeland Security provides a baseline of common knowledge for understanding the nature of homeland security. The course achieves this goal by focusing on homeland security, the motivation and nature of terrorists, the policies

established by governments, pertinent governmental plans to meet homeland security goals, who the key players are in homeland security, and the relevant legal issues framing efforts to defend the nation's security. As an introduction to the broad area of study, this course serves as a basis for specialized study such as critical infrastructure protection, emergency response management (including natural disasters), border security, security administration, national security, and terrorism. Understanding key principles of homeland security will be expected from students who complete this course.

Cross-listed with: PUBPL 201

HLS 306: Introduction to Crisis and Emergency Management

3 Credits

An introduction to emergency management in mitigating, preparing for, responding to and recovering from hazards. PUBPL 306 Introduction to Crisis and Emergency Management (3) The course offers an overview of the field of emergency management in dealing with routine emergencies, crises or disasters, and mega disasters. Specific topics emphasized include: the roles and interactions of the public, nonprofit, and private sectors in emergency management; the legal and organizational structure of the national emergency management system; and the problems and policy issues associated with emergency management. This is done by examining the four phases of emergency management: mitigation, preparedness, response and recovery as they relate to resilience, the attempt to; and an overview, including case studies, of various human-made and, technological disasters as well as disasters related to natural hazards. Emergency management as conducted within the U.S. integrated emergency management system (IEMS) by local state and national emergency management agencies, not terrorist incidents, is the course focus rather than the emerging field of homeland security and terrorist events.

Cross-listed with: PUBPL 306

HLS 401: Introduction to Homeland Security

3 Credits

This course provides foundational knowledge about homeland security, including policy, organization, and legal issues in the American context. P ADM 401 Introduction to Homeland Security (3) The Introduction to Homeland Security/Defense course provides a baseline of common knowledge for homeland security professionals. The course achieves this goal by focusing on homeland security/defense, the motivation and nature of terrorists, the policies established by governments, pertinent governmental plans to meet homeland security/defense goals, who the key players are across the homeland security/defense spectrum, and the relevant legal issues framing efforts to defend the nation's security. As an introduction to this broad area of study, this course serves as a basis for specialized study such as bioterrorism defense, critical infrastructure protection, cyber-security, and emergency response management. Understanding key principles will be measured through preparation of a written analysis of key homeland security/defense issues with alternative strategies consistent with current policy and legal constraints.

Cross-listed with: PADM 401

HLS 475: Critical Infrastructure Protection

3 Credits

This course provides knowledge about protection of critical infrastructure as an aspect of homeland security. PUBPL 475 Critical Infrastructure Protection (3) Critical Infrastructure Protection provides a definition of critical infrastructure and examines the importance of protecting it in the post-9/11 era. The course focuses on policies and programs designed to prevent catastrophic events and to protect and maintain the nation's critical infrastructure. It examines such activity through an understanding of the network of organizations at all levels of government and in the private sector responsible for protecting infrastructure. Case examples are provided of catastrophic events to provide an understanding of risks involved in infrastructure protection. Understanding key principles will be measured through preparation of a written analysis of a key homeland security/defense issue with alternative strategies consistent with current policy and legal constraints.

Prerequisite: PLSC 201; HLS 404
Cross-listed with: PUBPL 475

HLS 476: Homeland Security Intelligence

3 Credits/Maximum of 3

The Homeland Security Intelligence course provides a depth of knowledge of key intelligence issues for homeland security professionals.

Prerequisite: PLSC 201; HLS 404
Cross-listed with: PUBPL 476

HLS 483: Seminar in National Security Policy

3 Credits

This course provides a comprehensive overview of the process of U.S. national security policy - the principles, practices, and participants in the development and implementation of security strategy and policy. It applies theories and models to the bureaucratic policy making structure of the Executive Branch, looks at the roles of other governmental participants, and evaluates the many factors that constrain decision making. It assesses the impact of non-governmental entities such as the media, interest groups, and public opinion, and considers the effect of changing domestic factors on the process. Finally, it prepares students to be knowledgeable and effective participants in the process and presents them with a practitioner's framework for policymaking. The main themes of this course are that the U.S. Constitution established a federal government of separate institutions sharing powers within an intentionally inefficient system of checks and balances that has evolved by virtue of a dynamic process of Constitutional Amendments, legislative statutes, judicial decisions, and executive actions; and, that national security decisions are best understood by considering the bureaucratic context in which they are made within the Executive Branch, and as a result of the interaction of other governmental and non-governmental participants.

Prerequisite: seventh-semester standing
Cross-listed with: PLSC 483, PUBPL 483

HLS 495: Homeland security internship

1-18 Credits/Maximum of 18

Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required. A

specific title may be used in each instance and will be entered on the student's transcript.

Honors (HONOR)

HONOR 201: Developing Critical Thinking for Leadership

1-3 Credits

Discussions on various topics using critical thinking skills to make informed leadership decisions.

Prerequisite: member of the Presidential Leadership Academy
Honors

HONOR 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Honors

HONOR 301: The Role of Knowledge in Society

3 Credits

Honors interdisciplinary study of topics utilizing contributions from science/ engineering, business, public policy, behavioral sciences/ education, and the humanities. HONOR 301H The Role of Knowledge in Society (3) This course is designed as an honors interdisciplinary study course composed of topics utilizing contributions from science/ engineering, business, public policy, behavioral sciences/education, and the humanities.

Prerequisite: admission to an honors program belonging to the Penn State Honors Consortium
Honors

HONOR 401: Honors Seminar

1-6 Credits/Maximum of 6

In-depth honors-level exploration of a topic or theme that crosses disciplinary boundaries; may be repeated for credit. HONOR 401H Honors Seminar (3 per semester/maximum of 6) Students will accomplish in-depth honors-level exploration of a topic or theme at the 400-level that crosses disciplinary boundaries. This course may be repeated for credit.

Prerequisite: admission to an honors program belonging to the Penn State Honors Consortium or approval from the Schreyer Honors College
Honors

HONOR 493: Honors Service Learning

1-3 Credits/Maximum of 3

A supervised honors experience doing service for campus or community welfare and analyzing related issues. HONOR 493H Honors Service Learning (1-3 per semester/maximum of 6) Students will have a supervised honors experience doing service, service learning, and/or public scholarship dedicated to improving campus or community welfare and then analyzing the related issues through structured reflection.

Prerequisite: admission to an honors program belonging to the Penn State Honors Consortium

Honors

HONOR 494M: **SPECIAL TOPICS**

1-2 Credits

HONOR 494M Interdisciplinary Writing and Thesis Formulation (2) This course is a seminar to help students understand various approaches to interdisciplinary analysis. The course helps students learn about writing as an interpretive process. The course helps students with the formulation of their honors thesis projects and proposals.

Horticulture (HORT)

HORT 101: Horticultural Science

3 Credits

Introduction to horticulture with an emphasis on plant domestication, morphology, classification, world food crops, commodities, gardens, propagation, and agrochemicals. The course content of HORT 101, as indicated in the complete course outline, deals with the fundamental concepts and specialty areas, which contribute not only to the science and technology involved in horticulture but also to the art. It provides

an overview of the role of various specialties of the natural sciences (e.g. plant morphology, physiology, taxonomy, genetics and nutrition, pest management, management and production of crops, landscaping, and technology) relevant to a range of plant uses from medicinals and food production to the aesthetic benefits derived from plants. The course begins with the origin and domestication of plants followed by: A. An Overview of horticulture which includes an explanation of the horticulture industry, how to achieve success in horticulture and the relationship between horticulture and the environment; B. Science in horticulture which includes the classification of plants, plant propagation, plant nutrition, environmental factors affecting plant growth and development, plant growth regulators, post harvest physiology and pest management; C. Management and production of horticultural crops which include nursery, floral, turfgrass, vegetable, fruit and nuts; D. Landscaping including designing landscapes, xeroscapes and sitescapes, establishing and maintaining landscapes; and E. Concluding with Technology in horticulture. The course content additionally includes major areas of knowledge based on the fundamentals, universal concepts and achievements in the cluster of scientific disciplines comprising horticulture and provides students with the opportunity to appreciate that the origins, domestication and production of cultivated plants are the essence of human existence.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

HORT 120: Computer Applications for Landscape Contracting

2 Credits

Emphasis is placed on the use of commercial software used for landscape planning and estimating. Limited to Landscape Contracting majors only.

HORT 131: Herbaceous Perennial and Annual Identification

3 Credits

In this class students learn to identify and use many common and some not-so-common ornamental herbaceous annual and perennial plants. After completing this class students will have practiced identifying by scientific name and common name over 200 herbaceous annual and perennial plants in the field, and will have studied common uses for these plants, and practiced selecting plants for different landscape applications. Students will use online resources and databases to aid in identification of herbaceous annual and perennial plants and to research their characteristics and cultural needs.

HORT 137: Ornamental Plant Materials

3 Credits

Identification and description under fall conditions; discussion of cultural and aesthetic aspects of trees of value in ornamental planting.

HORT 138: Ornamental Plant Materials

3 Credits

Identification and description under spring conditions; discussion of cultural and aesthetic aspects of shrubs of value in ornamental plantings.

HORT 150N: Plants in the Human Context

3 Credits

Plants have played a dynamic role in shaping our life. In reality, human existence on Earth is made possible by the breath of plants through photosynthesis. Likewise, our botanical connections and interactions are many: we need plants for food, beverages, medicines, materials, healthy lifestyles, and aesthetics. Plants have also played an important role in where our ancestors settled and where we live today. Some of the important topics discussed in this class will include the role of tea in transforming world cultures, the importance of sugar in the Civil War and the establishment of the Caribbean nations, the effect of the Irish potato famine on Europe and the US, and the use of plants in solving crimes.

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Science (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Critical and Analytical Thinking

GenEd Learning Objective: Integrative Thinking

HORT 169N: Fundamentals of Home Landscaping: An Introduction to Design, Construction, and Maintenance

3 Credits

Fundamentals of Home Landscaping offers broad coverage of the environmental, human, technological, and aesthetic issues associated with residential landscape design. Beginning with the way we perceive, manage, and design the landscape, the course examines the arrangement of land, water, plant forms, and structures for their best use and greater enjoyment. Relying on actual procedures and underlying principles utilized by experienced residential landscape designers, the course will introduce students to basic design principles, concepts, specific procedures for preparing site plans and associated documents. The course will also explore designing with and general care of plants, assorted hardscape types, and how to properly assess a site. From choosing trees, shrubs, groundcovers that are correct for the site to properly installing patios, decks, and walkways, students will be presented with the varied ways plants and hardscape are installed and maintained. The course will conclude with students completing a design for a residential site.

General Education: Arts (GA)

General Education: Natural Sciences (GN)

General Education - Integrative: Interdomain

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Critical and Analytical Thinking

HORT 201: Applied Arboriculture

2 Credits

The objective of this course is to provide students with the opportunity to develop an appreciation of the skills required to properly care for large trees. The course provides information that is especially useful to those in the Landscape Management option of the Landscape Contracting major. The course will provide an overview of the methods used to diagnose problems and provide for the long term care of large trees. Areas of emphasis will include accessing the upper parts of large trees; safety when working in and around large trees; and the proper selection,

use, and maintenance of the equipment used in the arboriculture profession.

Recommended Preparation: Students should be physically capable of pulling their weight up a rope

HORT 202: Plant Propagation

3 Credits

This course introduces the principles and practices of asexual and sexual plant propagation. By the end of this class students will have hands on experience with many common forms of plant propagation and should be able to figure out how to successfully propagate most plants. The class covers common plant propagation techniques and equipment, commercial scale propagation methods, basic plant physiological processes that influence plant propagation, and the role of environmental factors such as light, temperature, and water on propagation success.

HORT 220: CAD Applications in Landscape Contracting

3 Credits

Application of computer-aided design software including AutoCAD and LANDCADD to landscape contracting.

Enforced Prerequisite at Enrollment: HORT 120

HORT 232: Horticultural Systematics

3 Credits

Fundamentals of horticultural crop plant classification and systematics. Examples chosen from fruits and vegetables, exclusive of subtropical and tropical fruit.

Enforced Prerequisite at Enrollment: HORT 101

HORT 233: The Science of Winemaking

3 Credits/Maximum of 3

Introduction to the principles of wine production emphasizing basic wine grape biology, fermentation science, wine chemistry, and wine perception. FDSC 233 / HORT 233 provides an interdisciplinary treatment of the science of grape growing, vinification, and wine consumption. Students will learn how viticultural practices translate to wine chemistry, and how key variables associated with that conversion affect consumer perception. The course will cover topics such as basic grapevine physiology, vineyard management practices, vinification, domestic and international wine styles, and consumer interactions with wine (e.g., sensory evaluation, health aspects of wine). Although the course is considered to be introductory, students must have a basic grounding in university-level chemistry and biology. Course material will be primarily transmitted through lectures, reading assignments to be completed outside of class, and brief practical exercises in the Sensory Evaluation Center (Department of Food Science).

Enforced Prerequisite at Enrollment: CHEM 110 or BIOL 110

Cross-listed with: FDSC 233

HORT 238: Turf and Ornamental Weed Control

3 Credits

Students will be introduced to the development of integrated weed management strategies utilizing a variety of cultural and chemical methods.

Cross-listed with: TURF 238

HORT 250: Landscape Contracting Design/Build Principles

3 Credits

Introduction to the processes and principles of residential landscape site development, from initial client contact to implementation.

HORT 269: Residential Landscape Planning

3 Credits

Introductory course which develops the student's ability to understand the processes, techniques, and theories that form the basis of residential site planning. The course covers the planning process, principles of design and graphic presentation

HORT 270: Basic and Advanced Hand and Digital Graphics for Landscape Contracting

1 Credits

Graphics are the language of design and presentation in Landscape Contracting. The ability to develop, document and communicate design ideas is essential for success in any design profession. As a graphics arts course, emphasis will be placed on hands-on studio activities and skill development to explore drafting, graphic, and rendering techniques using a variety of traditional drawing media to develop symbolic and representational graphics essential for the communication of design ideas. Digital rendering and hybrid (tradigital) graphics methods and techniques will also be explored.

Enforced Prerequisite at Enrollment: Landscape Contracting majors, in the Design/Build Option Enforced Corequisite at Enrollment: HORT 269

HORT 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

HORT 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HORT 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

HORT 301: Principles of Arboriculture

3 Credits

The objective of the course is to introduce students to the theories and practices related to the care of trees in developed areas. The course provides information that is especially useful to those in the Landscape Management option of the Landscape Contracting major, and the Urban Forestry option of the Forestry major. This course will provide an overview of the concepts and methods prescribed for the evaluation and care of large trees in urban settings. Emphasis will be placed on maintaining the long-term health of large trees. Major topic areas will include methods for characterization of tree health, diagnosing problems in trees, the influence of environmental factors on tree health, and the assessment of hazard trees. Proper pruning techniques and factors to consider when making decisions regarding long-term tree care in urban areas will be discussed.

Enforced Prerequisite at Enrollment: BIOL 110

HORT 315: Environmental Effects on Horticultural Crops

3 Credits

Horticultural plants respond to the environmental factors of light, temperature, water, and fertilizer both in controlled and field environments.

Enforced Prerequisite at Enrollment: HORT 101

HORT 352: Flower Arranging

2 Credits

Floral design beginning with elements and principles of design. Flower arranging techniques as well as different styles of flower arrangements.

HORT 368: Landscape Planting Design

4 Credits

Basic planting design employing the use of indigenous and ornamental plants as design elements in the man-made environment. Intended for Landscape Contracting majors only.

Enforced Prerequisite at Enrollment: HORT 269

HORT 402W: Plant Nutrition

3 Credits

Mineral nutrition of higher plants, including nutrient acquisition, transport, metabolism, and practical implications. HORT 402W Plant Nutrition (3) The course considers the mineral nutrition of higher plants from physiological, ecological, and agricultural perspectives. The first part of the course considers factors influencing the acquisition of mineral nutrients and their transport in the plant, including nutrient mobility in the soil, root biology, rhizosphere interactions, membrane transport, xylem, and phloem transport. Root symbioses and metabolic assimilation of N and S will also be discussed. The second part of the course gives an overview of mineral metabolism. The final third of the course illustrates the practical dimensions of plant nutrition. The diagnosis of nutritional disorders, nutrition, and yield, foliar fertilization, genetic aspects of plant nutrition, and nutrient cycling will be covered by lecture and laboratory exercises. Laboratory exercises demonstrate lecture topics and permit a

'Hands-on' involvement with the subject. Emphasis is placed on concepts and integrating principles rather than memorization of technical details.

Enforced Prerequisite at Enrollment: (HORT 315 or BIOL 441) and SOILS 101

Writing Across the Curriculum

HORT 407: Plant Breeding

3 Credits

The scientific principles and techniques of utilizing genetic variability in improving the heredity of plants for specific purposes. HORT 407 Plant Breeding (3) Horticulture 407 is a 3-credit course that is taught every spring semester and is required of horticulture undergraduate students at Penn State. This course also attracts upper-division and graduate students from other departments such as Agronomy, Biology, Forest Resources, Plant Pathology, Biochemistry, and Molecular Biology. The objectives of the course are to 1) develop an understanding of the role of genetics in plant breeding, 2) elucidate the diversity of plant characteristics which are subject to improvement, 3) review conventional and contemporary techniques for the development of new cultivars, and 4) present the opportunity for the student to effectively communicate scientific information in writing and through speaking. Horticulture 407 emphasizes basic principles of plant genetics and breeding and the utilization of molecular biology techniques for crop improvement. It includes two-hours of lecture and a two-hour laboratory-discussion session each week. Major topics of discussion during lecture periods include plant reproduction, genetic variation in plants, review of mitosis and meiosis, Mendelian genetics, linkage, and recombination, qualitative and quantitative traits, population genetics, cytogenetics, theory of selection and response to selection, heritability, review of statistical tools useful in plant genetics and breeding, systems of pollination controls in plants including self-incompatibility and male sterility, breeding methods for self- and cross-fertilized plants, and application of modern technologies, including molecular markers, marker-assisted selection, and genetic transformation, to crop improvement. The laboratory sessions are designed to complement the lectures and provide opportunities for hands-on experience. For example, students practice staining and counting plant chromosomes on microscope slides, self- and cross-pollination of different plant species, linkage mapping and analysis of plants for Mendelian segregation, inoculating plants with fungal pathogens and observing and evaluating plants for disease development, extracting DNA from plant tissue and separating DNA segments on agarose medium using gel electrophoresis, and practicing computer programs for gene mapping and analysis of Quantitative Trait Loci (QTLs). Furthermore, students are mentored to prepare a term paper on a plant breeding/plant genetics subject and to orally present their findings to the class using visual aids. Student evaluation is based on two mid-term exams (each 100 points), one comprehensive final exam (200 points), 10 weekly homework or laboratory reports (for a total of 100 points), and a term paper (50 points for writing and 50 points for presentation). For the presentation, each student is required to turn in a 3-5 page write-up about a topic of interest.

HORT 408: Landscape Plant Establishment and Maintenance

4 Credits

The course examines the environmental factors that assure success of landscape plants and the plant physiological conditions affected by the management practices (e.g., selecting plants, planting, irrigating, fertilizing, mulching, pruning, and pest management) used to successfully produce, grow, install, and maintain ornamental plants in the nursery

and landscape. Students analyze and summarize their findings from landscape evaluations conducted in the field and produce and present a thorough landscape management plan to an audience of their peers, professionals, and guests. By the end of the semester students will be conversant on the best management practices for selecting, planting, and maintaining plants in the landscape and capable of making landscape installation and management decisions and presenting them to their clientele.

Enforced Prerequisite at Enrollment: (HORT 137 or HORT 138 or FOR 203) and SOILS 101

HORT 410W: Issues in Landscape Contracting

3 Credits

An overview of current and emerging issues in the Landscape Contracting Industry. Students will learn about the entrepreneurial, management, labor, and environmental issues that are shaping careers and the direction of the industry. Interactions with personnel within the landscape industry will expose the students to company expectations of employees, and the immediate issues those companies are facing in the marketplace. Students will also practice and perfect their written communication skills.

Enforced Prerequisite at Enrollment: HORT 269 or HORT 250
Writing Across the Curriculum

HORT 412W: Post-Harvest Physiology

3 Credits

The purpose of this course is to examine the changes occurring in harvested horticultural crops and understand the means of controlling these changes. This is accomplished through an understanding of the basic physiological, biochemical, and molecular processes associated with senescence, such as respiratory metabolism, chilling injury, and ethylene action. The processes associated with the deterioration of specific plants or plant parts are also discussed, for example the physiological changes associated with fruit ripening, flower senescence, leaf yellowing and abscission. This knowledge is then used to understand why various storage technologies are effective in prolonging the useful life of horticultural commodities.

Enforced Prerequisite at Enrollment: HORT 101 RECOMMENDED
PREPARATION: HORT 315
Writing Across the Curriculum

HORT 431: Small Fruit Culture

3 Credits

An overview of small fruit crop production, including grapes, strawberries, raspberries, blackberries, blueberries, cranberries, currants and gooseberries. The botany and physiology of each crop is discussed so students understand how the crops can be manipulated for maximum production under various environmental conditions. Production practices are described for each crop, including growing requirements, cultivar selection, planting systems, pruning, plant nutrition, frost protection, irrigation scheduling, harvest and postharvest handling, mechanization, and pest identification and control. Sustainable production techniques, including aspects of organic production methods, are stressed. Laboratories in the field stress hands-on production practices.

Enforced Prerequisite at Enrollment: HORT 101

HORT 432: Deciduous Tree Fruits

3 Credits

Science, art, and techniques of regulated cropping; orchard designs and management systems.

Enforced Prerequisite at Enrollment: HORT 101

HORT 433: Vegetable Crops

3 Credits

Cultural requirements of important vegetable crops in conjunction with physiological processes and problems related to commercial production. This course will provide students with information, techniques and ideas to produce vegetable crops on a commercial scale. Students learn production fundamentals applying to all vegetable crops including fertility management, transplant production, season extension, and pest management during the first part of the semester. This is followed by detailed and specific information for important vegetables on the science of producing high quality crops. Using a participatory approach students learn important techniques to successful production including experimenting on a small scale, designing a drip irrigation system, scouting for pests and developing a pest management strategy. Field trips to successful operations and outlets and the research farm are important elements of the class.

Enforced Prerequisite at Enrollment: HORT 101

HORT 445: Plant Ecology

3 Credits

Advanced lectures on plant ecology which stress integration of physiological, population-level and community-level phenomena, and ecology in agriculture.

Enforced Prerequisite at Enrollment: BIOL 220W or FOR 308 or HORT 315

HORT 451: Hydroponics and Aquaponics

3 Credits

The course provides information that is especially useful to those with knowledge of horticultural plants; however a background in plant production is not needed. Major topics discussed include basic concepts in plant and fish biology; nutrient and water use, cycling, and management; pest and pathogen management; and environmental factors as they relate to the design and operation of hydroponics and aquaponics systems. This course includes a weekly laboratory session where students gain practical skills in growing crops in a variety of hydroponics systems and growing crops and fish in an aquaponics system.

Enforced Prerequisite at Enrollment: HORT 101 or AGRO 28 or AGECO 121 Recommended Preparation: Students without one of the formal prerequisite courses should have 3 credits of PLTSC, BIOL, or a 6th level standing in a science or engineering major.

HORT 453: Flower Crop Production and Management

3 Credits

The objective of this course is to provide students with detailed and specific knowledge, skills, and techniques used in production of commercial floricultural crops in the greenhouse and to introduce

students to the systems and approaches used in managing a greenhouse. After completing this course students will understand basic greenhouse management practices and environmental systems, controls and management used to produce potted flowering plants, bedding plants, greenhouse grown cut flowers, potted perennials, transplants, plugs and liners, and houseplants. Students will know the cultural and environmental conditions required for about 60 common floriculture crops and will have practiced scheduling and producing some of these plants in the PSU teaching greenhouses. We will also cover costs of production, production management and post harvest needs for many greenhouse crops.

Enforced Prerequisite at Enrollment: HORT 101

HORT 455: Retail Horticulture Business Management

3 Credits

The nature, operation, and management of retail garden centers, winery tasting rooms, and independent food retailers. Overview of retail marketing principles and practices as they pertaining to horticultural retail businesses. Lectures, discussions, and projects focus on: selecting and pricing goods and services ; how independent retailers effectively use traditional promotion avenues and social media networks to connect with customers; and how to develop a relevant brand, cause marketing effort, and loyalty program. Students will also learn: about retail layout and display strategies; that each consumer segment has different wants, interests, and abilities to obtain goods and services, and about effective employee management.

Enforced Prerequisite at Enrollment: AGBM 101 or ECON 102

Cross-listed with: AGBM 455

HORT 459: Plant Tissue Culture and Biotechnology

3 Credits

The overall goal of this course is to provide a strong overview of the techniques used in plant biotechnology and the applications made possible by those techniques. The lecture topics will be used to introduce the principles of tissue culture and molecular biology, including how they are used to produce transgenic plants. Furthermore, the course will give students a broader and deeper knowledge in the field of Plant Biotechnology and provide a foundation for understanding the field as it changes in the future. Topics include the safety, legal and ethical issues surrounding GMOs and the study of the anti-GMO arguments surrounding each issue. In the laboratory component of the course, students will be introduced to the underlying principles of molecular biology techniques and aseptic culture of plant cells as well as the tissues and organs used to produce transgenic plants. In summary, through this course students will be introduced to many of the most important tools of the biotechnologist.

Enforced Prerequisite at Enrollment: BMB 252 or BMB 252H or MICRB 252 or BIOL 230W or BIOL 230M

Cross-listed with: BIOL 459, BIOTC 459

HORT 464: Landscape Construction I

4 Credits

Develop and refine the student's ability to understand construction details likely to be encountered by the landscape contractor. It will introduce the technical considerations required to implement design in

a manner that is both functional and aesthetically pleasing. It will also introduce principles of grading and drainage.

Enforced Prerequisite at Enrollment: HORT 250 or HORT 269

HORT 466: Landscape Construction II

5 Credits

Project scheduling methods, plant installation techniques, and field layout principles and practices. Implications of site preparation.

Enforced Prerequisite at Enrollment: HORT 464

HORT 468: Landscape Estimating and Bidding

2 Credits

Reading and interpreting contract drawings and specifications, quantity take-offs, cost estimating, and bid document preparation.

Enforced Prerequisite at Enrollment: HORT 250 or HORT 269

HORT 495: Internship

1-13 Credits/Maximum of 13

Supervised off campus experience in a public or commercial horticultural enterprise. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Approval of proposed assignment required prior to registration
Full-Time Equivalent Course

HORT 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

HORT 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HORT 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

HM 100S: Hospitality Management First Year Seminar

1 Credits

The purpose of the First-Year Seminar is to introduce new students to an open and purposeful learning community, and to help them develop the habits and pleasures of good scholarship. Working with faculty members, students will learn that expectations of personal integrity, level of effort, and civility at Penn State are much higher than in high school, but that there are many people, vehicles, and support to help them meet those expectations. They will learn to take charge of their own education, to plan for internships, international experiences, research, and, in general, to become active learners. This First-Year Seminar specific to Hospitality Management (HM) offers students an up-close perspective of the School of Hospitality Management (SHM) experience directly from interactions with SHM faculty. Each class period a different HM faculty member will meet with first-year students to share their personal and professional motivations for being engaged in the hospitality industry. Unique to this class will be the opportunity for students to learn how their academic program prepares them for the breadth of opportunities the hospitality profession has to offer and the positive impact both hospitality research and practice have on our communities.

Enforced Corequisite at Enrollment: PSU 14
First-Year Seminar

HM 101: Exploring the Global Hospitality Industry

3 Credits

This course introduces students to the many exciting facets of the global hospitality industry, the largest service industry in the world. Students will be provided an overview of the major segments of the hospitality industry and key players, a historical perspective of the hospitality industry, and key operational issues common to most hospitality enterprises. This course will provide students with an overview of the characteristics that distinguish the hospitality industry from other industries and addresses the primary strategic and tactical issues relevant to hospitality enterprises. Current events, diversity, well-being, ethical issues related to the hospitality industry, and global trends will be integrated throughout. Ultimately, the course will provide students a broad and integrative overview of the global hospitality industry, and the opportunities for career development.

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Soc Resp and Ethic Reason

HM 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

HM 201: Introduction to Management in the Hospitality Industry

3 Credits

Introduction to the hospitality industry and hospitality management. HM 201 Introduction to Management in the Hospitality Industry (3) The objectives of this course are to provide an introduction to the hospitality industry, to management practices within the industry, and to the hospitality major. Students have an opportunity to learn about the functions of management; the major components of the hospitality, travel, and tourism industries; trade associations and publications; growth areas and trends; and the need for creative leadership. Main topics typically include: functions of management and functional areas of business segments of the hospitality industry, international business as related to hospitality, services business, the planning process and strategic planning, organization design in hospitality, directing and leading in hospitality, the control process in hospitality, travel and tourism industries hospitality, hotels and lodging, the restaurant business, managed services, leisure and recreation/other hospitality opportunities, beverage management, and management ethics and social responsibility.

Enforced Concurrent at Enrollment: HM 202

HM 202: Colloquium in Hospitality Management

1 Credits/Maximum of 4

Major industry and professional speakers lecture on current issues followed by discussion with students and faculty. HM 202 Colloquium in Hospitality Management (1) This course has two primary objectives. First, students have an opportunity to hear from industry leaders. Second, students can determine their career directions, learn about the requirements for success in the industry, and identify career opportunities. The topics for the course vary from semester to semester depending upon the expertise of the distinguished speakers who address the class. However, a common theme is to explore trends in the industry regarding hotels, restaurants, and institutional foodservice. Students may learn about related career opportunities, such as careers with cruise lines, travel agencies, and other sectors in the hospitality and tourism industry.

HM 203: Hospitality Professional Development Seminar

1 Credits

The purpose of this course is to provide students with professional development preparation early in the curriculum. This course will help students obtain quality work experience during their college career to best prepare them for post-graduate employment. In particular, this course is designed to prepare students for meeting the major's work experience requirement. Meaningful work experience serves as a complement to classroom learning and provides the foundation for securing employment upon graduation. This course will help students understand the connection between college work experience and full-time careers and will impart strategies for conducting a successful job search and making the most out of these work opportunities. The class will include lectures, discussions, experiential exercises, guest lectures, and professional development assignments.

Enforced Prerequisite at Enrollment: C or better in HM 101

HM 208: Social, Cultural, and Health Influences of Alcohol

1.5 Credits

This course is designed to provide a historical approach to educating students on the development of alcohol and its influence on society. Alcohol is both culturally and economically significant as its usage has been a source of global trade, economic status, and political conflict. Science has proven positive and negative impacts of alcohol, which have shaped marketing, regulation, and consumption patterns. A better understanding of alcohol and its place in our society is not only educational from a historical perspective, but provides students with impactful nutritional and health knowledge regarding alcohol. By the end of this course, each student will feel more comfortable with the topic of alcohol in our society. This course will focus on how we can promote a more responsible educational process involving alcohol consumption, sale, and service. Education on alcohol can provide fundamental information that cannot only significantly improve one's well-being and quality of life, but also others.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

HM 209: Alcohol & Cuisine: Culture & Responsible Service

1.5 Credits

This course focuses on the relationship between alcohol and cuisine. Students will gain a historical perspective on the societal, economic, and regulatory trends that shaped the gastronomy of regional entities around the world. The course will explore the role of these trends in defining the customs, opinions, health policies, as well as the attitudes of the various cultures towards alcohol and gastronomy. Evaluating social influences and issues with the spread of food and beverage across communities will allow students to engage in thoughtful discussions regarding cultural differences related to health and wellness initiatives, regulations, and service standards. A primary goal of the class is to instill a strong sense of social responsibility by educating the students not only on the legalities of alcohol sales and service in their community, but on health and wellness issues, and more importantly, on the responsible way to serve and consume alcohol. Students will gain a worldly perspective on regional food and alcohol cultures and how this shapes policies and regulations related to health guidelines and service practices. Specific lectures will emphasize the potential liabilities nationally linked to alcohol service in private settings or organizations such as Greek life, tailgating or other social gatherings. The course will provide training and may offer professional certification in responsible sales and service of alcohol. This certificate, besides educating students on the regulations and proper alcohol service standards, is also a critical mitigating factor in problem cases involving insurance companies or legal courts.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

HM 210N: The Impact of Culture and Customs in Global Hospitality Environments

3 Credits

We live, work, and travel in a world in which interactions with individuals from different cultures is increasingly common and necessary. This course investigates the differences that exist between countries and geographical regions in their cultural norms and looks at the social customs that are at the basis of proper behavior. The course draws on philosophical explorations of the importance of customs as extensions of cultural norms and morals, and on social science research into the differences between cultures. It provides students with an opportunity to see the world through the eyes of people from different cultures, and broadens their understanding of the different ways of seeing and thinking about themselves and others, and of their place in a global society. Through a greater understanding of the diverse cultural forces that influence values, behaviors, attitudes and business practices, students will develop the critical thinking skills that will allow them to successfully interact with others in personal and business environments, which are exemplified by hospitality management-specific cases. The course provides the opportunity for students, who are future managers, employees, and travelers, to become better global citizens with an appreciation of other cultures.

International Cultures (IL)

General Education: Humanities (GH)

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

HM 228: Hospitality Food Safety

1 Credits

Application of HACCP, U.S. Food Code, biosecurity and other federal regulations to hospitality foodservice operations. Students attain certification in foodservice sanitation. HM 228 Hospitality Food Safety (1) This course will examine the science associated with preparing and serving food that is safe for consumption with regards to biological, chemical, and physical contamination. Emphasis is on federal regulations associated with HACCP, the U.S. Food Code, and other issues associated with safety of the food supply in the U.S. Case studies help students apply food safety principles to hospitality operations. Students will attain certification in foodservice sanitation by taking the examination administered by the National Restaurant Association.

HM 230: Principles of Food Production Management

3 Credits

This course introduces students to the food service industry, one of the biggest and most dynamic segments in hospitality. This course will prepare students with a better understanding of the food service industry as well as prepare them for future classes throughout the program. Students will learn how to integrate tools such as menu planning, standardized recipes, forecasting and budget planning to successfully drive revenues, control costs, and manage customer service. This course will also offer students hands-on experience in a professional kitchen environment while introducing them to quantity food production principles. Students will be able to understand and apply the safety, sanitation and sustainability principles in food production, storage,

and food handling practices within a professional kitchen. Through a hands-on approach, students will be introduced to professional kitchen equipment and smallwares and their uses, as well as recognition of various food products commonly utilized in foodservice.

HM 235: Hospitality Financial Accounting

3 Credits

Accounting, in many respects, is the language of business and translates business transactions into quantifiable information. The purpose of this course is to provide the tools as to how to use and understand this language for making informed business decisions. Areas of focus include how to analyze and record business transactions, compiling and analyzing three of the four major financial statements, banking procedures and control of cash, various issues related to the payment of employees and the introduction of how to analyze financial statements. Regardless of the functional area in the hospitality industry in which students choose to work, they will be most likely be required to understand how accounting impacts the various financial statements, and how to use financial information to make informed business decisions. Therefore, an understanding of the importance of accounting information to make informed business decisions is vital to students' future success.

Enforced Prerequisite at Enrollment: a grade of C or better required in HM 201

HM 242: Hospitality Marketing

3 Credits

This course gives an overview of marketing applied to the hospitality industry, including unique attributes of hospitality marketing; understanding consumers and the service-quality imperative; market segmentation; relationship and target marketing; promotion planning; market research; and competitor analysis. The course examines the similarities and differences in Hospitality Marketing practices across service sectors.

Enforced Prerequisite at Enrollment: HM 101

HM 250: Principles of Quantity Food Production

3 Credits

Principles and methods of quantity food production including preparation techniques, quality control and evaluation, and cost control.

HM 265W: Teams and Leadership in the Hospitality Industry

3 Credits

The human element is vital to the success of any organization, particularly in the hospitality industry. The purpose of this course is to provide students tools for successfully leading teams of employees to enhance organizational performance. Particular areas of focus will be on understanding motivation, individual differences, power and influence, diversity, group dynamics, and conflict management. Students will be familiarized with these content areas and will apply them through project-based work, group assignments, experiential activities, and case studies. As a writing-intensive course, special emphasis will be placed on the development of students' written communication skills. Regardless of the functional area in which students choose to work, they will be required to work with, manage, and lead other people. Therefore, an understanding

of leadership and the dynamics of working in and with teams is vital to students' future success.

Enforced Prerequisite at Enrollment: HM 101

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

Writing Across the Curriculum

HM 271: Hospitality Information Technology Fundamentals

2 Credits

This course introduces students to the technology used in the hospitality industry and to technology concepts. To prepare students for success in the industry, the class is designed to allow students to possess a working knowledge of technology and how to best use this technology to improve the guest experience and increase an organization's performance.

Enforced Prerequisite at Enrollment: C or better in HM 101

HM 272: Introduction to Worksheet-Based Analysis and Modeling for Managerial Decision Making

2 Credits

The ability to use and apply MS Excel is a vital competency for SHM graduates to have. Companies expect it for career success and dependency on one's ability to use Excel in solving financial and managerial problems. The advisory board of SHM has identified the students' ability to use and apply MS Excel as a competency required by many hospitality companies. In addition, the use of worksheets and MS Excel is required in such diverse classes as hotel and food service management, marketing, revenue management, finance, real estate, and entrepreneurship. The course involves a lecture on the functionality of the software as well as hands-on, in-class learning exercises illustrating the topics presented in the lecture. Case studies will enable students to explore and analyze a variety of hospitality concepts on a common worksheet platform.

Enforced Prerequisite at Enrollment: C or better in HM 101

HM 280: Fundamentals of Hotel and Accommodations Management

3 Credits

Students will explore the typical ownership and management structures of various types of hotels. Ownership discussions include the various types of ownership entities from sole proprietorships to real estate investment trusts and large institutional owners. The role of the owner is discussed to enable students to understand how ownership entities effect their role as a hotel manager. Students will learn about franchise agreements, brand affiliations, and management companies. Students will learn how key operating departments of a typical hotel work, how the departments interrelate, work with one another to deliver exceptional guest service and profits. Discussions of the key operating departments in a hotel to include front office, housekeeping and laundry, engineering, food and beverage, and safety and security. Students will learn the key performance metrics and terminology related to the operation of the various hotel departments. Students will apply linear programming to optimize staffing and labor scheduling. Students will be provided tours of the primary operating departments, housekeeping and laundry, food and beverage, maintenance, and front office, to experience and observe operations. Students will have the opportunity to enhance their classroom learnings with observation of functioning operations. Students

will explore the growth in the home sharing sector and its effect on the hotel business. Other trends and current events will be presented and discussed regarding their short- and long-term impact on the hotel business.

Enforced Prerequisite at Enrollment: C or better in HM 101

HM 290W: Hospitality Managerial Communication

3 Credits

Communication in organizations is essential to creating an open and collaborative environment. The premise of this course focuses on the core fundamentals of creating and delivering clear and concise business messages. Additionally, the course draws on the ability to recognize and understand the differences between communication styles that exist in a global marketplace. Students will be familiarized with types of messages and will apply their knowledge through writing, reviewing, and evaluating written and verbal messages. Particular areas of focus include creating routine business messages, preparing persuasive memos, and delivering bad news messages. Students will also be challenged to create professional reports and presentations, which are essential to influencing and informing key stakeholders. Content in this course will help students become more effective communicators and leaders, regardless of their future profession.

Enforced Prerequisite at Enrollment: (ENGL 015 or ENGL 030H or ESL 015) and a grade of C or better required in HM 201 Writing Across the Curriculum

HM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HM 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual of group instruction.

International Cultures (IL)

HM 304: Institutional Food Service Management

3 Credits

Institutional food service management systems in the hospitality field. HM 304 Institutional Food Service Management (3) Institutional and contract food service management is in the growth stage of the hospitality industry life cycle. The objective of this course is to provide an overview of the various segments of institutional food service, including health care, life care, education, business, transportation (i.e., airlines, cruise ships), correctional and recreational services. Main topics typically include: historical overview of institutional/non-commercial food service management, exploring key markets where institutional food service management exists, key systems used in the fundamental areas of quantity food production, current and future trends effecting institutional food service management, career opportunities in the institutional food service management sector, and managed services and multi-department management. This course is an elective in the Hospitality Management program.

Enforced Prerequisite at Enrollment: a grade of C or better required in HM 201

HM 305: Restaurant Management

3 Credits

Restaurant food service management systems in the hospitality field; analysis including cost control and quality control techniques. HM 305 Restaurant Management (3) Providing quality service and products and ultimately making a profit in a restaurant require the foodservice professional to control and analyze costs. The objective of this course is to provide an overview of the food, labor, budget, and finance information required in restaurant management. Main topics typically include: framework and function of control in foodservice operations, steps and processes of using management information systems in controlling food cost and preparation of food; forecasting and menu pricing techniques in controlling food cost in the preparation and service of food; problems associated with labor costs and analyzing various techniques and tools used to control labor cost effectively through proper staffing and scheduling; methods of controlling food and beverage cost through effective purchasing, receiving, storage, issuing, preparation, inventory, and portion control; techniques of preparation and implementation of effective budgets as control tools; ratio-analysis for analyzing cost in foodservice operations; financial statements used to monitor the financial health of a foodservice operation; and capital budgeting and how it is used. This course is required in the Hospitality Management program. The introductory course in Hospitality Management must have been completed or must be taken concurrently.

Enforced Prerequisite or Concurrent at Enrollment: HM 201

HM 306: Hospitality in Senior Living

3 Credits

Introduction to senior living and continuing care retirement communities and related hospitality management career opportunities. HM 306 Hospitality in Senior Living (3) This course introduces students to continuing care retirement communities (CCRC's) and senior living facilities. The course is taught from a hospitality perspective and focuses on how the application of hospitality management can enhance senior communities and their residents. The multidisciplinary content includes a variety of perspectives on designing and delivering services for seniors, including long-term care administration, geriatric nursing, adulthood and aging, therapeutic recreation, and nutrition and foodservice.

HM 310: Beverage Management and Professional Service

3 Credits

This course is designed to familiarize students with the beverage industry. The course will introduce students to beverage identification, production, and service strategies. The course provides the principles for responsible service, efficient processes, and profitable management of various alcoholic and nonalcoholic beverages.

Enforced Prerequisite at Enrollment: students must be at least 21 years old

HM 311: Introduction to Wines of the World

2 Credits

The course introduces students to viticulture and viticulture and the sensory evaluation of wine. It focuses on the complexities of production,

storage, grape-growing, and the intersection of agriculture, commerce, and hospitality businesses. Special emphasis is given to the climates, topographies, and other natural conditions that make some regions more suited to certain wine cultivation than others and how these conditions are replicated around the world. It concentrates on the sensory elements of wine that make it a global economic and culture phenomenon with emphasis on Old World and New World traditions, food pairing, new entries to the marketplace, and trends in the wine business. It covers the important role wine plays in the delivery of dining experiences in both hospitality enterprises such as catering and restaurant venues as well as retail and social experiences. Wine sales makes a substantial contribution to the profitability and marketability of many food service operations. The wine industry is replete with specific and technical vocabulary that when mastered enables students to engage in wine activities knowledgeably and successfully, whether as a consumer or hospitality professional.

Recommended Preparation: Must be 21 years old or older to register for the class

HM 318: Club Management and Operations

2 Credits

Principles and practices of club organizations and management. HM 318 Club Management and Operations (2) This course focuses on the unique management skills that are necessary in the private club industry. A key objective is to demonstrate to students the concept of "exceptional service" that is demanded in this field. The course leads students on a tour of the responsibilities and operations of all departments that would be found in a city or country club. Main topics typically include: club management industry and career opportunities; types of clubs that exist in the industry, including structure, organization, and philosophy; the various departments of a successful club including but not limited to: food and beverage, accounting and cost control, human resources, marketing and promotion, catering and banquets, golf operations, tennis operations, aquatics, and fitness facilities; and management skills required of a club manager: leadership, board relations, general management, service excellence, communications. The course is required in the Professional Golf Management option in the Recreation, Park, and Tourism Management program and is a professional elective for Hospitality Management majors.

Enforced Prerequisite at Enrollment: a grade of C or better required in HM 201

HM 319: Hospitality Facilities Management

3 Credits

Fundamental principles of facilities planning, facilities management, and maintenance for all segments of the hospitality industry. HM 319 Hospitality Facilities Management (3) This course has been designed to provide students with information related to hospitality facility design and maintenance. While managers may not have to fix equipment or install heaters, they should understand the complexity of these tasks and respect the position of the architect and hospitality engineer. Main topics typically include: principles of facility engineering and maintenance, costs associated with the life cycle of a hospitality facility; role of the manager in the planning and maintenance process; function of the building in service and marketing, impact of building design on guest service and operation; evaluation of building and grounds for compliance with the Americans with Disabilities Act of 1990; role of management in development, planning, and remodeling of food service

operations; and flow of resources as exhibited in blueprints. The course is a required course for all Hospitality Management majors. Students must first complete the introductory hospitality course and the hospitality colloquium.

Enforced Prerequisite at Enrollment: a grade of C or better required in HM 201

HM 322: Introduction to Brewed Alcoholic Beverages (Beer, Cider, and Mead)

2 Credits

Discover the world of brewed alcoholic beverages. Historical and cultural impacts of brewed beverages (beer, cider, and mead) resonate in nearly all parts of our society. Explore and learn about production techniques, classic and modern ingredients, flavor profiles, and sensory expectations of different brewed alcoholic beverages. Taste and discover the sensory elements that make brewed alcoholic beverages vital economic products contributing to the hospitality industry. Appreciate marketing, merchandising, packaging, and service standards incorporated by industry leaders. Recognize the significance of responsible sales and service of all alcoholic beverages, specifically brewed beverages. Discover why brewed alcoholic beverages are culturally engrained in our future.

Recommended Preparations: Proof of Age 21+

HM 330: Food Production and Operations Management

3 Credits

This course is designed to apply management principles to foodservice production and service in a lab environment. HM 330 stresses the integration of management principles acquired in prior classes, including planning, organizing, controlling, staffing, and leading. Students will rotate in management and staff positions for the quantity production of quality food. The course draws from the students' theoretical background in accounting, management, nutrition, food production and sanitation. HM 330 integrates this content into the daily operation of a campus foodservice facility as a living laboratory.

Enforced Prerequisite at Enrollment: C or better in HM 230

HM 336: Hospitality Managerial Accounting

3 Credits

The course provides managerial tools for decision-making by focusing on the basic concepts, analyses, uses, and procedures of cost accounting in the hospitality industry. Managerial decision-making using accounting data is an integral part of the function of managers in the hospitality industry. The accounting function of a business generates financial data, and managers need to be able to interpret the data, analyze it and make decisions based on their interpretation and analysis of the data. This course provides the student with the core knowledge needed to understand the kinds of data generated by the financial systems of hospitality operations, prepare budgets, perform variance analysis, and provide control over the financial aspects of the hospitality business.

Enforced Prerequisite at Enrollment: (ACCTG 211 or HM 235) and HM 272

HM 344: Digital Marketing for Hospitality Management

3 Credits

This class explores the consumer's decision process for hospitality purchases within the changing landscape of digital technologies. The class focuses on expanding students' knowledge of the applications of digital communications across multiple channels within the context of hospitality. Students explore how to employ digital marketing to build hospitality brands, conduct business, handle guest complaints, drive sales, and forge and maintain guest relationships.

Enforced Prerequisite at Enrollment: HM 242

HM 350: Hospitality Revenue and Profit Optimization

3 Credits

This course introduces students to the principles of revenue and profit optimization, and the methodologies and analytical techniques required to make data-driven, profit-oriented decisions across all of the major revenue streams in hospitality. Areas of focus include data analytics, pricing, demand forecasting, capacity and duration management, and distribution channel management. The overriding goal of this course is to provide students with the skills necessary to make data-driven, profit-oriented decisions.

Enforced Prerequisite at Enrollment: HM 272

General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

HM 355: Legal Aspects of the Hospitality Industry

3 Credits

Specialized applications of law to the hospitality industry. HM 355 Legal Aspects of the Hospitality Industry (3) Laws, courts, and more generally the legal system together constitute an integral feature of the environment within which the hospitality industry operates. The objective of this course is to acquaint students with the application of law to hotels, restaurants, and institutional settings. A hospitality manager who understands the law can prevent many legal problems from occurring, including preventing injuries that may lead to lawsuits. Main topics in this course typically include: types of law, judicial structure and trial procedures; conduct of legal research, including use of Web resources; legal duties of innkeepers and guests; negligence and other torts; contract law; civil rights and public accommodations, especially protections from discrimination; guests' property; regulation and licensing; employment law, especially protections from discrimination; casinos and the law; and food and alcohol service liability.

Enforced Prerequisite at Enrollment: C or better in HM 101

HM 366: Human Resource Management in the Hospitality Industry

3 Credits

Hospitality is a people-intensive industry that relies on employees to provide the primary product delivered to the customer - the service experience. Therefore, the goal of this course to further develop your understanding and skill in managing people in a dynamic, diverse, and complex workplace. The course will begin by examining the strategic role of human resources in organizations and legal issues surrounding

the employment relationship. The course will then shift its focus to employee recruiting, selection, training, performance, management, and compensation and benefits. In addition to addressing the fundamentals in these core areas of human resources management, current issues and trends will be explored and analyzed. The course is grounded in the foundational principles of effective in human resource management and focuses on issues relevant to the hospitality industry throughout.

Enforced Prerequisite at Enrollment: A grade of C or better required in HM 201 and HM 365

HM 382: Franchising in the Hospitality Industry

3 Credits

The course examines franchising from the perspective of the both the Entrepreneur interested in franchising their business (Franchisor) and the Entrepreneur interested in starting a business by buying a franchise (Franchisee). Franchising is explored from legal requirements to marketing to feasibility and aptitude. Examples are included for a variety of hospitality franchise operations and franchise opportunities in other business segments. The course is oriented to the student who would like to start a business, explore buying a franchise of an existing business, or work for franchisors.

HM 384: Introduction to Meeting and Event Management

3 Credits

HM 384 Meetings and Events I examines the meeting and event industry, and the skill set of successful Meeting and Event Professionals. The course covers a broad overview of the processes involved in planning and implementing meetings, special events, and conferences by focusing on the basic processes of developing, planning, coordinating, implementing, and evaluating. Meetings & Events management is a viable career option within the hospitality industry. Hotels, restaurants, schools, arenas, convention centers, and retirement communities can all serve as venues for events. Events add value to organizations by creating engaging and memorable experiences for its stakeholders. Effective event managers know how to assess stakeholder objectives and design an event that meets or exceeds those objectives. With actual event case studies, the student will apply best practices in event design, promotion, management, and evaluation.

HM 386: Introduction to the Gaming and Casino Industry

3 Credits

HM 386 will serve as a gateway course to the casino concentration for some students and as a supplemental course for students focusing in other areas. The goal is to provide students with an overview of the commercial gaming industry with a focus on the United States gaming market. Students will be exposed to the early stages of the gaming industry in the twentieth century as well as the rapid expansion that has occurred in the last twenty years. Students will understand how casinos are structured depending on the markets they serve as well as how they are regulated. After providing the students with a framework from which to view commercial gaming, the course will provide an introduction to four important games that all contribute to casino profits. The goal will be to familiarize students with terms as well as operational knowledge necessary should they decide to pursue a career in commercial gaming. Lastly, HM 386 will serve as an entry course for the remainder of the casino concentration. This course will help students determine whether

they wish to make a further commitment which will involve three additional courses and an internship.

HM 388: Advanced Gaming Operations Management

3 Credits

The primary objective of this course is to build upon the fundamental understanding of the gaming industry that was introduced in the introductory course. The advanced students will gain an understanding of what it means to be a casino manager. Students will build this knowledge by working through case studies derived from actual issues that have confronted casino managers. In addition, students will continue to build their expertise in the various revenue producing games offered the casino industry. Finally, the students will continue to be exposed to some of the fundamentals of casino mathematics.

Enforced Prerequisite at Enrollment: HM 386

HM 390: Corporate Social Responsibility in Hospitality

3 Credits

This course introduces students to issues of corporate social responsibility. The course is taught from both general business and hospitality perspectives. Specifically, this course addresses the general historical development of CSR along with hospitality cases, fundamental concepts of CSR, different arguments for CSR, major frameworks of CSR, sustainability (environmental) issues, and hospitality cases and applications. The course will provide an opportunity to students for analyze the CSR programs of major hospitality companies by applying the concepts and practices of CSR discussed in the course.

Enforced Prerequisite at Enrollment: C or better in HM 101

HM 395A: Penn State Hospitality Services Internship

3 Credits/Maximum of 12

The on-campus internship course provides experience that will prepare students for management-level employment. This is designed to provide students with real job experience that complements their classroom learning and affords them the opportunity to apply their knowledge in real-world settings. This will be accomplished by participating in rotations as an employee, student supervisor, and Manager in Training in the daily operations in their department of Penn State Hospitality Services, and by developing their job skills specific to their internship position and personal goals. The students professional work experience offers knowledge about the hospitality industry, the chance to learn new skills, and a means to assess strengths and areas for development. Students will receive direct hands-on training in a functional area of Penn State Hospitality Services working in such areas as; front desk, housekeeping, maintenance, sales, restaurants, culinary, banquets, and marketing for 15-20 hours per week for 15 weeks. Students will also attend a 75-minute class weekly, which will feature presentations by Penn State Hospitality Services department heads, and professional development presentations.

Enforced Prerequisite at Enrollment: Approval by course instructor

HM 395B: Penn State Hospitality Services Executive Internship

3 Credits/Maximum of 6

The on-campus internship course provides experience that will prepare students for management-level employment. This is designed to provide students with real job experience that complements their classroom

learning and affords them the opportunity to apply their knowledge in real-world settings. This will be accomplished by participating in rotations as an employee, student supervisor, and Manager in Training in the daily operations in their department of Penn State Hospitality Services, and by developing their job skills specific to their internship position and personal goals. The students professional work experience offers knowledge about the hospitality industry, the chance to learn new skills, and a means to assess strengths and areas for development. Students will receive direct hands-on training in a functional area of Penn State Hospitality Services working in such areas as; front desk, housekeeping, maintenance, sales, restaurants, culinary, banquets, and marketing for 15-20 hours per week for 15 weeks. Students will also attend a 75-minute class weekly, which will feature presentations by Penn State Hospitality Services department heads, and professional development presentations.

Enforced Prerequisite at Enrollment: HM 395A and approval by course instructor

HM 395C: Penn State Food Services Internship

3 Credits/Maximum of 12

The on-campus internship course provides experience that will prepare students for management-level employment. This is designed to provide them with real job experience that complements their classroom learning and affords them the opportunity to apply their knowledge in real-world settings. This will be accomplished by participating in rotations as an employee, student supervisor and Manager in Training in the daily operations of Penn State Food Services, and by developing their job skills specific to their internship position and personal goals. The student's professional work experience offers knowledge about the hospitality industry, the chance to learn new skills, and a means to assess strengths and areas for development. Students will receive direct hands-on training in a functional area of Penn State Housing and Food Services for working 15-20 hours per week for 15 weeks. Students will also attend a 75-minute class weekly, which will feature presentations by Housing & Food Services department heads, professional development, and tours of the Penn State Housing & Food Services facilities.

Enforced Prerequisite at Enrollment: Approval by course instructor

HM 395D: Off Campus Internship - PSHS

3 Credits/Maximum of 12

The Off-campus internship course provides experience that will prepare students for management-level employment. This is designed to provide students with real job experience that complements their classroom learning and affords them the opportunity to apply their knowledge in real-world settings. This will be accomplished by participating in rotation as an employee, student supervisor and Manager in Training in the daily operations in their department. The students professional work experience offers knowledge about the hospitality industry, the chance to learn new skills, and a means to assess strengths and areas for development. Students will receive direct hands-on training in a functional area working in the hospitality industry for 15-20 hours per week for 15 weeks during Fall and Spring semesters, and 30-40 hours per week during the summer.

Enforced Prerequisite at Enrollment: Approval by course instructor.

HM 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HM 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual of group instruction.

International Cultures (IL)

HM 407: The Sustainable Fork: Food Systems Decisions for Away-From-Home Eating

3 Credits

The course will incorporate economic and managerial dimensions to the discussion of food decisions in foodservice away-from-home eating contexts, particularly emphasizing the behavioral aspect of decisions - how individuals (consumers, providers, managers) make choices in the food system, and what might be the consequences of these choices. The course will use evidence from multiple farm-to-fork perspectives to allow students to analyze food systems problems and solutions. It will also require students to engage directly with the local food service system through course projects and tours. The major topics of discussion will be organized under each of the value chain components of the farm-to-fork continuum: production, distribution, purchasing, preparation, and consumption. Specific topics under each of these value chain components will include: nutrition, food safety, food waste, sustainable practices, social justice, consumer utility, economic profits, ethics, government policy, and decision-making. In particular, the course will be motivated by economic theories such as: agency relationship, information asymmetry, transaction cost economics, and behavioral economics topics such as self-rationing, and time discounting.

Enforced Prerequisite at Enrollment: C or better in HM 101 or C or better in AGBM 170 or C or better in AGBM 170N
Cross-listed with: FDSYS 407

HM 413: New Product Development for Commercial Foodservice

3 Credits

This course introduces students to a new product development process that requires coordination, communication, and integration throughout the organization.

Enforced Prerequisite at Enrollment: A grade of C or better in HM 230

HM 430: Applied Leadership in Foodservice Operations Management

3 Credits

This course is designed to give students an opportunity to gain experience in the wide range of skills and techniques that are normally associated with the duties of a hospitality manager. The skills and techniques that will be emphasized include, but are not limited to, duties involved in the planning, execution, and evaluation of full-service, theme-oriented ala carte dining. Students are expected to form a marketable theme and then develop, produce, and evaluate an authentic dining experience. A successful dining experience is contingent upon both guest satisfaction and the achievement of financial goals.

This course simulates technical, conceptual, and interpersonal skills required in foodservice operations. The emphasis is on group dynamics, improvement in managerial skills, and management team functions.

Enforced Prerequisite at Enrollment: HM 330

HM 432: Contemporary Issues in Restaurant Management

3 Credits

A focus on special topics and current events in the restaurant industry. HM 432 Contemporary Issues in Restaurant Management (3) The purpose of this course is to focus on contemporary issues and current events in the restaurant and food service management. The course will attempt to keep the students as updated as possible regarding the industry by covering these topics and including a discussion of current events from headline news services and other electronic references. Students gain knowledge that is applicable specifically to the restaurant and foodservice industry. This course explores the global food and drink market in today's challenging climate with analysis of trends and conditions expected to influence sales value and volume growth over the next five years. Discussion will include the impact economic shifts have on the restaurant and food service industry and the subsequent influence on consumer purchasing habits and food and drink sales over several years. This course considers food and drink New Product Development (NPD) and other vital branding, marketing and sales strategies in the context of the following challenges, issues and trends expected to influence restaurants and food service management over the years.

Enforced Prerequisite at Enrollment: A grade of C or better in HM 201 and HM 228 and HM 230

HM 435: Hospitality Corporate Finance

3 Credits

This is an introductory financial management course for the hospitality management major. The course will teach students fundamental knowledge of financial management concepts. This course will introduce a wide range of essential concepts that students can utilize to improve their decision-making and value creation abilities. The course introduces financial management Health and Human Development concepts with a focus on practical application, both in professional and personal lives. Students' ability to learn these concepts will be tested through group and individual assignments. This course focuses on conceptual and analytical knowledge and skill. Practical knowledge will also be reinforced through in-class discussions, and periodic readings that focus on current issues in finance and hospitality.

Prerequisites: ECON 102, A grade of C or better in HM 336

HM 480: Applied Hospitality Concepts and Decision Making

3 Credits

Applied Hospitality Concepts and Decision Making is designed as a capstone course in the Hospitality Operations stream. The course primarily focuses on students' participation in a hotel management simulation. The simulation requires students to consider strategic objectives through the application of revenue management, managerial accounting, human resource management, sales and marketing, and sustainability and innovation concepts. The course also devotes time to the topic of service quality and the considerations in delivering high-quality service in the hospitality experience including both theoretical perspectives and quantitative analysis (i.e., project management, process

analysis). As a capstone course, the course will also keep students abreast of trends and current events in the hospitality industry.

Enforced Prerequisite at Enrollment: HM 280 and HM 336 and HM 350

HM 481: Advanced Topics in Hotel Management

3 Credits

This course will focus on advanced topics in hotel management that are of critical importance in a dynamic and ever-changing operating environment. In particular, this course will address the economy, hotel ownership relationships, brand development, other industries in the value chain, product and service trends, and legislative issues. Knowledge of the economy and its relationship to the hotel industry is presented with discussions on stock markets, economic indicators, capital structure, and hotel economic indicators. Hotel ownership relationships are becoming more complicated, which will be addressed with discussions on asset management, owner objectives, management contracts, and franchise agreements. The introduction of new brands is a key component to corporate strategy, and the nature of strategic brand development will be covered. Other industries in the value chain have a significant impact on the hotel industry, and this course will focus on the evolution of alternative booking channels and lodging options. Product and service trends will also be a course focus, including healthy hotel initiatives, environmental initiatives, design trends, amenity trends, and technological advances. In addition, legal issues impacting the hotel industry will be discussed, along with the role of the American Hotel and Lodging Association and its lobbying efforts on specific legislation.

Enforced Prerequisite at Enrollment: HM 280

HM 482: Hospitality Real Estate

3 Credits

Ultimately, hospitality enterprises are location-based businesses requiring the deployment of real estate. To understand this important concept, hospitality students need to understand real estate in a hospitality industry environment. Students in HM 482 complete projects including feasibility studies for proposed hotels where they evaluate the competition, project hotel supply by future year, including evaluating and quantifying future supply additions. Then, students project hotel demand by future year by market segment, including estimating growth and any induced demand, and they calculate fair share by future year for proposed hotels. Students estimate penetration ratios by future year by market segment for proposed hotels, until stabilization, calculate occupancy by future year for proposed hotels, until stabilization, and estimate Average Daily Rate (ADR) by future year for proposed hotels, including estimating inflation. Students develop detailed financial projections by future year for proposed hotels, estimate market value for proposed hotels by applying the Income Approach, Cost Approach, and Sales Comparison Approach, conduct a Reconciliation to conclude a single, final Market Value Estimate, and compare the estimated market value of proposed hotels to the estimated development cost to conclude feasibility.

Enforced Prerequisite at Enrollment: C or better in HM 101

HM 483: Revenue Management

3 Credits

Students learn how to effectively implement revenue management strategies and techniques in the hospitality industry.

Enforced Prerequisite at Enrollment: a grade of C or better in HM 350

HM 484: Hospitality Entrepreneurship and Innovation

3 Credits

This course examines Entrepreneurship, Intrapreneurship and Innovation in the Hospitality Industry. The course provides a foundation of how ideas are generated, implemented, and taken to market. The course examines the characteristics of the entrepreneur and the process from idea generations, building a business model, preparing competitive analysis, completing a feasibility study, reviewing intellectual property, developing a business plan, seeking funding, and presentation to investors. The course is oriented to the student who would like to start a business or explore innovation within an existing organization

Enforced Prerequisite at Enrollment: ACCTG 211 or HM 235

HM 485: Advanced Meeting and Event Management

3 Credits

Meeting and event planning is an important and viable professional career option within the hospitality industry. Each event contains all the aspects of any business venture: stakeholder analysis, operations plan, marketing plan, and financial plan. Accordingly, the execution of an event requires effective communication, teamwork, motivational, and analytical skills. Therefore, students seeking a career in event management need to possess these fundamental business skills. In this advanced, hands-on course, students will plan and execute an event, building on event management content from HM 384: Introduction to Meeting and Event Planning. Students will be involved in all major aspects of planning and executing events, including contract negotiation, budgeting, risk management, promotion, menu planning, site selection, on-site management, sustainability, inclusivity, volunteer management, and evaluation.

Enforced Prerequisite at Enrollment: HM 384

HM 486: Casino Marketing

3 Credits

The primary objective of this course is to build upon the fundamental understanding of the gaming industry that was introduced in the introductory course. The advanced students will gain an understanding of the various promotional programs currently used by the commercial gaming industry. Students will build this knowledge by working in teams to build competence and present specific programs to their classmates. In addition, students will continue to learn to evaluate marketing programs based on their incremental contributions to profits and thereby understand that some marketing approaches cannot be financially justified. Finally, the students will continue to build competence in the fundamentals of casino mathematics.

Enforced Prerequisite at Enrollment: HM 386

HM 488: Hospitality Asset Management

3 Credits

Asset management is a growing and dynamic discipline in the hospitality industry. Asset managers are integral to the relationships between owners, managers, franchisors, franchisees, and brands. Today's owners expect asset management to function as the owner's representative in optimizing the value and protecting the asset. This course introduces

students to asset management ("AM") and the role of the asset manager in global hospitality operations. The course is taught from a hospitality perspective and focuses on how asset managers usually work with hospitality asset owners and third-party providers to enhance and optimize the value of hospitality assets. The multidisciplinary content includes a variety of perspectives on asset manager helping owners and third-party operators make investment decisions, enhance asset value, review and assess contractual agreements, and be aware of ongoing global and local trends that could eventually affect the value of hospitality assets such as hotels and restaurants

Enforced Prerequisite at Enrollment: ACCTG 211 or HM 235

HM 490: Strategic Hospitality Management

3 Credits

The purpose of this capstone course is to integrate previous course work to enhance students' analytical and critical thinking skills, managerial decision making skills, and an awareness of emerging trends in the hospitality industry. In particular, this course will integrate content in the areas of hospitality marketing, human resource management, organizational behavior, finance, accounting, and hospitality operations. The course offers a blend of theory and practical application of models of competitive strategy. The central questions that drive the course are: 'How do hospitality companies make strategic decisions, and how does strategy enhance the effectiveness of hospitality enterprises?' During the first half of the semester, the course will focus on the model of strategy formulation, from developing company vision and mission and setting objectives, through conducting an environmental scan, SWOT analysis, strategic analysis, and strategic choice. During the second half of the course, the focus will shift to corporate social responsibility, ethics, international strategic decision making, global hospitality management, and emerging trends in the industry.

Enforced Prerequisite at Enrollment: HM 242 and a grade of C or better in HM 336 and HM 365

HM 490W: Strategic Hospitality Management

3 Credits

This capstone writing-intensive class integrates content from throughout the previous curriculum, focusing on strategic application to current industry issues. HM 490W Strategic Hospitality Management (3) This capstone course integrates previous courses in the curriculum and introduces students to new strategic management concepts. This course adopts a macro perspective by focusing on the total hospitality enterprise and the external competitive environment in which hospitality firms operate. The goal of the course is to develop students' analytical skills to formulate, implement, and evaluate business strategies. Using a case-based approach, the course emphasizes critical thinking and evidence-based decision making.

Enforced Prerequisite at Enrollment: A grade of C or better in HM 336 and HM 365 and HM 442

Writing Across the Curriculum

HM 492: Advanced Professional Seminar in Hospitality Management

1 Credits

Course prepares senior HM students to assume leadership positions in the hospitality industry (Focus on careers, leadership, ethics, lifelong learning).

Enforced Prerequisite at Enrollment: 1000 hours of work experience in the hotel, restaurant and institutional management industry; Concurrent: HM 430 and HM 466 and HM 490W

HM 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

HM 494H: Senior Honors Thesis

1-6 Credits/Maximum of 6

Independent study related to a student's interests directed by a faculty supervisor and culminating in the production of a thesis.

Enforced Prerequisite at Enrollment: STAT 200 and a grade of C or better in HM 201
Honors

HM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

HM 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HM 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HM 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Human Development and Family Studies (HDFS)

HDFS 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HDFS 101N: Helping People: Introduction to Understanding Social Problems & How to Help

3 Credits

This inquiry-based course introduces students to the dynamic world of helping through the exploration of "hot topics"/pressing social issues. Exploration will highlight core themes of lifespan human development, lives in context, and the ethics of care as well as integrate how to use concept maps to understand complex social issues and identify policies and interventions to help. While discussion and exploration of hot topics may extend to address international contexts and applications, exploration will primarily be grounded in exploring issues within the U.S. By the end of the semester, students should develop the skills and knowledge needed to independently learn about and find ways to help address the pressing social issues that interest them.

GenEd Learning Objective: Social Responsibility and Ethical Reasoning

HDFS 108N: Art and Science of Human Flourishing

3 Credits

This course offers students the opportunity to explore human flourishing - defined as a life of deep meaning, fulfillment and service to others. Students will be taught about flourishing through the lens of science, philosophy, and their own experience. Through exposure to diverse scientific theories and research on the skills associated with flourishing, to philosophical and religious writings on human happiness and wellbeing, and to various reflective exercises and contemplative practices (e.g., mindfulness and compassion meditation), students will develop conceptual knowledge, experiential insight, and practical skills related to flourishing. The course begins by introducing a conceptual framework that defines flourishing in terms of foundations, domains and dimensions. First, students will learn about the foundations of flourishing in terms of the unique human capacities for reflection, resilience and transformation. Second, students will learn about four major domains and related dimensions that characterize flourishing, including the domains of awareness (e.g., focus, emotion, mindfulness), connection to others (e.g., interdependence, compassion, diversity), wisdom (identity, aesthetics, values) and integration of one's values and intentions in everyday living (e.g., courage, performance). Together, in a supportive and highly experiential learning environment, students will be encouraged to envision, articulate and pursue their own unique path to flourishing during their time in college and beyond based on their intellectual and experiential learning in the course. By the end of this course, students

are able to: (I) Demonstrate foundational knowledge, including the ability to analyze and describe the relevant concepts and theories in multiple intellectual fields on the nature and cultivation of human flourishing, and the ability to recognize the possibilities, value, and relevance of cultivating personal flourishing in their own lives in relation to flourishing in social relationships, communities, and institutions; (II) Experience deep engagement in terms of being familiar with the basic personal experiences relating to individual qualities of human flourishing in order to make personal sense of them, and master individual practices for assessing and developing them; and (III) Understand real-world applications in terms of acquiring skills, sensibilities, and perspectives relating to individual qualities of human flourishing, which they are able to apply in the diverse contexts of their lives

General Education: Health and Wellness (GHW)

General Education: Social and Behavioral Science (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

HDFS 109: Community, Connection, and Contemplation

1.5 Credits

Supportive relationships and communities are critical to health and well-being. However, creating meaningful relationships is challenging, and often requires a continuous exploration of the self and others. In this course, human development and contemplative science research sets the foundation to explore and understand connections between wellness, self-care, and community. Students will examine qualities of healthy relationships, social connection in their lives, and contemplative practices as they build skills for to promote collective resilience and solidarity. Additionally, they will be guided to examine challenges of self-care and caring for others by exploring systemic, social, and psychological barriers perpetuated by culture. Primary goals of this course are for students to develop greater awareness of self and a skill set to build and support a culture that values belonging, acceptance, and authenticity.

Recommended Preparations: It is suggested (but not required) that students complete HDFS 108N prior to or concurrent with HDFS 109. United States Cultures (US)

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Soc Resp and Ethic Reason

HDFS 129: Introduction to Human Development and Family Studies

3 Credits

Introduction to psychosocial and family development at all stages of the individual and family life cycle. Students may take only one course for General Education credit from SOC 30 or HDFS 129. HDFS 129 Introduction to Human Development and Family Studies (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. This course provides a basic introduction to the concepts, theories, and research on human development as it occurs over the life span and in context. Students will be introduced to developmental tasks and challenges unique to each stage of human development from the womb through infancy, early and middle childhood, adolescence, emerging adulthood, middle age and old age. Beginning with the prenatal state and infancy, students will be introduced to the biological, emotional, cognitive, psychosocial, as well as the social, cultural and historical

factors that influence growth and development across infancy, childhood, adolescence, adulthood, and advanced adulthood. Students will be introduced to basic concepts, theoretical orientations, and key empirical studies that inform human growth and development. Furthermore, attention is given to the central role of families and family life as a context for development. The formation of intimate relationships, marriage, marital processes, motherhood and fatherhood will be reviewed, as well as problems and challenges that families face such as financial stress, separation and divorce, abuse, and caregiving. Finally how families and family behavior are influenced by their communities, the larger culture, and other social and economic forces will be discussed.

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Science (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

HDFS 129S: Introduction to Human Development and Family Studies

3 Credits

Introduction to psychosocial and family development at all stages of the individual and family life cycle.

Bachelor of Arts: Social and Behavioral Sciences

First-Year Seminar

HDFS 175N: Introduction to Youth Development and Arts-based Social Justice

3 Credits

Youth Development and Arts-based Social Justice is an inter-domain course (GA/GS) intended to help students develop a critical understanding of the ways that sociopolitical factors influence youth development. The course will examine youth development as an indicator of broader community development and explore the inter-dependencies between the two by drawing both from the interdisciplinary fields of youth development and arts-based social justice. This course will assess the proposition that goals of social equity at the community, metropolitan, or regional scale cannot be achieved unless disparities in youth development are also addressed. Students will learn to read, interpret, discuss, and integrate information from the arts and social sciences. We will primarily, but not exclusively, focus on youth-led organizing and social justice movements as sites of youth development wherein young people have utilized the arts to mobilize and transform public policy, determine the destiny of their communities and challenge injustice (e.g., mass incarceration, educational inequality, and forced relocation). We will explore key concepts, theories, models, and examples of youth development and youth organizing from the perspectives of youth and adults who are actively engaged in building progressive movements for social justice through the arts. Throughout this exploration, we will pay close attention to issues of identity, culture, community, and politics. Students in this course will be introduced to key ideas and dispositions for working with diverse youth populations through a social justice lens. Students will engage in critical thinking based on their own identities, values, experiences and perspectives while also practicing deliberate and strategic open-mindedness rooted in the awareness of the personal and political limitations. Students will reflect upon their own developmental experiences and the contexts in which these played out in their weekly sketchbook entries and the two papers. The course will consider the mutual impact that arts and social movements have on each other. This will be assessed through classroom dialogue, students' sketchbooks

and the integrative creative action project. The historical and theoretical materials will be contextualized by guest lectures, discussions, and performances involving visiting scholars, artists and activists.

Enforced Prerequisite at Enrollment: Recommended Preparations: ENGL 15 and CAS 100

General Education: Arts (GA)

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HDFS 197N: Special Topics - InterDomain

1-9 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is an Inter-Domain GenEd course.

HDFS 200: Quantitative Skills for Human Services

3 Credits

This course introduces students to the quantitative methods used in human service careers emphasizing the implementation and interpretation of quantitative procedures in human service program settings. Students will obtain an understanding of programming basic Microsoft Excel calculations used to manage and analyze data; budgeting required in human service settings; interpreting descriptive and foundational inferential statistics; using quantitative statistics for program evaluations, producing charts and graphs for presenting information to community shareholders and funding agencies, and using output from statistical software to guide conclusions about human service program effectiveness.

General Education: Quantification (GQ)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

HDFS 210: Ethnicity, Health and Aging

3 Credits

The study of health and aging among persons from diverse race populations is not only the study of how people of different racial groups age, but also the contexts in which these populations function physically, psychologically, and socially. This course will allow students to develop a better understanding of the aging process across racial/ethnic populations and how differences in adult and aging development can be affected by social structures. Furthermore, the course is designed to encourage students to transfer learned material into modifying existing or developing new practical solutions to reduce aging and health disparities. This course will cover multiple areas, such as: (1) Overview of the concepts regarding race, ethnicity, and culture; (2) Aging

demographics; (3) Research methods in aging and racially diverse populations; (4) Health Disparities (e.g., physical and mental health); (5) Family, work, and retirement; (6) Aging in neighborhoods; (7) Policy.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

HDFS 215N: Global health and families

3 Credits

This course examines global health from a family dynamics approach. The emphasis throughout the course is on the integration of family and health. Social science theories are introduced to understand how family kinship patterns and family dynamics influence health issues globally, as well as how family patterns are impacted by global health issues. This course also emphasizes how the family is used as a basis for intervention and prevention, and the social science theories that inform these strategies. Although global health itself is of great importance, the connections between global health and family dynamics will provide students a micro-macro connection and the skills to examine global issues from multiple levels of analysis.

HDFS 216: Personal and Interpersonal Skills

3 Credits

Conceptions of lifespan personal and interpersonal skill enhancement.

HDFS 229: Infant and Child Development

3 Credits

Theory, research, and methods of social/behavioral/biological sciences related to developmental processes and intervention during infancy and childhood. HD FS 229 Infant and Child Development (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. This course introduces students to the study of children from the prenatal period to (not including) adolescence. Students will become familiar with the most prominent theoretical ideas about child development. The latest research on prenatal development, infancy, early and middle childhood will inform the discussions, and students will become familiar with key studies. The major domains of children's functioning covered include social interactions and emotional development, cognitive changes and acquisition of language, physiological growth in infancy and biological changes that underlie the transition out of childhood into adolescence. A key feature of this course is how processes in these different domains interact to influence children's overall adaptation. Finally, informed by a life course developmental framework, this course will place these developmental processes in context. Students will become familiar with the theoretical and empirical literature that locates children's growth and development in the context of families and family change, peer groups, neighborhoods and communities, and the larger cultural context within which they are embedded.

 GenEd Learning Objective: Key Literacies

HDFS 230: Overview of Curricular Practices in Early Childhood Care and Education

3 Credits

Curricular practices in programs for infants, toddlers and preschoolers. Focus on developmentally appropriate practice, emergent curriculum and home/child care links. HD FS 230 Overview of Curricular Practices in Early Childhood Care and Education (3) This course, intended for current or future providers of early childhood care and education, examines curricular practices in programs for young children. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies. The course addresses current practices in early childhood care and education programs for infants, toddlers, and preschoolers. After a brief examination of the history of early childhood care and education, this course focuses on the use of developmentally appropriate activities and strategies to maximize children's positive growth and development. Each of the traditional early childhood curricular areas (involving physical, social, emotional, cognitive development) is considered, as is the importance of the connection between families and early care and education settings. Reading and discussion in each curricular area stresses diversity issues and inclusion of children with special needs in groups with normally developing children. There is an emphasis on applications of the project approach and emergent curriculum as appropriate for use with infants, toddlers and preschoolers. Students show mastery of the course material through tests over each topic of discussion, reports on outside reading related to current issues in early childhood care and education, individual and small group presentations about a specific curricular issues, and use of a reflective journal. The course will be offered once each academic year, with an enrollment of 15-25 students.

Enforced Prerequisite at Enrollment: HDFS 229

HDFS 231: Guidance in Early Childhood Care and Education

3 Credits

Positive guidance methods for infants, toddlers and preschoolers, leading to self-control and social capability. Includes focus on home/childcare links. HD FS 231 Guidance in Early Childhood Care and Education (3) This course, intended for current or future providers of early childhood care and education, examines guidance methods for use with young children. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies. The course emphasizes the use of guidance techniques that help children grow in independence, responsibility, self-control, and ability to function as group members. It addresses organization and guidance methods that foster the child's responsibility, independence, positive social interactions and emotional self-control. While the course covers various types of guidance, it emphasizes responding to children with respect and acceptance, using positive discipline. Since guidance is an area in which families and teachers frequently must confer, this course also deals with the use of effective parent-teacher communication skills. It requires weekly experience with young children. Each student will produce a portfolio demonstrating understanding of guidance techniques and their theoretical backgrounds. In addition, portfolios will demonstrate evidence of competence in analyzing the early childhood care and education environment in terms of its effect on young children's

behavior, as well as competence in solving environmental problems that contribute to guidance issues. Portfolios will also demonstrate evidence of competence in communicating with parents and families about guidance issues. Students will reflect, in writing, on their own use of developmentally appropriate guidance techniques in their work with young children. The course will be offered once each academic year, with an enrollment of 15-25 students.

Enforced Prerequisite at Enrollment: HDFS 229

HDFS 232: Creativity and Play in Early Childhood Care and Education

3 Credits

Planning for play, creativity and exploration in programs for infants, toddlers and preschoolers. Includes focus on home/childcare links. HD FS 232 Creativity and Play in Early Childhood Care and Education (3) This course, intended for current or future providers of early childhood care and education, examines the development of play and creativity in young children. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies. The course addresses the potential of play, creativity, and exploration in the optimal development of a child. Content includes the development of play, creativity, and aesthetics. The course emphasizes adult-child interaction styles and activities that encourage, enhance and expand play, exploration and creativity in infants, toddlers, and preschoolers throughout the daily care and education routine. There is an emphasis on effective communication with families regarding the benefits of play and open-ended activities. It requires weekly experience with young children. Each student will develop a portfolio that demonstrates understanding of the development of play, exploration and creativity in the early years, as well as competence in planning for and enhancing that development. The portfolio will also show evidence of competence in communicating with parents and families. In addition to the portfolio, the student will develop an activity card file containing ideas for developmentally appropriate play and creative activities for infants, toddlers, and preschoolers. Each student will participate in individual and group presentations related to course topics, and will take tests covering reading and other class material. The course will be offered once each academic year, with an enrollment of 15-25 students.

Enforced Prerequisite at Enrollment: HDFS 229

HDFS 233: Emergent Language and Literacy: Development and Practice in Early Childhood Care and Education

3 Credits

Fostering development of language and literacy in infants, toddlers and preschoolers. Includes children's literature and focus on home/childcare links. HD FS 233 Emergent Language and Literacy: Development and Practice in Early Childhood Care and Education (3) This course, intended for current or future providers of early childhood care and education, examines the emergence of language and literacy. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies. The course emphasizes why and how to foster continuous development from first sound through recognizable speech; from initial symbol recognition through reading; from making the first mark through writing. Content also includes choosing literature appropriate for use with infants and young children and methods of integrating literature throughout the daily child care and education routine. There is a focus on developing activities centered on language and literature, and an emphasis on effective communication with parents and families. This course requires

weekly experience with young children. Students will produce a portfolio demonstrating understanding of language and literacy development, competence in planning developmentally appropriate language and literacy activities for infants and young children, and competence in evaluating child care settings in terms of support for emergent language and literacy. Portfolios will also demonstrate evidence of competence in choosing and using good literature with young children, and in communicating to parents and families the importance of facilitating early language and literacy. In addition to the portfolio, students will develop files of language and literacy activities appropriate for use with infants and young children. They will also take tests related to reading and material covered in class. The course will be offered once each academic year, with an enrollment of 15-25 students.

Enforced Prerequisite at Enrollment: HDFS 229

HDFS 234: Mathematics and Science Reasoning: Development and Practice in Early Childhood Care and Educat

3 Credits

Fostering development of mathematical reasoning and scientific inquiry in infants, toddlers and preschoolers. Includes project approach and focus on home/childcare links. HD FS 234 Mathematics and Science Reasoning: Development and Practice in Early Childhood care and Education (3) This course, intended for current and future providers of early childhood care and education, examines the emergence of mathematics and science reasoning. It is required for the proposed Early Childhood Care and Education option to the associate degree in Human Development and Family Studies. The course addresses processes involved in mathematical reasoning and scientific inquiry. It emphasizes the development of activities, questioning skills, and observation and documentation techniques that extend infants' and young children's exploration, discovery, and thinking patterns. Content also includes methods of integrating mathematics, science and reasoning activities throughout the daily child care and education routine. Participation in the project approach provides students with an experiential understanding of constructing knowledge. There is also an emphasis on effective communication with parents and families. This course requires weekly experience with young children. Students will produce a portfolio demonstrating understanding of the development of mathematics and science reasoning in the very early years and competence in planning developmentally appropriate mathematics, science, and logical thinking activities for infants and young children. Portfolios will also demonstrate evidence of competence in communicating to parents and families the importance of exploration and discovery in facilitating young children's mathematics and science knowledge. Students will reflect, in writing, on their own growth in knowledge and competence in facilitating young children's thinking. In addition to the portfolio, students will develop files of mathematics and science reasoning activities appropriate for use with infants and young children. They will also take tests related to reading and materials covered in class. The course will be offered once early academic year, with an enrollment of 15-25 students.

Enforced Prerequisite at Enrollment: HDFS 229

HDFS 239: Adolescent Development

3 Credits

This course provides a basic introduction to concepts, theoretical perspectives, and key empirical studies on adolescent development. Students will become familiar with key developmental trends and

challenges that must be addressed to achieve healthy growth and development from the beginning of adolescence (puberty) up to the transition to adulthood. The course addresses biological changes (hormones, brain development), cognitive changes (abstract thinking, information processing) and social changes (families, peers, school, work); and the implications of these changes for issues such as identity development, autonomy, intimacy, sexuality and achievement. For each topic, students will become familiar with major theoretical frameworks, approaches to empirical research, and findings from empirical studies. Key features of this course are its attention to: how biological, cognitive and social changes combine to influence adolescents' overall adaptation; the ways in which adolescent development occurs in the context of families, peer groups, neighborhoods and communities, and the larger cultural context; and how theories and empirical findings can be applied to promote healthy adolescent development. Students pursuing the HDFS major must complete HDFS 129N plus two of the three 200-level developmental courses (HDFS 229, HDFS 239, HDFS 249N). This course may count toward the minor in HDFS. Students who are not pursuing a major in Human Development and Family Studies can apply credits from this course towards the General Education Social and Behavioral Sciences (GS) knowledge domain.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

HDFS 249N: Adult Development and Aging

3 Credits

This course provides a basic introduction to concepts, theoretical perspectives, and key empirical studies on adult development and aging. Students will become familiar with key developmental trends and challenges that must be addressed to achieve healthy growth and development throughout adulthood and late life. The course addresses changes in physical health, cognition, and psychosocial functioning (including mental health, social roles and relationships, and transitions in work and retirement); and the implications of these changes for issues such as risk of disability, dementia, caregiving, and end-of-life decisions. For each topic, students will become familiar with major theoretical frameworks, approaches to empirical research, and findings from empirical studies. Key features of this course are its attention to: how biological, cognitive and social changes combine to influence overall adaptation and throughout the aging process; the ways in which adult development and aging occurs in the context of families, social relationships, neighborhoods and communities, and the larger cultural context; and how theories and empirical findings can be applied to promote healthy adult development and aging. Students pursuing the HDFS major option must complete HDFS 129 plus two of the three 200-level developmental courses (HDFS 229, HDFS 239, HDFS 249N). This course may count toward the minor in HDFS. Students who are not pursuing a major in Human Development and Family Studies can apply credits from this course towards the General Education Integrative Studies requirement: as an Inter-domain Course, the course puts approximately equal emphasis on learning objectives for Social and Behavioral Sciences (GS) and for Health & Wellness (GHW) knowledge domains.

HDFS 250: Sexual Identity over the Life Span

3 Credits

Concepts of affectional and sexual orientation over life span, with emphasis on lesbian and gay male personal, family, and community adaptation. HD FS (WMNST) 250 Sexual Identity over the Life Span (3) (US) This course reviews concepts of sexual identity as informed by a human development perspective. Concepts of sexual orientation are discussed in the context of a review of lesbian, gay male, and bisexual lives. Developmental processes of lesbian and gay life are detailed: personal change from the teenage years through adulthood, changes in family and relationship patterns, and impact of communities, laws, and culture. These processes are contrasted to the developmental processes of women and men who identify themselves as heterosexual. The complex effect of gender, race, ethnicity, class status, and historical time on sexual orientation and its expression has generated ongoing controversies in scholarship as well as in public discourse. The course will be an introduction to these controversies as informed by human development research.

HDFS 254N: Reading Our Lives: Understanding Diversity and Human Development through Memoirs

3 Credits

Students will explore the way people and their environments interact to influence human development through the integration of memoirs and other personal narratives, humanist themes and methods of inquiry, and social science theory and research. The personal narratives will expose students to the diversity of human experience including differences in gender, race, socioeconomic status, cultural and historical contexts. To frame and inform discussions of each memoir, students will examine relevant social science theories and research. The social science material will include key developmental frameworks such as lifespan development and ecological systems theory, and micro- and macro-level contextual factors influencing development, such as interpersonal relationships, cultural norms, and structural constraints. Students will also examine core humanist themes relevant to each memoir, such as values, cultural relativism vs. universalism, narratives and objective facts, structure and agency. Students will learn to read, interpret, and integrate information from the humanities and social sciences. They will learn to critically reflect on their own experiences, perceptions, and values, while

developing an understanding of other people's experiences, perceptions, and values. Students will also learn to engage in compassionate, informed, and knowledge-generating discussions to understand the complexity of human experiences.

HDFS 258N: Introduction to Child Maltreatment and Advocacy Studies

3 Credits

Introduction to the multidisciplinary field of child maltreatment. CMAS (HD FS) 258 Introduction to Child Maltreatment and Advocacy Studies (3) This course will focus on the identification, investigation, service, advocacy, prosecution, and prevention of child maltreatment as well as the treatment of adverse health outcomes for children who have been maltreated. Specific topics include the causes, correlates, and consequences of child maltreatment, best practices for reporting and investigating an allegation of child maltreatment, evidence-based prevention and intervention programs, the Child Welfare System, and relevant legal issues (e.g., termination of parental rights, children's testimony in court, etc.). By definition, this course will detail issues related to the abuse and neglect of children. This material can be difficult to hear, view, and discuss. This course is a required course, and a prerequisite for all advanced courses, for a Minor in Child Maltreatment and Advocacy Studies.

HDFS 287Y: Intercultural Community-Building

3 Credits

An experiential introduction to negotiating differences in small groups, families, institutions, and communities. HD FS 287Y Intercultural Community -Building (3) (GS;US) This course provides students an experiential introduction to how individuals and families both affect and are affected by the various cultural/community contexts in which they develop, including schools, places of work, and youth and community programs. Students will identify and explore their own unique and shared assumptions, and the relationships between those assumptions and life histories and experiences. They will become aware of the dynamics of how communities are formed and function by forming a community themselves, and through involvement in a local community group or agency. Group discussions and written reflections will link their personal experiences to theory and research presented in class and readings on such topics as developing systems theories, cultural communication theories, and decision-making. The goals of the course are to increase students' understanding of the relations between values, power relations, and the various processes of social change, and encourage the development of communication skills and citizenship. Special

emphasis will be placed on developing relationships within culturally and ethnically diverse groups. Because it is designated as a writing intensive course, particular attention will be given to the development of written communication skills. Students will be evaluated on the basis on their performance in several areas, which may include examinations and quizzes, several writing assignments, and participation in class discussions and simulations. The course may be delivered at certain Commonwealth College campuses and Altoona College. Depending on location, the course may be offered during the fall, spring and/or summer sessions, with anticipated class enrollments of 12-20 students.

United States Cultures (US)
Writing Across the Curriculum

HDFS 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

HDFS 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HDFS 298: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HDFS 300: Honors Seminar: Concepts and Issues in Human Development and Family Studies

3 Credits

Introduces core concepts and issues in the study of Human Development and Family Studies.

Enforced Prerequisite at Enrollment: HDFS 129 or permission of human development and family studies honors adviser
Honors

HDFS 301: Values and Ethics in Health and Human Development Professions

3 Credits

Examines bases for choices among values in personal and professional relations in human development processes and supporting services.

HDFS 302A: Leadership and Technology Skills for Human Services Professionals A

3 Credits

Development of skills essential for contemporary human services professionals, including critical thinking, problem solving, electronic communications, and information handling.

Enforced Prerequisite at Enrollment: HDFS 129

HDFS 310M: Seminar in Honors--Research Methods

4 Credits

Overview of research and methods issues tailored around development of honors thesis proposals. HDFS 310 Seminar in Honors--Research Methods is designed to cover all of the elements in designing a research project. Through a series of written projects, students study the scientific method, research question development, and tools and techniques for data gathering and analysis. The course covers how to take a theory about human development and family studies and develop testable hypotheses/research questions. Students learn the basic skills needed for managing and understanding data; analyzing data; and presenting data. Then, students use real data to practice data management, data analysis, and reporting on data in both oral and written forms.

Enforced Prerequisite at Enrollment: Permission of Human Development and Family Studies honors adviser

Honors
Writing Across the Curriculum

HDFS 311: Human Development and Family Studies Interventions

3 Credits

Survey of individual and family formal and informal intervention efforts; historical and current perspectives and approaches.

Enforced Prerequisite at Enrollment: HDFS 129

HDFS 312W: Empirical Inquiry in Human Development

3 Credits

Introduction to the skills involved in critical thinking in general and the methods of empirical inquiry in particular. Open to HD FS majors only.

Enforced Prerequisite at Enrollment: A grade of C or better required in EDPSY 101 or STAT 200

Writing Across the Curriculum

HDFS 314: Understanding Human Development and Family Research

1 Credits

Students who complete HDFS 314 will have a broad understanding of the methodological principles and the techniques used to measure human and family behavior. Students will also acquire an understanding of how statistics, reading, and writing research are integrated together for a complete learning experience. By the end of the semester, students will have gained a supplementary understanding of the research process. Students who successfully complete HDFS 314 will have become proficient (1) in the use of standard methodological terminology related to HDFS research. (2) in the use reference managing software (such as Zotero or Mandalay). (3) using software for family data collection (such as Qualtrics, SPSS, or Excel). (4) recording and reporting family data collected from "participants." (5) analyzing family data sets through the use of standard statistical analysis.

Recommended Preparations: HDFS 312W

HDFS 315: Family Development

3 Credits

Family functions over the life course; family from a multidisciplinary perspective, emphasizing adaptation and change. HDFS 315 Family

Development (3) (US) This course offers an overview of families focusing primarily on contemporary American families. The primary thrust of this course is to step beyond our personal experiences with families and place them within a broader social, historical, cultural and economic context. This class will be multi-disciplinary in its approach to the study of American families. However, we will begin with the historical, demographic and social changes that American families have undergone and try to understand some of the causes and consequences of these changes for the developmental life course of adults and children in families today. Throughout this course we will be particularly concerned with the diversity of American families stressing differences based on gender, race and ethnicity, and socioeconomic status.

Enforced Prerequisite at Enrollment: HDFS 129 or (3 credits in ANTH or BBH or CAS or COMM or CRIM or CRIMJ or GEOG or HDFS or HIST or PSYCH or SOC or WMNST or BIOL or BISC)
United States Cultures (US)

HDFS 315Y: Family Development

HDFS 330: Observation or Experience with Children, Youth, and Families

1-6 Credits

Directed observations of, or supervised experience with children, youth, and families in group or home settings.

Enforced Prerequisite at Enrollment: HDFS 229 or PSYCH 212

HDFS 345: CONTEMPORARY URBAN ISSUES AND SOCIAL JUSTICE FRAMEWORKS

3 Credits/Maximum of 3

The discipline of Human Development and Family Studies has a tradition of culturally sensitive engagement within communities, helping to improve quality of life by applying and disseminating knowledge about development across the lifespan, all in their larger social contexts. Issues of social justice and equity play an integral role in defining the questions that Human Development and Family Studies students ask and the solutions that they pursue, as students must account

for diverse needs and values based on age, gender, ethnicity and cultural background. Students preparing to work in the field of Human Development and Family Studies must possess the content, pedagogical and professional knowledge, skills, and dispositions necessary to work in diverse communities. HDFS 345 is an opportunity for students to explore the relationship between contemporary urban issues and family development. Participants will evaluate urban development from a Human Development perspective and with a critical eye to how urban development has accounted for the distinctive needs of different segments of the public. Therefore, HDFS 345 incorporates the knowledge of different Human Development and Family Studies theories and social justice paradigms to help students examine urban themes and build their understanding of social justice and family development as related to these themes. Students will learn how urban planning accounts for differences in society, identify different segments of the urban population differentiated by a few diversity constructs (culture, race, SES, gender, etc) and gain awareness of the varying and distinctive needs and concerns of these groups with respect to living in the urban environment. Students will also explore contemporary issues, like modern policing practices, and find resources to develop solutions to social issues or problems. Discussions of policy and moral philosophy will contribute to students' aptitude to plan an appropriate solution with tangible results. Ultimately, students are expected to leave the course with geographically-informed conceptualizations of social justice and insight into how individuals, families and organizations can work within urban communities as collaborators and partners.

Recommended Preparations: HDFS 175N or HDFS 129 or HDFS 239

HDFS 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor

HDFS 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HDFS 400: Youth Development and Social Justice Capstone Seminar

4 Credits

This course will immerse students in theories, historical contexts, and practices of structural oppressions that influence youth development, and responses to them through youth empowerment, democratic action, and popular education in communities through study, reflection and, most importantly, on-site partnership field placement with an urban youth worker or agency, such as in a school or community organization. Specifically, you will work with various community-based organizations in partnerships set up by the Penn State Faculty that are local exemplars of democratic action with and for youth development, working closely with professionals affiliated with those programs to support their work

and learn from them. HDFS 400 is a community engaged and culture of support course. Community engagement, also called service learning, is a form of reciprocal experiential education wherein students learn through the collaborative process of meeting authentic community needs. High quality community engagement also attempts to affect real, material social conditions; to authentically integrate the work done to meet community needs with the curriculum/course through continuous, critical reflexive and reflective inquiry; and to be a system of praxis (theory - practice) where the inquiry then informs the work participants do, participants' self-concepts, and the practices of the community. The field, reading, in class and written work will reflect these principles

Enforced Prerequisite at Enrollment: HDFS 175N Recommended Preparations: HDFS 345 or ENGL 15 or CAS 100 or HDFS 239

HDFS 401: Project Planning, Implementation, and Evaluation in the Human Services

3 Credits

Exercises and activities related to the design, planning, implementation and management, and evaluation of projects and programs in the human services. HD FS 401 Project Planning, Implementation, and Evaluation in the Human Services (3) HD FS 401 is part of a sequence of courses that develop skills and competencies of the human services student. The course emphasizes the further development of communication skills, diversity skills, team-building skills, critical thinking skills, and technology and leadership skills. Intended to be completed prior to the internship experience, the course will initially focus students' efforts on the identification of a field-based human services project or program, and a setting within which it could be carried out. Subsequently, students will design and plan the project or program, examine and propose effective implementation and management procedures, and incorporate state-of-the-art evaluation procedures into the design.

Enforced Prerequisite at Enrollment: HDFS 312W and approval by internship coordinator. Prerequisite or concurrent: HDFS 411

HDFS 402: Human Services Seminar

4 Credits

Presentations and discussion of contemporary human issues by students and visiting professionals.

Enforced Prerequisite at Enrollment: HDFS 401

HDFS 405: Gender and Social Development

3 Credits

A REVIEW OF GENDER-RELATED PATTERNS OF SOCIAL DEVELOPMENT OVER THE LIFESPAN, AS INFLUENCED BY BIOLOGICAL, SOCIOLOGICAL, AND PSYCHOLOGICAL FACTORS.

Enforced Prerequisite at Enrollment: HDFS 129 and (HDFS 312W or 6 credits in ANTH or BBH or CAS or COMM or CRIM or CRIMJ or GEOG or HDFS or HIST or PSYCH or SOC or WMNST or BIOL or BISC) United States Cultures (US)

HDFS 410: Communities and Families

3 Credits

Family and community interaction, emphasizing strategies for intervention to solve family-community problems.

Enforced Prerequisite at Enrollment: HDFS 312W and (3 credits in ANTH or BBH or CAS or COMM or CRIM or CRIMJ or GEOG or HDFS or HIST or PSYCH or SOC or WMNST or BIOL or BISC)

HDFS 411: The Helping Relationship

3 Credits

Theory and research related to interpersonal conditions which facilitate personal growth; intensive interpersonal competency training.

Enforced Prerequisite at Enrollment: (HDFS 311 and HDFS 312W) or [6 credits in HDFS or 6 credits in PSYCH or (3 credits in HDFS and 3 credits in PSYCH)]

HDFS 412: Adult-Child Relationships

3 Credits

Theories, research, and application of adult behavior for maximizing adult-child relationships and optimizing child socialization and self-development.

Enforced Prerequisite at Enrollment: (HDFS 229 or PSYCH 212) and HDFS 311 and HDFS 312W and (HDFS 315 or HDFS 315Y)

HDFS 413: Developmental Problems in Adulthood

3 Credits

Analysis of individual developmental problems from young adulthood through old age and their prevention and modification.

Enforced Prerequisite at Enrollment: (HDFS 129 or HDFS 249) and HDFS 312W

HDFS 414: Resolving Human Development and Family Problems

3 Credits

Strategies for, and roles of professional specialists in, the solution of problems in human development and family functioning.

Enforced Prerequisite at Enrollment: HDFS 312W and [6 credits in HDFS or 6 credits in PSYCH or (3 credits in HDFS and 3 credits in PSYCH)]

HDFS 415: Program Development in Family Relationships

3 Credits

Methods for planning, developing, and evaluating human service programs for families across the life span.

Enforced Prerequisite at Enrollment: HDFS 311 and HDFS 312W and (HDFS 315 or HDFS 315Y)

HDFS 416: Racial and Ethnic Diversity and the American Family

3 Credits

This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States. HD FS 416 (SOC 411)

Racial and Ethnic Diversity and the American Family (3) During the last several decades, the racial and ethnic composition of the U.S. population has changed dramatically. At end of the 20th century, non-Hispanic whites accounted for less than 75 percent of the U.S. population. While blacks remained the largest minority group, there were nearly as many Hispanics as blacks, and the number of Asians was increasing. Population projections indicate that by the middle of the 21st century, Hispanics will make up nearly one-fourth of the U.S. population. Blacks, Asians, and American Indians together will comprise an additional fourth of the population. The last several decades have also brought significant changes in family life in the United States, including declining rates of marriage, a rising age-at-marriage, an increase in cohabitation, and a dramatic rise in the proportion of births outside of marriage. While these trends in family life have been experienced by all racial and ethnic groups, there is substantial variation in family patterns by race and ethnicity. The course will build on other courses in social inequality and the family. The course does not overlap with any existing courses in the Department of Sociology or with courses offered in other relevant departments. This course will explore the nature and determinants of racial and ethnic variation in family processes in the United States. The student will read articles from major sociological journals and learn to extract major points and issues. He/she will learn to synthesize and critique various arguments on major issues in the field. The student will acquire skills in summarizing and evaluating arguments in essay form. He/she will also develop oral presentation skills. Final grades for the course will be based on class participation, a brief (approximately 5 pages) paper, a group presentation, a midterm examination (essay format) and a final examination (essay format). The course is not required for the Sociology minor or major. However, the course can count as one of the 400-level elective courses in Sociology for the Sociology minor, B.A. or B.S.

Enforced Prerequisite at Enrollment: 3 credits in SOC
Cross-listed with: SOC 411
United States Cultures (US)

HDFS 417: Biocultural Studies of Family Organization

3 Credits

Study of variability in family organization with an emphasis on cultural and economic factors influencing household organization and family roles.

Enforced Prerequisite at Enrollment: HDFS 129 and HDFS 312W and [(HDFS 315 or HDFS 315Y) or (6 credits in SOC or ANTH)]
International Cultures (IL)
United States Cultures (US)

HDFS 418: Family Relationships

3 Credits

Dynamics of family interaction; effects of parenthood, sibling and intergeneration relationships on family solidarity.

Enforced Prerequisite at Enrollment: HDFS 312W and (HDFS 315 or HDFS 315Y)

HDFS 420: Laboratory in Individual and Family Enhancement

3 Credits

Supervised practice in methods of assessment, intervention, and evaluation to enhance individual and family development.

Enforced Prerequisite at Enrollment: HDFS 312W and HDFS 411 and 6 additional credits in HDFS

HDFS 424: Family Development in an Economic Context

3 Credits

Economic conditions influencing family functioning; familial effects on the economy; strategies to enhance work-family relations.

Enforced Prerequisite at Enrollment: HDFS 312W and (HDFS 315 or HDFS 315Y)
United States Cultures (US)

HDFS 427: Developmental Sport & Exercise Psychology

3 Credits

Developmental changes in the antecedents and consequences of physical activity across the lifespan. HD FS (KINES) 427 Developmental Sport & Exercise Psychology (3) Change is constant with physical activity - our reasons for being active change across the lifespan and our experiences with physical activity change how we view ourselves and those around us. Developmental Sport & Exercise Psychology focuses on developmental changes in the psychosocial antecedents and consequences of physical activity across the lifespan. Specific course objectives include (1) describing theoretical frameworks and methods used to study physical activity-related psychosocial development across the lifespan, (2) describing how self-perceptions develop and influence behavior in movement contexts at different points in life, (3) explaining how contextual factors influence developmental processes associated with physical activity, (4) identifying age-related differences in activity-related antecedents and consequences of physical activity, and (5) developing, reviewing, and critiquing theoretically-grounded interventions to address issues related to developmental processes associated with physical activity across the lifespan. Evaluation will be based on written examinations, submission of a series of reflection papers on reading assignments, a group presentation, and the students' engagement in the class. It extends but does not duplicate existing courses in the Department of Innersole, Human Development & Family Studies, and Psychology.

Enforced Prerequisite at Enrollment: PSYCH 100 and (KINES 321 or HDFS 129 or PSYCH 212)
Cross-listed with: KINES 427

HDFS 428: Infant Development

3 Credits

Conceptual analysis, assessment, and empirical investigation of normal and deviant development, prenatal through first two years of life.

Enforced Prerequisite at Enrollment: (HDFS 229 or PSYCH212) and HDFS 312W

HDFS 429: Advanced Child Development

3 Credits

Processes of development during childhood from birth to adolescence. Emphasis upon theory, method, and empirical research.

Enforced Prerequisite at Enrollment: (HDFS 229 or PSYCH212) and HDFS 312W

HDFS 430: Experience in Preschool Groups

1-6 Credits/Maximum of 6

Guided practicum experience in planning and facilitating developmentally appropriate activities for young children. HD FS 430 Experience in Preschool Groups (1-6 per semester/maximum of 6) This course is intended to provide students with guided experience in interacting with young children and in designing and conducting developmentally appropriate activities for children in preschool groups. In addition to working with preschool children in preschool classrooms, students will meet weekly to discuss curriculum and activity planning, guidance techniques and issues relevant to providing quality preschool settings. Time will be set aside in each class period for open discussion of classroom experiences. Visits to campus preschool locations are planned to enhance the selection of appropriate teacher resources for curriculum development.

Enforced Prerequisite at Enrollment: (HDFS 229 or PSYCH 212) and HDFS 312W and HDFS 330

HDFS 431: Family Disorganization: Stress Points in the Contemporary Family

3 Credits

Focuses on divorce, remarriage, incest, family violence as well as problems associated with family formation and parent-child relations.

Enforced Prerequisite at Enrollment: 6 credits in HDFS or 6 credits in PSYCH or 6 credits in SOC or (3 credits in HDFS and 3 credits in PSYCH) or (3 credits in HDFS and 3 credits in SOC) or (3 credits in PSYCH and 3 credits in SOC)

Cross-listed with: SOC 431

Bachelor of Arts: Social and Behavioral Sciences

HDFS 432: Developmental Problems in Childhood and Adolescence

3 Credits

Analysis of problems in individual development from infancy through adolescence; prevention and modification of developmental difficulties.

Enforced Prerequisite at Enrollment: HDFS 229 and (HDFS 239 or PSYCH 212) and HDFS 312W

HDFS 433: Developmental Transition to Adulthood

3 Credits

Conceptual analysis and empirical investigation of interrelationships between developmental processes during the period of pubertal growth.

Enforced Prerequisite at Enrollment: HDFS 239 and HDFS 312W

HDFS 433H: Developmental Transition to Adulthood

3 Credits

Conceptual analysis and empirical investigation of interrelationships between developmental processes during the period of pubertal growth.

Honors

HDFS 434: Perspectives on Aging

3 Credits

An analysis of the demographic, social, and cultural factors affecting the aged population in American society.

Enforced Prerequisite at Enrollment: 3 credits in SOC

Cross-listed with: SOC 435

Bachelor of Arts: Social and Behavioral Sciences

HDFS 440: Family Policy

3 Credits

An in-depth examination of family policy. HD FS (SOC) 440 Family Policy (3)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to provide an in-depth examination of family policy. Students will identify and critically analyze major issues, controversies, and policies that affect families. Attention will be devoted to recognizing both intended and unintended consequences of family policies and understanding policy challenges and trade-offs. Students will gain an understanding of how policies are shaped by both facts and myths, as well as our values. Students will examine historical and current trends in family patterns (e.g., divorce, women's labor force participation, nonmarital births) to understand the implications they hold for individuals, families and society. Students will gain an awareness of the social, economic, historical, legal, and political contexts within which family policies exist and are proposed. Although the main focus is on U.S. family policy, some time will be devoted to learning about family policies in other countries. We will learn about several specific family policies in-depth (e.g., welfare), but a final goal is to help students develop a general way of looking at family policy that they can then use to understand any issue of family policy that unfolds throughout their lifetime. This course will foster thoughtful reflection and critical thinking, writing skills, research skills, and skills of synthesis, logic, and argument. Course goals will be accomplished through course readings, writing assignments, lectures, class discussions, debates and group projects. Mastery of course material and student evaluation are assessed in several ways. Students will take a midterm and final exam that cover lectures, class discussions, and assigned readings. Two papers are also required. The first paper is based on an analysis of newspaper articles dealing with family policy issues that students will collect and relate to course materials. The second paper is a literature-based analysis of a family policy in a society outside the United States. Class participation is also essential and its evaluation will be based on a combination of class attendance, contributions to class discussions, participation in group debates and projects, and an oral presentation of the final paper on a non-U.S. family policy.

Enforced Prerequisite at Enrollment: 3 credits of SOC or HDFS

Cross-listed with: SOC 440

Bachelor of Arts: Social and Behavioral Sciences

HDFS 445: Development Throughout Adulthood

3 Credits

Processes of development and change of behavior from early adulthood through old age, emphasizing theory, method, and empirical research.

Enforced Prerequisite at Enrollment: HDFS 249 and (HDFS 312W or PSYCH 301W) and (PSYCH 200 or STAT 200 or 3 credits in STAT) and (6 credits in HDFS or PSYCH or SOC)

Cross-listed with: PSYCH 416

Bachelor of Arts: Social and Behavioral Sciences

HDFS 447: Issues in Gerontology

3 Credits

Analysis of major issues in adulthood and aging, with an emphasis on integration of theory and research.

Enforced Prerequisite at Enrollment: HDFS 249 or HDFS 445 and HDFS 312W

HDFS 448: Death and Bereavement

3 Credits

The course takes a social and developmental perspective to illuminate an often hidden, but significant dimension of human development in the context of death-related encounters, attitudes, historical patterns, cultural variations, as well as the complexities of the American death system. In considering death-related patterns in society, it explores notable examples like 'human-induced death' (e.g., suicides, accidents and homicides), 'socially sanctioned death' (e.g., violence from war, genocide, and terrorism), and the characterization of death in daily discourse, the media, and present day death rituals. Key issues and questions from the field are discussed at both individual and societal levels, which include the meaning of death, facing death across the life-course, the sociocultural context of death, bereavement and grief, the death industry, and ethical and legal issues surrounding death. Examining the variegated meanings in different social institutional spheres, such as ethics, politics, mass media, and family from a social-scientific perspective, the course helps students recognize and appreciate that death and bereavement are deeply embedded into social and cultural structures of society, including how we learn about death, the typical ways in which our attitudes and beliefs are shaped, and how death and bereavement affect children, adolescents, adults, and older adults. It also addresses issues specific to death/dying in careers Human Development and Family Studies prepares for in terms of death education and bereavement counseling.

Enforced Prerequisite at Enrollment: (HDFS 229 or HDFS 239 or HDFS 249 or PSYCH 212) and HDFS 301 and (HDFS 312W or PSYCH 301W)

HDFS 451: Adoption: Policy, Practice, and Experience

3 Credits

This course introduces students to the concepts, research, and policies associated with historical and contemporary adoption practice. Topics will include adoption policies, practices, and experiences from the viewpoints of birth parents, adoptees, and adoptive parents. Social, emotional, and developmental issues faced triad members throughout the adoption process and lifespan are also examined. For example, students will be guided to consider implications of various adoption arrangements and policies on identity development (e.g. ethnicity/race and transracial adoption; social class and issues of privilege related to adoption; gender, sexuality, and adoption) as well as how historical and contemporary U.S. adoption policies, laws, and practices intersect with issues of social justice and equity.

Enforced Prerequisite at Enrollment: 6 credits of HDFS or PSYCH or SOC or RHS.

United States Cultures (US)

HDFS 452: Child Maltreatment Prevention, Intervention, and Legal Issues

3 Credits

Examines causes, correlates, and consequences of child maltreatment, empirically supported prevention/intervention programs, the Child Welfare System and relevant legal issues.

Enforced Prerequisite at Enrollment: (HDFS 229 or HDFS 239) and HDFS 312W

HDFS 453: Family Participation and Involvement in Child Services

3 Credits

Current and historical perspectives of roles and functions of family members in designing, delivering, and evaluating of child service programs.

Enforced Prerequisite at Enrollment: HDFS 229 and HDFS 312W and (HDFS 315 or HDFS 315Y)

HDFS 455: Development and Administration of Human Services Programs

3 Credits

Fundamentals of program development and administration of human service programs in community settings; emphasis given to program content, strategies, and the overall planning process.

Enforced Prerequisite at Enrollment: HDFS 311

HDFS 465: Child Maltreatment: Prevention and Treatment

3 Credits

Advanced examination in approaches for preventing child maltreatment and treating its consequences. HD FS (CMAS) 465 Child Maltreatment: Prevention and Treatment (3) Child maltreatment, including physical abuse, sexual abuse, emotional abuse, and neglect, is a highly prevalent condition affecting nearly one million children each year in the United States alone. This course will delineate the long-term health consequences affecting those who have experienced child maltreatment with an emphasis on those outcomes exerting the greatest impact on overall public health throughout the lifespan. Importantly, a focus on the etiology of such health consequences in the child maltreatment population will be made in order to understand the causal pathways leading to these health consequences. This focus on etiology will serve as a segue into the remaining sections of this course, specifically the prevention and treatment of child maltreatment and its consequences. Universal and targeted prevention programs, where the focus is to prevent an initial instance of child maltreatment from occurring, will be detailed, as will tertiary prevention programs, where the focus is on preventing a re-occurrence of child maltreatment. Similarly, prevention of adverse health outcomes for those affected by child maltreatment will also be covered. Finally, evidenced-based interventions applied with children who have been maltreated and are currently experiencing clinical levels of impairment (e.g. post-traumatic stress disorder) will be detailed. Identification and rehearsal of treatment components commonly used in prevention and clinical intervention programs will be emphasized. Students successfully completing this course will have direct knowledge of the consequences of child maltreatment and the established methods used in prevention and intervention programs applied with this population.

Enforced Prerequisite at Enrollment: CMAS 258N or HDFS 258N or SOC 258N

Cross-listed with: CMAS 465

HDFS 467: Autism: Providing Professional Support for Individuals and Families

3 Credits

This course emphasizes the professional development for students planning to pursue careers in the field of autism. Topics include the stresses and needs of families and siblings of children with Autism Spectrum Disorders (ASD), vocational and social challenges faced as individuals with ASD age into adolescence and adulthood, and techniques to aid parents in becoming effective advocates for their child's academic, social, and behavioral needs. Although the core symptomatology of ASD and empirically validated interventions are covered as foundational knowledge, these topics are not the focus of this course. Rather, this course identifies the challenges and strengths likely to be encountered in the lives of families and individuals with ASD and provides current best practices to help clients navigate life with ASD.

Enforced Prerequisite at Enrollment: (HDFS 229 or HDFS 239) and (HDFS 312W or PSYCH 212)

HDFS 469U: Family Change in the Global Economy

3 Credits

Exploration of how family life, quality, and structures in each region of the world are affected by the new global economy. HDFS 469U Family Change in the Global Economy (3) (IL) We know that family life, structure, and practices undergo dramatic change when there are economic and political changes in the society. Economic globalization is unprecedented as a force for social and political change. How is it affecting family life and structures around the world? While we have considerable research on globalization and on family change, there has been little work that connects the two. This is an exploratory seminar that involves locating those linkages and discovering families in each world region are changing as they meet up with global economic forces. As we explore each world region, we will learn about diverse cultures and how they are affected by global forces. In the Americas, Africa, Asia, the Middle East and Europe this course uncovers new forms of inequality that are emerging from the global economy and having direct effects on women and families. Through it all, we explore how human action, in the family, the community and the society, struggles for quality of life in a global economic context.

International Cultures (IL)
Honors

HDFS 477: Analysis of Family Problems

3 Credits

Analysis of families' behavioral, managerial, interpersonal, and financial problems and their interrelationships.

Enforced Prerequisite at Enrollment: HDFS 312W and (HDFS 315 or HDFS 315Y) and (3 credits in ANTH or BBH or CAS or COMM or CRIM or CRIMJ or GEOG or HDFS or HIST or PSYCH or SOC or WMNST)

HDFS 485: Supporting Healthy Development: Understanding Systems, Successes, and Challenges

3 Credits

In this advanced, project-based course, each student will select a topic to study for an individual, semester-long project. Through interviews with people in their communities and reading academic literature, students will examine their topic in detail and explore the way individuals and contexts interact to influence development. Throughout the semester, students will be instructed on topics such as ecological systems theory, policy analysis, concept mapping, and network theory, as well as be guided to develop skills in interviewing, networking, and project management. Students will learn about each other's topics, share resources, and provide each other with support. Assignments will be professional-style products ranging from concise interview and reading summaries to project proposals, weekly logs, and presentations.

Enforced Prerequisite at Enrollment: HDFS 301 Recommended Preparation: HDFS 312W, 6 additional credits of HDFS coursework at the 300/400 level

HDFS 490: Introduction to Internship Experience

2 Credits

Planning and preparation for field experience in human service setting. Analysis of human service system and arrangement of site.

Enforced Prerequisite at Enrollment: HDFS 312W and approval by internship coordinator. Prerequisite or concurrent: HDFS 411

HDFS 492: Palliative Care and Bereavement

3 Credits

Palliative care focuses on enhancing the quality of life for persons with life-limiting conditions and their families throughout potentially curative treatment and disease progression, through assessment and intervention methods that prevent and ease suffering of biological, psychosocial, and spiritual. From a biopsychosocial perspective, this course provides students with the conceptual, assessment, intervention, and professional skills to assist individuals and families across the lifespan facing illnesses such as cancer, heart disease, dementia, and Parkinson's Disease from the time of a palliative care diagnosis to day of terminal care diagnosis. Additionally, the course applies a holistic viewpoint to the assessment of ecological, social, and psychological factors influencing individual and family well-being in emphasizing best practices in addressing psychosocial stress and grief. This course will cover multiple areas, such as: (1) Psychosocial and spiritual issues, (2) Optimizing quality of life, (3) Strategies to support individuals and families, (4) Ethical and legal issues, (5) Communication, and (6) Interprofessional practice. Focusing on sociocultural and ecological approaches to relationship building and problem-solving, the course emphasizes best practices in patient/client and family-centered methods. The course is designed to foster clinical skills, thoughtful reflection and critical thinking, research knowledge, and skills of synthesis and logic crucial to assisting persons and their families from the healthcare to counseling setting. Students will be asked to participate in role-play simulations, contribute to weekly in-class discussions, develop and analyze case studies, analyze empirical-based literature, complete written assignments, and create a final project.

Enforced Prerequisite at Enrollment: HDFS 129 or PSYCH 100 or SOC 1

HDFS 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

HDFS 494H: Senior Honors Thesis

1-6 Credits/Maximum of 6

Independent study under the direction of the thesis advisor of topics related to the interests of the student, culminating in presentation of a thesis.

Enforced Prerequisite at Enrollment: approval of honors thesis advisor Honors

HDFS 495A: Internship: Advanced Experience

3-9 Credits/Maximum of 9

HD FS 495A Internship: Advanced Experience (8) HD FS 495A represents a full-time, one-semester internship experience. Its focus is experiential learning accompanied by intensive supervision, provided by one-site personnel, as well as University-based mentoring. Taken within a year of the pre-internship course (HD FS 490), which helps the student with the details of making arrangements for their internship, HD FS 495A, taken during the same semester as HD FS 495B, is considered the capstone of the HD FS undergraduate program. The internship can be taken during the fall, spring, or summer semester. It is one full semester spent working as a human service professional in a setting of your choice. Generally interns will work as a full-time professional (35-40 hours a week) for the semester.

Enforced Prerequisite at Enrollment: HDFS 490 and HDFS 301 and HDFS 455, and permission of internship director

HDFS 495B: Internship: Advanced Project

3 Credits

HD FS 495B Internship: Advanced Project (4) HD FS 495B is taken at the same time as HD FS 495A, and within a year of the pre-internship course (HD FS 490), which helps you with the details of making arrangements for the HD FS internship, HD FS 495B focuses on the academic aspects of the internship experience. This course can be taken during the fall, spring, or summer semester. Currently, HD FS 495B consists of writing three papers; The Organizational Analysis, The Policy Analysis, and The Personal Development Paper. The purpose of the organizational analysis paper is to give the intern an opportunity to learn about his or her internship setting or organization in greater depth than might be possible otherwise. This will necessitate the intern taking an active approach to systematically securing information about the internship organization through the review of relevant documents, conducting formal or informal interviews, and observation. This paper will then be saved at the internship office, without identifying information or grade, to be viewed as a source of information about potential internship sites by future students who are seeking internships.

Enforced Prerequisite at Enrollment: HDFS 495A

HDFS 495C: Professional Practicum in Human Services

3-8 Credits/Maximum of 8

Guided professional practicum in human services, usually in the form of a project related to a human services issue.

Enforced Prerequisite at Enrollment: HDFS 401 or HDFS 490

HDFS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

HDFS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HDFS 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HDFS 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

HDFS 499A: **SPECIAL TOPICS**

3 Credits/Maximum of 12

International Cultures (IL)

HDFS 499B: **SPECIAL TOPICS**

3 Credits/Maximum of 12

International Cultures (IL)

HDFS 499C: **SPECIAL TOPICS**

3 Credits/Maximum of 12

International Cultures (IL)

Human Resource Management (HRM)

HRM 494: Research Topics in HRM

1-12 Credits

Supervised student activities on research projects identified on an individual or small-group basis.

HRM 495: Internship in Human Capital Management

1-3 Credits/Maximum of 6

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Human-Centered Design and Development (HCDD)

HCDD 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

HCDD 113: Foundations of Human-Centered Design and Development

3 Credits

HCDD 113 provides a rigorous introduction to the theories, models, and tools that inform Human-Centered Design and Development. It lays the groundwork for subsequent courses in the sequence by examining the relationship between physical capabilities, cognitive and social models, and philosophical issues pertinent to human-centered analysis, design and development work. The course is practice-based, which means that it instructs more abstract concepts through practical activities and practice-based inquiry. Students will learn how to apply cognitive models and philosophical concepts to real-world problems. This approach has the dual benefit of (1) highly engaging pedagogy and (2) the production of portfolio-quality deliverables that students will be able to use to secure internships and entry-level positions in industry. Students will gain skills for synthesizing and communicating design implications as well as presenting work in multiple contexts (e.g. live presentations vs. bite-sized portfolio pages). The format of the class will balance project work with tests, quizzes, short essays, and discussions on key topics. It will also include readings and some short lectures.

HCDD 113S: Foundations of Human-Centered Design and Development FYS

3 Credits

HCDD 113S provides a rigorous introduction to the theories, models, and tools that inform Human-Centered Design and Development. It lays the groundwork for subsequent courses in the sequence by examining the relationship between physical capabilities, cognitive and social models, and philosophical issues pertinent to human-centered analysis, design and development work. The course is practice-based, which means that it instructs more abstract concepts through practical activities and practice-based inquiry. Students will learn how to apply cognitive models and philosophical concepts to real-world problems. This approach has the dual benefit of (1) highly engaging pedagogy and (2) the production of portfolio-quality deliverables that students will be able to use to secure internships and entry-level positions in industry. Students will gain skills for synthesizing and communicating design implications as well as presenting work in multiple contexts (e.g. live presentations vs. bite-sized portfolio pages). The format of the class will balance project work with tests, quizzes, short essays, and discussions on key topics. It will also include readings and some short lectures.

First-Year Seminar

HCDD 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

HCDD 264: Design Practice in Human-Centered Design and Development

3 Credits

This course focuses on concepts, methods, techniques, and tools for designing effective technology-enabled experiences. The course will provide students with all the elements for a toolbox they can use to design and create both prototypes and working applications, and some analytic methods they can use to perform basic evaluations. The course will emphasize iterative design and the benefits of employing a cycle of analyze - design - built - evaluate in close cooperation with prospective technology users and other product stakeholders. In addition to more practice-oriented skills and knowledge, the course will provide students with an appreciation for some persistent design challenges including managing design trade-offs, ensuring universal and international access, working with others on co-design, and receiving and delivering design critiques. Students who successfully complete the course will leave equipped to engage with practicing design teams in industry, government, and academia.

Enforced Prerequisites at Enrollment: HCDD 113 or HCDD 113S

HCDD 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

HCDD 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

HCDD 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HCDD 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

HCDD 340: Human-Centered Design for Mobile Computing

3 Credits

The course will provide students with an appreciation for the importance of mobile computing in modern life. It will also provide an introduction to the technical aspects of mobile computing including input modalities, sensors and sensing, wearable and smart home devices, and virtual/augmented reality. It will provide an introduction to established design

concepts as well as explore emerging ideas and new concepts in the domains of mobile computing, and explore some of the most important domains where mobile computing is having a significant impact including health and wellness and computing in the developing world. The latter part of the course will include an analysis, design, and development project for students to work on individually or in groups.

Enforced Prerequisites at Enrollment: (HCDD 264 or IST 331) and (IST 256 or IST 311)

HCDD 364W: Methods for Studying Users

3 Credits

This course focuses on concepts, methods, and techniques for studying users and evaluating technology in the context of use. It will provide students with methods and tools they can use to incorporate knowledge of users and their settings into the design and evaluation of interactive systems. These methods will include both qualitative and quantitative techniques, as well as how to combine and sequence multiple techniques to gain a more holistic understanding. Students will learn to select and use appropriate data gathering and analysis methods and how to assemble these into a coherent user research design. The course also provides an overview of the most important statistical analysis methods employed in user research. This is a hands-on, practical course designed for HCDD undergraduate students, and others as an elective.

Enforced Prerequisites at Enrollment: HCDD 264 Writing Across the Curriculum

HCDD 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

HCDD 440: Human-Centered Design and Development Capstone Course

3 Credits

The Human-Centered Design and Development Capstone course develops the research orientation and creative problem solving necessary for successful careers. The capstone develops these skills in the context of a semester long project, the solution to which requires integration of knowledge, skills and analytic techniques taught in the core curriculum. The capstone will also give student a real world experience in which they will need to work in teams and will be coached on ways to translate analytic outcomes into meaningful and actionable information for decision makers. The course is intended for seniors who have successfully completed the core courses. The capstone projects will integrate knowledge gained in technical subjects such as usability engineering, software construction and engineering, and mobile computing as well as general information technology topics such as machine learning, data mining, data integration and visualization, and privacy and security. Students will also hone their presentation and technical writing skills, generating effective reports that not only explain their analytic processes, assumptions underlying the processes and outcomes, but also communicate the limitations of their approach and potential alternate strategies.

Enforced Prerequisites at Enrollment: HCDD 364W

HCDD 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

HCDD 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

HCDD 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

HCDD 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Humanities - CA (HUM)

HUM 100N: Foundations in the Humanities: Understanding the Human Experience

3 Credits

This course is an introduction to great ideas, themes, creations, and values in the arts and humanities, emphasizing the development of students' basic interpretive and close reading skills as applied to historically significant works in the various disciplines. The course introduces students to interpretive skills for analyzing and understanding historically significant works in the visual arts (painting, sculpture, architecture), the performing arts (theater, film, dance, music), history, literature, and philosophy. Students demonstrate their basic understanding of the disciplines encompassed in the course by interpreting key works in the various fields. The course stresses introducing students to these fields, as well as interdisciplinary connections between them, through broadly synthetic interpretations of important works within their cultural settings. The course will develop students' understanding of different historical periods by examining a variety of cultures, traditions, and aesthetic movements. The course promotes critical conversation among students, for example, by providing lectures that introduce and frame topics for discussion (this pedagogical practice is suggested as one possible approach, not as a requirement). The course also stresses the improvement of students' writing and critical thinking skills through such means as essay exams, group work, oral reports, and/or term papers, as deemed appropriate by the instructor.

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

HUM 101: Transformative Texts Part 1: Foundational Knowledge

3 Credits

This 3-credit General Humanities (GH) course with an International Cultures (IL) designate offers an introduction to transformative texts from around the world. Students will learn foundational knowledge from various disciplines in the humanities and arts, while developing basic interpretive, close-reading, writing, communication, and critical-thinking skills. This first course of the Keystone sequence engages students with core texts and arts-based materials from antiquity to the modern era, offering a roadmap of disciplinary, interdisciplinary, historical, cultural, and aesthetic perspectives within which to contextualize interpretation. Students will read texts from a variety of humanities disciplines alongside appropriate historical context to learn how ideas transformed, and were transformed, by social, economic, political, and historical events and institutions. The course supports open dialogue and critical engagement among students and faculty, to promote curiosity, reflexivity, and mindfulness, while cultivating the spirit of life-long learning. Students will learn about the value of the humanities and the arts in the context of its historical, sociopolitical, cultural, and global contributions. Student engagement will focus on close textual analysis, critical thinking, and synthesis skills with an emphasis on promoting excellence in written communication through a variety of written assignments designed to prepare students for the oral communication skills expected in our increasingly high-tech, global economy.

HUM 102: Transformative Texts Part 2: Contemporary Issues & Practical Perspectives

3 Credits

This 3-credit General Humanities (GH) course with a United States (US) designate offers an introduction to transformative texts from the beginning of modern history to the present that address current issues in the United States. Students will learn foundational knowledge from various disciplines in the humanities and the liberal arts, while developing basic interpretive, close-reading, writing, communication, and critical-thinking skills. This second course of the Keystone sequence engages students with transformative texts from beginning of the modern era to present day, offering a roadmap of disciplinary, interdisciplinary, historical, cultural, and aesthetic perspectives within which to contextualize interpretation. Students will read texts from a variety of humanities disciplines alongside appropriate historical context to learn how ideas transformed, and were transformed, by social, economic, political, and historical events and institutions and how these ideas relate to the history, politics, economics, and social structures of the United States. The course supports open dialogue and critical engagement among students and faculty, to promote curiosity, reflexivity, and mindfulness, while cultivating the spirit of life-long learning. Students will learn about the value of the humanities and the arts in the context of its historical, sociopolitical, cultural, and global contributions. Student engagement will focus on close textual analysis, critical thinking, and synthesis skills with an emphasis on promoting excellence in written communication through a variety of written assignments designed to prepare students for the

oral communication skills expected in our increasingly high-tech, global economy.

HUM 150N: World Mythologies in the Arts

3 Credits

This course is an interdisciplinary, cross-cultural, historical, and contemporary examination of myth as it appears in the visual arts, literature, and film. Each iteration of the course covers myths in the arts of at least several of the following cultures-Greek and Roman, Celtic, Norse, European, Egyptian, Near Eastern, Indian, Chinese, Pacific, African, and Native American. The course is thematic and intercultural, for example in the way myths are told in historical cultures and then retold and transformed in art, literature, and films in later cultures. Thus, the course considers in what ways myths are reconceived and altered when they appear in later cultures and in different media within the arts. The course is not a survey of world mythologies, but an interdisciplinary examination of myths and mythic themes and images in the arts (such as painting and film) and literature, with an emphasis on the interpretations and transformative processes applicable to myths as they are (sometimes radically) altered and embodied in art forms that may be far removed in time, place, and meaning from the original contexts of the myths themselves. The course is intended to familiarize students with the ways that different cultures have interpreted the world in which they live-how cultures created their own explanations for phenomena they could not understand, and how contemporary culture gives new life to older myths. The course examines such questions as the meanings of myths as represented in the arts, the various purposes of myths in the arts, such as the functions of creation myths and myths of the hero; theories of how myths originate; and ways that myths have been analyzed, interpreted, and adapted in other cultures through the arts. Students learn to compare and contrast myths in the arts, discuss common elements in myths in the arts, and to interpret the meaning of the myths both within the cultural and historical context in which they were created and the ways they are reinterpreted in later cultures in the arts.

Formal courses given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is a GenEd course.

HUM 200N: Explorations in the Humanities: The Quest

3 Credits

The theme of this course, Explorations in the Humanities: The Quest, is a highly flexible one used to investigate a variety of historically significant works in the arts and humanities from different perspectives—moral, social, historical, literary, artistic, and philosophical. The quest is conceived as a theme involving active human inquiry and historical breakthroughs that enlarged understanding of the world in new ways. The major fields within the arts and humanities that are covered in the course include art and art history, history, literature, philosophy, mythology, and the performing arts (theater, film, music). The selected works within the disciplines exemplify the broad theme of the course. This thematic course emphasizes the development of students' interpretative and close reading skills as applied to historically significant works in the fields of the arts and humanities. The course promotes the improvement of students' writing and critical thinking. It is designed so that students investigate, analyze, and interpret topics within the arts and humanities as they develop principles of critical practice and interpretation. The course promotes critical conversation among students, for example, by providing lectures that introduce and frame topics for discussion (this pedagogical practice is suggested as one possible approach, not as a requirement). The course also stresses the improvement of students' writing and critical thinking skills through such means as essay exams, group work, oral reports, and/or term papers, as deemed appropriate by the instructor. The course also emphasizes interdisciplinary connections between these arts and humanities fields, through broadly synthetic interpretations of important works within their cultural settings. Each iteration of the course is designed by the instructor teaching it, within the framework set out here. The specific works from the arts and humanities covered in the course are selected by the instructor, and represent major works within the disciplines specified above, and as reflected in the theme of The Quest.

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

HUM 300N: Interpretations in the Humanities

3 Credits

Two to four (usually three) different interpretive approaches to understanding creative and/or scholarly works in the arts and humanities, as exemplified by the study of specific works organized by theme, topic, or time period(s). The interpretive approaches chosen will be applied to a variety of arts and humanities content drawn from the arts, including the visual arts and art history, the performing arts, including theater, film, and music, and the humanities, including literature, history, and philosophy. The core course will develop students' abilities to employ advanced interpretive strategies appropriate to upper-division study in a range

of fields of study within the School of Humanities. Students will learn to interpret and analyze primary texts or creative works using several different methods, will exchange views with one another, and will develop skills in writing and expression through a variety of assignments. The course is designed to be taken at the junior level, because it presupposes a preliminary knowledge of the disciplines, before an interdisciplinary study can be undertaken. It is a writing-intensive course that requires substantial writing and revision. This course is designed to familiarize students with several different approaches to understanding creative and scholarly works in a range of humanities areas; to expose them to the viewpoints of others and encourage dialogue among students; to reinforce the interdisciplinary connections among arts and humanities fields; and to improve students' abilities to formulate, express, and defend their own interpretations using the approaches studied. Individual instructors select the particular interpretive methods to be studied, along with appropriate primary works or texts and examples of the scholarly or critical methods chosen. Instructors will typically organize their sections around specific themes, periods, or topics, which will vary from time to time. Ideally, students should take the course in the junior year.

Writing Across the Curriculum

HUM 400N: Expressions in the Humanities

3 Credits

Advanced interdisciplinary study of a particular theme, period, or topic including materials from various arts and humanities disciplines and interdisciplinary works. Students will identify and apply several approaches to interpretation of such works—theoretical perspectives, integrating questions, comparative criticism—and express their understanding in class discussion, formal and informal writing, and creative expression. The course investigates the humanities from different perspectives—moral, social, historical, literary, artistic, and philosophical. The major fields within the arts and humanities that are covered in the course include, from the arts, the visual arts (painting, sculpture, architecture) and the performing arts (theater, film, music), and from the humanities, art history, history, literature, philosophy, and mythology. The selected works within the disciplines exemplify the broad theme of the course. This thematic course emphasizes the development of students' interpretative and close reading skills as applied to historically significant works in the fields of the arts and humanities. The course promotes the improvement of students' writing and critical thinking. It is designed so that students investigate, analyze, and interpret topics within the arts and humanities as they develop principles of critical practice and interpretation. The course promotes critical conversation among students, through the framing of topics for discussion. The course also emphasizes interdisciplinary connections between these arts and humanities fields, through broadly synthetic interpretations of important works within their cultural settings. Each iteration of the course is designed by the instructor teaching it, within the framework set out here. The specific works from the humanities covered in the course are selected by the instructor, and represent major works within the disciplines specified above.

Industrial Engineering (IE)

IE 100: Discover Industrial Engineering: First-Year Seminar

1 Credits

Informational First-year on Industrial Engineering as a career choice and profession; lab exercises; guest speakers; real world problems. IE 100S IE 100S Discover Industrial Engineering: First-Year Seminar (1) (FYS) The objective of this first-year seminar course is to provide information on industrial engineering as a career choice and as a profession. It is a fact that most first-year students have never heard of Industrial Engineering (IE), or the many varied opportunities that exist within the IE major. This course explores the many aspects of the major and also offers the opportunity to interact with IE faculty and students, something that is an uncommon occurrence during the first year of engineering study. Class time is used for a variety of activities including: interactive class sessions where students work in teams to analyze and solve applied "real-world" problems in industrial and manufacturing engineering; IE faculty guest speakers addressing career opportunities in a particular area within IE; Lab experiences or demonstrations; Alumni guest speakers or panels; Plant tours (1 per semester); IE student panels on topics such as Co-op. The class atmosphere is relaxed and there are no examinations. Homework assignments are given throughout the semester on relevant topics.

First-Year Seminar

IE 302: Engineering Economy

3 Credits

Principles and methods for analyzing the economic feasibility of technical alternatives leading to a decision or recommendation.

Enforced Prerequisite at Enrollment: MATH 141

IE 304: Introduction to Service Systems Engineering

3 Credits

This course provides an introduction to service systems engineering by focusing on various modeling techniques for describing their characteristics and evaluating their productivity and performance. Students will learn descriptive modeling of service system from the perspective of different disciplines and functions. Building on this, students will study key concepts and issues in measuring and managing productivity of service systems, especially the role of the customer in services. Large-scale services built on cloud platforms will be discussed using real-world examples. Students will conduct performance modeling studies of such service platforms using analytical and simulation

approaches. Students will gain hands-on experience in computing and modeling with cloud platform.

Enforced Prerequisite at Enrollment: MATH 141 and (CMPSC 121 or CMPSC 131 or CMPSC 200 or CMPSC 201)

IE 305: Product Design, Specification and Measurement

3 Credits

Principles of product design and specifications and methods for product verification. IE 305 Product Design, Specification and Measurement (3) Product Design, Specification and Measurements a first level junior course in manufacturing, required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It exposes students to the principles required for designing a product and developing the specifications for its components and the methods for product verification and checking conformance to specifications. Students taking this course should be familiar with introduction to engineering design and should have graphical communication skills.

Enforced Prerequisite at Enrollment: EDSGN 100

IE 306: Machining Process Design & Analysis

3 Credits

Application of Engineering Principles for the Design and Implementation of Economic and Effective Machining Processes. Machining Process Design & Analysis is an elective course within the Department of Industrial & Manufacturing Engineering that can be used to satisfy the undergraduate, manufacturing process course requirement. Its purpose is to provide students with an in-depth experience into the science, engineering, and thought processes that are used to apply machining processes to economically convert raw materials into finished products. Students will learn how to design, analyze, implement, and troubleshoot machining processes and machining systems. Students taking this course must have previously completed IE 305, and have knowledge of produce specification, metrology, and computer aided design tools.

Enforced Prerequisite at Enrollment: IE 305 and IE 322

IE 307: Additive Manufacturing Process and Reverse Engineering

3 Credits

The study and application of rapid prototyping technologies in design and manufacturing. IE 307 Additive Manufacturing Process and Reverse Engineering (3) Speed to market is an essential element of competitiveness. New manufacturing technologies, driven by CAD, such as Additive Manufacturing (AM), Rapid Tooling (RT), and Reverse Engineering are making it possible for companies to significantly cut design and manufacturing cycles times. This course will explore these new manufacturing technologies, study the basic processes and their role in the design and manufacturing cycle, and provide hands on experience with these processes. Students will be able to use process models, characteristics and capabilities of specific AM processes such as Stereo Lithography Process, Fused Deposition Modeling, Selective Laser Sintering, Electron Beam Melting, and 3-D Printing to compare different processes. The students will study the use of these processes for Rapid Tooling applications for sand casting, investment casting, and injection molding. The students will be able to describe the role of CAD and Reverse Engineering in providing the data needed and current technological challenges for AM. The students will be able to develop cost models for the processes to evaluate the production economics.

Students will gain hands on experience with the processes and reverse engineering through the laboratory component.

Enforced Prerequisite at Enrollment: IE 305

IE 311: Principles of Solidification Processing

3 Credits

Discussion, laboratory practices, and laboratory experiments covering principles of metal casting and joining, nondestructive testing, and nonmetallic processing.

Enforced Prerequisite at Enrollment: IE 305

IE 312: Product Design and Manufacturing Processes

3 Credits

Theory and principles of mechanical design specification, verification, and manufacturing. Industrial engineering majors may not schedule this course.

Enforced Prerequisite at Enrollment: EMCH 213 or EMCH 210H or EMCH 210 Enforced Concurrent at Enrollment: ESC 414M or MATSE 259

IE 322: Probabilistic Models in Industrial Engineering

3 Credits

The study and application of probability theory in the solution of engineering problems. IE 322 Probabilistic Models in Industrial Engineering (3) Probabilistic Models in Industrial Engineering is a first level junior course required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It exposes students to the probability theory and models and discrete and continuous probability distributions which are necessary for solving real life engineering problems with uncertainty. Reliability modeling, one such problem of interest to the manufacturers and consumers, will be taught in this course. The course will also cover sampling distributions and point and interval estimation of mean, variance and proportion. Students taking this course should be familiar with elementary algebra, and differential and integral calculus.

Enforced Prerequisite at Enrollment: MATH 141

IE 323: Statistical Methods in Industrial Engineering

3 Credits

The study and application of statistics in the solution of engineering problems. Statistical Methods in Industrial Engineering is a second level junior course required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It exposes students to the statistical tools such as estimation, testing of hypotheses, control charts, process capability indexes, gage R & R studies, simple regression and design of experiments, which are necessary for analyzing and solving real life engineering problems using data. Students taking this course should be familiar with the following topics taught in the first course in probability offered in the department. Probability concepts, Random variables, Independence, Probability Distributions (both discrete and continuous), Mathematical Expectation, Variation and Binomial and Standard Normal tables.

Enforced Prerequisite at Enrollment: IE 322

IE 327: Introduction to Work Design

3 Credits

Job analysis, cognitive and physical considerations in design of work, work measurement. Introduction to Work Design is a first level junior course required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It exposes students to the basic introductory tools required for analyzing and designing both the job and the worksite in a cost-effective manner, as well as measuring the resulting output. These tools include human information processing, basic auditory and visual displays, anthropometry and musculoskeletal principles, cumulative trauma disorders, work measurement and stopwatch time study. Students taking this course should be familiar with the basic concepts of cost.

Enforced Prerequisite at Enrollment: MATH 141 Enforced Concurrent at Enrollment: EMCH 211 or EMCH 210

IE 330: Engineering Analytics

3 Credits

The study and application of Computing, Information Technology and Analytics to Industrial Engineering. IE 330 Engineering Analytics (3) Engineering Analytics is a required course for all baccalaureate students in the Industrial Engineering major. It provides students with a quantitative background in descriptive analytics which deals with data mining, predictive analytics which deals with forecasting, and the use of Big Data in analysis. Examples of analytics will be presented in various industries including manufacturing, healthcare, and distribution. The students will learn to work in settings to make data-informed decisions from large data sets. Students taking this course should be familiar with differential and integral calculus, statistics, and basic computing.

Enforced Prerequisite at Enrollment: IE 322 and (CMPSC 200 or CMPSC 201)

IE 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

IE 399: Foreign Studies–Industrial Engineering

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

IE 402: Advanced Engineering Economy

3 Credits

Concepts and techniques of analyses useful in evaluating engineering projects under deterministic and uncertain conditions.

Enforced Prerequisite at Enrollment: IE 302 and IE 322 and IE 405

IE 405: Deterministic Models in Operations Research

3 Credits

Deterministic models in operation research including linear programming, flows in networks, project management, transportation and assignment models and integer programming. IE 405 Deterministic Models in Operations Research (3) This course will be an introduction to deterministic modeling. In particular, the student will learn to formulate linear programs, network models, and integer programs. The student will also learn solution strategies such as the simplex method and branch and bound. Duality and sensitivity analysis will be covered along with their economic interpretation. Optimization software will be used for solving the formulations. Practical examples along with a detailed case study will be presented to help the student to synthesize the topic. This will be a required course for all undergraduate students pursuing a baccalaureate degree in Industrial Engineering.

Enforced Prerequisite at Enrollment: MATH 220

IE 408: Cognitive Work Design

3 Credits

Design and evaluation of cognitive work, including the human/computer interface, visual displays, software design, and automated system monitoring, with emphasis on human performance. Cognitive Work Design is a senior level course offered in the Department of Industrial and Manufacturing Engineering. It is one of two courses which follow IE 327, Introduction to Work Design. This course focuses on the cognitive part of human factors and work design. This course will enable students to design, implement, and evaluate human-computer interfaces according to principles outlined in foundational human-computer interaction readings. Students will be engaged in the active learning of design, programming, and usability concepts by way of building interfaces on the personal computer. Students taking this course should be familiar with computer programming and introduction to work design.

Enforced Prerequisite at Enrollment: IE 327

IE 418: Human/Computer Interface Design

3 Credits

Design and evaluation of the human/computer interface, including human performance, visual displays, software design, and automated system monitoring. IE 418 Human/Computer Interface Design (3) The objective of this course is to enable students to design, implement, and evaluate human-computer interfaces according to principles outlined in foundational human-computer interaction readings. Students will be engaged in the active learning of design, programming, and usability concepts by way of building interfaces on the personal computer as well as on the Palm computing platform. A major component of the course is the capstone design project for which student teams will communicate with users to design, implement, and assess interfaces to improve existing work processes in an actual work domain (e.g., safety office, power plant).

Enforced Prerequisite at Enrollment: IE 327 and (CMPSC 200 or CMPSC 201)

IE 419: Work Design - Productivity and Safety

3 Credits

Methods improvement, physical work design, productivity, work measurement; principles and practice of safety. Work Design - Productivity and Safety is a senior level course offered in the Department of Industrial and Manufacturing Engineering. It is one of two courses which follow IE 327, Introduction to Work Design. This course focuses on the methods improvement physical work design, productivity, work measurement; principles and practice of safety. This course will enable students to perform work measurement: develop an MTM analysis, and carry out a work sampling study. Students taking this course are expected to understand basic concepts of work design.

Enforced Prerequisite at Enrollment: IE 327

IE 424: Process Quality Engineering

3 Credits

Statistical methods for engineering process characterization and improvement. For non-Industrial Engineering majors. IE 424 Process Quality Engineering (3) This course will provide students with probabilistic and statistical methods required to improve the quality of products and processes. It will start with the introduction to quality culture and the key elements of quality improvement. Then the methods for data presentation and interpretation are discussed. Next, the basic probability concepts and commonly used probability distributions are taught followed by statistical concepts, such as sampling distributions, point and interval estimation, and hypotheses testing. The concepts and methods of statistical tools required for process selection and improvement such as process capability indexes and control charts are discussed next. The course ends with the coverage of simple and multiple regression models.

Enforced Prerequisite at Enrollment: MATH 141 Enforced Concurrent at Enrollment: MATH 220 or BE 301

IE 425: Stochastic Models in Operations Research

3 Credits

This course will be an introduction to the modeling of stochastic systems. The student will learn about Poisson processes, Markov Chains, Dynamic Programming, and Queuing systems; both model formulations and solutions strategies. The students will learn several applications of these models in manufacturing and service systems, so that they can synthesize the lecture material. The student will study the topic of inventory theory, including fundamental trade-offs, economic order quantity (EOQ) modeling, and stochastic models. This will be a required course for all undergraduate students pursuing a baccalaureate degree in Industrial Engineering.

Enforced Prerequisite at Enrollment: MATH 220 and IE 322

IE 427: Human Systems Networks

3 Credits

This course provides an awareness of the role of humans in systems. It builds upon a fundamental understanding of human work by situating humans within systems of other humans and things. Students will learn the fundamentals of social networks analysis methods. They will also learn to collect and compile data from humans in systems. Equipped with the fundamentals, students will then formulate task, knowledge,

and social networks to represent behavior and performance in different work domains. The use of human-system networks as a descriptive mechanism will be contrasted with optimization methods to improve networks. Examples will be provided to enable students to apply the methodology in the transportation domain and in sociotechnical systems (such as a hospital).

Enforced Prerequisite at Enrollment: IE 327

IE 428: Metal Casting

3 Credits

This course is designed to provide a fundamental understanding of contemporary metalcasting science and technology principles through integrated lecture and laboratory experiences. Lectures will focus on the primary manufacturing steps for producing castings – patternmaking and runner system design, molding systems, melt practices and solidification science, and the application of Industrial Engineering principles for efficient casting production. Laboratory instruction includes the use of foundry laboratory facilities, 3D sand printing facilities, and solidification/flow modeling simulation software. Students perform structured casting experiments in lab and work in project teams to develop effective gating and risering systems for metal castings based on both simulation and laboratory results.

Enforced Prerequisite at Enrollment: IE 305 and MATSE 259

IE 432: Introduction to Healthcare Systems Modeling

3 Credits

The objective of this course is to equip students with both domain knowledge about healthcare systems and the skills of applying quantitative modeling techniques for tackling application problems specific to the healthcare domain. This course exposes students to the contextual knowledge about the structure, finance, and operations of healthcare systems and provides students with the understandings of decision-making from different perspectives within the healthcare systems. It introduces common types of data used in healthcare settings, measures for health outcomes, and the framework of health economic evaluation. This course also emphasizes applications of quantitative modeling techniques ranging from statistical analysis, data analytics, optimization, and simulation to a variety of decision problems in healthcare operations and health policy settings. Students will learn to identify and formulate decision-making problems in healthcare systems, apply proper analytic tools and data sources to solve the problems, and interpret the modeling analysis results in the healthcare context. Students taking this class should be familiar with computer programming and basic mathematical modeling techniques.

Enforced Prerequisite at Enrollment: IE 304 and IE 323 and IE 405

Enforced Concurrent at Enrollment: IE 330

IE 433: Regression Analysis and Design of Experiments

3 Credits

Theory and Application of Regression Analysis and Design of Experiments to build models and optimize process and product parameters. This is an elective course for the baccalaureate students in the Department of Industrial and Manufacturing Engineering. It exposes students to the two important statistical tools which are regression analysis and design of experiments. Topics include simple and multiple regression analysis (matrix formulation), diagnostics, prediction, Analysis

of Variance, Blocking, and Fractional Factorial designs. Students taking this course should be familiar basic matrix computations and with the following topics taught in the second course in probability and statistics offered in the department: properties of point estimators, sampling distributions, and test of hypotheses.

Enforced Prerequisite at Enrollment: IE 323 or STAT 319 or MATH 319 or STAT 415 or MATH 415

IE 434: Statistical Quality Control

3 Credits

Statistical techniques for univariate and multivariate monitoring of independent and autocorrelated processes; foundations of quality control and improvement. I E 434 Statistical Quality Control (3) This course is about the use of modern statistical methods for process and product improvement. The goal is to impart a sound understanding of the principles and basis for applying them in a variety of practical situations in manufacturing and service fields. The course will give an overview of the basic statistical methods and then concentrate on some of the more useful recent developments including univariate and multivariate techniques to monitor autocorrelated data, analyzing process capability, and improving process quality in short-run environments. The course objectives are to: (1) understand the assumptions and theoretical foundations of process monitoring; (2) know how to select, set up, and use monitoring charts effectively depending on the system characteristics; and (3) understand the basic business and economic principles of process monitoring.

Enforced Prerequisite at Enrollment: IE 323 or STAT 319 or MATH 319 or STAT 415 or MATH 415

IE 435: Pricing and Demand Management

3 Credits

This course provides a broad exploration of improving profitability for organizations using revenue- and demand-based strategies. After a brief introduction to the time value of money, it investigates the topics of customer demand and choice, traditional and dynamic pricing methods, auction methods, customer-based strategies such as bundling and customization, and how to determine service charges for service activities. It considers the various factors that influence how and why customers make the decisions they do for service-based products, particularly in relation to their utility for transactions. Building on these insights, students will be able to develop various pricing and other customer-based strategies that help to improve profitability for service industries that use either traditional or dynamic pricing strategies. Students will be able to apply these strategies to a variety of service industries including the logistics, hospitality, healthcare, and retail industries.

Enforced Prerequisite at Enrollment: IE 405 Enforced Concurrent at Enrollment: IE 330

IE 436: Six Sigma Methodology

3 Credits

Techniques for structured problem-solving to improve the quality and cost of products and processes. I E 436 Six Sigma Methodology (3) Six Sigma is a structured, quantitative approach to improving the quality and cost of products and processes. It provides a framework for quality improvement that builds upon statistical tools to achieve business

results. Although statistical techniques are emphasized throughout, the course has a strong engineering and management orientation that will prepare students for synthesizing the material that comprises the Six Sigma body of knowledge. Important aspects of the Six Sigma approach include a strong focus on the customer, proactive management, fact-based decision-making, and interdisciplinary collaborations. The course objectives are: (1) to give students a fundamental understanding of and experience with solving a problem using the structured problem-solving approach of Define-Measure-Analyze-Improve-Control (DMAIC); (2) to provide an opportunity for students to solve or be involved with solving business problems with statistical tools; and (3) to help students build confidence in their business sense and statistical skills.

Enforced Prerequisite at Enrollment: IE 323 or STAT 319 or MATH 319 or STAT 415 or MATH 415

IE 453: Simulation Modeling for Decision Support

3 Credits

Introduction of concepts of simulation modeling and analysis, with application to manufacturing and production systems. IE 453 Simulation Modeling for Decision Support (3) Simulation Modeling for Decision Support is a senior level course offered in the Department of Industrial and Manufacturing Engineering. It is the third course in operations research offered to the undergraduate students. The objective of this course is for students to learn to appropriately apply discrete event simulation modeling for decision support in IE problems through developing skills in model building, simulation output analysis, and communication of technical information and conclusions drawn from data analysis. Students taking this course should be familiar with computer programming and operations research techniques.

Enforced Prerequisite at Enrollment: (CMPSC 200 or CMPSC 201) and IE 323 and IE 425

IE 454: Applied Decision Analysis

3 Credits

Theory and practice of decision analysis applied to engineering problems.

Enforced Prerequisite at Enrollment: IE 322

IE 456: Industrial Robot Applications

3 Credits

Introduction to robotics, with emphasis on robot selection, programming, and economic justification for manufacturing applications. IE 456 Industrial Robot Applications (3) This course is a technical elective, and is normally taken by students in their Senior years. In this course, students learn about present and future status of robot applications, and are required to apply fundamental knowledge of physics and mathematics to develop software to analyze and control robots. The course deals with mechanics and control of robot manipulators and wheeled mobile robots. First, students are taught to analyze 3-D kinematics, statics and dynamics of robot manipulators. Then, control algorithms for robot manipulators are presented. Sensors, actuators and softwares used in industrial robots are discussed. In the end, kinematics and control of wheeled mobile robots are presented. During this course, application of computer, particularly Matlab, is emphasized as much as possible.

Enforced Prerequisite at Enrollment: EMCH 212 and (ME 360 or ME 367)

IE 458: Manufacturing and Design of Nano Devices

3 Credits

This is an advanced undergraduate course on the manufacturing and design of advanced devices at the nano- or micro-scale. The topic covers many disciplines in engineering and science, including: nanotechnology, nanomaterials, nano- or micro-scale sensors and actuators, energy storage devices, and subtractive and additive processing. Upon completion of this course, students will understand the scaling effect, design principles of nano- or micro-devices, fabrication methods, and their practical applications.

Enforced Prerequisite at Enrollment: EDSGN 100

IE 460: Service Systems Engineering

3 Credits

Use of quantitative models and methods for analysis, design and control of service systems. IE 460 Service Systems Engineering (3) This course focuses on using operations research methods such as mathematical programming, network analysis and applied probability to solve problems that arise in service systems. The lecture topics will include measuring service quality, methods for evaluating service systems, financial engineering & portfolio optimization, supply chain design & operations, manpower planning & scheduling, and revenue management. Several case studies will be used to illustrate applications. Course grades are based on homework, case studies, mini-project, midterm and final exams.

Enforced Prerequisite at Enrollment: IE 322 and IE 405

IE 466: Concurrent Engineering

3 Credits

Concurrent engineering methods for product/process development, capturing customer requirements, insuring manufacturability and serviceability.

Enforced Prerequisite at Enrollment: MATH 141 and MATH 220

IE 467: Facility Layout and Location

3 Credits/Maximum of 3

Analytical and computational methods for facility layout designs, material handling systems and equipment, and location. IE 467 Facility Layout and Material Handling (3) Facilities planning and design is the process of locating and laying out the of industrial and service facilities to best support the purpose of the facility while respecting constraints on resources such as space and budget. The facility planning function involves strategic, tactical and operational decisions depending on the nature of the facility. In this course, we address both the layout and the location of facilities. The layout problem involves a discussion of the arrangement of departments within a plant, the design of material handling systems and the design of storage and warehousing systems. Structural and architectural design questions are NOT addressed in this course. We shall also consider simplifications to the manufacturing process that result in a simplification of the layout problem. Finally, we will investigate a range of facility location problems, including median and center location problems as well as some advanced variants. One of the objectives of this course is also to familiarize the student with the analytical and computer tools that can be used for facility planning and other production and operations management problems.

Enforced Prerequisite at Enrollment: IE 322 and IE 405

IE 468: Optimization Modeling and Methods

3 Credits

Mathematical modeling of linear, integer, and nonlinear programming problems and computational methods for solving these classes of problems. IE 468 Optimization Modeling and Methods (3) This course provides an analytic treatment of optimization models in linear, integer, and nonlinear programming. In particular, the course is concerned with the development of mathematical optimization models and computational solution techniques for solving these problems. The mathematical modeling of real-world applications is complemented with the use of modeling software such as LINGO or GAMS (General Algebraic Modeling System), which allows the user to readily develop large-scale mathematical models. The course also considers solution techniques for solving these optimization problems. Students will develop a basic understanding of the solution techniques through actual implementation of simple algorithms, as well as the use of commercial software such as those provided by LINDO, LINGO, and GAMS.

Enforced Prerequisite at Enrollment: IE 405 and (MATH 231 or MATH 230)

IE 470: Manufacturing System Design and Analysis

3 Credits

Contemporary design and analysis methodologies used to organize systems for economic manufacture of products. IE 470 Manufacturing System Design and Analysis (3) Manufacturing System Design and Analysis is a senior level course in manufacturing, required for all the baccalaureate students in the Department of Industrial and Manufacturing Engineering. Students will be exposed to the contemporary techniques used to design and analyze manufacturing systems for economic manufacture of products. Students will learn to design manufacturing systems (human and automated) to satisfy differing types of product demand. Students taking this course should be familiar with introduction to manufacturing and product specifications and introduction to manufacturing process design and analysis.

Enforced Concurrent at Enrollment: IE 306 or IE 307 or IE 311 or IE 428

IE 475: Modeling and Optimization of Stochastic Service Systems

3 Credits

This course will cover the analysis, modeling, optimization, and evaluation of practically occurring service systems. The first part of the course will employ a queueing-theoretic approach for modeling service systems, which will cover the modeling and simulation of arrival processes via Poisson models and their variants, steady-state analysis for service models with exponential and general service time distributions, and non-stationary arrival processes. The second part of the course will expose students to modern data-driven approaches for uncertainty modeling, scheduling, and optimization of service systems. Case studies from service systems in diverse fields including but not limited to healthcare, call centers, transportation, and computer networks will be employed to supplement and reinforce the material.

Enforced Prerequisite at Enrollment: IE 304 and (IE 330 or STAT 380) and (IE 405 or STAT 440) and (IE 425 or STAT 416)

IE 478: Retail Services Engineering

3 Credits

Objective of this course is to understand modern retail industry with focus on their operations and information technologies. The course starts with an overview of the basic types of retailing, their channels, and economics of their operations. This will be followed by an introduction to financial statements and understanding how they are used for measuring performance of retailers. Warehousing and distributions operations will be reviewed. Queuing models will be introduced and applied for staffing checkout processes and distribution centers. Mean value analysis from queuing theory will be used for rough-cut capacity planning of automated cross-docks which are now being increasingly used in retailing. Information technologies and data analytics in retail industry will be covered through exercises in class using MS Access and MS Excel VBA to give students hands-on learning experience with these techniques. Data warehouse architectures will also be discussed.

Enforced Prerequisite at Enrollment: IE 322

IE 479: Human Centered Product Design and Innovation

3 Credits

Consumer product design for a global market, incorporating human factors principles and user desires in a multicultural perspective. EDSDG (I E) 479 Human Centered Product Design and Innovation (3) This course will focus on consumer product design for a global market, incorporating human factors and ergonomics principles as well as user needs and emotional desires. The students will be led through product design process, various product design strategies, product planning, managing the development process, product evaluation, decision making tools, and market entry. Special emphasis will be placed on user centered design, incorporating user characteristics, user needs and emotional desires (including Kansei engineering approaches), survey methodology, and usability testing. To emphasize the multicultural perspectives in today's global product design, interdisciplinary teams from two universities on opposite sides of the globe will apply these principles on actual industrial product designs for leading consumer product manufacturers.

Enforced Prerequisite at Enrollment: IE 408 or IE 419

IE 480W: Capstone Design Project

3 Credits

Industry-based senior capstone design project emphasizing manufacturing systems, service systems, and information systems in an interdisciplinary setting. IE 480W Capstone Design Project (3) Students will develop 'real world' engineering project experience through an industry-based project. Projects will focus on manufacturing systems, service systems, and/or information systems. Students will work in teams to complete the projects, where the teams will be interdisciplinary and composed of students from within the major with different areas of expertise and students from other majors as needed. Students interested in taking this course should have senior standing and be familiar with basic principles in manufacturing, operations research, and human factors engineering. Students will be evaluated through in-class participation, and a group project that consists of weekly communication with the project sponsor along with three design reviews, interim written reports and a final report, presentation and poster. This is a Writing-Intensive course in the department and hence students will be given

opportunities to practice writing throughout the semester in multiple writing assignments.

Enforced Prerequisite at Enrollment: IE 302 and IE 305 and IE 323 and IE 327 and IE 405. Enforced Concurrent at Enrollment: IE 330 Writing Across the Curriculum

IE 494: Senior Honors Thesis

1-9 Credits/Maximum of 9

Students must have approval of a thesis adviser before scheduling this course.

Honors

IE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

IE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

IE 499: Foreign Studies--Industrial Engineering

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Industrial Engineering Technology (IET)

IET 101: Manufacturing Materials, Processes, and Laboratory

3 Credits

Mechanical properties of materials; primary processing methods used in manufacturing; ferrous and nonferrous metals; important plastic plus ceramic materials; dimensional verification and measurements; mechanical properties evaluation; laboratory methods; statistical interpretation of data.

IET 215: Production Design

2 Credits

The study of manufacturing processes for the purpose of part creation and/or part feature creation using both current and advanced technologies.

Enforced Prerequisite at Enrollment: IET 101 or MET 105

IET 216: Production Design Laboratory

2 Credits

Laboratory methods in production design including conventional and advanced manufacturing processes, computer applications, and automation/robotics.

Enforced Concurrent at Enrollment: IET 215

IET 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

IET 308: Statistical Quality Control

3 Credits

Fundamentals of probability and statistics, introduction to quality control fundamentals, control charts, acceptance sampling.

IET 311: Elements of Metallurgy

3 Credits

Introduction to metallurgical concepts, metallurgical testing, phase diagram studies, heat treating concepts, ferrous and nonferrous systems.

Enforced Prerequisite at Enrollment: ET 322

IET 321: Manufacturing Processes

3 Credits

Manufacturing processes for producing metal, plastic, and ceramic items. Primary emphasis is placed on machine tool processes.

IET 333: Engineering Economics for Technologists

2 Credits

Fundamentals of engineering economics; equivalence and rate of return analysis; replacement models; depreciation and tax considerations; and economic decision making for technologists.

Enforced Prerequisite at Enrollment: MATH 26 or MATH 40 or MATH 41 or MATH 83 or MATH 140

Information Sciences and Technology (IST)

IST 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

IST 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

IST 110: Information, People and Technology

3 Credits

Information, People and Technology presents the high points of an education in the College of Information Sciences and Technology. It opens an intellectual journey through the ideas and challenges that IT professionals face in the world. It will address major questions such as: How can we use technology to organize and integrate human enterprises? How can technology help people and organizations adapt rapidly and creatively? What can we do about information overload? Three perspectives (or facets) address the core issues: information or the basic science of data encoding, transmission and storage; people or the interactions among technologies, institutions, regulations and users; and technology or the design and operation of basic information technology devices. Students completing the course will be confident users and consumers of information technology. Students will develop research and analytical skills to evaluate specific devices and understand how those devices function in larger socio-technical systems. Students will be able to predict and anticipate the impact of new technologies on human institutions as well as understand the potential impact of institutions on the use and design of information technologies. The course employs an action-oriented approach. Students learn by doing-formulating and solving problems drawn from professional contexts, detecting and recovering from errors related to technology use, and locating, reading and studying materials that support their analysis and problem-solving. Students will accomplish this by participating in team-based learning. The course provides students with the opportunity to use, modify, and evaluate software to search for, frame, and express ideas with fluency. A variety of mechanisms are used to assess student performance. These evaluation methods typically include exams, quizzes, homework assignments, group projects, and peer and self-assessments.

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

IST 111: Seminar in IST

1 Credits

Introduction to academic requirements, career planning & information literacy for students majoring in College of IST. IST 111 Seminar in IST (1)IST 111 introduces the student to the academic requirements, career planning and information literacy for the School of Information Sciences and Technology degree programs. Seminar in Information Sciences and Technology is required of all Information Sciences and Technology Associate degree candidates. Upon completion of the course, the student will have an understanding of the programs and requirements of the School of Information Sciences and Technology and the University, and the career options for which they prepare students. The student will also develop and exercise habits and techniques for continuing self-assessment of learning styles, personality traits, vocational interests, and career plans. The student will learn how to maintain involvement in professional conversations and networks, including local, state, national, international organizations, listservs, etc. Students will have a basic knowledge of professional news literature, and the ability to identify and use reference tools and databases, which provide access to professional knowledge and literature. Finally, the student will have a

basic understanding of government plans, policies and actions regarding the information professions including: regulatory agencies of the executive branch, legislative activities, and judicial decisions at local state and national levels. Students will be graded on course attendance, participation, examinations and brief exercises.

IST 111S: Seminar in Information Sciences and Technology

1 Credits

Introduction to academic requirements, career planning, and information literacy for students majoring in the College of Information Sciences and Technology. IST 111S Seminar in IST (1) IST 111S introduces the student to the academic requirements, career planning and information literacy for the School of Information Sciences and Technology degree programs. Seminar in Information Sciences and Technology is required of all Information Sciences and Technology Associate degree candidates. Upon completion of the course, the student will have an understanding of the programs and requirements of the School of Information Sciences and Technology and the University, and the career options for which they prepare students. The student will also develop and exercise habits and techniques for continuing self-assessment of learning styles, personality traits, vocational interests, and career plans. The student will learn how to maintain involvement in professional conversations and networks, including local, state, national, international organizations, listservs, etc. Students will have a basic knowledge of professional news literature, and the ability to identify and use reference tools and databases, which provide access to professional knowledge and literature. Finally, the student will have a basic understanding of government plans, policies and actions regarding the information professions including: regulatory agencies of the executive branch, legislative activities, and judicial decisions at local state and national levels. Students will be graded on course attendance, participation, examinations and brief exercises. Since this is a core requirement, all IST students will be enrolling; it should be offered at least once per year. As enrollment growth warrants, it may require more frequent offering.

First-Year Seminar

IST 130: Emerging Technologies in Popular Culture

3 Credits

A survey course that explores emerging technologies used to produce and consume popular cultural artifacts. Through individual and team-based learning activities, students will analyze and interact with information and communication technologies across popular culture genres. The course content and the assignments are directed at helping students to both create and critique digital media in ways that demonstrate their understanding of, engagement with, and reflections upon the relationships among people and organizations, emerging technology, and popular culture. Students will also design and produce digital media that demonstrate their ability to integrate and synthesize central concepts and themes from the course. This is an introductory course in IST, and meets the requirements for a General Education course in Arts (GA). This course is delivered with significant student and instructor interaction with computers and digital media.

General Education: Arts (GA)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

IST 140: Introduction to Application Development

3 Credits

A first course in concepts and skills for application development. Math 22 is recommended as preparation for IST 140. This is a first course in application development. Applications are computer programs developed to support human activity in enterprise and other social contexts. Examples of applications might include programs to help run a business, manage personal information, or provide entertainment. The emphasis of this course is on learning to translate practical problems through domain analysis into software applications usable in a human or organizational context. It will focus on the knowledge needed to create applications that use high level programming languages, combining original code with existing code libraries and application programming interfaces (APIs). Students in this course will learn application development concepts including problem solving using computer programming; how to recognize the need for different types of data and how to use data of different types to represent an application's information; application testing and debugging; basic computer organization; and the basics of operating systems. This is a hands-on, practical course designed for students without prior computer programming experience who will use computer languages and tools to develop applications in their later courses and future careers.

Enforced Prerequisite at Enrollment: C or better in Math 21 or placement above the level of Math 21 in the mathematics placement test.
Recommended Preparation: Math 22

IST 140H: Introduction to Application Development

3 Credits

A first course in concepts and skills for application development. IST 140 Introduction to Application Development (3) This is a first course in application development. Applications are computer programs developed to support human activity in enterprise and other social contexts. Examples of applications might include programs to help run a business, manage personal information, or provide entertainment. The emphasis of this course is on learning to translate practical problems through domain analysis into software applications usable in a human or organizational context. It will focus on the knowledge needed to create applications that use high level programming languages, combining original code with existing code libraries and application programming interfaces (APIs). Students in this course will learn application development concepts including problem solving using computer programming; how to recognize the need for different types of data and how to use data of different types to represent an application's information; application testing and debugging; basic computer organization; and the basics of operating systems. This is a hands-on, practical course designed for students without prior computer programming experience who will use computer languages and tools to develop applications in their later courses and future careers.

Honors

IST 144N: Invasion of Technology from a 21st Century Perspective

3 Credits

The Invasion of Technology from a 21st Century Perspective introduces students to the world of technology from a humanistic point of view. Students will embark on a journey starting in the early 20th century to explore technology and relationships between technology and society

and what the varying theoretical and historical underpinning about "human progress" in respect to these relationships. They will then sojourn through the years to learn about the advances of technology for better or worse. Students will develop an understanding of how individuals and social groups shape and are shaped by technological change and how human societies create means for both social control and freedom, with a focus on ethics and morality as related to the use of technology and its resulting consequences. Students will also be introduced to the latest technology and current collaboration with other professionals. They will gain a better understanding of the historical perspective and the societal, political, cultural and economic issues relative to technology. This course is a multidimensional, interactive course, which allows students to explore the nuances of modern technology as it pertains to security, medicine, education, employment, treatment, military defense and social media. Students will create/invent a design proposal for a scalable and usable application that focuses on topics related to the humanities and social sciences, which may ultimately find its way into the marketplace. Students will also conduct an interview with a grandparent or equivalent to gain a better understanding of people's impact on technology and visa-versa.

General Education: Humanities (GH)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

IST 170N: What is Information?

3 Credits

"What is Information?" considers the material and social nature of information in historical and contemporary contexts. How has information been managed and valued? How have information infrastructures served as sites of social and political connection or antagonism? How have ideas about information changed over time and how have they remained the same? The course integrates perspectives from the social sciences and the humanities, and prepares students to think about (and act in) a world in which information (and its linked concepts, like data) play an increasingly important social and political role. The course addresses the history of information as both a concept and as a matter of social practice, and then focuses on three major topics: how information is presented, how information is organized, and how information is put to social and political use. Moving from the earliest periods of human history and their "information ages" (including the birth of writing and the dawn of printing and mass literacy), the course leads students into our contemporary "information society," and the ways in which both the use and manipulation of information shape our lives.

IST 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

IST 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

IST 210: Organization of Data

3 Credits

Introduction to concept of databases including the storage, manipulation, evaluation, and display of data and related issues. IST 110 is recommended as preparation for IST 210. IST 210 Organization of Data (3) As the database management software becomes one of the critical components in modern IT applications and systems, a solid understanding of the fundamental knowledge on the design and management of "data" is required for virtually any IT professionals. In a business setting, such IT professionals should be able to talk to the clients to derive right requirements for database applications, ask the right questions about the nature of their entities and in-between relationships in their business scenarios, analyze and develop an effective and robust design to address business constraints, and react to the existing database designs as new needs arise. Modern IT professionals should be able to guide a company in the best use of the diverse database-related technologies and applications toward the "Big Data" era. As such, IST 210 aims to prepare students for obtaining fundamental understanding on the database concepts and practical skills to analyze and implement a well-defined database design. In particular, IST 210 provides an introduction to physical database design, data modeling, relational model, logical database design, SQL query language, and instructors' choices on database applications and advanced concepts. Students will learn to use a real-world commercial or open-source database management system, too. Upon taking IST 210, students should be able to understand the implications and future directions of databases and database technologies.

IST 220: Networking and Telecommunications

3 Credits

Introduction to digital network topologies; transmission media, signal modulation, digital packet switching and routing, systems integration, communications management, and security. IST 110 is recommended as preparation for IST 220. The course includes an introduction to: telecommunications history; telecommunications transmission media (conducted and radiated); transmission characteristics (including an introduction to coding and modulation techniques); error characteristics, detection, and correctional; local and wide area networking applications, hardware, and software; the OSI models; industry standards; topologies; protocols; internetworking devices; communications management; security and recovery; information system applications; and the selection of telecommunications and networking systems. Special attention will be paid to evolving Internet Protocol (IP) technologies, e.g., Internet2. IST 220 is an introduction to digital networking and telecommunications and their applications in information systems. It is a required core course for both the two-year and four-year Information Sciences and

Technology degrees, and is a critical part of the curriculum. Its objective is to provide the students with a basic understanding of the working of digital networks and the ability to apply this knowledge to specific applications and situations. Evaluation of knowledge objectives will be by examination; and of application (i.e., selection and management) objectives by grading of group and individual projects and case studies. As a "core course", IST 220 will be offered every semester at University Park, in as many sections as necessary to meet current demand. At other locations where the Associate and Baccalaureate degrees are offered, it will be offered 1-2 times annually depending on demand. Ideally, section size should not exceed 45 students per class. While the course is about digital technology and how it works, it is not a "hands on" course, or a training course in particular equipment and/or applications. While there will be demonstrations of relevant technologies, the course is not equipment-intensive and will not involve special technology needs beyond the normal access to computing and the Internet. The course is not duplicative of any other course currently offered. Although there is some overlap with CMPET 401-402, CSE 458, and COMP 421, none of these courses cover exactly the same material, and they operate at a different level of depth and detail. M I S 180 also overlaps somewhat, but it appears that no current course provides the same 200-level mixture of local and wide-area networking and business communications topics.

IST 222H: Community Informatics

3 Credits

This course combines theory and practice to help students develop a contextualized understanding of community as a conceptual lens for understanding human history and human experience. This course examines the history of community, and of interactions between community and information technology, emphasizing how possibilities and practices of community have been transformed by information technology through the last half century, and currently. The course includes opportunities for students to engage with, and thereby come to understand and appreciate local community institutions off campus. Thus, in the tradition of the Chicago School of Sociology, the course directly utilizes the local community itself as a living laboratory for the study of community informatics. The objective of the course is to help students think critically about community and technology in society, and more specifically, about the how information technology can be used to shape human participation in and experience of community. The course is an honors course. It is run as a small class. It is taught by a research leader in the field of community informatics. The class environment is dominated by debate and discussion. And the course has challenging assignments, involving direct interaction with local community groups.

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

IST 225: PC Hardware Basics

3 Credits

Preparation for PC hardware support: Students learn data recovery and how to build, configure, upgrade, troubleshoot, diagnose, and repair PC's. IST 225 PC Hardware Basics (3) IST 225 covers materials needed to prepare students to function as PC support technicians in business and industry. In a hands-on laboratory environment, students learn to build, configure, upgrade, troubleshoot, diagnose, and repair PC

hardware. Course modules cover all the basic hardware components of the PC - their functions, interactions, installation, configuration, upgrading, repair, and replacement. Detailed coverage of system BIOS, CMOS setup, and the boot process is also included. Preventive maintenance and data recovery procedures are also studied. IST 225 is one of four courses required for the Networking Option in the Associate degree in Information Sciences and Technology (IST). The IST 225 is designed to help the student to thoroughly understand all the basic hardware and firmware PC components, from PC resources, their function (BIOS and CMOS setup) and interaction, to diagnosing and resolving resource conflicts. The IST student should be able to install, configure, troubleshoot, repair, recover data, correct errors or replace all basic hardware components. The student should also be able to make appropriate hardware recommendations, purchases and upgrade decisions, as well as, determine appropriate preventive maintenance procedures. Finally, the Information Sciences and Technology major will learn how to foster communications, interpersonal, and group interaction skills through appropriate collaborative and active learning projects, laboratory exercises, and related experiences. Achievement of knowledge objectives will be evaluated by examinations. Ability to perform hands-on support activities will be evaluated by grading appropriate group and individual hands-on laboratory projects, scenarios, and case studies. The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

Enforced Prerequisite at Enrollment: IST 220

IST 226: Networking Essentials

3 Credits

Concepts for peer-to-peer and server-based network: International Organization for Standardization-Open Systems Interconnection (ISO-OSI) reference model, industry standards, troubleshooting, performance monitoring, and optimization. IST 226 Networking Essentials (3) IST 226 covers basic networking concepts such as network types, cable types, wireless technologies, and network adapters. It discusses network models, including the ISO-OSI reference model and all industry standard network architectures. Both peer-to-peer and server-based commercial network operating systems are introduced with hands-on laboratory experience provided. Basic network administration issues are introduced. Internetworking/enterprise networking devices and architectures are also covered, as are network troubleshooting, performance monitoring, and optimization. IST 226 is one of four courses required for the Networking Option in the Associate degree of Information Sciences and Technology (IST). Achievement of knowledge objectives will be evaluated by examinations. Ability to perform hands-on network administration and support activities will be evaluated by grading appropriate group and individual hands-on laboratory projects, scenarios, and case studies. Upon completion of this course, the students will be able to understand both cabled and wireless media types and be able to select appropriate media. The student will also understand the ISO-OSI and IEEE models and other industry standards, the roles of drivers and protocols and network architectures. The student will have experience with the installation, configuration and administration of basic server-based networking, as well as, an understanding of wide area/enterprise networking, performance monitoring and network troubleshooting. Most important, the student will learn how to foster communications, interpersonal, and group interaction skills through appropriate collaborative and active learning projects, laboratory exercises, and related experiences. The majority of campuses offering the Associate degree in Information

Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

Enforced Prerequisite at Enrollment: IST 220

IST 227: Network Administration

3 Credits

Administering peer-to-peer and client/server networks: Planning, installation, server configuration, resource management, remote access, performance monitoring, and optimization. IST 227 Network Administration (3) IST 227 covers the essential knowledge and skills required to successfully administer peer-to-peer and client/server networks. Hands-on experience with commercial networking software such as Windows 9x, NetWare, Windows NT Workstation, and Windows NT Server is an important course component. Topics covered include pre-installation planning, network installation, network software architecture, server configuration, profiles and logon scripts, user account management, policies, resource sharing and security, disk management, remote access, backup and recovery, performance monitoring, and network optimization. IST 227 is one of four courses required for the Networking Option in the Associate degree in Information Sciences and Technology (IST). Upon completion of this course, the students will be able to understand network software architecture, plan and install peer-to-peer and server-based networks. The IST student will also be able to manage user accounts, profiles, logon scripts, and system policies. The student will have practical experience with disk storage, resources, security, backup and recovery procedures. Finally, the student will be able to manage remote access features, monitor and optimize network performance, and foster communications, interpersonal, and group interaction skills through appropriate collaborative and active learning projects, laboratory exercises, and related experiences. Achievement of knowledge objectives will be evaluated by exam. Ability to perform hands-on network administration and support activities will be evaluated by grading appropriate group and individual hands-on laboratory projects, scenarios, and case studies. The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

Enforced Prerequisite at Enrollment: IST 226

IST 228: Advanced Network Administration

3 Credits

TCP/IP planning, installation, configuration: IP addressing, subnetting, routing, Dynamic Host Configuration Protocol (DHCP), Windows Internet Naming Service (WINS), address/name resolution, Domain Name System (DNS); database, web, mail server management. IST 228 Advanced Network Administration (3) IST 228 covers the essential knowledge and skills required to successfully administer TCP/IP networks and applications servers such as database servers, web servers, and mail servers. Hands-on experience with commercial software such as SQL Server, Exchange Server, and Internet Information Server is an important course component. Topics covered include TCP/IP planning, installation, and configuration, IP addressing, subnetting, IP routing, DHCP, WINS, address and name resolution protocols, DNS, and management of database, web, and mail servers. IST 228 is one of four courses required for the Networking Option in the Associate degree of Information Science and Technology (IST). Upon completion of this course, the IST students will be able to plan, install, configure and troubleshoot TCP/IP. The student will also understand IP addressing, subnetting, supernetting,

routing and configuration. The student will have practical experience installing and configuring DHCP, WINS, and various protocols. Finally, the IST student will have administrative skills with database, server and web software, as well as, the ability to foster communications, interpersonal, and group interaction skills; through appropriate collaborative and active learning projects, laboratory, exercises, and related experiences. Achievement of knowledge objectives will be evaluated by exam. Ability to perform hands-on network administration and support activities will be evaluated by grading appropriate group and individual hands-on laboratory projects, scenarios, and case studies. The majority of campuses offering the Associate degree in Information Sciences and Technology will have 20-30 students enrolled in the course. The course will be offered one semester each academic year.

Enforced Prerequisite at Enrollment: IST 226

IST 230: Language, Logic, and Discrete Mathematics

3 Credits

Introduction to formal languages, mathematical logic, and discrete mathematics, with applications to information sciences and technology. IST 230 Language, Logic, and Discrete Mathematics (3) IST 230 is one of the five introductory core courses for the baccalaureate degree program in Information Sciences and Technology. The purpose of IST 230 is to provide students with an understanding of an array of mathematical concepts and methods which form the foundation of modern information science, in a form that will be relevant and useful for IST students. Exams and assignments will be used to assess that understanding. IST 230 will draw some of its material from several mathematical disciplines: formal language theory, mathematical logic, discrete mathematics. In-depth treatments of each of these subjects are offered elsewhere in the University as advanced mathematics and computer science courses. The difference is that IST 230 will present these concepts in a more elementary way, with much more emphasis on IST applications, and in a more eclectic, web-based format. IST 230 will be structured as a small number of modules. Each module will introduce a group of mathematical concepts and present applications of those concepts to problems of information storage, information retrieval, information management, etc. These include: MODULE 1: SET, RELATIONS, FUNCTIONS, NUMBERS set operations, applications of relations, equivalence relations, function composition, inverse functions, logarithms, exponential function, number systems, applications of number theory. APPLICATIONS: mathematical data types (integers, fractions, real numbers, tuples, function spaces); exponential growth; non-feasible algorithms; public key encryption. MODULE 2: LOGIC AND BOOLEAN ALGEBRA predicates, quantifiers, formulas, interpretations, syllogisms, logical consequence, tableau method, boolean connectives, boolean functions, valuations, truth tables, logic gates. APPLICATIONS: database query languages; specification languages; switching circuits; boolean search expressions. MODULE 3: COMBINATORICS AND PROBABILITY combination, permutation, discrete probability APPLICATIONS: lexicographic ordering; combinatorial explosions; lower bounds of algorithms; reliability of computer systems MODULE 4: GRAPHS AND TREES directed and undirected graphs, weighted graphs, walks, paths, matrix representations, graph algorithms, spanning trees, rooted and structured trees, combining trees to form new trees, inserting nodes in trees, sorting, searching. APPLICATIONS: flow diagrams; task scheduling; critical paths; network connectivity; finite state machines; parsing; derivation; trees as data structures for storing information. MODULE 5: INDUCTION AND RECURSION induction and recursion on the natural numbers and other structures such as trees. APPLICATIONS: recursive evaluation of mathematical and Boolean expressions; recursive searching and sorting algorithms; asymptotic

analysis of algorithms. MODULE 6: GRAMMARS, LANGUAGES AND FINITE STATE MACHINES alphabets, strings, grammars, languages, regular languages, regular expressions, finite state machines, language recognizers. APPLICATIONS: regular expression search; efficient pattern matching using finite-state machines.

Enforced Prerequisite at Enrollment: MATH 110 or MATH 140

IST 234N: Digital Cultures

3 Credits

This introductory course will combine theory and practice to help students develop a rich understanding of the constantly evolving US digital culture. We will survey a variety of information and communication technologies (ICTs), and their modes of production, distribution, and consumption by individuals and institutions including traditional media, business, and government. Specifically, we will examine the impact of social and mobile technologies on how we consume, share, resist, and participate in digital culture. Students will also develop basic technical and media creation skills. The general theme of the course is analyzing contemporary cases to understand the significance of new ICTs in shaping our identities, behaviors, language, imaginations, and society. Students will read texts authored by some of the most formative thinkers examining the impact ICTs on society, and apply these core concepts in our analysis of digital cultures. Students will actively use microblogging, RSS feeds, social networking and other Web 2.0 tools to produce and consume content, interact with peers, and reflect critically on this experience. This course will emphasize awareness of current events and technology trends, as well as critical thinking skills and the ability to frame and explore issues through written, visual and verbal communication. This is an introductory course in IST and COMM, and meets the requirements for a Social and Behavioral Sciences (GS) and Humanities (GH) Course. This course is delivered with significant student and instructor interaction with computers and digital media.

United States Cultures (US)

IST 237: Digital Entrepreneurship

3 Credits

The proliferation of new IT combined with the reach of the Web, Internet, and mobile devices is opening up new possibilities for individuals and companies to leverage IT to create new digital businesses. This course provides a broad overview of the role of entrepreneurial thinking and innovation in advancing IT-focused businesses. Students will examine how these skills can be leveraged to create new IT-driven businesses as well as to create competitive advantage for existing businesses via new

IT products and services (i.e., intrapreneurship). This course provides a broad overview of the role of entrepreneurial thinking and innovation in advancing IT-focused businesses and familiarizes students with the processes and tools used to conceptualize and plan new innovative products and/or services that leverage IT as a core component of their business model. Students will be introduced to concepts, tools, and principles of business management including business strategy, finance, marketing, human resources, and leadership within the context of IT business models. This will be a very hands-on active class. Students will have the opportunity to work in teams to practice skills related to identifying novel ideas, assessing market opportunities, defining customer segments, identifying key partners, and building IT-based business models.

Enforced Prerequisite at Enrollment: MGMT 215 or ENGR 310

IST 240: Introduction to Computer Languages

3 Credits

Introduction to the specification and application of languages and language paradigms that interact with computers. IST 240 is one of two courses added to the three core courses for the associate degree program to form the core courses for the baccalaureate degree program in Information Sciences and Technology. The primary goal of this course is to study the foundations underlying the design, specification and use of a wide variety of language paradigms used to interact with computers. The following details the content of the course: (1) nature of languages; (2) elements of languages; (3) classification of languages; (4) formal descriptions of languages; (5) data and types; (6) names and bindings; (7) control structures; (8) language processors; and (9) study experiences. Student evaluation may be accomplished by means of assignments, examinations, and possibly a project. This course will most likely involve Web-based course material and will therefore require student access to computers and the Web. Although other existing courses are similar to IST 240 in content, none of those courses fit the objective of this course and of this program.

Enforced Prerequisite at Enrollment: C or better in IST 140 or CMPSC 101 or CMPSC 121 or CMPSC 131

IST 240H: Introduction to Computer Languages

3 Credits

Introduction to the specification and application of languages and language paradigms that interact with computers.

Honors

IST 242: Intermediate & Object-Oriented Application Development

3 Credits

Intermediate application development including algorithms, data structures, and object-oriented concepts. IST 242 Intermediate & Object-Oriented Application Development (3) This is a second course in application development. It will focus on the intermediate knowledge needed to create applications that use high level programming languages, combining original code with existing code libraries and application programming interfaces (APIs). The perspective will be of application development that takes place within a human and organizational context; in this sense data structures will be construed as representations of organizational entities and information, and algorithms as a reflection of human and organizational processes and

activity. Students will also learn about common application architectures and design patterns. This is a hands-on, practical course designed for IST design and development option undergraduate students and others as an elective.

Enforced Prerequisite at Enrollment: C or better in IST 140 or IST 240 or CMPSC 121 or CMPSC 131

IST 250: Introduction to Web Design and Development

3 Credits

Introduction to how the World Wide Web utilizes emerging technologies. Students acquire conceptual and practical understanding of constructing Web sites. IST 110 is recommended to be taken before or at the same time as IST 250. This course provides an introduction to the visual/information design of Web sites and the technologies of the World Wide Web. Students will acquire a sound conceptual understanding of how to design and construct simple to complex web sites, and how this knowledge can be applied in practical ways across all disciplines. Knowledge gained in this course will support the Information Sciences and Technology (IST) Associate degree, as well as other degree options within IST and across the university. Knowledge gained in this course will also support other disciplines within the University, as the Web becomes the predominant publication medium of the 21st Century. There are two major course objectives: (1) students will be able to perform a written critical evaluation of any web site, using the criteria listed below for evaluation; (2) students will be able to develop a written and/or electronic comprehensive proposal for the design or redesign of a web site, based on their understanding of visual and information design.

IST 256: Programming for the Web

3 Credits

IST 256 will provide students with the knowledge and skills to create both basic and more dynamic web-based content pages and applications. The course will first focus on acquiring competencies in core web development languages including HTML, CSS, and JavaScript, then move on to more advanced topics such as information architecture, incorporation of multimedia, and the use of application programming interfaces (APIs) and application development frameworks for the web. The course will follow an active learning pedagogy and incorporate a substantial project component. The first part of the course consists of introduction of web programming concepts, techniques, and tools. Students will demonstrate understanding of the course content by building web pages via individual and group activities. The latter half of the course will involve more in-depth project work both as individuals and in groups.

Enforced Prerequisites at Enrollment: IST 250 or IST 242 or CMPSC 122 or CMPSC 132

IST 260W: Introduction to Systems Analysis and Design

3 Credits/Maximum of 3

Introduction to systems analysis and design, stressing the process of requirements acquisition, specification, design, and implementation. IST 260W Introduction to Systems Analysis and Design (3) IST 260W is an introductory course to system analysis and design. It covers the process and is intended to be independent of the specific system, whether it be a hardware, software, telecommunication, logistics, or information system. This course can be used as a prerequisite to specific Associate degree system design courses. It can also be used for

breadth for those IST students who do not pursue technical emphases. It serves as a writing across the curriculum course for the Information Sciences and Technology Associate degree. The course looks at two design paradigms. A small design project is included in the course. The objectives of the course include: (1) teaching students the importance of teamwork, project management, and oral and written communication skills; (2) teaching students a systems design strategy that emphasizes customer requirements at all stages of the process; (3) introducing students to the object oriented design process; (4) giving students a full design experience on a small project such as designing an e-Commerce system; and (5) showing students examples of the writing required for systems design and requiring them to write individual and team reports as well as give oral presentations on their designs. Students will be evaluated by examinations and by grading of their written reports and oral presentations. System design courses are taught at the upper-division level in Engineering and Business departments. This is a lower-division course that serves as an introduction for Associate degree students to give them a background for project-level courses in their fourth semester. It will serve as a core requirement in the Associate degree program and act as a prerequisite for the design courses that are capstone courses in many of the Associate degree options. The course will be offered one semester each academic year.

Enforced Prerequisite at Enrollment: IST 110, IST 210, IST 220, and ENGL 15
Writing Across the Curriculum

IST 261: Application Development Design Studio I

3 Credits

Introductory design and development studio course for IST and SRA students. IST 261 Application Development Design Studio I (3) This studio course will provide opportunities for students to practice the technical skills acquired in their foundation application design and development courses, specifically, in IST 140 and IST 242. The course will follow the general format of experiential studios in the arts and architecture. It will be primarily problem-based and project oriented. Peer and instructor design critiques will be the major feedback and assessment mechanisms. Students in the IST Software Design Studios will be expected to complete deliverables in each phase of the systems development lifecycle (i.e. problem definition, requirements analysis, design, development, test) regardless of the development paradigm employed (plan-based, agile, etc). A key objective of this design studio will be to introduce students to the challenges faced in different application design and development activities before exposing them to specific techniques to manage these challenges in upper-division courses. Projects may be undertaken by individuals, pairs, or larger groups but each studio participant will be responsible for producing significant individual project deliverables. Project ideas may come from the student or from the instructor; however, projects related to students' other course deliverables will require the agreement of both instructors. Students will be required to maintain a design and development journal. This journal will be the analog of an engineering notebook or artist's sketchbook and should contain a running account of the students design and development ideas, explorations, rationale, and other notes. The IST design and development studios are a forum for serious students to engage with the concepts, process, tools, and materials used to envision and build software applications. Both collaboration and individual performance will be emphasized, as will experimentation, risk-taking, and enthusiasm for the process of designing and building working software

applications. Students will be expected to improvise and then respond constructively to feedback from instructors and peers.

Enforced Prerequisite at Enrollment: C or better in IST 242 or CMPSC 221

IST 261H: Application Development Design Studio I

3 Credits

Introductory design and development studio course for IST and SRA students.

IST 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

IST 295A: Distributed Team Project

1-3 Credits/Maximum of 3

IST 295A Distributed Team Project (3) This course offers a web-based distributed project that simulates an internship of a student in a company. Faculty gather information system design projects from industry or units within the university. These projects are announced on the web and students bid to join groups to work on the projects. Each project has a faculty mentor with an additional industrial mentor where appropriate. Student groups are formed by the mentors based on the resumes and skill sets of the students. Students bid on one project at a time until they have been selected to be a member of a project team. Membership in a group may include students from different campuses throughout the Penn State System. The majority of communication within the groups and with the mentors is to be via the internet. This course gives a true experience in information project development. Students will be graded as a team by the faculty mentor on the quality of the project. An individual written report detailing the work accomplished during the course is required from all team members. The grade of the individual report and the team project grade form a basis for student evaluation. The objectives of the course include: (1) teaching students the importance of teamwork, project management, and oral and written communication skills; and (2) exposing students to the virtual workplace and providing them with meaningful information and technology related tasks.

Enforced Prerequisite at Enrollment: IST 110

IST 295B: IST Internship

1-3 Credits/Maximum of 3

IST 295B IST Internship (1-3) This course is offered as an internship for a student within a company. Faculty and industry collaborate to specify the duties of the intern. The faculty member responsible for the course then approves the internship. The internship must consist of a minimum of 150 hours of meaningful information and technology related tasks. A written report by the student, detailing the work accomplished during the internship, is required. This report and a report from the intern supervisor form the basis for the grade. The objectives of the course include: (1) teaching students the importance of teamwork, project management, and oral and written communication skills; and (2) exposing students to the workplace and providing them with meaningful information and technology related tasks.

Enforced Prerequisite at Enrollment: IST 110

Full-Time Equivalent Course

IST 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

IST 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

IST 298: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

IST 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

IST 301: Information and Organizations

3 Credits

Overview of organizational structures and functions. Includes information processing and analytic perspectives of organizations. IST 301 Information and Organizations (3) This course provides students the opportunity to learn and experience: 1. Applicable organization and the ways in which IT can alter and enable these activities. 2. A series of analytic techniques that students can use to investigate the effects of new IT on work and organization. 3. Examples and problems set in and drawn from a range of domains including military, medical, high technology, business and government. This course is designed around a series of ill-structured, contemporary problems that require students to develop responses by applying analytic techniques and theories of work and organization. At the end of the course, students will be able to: 1. Apply theories of work and organization as analytic techniques. 2. Conduct organizational and inter-organizational process analyses. 3. Map information flows among organizational units and actors.

Enforced Prerequisite at Enrollment: IST 210 and IST 220

IST 302: IT Project Management

3 Credits

Exploration and application of the basic concepts, methodologies, and tools of project management in the field of information sciences and technology. IST 302 IT Project Management (3) This course is designed to introduce and explore the basic concepts and practices of project management and help students understand how to plan and manage IT projects successfully. Throughout the course, students will be asked to utilize course concepts, methodologies, and tools while utilizing technology applications and addressing real-world problems. Students will learn the skills necessary to define project scope, create workable project plans, and manage projects with quality, budget, and schedule in

mind. The course is structured around the key phases of project lifecycle, including initiating a project, developing project plans, executing and managing a project, and closing out a project. In addition, students will be taught how to identify and address the change management and political issues associated with project management.

Enforced Prerequisite at Enrollment: IST 210 and IST 220

IST 310: Digital Media Metrics

3 Credits

Analysis of audience data for traditional and new media to create metrics for advertising, content marketing and audience analysis. COMM (IST) 310 Digital Media Metrics (3) The emergence of a converged marketplace where all media are now digital, including broadcasting, websites and social media, has created enormous new opportunities for advertising, promotions and content distribution. The proliferation of media has made the marketplace much more competitive, but simultaneously the availability of data too has increased significantly making possible the much more precise and segmented distribution of messages and content. For media practitioners in this new environment, a familiarity with audience data, metrics and dimensions is essential. This course is an introduction to the methods for collecting, analyzing and utilizing audience data for traditional and new media. The class will cover the fundamentals of traditional media audience analysis, web metrics, and social media metrics, specifically as they relate to audience measurement, advertising campaign evaluation and content distribution. Students will learn the methods of data collection, analysis and use for traditional broadcast media, and the transformation of these practices in the newly digitized and converged multiplatform, multiscreen environment. The course will also cover the basics of data capture for new media (at an appropriate technical level), and the use of this data for the design of metrics appropriate for various purposes such as monitoring traffic, conversions and revenue generation. The use of metrics in pricing models for advertising, sales generation and content distribution will also be covered. Students will be introduced to data sources for digital media audience analysis, with a special focus on Google Analytics. Students passing this class would be able to pass the Google Analytics Individual Qualification test.

Cross-listed with: COMM 310

IST 311: Object-Oriented Design and Software Applications

3 Credits

Introduction to object-oriented applications including applications in an Object Oriented Design (OOD) language or OOD languages. IST 311 Object-Oriented Design and Software Applications (3) IST 311 is among the courses making up the Application Design & Development option in the Baccalaureate degree in Information Sciences and Technology. This course is normally taken in the 5th or 6th semester. It is the first upper-division course in the option sequence. The course is intended to provide students with a background in object-oriented design and object-oriented application development. Students will learn the fundamentals of object-oriented analysis, design, and modeling. They will apply design concepts and develop the skills necessary to bring an idea through the different phases of the application development lifecycle. The course normally involves students working on teams to design and develop working application prototypes. Upon completion of this course, students will be able to apply object-oriented design principles using object-oriented modeling and programming languages, show how object-oriented principles increase the quality of complex applications, and begin

development of the team skills necessary when developing complex systems.

Enforced Prerequisite at Enrollment: C or better in IST 242 or CMPSC 221

IST 331: Foundations of Human-Centered Design

3 Credits

Interdisciplinary survey of topics and methods related to the human-centered design use and usability of information systems. IST 331 Foundations of Human-Centered Design: User and System Principles (3) This course provides a focused introduction to one of the most complicated parts of information systems design: users and the contexts in which they live, work, and play. The course provides a balance between theory and practice, which are tightly intertwined in this area. Students will learn how to use social science theories about human capabilities and group behavior to predict whether an information system will be usable and useful, and they will learn about the opportunities and challenges that are associated with a wide range of emerging technologies. Students will also gain skills in designing and evaluating information systems that meet the needs of a target audience. Because the information technology design space evolves rapidly, much of the technology-related content covered in this course will evolve from year to year; however the focus throughout will be understanding and responding to the needs, capabilities and preferences of the users of interactive information systems. The format of the class may include lectures, readings, in-class or online discussions, projects, or case studies. Assessment of student performance may include short assignments, quizzes, exams, or in-depth projects.

Enforced Prerequisite at Enrollment: C or better in IST 240 or IST 242 or CMPSC 122 or CMPSC 132

IST 337: Technologies for Digital Entrepreneurs

3 Credits

This course introduces the student to the applications, technologies, and tools for entrepreneurs engaging in or considering engaging in a start-up or running a small-to-medium size business. Although there will be some consideration of product concept development and implementation, much of the course will be devoted to the tools and infrastructure need to support a start-up up a small-to-medium size business. These concepts and skills will also support entrepreneurs looking to develop new applications to open new market opportunities. This will be a very hands-on and active class that relies on approaches such as problem-based learning (PBL), "flipped" classrooms, and learning by doing. Students will spend time outside class learning key concepts and time inside class applying them.

Enforced Prerequisite at Enrollment: IST 237

IST 361: Application Development Design Studio II

3 Credits

Second of two design and development studio courses for IST and SRA students. IST 361 Application Development Design Studio II (3) This studio course will provide opportunities for students to practice technical skills acquired in their previous design and development courses to date, specifically, in IST 140, Introduction to Application Development; IST 242, Intermediate and Object-Oriented Application Development; and IST 311, Object-Oriented Design and Software Applications. The course will follow the general format of experiential studios in the arts

and architecture. It will be primarily largely problem-based and project oriented. Peer and instructor design critiques will be the primary feedback and assessment mechanisms. Students in the IST Software Design Studios will be expected to complete deliverables in each phase of the systems development lifecycle (i.e. problem definition, requirements analysis, design, development, test) regardless of the development paradigm employed (plan-based, agile, etc). A key objective of this design studio will be to provide application development opportunities where students can apply knowledge and practice techniques gained from their foundation and first upper-division courses. Projects may be undertaken by individuals, pairs, or larger groups but each studio participant will be responsible for producing significant individual project deliverables. Project ideas may come from the student or from the instructor; however, projects related to students' other course deliverables will require the agreement of both instructors. Students will be required to maintain a design and development journal. This journal will be the analog of an engineering notebook or artist's sketchbook and should contain a running account of the students design and development ideas, explorations, rationale, and other notes. The IST design and development studios are a forum for serious students to engage with the concepts, process, tools, and materials used to envision and build software applications. Both collaboration and individual performance will be emphasized, as will experimentation, risk-taking, and enthusiasm for the process of designing and building working software applications. Students will be expected to improvise and then respond constructively to feedback from instructors and peers.

Enforced Prerequisite at Enrollment: C or better in IST 311

IST 389: Leadership and Technology for Instruction

1-4 Credits

Leadership in college instructional settings; teaching and learning principles; instructional technologies; and best practices in coaching, team facilitation, learning assessment. This course prepares undergraduate students for their role as Learning Assistants (LA's) in the College of IST. In this course, LA's will prepare to assist in instructional environments that encourage students to participate actively in their learning. LA's will be immersed in activities that introduce them to some of the teaching methods aimed at promoting active learning in College of IST classrooms, while being prepared for leadership responsibilities such as coaching, providing feedback, evaluating, monitoring academic integrity, fostering inclusive learning environments, and supporting teams. Students will also learn about information technologies designed for managing courses and increasing student engagement. Outside of class meetings, students will serve as instructional assistants in an assigned course. They will be mentored, supervised, and evaluated on the job by their assigned faculty member.

Enforced Prerequisite at Enrollment: IST 110 or SRA 111. Co-requisite: Employment as a Learning Assistant in the College of IST.

IST 390: Introduction to Professional Development

1 Credits

Interdisciplinary course to introduce students to the issues, concepts and skills involved in successfully transitioning into professional life. IST 390 Introduction to Professional Development (1) IST 390 focuses on introducing the students to professionalism and professional development in the field of IT. Emphasis will be placed on the theories and skills required for planning, developing, implementing, and managing professional skills. For example, students will attempt to

master relationship skills such as client relationship management and interpersonal communication, business skills such as presentation planning and scheduling; leadership skills such as decision making and goal setting; and career management skills such as networking and interviewing. Additional focus will be placed on the various resources and strategies available for pursuing a successful job search. Students will be given opportunities to practice the concepts, theories, and methodologies learned in class by working in teams on real-world case studies (many derived from corporate partners). Students will be periodically assessed through examinations, case studies, individual and group assignments and projects, and other performance indicators where appropriate. The audience is students who are ready to enter the work force. For those pursuing Baccalaureate Degrees, this would mean a class standing of Junior or Senior. For those pursuing Associate Degrees, this would mean a second year standing.

IST 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

IST 398: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

IST 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

IST 402: Emerging Issues and Technologies

3 Credits/Maximum of 9

Introduction to emerging issues, technology forecasting and analysis; overview of emerging issues and leading technologies in IST and how they impact information systems, users, the IT labor force and society. IST 402 Emerging Issues and Technologies (3 per semester/ maximum of 9) Information Sciences and Technology (IST) is a rapidly changing discipline. New issues, methods, tools, applications and terminology appear on a continual basis. A key skill is the ability to analyze new issues and assess new technologies within the context of the information age. This course prepares students to understand the difference between potential technological failures and success, fads and revolutionary technology. It also helps students to view emerging issues as an opportunity rather than a threat. Intellectual tools are provided to assist in understanding issues, assessing and forecasting technological changes for feasibility and planning in real world situations. The course provides students with: a.) A process framework for analyzing new issues and a theoretical framework to study technological and social impacts of such issues. b.) A process framework for recognizing and understanding new technologies and a theoretical framework to take advantage of such technologies. c.) Exposure to new issues and technologies. d.) Hands-on experience in studying recent technological advances in detail. The course will also provide students with the ability to: a.) Understand the concept of issue analysis and technology forecasting. b.) Recognize the important of new issues and technologies in information

sciences. c.) Incorporate these new issues and technologies into an existing information systems framework. d.) Develop and implement new technology solutions, or discuss policies for addressing emerging issues. e.) Predict impacts of issues and technology on information management, users, policies, and the environment. Each time the course is offered; new issues and/or information technology areas will be explored. Examples of issues and technologies addressed include: wireless communications, security and intrusion detection, intelligent agents, web search, languages, intelligent systems, bio-informatics, advanced visualization and human-computer interactions, ubiquitous-pervasive computing, groupware, computer aided cognition, system design by global IT teams, IT outsourcing, and digital divide.

Enforced Prerequisite at Enrollment: IST 210 and IST 220

IST 402H: Emerging Issues and Technologies

3 Credits/Maximum of 9

Introduction to emerging issues, technology forecasting and analysis; overview of emerging issues and leading technologies in IST and how they impact information systems, users, the IT labor force and society.

Honors

IST 411: Distributed-Object Computing

3 Credits/Maximum of 3

Introduction to distributed-object computing and its use in client/server and real-world computing applications. This course presents the fundamental concepts of distributed-object computing, including client/server computing which is an important platform for real-world computing systems. The course focuses on design, development, and deployment of distributed systems. Students will also consider issues of managing distributed systems and the relationships between organizational processes and information-system architectures. IST 411 is an elective course for the Baccalaureate degree program in Information Sciences and Technology. Students completing the Systems Development Option may take this course to fulfill option requirements. Upon completion of this course, students will have a broad understanding of the fundamental concepts of distributed objects and distributed-computing architectures, have the ability to apply these concepts to real-world applications, and be able to design, develop, deploy, and maintain distributed applications.

Enforced Prerequisite at Enrollment: C or better in IST 311

IST 412: The Engineering of Complex Software Systems

3 Credits/Maximum of 3

Introduction to the engineering of complex software systems including software system specification, design and implementation, integration and test, and evolution. IST 412 The Engineering of Complex Software Systems (3) This course presents the fundamental concepts of the engineering of complex software systems, including iterative and agile development strategies. The course gives students insight into the full software development cycle, including design, implementation, test and quality assurance, deployment, maintenance, and project estimation and management. IST 412 is an elective course for the Baccalaureate degree program in Information Sciences and Technology. Students completing the Systems Development Option may take this course to fulfill option requirements. Upon completion of this course, students will have a broad understanding of the fundamental concepts of complex

system software engineering and be able to apply these concepts to managing and developing a complex software project over the full software development cycle.

Enforced Prerequisite at Enrollment: C or better in IST 311

IST 413: Usability Engineering

3 Credits

This course addresses activities in the system development process that ensure usability. It considers the emerging concept of usability, requirements gathering and analysis, activity design, information design, interaction design, documentation design, user testing and usability evaluation. IST 413 Usability Engineering (3) The modern system development process includes concurrent engineering of usability - features of a system that make it approachable, learnable, as well as easy and satisfying to use. Topics in the course include the emerging concept of usability, requirements gathering and analysis, the use of scenarios and claims to describe and analyze both current human practices and envisioned practices, activity design, information design, interaction design, documentation design, and user testing, including techniques for formative and summative usability evaluation.

Enforced Prerequisite at Enrollment: C or better in IST 331

IST 420: Fundamentals of Systems and Enterprise Integration

3 Credits

Introductory course on integration of information technology into different venues, including the planning, development, and implementation of the integration. IST 420 Fundamentals of Systems and Enterprise Integration (3) IST 420 focuses on introducing the student to the role of information systems and technologies in achieving a variety of system goals. Emphasis will be placed on the theories and skills required for planning, developing, implementing, and managing the integration of information technology and different systems. IST 420 is required of all Information Sciences and Technology (IST) undergraduates who have chosen the Information Technology Integration Option in their baccalaureate degree. It is the prerequisite for IST 421 which is also required for the Option. Upon completion of the course, the student will be able to recognize information technology integration. They will also understand the 'business processes and information value chain' within a system, and be able to foster an understanding of the role of IT in system integration. Students will be periodically assessed through examinations, case studies, individual and group assignments and projects, and other performance indicators where appropriate.

Enforced Prerequisite at Enrollment: C or better in IST 240 or IST 242 and C or better in IST 301 and C or better in IST 302

IST 421: Advanced Enterprise Integration: Technologies and Applications

3 Credits

Advanced course on the integration of information technology into systems applications. IST 421 Advanced Enterprise Integration: Technology and Applications (3) IST 421 expands the knowledge gained in IST 420 on the theories and skills required for planning, developing, implementing, and managing information systems. IST 421 is required of all Information Sciences and Technology (IST) undergraduates who have chosen the Information Technology: Integration and Application Option in their Baccalaureate degree. Upon completion of the course, the student will have expanded knowledge of information technology and systems

integration issues across multiple application settings. They will also have a deeper understanding of the specific information technology (both hardware and software) that can serve as the foundation for designing systems within an organization, and have experience that fosters an understanding of the role of IT achieving system performance goals.

Enforced Prerequisite at Enrollment: C or better in IST 420

IST 422: Enterprise Architecture Foundations

3 Credits

Theoretical foundations and practice of enterprise architecture. IST 422 Enterprise Architecture Foundations (3) Enterprise Architecture is the overall framework and set of strategic objectives for the usage of technology over time across an organization. Enterprise Architecture can also be described as the top-down, strategy-driven, integrating framework that brings together and manages the business model, applications and technology. Its primary goal is to facilitate improvement and deliver business-aligned information systems. This course presents the key components and processes involved in the effective creation and governance of enterprise architectures. Students will acquire knowledge about the key foundational aspects of enterprise architecture, learn what decisions need to be made and how to make them, and be able to explain and justify their recommendations.

Enforced Prerequisite at Enrollment: IST 301

IST 423: Enterprise Information Management and Storage Architecture

3 Credits

Provide in-depth study of the concepts, issues, and technologies associated with the complex world of enterprise information and storage architecture. IST 423 Enterprise Information Management and Storage Architecture (3) This course is designed to introduce students to enterprise information storage and management concepts, issues, trends, and technologies. As an upper-division course, the focus will center on applying design concepts and associated technologies to real-world problems in the area of enterprise information storage and management. Existing partnerships with leading information management firms will be leveraged to provide real-world exposure to the complex enterprise information storage and management issues facing all organizations today. This course also focuses increasingly on the critical areas of information security and the emerging field of information storage virtualization. The course will mix technical details, applied value, and organizational insights of enterprise information storage and management through the use of labs, case studies, real-life problems, and team projects. This is a unique course that has generated great industry interest.

Enforced Prerequisite at Enrollment: IST 301

IST 424: Architectural Modeling of Organizations

3 Credits

Theoretical foundations and practice of enterprise modeling. IST 424 Architectural Modeling of Organizations (3) Enterprise Architecture is the overall framework and set of strategic objectives for the usage of technology over time across an organization. Enterprise Architecture can also be described as the top-down, strategy-driven, integrating framework that brings together and manages the organization model, applications and technology. Its primary goal is to facilitate improvement and deliver organization-aligned information systems. Effective modeling is crucial

for successful EA. This course provides an exposure to the foundational concepts and practices of effective enterprise modeling for EA. Students will acquire knowledge about the key foundational knowledge in modeling different layers of the enterprise, learn what decisions need to be made and how to make them, and be able to explain and justify their models and recommendations. This course explores the use and effectiveness of architectural modeling to describe an organization and to integrate and manage IT resources strategically from an enterprise perspective. Hands-on exercises and cases studies are used to illustrate the role and effect of enterprise architecture concepts and methodologies. Emphasis is placed on understanding different architectural approaches, standards, and styles. Students will use enterprise architectural tools to develop descriptive models and understand how to integrate and manage IT within and between organizations. For each general topic area, core readings are used to define standard vocabulary, concepts and relations, methods and criteria for evaluation, and implications for enterprise architecture. Students participate in class discussions as well as complete written assignments that focus on solidifying the understanding of the course content. Students also complete a team modeling project that is motivated by, and whose outcomes are discussed with respect to, one or more theoretical frameworks covered in the course.

Enforced Prerequisite at Enrollment: IST 301

IST 425: New Venture Creation

3 Credits

Via problem-based learning, students define new business ventures to meet current market needs, develop business models, and present to various stakeholders. The goal of New Venture Creation is to better prepare undergraduate students to be leaders in adaptive, globally-minded, technology-savvy organizations. The course is structured so students develop skills that are of high value in any workplace: leadership skills, self-efficacy, creativity and the ability to deal with ambiguity. Upon course completion, students will have a working knowledge of traditional and non-traditional ways for identifying a new product or business opportunity, quantifying the potential, understanding the key competitive factors, researching the audience, and producing a convincing plan for financing and launch. Students who want to augment the skills and knowledge from their major with the ability to develop a new product/service/process, will find New Venture Creation a valuable course. This is a novel problem-based learning (PBL) course, where the learning is student-centered, with faculty acting primarily in the role of facilitators. Active/Experiential learning happens in this course because students develop ownership of their venture concepts and are fully responsible for the genesis of ideas.

Enforced Prerequisite at Enrollment: (ECON 102 or ECON 104 or ECON 14 or MGMT 215) and (CAS 100 or CAS 138T or EMSC 100S)
Cross-listed with: ENGR 425, MGMT 425

IST 426: Invention Commercialization

3 Credits

Working with Penn State inventions selected by the Intellectual Property Office, student teams define an optimum commercialization path each technology. ENGR 426/ENGR (MGMT/IST/ENTR) 426 Invention Commercialization (3) The goal of ENGR (MGMT/IST/ENTR) 426 is to have students understand why invention commercialization is complicated and difficult by participating in the process. For example, the inventor rarely has insights into the markets for his/her invention, is often

not interested in the details of commercialization, and can be secretive. In addition, the business and financial communities often do not take the time, or have the resources, to understand new technologies and perform complex due diligence. Thus lack of due diligence often leads to rejection of innovation because existing companies often discount new technologies from outside the company as NIH - 'not invented here'. Effective transfer of new invention or innovation to a commercial product requires at least three different functional communities to interface: technical, legal and business. Each uses a different language, comes from different educational and cultural backgrounds, and may have an inherent distrust of the others. These functional barriers are difficult to overcome. This course teaches how these barriers can be broken down as student teams help bridge the perceived chasm between key players in the invention commercialization process. In these teams, students bring the skills and knowledge from their major to develop an invention commercialization recommendation for the Technology Transfer Office and the inventor. For example, business students focus on finance and market opportunity assessment; engineering and IST students focus on design refinements, prototyping support, and (if appropriate) making technology suggestions to the inventor. Upon completing the course, the students will have a working knowledge of different university and corporate technology or invention commercialization processes, important intellectual property management tools for inventions (patents, license agreements, option agreements) source of funding to move inventions toward product development, and delivering top quality presentations which outline the recommended commercialization path. Students who enjoy open-ended projects which involve the interplay of business and invention of who wants to work on interdisciplinary teams with the newest inventions will find this course a valuable course. NOTE: Because the inventions/products are based on Penn State faculty intellectual property, students must sign the Penn State Special Intellectual Property Agreement For Students - For Use When Assigning Intellectual Property to The Pennsylvania State University. The form can be viewed at <http://guru.psu.edu/policies/RAG13.html> The course will be offered both Spring and Fall semesters with an enrollment of 40 students.

Enforced Prerequisite at Enrollment: (ECON 102 or ECON 104 or ECON 14) and CAS 100

Cross-listed with: ENGR 426, MGMT 426

IST 431: The Information Environment

3 Credits

Survey of social environment of information technology themes: Community, sovereignty, privacy, ethics, economics, and knowledge management. IST 431 The Information Environment (3) The ways that people communicate and utilize information is being changed dramatically by new information technologies. Information and the technologies that are employed by create, organize, transfer, and utilize that information in a networked environment, using such global networks as the internet or internal networks such as intranets, have become a key component of the global economy. This global environment can change the way we interact, communicate, and function on the job and in our daily lives. The new technologies also raise new economic, legal, ethical, and social issues that are of grave importance to society. IST 431 examines the overall context of the new information environment and new technical issues relating to knowledge management in the global networked environment. IST 431 is a required course in the Information, Society and Public Policy Option. There may be some overlap of material with COMM 405, COMM 483, COMM 485, PHIL 407, PHIL 423, PHIL 433 and PL SC 460m but none of these courses cover the same material, or approach it in the same manner. Upon completion of this

course, the student will gain an appreciation of the differences between 'cyberspace' and the 'real' world. The student will also understand that the implementation and modern information technologies has significant social and policy implications that demand appropriate policy issues in several different contexts (global, national, local). The student will also be able to discuss the major themes in information policy studies (e.g., community, privacy, access, economic participation, security) and be able to relate these themes to the applications of particular technologies. They will be able to describe policy frameworks and issues, as well as the ethical and social implications of these choices. Homework assignments; Socratic dialogue; analysis and write-up of case studies; assessment of group research projects and presentations; participation in on-line discussion groups; two mid-term and one final examination (objective and essay). The precise mix of evaluation components will be determined by individual instructors; a typical weighting might be exams (60%), written assignments and papers (20%), and collaborative projects (20%). IST 431 will be offered every semester at University Park. At every other campus location where the Baccalaureate degree program is offered, the course will be offered 1-2 times annually depending on demand. Student enrollment at University Park will begin at approximately 50-75 in the first year and grow to 200 over a 3-4 year time period. At other locations, enrollment should range from 25-50 annually.

Enforced Prerequisite at Enrollment: IST 210 and IST 220

IST 432: Legal and Regulatory Environment of Information Science and Technology

3 Credits

Legal environment of information technology, constitutional/political issues, intellectual property, management, e-commerce, privacy, access, computer contracting, cyberspace regulation. IST 432 Legal and Regulatory Environment of Information Science and Technology (3) The new information technologies are creating a global economy heavily dependent upon networked information, hardware, software, and electronic commerce, which calls for adaptation of existing legal and business practices. In many cases, the new technologies pose problems that existing laws or legislation are inadequate to cope with; but the complexity of the environment makes new solutions elusive. This course examines the legal, regulatory, and political environment within which intellectual property rights and examination of contracting issues, licensing of information and products, data protection, patents, cyberspace regulation, and implications for personal privacy. It also focuses on where technology is making regulation difficult by challenging previous concepts upon which our legal and regulatory systems depend.

Enforced Prerequisite at Enrollment: IST 301 or SRA 231

IST 437: Digital Design & Innovation

3 Credits

This course introduces students to design thinking, user-driven innovation and user experience, and business model implementation issues for IT-driven innovation. IST 437 Digital Design & Innovation (3) IT-driven innovation requires a deep understanding of the user, the context of the compute environment, and a systems approach to identifying critical system features. In addition, the IT-driven innovation must meet user needs in a commercially feasible manner. Students taking this class will work in teams to create a design concept and refine it through user analysis and prototyping. To get to a commercially feasible concept, students will analyze the competitive landscape and the ecosystem in which their concept will reside. Each team will express

their concepts using the Business Model Canvas - a tool used in both educational and professional settings - to identify the value proposition and potential monetization strategies. Throughout the class, students will be introduced to tools in the IT design space through hands-on problem solving, role playing, and improvisation, among other techniques. A critical part of this course is the in-class coaching that teams will receive from the instructor, as well as guest speakers who can demonstrate the real world challenges of entrepreneurship and innovation. Frequent communication practice using techniques such as idea pitches will help students refine their ability to express their ideas more effectively.

Enforced Prerequisite at Enrollment: IST 237

IST 440W: Information Sciences and Technology Integration and Problem Solving

3 Credits

Problem-based approach to technology integration by focusing on real-life problems faced by an organization. IST 440W Information Sciences and Technology Integration and Problem Solving (3) This course is the undergraduate capstone for Information Sciences and Technology majors in the Baccalaureate degree. It requires students to work collaboratively in teams of 4-6 students, with each team comprised of students from more than one option and, if possible, more than one campus. Each team is given a significant real-world problem or issue in which information technology is part of the solution. Teams will be expected to manage the project effectively and to communicate its results clearly to a variety of audiences within an organization. Major topics include: review of problem-based and case-based learning; overview of project management practices; assessment of organizational and technical issues posed by the scenario; development and testing of work plans and analysis of options; communication within the group; communication within a management environment; and presentation of results to a variety of audiences inside and outside the organization. IST students need to understand the organizational and social contexts in which technology functions. Indeed, many technology problems are multi-dimensional—they have an economic dimension, a legal dimension, a human resources dimension, and so on. This course will require students to analyze, evaluate, and test alternative solutions and to weigh their advantages and disadvantages for the organization. Students will be evaluated in three ways: by the effectiveness of their team's solution of the technical or organizational problem; by the quality of the students' written and oral presentations; and by the quality of their project management and internal communication. A substantial written paper will be required of each student and each time; in addition, each team will also construct a Web-site for sharing results. Other technologies will be used as required by the project. It is expected that membership on teams of students will be drawn from the various options in the Information Sciences and Technology major. At least nine credits (including at least one IST 300-level and one IST 400-level course) in the student's option must be completed before enrollment in IST 440W. This course should be offered every fall and spring semester beginning in the fall semester 2002. It will be taught in sections of 25 and have a total enrollment of approximately 100 per semester.

Enforced Prerequisite at Enrollment: ENGL 202C or ENGL 202D and seventh semester standing (this course is intended for seniors) Writing Across the Curriculum

IST 442: Information Technology in an International Context

3 Credits

International concepts to improve strategies for the design, dissemination, and use of information technology. IST 442 Information Technology in an International Context (3) (IL) IST 442 focuses on the implications of the international context for the design, diffusion and use of information technology. The course will provide students with an understanding of the three crucial IT-related characteristics of the international context: 1. information infrastructure, 2. the economic and policy environment, and 3. social and cultural structures. Students will develop analytic skills that will enable them to predict the implications of the international context for information technology and will apply these skills in a final project that addresses a problem in the areas such as information systems integration, interface design, or management of information technology projects.

Enforced Prerequisite at Enrollment: IST 110
International Cultures (IL)

IST 445: Globalization Trends and World Issues

3 Credits

This course covers trends in globalization and their influence on U.S. policy making as well as the role of the U.S. in international issues.

Recommended Preparation: 6 credits of honors course work.
Honors

IST 446: An Introduction to Building Computer/Video Games

3 Credits

An interdisciplinary course that introduces students to process and techniques involved in developing a video or computer game. IST 446 An Introduction to Building Computer/Video Games (3) The course is project driven. Students will form teams and collaborate with one another to develop an interactive immersive experience. During the course, students will be exposed to several techniques for building graphical 3D worlds, animating characters, moving the camera and lights in real-time, and building intelligent characters (using state machine-based architectures). They will also learn different techniques of interactive storytelling, such as linear narrative, branching narrative, and adaptive narrative. Furthermore, they will be introduced to several tools that will aid in realizing their own projects and ideas, such as graphic engines (e.g. Wildtangent), and game engines (e.g. Unreal Tournament). The course is heavily project driven. Students will, in the first half of the course, learn the tools used in the development of interactive 3D environments. They will submit 2 individual assignments using these tools to develop a simple interactive environment. These individual assignments will be graded and critiqued. In the second half of the course, students will work on a game idea from generation to actual implementation. Students will be grouped in teams of three to develop a project, integrating concepts they learned through the class. They will use one or more of the tools they learned to build this project. Projects will be continuously evaluated and critiqued during game tuning sessions. In addition, projects will be formally evaluated through two prototypes that are critiqued by the class and the instructor. The students will continuously revise their designs and projects through the semester. The final version of the system is due by the end of the semester.

Enforced Prerequisite at Enrollment: C or better in IST 311 and IST 331

IST 450: Digital Advertising

3 Credits

Digital advertising has transformed many industry activities related to buying and delivering advertising. Information technology and big data have revolutionized the way media and content providers interact and negotiate with advertisers, agencies and third parties. This course will explore the digital advertising and media ecosystem, identify key players and trends, and review performance analysis and evaluation. Particular attention will be paid to sources, management, storage, analysis and visualization of data. Trends in industry regulation and ethics will be explored. This includes ad industry selfregulation and data privacy regulations. The implications of big data and artificial intelligence on industry ethics is discussed.

Enforced Prerequisite at Enrollment: COMM 310 or IST 310 or COMM 422
Cross-listed with: COMM 450

IST 450A: Digital Campaigns

3 Credits/Maximum of 3

This project-oriented course provides students with the knowledge and skills necessary to conduct sponsored advertising-based marketing campaigns. This course offers students an opportunity to gain knowledge and hands-on experience on sponsored search and email advertising. Strategies for developing successful digital advertising campaigns will be discussed, including qualifying and researching clients, account and campaign structure, identifying and organizing keywords, bidding strategies and budgeting, and targeting approaches (including geo, time-based, audience, content and domain targeting), and conversion tagging, tracking and attribution. Students will earn certifications for Google Search and Display, and gain experience with the Google Ads platform, including use of the keyword planning tool, setting up campaigns, ad groups and keywords, writing text and display ad copy, and applying proper settings at the account, campaign, ad group and ad levels. Finally, students will learn important principles for landing page design and become proficient building professional landing pages. Students cannot earn credit for both COMM 450A and MKTG 473.

Enforced Prerequisite at Enrollment: COMM 450 or IST 450
Cross-listed with: COMM 450A

IST 451: Network Security

3 Credits

Fundamental issues and concepts of network security, network security technologies and protocols, and emerging technologies in network security. IST 451 Network Security (3) Information technology has become a key component to support critical infrastructure services in various sectors of our society. In an effort to share information and streamline operations, organizations are creating complex networked systems and opening their networks to customers, suppliers, and other business partners. Increasing network complexity, greater access, and a growing emphasis on the Internet have made information/network security a major concern for organizations. IST 451 focuses on network security. The course will provide the students with a comprehensive understanding of the fundamental issues and concepts of network security, and the mainstream network security technologies and protocols that are widely used in the real world. The course will also address emerging technologies in network security. A major component of the course will be several team-based hands-on attack-defense projects.

Each project has two phases: the attack phase and the defense phase. A group may be asked to defend against the attacks enforced by another group. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

Enforced Prerequisite at Enrollment: C or better in IST 220 and SRA 221

IST 452: Legal and Regulatory Environment of Privacy and Security

3 Credits

Exploration of legal, regulatory, public policy, and ethical issues related to security and privacy for information technology professionals in public institutions, private enterprise, and IT services. IST 452 Legal and Regulatory Environment of Privacy and Security (3) Institutional constraints on security historically focused on traditional criminal enforcement and a slow but steady increase in civil remedies through the twentieth century. Professional security protection could satisfy reasonable assurance criteria by managing legal and regulatory risks based on commonly-held understandings of burglary, theft, conversion and widely-understood but related institutional constraints in the protection of physical property. This focus retained effectiveness so long as physical security over tangible property appeared successful, even extending to the maintenance of control over mainframe computers and their peripherals. However, the proliferation of networked computers has made access and storage ubiquitous, vastly increasing the vulnerability of confidential data, private information and critical national security infrastructure. Security and privacy regulation compliance responsibility now falls much more harshly on both organizations and most of their individual personnel. These complex new duties constrain organizations in the data management industry as well as suppliers and users of data and all participants in the information supply chain, including consultants, software suppliers, applications service providers, maintenance, outsourcing and communications providers. Other factors exacerbate these liability risk management difficulties. Advances in network computer storage and use, the broadening perception of heightened value of information and the pervasive availability of rich data warehousing increase the vulnerability of data management. Risks of information theft and integrity losses as well as the explosion of privacy rights and national security concerns now require pervasive and fuller understanding of liability risk management principles/techniques among all managers and subordinates in the data management industry and in government. Information suppliers, handlers, owners and network service providers are increasingly exposed to civil litigation, regulatory oversight/compliance and criminal prosecution for various information-related wrongs. For example, confidentiality is compulsory for corporate trade secrets, privacy is required for personally identifiable information about individuals and secrecy is mandatory over matters of national security; all of which create complex legal duties that are fundamentally driving the design of information handling processes. This course surveys legal and regulatory constraints on information security and privacy practices.

Enforced Prerequisite at Enrollment: IST 432

IST 453: Legal, Regulatory, Policy Environment of Cyber Forensics

3 Credits

Legal, regulatory and public policy environment of computer and network forensics that constrain investigatory and monitoring activities in computer and network environments. IST 453 Legal, Regulatory, Policy Environment of Cyber Forensics (3) This course covers the major legal,

regulatory and policy issues in cyber-forensics including, pre-trial discovery, production of electronic documents (electronic data discovery or EDD), custody, EDD cost balancing, admissibility of electronic evidence, "business records," expert witness roles and qualification, constitutional rights to privacy and confidentiality, privilege, litigation support, forensic service providers, document retention standards, legal constraints on electronic records management, EDD employment policies, key EDD laws, civil, criminal and regulatory procedure and evidence, litigation holds, spoliation, obstruction of justice, interaction with inside and outside service providers and counsel, EDD strategy, audit trails, and multi-disciplinary relations with computer and network forensic experts. Students are exposed to the failure and successes of particular cyber forensic techniques in the dominant legal and regulatory forums.

Enforced Prerequisite at Enrollment: IST 110 and sixth semester standing or higher.

IST 454: Computer and Cyber Forensics

3 Credits

Fundamental issues and concepts of computer forensics; aspects of computer and cyber crime; methods to uncover, protect, exploit, and document digital evidence; tools, techniques, and procedure to perform computer and cyber crime investigation. IST 454 Computer and Cyber Forensics (3) Computer and communication technologies have become the key components to support critical infrastructure services in various sectors of our society. In an effort to share information and streamline operations, organizations are creating complex networked systems and opening their networks to customers, suppliers, and other business partners. Increasing network complexity, greater access, and a growing emphasis on the Internet have made information and network security a major concern for organizations. IST 454 focuses on computer and cyber forensics. Students will learn different aspects of computer and cyber crime and ways in which to uncover, protect, exploit, and document digital evidence. Students will be exposed to different types of tools (both software and hardware), techniques and procedure, and be able to use them to perform rudimentary forensic investigations. A major component of the course will be several hands-on exercises and a final team-based project. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course. Integrated throughout are perspectives of computer and related legal process, including computer crimes from state and federal law, methods of interaction with law enforcement and prosecutors, admissibility of expert witness testimony and the use of forensic reports in civil, regulatory and internal investigations.

Enforced Prerequisite at Enrollment: C or better in IST 220 or SRA 221

IST 456: Information Security Management

3 Credits

Contemporary Security Issues; security management processes, architecture and models; risk analysis and management; security planning, analysis and safeguards; security policies development and administration; contingency planning, incidence handling and response; and security standards and certification processes. IST 456 Information Security Management (3) Communication technologies have become a key component to support critical infrastructure services in various sectors of our society. In an effort to share information and streamline operations, organizations are creating complex networked

systems and opening their networks to customers, suppliers, and other business partners. Increasing network complexity, greater access, and a growing emphasis on the Internet have made information systems and network security a major concern for organizations. IST 456 focuses on security and risk management. Students will learn contemporary security issues; security management processes, architecture and models; risk analysis and management; security planning, analysis and safeguards; security policies development and administration; contingency planning, incidence handling and response; and security standards and certification processes. A major component of the course will be several case studies and a final team-based project. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

Enforced Prerequisite at Enrollment: C or better in IST 220 and SRA 221

IST 461: Database Management and Administration

3 Credits

Introduces advanced topics in database management systems that are fundamental to effective administration of enterprise information systems. IST 461 Database Management and Administration (3) The objective of the course is to enable a student to comprehend principles of database management and administration. The students will learn how data are stored (indexing), accessed (query processing), shared (currency and transactions), and controlled (security). Students will be creating and using these features in a database in the laboratory. They can then develop, use, and tune database systems and applications, utilizing advanced database management features. This course assumes basic familiarity with relational model, Entity-Relationship diagram, SQL query language, and normalization (as covered in IST 210). It builds the foundation on more advanced concepts of database systems that are fundamental to a career in database administration.

Enforced Prerequisite at Enrollment: IST 210 and IST 240

IST 462: Database Modeling and Applications

3 Credits

This course introduces advanced topics in database modeling and applications. IST 462 Database Modeling and Applications (3) The objective of the course is to enable a student to comprehend advanced database modeling and their applications. Students will model requirements using the advanced techniques and implement various applications in different domains. This course assumes basic familiarity with relational model, Entity-Relationship diagram, SQL query language, and normalization (as covered in IST 210). This course will cover more advanced topics in database modeling and database applications.

Enforced Prerequisite at Enrollment: IST 210 and IST 240

IST 489: Research Methods for the Information Sciences and Technology

3 Credits

Seminar course focused on approaches to studying information and communication technologies and writing theses and other research reports. IST 489H Research Methods for the Information Sciences and Technology (3) IST 489H provides students the opportunity to learn and experience: 1) Conceptualizing what are information and communications technologies. 2) Approaches to conducting research on,

and reporting results of studies, of ICT. 3) The research process and its academic context. The course is designed around a series of ill-structured, contemporary, problems that require students to develop responses by applying research approaches to ICT. At the end of the course, students will be able to: 1) Apply different conceptualizations of ICT to common problems. 2) Select and initiate research on ICT. 3) Begin writing research-oriented work such as theses and papers.

Enforced Prerequisite at Enrollment: IST 110
Honors

IST 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

IST 494H: Honors Thesis Research

1-12 Credits/Maximum of 12

This course is the mechanism by which students in the Schreyer Honors College who are conducting research with a faculty member affiliated with the IST undergraduate major will register for thesis credits. The course includes activities related to research, scholarship, and/or writing necessary for the completion of an approved honors thesis.

Honors

IST 495: Internship

1-18 Credits/Maximum of 18

Supervised on or off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor
Full-Time Equivalent Course

IST 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

IST 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

IST 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Information Technology (ITECH)

ITECH 495: Internship

0.5-3 Credits/Maximum of 3

Supervised on or off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required IST 495 is offered as an internship for a student within a company. Faculty and industry collaborate to specify the duties of the intern. The course facilitator responsible for the course then approves the internship. The internship must consist of a minimum of 240 hours for 1 credit and 120 hours for .5 credit of meaningful information and technology-related tasks per credit hour.

Integrative Arts (INART)

INART 1: The Arts

3 Credits

The Arts is a course designed to give students an integrative experience of the themes and purposes common among the arts, visual, performing, and literary. Students are given the opportunity to view and discuss many forms of art, learning a specific vocabulary for discussing each artistic form and arriving at an answer to the question "what is art?" The goal of the course is to enhance aesthetic perception by examining works of art, by discerning what can be seen and heard in them, by understanding what those elements are called, and by determining how the artwork creates a response in the viewer or listener.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

INART 3: Reception of the Arts

3 Credits

This course considers how art uses time, space, and causality to define culture and the human condition. INART 003 Reception of the Arts (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. INART 003 approaches the study of the arts from the audience's point of view. It is designed to meet the General Education Arts requirement. The course is offered in the Fall and Spring University Park, with a typical enrollment of 50, and is available to other locations through Campus Course Exchange. There are no prerequisites, and students are assumed to have little or no background in art. As a result of taking the course, students are able to use analogy, the idea of structure, and theories of reception and communication in both art and non-art situations. The course is offered on-line, making it particularly useful for students with family and personal obligations, for older students with job obligations, and for students with handicaps limiting their access to traditional 'classroom' courses. Although INART 003 is designed for potentially large enrollments, students relate to the instructor on a one-to-one basis through e-mail and interact with other students using an on-line bulletin board. Writing, criticism, and analytical thinking are required. Evaluation is based on five on-line quizzes, two on-line exams, and participation in on-line discussions. Tests measure students' ability to reason, synthesize materials, and apply ideas about art to other situations. The discussion sessions expand ideas found in art to apply them to everyday life. Writing

is required for the course. Students must contribute at least three short essays and post commentary on others' work for 20 points of the final grade. Informal e-mail conversations supplement this requirement. The course's extensive web site includes lessons corresponding to each chapter in the text, a lexicon of difficult terms, links to other web sites, study guides, works of art, and provocative essays about art.

Bachelor of Arts: Arts

INART 5: Performing Arts

3 Credits

INART 5 is not an "art appreciation" course in any traditional sense of the term. Rather, it is focused on the act of experience and the encouragement of critical thinking about those experiences. No effort is made to encourage students to "like" or "dislike" the things that they experience or to encourage them to accept the view that some experiences are more or less valuable than others. The idea, simply, is to have informed experiences in the performing arts and think about them in a critical context. To satisfy those ends, the course will provide students with exposure to significant examples of dance, music, and theatre as well as give students a practical and theoretical background to enrich their experience of those performing arts. The course will also help to develop students' critical thinking as they evaluate their experiences. This is accomplished through student attendance at six performing arts events on campus throughout the semester and the completion of related assignments.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

INART 10: The Popular Arts in America: Mass Media Arts

3 Credits

An introduction to the arts of the mass media with emphasis on how film, radio, television, and the print media influence and reflect society. INART 010 The Popular Arts in America: Mass Media Arts (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. INART 10 examines the historical and technological development of media in relationship to popular culture from the invention of the printing press up to present 21st century America. The primary goal of the course is to help students develop a critical and analytical approach to dealing with contemporary mass media. The course presupposes some familiarity with modern popular media and takes as its content both historical and contemporary examples as sources for analysis. While the class offers facts and data, the central focus of the course is the theory, stylistic elements, and structural workings of media content. The pedagogical goal of this approach is to examine not just what the mass media arts are but also where they come from, how they function, and what effects they have on our culture and society. The key to this goal is understanding the naturalized ideologies imbedded in the structural form of popular culture: how the early expressions of popular culture both shaped cultural attitudes and reflected societal notions of race, gender, and socioeconomic norms. Class meetings consist of lectures and in-class discussions that illustrate modern critical approaches to popular culture and the terminology used in presenting critical arguments and ideological viewpoints on these art forms. Reading assignments will support classroom work by presenting students with a diversity of

opinion on popular culture and significant examples of that culture in media. Further, examples of historically significant popular mass media arts will be shown in class or online and then discussed in relation to the concepts and critical viewpoints covered in lectures.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

INART 15: The Popular Arts in America: Performing Arts

3 Credits

The development of the performing arts of American popular culture; emphasis on popular music, dance, theatre, and variety arts. INART 015 The Popular Arts in America: Performing Arts (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. INART 015 examines the Popular performing arts and their place in American popular culture. broken into four units: popular music, popular stage dance, popular theatre, and acts like the circus and stand up comedy. The course will highlight important influences, artists, events, works, and effects such as: 1) Popular Music: This unit will trace the development of the American popular music from the emergence of the popular songwriter in the 1830s to the beginnings of rock and roll. Jazz, country, blues, and mainstream pop will be major genres examined. 2) Popular Stage Dance: This unit will cover the evolution of dance as a popular performance art from percussive dances performed in the minstrel show to rock and roll choreography in music videos. 3) Popular Theatre: This unit examines the founding forms of popular theatre (minstrelsy, vaudeville, and burlesque) and their effect on later arts like motion pictures and television. 4) Popular Variety Arts: This unit deals with those performing arts that fall outside of the broader categories of dance, music, and theatre. The circus, stand up comedy, and stage magic will be highlighted. There will be three equally weighted objective tests in the course, each covering approximately one-third of the course's content. These examinations account for 75% of the semester grade (25% each). Students in INART 015 also participate in the Popular Arts Forum, a semester-long examination of an important contemporary issue in popular culture (cultural imperialism and censorship; sexuality in popular culture; gender, ethnicity, and race in the popular arts; etc.) that requires research, critical thinking, the formation of objective opinions, and discussion. The Popular Arts Forum is conducted online utilizing resources held on the Forum website and World Wide Web. Asynchronous online discussions on the topic will occur three times during the semester. The class will be broken into groups of fifteen students for the purpose of discussion. Participation in the Popular Music Forum will account for 25% of the semester grade. The discussion grade will be determined by the quality of participation and degree of involvement in the discussion.

Bachelor of Arts: Arts

INART 50: The Science of Music

3 Credits

Waves, physics of sound, hearing, musical scales, musical instruments, and room acoustics. INART 050 The Science of Music (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. This course explores the physical and acoustical bases of sound and music. The physics include a study of vibrating systems and simple harmonic motion, wave propagation, reflection and refraction, superposition,

resonant frequencies, harmonics, phase, the relationship of speed and velocity, and spectra. The acoustics portion applies these physical properties to hearing, sound and music, covering the nature of the human auditory system, and correlations of pitch to frequency, loudness to amplitude/power/intensity, timbre to spectra and envelope. An overview of perceptual psychological studies of Gestalt organizational principles and auditory streaming explores how the auditory system organizes sound on a primitive, unlearned level. NOTE: there need be no specific math prerequisite for the course. Though high school algebra and trigonometry will be recommended, these topics will be integrated with the rest of the course material. With physical and physiological groundwork laid, the subject matter moves to purely musical areas: the construction of musical scales, the nature of consonance, dissonance, and harmony. Twelve-tone equal temperament, the basis of Western common practice music, is not an absolute, but a decision made to facilitate certain musical choices, and a compromise in terms of optimal consonance. The nature of the different instruments is then discussed - strings, winds, brass, percussion, and voice. Different instruments naturally produce different scale types and different types of spectra. Students will learn to appreciate the inherent differences in different instrument types. The course then returns to acoustics, exploring the role that performance spaces play in the propagation and reception of sound. The shape and materials of a room determine its characteristic sound. Students learn about how sound in large auditoriums is characterized by the balance of direct and reflected sound, the distinction between specular and diffuse reflections, the absorptive properties of different building materials, and the nature of reverberation. Smaller performance spaces are subject to standing waves, flutter echo, and comb filtering. Taking steps to avoid undesirable characteristics is often an easy matter once the nature of these characteristics is understood. The final weeks cover audio technology and the distinctions between analog and digital formats.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

INART 55N: History of Electronic Music

3 Credits

This course investigates how technology and music developed in parallel from the start of the twentieth century to the present. It explores the international cultural movements, technological developments, and music trends and genres of the era. Students will learn to recognize the primary innovators in the field of electronic music, not only by name, date, nationality and affiliations, but also by the sound of their music.

INART 100: Seminar in Integrative Arts

3 Credits

A study of various arts with emphasis on comparison, contrast, and other aspects of interrelation. Topics will change each semester. INART 100 Seminar in Integrative Arts (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. INART 100 is a semester-long seminar that explores a theme or topic through selected works of the visual or performing arts. Various arts will be examined with emphasis on comparison, contrast, and other aspects of interrelation. Although topics will change each semester, they will always be bound to broad concerns in the arts that are shared or common. The approach will be strictly interdisciplinary with emphasis, on discussion and the direct experience of art. INART 100 is a General Education Arts offering (GA) and, for selected topics, will satisfy the Intercultural and International Competence Requirement (GI). This is an experiment in experiential learning, combined with a traditional examination of modern cinema from Latin America. As regards the latter point, students will become familiar with the history and scope of Latin American cinema in the past 30 years, considering the historical and social contexts in which movies were made and which the movies address. The films chosen for this course are "road movies" about journeys of discovery. We'll watch six movies, read about them, and discuss them in light of these historical and social contexts. In addition, we will discuss the films from technical angles - the use of music, narration, camera angles, dialogue, settings, etc. This technical component feeds into the first point of the first sentence above. As part of the course requirements, students will make their own "on the road" film.

INART 100W: Seminar in Integrative Arts

3 Credits

A study of various arts with emphasis on comparison, contrast, and other aspects of interrelation. Topics will change each semester. INART 100W Seminar in Integrative Arts (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. INART 100W is a semester-long seminar that explores a theme or topic through selected works of the visual or performing arts. Various arts will be examined with emphasis on comparison, contrast, and other aspects of interrelation. Although topics will change each semester, they will always be bound to broad concerns in the arts that are shared or common. The approach will be strictly interdisciplinary with emphasis on writing, discussion, and the direct experience of art. INART 100w is a General Education Arts offering (GA), a writing intensive course (W), and, for selected topics, will satisfy the Intercultural and International Competence Requirement (GI). At University Park, the course is built around twelve to thirteen motion pictures shown as part of the Palmer Museum of Art's film series, a gallery exhibition at the Palmer, and two or three performances at the Center for the Performing Arts. Students are required to attend all of these events and showings. The film series and the gallery exhibition are free. Tickets for the two events at the Center for the Performing Arts must be purchased. Attendance will constitute 20% of the semester grade. Each week, there will be a required online discussion based on the "Commentaries" associated with the event or exhibition of that week. These "Commentaries" are included with the

background information on the events and exhibitions contained in the course web site. Discussions will last for one week and all students are required to participate in all online discussions. Participation in discussions will constitute 30% of the semester grade. INART 100W is a "writing intensive" course and, as a consequence, a major portion of the course is devoted to the acquisition of skills and practice in writing. There are three required papers in the course: one 600 word critical review, one 900-word critical opinion paper, and a final 1500-word critical opinion paper. Grading will be based on the quality of students' critical arguments and the quality of their writing. These three papers will constitute 50% of the semester grade.

Writing Across the Curriculum

INART 110: The Dramatic Arts in the Mass Media

3 Credits

The place of television-radio-film drama in our culture; relationship with other art forms; standards of evaluation. INART 110 Dramatic Arts in the Mass Media (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. INART 110 examines the history and development of the dramatic arts of the mass media with a particular focus on television as the strongest exemplar of media practice. The primary goal of the course is to help students develop a critical and analytical approach to dealing with the dramatic arts of the contemporary mass media. The course presupposes some familiarity with modern popular media and takes as its content both historical and contemporary examples as sources for analysis. While the class offers facts and data, the central focus of the course is the theory, stylistic elements, and structural workings of media content. The pedagogical goal of this approach is to examine not just what the mass media arts are but also where they come from, how they function, and what effects they have on our culture and society. The key to this goal is understanding the effects and influence of dramas in the mass media on our society and its beliefs and values. Class meetings consist of lectures and in-class discussions that illustrate modern critical approaches to popular culture and the terminology used in presenting critical arguments and ideological viewpoints on the dramatic arts of the mass media. Reading assignments will support classroom work by presenting students with a diversity of opinion on mass media and the influence of television dramas and comedies. Further, examples of historically significant radio and television dramatic works will be shown in class and then discussed in relation to the concepts and critical viewpoints covered in lectures. In addition to regular scheduled classes, students will participate in an on-line Television Journal that requires watching and critically responding to assigned television programs. Each week, students will be required to watch and critically respond to assigned television programs. Their critical responses will be posted on the online Television Journal and made available to all members of the class. Grades will be based on three equally weighted objective examinations that will account for 50% of the semester grade. A written paper will account for 25% of the final grade, and the remaining 25% of the grade will be determined by participation in the online Television Journal.

INART 115: The Popular Arts in America: Popular Music

3 Credits

An examination of the roots, development, and significance of popular music in our culture. INART 115 The Popular Arts in America: Popular Music (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. INART 115 examines the roots, development, and significance of popular music in our culture. It covers the origin of popular music in the early nineteenth century and introduces the major genres of the art: blues, jazz, country, mainstream pop, and rock and roll. The thrust of the course is sociological and cultural rather than musicological and will trace the music's development in a historical context. The intent of the course is to provide students with a comprehensive overview of popular music, the significance of major artists in its development, and its importance in our social and cultural history. There are three equally weighted objective tests in the course, each covering approximately one-third of the course's content. These examinations account for 75% of the semester grade (25% each). Students in INART 115 also participate in the Popular Music Forum, a semester-long examination of an important contemporary issue in popular music (censorship, copyright infringement and music piracy, music and violence, etc.) that requires research, critical thinking, the formation of objective opinions, and discussion. The Popular Music Forum is conducted online utilizing resources held on the Forum website and World Wide Web. Asynchronous online discussions on the topic will occur three times during the semester. The class will be broken into groups of fifteen students for the purpose of discussion. Participation in the Popular Music Forum will account for 25% of the semester grade. The discussion grade will be determined by the quality of participation and degree of involvement in the discussion.

INART 116: The Popular Arts in America: The History of Rock and Roll-
The 1950s

3 Credits

This course examines the roots, development, and significance of rock and roll music in its first decade. INART 116 INART 116 The Popular Arts in America: The History of Rock and Roll-The 1950s (GA;US)(BA) This course meets the Bachelor of Arts degree requirements. This course is composed of eight chronologically arranged units of study that examine the major developments in early rock and roll in an historical context. Rock and roll music, especially in the 1950s, was the reflection of the dynamic cross-cultural interplay between country, gospel, rhythm and blues, and mainstream pop. Of central importance in early rock and roll was the influence of African American music and culture and the effect that African American music and culture had when brought into the mainstream. Through an examination of the foundation of emergence of rock and roll in our culture, students gain an understanding of the role played by intercultural cross-influences in shaping both our music and our cultural sensibilities. Both the content of the course and the assignments in the Popular Music Forum are directed at helping students understand, reflect upon, and critically think about the intercultural nature and effect of our musical heritage. The thrust of the course is sociological and cultural rather than musicological, and the intent of the course is to provide students with a comprehensive overview of the early development of rock and roll and its importance in our social

and cultural history. Each unit of study will be accompanied by key examples of recorded music from the period of the late 1940s through the 1950s. The course includes approximately 100 important recordings for required study. Grades in INART 116 will be determined by a series of eight objective tests and four assignments in the Popular Music Forum. The Popular Music Forum will examine important issues in popular music and culture concerning or related to rock and roll in the 1950s that require research, critical thinking, the formation of objective opinions, and discussion. The Popular Music Forum is conducted online as a series of asynchronous discussions on Forum topics. The class will be broken into groups of fifteen students for the purpose of discussion. Grading will be based on a point system. There are 1200 possible points that can be earned during the course - 800 points on exams (2/3 of the final grade) and 400 points on written assignments in the Popular Music Forum (1/3 of the final grade).

Bachelor of Arts: Arts

INART 125: The Popular Arts in America: The History of Rock and Roll -
Punk Rock

3 Credits

An examination of the roots, development, and significance of punk rock in our culture. INART 125 The Popular Arts in America: The History of Rock and Roll - Punk Rock (3) (GA;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. Punk rock was an important and historically significant genre in rock and roll music that initially developed in the United States and Great Britain in the late 1960s and has continued to the present. Through an examination of the now more than thirty-year history of punk rock in our culture and that of Great Britain, students gain an understanding of the role played by punk rock in shaping both our musical and cultural sensibilities and the historical and social movements that influenced and led to the development of punk rock as a musical genre and lifestyle. This course is composed of eight chronologically arranged units of study that examine the major developments in punk rock in an historical context. In addition to weekly text assignments, students are required to complete four assignments in the Popular Music Forum. The Popular Music Forum will examine important issues in popular music and culture concerning or related to the historical development of punk rock in both countries that require research, critical thinking, the formation of objective opinions, and discussion. The Popular Music Forum is conducted online as a series of asynchronous discussions on Forum topics. The class will be broken into groups of fifteen students for the purpose of discussion. Both the content of the course and the assignments in the Popular Music Forum are directed at helping students understand, reflect upon, and critically examine the music created in the genre and the social and cultural forces that influenced and were influenced by punk rock. The thrust of the course is sociological and cultural rather than musicological, and the intent of the course is to provide students with a comprehensive overview of the development of punk rock its importance in our social and cultural history. Each unit of study will be accompanied by key examples of recorded music. The course will include approximately 200 important recordings for required study.

Bachelor of Arts: Arts
International Cultures (IL)
United States Cultures (US)

INART 126N: The Popular Arts in America: The History of Hip-Hop

3 Credits

Hip-hop is an important and historically significant genre in popular music that initially began in the South Bronx in the early 1970s and has grown to become one of the most influential, controversial, and important genres to emerge in the last quarter of the 20th century. Beyond music, hip-hop has also been defined as a commercial enterprise, a lifestyle, and a sociocultural movement. This course explores the various meanings and manifestations of hip-hop throughout its evolution from the early 1970s to the present day. Students will examine the cultural, economic, social, and political implications of hip-hop nationally and globally. Drawing on frameworks like critical race theory and Black feminist/womanist theory, students will engage enduring debates at the heart of hip-hop-debates about art, race, class, gender, citizenship, power, and the body. Topics to be covered include: four foundational elements of hip-hop (rap, DJ arts, graffiti & visual arts, dance); the cultural, economic, political, and social conditions under which hip-hop emerged and developed; impact of hip-hop on the culture industries and the commercialization of the genre; stylistic principles that constitute the hip-hop aesthetic; racial parameters of hip-hop and notions of authenticity; gender and hip-hop's framing of black femininity and masculinity; and global circulation of hip-hop culture. Throughout the course students will explore the following questions: Under what social, political, and economic conditions did hip-hop emerge? Who were the key producers, fans, and detractors of hip-hop in its earliest years? Whose voices are privileged (and marginalized) within hip-hop studies as an academic project? How has hip-hop been framed within and/or transcended traditional notions of art and beauty? In what ways has hip-hop style been criminalized and degraded as low culture? In what ways has hip-hop style been (mis)appropriated? What is authentic hip-hop and how is it measured? To what extent do hip-hop artists pander to stereotypes? What is the relationship between hip-hop and capitalism? What are the benefits and limitations of the commercialization of hip-hop? How do fans and producers impact the genre in the contemporary digital era? What are the primary impediments to rappers who are neither black, nor male achieving the level of popularity and respect that hip-hop's biggest stars have attained? To what extent does the music industry use talent and marketability as a stand in for racial identity? How has hip-hop been taken up by marginalized groups in countries such as Brazil, Cambodia, and South Africa?

INART 141N: African American Read-In Engaged Learning Experience

1-3 Credits/Maximum of 6

This course will allow students to study African American literature, culture, history, and arts in connection with an annual public event, the African American Read-In (AARI). The AARI, promoting literacy and appreciation of African American literature, is a national event established in 1990 under the auspices of the National Council of Teachers of English. It has become a regular feature of Black History

Month celebrated by community, neighborhood, and church groups as well as schools and institutions of higher education throughout the United States and elsewhere on a given Sunday and Monday in February attracting more than a million participants annually. This course offers students an engaged learning experience in which they will produce original intellectual and artistic content to be presented publicly at an AARI event on campus. Students will study texts from a range of historical periods and/or genres, and thus gain a solid introduction to the African American literary tradition. At the same time, the primary organizing principle of the course will be a particular theme that both allows a broad and coherent overview of a significant cultural or historical topic and engages issues of cultural diversity in the United States. The specific theme, thus, will bring the study of African American literature into a broader interdisciplinary context that intersects with African American culture, history, identity, and the struggle for equality. Students will study texts that relate to this annual theme and participate in a relevant field trip (museum, theater, cultural site, library, etc.) to deepen their understanding of the significance and contexts, social, historical, cultural, artistic of these materials and this theme. They will then develop this knowledge through creative and critical engagements into exhibitions, presentations, or performances to communicate their insights about a particular author, text, or topic in the African American literary tradition. As shapers of the AARI program on their campus, class members will also have a voice in designing and planning the AARI as well as a stake in its overall success. As this course necessarily spans semesters, students who enroll in the Fall course will be expected to enroll in the Spring course in order to present their projects at the AARI in February. Only students who were enrolled in the Fall course will be permitted to enroll in the Spring, as it is the culmination of the same course.

INART 200: The Popular Arts in America: Elvis Presley - The King of Rock and Roll

3 Credits

The significance and influence of Elvis Presley as an artist and cultural force focusing on his recordings and major performances. INART 200 The Popular Arts in America: Elvis Presley - The King of Rock and Roll (3) (GA)(BA) This course meets the Bachelor of Arts degree requirement.

INART 200 is composed of eight chronologically arranged units of study that trace Elvis Presley's life; accomplishments; the significance of his art; his influence as a performer, recording artist, and motion picture star; and, perhaps most important, his place as a force and symbol of social/cultural change in the second half of the 20th century. Elvis was the principal symbol of change in a time when change was all-important. He was the first of the great rock and roll superstars, a herald of the cultural revolution of the 1960s, and the central figure in the musical revolution that brought rock and roll into the popular mainstream. He was - and is - the King of Rock and Roll and his place and importance in the cultural history of the twentieth century can never be overstated or exaggerated. The thrust of the course is sociological and cultural rather than musicological and the intent of the course is to provide students with a comprehensive overview of Elvis as an artist, his significance in the development of rock and roll, and his importance in our social and cultural history. Each unit of study will be accomplished by key examples of recorded music and video records of important performances from television and motion pictures. The course includes approximately 100 important recordings and 15 video performances for required study. Grades in INART 200 will be determined by a series of eight objective tests and four assignments in the Popular Music Forum. The Popular Music Forum will examine important issues in popular music and culture concerning or related to the life of Elvis Presley that require research, critical thinking, the formation of objective opinions, and discussion. The Popular Music Forum is conducted online as a series of asynchronous discussions on Forum topics. The class will be broken into groups of fifteen students for the purpose of discussion. Grading will be based on a point system. There are 1200 possible points that can be earned during the course - 800 points on exams (2/3 of the final grade) and 400 points on written assignments in the Popular Music Forum (1/3 of the final grade).

Bachelor of Arts: Arts

INART 203Q: Medievalism

3 Credits

In English 190Q / INART 203Q students will gain an understanding of medievalism, defined by Leslie J. Workman in 1987 as "the study of the Middle Ages, the application of medieval models to contemporary needs, and the inspiration of the Middle Ages in all forms of art and thought." As this definition suggests, understanding medievalism and, thus, the popular works students know, such as *Game of Thrones* and *Lord of the Rings*' benefit from learning something about the Middle Ages and the reach of its re-mediation across various kinds of expression. Therefore, ENGL 190Q / INART 203Q begins by introducing students to medieval works and a few of the forms that characterize it. More particularly, the medieval works to be studied are those combining more than one genre, media, and/or form. For example, students will read and listen to (or sing!) medieval lyrics, read and perform short medieval plays such as *Robin Hood*, be introduced to manuscripts of the bestiary with its illuminations, historiated letters, and scribal copying. They also will be introduced to Romanesque and Gothic architecture. The first medievalist remediations—works adapted in other media—to be examined will be Book I of Spenser's *Faerie Queene*, with the woodcut of the Redcrosse Knight and Dryden/Purcell's *King Arthur*, which will introduce students to Early Modern English medievalism and how it reflects prevailing values in new combinations of old and new artistic forms. Still greater emphasis will be placed on the English Medieval Revival of the nineteenth century, including John Ruskin and the PreRaphaelites poetry, paintings, and essays, as well as William Morris's poetry, painting and Arts and

Crafts Movement. Then, as now, medievalism served multiple purposes, including aesthetic, political, and social. To put into practice what students learn and to engage their creativity, one assignment involves hand crafting an art project to be accompanied by an artist statement. In the last part of the course, the focus shifts to contemporary medievalist arts and theory. In keeping with the contemporary direction, another assignment asks students to remediate their handcrafted medievalist work, or to create a new one, using digital resources to engage both their creativity and understanding of key medievalist concepts.

INART 205: Introducing the Beatles

3 Credits

The influence and achievement of the Beatles as artists focusing on their recordings and films as sociocultural artifacts. INART 205 Introducing the Beatles (3) (GA) INART 205 is composed of eight units of study that trace the lives and work of the Beatles. The course's chronological design is arranged in order to capture the band's artistic trajectory from two-track recording and the relatively primitive *Please Please Me* album through the sonic heights of *Revolver*, *Sgt. Pepper's Lonely Hearts Club Band*, *The White Album*, and *Abbey Road*. This course examines the group's wide-ranging sociocultural influence in terms of music, fashion, film, gender, consumerism, and politics. The thrust of the course is interpretive in nature, with the Beatles' songs and albums receiving considerable scrutiny in terms of their composition, production, and attendant musicianship. Developments in recordings and instrument technology are germane to our understanding of the Beatles' evolving aesthetic, as is the bandmates' development as songwriters who eventually eschew issues associated with romance in order to address larger and more prescient subjects such as loneliness, oppression, nostalgia, ethics, and redemption in their music. Each unit of study will be accompanied by the analysis of key examples from the Beatles' massive recorded corpus. More than 100 songs will receive consideration, as will the group's five forays as feature-film stars. Grades in INART 205 will be determined by two objective examinations— a midterm and a final. Class participation will be a key ingredient in student performance, as will students' work on two papers. The first of such assignments will involve a shorter paper in which students address a particular aspect of the band's sociocultural emergence during their early years. The longer term paper will be researched, argumentative essay in which students will be assigned to discuss any aspect of the Beatles' career - a particular album (or series of albums), their musical influence, or their cultural impact, among other topics - and construct a mature, expansive thesis about its meaning.

INART 220: Stand-Up Comedy: A Cultural History

3 Credits

An American cultural history from mid-19th through mid-20th Century as seen through the prism of stand-up comedy. INART 220 Stand-Up Comedy: A Cultural History (3) (GA;US)(BA) This course meets the Bachelor of Arts degree requirements. Stand-up comedy, the art of making an audience laugh through primarily the spoken word, is a vital and revealing part of American cultural history. The best American comedians from Mark Twain and his sardonic monologues to Lenny Bruce and Richard Pryor's unexpurgated free form rants not only entertained, but illuminated, challenged, reflected the times, and at their best influenced the culture for the better. This course, through rare uncensored video and audio clips, readings, and lecture, offers an American cultural history through the lens of stand-up comedy covering a span from the mid-19th through the 20th Century. Topics of consideration include the art of the joke and stand-up comedy performance, the evolution of American comedy genres and venues, the significant performers, the impact of technologies such as radio and television, as well as a variety of issues ranging from racism, ethnic, and gender stereotyping to freedom of speech and political and social change.

INART 226N: Critical Approaches to Hip-Hop

3 Credits

This course will examine the politics of hip-hop art and culture. To do so, we will place hip-hop in broad historical context and trace its aesthetic

and cultural roots from Africa to Jamaica to 1970s New York City and then forward to 1980s gangsta rap and former President Barack Obama's iPod. We will think through the implications of hip-hop's addiction to Italian-American mobsters, bling, and all-things keepin' it real. We will also search for hip-hop's political foundations in funk records, 1960s community organizing, and poetry of the Harlem Renaissance. All the while, we will analyze the varieties of hip-hop politics by paying close attention to how hip-hoppers vie for authenticity, recognition, and power through cultural practices—b-boying/girling, graffiti art, emceeing, djing, e.g.-at odds with the State, inequality, and injustice. We will also situate hip-hop politics within the ongoing history of American social movements. To avoid over-romanticizing, we will equally examine hip-hop's appetite for conspicuous consumption, misogyny, homophobia, trappin', and criminality. A deep understanding of hip-hop politics, then, requires examining its contradictions as well as the ways race, class, gender, sexuality, and geography shape hip-hop—and therefore American-culture, art, and identity. To get at these and other ideas, we will read, listen, and think broadly about why a full understanding of hip-hop truly matters.

INART 236: Integrating Music and Animation with Technology

3 Credits

An introduction to the theory, design and creation of musical animations. For general students.

INART 258A: Fundamentals of Digital Audio

3 Credits

A thorough introduction to digital music production technologies, covering fundamentals of how digital musical information is stored, processed and transmitted. INART 258A Fundamentals of Digital Audio (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. A thorough introduction to digital music production technologies, covering the fundamentals of how musical information is stored and transmitted in digital devices. This course is meant for people who are passionate about working with sound, and who are willing to take on new technical and creative challenges in audio production. It is the pre-requisite for many more advanced courses in music technology and audio production. Students complete a series of low-stakes audio exercises on fundamental operations, a series of written responses to questions on the underlying theory of digital audio, and a small number of extended creative projects. The software used is at the level of professional audio production workstations. Students complete the course with a set of vocational skills in computer music and audio.

INART 410: Early Pennsylvania Decorative Arts and Furniture

3 Credits

The study of Pennsylvania and related furniture, pottery, paintings, and decorative arts of the seventeenth, eighteenth, and early nineteenth centuries. INART (AM ST) 410 Early Pennsylvania Decorative Arts and Furniture (3)(BA) This course meets the Bachelor of Arts degree requirements. This course explores the aesthetic, cultural, and social significance of the household arts common in Pennsylvania in the seventeenth, eighteenth, and nineteenth centuries. Emphasis is placed on the major periods and styles (Puritan, William and Mary, Queen Anne, Chippendale, and Federal) as represented in furniture, pottery, paintings and decorative arts. Indigenous styles and crafts representative of Pennsylvania arts and crafts will be explored in detail. The course combines lecture and discussion with seven field trips to historic sites to provide students with the opportunity to view furniture and decorative arts within the setting of period homes. The course carries no prerequisite.

Bachelor of Arts: Arts

INART 415: Nineteenth Century Pennsylvania Architecture and Restoration

3 Credits

Interior and exterior design of early Pennsylvania architecture; understanding and evaluation of and experience in restoration. INART (AM ST) 415 Nineteenth Century Pennsylvania Architecture and Restoration (3)(BA) This course meets the Bachelor of Arts degree requirements. This course provides students with hands-on practical experience in the restoration of historic buildings of the nineteenth century. Each semester, students will research, evaluate, identify problems, and develop solutions to restore these structures in an historically correct manner. Students will then practically restore these structures and gain practical experience in the process of restoration. Major classroom topics will vary in order to meet the specific needs of the project at hand. Topics may include wood technology, structural problems and solutions, vernacular architecture, use of early tools, etc. Students will also take field trips to several restored homes to gain insight into applicable methods and approaches to restoration and gain perspective on costs and outcomes. INART 410 Early Pennsylvania Decorative Arts and Furniture is the prerequisite for this course.

Enforced Prerequisite at Enrollment: INART 410

Bachelor of Arts: Arts

INART 420W: Portfolio Matters: Integrative Arts Capstone

3 Credits

INART 420W: Portfolio Matters is the writing-intensive capstone course for the Integrative Arts degree. The course is based on the application of integrated learning to complex life and career questions through assignments that include self-reflection exercises, independent research, collaborative teamwork, participation in seminar-based discussions, peer critiques, resume writing, portfolio planning, and individual presentations that may include visual and written elements. The course prepares Integrative Arts majors to be able to evaluate and curate their creative, academic, and work experiences for the development of a strategic plan for a professional portfolio and resume. The course design provides students with the opportunity to use thought and creativity to develop a plan for a portfolio and resume that reflects their creative and

intellectual accomplishments and the range of their capabilities. The skills, reflections, shared engagement, and written documentation of the work produced as part of the course will enhance students' preparation for post-graduate study and career activities. Through this course, students will gain experience in the definition, articulation, and design of life and career goals and how to incorporate them into focused actions. This course provides the opportunity for individual student and program assessment. Although designed specifically for Integrative Arts majors, the course may function as an elective course for students who are intent on pursuing professional goals that involve a synthesis of learning across creative disciplines. Students who enroll in the course should be sixth-semester standing or higher and have completed at least six credits or more of 400-level or equivalent courses in ARCH, ART, A ED, ART H, DANCE, GD, INART, LARCH, MUSIC, PHOTO, THEA, COMM or ENGL.

Writing Across the Curriculum

INART 494: Research Projects

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

INART 494H: Research Projects

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

INART 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

INART 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

INART 496H: Independent Studies - Honors

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

INART 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

INART 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

INART 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Interdisciplinary Science and Business (ISB)

ISB 207: Integrating Science and Business

1 Credits

This course is designed to bring together second and third year ISB majors to discuss in-depth the Interdisciplinary Science and Business (ISB) major. ISB students are required to select one science module and one business module for the major. The first seven weeks will be used to explore the six different modules. Science modules currently include quantitative, lab sciences, and human health. Business modules currently include accounting and finance; technical sales; and operations and supply chain management. The modules covered may change to reflect changes in offering of the ISB program. Students will then explore how science and business have been integrated in industry by examining case studies. These case studies will be used to show students how business and science can be integrated to solve real world problems. Career opportunities and internships will then be explored by interacting with people whose jobs require integrating science and business and by bringing in employers who hire students with these skills, both as interns and as graduates. Finally, the last two weeks of the course will be spent exploring the future of these types of jobs, including what skills students might be interested in acquiring outside the curriculum and what future skills may be desirable.

Prerequisites: 3rd semester standing.

ISB 475W: Strategic Integration of Science & Business

3 Credits

This course will provide a capstone experience for the Interdisciplinary Science and Business BS degree. The tools of strategic management and cross-functional collaboration will be introduced and serve as a background for the design, development, and implementation of a new product or process within an existing corporation. Student teams will be provided with an industry concept and work toward the objectives of a firm sponsoring the product concept. During the course, the evaluation of the product will include the feasibility of the product or process in terms of design, manufacture, and intellectual property. This evaluation will be presented to the firm by student teams. The final deliverable will include a complete written assessment of each of the components of feasibility.

Prerequisites: 7th Semester standing; FIN 301; SCM 301; MGMT 301; MKTG 301; ISB 207
Writing Across the Curriculum

ISB 495: Internship

1-18 Credits/Maximum of 18

Supervised field experience related to the student's major.

International Agriculture (INTAG)

INTAG 100N: Everyone Eats: Hunger, Food Security & Global Agriculture

3 Credits

How does reduced rainfall impact the lives of people growing coffee in Honduras... and immigration in the USA? How does increasing consumption of meat in China influence deforestation of the Amazon Rainforest? How do subsidies for cotton in the USA affect cotton growers in Mali and the price of a t-shirt in Italy? These are a few of the complex issues we will explore this semester. Agriculture affects all of us. Every time we eat, go to the grocery store, or even buy clothing, we are participating in complex agricultural systems that are increasingly more globally integrated. This course takes an interdisciplinary approach, combining both natural and social science theory and scholarship to investigate topics such as climate change, technological applications to agriculture (e.g. GMOs), soil and water usage, the role of culture and local knowledge, and population growth. Over the course of the semester we will investigate issues receiving widespread attention from policymakers, national governments, academics, farmers, consumers, and many others. This class will place a specific emphasis on agriculture in the global South examining issues related to food security. As we explore the issues related to international agriculture, we will confront implications for national and global security, human rights, sustainability, and other ethical questions.

International Cultures (IL)

INTAG 300: Tropical Agriculture and Food Systems

3 Credits

The primary goal of this course is to inform students about tropical agriculture, including the environments of tropical agroecosystems, the production of crops, livestock and forestry within these systems, and major farming systems of the tropics. This class will focus on agriculture in developing countries in the tropics. Several examples from around the world will be included. By the end of this course students should be able to: 1. Describe the various environments of the tropics and explain the influence of these environments on tropical agroecosystems 2. Identify the major crops and livestock of the tropics and discuss their agroecological requirements and production in tropical environments 3. Identify and describe the major farming systems of the tropics 4. Critically analyze the important issues facing contemporary tropical agriculture

International Cultures (IL)

INTAG 460: International Food Production

1 Credits/Maximum of 3

FDSC 460 / INTAG 460 is designed to give food science undergraduate and graduate students an appreciation of how food is produced and processed abroad. Students participate in a number of production facility tours, interact with local food scientists and food technologists, and gain valuable international experience. A major point of emphasis for the course is comparing and contrasting food production norms in the U.S. and the host country or region. The course consists of pre-trip

lectures and meetings and culminates in a faculty-guided embedded study tour. Prior to the travel component of the course, students work in small groups to research a specific food product that is of economic and cultural importance to the country or region of interest, then write reports to be presented in-country before a tour of the related product's production facility. The course integrates and builds upon core concepts in food chemistry and food microbiology; as such, FDSC 460 / INTAG 460 is targeted towards upper-level food science undergraduate students, as well as food science graduate students.

Enforced Prerequisite at Enrollment: FDSC 200 and Permission of program

Cross-listed with: FDSC 460
International Cultures (IL)

INTAG 470A: Comparing Agricultural and Food Systems in the US and France: Lecture

2.5 Credits

This course is designed to explore key similarities and differences in the food and agricultural systems of the United States and France. It introduces students to a number of overarching food and agricultural topics that pertain to both countries, and students explore and analyze these key issues from both countries perspective. These overarching topics include the structure of agricultural and environmental policies, the use agricultural land for biofuel production, organic agriculture, food safety, attitudes and policies surrounding the use of genetically modified crops, the role of large agribusiness firms, attitudes towards diet and health, and several others important topics. Students conduct background reading on these topics, hear lectures – sometimes from guest presenters – that frame the topics from both the U.S. and France's perspective, and write reports on specific crops or foods that expose key similarities and differences between the two food systems. Finally, students pick one crop or food for an oral presentation that contains background information on how that crop fits into the two food systems, U.S. and France, and analyzes the key issues that relate to the overarching topics already identified. This course has two components that must be taken in partnership: 470A (FOOD SYS US/FRANCE I) and 470B (FOOD SYS US/FRANCE II). The first is a classroom - based course, and meets regularly during the semester. The second is a two - week component that takes place after the end of the semester. In this second component, after traveling to France, students hear presentations from the French perspective on the overarching topics identified earlier and also explore the topics first hand via field trips to farms, wholesale markets, retail markets, and other places relevant to the French food system. This component is organized by a host university, AgroParisTech. For these two weeks, students live in dorms within the city of Paris. Knowledge of French is not required.

Enforced Prerequisite at Enrollment: INTAG 100 or AGBM 101 or ECON 102

Cross-listed with: AGBM 470A

INTAG 470B: Comparing Agricultural and Food Systems in the United States and France: Travel

0.5 Credits

Explore key differences and similarities in the food and agricultural systems of the United States and France. INTAG 470B / AGBM 470B Comparing Agricultural and Food Systems in the US and France: Travel (0.5) This course is designed to explore key similarities and differences in the food and agricultural systems of the United States and France. It

introduces students to a number of overarching food and agricultural topics that pertain to both countries, and students explore and analyze these key issues from both countries perspective. These overarching topics include the structure of agricultural and environmental policies, the use agricultural land for biofuel production, organic agriculture, food safety, attitudes and policies surrounding the use of genetically modified crops, the role of large agribusiness firms, attitudes towards diet and health, and several others important topics. Students conduct background reading on these topics, hear lectures – sometimes from guest presenters – that frame the topics from both the U.S. and France's perspective, and write reports on specific crops or foods that expose key similarities and differences between the two food systems. Enforced Prerequisite at Enrollment: INTAG 470A or AGBM 470A

Cross-listed with: AGBM 470B

INTAG 490: Senior Seminar in International Agriculture

3 Credits

Seminar discussions on contemporary topics in global agriculture; capstone course for INTAG minor. INTAG 490 Senior Seminar in International Agriculture (3) This course is designed to meet the need for a capstone course within the International Agriculture (INTAG) minor. The course provides a range of experiential learning techniques including intensive reading and in-class discussion, practical experience through a group trip to the nation's capital, and application of the international experiences encountered through the INTAG program. Included is course content designed to provide a holistic integration of the four main INTAG study areas (Socioeconomic and Communication Systems, Animal and Plant Sciences, Natural Resources and the Environment, and Food, Health, and Nutrition). Students will learn about the current state of international agriculture through recent articles and analyses and respond in-class discussions and through written response papers. The second half of the course involves site visits to major international development organizations in Washington, D.C. (US government, international agricultural research organizations, and various NGOs) and participation in the form of an INTAG senior seminar series open to the public. This seminar series allows students to present and discuss their past (or intended) international agriculture experiences while a student at Penn State, and share with both those in the class and those outside of the class options, opinions about and critical issues in international agriculture. This seminar series will be an important tool in promoting the INTAG minor. The students will then synthesize the knowledge they have obtained both from the course and their international agriculture experiences to complete final reports which outline their understanding of the current state of international agriculture. This course is ultimately designed to facilitate the development of students to be global citizens

in the agricultural arena. The course is geared towards students in their junior or senior years. Evaluation consists of class participation (20%), student-led presentation of materials (15%), response papers to readings and D.C. trip (30%); presentation at INTAG seminar series (15%) and the completion of a final paper on their understanding of the current state of international agriculture (20%). The course is offered once every academic year in the Spring semester. The course is a core requirement for the International Agriculture minor. INTAG 100 is a prerequisite.

Enforced Prerequisite at Enrollment: INTAG 100N

INTAG 495: Internship in International Agriculture

1-13 Credits

Observation of and participation in the operation and management of a University-approved international agricultural firm or international agricultural development agency.

Enforced Prerequisite at Enrollment: Prior approval of proposed internship plan.

Full-Time Equivalent Course

INTAG 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

INTAG 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

INTAG 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

International Cultures (IL)

IB 290: International Business Goes to the Movies

1 Credits/Maximum of 3

A business elective to expose students to international and global issues through the eyes of film makers around the world. I B 290 International

Business Goes to the Movies (1 per semester/maximum of 3) I B 290 is an international business elective class which exposes students to international and global issues through the eyes of film makers around the world. Using film as the medium, students can evaluate differing perspectives and arguments on issues affecting business and economics in the global environment. This course is intended for students who are likely to study abroad during their PSU careers. Thus, the course attempts to prepare students for immersion in a variety of cultures, often different from the US. The course objective is to begin a broadening process of students' world views by examining a wide range of issues captured in film around the world. Typical topics include the rise of globalization and its impact on various countries and societies, a range of cross-cultural issues and controversies inherent in competing cultural differences between peoples of various nations, the impact of American culture on social, political, economic, and legal institutions throughout the world, and the differential role played by economics in various societies and at different stages of economic development across many nation states. This course employs film as a powerful medium to enable historical and modern understandings of global issues and international perspectives. As students enter the business world and learned professions, it is imperative that their world view include images and understandings found in a host of competing cultures including Eastern and Central Europe, East Asia, The Middle East, Latin America as well as Western Europe, Australia, and North America. Upon completion of the course, students will be introduced to a wide range of international issues as well as a foundation for approaching cross-cultural disputes inherent in international and global business. In addition, they will obtain an appreciation of international cinema and its wide scope as an art form, as an informational source for business, and as a powerful medium for argument and debate.

IB 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

IB 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore in depth, a comparatively narrow subject interest.

IB 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

IB 303: International Business Operations

3 Credits

A survey of the major aspects of international business environment and operations with an emphasis on the cultural dimension. I B 303 International Business Operations (3) (IL) International business is important and necessary because economic isolationism has become impossible. Failure to become a part of the global market assures a nation of declining economic influence and deteriorating standards of living for its citizens. International business therefore presents more opportunities for expansion, growth, and income than does domestic

business alone. This course will cover the major aspects of international business environment and operations with emphasis on its impact on the local businesses in your state. In other words, in this course you will learn why international business differs from domestic business, economic theories on international trade, and how managers deal with the uncontrollable forces such as cultural differences of international environment. In this course you will develop a global perspective through studying the impact of other countries and their peoples on society and develop skills that will enable you to interact effectively in an interdependent global community.

Enforced Prerequisite at Enrollment: fifth-semester standing International Cultures (IL)

IB 350: International Business Law

3 Credits

International Business Law examines the framework and systems of international law, including: world legal systems, international commercial disputes, contracts, banking and trade regulation, European Union law, the World Trade Organization, import/export law, marketing regulations, intellectual property, foreign direct investment, labor & employment, and environmental laws.

Enforced Prerequisite at Enrollment: IB 303 and (BA 241 or BA 243 or BLAW 341)

IB 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparative narrow subject which may be topical or of special interest.

IB 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

IB 403: International Business and National Policies

3 Credits

Evaluation of national economic policies in the light of international economic theory; their impacts on operations of the international business firm. IB 403 International Business and National Policies (3) IB 403 integrates macro and micro analyses of the dynamics between international businesses/ multinational enterprises (MNEs) and national Governments. Students who successfully complete IB 403 will acquire knowledge of and tools to understand, analyze and evaluate actions, theories and philosophies that influence home and host Government policies, the roles businesses play in shaping, these policies, and how policies and other factors shape competitive strategies of international business firms in the areas of trade, investment and other international economic activities. * Theories, Models and Policies - Country-based advantages Imperfect Competition, Barriers to Entry and Strategic Trade Policy * Competitive Analysis: Product Life Cycle and Porter Models * Integrating Market and Non-Market Strategy * Manipulating and Managing External Stakeholders Across Borders * Transitional Economies: Opportunities, Risks and Strategies * Strategies for Successful Foreign Direct Investment in China * Evaluating Opportunities and Risks in Global Industries * Privatization of Telecommunications

* Economic Integration: the Case of Europe * Industrial Policy, Foreign Direct Investment and Economic Growth * Foreign Market Entry Strategies for Regulated Industries * Industrial Policy and International Competition * International Competition in Services Industries * Update on U.S. and EU policies in the Airline Industry and Impacts on Industry Structure and Firm Strategy.

Enforced Prerequisite at Enrollment: ACCTG211 and (BA 301 or FIN 301)

IB 404: Contemporary Issues in International Business

3 Credits

Investigation of issues in international business practice interpreted from the foundations of the social sciences. Topics will be chosen from contemporary issues in global business and economics. I B 404 Contemporary Issues in International Business (3) I B 404 enables students to study the most current topics in international and global business from the framework of the social science issues that form the framework for understanding, business decisions. The course provides structured experiences in library research and data gathering, techniques, and builds the habit of reading the international business press daily and analyzing it weekly. The class is typically organized around 3 integrative business topics that represent a spectrum of questions important to business. These include questions about finance and economics in international business, questions about people and organizations in an international environment, and questions about products (development, production, distribution of goods and services) in international business contexts. This is not an introductory course, and as such, the topics chosen should be substantive and nuanced. For example, one topic might be how the structure of franchises must be modified to reflect the property rights in a particular country, and how those property rights laws impact the value of the franchise. The second topic might be how the internationalization of the structure and role of Boards of Directors in multinational firms contribute to globalization, and challenge the cultural norms in those organizations The third topic might be how North American firms have been forced to adjust their product packaging, in response to environmental impact laws in Germany, and how this shifts the locus of the product message from point-of-purchase to alternative media.

Enforced Prerequisite at Enrollment: ACCTG211 and (BA 301 or FIN 301)

IB 440: Globalization and Its Implications

3 Credits

This course explores the socioeconomic implications of globalization.

Enforced Prerequisite at Enrollment: AFAM 100N or AFR 110 or PLSC 3 or PLSC 14 or PLSC 200N or PLSC 220

Cross-listed with: AFR 440, PLSC 440

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

United States Cultures (US)

IB 450: The Business Environment of Europe

3 Credits

This course provides an overview of the economic, institutional, and regulatory environment in Europe at the EU and national levels. IB 450 The Business Environment of Europe (3) This course provides an overview of the business, economic, and regulatory environment in Europe at the European Union (EU) and national levels. The course

examines how regional integration, through the EU, has shaped industrial, competition, monetary, and related economic policies, and how Europe's international trade and finance capabilities affect the global economy. As a result, a significant part of the course focuses on the evolution of the EU, its institutional structure, and its impact on business (both European and foreign). The course also compares business-government relations, models of capitalism, and corporate governance in individual European countries, using the United States as a basis of comparison. Particular attention is given to France, Germany, Ireland, and the United Kingdom, and how their business environments differ from each other. While the primary focus of this seminar will be on these themes, we will use articles from the Financial Times and similar publications as the basis of discussion in each class for a range of topics related to Europe. The approach taken in this course is a multidisciplinary one, with the assumption that business executives must understand the political, cultural, institutional, historical, and geographic aspects of Europe if they are to be successful in the business environment of Europe. Students are expected to be active participants in class discussion. Readings usually will include a textbook, readings packet, and a subscription to the Financial Times. Evaluation will be based on a combination of participation and attendance, exams, quizzes, a group project, and essay assignments.

Enforced Prerequisite at Enrollment: ACCTG211 and (BA 301 or FIN 301)

IB 460: International Business in Emerging Nations

3 Credits

An overview of international business strategies and economic environments of emerging nations with a specific focus on markets in China, India, and Southeast Asia.

Enforced Prerequisite at Enrollment: ACCTG 211 and (BA 301 or FIN 301) and Enforced Concurrent: IB 303

IB 464: International Logistics

3 Credits

This course will examine the logistics function and the unique requirements of the movement of products internationally. To effectively maneuver in today's global marketplace, a mastery of the international logistics function has become a critical success factor. The course will explore the key elements of international logistics (including INCO terms, container shipments, and packaging for rail, water, and land shipments). The requirements of moving material through the supply chain from raw materials to finished goods, including sourcing, manufacturing, packaging, and documentation through its delivery to the final customer.

Enforced Prerequisite at Enrollment: IB 303 and MKTG 301 and SCM 301

IB 470: International Development in an African Context

3 Credits

This course looks at international development from an African perspective and discusses the prospects for African economic growth in the 21st Century. With an understanding of historical events that have shaped the political and social landscape of modern day Africa, the economic potential of African nations will be discussed in detail. Utilizing success stories, the course introduces economic, business, social, and political issues that confront developing countries in Africa, along with solutions that have been proposed or are in use to address various development challenges. This course will provide students with the

opportunity to learn first-hand about international development issues. It will introduce students to definitions of international development terms, data on international development, measures of development and development indices, as well as leading issues in International development. Using an interdisciplinary approach, the course explores some of the key development issues in sub-Saharan Africa, examines empirical findings to better understand Africa and its nations, and reviews the prospects for successful international business in this emerging growth market. Cases studies focus on successful economic growth that have emerged out of Africa and what how these successes are laying the groundwork for future international business opportunities. As such, the various components of the course are designed to promote the student's abilities to: -Describe and analyze social, economic, political elements that influence development in African countries. Students will learn that development problems, while often measured in economic terms, are multi-faceted and interrelated, thereby learn to appreciate that meaningful analysis and problem solving in international development must include different components. -Identify and analyze specific global issues, illustrating the social, economic and political context that may affect their resolution. Students will have the opportunity to experience the different facets of international development and participate, in a limited way, in efforts to address the issues.

Enforced Prerequisite at Enrollment: Fifth semester standing or higher required

IB 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Enforced Prerequisite at Enrollment: permission of the program

International Studies (INTST)

INTST 100: Introduction to International Studies

3 Credits

An introductory multidisciplinary course designed to familiarize students with critical international issues. INTST 100 Introduction to International Studies (3) (GS;IL)(BA) This course meets the Bachelor of Arts degree requirements. This is an interdisciplinary course designed to provide students with an introduction to a range of global issues. The course will emphasize the themes of international interdependence and globalization and their development over time. A key component of this course is cultural diversity and the connecting international and domestic issues, particularly those of race and culture. In both their written and oral work, students will be required to relate international issues to their own fields of study. The disciplines involved are mainly political science and economics, ecology, history, and cultural studies.

INTSP 295B: Internship in Business & Engineering

1-6 Credits/Maximum of 6

ALT 295B Internship in Business & Engineering (1-6) Individual exploration of practical applications of a field of study through a supervised work experience. Final analytic paper, essays, journals and oral presentation as required by the instructor. Satisfactory employer evaluation required for passing grade. Prior approval of a member of the College faculty required.

Prerequisite: minimum 30 credit hours; minimum 2.0 GPA; prior approval of proposed assignment(s) by instructor

INTSP 295C: Internship in Education, Human Development, & Social Sciences

1-6 Credits/Maximum of 6

ALT 295C Internship in Education, Human Development, & Social Sciences (1-6) Individual exploration of practical applications of a field of study through a supervised work experience. Final analytic paper, essays, journals and oral presentation as required by the instructor. Satisfactory employer evaluation required for passing grade. Prior approval of a member of the College faculty required.

Prerequisite: minimum 30 credit hours; minimum 2.0 GPA; prior approval of proposed assignment(s) by instructor

INTSP 370: Internship Preparation

1 Credits

Planning and preparation for upper-level or capstone internship experience, suited to students' individual academic and career interests. ALT 370 Internship Preparation (1) Planning and preparation for upper-level or capstone internship experience, suited to students' individual academic and career interests. Evaluation methods include two-three page reflective/analytic papers at the end of each segment; preparation and presentation at mock interview. This is an optional preparatory course for upper-division/senior-level internships in degree programs not offering formal internship preparation and will be offered for elective credit.

Prerequisite: formal acceptance into a College major; junior standing; minimum 2.0 GPA; completion of core research/skills course(s) for student's degree program

INTSP 495: **SPECIAL TOPICS**

1-6 Credits/Maximum of 6

ALT 495A Internship in Business for non-Business Students (1-6)
Individual exploration of the application of a non-business field of study in a business-related setting. Final analytic paper, essays, journals and oral presentation as required by the instructor. Satisfactory employer evaluation required for passing grade. Prior approval of a member of the College faculty required. Intended for non-Business students.

Italian (IT)

IT 1: Elementary Italian 1

4 Credits

Elementary Italian I (4 credits) is for students who have not previously studied the Italian language. The course provides an introduction to the written and spoken language through a variety of exercises. Information is also presented regarding current issues in Italian society with the goal of developing intercultural competencies. Topics may include both traditional themes (e.g. cuisine, family and the arts) and contemporary themes (e.g. immigration, environmental issues and civil rights). The class will be conducted in Italian.

Bachelor of Arts: World Language (All)

IT 2: Elementary Italian 2

4 Credits

Elementary Italian 2 (4 credits) is for students who have successfully completed IT 001 (or equivalent). The course continues the introduction to the written and spoken language in IT 001 through a variety of exercises. Information is also presented regarding current issues in Italian society with the goal of developing intercultural competencies. Topics may include both traditional themes (e.g. cuisine, family and the arts) and contemporary themes (e.g. immigration, environmental issues and civil rights). The class will be conducted in Italian.

Prerequisite: IT 001

Bachelor of Arts: World Language (All)

IT 3: Intermediate Italian

4 Credits

This course (4 credits) is designed for students who have successfully completed Italian 001 and 002 at Penn State, or the equivalent level at another university, or who have taken four or more years of high school Italian. The purpose of the course is to continue the development of communication skills in written and spoken Italian at the intermediate level. The course offers students the opportunity to expand their vocabulary and to use more complex sentence structures in a variety of contexts to express more sophisticated concepts and opinions. Information is also presented regarding current issues in Italian society with the goal of developing intercultural competencies. Topics may include both traditional themes (e.g. cuisine, family and the arts) and contemporary themes (e.g. immigration, environmental issues and civil rights). The course will be conducted in Italian.

Prerequisite: IT 002

Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Bachelor of Arts: Humanities

IT 10: Intensive Elementary Italian

6 Credits

Intensive Beginning Italian is equivalent to IT 001 and half of IT 002. This course is intended for students with no experience of Italian and provides an intensive language-learning environment in which to complete 6 credits of Italian language. Students receive an extensive introduction to Italian grammar, speech, and culture and develop skills in written and spoken Italian through a variety of exercises. Information is also presented regarding current issues in Italian society with the goal of developing intercultural competencies. Topics may include both traditional themes (e.g. cuisine, family and the arts) and contemporary themes (e.g. immigration, environment and civil rights). The course will be conducted in Italian and prepares students for IT20, Intensive Intermediate Italian.

Bachelor of Arts: World Language (All)

IT 20: Intensive Intermediate Italian

6 Credits

Intensive Intermediate Italian is equivalent to the second half of IT 002 and IT 003. The course is for students who have successfully completed IT 010 Intensive Elementary Italian and who seek an intensive learning environment of all aspects of Italian language: reading, writing, listening, and speaking. The course emphasizes reinforcement of elementary language and offers students the opportunity to expand their vocabulary, to use Italian in a variety of contexts and acquire more complex skills. Information is also presented regarding current issues in Italian society with the goal of developing intercultural competencies. Topics may include both traditional themes (e.g. cuisine, family and the arts) and contemporary themes (e.g. immigration, the environment, and civil rights). The course will be conducted in Italian. The course satisfies the BA 12th-credit level language requirement.

Prerequisite: IT 010

Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Bachelor of Arts: Humanities

IT 50: Italian Conversation Tutorial

1-3 Credits/Maximum of 3

Roundtable conversation practicum for students concurrently enrolled in IT 001, 002, 003, 010, or 020. May be repeated up to 3 times for credit. IT 050 Italian Conversation Tutorial (1-3)(BA) This course meets the Bachelor of Arts degree requirements. Students supplement their elementary or intermediate language classes (001, 002, 003, 010, 020) with this practicum, which has as its objective to improve pronunciation and oral conversational skills. This course must be taken concurrently with an elementary or intermediate language course and may be repeated up to three times for credit. Evaluation based on student participation (80%) and performance in oral drills and exercises (20%).

Prerequisite: Concurrent enrollment in IT 001 , IT 002 , IT 003 , IT 010 or IT 020

Bachelor of Arts: Humanities

IT 51: Elementary Intensive Italian for Graduate Students I

3 Credits

Intensive introduction to Italian: first half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. IT 051 Elementary Intensive Italian for Graduate Students I (3) This is the first in a series of three courses designed to give students an intensive introduction to Italian. This is the first half of elementary sequence in reading, writing, speaking, listening, and cultural contexts. Students will learn the Italian vocabulary and will learn to create simple sentences. Lessons are taught in an authentic cultural context.

Prerequisite: graduate standing

IT 52: Elementary Intensive Italian for Graduate Students II

3 Credits

Intensive introduction to Italian: second half of graduate intensive sequence in elementary reading, writing, speaking, listening, cultural contexts. IT 052 Elementary Intensive Italian for Graduate Students II (3) This is the second in a series of three courses designed to give students an intensive introduction to Italian. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the Italian vocabulary. Lessons are taught in an authentic cultural context.

Prerequisite: IT 051 or equivalent, and graduate standing

IT 53: Intermediate Intensive Italian for Graduate Students

3 Credits

Continued intensive study of Italian at the intermediate level: reading, writing, speaking, listening, cultural contexts. IT 053 Intermediate Intensive Italian for Graduate Students (3) This is the third in a series of three courses designed to give students an intermediate intensive knowledge of Italian. Continued intensive study of Italian at the intermediate level: reading, writing, speaking, listening, and cultural contexts. Lessons are taught in an authentic cultural context.

Prerequisite: IT 052 or equivalent, and graduate standing

IT 83: First-Year Seminar in Italian Literature, Film, and Culture

3 Credits

Introduction to the study of Italian literature and culture. IT 083S First Year Seminar in Italian Literature, Film, and Culture (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. The first-year seminar will introduce students to the study of Italian literature, film and culture in their first year at Penn State. Students will read significant texts (in English), view videos (with subtitles), listen to music and explore Italian thought and culture in general. These experiences will help prepare students for additional courses in literature and in Italian as well provide a point of comparison with U.S. culture. In addition to the academic topic explored in this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them including the opportunity to develop relationships with faculty and other students who share their academic

interests. This course satisfies both the first-year seminar and a General Education humanities or Bachelor of Arts humanities requirement. We will offer the course once every two years with enrollment limit of twenty students.

IT 130: Italian Culture and Civilization

3 Credits

IT 130, Italian Culture and Civilization, examines Italian life from antiquity to the present. It is designated an International Cultures course, which aims to develop critical and analytical skills of undergraduate students through a global exploration of the historical, cultural, and political aspects of Italian society. Historical material will be studied to facilitate understanding of how Italian unity is imagined across time, and will emphasize the continuous process of fragmentation and negotiation of cultural, national, and political identity through the ages. The course traces, among other topics, the importance of the Roman Empire, the Catholic Church, the Renaissance, Italian Unification, Fascism, and contemporary immigration to Italy. Students will analyze primary texts – literature, visual art, essays and speeches, music, dramatic works, and film – to become familiar with significant aspects of Italian thought and culture. Consideration will be given to the various representative Italians such as Dante Alighieri, Leonardo Da Vinci, Niccolò Machiavelli, Galileo Galilei, and Vittorio De Sica; inclusion of lesser-known figures, such as Igiaba Scego and Amara Lakhous, will provide students with a wider range of voices that will enrich critical engagement with course themes. By the end of the course students will be able to identify and critically analyze diversity within the peninsula, and demonstrate a familiarity with the key moments, people, and products of Italian culture from antiquity to the present. Throughout the semester, students will also be encouraged to develop a critical appreciation of the influence of Italian culture on Western civilization, and demonstrate a more nuanced understanding of the country by recognizing and articulating similarities and differences among the various international cultures that have influenced, and continue to shape Italy.

IT 131: Introduction to Italian American Culture

3 Credits

Between 1870 and 1920 over five million Italians immigrated to the United States. Of those who came, about one-third returned to Italy. Those who remained, often joined by their families, left an indelible mark on the American cultural, political, artistic, educational, and social landscape. This course provides an overview of Italian emigration to America in the 19th and 20th centuries and the conditions within the United States as a destination culture. Through a study of historical, sociological, literary, and cinematic texts, students will consider, among other topics: 19th-century Italy, the odyssey of immigration to and assimilation in the United States, and life in ethnic neighborhoods. The course will also look at the Mafia, forms of prejudice, and ways Italians uniquely manifested their social values in labor unions, religion, and education in America. Interrogating the immigrant experience for at least three generational periods through the lens of race and ethnicity, the course probes how Italian American identity has been represented in American culture both as profoundly "other" and as emblematically "American." Upon successfully completing this course, students will have a solid grasp of how Italians, in becoming Americans, contributed to the rich fabric of life in the United States. Conducted in English.

IT 140: Italian Language & Culture for Study Abroad

3 Credits

IT 140 prepares students for study abroad in Italy through contact with language and customs and through the inclusion of pragmatic information and cultural intelligence/sensitivity. IT 140 splits equal classroom time between developing basic language skills and providing important cultural information. Pronunciation, key vocabulary terms and scenario-based instruction form the basis of the language portion. Vocabulary sets include travel (emphasis on public transportation), cuisine (cafe and restaurant settings), navigation (using maps, giving/receiving directions), health (pharmacy and doctor's office settings) and shopping (open air market and boutique settings). These areas of content naturally overlap with cultural lessons as does learning to use formal and informal registers. Accordingly, cultural lessons deal with these topics as well as geography (including regional variations), history and safety. Italian 140 is both GH and IL. This course does not count for the Italian major or minor.

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Key Literacies

IT 175: Italian Language and Culture for Embedded Experiences Abroad

3 Credits

IT175 Italian Language and Culture for Embedded Experiences Abroad, is designed for students who have little or no knowledge of Italy's language and culture. This course is linguistic and cultural preparation for students participating in an embedded experience in Italy. Properly preparing for study and travel to Italy helps students to maximize the abroad experience. The ability of students to function abroad can be greatly facilitated by an understanding of the local culture and language. Students will be introduced to key Italian social and cultural issues, pragmatic information (for travelers, students, and residents of Italy) as well as essential vocabulary terms, phrases, and pronunciation. The course also explores themes of cultural intelligence/sensitivity and proper behavior abroad. IT175 is designed to be taught as a co-requisite for any course with an embedded experience in Italy (e.g. BIOL 475N Anatomy in Italy). With this co-requisite, particular emphasis is placed on vocabulary relevant to the embedded experiences in history of science/medicine museums, university settings and religious institutions.

IT 210N: Multilingual and Intercultural Communication

3 Credits/Maximum of 6

SPAN 210N Multilingual and Intercultural Communication course will showcase the fundamental components of the intersection of language and culture through humanities and social science. The purpose of this course is to teach the underlying mechanisms of multilingualism through language science principles and develop an understanding of intercultural communication through humanistic approaches. The content of this course focuses on linguistic strategies for succeeding in multilingual environments (e.g. dialect variation, second language acquisition strategies) as well as intercultural communication practices for navigating new environments (e.g. understanding cultural norms, skills for global leadership). The course requires an introductory level understanding of language. Students will learn how language and culture inform each other through the examination of cultures within the United States and internationally, including non-Western cultures.

IT 225N: Organized Crime in Film and Society

3 Credits

IT 225N / CRIM 225N, Organized Crime in Film & Society, examines the relationship between criminological and justice theories regarding organized crime and the portrayal of the mafia in popular Italian American film. The course follows two simultaneous threads of inquiry: an examination of historical and theoretical models of organized crime in the United States and the state and federal laws that address them; and an analysis of how such models are depicted in American films and television about the the Italian American community. By the end of the course, students will gain key literacy skills by identifying varied definitions of organized crime and distinguishing between structural models, particularly La Cosa Nostra and network models. Students will also sharpen analytical and critical thinking skills through written and spoken interpretations of films and the scholarly approaches to studying organized crime (e.g. research methods). Throughout the semester students will also be able to apply knowledge of the social scientific aspects of organized crime to guide their observations and analyses of film and Italian American culture, thus refining Integrative Thinking across the humanities and social sciences.

IT 240Q: Artistic Patronage in Europe

3 Credits

This course surveys the institutions and social networks in which European fine arts were created, consumed and critiqued. Beginning with the medieval period and ranging to the early 20th century, the course will examine the variety of communities where public and private often intersected and which sponsored innovations in the arts. Often indexing social movements and political change, such communities include convents and cathedrals, royal academies and courts, coffee houses, salons, and theaters. Artists, performers, patrons, politicians, journalists, and others collaborated and competed in these spaces. Such communities could embody political and economic power, or foster resistance to it. This approach to the history of the arts in western culture puts the focus less on the individual creative genius of great composers,

writers, painters, and sculptors, and more on the social exchanges and institutions that sponsored and received their work. Such an approach brings to light particularly the ways in which women played significant roles in the production and reception of culture: as salon hostesses, patronesses, and divas, women often enabled and enacted cultural production. Some examples of particular units of study might include: the German convent of Hildegard of Bingen (1098-1179), where monophonic chant and allegorical morality plays developed; the Mantuan (Italy) court of Isabella d'Este ,the first lady of the world, (1474-1539) where the roots of the madrigal began and where notable painters found support and sponsorship; the French salons of Mme. Geoffrin (1699-1777) and Mme. de Staël (1766-1817); and the student residences in Madrid where avant-garde writers and artists interacted. Each unit will also consider the relationships between the aesthetic norms and values of a period and the economic and political realities of sponsorship. The course will require that students attend at least one musical performance or concert held on campus during the semester and complete a brief writing project based on that experience. This requirement will encourage students to think about their own university as a contemporary space of cultural sponsorship.

IT 301: Advancing Italian in Context

3 Credits

IT 301 serves as a bridge between intermediate language courses (IT 3/20) and 300- and 400-level Italian courses. This language course begins with a review of grammar basics and includes intermediate and advanced topics (subjunctive, hypothetical sentence, passive voice, etc.)

that students need for success in upper-level courses. The grammar review is conducted in context of contemporary cultural materials, such as web sites, music lyrics, newspapers, and magazine articles. Our readings will illuminate how 'italianità' is continuously reimagined as it embraces, or resists, movements towards greater inclusivity and diversity. More challenging speaking and writing tasks that students will encounter in advanced 300- and 400-level courses are here delivered in manageable pieces, and IT 301 helps students increase their comfort level with the language through reading and writing assignments, conversation, class discussions and presentations. By successfully completing this course, students will feel more confident in their study of Italian and have a smoother transition into upper-level courses.

Prerequisite: IT 3 or IT 20 or permission of instructor
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Exceeds 12th Unit of World Language

IT 310: Advancing Conversation

3 Credits

Focusing on intensive oral communication practice, this course is designed to bolster student self-confidence in the use of advanced intermediate speaking skills through vocabulary development, presentations, and oral practice in small and large group discussions on a wide array of conversational topics.

Prerequisite: IT 3 or IT 20 or permission of instructor
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)

IT 320: Global Italy: An Introduction to Italian Culture

3 Credits

This course focuses on cultural, historical, and sociopolitical issues of Italy, with a particular emphasis on contemporary current events, and by utilizing advanced grammatical tools. Students will be exposed to authentic material from books, newspapers, magazines, comics, movies, songs, the web, and they will deal with topical aspects of the Italian culture: not only food, fashion, and family, but also art, graffiti, cinema - as well as current sociopolitical issues such as immigration, racism, integration, LGBTQ rights, and feminism. Evaluation methods include quizzes, exams, current events reviews, class discussions, and oral presentations. This course is in Italian.

Prerequisites: IT 20 or IT 3
Bachelor of Arts: Humanities

IT 325: Italy's Inspiration for Your Life

3 Credits

In this highly interdisciplinary course taught in Italian, students take cues from a selection of Italy's great examples of literature, art, music, science and innovation, design and artisanal goods, political change, etc., to explore their own intellectual and creative potential through participation in class activities, group trips, oral presentations, notebooks in the style of Leonardo da Vinci, and a final project in which students learn a new hobby or skill directly in Italian. Among the class content modules is one on Il movimento Slow Food and the ethics of sustainability within Italian culture today. The course will amplify students' Italian vocabulary in multiple disciplinary areas and will provide the opportunity to work on the

expression of advanced conditional and subjunctive modes to express hopes, fears, and ambitions.

Prerequisite: IT 3 or IT 20 or permission of instructor
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Bachelor of Arts: Humanities

IT 330W: Greatest Books of Italian Literature

3 Credits

A survey of the greatest books of Italian literature (prose, poetry, drama). Time period varies each semester. In Italian. IT 330W Greatest Books of Italian Literature (3) This course is a survey of the greatest books of Italian literature (prose, poetry, drama). Time period varies each semester, and may include early literature (St. Francis, Marco Polo, Dante, Boccaccio, Petrarch, Machiavelli, etc.) or modern authors (Vico, Goldoni, Manzoni, Foscolo, Leopardi, Pirandello, Fo, Calvino, Eco, etc.). Please check with department faculty for current offering. Taught in Italian. Course objectives are to read, discuss, and better understand the enduring relevance of Italy's literary masterpieces, while strengthening linguistic skills in writing (especially), as well as reading, speaking, and listening, through weekly or bi-weekly written reading reactions, critical notebooks, and class discussions/participation. Course is appropriate for students who have successfully completed an intermediate Italian course (such as IT 003 or 020) and counts toward the Italian major (all tracks) and minor. Successful completion of this course may permit further Italian study at the 400-level.

Prerequisite: IT 003 , IT 020 , or permission of program
Writing Across the Curriculum

IT 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor
Bachelor of Arts: Humanities

IT 399: Foreign Study-Italian

1-12 Credits/Maximum of 12

Advanced training in Italian language skills.

Prerequisite: IT 003
International Cultures (IL)

IT 412: Theory and Practice of Translation

3 Credits

Advanced practicum in Italian explores the technical, artistic, and practical applications of translation between Italian and American cultures. IT 412 Theory and Practice of Translation (3)(BA) This course meets the Bachelor of Arts degree requirements. This course explores the technical, artistic, and practical applications of translation between Italian and American cultures in wide variety of contexts: literature, technical writing, film subtitling, etc. Taught in Italian. Evaluation consists

of reading quizzes, short translation assignments, class presentation, longer (roughly 10-page) individual final translation project. Prerequisite: Any 300-level course in Italian.

Prerequisite: any 300-level course in Italian
Bachelor of Arts: Humanities

IT 415: Dante

3 Credits

Students read and discuss in Italian selections from Dante Alighieri's *Divine Comedy* with special consideration of the biographical, historical, political, literary, and/or theological ramifications of the poetic masterpiece, and without forgetting its enduring influence today. Critical thinking skills in literary interpretation are rigorously emphasized. Given the sustained examination of Dante's hierarchical ethical scheme and his notion of "contrapasso," credits from this course may be applied to the Paterno Fellows Ethics requirement.

Prerequisite: IT 301 or IT 310 or IT 320 or IT 325 or IT 330W or IT 399 or permission of instructor

Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)

Modern and contemporary Italian prose, drama, and poetry.

Prerequisite: any 300-level IT course
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Bachelor of Arts: Humanities
Exceeds 12th Unit of World Language

IT 470: Ghosts and Otherworldly Visions in Italy c. 1300-1600

3 Credits

This course explores ghost storytelling and visions of the afterlife in early Italian literature and culture. Motivations for telling ghost stories go far beyond entertaining or inducing fear in an audience. Ghost stories can engage some of the most profound human inquiries, mortality, grief, commemoration, spirituality, ethics, human imagination, and the violations of proper societal behavior. This course will explore such issues in a range of readings (poetry, short stories, diaries, and dialogues), including works by Dante, Boccaccio, Petrarch, Ficino, Machiavelli, and Ariosto. In addition to a foundational survey knowledge and contextualization of some of the greatest works of medieval/Renaissance Italian literature, successful students of this course will receive a deep understanding of the potentials of authorial power and the rhetorical strategies that storytellers use to convince or manipulate the beliefs and emotions of their readers through close study of the primary texts, active in-class discussions, practice in critical interpretation, and individual experiments in the creative composition of spirit narratives. This 3-credit course is taught in English, and no knowledge of Italian is expected.

Prerequisite: 5TH SEMESTER STANDING

IT 475: Modern Italian Literature and Cinema

3 Credits

Focus on silent films, fascism, WWII, Resistance, Neorealism, and reactions against Neorealism. IT 475 Modern Italian Literature and Cinema (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will explore the literary, cultural, and historical backdrops behind a variety of films from Fellini's *The Road*, to one of the greatest spaghetti westerns ever made (Leone's *Once Upon a Time in the West*), to the Oscar winner for Best Foreign Film (Benigni's *Life is Beautiful*). Selected 19th and 20th-century prose texts also trace such issues as the individual's role in society and the use of the imagination in the representation of history. This course aims to provide students with the fundamental tools to read texts and watch films critically and intelligently while presenting an overview of some major themes of Italian culture. Students will be evaluated on three in-class exams, paper outline, final paper, and participation in class discussions/activities/debates. IT 475 is the first interdisciplinary course taught in English at the IT 400 level. The course helps satisfy the Italian minor requirement. It is also good for students who have taken IT 130 and want to know more about 20th-century Italian lit/film/culture without having to do course work

in Italian. IT 475 may also be of particular interest to students of film and media studies, English or comparative literature, religious studies, and history. This course satisfies the Italian minor or bachelor of arts humanities requirements. IT 475 will be offered once a year with 40 seats per offering.

Bachelor of Arts: Humanities

IT 480: Italian Women Writers

3 Credits

Italian women have often been stereotyped as the "Mamma" or the "Nonna" who cooks, prays, and idolizes her sons. Such images do not accommodate the wide variety of experiences and contributions of Italian women throughout history. This seminar explores texts written by women during the 19th, 20th, and 21st centuries in Italy, including autobiography, historical novels, short stories, poetry, children's books, and theater. We consider the political and cultural developments in Italy in these centuries with attention to differences among the various geographic regions and an emphasis on issues of special relevance to women and their changing legal status and social roles. As we approach each creative work, we analyze such issues as: the role of form and genre; the author's use of language and rhetoric; the political, philosophical, and theological questions posed by the text; the ways in which the text responds to the established Italian literary canon; and the text's depictions and uses of history. The course is conducted in English.

Prerequisite: Minimum fifth-semester standing or permission of instructor

Cross-listed with: WMNST 480

IT 485: Italian American Cultural Studies

3 Credits

Italian American Cultural Studies explores the representations and self-representations of Italian Americans that have been produced since the 19th Century in a variety of aesthetic forms. Through analysis of literary and cinematic works, informed by readings in history and sociology, students will refine their critical reading and writing skills while gaining a more informed appreciation of the contributions of Italian Americans to American culture. We consider how gender, sexuality, and class intersect with ethnicity and race in the experience and construction of Italian American identity, and how later generations of Italian Americans remember and represent their heritage. This course fulfills requirements for the major and minor in Italian, and allows students interested in Italian American culture to undertake more in-depth and specialized study than is possible in the 100-level General Education survey offered by the department. Conducted in English.

Prerequisite: Minimum fifth-semester standing or permission of instructor

Bachelor of Arts: Humanities

IT 490: Dante in Translation

3 Credits

Students read and discuss Dante's poetic journey through the afterlife realms of Hell, Purgatory, and Paradise in *The Divine Comedy*. Also featured is his *Vita Nuova*, the account of Dante's love for Beatrice, which he wrote in his 20s. By the end of this course, successful students will have a critically sophisticated understanding of Dante's two most important literary works and the ability to compare Dante's hierarchical

ethical scheme with other ethical paradigms (such as Aristotle's or the American code of justice). Students are invited to practice interpreting texts literally, allegorically, and symbolically; to come to a greater understanding of the demands and rewards of reading a canonical masterpiece of world literature; and to consider the values/morals/responsibilities that shape their lives and ambitions from differing perspectives (religious/spiritual, ethical, legal, cultural). Credits from this course can be used to satisfy a Paterno Fellows Ethics requirement.

Prerequisite: Minimum fifth-semester standing or permission of instructor

Bachelor of Arts: Humanities

IT 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

IT 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

Honors

IT 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

IT 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

Japanese (JAPNS)

JAPNS 1: Level One Japanese A

4 Credits

Introduction to modern Japanese; development of audio-lingual facility and ability to read and write Japanese without aid of romanization.

Bachelor of Arts: World Language (All)

JAPNS 2: Level One Japanese B

4 Credits

Continuation of elementary Japanese, with emphasis on improving audio-lingual facility and strengthening reading and writing skills in modern Japanese.

Prerequisite: JAPNS001

Bachelor of Arts: World Language (All)

JAPNS 3: Level Two Japanese A

4 Credits

Continued study of modern Japanese at elementary level; extensive audio-lingual practice for conversational fluency; reading/writing original scripts.

Prerequisite: JAPNS002

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

JAPNS 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

JAPNS 99: Foreign Study

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

JAPNS 110: Level Two Japanese B

4 Credits

Intermediate Japanese - Continued study of modern Japanese at intermediate level; extensive audio-lingual practice for conversational fluency; reading/writing original scripts. JAPNS 110 Conversation, Reading, and Composition (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. The course offers the instruction of intermediate Japanese where students learn how to communicate and express various ideas using the Japanese language. Each chapter includes new essential vocabulary items, grammar patterns, and kanji which enable us to achieve higher overall communicative fluency in Japanese. By the end of the semester, students are able to construct grammatical structures, such as presuppositions, desire, hypothetical condition, causative, completion, regret, etc. The usage of polite expressions of humble and honorific is introduced. Various aspects of Japanese culture and customs are also discussed throughout the semester. This course fulfills the International Cultures requirement.

Prerequisite: JAPNS003

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

International Cultures (IL)

Exceeds 12th Unit of World Language

JAPNS 120: Japanese Literature in Its Cultural Context

3 Credits

Japanese literature and film from classical through contemporary times, with attention to changing cultural settings. Taught in English. This course is intended to provide an introduction to the literature of Japan from the seventh century to the postmodern era. Prior study of Japan is not required and materials will be available in English. Students will learn about major eras of Japanese literature and culture, such as the age of the Man'yōshū, the age of the Genji monogatari (The Tale of Genji), the age of No and Kyogen, the age of Wit and Learning, the age of Meiji, the age of industrialization, the postwar years, and postmodernity. The readings will include several genres, such as poetry, folktale, short story, and novel, with an emphasis on prose fiction. The course is structured so that students develop a historical/cultural perspective in order to understand the contexts that have inspired the literary works. By examining literature in its cultural contexts, students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, the Emperor system, and postmodern consumer culture, among others. Students will read literature and related materials from different periods, with occasional presentations of films. Class work includes some lecture but emphasizes guided discussions, group discussions, and student presentations. This participatory approach is intended to deepen appreciation of the texts, to help students understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist them in developing both analytical and expressive abilities. The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study, whether or not they have previously studied the culture of Japan.

JAPNS 121N: Japanese Film and New Media

3 Credits

Survey of Japanese film and new media in the twentieth century and beyond, with attention to changing cultural settings. Taught in English. JAPNS 121N Japanese Film and New Media (3) (GH;GA;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course is intended to provide an introduction to modern and cutting-edge forms of cultural production in Japan from the twentieth century to the present day. Prior study of Japan is not required and materials will be available in English. Students will learn about major technologies and forms of media, including film, manga, anime, and various forms of new media (cell-phone novels, blogs, MMOGs, IM, and Web 2.0 for instance). Readings and screenings will cover several artistic modes including formalism, historiography, documentary, period drama, and experimental works. The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the cultural contexts that have inspired the creative works under study. By examining Japanese film and new media with attention to changing cultural settings, students will investigate such topics as the relation between social institutions and the individual, the formation and expression of identity, changing gender roles and family structures, the impact of technological and economic trends on social structure, and changing climates of censorship and freedom of expression. In addition, students will learn to think critically about various media's techniques and aesthetics of representation, and will become more engaged, critical spectators of film and related media. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students' appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. Through critical reading, group discussion and interpretive writing, students will hone skills for evaluating modes of cultural production and consumption in modern Japan. The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study, whether or not they have previously studied the culture of Japan.

JAPNS 122: Gods to Godzilla: A Survey of Japanese Culture

3 Credits

This course will examine the formation of Japanese culture through the lens of exchange and adaptation. Seeking to examine our understanding of "Japan" and "culture," the course will explore the interplay between culture and identity, with the Japanese experience providing a viewpoint that differs from the standard Western-centric narrative in important ways. Focusing primarily on cultural studies and history, we will also consider not only how the world influenced Japan, as is the standard narrative, but also, how Japanese culture impacted other cultures, both near and far, as the country emerged from being an obscure Asian island to a cultural superpower at the beginning of the 21st century.

1-8 Credits/Maximum of 8

Small group instruction in spoken and written modern Japanese at the introductory level.

International Cultures (IL)

JAPNS 210: Extensive Reading in Japanese

1.5 Credits/Maximum of 12

This course consists of reading Japanese books without translation or grammar instruction in and outside of class. Students will choose books from a selection provided by the instructor, beginning at a lower level and moving gradually to higher levels under the instructor's supervision. Books may include an audio component. The instructor will select appropriate reading materials and organize them by levels, then constantly monitor students' reading behavior, occasionally giving suggestions and regularly consulting with students. The idea of this class is to learn incidentally, by encountering new words and grammatical patterns that can be understood based on context, and by reinforcing existing knowledge through increased familiarity. The emphasis is on learning the way of reading that allows you to enjoy the content of authentic but carefully selected reading materials. The course will help students develop a habit of reading at a designated time and place. Using language skills acquired in the classroom as a real communication tool will encourage use of Japanese beyond the classroom.

Prerequisite: JAPNS002

JAPNS 403Y: Level Four Japanese A

4 Credits

Continuation of JAPNS 402. Aims to improve students' proficiency in all four language skills, with a special emphasis on writing. JAPNS 403Y Level Four Japanese A (4) (IL) This is a four credit course designed for those who have completed Level Three Japanese B or the equivalent. The course aims to further develop students' proficiency in all four language skills, with a special emphasis on writing. Students will study several topics such as Japanese society and Japanese literature for content-based language learning throughout the semester. For each topic variety of media will be used -newspaper articles, essays, short stories, TV programs, movies, etc. The majority of reading and writing assignments will be done outside class, with some guidance from the instructor. That will help students become more independent in studying Japanese. They will use appropriate resources such as dictionaries, reference books, online dictionaries and other online resources depending on their individual needs. Class time will be used mainly for discussions of content, feedback on writing, and presentations by students. All class activities will be conducted in Japanese. Writing exercises include short response papers on topics and summaries of literary pieces or audio visual materials. In the response papers students will reflect more deeply on certain topics, synthesize information from course materials, express their opinions, and support ideas by referring to and citing from source texts. This will help students be prepared for a longer thesis in the next course in the sequence. Discussion on the summaries will cultivate sensitivity toward words and expressions. The course will help students start building their career in Japanese. Students will familiarize themselves with and if they wish study for the Japanese Language Proficiency Test (Level N2). They will also write a resume and formal letters that could be used in job applications and practice formal spoken communication in business settings.

Prerequisite: JAPNS402
International Cultures (IL)
Writing Across the Curriculum

JAPNS 404: Level Four Japanese B

4 Credits

Continuation of JAPNS 403Y. Aims to improve students' proficiency in all four language skills through content-based language learning. JAPNS 404 Level Four Japanese B (3)(IL) This is a four credit course designed for those who have completed Level Four Japanese A or the equivalent. The course aims to further develop students' proficiency in all four language skills. Students will study several topics such as Japanese popular culture and issues in contemporary Japan for content-based language learning throughout the semester. For each topic variety of media will be used -newspaper articles, essays, short stories, TV programs, movies, etc. The majority of reading and writing assignments will be done outside class, with some guidance from the instructor. That will help students become more independent in studying Japanese. They will use appropriate resources such as dictionaries, reference books, online dictionaries and other online resources depending on their individual needs.

JAPNS 410: Japanese Through Manga

3 Credits

The course aims to expand students' knowledge and application of Japanese language beyond elementary and intermediate textbooks through the use of manga (graphic novels). JAPNS 410 Japanese Through Manga (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is a three credit course designed for those who wish to expand their knowledge in Japanese and application of it beyond typical elementary and intermediate textbooks. The course will use manga, the format of which helps students understand the story line, the setting, and the thoughts and emotions of the main characters. Given quick interactions between manga characters and onomatopoeia that accompany pictures, students will learn natural daily communications of Japanese. Class discussions will also cover relevant customs, manners, cultural values, socio-historical context, and social perspectives along with language use. The exact texts will vary from instructor to instructor, and may include film and new media in addition to a primary focus on manga. The course will serve as a gateway to the further exploration of Japanese authentic texts and audio visual materials. The prerequisite is JAPNS 110. Students who have successfully completed JAPNS 110, JAPNS 401, or JAPNS 402 are encouraged to take the course. Students who have finished JAPNS 403Y or JAPNS 404 may also take the course.

Prerequisite: JAPNS110 or equivalent
Bachelor of Arts: World Cultures
International Cultures (IL)

JAPNS 426: Early Modern Japan

3 Credits

Japanese history from 1580-1880. ASIA 474 (HIST 474, JAPNS 426) Early Modern Japan (3) Japan's Tokugawa period can be difficult to grasp. It resembles a modern society in many respects but operated according to a logic of social organization different from that of most modern states. There was a collective sense of national identity, but its characteristics differed significantly from modern forms of Japanese identity. Moreover, modern ideologies have contributed to the characterization of early modern Japan as a rigid society and of the country as a whole having been isolated from the rest of the world. The main purpose of this course is to afford students the opportunity to study early modern Japan in detail and, insofar as possible, on its own terms. Through readings in primary and secondary sources, and through the evaluation of visual images, this seminar-style course will deepen students' knowledge of Japan and serve as basis for comparative study of other early modern societies. Although the course investigates classic areas of historical study such as institutional development and foreign relations, the emphasis is on social and environmental history. The course encourages students to think about a range of approaches to the past and to think about the ways our contemporary biases influence the ways we understand the past.

Prerequisite: HIST 172 , HIST 174 , JAPNS120 or JAPNS121
Cross-listed with: ASIA 474, HIST 474

JAPNS 430: Japan in the World

3 Credits

Study of Japan's foreign relations and position in the international community from the early 19th century to the present. ASIA (JAPNS) 430 Japan in the World (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine Japan's foreign relations and changing position in the international community, from the rethinking of relations with the Western world in the early nineteenth century to its emergence as a pop culture superpower in the present day. The course will explore the structures of international relations, such as imperialism and international organizations, with the Japanese experience providing a viewpoint that differs from the standard Western-centric narrative in important ways. We will also consider the development of alternative methods of diplomacy, including cultural exchange and economic and technical assistance.

Prerequisite: JAPNS 120; JAPNS 121; ASIA 100; ASIA 101; ASIA 102; ASIA 105; ASIA 172; ASIA 175; ASIA 185; HIST 172; HIST 175; HIST 185; 5th Semester standing

International Cultures (IL)

JAPNS 431: Courtyly Japan

3 Credits

Focused study of aristocratic society and culture of Heian period Japan. JAPNS 431 (ASIA 431) Courtyly Japan (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The Heian period of Japanese history saw the apex of a refined court culture. Through readings of primary and secondary sources, this seminar-style course will explore the activities, norms, and structures of courtly society in Japan, from the centralization of imperial power in the 8th century through the court's political marginalization in the late 12th century. We will pay particular attention to religion, the arts, politics and governances, gender, and the gradual rise of samurai power in the shadows of the court. This course is intended to provide an introduction to the political, social, economic, and cultural life of the Heian court of ancient Japan. The goals of the class are not only to gain an understanding of a time and place far removed from our own, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian or literary critic themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through reading, discussions, and writing, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing. The course is intended to deepen student's appreciation of the cultural production of ancient Japan, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytic and expressive abilities. The course is designed to be suitable for all students generally interested in Japan or in various fields of humanistic study.

JAPNS 432: War and the Warrior in Japan

3 Credits

Survey of the role of warfare and the warrior in Japan, with attention to changing cultural settings. Taught in English. JAPNS 432 (ASIA 432) War and the Warrior in Japan (3) (IL) This course is intended to provide an introduction to the social and historical roles of warfare, and the changing cultural figure of the warrior, in Japan. Some prior study of Japan (JAPNS 120 or JAPNS 121 or HIST 172) is required. All materials will be available in English. Students will learn about subjects like the causes of violence, culturally acceptable ways of resolving conflict, obligations of victor toward vanquished, expectations regarding the memory of the war dead, the ideal of the warrior as a cultural figure, and historical roles that Japanese warriors have played in ages of peace. Readings and screenings will cover several genres, such as film, historiography, history, documentary, classical epic, modern novel, and excerpts from Japanese history textbooks (in translation). The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the cultural contexts that have generated attitudes toward war and the warrior in Japan. In addition, students will learn to think critically about various media's techniques and aesthetics of representation, and will become more engaged, critical investigators of literature and related media. Readings and in-class discussion will focus on the image of the warrior as a cultural icon, exploring the many ways in which popular understandings of the warrior have changed over time, for instance, as popularized dramatics began to idealize warriors as moral exemplars in the late medieval period, and then as historical realities made the position of the warrior itself redundant in the early modern era. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students' appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. Through critical reading, group discussion and interpretive writing, students will hone skills for evaluating modes of cultural production and consumption in premodern and modern Japan. Evaluation will be through means such as in-class presentations, short writing assignments, midterms or quizzes, one analytic paper (3-7 pages), and in-class/on-line participation and discussion. The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study.

JAPNS 434: Beyond Anime

3 Credits

The visual, tactile, and literary arts play key roles in how modern nation-states make sense of themselves and how they make sense of other nations. Japan provides one key example through which to observe the use and function of art to create not only the image and identity of a nation and national culture, but also the image and identity of other national cultures. In recent years, Japanese popular culture has been

reborn around the world. A global generation has grown up watching anime and reading manga in Spanish, Chinese, Russian, and English. Beyond Anime is designed to contextualize the recent appropriation and dissemination of Japanese popular culture through the cyclical history of such appropriations through the modern period. In this way, the course will explore the precursors, antecedents, and contexts to our present cultural moment. Through film, photography, posters, matchbook-labels, textiles, industrial design, novels, and myriad other popular media, this seminar-style study of Japanese popular visual culture will help students see Japanese visual arts in terms that are local to Japanese aesthetics and through those that transcend local cultures. Drawing on the long history of illustrated narrative from scrolls to chapbooks, through film and photo essay, this course confronts the exoticist notion that Japan's arts have always placed a disproportionately heavy emphasis on the visual. Through comparative readings of cultural and visual material from Japan, this course will raise questions of aesthetic, cultural, and national difference. Specific topics will vary with instructor, but may include: the rendering of three dimensional space through perspective, the use of pictures in the service of narrative versus the use of pictures as narrative, and how notions of negative space promise deep insight and risk cross stereotypes.

International Cultures (IL)

JAPNS 452: Contemporary Japan: Cultures, Lifestyles, Trends

3 Credits/Maximum of 6

Survey of aspects of modern Japanese society; includes readings from Japanese newspapers, magazines, and fiction; topics may vary each semester. JAPNS 452 Contemporary Japan: Cultures, Lifestyles, Trends (3 per semester/maximum of 6) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course orients students to cultural issues and trends in contemporary Japan, and the way that those issues and trends are explored in literature, film, newspapers and magazines. The course examines a selection of Japanese-language materials from an array of genres, modes of representation, and historical settings. Focusing on the postwar era to present (1945-), this course introduces various aspects of contemporary Japanese culture, from literary works of the postwar experience to recent popular culture, including anime (animated movies) and manga (graphic novels). Each work is discussed in terms of its own literary or artistic merit, the social context that produced it, its position within the larger trends of literary development in Japan, and its relevance for the modern reader. This course is designed for (prospective) Japanese major or minor students interested in broadening their knowledge of Japanese culture and society as well as for students who wish to compare other cultures and literatures they have studied with those of Japan.

Prerequisite: JAPNS401

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

International Cultures (IL)

Exceeds 12th Unit of World Language

JAPNS 453: Japanese Film

3 Credits/Maximum of 6

Selected films and directors representing various aspects of Japanese culture and cinema; topics may vary each semester. JAPNS 453 Japanese Film (3 per semester/maximum of 6) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This class will be a seminar-style study of Japanese culture, texts, and language as seen through the lens of Japanese cinema. The goal is to deepen the students' understanding of diverse aspects of Japanese life, history, and culture while developing language skills. Typical class sessions may involve watching sections of film (with or without English subtitles); working with listening comprehension; engaging with student presentations (in Japanese) on studios, directors, or actors; discussing Japanese film history; and analyzing film stills for aesthetic qualities. Participants will be required to view and discuss films in Japanese (with or without English subtitles). Viewing's will be accompanied by secondary readings (at least some of which may be in Japanese). We will also be discussing the films and readings in the context of nation, identity, history, sociology and culture. Exercises will range from group discussion, web-based research in Japanese and English, presentations, essays and film analysis. Students must prepare for class by reading the material carefully, taking notes, writing down questions, and being ready to take part in lively conversations. Course discussion will take place primarily or exclusively in Japanese. This course satisfies the International Cultures requirement.

Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
International Cultures (IL)
Exceeds 12th Unit of World Language

JAPNS 454: Japanese Literature

3 Credits/Maximum of 6

Selected works from important Japanese texts representing genres such as autobiography, poetry, fiction, and drama; topics may vary each semester. JAPNS 454 Japanese Literature (3 per semester/maximum of 6) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This class will be a seminar-style study of contemporary Japanese literature. The goal of the course is to help students move from grammar-assisted reading assignments (which may provide vocabulary lists, grammar notes, and cultural notes) to reading 'raw' materials in Japanese, where students are responsible for knowing how to use the appropriate reference materials so that they can compile vocabulary lists, grammar notes, and cultural notes on their own. Students will be reading selected works from an array of genres such as autobiography, poetry, fiction, drama and essays, with topics and thematic focuses varying from semester to semester. Typical class sessions may involve reading aloud from a literary work; engaging with student presentations (in Japanese) on authors, genres, thematic elements, and relevant historical or cultural events; discussing Japanese literary history; analyzing short passages for their aesthetic qualities; and working with specific items of grammar or vocabulary. Participants will be required to read and discuss Japanese literature in Japanese. Exercises will range from group discussion, web-based research in Japanese and English, presentations, essays, quizzes and tests. Students must prepare for class by reading the material carefully, taking notes, writing down questions, and being ready to take part in lively conversations. Course discussion will take place primarily or

exclusively in Japanese. This course satisfies the International Cultures requirement.

JAPNS 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

JAPNS 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors**JAPNS 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

JAPNS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

JAPNS 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

JAPNS 499: Foreign Study--Advanced Japanese

1-15 Credits/Maximum of 15

Small group instruction in spoken and written modern Japanese at the advanced level.

Prerequisite: JAPNS110 or JAPNS299

International Cultures (IL)

Jewish Studies (JST)

JST 4: Jewish and Christian Foundations

3 Credits

This course seeks to help students better understand the Bible and appreciate its role as an authoritative collection of sacred texts for Jews and Christians. The Bible is a difficult book, one that is demanding on many levels. In order to read the Bible intelligently, it is important to understand the historical and cultural backgrounds of the biblical

writings. This course explores the history and geography of ancient Near Eastern civilizations that shaped the experience of ancient Israel and, later, the Greek and Roman imperial contexts that shaped Second Temple Judaism and early Christianity. The focus of the course, however, is on the biblical narrative itself and the particular ways that the story of Israel and its covenant with God was represented in scripture: in tales, poems, hymns, dialogues, and genealogies. A basic goal of the course, then, is to promote intelligent, well-informed reading of the Bible. Also important is the willingness to read the Bible closely and critically, with a view toward larger questions raised by biblical texts: how is God to be known and understood? What is the purpose of human life in the world? What moral obligations ought to structure our common life? Does human history have direction and purpose? What is the good and how do we follow it? The Bible takes up these questions and many more. Though an ancient anthology shaped by the succession of Assyrian, Babylonian, Persian, Hellenistic, and Roman empires, the Bible is not merely a product of its original contexts. Millennia of transmission and interpretation have made it a product of history in a much more extended and dynamic sense. In this course, we will examine larger questions raised by the biblical writers and consider the ways that the Bible has shaped, informed, and guided Jewish and Christian ways of life.

JST 10: Jewish Civilization

3 Credits

This course explores the life of the Jewish people from Biblical times on, emphasizing cultural, religious, and institutional developments. HEBR 10 / HST 10 Jewish Civilization (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Jewish tradition goes back thousands of years, and Jews have resided in many different lands. They have become an integral part of many different cultures, yet have often retained (or been forced to retain) a certain degree of separateness or difference. In this course we will trace continuity and change in Jewish traditions from ancient to modern times, and across different regions. Taking into account inter-cultural contact and historical events -- ranging in place from the Middle East to Muslim Spain to Asia, Africa, Europe, and the Americas, and in time from the ancient world to the medieval era, the Holocaust, and contemporary Israel and the U.S. -- we will explore developments in Jewish history, literature, and culture. The course considers topics such as the attitudes other groups have had toward Jews (and vice-versa), the question of whether Jewish identity is a race, a religion, or an ethnicity, the dilemmas Jews face today, and the ways that Jews in many diverse settings have balanced change and continuity. We will explore the factors that shape Jewish experience in different times and places, the diversities within and among Jewish lifestyles, and the ways in which events and interactions with other peoples have influenced the development of Jewish civilization. Finally, we will consider the dilemmas Jews face today in terms of the preservation of their identity and traditions. The course includes class discussion. Students are

evaluated on the basis of, essay exams, quizzes, in-class discussion and commentaries, and group projects.

JST 12N: Lands of the Bible

3 Credits

Utilizing the textual and archaeological evidence, this course introduces students to the lands, cultures, and peoples associated with the Hebrew Bible, New Testament, and Qur'an. Geographically, the lands of the Bible encompass what is often referred to as the Cradle of Civilization or Fertile Crescent - an arc-shaped region defined by the Nile, Jordan, Tigris and Euphrates river valleys. Today this crescent includes the modern countries and regions of Egypt, Israel, the Palestinian territories, Jordan, Syria, southeastern Turkey, and Iraq. Spanning ten millennia of history (ca. 9000 BCE-750 CE), this course explores a series of landmarks in the history of human development, which are considered together with Jewish, Christian, and Islamic traditions. These include the birth of religion and the agricultural revolution (Garden of Eden), the first cities and the invention of writing (Tower of Babel; Patriarchal/Matriarch traditions), Egyptian imperial rule in Canaan (Exodus), the collapse of the Bronze Age (Emergence of Israel), impact of empire (united and divided kingdoms of Israel and Judah), Alexander the Great and the Roman imperial expansion to the east (world of Jesus and development of rabbinic Judaism), Byzantine Palestine (expansion of Christianity), and the Islamic conquest of the Holy Land. Through an integration of numerous disciplines, including historical geography, archaeology, ancient history, biblical studies, epigraphy, and anthropology, students will investigate the interaction between the cultures of the ancient Near East and the religious traditions that developed in the lands associated with the Bible, a relationship that continues to shape the region and the world until today.

JST 60N: Society and Cultures in Modern Israel

3 Credits

Israel is often portrayed in media and popular society in incomplete or distorted terms. In some cases, it is presented as a troubled, violent, dangerous place, as a place permeated by long-standing hatred between Jews and Muslims, Israelis and Arabs, Israelis and Palestinians. In

others, the focus is on the state's role as the center of Judaism—a home of the "chosen people" and the source of inspiration for one of the world's great monotheistic religions. Some present it as a model for how a democracy can succeed under trying demographic, historic, and geopolitical circumstances. Others frame Israel as a place of conflagration (armageddon) that will usher in a messianic period or as a nation-state with a discriminatory regime that privileges its majority population over its minority and administers oppressive policies over Palestinians in the occupied territories it captured in the 1967 War. While there are elements of truth in each of these presentations, the full picture of Israeli society is much richer and more complex. This course teaches students to cut through the mythology, and develop a more accurate understanding of what Israel is in the 21st century. Since Israel is a culturally, ethnically, and religiously diverse society, it is only possible to understand the true nature of modern Israel through exploring the many sub-groups that comprise the Israeli citizenry. The course looks at Ashkenazi and Mizrahi Jews (both religious and secular), Muslim and Christian Palestinian Arab citizens of Israel, Ethiopian-Israelis, Russian-Israelis, Bedouins, and Druze. For each group, it looks at demographics, background histories, migration patterns, institutions, cultural norms, values, and practices. We will look at what is important to each group, how they see and organize themselves, and how they understand and experience the world around them. The course aims to convey an understanding of the geographic, demographic, and social-historical context in which Israelis live as well as the diversity of Israeli culture. Students will be challenged to be critical readers of Israeli society and the way it is represented and to strive for measured, evidence-based analyses.

JST 70: Prophecy in the Bible and the Ancient Near East

3 Credits

This course will introduce students to the prophetic traditions of the Bible and the Ancient Near East. The course will explore the development of prophetic circles in the ancient Near East (including Egypt, Syria-Palestine, and Mesopotamia), and then focus on the major prophetic traditions of the Hebrew Bible (e.g., the books of Isaiah, Jeremiah, Ezekiel, Amos, Hosea, Micah, Haggai, Zechariah, and Daniel). It will also look at how these traditions were understood in early Judaism and nascent Christianity. Special attention will be paid to the roles of priests, kings, and prophets in ancient Israel to better understand Israelite and Judaean prophetic traditions in ancient Israelite society. The course will then examine the rise of apocalypticism and its medieval and modern manifestations including a brief look at Islam. Additional emphasis will be placed on the religious and political interactions which manifest themselves in prophetic movements - then and now - including the rhetoric of ideology and propaganda. Important figures and events illustrate these cultural and political trends.

JST 83: First-Year Seminar in Jewish Studies

3 Credits

Critical approaches to the history, sociology, and literature of Jewish Studies. JST 83 First-Year Seminar in Jewish Studies (3) (GH;FYS;IL)(BA)
This course meets the Bachelor of Arts degree requirements. Through a combination of readings, lectures, discussions, and research projects, students will learn to master the subject material of the course and acquire basic skills important to the study of humanities. Students will learn to read academic books, as well as original documents, to formulate arguments, and to write analytical essays and papers. Analyses of this type will provide students with techniques for formulating, identifying, and judging academic arguments and presentations in many fields of learning other than Jewish Studies. The topics chosen for these seminars will introduce students to some of the major figures, historical, literary, religious, and sociological developments in Jewish Studies. By concentrating on these topics, the students will better understand the cultural assumptions of different groups and societies. Although the course will focus on a specific topic, the instructor will aid the student in seeing the larger implications of the issues and controversies discussed in the class. The international and intercultural aspects of the topic will consistently be considered. The course will require students to express their ideas as well as to gather information through research, discussion, and writing. It will consistently challenge students to consider social behavior, the nature of the community, and the value of scholarly work as these relate to the particular topic of the seminar. The course fulfills the first-year requirement, as well as one of the humanities requirements in general education or a Bachelor of Arts humanities requirement. The first-year seminar will be offered twice per year with an enrollment limit of 20 per section.

JST 90: Jerusalem: Past, Present, and Future

3 Credits

Jerusalem, a city sacred to Judaism, Christianity, and Islam, is often depicted as the spiritual and physical center of the world. Throughout its 5000-year history, Jerusalem has attracted diverse cultures, empires, and peoples who have vied for control of this holy city. Jerusalem: Past, Present, and Future surveys the cultural, religious, political, archaeological, and historical record of Jerusalem, beginning with its earliest settlement during the third millennium BCE; through its expansion as a second millennium Canaanite urban center; its role as the capital of Israel and Judah during the first millennium BCE biblical periods; the influence of the Egyptian, Assyrian, Babylonian, Persian, Hellenistic, Roman, Byzantine, Crusader, Mamluk, and Ottoman empires; and its development under Jewish, Christian, and Islamic control. The

significance of Jerusalem's past, its impact on contemporary society and politics in the modern Middle East, and differing visions for this contested city's future are examined in light of various interpretations of the textual and archaeological evidence.

JST 102: Canaan and Israel in Antiquity

3 Credits

This course is an overview of the ancient history and cultures of Canaan (the Mediterranean Levant of Syria-Palestine) and the emergence of Israel. It involves a critical view of biblical texts (especially the Hebrew Bible, aka Old Testament) in light of other ancient texts, archaeology, and historical methods, in order to explain the nature and the evolution of society, religion, and thought in the prebiblical and biblical era. We will be especially interested in the period from the end of the Late Bronze Age (c. 1200 BCE) to the Persian period (539-332 BCE), and will examine ongoing debates about the Bible and history, as well as the development of Israelite religion from polytheism toward monotheism and a distinctive worldview.

JST 104: The Bible as Literature

3 Credits

This course examines the literature of the Bible. Throughout this course, students will study the language, thought, images, and structures of the book that has arguably proved the central text of Western literature. Students will also actively explore the ways in which the Bible has shaped the literature of English-speaking cultures around the world. Students will read substantial portions of the Old and New Testaments, learning to read critically and to interpret the Bible as they would any other literary text. They will also learn about the historical construction of the Bible, some history of its translation, and contemplate the competing versions of existing Biblical texts. Accordingly, reading the Bible as literature by necessity requires critical engagement with different international cultures from different historical periods.

JST 110: Introduction to the Bible: Old Testament

3 Credits

The Old Testament (or, Hebrew Bible) is the record of the interaction between the people of ancient Israel and their God. As a religious text, the Bible is inextricably intertwined with the cultures of Israel's neighbors, including the Canaanites, Syrians, Greeks, Assyrians, Babylonians, Arabs, Egyptians, and the peoples of the eastern desert. To study the Hebrew Bible and its development during the first millennium BCE is to study the history, culture, and literature of the entire region. This course introduces students to the literature of ancient Israel, its rituals, the stories which established a people's identity, and which defined their moral behavior. Great figures of the texts, such as Moses, David, Solomon, Bathsheba, Ruth, Jeremiah, Daniel, and Ezra, teach us important lessons about life and how people of faith attempted to relate to one another, to God, and to people outside their ethnic group. Students will read from the biblical text, as well as from secondary source readings which contains scholarly opinion from a variety of sources. Recent archaeological and epigraphical studies will be incorporated into the course to enhance our work. The ultimate goal will be to assess the meaning of the texts in their ancient Near Eastern environment; to understand the development of Hebrew religion and the beginnings of Rabbinic Judaism; and to understand the connection between biblical studies and other fields of study, such as History, Religious Studies, Archeology, Linguistics, and Comparative Literature.

JST 111: Early Judaism

3 Credits

Early Judaism will introduce students to the history of Judaism as reflected in Jewish literature from the period of the Babylonian exile (587/6 BCE) to the closure of the Babylonian Talmud (ca. 600 CE). This course will analyze the development of Judaism from its emergence out of the ancient Israelite religion through the formative period of rabbinic Judaism. Attention will be given to the diversity of ideas and practices that characterized early Judaism and the influence the larger Persian, Hellenistic, and Roman worlds had on Judaism's development. We will examine selections from the Hebrew Bible, and from other literature, including the Dead Sea Scrolls, the Apocrypha, the New Testament, the Mishnah, and the Talmudim.

JST 112: Jesus the Jew

3 Credits

Although Jesus of Nazareth is the object of Christian devotion, he was not a Christian himself, but a pious Jew. What can be known about the historical figure of Jesus the Palestinian Jew? How would his teachings and actions have fit in the context of Judaism of his day, in the Greco-Roman world? What did he mean when he proclaimed the coming kingdom of God? Because almost all of our source material espouses Jesus as the Christ of Christian faith, the first step is to understand the aims and perspectives of these Christian sources, including the canonical Gospels as well as non-canonical Gospels. Through careful examination of these sources in light of critical scholarship and the social and historical context of Judaism in the Greco-Roman world, we will consider how much the historian is able to reconstruct of Jesus using historical method, what the limits of this investigation are, and how relevant the task is. We will consider and evaluate a few of the different scholarly reconstructions of the historical Jesus. Major emphases will include the historical, social, religious, political, and cultural contexts of Jesus, including important precursors; the political, institutional, and cultural history of the teachings and actions of Jesus in their Jewish setting, and how these are reinterpreted by his followers after his death. Attention will be paid to the development of variant Christian traditions about Jesus including Jesus as Messiah, his death as a saving event, the resurrection as exaltation of Jesus as Lord, the memorialization of Jesus in Christian ritual practice, and the cultural and religious impact of Jesus throughout history. In addition to the early Christian sources on Jesus (especially the canonical Gospels, but also other New Testament texts and non-canonical writings), on each topic students will read selections from early Jewish writings in order to illuminate the cultural context. These include the Dead Sea Scrolls, Philo, Josephus, Jewish texts among the so-called Apocrypha and Pseudepigrapha, early rabbinic texts, and epigraphical writings. Relevant archeological evidence and Greco-Roman sources will also be considered. Broader issues of historical, cultural,

linguistic, political and geographical context will be covered in lectures and secondary readings.

JST 113: Jewish Myths and Legends

3 Credits

Comparative study of diverse interpretations of stories from the Bible in Judaism and Christianity. CMLIT 113 / JST 113 / CAMS 113 / RLST 113 Myths and Legends of the Jews (3) (GH;IL) The impact of the Bible on Western Culture is immense. Beyond its religious importance, the motifs and images from its myths and stories permeate literature and art, providing a basic frame of reference that for much of history could be taken for granted. A degree of familiarity with these motifs so as to be truly fluent is no longer common, and so it requires special effort to discern allusions to biblical traditions. Moreover, these traditions are not static: religious communities continually re-interpret them and appropriate them in very different contexts. Many prominent traditions in Judaism, Christianity, and Islam do not appear explicitly anywhere in the Hebrew Bible, but are the product of imaginative and ingenious interpretation and re-tellings. Why, for example, is Noah an example of a righteous person in Christian tradition, but in rabbinic tradition is more often portrayed as a profane, earthly-minded man who was saved only because he was the least bad of an evil generation? Why is Moses commonly portrayed with horns in medieval art? Underlying such different traditions are centuries of debate and reflection on these texts as sacred scripture, and competing religious communities often authorized their distinctive beliefs and practices by reading them into scripture. The differences are often too subtle to discern apart from careful comparison. This course will explore the boundaries between Scripture and tradition by means of a close examination of the myths and stories in the Hebrew Bible and their subsequent interpretation and re-tellings in Judaism, Christianity, and Islam. Using methods from comparative mythology and folklore, as well as comparative midrash, our procedure will be to compare these traditions closely with the biblical text, asking: What are the main motifs in the mythology of Judaism? Does Judaism have a coherent mythology? How do their myths compare with the myths of their neighbors? Where did these myths come from? How do these traditions relate to the Bible? What was the function of these myths? Why are there competing myths? How is it possible that Judaism affirms belief in only one God, but has myths that include other divine beings? We will also compare with later interpretive traditions (Jewish, Christian, Islamic). Can we trace trajectories of interpretation? Can we discern particular interpretive methods in operation? We will seek to answer: what do these re-workings of the traditions tell us about the development and function of Scripture, and the social circumstances of the communities? Finally, we will seek to detect reflections of these interpretive traditions in literature and art from the medieval to the modern periods. The course is organized around major topics in the Jewish Scriptures: God, creation, heaven and hell, Torah, Sabbath, Abraham and other ancestors, Israel and holy land, exile, and Messiah.

Throughout we will consider how sacred stories function to form ethical perspectives and values.

JST 114: Modern Judaism

3 Credits

This course will explore the developments in Judaism since the Enlightenment and the French Revolution. Major changes have come to the world since 1700—changes represented by terms such as the Enlightenment, Emancipation, Industrialization, Nationalism, Urbanization, Immigration, and Egalitarianism/Feminism. These broad social changes led to the break-up of traditional communities and, among other things, reformulations of Jewish Life and Jewish Religion. The effects can be seen in a number of Jewish responses—Assimilation, Hassidism, Self-Defense and Nationalism, Denominationalism, and Egalitarianism/Feminism—which we shall study in this class. In particular, we shall look at Jewish spirituality—its historical and theological development, its many historical and modern manifestations, and how it works.

JST 115: The American Jewish Experience

3 Credits

Chronological and topical survey of the story of Jewish life in America. We will trace the social, religious, cultural, and political developments in the Jewish community from the Colonial Period to the present. Topics to be covered include immigration, acculturation, ethnicity, gender, politics, and communal and religious innovation. While "knowing the facts" is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or "order" to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments (conclusions/interpretations/arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the relationship between the experiences of members of the American Jewish community and United States history as a whole. (2) Students will gain an understanding and knowledge of the political, economic, and social processes that shaped the American Jewish experience.

(3) Students will learn how to "think historically" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of American Jewish history. Demonstrate an understanding of the diverse experiences of different groups of Americans. Demonstrate an understanding of the social, political, and ideological structures that shaped the American Jewish experience and continue to shape the modern United States.

JST 116: Jewish Great Books

3 Credits

Historical and cultural survey of key texts of the Jewish Tradition, from The Bible to the present. CMLIT (J ST) 116 Jewish Great Books (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course will introduce students to the rich and diverse expanse of the Jewish tradition through a survey of that tradition's most important texts. Starting from the Bible, moving up through the contemporary world, and spanning the globe, the course will examine religious, cultural, folkloric, philosophical, national, and literary traditions, and attention will be paid to both breadth emphasizing the vast range and diversity of Jewish thought and writing and depth emphasizing the complexity and subtlety of particular texts in examining the material. Students will learn methods and practices of textual, cultural, and historical criticism as they engage in analysis of Jewish textual traditions, of the relationship between representation and history, and of the productive interchanges between representation, history, and identity.

JST 118: Modern Jewish History

3 Credits

Modern Jewish history is a complex and fascinating story. Some scholars depicted it as a long period of suffering and isolation that culminated in the Holocaust and only ended with the founding of the state of Israel. In recent decades a more balanced perspective has found wide acceptance. Today scholars highlight Jewish agency and different conditions in the various places Jews settled without downplaying anti-Jewish prejudice and violence. A recurring theme in this course concerns the relationship between individual Jews and Jewish communities, and on a broader level, the perception and treatment of Jews by societies and states. As Jews in Western and Central Europe "left the Ghetto" around 1800 and became citizens of states, they redefined their relationship to Jewish communities in strikingly different ways. Some Jewish women and men

emerged as agents of change, others resisted change. We will explore Jewish "responses to modernity," ranging from assimilation, Zionism, and socialism to migration. While many Jews in Western Europe and the United States prospered, the lives of Jews (and their neighbors) in Eastern Europe and the Ottoman Empire were shaped by social and economic crisis (albeit not constantly and not everywhere). For the twentieth century the course will concentrate on three major events that had a dramatic impact on Jews, especially in Europe: the First World War and the collapse of the large multiethnic Empires in Eastern Europe, the Holocaust and the founding of the first modern Jewish state, Israel.

JST 120: New Testament

3 Credits

CAMS 120 / JST 120 / RLST 120 New Testament (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. This course provides an introduction to the collection of early Christian writings that make up the New Testament. It begins with an examination of the first-century context in which these writings took shape—one overshadowed by the Roman empire, influenced by Hellenistic culture, and based, above all, on varieties of Judaism. From there, the course takes up a few guiding questions. How, in this ancient context, did the first Christians understand and portray the figure at the center of their communities, Jesus of Nazareth? What do the New Testament writings reveal about the beliefs and aspirations of these communities as they advanced a movement that would, in time, become among the most consequential in world history? By the end of the course, students will have gained knowledge of the historical context of New Testament writings and an understanding of why the New Testament has been such an important and influential collection of writings.

JST 121: History of the Holocaust 1933-1945

3 Credits

This course focuses on the history and historiography of the Holocaust from 1933-1945. In addition to cultivating intellectual skills, such as critical analysis and concise presentation, the primary purpose of this course is to provide an in-depth overview of the Holocaust. The course will touch on various aspects of the Holocaust, including the function of the "Ghettos", the role of the mobile killing units, extermination camps, Jewish resistance, the role of the Allies, Holocaust trials, and the question how the Holocaust can be compared with other genocides. The course will analyze the Holocaust using historical, literary, and philosophical approaches.

JST 122: Apocalypse and Beyond

3 Credits

Apocalypse and Beyond is a topic (and title) meant to suggest that apocalyptic imagination about the end of the world, first begun in the Ancient Near East with certain Jewish and Christian writings, is constantly re-envisioned for each new age. Apocalyptic literature and world views are frequently produced by marginalized groups who perceive themselves to be persecuted, and who envision a violent (often divine) intervention, which alone will bring justice. In Part One of the course, we will examine the ancient literary genre of apocalypse, which was popular in the Ancient Near East from around 200 BCE to 200 CE, especially in Jewish and Christian writings both in the Bible (e.g., Daniel and Revelation) and outside of it (e.g., First Enoch, the Apocalypse of Peter, and the Apocalypse of Paul). The authors of these apocalypses expected the evil age in which they were living to dramatically end in their lifetimes; although that did not happen, apocalyptic thinking became foundational to the three world religions stemming from the Near East: Judaism, Christianity, and Islam to varying degrees. In Part Two, we will examine the ideology, sociological underpinnings and some historical examples of apocalyptic groups and movements in medieval to modern times, and look at the impact that apocalyptic world views have had on the secular world, including philosophy, political movements, and popular culture, such as movies.

JST 123: History of God: Origins of Monotheism

3 Credits

This course examines the early history of God; that is, the concept of the divine as a single supreme being. In particular, it focuses on the origins of monotheism and the development of its three major traditions in the Near East: Judaism, Christianity, and Islam, from their respective beginnings to around 1000 C.E. The course will begin with an analysis of the polytheistic religious milieu of the Ancient Near East in the second and first millennia B.C.E., and will consider the question of how, when, and why belief in one God first appeared in ancient Israel. Various modern theories about the origins of Israel's national God (Hebrew Yhwh/Yahweh and Aramaic Yhw/Yaho) will be analyzed, with careful attention to the evidence of ancient texts and archaeology. Following a discussion of the nature of the religion(s) of early Israel, the course will then turn to the development of Judaism as the world's first monotheism. It will then examine the subsequent emergence of Christianity in Roman-era Palestine and Islam in Late Antique Arabia, with a brief glance at the

Persian religion of Zoroastrianism, which shares some commonalities. Finally, the course will compare and contrast some of the major beliefs, practices, and significant historical trends and movements within the first centuries of the three major monotheisms.

JST 124: Early and Medieval Christianity

3 Credits

This course provides an introduction to the history of Christianity. It traces, specifically, the development of the Christian movement from its beginnings as a small Jewish sect in Jerusalem to its unlikely emergence as the religion of the Roman Empire and, finally, its subsequent spread and development in Europe, Asia, and Africa. In form and structure, the course is historical, following figures and events in a more or less chronological sequence and taking up questions of causality, influence, and social identity. Yet the course is also concerned with the ideas, concepts, and philosophical viewpoints that have shaped Christianity and given it a certain intellectual coherence over time. The course begins with first-century construals of messianic identity and also with the figure of Jesus, as he was portrayed in the New Testament gospels. It then follows the first generations of the Christian movement, considering it within the context of first-century Judaism and the early Roman empire. Topics include persecution, martyrdom, and the important contributions of Origen. The middle section of the course looks at the second, third, and fourth centuries through three lenses, as it were: the office of bishop, the rise of monasticism, and the realities of empire. Bishops, monks, and emperors all shaped Christianity in essential ways, creating a rich and complicated spiritual, moral, theological, intellectual, and geo-political legacy for generations to come. The final third of the course looks at the development of Christianity beyond the fourth century in geographical groupings including churches in Africa, Asia, the Middle East, western Europe, Byzantium, and the Slavic lands. It is hoped, in all of this, that students will gain an understanding not only of Christian history but also of what made - and what makes - Christianity a distinctive and influential religion.

JST 128N: The Holocaust in Film and Literature

3 Credits

This class studies how art, literature, film, and other media can help us to gain a perspective on one of the most horrific events in human history, the Holocaust: the genocidal murder of more than six million men,

women, and children (mostly Jewish) under the Nazi regime during World War II. We will also examine the theoretical questions involved in any attempt to capture what appears to be beyond our comprehension, in terms of moral outrage and the sheer scale, inhumanity, and bureaucratic efficiency. To this end we will study literary works, such as Primo Levi's *Survival in Auschwitz*, films such as Steven Spielberg's *Schindler's List*, Roman Polanski's *The Pianist*, and Roberto Benigni's *Life is Beautiful*, as well as photographs, poems, artworks, installations, museum architecture, the design of monuments and other artifacts. We will also examine questions of memorialization (Holocaust museums and memorials), national guilt, survivor's guilt, stigmatization, and the ethics of historical representation.

JST 131: Jewish Literature: An International Perspective

3 Credits

Literature of the Jewish tradition in various cultures and contexts, such as Europe, Israel, Islamic countries, and the Americas. JST 131 (CMLIT 110) Jewish Literature: An International Perspective (3) (GH;US;IL) (BA) This course meets the Bachelor of Arts degree requirements. CMLIT 110 (JST 131) will provide an introduction to the multiple worlds of Jewish experience and the different literatures they continue to inspire. Jewish literary creativity has varied widely with the personal and communal experience of writers in many parts of the world, and in many different time periods. Readings usually range from the first Jewish literary text, the Hebrew Bible, to twentieth- and twentieth-century works, including writings about the Holocaust. The course typically includes units such as Jewish writing and culture in Eastern Europe, in the Americas, in Spain during the Middle Ages, and in Israel and the Middle East today. The material may be organized chronologically, thematically, or by regions or languages. Texts that critique or apparently suppress Jewish identity, as well as texts with representations of Jews by writers of other heritages, may be included for comparative purposes. We will include writings by Jewish authors who have written in languages usually associated with Jewish tradition (such as Hebrew and Yiddish) and in other languages (such as Spanish, Arabic, German, English, etc.). Topics discussed in the literature may focus on questions of Jewish identity and continuity, the situation of Jews as a minority people, the immigrant and diasporic experience, representations of the Holocaust, and the establishment of Israeli culture as a mixture of several traditions. We will question generalizations about the meaning of "Jewish" by showing the wide range of characteristics associated with Jewish literary productions, and the great diversity of depictions of Jews and Jewish lifestyles, in different times and places. In addition to our primary focus on literary texts, we may include examples of other cultural productions (film, music, the visual arts, philosophy, etc.). CMLIT 110 (JST 131) counts towards the Comparative Literature major and the World Literature minor. No prior knowledge of Jewish tradition is required, and General Education

students are welcome. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and the United States and International Cultures requirement.

JST 132: Jewish American Literature

3 Credits

This course will provide an introduction to Jewish American literature through a historical survey of the tradition's key texts, figures, and themes. The course will focus on the defining aspects of the literature and on what the literature "thinks" about Jewish American culture and identity. But rather than assuming a unity to Jewish-American culture, this course will use Jewish literature to seek ways of articulating and representing both the points of cohesion and the points of divergence that characterize Jewish life in America. The United States has absorbed large numbers of Jewish immigrants hailing from many parts of the world, holding many different ideas about Jewish practice, and affiliating themselves with many different political, social, and cultural traditions. Moreover, Jews have settled and made homes in a wide variety of American communities. This course aims to explore Jewish American culture's marked diversity by offering a literary window onto the major fault-lines running through Jewish American culture: lines demarcated by gender, by political affiliation, by geography, by pre-immigration community by religious practice, by attitude toward world Jewry, by national allegiance, and by minhag (or custom), to name just a few. The class therefore provides an opportunity to consider the constitution, origin, and development of Jewish American's identity and social formations by looking at how that identity and those social formations exist and what they "do" in literature written by and about Jews in America. Materials will consist predominantly of primary texts, including prose fiction and nonfiction, poetry, drama, and film. Course methodology will emphasize the close reading of these texts. The course complements offerings in Jewish Studies and English, and it will satisfy the GH and US requirements. Most obviously, the course will offer students of Jewish literature, world literature, and American literature an opportunity for contextualization. It enables students in Jewish Studies to study the rich literature of American Jews, and it adds to courses covering Jewish American history, religion, and culture. The course offers students in English a valuable, sustained introduction to an important U.S. and world sub-culture.

JST 135: Ethics in Jewish Tradition and Thought

3 Credits

This course takes as its starting point the idea that modern ethical frameworks are deeply rooted in the soil of older traditions. By examining the development of Jewish intellectual traditions and their roots in the Bible, it provides students with an opportunity to study ethics in a philosophically textured, culturally rich, and historically informed way. And by focusing on Jewish engagement with the Bible, the course illuminates other traditions that derive from biblical monotheism: for example, those associated with Christianity, Islam, and the Enlightenment. The first part of the course takes up the idea of tradition and includes a study of biblical texts that serve as the foundation for key moral concepts. Following the traditional division of the scriptures, it examines questions of human identity and responsibility in the Torah, social ethics in the Prophets, and the quest for wisdom in the Writings. The final topic in this unit is the development of ethical tradition among the great sages of Jewish antiquity. The second unit shifts focus to the appropriation of tradition in modern Jewish thought. After reviewing important developments in Jewish thought in the medieval and early modern periods, it turns attention to the ways that some recent figures have addressed perennial concerns in light of commitments and ways of being that are integral to Jewish identity. By reading closely the works of such seminal thinkers as James Kugel, Joseph Soloveitchik, and Abraham Heschel, we will gain a deep acquaintance not only with important vocabulary but also with the ways that traditional words and concepts may be used dynamically to produce fresh ways of looking at questions in moral philosophy.

JST 143N: History of Fascism and Nazism

3 Credits

This course studies the developments of right-wing totalitarianism in the twentieth century with special emphasis on Fascist Italy and Nazi Germany, which provided the roots for fascist developments in the modern world. The course concerns itself with understanding the social, political, and economic contexts of fascism, its governing assumptions, ideals, and values, how it worked in practice, and its consequences and historical implications. Another focus will be on the question of why these illiberal, anti-democratic, and ultimately murderous regimes appear to have appealed to many groups during the 1930s and 1940s, not only within Italy and Germany, but also within broader European society.

JST 151: Introductory Biblical Hebrew

3 Credits

Fundamentals of Biblical Hebrew grammar, syntax, and vocabulary. J ST (CAMS/HEBR) 151 Introductory Biblical Hebrew (3) The aim of CAMS/ J ST/HEBR 151 is to introduce students to the fundamentals of Biblical Hebrew as quickly and thoroughly as possible. Biblical Hebrew is the language in which the Old Testament was written, between the period of approximately 1200-200 B.C.E. This focuses primarily on the morphology and syntax of Biblical Hebrew. Drills on each point of grammar, as well as translation of sentences from Hebrew to English and English to Hebrew, and brief passages taken from the Bible are the basis of the student's homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of the Bible. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS/J ST/HEBR 151 will prepare students to continue with CAMS/J ST/HEBR 152 and then 400-level courses. The course goals, in addition to providing the students with a firm grounding in Hebrew grammar and vocabulary, include giving the students a basic understanding of the history of the Biblical text. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to the Biblical texts themselves, which together form such an important piece of literature.

Cross-listed with: CAMS 151, HEBR 151

JST 152: Intermediate Biblical Hebrew

3 Credits

Intermediate study of Biblical Hebrew grammar, syntax, and vocabulary. CAMS (JST/HEBR) 152 Intermediate Biblical Hebrew (3)(BA) This course meets the Bachelor of Arts degree requirements. CAMS/JST/HEBR 152 continues from CAMS/J ST/HEBR 151, which is a prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Hebrew vocabulary, morphology,

and syntax to enable them to read unadapted passages from Biblical Hebrew texts (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from actual Hebrew texts, rather than composed sentences by the textbook author, so that when the students enter more advanced classes, they will find the transition to reading Hebrew as smooth as possible. In tandem with the increasing emphasis on Hebrew written by ancient Hebrews, the course will continue to focus on the linguistic and cultural background for the texts that the students read. Students will be evaluated on a combination of written work, including frequent quizzes, tests, homework completion, and course attendance and participation. CAMS/J ST/HEBR 152 will prepare students to continue with courses at the 400-level.

Cross-listed with: CAMS 152, HEBR 152

Bachelor of Arts: Humanities

JST 153: Dead Sea Scrolls

3 Credits

The discovery of the Dead Sea Scrolls was one of the most important archeological discoveries of the 20th century. This collection of over 900 scrolls found in caves by the Dead Sea includes the oldest manuscripts of the Hebrew Bible (Old Testament) and hundreds of other Jewish writings dating from the 2nd century BCE to the 1st century CE, many of which were previously unknown. In this course we will examine select examples of the Dead Sea Scrolls in order to understand how these writings have revolutionized our understanding of the formation of the Bible, Jewish groups in the Greco-Roman period, and the origins of Christianity and rabbinic Judaism, and why there is so much scholarly debate around them. We will consider such issues as Jewish law, biblical interpretation, messianism, apocalypticism, prayer and rituals. The course will include discussion of the archaeology of the Qumran settlement and caves, scribal practices and the production of scrolls, and scholarly methods in reconstructing and interpreting ancient texts. We will study this one sectarian movement as a microcosm of the issues related to Jewish identity in this critical period that birthed both rabbinic Judaism and Christianity. We will focus on the beliefs and practices by which this movement constructed their particular community identity and worked out their place in the world.

JST 160: Sacrifice in the Ancient World

3 Credits

Sacrifice (from Latin sacer "holy + facere "to make") is one of the most prevalent yet troubling aspects of religion. Its destruction and violence is often at odds with other rituals and core understandings within a religion, so why is it done and what good does it do? For the sacrificer, does it represent a gift to the gods, a renunciation, an exchange, a surrogate, or something else? This course will examine some competing definitions

and theories of sacrifice, as well as its manifestations in the cultures and religions of the ancient Mediterranean world, especially those of Greece, Rome, Egypt, Mesopotamia, Hatti, Israel, and Phoenicia. A brief look at religious sacrifice elsewhere, such as ancient Mesoamerica and India, will conclude the course.

JST 194: Jerusalem: Sacred and Profane

3 Credits

Jerusalem, a city sacred to Judaism, Christianity, and Islam, is often depicted as the spiritual and physical center of the world. Throughout its 5000-year history, Jerusalem has attracted diverse cultures, empires, and peoples who have vied for control of this city that is both religiously significant and a very ordinary site of urban life. Jerusalem: Sacred and Profane surveys the archaeological, religious, cultural, political, social, and historical record of Jerusalem in the ancient, medieval, and modern periods. We will explore a series of themes in the city's history: the built urban environment, political power in and over the city, sacred sites and

pilgrimage, the everyday experiences of Jerusalemites, the changing cultural meanings of the city across various religious and national traditions, and war, violence, and memory in the urban landscape. The significance of Jerusalem's past, its impact on contemporary society and politics in the modern Middle East, and differing visions for this contested city's future are examined in light of various interpretations of the historical evidence.

JST 235: The Church and the Jews

3 Credits

Examination of the relationship between Western church and the Jews from the First Century to Enlightenment. HIST 235/HIST 235 The Church and the Jews (3) (US;IL)(BA) This course meets the Bachelor

of Arts degree requirements. This course will examine a key aspect of western history - the complex relationship between the Western (Roman Catholic) Church and the Jews, from the first century to the present. We will analyze ideas and policies regarding Jews as expressed in different realms, from theology and canon law to church art and popular preaching. We will also examine how changing conditions led to striking changes in church attitudes and policy, and how church policy was often at odds with popular sentiments about Jews. The course will be designed to enable students to grasp the fluidity of attitudes over time, and the interplay of economic, social, political, and theological factors; to grasp of essential elements of a key area of conflict in western culture; and to develop their skills in the close reading of primary texts. Students will be evaluated on the basis of three quizzes and a final exam. The course would offer a chance for students to develop perspectives previously gained in a number of courses, particularly HIST 001 and 002 (The Western Heritage), RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), HIST 107 (Medieval Europe), HIST 407 (Early Medieval Society), and J ST 010 (Jewish Civilization). It would complement such courses as HIST 108 (The Crusades), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), HIST 414 (Renaissance and Reformation), J ST 111 (Early Judaism), J ST 110 (Hebrew Bible), RL ST 120 (New Testament), and RL ST 124 (Early and Medieval Christianity). The course will count for 3 credits toward a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major.

JST 260: The Middle East in Film

3 Credits

Through the medium of film, HIST/JST 260 examines the contemporary and historical transformation of the Middle East from the Ottoman period, through the British and French mandates, and the eventual establishment of the modern nation-states. This course analyzes the political-religious-social tensions of this region, and through film illuminates many of the conflicts in a different light. This course engages in specific film define certain moments in the contemporary history of the Middle East. The films reveal the culture perception of politics, the Arab-Israeli conflict, views on and of religious and ethnic minorities, women and gender issues, various elements of political Islam, and the generational shift in politics and culture. The course will watch, analyze and engage in films (with subtitles) from - among other states - Iran before and after the revolution, Turkey, Israel, Palestine, Egypt, and Tunisia.

JST 320N: Language, Ideology, and Propaganda

3 Credits

The course gives students hands-on tools for investigating ideology and propaganda through the analysis of a variety of historical and contemporary texts. With the help of different theoretical perspectives, students learn how to analyze ideologies that can be found in texts, identify whose interests those ideologies serve, and discuss their biases, with the goal of learning how these belief systems can be used to promote and circulate specific political views (i.e., propaganda). The course begins with a historical overview of the role played by language and other meaning-making resources in the production and circulation of ideology and propaganda across a variety of historical contexts. The course will then explore contemporary practices of disinformation, and investigate alternative strategies through which to counter disinformation.

JST 409Y: Antisemitisms

3 Credits

Surveys the history of anti-Semitism from antiquity through the Middle Ages to the present. HIST (J ST) 409Y (RL ST 407Y) European Anti-Semitism from Antiquity to the Present (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course analyzes major episodes in the history of anti-Semitism and tries to clarify the motives and dynamics involved. It seeks to understand what these episodes have in common and what is unique in each case—is there a single universal, eternal antisemitism? Or are there rather 'anti-Semitismisms' each belonging to a unique historical context? Is there a single continuous line of development in anti-Semitism? What is the relationship of a particular anti-Semitism to the national culture in which it originates? We will be reading the major original texts of anti-Semitism from Roman and ancient writers, through early Christian texts and medieval Christian Blood Libels against the Jews, documents of the Spanish expulsion, Lutheran tracts, Voltaire's essays, German philosophical texts from Kant to Marx, Wagner's racial essays, the Protocols of Zion, and documents of Nazi anti-Semitism by Hitler and Streicher. The major part of the grade will depend on a short research paper which will be presented in various drafts, so that the final version represents the culmination of discussion and constructive criticism and advice. This course is a parallel course to J ST/HIST 416 (Zionist History) and J ST/HIST 118 (Modern Jewish History). This course will count toward the Religious Studies, Jewish Studies, and History majors and minors in the 400-level category.

JST 410: Jews in the Medieval World

3 Credits

Trends in medieval Jewish society under Islam and Western Christendom. HIST 410/HIST 410 Jews in the Medieval World (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. The Jews lived in widely scattered communities under Christian and Islamic rule in the medieval period. This course will examine how Jews adapted the traditions they developed in Palestine and Babylonia in the early centuries C.E. to the new conditions they encountered in Europe and the Mediterranean region from the ninth to the fifteenth centuries. It will focus on the general problem of how traditional societies survive in rapidly changing circumstances, particularly when their members are a minority population. The course will aim at developing students' skills in comparative analysis as they compare the adaptive strategies of Jews in different cultural spheres (the Franco-German region versus Spain, for example). They will also be asked to compare the different polemical stances Jews adopted vis-a-vis Christianity, on the one hand, and Islam, on the other. They will be encouraged to understand the ways in which Jews internalized certain aspects of the majority culture and rejected others. It is hoped that they will come to see how deeply Jewish history was intertwined with medieval Christian and Islamic history, despite inter-religious hostilities and the frequent need for Jews to defend against majority aggression. Students will be evaluated on the basis of two mid-term exams (the first after the survey of the Muslim world, the second after the examination of the Franco-German region) and a comprehensive final exam. The course will be linked to most of the courses taught in the field of Jewish Studies, especially J ST 111 (Early Judaism), J ST 114 (Modern Judaism), and J ST 118 (Modern Jewish History from 1492). It will also be linked to offerings in Religious Studies: RL ST 001 (Introduction to World Religions), RL ST 101 (Comparative Religion), RL ST 107 (Introduction to Islam), RL ST 124 (Early and Medieval Christianity), and RL ST 165 (Introduction to Islamic Civilization). Further, it would complement HIST 001 and 002 (The Western Heritage), HIST 107 (Medieval Europe), HIST 108 (The Crusades), HIST 407 (Early Medieval Society), HIST 408 (Church and State in the High Middle Ages), HIST 412 (Intellectual History of the Middle Ages), and HIST 471W (Classical Islamic Civilization, 600-1258). The course will count for 3 credits toward: a) the 22 credits required for the minor in Jewish Studies, b) the 33 credits required for the major in Jewish Studies, c) the 30 credits required for the major in Religious Studies, and d) the 36 credits required for the History major. It will be offered once a year with an enrollment of approximately 60 students.

JST 421: Introductory Targumic Aramaic

3 Credits

Fundamentals of Aramaic grammar, syntax, and vocabulary. CAMS 420 Introductory Targumic Aramaic (3) The aim of CAMS 420 is to introduce students to the fundamentals of Targumic Aramaic as quickly and thoroughly as possible. Targumic Aramaic, is the dialect used by Jews in the last few centuries BCE in their translations of the Bible into Aramaic. Targumic Aramaic texts remain vital within Judaism and Biblical study. This course focuses primarily on the morphology and syntax of Aramaic. Drills on each point of grammar, as well as translation of sentences from Aramaic to English and English to Aramaic, and brief passages taken from the native texts are the basis of the student's homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of actual Aramaic. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS will prepare students to work with Aramaic in related courses in CAMS, in particular those dealing with other Aramaic dialects, the Bible, and other related ancient languages. The course goals, in addition to providing the students a basic understanding of the history of the Aramaic literary tradition. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to real Targumic Aramaic texts, which are of great importance to understanding the history of Biblical textual transmission.

Cross-listed with: CAMS 420

JST 425W: Books of the Bible: Readings and Interpretation

3 Credits/Maximum of 12

Study of a biblical book/topic in terms of literary, historical, and cultural contexts, history of interpretation, and critical scholarship. CAMS (J ST/RL ST) 425W Books of the Bible: Readings and Interpretation (3 per semester/maximum of 12) The Bible is a diverse collection of writings sacred to Jews and Christians written over about 1000 years, in a variety of different genres and historical circumstances. This course allows students the opportunity to study in depth a particular book of the Bible, from either the Hebrew Bible/Old Testament or the New Testament. We will explore the literary, historical and cultural context of the book in question. A literary analysis of the book will include consideration of genre and literary devices, and a close reading of the text. A historical

analysis will consider the date of composition, its source materials, comparative traditions in other cultures, and relevant historical and cultural factors relevant to understanding the text. The course will introduce students to various other approaches to interpretation of the Bible in modern scholarship, including feminist and post-colonial critiques. We will also explore the varied interpretations and uses of the book in Judaism, Christianity, and Islam throughout history, and its influences in Western culture, including art and literature. The course will be offered once a year with varying content, and students may repeat it when taught with different content.

Prerequisite: 3 credits in CAMS or J ST or RL ST, recommended CAMS/J ST/RL ST 110 or 120; or ENGL 104.

Cross-listed with: CAMS 425W, RLST 425W
Writing Across the Curriculum

JST 426: Holocaust

3 Credits

This course is an in-depth study of the history of the Holocaust in Europe that puts special emphasis on primary sources. HIST 426 / JST 426 Holocaust (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The Holocaust stands out as the most terrible and challenging phenomenon of the 20th Century. Societies and the scholarship struggled for decades to fully grasp how much the Holocaust has questioned widely shared assumptions about modernity and progress. This course pursues the overarching question how the Holocaust could have taken place. Who were the perpetrators, victims and bystanders? How much agency did they have? How was the Holocaust organized? The course will encourage students to critically engage with the Holocaust, and will consider a variety of different kinds of sources and means of representation, including oral testimony, film and fiction, as well as more conventional documentation. After discussing some of the most important studies about the Holocaust and identifying the main historiographical debates, students will look at the origins and the evolution of the "Final Solution." The class will touch on the function of the "Ghettos," the role of the mobile killing units, the extermination camps, and Jewish resistance. The course will also deal with Jewish responses to the Holocaust, notably with attempts to enable Jews to emigrate to safe countries; with efforts to alert the public to the systematic killing after 1940; and the support especially of American Jews for Jewish survivors and DPs. Apart from discussing the historiography, students will work mostly with primary sources. Students are expected to do extensive reading for this class and prepare oral presentations on their respective paper topic. The research paper for this course will be based largely on primary sources. Apart from discussing the historiography, the sessions will concentrate on the interpretation of primary sources: - documents created by the perpetrators, bystanders, and victims; - files relating to postwar trials of perpetrators; - photographs; - representations of objects relating to the Holocaust; - memoirs by survivors; - interviews with survivors and bystanders.

JST 427: Topics in Jewish American Literature

3 Credits/Maximum of 9

An in-depth examination of important themes, writers, and/or historical developments in Jewish Literature of the United States. ENGL (J ST) 427 Topics in Jewish American Literature (3) This course will provide sustained examination of major themes, texts, and figures in the Jewish American literary tradition. The course will focus on depth rather than breadth in its analysis of the defining aspects of the literature and on what the literature reveals about Jewish American culture and identity. The United States has absorbed large numbers of Jewish immigrants from many parts of the world, holding many different ideas about Jewish practice, and affiliating themselves with many different political, social, and cultural traditions, and moreover Jews have settled and made homes in a wide variety of American communities. Close analysis of literature will therefore provide an opportunity to consider the constitution, origin, and development of Jewish America's wider cultural, political, and social contexts. Materials will consist predominantly of primary texts, including prose fiction and nonfiction, poetry, drama, and film, and the methodology will emphasize the close reading of these texts. The course complements offerings in Jewish Studies, English, and Comparative Literature. Most obviously, the course will offer students of Jewish literature, world literature, and American literature an opportunity for contextualization. It enables students in Jewish Studies to study the rich literature of American Jews, and it adds to courses covering Jewish American history, religion, and culture. The course offers students in English and Comparative Literature a valuable, sustained introduction to an important U.S. and world sub-culture and -literature.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Cross-listed with: ENGL 427

JST 432W: Gender and Sexuality in the Bible

3 Credits

This writing intensive course will examine issues of gender and sexuality in the Bible, including the Hebrew Bible/Old Testament, the Deuterocanon, and the New Testament. It will introduce students to a variety of academic approaches to the Bible with respect to a broad range of topics. These topics include: gender identity, sexual orientation, sex, marriage and divorce, adultery, monogamy and polygyny, same-sex relations, chastity and celibacy, prostitution, gender violence, pornography, fertility, procreation, abortion, divine gender and sex, incest, and many others. In covering these themes, the course will deal with some of the most challenging and often disturbing stories and passages in the Bible, the ancient library of books that is sacred to Jews and Christians and which has otherwise greatly influenced civilization for more-or-less two thousand years. Alongside a close reading of the text (philology), this course will employ historical and literary criticism, investigations into ancient material culture (archaeology), modern theoretical interpretive approaches, reception theory, and other methodologies to examine not only the biblical writings in their ancient contexts, but their interpretation and use throughout history to construct social norms.

Prerequisite: 3 credits in CAMS, RLST, or JST.

Bachelor of Arts: Humanities
Writing Across the Curriculum

JST 434: Movies, Media, and the Jewish American Experience

3 Credits

Study of Jewish American Film and Popular Culture. COMM (J ST) 434 Movies, Media, and the Jewish American Experience (3) The course examines film and other popular media, including theater, radio, and television, as important sources for understanding the Jewish experience and its impact on and relationship with American culture more generally since the late 19th century. Topics to be considered include US film and popular media as representations of Jewish history, culture, and experience; the role of Jews as prominent directors, producers, actors, and writers in their social-historical context; and the history and function of the representational modes and techniques used in these texts. A major emphasis of the course will be on analyzing film and other media texts as lenses to reflect, refract, and focus on Jewish American identity. By way of analyzing the interrelationships between filmic and other media texts and Jewish American experience, the course will attend to a number of key themes in Jewish cultural history, including Jewish life in late 19th-early 20th century Europe; immigrant life in turn of the century America and questions such as assimilation, preservation of tradition, family life, social mobility, and male/female relations; Jews in show business, organized crime, and sports; American Jews and the Holocaust; American Jews and Israel; Jews in the modern age; generational and denominational differences among Jews; and Jews and anti-Semitism.

Prerequisite: A previous course in Jewish Studies, Film Studies, Media Studies, Art, Music, English, or Comparative Literature.
Cross-listed with: COMM 434

JST 439: Women and the Holocaust

3 Credits

Analysis of women's experience in the Holocaust and exploration of the role of gender in Holocaust Studies. J ST (HIST/WMNST) 439 Women and the Holocaust (3) Most of the early study of the Holocaust focused almost exclusively on the experiences of Jewish men. It was men who wrote the first and most widely read Holocaust memoirs and men who produced the first studies of the Holocaust. The first question motivating this class is thus what we can learn from examining women's experiences. Is it possible that the ghetto, the camp, and the forest look different from women's perspectives? Are there factors we miss when we read primary documents written by only half of the participants in these historical events? Beyond this, however, our exploration will also lead us to look more broadly at gender as a category of analysis. What do we gain by bringing questions of gender to bear on our study of the Holocaust? Are there any ethical concerns that should inform our approach?

Prerequisite: J ST 010 or J ST 121 or HIST 121 or consent of program
Cross-listed with: HIST 439, WMNST 439

JST 443: Jewish Histories of the Middle East

3 Credits/Maximum of 6

Jews have been part of Middle Eastern societies for thousands of years. They flourished at times and endured hardships at others, but they have been part of every significant social and cultural transformation of the Middle East. In this class, students will discuss the significant contribution of the Jewish community to the development of various Middle Eastern societies throughout the centuries. Students will critically

read and analyze primary sources and secondary literature. We will delve into national historiographies of places such as Morocco, Egypt, and Iran-to name a few-and seek to discover a nuanced narrative of Jewish histories of the region. We will also analyze popular culture products, such as documentaries, television, and literature. The course will follow a chronological and thematic order, and will examine Jewish history in conjunction with global and interregional processes in the Middle East and beyond, such as colonialism, imperialism, nationalism, relations with the West, the formation of the modern nation states of the Middle East, and the Israeli-Arab conflict.

Cross-listed with: HIST 443

JST 450H: Genocide and Tyranny

3 Credits

This course focuses on the conceptualization and socio-political determinants of genocide and tyrannical regimes, with an emphasis on the Holocaust.

Prerequisite: PL SC003 , PL SC007 or PL SC014 or HIST 121

Cross-listed with: PLSC 450H

Honors

JST 457: Jewish Communities: Identity, Survival, and Transformation in Unexpected Places

3 Credits

Examines the global array of smaller Jewish communities that have flourished outside the main urban centers of Jewish settlement. JST 457 / ANTH 457 / SOC 457 Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3) (US;IL) This course addresses an understudied aspect of Jewish experience. It aims to expand our understanding of Jewish communities by focusing on those that are, alternatively, small, situated in out-of-the-way places, culturally outside the Jewish urban mainstream, or embedded in a larger society with markedly different values and traditions. These communities often constitute the points-of-contact between Jews and non-Jews, and in so doing sometimes transform Jews, non-Jews, and the relationships among them. Other such communities constitute experiments in Jewish lifeways and provide mainstream Jews with pilot projects for potential social and cultural change. This course will explore the significance of small, little-known, idiosyncratic, and anomalous Jewish communities on Jewish history and culture, and draw on them to instruct students on the social and cultural processes of small or unusual communities generally. The communities studied will be located both in the U.S. and elsewhere in which Jews have lived as a minority community during modern times. The course will look at the founding, growth, and decline of such communities and at their social processes and institutions. It will explore how to understand and analyze such communities, which vary from one part of the world to another. The social world of Jewish communities, large and small, is a core interest of Penn State's Jewish Studies Program. This course will complement the current offerings in Jewish Studies, strengthening the social, cultural, and contemporary perspectives available in the Program. It will provide students with an opportunity to explore individual experience and micro-level processes among Jews, and to study the dynamics of identity and survival. It will complement the current offerings in Sociology and Anthropology by affording an opportunity to focus on community-level social processes and by adding a course on contemporary Jewry. The course will integrate knowledge from a variety of sources and fields, promote intercultural understanding, and meet US and IL requirements. Materials will be

interdisciplinary, and will include ethnographies, sociological studies, population studies, histories, and personal narratives. They will include primary texts, creative works, and scholarly analyses. The assignments will be structured to facilitate preliminary experience in independent analysis, library research, or field research. The course will be offered approximately once a year. Enrollment will be limited to 30 students in order to promote active, engaged learning. Evaluations will be based on short papers and outlines that will prepare students for their final, term papers.

Enforced Prerequisite at Enrollment: Three credits in JST or ANTH or SOC
Cross-listed with: ANTH 457, SOC 457
International Cultures (IL)
United States Cultures (US)

JST 459: Writing Palestine-Israel

3 Credits

Study of literary writing of and about the Israel-Palestine conflict. This course examines the Israel-Palestine conflict through an analysis of literature written by participants, victims, bystanders, and observers. We will read literature by Arabs, Jews, and Christian; by Israelis, Palestinians, and other populations affected by the conflict; and by writers in the Arab World, Europe, and the Americas in order to develop a nuanced understanding of the conflict, its history, what's at stake for its participants, antagonists, and victims. The course will emphasize close reading and aesthetic analysis, but it will also pay attention to the ways in which literature can be used to think about history, experience, and politics. The course will survey a wide array of writing from a diverse set of global traditions, including significant figures, themes, and histories, and the course will pay attention to literature's intersections with migration history, international politics, faith, nationalism, and revolutionary liberation. The course will showcase national and religious diversity. We will focus on the relationship of writing of and about the Israel-Palestine conflict to other subfields and literary study more generally, including issues such as ethnicity, culture, religion, diaspora, gender, politics, and identity. A major emphasis of the course will be on analyzing literary texts as lenses to reflect, refract, and focus on Arab, Jewish, and Palestinian identity. In addition, by way of analyzing the interrelationships between literary representation and experience, the course will attend to a number of key themes in how we think about Diaspora, with some special emphasis on American literature about the Israel-Palestine conflict: how have American writers, and especially American writers of Arab, Jewish, and Muslim heritage, articulated their identities in relation to the Israel-Palestine conflict and the Middle East more generally, including the long history of US involvement in the Middle East? The course will cover both English-language literature and literature in translation from other languages.

Enforced Prerequisite at Enrollment: Prerequisites: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H Recommended Preparations: Some knowledge of the Israel-Palestine conflict would be helpful.

JST 468: Jewish Philosophy

3 Credits

Explores major figures and trends in Jewish philosophy and their influences on other philosophical traditions. J ST (PHIL) 468 Modern Jewish Philosophy (3) The primary objective of this course is to encourage students to have a reflective stance on Jewish thought. Students will learn what comprises Jewish thought and how it is distinguished from theology. They will learn what role religion plays in philosophical thought and what is at stake for a philosophy that emerges from a particular religion. This course will give students perspective on how Judaism links to other philosophical movements, for example, the enlightenment of the modern period. It will enable to think about Judaism from a theoretical perspective, adding a new dimension to what they might study from historical, sociological, or literary viewpoints. Some questions we will consider include: In what ways does it converge/diverge, with the philosophical strains that influence it? In what ways have particular events in history shaped Judaic thinking? Does Judaism, or Judaic thinking, have an essence? If so, what is it? What does Judaism mean for the Jews, and what does it mean for others? And finally, what role does mysticism have in the play between religion and philosophy? Students will be evaluated by written work (short papers and a longer seminar paper) and a class presentation.

Prerequisite: one course in Philosophy and/or Jewish Studies
Cross-Listed

JST 473: The Contemporary Middle East

JST 478: Ethics After the Holocaust

3 Credits

The aim of this course is to explore various ways in which philosophers have responded to Auschwitz (a signifier, or name, which is in turn not without controversy and complexity). It will examine, in particular, the promise and failure of post-Holocaust ethical theory, with attention to evil, suffering, goodness, witnessing, testimony, trauma, and human rights. Authors include Levi, Agamben, Arendt, Adorno, Levinas, Jonas, and Jankelevitch. Through reading and discussion of primary sources, this course introduces students to these philosophers' leading questions, methods, and conclusions, with reference to their historical context and their impact on later philosophy. The course will make these writings accessible to students without unduly presupposing prior knowledge, while also encouraging students to rise to the challenge with their own critical analysis and creative interpretations.

Kinesiology (KINES)

KINES 1: Introduction to Outdoor Pursuits

1.5-3 Credits/Maximum of 12

Introduction to Outdoor Pursuits (KINES 1/ RPTM 1) is a course that is designed to introduce the student to selected outdoor pursuit activities. The selected activities will depend on the time of the year and availability of resources. The activities could include but are not limited trail day hiking, mountain biking, backpacking, orienteering, kayaking, canoeing, cross country skiing, or to rock climbing experiences. All selected activities will follow the same basic format of skill development and training procedures, history and philosophical underpinnings of the activity, available written resources and professional organizations related to the activity, logistical equipment preparation, appreciation of environmental impact of partaking in the selected activity, safety management / risk assessment and future opportunities to participate in the activity. It is a purpose of this course to allow the student to explore different outdoor pursuit activities and then to make a more informed decision as to which activities they might choose to further develop their skill base and competency necessary to partake in the activity at a more advanced level on a life long basis. Through opportunities to develop camaraderie through collaborative work/ teamwork, students practice safe participation in the selected activities with attention to environmental impact. Students will experience a common skill base from which to engage in the activities. After completion of the course, students are encouraged to engage in adventure recreation programs, and other appropriate courses to help with the continued development of life skills. This course fulfills credits toward the GHW General Education requirement.

KINES 4: Principles of Fly Tying and Fly Fishing for Trout

1.5 Credits

KINES 4 is a unique course designed to give students of all experience levels an introduction to the lifetime sport of fly fishing. The purpose of the course is to present the students with the many aspects of fly tying and fishing for trout, so that they can enjoy outdoor activity for the remainder of their active lives. In KINES 4, students acquire the knowledge, skills and tactics they will use to solve problems in the constantly changing natural environment. Instruction includes, but is not

limited to: conditioning, basic fly tying, tying local patterns, appreciation for conservation techniques, equipment use/care/selection, fly casting, aquatic entomology, stream hydrology, fly fishing tactics, basic knots and experiencing local streams. Because of the geologic location, students have access to the premiere fly fishing streams in the eastern United States. These streams are a destination for fly fishing minded individuals and provide an outstanding opportunity for practice of a new healthy activity. In this active course, students apply what is learned to enhance the basic understanding of the sport and to experience the full complement of wellness components. Students will find that they have enhanced their quality of life now and for the remainder of their lives. Appreciating the rich history, this course models that of the first accredited university fly tying and fishing course started in the 1930s by Mr. George Harvey, known as the "dean of fly fishing" at Penn State ("Fly Fishing U").

KINES 6: Cycle Conditioning

1.5-3 Credits

KINES 6 introduces students to the performance of cycling as a lifelong activity that helps maintain and enhance physical fitness and overall wellness. This course provides the information that the student needs to understand, organize, plan and implement a physical fitness program that features cycling as a primary activity. The centerpiece of this course is a progression of individually-paced rides of varying lengths that are conducted over various terrains and potentially utilizing both indoor and outdoor training. Cycle conditioning typically includes a longer group trail ride utilizing designated cycling trails such as the Rails to Trails system. Students may experience opportunities to attempt individual time trial, interval training, and indoor, road or trail riding depending on the offering. Additionally, students are exposed to such topics as the physiology of exercise, cycling safety, goal-setting for personal health, principles and concepts of physical fitness, training methods to address different cycling goals, and nutrition and weight control. Students also have the opportunity to monitor their performance throughout the course using a variety of personal assessment inventories and instruments and are encouraged to utilize current technologies such as heart rate monitors and fitness apps. A student who completes KINES 6 will be able to identify the components of an effective physical fitness program and explain how cycling contributes to the success of this program, develop realistic fitness goals and design a cycling program to meet these goals, perform a variety of fitness cycling techniques, and understand how cycling promotes psychological well-being.

KINES 10: Techniques in Rock Climbing

1.5 Credits

KINES 10 is a course designed to give students a comprehensive introduction to the skills, safety, terminology and equipment used in the sport and recreational activity of rock climbing. This course also provides the knowledge base and experience the student needs to evaluate their

continued safe participation in rock climbing. There is an emphasis on belaying, technical systems, use and selection of equipment, climbing technique, and the metaphorical and psychological aspects of climbing. Students learn and practice proper physical aspects of climbing focusing on foundational training and conditioning through cardiovascular, strength, and flexibility movements. Important information on training, safety issues, injury prevention and treatment, and gaining appreciation for conservation and preservation of resources are included in the course. The rock climbing surface provides a conduit to promote lifelong wellness by engaging the entire body and mind to be physically challenged and mentally stimulated. Rock climbing challenges the participant to take risks, to work with others to solve problems and make informed decisions, and to learn to trust in partners. Students may be exposed to a wide range of climbing opportunities including indoor and/or outdoor experiences. In this course, students practice responsibility, cooperation, and collaborative skills. Teamwork and communication are essential components to the success of the student; students typically work together as climber, belayer (method of securing a climber by the use of a rope), and observer. The group connection is dependent on building communication and trust. Students provide constructive feedback and positive encouragement to one another during climbs.

KINES 10A: Lead Rock Climbing

1.5 Credits

Kinesiology 10A is designed to give students a comprehensive introduction to the skills, safety, terminology and equipment used in the activity of lead rock climbing. Lead climbing involves the climber placing protection to protect oneself as opposed to top roping (KINES 10). This course also provides the knowledge base and experience the student needs to evaluate their continued safe participation in lead rock climbing including a strong group work ethic and practicing the responsibility, cooperation, and collaborative skills needed for safety in lead rock climbing. In Lead Rock Climbing, students are introduced to advanced climbing techniques such as: footwork, hand holds, and body positions and benefit from immediate encouragement and assessment from the group. Lead climbing challenges the climber to be more critically aware of making good decisions in clipping, route choice and direction, back-stepping if necessary, body positions, equipment use, and safety. This class delves more deeply into issues of kinesthetic awareness of the climber's relationship to the climbing surface and to gravitational forces when climbing. Students learn and practice proper physical aspects of climbing focusing on foundational training and conditioning through cardiovascular, strength, and flexibility movements. Important information on training practices, safety issues, injury prevention and treatment, and understanding the climbing environment are important aspects of the course. The climbing surface provides a conduit to promote lifelong wellness by engaging in the entire body and mind to be physically challenged and mentally stimulated. Rock climbing challenges the participant to take risks, to work with others to solve problems and to make informed decisions. Students may be exposed to a wide range of climbing opportunities including indoor and/or outdoor experiences including bouldering and more advanced rock climbing techniques.

KINES 11: Snowsports: Downhill Skiing

1.5 Credits

KINES 11 is designed to help students build overall fitness and wellness based in winter snowsports, specifically downhill skiing. Students acquire the knowledge and critical thinking skills that are essential to the development and continual evolution of a fitness and wellness plan focused on a healthy and active lifestyle that includes cold weather exercise. Students explore such topics as wellness, training principles, cold weather injury and illness prevention and management, and proper mechanics to promote safety and success on snow. Downhill skiing is a popular recreational physical activity in a global market. The early days of skiing in the United States were typified by a variety of styles and techniques, many of which were brought to this country by European ski instructors. As the equipment and the snowmaking capabilities change, these changes are translated into adapting techniques for successful skiing. Downhill skiing can be performed across all ages and skill levels; in KINES 11, students are grouped appropriately by ability, so all students can be challenged individually on snow. If done properly, downhill skiing will promote comprehensive wellness while developing important life-long motor skills. Ultimately students will learn the benefits of downhill skiing as a lifetime activity for health and wellness.

KINES 13: First Aid & Safety, CPR/AED

1.5 Credits

KINES 13 provides students with the knowledge and skills necessary to assess and recognize an emergency situation, call for help, and administer basic first aid & cardiopulmonary resuscitation (CPR) with an automated external defibrillator (AED) while maintaining appropriate personal safety precautions. Students are trained to use specific techniques that are current with the practicing standards of the American Red Cross or American Heart Association organizations. Students receive information on the prevention of injury and illness, with a focus on personal safety. Participants assess their environment and personal habits to help reduce their risk of injury and illness and risk to others.

KINES 17: Ballroom Dance

1.5 Credits

KINES 17 introduces students to ballroom dance as a social/recreational or competitive activity, with the goal of leading to an active lifestyle. This course provides the basic skills and information necessary to develop and continue one's appreciation for and interest in ballroom dancing. Dance history and etiquette, cooperation with a partner, and learning the fundamental of leading/following techniques are stressed from the beginning of the semester. As different dances are introduced (i.e. FoxTrot, Waltz, Jitterbug/Swing, Cha-Cha-Cha, Tango, Slasa, etc.), additional terminology and movement patterns are included. Students must combine skills in a variety of ways: timing movement to music, executing dance relevant movements, and interacting with partners. The remainder of the class has the option of practicing or observing. Outside opportunities for dancing are encouraged within Penn State and the local community. This class involves continuous movement for cardiovascular and muscle fitness as well as stretching and strengthening of the muscles to develop and improve posture, balance, coordination and flexibility. Students explore the importance of general fitness and wellness as paths to lifetime activity participation. The weight-bearing, low-impact benefits of Ballroom Dancing allows for maintaining bone density over time. Ballroom Dancing is a lifetime activity and provides an opportunity to encourage physical activity.

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

KINES 20: Modern Dance

1.5 Credits

KINES 20 is a beginner's level course designed to provide students with an introduction to the motor skills and cognitive understanding needed for expression through modern dance. This class explores the use of weight, time, space, and energy in relation to a release based on modern dance technique. There is emphasis placed on the development of personal movement vocabulary, experimentation, and self-expression. Modern dance is grounded in somatic practices with importance placed on finding organic or efficient ways to engage the body in movement.

By the end of the course, students will develop an appreciation for the lifetime benefits offered by expression through dance and will understand how dance can be incorporated into a lifetime pursuit of health and wellness.

KINES 24: Lifetime Sports

3 Credits

KINES 24 is divided into three equal units that are designed to give students the opportunity to explore three different sports that have the potential for lifetime participation. This format will give students an opportunity to gain a breadth of information and experience that will serve as a gateway to learning opportunities in more advanced classes that offer more depth and focus. Such sports may include, but are not limited to: racquet sports, winter sports, archery, bowling or golf. Sports that have lifetime social and wellness values may be offered due to specific location considerations such as unique facilities or faculty expertise. This course provides information not only specific to the sports included, but also on how to incorporate those sports into one's fitness plan throughout life, the potential fitness and wellness benefits of regular participation in the sport, injury prevention, and sportsmanship/etiquette to promote lifelong participation. Participating in lifetime sports will help students understand that regular activity has social, emotional, and physical benefits with potential for total well-being and a better quality of life.

KINES 25: Introduction to Court Sports

1.5 Credits

KINES 25 is a course that has been designed to give the Penn State student an introduction to selected lifetime racquet sports such as but not limited to tennis, racquetball, squash, table tennis, badminton, handball, pickleball, and/or other court sports. By the end of the course, each student will possess a basic knowledge of a selection of racquet sports that will allow them to be a knowledgeable spectator or participant over the lifespan. KINES 25 is offered in as a series of modules with two to three racquet sports selected for the course content for the semester. Selections of included sports are noted by section in the schedule of courses. The fundamental skills, strategies, etiquette, and rules will be covered for each racquet sport included in the course. Successful completion of this course serves as a 'gateway' to advanced level courses in court sports, intramural and recreational play and provide the skills and knowledge necessary to participate in a lifetime activity. In addition to acquisition of knowledge and skill in a variety of racquet sports, students will examine the level of fitness necessary for successful participation in such sports, the potential fitness benefits of participating in racquet sports on a regular basis, and the social benefits associated with the betterment of one's well-being and quality of life. Furthermore, students will explore proper training techniques, injury prevention, and fitness

habits that may aid their enjoyment of a variety of racquet sports in pursuit of wellness over the lifetime.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Crit and Analytical Think

KINES 27: Badminton

1.5 Credits

KINES 27 is a course designed to give the student the understanding, knowledge and skills to begin an exploration of the game of badminton. While the primary focus of this course is shot development and acquiring an understanding of rules, regulations, and terminology, subsequent effort will emphasize the development of movement skills and a progression from rallying to game play. By the end of the course, each student will possess a basic knowledge of the game of badminton that will allow them to be a knowledge spectator or participant in the game of badminton over the lifetime. KINES 27 delivers badminton as a lifetime sport. Students will examine such content as the minimum level of fitness necessary for successful participation in the game of badminton, the potential fitness benefits of participating in badminton on a regular basis, promoting lifetime wellness through activity, and the social benefits associated with the betterment of one's well-being and quality of life. Perhaps the most unique feature of Badminton is the regular on court practice. Each week during this course, students will have a chance to apply the skills they have learned during the week on an actual badminton court. This situation creates an ideal practice areas for the student badminton player to become acquainted with the situational application of badminton skills and to engage in and promote community in badminton.

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

KINES 29: Golf I

1-1.5 Credits

KINES 29 is a beginner's level course designed to give students the understanding, knowledge and skills to begin an exploration of the game of golf. While the primary focus of this course is the short game, 100 yards and in to the green, students will also develop proficiency in short and mid-range irons. By the end of the course, each student will possess a basic knowledge of the game of golf that will allow them to be a knowledgeable spectator or participant in the game of golf. KINES 29 also explores golf as a lifetime sport. Students will examine the level of fitness necessary for successful participation in the game of golf, the potential fitness and wellness benefits of participating in golf on a regular basis, and the social benefits associated with the betterment of one's well-being and quality of life. During this course, students will have a chance to apply the skills they have learned during the course through practicing the game on an actual golf course. This opportunity creates an ideal practice area for the student golfer to become acquainted with the situational application of golf skills and the decision-making and problem-solving skills needed to manage the golf course including the various hazards.

KINES 29B: Total Golf

1.5-3 Credits

KINES 29B is a course that provides the information needed to understand, prepare for, and execute the game of golf and includes mandatory participation in travel during Spring Break. Students in this course work to appreciate the history of the game of golf, gain appreciation for etiquette and ethical play, learn and implement USGA Rules of the Game, practice golf-specific physical conditioning and mental strategies, and develop the swing for various conditions. This course is designed for students who have at least played golf. The main focus during active rounds of golf within the course is not the golfer's score, but the sportsmanship, ethical behavior, and etiquette displayed while demonstrating pace of play. KINES 29B emphasizes golf as a lifetime sport of high integrity. Students will examine the level of fitness necessary for successful participation in the game of golf, the potential social wellness benefits of participating in golf on a regular basis, and potential effect on one's quality of life. Students apply the knowledge and skills they have learned during the course through playing multiple rounds of golf on a golf course. This opportunity creates an ideal practice area for the student golfer to become acquainted with the situational application of golf skills and the decision-making and problem-solving skills needed to manage the golf course while balancing the mental game, ever important etiquette, and displaying ethical behavior and sportsmanship. During the course, students experience golf and good sportsmanship in a social, yet competitive situation. Students receive group and individual practical instruction in addition to learning theoretical knowledge. For completion of this course, students are required to travel with the class during Spring Break, generally to the Southeastern United States; specific details including location and costs are displayed on the section information on the schedule of courses.

KINES 42: Ice Skating

1.5 Credits

KINES 42 is a course focused on the development of basic ice skating skills, and introducing a new physical fitness activity option into the lifestyle of the Penn State student. In the course, students develop balance and control while performing the basic skills necessary for the execution of many ice skating maneuvers for use in recreational skating or in learning to play hockey and/or figure skate. Skills are acquired through the use of exercises and patterns designed to strengthen the fundamentals of skating and to further develop balance, edge control, and confidence while participating in the activity. Such skills are developed and reinforced through off-ice practices to enhance the components of physical fitness, enhance balance, and to promote healthy behaviors in general fitness and wellness. Students may have the opportunity to work as partners and in small groups to balance the individual efforts through peer support and involvement. This course provides the necessary skill foundation for participation in forms of ice skating such as hockey, figure and/or recreational skating activities. In addition to the core component of physical skill development, the student has an opportunity to acquire an enlightened appreciation and understanding of the skill and art of ice sports and enhance general wellness and quality of life.

KINES 45: NAUI Basic SCUBA

1.5 Credits

KINES 45 introduces students to the fundamental academic concepts and practical skills of SCUBA diving as described by NAUI (National Association of Underwater Instructors) standards. Students explore the importance of fitness and wellness and their personal fitness needed to succeed in SCUBA. Water safety and emergency response skills are emphasized. Students must be able to tread water, swim the front crawl for an extended time, and be able to swim underwater for a length of the pool. This course addresses academic elements and applied sciences such as: the gas laws, Archimedes' principle, physics (light, sound, heat, aquatic pressure relationships), physiology (arterial gas embolism, miscellaneous barotrauma, decompression illness, hypo and hyperthermia), dive planning, equipment configuration and function, environmental considerations (salt vs. fresh water, dangerous plants and animals, water temperature and visibility, and altitude). In addition, this course introduces practical confined water skills including: basic skin-diving skills, fundamental SCUBA skills (regulator clearing and retrieval, emergency out of air ascents, buoyancy control, rescue techniques, ditch and don of gear, underwater communication, and proper partnership), and equipment preparation and assembly. Students may only earn credit in either KINES 45 or KINES 45A.

Enforced Prerequisite at Enrollment: Meet NAUI standards and/or by permission of the instructor. and Students may only earn credit in either KINES 45 or KINES 45A.

KINES 46: Squash I

1-1.5 Credits/Maximum of 1.5

KINES 46 is a beginner's level course designed to provide students with the motor skills and cognitive understanding necessary to successfully compete in the game of squash. While the initial focus of this course is development of racquet skills, acquiring an understanding of rules, regulations, and terminology are integral to the process in learning squash. Subsequent effort will emphasize the development of movement skills, progression of racquet fundamentals, and application of the above to managing game situations. Here, students will learn to recognize, comprehend, and develop on-court strategies, and will learn to employ

these tactics in game play. By the end of the course, each student will possess a basic knowledge of the game of squash and sound racquet fundamentals that will allow them to be a knowledgeable spectator or participant in the game of squash. This will serve as a "connector" to, not only advanced levels of squash, but other forms of racquet play as well. In turn, this will facilitate the discovery and appreciation of the significant lifetime benefits offered by all racquet sports. Finally, KINES 46 examines squash as a lifetime sport. Students will explore the level of fitness necessary for successful participation in racquet sports, the potential fitness benefits of participating in squash on a regular basis, and the social benefits associated with the betterment of one's well-being and quality of life. Furthermore, students will explore proper training techniques, injury prevention, and fitness habits that may aid their enjoyment of squash as a lifetime pursuit of wellness.

GenEd Learning Objective: Key Literacies

KINES 47A: Beginning Swimming

1.5 Credits

KINES 47A introduces students who are beginning swimmers to the performance of swimming safety and skills that can be used as lifelong activities. Students will learn and practice a progression of swimming related skills designed to acclimate the new or beginning swimmer to the aquatic environment. An introduction to personal safety skills provides the students with knowledge necessary for safe behavior in an aquatic setting. The course provides basic knowledge of hydrodynamic principles that will identify a kinetic awareness at various water depths. KINES 47A may also introduce students to a variety of aquatic fitness activities that include jogging in the water and water aerobics. As swimming and basic aquatic fitness may play a role in lifetime activity, fitness, and wellness, students learn valuable personal fitness knowledge and principles and how to implement them. Though the importance of water safety and basic survival tactics is paramount to the course, so to is the appreciation for self-care and wellness over the lifespan and possessing the tools to have a rich quality of life.

Recommended Preparation: Students should be comfortable in shallow and deep water and be moderately proficient in front crawl, elementary backstroke, sidestroke, and breaststroke.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

KINES 47B: Intermediate Swimming

1.5 Credits

KINES 47B introduces students who have attained moderate swimming skills and knowledge to advanced swimming strokes. Aquatic activities are introduced as they relate to one's lifetime for maintenance of physical health and psychological well-being. Students learn and practice a progression of swimming skills designed to promote efficiency and fitness in the water. Personal safety skills provides the students with knowledge necessary for safe behavior in an aquatic setting. Students are exposed to a variety of aquatic fitness activities that include walking and jogging in the water, lap swimming, and water aerobics. Students also experience recreational aquatic sports (i.e. water polo, volleyball) to allow them to participate independently outside class. Though the

importance of water safety and basic survival tactics is paramount to the course, so too is the appreciation for self-care and wellness over the lifespan and possessing the tools to have a rich quality of life.

Enforced Prerequisite at Enrollment: 47A or Students taking this course must demonstrate the ability to swim in depths of over 4ft successfully or one length of the pool without apprehension or fear.

KINES 53N: History and Practice of Martial Arts

3 Credits

History and Practice of Martial Arts, is an integrative, interdomain (GH, GHW) course. It examines the history of martial arts in which students will learn both about the origins, development, and diffusion of martial arts dating to China in the late 6th century and how it morphed and spread to different cultures including but not limited to Okinawa, Japan, Korea, the United States, Brazil, and Europe. Students will understand the philosophical bases of the martial arts as a mode of thinking combining the mental, physical, and spiritual well-being of the practitioner. For the health & wellness (GHW) portion students will also be introduced to a particular martial art (whatever the choice/specialty of the course instructor). While martial arts date to the late 500s C.E., many martial arts, like Korean Tae Kwon Do for instance, developed as a nationalistic martial art in Korea only in 1955 influenced by and becoming a synthesis of native Korean martial arts, Japanese karate, and Chinese Kung Fu. Other martial arts have similar evolutions. It's a classic product of trans-cultural influences at a particular moment in time given the histories of Korea, Japan, and the region. Examination for this will be done in class through a physical demonstration of skills for belt promotions.

KINES 56: Introduction to Martial Arts

1.5 Credits

KINES 56 is designed to give students an introduction to martial arts and the use of martial arts for lifelong fitness. Martial arts have been practiced for centuries as a method of integrating mind, body, and spiritual well-being. While improving physical fitness and emotional health, martial arts are the cornerstone of unarmed self-defense. In addition to being able to identify and enact strategies for improving situational awareness and display proficiency in basic Martial Arts for personal defense, this course will promote comprehensive wellness while developing important lifelong motor skills. Assessments will be both written and physical. Students will be expected to show knowledge of martial arts history and terminology and perform martial arts techniques covered in the course.

KINES 57: Personal Defense

1.5 Credits

KINES 57 is designed to give students an understanding of and proficiency in self-defense strategies based on martial arts techniques. Students are introduced to the culture and history of the martial arts which encompasses a wide variety of Asian self-defense systems. The skills, strategies and techniques of self-defense developed through this course can be performed at any level across all ages, and the training will promote comprehensive wellness and facilitate the development of

a lifelong fitness program. For many, the emotional and psychological benefits of learning self-defense can be as important as the physical benefits. While the focus of this course is not solely on physical fitness, it will challenge students to improve their flexibility and conditioning which will enhance their ability to defend themselves and allow for additional options when defending oneself.

KINES 61: Fitness Theory and Practice

3 Credits

Fitness theory and Practice is a course designed to give the Penn State student a complete understanding of the fundamental principles of physical fitness and the skills necessary to implement a personalized fitness program. This course will provide the information and skill needed for the student to organize, plan and implement a complete physical fitness program which can evolve over the lifespan. In this course the Penn State student will acquire the knowledge and critical thinking skills that are essential to the development of a healthful and active lifestyle. Students explore the training principles, health-related components of physical fitness, benefits of these components, and learn to use and apply established fitness guidelines. Students also consider factors which affect their performance in executing a fitness plan such as nutritional concerns, the impact of stress, choice of proper equipment, matching personal goals to proper execution, and personal motivation. In their pursuit of an active and healthy lifestyle, students assess and evaluate their personal health, fitness, and wellness using pre and post intervention strategies, and engage in physical exercise to practice concepts presented in course materials including cardiovascular, flexibility, muscular strength and endurance training techniques.

KINES 62: Introduction to Cardiovascular Activities

1.5 Credits

KINES 62 has been designed to help students become acquainted with and proficient in many types of cardiovascular activities that can be used as part of a lifelong exercise program. Students should expect to participate in a variety of activities such as, but not limited to, walking/jogging, cycling, aquatics, aerobic dance, and cardiovascular exercise machine use. Additionally, students will have an opportunity to learn skills necessary to create safe cardiovascular exercise programs while considering safety, injury prevention, and the pursuit of lifelong wellness. KINES 62 is taught in a modular format including three to five separate types of cardiovascular exercise being chosen for the course content for the semester. Students will know which courses have been selected by listings in the semester Schedule of Courses. KINES 62 will provide a unique balance of training guidelines that can be applied to the various cardiovascular activities one pursues throughout life. Fundamental guidelines for safe exercise, progression, self-monitoring, etiquette, and injury prevention will be introduced and practiced throughout the course. Cardiovascular Activities serves as a stepping stone to lifetime physical fitness and disease prevention. Self and group paced activity will allow for each individual to maximize the benefits of exercise.

KINES 63: Aerobic Dance

1.5 Credits

KINES 63, students engage in participation in various types of group fitness classes including but not limited to aerobic dance, Zumba, interval training, cardio circuit training. This active participation is joined with delivery of information addressing components of cardiovascular training, including principles, components, theories, and training strategies of physical fitness. Students learn how to prepare for and engage in group exercise activities by applying theories of kinesiology and aerobic exercise in real-world experiences. In addition to active engagement in group exercise, students experience collaborative work in small and large groups to solve complex movement problems by developing their own brand of group exercise training. Critical thinking is stressed as students negotiate the implementation of cardiovascular training principles as part of their ADL (activities of daily living). When a student completes KINES 63, he or she is able to identify the components of an effective physical training program and explain how that program contributes to lifelong wellness; develop training goals and design a wellness program to meet these goals; perform a variety of physical training techniques; and understand how the acquisition of components of cardiovascular training skills and knowledge promotes psychological well-being.

KINES 65: Lifetime Jogging

1.5 Credits

KINES 65 is a beginner's level course that seeks to give students the understanding, knowledge and skills to establish a fitness program involving jogging. This course introduces students to the performance of jogging as a lifelong activity that helps maintain and enhance physical fitness and overall wellness. It also provides the information that the students need to understand, organize, plan and implement a physical fitness program that features jogging as a primary activity. Students will examine the varying levels of fitness necessary for successful participation in jogging, the potential fitness benefits of engaging in jogging on a regular basis, and the social benefits associated with the betterment of one's well-being and quality of life. The centerpiece of this course is a progression of individually paced jogs of varying lengths that are conducted over various terrains. Students will experience participation in jogging through a variety of training techniques including interval runs, hill runs, and runs to various locations of interest dependent on each campus location and the surrounding community. These activities are complemented by lectures on a variety of jogging and fitness related topics. Students may also participate in small group-based activities that build leadership and teamwork skills. Throughout the course, students will have opportunities to apply the knowledge and skills they have learned during the course through participation in regular exercise. This opportunity creates an ideal practice arena for the students to become acquainted with situational awareness and the ability to make "on-the-fly" problem solving decisions.

KINES 67: Physical Conditioning

1.5 Credits

KINES 67 has been designed to help students build high levels of overall physical conditioning based upon a variety of training techniques such as, but not limited to, high intensity interval training, functional training, and body weight training. Students should expect to physically challenge themselves through a variety of activities focusing on aerobic, anaerobic, and resistance training. Students will acquire the knowledge and critical thinking skills that are essential to the development of a healthful and active lifestyle. Students explore such topics as wellness, training principles, health-related components of physical fitness, benefits of these components, and learn to use and apply established fitness guidelines. Students must also consider nutritional concerns and choice of proper equipment and training tactics to match one's goals. In this course, students will acquire the knowledge and critical thinking skills that are essential to the development of a healthful and active lifestyle. Additionally, students will have an opportunity to learn skills necessary to create safe, complete conditioning programs while considering safety and injury prevention. Physical Conditioning will provide a unique balance of training guidelines that can be applied to the various activities one pursues throughout life. KINES 67 may serve as a stepping stone to lifetime fitness, competition in organized athletic events, and personal

challenge activities. Students will develop a holistic approach to training for endurance, strength, and integrated activities. Students should expect to work individually and in groups to complete athletic challenges and integrate exercise, team work, and problem-solving skills.

KINES 68: Resistance Training

1.5 Credits

Resistance Training is a course designed to improve students' muscular strength/endurance and is focused on development and implementation of an effective personal strength/endurance training program for lifelong fitness. Key purposes of this class are to learn the basic principles of resistance training, to learn the role of resistance training in an overall program of health and wellness, and to acquire the necessary skills and experience to develop an individualized program for developing muscular strength and endurance over the lifespan. Students will explore the benefits of incorporating a resistance training program as part of a complete fitness plan and how implementation of such a plan may contribute to such changes as increased weight loss/control, balance and coordination, and a better overall sense of well-being. Students practice proper technique for a wide variety of training exercises and to create a personal training program. Students will explore resistance training principles through learning basic anatomy, basics in muscular physiology, and understanding the body's adaptations to training and detraining. Attention will be given to safety and injury prevention, performance enhancement through natural means and training, proper training techniques and full fitness and wellness plan creation and implementation, and strategies in progression and motivation. Furthermore, students will learn validated techniques to assess muscular strength and endurance and to compare results to normative data. Students will be encouraged to explore their personal health and fitness goals and how resistance training may be incorporated into their lifelong fitness and wellness plan.

KINES 70: Swim Conditioning

1.5 Credits

KINES 70 addresses, in both a theoretical and practical manner, the fitness benefits derived from swimming. These benefits include but are not limited to: flexibility, cardiovascular endurance, muscular strength and endurance, and weight management. Because of its non-weight bearing nature, attention is also given to the exercise value of swimming for arthritic, injured and overweight individuals. This course promotes swimming as a lifelong pursuit and at the same time, enables a student to design an individualized fitness plan, using swimming as the primary activity. Students taking this course must be proficient in swimming skills with the ability to swim distance in the pool. During the swim conditioning portion, students should expect a warm-up, training session, flexibility portion, and a cool-down phase. Training progresses through the semester and takes into account the fitness goal

(group or individual). Throughout the semester, swimming is the primary activity, but an exposure to aquatic walking/jogging/running and dryland training is also provided. Moreover, the importance of implementing training variety, proper technique and appropriate safety procedures is emphasized throughout the course with consideration for altering training to meet current and future health and fitness needs. Students have an opportunity to practice skills and behaviors that enable them to better maintain health across their lifespan, as well as to recognize the importance of social, emotion and physical health and wellness.

Enforced Prerequisite at Enrollment: Intermediate or advanced swimming level or Students taking this course must be proficient in swimming skills with the ability to swim distances in the pool.

KINES 72: Walking for Fitness

1.5 Credits

KINES 72 introduces students to the performance of fitness walking as a lifelong activity that is intended to maintain and enhance physical health, wellness, and psychological well-being. This course provides information the student needs to understand, organize, plan and implement a physical fitness program that features walking as a primary, low-impact activity. Students examine the potential fitness benefits of engaging in walking on a regular basis and the social benefits associated with the betterment of one's well-being and quality of life. This course includes a progression of individually paced routes varying lengths that are conducted over various terrains. Students experience participation in ambulation through a variety of training techniques including intervals, hill training, and walks to various locations of interest dependent on each campus location and the surrounding community. These activities are complemented by teachings on a variety of walking and fitness related topics such as the philosophy of walking and walking safety, goal-setting for personal health, principles and concept of physical fitness, the physiology of walking, assessing exercise, promoting wellness, and nutrition and weight control. Students may also participate in small group-based activities that build leadership and teamwork skills. Throughout the course, students have opportunities to apply the knowledge and skills they have learned during the course through participation in regular exercise. Students also experience techniques used to monitor performance throughout the course.

KINES 76: Introduction to Tai Chi Ch'uan

1.5 Credits

KINES 76 is designed to introduce students to Tai Chi Ch'uan, a traditional Chinese system of personal cultivation and self-defense. Students explore Tai Chi Ch'uan as a health and martial arts system which is based on more than five thousand years of observation and practice culled from the major Chinese Schools of philosophy and Chinese medical practice. Tai Chi Ch'uan is considered a physical embodiment of the supreme Taoist principles. Tai chi Ch'uan has been the focus of research in China and the west and has been found extremely beneficial for balance, arthritis, Parkinson Disease and for general health and well-being. Tai

Chi Ch'uan has gained popularity throughout the world as a means for attaining physical health and vitality and as a formidable defensive martial art. Students are introduced to the principles of Tai Chi Ch'uan by learning Tai Chi relaxation techniques and warm ups to relax the joints, right body alignment and Qi Gong exercises to promote the flow of chi, or life energy, through the body and the internal organs. Students become proficient in the performance of the first part of the Tai Chi Yang form, which is the heart of the practice. Students also explore the martial art aspects of Tai Chi Ch'uan through the practice of push hands, a two person play, and through the demonstration and introduction to the Tai Chi Sword. The martial art aspects enrich the student's experience and demonstrate the interaction of the student's chi with their environment. Students are encouraged to practice daily outside of class to progress to perform movement and related exercises on their own to create beneficial exercise for mind and body over the lifespan.

KINES 77: Yoga for a Lifetime

1.5 Credits

KINES 77 is a course designed to give students an understanding of and proficiency in yoga. Yoga for the Lifetime introduces students to the performance of yoga as a lifelong activity that maintains and enhances physical health, psychological well-being, and overall wellness. This course provides the information that the student needs to understand, organize, plan, and implement a wellness program that features yoga as a central practice. The centerpiece of this course is an integration of foundations in yoga principles and the physical practice of yoga, introducing students to classical yoga postures that address such needs as stress management, muscular tightness, skeletal alignment, and injury recovery. In addition to posture instruction, students practice breathing techniques and meditation; various breathing techniques are included to calm the mind and focus mental energy on specific tasks. Students explore such topics as the historical and philosophical foundations of yoga, nutritional practices that enhance the value of a lifelong yoga program, and Eastern-based movement traditions that complement yoga practice. Students also have the opportunity to reflect upon various aspects of yoga philosophy and the evolution of their personal practice. Upon completion of KINES 77, the student will be able to identify the components of an effective lifelong wellness program and explain how yoga contributes to the success of this program; perform yoga to develop flexibility, strength, and cardiovascular endurance; select and perform yoga postures that address specific needs (e.g., stress management, muscular tightness); describe the philosophical and historical framework that supports yoga practice; and explain how effective breathing and meditation techniques promote physical and psychological well-being.

KINES 77A: Advanced Yoga Practice

1.5 Credits

Students who enter Advance Yoga Practice (KINES 77A) have experience with yoga but are introduced to a deeper and more detailed knowledge and practice of this ancient philosophy now practiced in all contemporary societies throughout the world. Advanced Yoga is designed to deepen the student's understanding and practice of yoga, including yoga postures (asana), breath-work (pranayama), anatomy, philosophy, meditation, sequencing, and applied personal practice. This course involves basic postures (asanas) building to advanced postures, workshops and partner work, readings and discussions, development of restorative and active home practices, and personal reflection to deepen one's practice and overall wellness throughout one's 'lifespan. Students become familiar with the research that supports the benefits of yoga to the body's systems while exploring the power of changing the mind. Movement-based sessions focus purposeful practicing of yoga postures with the knowledge of their specific benefits. For instance, when learning the bridge pose students will learn that the bridge increases flexibility in the back and shoulders, strengthens the leg muscles and stimulates thyroid function. Students learn to integrate such knowledge into their personal practice of yoga. In addition to the physical practice, students will explore mindfulness, the eight limbs of yoga, restorative practices, the seven chakras, use of breath, use of bandhas, and chanting during the course. The course emphasizes connecting to the core, proper alignment, anatomy, functional movement, intelligent and interesting sequencing, moving fluidly with the breath, mindfulness, and compassion. There are opportunities in Advanced Yoga Practice to understand Sanskrit, the historical language of yoga, in relationship to meditation techniques, energy center practices, temperament determination and application of specific yogic activities.

KINES 81: Wellness Theory

3 Credits

KINES 81 is a course designed to explore the cognitive foundations of wellness. Wellness is dynamic and multidimensional. Each individual possesses a unique potential for wellness that is impacted by biological, environmental and behavioral factors. This course covers the physical components of wellness as well as the social, emotional, intellectual, and spiritual components. Students explore the health benefits of exercise, diet, and cardiovascular wellness, along with the management of lifestyle change and personal responsibility to achieve wellness across the lifespan. Social, economic, and cultural factors that may influence wellness will be discussed. Assessment activities are integrated to enable and encourage responsible decision making. Emphasis will be placed on helping students understand the impact of lifestyle on acute and chronic disorders. A portion of the course will be devoted to theoretical constructs as they apply to human behavior including the Health Belief Model, Theory of Reasoned Action, Self Efficacy Theory, Transtheoretical Model (Stages of Change), and Planned Behavior. By examining theories of human health behavior over a variety of topics, students will be able to analyze their personal health behavior and gain an understanding of the importance of prevention. Students may

participate in collaborative learning activities related to health care ethics, individual rights versus public health and safety issues, and issues related to health information on the internet. Students will explore and differentiate medical based information and marketing based information on the internet. The student who successfully completes KINES 81 will be able to identify the components of a positive healthy lifestyle, understand health risk behavior that delimits wellness, grasp the multidimensional nature of wellness, and comprehend the importance of personal responsibility in maintaining wellness.

KINES 82: Action Methods for Stress Management

3 Credits

In Action Methods for Stress Management, students explore how the mind and body are affected by stress over the lifespan. Through the course students examine the effects of stress on various body systems (i.e. cardiovascular system), learn to identify those factors that typically lead to certain mental and physical stress-related illnesses, study invasive and non-invasive interventions and techniques of stress management, and explore theoretical connections between stress and disease. Students will concentrate their cognitive learning efforts on the most common non-invasive practices that can be implemented to control stress. In the course, students identify factors that lead to stress-related illness and develop an understanding and practice of active methods of stress management, with a focus on relaxation and meditation techniques. Both formal and informal contemplative practices are introduced, with students expected to develop a daily action method, meditation and/or relaxation practice to promote stress management and overall wellness in changing life conditions. Students will have an opportunity to become proficient with action methods such as yoga, meditation, conscious eating, and regular exercise; time spent in mindfulness, stillness, silence, and nature may also be explored.

KINES 83: Exercise for Stress Management

1.5 Credits

KINES 83 is a course designed to give the student an introductory understanding of the fundamental principles of stress management. This course will provide pertinent information the student needs to understand, organize, plan and implement a preliminary stress management program. In this course, the student will follow a progression to manage stress that encourages gaining awareness of the factors that contribute to stress, gives attention to the physical/emotional/ behavioral symptoms in response to stress, encourages exploration of a variety of stress management techniques, and fosters the development of strategies that can be effective over time. Throughout the course, the student considers many components of wellness. Attention is given to specific strategies in physical wellness such as using physical activity and exercise to promote fitness, healthy eating to combat nutritional stresses, and physical relaxation techniques to explore reduction in muscular tightness, physical signs and symptoms

of stress, and elevated mental distraction. The course also includes good practices in addressing emotional wellness through improving awareness and practicing cognitive stress management techniques such as reframing and cognitive restructuring. The student is introduced to the elements of fitness and research data that support inclusion of fitness prescriptions to enhance the relaxation response and/or to produce relevant changes in hormone levels. In conjunction with this knowledge and application of such knowledge, the student learns how nutritional decisions and qualities food possesses can result in calming versus energizing effects. Combining this knowledge, the student develops skills to create a personal program to incorporate these fitness and nutritional goals into their own behaviors. As the course progresses, there is continual emphasis on the importance of awareness and the connectedness of the mind and the body. Common themes through the course are awareness, mindfulness, and acting with intention with a goal of performing more effectively in a time of stress.

KINES 88: Varsity Sport Experience

1.5-3 Credits

kines 88 introduces students to the rigors of the varsity sport experience. This course provides the information that the student needs to understand, organize, plan and thrive in the competitive environment of a collegiate sport program while integrating themselves into the university community. The intent of the course is to provide an active learning environment including service. The "corner stone" of this course is the varsity sport experience itself. Under the tutelage of some of the best instructors in the nation these student-athletes will learn how to prepare for and engage in physical and psychological contests of the highest order. In addition to engagement with the finest physiological training, students experience collaborative work in small and large groups to solve complex movement problems. Critical thinking is stressed as students negotiate the complex real world problem of being a student athlete in a collegiate athletic program. Social behavior, community and

scholarly conduct are continually addressed as the student-athletes attempt to integrate themselves into the university and local community. When a student completes KINES 88, he or she is able to identify the components of an effective physical training program and explain how that program contributes to lifelong wellness; develop training goals and design program to meet these goals; perform a variety of physical training techniques; and understand how the acquisition of sport specific skills and knowledge promotes psychological well-being. Sport-appropriate training and performing venues are provided by the university. All offerings of KINES 88 require completion of the signature assignment including, but not limited to, reflection on one's own sport participation, discussion of how participation impacted academic performance, and based on at least five principles discussed during the semester.

Enforced Prerequisite at Enrollment: Member of Varsity team sport in season.

KINES 89: Wilderness Experience

3 Credits/Maximum of 3

KINES 89 is a wilderness orientation program that is offered for incoming students to assist in their transition to life at Penn State. This course includes multiple days of backpacking in various locations. Through these activities students learn the various skills associated with backpacking and wilderness living which they can continue to use across the lifespan. Students are placed into small groups of eight to ten students with Penn State students and graduate students who mentor and lead the backpacking experience. Small group discussions are threaded throughout the course and focus on student life at Penn State. This class emphasizes teamwork, group living skills, nutritional strategies, living in the elements, wilderness ethics, and health and wellness by introducing students to the craft of backpacking, an activity that students can continue throughout their lifetime. Through this aspect of the course the aim is to help students develop skills to successfully manage their time and stress in order to better balance the physical, social and academic aspects of their lives. Throughout the class these various topics are addressed. Equipment for all activities is provided. Incoming students with all levels of experience may take this course. Both course travel and engagement in and completion of all other course content are required.

KINES 90: Indoor Team Sports

3 Credits

This course is divided into two to three units that are designed to provide students with an introduction to a variety of lifetime indoor team sports. The course may include, but is not limited to, basketball, volleyball, team handball, indoor soccer, or floor hockey. Specific location considerations such as facilities or faculty expertise may allow for other indoor team sports to be made available. This format will give students an opportunity to gain a breadth of information and experience that will serve as a

gateway to learning opportunities as a knowledgeable spectator or participant over the lifespan; students may also develop an interest to pursue participation in more advanced intramural and recreational sports activities or opportunities. This course provides information not only on participation in the included sports, but also on how to incorporate those sports into one's fitness plan throughout life and the potential fitness benefits of regular participation in the sport. Foundational principles of creating an effective fitness and wellness plan including appreciation for factors impacting performance, safety, and injury prevention are addressed. Participating in team sports will help students understand that regular activity has social, emotional, and physical benefits with potential for total well-being and a better quality of life. While the primary focus of the class is the skills, strategies and rules of a variety of indoor team sports, the underlying sub-focus of the course is the development of the social skills required to be a good team member. The commitment to a team sport requires students to encounter a collaborative atmosphere where they seek to solve complex movement problems and learn to cooperate to achieve various team goals. The improvement of individual skills is important however the successful integration of these individual skills into the team is a valuable life lesson. As the student leaves the university the lessons learned in this class will prepare him/her for "team membership" in their various areas of professional practice.

This format gives students more depth and focus on the game of ultimate and the communication skills that good teamwork requires. While the primary focus of the class is the skills, strategies and rules of ultimate frisbee, the underlying sub-focus of the course is the development of the social skills required to be a good team member. The commitment to a team sport requires students to

encounter a collaborative atmosphere where they seek to solve complex movement problems and learn to cooperate to achieve various team goals. This course provides information not only on ultimate, but also on how to incorporate ultimate into one's fitness plan throughout life and the potential fitness benefits of regular participation in ultimate. Foundational principles of creating an effective fitness and wellness plan including appreciation for factors impacting performance, safety, and injury prevention are addressed. Participating in team sports will help students understand that regular activity has social, emotional, and physical benefits with potential for total well-being and a better quality of life.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

KINES 92: Personal Fitness and Wellness

0.5-3 Credits/Maximum of 3

KINES 92 has been designed to help students build overall fitness and wellness based upon their individual condition and accommodating individual needs. Students acquire the knowledge and critical thinking skills that are essential to the development and continual evolution of a fitness and wellness plan focused on a healthy and active lifestyle. Students explore such topics as wellness, training principles, health-related components of physical fitness, benefits of these components, and learn to use and apply established fitness guidelines. Students learn skills necessary to create safe, complete conditioning programs while considering such topics as nutritional choices, safety and injury prevention. KINES 92 may serve as a stepping stone to lifetime fitness, participation in organized athletic events, and personal challenge activities. Students develop a holistic approach to training for endurance, strength, and integrated activities.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Creative Thinking
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

KINES 93: Enhancing Mastery in Physical Activity

1.5-3 Credits/Maximum of 6

The KINES 93 curriculum provides a unique approach to movement education. Rather than focusing on regimented skill development over a period of a semester, KINES 93 requires students to incorporate activity into their daily lives which may continue over multiple semesters. The curriculum is designed to bring a higher percentage of students into a movement subculture requiring understanding of and involvement in such experiences as related clubs, tournaments, competitions, engaging experiences, and/or membership in national or international organizations or workshops. Students experience opportunities to enhance mastery through a focus on specified lifestyle management, personalized wellness, and training as well as advanced movement instruction. Students experience a healthy balance of more advanced training practices and depth to performance related behaviors (e.g. nutrition, training, lifetime wellness) in the specified activity. To reinforce the subject and to encourage practice of becoming part of the subculture, students become connected to the subculture by engaging in appropriate organizations, and/or subscribing to relevant publications. This intensity of involvement is designed to produce students who become bona fide

members of a movement subculture by the time they leave the program. The expectation is that students will embody the habits, values, and attitudes needed for an active, healthy lifestyle.

Enforced Prerequisite at Enrollment: Successful completion of relevant course, adequate experience in the topic, or permission of the instructor
General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

KINES 96: Independent Study in Physical Activity

0.5-3 Credits/Maximum of 99

This course is designed to meet the needs of students to expand Kinesiology experiences beyond the designed course curriculum. KINES 096 Independent Study in Physical Activity (1-3 per semester) (GHA) Students enroll in KINES 096 to take advantage of a unique movement experience in which they plan to participate. They enroll in KINES 096 by an application process. Students who feel that they would like to fulfill their Health Science and Physical Activity (GHA) requirement by pursuing a movement form outside of the normal curricular offerings apply to the department of Kinesiology. Applications will be screened to see that they fulfill the tenants of the GHA requirement. The topics for this course vary widely from student to student. A student may be working on a personal contract that has been designed to report the progress of experiences from hiking excursions in Nepal to a mountain biking course in Crested Butte, Colorado, to walking a mile in 15 minutes after major knee surgery. Therefore, many common topics are an exception rather than a rule during any given semester. Each student completes a proposal form that requires that they describe their need for this course. They are also asked to describe the experience that they have identified in detail and also a preliminary program and implementation plan for the detailed program. This proposal is then approved or denied by the faculty member facilitating the independent study program. After the proposal has been approved or denied the student will receive a letter notifying them of their status in the course. If they have received an approval letter they are instructed in the letter to meet one-on-one with the class instructor. At the initial meeting, the proposal is discussed and when there is an agreement with the student and instructor concerning the requirements for the student to complete the course successfully a contract is written and signed by both the instructor and the student. Weekly contact, at a minimum, with the instructor is required. Student evaluation techniques shall include but not be limited to objective testing, individual projects, presentations, journals and subjective evaluation of effort involved in meeting the stated goals and objectives for the course. There are no special facilities for this course. The department plans to offer this course every fall and spring semesters, with an enrollment of up to 25 students each semester.

KINES 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

KINES 100: The Cultural and Behavioral Foundations of Kinesiology

3 Credits

Philosophical, ethical, historical, cultural, psychological, and behavioral foundations of human movement, health, wellness and exercise.

KINES 100 The Cultural and Behavioral Foundations of Kinesiology

(3) This course introduces and integrates the philosophical, ethical, historical, cultural, and psychological foundations of kinesiology. Kinesiology is a dynamic, multi-disciplinary area devoted to the study of human movement. Kinesiology is unique in that it covers the "three cultures" of academia: the sciences, the social sciences, and the humanities. This foundational, entry-level survey course introduces students to social scientific and the humanistic approaches to sport, exercise, health, wellness, and physical activity. Topic areas include the psychology of exercise and sport, the history of sport and physical activity, and the philosophy and ethics of sport and physical activity. Throughout the course, applications and integration to human health, physical activity, and to health and fitness professions are provided.

The Philosophical & Ethical Foundations of Human MovementThis section introduces students to the philosophical and ethical aspects of kinesiology. This includes fundamental question of human movement, explorations of dualism and holism, ethical decision-making in sport, games and play, and an introduction to the ethical obligations of kinesiology and health/wellness professionals

The Cultural Foundations of Human Movement This section introduces to the historical, cultural, and social dynamics of kinesiology. Building off a philosophical foundation, it includes questions about why and humans move, the effects of historical and cultural influences on sport, physical activity, health, and human movement, as well as the roles that social identities play in these processes. In addition, this course module explores significant cultural considerations for kinesiology and health/wellness professionals.

The Psychological Foundations of Human Movement This section introduces students to the psychological dimensions of kinesiology. This includes information about psychological orientations and enhancement in exercise and sport and foundations of health and psychological well-being. This section also addresses principles of behavior change, reinforcement, motivation, intervention, and performance enhancement and emphasizes psychological and health theories to explain physical activity behavior. It also includes information about the importance of sport and exercise psychology for kinesiology and health/wellness professionals.

KINES 101: The Biophysical Foundations of Kinesiology

3 Credits

Biomechanical, physiological, and neurobiological foundations of human movement and exercise, including applications to clinical conditions, rehabilitation, and fitness are presented.

KINES 101 The Biophysical Foundations of Kinesiology (3) This course introduces and integrates the physiological, neural, anatomical and biomechanical foundations of kinesiology. Throughout the course, applications to human health, physical activity, and to health and fitness professions are provided.

The Physiological Foundations of Human MovementThis section introduces students to basic physiological principles that are necessary to understand exercise metabolism, adaptations to training, and changes that occur throughout the lifespan. This section builds important groundwork in exercise physiology to enable the student to understand the fundamental principles of energy metabolism and adjustments to energy metabolism as a result of acute and chronic exercise. Adaptations to chronic exercise training to the aerobic, anaerobic and muscular strength systems are a cornerstone of this section, but emphasis is also expanded to include functional capacity. The final section emphasizes the effects of exercise on chronic diseases, and takes a lifespan approach.

The Neural Foundations of Human MovementThis section introduces students to basic neural anatomy and physiology that serve as a basis for understanding neural control of movement. This includes the cellular, anatomical and functional organization of the central nervous system, and applications to clinical conditions. Students are introduced

to sensorimotor processes, as a foundation for understanding human motor control and motor coordination, and associated dysfunction.

Anatomical Foundations of Human MovementThis section provides a survey of basic terms for describing human anatomy, including anatomical planes, axes, and directions, as well as an introduction to the major components of the musculoskeletal system. The fundamental structure and function of muscles and bones will be discussed with reference to their contributions to human movement.

Mechanical Foundations of Human MovementThis section introduces the physical principles that underlay the study of biomechanics. Students will learn how to properly describe human movement using terminology for linear and angular motion. Newton's three laws of motion will be introduced and used for as a basis for discussing the role of forces and torques in starting and stopping motion. This section will include discussions of the biomechanics of walking and the biomechanical causes and effects of movement disorders.

KINES 123S: Thinking Critically about Key Questions in Kinesiology

1 Credits

This course gives an introduction to some the major academic topics in the Department of Kinesiology with the aim to meet the Penn State first year seminar goal of orienting students to the scholarly community from the outset of their undergraduate studies in a way that will bridge to later experiences in a chosen major. After an overview of kinesiology, different key questions in kinesiology will be explored as vehicles for introducing students to scholarly themes in kinesiology and careers arising from studying kinesiology including and introduction to the role of scientific literature. Specifically themes will relate to the following scholarly areas: Biomechanics, Exercise Physiology, History and Philosophy of Sport, Motor Control, and Psychology of Physical Activity. Themes will be examined using critical thinking, providing students with tools to evaluate information.

Enforced Corequisite at Enrollment: PSU 14 First-Year Seminar

KINES 126: The Health Program for the Elementary School Child

1.5 Credits

Introduction to the Coordinated School Health Program. Overview of contemporary school-based health education theory, content, methods, and practice.

KINES 126 The Health Program for the Elementary School Child (1.5) KINES 126 is an introductory course designed to prepare school-and community-based educators to implement health promotion and disease prevention educational programs to elementary-aged audiences. Emphasis of the course is on the coordinated school health program model, theory, content, and teaching methods. Eight specific components of a coordinated school health program serve as the foundation for the course: (1) comprehensive school health education; (2) physical education; (3) school health services; (4) school nutrition services; (5) school counseling, psychological, and social services; (6) healthy school environment; and (7) school-site health promotion for faculty and staff; and family and (8) community involvement in school health. Students will gain experience in health promotion and disease prevention concepts; lesson planning; roles and responsibilities of teachers, staff, administrators, and students; and implementing effectively the health education concepts outlined above. The Department will offer one large section each fall and spring semesters with an anticipated enrollment of 150 students per section. A technology room will be required. Participation in this course will enable the student to:

- Analyze the goals, roles, and responsibilities of the

classroom teacher concerning the health of the school-aged child. b. Identify appropriate educational resources related to school health. c. Describe the components of the coordinated school health program d. Discuss the important of learning healthy life skills for elementary-aged learners. e. Organize and submit one modified health-based lesson plan for elementary-aged learners. f. Demonstrate competency in accessing health education resources from the World Wide Web. Methods for Evaluation: Written examinations 50% Lesson Planning 30% In-Class Participation 20%

Enforced Prerequisite at Enrollment: EDPSY 14

KINES 127: The Physical Education Program for the Elementary School Child

1.5 Credits

Theoretical and practical overview of developmentally appropriate physical education for children. KINES 127 The Physical Education Program for the Elementary School Child (1.5) KINES 127 is an introductory course designed to introduce future classroom teachers to the conceptual framework of developmentally appropriate physical education. The class includes both theoretical and practical guidelines for analysis and implementation of children's physical education. The course focuses on applications of the Pennsylvania standards for elementary educators K-6. The components of KINES 127 include: concepts related to becoming and remaining physically active for a lifetime, physical fitness, motor development, movement and fitness concepts and fundamental motor skills, safety procedures, role and value of play, game and sports in child development. Students will gain experience teaching physical education lessons, as well as observing and participating in physical education experiences. Students will be introduced to multi-cultural dance and games. Students will understand the use of small and large equipment. Evaluation will include written examination, group peer teaching, and participation. The Department will offer 4 sections each Fall and Spring semesters with an anticipated enrollment of 30 students. The Department will offer 1 section per summer semester with an anticipated enrollment of 30 students. Participation in this course will enable students to: 1. Define and develop a philosophy of elementary physical education. 2. Identify developmental characteristics and stages for children grades K-8. 3. Develop professional teaching techniques. 4. Apply activities for physical education, using proper safety procedures. 5. Discuss the importance of nutrition, personal wellness, and lifelong healthy habits. 6. Understand the human body and its systems. 7. Demonstrate competency in accessing physical education activities and resources from the World Wide Web. Methods for Evaluation: Writing Examination 50% Group Peer Teaching and lesson planning 20% Written Observation of Peer Teaching 10% Participation 20%

KINES 135: Introduction to Athletic Training

3 Credits

Introduction to Athletic Training provides an overview of the field of athletic training exploring the breadth of athletic training terminology, issues, and injuries. After completing the course, the students will be able to describe the roles of the sports medicine team, understand the legal considerations for the athletic trainer as a health care provider, and identify the basics of physical conditioning and nutrition in reference to injury prevention. Students will be able to describe an emergency action plan for injuries, and environmental conditions. Students will be able to identify basic use of therapeutic modalities and principles of therapeutic exercise programs. Students will gain an understanding of acute vs.

chronic injury conditions and be able to describe the related anatomy, etiologies, pathologies, signs and symptoms, and general treatment and management for injuries of the foot, ankle, lower leg, knee, hip/groin, shoulder, elbow, wrist, hand, cervical spine, and head. Rationale and demonstrations for a variety of taping techniques are included to address upper and lower extremity injuries. Students are also provided an overview of general medical conditions that may occur in the athletic arena.

Cross-listed with: ATHTR 135

KINES 136: Introduction to Careers in the Health Professions

3 Credits

Approximately 11% of all jobs in the economy are in the healthcare sector. This course will provide an overview of the US healthcare system and the various careers that can be pursued within it. Several career paths (such as athletic training, physical therapy, occupational therapy, physician assistant, chiropractor, medical doctor/osteopath, nursing, diagnostic technician, clinical exercise physiologist, speech pathology and alternative therapies) will be explored in detail with opportunities to interact with professionals working in those careers. For each profession, the clinical focus, clientele, job responsibilities, knowledge, skills, personal attributes, typical workday, work/life balance, financial considerations, ethical considerations, and legal considerations will be discussed. Student personality traits will be assessed and used to help with career exploration. The requirements for gaining admission to various healthcare educational programs will be elucidated. In culmination, students will outline an academic plan to prepare them to apply to the program of their choice, as well as a Plan B option.

KINES 160N: Fitness with Exercise Physiology

3 Credits

Biology of Exercise is an integrative exercise physiology course that combines performing physical activity (Kinesiology) and applying biological principles (Biology). This course will explain the benefits, changes, and processes the body exhibits while exercising. Students will gain knowledge and comprehension through both a lecture (or online) setting (approximately half of the class meetings) as well as an activity component (approximately half of the class meetings) in which students will demonstrate their health related components of fitness. This includes, but is not limited to, muscular strength, muscular endurance, flexibility, power, cardiorespiratory endurance, and body composition. In the lecture component, students will describe biological principles including homeostasis, nutrition, the structure and function of musculoskeletal, cardiovascular, and respiratory systems. At the completion of this course, students will be able to argue for the lifelong significance of exercise including why it is important, benefits related to organ systems, and disease prevention.

Cross-listed with: BIOL 160N

KINES 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

KINES 200: Muscle Training: Physiology, Programs, Techniques

3 Credits

KINES 200 addresses the physiological basis of strength training emphasizing mechanisms of muscle contraction and growth, program and facility design, and individual exercise technique. This course focuses on the concepts and applications of strength exercise science including relevant testing and evaluation of strength protocols. It explores the organization and administration of resistance training and conditioning facilities including the development of resistance training programs. The course also introduces students to exercise techniques. As a result of this course students will be able to work collaborative with others. They should be able to evaluate information for authority, relevance, currency and accuracy. They will understand the biomechanics of strength training, the physiological adaptations to muscle training and the mechanisms of change with varying populations. In addition they should be able to select and organize appropriate muscle testing protocols. They should be able to teach and demonstrate appropriate strength exercises to an individual or group as well as be able to identify and correct errors an individual might make. They should be able to prescribe the proper exercise and exercise sequence to strengthen a specific muscle or muscle group, and they should be able to design and organize a strength training facility.

Enforced Prerequisite at Enrollment: BIOL 141 or BIOL 161 or KINES 202

KINES 201: Cardiorespiratory Training for Health and Performance

3 Credits

Exploration of the principles and practical applications of cardiorespiratory training for health and performance enhancement. KINES 201 Cardiorespiratory Training for Health and Performance (3) KINES 201 prepares students in understanding the process of developing a cardiorespiratory exercise prescription program. Exercise programming is scripted on an individual basis according to goals, national guidelines, age, interests, available time, and commitment. The benefits of physical activity are becoming increasingly documented. However, physical activity is not without risks. The proper cardiorespiratory exercise prescription is important to the safe participation for a wide range of populations. Students will be able to determine the differences between activity, fitness, and sport performance and be cognizant of the various components and modes of cardiorespiratory activity. Students will understand the different models of cardiorespiratory exercise prescription for health, fitness, and sport performance. Applying this knowledge, students will experience practical applications of cardiorespiratory exercise prescription on various training modalities applied to a wide range of settings. Homework assessments, laboratory activities and/or mid-term and final exams based on the discretion of the course instructor

will reflect the pedagogical and practical application of cardiorespiratory exercise prescription concepts. The Department is planning to offer one section every year with an anticipated enrollment of 25 students per section.

KINES 202: Functional Human Anatomy

3 Credits

This course is designed to provide students a didactic and laboratory experience in functional human anatomy. Upon course completion, students should be able to comprehend and apply standard anatomical nomenclature pertaining to human movement science; comprehend structure and function of the musculoskeletal, systems pertaining to human movements science; comprehend the classification, structure and function of human anatomical articulations (joints) pertaining to human movement science; and comprehend the classification, structure, and function of human biological tissues (epithelium, connective, muscle and nervous) pertaining to human movement science. In the laboratory portion of the course students will learn to identify bone and capsuloligamentous tissues as well as their respective landmarks pertaining to human movement science; identify origins, insertions, actions and innervations of skeletal muscles pertaining to human movement science; and identify biomechanical characteristics and neuromuscular activity of human anatomy during the execution of active, passive as well as resistive movements. The laboratory portion of this course will use three-dimensional bone models, joint models, ligament models and cadaveric models to apply concepts covered in lecture.

Enforced Prerequisite at Enrollment: 2nd Semester Standing in HDD or KINES major or KINES minor or ATHTR major
Cross-listed with: ATHTR 202

KINES 202H: Functional Human Anatomy

4 Credits

In-depth examination of the, musculoskeletal, nervous, cardiovascular, and respiratory systems, and their relationship to human movement.

Honors

KINES 203: Medical Terminology for Allied Health Professionals

3 Credits

Comprehensive review of terms related to functions, disorders, diagnosis, and treatment of body systems related to physical activity and movement. KINES 203 Medical Terminology for Allied Health Professionals (3) This course is designed for students who wish to enter an allied health field related to physical activity and human movement. This course will help students prepare for careers in physical therapy (PT), occupational therapy (OT), medicine (MD, DO), physician assistant (PA-C), pharmacy (R.Ph), dietary medicine (RD) and emergency care (EMT, EMT-P). Some of the allied health programs listed above requires a 3 credit course in medical terminology prior to admission into graduate school and this course fulfills that requirement. The goal of this course is to help students develop an understanding of medical terminology related to physical activity and human movement used when dealing with the anatomy and physiology of the systems of the body, disease processes associated with each system, and pharmacology and clinical treatments associated with the pathology of the body systems. Students will appreciate the weights and measures, chemical symbols, diagnoses,

procedures, and medical documentation used in allied health fields, especially in sports and human movement medicine.

KINES 222N: Science and Politics of the Female Athlete

3 Credits

The purpose of this course is to explore gender differences in sport and politics that emerge from physiology, culture, history, politics, and policy. The engagement of women in sport has unique physiological considerations and ethical dilemmas as well as a rich history of defining moments and important ties to feminism and politics. In this course, students will learn how physiology differences affect female athletic performance and the effects of exercise on the female body, as well as how cultural, historical, and political forces shaped women's participation in sport. Students will also see how similar historical, cultural, and political forces affect women's involvement in politics. Combined, students will understand how similar forces shape gender norms and participation two different, yet related, aspects of society. Additionally, students will learn about the push for evidence-based policymaking and apply that knowledge to topics including doping, pregnancy, and gender verification. Students will integrate physiology and policy in a final assignment advocating for evidence-based sport policy. They will also educate their peers through a public education project.

KINES 260: Research Skills in Kinesiology

3 Credits

KINES 260 prepares students to read, understand and critique scientific research. The epistemological belief that knowledge is static and science discovers truth will be challenged. Rather than research being a product achievable only by professors, research will be presented as a process that students can understand and contribute to. Therefore, this course will develop skills and knowledge in understanding and conducting scientific research through practical experience. Specifically, students will learn to search for articles and be able to evaluate different sources of knowledge. Reading strategies will be employed to develop the ability to read and produce research papers according to standard structure and formatting. Students will gain experience using a range of different measurements of human movement and behavior, and understand general measurement issues. Practical experience with different types of research in kinesiology will occur throughout the semester, aiding students to critique and design research. Students will learn when to employ different statistical tests, be able to analyze data using statistical software, and interpret the results. Experience in other computer software will occur throughout the semester to develop student's word processing, spreadsheet and graphical skills. This knowledge and skills will be integrated throughout the semester and culminate in a research project performed by teams of students.

Enforced Prerequisite at Enrollment: KINES 101

KINES 267: Fundamental Movement Skills Instruction

1 Credits

Instruction for performing and delivering developmentally appropriate psychomotor skills, movement patterns, and content to preschool and elementary school-aged children. The course is designed for students interested in understanding how to instruct movement concepts, skill themes, and fundamental movement skills to preschool and elementary school aged-children. An understanding of developmentally appropriate skills and physical activities and an understanding of how to effectively instruct fundamental movement skills to this population of children make-up the foundations of the course. Students will apply content knowledge to instructing, coaching, and executing movement concepts, skill themes, and fundamental movement skills. Students will be able to identify and organize appropriate skills and activities based on the developmental level of preschool and elementary students. Students develop knowledge and skill in designing and implementing movement and rhythmical activities for preschool and elementary students. Emphasis is placed on the ability to analyze and instruct the associated movement skills. A primary focus of the course is to create interesting challenges that motivate children to continue to practice tasks and engage in regular physical activity. The first half of the course will provide an introduction to developmentally appropriate fundamental movement skills, physical activity participation rates of children, and special considerations when instructing and coaching. Students will examine how the developmental level of the child relates to their level of skill proficiency and the importance of children learning correct skill execution in order to enjoy participation in regular physical activity. The second half of the course will focus on each specific fundamental motor skill. Students will learn the correct form of execution, common errors of execution, verbal cues associated with correct execution, and application of the fundamental motor skill to a developmentally appropriate activity. In this portion of the course, students will have the opportunity to use the knowledge and skills learned in this course by engaging in peer-to-peer instruction sessions.

Enforced Concurrent at Enrollment: KINES 295B

KINES 295: Introduction into Careers

1 Credits/Maximum of 1

This course exposes students to self-examination, career pathways, certification prerequisites and internship opportunities within the related field of studies. This course is designed to expose students to specific career pathways, specific certification prerequisites, internship opportunities and professionals in the applied kinesiology fields of study through experimental learning. This course offers, but is not limited to offering, many enriching professional development skill building lectures and assignments, professional interview, and completion of observation hours within a professional setting. Students can choose from a variety of sites, including but not limited to schools, YMCAs, fitness centers, university courses, community or corporate health and wellness programs. Students are required to choose a field that directly relates to their career goals and/or expected professional certifications. Students must complete a minimum of 12 hours of a hands-on experience in that field. The expectation is that students apply and integrate content from other and concurrent courses in the program and further learn appropriate applied skills that are critical to success in the field. This course covers the breadth and depth of discussion pertaining to professional career development within the vast possibilities within the field of applied exercise & health. An important

focus of the course are the preparatory fundamentals that foster better student awareness, opportunities and discussion of how to utilize a B.S. degree in Kinesiology for career development and success within the industry. The student's field experience productivity and work will be evaluated on an ongoing basis by the course instructor as well as the field experience supervisor. The course may take place at either on campus facilities or off campus locations.

KINES 295B: Kines Careers & Observation

1 Credits/Maximum of 1

KINES 295B (1 credit) is a required course for students in the Movement Science Option and the Applied Exercise and Health Option of the Kinesiology curriculum. It is the first of three practicum courses that exposes students to general and specific career information, an observational experience, research and professionals in Kinesiology related fields of studies. This course is designed to expose students to specific career pathways, specific certification prerequisites, internship opportunities and professionals in the applied Kinesiology fields of study through experimental learning. This course offers, but is not limited to offering, many enriching professional development skill building lectures and assignments, professional interview, and completion of observation hours within a professional setting. Students can choose from a variety of sites, including but not limited to schools, YMCAs, fitness centers, university courses, community or corporate health and wellness programs. Students are required to choose a field that directly relates to their career goals and/or expected professional certifications. Students must complete a minimum of 12 hours of a hands-on experience in that field. This course covers the breadth and depth of discussion pertaining to professional career development within the vast possibilities within the field of applied exercise & health. An important focus of the course are the preparatory fundamentals that foster better student awareness, opportunities and discussion of how to utilize a B.S. degree in Kinesiology for career development and success within the industry. The student's field experience productivity and work will be evaluated on an ongoing basis by the course instructor as well as the field experience supervisor. The course may take place at either on campus facilities or off campus locations.

Enforced Prerequisite at Enrollment: 2nd semester standing

KINES 295C: Professional Development - Field Experience

1-2 Credits/Maximum of 8

KINES 295C Professional Development - Field Experience (1-2 per semester/maximum of 8) This course is designed to provide undergraduate students the opportunities of professional development via lecture format, professional travel to a national conference, and guest round table discussions. Throughout the course, students will have exposure to professional communication with faculty through formats including, but not limited to the following: conference forums, faculty/professional/expert dinner discussions, lectures, training sessions, symposiums, break-out sessions, and a poster forum. The students will enhance skills needed to develop networking and interview skills, communicate information effectively, and build resumes to meet the needs for such endeavors as graduate school, internship acquisition, and/or employment. Other class foundational principles include but are not limited to: attending a professional conference, practicing business etiquette at professional lectures and expositions, exposure to professional networking, learning how to exchange knowledge within the professional realm, and researching professional collaborative work. Students will share the experience and knowledge gained from this

professional travel through relevant exercises that may include a formal poster forum within the university setting.

Enforced Prerequisite at Enrollment: completion of three credits in KINES

KINES 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

KINES 296F: **SPECIAL TOPICS**

1-6 Credits/Maximum of 18

KINES 296G: **SPECIAL TOPICS**

1-6 Credits/Maximum of 18

KINES 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

KINES 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

KINES 303: Emergency Recognition and Care with BLS CPR

3 Credits

KINES 303 is designed to provide students with the opportunity to acquire and develop the skills and competencies needed for First Responder Certification from the American Red Cross, American Heart Association, or Emergency Care and Safety Institute. Students will understand the role of the Emergency Medical System (EMS) in a complex society and the importance of emergency care in our health care system. KINES 303 will foster the student's critical thinking skills and their ability to assess and evaluate life threatening and disabling injuries and illnesses and to respond with appropriate care and life saving action steps in variety of medical emergencies. Students will develop an understanding of the importance of emergency care, first aid and safety at all levels of society with emphasis on providing and improving the quality of emergency care practices in a wide variety of community organizations, occupations and professions including childcare, education, human services, geriatric care and disaster management. KINES 303 is taught through a variety of teaching methods. Students are prepared for proficiency through readings, classroom discussion, video presentation, practical skills, sudden illness and injury scenarios, group presentations and possible direct observation of EMS (Ride-Alongs). The course is practice-focused on developing the skills and competencies necessary for emergency scene management, CPR/AED and sudden illness and injury. Various evaluation techniques will be used to assess the students progress in KINES 303. These techniques shall include but not be limited to conventional objective testing, practical skill tests, sudden illness and injury scenarios, group presentation and written observation papers. Students may wish to pursue certification following completion of the course. Students who have already received credit

for NURS 203 and/or KINES 233 may not enroll in this course due to duplication of material.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

KINES 321: Psychology of Movement Behavior

3 Credits

Psychology of Movement Behavior is designed to introduce students to the basic concepts and applications of psychological knowledge for organized sport, physical activity, athletic training, and related environments where people are active. The course touches on the history of sport and exercise psychology, sport and exercise psychology consultants' responsibilities (i.e., research, teaching, and service), and understanding sport and exercise participants' personality traits and motivation for participation. The course also promotes an understanding of sport and exercise environments through discussion of competition, group dynamics, and the principles of feedback and reinforcement. Performance enhancement is also covered through discussion of topics related to psychological skills training and application (e.g., goal setting, imagery, and relaxation training). Finally, the course focuses on enhancing sport and exercise participants' health and well-being by promoting an understanding of addictive behaviors (e.g., exercise dependence, eating disorders, and substance dependence), body image, injury rehabilitation, and exercise initiation, maintenance, and adherence. The general objective of this course is to familiarize the student with the science and practice of sport and exercise psychology from both a theoretical and applied perspective. To achieve this objective, the student will: (a) develop an understanding of how various psychological factors influence athletic performance, physical activity participation, and overall health and well-being; (b) learn the methods used by athletes and exercisers of various skill levels to achieve peak performance; (c) understand the scientific and theoretical background of sport and exercise participation; and (d) comprehend how psychological skills are applied to sport and exercise environments to enhance peak performance and quality of life, and recognize the ethical principles of applying these psychological skills.

Enforced Prerequisite at Enrollment: Students must have a grade of C or better in KINES 100

KINES 341: The Historical, Cultural, and Social Dynamics of Sport

3 Credits/Maximum of 3

Connections between sport and broader historical, cultural, social, political, intellectual, and economic contexts.

Enforced Prerequisite at Enrollment: Students must have a grade of C or better in KINES 100

International Cultures (IL)

United States Cultures (US)

KINES 345: Meaning, Ethics, and Movement

3 Credits

The course focuses on the development of philosophic reasoning skills to better understand the values and ethics of physical activity in a variety of professional settings. Emphasis is placed on the practicality of good philosophy, on applying philosophic insights to the health

and physical activity workplace. The course shows how philosophic commitments are unavoidable and thus, why it is better to formally consider these commitments and evaluate their worth than adopt professional standards and behaviors without critical reflection. Specific course content emphasizes a number of learning outcomes. The first objectives are related to clarifying the nature of the philosophy of physical activity and relationships between the philosophy and science of human movement. The field of philosophy is described including the areas of metaphysics, epistemology, axiology, ethics and aesthetics. A variety of philosophic methodologies are identified and practiced including inductive, deductive and descriptive reasoning. Emphasis is placed on the varying degrees of confidence placed on the trustworthiness of philosophic methods and the validity of its conclusions. Students take a "philosophic readiness inventory" to determine their own philosophic tendencies and interests. Once the philosophy of physical activity is better understood, its methods and products are compared to the methods and outcomes of science. The course emphasizes a potential complementary relationship between the two where neither one is sufficient. A major portion of the class is devoted to three rival interpretations of personhood that have significant implications for professional practice. Students review the strengths and weaknesses of dualism, materialism, and holism and see their impact on biomedical ethics, motivational strategies, professional-client relationships, and other facets of health and physical activity professions. The undergirding logic here is that practitioners must first understand what a person is before they can best determine how to intervene or otherwise provide services to them. Attention is also directed to the subject matter of Kinesiology-namely, skilled movement in general and physical abilities in work, exercise, sport, dance, games, and play more specifically. The nature and values of these different ways of moving are analyzed in terms of their ability to serve as "tools" (means to other ends) and "jewels" (ends in themselves). Issues of motivation, efficacy, safety, and other factors are analyzed in an attempt to determine whether a play-and-enjoyment or a work-and-duty philosophy should be emphasized in various professional settings. Quantity and quality of life are juxtaposed to show their interdependence and the variable roles they play in affecting allied medical, coaching, teaching, fitness, recreation, and other movement-related professions. Finally, the course addresses common ethical problems faced by athletes, as well as physical activity and health professionals.

Enforced Prerequisite at Enrollment: Students must have a grade of C or better in KINES 100

KINES 350: Exercise Physiology

3 Credits

Structure and function of the human body as applied to health, wellness, exercise, and sports. KINES 350 Exercise Physiology (3) Exercise Physiology is a mid- to upper division course that will appeal to students with an interest in human biological adaptation. The course has two primary goals: First, students develop an understanding of the physiological adaptations that occur during and after endurance and resistance exercise. Second, students improve their comprehension of the differences between the acute exercise response and the changes that occur with chronic physical activity (exercise training). A major emphasis is placed on physiological systems as they relate to physical activity, exercise and health, and environmental stress; including, but not limited to, cardiovascular, respiratory, musculoskeletal, renal, neural, and metabolic. These systems are considered singly and in combination with regard to both exercise intensity and exercise duration. The depth of inquiry can range from molecular to organismal (whole-

body). In addition, the mechanisms underlying the preventive and protective effects of exercise on human health and performance are discussed. The ability to apply concepts and principles of physiology to situations involving exercise, exercise training and decreased physical activity are highlighted, improving students' abilities to develop and differentiate between paradigms that utilize exercise to improve athletic performance and those that utilize physical activity to promote health. Special topics of applied study may include aging; development; gender; body composition; disease and environmental extremes such as heat, cold, diving and altitude. Students are required to demonstrate via assessment, knowledge and understanding of the acute physiological response to exercise and physiological adaptations to programs of chronic resistance and endurance exercise. Quantitative and analytical skills are emphasized, especially as they pertain to exercise testing and exercise program evaluation. The ability to interpret scientific data as they pertain to exercise physiology is required. Background knowledge in biology, chemistry, physics, and exercise science represent the knowledge base from which the class is built and contributes to the mastery of concepts presented. This course is required for Athletic Training and Kinesiology majors.

Enforced Prerequisite at Enrollment: Students must have a C or better in KINES 101 and [(BIOL 141 and KINES 202) or (BIOL 161 and BIOL 163)] and (CHEM 101 or CHEM 106 or CHEM 110 or CHEM 130)

KINES 356: Activity and Disease

3 Credits

KINES 356 is an examination of hypokinetic disease on human wellness involving identification, assessment, research, and exercise design of human activity for disease prevention. Content in this course defines what physical activity, fitness, and lifestyle are. It covers the methodological and measurement assessment of physical activity and disease as well as exploring the relationships between physical activity and specific physical diseases, and between physical activity and various disorders of the mind. After this course students will be able to design and implement an exercise program to prevent or combat the effects of a specific disease on an individual. They will understand and be able to persuasively inform clients to the dangers of a sedentary lifestyle. They will know the strategies necessary to motivate and modify individual behavior so that it results in a more healthy lifestyle. And they will be able to design epidemiological research protocols to study the relationship between a specific disease and activity. Knowledge will be assessed by written evaluations, through the use of case studies in the case of exercise prescription skills, and through presentation of high quality group projects. This course will complement other courses in this curriculum but will be the only course devoted to a thorough investigation of the relationship between inactivity and various disease states. Material in this course and experience in the lab cover the conceptions and applications of strength exercise science. It also addresses testing and evaluation of strength protocols including selecting appropriate tests, organizing testing procedures, and individual testing protocols and procedures. Students will be introduced to material which overviews the organization and administration of resistance training and conditioning facilities. They will also learn the design principles of resistance training programs as well as exercise techniques. After this course, students will understand the biomechanics of strength training, the physiological adaptation to muscle training, and the mechanisms of change with varying populations. Students will be able to select and organize appropriate muscle testing protocol and will be able to teach

and demonstrate appropriate strength training exercises to individuals and groups, including being able to identify and correct errors.

Enforced Prerequisite at Enrollment: BIOL 141 or BIOL 161

KINES 358: Ergogenic Aids

1 Credits

Skills development including research identification and evaluation of work-enhancing methods and devices as related to human performance and wellness. In this course students will learn about the research identification and evaluation of work-enhancing methods and devices as they relate to human performance and wellness. The course will overview historical and ethical issues associated with the use of ergogenic aids, as well as the mechanisms that delineate how they affect body systems. Ergogenic aids will be classified as hormonal, pharmacological, psychological, physiological, mechanical and nutritional. In the course students will also look at various restorative and accelerate healing agents. As a consequence of this course students, will be able to identify specific ergogenic aids, their actions, their legality, advantages, disadvantages, and safety concerns. Students will also understand the research issues involved with ergogenic aids, as well as developing a philosophy for dealing with clients who approach them interested in these kinds of enhancements. Because of the topic's relevance to work in this field, this course gives students knowledge necessary to function effectively as a professional.

Enforced Prerequisite at Enrollment: (BIOL 161 or BIOL 141) and NUTR 251

KINES 360: The Neurobiology of Motor Control and Development

3 Credits

This 3 credit lecture course provides a rigorous presentation of the neuroscientific foundations of human movement control and coordination. This course introduces students to the cellular basis of neurophysiology, while emphasizing the contributions of both sensory and motor systems to motor control, coordination, and development. The course provides an in-depth presentation of systems neuroscience, with a special emphasis on the spinal, brainstem, and cortical contributions to movement. The course introduces the physiology and functional anatomy of the major sensory systems, motor systems, and sensorimotor integration networks, of the spinal cord, brainstem, and hemispheric structures in the central nervous system. These include spinal circuitry underlying reflexes and central pattern generators, basal ganglia organization and functional networks, cerebellar organization and functional networks, primary, secondary, and tertiary cortical areas associated with sensory and motor functions, neural tracts associated with ascending and descending sensory and motor systems, and cortical-subcortical loops. Students are introduced to dysfunction in these systems from both disease and traumatic processes, due to development disabilities such as cerebral palsy, degenerative processes including Parkinson's Disease, vascular disease including stroke, as well as traumatic brain injury. The overall objective of this course is to prepare Kinesiology students with a foundational level preparation in neuroscience, as required for understanding control of human movement, motor coordination, motor development and dysfunctions in these processes. This course forms one of four 300-level core courses that provide the basic science foundations that underlie the study of human movement, including exercise physiology, biomechanics, and the psychology of movement behavior. Neuroscience represents the fourth foundational discipline that contributes to human movement

science. This course is presented from a hierarchical perspective, that introduces the cellular basis of neural communication, as well as cortical, brainstem, and spinal systems that underlie sensorimotor functions. It provides a thorough introduction to the central nervous system, focusing on a systems level approach to sensory and motor physiology and its impact on motor control and coordination, as well as both developmental, degenerative, and traumatic disorders in these processes. Considerations of applications of the material to the fields of athletics and rehabilitation medicine are often provided.

Enforced Prerequisite at Enrollment: Students must have a grade of C or better in KINES 101 or KINES 180 and KINES 202 and (BIOL 141 or BIOL 161)

KINES 360H: Movement Skills

3 Credits

Examination of the basic mechanisms and variables that govern the coordination and control of movement and the acquisition of skill.

Honors

KINES 366: The Process of Teaching Physical Education

3 Credits

Analysis of pedagogical skills and methods applied to K-12 physical education. KINES 366 The Process of Teaching Physical Education (3) The purpose of this course is to introduce teacher candidates to the pedagogical processes used in teaching K-12 physical education. Physical education instruction techniques related to classroom management, creating effective learning environments, analysis of motor skills, providing effective feedback, content development, creating active learning experiences and systematic analysis of effective instruction comprise the foundation of this class. These pedagogical skills will be practiced and analyzed throughout the semester. Specifically, students will be required to demonstrate the ability to use, analyze and critique these techniques in micro-teaching situations with their peers. The primary focus of the class is to develop a repertoire of effective teaching skills based upon research of teacher effectiveness that enables teacher candidates to become reflective physical educators with the ability to deliver, analyze and modify their teaching to provide developmentally appropriate instruction for elementary, middle and high school students. The content of this course also addresses the physical education teaching standards developed by the National Association for Sport and Physical Education (NASPE), the national accrediting body for physical education teacher education programs that works in conjunction with the National Council for Accreditation of Teacher Education (NCATE) to certify physical education teacher education programs throughout the United States. Assessment of student performance in the course includes: 1. Participation in laboratory experiences (10%) 2. Performance on knowledge tests (35%) 3. The ability to correctly and effectively demonstrate a repertoire of pedagogical skills in simulated teaching situations (35%) 4. Teaching reflections based on class teaching experiences and analyses and observations of teaching (20%)

Enforced Prerequisite at Enrollment: Students must have a C or better grade in all of the following: EDPSY 10 and KINES 100 and KINES 101 and KINES 295B and PSYCH 100 Concurrent Courses: KINES 400 and KINES 464 and KINES 468W

KINES 367: Games and Sports Instruction Across the Lifespan

1 Credits

How to understand, perform and deliver individual and team games and sports across the lifespan. This course is designed to provide students with the opportunity to research, experience, and reflect upon the content knowledge necessary to successfully instruct and coach a variety of individual and team games and sports across the lifespan. Students will gain experience in at least one activity from each of the four games classification groups (net and wall, invasion, striking and fielding, and target games). Students will develop the knowledge and skills necessary to instruct and coach various lifetime individual and team games and sports. The games and sports chosen for this course (basketball, soccer, golf, softball, and tennis) have been specifically selected for three reasons related to lifespan development and participation. First, they are consistently included in preschool through 12th grade school physical education curriculums. Second, they are popular extra-curricular activities, which are heavily attended by young people and adolescents. Finally, they represent popular adult recreational (pick-up games) and competitive activities (adult leagues) that are often continued over the lifespan. Emphasis is placed on the student's competency in being able to effectively instruct and perform across multiple individual and team games and sports. Students will be expected to practically demonstrate a range of psychomotor techniques and skills for each given game and sport to a high level. Students will also need to display competence in a range of cognitive, affective and behavioral domain skills. This includes the ability to make appropriate game play decisions, communicate with teammates, understand and adhere to governing body rules/regulations and creating strategies to promote lifelong participation. Students will be assessed on their ability to instruct and coach the associated psychomotor skills, principles of play, and the official rules and regulations operated by each game or sport's governing body in a peer-to-peer instructional setting. Practical activity learning experiences are designed to provide students with a sound knowledge of the concepts associated with skill acquisition including the class/team/client structure and organization, teaching and coaching techniques, and developmentally appropriate activities. Peer to peer instructing and coaching sessions will be used as an instructional strategy.

Enforced Concurrent at Enrollment: KINES 267

KINES 368: Individual Fitness and Wellness

2 Credits

How to perform and deliver fitness and wellness concepts and exercises to individuals across the lifespan. The purpose of this course is to teach students how to effectively communicate, motivate, and engage individuals in fitness improvement exercises and activities across the lifespan (children, young adults, adults, and older adults). Understanding client management skills, various fitness environments, and specific individual fitness exercises and activities from the foundation of the course. Initially, students will learn appropriate and effective client management skills and will explore different instructional environments. Throughout the course, students will work on acquiring skills for developing progressions of exercises across the lifespan. The students will become familiar with contemporary fitness practices and exposed to a variety of exercises. Students will learn the associated execution cues and how to demonstrate the exercise. Students will apply content knowledge to instructing individuals how to properly engage in fitness exercises and activities that contribute to one's overall wellness. Students will be able to organize and execute a developmentally

appropriate fitness program for a client that targets one or more of the components of fitness including: cardiovascular, muscular strength, agility, power, coordination, and flexibility. The primary objectives of the course are to develop an understanding of how to create an individualized fitness program that is appropriate for the individual and how to interact with the individual to promote engagement in regular exercise and activity and successful achievement of goals. Students will examine how the age and developmental level of the individual relates to ability and individual fitness programming. Students will learn the correct form of exercise execution and progressions of exercises. Content knowledge is integrated with application of skills in fitness exercise and instruction and will be put to use in a learning laboratory setting which students will have the opportunity to engage in hands-on instructional experiences.

Enforced Prerequisite at Enrollment: KINES 200 and KINES 201
Concurrent Courses: KINES 267 and KINES 367

KINES 384: Biomechanics

3 Credits

Basic mechanical knowledge required to understand human movement. KINES 384 Biomechanics examines biological phenomena from a mechanical perspective; this course examines predominantly human movement from this perspective. The course aims to introduce students to the mechanical principles that underpin biomechanics, and to the measurement procedures used in biomechanics. Students will examine these principles for a variety of activities including: walking, running, jumping, quiet standing, throwing, striking, and reaching. Laboratory activities emphasize the qualitative and quantitative analysis of human movement. These sessions require students to work effectively in groups to collect data, and then work independently to analyze and interpret their data. Students use Newton's laws, basic algebra and trigonometry in the analysis of their data, and produce reports about these laboratory activities. The lectures provide the framework for all class activities. They aim to link the student's knowledge of anatomy with mechanics to provide an understanding of how movement is produced in both health and disease. The lectures provide information about the history, scope, and impact of biomechanics. Students are introduced to the pertinent kinematic variables required for the analysis of human movement. Newton's laws are used to understand both linear and angular human motion. Basic principles from aerodynamics are introduced as they may apply to man and the implements he or she may use. The examination of aerodynamic factors is augmented by examining the mechanics of balls spinning, and bouncing. Approaches for the determination of the inertial properties of human body segments are examined in detail, with a view to understanding the strengths and weaknesses of the various approaches. The theory, methodology, and protocols for image-based motion analysis are introduced as common methodology used in biomechanics. The principles behind force measurement are presented, using force plates as the core example. Students are taught the basics of the interpretation of ground reaction forces, using the impulse-momentum relationship. Contractile muscle mechanics are studied to understand the influences of muscle fiber activation, length, and velocity on the production of force are presented. The mechanical properties of tendon are presented (stress-strain relationship), and its role in human movement. Potential and kinetic energy are introduced, along with the concept of energy storage and its application in the analysis of human movement examined. The principles governing modeling are introduced, and approaches for modeling human movement are established and then used to understand the coordination of human movement.

Enforced Prerequisite at Enrollment: Students must have a grade of C or better in: KINES 101 and KINES 202 and (PHYS 150 or PHYS 250)
 General Education: Quantification (GQ)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

KINES 395: Leadership Practicum for Applied Exercise and Health Careers

1 Credits/Maximum of 1

Introduction to hands-on leadership experience within the fields of health, fitness, wellness, and physical activity. This course is designed to provide students with a supervised practicum experience in applied careers in the fields of health, wellness, fitness, and physical activity. Through a combination of classroom-based discussion and workplace opportunities, this course allows each student the opportunity to observe professionals in the fields of health, fitness, wellness, and physical activity, complete hands-on experiences, and learn skills in professional development. This course also offers, but is not limited to offering, many enriching professional development skill building lectures and assignments. Students can choose from a variety of sites, including but not limited to YMCAs, fitness centers, university courses, community or corporate health and wellness programs. Students are required to choose a field that directly relates to their career goals and/or expected professional certifications. Students must complete a minimum of 40 hours of a hands-on experience in that field. The expectation is that students apply and integrate content from other and concurrent courses in the program and further learn appropriate applied skills that are critical to success in the field. The student's field experience, productivity, and work will be evaluated on an ongoing basis by the course instructor as well as the field experience supervisor. The course may take place at either on-campus facilities or off-campus locations.

Enforced Prerequisite at Enrollment: KINES 295

KINES 395A: Ldrshp Prac:Tchrs

1 Credits

This is a one credit practicum designed to provide teacher candidates with the opportunity to observe, assist, and teach physical education classes in school settings. Most KINES 395A teacher candidates are in the final semester before starting their student-teaching internship and these experiences are intended to provide additional practical experiences in physical education instruction. This practicum involves a minimum of 10 consecutive weeks during a University semester. Teacher candidates need to demonstrate the ability to plan lessons, teach lessons, assess student learning, and reflect on their teaching performance during this practicum experience.

Enforced Prerequisite at Enrollment: Students must have a C or better in: EDPSY 10 and KINES 100 and KINES 101 and KINES 295B and PSYCH 100
Concurrent Courses: KINES 366 and KINES 400 and KINES 464 and KINES 468W

KINES 395B: Leadership Practicum: KINES

1 Credits

Supervised experience in leading/assisting in tasks associated with fitness testing/prescription in a variety of settings.

Enforced Prerequisite at Enrollment: KINES 295B and fifth-semester standing

KINES 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

KINES 398: Special Topics Course

1-9 Credits/Maximum of 9

Forman courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

KINES 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

KINES 400: Adapted Physical Education

3 Credits

Basic concepts of planning and conducting physical education programs for children with physical, sensory, and/or intellectual impairments.

KINES 400 Adapted Physical Education (3) This is an undergraduate level course teaching students the basic concepts of planning and conducting physical education programs for children with physical, sensory, and/or intellectual impairments. This course will help the student to become more aware of the physical needs of children with disabilities and of the possibilities to professionally deal with these needs. The course requires the student to complete a 10-hour practicum, providing the opportunity to work with children with a disability. The practicum will be conducted in cooperation with physical education staff members working with various schools in State College. The children's difficulties may range from emotional problems to severe physical and mental handicaps. Students are free to identify alternative practicum sites (e.g., work with a friend or family member with a disability). The requirements for the practicum may include: select a child who has a physical, sensory, or intellectual disability; write an Individualized Education Program (IEP) using the guidelines presented in the textbook; implement the IEP in a two-on-one teaching situation (two students, one child); keep a log of all the practice sessions; after completing the 10-hour practicum, write a final report based on the IEP, this final report should state the definition of the problem, the etiology, the general characteristics, the teaching techniques specific to the disability, an evaluation of the actual teaching strategies and an evaluation of the outcome of the practice (did it work?); and, present the findings orally (10-15 minute talk).The student will generally be evaluated by exam, teaching activity, an oral presentation, and a final report.

Enforced Prerequisite at Enrollment: KINES 202

KINES 401: Applied Group Fitness Exercise Prescription and Program Design

3 Credits/Maximum of 3

Skills and practical knowledge to design safe and effective exercise classes for a variety of populations to improve health. The primary

purpose of this course is to provide students interested in applied exercise and health careers (group fitness instructors, health and physical education teachers, personal trainers, wellness professionals, corporate fitness professionals, physical therapists) with skills and practical knowledge to design as well as instruct safe and effective exercise classes for a variety of populations to improve cardiovascular health, strength, and flexibility. Students will learn how to prepare for a class, which includes participant monitoring as well as evaluation and progresses to developing the skills for both programming as well as leading group exercise classes. Students will gather and apply the current literature regarding the ideal training strategies and practical tips for both healthy adults as well as special populations (i.e. asthma, obesity, youth, pregnancy, older adults). They will also learn how to verbally and physically cue and demonstrate the exercises to a group. Strategies for adherence to assist in behavior modification will be a focus throughout the course. At the conclusion of KINES 401, the students will be able to demonstrate a knowledge and understanding of group fitness class components. Inherent in the course goals is an understanding of the adaptations that occur as a result of programs of cardiorespiratory and muscular exercise in apparently healthy, at-risk, and diseased populations. Content knowledge is integrated with application of skills in fitness exercise, and instruction and will be put to use in a learning laboratory setting which students will have the opportunity to engage in hands-on instructional experiences.

Enforced Prerequisite or Concurrent at Enrollment: KINES 367 and KINES 368

KINES 402: Human Anatomy Cadaver Dissection

3 Credits

This course is designed to provide students with an established anatomy background (i.e. completed KINES 202 or an equivalent course (BIO 129, 161/162, 163/164, 472) the basic concepts and applications of human cadaver dissection. Upon completion of the course, students will gain an appreciation for the amount of variability that exists in human anatomy as well as be able to apply anatomical concepts related to clinical pathologies to prepare them for a career in the allied health fields.

Prerequisites: KINES 202 or BIOL 129 or BIOL 161 or 162 or 163 or 164

KINES 403: Emergency Medical Technology

4 Credits

Theoretical and practical aspects of emergency medical techniques as applied in the pre-hospital environment.

Enforced Prerequisite at Enrollment: KINES303 and/or current advanced first aid and cardiopulmonary resuscitation certification

KINES 405N: Bicycling Culture and Urban Design

3 Credits

KINES 405N, a study abroad course, based in a bicycle friendly European city, provides students with an opportunity to experience the programs, policies, infrastructure (including urban design features) and culture associated with bicycling in what is one of the most bike-friendly cities in the world. Students will have an opportunity to be immersed in the city's bicycle culture, observe bicycle infrastructure and multi-modal transportation solutions, learn from programs and policies that support bicycling and learn about the role of bicycling in sustainable, liveable

communities. This course will be taught from a multi-disciplinary perspective to address the complex issues associated with bicycling. Students are expected to apply information and content to other countries and communities.

Enforced Prerequisite at Enrollment: KINES 100 or LARCH 125 or [5th Semester standing and (3 credits of CAS or 3 credits of ENGL)]

Cross-listed with: LARCH 405N

International Cultures (IL)

General Education: Arts (GA)

General Education: Health and Wellness (GHW)

General Education - Integrative: Interdomain

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

KINES 408: Kinesiology Learning Strategies

1-3 Credits/Maximum of 6

This course provides peer learning assistants with the fundamentals they will need to be effective in the laboratory and/or recitation classroom. Students will learn the fundamental skills needed to; assist in designing lesson plans; facilitate class discussions; assist in developing effective assessments; communicate learning expectations; provide helpful feedback; and maintain a safe learning environment in laboratory settings. Students enrolled in this course will be serving as an undergraduate learning assistants for course instructors and/or lab coordinators in the relevant course, who provide the instruction. Regular meetings with the course instructors will help the learning assistants adjust to their duties and solve common problems that arise in the instructional environment. Learning assistants will learn how to facilitate active learning and help other students develop sound study skills. The focus will be on evidence-based teaching strategies. Students enrolled in this course will be expected to have regular attendance, organization in and preparation for their peer learning assistant role, and clarity in how they communicate with their students

Enforced Prerequisite at Enrollment: 5th Semester standing and (KINES 100 or KINES 101)

KINES 410: Physical Growth and Motor Development

3 Credits

Study of biologically programmed growth processes and environmental influences leading to attained adult form and biomechanical function.

Enforced Prerequisite at Enrollment: KINES 101

KINES 411: Introduction to Musculoskeletal Injury and Rehabilitation

3 Credits

This course is designed to provide an overview of common musculoskeletal injuries and rehabilitation for pre-allied health and fitness professionals. KINES 411 Introduction to Musculoskeletal Injury and Rehabilitation (3) This course is designed to provide an overview of basic orthopaedic injuries and related musculoskeletal system dysfunctions as well as rehabilitation of those injuries and dysfunctions. Common orthopaedic injuries of all major musculoskeletal structures and tissues are discussed moving up the kinetic chain from the feet up the lower extremities, through the spine and out the upper extremities to the hands. Common injuries such as sprains, strains, fractures, tendinopathies, disc herniations, spinal stenosis, compartment

syndromes, neural compression, carpal tunnel syndrome and thoracic outlet syndrome will be discussed. Anatomy and function of each body region will be reviewed prior to the discussion of injuries. Mechanisms of injury, tissue pathology and the tissue healing processes are reviewed. The role of inflammation in the healing of injured tissues will be explored and the variations in healing processes between tissues explained. Common surgical procedures for major injuries like anterior cruciate ligament tears will be presented. A general rehabilitation process is discussed and rehabilitation concepts unique to specific injuries are explored. Basic principles of the major components of a rehabilitation program are explained. These major components include the protection of healing tissue, pain control, swelling resolution, restoration of range of motion, facilitation of volitional control, enhancement of muscular strength and endurance, improvement of neuromuscular control, training of functional movement patterns and return to functional activities. The RICE (Rest, Ice, Compression, Elevation) method of treating pain and limiting swelling will be presented. Manual therapy, stretching and exercise activities used to regain range of motion will be explained. Exercises used to improve muscular strength and endurance will be discussed for each region of the body. Methods of facilitating balance and neuromuscular control will be demonstrated. Finally, the benefits of functional exercise in terms of three-dimensional exercise requiring the use of groups of synergistic muscles in a coordinated manner will be presented. In addition, return to sport programs that gradually reintroduce the patient to the real life stresses placed on their injured body part will be explained. Prioritization of addressing the different components of a rehabilitation plan will be discussed and differences between surgical and non-surgical rehabilitation plans presented. Criteria used to make return to play decisions for injured athletes will also be outlined. Modifications of common exercises to accommodate for injuries and allow continued participation in exercise routines will be presented. This course is appropriate for pre-allied health professionals and fitness professionals with an interest in orthopaedic injuries, musculoskeletal system rehabilitation and the construction of exercise programs that prevent, or accommodate for, musculoskeletal problems.

Enforced Prerequisite at Enrollment: KINES 202

KINES 413W: Movement Science and Pseudoscience

3 Credits

The domains of health and fitness seem to be filled with questionable claims for products that are supposed to make us stronger, faster, fitter, and healthier. How should we make decisions about whether to accept these claims? How can we judge (often conflicting) research reports to reach these decisions? What pitfalls are we all subject to when evaluating evidence and drawing conclusions? This course does not provide ready answers about specific treatments. Instead, the primary goal of this course is to help students develop a set of critical thinking skills that they will take with them into their chosen careers. In this way students will be prepared to make decisions not only about existing treatments, techniques, and practices, but also ones that are yet to appear. Real-world examples that draw on knowledge from multiple areas within kinesiology will be the subjects of class discussions that complement the lectures. A secondary goal of this course is to demystify science and humanize scientists in order to give students a better understanding of how science is done properly and improperly. The boundaries between science and pseudoscience are discussed so that students are better prepared to identify the latter. Making this distinction can be difficult when pseudosciences seem to have many of the hallmarks of actual science without the same rigor, openness, and possibility for progress. Kinesiology 413 relies on small group discussions with the Instructor and

other students in the class. This is also a writing-intensive class, and as such there will be writing assignments focused on the development of tests for a claim, and critical evaluation of claims related to a treatment, device, etc. related to human movement and activity.

Enforced Prerequisite at Enrollment: 6th Semester standing
Writing Across the Curriculum

KINES 419: Disability Sport and Recreation

3 Credits

The purpose of this course is to provide students with an understanding of disability sports and recreation. Throughout the course students will explore the process for developing and implementing a disability sports program such as, but not limited to, identifying community need, determining budget and funding sources, assessing resources needed, and gaining experience in teaching a sport or recreation for individuals with disabilities. While exploring the development of disability sports students will gain an understanding of key historical, sociocultural, and biomedical issues that are unique to individuals with disabilities. Historical issues such as the treatment of individuals with disabilities within society and sport, and the impact that sport has had on acceptance of individuals with disabilities will be examined. Students will also compare and contrast the major international sports organizations as well as United States sport organizations that are specific to individuals with disabilities. Students will gain an understanding of cognitive, mental, and physical disabilities, and the interaction between disability type and other identities such as gender. These concepts will be emphasized with a variety of hands on experience with disability sports and sport equipment. In addition, students will utilize theory based learning to review key concepts of accessible recreation and sport programs for individuals with disabilities in the United States. Students will also gain an understanding of unique characteristics of individuals with disability, and appropriate adaptations for sport and recreational success. By the completion of the course students will be able to identify major resources and concepts for disability sport and recreation related to coaching, sport management, sports medicine, and program development in the United States. Throughout the course an emphasis will be placed on acquiring knowledge of and concern for inclusion of individuals with disabilities through sport.

Enforced Prerequisite at Enrollment: KINES 100 or RHS 100
United States Cultures (US)
General Education: Humanities (GH)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

KINES 420: Psychosocial Dimensions of Physical Activity

3 Credits

Discussion of theoretical and empirical findings, structuring a frame of reference for exploring man's involvement in physical activity.

Enforced Prerequisite at Enrollment: KINES 321 or 3 credits in PSYCH or SOC

KINES 421: Exercise Psychology

3 Credits

Psychological antecedents and consequences of physical activity behaviors. KINES 421 Exercise Psychology (3) Exercise Psychology is designed to introduce students to the psychological antecedents and consequences of exercise behaviors. The antecedents of exercise behaviors are the psychosocial and cognitive factors (e.g., beliefs, attitudes, personality traits) that facilitate and/or inhibit exercise behaviors. The consequences of exercise behavior are the physical, psychosocial, and cognitive outcomes (e.g., self-efficacy, body image, mental health) of exercise participation. The antecedents and consequences of exercise behaviors will be presented within the context of contemporary conceptual and theoretical models in exercise psychology. This course is designed to provide students with an overview and foundation of the important psychosocial phenomena related to these antecedents and consequences of exercise behaviors. Students will have the opportunity to apply their knowledge in selected areas within exercise psychology through class discussions and assignments.

Enforced Prerequisite at Enrollment: KINES 321 and PSYCH 100

KINES 422: Physical Activity Interventions

3 Credits

Principles of designing, planning, and implementing theory- and evidence-based physical activity interventions. KINES 422 Physical Activity Interventions (3) This course is designed to acquaint undergraduate students with the application of major theories and models used to design and guide the development of contemporary physical activity interventions. Students will be familiarized with empirically-supported principles of behavior change and will gain an understanding of the basic strategies and methods used in designing, planning, implementation, and evaluation of physical activity interventions. The course will cover a variety of approaches to physical activity promotion, ranging from clinical and community-based interventions to population-based approaches, while discussing practical strategies and concrete examples of contemporary, evidence-based physical activity interventions. The goal of the course is for students to demonstrate the ability to formulate well-conceived physical activity interventions across a variety of settings and participant populations and learn how to apply theoretical principles and research findings to intervention development.

Enforced Prerequisite at Enrollment: KINES 321 and PSYCH 100

KINES 423: Psychology of Sports Injuries

3 Credits

Psychological causes and consequences of sports related injuries in athletes. KINES 423 Psychology of Sports Injuries (3) Using lectures/ whole class discussion formats, this course is intended to provide the students with the basic knowledge regarding psychological causes and consequences of sport-related injuries, including concussions. Specific course objectives include: (1) developing the proficiency in initiating interviews and observations of athletes suffering from sport-related injuries; (2) assessing psychological impact of injury on athletes; (3) developing critical-thinking skills related to the probability of developing of psychological trauma in athletes with injuries; (4) developing specific skills of psychological assessment of injured athletes; (5) stimulating thinking about temporary research questions as related to psychology of injury. Evaluation will be based on active engagement in class

discussions and administration of quizzes and written examinations according to course syllabus. This class extends but does not duplicate existing courses in the Departments of Kinesiology and Psychology.

Enforced Prerequisite at Enrollment: KINES 321

KINES 424: Women and Sport

3 Credits

An interdisciplinary approach to contemporary issues related to women and sport from historical, physiological, psychological, and sociological perspectives.

Enforced Prerequisite at Enrollment: PSYCH 100 or SOC 1 or WMNST 100 or KINES 100

Cross-listed with: WMNST 424
United States Cultures (US)

KINES 425W: Physical Activity in Diverse Populations

3 Credits

This course includes examination of issues related to race, ethnicity, geography, income status, and other social factors across the lifespan for promoting physical activity through public health strategies and will include content on both the influences on activity and health as well as the implications for intervention. Coursework will include an examination of the influences on health and physical activity behavior and will include content on federal initiatives and programs for addressing health disparities, and the influence of race, ethnicity, immigration, social class/ income status, urban/rural location, religion, veteran status, ability level, and sexual orientation on physical activity participation. For each influence, content will include interventions and strategies for addressing inequities; cultural tailoring and targeting, intervention planning for diverse populations, and evidence based strategies at the individual, institutional, community and environmental level.

Enforced Prerequisite at Enrollment: KINES 100

United States Cultures (US)
Writing Across the Curriculum

KINES 426: Physical Activity and Public Health

3 Credits

Examines the role of physical activity in public health. Includes population level strategies for promoting physical activity in communities. KINES 426 Physical Activity and Public Health (3) An examination of the role of physical activity in public health. The first half of the course will provide an introduction to public health and basic epidemiology, measurement, dose-response relationships, chronic disease prevention. We will examine the historical progression of physical activity as a part of public health, including landmark studies showing the relationships between physical activity and chronic disease morbidity and mortality. Current public health guidelines and national policies related to physical activity will be discussed in detail. Students will debate the scientific foundation for current issues in the field, including fitness vs. fatness as a predictor of health outcomes and comparing behavior vs. objectively measured variables. The role of physical activity in preventing cardiovascular disease, type 2 diabetes, obesity, and cancer, colon and prostate cancer will be discussed. We will focus on large scale epidemiologic studies that highlight prevention. The second half of the class will focus on a social ecological framework for promoting physical activity and will address population level approaches through policy and

environmental strategies, following the Centers for Disease Control and Prevention Task Force for Community Preventive Services guidelines. We will study how features of the built environment can encourage or discourage walking and biking and refer to current research in the field that examines these relationships in different populations (urban/ rural, youth/older adults). We will learn about the challenges associated with assessment and measurement at a population level. Policy level approaches to physical activity promotion; including local, state and national; will also be discussed. We will discuss various community level approaches including: point-of-decision prompts, mass media campaigns, enhancing access to physical activity opportunities and other strategies outlined in the guidelines. Lastly, we will examine how physical activity promotion is addressed in other countries through community, policy and environmental strategies in Canada, Australia, Brazil and throughout Europe.

Enforced Prerequisite at Enrollment: KINES 100

KINES 427: Developmental Sport & Exercise Psychology

3 Credits

Developmental changes in the antecedents and consequences of physical activity across the lifespan. HD FS (KINES) 427 Developmental Sport & Exercise Psychology (3) Change is constant with physical activity - our reasons for being active change across the lifespan and our experiences with physical activity change how we view ourselves and those around us. Developmental Sport & Exercise Psychology focuses on developmental changes in the psychosocial antecedents and consequences of physical activity across the lifespan. Specific course objectives include (1) describing theoretical frameworks and methods used to study physical activity-related psychosocial development across the lifespan, (2) describing how self-perceptions develop and influence behavior in movement contexts at different points in life, (3) explaining how contextual factors influence developmental processes associated with physical activity, (4) identifying age-related differences in activity-related antecedents and consequences of physical activity, and (5) developing, reviewing, and critiquing theoretically-grounded interventions to address issues related to developmental processes associated with physical activity across the lifespan. Evaluation will be based on written examinations, submission of a series of reflection papers on reading assignments, a group presentation, and the students' engagement in the class. It extends but does not duplicate existing courses in the Department of Innersole, Human Development & Family Studies, and Psychology.

Enforced Prerequisite at Enrollment: PSYCH 100 and (KINES 321 or HDFS 129 or PSYCH 212)

Cross-listed with: HDFS 427

KINES 428: Motivation and Emotion in Movement

3 Credits

Theories of motivational and emotional processes and their applications in movement settings. KINES 428 Motivation and Emotion in Movement (3) Motivation & Emotion in Movement will focus on the psychological processes underlying human motivation and emotion in movement settings. Special attention will be directed to social manipulations that can enhance motivation and emotion, and the consequences thereof. This course will be valuable for students whose career goals relate to education, personal training, rehabilitation, coaching, or psychology. Specific course objectives include (1) distinguishing between motivation and emotion, (2) understanding psychological mechanisms underlying

common motivational and emotional processes in movement settings, (3) identifying existing applications of motivation and emotion theories in movement settings, and (4) developing, reviewing, and critiquing theoretically-grounded interventions to address issues related to motivational and emotional processes in movement contexts. It extends but does not duplicate existing courses in the Departments of Kinesiology and Psychology.

Enforced Prerequisite at Enrollment: KINES 321 and PSYCH 100

KINES 429: Psychology of Sport Performance

3 Credits

Psychological theories of talent development and performance enhancement in sport. KINES 429 Psychology of Sport Performance (3) Psychology of Sport Performance will provide a psychological perspective on the phenomenon of superior motor performance. The course will cover nature of superior performance, talent development processes, sources of performance crises, and self-regulation strategies used by athletes, coaches, and psychologists to enhance performance. This course will be valuable for students whose career goals involve training athletes or other performers involved in socially-evaluative performance domains. Specific objectives include (a) distinguishing the antecedents and consequences of subjective and objective performances, (b) conceptualizing motor performance and performance problems in a psychological context, and (c) matching psychologically-based performance problems with theoretically-based intervention strategies. It extends but does not duplicate existing courses in the Departments of Kinesiology and Psychology.

Enforced Prerequisite at Enrollment: KINES 321 and PSYCH 100

KINES 430W: Groups in Physical Activity

3 Credits

During involvement in this course, students will be acquainted with how exercisers and athletes interact with the others within small group environments. Notably, athletes and exercisers are commonly structured into tight-knit, interactive, and interdependent groups such as teams, fitness classes, family units, peer groups, neighborhoods, and training groups. These small groups are fundamental to sport and exercise experiences, while also influencing whether or not youth and adults derive value from physical activity. Therefore, identifying and promoting optimal small group environments is a central goal for researchers studying the social psychology of sport. Whereas the construct of group cohesion is the most widely-studied aspect of small groups in this context, rich and emerging lines of research reveal a great deal about group structures (e.g., norms), emergent states (e.g., social identities), and group processes (e.g., teamwork), as well as the outcomes of involvement in groups. This area of research is of general theoretical interest, but is also critical to establish an enhanced practical understanding for fields ranging from coaching to health promotion, education, and psychology. To explore these group processes, the goal of the course entails establishing a foundational understanding of small group dynamics. From this foundation, class members will explore contemporary research and theory about optimizing sport groups (i.e., sport adherence and performance) and physical activity groups (i.e., physical activity maintenance, positive psychosocial perceptions). This exploration will demand that students read and discuss empirical research - demonstrating the capacity to interpret and understand this literature, along with the capacity to critically appraise empirical findings. Students' learning related to group dynamics will be cemented

through discussions and activities focused on real-life groups, as well as demonstrations of group processes using group tasks. By the completion of the course, students will have acquired strategies to optimize small group environments and developed skills to communicate group dynamics constructs and theories. Regarding communication, a critical outcome of this writing-intensive course is the capacity to interpret writing from group dynamics experts and communicating these themes through one's own effective writing.

Enforced Prerequisite at Enrollment: KINES 321 or PSYCH 100
Writing Across the Curriculum

KINES 431: Concussion in Athletics: Brain to Behavior

3 Credits

National organizations have identified mild traumatic brain injury, also known as concussion, as a major health concern for injured athletes at high school, collegiate and professional levels. These injured athletes have focused the research and clinical community's efforts into further understanding the pathophysiological underpinnings of the injury as well as its both short and long term effects. It is the overall intention of this course to elicit current understanding the pathophysiology, including its underlying mechanisms, predicting differential evolution and consequences of concussion. The central focus of this course is that symptoms following the concussion (e.g., headache, dizziness, balance, gait and locomotion, executive and neurocognitive function deficits etc.) may be exacerbated and /or triggered by compromised integrity of cortical, subcortical, and other areas of CNS. Thus, this concept will be discussed and elaborated throughout the course development.

Enforced Prerequisite at Enrollment: KINES 321

KINES 440: Philosophy and Sport

3 Credits

An examination of human nature from the perspective of our participation in sport.

Enforced Prerequisite at Enrollment: KINES 345 or 3 credits in PHIL

KINES 441: History of Sport in American Society

3 Credits

AMST 441 / KINES 441 History of Sport in American Society study of the background, establishment, and growth of sport in America from colonial times to the present, and the role of American sports in American culture and society. The course will examine the ways that sports have operated in the United States as the country has developed into a modern, mass society. Issues of national identity, commercialism, race, ethnicity, class, and gender will be discussed in relation to the popularity of sports. Another set of issues will center on language and media; students will employ methods of analysis such as ethnography and rhetorical criticism that emphasize the multiple layers of meaning inherent in sports culture.

Enforced Prerequisite at Enrollment: KINES 100 or KINES 341 or COMM 170 or RPTM 120 or HIST 113 or ENGL 234 or AFAM 114 or ASIA 101N or CAMS 142 or 6 credits of AMST or 6 credits of HIST or (3 credits in AMST and CAMS 142)
Cross-listed with: AMST 441
United States Cultures (US)

KINES 445: Alcohol and Drug Education

3 Credits

Principles of integration and coordination of alcohol and drug education programs for health education and other health related professions.

Enforced Prerequisite at Enrollment: 6 credits in KINES or BBH

KINES 446: History of Sport in the Modern World

3 Credits

History of sport in modern world, ca. A.D. 1500 to present; concentrates on role of sport in societies outside United States. KINES 446 History of Sport in the Modern World (3) (IL) The History of Sport in the Modern World introduces students to the connections between sporting practices and the broader cultural, political, intellectual and economic patterns that shape societies during the modern period in world history (ca. A.D. 1500 to the present). The course begins with a foray into the transition from traditional to modern forms of sport and society and covers the development of a wide variety of athletic games and pastimes from the sixteenth through twentieth centuries. Students will encounter a variety of historic conceptions of sport and explore the role of sport in the development of European, North American, Latin American, Asian, African and Pacific cultures. Students will learn how sports have been shaped by and have shaped by multiple factors, including modern ideas, science, class structures, gender roles, constructions of race, urbanization, nationalism, political conflicts, international relations, and economic institutions. This is a senior-level course that fills an important historical gap in the Kinesiology Department's sequence of offerings on the history of sport. Other courses in the sequence cover ancient sport, sport in American society, and the Olympic Games. While crucial American developments that impact sports in the modern world are incorporated into this course, this class offers students a global focus that concentrates on the role of sport in societies beyond the borders of the United States. This course also relates to the offerings in the philosophy of sport program by exploring the history of ideas about sport in modern thought. Additionally, the course connects to the science-based offerings in Kinesiology by providing students with an introduction to the history of the scientific study of human performance. The course introduces students to basic readings and knowledge of the history of sport in the modern world. The class provides opportunities to practice the critical reading and thinking techniques that shape the historian's approach to knowledge. This course will be taught once every year with an anticipated enrollment of 50 students. Evaluation methods that test reading and critical thinking skills are employed. No special facilities are required.

Enforced Prerequisite at Enrollment: KINES 100 or KINES 341 or COMM 170 or RPTM 120 or HIST 113 or ENGL 234 or AFAM 114 or ASIA 101N or CAMS 142 or 6 credits in HIST International Cultures (IL)

KINES 447W: Representing Sport in Popular Film

3 Credits

Critical, contextual, and theoretical analyses of sport films focusing on popular narratives of social inequalities.

Enforced Prerequisite at Enrollment: KINES 100 Writing Across the Curriculum

KINES 448: Coping with Life After Sport

1 Credits

Psychosocial concerns affecting student-athletes as they enter the transition period following sport disengagement, focusing on coping interventions. KINES 448 Coping with Life after Sport (1) KINES 448 is designed for student athletes who have exhausted their eligibility for or will no longer be participating in their respective sport due to injury or other issues. It is also relevant for students in athletic training or those who plan to pursue a career in coaching. The focus of the course is on the identification of issues and stressors affecting the transition and the development of strategies and coping skills to deal with life after sport. This can often be a very emotional and difficult time for student athletes. Discussion is focused on intervention and coping strategies, goal setting, decision making, career planning, and transferable skills. Student athletes will be able to recognize how their athletic experience has helped them to acquire numerous skills and characteristics highly valued in the workplace. Two sections of the course will be offered each semester. Students will be required to submit a weekly reaction paper, do a review of literature, and compile a comprehensive career plan. The class will be highly interactive with regular in-class assignments and projects.

Enforced Prerequisite at Enrollment: 7th semester or higher and major in KINES or 7th semester or higher and minor in KINES or 7th semester or higher and intercollegiate sport participation

KINES 449: Sport in African History

3 Credits

Recent events in sporting history have precipitated changes in perception for many in Africa relative to the historic legacies of racism and colonial rule. These events lead to pivotal questions -What are the broader social and political meanings of sport in African society? And what does the study of sport in Africa tell us about Africa's place in world history? This course uses the lens of sport to examine the social and political histories of Africa and the wider diaspora in historical perspective. From the racial and gendered hierarchies of colonialism to the use of sport to protest against social injustices, students are challenged to analyze the interdisciplinary significance of sport far beyond the playing field. One of the main intellectual goals of this course is to use sport to deepen our understanding of specific outcomes in African sport (e.g. South Africa's remarkable transformation from pariah of international sport to host of global events like the 2010 World Cup, and Kenyan running successes) from a variety of perspectives. We also consider how Americans travelled to and engaged with African societies as athletes, ambassadors, and activists. Broadly, this course explores sport and social change in Africa from the late nineteenth century to the present. It examines the sporting lives of African athletes, fans, reporters, coaches, and organizers and then connects them to shifting racial identities and power relationships on the continent as well as elsewhere around the world. These histories shed light on the pivotal role of sport in the everyday lives of people across the continent. In the process, we pay attention to primary sources, analyzing the ways in which Africans thought, talked, and represented themes discussed in assigned readings. Ultimately, this course will strengthen student skills of critical thinking, oral communication, collaboration, research, and writing.

Enforced Prerequisite at Enrollment: KINES 100 or 3 credits of AFR or 3 credits of HIST
Cross-listed with: AFR 449
International Cultures (IL)

General Education: Humanities (GH)
 GenEd Learning Objective: Global Learning
 GenEd Learning Objective: Key Literacies

KINES 452: Applied Cardiovascular Physiology

3 Credits

In-depth study of cardiovascular regulation during postural, environmental, and exercise stress. KINES 452 Applied Cardiovascular Physiology (3) First, the course begins with an intensive review of hemodynamics and basic cardiovascular control mechanisms (neural, hormonal, and local regulation). Second, students compare and contrast these general principles in six important circulations: splanchnic, renal, cerebral, coronary, cutaneous, and muscle. Third, they examine the three stresses which affect the circulation: posture (gravity), environment (especially heat) and exercise. For each stress, students identify the regional circulation(s) most affected and how they contribute to an integrated (systemic) cardiovascular response that is unique for each stress. Finally, combinations of posture, heat, and exercise stress are considered to illustrate competing cardiovascular control mechanisms. At each step students are introduced to seminal research papers illustrating the concept being studied.

Enforced Prerequisite at Enrollment: KINES 350

KINES 453: Environmental Physiology

3 Credits

This course examines physiological function of humans at rest and during prolonged or maximal exercise in conjunction with environment stress (heat, cold, altitude, hyperbaria).

Enforced Prerequisite at Enrollment: KINES 350

KINES 454: Women's Health and Exercise Across the Lifespan

3 Credits

KINES 454 begins with a review of general principles of research conduct and publication, themes that will be carried throughout all material covered in this class. A review of the historical aspect of women's health research and a review of the state of knowledge in women's health in the wake of the contemporary scientific endeavors such as the Women's Health Initiative will also be explored. Students will learn physiology of puberty, menstrual function and bone health and the impact of exercise on these processes. Students will explore current concepts of exercise related to the female athlete and clinical implications of alterations in normal physiology. The impact of oral contraceptives on health and exercise performance will be also discussed. Students will learn menopausal physiology, alterations in clinical status associated with this life stage, and review current research related to the Women's Health Initiative. Finally, a discussion of the effects of gender differences on health and exercise will be discussed. This course is designed for students who wish to develop a richer understanding of the physiological role of exercise in modulating the health of girls and women during different phases of the lifespan, including but not limited to childhood, adolescence, adulthood and later adulthood. At each step, students will be exposed to relevant research methods issues and introduced to seminal research papers illustrating the concept being evaluated. Students will improve their ability to read and summarize original research literature through in depth presentation and discussion of seminal studies. Moreover, students will develop an understanding of how research has informed the state of knowledge on issues covered

in this class and students will develop "language understanding" appropriate for interpreting and reading research papers.

Enforced Prerequisite at Enrollment: KINES 101

KINES 455: Physiological Basis of Exercise as Medicine

3 Credits

KINES 455 reviews the physiological basis of exercise for enhancing health and protecting against chronic diseases. This course is designed for students interested in developing a deeper understanding of the physiological mechanisms behind exercise as medicine. Course content will consist of a mixture of selected book chapters as well as contemporary review and primary research articles. This course begins with an overview of the current exercise deficiency problem, including the societal, behavioral, and economic changes of the past century which have contributed to the modern day epidemic of chronic inactivity-related disease. After developing an appreciation for the scope of these problems, students will be introduced to the "tools" needed to critically evaluate the association between exercise and/or inactivity on health and the mechanisms by which these associations may occur, including: basic principles of epidemiology, searching/reviewing scientific literature, and experimental design. The remainder of the course will be focused on how exercise/physical activity modifies molecular/tissue-level and integrative physiological function, and describes the extent to which these modifications confer either preventative or therapeutic benefit. Students will also use the "tools" that they learned at the beginning of the semester to demonstrate and share knowledge with others; integration of this information may include a thorough analysis of a chronic condition including the pathophysiology, strength of evidence for exercise as medicine, and physiological actions of exercise in prevention or treatment. Students may also be given the opportunity to translate their knowledge from this course into educational materials (e.g., flyers, pamphlets, screensavers, fitness center displays, social media, etc) for use during "Exercise is Medicine" week.

Enforced Prerequisite at Enrollment: KINES 350

KINES 456: Physical Fitness Appraisal

4 Credits

In KINES 456, students assess the five components of health-related physical fitness through fitness testing measures: body composition, joint flexibility, muscle strength, muscle endurance and cardiorespiratory fitness. The importance of a comprehensive pre-participation health screening, including relevant medical history, physical examination findings, cardiovascular disease risk factor assessment and laboratory testing is emphasized. Several current pre-participation screening instruments are reviewed. The American College of Sports Medicine physical activity guidelines and guidelines for exercise testing and prescription are discussed and grounded in best practices in monitoring signs and symptoms of physical stress leading to test termination. Students explore the role that cardiovascular, pulmonary, renal and metabolic disease risk factors and signs and symptoms play in the development of atherosclerosis and the impact each has on fitness appraisal. Modifications and/or alternative assessments for each health-related component of physical fitness are discussed for clinical populations, children and older adults. The required laboratory allows students practical opportunities to assess these components across the lifespan utilizing both field testing and laboratory testing and interpreting results using normative data. The required laboratory experience reinforces the course content and aids in skill acquisition by

requiring that all students participate in the testing procedures as both test administrators and subjects. As EKG interpretation is a valuable skill in fitness appraisal, students receive instruction in basics of EKG interpretation to include: determination of mean electrical axis, heart rate and rhythm, EKG waveform norms, and normal and abnormal EKG responses before, during and after exercise testing. Atrial, junctional and ventricular arrhythmias, heart blocks and bundle branch blocks are included in the latter portion of the course. ACSM metabolic calculations for exercise testing and prescription are reviewed and utilized.

Enforced Prerequisite at Enrollment: KINES 350

KINES 457: Exercise Prescription and Case Studies

3 Credits

Principles of exercise prescription; application of fitness appraisal based on current practices using evaluation and discussion of case studies. KINES 457 Exercise Prescription and Case Studies (3) The major purpose of this course is to provide those students interested in allied medical careers (e.g., cardiac rehabilitation, hospital testing, wellness centers, corporate fitness centers, physical therapy) with skills and practical knowledge regarding exercise diagnostics and prescription. Particular emphasis is placed on clinical diagnostic procedures, interpretation and terminology and this course directly contributes to the knowledge base expected for future employment in this area. At the conclusion of KINES 457, the students will be able to demonstrate on written examinations and in discussions, a knowledge and understanding of basic exercise prescription principles for apparently healthy, at risk and diseased populations, with special- emphasis on the cardiac patient. Inherent in the course goals is an understanding of the chronic physiological adaptations that occur as a result of programs of endurance and resistance exercise in apparently healthy, at risk and diseased populations. This course includes lectures as well as hands-on laboratory sessions. Evaluation is based on student performance on written examinations, written and oral case study presentations, and written assignments. This course will be taken after students have completed KINES 456 and will complete the learning scheme involving fitness appraisal and subsequent prescription of exercise programs. The course is offered fall and spring semesters with an enrollment of 35 students.

Enforced Prerequisite at Enrollment: KINES 350 and KINES 456

KINES 458: Introduction to Electrocardiogram Interpretation

3 Credits

Reading and interpreting electrocardiograms are important skills for an exercise physiologist and many other allied health care practitioners. This skill features prominently in the job task analyses for industry certifications. The electrocardiograph is an instrument that measures electrical potentials on the body surface and generates a record of the electrical currents associated with heart muscle activity. The graphic record generated by the electrocardiograph is called an electrocardiogram (EKG or ECG). The EKG provides information about the rhythm and rate of contraction of heart muscle and the strength, timing and direction of electrical signals as they pass through various areas of the heart. Specific abnormalities of rate and rhythm will produce recognizable patterns in the EKG waveforms. This course will begin with cardiac anatomy and cardiac action potential production and conduction. The course material will progress through normal EKG patterns through common abnormalities in various areas of the heart as well as patterns related to infarction, acute injury and ischemia. The

hemodynamic consequences of these abnormalities will be discussed. The effects of exercise, prescription medications and other drugs on the EKG will be explored. Successful completion of this course does not grant the authority to provide a medical diagnosis based upon an EKG interpretation; only a physician can do so

Enforced Prerequisite at Enrollment: KINES 350 or BIOL 163

KINES 459: Community Engagement and Outreach in Kinesiology

3 Credits

Community outreach and engagement are two missions of the Department of Kinesiology. Towards these goals this course provides students with an opportunity to gain knowledge and master assessment skills in the teaching laboratory or classroom before providing opportunities for students to practice these skills in diverse populations across the Commonwealth and in neighboring states. The first several weeks of the course will be spent learning how to perform various fitness and health screenings, including but not limited to: tests on treadmills and stationary cycles, blood pressure auscultation, heart rate measurement techniques, fingerstick procedures for blood lipid, blood glucose and HbA1c assessments, body composition measurements, strength testing and flexibility testing. Special emphasis will be placed on measurement techniques across the lifespan including older adults and children. There are potential fees for this course to support travel; such fees are indicated in the course information in the scheduling system.

Enforced Prerequisite at Enrollment: 5th Semester standing and KINES 101

KINES 460: Movement Disorders

3 Credits

Content in this course covers the major peripheral and central movement disorders and methods of their treatment. This course addresses the neuromuscular mechanisms underlying the coordination of voluntary movements, including their changes during development and aging. Disorders of movements, including muscular, systemic neurological, developmental and those related to a spinal cord or brain injury will be covered. Motor rehabilitation and commonly used therapies will be considered.

Enforced Prerequisite at Enrollment: KINES 101

KINES 461W: Preparation for Research Project

2 Credits

Planning and preparation for research project. KINES 461W Preparation for Research Project (2) This course prepares students to conduct a research project in KINES 462W. Students will begin by critically examining different research approaches. They will explore the development and assessment of research topics paying special attention to both scientific and philosophical justifications. They will learn how to identify research populations and how a human subjects review protects those involved in research studies. They will identify and critique the various inventories and assessment tools available for the kind of research they propose. Students will complete a research proposal including review of literature and method section, and submit an application to the Institutional Review Board. These goals will be achieved through a series of writing assignments. Students are expected to demonstrate the following outcomes: 1) Communicating and writing ideas relevant to the field of Kinesiology. 2) Understanding and

describing the major issues in the field. 3) Understanding the principles of how to conduct research in wellness, fitness and/or associated practice. 4) Understanding and communicating the methods of scientific discovery. Students are evaluated on their research proposal (50% of final grade) which is drafted and revised during the semester. Further writing assignments (50%) assess and enhance student's competency in research methods and statistics. The course is offered every fall semester with a total enrollment of 25 each semester.

Enforced Prerequisite at Enrollment: KINES 260 and STAT 200 and at least 4 of the following (KINES 321 or KINES 341 or KINES 345 or KINES 350 or KINES 360 or KINES 384)

Writing Across the Curriculum

KINES 462W: Research Project

2 Credits

Completion of research topic. KINES 462W Research Project (2) During this course students will collect and analyze data for a research project. They will troubleshoot any data collection problems and learn how to use computerized programs for statistical analysis of data. They will learn about various presentation modes relevant to the written and oral presentation of research data. Students will prepare and be evaluated on a research paper that reports on their research project. In addition, they will present their work orally in showcase sessions to which fellow students and faculty members are invited. The goal is for students to produce as close as possible to publishable papers. This course is part of a two-course sequence and can only be taken upon successful completion of KINES 461W. It, along with the internship experience, are the culminating experiences in the Exercise Science - Science Emphasis. Facilitates needed will be determined based on the individual research project. This course will be offered only in the spring semester of each year. Enrollment will vary from 1 to 25.

Enforced Prerequisite at Enrollment: KINES 461W

Writing Across the Curriculum

KINES 463: Acquisition of Motor Skills

3 Credits

Examination of principles of motor learning; the application of strategic factors such as: practice types, schedules, augmented information, and motivation. KINES 463 Acquisition of Motor Skills (3) This course is intended for students interested in the principles of motor learning (learning, retention and transfer) and the application of specific learning strategies such as, practice, feedback, demonstrations, and instructions. Through lectures, discussions, and course readings in addition to writing assignments, the goal is for students to develop a unified conceptual framework for motor learning and its facilitation through intervention strategies. The evaluation for the final grade will be based upon a synthesis of assessment in three areas: a) Term Project (30% of final grade) - a report on a learning experiment or a synthesis paper on a learning principle or a learning strategy; b) Mid-Term Exam (30% of final grade) - questions requiring short 2-3 sentence answers; and, c) Final Exam (40% of final grade) - requiring essay length answers to selected questions that integrate key issues from all the course material. This course will build on the concepts outlined in KINES 171 and 360. It will represent the culminating upper level undergraduate course in motor learning. This course will be an elective available to students who have completed the required KINES 360 course. It can be used to fulfill requirements for the Kinesiology major and the Movement Science, Teacher Preparation, and Athletic Training Options. This course will be

available to students outside of the Kinesiology major who may, upon approval, substitute the KINES 360 prerequisite requirement. The course will be offered every spring semester.

Enforced Prerequisite at Enrollment: KINES 360

KINES 464: Physical Education Programming and Practicum

3 Credits

This course is designed to provide students pursuing a health and physical education teacher certification in the Kinesiology degree with the conceptual foundation necessary to develop comprehensive and developmentally appropriate instruction that aligns with the National Association of Sport and Physical Education to students in preschool through twelfth grade (P-12). It will provide students with information on physical education comprehensive programming and contemporary instructional practices. Appropriate planning, instruction, programming and assessment make-up the foundation of this course. Emphasis is placed on the student's ability to create an effective instruction/programming and deliver the content in a preschool through twelfth grade physical education class. The overarching objectives for this course are to develop students' understanding of the different physical education program/curriculum models and applications of the models in a P-12 setting, integration of technology to enhance student learning, and develop advocacy measures for physical education through understanding and communicating the value of quality physical education and its contribution toward student wellness. Students will be able to plan and design program content that targets the psychomotor, cognitive, and affective learning domains and aligns with national standards. Students will design and administer authentic student assessments that align with the cognitive, psychomotor, and affective learning domains. Students will also design curricular scope and sequence overviews that are used to guide comprehensive programming and lesson development from grades P-12.

Enforced Prerequisite at Enrollment: Students must have a grade of C or better in: EDPSY 10 and KINES 100 and KINES 101 and KINES 295B and PSYCH 100 Concurrents: KINES 366 and KINES 395A and KINES 400 and KINES 468W

KINES 465: Neurobiology of Sensorimotor Stroke Rehabilitation

3 Credits

This course is designed to expose students to the recent topics in motor stroke rehabilitation research through literature. KINES 465 Neurobiology of Sensorimotor Stroke Rehabilitation (3) This 3-credit course is designed to expose students to the most recent topics in motor stroke rehabilitation research through reading of current literature. The course addresses the neurobiological foundations of motor deficits in stroke, including contralesional and ipsilesional effects, current research on mechanisms of motor recovery, and the most current research on intervention strategies, such as constraint induced therapy, robot aided rehabilitation, virtual reality therapy, and sensory motor interventions. The purpose of the course is to provide an understanding of the neurophysiological and biomechanical foundations of motor deficits that occur with stroke, and of current treatment approaches. Stroke presents a significant social problem that is emphasized in current statistics reported by the American Heart Association indicating that each year, about 780,000 people in the United States experience a new or recurrent stroke. While stroke can produce deficits in perceptual, cognitive, and motor processes, this course is focused on sensorimotor deficits and associated rehabilitation interventions that tend to be employed by

physical and occupational therapists in the rehabilitation environment. Sensory-motor strokes often result in weakness and deficits in voluntary movement of the limbs on the opposite side of the body as the damaged hemisphere (Contralesional). These motor deficits currently receive primary focus in occupational and physical therapy treatment for stroke. However, regardless of improvements in contralesional arm function, most patients also show deficits in coordination of the ipsilesional arm that is on the same side of the body as the damaged hemisphere. For many hemiparetic patients, functional recovery relies heavily on this arm. This class will focus on understanding both ipsilesional and contralesional motor deficits in stroke. Physiological and biomechanical mechanisms of dysfunction will be emphasized. Recovery of function will be addressed through analysis of physiological and biomechanical measures that are used to track changes in neural function. In addition, current research that is focused on developing rehabilitation intervention protocols that systematically address remediation of dysfunction, and facilitation of recovery will be discussed. Students will be guided in reading, critiquing, and presenting primary scientific manuscripts and review articles. Active discussions of presented material are encouraged, and grades are based on presentations, quizzes, and participation in class.

Enforced Prerequisite at Enrollment: KINES 360 and KINES 384

KINES 467: The Science of Performance Enhancement

3 Credits

Evidence-based evaluation of performance enhancing substances and methods in sport. KINES 467 The Science of Performance Enhancement (3) Students will describe and evaluate the evidence base for substances and methods used to improve aerobic power, strength, body composition, metabolism and thermoregulation as they relate to exercise and physical activity. Students will study and develop a rating scheme to describe the quality of evidence and recommendation to use ergogenic aids. This rubric will be utilized throughout the course to evaluate recent and proposed techniques to enhance athletic performance. Topics include, but are not limited to: • Blood boosting: Enhancement of oxygen transport • Androgens, prohormones, and anabolics • Substrate manipulation to increase strength • Nutraceuticals to improve athletic performance and recovery. General pacing of these topics may be modified depending on class interest and issues that emerge in the popular press. Consideration will be given to the regulatory and ethical aspects of their use. Students will develop an understanding of the World Anti-Doping Code, administered by the World Anti-Doping Association and its subsidiaries. Prior familiarity with ethics is essential. Science of Performance Enhancement is designed to emphasize team and individual scholarship in multiple domains, with emphasis on quantitative, qualitative and analytical skills.

Enforced Prerequisite at Enrollment: KINES 345 and KINES 350

KINES 468W: Health Instruction in the School--Content and Method

3 Credits/Maximum of 3

Methods, materials, and units of instruction. KINES 468 Health Instruction in the School-Content and Method (3) This writing-intensive course is designed to provide students pursuing a health and physical education teacher certification in the Kinesiology degree with the conceptual foundation necessary to develop health instruction that aligns with the National Health Education Standards to students in preschool through twelfth grade (P-12). It will provide students with information on health education content, theory, and contemporary

instructional practices. An understanding of how to effectively plan and sequence age-appropriate health content and deliver the content using multiple instructional strategies make up the foundations of the course. Emphasis is placed on the student's ability to create an effective lesson plan and deliver the content in a preschool through twelfth grade health education classroom. The overarching objectives for this course are to develop students' health education planning skills, instructional skills, reflection skills, and writing skills. The overarching objectives for this course are to develop Pre-K-12 teacher candidates' health education skills in planning, delivery and instruction, and reflective writing. Students will learn these skills by designing comprehensive preschool through twelfth grade health instruction using interactive learning activities that lead to health literacy and reflecting on their own teaching as well as their peers' teaching abilities. The purpose of this course is to enhance students' writing and oral communication skills for success in health education. Given the importance of clear communication in health and wellness instruction, this course will provide students with the skills necessary to effectively communicate with students, parents, school administrators, and the public. The course will begin with the basics of writing a comprehensive health education lesson plan and will progress to developing increasingly complex written communications and oral presentations.

Enforced Prerequisite at Enrollment: Students must have a grade of C or better in: EDPsy 10 and KINES 100 and KINES 101 and KINES 295B and PSYCH 100 Concurrent: KINES 366 and KINES 395A and KINES 400 and KINES 464

Writing Across the Curriculum

KINES 470: Genetics and Human Physical Performance

3 Credits

Human genetic variation is ubiquitous and important functionally. How genetic profiles, such as those leading to a high proportion of fast muscle fibers, combined with individualized training environments underlie peak performances will be examined. Similarly, when genetic predispositions are known, lifestyles can be optimized for health through the lifespan. Several hundred genetic loci influence physical performance and health, while allelic variants influencing elite athlete status and/or unusual longevity are about an order of magnitude lower. Only a few individual genetic loci and alleles are associated consistently with elite athletic performance and healthful longevity; many traits important for competitive maxima and general health are multifactorial, involving numerous loci and environmental factors. Each sport has unique physical requirements. Therefore, any study of a favorable genetic background for a given sport should consider the performance components most appropriate. Athletic performance is a complex human trait, involving interaction of multiple body systems (musculoskeletal, cardiovascular, respiratory, nervous, etc.). These include morphology (height and body composition), with specific physiques naturally suited to specific sports. Endurance, strength, and power are other factors underlying athletic performance. Additional complexities affecting athletic performance include cognitive factors and injury susceptibility. Environmental factors (including training and nutrition) also influence various traits. An individual's "trainability," or response to exercise training itself also is dependent partially on genetic factors. The relative importance of environment versus genetic factors in athletic success varies widely among sports. Consequently, elite athletic performance as well as long term health result from interactions among genetically-based physical, and appropriate good environments. This course is focused on preparing

students with basic knowledge on how the field of genetics can influence sport and athletic performance, fitness outcomes and health.

Enforced Prerequisites at Enrollment: BIOL 161 and BIOL 163 and KINES 101

KINES 471: MOTOR CONTROL

3 Credits/Maximum of 3

Analysis of the mechanisms underlying the neural control and coordination of voluntary movements. Within this course, the students will get an in-depth knowledge of the mechanisms underlying the neural control and coordination of voluntary movements. The course will include content on the history of movement studies, classical research, and main current theories in the field of motor control. These will include theories based on ideas of motor programming and internal models, control with muscle activation patterns, equilibrium-point control, optimization, dynamic systems, and theory of synergies. The neural control of several everyday motor behaviors will be discussed such as vertical posture, locomotion, reaching, and prehension. Speed-accuracy and speed-difficulty trade-offs and changes in motor control and coordination with practice will be described emphasizing plasticity within the central nervous system. Changes in motor control with healthy aging and fatigue will be discussed. In addition, changes in motor control and coordination will be discussed based on the reviewed theories. The role of specific structures within the central nervous system in motor control will be reviewed with an emphasis on movement disorders associated with dysfunctions of specific structures such as spinal cord injury, stroke, disorders of the basal ganglia and of the cerebellum.

KINES 481W: Scientific Basis of Exercise for Older Adults

3 Credits

Study of age-associated physical changes and the effects of exercise on the aging process.

Enforced Prerequisite at Enrollment: KINES 350
Writing Across the Curriculum

KINES 483: Motor Patterns of Children

3 Credits

Development of motor patterns. Fundamentals of movement, basic motor skills, and adaptation of the body to external forces.

Enforced Prerequisite at Enrollment: KINES 202

KINES 484: Advanced Biomechanics

3 Credits

The use of advanced biomechanics to provide an in-depth understanding of the principles which underpin human movement.

Enforced Prerequisite at Enrollment: KINES 384

KINES 485: Science and Practice of Training Athletes

3 Credits

The primary purpose of this course is to provide students interested in applied exercise and health careers (strength and conditioning coaches, group fitness instructors, health and physical education teachers, personal trainers, wellness professionals, physical therapists) with skills

and practical knowledge to design as well as instruct safe and effective strength and conditioning techniques for athletes to improve their cardiovascular health, strength, and flexibility. Students will learn how to conduct sport-specific training sessions, demonstrate and teach proper exercise techniques, understand nutrition and performance-enhancing substances and administer exercise tests. Students will gather and apply the current literature regarding the ideal training strategies and practical tips for athletes. They will also learn how to verbally and physically cue and demonstrate the exercises. Strategies for adherence to assist in behavior modification will be a focus throughout the course. At the conclusion of KINES 485, the students will be able to demonstrate a knowledge and understanding of properly training an athlete. In the course goals is an understanding of the adaptations that occur as a result of programs of cardiorespiratory and muscular exercise in the athlete populations. Content knowledge is integrated with application of skills in fitness exercise, and instruction and will be put to use in a learning laboratory setting which students will have the opportunity to engage in hands-on instructional experiences. Additionally, this course can assist in preparing students for the nationally accredited certification exams.

Enforced Prerequisite at Enrollment: KINES 200 and KINES 202

KINES 488: Mechanics of Locomotion

3 Credits

This course examines the forces and motions characteristic of locomotion, with emphasis on walking, the most common human activity. Walking has been described as the most commonly performed human activity. Diseases or injuries that reduce the ability to walk independently and efficiently are especially likely to adversely affect quality of life. KINES 488 introduces students to the elements of normal walking and how walking motions are affected by changes in age, walking speed, and pathological conditions. Advanced topics covered in this course include other forms of locomotion, including running and cycling, and the use of mathematical models to understand phenomena related to locomotion. Students enrolled in this course learn the particulars of human locomotion, but in so doing they also gain an understanding of kinematics and kinetic analysis, joint mechanics, and the clinical treatment of movement disorders. Basic principles of mechanics are applied to establish how walking motions result from forces produced by muscles, gravity, and contact with the ground. Students planning to pursue graduate study in movement biomechanics or in clinical areas such as physical therapy are especially likely to benefit from the focus on these areas. Laboratories introduce students to current experimental methods used to measure motions, forces, and muscle activity during locomotion. Completion of several case studies during the semester gives students practical experience with the interpretation of motion analysis data, the factors that influence clinical decisions in the treatment of movement disorders, and ethical considerations in biomechanics research.

Enforced Prerequisite at Enrollment: KINES 384

KINES 491W: Research Proposal

3 Credits

This course prepares students to propose a research project in the field of Kinesiology. Students will choose to work within a sub-discipline of Kinesiology and be mentored by the course instructor with expertise in that area. Students will review and critically analyze scholarly literature to identify a critical gap in knowledge in their topic area. Students will

then develop a research question supported by a rationale and develop a plausible research approach to address the existing gap in knowledge. Students will write a research proposal that includes specific aims, introduction, hypothesis, methods, significance and innovation, and potential pitfalls and alternative approaches sections. Formal peer review sessions will be conducted throughout the semester to have students critically evaluate other research proposals. Students will need to demonstrate good command of writing skills including composition, grammar, and spelling, and demonstrate responsibility, dependability, and maturity by meeting writing deadlines, and the criteria for acceptable papers. Students will also complete an Institutional Review Boards application for their proposed research project. The course will culminate in a final written proposal and presentation.

Enforced Prerequisite at Enrollment: KINES 260 and STAT 200 and at least 4 of the following KINES 300 level courses should be taken. (KINES 321 or KINES 345 or KINES 341 or KINES 350 or KINES 360 or KINES 384)

Writing Across the Curriculum

KINES 492W: Programming for Business and Agencies

3 Credits

Fundamentals of program development applied to corporate and private physical fitness businesses. KINES 492W Programming for Business and Agencies (3) This course will use an experiential approach to acquire knowledge and skills necessary to assess, plan, implement and evaluate health/wellness/fitness programs within a business/corporate setting. Students will actively participate in a process-oriented, student-centered learning environment that includes cooperative learning, critical thinking, effective communication, assessment, and problem solving. Students will assess, plan, implement and evaluate a health-related program (i.e., wellness fair, career fair, road race, fitness programs). Students will write business letters, operating plans, mini-grants, budgets, flyers, press releases, newspaper articles, surveys, and other written communication projects relevant to the fitness/wellness business. Students will access and evaluate health/wellness resources (i.e., agencies, Internet, media, speakers). This is a writing intensive course and will follow university guidelines for such courses. Most of the assignments will involve group-based problem solving.

Enforced Prerequisite at Enrollment: 5th Semester Standing and (KINES 100 or KINES 101)

Writing Across the Curriculum

KINES 493: Principles and Ethics of Coaching

3 Credits

The Principle and Ethics of Coaching examines the challenges of today's coaching profession through societal norms and expectations from the past and present. The course begins with a study of the coaching profession covering past and current coaches who have experienced success and failure in the profession. Students learn how the profession has developed as a result of changing values, demands, emphasis and expectations in the athletic world. Students will learn how to work with Title IX, parents, high school and collegiate regulations, season structures and the various roles and responsibilities of today's coach. The course is an upper-level course providing students in Kinesiology with an in depth study of the profession that has historically been associated with careers in Kinesiology. This course relates to other courses in sport ethics, sport philosophy and history of sport as they provide the theoretical background for coaching decisions. In addition,

this course demonstrates practical implementation of theories from nutrition as well as activity courses. The course offers students an in depth study of sport and gender specific differences as they relate to the coaching profession. The students observe, question and study current coaches while examining their own backgrounds to develop set of principles to handle today's coaching issues. A coaching experience is an optional opportunity afforded to students while writing skills must be demonstrated by all students through written exams, papers and/or projects. The emphasis on class discussion and interaction with various athletic coaches introduces students to realities of today's coaching profession and the challenges of the 21st century coach. Video and power point enhance the multi media approach to this course and further enhance the learning environment. Students may only receive credit for KINES 493 or KINES 493W.

Enforced Prerequisite at Enrollment: KINES 100 and Students may only receive credit for KINES 493 or KINES 493W.

KINES 493W: Principles and Ethics of Coaching

3 Credits

The Principle and Ethics of Coaching examines the challenges of today's coaching profession through societal norms and expectations from the past and present. The course begins with a study of the coaching profession covering past and current coaches who have experienced success and failure in the profession. Students learn how the profession has developed as a result of changing values, demands, emphasis and expectations in the athletic world. Students will learn how to work with Title IX, parents, high school and collegiate regulations, season structures and the various roles and responsibilities of today's coach. The course is a senior-level course providing students in Kinesiology with an in depth study of the profession that has historically been associated with careers in Kinesiology. This course relates to other courses in sport ethics, sport philosophy and history of sport as they provide the theoretical background for coaching decisions. In addition, this course demonstrates practical implementation of theories from nutrition as well as activity courses. The course offers students an in depth study of sport and gender specific differences as they relate to the coaching profession. The students observe, question and study current coaches while examining their own backgrounds to develop a set of principles to handle today's coaching issues. The emphasis on class discussion and interaction with various athletic coaches introduces students to realities of today's coaching profession and the challenges of the 21st century coach. This course fulfills 3 credits in Writing Across the Curriculum. Students may only receive credit for KINES 493 or KINES 493W.

Enforced Prerequisite at Enrollment: KINES 100 and Students may only receive credit for KINES 493 or KINES 493W.

Writing Across the Curriculum

KINES 494H: Honors Research Project

1-6 Credits/Maximum of 6

Supervised student activities on honors research projects identified on an individual or small-group basis.

Enforced Prerequisite at Enrollment: Approval of honors thesis advisor
Honors

KINES 495: **SPECIAL TOPICS**

1-14 Credits/Maximum of 1

KINES 495A: Practicum in Student Teaching

12 Credits

The teacher candidate will be placed in either an elementary or secondary school setting for the first 7.5 weeks of the student teaching experience, followed by placement in the level not selected first for the last 7.5 weeks. The teacher candidate will be teaching both health and physical education during each placement. The teacher candidate will be assigned on-site cooperating teachers will be supervised by a university faculty member who makes a minimum of four on-site visits, plus review of teaching via two videotape. During the 15-week semester, there are four seminars of approximately 5 hours each, during which all teacher candidates meet with the coordinator of the student teaching program to discuss topics related to the multiple roles of teachers in public schools and the transition to becoming a professional teacher. In addition, some time in each seminar is devoted to experience sharing and collaborative problem solving. The following topics are covered during the seminars: legal liability and sexual harassment, electronic portfolios, resume and cover letter writing, health and physical education professionals, preparation for employment, interviewing, best teaching practices and sharing, classroom management, and technology in physical education. In addition, the student teachers are required to complete a variety of assignments including: a professional portfolio, unpaid service activity reflection, daily notebook, videotapes and reflection, and Pennsylvania teaching application and essay.

Enforced Prerequisite at Enrollment: KINES 366, 395A, 464, 468W C or better, 3.0 GPA, completion of all PA Dept of Education Entrance Criteria, demonstrated pedagogical and professional disposition competence, and recommendation by the Program Director

KINES 495B: Field and/or Research Practicum in Kinesiology

3-6 Credits

This is a required course for students in the Movement Science and Applied Exercise Health (AEH) Options within the Kinesiology curriculum. This course requires students to complete gainful leadership and experiential learning in workplaces or research settings with the expectation that these experiences will allow them the opportunity to apply and integrate content from all their courses with success and insight. Students complete practicum requirements at a variety of settings, including but not limited to research laboratories, professional fitness centers, rehabilitation facilities, senior centers, community health and wellness programs, hospitals and collegiate and professional sports venues. They learn the day-to-day requirements of being "on the job" or "in the lab," including professional management practices and ethical considerations. Practicums are evaluated on an ongoing basis with the student intern, on-site internship supervisor, and/or faculty member involved in the process. Internships can be completed either on or off-campus

Enforced Prerequisite at Enrollment: KINES 395B and 7th Semester standing and 2.00 cumulative GPA or greater cumulative GPA and 9 credits of 400-level KINES courses

KINES 495C: Exercise Science Practicum

3-6 Credits/Maximum of 6

This course places students in the work place with the expectation that the experience will allow them the opportunity to apply and integrate content from all the courses in the program. They will be placed at professional fitness centers, rehab facilities, senior centers, and wellness centers. They will learn the day-to-day requirements of being "on the job" such as time management, record keeping, client interactions, feedback delivery, fitness program establishment and implementations, business and management practices as well as ethical considerations. Their field experience will be focused on four in-class days during which students will collectively explore work place issues. Practicum work will be evaluated on an ongoing basis with the student intern, work place supervisor, and faculty member involved in the process. The course will take place off campus as work sites and no special on-campus facilities are required. It will be offered annually as the last course in the major.

Enforced Prerequisite at Enrollment: KINES 100 and KINES 101 and KINES 200 and KINES 202 and fifth semester standing

KINES 495D: Expanded Field and/or Research Practicum in Kinesiology

1-12 Credits/Maximum of 12

KINES 495D Expanded Field and/or Research Practicum in Kinesiology (1-6) This course, in combination with KINES 495B, places students in the workplaces or research settings with the expectation that these experiences will allow them the opportunity to apply and integrate content from all their courses in the program. They will be placed at a variety of sites, including but not limited to research laboratories, professional fitness centers, rehabilitation facilities, senior centers, community health and wellness programs, and hospitals. They will learn the day-to-day requirements of being 'on the job' or 'in the lab,' including professional management practices and ethical considerations. Practicum work will be evaluated on an ongoing basis with the student intern, work place supervisor, and faculty member involved in the process. The course will take place off campus at work sites and no special on-campus facilities are required. It will be offered annually as the last course in the major.

Enforced Prerequisite at Enrollment: KINES 495B

KINES 495E: Advanced Professional Development in Kinesiology

3 Credits

KINES 495E Advanced Professional Development in Kinesiology (3) This course is designed to provide undergraduate students the opportunities of fitness professional pre-certification preparation via lecture format, professional travel to acquire hands-on skills at a top caliber training facility, and an expert panel round table discussions. Throughout the course, students will have exposure to professional communication with faculty through formats including, but are not limited to the following: faculty/professional/expert discussions, lectures, training sessions, quizzes and examinations that are designed to prepare students to pass a national certification. Students will enhance skills needed to develop exercise leadership characteristics, communicate information effectively, and build a foundation of exercise testing and prescription guidelines which are safe, effective and motivating to clientele. Other class foundational principles include but are not limited to Exercise Programming; Health Risk Assessment; Serial Testing; Metabolic Calculations; Nutrition and Weight Management and Facility

Administration. Students will take practical experience and knowledge gained from this professional course and apply principles into their proposed field of study in a safe and effective manner.

Enforced Prerequisite at Enrollment: 5th Semester standing and (KINES 100 or KINES 101)

KINES 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

International Cultures (IL)

KOR 110: Level Two Korean B

4 Credits

This is the fourth semester course of sequenced Korean study at Penn State. It is the Advanced-Intermediate course. KOR 110 Level Two Korean B (4) This is the second part of intermediate Korean and a continuation of Korean 3 offered at Penn State. Classroom activities will be built around the textbook lessons and all activities will be designed such that students will have multiple opportunities to practice listening, speaking, reading, and writing. Pedagogical materials also include the use of multi-media based authentic language samples from a variety of modalities (spoken, written, and computer mediated) produced for Korean nationals (e.g., tv dramas, movies, magazines, internet sites and blogs, essays, short stories, magazine articles, advertisements). These will supplement the textbook and will provide insights into daily life in Korea, sociocultural values of the Korean people, as well as a broader representation of Korean language, history, literature, and culture. Students will also work within various genres of Korean discourse and literature and learn to recognize and accurately use the particular language styles that are associated with those genres.

Prerequisite: KOR 001 , KOR 002 ,and KOR 003 (or equivalent cumulative knowledge of Korean)

KOR 120: Introduction to Korean Culture

3 Credits

Survey of Korean culture and society in historical contexts; exploration from antiquity to the contemporary period through diverse media.

This course is designed as a multi-disciplinary introduction to Korean society. In surveying Korean culture from antiquity to the present, we will examine a wide range of primary sources from the past, including archaeological relics, written records, and works of art; as well as contemporary materials by Korean authors, directors, and other cultural producers, together with scholarly commentaries about these materials. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course. In the first part of the course that covers the origins of Korean 'tradition,' we will observe the formation and development of social relations, popular beliefs, and systems of thought that have shaped the Korean way of life. Our historical analysis of these texts will also locate their resonances and ramifications in modern Korea, particularly in cultural representations. In the second part of the course, we will discuss Korea's transformation through its encounter with the West, its modern experiences and national struggle under colonial rule, social upheavals after liberation, and the Korean War. Finally, by tracing the enduring impacts of the unresolved past on contemporary society, we will look at Korea today in terms of economic development and crisis, the democracy movement and its limitations, relations with North Korea and with the US, and sociocultural diversification in the age of globalization. By situating these topics within the broader contexts of East Asia and the world, we will seek to gain a richer and more nuanced view of Korea on the global map. The overall goal of this course is to develop students' abilities to engage in cross-cultural understanding. Through a comprehensive study of Korean materials from a variety of genres and media, students will not only learn about and from Korean history and culture, but also enhance their skills in reading closely, thinking critically, and writing effectively. In exploring Korean culture as a space of complex formations and dynamic interactions, students will be trained to question, analyze, and appreciate different modes of cultural production in their specific political and social contexts.

Bachelor of Arts: Humanities
 Bachelor of Arts: World Cultures
 International Cultures (IL)
 General Education: Humanities (GH)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Global Learning
 GenEd Learning Objective: Key Literacies

KOR 121: Korean Popular Culture

3 Credits

Survey of contemporary Korean popular culture in various forms, including pop music, film, TV drama, advertising, comics, and literature. What do we mark as 'Korean-style'? Are the images of Korea(ns) changing with the worldwide spread of Korean popular culture known as the Korean Wave (Hallyu)? This course provides critical approaches to cultural flows from South Korea. We will employ theoretical concepts and critical vocabularies from cultural studies to deepen and sharpen our analysis of the cultural representation of Korea in relation to questions such as class, gender, ethnicity, and body politics. Using diverse texts from literature, film, TV dramas, comics, and pop music, we will examine the social codes, cultural values, and economic realities that influence Korean society, including the Korean diasporic population around the world. In directing our attention to various ways in which Korean culture is transmitted and presented in different media, we will also inquire into historical and social issues rooted in the division of Korea, as well as the international dispersion of Koreans since the colonial period. Through intellectual exercises in boundary crossing, we will ultimately develop our

ability to explore the cross-cultural production of trans/national identities in the age of globalization. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

KOR 401: Level 3 Korean A

4 Credits

KOR 401 is the first semester of third-year Korean, which is equivalent to Advanced-Intermediate Korean I. KOR 401 Level 3 Korean A (4) (IL) Korean 401 is the first half of the 3rd year Korean (or Advanced-Intermediate Korean I). KOR 401 is designed for the learners who have background in KOR 110 or equivalent. The medium of instruction will be Korean. The students in this course will explore various topics and styles in Korean and further improve their skills of listening, reading, speaking, and writing in Korean to be able to better comprehend Korean culture and society. The objectives in this course are 1) to review, reinforce, and expand the basic grammar, 2) to expand knowledge of vocabulary and idioms, 3) to be able to speak not only in single sentences, but in dialogues to perform basic communicative functions, 4) to be able to read and understand simple essays and stories, and 5) to be able to write short compositions in Korean. As an advanced-intermediate Korean language course, it does not only strive to enable the students to interact successfully in Korean, but it also encourages them to deepen their understanding of Korean culture and society. In addition, it aims to cultivate students' knowledge and awareness of the similarities and differences between Korean and American culture, by introducing cultural values, tradition, beliefs, and customs of Korea during the course and also promoting discussion on the topics. It is expected that through enhanced Korean language proficiency and cultural knowledge of Korea, students can increase their ability to locate and evaluate information about Korea for their further academic and/or professional needs. The course is designed to be suitable for the students who have successfully completed Korean 110 (or its equivalent, through such means as study abroad). This course is designed to meet the Korean minor requirement and also count as an IL ("International Cultures").

Prerequisite: KOR 110 or equivalent
International Cultures (IL)

KOR 402: Level 3 Korean B

4 Credits

KOR 402 is the second semester of third-year Korean, which is equivalent to Advanced-Intermediate Korean II. KOR 402 Level 3 Korean B (4) (IL) Korean 402 is the second half of the 3rd year Korean (or Advanced-Intermediate Korean II). KOR 402 is designed for the learners who have background in KOR 401 or equivalent. The medium of instruction will be Korean. The students in this course will explore various topics and styles in Korean and further improve their skills of listening, reading, speaking, and writing in Korean to be able to better comprehend Korean culture and society. The objectives in this course are 1) to review, reinforce, and expand the basic grammar, 2) to expand knowledge of vocabulary and idioms, 3) to be able to speak not only in single sentences, but in dialogues to perform basic communicative functions, 4) to be able to read and understand simple essays and stories, and 5) to be able to write short compositions in Korean. As an advanced-intermediate Korean language course, it does not only strive to enable the students to interact successfully in Korean, but it also encourages them to deepen

their understanding of Korean culture and society. In addition, it aims to cultivate students' knowledge and awareness of the similarities and differences between Korean and American culture, by introducing cultural values, tradition, beliefs, and customs of Korea during the course and also promoting discussion on the topics. It is expected that through enhanced Korean language proficiency and cultural knowledge of Korea, students can increase their ability to locate and evaluate information about Korea for their further academic and/or professional needs. The course is designed to be suitable for the students who have successfully completed Korean 401 (or its equivalent, through such means as study abroad). This course is designed to meet the Korean minor requirement and also count as an IL ("International").

Prerequisite: KOR 401 or equivalent
International Cultures (IL)

KOR 403Y: Level 4 Korean A

4 Credits

This is a four-credit writing intensive course designed for students who have completed Level Three Korean B (KOR 402) or the equivalent. The course aims to further improve students' proficiency in all four language skills, with a special emphasis on writing. By exploring a wide range of topics on Korean popular culture and issues in modern Korea through selected various authentic materials, students will engage in a substantial amount of writing, editing, and revising in Korean. As a writing-focused course, this course will involve in-class and out-of-class writings entirely in Korean that aim to show students how to use writing as a form of both thinking and developing Korean proficiency, as a way to invent and/or build up new ideas, and as ways of organizing their thought in ways that allow them to communicate those ideas effectively to others entirely in Korean. Students will be assigned bi-weekly writing assignments of different genres on the topics that are covered by each lesson. The final project of the course will be a writing-based research project in Korean; the leadup to that project will involve significant discussion of academic writing style as well as the use of writing to help develop the research abilities and critical thinking. The course will cover various topics on Korean culture and issues in modern Korea that are selected from authentic materials such as newspaper articles, essays, TV programs, movies, and short stories. Thus, students will be exposed to various genres and different writing styles in Korean. This will allow students not only to develop writing proficiency in Korean in that what kinds of speech styles should be appropriately selected (among the many that have been learned) but also to gain greater knowledge of Korean culture and a deeper awareness of the role of culture and social behavior and to hone intercultural competence and critical thinking.

KOR 404: Level 4 Korean B

4 Credits

This is a four credit course designed for those who have completed KOR 403 (Level Four Korean A) or the equivalent. As a continuation of KOR 403, the course aims to further develop students' proficiency in

all four language skills. Students will explore a wide range of topics on Korean popular culture and issues in Korean society for content-based language learning throughout the semester to improve all aspects of proficiency for an advanced/near-superior level. Students will learn and practice via structured and authentic materials such as newspaper articles, essays, TV programs, movies, etc. The majority of reading and writing assignments will be done outside class, helping students become more independent in studying Korean. Students will be introduced to appropriate resources such as dictionaries, reference books, online dictionaries and other online resources depending on their individual needs. Class time will be used mainly for discussions of content, feedback on writing and presentations by students. This course will help students further advance their writing and speaking skills by continuously building their vocabulary, understanding the target culture, and its social issues through various sources of structured and authentic materials.

Prerequisites: KOR 403

Bachelor of Arts: World Language (All)
 Bachelor of Arts: World Lang (12th Unit)
 Bachelor of Arts: Humanities
 Bachelor of Arts: World Cultures
 International Cultures (IL)
 Exceeds 12th Unit of World Language

KOR 422: Introduction to Korean Linguistics

3 Credits

This course aims to develop linguistic knowledge about the Korean language. The course will focus on understanding the Korean language in terms of history, the writing system, lexicon, phonology, morphology, syntax, dialects, sociolinguistics, and pragmatics. Students will be introduced to essential features of the Korean language, focusing on its general and salient aspects of the language in consideration of general linguistics. The primary objective of the course is to develop a deep understanding of the Korean language and to be able to analyze some of the linguistic phenomena that are unique to the Korean language. Students will be engaged in hands-on analysis of language data in major topic area in linguistics. This course will offer valuable insights into various linguistic aspects of the Korean language, by providing not only essential background knowledge but also an extensive survey and descriptions of the Korean language to the students learning Korean and the students who are interested in particularly East Asian linguistics. The course is thus suitable primarily for students who are learning (or who have learned) Korean and would like to know more about the language and connect with it on a more academic level. Secondly, it is suitable for students interested in East Asian linguistics who would like to pursue specialization in Korean or East Asian languages. Some linguistic background will be helpful, although it is not required.

Prerequisites: KOR 121; 5th Semester standing

Bachelor of Arts: Humanities
 Bachelor of Arts: World Cultures
 International Cultures (IL)

KOR 423: Korean Media and Communication

3 Credits

This course explores historical, technological, and cultural aspects of Korean media and communication by examining both scholarly and primary sources such as film, radio, youtube, webtoons, online games, facebook, twitter, and TV dramas/variety shows. Students will

study the role of media and communication in private, interpersonal, national, global, communal, and cultural settings in order to deepen their understanding of contemporary Korean society and culture. The objectives of the course are to enable students to improve their knowledge in Korean media and communication methods and technologies; become an autonomous learner of Korean culture through making use of the newly available tools and resources; become a global citizen, with better understanding of the usage of media in a different culture and enhanced cultural sensitivity; and develop critical thinking abilities through investigating Korea-related issues reported and discussed in new media. Class activities may include: written analysis of scholarly articles and media content, class and group discussions, debates and presentations. The course content may vary depending on instructors but it covers various topics that illustrate characteristics of Korean communication media such as technologies, grassroots journalism, effects of social media, communication trend, media policy, softpower, etc.

Prerequisite: KOR 121 or 5th Semester standing

Bachelor of Arts: Humanities
 Bachelor of Arts: World Cultures
 International Cultures (IL)

KOR 424: Transnational Korean Literature

3 Credits

Exploration of seminal Korean texts, including poetry, fiction, autobiography, and criticism, from the early twentieth century to the contemporary era. This course provides a comprehensive overview of modern Korean literature within a transnational context. As we learn how to critically analyze seminal Korean texts, we will locate them in the social, political, economic, and cultural conditions under which they were produced and received. In grappling with some of the fundamental issues they raise; including colonialism, migration, national division, war, gender relations, developmentalism, urbanization, democratization, and contemporary consumer culture; we will also seek to situate these writings in the Korean vernacular within the larger context of global modernity. Rather than take Korean literature and global modernity as given or apart from each other, we will attend to their intersections by raising such questions as: How did modern experiences, constructed through the interface with unfamiliar Others, change preexisting ways of writing and reading? How did foreign occupations affect the formation of a national literature? In what ways do Korean writers' representations of the inter/national events and phenomena on and beyond the Korean peninsula at once enrich and complicate empirical investigations into modern histories of Korea, East Asia, and the world? In an increasingly borderless world, can we draw a boundary around what is called "Korean" literature? In parallel with these questions, we will further discuss why and how to engage in literary practices in the current age of digital reproduction. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

Prerequisite: KOR 120; KOR 121; ASIA 100; ASIA 102; ASIA 83; ASIA 4; CMLIT 4; 5th Semester standing

Cross-listed with: ASIA 424, CMLIT 424

Bachelor of Arts: Humanities
 Bachelor of Arts: World Cultures
 International Cultures (IL)

KOR 425: Global Korean Cinema

3 Credits

Exploration of Korean cinema from the early twentieth century to the present, with an emphasis on its global/local dynamics. This course offers an introductory overview of Korean cinema. As we trace its history from the colonial period to the current "Korean wave," we will also engage with film criticism, the trans/national contexts of film productions, the particular aesthetics of selected auteurs/genres, and local/global receptions of Korean cinema. Our discussion of formal elements and key issues featured in these films; modernity, colonialism, division, nation, class, gender, identity, tradition, ideology, desire, violence, and migration, among others; will be informed by readings of secondary sources and theoretical works, as well as literary materials produced during the same period. Throughout our analyses, we will seek to contextualize the cinematic texts within moments of major shifts not only in modern Korean history, but also in the transnational film industry and screen culture. In pursuing a broad and detailed perspective of Korean cinema, this course will ultimately enrich, and simultaneously complicate, our understanding of Korea, cinema, and the world. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

Prerequisite: KOR 120; KOR 121; ASIA 100; ASIA 102; ASIA 83; ASIA 4; CMLIT 4; 5th Semester standing

KOR 450: Korean Cultures in Global Contexts

3 Credits

As Korea has gained significant economic and political power in the past few decades, people in many different parts of the world desire to know about Korean culture as a way to communicate with them. Korea has a long history and traditions that distinguish it from other nations and societies; and that still influence the ways Koreans behave in different social and cultural settings. However, Korean culture is not a unifying or clearly defined entity since foreign political, economic, and cultural forces that shaped contemporary Korean culture. It is a malleable entity that continuously evolves through Korea's close engagement with the world. This course examines the multiplicity and fluidity of Korean culture in global contexts primarily in Korean language. It is designed for students who desire to obtain knowledge about the global connection between Korea and other societies in the world in the fields of business culture, entertainment culture, tourism, diplomacy, education, art, etc. It first situates Korean culture in its relationship to others to see how global politics, economy and culture influenced the ways Korean cultures transformed; how Koreans engage with the global community in industries, politics and economy; and how the engagement can further create constructive channels between the global community and Korea. Depending on instructors, the content will vary, but it covers topics that concern students whose interests lie in the cultural understanding of work culture, Korean business, entertainment, tourism, Korean diaspora, and art from a global perspective.

Prerequisites: KOR 401

International Cultures (IL)

Exceeds 12th Unit of World Language

KOR 451: Food and Foodways in Korea

3 Credits

Food is an essential means to live but it is also an important element to tell us about who we are and how we live. Korean cuisine offers rich history and tradition. It is also a gateway to deeply understand and appreciate Korean culture and society in which key ideas of national and individual health and identities, social life, international relations, gender roles and relations, class, and food activism manifest in actual food and ways of preparing and consuming food. This course explores historical, social, cultural, and geographical aspects of Korean food almost entirely in Korean language. By learning Korean food and foodways, students will understand traditions of Korean food; the ways Korean food evolved; the relationship between food and national and individual identity; and ingredients and recipes for some of the representative Korean dishes. Various course materials will be used such as scholarly books and articles, cookbooks, TV cooking shows, films, youtube, culinary tour brochures, etc. Students will have an opportunity to master how to cook a few essential Korean dishes during the course and present their actual cooking process of at least one dish either in class presentation or in video-recording.

Prerequisites: KOR 401

 Bachelor of Arts: World Lang (12th Unit)
 Bachelor of Arts: Humanities
 Bachelor of Arts: World Cultures
 International Cultures (IL)
 Exceeds 12th Unit of World Language

KOR 452: Korean Language and Culture

3 Credits

How do language, culture, and society affect one another? Through this course, students are introduced to the Korean language, culture, and society and how they are closely related to one another. We will examine essential and critical roles of the Korean language in Korean culture and society in order to gain a better understanding of the Korean society and an understanding of the Korean language in relation to its culture and society from diverse perspectives. We will examine the relationship by means of literature, history, philosophy, social structure, social/cultural values, interpersonal relationships, and social and regional varieties of Korean. We will explore a series of topics related to sociolinguistic perspective, cultural terms and figurative expressions, linguistic etiquette, language use in the media as a reflection of culture, which will allow students to develop a deeper understanding of fundamental socio-cultural nature of the Korean language (that are distinct from other languages such as English). With readings drawn from media articles, scholarly essays, popular books, and podcasts, a comparative perspective will also be taken to discuss similarities and differences between Korean and English in various aspects covered by the course. Thus, the course will provide richer insight into the Korean language, culture, and society as well as a broad awareness of different cultures and languages.

LER 424: Employment Compensation

3 Credits

Development and management of employee compensation systems. LER 424 Employment Compensation (3) Employment Compensation provides an overview of compensation programs, practices, and strategies. This course examines various compensation systems, that serve as an integral component of human resource management operations. Upon completion of this course, students will have a better understanding of compensation program design and development, the criteria used to compensate employees, and challenges that compensation professionals may encounter. Requirements for this course include regular attendance and participation, completion of three case studies, three project assignments, and three examinations which will consist of short answer and multiple choice questions.

Prerequisite: LER 201 and sixth-semester standing
Bachelor of Arts: Social and Behavioral Sciences

LER 425: Employee Benefits

3 Credits

The examination of employee benefits programs used by employers to meet the welfare needs of employees and their families. LER 425 Employee Benefits (3) This course is a comprehensive survey of the programs, principles and trends in planning and administering employee benefit programs for private and public employers. The objectives for this course are to provide students with an understanding of employee benefit programs and their broad implications for the workplace, the role of employee benefits in motivating and retaining employees, and the recent trends in employee benefit offerings and cost containment approaches. Topics covered include strategic and tactical planning considerations used in implementing and changing benefit programs, discretionary and mandatory benefits, Social Security, health insurance structures, disability and life insurance programs, workers' compensation, retirement programs, executive benefits, paid-time off programs and accommodation and enhancement programs. This course builds on introductory general foundation courses in human resources and labor relations. It provides students with a working knowledge of employee benefits and its important role in human resources and labor relations careers. Students must select and write a research paper on a benefits topic of special interest. Course grades will be determined from examinations and the research paper.

Prerequisite: LER 201 and 6th semester standing

LER 445Y: Politics of Affirmative Action

3 Credits

Examines history, politics, and economics of the use of special programs to advance racial interests in the U.S. PLSC 445Y / AFAM 445Y / LER 445Y Politics of Affirmative Action (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. The objectives of this course are to introduce students to the relationship between affirmative action and other policies purportedly designed to end racial inequality in the U.S. This course approaches the study of affirmative action in the context of the historic racial discrimination and inequality that Black Americans have faced since the founding of the Nation. The purpose of this course is to help students think about how contemporary and historic affirmative action policies relate to race, concepts racial inequality, the historic and continuing causes for racial inequality, public opinion, American politics and economic thought. The course materials will lead students through scholarly and popular articles, books and video presentations on the topic. It is hoped that students will become familiar with the history of affirmative action from its conception. Students will gain an intimate understanding of affirmative action economic and social outcomes on various racial groups. No prior knowledge is assumed, however a knowledge of civil rights history, quantitative methods, and constitutional law will be useful. The Politics of Affirmative Action satisfies the requirements for major and minor electives for the African American Studies, and major and minor electives for Political Science, and Labor Studies and Industrial Relations. Students are evaluated on the basis of an examination, term paper, class participation and class presentations of papers.

Prerequisite: AAA S 100 level course and PL SC001 or PL SC007

Cross-listed with: AFAM 445Y, PLSC 445Y

Bachelor of Arts: Social and Behavioral Sciences

Writing Across the Curriculum

LER 485: The Business Side of Human Resources

3 Credits

Students will examine the interface between HR, the business model, and other aspects of the business organization. LER 485 The Business Side of Human Resources (3) Students will have the opportunity to learn about important business issues in human resource management that will introduce them to the interface between human resources and other areas of the operation of a business. This course will focus on subject matter that will better prepare students for the broader role that human resource managers are being requested to play in terms of contributing to the profitability of their employers. In the investigation of the course material, students will be exposed to real life examples and experiences, interaction with outside human resource professionals and guest speakers that will broaden their understanding of the concepts learned in their previous course work in human resources and labor relations. Some examples of the subject matter that will be addressed in this course are: Human resource and business ethics; Basic introduction of the interrelationship of human resources and business finance and accounting; Human resource metrics; Employment process; Leadership and relationship building; Communication in the workplace; Professional networking; Business etiquette; Human resource culture in business. The course is best designed for senior and graduate students who have

serious interest in pursuing employment in human resources and/or labor relations.

Prerequisite: 6th semester standing and 6 credits of Labor Studies and Employment Relations

LER 488: Career Development Seminar I

1.5 Credits

This course features an introduction to several useful career development resources, development of a personal profile of your career-related strengths and interests, exploration of career options, creation of a career development plan, and guidance for securing prospective internships and other relevant experiences. LER 488 Career Development Seminar I (1.5) This course is the first of two 1.5-credit seminars designed to help students plan and launch their career in labor, employment relations, or human resources. This seminar features an engaging discovery-oriented approach to career development that includes exploration of the world of work, students' personal needs and preferences, and strategies for finding an optimal match in the world of work. This experiential course immerses students in the process of charting their career path and preparing for success as a professional. This seminar fosters the development of practical career management skills that can be applied throughout the students' entire career. This seminar, the first in the two-part series, will help students to chart an overall career track as a professional in labor, employment relations, or human resources. This course features an introduction to several useful career development resources, development of a personal profile of career-related strengths and interests, exploration of career options, creation of a career development plan, and guidance for securing prospective internships and other career development experiences.

Prerequisite: 4th semester standing

LER 489: Career Development Seminar II

1.5 Credits

This course is the second of two 1.5-credit seminars designed to help LER majors launch their career in labor, employment relations, or human resources. Both seminars guide students through the process of charting their career path and preparing for success as a professional. This seminar focuses on helping students to cultivate their professional brand, plan a job search strategy, market themselves as a professional in the world of work, manage a variety of interview challenges, and strengthen key work habits that are valued by employers and essential to success as a professional. LER 489 Career Development Seminar II (1.5) This course is the second of two 1.5-credit seminars designed to help LER majors launch their career. The first seminar in the series is targeted toward juniors, while the second is designed for seniors. Both seminars guide students through the process of charting their career path and preparing for success as a professional. This seminar requires students to complete specific career development activities and then complete reflection and application exercises related to those activities. Utilizing a discovery-oriented approach, this course helps students to cultivate their professional brand, plan a job search strategy, market themselves as a professional, manage a variety of interview challenges, and strengthen key work habits that are valued by employers and essential to success as a professional. The course incorporates services offered by Penn State Career Services and the Liberal Arts Career Enrichment Network.

Prerequisite: LER 488

Labor and Human Resources (LHR)

LHR 83S: First-Year Seminar in Labor and Human Resources

3 Credits

LHR 83S meets the Bachelor of Arts degree requirements. This course provides a general introduction to the field of labor, employment relations, and human resources, as well as a more in-depth examination of an issue or topic related to the field and it does so in a small class environment. It also introduces first-year students to the University as an academic community, to their responsibilities as a member of that community, and to the wide range of the opportunities and resources available to them. The course fulfills both a first-year seminar and a general education or Bachelor of Arts social/behavioral science requirement. Class sessions stress discussion of assigned readings, debates, and/or talks by guest lecturers/speakers.

Bachelor of Arts: Social and Behavioral Sciences
First-Year Seminar

General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think

LHR 100: Exploring Work and Employment

3 Credits

Work and employment are central parts of the human experience. With that in mind, this course has two main objectives. First, to help better prepare students for the role that work and employment will play in their lives. And second, to introduce students to the fields of human resource management and employment relations. The course will begin by looking at the ways in which work and employment impact people's lives financially, socially, and psychologically. It then examines a number of issues that impact the kind of experience that people have at work and that people entering the workforce need to be aware of, including the basic legal rights employees have related to employment, workplace privacy, employment discrimination, family-friendly policies at work, safety and health in the workplace, drug and alcohol testing, and the growing trend of working from home. The course then introduces students to human resource management as a field. It also discusses the various ways that students will interact with human resources professionals when they begin applying for jobs, including the search and hiring process and, once they obtain employment, on issues such as compensation, benefits, and job evaluation. As the employees in some workplaces are represented by labor unions, students will be introduced to the role that unions have historically played in American workplaces. The process for organizing a union will be addressed, as will the collective bargaining process through which employers and unions jointly determine wages and salaries, benefits such as healthcare and pensions, and processes for ensuring fair treatment and due process in the workplace. New alternatives to unions that give workers a voice in their workplace will also be discussed. The final section of the course will focus on globalization and immigration and their impact on work and employment around the world. Both the benefits of globalization (lower costs on consumer goods) and its costs (job losses in developed countries and the exploitation of workers in poorer countries through substandard pay, sweatshops, and child labor) will be discussed, as will the benefits and costs of immigration.

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Soc Resp and Ethic Reason

LHR 136: Race, Gender, and Employment

3 Credits

This course will ask how race and gender affect work in the contemporary United States. We will consider how race and gender shape people's work opportunities, their wages at work, and whether they participate in paid or unpaid labor (or both). We will begin with an overview of work and the changes in the workforce over time; we will move to investigate how workplace structures reproduce gender and race inequalities; will ask how race and gender inequalities are informally maintained through education systems and social networks; will consider differing dimensions of inequality across poverty, immigration, and sexuality; and will consider how studying unpaid labor helps us better understand the formal paid economy. This course meets the Bachelor of Arts degree requirements.

LHR 136Y: Race, Gender, and Employment

3 Credits

This course will ask how race and gender affect work in the contemporary United States. We will consider how race and gender shape people's work opportunities, their wages at work, and whether they participate in paid or unpaid labor (or both). We will begin with an overview of work and the changes in the workforce over time; we will move to investigate how workplace structures reproduce gender and race inequalities; will ask how race and gender inequalities are informally maintained through education systems and social networks; will consider differing dimensions of inequality across poverty, immigration, and sexuality; and will consider how studying unpaid labor helps us better understand the formal paid economy. The course emphasizes writing in the form of short assignments and longer papers as a means to develop comprehension of these ideas. This course is a writing intensive course designed to develop formal writing appropriate for a business context. We will use an active and engaged writing process using the course topics of diversity and employment inequality to strengthen writing skills.

LHR 160N: The Virtual Transformational Leadership Development Experience

3 Credits

The Virtual Transformational Leadership Development (VTLD) Experience is designed to help develop the next generation of leaders to serve as agents of change in pursuit of a more civil, equitable, and just workplace, society, and world. A guiding principle of The VTLD Experience is that diversity is a fact, inclusion is a choice, equity is an action, and belonging is an outcome. It leverages technology, including artificial intelligence, machine learning, interactive arts and and employs high impact teaching practices including micro-lessons, rapid learning, reflective exercises, online discussions, meditation and mindfulness practices, an online journal, and synchronous individual transformational leadership development coaching sessions conducted via Zoom. Students enroll in the VTLD Experience from the University Park and the Commonwealth Campuses and have an opportunity to engage with artists curated by the Center for the Performing Arts at Penn State. This involves viewing performances from a distance and digital programming. Fundamentally, the course is an anti-racist, anti-oppression leadership development experience and aligns with the following foundations and thematic priorities of the university's 2016 - 2025 strategic plan: Foundations - Engaging Our Students - Advancing Inclusion, Equity and Diversity - Enabling a Sustainable Future Thematic Priorities - Transforming Education - Empowering Through Digital Innovation - Advancing the Arts and Humanities - Stewarding our Planet's Resources

LHR 165N: Work and Literature

3 Credits

If you get a job out of college, work eight hours a day, fifty weeks a year, and retire at age 65, at that point you have will spent roughly one third of your adult, waking life at work. And that is just paid work. Add in housework, childcare, and other forms of unpaid labor and the share of your waking hours devoted to work creeps closer to one half. And those calculations may actually underestimate the influence work has over your life. What you do will determine where you live, how you live, and, perhaps, whether you believe you have ultimately done something meaningful with your life. With work playing such an outsized role in a life, you may as well understand it as best you can. Hence this class. In it, we approach the question of work from the perspective of two disciplines: labor and employment relations and literature. The field of labor and employment relations asks about the social and economic forces-markets, compensation, globalization, immigration, etc.-that shape work. By contrast, the discipline of literature takes a more subjective approach to the question of work. Very broadly speaking, it shows how the forces that shape work play out in individual lives. In short, it shows how individuals feel about the work they do or, in the case of the

unemployed, they do not do. Together, the two disciplines provide a global and personal perspective on one of the most important parts of our lives. Students registering for the course will read representative selections from both domains, engage in course discussions, take exams, and write essays as they explore the variety of ways both labor and employment relations and Literature can prepare them for their work lives and help them understand the place of work in culture and society.

LHR 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses offered infrequently to explore, in-depth, a comparatively narrow subject that may be topical or of special interest.

LHR 201: Employment Relationship: Law and Policy

3 Credits

LHR 201 surveys U.S. employment law. It begins with an overview of general legal concepts necessary to understanding the US legal system. It next examines the employment relationship and the employment contract, cornerstones in the field of employment law. In the main body of the course, students examine major state and federal labor and employment statutes, regulations, and cases that create employer and employee rights and obligations beyond those the parties have negotiated for themselves. This part of the course covers such topics as anti-discrimination law, wage and hour regulation, benefit and leave requirements, safety and health enforcement, workers' compensation systems, and the growing use of employer-mandated arbitration of statutory employment rights. Overall, the course analyzes workplace law problems from the different policy perspectives of employees, unions, employers, and the public. As appropriate, it introduces students to the economic, political, and social forces (both historical and contemporary) that influence the content of workplace law.

LHR 202: Understanding Employee Behavior

3 Credits

The course will be offered at an introductory level. It is designed to encourage students to explore individual and group behavior at work. The ability to describe, explain and analyze concepts in this course is critical to appreciating the dynamics that determine organizational outcomes. In this context, students will learn basic tools that will assist them in developing management, supervisory and leadership skills. Because the concepts from this course are the foundation of human resource management and employee relations, it is essential to master them in order to be an effective human resource management or employee relations professional. The conceptual learning in the

course will include individual differences, diversity, attitudes, fairness perceptions, motivation, decision making, leadership, teams, negotiation, organizational culture and its role in the external context.

LHR 304: Labor and Employment Relations Fundamentals

3 Credits

The course surveys the main elements of modern labor and employment relations systems in the U.S. and beyond. The course encourages students to use a framework for evaluating workplace outcomes according to three yardsticks: efficiency; equity; and voice. Focusing primarily on employee voice, the course introduces students to a variety of mechanisms that bring democracy, worker engagement, and worker influence to the workplace. Among these mechanisms are U.S.-style collective bargaining, non-union systems of worker involvement, European works councils, and a new variety of "alt-labor" initiatives from around the world. In its single largest unit, the course focuses on U.S. workplaces, beginning with the historical and legal foundations of the modern U.S. labor relation system. This includes units examining union organizing campaigns, collective bargaining, and dispute resolution systems. Concluding weeks of the course look at issues surrounding the push for workplace flexibility, a comparative labor relations look at other country practices (include European works councils), emerging issues in global supply chains, "alt-labor" institutions and practices, the role of gender, race, and diversity initiatives at work, and the impact of automation and artificial intelligence on the future of work.

Prerequisite: LHR 100

LHR 305: Human Resources Fundamentals

3 Credits

This course will provide students with an opportunity to understand and apply important concepts concerning human resources in the workplace. Students will learn to think of the issues in the class from both the employees' and organizations' perspectives. The course begins with a description and analysis of the role human resource managers play in supporting employees' personal needs as well as an organization's strategic objectives. The discussion traces the changes in that role historically, as well as the contemporary understanding of HR's part in helping stakeholders succeed. Against this backdrop, students will study three critical variables affecting HR's involvement in management: the individual; the organization; and, the law. Each of these foci illustrates variables with which HR managers must contend. The course presents these variables through a variety of lenses: law, psychology, sociology, history and literature. Students will also spend considerable time studying the various functions HR plays in recruiting, selecting, training, evaluation, compensation, labor relations and safety. In these portions of the class, students will learn to understand the functions not only from the organization's, but also from the employees' perspective. The discussion of functional areas will end with application of the concepts studied to the global business environment in which HR increasingly operates. Throughout students will not only learn the mechanics of, for example, the selection process, but how processes support an organization's and individual's pursuit of their unique purposes.

Consistent with the liberal arts environment in which LHR students enroll, the final project requires students to apply the concepts learned concerning the HR function to their everyday lives, helping students to reflect on the difference HR processes can have on both the organization but equally important on the employee. As a Gen Ed course (GS), the course qualifies as a Bachelor of Arts (B.A.) course consistent with the B.A. Fields category.

LHR 312: Research Methods in Labor and Employment Relations

3 Credits

The objective of this course is to enhance students' abilities to use a range of methodologies to evaluate and conduct research in the field of employment relations and human resource management. LHR 312 Employment Relations to Research Methods in Labor and Employment Relations (3)(BA) This course meets the Bachelor of Arts degree requirements. The objective of this course is to enhance students' abilities to use a range of methodologies to evaluate and conduct research in the field of employment relations and human resource management. It covers core concepts such as the scientific method, literature search, the logic of hypothesis formulation and testing, measurement, sampling and data collection methods, and basic statistical analysis. To accomplish these objectives, the course utilizes readings, lectures, class discussions, exercises and assignments, student presentations, and examinations.

Bachelor of Arts: Social and Behavioral Sciences

LHR 400: Comparative Employment Relations Systems

3 Credits

Analysis of structure and elements of employment relations systems in developed and developing areas. LHR 400 Comparative Employment Relations Systems (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course explores contemporary topics in employment relations in the world. The course examines seven examples of employment relations systems, each carefully chosen to illustrate important variations in employment relations practices. It also provides an overview of economic globalization and its impact on employment relations. Topics include global sweatshops, child labor, the diffusion of human resource practices, and corporate social responsibility. The first country case is Germany, which provides an example of a country with strong national unions and a highly developed system of works councils. The Swedish case exemplifies a long-tradition of centralized bargaining and tripartite relations that is now in transition. The third case, Japan, illustrates some of the initial experiences with team work, just-in-time production, and employee commitment through job security and training. China offers an example of a socialist system in transition that has become an economic powerhouse through massive export processing zones, government controlled unions, and wage competition. Brazil provides an important example of a Latin American country with a state dominated employee relations system. South Africa offers a case of highly politicized employment relations in a country in transition from extreme racial segregation to a democracy. Finally, India represents Asia's other economic powerhouse, with an English speaking workforce that is drawn to the booming call center industry and export-oriented

production. The second half of the course looks at broader themes related to the topic of globalization. Sweatshops in Mexico and child labor in India examined alongside the diffusion of high-end human resource practices in Brazil. In this section, student will also study inter-governmental institutions such as the World Trade Organization, and the International Monetary Fund. The final unit of this section examines the topic of Corporate Social Responsibility (CSR), recent attempts by corporations -at times in coordination with labor unions- to establish basic sets of rules or standards for their employees wherever units of the corporation might be located in the world today.

Prerequisite: LHR 100 or 3 other credits of LHR or 5th Semester standing Bachelor of Arts: Social and Behavioral Sciences International Cultures (IL)

LHR 401: The Law of Labor-Management Relations

3 Credits

Development of Anglo-American law regulating collective bargaining, with emphasis on American labor-management relations under Wagner, Taft-Hartley, and other acts. LHR 401 The Law of Labor - Management Relations (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the evolution of labor law in the United States. The N.L.R.A. itself, and the decisions of the National Labor Relations Board (N.L.R.B) and the courts, will be examined in order to gain an understanding of the current legal framework underpinning our system of labor-management relations. Major issues to be examined include the rights of employees to union representation; the formation of bargaining units; the conduct of organizing campaigns and elections; the duty to bargain; strikes, striker's rights, and lockouts; picketing, boycotts, and related activity; the enforcement of collective bargaining agreements and the duty to arbitrate; union members' rights and responsibilities, the duty of fair representation; and federal-state relationships in labor relations. Also covered in the course will be the legal framework for public sector labor-management relations, with specific attention paid to Pennsylvania Acts 111 and 195. The course will be taught from a liberal arts perspective, meaning that societal factors influencing the law-history, politics, and economics -will be emphasized. Student performance will be evaluated by means of tests, short papers, and such reports as may be required. This course is complementary to others in Labor Law, including LHR 434, Collective Bargaining and LHR 435 Labor Relations in the Public Sector. The course requires no special facilities or equipment; however, students enrolled are expected to have computer skills sufficient for communication and word processing purposes.

Prerequisite: LHR 100 or 5th Semester standing or 3 other credits of LHR Bachelor of Arts: Social and Behavioral Sciences

LHR 403: International Human Resource Studies

3 Credits

Course exploring human resource management from an international perspective. LHR 403 International Human Resource Studies (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course on International Human Resource Management expands beyond the traditional disciplines of HRM through a broader consideration of the impact of national contexts on these areas of organizational practice. The first question addressed is whether 'HRM' actually means the same thing in different countries, especially given that the term 'HRM' was developed from US management practice and scholars. This opens the discussion as to how institutions and culture at the national level help to shape management practice. As organizations become increasingly

global, these issues of national culture and institutions can often stand in the way of a seamless progression of HRM across national boundaries. From a national culture perspective, the course compares how people in different countries see themselves and others around them, and how expectations, values and beliefs can differ in the workplace. This understanding is drawn from frameworks of national culture which describe the culture's multiple dimensions. This enables students to identify why and how it may be different working with colleagues from other cultures, as well as understanding the implications this can have for designing appropriate HRM practices. From a national institutions perspective, the course compares how institutions such as legislation, state intervention, trade union influence, education systems, and the respective power of shareholders versus stakeholders can impact on patterns of HRM and employee relations practices in different countries. For example, comparisons are made between economies with very high levels of employment regulation, explaining local employee rights and benefits, and those in which firms have more autonomy to choose how to manage their employees. From a strategic perspective, the course looks at how multinational enterprises are managing this cultural and institutional complexity, making strategic choices in international HRM to ensure they achieve the ultimate balancing act of thinking global but acting local. It considers different strategies firms might take (from complete standardization of HRM to complete localization) and how this then translates into different roles and activities for the IHRM function. This section also explores how these firms manage their international staff (expatriates), as well as finally exploring ethical issues around outsourcing activities to lower cost countries, and the impact of a more globalized workforce on diversity and work-life balance issues.

Prerequisite: LHR 100 or 3 other credits of LHR or 5th Semester standing Bachelor of Arts: Humanities Bachelor of Arts: Social and Behavioral Sciences International Cultures (IL)

LHR 409: Leadership Development: A Life-Long Learning Perspective

3 Credits

The course examines the continuing influence of social and environmental factors in shaping leadership and leadership development. LHR (OLEAD) 409 Leadership Development: A Life-Long Learning Perspective (3)(BA) This course meets the Bachelor of Arts degree requirements. Current social conditions, such as financial crises, ineffective solutions to local, national, and international problems and corrupt leaders, call for more effective and ethical leadership on a broad scale. The positive and moral transformation of social institutions requires active participation and leadership of more authentic transformational leaders. This course will discuss authentic transformational leadership development from a life span developmental perspective. More specifically, it will focus on how an individual develops his/her leadership skills, potential, and capacity in his/her childhood, school, social organizations, colleges, and work organizations. The primary purpose of this course is to help students understand how family, educational, and other environmental factors have helped and/or will help them develop their transformational leadership potential and leadership effectiveness, in addition to gaining a better understanding of their strengths and weaknesses in respect to personality, individual difference, motivation, values, emotions, self-awareness, and identity. The fundamental objectives of this course are to help students 1) increase self-awareness; 2) to help students to know more about their sense of self, including self-identity, self-awareness, self-efficacy, and other types

of self-concepts; 3) to understand the effect of life span influences in an individual's leadership development.

Prerequisite: OLEAD 100 or 5th Semester Standing

Cross-listed with: OLEAD 409

Bachelor of Arts: Social and Behavioral Sciences

LHR 410: Employment Strategies for People with Disabilities

3 Credits

Develop knowledge, skills, and resources necessary to understand and practice effective employment strategies in working with people with disabilities. This course is designed for students to develop knowledge, skills, and necessary resources to understand and practice effective employment strategies in working with people with disabilities, including individuals from culturally diverse backgrounds. Students will develop skills on networking with employers (e.g., social media, professional organizations, interviewing employers, etc.) for building professional contacts and networks. Various forms of labor market information will be analyzed to identify both challenges and opportunities for people with disabilities in different sectors of the labor market (primary and secondary). Throughout the course, students will learn about disability issues in the workplace (e.g., laws, policy, stigma, accommodations, etc.). A strong emphasis will be on understanding how laws and policies impact employment for people with disabilities, and students will identify legal and illegal practices. Best employer practices will be identified regarding mitigating disability impact on both employees (current and future) and employers. This course will incorporate Assistive Technology (AT) applications so students will be able to identify appropriate AT devices to assist people with disabilities in obtaining and retaining employment along with applicable strategies for working with employers in developing employment opportunities in today's changing world of work. Students will understand how disability is a critical component of workforce diversity and strengths people with disabilities bring to the workplace. Students will identify how people with disabilities should prepare for the employment process including training opportunities (formal and informal), resume development, interview preparation, and initiatives to promote increased employment outcomes. Different disability populations (e.g., youth, Veterans, aging workers, etc.) will be discussed including common barriers for employment as well as how to create opportunities in different employer settings.

Prerequisite: 5th Semester standing or 3 credits of LHR or LHR 100

Cross-listed with: RHS 410

LHR 426: Staffing and Training Strategies in Organizations

3 Credits

This course focuses on the theory and practice of human resource staffing and training in organizations. It provides the conceptual framework for understanding the staffing and training function as a factor of production and service. For this we will discuss policies and practices designed to attract, retain, and motivate employees. It explains how staffing and training can be used as a competitive weapon. For this we discuss how human resource policies and practices can be targeted towards achieving business objectives. This should inspire you to think of the connection between employee effectiveness and profitability. The course also provides the government regulations that impact staffing and training practices. The course uses lectures, group discussion, and in-class exercises to impart these concepts.

Prerequisite: LHR 100 or 3 other credits of LHR or 5th Semester Standing

Bachelor of Arts: Social and Behavioral Sciences

LHR 427: Understanding Business Processes for LHR Professionals

3 Credits

This course examines human resource management (HRM) and employment relations (ER) from a strategic perspective embedded in a complex and evolving organizational system. To be effective, students must understand how different organizational strategies interface with the entire set of HR/ER practices put in place. This approach also requires an ability to connect business functions, governance, organizational metrics and financial considerations with investments in the broader HR/ER system. The goal of this course is to build business acumen by providing a foundational understanding of the components of a strategic and proactive HR/ER system. Through active learning, this course will encourage the development of analytical skills, personal competencies, and in-depth understanding of how various HRM and ER parts work together to shape organizational success. Students are more effective in their roles when they understand organizational strategic typologies, business functions, and governance structures that can affect the structure and implementation of the HRM/ER functions. Other topics include vertical and horizontal integration of the supply chain, and mergers and acquisitions, both of which are important to the work context. Basic finance and accounting concepts relevant to HRM/ER such as profit and loss statements, balance sheets, and cash flow enable students to understand how managers and leaders make resource decisions. Students gain credibility with other organizational decision makers by better understanding concepts such as earnings per share, return on assets (ROA) and return on investment (ROI). Understanding the time value of money and implications for decisions regarding investments in people enables students to be more effective in decision-making roles. The goal is to provide students with the fundamentals of the business context as relevant to their roles as HRM and ER professionals. The use of metrics and measures to provide feedback to the organization and individual employees will be examined. The criticality of understanding appropriate metrics and the importance of finding or creating valid, reliable, and bias-free metrics is explored. Learning how to create balanced score cards and associated HRM/ER scorecards can provide actionable insight to all organizational stakeholders. Finally, exposure to conceptual frameworks related to ethics and risk assessment will enable students to apply such frameworks in an organizational context. The goal is to have HRM and ER students develop a deep understanding of perspectives, practices, and tools that connect HRM and ER policies and practices to an organization's context and strategy.

Prerequisite: LHR 100 or 5th Semester standing or 3 other credits of LHR

LHR 428: Total Rewards

3 Credits

This course requires students to learn the link between company's strategy and compensation, and understand core policies necessary to develop effective compensation systems. The core policies include internal alignment, external competitiveness, and employee contribution. First, theoretical frameworks of human resource management and corporate strategies will be discussed to define the relationship between company's strategy and compensation philosophy. Students then will study how to establish internally consistent and fair pay levels for various jobs using techniques such as job analysis, job evaluation, and competency analysis. The course then will discuss how to collect and analyze salary data and covers 'pay for performance' where students

learn the concept of performance management and various incentive practices at the individual, team, and organizational levels. The course will be finalized with the discussion of employee benefits. In this section, students will discuss various benefit options that companies can provide, and various legal issues.

Prerequisite: LHR 100 or 5th Semester standing or 3 other credits of LHR

LHR 429: Conducting Workplace Investigations

3 Credits

A 400-level course that presents the incident management process in a manner that is relevant to managers, human resource professionals, and labor relations professionals. The course focus on that investigative process most critical in describing and explaining events such as, - Accidents - Harassment - Altercations (fights, etc.) - Abuse of patients/ customers The course will provide a framework for executing the various types of investigative tasks based on evidence-based best practices.

Prerequisite: LHR 100 or 5th semester standing

LHR 434: Advanced Collective Bargaining and Contract Administration

3 Credits

This course examines, at an advanced level, the theory, practice, and impact of the major phases of union organizing, collective bargaining, and contract administration. Upon completion of this course students should be able describe, explain and participate, at an advanced level, in the major phases of labor relations: union organizing campaigns; collective bargaining (including its preparation phases); grievance processing; mediation; and arbitration, as practiced in industries in the U.S. private sector subject to the National Labor Relations Act, as amended, and the Railway Labor Act. Students will also develop concrete negotiation and grievance administration skills and have the opportunity to apply those skills, with the benefit of observations and feedback. Part I of the course reviews the structure of collective bargaining, the determination of bargaining units, and theories of effective labor negotiation. Further foundational study looks at the law applying to the determination, compositions and scope of bargaining units, as well as the law of collective bargaining, grievance handling, and arbitration. The main body of the course introduces students to different schools of effective technique in the negotiation of labor disputes. Part 2 of the course examines the subjects and processes of collective bargaining in detail. In this portion of the course, the course requires small teams of students to conduct out-of-class exercises. The first asks students to resolve a dispute over bargaining unit determination. In this phase of the course, teams of students negotiate a comprehensive new collective bargaining agreement in a hypothetical (simulated) case study. Similarly, students will conduct an exercise in the processing of grievances through a grievance procedure and, in some case, ultimate arbitration. In the latter procedure (arbitration), students will role-play in union representative, management representative, and arbitrator roles, assigned to writing either advocates' briefs or an arbitration award. The course will also include an exercise in the mediation/conciliation of a labor dispute

Prerequisites: LHR 304

Bachelor of Arts: Social and Behavioral Sciences

LHR 435: Labor Relations in the Public Sector

3 Credits

Analysis of labor relations problems within different areas of public employment. LHR 435 Labor Relations in the Public Sector (3)(BA) This course meets the Bachelor of Arts degree requirements. Upon completing this course, students should be able to identify the legal frameworks that govern collective bargaining between employers and unions in federal, state and local governments. Students should also be able to explain the process of collective bargaining in the government sector and the special circumstances that make public sector bargaining different from private sector bargaining. At course end, students should be able to identify the parties involved in public sector bargaining, including those involved in dispute resolution, and explain their priorities in the labor relations process. Students should come to understand and articulate the reasons why it is important to study and more fully comprehend the public sector labor relations process. Together, we will explore the distinctions between public and private sector employers that impact labor relations in the public sector, in order to better understand those distinctions. Also, we will explore the principal historical differences between negotiations in the public and private sectors, in order that students can better articulate those differences. In addition, we will work to understand the principal arguments for and against the right to strike for public sector employees, as well as other impasse resolution processes. Finally, we will work to identify and discuss the challenges facing public sector labor relations in the near term and in the intermediate term.

Prerequisite: LHR 100 or 3 other credits of LHR or 5th Semester standing
Bachelor of Arts: Social and Behavioral Sciences

LHR 437: Workplace Dispute Resolution

3 Credits

Dispute resolution practices and procedures used in the workplace and employment law settings. LHR 437 Workplace Dispute Resolution (3)(BA) This course meets the Bachelor of Arts degree requirements. This course examines dispute resolution procedures in unionized and nonunion workplaces. The course begins with an examination of grievance procedures in unionized workplaces and the system of labor arbitration. The second major theme of the course is an examination of the design and use of nonunion workplace dispute resolution procedures. Finally, the course will look at procedures for resolving employment law disputes and the major public policy debates surrounding mandatory nonunion arbitration procedures. A key objective of the course is to enable students to both understand and think critically about different alternative dispute resolution procedures and their role in employment relations. As part of achieving this objective, the course will include simulated dispute resolution exercises to provide students with experience in using techniques such as arbitration, mediation, and peer review. This course builds on and is complementary with other coursework in Labor and Employment Relations in the areas of employment relations, employment and labor law, and human resource management. It also compliments courses in other departments in the area of dispute management and resolution, including the Minor in Dispute Management and Resolution. LHR 437 may also be taken as an elective by students in the MS in Human Resources and Employment Relations and compliments coursework in the graduate program.

Prerequisite: LHR 100 or 3 other credits of LHR or 6th 5th Semester standing
Bachelor of Arts: Social and Behavioral Sciences

LHR 444: Workplace Safety and Health: Principles and Practices

3 Credits

The role of employees, unions, employers, and government in dealing with work-related safety and health issues. LHR 444 Workplace Safety and Health: Principles and Practices (3)(BA) This course meets the Bachelor of Arts degree requirements. Workplace Safety and Health: Policies and Practices focuses on the roles of employees, unions, employers, and government in addressing work-related safety and health issues. The course will introduce students to the three interrelated fields of workplace safety, workplace health, and environmental protection. Students will be provided with an overview of key issues within these fields and gain an appreciation for their importance within the workplace. Students will also become familiar with the fundamental concepts involved in the management of workplace safety and health issues. LHR 444 satisfies requirements within the Labor Studies and Employment Relations major and may be taken as an elective. LHR 444 is complementary to other courses dealing with employee relations and legal principles within the workplace.

Prerequisite: LHR 100 or 5th Semester standing or 3 other credits of LHR Bachelor of Arts: Social and Behavioral Sciences

LHR 450: Developing a Career in Human Resources or Employment Relations

3 Credits

The overall goals for this course are to enhance student awareness of aspects of themselves that are related to career success and satisfaction, guide student exploration of the world of work, and equip students with strategies for finding an optimal career match in the world of work. More specifically, this course will help students to increase awareness of their strengths, values, interests, and personality thereby helping students to make informed decisions to select and prepare for the next step in their career. Students will research the world of work through information interviews. They will learn how to develop and deploy a personal brand, including resume, cover letters and elevator pitches. Students will apply the career planning resources available through Penn State Career Services, the Liberal Arts Career Enrichment Network, and the Labor and Human Relations Department to their job and internship searches. Students will learn about career management skills from notable and distinguished alumni. Students will improve interviewing skills and prepare for a wide range of interview challenges. Students will integrate prior self-assessment results to summarize the professional assets that each student offers to employers. They will define their unique differentiators and identify the primary motivator that drives them. They will chart five year career goals and draft a development plan for realizing those goals. These steps will help students to begin the life-long process of managing their career in a systematic and proactive manner. Students will be introduced to the various career service options available to them at Penn State including: Penn State Career Services, Liberal Arts Career Enrichment Network, Nittany Lion Careers, and the resources available to them in the School of Labor and Employment Relations. They will also participate in the Strengths Finder Assessment, which is a tool to identify skills in which they exhibit high levels of strength. The following Career Readiness Competencies will be addressed by this course: Critical thinking and problem solving. Students will also strengthen their oral and written methods of communication. The role of digital technology in a career search will be discussed. Career Development Processes will be covered in this course. Resume and cover letter writing will be addressed. Students will learn to develop a network

through avenues such as LinkedIn, networking events, information interviews, and connecting with alumni. Students will develop interview skills. Students will receive guidance on developing effective job search strategies, including job offer negotiation, skills and qualities employers are seeking, and career decision making.

Corequisites: 3 credits of LHR course

LHR 452: Human Resources and Employment Relations in Tech

3 Credits

Students will study the theory, practice, and controversies related to human resources and employment relations in the tech sector. This course will explore how organizations manage the people who produce technology and compare human resource management (HRM) practices in the tech sector to those from industries not based on knowledge resources. We further investigate the role organizational culture and leadership play and introduce students to the relevant public policy debates concerning the organization of work and HRM practices in tech. The course culminates in visits to a variety of U.S. tech companies and meetings with tech employee representatives to build and extend the insights learned in the classroom.

Prerequisites: 9 credits in LER
Bachelor of Arts: Social and Behavioral Sciences

LHR 458Y: History of Work in America

3 Credits

LHR 458Y, "History of Work in America," a writing-intensive course, studies selected problems in the history of work in the United States. This course addresses economic, technological, social, cultural, and political aspects of employment and self-employment. Major topics of concern include methods of producing goods and services, work time, working conditions, the composition of the workforce, the changing functions of managers, the role of the state in shaping labor markets and regulating employment, the formation and actions of unions and other pro-labor organizations, and the relation of work to the family and other social institutions. In addition, students will undertake original research in primary sources and secondary literature, thereby learning something of historical research methods. The essay project is treated as a process, besides regular encouragement of students to submit a paper proposal, rough drafts, and a final draft. Students are advised that the instructor will read and comment on additional drafts as they care to submit. This section of LHR 458Y is a blended course. Some activities take place in the classroom, and other activities are conducted on Canvas.

Prerequisite: 3 credits in HIST or LHR or LHR 100 or 5th Semester standing

Cross-listed with: HIST 458Y

Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)
Writing Across the Curriculum

LHR 459: Collective Bargaining in Professional Sports

3 Credits

In this course, students will learn how collective bargaining works in professional sports and how it compares to bargaining in other industries. Students explore the process of collective bargaining in professional sports in the US and Canada. In particular, the course will examine how the application of leadership, leverage and resources by

professional sports employers and their player employees' associations impacts the collective bargaining process and outcomes in each sport. This course will also focus on how the interaction of these three attributes has produced landmark collective bargaining agreements, as well as disruptive strikes, lockouts and litigation. This course will give context to present day professional sports collective bargaining by examining the history and structure of the players associations, the laws affecting professional sports bargaining, and the role of sports agents in the process. Students will have the opportunity to learn how professional sports bargaining illustrates universal lessons about the process of collective bargaining, and also how it is unique. Guest speakers with considerable experience in professional sports collective bargaining will give students in this course real world context and will afford them the opportunity to question actual professional sports collective bargaining practitioners.

Prerequisites: LHR 100, and 4th Semester standing
Bachelor of Arts: Social and Behavioral Sciences

LHR 460: Ethics in the Workplace

3 Credits

The course will explore ethics from both a normative and behavioral perspective. A key operating assumption of this course is that every employee of an organization has a responsibility to demonstrate ethical leadership. The course will emphasize the importance and applicability of shared mutual accountability. Four interrelated and mutually reinforcing subject areas will be explored in the course at the individual, organizational and transnational levels business ethics, ethics in unionized firms, corporate social responsibility, and sustainability. Students will develop their abilities to articulate their own moral values and to recognize and resolve ethical dilemmas within an organizational setting. Students will analyze situations using ethical theories and learn to advocate for particular management and labor relations approaches, practices and policies based on ethical considerations. While no one view of ethics is identified as "best," students learn to recognize, evaluate, compare and apply different approaches. Students also will develop their abilities to identify, read, and explain academic literature related to the topic of ethical leadership from a management and employment relations perspective.

Prerequisite: LHR 100 or 5th Semester standing or 3 other credits of LHR

LHR 464: Communication Skills for Leaders in Groups and Organizations

3 Credits

Theory- and research-based communication skills for leaders dealing with work-related problems in contemporary groups and organizations. LHR 464 Communication Skills for Leaders in Groups and Organizations (3)(BA) This course meets the Bachelor of Arts degree requirements. LHR 464 Communication Skills for Leaders in Groups and Organizations is a survey of theory, research, and practice related to the communication processes by which individuals in groups and organizations exercise influence, whether or not they occupy positions of acknowledged leadership, and may be taken as part of an Labor and Industrial Relations major or minor, or as an elective by students in other disciplines. The course is offered once each academic year and has an enrollment limit of 40 students per offering. The course requires no special facilities. It extends to other courses in the major primarily in the areas of Industrial Relations and Human Resources. It is also complementary to courses focusing on groups and organizations in Sociology, Psychology, Management, and Engineering. During the course, students are exposed

to a variety of theoretical perspectives on the study of leadership, learn about research illuminating its functions, and become acquainted with communication practices derived from and/or suggested by such theories and research that contribute to the exercise of influence and, thereby, effective group and organizational performance. These terminal outcomes define the objectives of the course. Focus will be on leadership as both role-related behavior and goal-directed behavior, regardless of roles that members of groups and organizations occupy.

Prerequisite: 5th Semester Standing

Cross-listed with: OLEAD 464

Bachelor of Arts: Social and Behavioral Sciences

LHR 465: Collective Decision Making

3 Credits

Application of theories of decision making to work-related issues in groups and organizations requiring collective resolution and action. LHR 465 Collective Decision Making (3)(BA) This course meets the Bachelor of Arts degree requirements. This course presents a broad overview of theories, research, and practices in decision making as related to work-related choice making in groups and organizations and is open to students majoring or minoring in Labor and Industrial Relations, as well as to students who may wish to use the course as an elective. The course is offered once each academic year and has an enrollment limit of 40 students per offering. It requires no special facilities. LHR 465 extends to other courses in the major, primarily in the areas of Industrial Relations and Human Resources. It is also complementary to courses dealing with decision making in groups and organizations in sociology, psychology, and management. Of particular interest are decision making practices, as well as theories that account for them, in single-motive situations (in which participants in the process are pursuing a common goal) and mixed-motive situations (in which two or more of the participants are competitively related, but must cooperate to achieve their objectives). Hence, the course deals both with (1) conventional decision making, as in the case of boards, task forces, problem-solving groups, and quality circles or teams, appropriate to single-motive situations and (2) processes, such as bargaining, negotiation, and dispute management/ resolution, appropriate to mixed-motive situations. The course also deals with the influence of organizational culture on decision-making in both types of situations. Upon completing LHR 465, students will have been exposed to a broad array of theoretical perspectives on decision making in groups and organizations, will be familiar with research testing these theories, and be aware of decision making practices suggested by theory and research that are useful in situations requiring collective choice and action. These terminal outcomes of the course reflect the objectives.

Prerequisite: 5th Semester Standing

Cross-listed with: OLEAD 465

Bachelor of Arts: Social and Behavioral Sciences

LHR 466: Labor Union Structure, Administration and Governance

3 Credits

American unions have long played an important role in the American economy. However, in the last forty years, the number of workers represented by unions has declined steadily. Within this same time frame unions have been looking at ways to restructure in order to increase their strength if not to just survive. This includes organizing workers beyond their traditional membership, merging with other unions, and reorganizing union hierarchy. It also includes looking at ways to reconnect and mobilize existing members; motivating them to become

more committed to and actively involved in their unions. This course will look at the similarities and differences of union structure, internal and external rules of governance and examine best practices for effective union administration. The traditional labor movement's connection with new types of workers' organizations and non-unionized labor movements will also be explored. As they organize, structure, and govern themselves, labor unions must address and accommodate to the diversity among actual and potential members of differing economic, social, occupational, and cultural groups. As students work through the topics outlined above, they will examine whether and how the US labor movement succeeds, or sometimes fails, at creating representational structure that attracts and mobilizes workers of professional-, middle- and lower classes, skilled and unskilled occupations, immigrant and native born, and different genders and races. This course asks: how does one create the kind of union structure and governance that best achieves social justice and progress? At the conclusion of the course students will be able to: - Describe and analyze the primary ways in which unions have structured their activities at the local, national and international levels; - Describe the manner in which union members interact within the governance processes common in the labor movement; - Analyze the relationship between union administration and governance with respect to the legal framework within which unions must operate; - Develop plans to attract employees to join a union and develop tools to effectively socialize new members as effective contributors in pursuing legitimate union objectives. - Articulate the variety of ways in which leadership emerges within the labor movement and how leadership affects the labor movement's ability to successfully interact with the political, social and economic factors influence union success. Students will be able to link these concepts to related courses in the LER major and minor classes addressing collective bargaining and employment relations. They will also find connections to the College of the Liberal Arts and the Smeal College of Business. Courses in related disciplines: Management; Political Science; Psychology; History; Economics.

Prerequisite: LER 100

Bachelor of Arts: Humanities
United States Cultures (US)

LHR 468: American Labor Unions

3 Credits

This course will explore the current state of American labor unions and the historical, cultural, legal, political, and economic contexts within which they operate. In addition, we will examine alternative organizational forms through which U.S. workers organize including cooperatives, worker centers, living wage campaigns, and digital platforms. Among the subjects that students will analyze are the US public's perception of unions, the recent increase in political resistance to US public employee unions, the relationship between rising inequality and declining U.S. labor union membership, shifting union attitudes toward immigrant workers, the impact of globalization on U.S. unions, and how U.S. unions compare to those in other parts of the world. We will also analyze how divisions of class, gender, race, sexuality, and nationality shape the U.S. labor movement today. Finally, we will discuss pressing contemporary issues such as the rise of the gig economy, 2019-2020 strike wave, the Janus v. AFSCME decision, and the impact of the COVID-19 pandemic on U.S. workers. Guest speakers, who are union practitioners, will provide students with the opportunity to question elected union officers and staff and will provide real world context to the course readings. This course will give students a fundamental understanding of how U.S. unions

are structured and operate, and how those unions both impact and are impacted by the U.S. and global economies.

Prerequisites: 4th semester standing

LHR 471: Comparative Human Resource and Employment Relations
Practices: Virtual Travel to Three Continents

3 Credits

The goal of this course is to provide the information and context for understanding how the HR and ER practices differ in different contexts (countries). In addition, the course will provide a nudge for the students towards a permanent shift in their mindset, that will allow them to notice these differences more easily, and eventually expect them. In the end, even though the course will be closely focusing only on three exciting countries, the aim is that students will walk out of this course with a newly gained appreciation for global cultural differences and hence notice the nuances when it comes to employees and employment on the global stage. The course starts with general introductions to cultural and institutional differences that shape HR and ER practices. Following this introduction, the course will focus on each of the three countries for a couple of weeks at a time. Each virtual country visit will start by learning some general facts about the country, interesting and relevant bits of its history, culture, customs, legal environment, food, music, and similar. Then we'll examine the typical HR and ER practices in that country, all the while aiming to understand them, and explain them, taking into consideration the specific context of that country. Finally, the culmination of the country virtual visit will be live synchronous zoom meetings with local experts in HR and/or ER fields. These opportunities to connect with local experts will give students the opportunity to directly interact, ask questions, and gain a much clearer perspective of the specific challenges and opportunities for employers and employees around the world.

Prerequisite: LHR 100 or 5th semester standing
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

LHR 472: Work-Life Practices and Policies

3 Credits

Explore the causes and consequences of conflicts between work, family, and other life commitments, and how these may be resolved. LER 472 Work-Life Practices and Policies (3)(BA) This course meets the Bachelor of Arts degree requirements. The interdisciplinary field of work-family and work-life developed as a result of middle-class women's entry into the labor force, a movement that generated conflict between family and paid work commitments. Overall, the course addresses the reasons the field developed, relevant theoretical perspectives regarding the issues, and related problems as well as proposed solutions at both the public and private sector levels. The overarching objectives of the course are to expand students' understanding of conflicts between work and family commitments, and how these might be resolved through private and public sector initiatives. Specifically, the course concerns how individuals, families, and organizations interact to help hinder the achievement of balance between work and life commitments, and relevant effects on those involved. The changing demographics of the family, laws and trends around working time, father and mother time with children, the expanded need for elder care, work-life programs such as flextime, concierge services, paid parental leave, part-time careers, paid time-off banks, and the role of unions, corporations and government legislation are covered. The course attempts to link the likely future needs of students to broader trends in society and how balance could be achieved

at the level of individuals, families, other stakeholders in the community, and for society as well. Fields of research relevant to the course include labor studies, women's studies, Industrial/Organizational psychology, the sociology of work and of family, and child development. Students will be evaluated on the basis of class participation, through two in-class examinations, and through a final written or oral project providing a chronology and analysis of an adult's work-family history.

Enforced Prerequisite at Enrollment: 3 credits in LER or LHR
Cross-listed with: SOC 472, WMNST 472
