Middle East). Studying their culture can inform our own understanding of modern life both nationally and internationally. Many ideas in such diverse areas as government, law, military organization and strategy, the calendar, social practices, urban life, literature, art, and architecture clearly derive from Roman practices. Furthermore, study of the Romans includes learning in detail about the geography and resources of a very large area of the world. Knowledge of the Romans and the similarities and important differences between their lives and ours also provide an opportunity to reflect on human values and contemporary culture. The course includes discussion of the origin of the Romans, how they saw it themselves, and the rather different picture painted by modern archaeology. How the Romans expanded and maintained their power with long periods of peace from what is now southern Scotland to North Africa, and from Gibraltar to the borders of India, and how their power waned in the later Roman period illustrates many aspects of political institutional design. Roman society included various social groups, from slaves to the wealthy members of the traditional nobility. The opportunity for movement from slave to freedman or freedwoman to full citizen helps explain why for generations Roman rule was widely accepted. Roman urban life, with its public meeting halls, baths, arenas, race courses, theaters, luxurious houses and apartment blocks spread across Europe, North Africa, and the Near East. The most influential works of Rome's poets, such as Vergil's "Aeneid" and Ovid's "Metamorphoses," remain rich sources for current writers, composers, and choreographers. Roman historians and thinkers also continue to inform and inspire. Religious beliefs and the causes for the growth of Christianity likewise remain relevant to the present.

CAMS 44: Ancient Near Eastern and Egyptian Mythology

3 Credits

This course provides a survey of all major Ancient Near Eastern mythological traditions in their cultural and historical context. The course also addresses the relation between myth and religion, as well as the relation between these mythological corpora and those of Ancient Greece and Rome and the tapestry of cultic traditions reflected in the Hebrew Bible.

CAMS 45: Classical Mythology

3 Credits

CAMS 45 Classical Mythology (3) (GH;IL)(BA) CAMS 45 introduces the myths of ancient Greece and Rome as they are represented in the canonical works of Greek and Latin literature and art. Students become

conversant in classical mythology by studying the stories of gods and goddesses and heroes and heroines. The course discusses the meaning and function of myths in their historical, religious, and literary contexts. It may also approach the interpretation of myth from different disciplinary perspectives (comparative mythology, critical theory, cultural anthropology, gender theory, history, philosophy, psychology, religion, or rhetoric). In addition, CAMS 45 gives students the opportunity to apply their knowledge and understanding of myth to the flourishing legacy of classical mythology in the literature, art, and culture of subsequent ages. CAMS 45 meets the Bachelor of Arts degree requirements. It also fulfills the General Education humanities requirement and the International Cultures requirement.

CAMS 50: Words: Classical Sources of English Vocabulary

3 Credits

CAMS 50 Words: Classical Sources of English Vocabulary (3) (GH) (BA) offers an introduction to the history, structure, and meaning of modern English words that are formed from Latin and Greek elements. Many English language users are unacquainted with Latin and Greek or unaware that these languages are the etymological sources for at least 60 percent of English vocabulary. Consequently, it is common for students to have difficulty understanding or implementing English words derived from Latin and Greek. CAMS 50 leads students through a program that helps them to learn and analyze the form and meaning of the Latin and Greek roots and affixes that occur most frequently in English vocabulary. Class lectures, textbook readings, workbook exercises, and various kinds of classwork show students how to research and explain the etymologies of English words and in particular

how to use dictionaries and the explanatory methods of comparative historical linguistics. By understanding the relationship of English to other languages in the Indo-European family tree and by taking account of the historical events and social circumstances that gave rise to the borrowing of words from other languages, students will also come to understand when, how, and why modern English vocabulary has become so indebted to Latin and Greek. A secondary aim of the course is to explore specialized vocabularies in the humanities, medicine, law, science, and technology, whose word-stock is predominantly of Latin and Greek origin. Upon completion of the course, students will have increased their vocabulary and be able to recognize and analyze new words derived from Greek and Latin sources.

CAMS 70: Prophecy in the Bible and the Ancient Near East

3 Credits

This course will introduce students to the prophetic traditions of the Bible and the Ancient Near East. The course will explore the development of prophetic circles in the ancient Near East (including Egypt, Syria-Palestine, and Mesopotamia), and then focus on the major prophetic traditions of the Hebrew Bible (e.g., the books of Isaiah, Jeremiah, Ezekiel, Amos, Hosea, Micah, Haggai, Zechariah, and Daniel). It will also look at how these traditions were understood in early Judaism and nascent Christianity. Special attention will be paid to the roles of priests, kings, and prophets in ancient Israel to better understand Israelite and Judaeen prophetic traditions in ancient Israelite society. The course will then examine the rise of apocalypticism and its medieval and modern manifestations including a brief look at Islam. Additional emphasis will be placed on the religious and political interactions which manifest themselves in prophetic movements - then and now - including the rhetoric of ideology and propaganda. Important figures and events illustrate these cultural and political trends.

CAMS 83Y: First-Year Seminar in Classics and Ancient Mediterranean Studies

3 Credits

Critical approach to the study of ancient Mediterranean languages, literatures, histories, and material cultures. CAMS 83Y First-Year Seminar in Classics and Ancient Mediterranean Studies (3 credits) (GH;FYS;IL;Y) meets the (BA) Bachelor of Arts degree requirements and satisfies the (Y) Writing Across the Curriculum requirement in International Cultures. The first-year seminar in Classics and Ancient Mediterranean Studies (CAMS) is concerned with selected features of one or more of the cultures that surrounded the Mediterranean Sea in antiquity, from around 3,500 B.C. to 500 A.D. The topic of CAMS first-year seminars varies. In all offerings of this course students will be introduced to the civilizations

that surrounded the Mediterranean Sea in ancient times and why their great accomplishments, their struggles, and their failures remain important to us even today. Students will learn about ancient literature and physical remains that provide information about these cultures. Students will learn to assess theories about ancient societies, the types of evidence that exist for antiquity, and how to gain access to academic resources in the library and in electronic form. Some recent seminar topics include a critical study of widely believed "Ancient Mysteries," such as the continent of Atlantis and Pyramid Power; a seminar on "Greek Gods in Action," investigating how the Greeks believed that the gods influenced them and might even live among them; a seminar on the relationships among Christians, Jews, and Pagans in the later Roman period; and "Word Power," a course that gives students linguistic tools to understand the sources and nature of much of our modern English vocabulary. Students will read selections of ancient literature in English translation and examine the remains of the societies that produced them to ponder basic questions about the meaning and value of human life. Some knowledge of ancient Mediterranean cultures has always been indispensable to intelligent participation in contemporary society. By examining selected topics in a seminar format, students learn how scholarship advances in an academic environment while also learning how features of ancient languages, and religious, political, and social ideas formulated in antiquity give insights into our own culture and into the common humanity that all people share.

CAMS 90: Jerusalem: Past, Present, and Future

3 Credits

Jerusalem, a city sacred to Judaism, Christianity, and Islam, is often depicted as the spiritual and physical center of the world. Throughout its 5000-year history, Jerusalem has attracted diverse cultures, empires, and peoples who have vied for control of this holy city. Jerusalem: Past, Present, and Future surveys the cultural, religious, political, archaeological, and historical record of Jerusalem, beginning with its earliest settlement during the third millennium BCE; through its expansion as a second millennium Canaanite urban center; its role as the capital of Israel and Judah during the first millennium BCE biblical periods; the influence of the Egyptian, Assyrian, Babylonian, Persian, Hellenistic, Roman, Byzantine, Crusader, Mamluk, and Ottoman empires; and its development under Jewish, Christian, and Islamic control. The significance of Jerusalem's past, its impact on contemporary society and politics in the modern Middle East, and differing visions for this contested city's future are examined in light of various interpretations of the textual and archaeological evidence.

CAMS 100: Ancient Greece

3 Credits

The Greek world from the earliest Aegean cultures to the death of Alexander the Great and the beginnings of Hellenistic civilization. CAMS 100 / HIST 100 Ancient Greece (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. The course presents a survey of ancient Greek history and culture beginning with the Bronze Age palace-states of Crete and Mycenae, examines the emergence of Greek city-states, notably Athens and Sparta, traces their transformation through conflicts among themselves and with the Persian empire, and describes their eventual eclipse by the kingdom of Macedon. Since this course treats the beginnings of historical writing among the Greeks, students learn to evaluate diverse historical texts and their relationship to legend, myth, and poetry. The nature of historical thought itself is emphasized throughout the course. Also emphasized is the debate between the egalitarian Justice of democracy, the sober wisdom of oligarchy, and the overwhelming power of monarchy, as experienced by the Greeks down to the end of the fourth century B.C.E.

CAMS 101: The Roman Republic and Empire

3 Credits

History of the Roman Republic and Empire from the origins of Rome to the disintegration of the Empire. CAMS 101 / HIST 101 The Roman Republic and Empire (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements and fulfills 3 credits of the General Education-Humanities (GH) requirement. The course provides an introduction to the ancient Roman empire: how that empire came into being, how it evolved, how it came to govern much of the Mediterranean and European world, and how that empire declined. The course demonstrates the social and legal structures employed by a past society to govern an ethnically and religiously diverse population. The course also introduces students to the sources of our knowledge of the past, and illustrates how these sources are to be critically evaluated. This course complements other courses on the ancient Mediterranean world (such as HIST 100 / CAMS 100) and is a prerequisite to more advanced (400-level) courses in ancient Mediterranean history.

CAMS 102: Canaan and Israel in Antiquity

3 Credits

This course is an overview of the ancient history and cultures of Canaan (the Mediterranean Levant of Syria-Palestine) and the emergence of Israel. It involves a critical view of biblical texts (especially the Hebrew Bible, aka Old Testament) in light of other ancient texts, archaeology, and historical methods, in order to explain the nature and the evolution of society, religion, and thought in the prebiblical and biblical era. We will be especially interested in the period from the end of the Late Bronze Age (c. 1200 BCE) to the Persian period (539-332 BCE), and will examine ongoing debates about the Bible and history, as well as the development of Israelite religion from polytheism toward monotheism and a distinctive worldview.

CAMS 104: Ancient Egypt

3 Credits

This course will track the history of Egypt, the first nation state in the world, covering a time span of over 3,000 years. The investigation of the history will focus primarily on the major players (i.e. the pharaohs themselves) and the political events that shaped their reigns. Its history involves not only the Nile Valley, but also that of the entire northeast African continent and lands of Western Asia. The magnificent ruins and artifacts that have survived offer the student a visual examination of the ancients and will provide illustration to a great extent of the specific time periods and dramatic incidents. The student will also be confronted at every turn by textual sources (in translation) and the archaeological evidence. The latter will be addressed at length with introduction to archaeological expeditions. This will serve to teach the student the contribution of archaeological method and interpretation in the knowledge and understanding of the history of the Near East.

CAMS 105: History of the Ancient Near East

3 Credits

History of the Ancient Near East from the end of the Neolithic to the Hellenistic period. CAMS 105 History of the Ancient Near East (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. The objective of this course is to introduce the student to the history of Ancient Near Eastern societies. The geographic areas to be covered include Mesopotamia, Iran, Anatolia, Syro-Palestine, and Egypt. This course will stress the variegated nature of civilizations in those geographic areas and focus on the written texts and material culture through which we can reconstruct the history of the Ancient Near East. This course complements similar introductory courses in ancient Mediterranean history and civilizations. This course satisfies major and minor requirements for programs of study in the Dept. of Classics and Ancient Mediterranean Studies. A special emphasis will be placed on those aspects that permit us to relate to the seemingly arcane mechanisms lying behind the social, religious, and political interactions which characterize the history of these civilizations, especially ideology, economy, and propaganda. Major figures and events will be presented as being as symptomatic of cultural or political trends.

CAMS 109Y: Writing Systems of the World

3 Credits

This course aims at providing students with a thorough understanding of the role played by writing systems in the development of civilizations and the articulation of polities. The emphasis will be placed on historical, cultural, economic & religious matters. In order to fully comprehend the nature of these issues, the lion's share of the course will focus on the functions & the development of early writing in Mesopotamia, Egypt, China, and the Americas. Additional attention will be given to the history of early writing systems. We will examine how the writing systems in the Near East and East Asia originated and developed orthographic strategies & conventions to record the linguistic realities for which they were designed; what processes & mechanisms facilitated the creation of the first alphabet in the Ancient Near East; how modern scholars have been able to decipher scripts lost long ago (such as Egyptian hieroglyphs & Mesopotamian cuneiform), and how some decipherment processes are advancing & improving our knowledge of other civilizations (such as Maya hieroglyphs). The study of the social & cultural aspects of writing will be grounded in a diachronic approach. In that regard, the course will engage with a variety of historical concerns: the possible reasons for which certain cultures may have started to use writing for bureaucratic & economic reasons, whereas others (such as early China) would seem to have started to use it for rather more symbolic realms of life; and the relation between writing, identity, and script in different areas.

 Writing Across the Curriculum

CAMS 110: Introduction to the Bible: Old Testament

3 Credits

The Old Testament (or, Hebrew Bible) is the record of the interaction between the people of ancient Israel and their God. As a religious text, the Bible is inextricably intertwined with the cultures of Israel's neighbors, including the Canaanites, Syrians, Greeks, Assyrians, Babylonians, Arabs, Egyptians, and the peoples of the eastern desert. To study the Hebrew Bible and its development during the first millennium BCE is to study the history, culture, and literature of the entire region. This course introduces students to the literature of ancient Israel, its rituals, the stories which established a people's identity, and which defined their moral behavior. Great figures of the texts, such as Moses, David, Solomon, Bathsheba, Ruth, Jeremiah, Daniel, and Ezra, teach us important lessons about life and how people of faith attempted to relate to one another, to God, and to people outside their ethnic group. Students will read from the biblical text, as well as from secondary source readings which contains scholarly opinion from a variety of sources. Recent archaeological and epigraphical studies will be incorporated into the course to enhance our work. The ultimate goal will be to assess the meaning of the texts in their ancient Near Eastern environment; to understand the development of Hebrew religion and the beginnings of Rabbinic Judaism; and to understand the connection between biblical studies and other fields of study, such as History, Religious Studies, Archeology, Linguistics, and Comparative Literature.

CAMS 111: Early Judaism

3 Credits

Early Judaism will introduce students to the history of Judaism as reflected in Jewish literature from the period of the Babylonian exile (587/6 BCE) to the closure of the Babylonian Talmud (ca. 600 CE). This course will analyze the development of Judaism from its emergence out of the ancient Israelite religion through the formative period of rabbinic Judaism. Attention will be given to the diversity of ideas and practices that characterized early Judaism and the influence the larger Persian, Hellenistic, and Roman worlds had on Judaism's development. We will examine selections from the Hebrew Bible, and from other literature, including the Dead Sea Scrolls, the Apocrypha, the New Testament, the Mishnah, and the Talmudim.

CAMS 113: Jewish Myths and Legends

3 Credits

Comparative study of diverse interpretations of stories from the Bible in Judaism and Christianity. CMLIT 113 / JST 113 / CAMS 113 / RLST 113 Myths and Legends of the Jews (3) (GH;IL) The impact of the Bible on Western Culture is immense. Beyond its religious importance, the motifs and images from its myths and stories permeate literature and art, providing a basic frame of reference that for much of history could be taken for granted. A degree of familiarity with these motifs so as to be truly fluent is no longer common, and so it requires special effort to discern allusions to biblical traditions. Moreover, these traditions are not static: religious communities continually re-interpret them and appropriate them in very different contexts. Many prominent traditions in Judaism, Christianity, and Islam do not appear explicitly anywhere in the Hebrew Bible, but are the product of imaginative and ingenious interpretation and re-tellings. Why, for example, is Noah an example of a righteous person in Christian tradition, but in rabbinic tradition is more often portrayed as a profane, earthly-minded man who was saved only because he was the least bad of an evil generation? Why is Moses commonly portrayed with horns in medieval art? Underlying such different traditions are centuries of debate and reflection on these texts as sacred scripture, and competing religious communities often authorized their distinctive beliefs and practices by reading them into scripture. The differences are often too subtle to discern apart from careful comparison. This course will explore the boundaries between Scripture and tradition by means of a close examination of the myths and stories in the Hebrew Bible and their subsequent interpretation and re-tellings in Judaism, Christianity, and Islam. Using methods from comparative mythology and folklore, as well as comparative midrash, our procedure will be to compare these traditions closely with the biblical text, asking: What are the main motifs in the mythology of Judaism? Does Judaism have a coherent mythology? How do their myths compare with the myths of their neighbors? Where did these myths come from? How do these traditions relate to the Bible? What was the function of these myths? Why are there competing myths? How is it possible that Judaism affirms belief in only one God, but has myths that include other divine beings? We will also compare with later interpretive traditions (Jewish, Christian, Islamic). Can we trace trajectories of interpretation? Can we discern particular interpretive methods in operation? We will seek to answer: what do these re-workings of the traditions tell us about the development and function of Scripture, and the social circumstances of the communities? Finally, we will seek to detect reflections of these interpretive traditions in literature and art from the medieval to the modern periods. The course is organized around major topics in the Jewish Scriptures: God, creation, heaven and hell, Torah, Sabbath, Abraham and other ancestors, Israel and holy land, exile, and Messiah. Throughout we will consider how sacred stories function to form ethical perspectives and values.

CAMS 115: Literature of the Ancient Near East

3 Credits/Maximum of 3

Reading and study of literary works from the Ancient Near East, especially from Mesopotamia and Ancient Egypt. This course is designed to provide the student with both a basic knowledge of Ancient Near Eastern literature and the tools to appreciate it. It will present a wide sample of literary compositions from Ancient Mesopotamia and Ancient Egypt, along with some parallels from Ancient Anatolian and Syro-Palestinian traditions. Although mythology is not the main focus of the course, some mythological compositions will be read because of their literary fabric and epic structure. The course will be divided into two main sections: Mesopotamian and Egyptian literatures. Students will read some of the most famous literary compositions from the Ancient Near East (such as Gilgamesh and the Babylonian story of creation), as well as a representative sample of works from a wide variety of genres (love poetry, mythological narratives, laments, religious hymns, tales, wisdom literature). These compositions will be approached from a literary and aesthetic point of view, without neglecting the inherently problematic relation with their historical context (as in the case of compositions that mention actual historical characters, such as the legends of the Sargonic kings in Mesopotamia). Moreover, the works related to both official cult and popular religion (hymns, prayers, incantations, prophecies) will be read in their political, social, and religious context. In the limits between sacred and profane, our approach to love poetry will address some issues of ritual, gender, and sexuality. More strictly mundane genres (wisdom literature and humor) will show that some basic human concerns have remained unchanged. The course will provide students with a detailed overview of the main literary traditions and genres from the Ancient Near East, which played an essential role in the origins and shaping of the Bible as well as in some aspects of the Greek literary tradition. *i.e.*, the foundations of the Western understanding of literature and religious discourse.

CAMS 120: New Testament

3 Credits

CAMS 120 / JST 120 / RLST 120 New Testament (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. This course provides an introduction to the collection of early Christian writings that make up the New Testament. It begins with an examination of the first-century context in which these writings took shape—one overshadowed by the Roman empire, influenced by Hellenistic culture, and based, above all, on varieties of Judaism. From there, the course takes up a few guiding questions. How, in this ancient context, did the first Christians understand and portray the figure at the center of their communities, Jesus of Nazareth? What do the New Testament writings reveal about the beliefs and aspirations of these communities as they advanced a

movement that would, in time, become among the most consequential in world history? By the end of the course, students will have gained knowledge of the historical context of New Testament writings and an understanding of why the New Testament has been such an important and influential collection of writings.

CAMS 121: Jesus the Jew

3 Credits

Although Jesus of Nazareth is the object of Christian devotion, he was not a Christian himself, but a pious Jew. What can be known about the historical figure of Jesus the Palestinian Jew? How would his teachings and actions have fit in the context of Judaism of his day, in the Greco-Roman world? What did he mean when he proclaimed the coming kingdom of God? Because almost all of our source material espouses Jesus as the Christ of Christian faith, the first step is to understand the aims and perspectives of these Christian sources, including the canonical Gospels as well as non-canonical Gospels. Through careful examination of these sources in light of critical scholarship and the social and historical context of Judaism in the Greco-Roman world, we will consider how much the historian is able to reconstruct of Jesus using historical method, what the limits of this investigation are, and how relevant the task is. We will consider and evaluate a few of the different scholarly reconstructions of the historical Jesus. Major emphases will include the historical, social, religious, political, and cultural contexts of Jesus, including important precursors; the political, institutional, and cultural history of the teachings and actions of Jesus in their Jewish setting, and how these are reinterpreted by his followers after his death. Attention will be paid to the development of variant Christian traditions about Jesus including Jesus as Messiah, his death as a saving event, the resurrection as exaltation of Jesus as Lord, the memorialization of Jesus in Christian ritual practice, and the cultural and religious impact of Jesus throughout history. In addition to the early Christian sources on Jesus (especially the canonical Gospels, but also other New Testament texts and non-canonical writings), on each topic students will read selections from early Jewish writings in order to illuminate the cultural context. These include the Dead Sea Scrolls, Philo, Josephus, Jewish texts among the so-called Apocrypha and Pseudepigrapha, early rabbinic texts, and epigraphical writings. Relevant archeological evidence and Greco-Roman sources will also be considered. Broader issues of historical, cultural, linguistic, political and geographical context will be covered in lectures and secondary readings.

CAMS 122: Apocalypse and Beyond

3 Credits

Apocalypse and Beyond is a topic (and title) meant to suggest that apocalyptic imagination about the end of the world, first begun in the Ancient Near East with certain Jewish and Christian writings, is constantly re-envisioned for each new age. Apocalyptic literature and world views are frequently produced by marginalized groups who perceive themselves to be persecuted, and who envision a violent (often divine) intervention, which alone will bring justice. In Part One of the course, we will examine the ancient literary genre of apocalypse, which was popular in the Ancient Near East from around 200 BCE to 200 CE, especially in Jewish and Christian writings both in the Bible (e.g., Daniel and Revelation) and outside of it (e.g., First Enoch, the Apocalypse of Peter, and the Apocalypse of Paul). The authors of these apocalypses expected the evil age in which they were living to dramatically end in their lifetimes; although that did not happen, apocalyptic thinking became foundational to the three world religions stemming from the Near East: Judaism, Christianity, and Islam to varying degrees. In Part Two, we will examine the ideology, sociological underpinnings and some historical examples of apocalyptic groups and movements in medieval to modern times, and look at the impact that apocalyptic world views have had on the secular world, including philosophy, political movements, and popular culture, such as movies.

CAMS 123: History of God: Origins of Monotheism

3 Credits

This course examines the early history of God; that is, the concept of the divine as a single supreme being. In particular, it focuses on the origins of monotheism and the development of its three major traditions in the Near East: Judaism, Christianity, and Islam, from their respective beginnings to around 1000 C.E. The course will begin with an analysis of the polytheistic religious milieu of the Ancient Near East in the second and first millennia B.C.E., and will consider the question of how, when, and why belief in one God first appeared in ancient Israel. Various modern theories about the origins of Israel's national God (Hebrew Yhwh/Yahweh and Aramaic Yhw/Yaho) will be analyzed, with careful attention to the evidence of ancient texts and archaeology. Following a discussion of the nature of the religion(s) of early Israel, the course will then turn to the development of Judaism as the world's first monotheism. It will then examine the subsequent emergence of Christianity in Roman-era Palestine and Islam in Late Antique Arabia, with a brief glance at the Persian religion of Zoroastrianism, which shares some commonalities. Finally, the course will compare and contrast some of the major beliefs, practices, and significant historical trends and movements within the first centuries of the three major monotheisms.

CAMS 124: Early and Medieval Christianity

3 Credits

This course provides an introduction to the history of Christianity. It traces, specifically, the development of the Christian movement from its beginnings as a small Jewish sect in Jerusalem to its unlikely emergence as the religion of the Roman Empire and, finally, its subsequent spread and development in Europe, Asia, and Africa. In form and structure, the course is historical, following figures and events in a more or less chronological sequence and taking up questions of causality, influence, and social identity. Yet the course is also concerned with the ideas, concepts, and philosophical viewpoints that have shaped Christianity and given it a certain intellectual coherence over time. The course begins with first-century constructions of messianic identity and also with the figure of Jesus, as he was portrayed in the New Testament gospels. It then follows the first generations of the Christian movement, considering it within the context of first-century Judaism and the early Roman empire. Topics include persecution, martyrdom, and the important contributions of Origen. The middle section of the course looks at the second, third, and fourth centuries through three lenses, as it were: the office of bishop, the rise of monasticism, and the realities of empire. Bishops, monks, and emperors all shaped Christianity in essential ways, creating a rich and complicated spiritual, moral, theological, intellectual, and geo-political legacy for generations to come. The final third of the course looks at the development of Christianity beyond the fourth century in geographical groupings including churches in Africa, Asia, the Middle East, western Europe, Byzantium, and the Slavic lands. It is hoped, in all of this, that students will gain an understanding not only of Christian history but also of what made - and what makes - Christianity a distinctive and influential religion.

CAMS 130: The Ancient World in Film

3 Credits

CAMS 130 examines the ancient Mediterranean world as it is represented in the cinema. Students will view, interpret, and critically evaluate twelve popular and/or critically acclaimed films that illustrate the narratives and themes that have engaged the interest of filmmakers and audiences since the birth of motion pictures. The curriculum will naturally gravitate toward "epic" films that are rooted in the stories of the Bible, classical mythology, and the histories of the ancient Greeks and Romans; but some attention will be paid also to other kinds of film, such as adaptations of classical drama and literary works, or parodies of "epic" films. To pursue the critical analysis of each film, students are required to read

the ancient source materials on which it is based and to apply methods of interpretation that they will have learned from assigned readings about film studies. By researching a film's ancient historical and cultural backgrounds, students will advance their global learning. By applying the analytic frameworks of film studies to the interpretation of films, they will have the opportunity to engage in integrative thinking and to hone the skills of effective communication. CAMS 130 fulfills the Bachelor of Arts requirements in the field of Humanities (BA) and the General Education requirements in the Humanities (GH).

CAMS 140: Classical Archaeology--Ancient Greece

3 Credits

CAMS 140: Greek Archaeology (3) (GH;IL) This course meets the Bachelor of Arts degree requirements. CAMS 140 investigates the culture and society of the ancient Greeks based on the material remains from the Middle and Late Bronze Age (c. 1700-1100 BCE), through the Dark Age (c. 1000-800 BCE), and into the Geometric Period (8th century) and through the Classical Period (fifth and fourth centuries BCE) when the city of Athens was at its height of political and cultural influence and ends with the conquests and death (323 BCE) of Alexander the Great in the East and the aftermath of his death in Macedonia in Greece. Throughout the course, when relevant, ancient literary sources are also discussed. The course begins with a survey of geography, chronology, and scientific methods of dating. The course emphasizes the archaeological sites that illustrate each period, in the Bronze Age Knossos on Crete, the citadels and palaces at Mycenae and Pylos on the Greek peninsula, and at Troy in Anatolia. In the Archaic and Classical Periods the course covers Greek sites such as the Sanctuary to Zeus at Olympia, the Sanctuary to Apollo at Delphi, and the Sanctuary to Athena on the Acropolis of Athens as well as the Athenian Agora, the Civic Center and Market Place of Athens. The course ends with the conquests of Alexander the Great (323 BCE) and the immediate aftermath including an examination of the intact and unrobbed Royal Macedonian Tombs at Vergina. CAMS 140 is a counterpart to CAMS 150, an appropriate prerequisite for CAMS 440W, and an appropriate parallel to CAMS/HIST 100 or a successor to CAMS 25. CAMS 140 is recommended as preparation for students enrolling in the Penn State Education Abroad Program in Athens. CAMS 140 fulfills common requirements in the major under two categories: (1) for a 3 credit course concerned with Greek or Roman language, literature, civilization, or archaeology, and (2) 6 credits of study in the general field of Classics and Ancient Mediterranean Studies at any level. CAMS 140 may be used to fulfill the requirements for 12 credits of course work at any level toward a CAMS Minor. CAMS 140 is an approved General Education Humanities course that may fulfill three credits of the six-credit requirement. It may also be used to fulfill the three credit B.A. humanities requirement.

CAMS 142: Sport and Spectacle in the Ancient Mediterranean World

3 Credits

CAMS 142 Sport and Spectacle in the Ancient Mediterranean World (3) (GH;IL) (BA). This course presents a comparative social history of sport in the ancient Mediterranean world. Of central interest are the culturally distinctive practices of Greek athletics and Roman spectator sports. Other topics for study and discussion include the earlier history of sport in Bronze Age Mesopotamia, Egypt, and the Aegean. The course begins its survey with the origins and development of Greek athletics in the context of the Olympic Games. Students will familiarize themselves with the program of Olympic events from the stade race to the pankration. They will also learn about the athlete's career, social status, regimen of training, and what the prize of victory was. The second part of CAMS 142 explores the history of spectator sports in ancient Rome, including the chariot races in the circus and animal hunts and gladiatorial combat in the amphitheater. Students will compare Rome's public entertainments with Greek athletics and inquire why spectator sports evolved so differently in those two societies. CAMS 142 fulfills the Bachelor of Arts requirements in Humanities and in International Cultures.

CAMS 150: Classical Archaeology--Ancient Rome

3 Credits

CAMS 150 Classical Archaeology-Ancient Rome (3) (GH;IL) (BA) surveys the development of Roman civilization in relation to the relevant archaeological discoveries and meets the Bachelor of Arts degree requirements. CAMS 150 is an introduction to the archaeological, architectural, and artistic remains of ancient Italy, Rome, and the Roman Empire from ca. 900 BCE to 330 CE through the literary and physical evidence for ancient Roman culture. Roman material culture from its early beginnings under Etruscan influence through the eras of the Roman Republic, the Imperial Period, the rise of Christianity, and the dissolution of the empire is covered. Architecture, sculpture, mosaics, coins, and pottery are examined in their political and social contexts with the goal of understanding Roman society and those under Roman rule. The city of Rome's monuments are a major focus, while the well-preserved Pompeii and Herculaneum covered by the eruption of Vesuvius in 79 AD give vivid views of daily life in two thriving Roman towns. Roman archaeology in Greece, Asia Minor, North Africa, and in the West is also considered. Students have an opportunity to study the geographically dispersed areas of Roman settlement across a long period of time, from Britain to Africa and Spain to Mesopotamia. Students to learn how the Romans were influenced by the non-Roman cultures of the Mediterranean region as they gained political and economic control over them, and how these regions were Romanized. The course considers archaeological methods and various scientific and comparative methods used to establish dating, and the connections among geography, environment, and human settlement patterns. The course briefly covers the losses caused to cultural heritage and scholarship by wars, looting, and the illegal antiquities trade. The difficulty in regulating the trade in antiquities through current ethics guidelines permits students to consider the difficult relationship between policy and enforcement, and ethical choices

more generally. CAMS 150 is an appropriate prerequisite for CAMS 440W: upper level archaeology course. It fulfills common requirements in the major: (1) for a 3 credit course concerned with Greek or Roman language, literature, civilization, or archaeology, and (2) 6 credits of study in the general field of Classics and Ancient Mediterranean Studies at any level. CAMS 150 fulfills the requirements for 12 credits of course work toward a CAMS Minor. CAMS 150 is a General Education course that fulfills three credits of the six credit Humanities requirement. It fulfills the three credit B.A. humanities requirement.

CAMS 151: Introductory Biblical Hebrew

3 Credits

Fundamentals of Biblical Hebrew grammar, syntax, and vocabulary. J ST (CAMS/HEBR) 151 Introductory Biblical Hebrew (3) The aim of CAMS/J ST/HEBR 151 is to introduce students to the fundamentals of Biblical Hebrew as quickly and thoroughly as possible. Biblical Hebrew is the language in which the Old Testament was written, between the period of approximately 1200-200 B.C.E. This focuses primarily on the morphology and syntax of Biblical Hebrew. Drills on each point of grammar, as well as translation of sentences from Hebrew to English and English to Hebrew, and brief passages taken from the Bible are the basis of the student's homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of the Bible. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS/J ST/HEBR 151 will prepare students to continue with CAMS/J ST/HEBR 152 and then 400-level courses. The course goals, in addition to providing the students with a firm grounding in Hebrew grammar and vocabulary, include giving the students a basic understanding of the history of the Biblical text. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to the Biblical texts themselves, which together form such an important piece of literature.

Cross-listed with: HEBR 151, JST 151

CAMS 152: Intermediate Biblical Hebrew

3 Credits

Intermediate study of Biblical Hebrew grammar, syntax, and vocabulary. CAMS (JST/HEBR) 152 Intermediate Biblical Hebrew (3)(BA) This course meets the Bachelor of Arts degree requirements. CAMS/JST/HEBR 152 continues from CAMS/J ST/HEBR 151, which is a prerequisite for enrollment. After a brief review of key grammar and morphology from the first semester, the course will complete the process of providing students with a sufficient grasp of Hebrew vocabulary, morphology, and syntax to enable them to read unadapted passages from Biblical Hebrew texts (with the aid of a lexicon) by the end of the course. Class sessions will focus on grammar drills, sentences, and similar exercises as homework to supplement class work. As the semester progresses, students will read more and more from actual Hebrew texts, rather than composed sentences by the textbook author, so that when the students enter more advanced classes, they will find the transition to reading Hebrew as smooth as possible. In tandem with the increasing

emphasis on Hebrew written by ancient Hebrews, the course will continue to focus on the linguistic and cultural background for the texts that the students read. Students will be evaluated on a combination of written work, including frequent quizzes, tests, homework completion, and course attendance and participation. CAMS/J ST/HEBR 152 will prepare students to continue with courses at the 400-level.

Bachelor of Arts: Humanities

CAMS 153: Dead Sea Scrolls

3 Credits

The discovery of the Dead Sea Scrolls was one of the most important archeological discoveries of the 20th century. This collection of over 900 scrolls found in caves by the Dead Sea includes the oldest manuscripts of the Hebrew Bible (Old Testament) and hundreds of other Jewish writings dating from the 2nd century BCE to the 1st century CE, many of which were previously unknown. In this course we will examine select examples of the Dead Sea Scrolls in order to understand how these writings have revolutionized our understanding of the formation of the Bible, Jewish groups in the Greco-Roman period, and the origins of Christianity and rabbinic Judaism, and why there is so much scholarly debate around them. We will consider such issues as Jewish law, biblical interpretation, messianism, apocalypticism, prayer and rituals. The course will include discussion of the archaeology of the Qumran settlement and caves, scribal practices and the production of scrolls, and scholarly methods in reconstructing and interpreting ancient texts. We will study this one sectarian movement as a microcosm of the issues related to Jewish identity in this critical period that birthed both rabbinic Judaism and Christianity. We will focus on the beliefs and practices by which this movement constructed their particular community identity and worked out their place in the world.

CAMS 160: Sacrifice in the Ancient World

3 Credits

Sacrifice (from Latin sacer "holy + facere "to make") is one of the most prevalent yet troubling aspects of religion. Its destruction and violence is often at odds with other rituals and core understandings within a religion, so why is it done and what good does it do? For the sacrificer, does it represent a gift to the gods, a renunciation, an exchange, a surrogate, or something else? This course will examine some competing definitions and theories of sacrifice, as well as its manifestations in the cultures and religions of the ancient Mediterranean world, especially those of Greece, Rome, Egypt, Mesopotamia, Hatti, Israel, and Phoenicia. A brief look at religious sacrifice elsewhere, such as ancient Mesoamerica and India, will conclude the course.

CAMS 180: Ancient Warfare

3 Credits

Historical survey of the evolution of warfare in the ancient Mediterranean region from prehistoric times to the Later Roman Empire. CAMS 180 CAMS (HIST) 180 Ancient Warfare (3) (GH;IL) Warfare has occupied a central place in the civilizations of the Mediterranean from the earliest times. The prehistoric origins of warfare is a hotly debated topic and constitutes the starting point for this course. Most scholars are agreed that military culture grew in step with sociopolitical development over the course of the third millennium BCE. In the following centuries, the Egyptians, and later the Assyrians and Persians, took great strides in developing sophisticated tactical systems, using infantry, chariotry, and cavalry. These matters occupy a little over the first third of the course. Across the Aegean Sea, Bronze Age (Mycenaean) Greece was ruled by elites occupying massively walled citadels, their leaders buried surrounded by their weapons. But how did these warriors fight? Do the epic poems of Homer memorialize Bronze Age combat? In the Archaic Period (700-500 BCE) infantry warfare in Greece was transformed by the appearance of the heavily-armored infantryman (the hoplite), deployed in a tight formation (the phalanx). The processes involved in the appearance of this kind of warfare, its nature, and its affects on Greek society and culture will be the focus of our attention for the second third of the course. On the periphery of the Mediterranean basin stood a variety of warrior cultures (the Scythians, Celts, or Germans). Numerous warrior-dominated polities vied with each other in Archaic Italy, but one of them, sitting on a ford of the river Tiber, ultimately rose to be the greatest military power produced by the ancient Mediterranean world: Rome. The Roman legions first won and then ensured the security of a Mediterranean-wide empire that stood for 700 years and evolved ultimately into world's first standing army of professional volunteers. The Roman military system holds our attention for the final third of the course. The course defines warfare broadly to include both tactical and strategic, as well as cultural and ideological, matters. Even this canvas is too vast to be surveyed in all its richness, so the major themes explored are: (i) what is war, where does it come from, and how did it change as civilization spread?; (ii) in what ways did warfare develop in the periods under study, in terms of strategy, tactics, and weapons technology?; (iii) how do different warfare practices reflect essential facets of the various cultures under consideration?

CAMS 194: Jerusalem: Sacred and Profane

3 Credits

Jerusalem, a city sacred to Judaism, Christianity, and Islam, is often depicted as the spiritual and physical center of the world. Throughout its 5000-year history, Jerusalem has attracted diverse cultures, empires, and peoples who have vied for control of this city that is both religiously significant and a very ordinary site of urban life. Jerusalem: Sacred and Profane surveys the archaeological, religious, cultural, political, social, and historical record of Jerusalem in the ancient, medieval, and modern periods. We will explore a series of themes in the city's history: the built urban environment, political power in and over the city, sacred sites and pilgrimage, the everyday experiences of Jerusalemites, the changing cultural meanings of the city across various religious and national traditions, and war, violence, and memory in the urban landscape. The significance of Jerusalem's past, its impact on contemporary society and politics in the modern Middle East, and differing visions for this contested city's future are examined in light of various interpretations of the historical evidence.

CAMS 200: Ancient Philosophy

3 Credits

This course examines key themes, texts, and persons in ancient Greek philosophy, with the works of Plato and Aristotle at the core. We ask: What did Socrates mean when he said "the unexamined life is not livable by humans"? Or when Thales said "All begins in water"? Or when Epicurus said "Only pleasure is valuable"? Or when Parmenides said "You cannot speak of what is not"? To answer these questions, we examine the cultural background of philosophical thinking (Homer and Hesiod; Near Eastern traditions; trade and empire), and we survey views about, for example, the universe's structure and origin, the nature of reality and change, the status of knowledge and opinion, the best way of life for individuals and for societies, and the value of reason, persuasion, argument, and logic. We also give close attention to the formation,

meaning, and purpose of philosophy, wisdom, and sophistry. This includes analysis of the "myth reason" hypothesis, Milesian inquiry into basic principles (archai), physical vs. ethical inquiry, and the development of doctrine, discipline, and disagreement. In addition to the figures mentioned above, figures studied may come from the periods of the Presocratics (e.g., Pythagoras, Heraclitus, Xenophanes), Hellenism (Stoic, Epicurean, Cynic, and Skeptic), the Romans (e.g., Cicero, Seneca), and the Neoplatonists (e.g., Plotinus).

CAMS 250: Honors Classics in Literature and Film

3 Credits

This honors course explores the Classical Tradition as it thrives in the literature of later epochs and film. CAMS 250U Honors Classics in Literature and Film (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. The Classics in Literature and Film has as its objective an exploration of the vital, continuing life of classical literature—its influence on the artistic production of later centuries and the ways in which ancient works re-emerge globally as modern literature and cinema whose verbal and visual rhetorical devices engage motifs and themes of recurring intercultural concern through the millennia. Readings include epic, drama and lyric poetry, all of which encompass global political, philosophical and artistic concerns. The demands of the course reading and film viewing require the strong engagement and critical acumen that should be a staple of students in the Honors College. CAMS 250U relates to programs of study in literature, film & classical studies.

CAMS 400W: Comparative Study of the Ancient Mediterranean World

3 Credits/Maximum of 12

Comparative study of ancient Mediterranean civilizations. CAMS 400W Comparative Study of the Ancient Mediterranean World (3)(BA) This course meets the Bachelor of Arts degree requirements. CAMS 400W provides students in the Classics and Ancient Mediterranean Studies (CAMS) Major, and other undergraduate and graduate students in allied fields, a capstone overview of research methodologies as they are applied to contemporary issues in ancient Mediterranean studies. The course is interdisciplinary in nature, and stresses the interactions among the ancient cultures of the Mediterranean region. The specific course content varies depending on the current research interests of the department faculty and the work undertaken by participating students. The course is organized as a seminar with participation by department faculty, and, when appropriate, visiting speakers. The topics concern issues of chronological, geographic, and cultural breadth. Students are expected to give an oral presentation of their research on a relevant topic during the last three weeks of the semester. This course requires a sequence of written assignments that constitute drafts in the process of writing an extended research paper. These consist of a statement of the problem, an annotated bibliography, a preliminary draft, and a final paper revised in light of the instructor's comments on the assignments. This paper and an oral presentation in class based upon it will constitute about half of the final grade. A quiz and essay final examination will constitute the remainder of the grade.

Prerequisite: 3 credits in Classics and Ancient Mediterranean Studies

Bachelor of Arts: Humanities

Writing Across the Curriculum

CAMS 405: Law & Economy in the Ancient Near East

3 Credits

This course is an overview of the legal and economic texts and institutions in the Ancient Near East. CAMS 405 Law & Economy in the Ancient Near East (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course will introduce the students to

the legal and economic institutions of the Ancient Near East, as well as to the many theoretical issues raised by their study, such as: the matter of land tenure; the role played by the temple and the palace in the economic structure; the nature of law within political theology and kingship; and the legal and economic status of specific social groups (women, the elderly, slaves, children). Since most of the topics to be examined are widely debated, the course will provide the students with a broad overview of scholarly theories and intellectual schools. In order to accomplish such an objective, the readings for the class will include both introductory works (taken, for instance, from Sasson, *Civilizations of the Ancient Near East*) and more advanced and specific articles and works (e.g., R. Westbrook, *A History of Ancient Near Eastern Law*). Students will be asked to prepare these readings, which will be available in the library or in electronic format, so they will be ready to take part in class discussions. The source book for the basic legal texts will be M.T. Roth's edition of law collections. Moreover, students will be expected to give a presentation based on some of the optional readings listed on the syllabus. Thus, every class will consist of lecture on the topic and a critical and open discussion of the assigned readings. Every lecture will take into account the assigned readings and will be accomplished by some handouts. Students will be evaluated on the basis of class participation (including a class presentation), as well as on writing assignments. The writing assignments will include take-home examinations. This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies, Classics, Ancient History, and Linguistics. Moreover, this is one of the several history and culture courses in CAMS that provide detailed overviews of major civilizations of the Mediterranean and Near Eastern regions.

Prerequisite: 3 credits in CAMS
Bachelor of Arts: Humanities
Bachelor of Arts: World Cultures
International Cultures (IL)

CAMS 410: Classical Epic

3 Credits

Homer, Hellenistic Epic, and Vergil; influences on later epic.

Bachelor of Arts: Humanities

CAMS 411W: Classical Drama

3 Credits

Masterpieces of Greek tragedy (Aeschylus, Sophocles, Euripides) and comedy (Aristophanes, Menander); their influence on Roman writers. CAMS 411WCAMS 411W Classical Drama (3)(BA) This course meets the Bachelor of Arts degree requirements. The aim of this course is to read, interpret, discuss, and write about the best known and most influential examples of classical drama (in English translation). Students will become conversant with the formal and thematic aspects of Greek tragedy and comedy. (The course could also include a module devoted to Roman adaptations of Greek drama.) The Greek playwrights to be read are Aeschylus, Sophocles, Euripides, and Menander. (Roman playwrights would include Plautus, Terence and Seneca.) The objectives of this course include learning how to read, analyze, and interpret tragedy and comedy within a literary, cultural, and historical framework that is fundamentally different from our own. At the same time as students come to grip with the cultural differences of Greek drama, they will be invited to ponder why these texts are still relevant to modern readers and audiences. The second objective of this course is to give students a forum in which they may reenact the critical debates and dramatic

conflicts that characterize the ancient Greek theater. Class time will be devoted to structured discussion on set topics. Toward the end of the semester students will give 15-minute presentations on different aspects of classical drama that illuminate the texts read in class: for example, the design of Greek theaters and ancient theatrical production, the religious and civic functions of tragedy, gender roles, tragic and comic heroism, myth, rhetoric, philosophy, and the legacy of Greek tragedy and comedy in the modern world. The third objective of the course is to focus on developing critical writing skills and communicating clearly with readers. Students will write six papers of varying length (three papers in two drafts) and two essay exams (mid-term and final). The process of writing will provide a vehicle for close-reading and critical interpretation of classical drama. Students will also learn in classroom discussion and in feedback from the instructor and other students that critical writing entails drafting ideas and revising them. Finally, participants will learn how to write properly documented and well-argued research papers.

Bachelor of Arts: Humanities
Writing Across the Curriculum

CAMS 420: Introductory Targumic Aramaic

3 Credits

Fundamentals of Aramaic grammar, syntax, and vocabulary. CAMS 420 Introductory Targumic Aramaic (3) The aim of CAMS 420 is to introduce students to the fundamentals of Targumic Aramaic as quickly and thoroughly as possible. Targumic Aramaic, is the dialect used by Jews in the last few centuries BCE in their translations of the Bible into Aramaic. Targumic Aramaic texts remain vital within Judaism and Biblical study. This course focuses primarily on the morphology and syntax of Aramaic. Drills on each point of grammar, as well as translation of sentences from Aramaic to English and English to Aramaic, and brief passages taken from the native texts are the basis of the student's homework throughout the semester. By the end of the semester, the students will be prepared to read short, unmodified passages of actual Aramaic. The course will focus primarily on reading and writing, though students will read aloud in class regularly in order to ensure correct pronunciation and understanding. CAMS will prepare students to work with Aramaic in related courses in CAMS, in particular those dealing with other Aramaic dialects, the Bible, and other related ancient languages. The course goals, in addition to providing the students a basic understanding of the history of the Aramaic literary tradition. The primary focus will be on mastering paradigms and syntax, but the students will also be introduced to real Targumic Aramaic texts, which are of great importance to understanding the history of Biblical textual transmission.

CAMS 425W: Books of the Bible: Readings and Interpretation

3 Credits/Maximum of 12

Study of a biblical book/topic in terms of literary, historical, and cultural contexts, history of interpretation, and critical scholarship. CAMS (J ST/RL ST) 425W Books of the Bible: Readings and Interpretation (3 per semester/maximum of 12) The Bible is a diverse collection of writings sacred to Jews and Christians written over about 1000 years, in a variety of different genres and historical circumstances. This course allows students the opportunity to study in depth a particular book of the Bible, from either the Hebrew Bible/Old Testament or the New Testament. We will explore the literary, historical and cultural context of the book in question. A literary analysis of the book will include consideration of genre and literary devices, and a close reading of the text. A historical

analysis will consider the date of composition, its source materials, comparative traditions in other cultures, and relevant historical and cultural factors relevant to understanding the text. The course will introduce students to various other approaches to interpretation of the Bible in modern scholarship, including feminist and post-colonial critiques. We will also explore the varied interpretations and uses of the book in Judaism, Christianity, and Islam throughout history, and its influences in Western culture, including art and literature. The course will be offered once a year with varying content, and students may repeat it when taught with different content.

Prerequisite: 3 credits in CAMS or J ST or RL ST, recommended CAMS/J ST/RL ST 110 or 120; or ENGL 104.

CAMS 432W: Gender and Sexuality in the Bible

3 Credits

This writing intensive course will examine issues of gender and sexuality in the Bible, including the Hebrew Bible/Old Testament, the Deuterocanon, and the New Testament. It will introduce students to a variety of academic approaches to the Bible with respect to a broad range of topics. These topics include: gender identity, sexual orientation, sex, marriage and divorce, adultery, monogamy and polygyny, same-sex relations, chastity and celibacy, prostitution, gender violence, pornography, fertility, procreation, abortion, divine gender and sex, incest, and many others. In covering these themes, the course will deal with some of the most challenging and often disturbing stories and passages in the Bible, the ancient library of books that is sacred to Jews and Christians and which has otherwise greatly influenced civilization for more-or-less two thousand years. Alongside a close reading of the text (philology), this course will employ historical and literary criticism, investigations into ancient material culture (archaeology), modern theoretical interpretive approaches, reception theory, and other methodologies to examine not only the biblical writings in their ancient contexts, but their interpretation and use throughout history to construct social norms.

Prerequisite: 3 credits in CAMS, RLST, or JST.

CAMS 440W: Studies in Classical and Ancient Mediterranean Archaeology

3-6 Credits/Maximum of 6

CAMS 440W Studies in Classical and Ancient Mediterranean Archaeology (3-6) (BA) This course meets the Bachelor of Arts degree requirements. CAMS 440W is a writing-across-the-curriculum upper-level archaeology

course on various topics in the broad field of Classical and Mediterranean archaeology. The selected topic will emphasize interdisciplinary themes, such as comparative state formation, societal collapse, gender in the ancient world or the socio-economic and cultural development of a society or region and its interaction with other Mediterranean, Near Eastern and North African cultures. Students will learn of major publications in the field of study, and how to conduct searches of the previous archaeological literature and the related literary record. As one requirement, students will complete a research paper on a topic related to the theme of the course that semester. The sequence of writing assignments is designed to allow students to develop a project, to search for related publications, to develop a proposal, and to revise drafts of the final paper. The course is also intended to provide students with a practical background in Classical and Mediterranean archaeology that will help prepare them for archaeological fieldwork, for the interpretation of archaeological publications, and, as relevant, for utilizing the literary and/or epigraphic record for interpreting archaeological evidence. Those considering enrolling in this course may obtain information about the specific topic by asking the faculty member listed as teaching the course or the Undergraduate Officer in the Department of Classics and Ancient Mediterranean Studies.

Prerequisite: 3 credits in CAMS or 3 credits in ANTH or permission of instructor

Cross-listed with: ANTH 439W

Bachelor of Arts: Humanities

Writing Across the Curriculum

CAMS 450Y: Gender and Sexuality in Ancient Greece and Rome

3 Credits/Maximum of 3

An examination of gender, sexuality, and sexual desire in ancient Greece and Rome. This course examines issues of gender and sexuality in Greece and Rome. Through close analysis of ancient texts and artifacts, we will explore representations of gender in literature and art, medical theories of the male and female body, sexual norms and codes, and views on marriage, rape, adultery, and prostitution. In addition, we will consider how eroticism and gender both support and subvert political and social ideologies. The objective of this course is to enable students to analyze gender identities and conventions surrounding sexuality in the context of the Greek and Roman worlds. This course will also invite students to consider the influence of ancient conceptions of gender and sexuality on modern discussions and debates. Authors and texts may include Homer, Hesiod, Sappho, Sophocles, Aristophanes, Plato, Aristotle, the Hippocratic corpus, Catullus, Virgil, Ovid, and Augustine. These ancient readings will be supplemented with selections from modern feminist theorists and gender studies.

Prerequisite: 3 credits in CAMS

Cross-listed with: WMNST 450Y

International Cultures (IL)

Writing Across the Curriculum

CAMS 453: Seminar in Ancient Philosophy

3 Credits/Maximum of 6

This course allows intensive study of select authors, traditions, works, or questions from ancient Greek and Roman philosophy. Focal authors may include, for instance, the Presocratics, Socrates, Plato, Aristotle, Epicurus, Lucretius, Cicero, Seneca, Augustine, or Plotinus. Key traditions may include Stoicism, Hedonism, Platonism, Skepticism, Jewish, Roman, and Christian reception, or Neoplatonism and Neopythagoreanism.

Focal works may include Nicomachean Ethics, On the Nature of Things, Confessions, or Enneads. Focal themes may include ethics (e.g., virtue, human flourishing, and pleasure), psychology (e.g., emotion, character, immortality of the soul), epistemology (e.g., imagination, knowledge, wisdom), metaphysics (e.g., atomism, teleology, dualism), theology, logic, aesthetics, or history. This course may also include intellectual and cultural context for claims or trends in ancient philosophy. Students will develop in-depth experience with parts of ancient philosophy that go beyond what they receive in Philosophy/CAMS 200: Ancient Philosophy. They will also hone reading, interpretative, argumentative, and creative philosophical skills on the relevant texts, which are among the most fascinating, puzzling, and frequently referenced of the Western philosophical tradition.

Prerequisite: 9 credits of philosophy, including either PHIL 200 or 6 credits of philosophy at the 200 level; or 9 credits of any combination of CAMS/GREEK/LATIN (or 6 credits if three come from CAMS 200
Cross-listed with: PHIL 453
Bachelor of Arts: Humanities
International Cultures (IL)

CAMS 461: Plato

3 Credits/Maximum of 6

Plato has had, along with his student Aristotle, the greatest influence on the history of Western philosophy of any writer. He synthesized politics and ethics, pedagogy and dialectics, psychology and epistemology, metaphysics and ontology, and even cosmology and theology. He founded Europe's first research institute, which cultivated mathematicians, astronomers, psychologists, rhetoricians, literary scholars, and of course philosophers. He lived at a time of profound political upheaval, in a democratic Athens that had just lost a war of imperial expansion. He wrote dozens of dramatic dialogues, among the greatest works of prose ever, celebrating his teacher Socrates, stunning his readers into puzzlement, and posing problems of self-understanding that would set the philosophical agenda for centuries to come. His works have appealed to skeptics and mystics, formal theorists and creative writers, Jews, Christians, and Muslims, and philosophers of a wide range of sensibilities. This course studies a variable range of his dialogues, with the goal of getting a broad and deep understanding of this author, his intellectual context, and his philosophical reception. Students will also learn about the features of Plato's thought and world that remain culturally salient - the Academy, the Forms, Platonic love, Socratic ignorance, the dialogue form, Platonism and Neoplatonism, and the distinctiveness of Greek philosophy.

Prerequisite: 9 credits of philosophy, where 3 of those credits are PHIL 200 or 6 of those credits are PHIL 200-level courses or 9 credits of any combination of CAMS/GREEK/LATIN courses.
Cross-listed with: PHIL 461
Bachelor of Arts: Humanities

CAMS 470: Languages and Cultures of the Ancient Near East

3 Credits

This course is an overview of the languages and cultures that populated the Ancient Near East. CAMS 470 Languages and Cultures of the Ancient Near East (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course aims to provide students with a wide overview of the languages spoken in the Ancient Near East. The goal is to go beyond the merely linguistic sketches of the main grammatical features of these languages. In fact, the focus will be

placed on historical, literary, social, anthropological, and ethnic matters: language contact settings; relations between language and ethnicity; sociolinguistic aspects of language evolution, language variation, bilingualism, and diglossia; relations between historical and social patterns and the literary, bureaucratic, and popular uses of language; etc. In order to address this ample variety of issues, the students will be introduced first to the essential set of facts needed to comprehend the sociolinguistic history of each region, i.e., basic overviews of the languages in question, their linguistic affiliation, the main periods of their history as evolving linguistic realities, and their different writing systems. These overviews will immediately open the door to the discussion of a tapestry of topics concerning the realities behind these languages, especially their speakers and their ethnic, historical, and political identity. This inquiry into the facets of language as an inherently human reality will lead to a miscellaneous constellation of problems, such as, for instance, the construction of a national identity through the use, revival, or vindication of a concrete language or dialect. Students will be required to do a number of readings before each class. These readings will include basic historical sketches of the languages and linguistic traditions with which the course will deal. Moreover, students will be expected to give a presentation based on some of the optional readings listed on the syllabus. Thus, every class will consist of a lecture on the topic and a critical and open discussion of the assigned readings. Every lecture will take into account the assigned readings and will be accompanied by some handouts. Students will be evaluated on the basis of class participation (including a class presentation), as well as on writing assignments. The writing assignments will include take-home examinations. This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies, Classics, Ancient History, and Linguistics. Moreover, this is one of the several history and culture courses in CAMS that provide overviews of major civilizations of the Mediterranean and Near Eastern regions.

Prerequisite: 3 credits in CAMS
International Cultures (IL)

CAMS 471: Sumerian

3 Credits

Introduction to the Sumerian language and the cuneiform writing system. CAMS 471 Sumerian (3)(BA) This course meets the Bachelor of Arts degree requirements. Sumerian was the language originally spoken in the south of Ancient Mesopotamia (modern Iraq) during the third millennium b.c.e. After it died out as a spoken language, Sumerian became the essential cultural vehicle for a wide variety of literary, scholarly, and religious genres, and it was preserved in writing until the practical disappearance of the Mesopotamian civilization by the second century of our era. This course aims to familiarize students with the basics of Sumerian grammar and enable them to read royal inscriptions from the Early Dynastic and Ur III periods (3rd millennium b.c.e.) as well as provide them with a preliminary introduction to some literary and non-literary texts. Students will be introduced to a variety of genres: royal inscriptions, administrative documents, letters, incantations, and literary texts. Because of the specific nature of the writing system and the fact that most Sumerian texts are available only in copies, students will also be introduced to the cuneiform script, its basic structure, and a basic repertoire of signs. Students will be required to do all the assigned exercises in advance, and participate in class. Special emphasis will be put on class participation: every student will be asked to read and translate in class. Furthermore, occasional quizzes are by no means a remote possibility. In addition, there will be a mid-term and a final examination. This course complements other existing courses in areas

such as Ancient Near Eastern studies, biblical studies, Classics, Ancient History, and Linguistics. Moreover, this is one of the courses in CAMS that provide an introduction to an essential language of the Mediterranean and Near Eastern regions.

Prerequisite: 3 credits in CAMS
Bachelor of Arts: Humanities
Bachelor of Arts: World Cultures

CAMS 472: Akkadian

3 Credits

Introduction to the Akkadian language (Babylonian & Assyrian) and the cuneiform writing system. CAMS 472 Akkadian (3)(BA) This course meets the Bachelor of Arts degree requirements. Akkadian is the cover term for the East Semitic dialects spoken and written in Mesopotamia (modern Iraq) from the mid-third millennium b.c.e. to about the first century c.e. These dialects (Babylonian and Assyria) are all quite similar. As is customary, the course will focus on Old Babylonian, as this is the 'classical' variety of the language, and served as the basis for the dialect of the vast majority of later Akkadian texts (Standard Babylonian). This course aims to familiarize students with the basics of Akkadian grammar and enable them to read a wide variety of genres: legal texts, letters, omens, royal inscriptions, and literary compositions. Because of the specific nature of the writing system and the fact that many texts are available only in copies, students will also be introduced to the cuneiform script, its basic structure, and a basic repertoire of signs. Every meeting will follow a similar structure: the first part will be devoted to the exercises corresponding to the lesson in the textbook that was explained the previous day; and the second part will be an explanation of the next lesson, the exercises of which will have to be prepared for the next meeting. Students will be required to do all the assigned exercises in advance, and participate in class. Special emphasis will be put on class participation: every student will be asked to read and translate in class. Furthermore, occasional quizzes are by no means a remote possibility. In addition, there will be a mid-term and a final examination. This course complements other existing courses in areas such as Ancient Near Eastern studies, biblical studies. Classics, Ancient History, and Linguistics. Moreover, this is one of the courses in CAMS that provide an introduction to an essential language of the Mediterranean and Near Eastern regions.

Prerequisite: 3 credits in CAMS
Bachelor of Arts: Humanities
Bachelor of Arts: World Cultures

CAMS 480: Greeks and Persians

3 Credits

Development and achievements of the Achaemenid kingdom; relationships between Persians and Greeks.

Prerequisite: 3 credits in CAMS
Cross-listed with: JST 480
Bachelor of Arts: Humanities

CAMS 481: Introduction to Middle Egyptian & Hieroglyphics

3 Credits

An introduction to the language and script of Ancient Egypt, familiarizing the student with grammar, syntax and lexicon. CAMS 481 Introduction to Middle Egyptian & Hieroglyphics (3) This course is offered as a basic

introduction to that stage in the evolution of the Egyptian language known as 'Middle Egyptian' (used as a vernacular c. 2300-1700BC, and as a 'literary' dialect c. 2200-1350BC). First encountered in caption texts and snippets of conversation of the workers and peasants in late Old Kingdom mastaba depictions, Middle Egyptian originally was the vernacular of the 'street' during the outgoing Old Kingdom. In the upheaval that swept away the monarchy and elite of the Old Kingdom the language which characterized the Pharaonic court (Old Egyptian) was swept away as well. In the subsequent First Intermediate Period, the language that everyone speaks is a lower class register. Middle Egyptian was given a fillip shortly after the turn of the millennium when the new regime of the 12th Dynasty (c. 1991-1786 BC) established a writing school and adopted this dialect as the accepted literary medium. The scribes of this institution produced a number of literary pieces, hymns and poetry which although created in writing, were intended for oral dissemination *parlando*. They rapidly became classics and were copied and learned by heart for centuries into the future. Middle Egyptian was used in every walk of life from monumental inscriptions, religious, and mortuary texts to letters, business documents and accounts, and the output from Dyn. 12 through 18 was prodigious. Even beyond the 14th Century BC learned scribes would continue to make the attempt at composing in Middle Egyptian, even though the language was no longer spoken, and as a quasi-ecclesiastical speech it continued down to Greco-Roman times. By that time its restriction to temple texts gave the false impression that both language and script had always had the purpose of conveying religious concepts, hence the Greek misnomer 'hieroglyphs', i.e. holy script.

Prerequisite: 3 Credits in CAMS Recommended Preparations: CAMS 20 and CAMS 104
Bachelor of Arts: World Cultures
International Cultures (IL)

CAMS 490: Ancient Mediterranean Languages

3-6 Credits/Maximum of 6

Variable topic study of an ancient language of the Mediterranean basin and related areas, other than Greek, Latin, or Hebrew. CAMS 490 Ancient Mediterranean Languages (3-6)(BA) This course meets the Bachelor of Arts degree requirements. CAMS 490 is a variable topic course in ancient languages, other than Greek, Latin, and Hebrew, that are offered by the Department of Classics and Ancient Mediterranean Studies. The course expands the range of ancient languages of areas in the Mediterranean region which students may study at Penn State. The course permits students of Latin, Greek, or Hebrew to learn the basics of other ancient Mediterranean languages, thereby extending their understanding of the structural similarities and differences of the region's writing systems. The languages taught at present include Egyptian and Sanskrit. Other languages, such as Akkadian, Hittite, Ugaritic, or Aramaic may be offered in future years. The course consists of three major components: The course begins with an overview of the language of study with respect to the language systems of the ancient Mediterranean world in a historical context. Next students learn the essential features of the language of study including its forms, grammar, and lexicon. In the second part of the semester, students read selected texts of various genres as appropriate, including literary and historical texts and inscriptions. The known features of the oral language will also be discussed. The course complements advanced courses such as LATIN 450W, The History of the Latin Language, and other advanced language offerings in Greek, Latin, and Hebrew. It also complements offerings in historical-comparative and Indo-European linguistics such as LING 102(GH).

Prerequisites: 3 credits in CAMS
Bachelor of Arts: Humanities

CAMS 492: Intermediate Field Methods

3-6 Credits/Maximum of 6

On-site experience in archaeological fieldwork in the ancient Mediterranean region. CAMS 492CAMS 492 Intermediate Field Methods (3-6)(BA) This course meets the Bachelor of Arts degree requirements. Students will have the opportunity to participate in a practicum in archaeological fieldwork at Mediterranean sites under the direction of an experienced research archaeologist. Activities will include surveying recognition and recording of stratigraphy and standing remains, recovery of artifacts and ecofacts, and on site conservation. Students will keep a journal and be graded on it as well as on their development of skills in excavation and interpretation. This course may be used to fulfill a requirement for the Classics and Ancient Mediterranean Studies option of the CAMS major and as a 400-level course for the CAMS Minor. The course will be available when CAMS faculty conduct archaeological fieldwork or students participate in projects approved by CAMS archaeology faculty. Estimated enrollment will vary depending on project, funding, etc.

Prerequisite: approval by field school director
Bachelor of Arts: Humanities

CAMS 493: Intermediate Field Analysis

3-6 Credits/Maximum of 6

On-site experience in archaeological analysis in the ancient Mediterranean region. CAMS 493 Intermediate Field Analysis (3-6)(BA) This course meets the Bachelor of Arts degree requirements. Students will have the opportunity to participate in archaeological fieldwork at Mediterranean sites under the direction of an experienced research archaeologist. Activities will include analysis of materials recovered in archaeological projects including maintaining an objects database, artifact sorting and reparation, recognition of pottery types, recording finds, proper handling and storing of finds, and understanding the role of artifacts in archaeological interpretation. Students will keep a journal and be graded on it as well as on their development of skills in recording and interpreting archaeological data. This course may be used to fulfill a requirement for the Classics and Ancient Mediterranean Studies option of the CAMS major and as a 400-level course for the CAMS Minor. The course will be available when CAMS faculty conduct archaeological fieldwork or students participate in projects approved by CAMS archaeology faculty.

Prerequisite: approval by field school director

Communication Arts and Sciences (CAS)

CAS 83: First-Year Seminar in Communication Arts and Sciences

3 Credits

This course offers a dynamic introduction to major theoretical, critical, research and pedagogical issues in human communication. Specifically, it will introduce students to essential aspects of the communication sciences as an academic discipline. The field of Communication Arts and Sciences involves a wide variety of approaches to the study of human communication, including within the communication sciences. For that reason, different versions of CAS 83 will vary depending on the expertise of the instructor. All versions of the course, however, will be designed according to common learning objectives and major topics in order to introduce first-year undergraduates to essential aspects of communication science. Previous versions of the course, for example, have focused on: communication about women's health issues; the dark side of interpersonal communication; and the effectiveness of

various persuasive campaigns. Whatever the specific focus of the course in a given semester, CAS 83 benefits students by introducing them to important dimensions of communication science during their first year at the University. Doing so allows potential majors or minors to our department to develop skills in studying communication science early in their undergraduate careers while gaining a functional knowledge of the field in general. Opportunities to plan a double major, a minor, and explore other miscellaneous forms of academic or professional training naturally follow from this early experience. ***CAS 83 fulfills both a first-year seminar and general education or Bachelor of Arts social/behavioral science requirements.***

CAS 100A: Effective Speech

3 Credits

This general education course explores how people use techniques of oral communication to address practical, professional and civic problems. It is designed to introduce students to principles of effective public speaking, implemented through the design and presentation of individual speeches. Class size is limited to ensure that scheduled

meetings can support students in focusing on the development of public speaking skills through in-class activities, collaborative learning, peer critiques, and examinations of various communication practices. Drawing upon concepts from the study of both rhetoric and communication science, the course aims to foster habits of ethical self-reflection alongside practical speaking skills. To that end, course content centers on the diverse ways that students participate in practices of citizenship and civic engagement. Linking content to practice, students are expected to demonstrate course concepts through the situational, generic, and ethical choices they make in composing their major speech assignments. At least three individual graded speeches are required in this course. Additional presentations (graded or non-graded) may be required by some instructors. Following major speeches, students may compose reflective essays engaging in the critique and assessment of their own and others' work. Assessment may include evaluation by a combination of exams (although no final exam is given in the course) and/or occasional quizzes and other activities, all of which emphasize the mastery and application of the conceptual content of the course. Presentations are evaluated for content, organization, and presentation. Numerous sections of CAS 100A are offered throughout the university system in any given semester. For that reason, different versions of the course may vary slightly depending on the expertise or professional preferences of the instructor. ALL versions of the course, however, will be designed according to common learning objectives and major topics in order to introduce undergraduate students to essential aspects of effective oral communication.

General Education: Writing/Speaking (GWS)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Crit and Analytical Think

CAS 100B: Effective Speech

3 Credits

This general education course introduces students to principles of effective communication with a specific focus on collaborative communication and group problem solving. The goal of CAS 100B is skill development in effective group communication, with less emphasis on formal public speaking and message evaluation compared to other versions of CAS 100. Toward that end, class size is limited and class meetings involve considerable attention to group dynamics, teamwork, and effective communication within groups. Through in-class activities, peer critiques, and analysis of both process and product, this course is designed to allow students to actively work in groups and engage in self-analysis of their own group processes. Structurally, this course begins with discussion of the principles of effective communication and public presentations. It then substantively addresses both the theory and practice of group communication and group process. This course enables students to work more effectively in groups and to make effective group and individual presentations. At least one speech, several group communication activities, and regular analytical writing are required. Evaluation methods include evaluation beyond formal exams. Public presentations are evaluated for content, organization, and presentation; group work is evaluated for process effectiveness and outcomes; critical evaluation of messages is assessed in individual analytical writing assignments; and all course content is covered on quizzes. Numerous sections of CAS 100B are offered throughout the university system in any given semester. For that reason, different versions of the course may vary slightly depending on the expertise or professional preferences of the instructor. All versions of the course, however, will be designed according to common learning objectives and major topics in order to

introduce undergraduate students to essential aspects of effective oral communication in group settings.

General Education: Writing/Speaking (GWS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

CAS 100C: Effective Speech

3 Credits

This general education course introduces student to principles of effective communication with a specific focus on the analysis and evaluation of messages. It thus offers a specialized variant of the university's required course in effective public speaking skills. Through in-class activities, lectures, and group discussions, students develop skills in effective communication skills based on a combination of practice, theory, and analysis. Class size is limited to ensure that scheduled meetings can support students in focusing on the development of effective communication skills through in-class activities, collaborative learning, peer critiques, and the analysis of written and spoken discourse. In addition to developing presentational skills, students learn some essential components of rhetorical theory. Through analysis and evaluation afforded by those components, students will be able to listen more effectively to persuasive messages, draw on the content of persuasive messages as resources for their own civic engagement, and see how the persuasive messages of others can offer models for their own persuasive efforts. Students will deliver a minimum of two public speeches. Speeches will be evaluated for content, organization, and presentation. Graded preparation assignments will test students' ability to synthesize and apply course concepts from the textbook and lectures in the analysis and evaluation of messages. Student speeches will be prepared, by utilizing such resources, to present such analysis and evaluation. In sum, student will develop a deeper understanding of the persuasive messages they receive and an improved ability to persuasively communicate their own messages. Numerous sections of CAS 100C are offered throughout the university system in any given semester. For that reason, different versions of the course may vary slightly depending on the expertise or professional preferences of the instructor. All versions of the course, however, will be designed according to common learning objectives and major topics in order to introduce undergraduate students to essential aspects of effective oral communication.

CAS 101N: Introduction to Human Communication

3 Credits

CAS 101 introduces students to the field of communication studies and to the most important concepts, questions, and ideas that surround the study of communication today. This class is essential for any student who wishes to consider a major or minor in Communication Arts and Sciences. The course is also an important elective for students who want to understand processes of communication in a variety of social forms or settings, including: interpersonal, small group, organizational, intercultural, public, and technological. The main objectives of the course are: 1) to expose students to the concepts and best practices that cut across every aspect of modern communication, 2) to prepare students to excel in advanced classes within the Department of Communication Arts and Sciences, and 3) to help non-CAS majors incorporate essential communication principles into their own fields of study and future professions. Students from every major or college are welcome. Student grades may be determined by a variety of assignments, including quizzes, exams, in-class discussions, and major individual or group projects. This course invites students not only to learn about major concepts or ideas in the study of communication, but to explore their practical implications.

CAS 126: Developmental Listening

3 Credits

Introduction to effective strategies of listening, with an emphasis on studying, note taking, test taking, and research paper writing. CAS 126CAS 126 Developmental Listening (3) This course designed to assist first year students in developing a comprehensive understanding of their role as students, the nature of the learning process and the role of communication in successful learning. A critical objective of the course is for students to understand the integral relationship of communication to academic success. Therefore, considerable attention is given to learning processes and the significant impact of communication on these processes and subsequent learning outcomes. Within this larger context students will be provided opportunities to engage in activities designed to enhance their skills in the following areas: listening, speaking and writing; self awareness and self monitoring; classroom management; time management; study management and learning strategies; exam management; resource management; and researching and developing a thesis in a research paper. Student achievement is evaluated through class participation, including working in groups; a research paper and oral presentation based on developing an effective argument; an academic planning project; reflection papers; quizzes; and two exams. CAS 126 is available only to students participating in the Comprehensive Studies Program, Penn State's Act 101 Program.

CAS 137H: Rhetoric and Civic Life I

3 Credits

Rhetoric and Civic Life (RCL) is a year-long honors course offering comprehensive training in oral, written, visual, and digital communication.

It unites these various modes under the flexible art of rhetoric and uses rhetoric both to strengthen communication skills and to sharpen awareness of the challenges and advantages presented by oral, written, visual, and digital modes. This portion of the course, CAS/ENGL 137 focuses particularly on two critical academic capacities: analyzing and contextualizing. In this semester, students learn to rigorously examine the rhetoric surrounding them, compellingly present their findings in various modes, and thoughtfully contextualize their research. In this course, students will: -Develop a rich understanding of rhetorical concepts - Practice application of concepts and terms in expressing understanding of effectiveness of rhetoric through analysis and contextualization of existing texts -Enhance communication skills by practicing and applying in a variety of communication modes (written, oral, digital)

CAS 138T: Rhetoric and Civic Life II

3 Credits

This course builds rhetorical skills in oral, written, visual, and digital contexts and introduces deliberation and advocacy in civic and disciplinary spheres. CAS (ENGL) 138T Rhetoric and Civic Life II (3) (GWS)ENGL/CAS 138T, Rhetoric and Civic Life II, expands knowledge and aptitudes built in ENGL/CAS 137H by asking students to use rhetorical skills and principles to develop strategies for persuasion and advocacy in the context of civic issues. The course continues the multimodal emphasis—the focus on oral, written, visual, and digital communication—used in 137H and adds new components as well. Students will develop a repertoire of communication skills through hands-on practice at composing and delivering speeches and essays, and they will work with digital media to create multimedia texts, podcasts, and websites. Students will reflect on these different modes as themselves rhetorical choices. The course's civic and ethical components take center stage as students learn how to deliberate important public issues thoughtfully and with civility and respect. They will learn the difference between persuasion and advocacy and develop strategies for both in the context of pertinent local, national, and global issues. They will participate in a public deliberation forum on topics they generate and vote on. The forum will be organized to allow small deliberative action groups as well as large forum-style meetings. The course focuses on ethics in many contexts, e.g., community action and public deliberation; ethics of persuasion; ethical controversies in the disciplines. Students will be encouraged to explore percolating disciplinary interests and to share knowledge in online disciplinary communities. Students will work throughout the semester to design and build a final electronic portfolio that represents their academic work with an eye to their imagined professional futures. The portfolio assignment offers students an opportunity to reflect on their work, assessing the merits and themes of inquiries, and to curate and present their work to both targeted and broad online audiences.

CAS 162N: Communicating Care

3 Credits

Communicating Care ENGL 162N / SOC 162N / CAS 162N What do we talk about when we talk about health? Our states of well-being and illness are topics that, like the weather, drive our daily conversations, but we rarely have time to study and practice these vital exchanges. Spoken in emergency rooms or on long-distance calls, by medical professionals, family members, or strangers making small talk, the languages we use to share pain and recovery require our knowledge of long-established scripts and our willingness to improvise. By exploring how these encounters draw from and work as textual and dramatic performances, this course will guide students to achieve a new level of literacy in the most essential communicative art of caring. Students will analyze health conversations in literary texts, such as short stories, poems, memoirs, and graphic novels. They will explore real-life scenarios drawn from their own experiences, fieldwork, social science theories, and published case studies. Developing skills in the humanities (GH), they will see how subjective, often individual experience, historical perspectives, and creative expression help people to communicate about health and care. Developing their abilities in the social and behavioral sciences (GS), they will see how theory provides insights to predict and understand health and practices of care, investigate objective perspectives and recognize the contributions of fieldwork and data-driven studies to analyzing and improving communication when health is a main concern. They will integrate these methodologies especially to pursue these fields' common goals of making beneficial connections between individuals and groups, and managing private and public life.

CAS 170N: What is Information?

3 Credits

"What is Information?" considers the material and social nature of information in historical and contemporary contexts. How has information been managed and valued? How have information infrastructures served as sites of social and political connection or antagonism? How have ideas about information changed over time and how have they remained the same? The course integrates perspectives from the social sciences and the humanities, and prepares students to think about (and act in) a world in which information (and its linked concepts, like data) play an increasingly important social and political role. The course addresses the history of information as both a concept and as a matter of social practice, and then focuses on three major topics: how information is presented, how information is organized, and how information is put to social and political use. Moving from the earliest periods of human history and their "information ages" (including the birth of writing and the dawn of printing and mass literacy), the

course leads students into our contemporary "information society," and the ways in which both the use and manipulation of information shape our lives.

CAS 175N: Persuasion and Propaganda

3 Credits

Propaganda, in common usage, is a deliberate, systematic attempt to manipulate beliefs and emotions, usually through methods considered deceitful and unethical. Persuasion, on the other hand, is an everyday activity in our personal, social, and civic lives. Persuasion is considered acceptable, even necessary in a free society. This course will explore the distinction historically and theoretically between propaganda and persuasion, with an emphasis on developing the critical skills necessary to distinguish between the two. There are many different definitions of propaganda, and the term often is used to label and discredit political opponents. This course allows students to develop a more precise understanding of propaganda and the techniques of the propagandist. In more practical terms, students will learn to recognize, describe, and evaluate propaganda in all of its various forms and contexts. Toward this end, it includes important cases from the history of propaganda as well as contemporary cases of public advocacy that raise questions about the distinction between persuasion and propaganda.

CAS 182N: Communication and Sport

3 Credits

CAS 182N: Communication and Sport is an introduction to the unique relationship between communication and sport in our society at any level. This course allows students to understand how we play, watch, interpret and evaluate sport through communication. However, this course is also about the reciprocal relationship of how sport impacts our communication, especially as it relates to how we function and interact on a daily basis. Examples of topics that will be discussed include but are not limited to: the participants of a sports community, the role of the media in sport, fan dynamics and culture, gender roles in sport, race and ethnicity in sport, the use of sport in politics, communication between parent and child, teammates, player and coach, crisis communication in sport, and commodification of sport. Course objectives: - Describe and define the foundational relationships between communication and sport. - Identify and dissect the roles of the "players" who collectively constitute the community of sport - Explain the modern evolution of

sports media in the United States and hypothesize how new media and social media will further alter the sports landscape. - Synthesize the student's own fan experiences and rituals with the motivations and typology of fandom. - Examine the creation and function of mythology in sport - Explore and debate gender issues in sport through constructs such as hegemonic masculinity, current coverage and exposure afforded to men's and women's sport, gendered language differences in sports media, and current opportunities and struggles for women in modern sport society. - Recognize and articulate the impact of race and ethnicity on sports culture including discussion of "stacking" practices and media dialogues. - Discover the extent of the historical relationship between politics and sports - Analyze the relationship between sport and the body and interpret what the relationship communicates about performance expectations based on dimensions of identity, such as gender, sexuality, race and ethnicity and disability. - Demonstrate how the shifting of youth sports from game culture to sport culture has led to disturbing trends in parent-child interaction such as evolving participation models and sports rage. - Recognize different leadership behaviors used by coaches. - Judge the importance of group and team cohesion in sport success. - Determine whether commodification of sport outweighs and harmfully diminishes the other roles sports offers to society. - Distinguish, evaluate and apply crisis management skills specific to sport, particularly apologia and image repair. Instructional Methodology: This class is not simply about sport but an ongoing discussion on how to operate effectively in a world that is constantly impacted and influenced by sport. It is expected that students will participate and engage in discussion, activity and assignments relative to different sport contexts. Differences of opinion are encouraged and fans and critics of sports are equally welcome. We will spend time in class on a combination of lecture, case study, debate, student presentation and role play situations. Students who have received credit for COMM 412 may not schedule COMM 182N.

CAS 195: Careers in Communication

1 Credits

An introduction to a variety of careers in the field of communication arts and sciences.

CAS 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CAS 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CAS 200: Language, Culture, and Communication

3 Credits

Introduction to language, language development, cultural literacy, culture, and intercultural communication. CAS 200CAS 200 Language, Culture, and Communication (3) (US;IL) This course defines culture broadly, including how people conceptualize and enact reason, rationality, race/ethnicity, sex/gender, power, and age. Course content is organized into three large units: (1) how culture shapes language use; (2) how language use shapes culture; and (3) how culture and language (both verbal and nonverbal) operate together and influence each other, including how language is used to create, and negotiate understandings of culture. In the first unit, the class examines the effects of preconceived cultural beliefs on behavior; that is, how beliefs that a culture takes for granted as being true filter persons' perceptions of reality. This unit also covers the concepts of self-fulfilling prophecies, cultural stereotypes about age, the possibility of cross-cultural universals (e.g., politeness), and African-American culture. In the second unit, the class examines how the structure of different culture's languages (e.g., their vocabulary and grammar) shapes how persons experience the world and thus shapes their "reality." In the third unit, the class takes the position that various aspects of culture (e.g., race/ethnicity, sex/gender, power, and age) are constantly being constructed and re-constructed through language. This unit examines how persons accomplish being "a woman," "African American," "old," "polite," "powerful," etc. This class is interdisciplinary and incorporates materials from anthropology, applied linguistics, linguistic anthropology, communication studies, and sociology. Grades are based on three in-class exams (two midterms and a final), which are closed-book and involve short-answer and essay-type questions. Attendance is mandatory. This is one of the three core/required courses for the major. This course ties into another core course, Communication Theory, by discussing several key Communication Theories in different ways, such as the Sapir/Whorf hypothesis, Politeness Theory, and various theories of language. This course ties into those dealing with race and gender.

International Cultures (IL)

United States Cultures (US)

CAS 203: Interpersonal Communication

3 Credits

The phenomenon called interpersonal communication encompasses the complexities of interaction between people in any of a variety of situations. The expectations people form prior to a conversation, the messages that they produce using language and nonverbal cues, the ways in which they attach meaning to the behaviors of others, and the systemic qualities of the dyad are all part of interpersonal communication. And interpersonal communication occurs in contexts as varied as strangers sharing a seat on a bus, neighbors passing each other in the street, college roommates or married couples coordinating their lives, and co-workers negotiating office politics. In the home, at school, at work, and in public, interpersonal communication is an intricate process that weaves the fabric of our lives as social beings. This class is designed as an opportunity to explore the complexities of interpersonal communication and to develop a repertoire of interpersonal communication skills.

GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 204: Communication Research Methods

3 Credits

Overview of the skills necessary to evaluate commonly reported communication research.

CAS 206: Mediation and Communication

3 Credits

Presentation of the history, theory, and practice of mediation as a means of resolving conflict through communication. CAS 206 CAS 206 Mediation and Communication (3) There are two overall objectives to this course. First, the course will acquaint students with conflict as a normal part of the human condition, and with the efforts of humans for thousands of years to resolve conflict in a peaceful way. The specific method of conflict resolution addressed by the course is mediation, which involves the intervention of a third party who is neutral in the conflict. Modern uses of mediation to resolve conflict extend from the playground to essential functions in society, for example, labor relations, legal systems, government operations, including international relations, and family disputes. While Western methods will be emphasized, mediation also plays an important role in non-Western cultures. For example, Hawaiian, Palestinian, Native American, and Chinese cultures rely on mediation to resolve conflict and rebuild relationships. In fact, mediation is the most popular means of conflict resolution in China, Taiwan, and Japan. Second, the course will acquaint students with the essential means by which mediation is accomplished, communication. The success of the mediation depends on the ability of the mediator to communicate well in specific ways when addressing the assembled parties, and when interacting with them individually. The course will also acquaint students with communication issues in mediation under study by both professional mediators and communication scholars. This course relates to lower-division Communication Arts and Sciences courses in rhetoric and interpersonal communication, in that it demonstrates how the different theories and practices they discuss can be integrated to produce important positive outcomes not only to individuals in conflict, but also to cultures. This course relates to upper-division Communication Arts and Sciences courses in rhetorical theory, interpersonal communication theory and research, conflict resolution and family communication theory and research, by providing an introduction to communication issues arising from an important context of communication, mediation, issues that can stimulate both further theory and research. This course relates to upper division courses in Labor Studies and Industrial Relations dealing with workplace dispute resolution and collective decision-making, and in Human Development and Family Studies dealing with interventions and resolving problems, to the extent that these courses discuss mediation. This course introduces the communication bedrock on which mediation rests.

CAS 208N: Introduction to Managing Conflict and Bargaining

3 Credits

CAS 208N introduces students to the nature of interpersonal conflict and emphasizes how this knowledge, in turn, helps students become more effective negotiators. Students apply both objectivist and interpretive theories to different communication contexts and across various communication channels (face-to-face and mediated). Students learn affective communication skills (e.g., how to be an empathetic

listener) and instrumental communication skills (e.g., how to manage interpersonal conflict). Much of the class focuses on relational power dynamics in interpersonal contexts. Thus, students learn the importance of empathetic listening, especially when another person disregards students' core concerns (ego, affiliation, appreciation, status, and role). Students will also learn distributive and integrative bargaining strategies, including how best to negotiate across cultures. The class integrates an array of theories where intellectual traditions from both the Humanities (GH) and the Social and Behavioral Sciences (GS) are covered equally.

CAS 209: Democratic Leadership

1 Credits

Penn State has a special opportunity to create new leaders who learn deliberative approaches to politics and public life. This one-credit course provides a background for this approach to democratic leadership, and it also prepares students for the Nevins Fellows paid internship program. Those who complete this course will have first priority when awarding these internships each year. The centerpiece of this course are day-long workshops that introduce students to effective civic leaders in government or the non-profit sector. Bracketing these workshops are a handful of seminars, which introduce ideas, discuss reading assignments, and reflect on the workshops. In addition to short reaction papers, students will produce a narrative essay at the end of the course that describes how they could see themselves advancing democracy in the United States (or elsewhere) and what kind of internship experience will help them prepare for such a career. For those who opt to seek an internship, this essay will supplement their formal application. Credit for the course requires attendance at every class meeting and workshop, or equivalent makeup assignments, if permitted.

Cross-listed with: PLSC 209

Honors

CAS 210: Landmark Speeches on Democracy and Dissent

3 Credits

Landmark Speeches on Democracy and Dissent offers a survey of key speeches, debates, and controversies making up the rich tradition of U.S. civic life. The course is designed to introduce students to the basic historical contexts within which these key events arise; engage them in close readings of speeches, tracts, and polemical writing; and develop skills in critical thinking and writing. Students will attend to a broad spectrum of voices, including those of historically under-represented peoples as well as canonical figures. Landmark Speeches on Democracy and Dissent thereby encourages students to develop a broad rhetorical literacy in the diverse democratic voices that have long contributed to essential U.S. arguments about nationhood, protest, war, race, gender, religion, and more. The course presupposes that students will be able to apply this rhetorical literacy to both participation within and critical thinking about contemporary forms of democracy and dissent.

CAS 212: Professional Public Speaking

3 Credits

Organizing, adapting and presenting ideas in public informative, persuasive, technical and ceremonial speeches.

Enforced Prerequisite at Enrollment: CAS 100

CAS 213: Persuasive Speaking

3 Credits

Planning, organizing, and adapting techniques of persuasion to achieve personal and public goals; engaging in critical assessment of persuasive messages.

Enforced Prerequisite at Enrollment: CAS 100

CAS 214W: Speech Writing

3 Credits

Due to time pressures, media scrutiny, and sadly under-developed rhetorical talents, powerful people in the public and private sectors need speechwriters. Because writing in the character of someone else and writing for the ear present the two biggest challenges for speechwriters, this course trains students in speech analysis and oral/aural composition. Throughout, students apply what they are learning, writing several genres of public speech in the voices of others and for various audiences and occasions. In accordance with the 'WAC' designation, students work through various drafts during structured and facilitated peer-review sessions. The majority of assessments is comprised of original, written work.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 30H or CAS 137H or ENGL 137H or CAS 100

Writing Across the Curriculum

CAS 215: Argumentation

3 Credits

This course provides an in-depth examination of argumentation in both public and private contexts. The course requires students to investigate the process of researching sound evidence, constructing legitimate argumentative claims, and participating in live debates. Fundamental to this endeavor is a strong attention to research, ethics, and strategy. Major topics may include essential components of effective arguments, in-depth examination of different types of evidence, introduction to forms of reasoning, negative and affirmative cases, and debate rules or strategies. Students may be evaluated with a range of assignments, from oral debates or presentations to written assignments, quizzes, and exams. This course thereby offers students opportunities to enhance their skills in effective inquiry and advocacy, useful for academic as well as professional success. Understanding the theoretical foundation of argumentation will enable students to accomplish four objectives: 1) to

understand the significant role argumentation plays in public and private discourse, 2) to research, gather and organize supporting material into argumentative discourse so as to become a skilled advocate, 3) to be familiar with the physical and virtual PSU libraries, and 4) to become an effective critic of argumentative discourse.

3 Credits

Practice in presiding over and participating in meetings conducted under rules of order.

Cross-listed with: AEE 216

CAS 220: Persuasion

3 Credits

The course aims to impart knowledge of scientific theories of persuasion by engaging students in the design and execution of a persuasion campaign. The applied component of the course involves (a) selecting a consequential issue, (b) evaluating the extent to which that issue might be amenable to solution via persuasion, (c) learning how members of the target audience view the issue via formative research, (d) designing theoretically-informed messages adapted to the target audience, (e) implementing a campaign that utilizes multiple messages in multiple modalities, and (f) evaluating the impact of the campaign. Classic and contemporary concepts of persuasion science are brought to bear on each stage of this sequence.

CAS 222N: Foundations: Civic and Community Engagement

3 Credits

Through readings, discussion, deliberation, listening, and individual as well as collaborative action, this course gives students the opportunity to learn about and practice theories and habits of civic and community engagement and public scholarship with the goal of helping to build democratic capacity and sustain participatory democracy. This course emphasizes concepts and case studies that focus on the people's role in shared governance. The course also provides a foundation for understanding how a wide range of other individual and collective practices have an equally important role to play in building and sustaining community. The course draws from studies in demography, political science, sociology, psychology of racial identity formation and education to help students communicate better about and in shared governance. Among the core concepts are the role of students and other citizens in sustaining and transforming their communities, the historical and contemporary mission of Land Grant universities, the centrality of rhetoric and communication to collaborative judgment, and the relationship among media, cultures, and politics as they affect civic

and community engagement. Students also learn together about the range of ways that citizens do, can, and might participate in democratic decision-making and will observe and practice these forms in several communication media and across a range of differences. Finally, learn about models of and opportunities for engaging other citizens across and beyond Penn State, including in global environments.

CAS 232N: Identity, Citizenship, and the Rhetoric of American Horror Film

3 Credits

Concentrated on American horror film from the 1930s to the present, the course will address the role of horror in the creation of stories told about the United States, its history, and its people. The course examines horror films rhetorically and social scientifically. Specifically, the course incorporates a rhetorical lens by exploring horror films as acts of constitutive rhetoric, that dramatize and interrogate the ways people use language and images to tell stories and foster identification within and between citizens and to constitute an "American identity." The course also incorporates a social scientific lens by examining horror films' association with identity/US identities using media effects theories, which include perspectives associated with audience use and reception. Both perspectives (rhetoric and media effects) are used to consider the roles of U.S. social, political, and economic contexts in the production/construction of horror films for the stories they tell and the characters they construct. For example, the course will examine the ways that American horror films respond to fear and anxiety in response to specific cultural contexts such as the emergence of science, xenophobia/marginalized populations, various social movements, economics, and war.

CAS 250: Small Group Communication

3 Credits

People learn the basic features of society, and social relationships, through interaction. Small groups are especially important because they are the smallest possible social unit in which bargaining, negotiation, and deliberation can occur. Every student has practical life experience in groups, and the course syllabus draws on those experiences to contextualize the material students learn. At the same time, without

a formal study of group communication, students lack the necessary perspective and training to work most effectively and ethically in groups. This course addresses that knowledge and skill deficit by walking students through the major concepts, theories, underlying research methods, and ethical dilemmas faced in small groups. Students come to understand how groups fit into larger organizations and society—often making up the building blocks of both small and vast social units. Students come to appreciate the dynamic quality of groups, which often develop in relation to group members' needs and external social forces. The course teaches students the importance of group cohesion, conflict, bonding, and group culture, as well as the hazards those can face when groups wish to engage in effective group problem analysis and decision making. Throughout, students are learning the ethical principles of democratic deliberation and leadership in groups—a subject that was at the center of communication pedagogy in the early twentieth century and that has become particularly important once again early in this century. Finally, students learn practical abilities, such as group agenda setting, discussion management, and presentation skills.

General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 251: Communication, Advocacy, and Entrepreneurship

3 Credits

Communication, Advocacy, and Entrepreneurship empowers students to utilize the process of entrepreneurship as a form of advocacy to enhance the human condition and improve public life. Students in this course learn the "Lean Startup" methodology of entrepreneurship through the simulated team-based activity of launching a startup to address an important societal exigence. Student startup teams will interrogate the rhetorical constructs that enable and constrain advocacy-based solutions to exigencies such as economic inequality, mental health, racism and sexism, and political disenfranchisement, and utilize qualitative research methods to develop key social venture hypotheses around their own simulated startups that will be tested through a minimum of 30 client discovery interviews and secondary research. This course offers a critique of the business paradigm of maximize shareholder value, which privileges rapid scalability and growth, maximized profit, and ROI (Return on Investment), and invites students to consider the impact this dominant view of business has on companies' commitment to environmental performance, social responsibility, employee well-being, and organizational mission. Students are encouraged to adopt the ethical business framework of nonprofits and emerging alternatives such as B Corporations and social enterprises, which provide assessments to help companies raise their standards for legal transparency, environmental responsibility, and worker and community well-being. Student simulated startups are designed to give voice to those disenfranchised by systems and discourses of power, and student teams are encouraged to see their solutions as offering services and/or interpretive frameworks that remedy inequity and promote healing, justice, and empowerment within the constraints of a specific moment in time. For example, students concerned about the impact of substance abuse on mental well-being and academic success could create a startup to help colleges/universities alter their messaging about alcohol use and/or implement sober living option best practices, or a student victimized by developmental sexual trauma could draw upon the latest research on healing and the body to propose a startup to raise awareness about natural treatments for posttraumatic stress disorder. Students who complete Communication, Advocacy,

and Entrepreneurship are encouraged to consider advancing their idea from simulated startup to real startup by participating in the vast array of educational and fundraising opportunities within Penn State's entrepreneurship ecosystem (e.g., Happy Valley Launchbox, Invent Penn State, Startup Week, Global Entrepreneurship Week).

CAS 252: Business and Professional Communication

3 Credits

Review and practice of various communication forms used in modern organizations. Topics include persuasive speaking, speech writing, multimedia presentations and business and report writing. Interviewing, briefing, conferring, and decision making; analyzing and evaluating formal and informal patterns of communication in organizations.

General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 253: Health Communication

3 Credits

CAS 253 introduces students to principles of health message design and the general theories and models used to guide these efforts. This course is designed to provide students with theoretical principles for practice in planning and evaluating health messages for dissemination by health organizations, policy makers, and other interested publics. CAS 253 emphasizes the potential positive and negative outcomes associated with specific messages designed to impact individuals' knowledge and behavior with health consequences. It emphasizes the importance of audience segmentation on goal selection in guiding health message design, as well as the effects and effectiveness of source and channel selection for reaching particular audiences. The CAS 253 Health Communication course is one of a series of electives for Communication Arts and Sciences majors or minors interested in pursuing careers in organizational communication, health communication, sales, and training and development in small groups. The course is possibly linked to those with interests in biobehavioral health.

CAS 255: Communicating Gender

3 Credits

This course is designed to offer opportunities for exploring how gender is socially constructed partly through communication. The course offers a survey of concepts from rhetorical theory and gender theory that help explain how the norms for gender—including as it intersects with other categories such as sexuality and race—are communicated within multiple domains in a culture. Students develop skills for thinking critically about diverse perspectives on these norms. The course emphasizes the agency of students in developing their own ethical frameworks for how to enact gender performances in their communication, as well as how to respond through communication to the performances of others.

CAS 271N: Intercultural Communication

3 Credits

Focus on topics such as language, identity, prejudice, and intergroup relations on a domestic/ international level. This course fulfills an intercultural and international competence (US/IL) requirement. CAS 271N is designed to give undergraduate students an introduction to the various issues, trends, and historical perspectives pertaining to communication within U.S. domestic and international cultures. It integrates social and behavioral sciences and humanities disciplines so that students can compare and contrast what different disciplines bring to a topic. CAS 271N is an introductory survey course that is highly recommended to students as a course preceding several other 300 and 400-level courses on interpersonal, group and intercultural communication, relationships, and processes.

CAS 272N: Political Communication and Technology

3 Credits

This course examines how interactive communication technologies reshape political rhetoric, discursive civic culture, deliberation in the online public sphere, and participatory democracy. It traces the evolution of the public sphere and explores theoretical and empirical issues related to online political discourse (blogs, political discussion fora, viral politics of social networking sites), cyberactivism, smart mobs, networked publics, and peer-to-peer production (You Tube, Wikis). CAS 272N concentrates on online rhetorical and discursive strategies of candidates for public office, and individuals and organizations campaigning on specific issues and causes. It emphasizes civic engagement and includes topical areas such as mechanisms of online public spheres, citizen generated discourse and content, viral politics, connections between social networking sites and political discourse, and behaviors such as networked activism. It examines how various interactive communication options have affected political discourse, campaign communications and public deliberation. It provides students with hands-on experiences in analyzing the rhetorical and persuasive strategies involved in creating video content, writing blogs, creating wikis and twitter messages. It teaches students how they could use these communication options in working for political campaigns, civic action groups and non-profit institutions. The goal of the course is to help students understand the opportunities and constraints involved in using interactive communication technologies for civic and political actions, and facilitate their development as informed citizens. Class activities focus on identification and critique of rhetorical strategies employed when using interactive communication technologies, and learning to create content such as weblogs, wikis, and mashups. Students will be graded on exams, participation in discussion groups, analyzing and connecting course

concepts to real world examples, creating content such as mashups, and analysis of rhetorical strategies of political candidates and activist groups. CAS 272N is highly recommended to students interested in examining the potential of interactive communication technologies for civic and political action.

CAS 283: Communication and Information Technology I

3 Credits

This is an introductory course in the theory and application of technology for communication and self-presentation using the Internet. A major emphasis is placed on Computer-mediated Communication (CMC) & the study of the social effects of communication and information technology. Areas covered include factors that distinguish mediated from face-to-face interaction, theories of mediated interpersonal communication, self-presentation online, Internet-based relationships, and online communities. Upon completion of this course, the student should have knowledge of how the Internet influences communication and a better understanding of how to use CMC for self-presentation.

General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Integrative Thinking
 GenEd Learning Objective: Key Literacies
 GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 295: Internship

1-16 Credits/Maximum of 16

Supervised nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor

CAS 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CAS 296A: **SPECIAL TOPICS**

1-6 Credits

CAS 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CAS 297G: Special Topics - GenEd

1-9 Credits/Maximum of 9

Formal course given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This is a Special Topics GenEd course.

General Education: Humanities (GH)

CAS 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CAS 301: Rhetorical Theory

3 Credits

History and theory of public advocacy and civic discourse.

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

CAS 302: Social Influence

3 Credits

Explores how humans influence others through communication.

CAS 303: Communication Theory

3 Credits

This course is intended as a foundational course in communication theory for Communication Arts and Sciences majors and others interested in social science theory in general. It is designed to show how communication theory can be applied to understand and improve communication in your professional (and personal) life. The theories examined will span the range of communication contexts, including interpersonal, group, organizational, mediated, and cross-cultural interactions. At the conclusion of this semester, students should be able to demonstrate: - Knowledge of major ideas from a substantial number of communication theories - Ability to apply theories of human interaction to explaining and improving communication behavior, especially in professional contexts In addition, students should have: - Improved skills at both creative and analytic writing that includes practice in giving helpful feedback on others - writing, and facilitating discussion

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

CAS 303H: Introduction to Communication Theory- Honors

3 Credits

This honors course provides an overview of conceptual perspectives and theories of human communication. Students will apply theories to analyze and solve problems in different applied contexts (e.g., interpersonal, political, and health, etc.). Students will learn to recognize and present clear descriptions of communication theories in both general instances and specific contexts. Students will learn to understand communication theories apply them to the analysis real-world problems. Students will learn to defend their analyses, justify their arguments, and prepare counter-arguments with articulate logic and appropriate empirical evidence. Additionally, students will learn to synthesize scholars' logically related, testable statements devised to explain the same group of facts or the same phenomena: their definitions, claims, assumptions, and rationale from published, empirical research. CAS 303H is designed to provide the opportunity to pursue this course more in depth and rigorous level.

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

CAS 304: Quantitative Methods for Communication Research

3 Credits

The purpose of this course is to instruct students on concepts and issues of quantitative research methods in Communication. Students will learn how Communication researchers conduct and evaluate research from using a variety of quantitative methodologies. By the end of the course, students will possess the knowledge necessary to understand and evaluate arguments utilizing research to persuade, as well as, to conduct sound research on their own. A primary goal of the course is to enable students to become a critical consumers and producers of information that defines the world around them. The course will educate on the proper terminology/concepts used in research methods. The end result of the course should be a fundamental understanding of how to critique and conduct research in the field of Communication.

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 311: Methods of Rhetorical Criticism

3 Credits

Rhetorical Criticism introduces students to the most common methods of rhetorical criticism within the field of communication. These methods are designed to help students analyze and evaluate commonplace forms of rhetoric. Examples include historical or contemporary speeches, debates, political campaigns, social movements, or mass mediated messages intended to influence the public at large. The course not only

provides a survey of essential methods of rhetorical criticism, but also requires students to produce works of rhetorical criticism themselves based on substantive research and written evaluation of a rhetorical artifact. Methods of rhetorical criticism are distinct from analytic methods used by other academic disciplines. Scholars of communication began to establish methods of rhetorical criticism in the early twentieth century in an effort to distinguish the aims of their scholarly pursuits from those of literary criticism or historical research. Rhetorical criticism evaluates the rhetoric of public communication (speeches, debates, or mediated messages intended to shape public understanding of real-world social, political, or moral issues). Such methods enable rhetorical critics to do so, moreover, not only by examining who said what at a given moment in history, but by closely analyzing how and why strategic uses of language or symbolic communication influenced public beliefs or behaviors. Rhetorical Criticism thus provides students with a variety of adaptable analytic tools that they may use to better understand and evaluate the nature as well as impact of rhetorical messages throughout history and in everyday life.

 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies
 GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 315: Debate and Civic Life

3 Credits

This course provides historical background on debate in politics and in civic life, examining both public and competitive debate practices. Debate has been a vital part of democratic engagement in the United States since the founding of the country. This course explores the role debate has played in the United States, focusing primarily on debate practices in the 20th and 21st century. This course provides historical background on debate in politics and in civic life, examining both public and competitive debate practices. Course material will expose students to theories and practices of debate including the history of important debate moments in the United States, analysis of contemporary political debates, and practical debate techniques inside the classroom and in a public setting.

General Education: Humanities (GH)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Integrative Thinking

CAS 321: Rhetoric and Law

3 Credits

A survey of the literature on the role of rhetoric in law, including trial advocacy, appellate argument, and judicial reasoning. Rhetoric and Law explains how knowledge of rhetorical principles enhances the understanding of legal documents, reasoning, and performance. This course surveys classical to contemporary rhetorical literature demonstrating its utility to the study of law. Students will examine the role rhetoric plays in jury deliberation, trial advocacy, appellate argument and judicial reasoning. Students will demonstrate their understanding of rhetorical theory by participating in a mock trial. In this exercise, students will deliver opening statements, closing arguments as well as conduct direct and cross-examination of witnesses. Finally, the class will examine United States Supreme Court majority and dissenting opinions as rhetorical documents.

General Education: Humanities (GH)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Crit and Analytical Think

CAS 340: Communication and Civility

3 Credits

Communication behaviors contributing to civil and uncivil discourse; their implications in business, public life, across cultures and in interpersonal relationships.

CAS 352: Organizational Communication

3 Credits

This course combines theory, research, and practical application to explore the role of communication in today's organizations. Students will learn communication skills applicable to modern work-related issues. Topics include organizational culture, problem solving in teams, organizational conflict, communication technology, social media, and ethical leadership.

General Education: Humanities (GH)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Creative Thinking
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Integrative Thinking

CAS 360: Communication for Teachers

3 Credits

Analysis of dynamics of instructor-student communication implemented through structured exercises in instructor listening, verbal and nonverbal message-making.

Enforced Prerequisite at Enrollment: CAS 100

CAS 373: The Rhetorics of War and Peace

3 Credits

This course explores how war and peace are advocated. CAS 373 The Rhetorics of War and Peace (3) In *The Wealth of Nations* (1776), the first classic of capitalism, Adam Smith speaks of "the art of war," deploying a phrase from Sun-Tzu's *The Art of War* that would later appear in Baron von Clausewitz's *On War* and also in contemporary U.S. military handbooks. This course argues that war is indeed an art, and a thoroughly rhetorical one in which the political economy of persuasion is as important as high-tech weaponry and whiz-bang battle plans. By considering some of war's most thoughtful theorists, by discussing wars past and present, and by reading powerful defenses and trenchant critiques of war, this course will help students understand how wars are managed rhetorically. This course satisfies a grave need: for living in the post-9/11 world requires the critical rhetorical skills necessary to understand not just how war is waged or how it structures our lives but how war is advocated and defended. The trajectory of this course will thus make the full arc from war to peace. Perhaps most importantly in this time of grave post-modern warfare, this semester's readings and discussions will make us all better rhetorical scholars capable of imagining alternative futures. From the realities of war comes the possibility of peace.

General Education: Humanities (GH)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 375: Rhetoric and Public Controversy

3 Credits

Debates, arguments, and other forms of communication in public life often address various kinds of ongoing controversies. Resolving those controversies often influences our collective social, political, and moral decision-making. This course provides students with concepts, vocabularies, and practices necessary to study historical and contemporary public controversies. Understanding how to use rhetoric collaboratively and constructively for the public good is therefore valuable in both evaluating and helping to resolve controversies. CAS 375 will allow students to learn about well-known and lesser-known controversies that affect social and political life in Pennsylvania, at Penn State, and throughout the nation. Students will do so by examining primary and secondary texts (or historical documents as well as academic research). The course requires students to collaboratively research controversial topics of their choice, thereby enabling them to practice both analytic and communicative skills that help to promote constructive public discourse. In these respects, the course offers students an academically rewarding and civically engaged experience. Different versions of CAS 375 will vary depending on the specialties of individual instructors within the broad and diverse scholarship on public controversies. All versions of the course, however, will be designed according to common learning objectives and major topics in order to provide students with substantive points of academic coherence and consistency across slightly differing iterations of the course.

General Education: Humanities (GH)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 383N: Culture and Technology

3 Credits

The aim of this course is to examine the relationship between technology and culture in the broadest sense, from the role of tools used in society to the impact of high technology in post-industrial societies. The course begins with an overview of the theoretical approaches to the linkage between technology, culture and society. Students will examine the role of technology as a determinant of culture. Particular attention will be given to the diffusion and transfer of new technology and its impact on social and cultural issues. This course is designated as Integrated Domain because of the interdependence of humanities and social sciences as fundamental to understanding the role technology plays in the transformation of the nature and influence of cultural properties such as education, work and economics, politics, and human relationships. Using communication theories that focus on technology, students will grapple with ethical questions of power and justice and the way dominant cultural ideologies and technological developments shape norms that get solidified in attitudes, norms, and workplace and public policies.

CAS 390: Qualitative Research Methods

3 Credits

An overview of Qualitative Research Methods, including how to conceive, design and execute a research study. CAS 390 Qualitative Research Methods (3) (GS) This course provides students with an understanding of both qualitative research methods and the theoretical frameworks that inform qualitative inquiry. Additionally, this course focuses on tools for data collection such as individual and focus-group interviewing and observing and recording interaction. This course provides practical experience for students in collecting and analyzing qualitative data with and without the use of technology and examines particular difficulties in the interpretation and reporting of qualitative findings. Qualitative Research Methods is course that bridges disciplinary boundaries and is useful to any student who will be investigating human interaction.

CAS 395: Forensics Practicum

1-2 Credits/Maximum of 16

Provides students in forensics the opportunity for supervised participation in the activity in class and in intercollegiate competition.

CAS 398: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CAS 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CAS 402: Speech and Human Behavior

3 Credits

General semantics, thought, and human behavior; not offered at University Park campus.

CAS 403: Interpersonal Communication Theory and Research

3 Credits

CAS 403 is an advanced introduction to social scientific theory and research on interpersonal communication. Course foci center on contemporary theory and research, interpersonal communication in personal and professional relationships, and a research practicum in which students conduct an original research study. The course is intended for juniors and seniors in Communication Arts and Sciences and other liberal arts majors who have a serious interest in interpersonal

communication processes. Assignments and readings address theory, research, and practical application.

Enforced Prerequisite at Enrollment: 3rd Semester Standing or 6 credits of CAS

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

CAS 404: Conflict Resolution and Negotiation

3 Credits

Conflict and its management are critical issues that pervade the fabric of our society. This class is designed as an opportunity to explore the complexities of conflict, to understand the forces that make conflict challenging, and to develop a repertoire of skills for thinking about and managing conflict more effectively. In this pursuit, we first examine the features that define and set the stage for conflicts. We then turn to the communication behaviors that people use to manage conflicts. Finally, we consider some of the dynamics that make constructive conflict management a challenge. The objective of this course is to expose students to the scholarly study of interpersonal communication in a way that both captures the vitality of the discipline and enhances interpersonal communication skills. As a General Education course contributing to the social and behavioral science requirement, this class is also expected to (a) survey existing knowledge in the subject domain, (b) promote an understanding of social scientific methods, (c) clarify the multiple nature of causality in social settings, (d) demonstrate the relationships between the study of interpersonal communication and other disciplines, and (e) encourage students to integrate empirical knowledge and theoretical views of the social world. The course content, assignments, and exams were developed to attend to these concerns. Recommended Preparation CAS 100

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 405: Family Communication Theory and Research

3 Credits

Family relationships are powerful. They represent our foundation, our growth, and our potential. Family relationships are complicated. They endure change, hardship, and adversity. And family relationships are ever changing. They shift with the diversity of family systems, they blend blood, legal ties, and social connections, and they move with the experiences of the individuals embedded in the family unit. In the midst of all that family is communication, functioning as the creator, the designer, the mediator. Without communication, the family unit would have no identity. This course centers on family communication as the means through which family identity is constructed. Family communication is the way in which families (re)define themselves, how they make sense of their experiences, and the way they adapt to changing circumstances. The course focuses on family communication as a vibrant and cross-disciplinary field, one that is dedicated to understanding the unique experiences and issues facing families. Theory and research are the foundation of the course with the goal of building

bridges between theoretical frames and praxis, identifying ways in which theory illuminates many of the challenges facing families, while exploring how research can help to resolve these problems. By the end of this course all students should be able to comfortably negotiate the tension between theory and practice.

Enforced Prerequisite at Enrollment: 3rd Semester Standing or 6 credits of CAS

CAS 406: Honors Course in Communication Arts and Sciences

3 Credits

Individual study and seminar in selected areas or issues of speech communication.

Enforced Prerequisite at Enrollment: 5th Semester standing Honors

CAS 408: Interpersonal Influence

3 Credits

Because humans live in groups, they must grapple with who is in charge and how to get along with each other. All social animals have devised various means of answering these basic questions, but humans have the added complexities associated with the use of language and argument. This course aims to show how basic problems of sociality play out in common contemporary interactions such as getting help from others, enforcing rules and obligations, providing advice, and changing opinions. It covers theories of message production and of message effects, all of which are evaluated from evolutionary, social, and cognitive meta-perspectives.

Enforced Prerequisite at Enrollment: 6 credits in CAS and 3rd semester standing

CAS 409: Democratic Deliberation

3 Credits

Explores the theory and practice of democratic deliberation in elections, town meetings, juries, legislatures, and other public institutions. CAS (PL SC) 409 Democratic Deliberation (3) Many modern democracies have made strides to become more deliberative in how they make decisions. This course looks closely at the most promising innovations in self-government while also reviewing the persistent anti-deliberative and undemocratic features of modern societies and governments. Topics covered in the course include deliberative democratic theory, political conversation, common forms of public meetings, mediated deliberation, campaigns and elections, the jury system, and deliberative democracy on larger social scales.

Enforced Prerequisite at Enrollment: PLSC 1 or PLSC 7 or CAS 101N or CAS 137H or ENGL 137H or CAS 215 or CAS 303

Cross-listed with: PLSC 409

CAS 411: Rhetorical Criticism

3 Credits

Principles of rhetorical criticism examined through analysis of selected texts and critics.

Enforced Prerequisite at Enrollment: 3rd Semester Standing or 6 credits of CAS

Bachelor of Arts: Humanities

CAS 415: Rhetoric of Film and Television

3 Credits

Rhetorical analysis of the artistic forms and cultural structures of film and television; intensive study of selected examples.

Enforced Prerequisite at Enrollment: 3rd Semester Standing or 6 credits of CAS

Bachelor of Arts: Humanities

CAS 420: Rhetorical Theory

3 Credits

Ancient, medieval, Renaissance, Enlightenment, and contemporary theories of rhetoric.

Enforced Prerequisite at Enrollment: 3rd Semester Standing or 6 credits of CAS

Bachelor of Arts: Humanities

CAS 421: Communication and Aging

3 Credits

Concentrates on the pivotal role that communication plays in the social process of aging. CAS 421 CAS 421 Communication and Aging (3) Communication and Aging is a course that concentrates on the pivotal role that communication plays in the social process of aging. An understanding of the communicative behavior of older adults can result in significant improvements in our ability not only to describe the essential components of a quality life, but to actively intervene in the various factors that help each of us adapt to the many physiological, psychological, social and economic challenges of the aging process. Topics covered in this course include: the theories of social aging; attitudes and ageism; mass media use and portrayals; work, leisure, and retirement; family relationships such as siblings, grandparent-grandchild, parent-child; friendships; health and aging; death and dying; and successful aging. This course places communication and our interactive behavior at the heart of the aging process and helps us combine the growing bodies of literature in physical, psychological and social aging as we attempt to grasp the process of life long development.

Enforced Prerequisite at Enrollment: 3rd Semester Standing or 6 credits of CAS

CAS 422: Contemporary African American Communication

3 Credits

A focused study on the continuities between African and African American culture and communication. CAS 422 / AFAM 422 Contemporary African American Communication (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. At least once a year, this multidisciplinary course is designed to serve both Speech Communication and African and African American Studies. It is concerned with the relationship between a people's culture and world view and their systems of rhetoric/communication. It also provides a focus on the continuities between African and African American culture and communication. Specifically, it offers an approach to ascertaining the salient features of African and African American communication for community development. Special emphasis is given to the development and rhetoric of the Civil Rights Movement. The course utilizes videos,

guest lectures, tapes of speeches, etc. to clarify objectives and stimulate classroom discussion. Students will be evaluated on two exams, one oral report, a final paper and class participation. Even though students need 400-level courses for their major and minor, this course is not required for Speech Communication majors. However, it does meet the Intercultural and International Competency requirement because it focuses on the communication of African Americans and how that communication has affected all Americans. The course will accommodate ten students in Speech Communication and ten students in African and African American Studies to ensure active discussion of issues.

Enforced Prerequisite at Enrollment: 3rd Semester Standing

Cross-listed with: AFAM 422

Bachelor of Arts: Humanities

United States Cultures (US)

CAS 426W: Communication Ethics

3 Credits

Ethical issues in public and private communication; role of communication in expressing and realizing individual and social values.

Enforced Prerequisite at Enrollment: 3rd Semester Standing and CAS 100 or CAS 137H or ENGL 137H or ENGL 15 or ENGL 30H

Bachelor of Arts: Humanities

Writing Across the Curriculum

CAS 438: Rhetoric of Documentary

3 Credits

Rhetorical analysis of the documentary in film, television, and other media; historical and critical analysis of functions and form.

Enforced Prerequisite at Enrollment: 3rd Semester Standing or 6 credits of CAS

CAS 450W: Group Communication Theory and Research

3 Credits

This writing-intensive course provides students with an overview of a broad range of theories and perspectives on group interaction and their implications for communication, including topics such as group formation, development, maintenance, and behavior.

Enforced Prerequisite at Enrollment: 3rd Semester Standing and (CAS 137H or ENGL 137H or ENGL 15 or CAS 100)

Bachelor of Arts: Social and Behavioral Sciences

Writing Across the Curriculum

CAS 452: Organizational Communication Theory and Research

3 Credits

CAS 452: Organizational Communication Theory and Research explores the nature and function of communication in organizations; emphasis is placed on theoretical concepts, tools, and skills for effective management of communication. The goal is to open students' minds to the importance and centrality of the communicative process within formal and informal organizations. The course explores communication theories which focus on and help explain the complex interactions that occur at numerous levels within modern organizations. The course culminates in a semester long "communication audit" of an organization to test the explanatory

power of communication theories in the working world. There is also a writing intensive version of this course, CAS 452W. Students may only receive credit for one of the versions of CAS 452.

Enforced Prerequisite at Enrollment: CAS 100 or CAS 137H or ENGL 137H or 3rd semester standing or 6 credits of CAS

CAS 452W: Organizational Communication Theory and Research

3 Credits

CAS 452W explores the nature and functions of communication in organizations; emphasis on writing and exploring concepts, tools, and skills for effective management of communication. This course is designed to further introduce students to the field of Organizational Communication. Emphasis is placed on macro-organizational variables that can systematically affect micro-communication behaviors; in other words, how could something like the hierarchy of the organization influence who someone talks with as an organizational employee. The purpose of the course is to provide students with a basic understanding of communication-relevant behaviors and activities in organizations. This includes things like leadership, teamwork, conflict management, and diversity. Additionally, this course examines various theories of and approaches to studying communication within organizations. This version of the course is writing intensive, there is also one that is not. Students may only receive credit for one: CAS 452 or CAS 452W.

Writing Across the Curriculum

CAS 453: Health Communication Theory and Research

3 Credits

Principles of communication about health across the lifespan and within health-care contexts. CAS 453 Health Communication Theory and Research (3) This is an upper division course designed to provide students with a comprehensive introduction to multiple discourses about health and health care. CAS 453 emphasizes the communication about health and health care that reaches us everyday through many and varied professional, personal, and mediated forms. Interactions with health care providers were once limited primarily to physicians and nurses. Today, careers in health care are among the most rapidly expanding job areas, and a bewildering array of technicians and technical and professional titles greets the client of formal health care. Awareness and understanding of how to assess these various roles increases the ability of students to interact competently with care providers. Family, friends, and the cultural groups that nurture our youth and sustain our adulthood interact with us about health on a regular basis as well. Awareness and understanding of the impact that interactions with these primary social network members has on interactions with health care providers increases the likelihood that both provider and client will be

better understood and better served. Every message about health and health care carries an ethical dimension in its content. The course will increase a students' critical thinking and informed decision-making skills associated with others efforts to influence them regarding their own health practices. It also frames discussion about the ethics of and ethical decision-making associated with health communication. Students will examine communication about health in many situations and contexts to illustrate how it reflects efforts to assign labels to illness and disease, and sometimes the environmental and political contributors to the situation. Students will assess whether communication about health and health care places the responsibility on individuals, institutions, society, or some combination for the particular health condition or situation. Finally, students will evaluate how communication is used to invoke personal, professional, and societal norms of conduct associated with standards of conduct that should promote health and well-being. The course is linked to the courses in interpersonal communication, organizational communication, health communication, and small group communication, as discourse about health crosses societal, cultural, and personal contexts. CAS 453 is one of the upper division courses that may be used to fulfill Major or Minor students' requirements for upper division credits.

Enforced Prerequisite at Enrollment: 3rd Semester Standing or 6 credits of CAS

CAS 455: Gender Roles in Communication

3 Credits

Explores the literature on gender research in the discipline of human communication. CAS (WMNST) 455 Gender Roles in Communication (3) (US) This 400-level course is a theory and application course which also satisfies an intercultural requirement. CAS/WMNST 455 strives to ensure that students understand female and male differences and similarities in communication patterns, perceptions of the opposite sex, and expectations and stereotypes regarding the opposite sex. Many researchers find that gender communication is 'cross cultural' i.e., that women and men come from two different cultures, and therefore misunderstanding of each others' intent and expectations may frequently occur. This course examines how distinctions in meaning and interpersonal dynamics may create these two differing cultures, and promotes understanding and possibilities for adaptation. It also investigates when and if changing communication styles is desirable, and in which settings. A goal of the course is to help students to solve puzzles toward understanding those we work with and relate to, as well as to apply their knowledge to their own lives and contexts. The course content and format reflects these goals. CAS/WMNST 455 begins with theoretical information, later applying it to situations of interest to most -- relationships, language use differences (verbal and nonverbal), media messages, and workplace issues. Lecture incorporates considerable discussion and exploration of gender issues, and most topics are followed by activities, which illustrate how theories work in real life. This course is useful for any students seeking an intercultural course. It is recommended to Communications Arts and Sciences and Women's Studies majors and minors due to emphasis on communication theory and gender issues. Business, counseling, psychology, sociology, education and any social science majors may fulfill a US requirement through 455.

Enforced Prerequisite at Enrollment: 3rd Semester Standing

Cross-listed with: WMNST 455

United States Cultures (US)

CAS 460: Introduction to Honors Thesis

3 Credits

This course will guide students through steps that result in Honors Thesis Proposal.

Enforced Prerequisite at Enrollment: Student must be in good standing in Schreyer Honors College. CAS 201 or CAS 202 or CAS 204 Honors

CAS 470: Nonverbal Communication

3 Credits

Examining ways nonverbal messages, such as gestures, posture, vocal intonation, and facial expressions, affect us on a daily basis.

Enforced Prerequisite at Enrollment: 3rd Semester Standing or 6 credits of CAS

CAS 471: Intercultural Communication Theory and Research

3 Credits

CAS 471 Intercultural Communication Theory and Research (3)(US;IL)
This upper division course provides a comprehensive overview of intercultural communication theories and research. Students will apply theories to analyze and solve problems that affect intra-group and intercultural communication within and across national boundaries. Course includes a variety of activities, including interactions that cross cultural, linguistic, or national boundaries.issues of humanity, tolerance, values, and communication.

Enforced Prerequisite at Enrollment: 5th Semester standing

CAS 475: Studies in Public Address

3 Credits

History and criticism of public discourse; intensive analysis of selected public addresses and social movements.

Enforced Prerequisite at Enrollment: 3rd Semester Standing or 6 credits of CAS
Bachelor of Arts: Humanities
Bachelor of Arts: Social and Behavioral Sciences

CAS 478: Contemporary U.S. Political Rhetoric

3 Credits

In this course students will learn how to analyze selected discourses and movements in recent U.S. political history and to compose and deliver their own discourses—written, spoken, and mediated by digital information technologies. The discourses students will learn to analyze include speeches, debates, news stories, commentaries and other written arguments; audio, visual, and video messages; and persuasive campaigns. This course provides students the opportunity to study contemporary U.S. political rhetoric in order to contribute to improving its quality. Using rhetoric's analytic and productive capacities, students will read, listen to, and view examples of public discourse on vital issues of the day. Informed by the diverse, millennia-long history of rhetorical theory in general and argumentation and public memory studies in

particular, this course offers variously mediated texts as points of departure to enable students to learn and deliberate together about the causes and consequences of and the possible remedies for the state of U.S. political rhetoric in the past, present, and future. This course thus serves as one kind of culmination of undergraduate rhetorical study, equipping students with the skills, habits, and practices they need to be informed and capable citizens of a democratic republic. Further, the course enables students to synthesize what they have studied in various disciplines across their undergraduate education because the course focuses on public problems and public memory. While different sections of the course will focus on different public problems and political issues, the rhetorical theory and criticism core of the course will remain consistent across sections. Over the course of the semester students will learn through practice how to compose and deliver factually correct and rhetorically credible discourses for different audiences. Students will learn through practice how to analyze and produce rhetorically sound arguments. Students will learn the histories of social and political movements in the United States as those histories pertain to contemporary political discourses and controversies.

Enforced Prerequisite at Enrollment: 3rd Semester Standing or 6 credits of CAS

United States Cultures (US)

General Education: Humanities (GH)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

CAS 483: Communication and Information Technology II

3 Credits

Theory and application of interactive internet-based communication and information management; for students who want a Liberal Arts approach.

Enforced Prerequisite at Enrollment: 3rd Semester Standing or 6 credits of CAS

CAS 490: Peer Tutoring for Public Speaking

3 Credits

This course will prepare students to become peer tutors in public speaking. CAS 490 Peer Tutoring for Public Speaking (3) This course will prepare undergraduates for work as peer tutors in the area of public speaking. Students will begin by considering peer tutoring as an opportunity for civic engagement, and public speaking as integral to the democratic process. Students will review and practice elements of the speaking process both to become excellent speakers themselves and also highly competent tutors for their peers across the university's curriculum. In addition to instruction on elements of public speaking, students will study and practice the art of critique. This course will include in-class instruction, discussion, and activities, as well as a practicum in which students will participate in reviews of peers' work at all stages of the speaking process.

Enforced Prerequisite at Enrollment: CAS 100A or CAS 137H or ENGL 137H or CAS 138T or ENGL 138T or approved higher level speaking course

CAS 493: Undergraduate Teaching Assistantship

1-3 Credits/Maximum of 6

As a Teaching Assistant, you'll activate your learning in a way that will reinforce and enrich your understanding of course material. In addition to this intellectual benefit, working as a Teaching Assistant is great professional experience that enhances other skill sets including: organization, time management, planning and executing effective meetings, and, of course, effective communication. Finally, teaching assistantships are great ways to cultivate strong relationships with faculty and graduate students who may become mentors and personal and professional resources. Specific duties of undergraduate teaching assistants might include leading discussions, holding office hours, doing research or creating materials for the instructor, and performing tasks related to the course (e.g., taking attendance or keeping records). Grading of exams and assignments is not an appropriate task for undergraduate TAs.

CAS 494: Research Topics

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor

CAS 494H: Research Topics

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor
Honors

CAS 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor

CAS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CAS 496H: Introduction to Thesis Research

1-3 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

CAS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CAS 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CAS 499: Foreign Studies

1-9 Credits/Maximum of 9

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Communication Sciences and Disorders (CSD)

CSD 100: Preventing Vocal Abuse, Misuse, and Disorders

3 Credits

Preventing Vocal Abuse, Misuse, and Disorders is a 3 credit course intended to be the first course for all University students exploring communication sciences and disorders as a possible major, and students interested in learning specifically about vocal hygiene, voice use, vocal abuse and voice disorders. Principles of the voice mechanisms, preventing vocal abuse, and promoting vocal health across the life span are core principles of the course. The focus of this course is on preventing voice disorders and promoting activities that contribute to healthy vocal habits across the life span. The course is designed to integrate theoretical knowledge, practice-based, and measurement-focused activities to assist learners in understanding, achieving, maintaining, and promoting a lifetime of healthy vocal activities. Learning activities include use of specialized computer instrumentation for analyzing voice qualities. The educational objectives of the course are to: 1) develop a basic understanding of the normal and disordered vocal mechanism; 2) understand the need for maintaining and promoting lifetime wellness in your vocal activities and habits for any occupational choice; 3) learn about the prevention of vocal disorders across the life span from vocal nodules to laryngeal cancer; 4) understand the subjective and objective measures of vocal qualities to assist in changing and altering vocal abuses and misuses while improving and enhancing good vocal habits, and 5) developing an understanding of how vocal behaviors influence social behaviors, employment, and quality of life. The course includes an overview of the anatomy and physiology of the respiratory and vocal mechanisms, physics of voice production, development of vocal abuses and resulting pathologies, disorders including vocal growths, paralysis, voice disorders associated with cleft lip and cleft palate, syndromes, neurodegenerative disorders, aging and head and neck cancer.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

CSD 146: Introduction to Communication Sciences and Disorders

3 Credits

Classification of speech, language, and hearing disorders, diagnostic and treatment procedures; skills and responsibilities of the speech-language pathologist and audiologist. CSD 146 CSD 146 Introduction to Communication Disorders (3) (US;IL) CSD 146, Introduction to Communication Sciences and Disorders (INTRO TO CSD), is a 3-credit course typically offered every semester. The course is intended as the first course for Communications Sciences and Disorders majors or for students exploring Communications Sciences and Disorders as a possible major. For Communications Sciences and Disorders majors, CSD 146 is a required course, requiring a grade of "C" or better, and should be taken during the first or second year (semester standing 1-4) since CSD 146 is a prerequisite for CSD 230, 245, 395W, 442, 444, 451, and 459W. The educational objectives of the course are to introduce students to speech, language, and hearing disorders and the professions of speech/language pathology and audiology. This is done by providing an overview of the normal aspects of speech, language, and hearing followed by an overview of speech, language, and hearing disorders with emphasis on assessment and intervention strategies. The course includes an overview of the anatomy and physiology of the speech and hearing mechanisms, physics of sound, and linguistic and psycholinguistic development. Students are required to complete several observations of speech, language, or hearing therapy or assessment in the Penn State Speech and Hearing Clinic and readings from a required text and Internet sites. Students are evaluated by three to four tests and their clinical observation reports.

International Cultures (IL)

United States Cultures (US)

CSD 218: American Sign Language I

3 Credits

In this course, students will develop their knowledge and awareness of American Sign Language (ASL). Students will learn and develop comprehension and production abilities in ASL. Emphasis will be on recognition and demonstration of basic grammatical features of ASL with focus on development of fluency and accuracy. The primary components of this course will be to introduce and practice what students are learning in this language class including, vocabulary development, grammatical features, conversation and communication skills, and cultural awareness. When possible, classroom instruction will be augmented with guest speakers and videos. Class attendance and outside practice with other people who know or are studying ASL are essential in this course.

Bachelor of Arts: World Language (All)

CSD 230: Introduction to Audiology

3 Credits

Basic measurement procedures, evaluation, and screening of hearing loss using pure-tone and speech audiometry, immittance, and physiological measurements. CSD 230 CSD 230 Introduction to Audiology (3) CSD 230, Introduction to Audiology (INTRO TO AUDIOLOGY), is a 3-credit course typically offered during Fall semester. The course is prerequisite by Communications Sciences and Disorders 146, required for Communications Sciences and Disorders majors, and should be taken during the second or third year. The course can also be taken by students

exploring CSD as a major. The intent of this course is to provide students with a basic understanding of hearing measurement procedures, screening for hearing loss, and the educational, social, and vocational problems of hearing impaired individuals across the age span. The educational objectives are that students will acquire an understanding of: 1) acoustics as related to hearing testing, 2) anatomy and physiology of the auditory system, 3) common disorders of the auditory system, 4) the basic principles of measuring hearing sensitivity, speech understanding ability, and middle ear function, 5) screening for hearing loss, and 6) the educational, social, and vocational problems caused by a hearing loss across the life span. Students meet the educational objectives by attending and participating in class discussions, completing assigned readings, participating in workshops, observing hearing testing, and completing several examinations.

CSD 240: Supporting Communication Through The Performing Arts

3 Credits

This course will allow students to acquire skills, knowledge, and experiences about the ways in which performance activities such as improvisation, vocal performance, and dance can promote valued communication and developmental outcomes for individuals with and without developmental and intellectual disabilities. The course is explicitly designed to include students from the Lifelink PSU program who have intellectual disabilities, who learn with and alongside enrolled students. This structure directly emphasizes the interconnections between students with and without disabilities, as well as between the knowledge bases and theoretical approaches brought by specialists in the performing arts and in diverse areas of disability services. The course will emphasize the pluralistic nature of knowledge in the social and behavioral sciences by incorporating the pedagogy and knowledge of experts from the performing arts with the empirical scientific approach taken in diverse disciplines dedicated to disability services and rehabilitation, including but not limited to Communication Sciences and Disorders, Education and Special Education, Psychology, Music Therapy, and Rehabilitation. Students will collaborate to analyze both in the empirical research literature as well as in their classroom experiences with the Lifelink students the specific ways in which various performing arts offer opportunities for growth in self-expression, interpersonal understanding, and other important communication skills.

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

CSD 250: Professional Issues in Communication Sciences and Disorders

2 Credits

This course is an overview of contemporary professional issues within the field of communication sciences and disorders. Topics include choosing an appropriate graduate school, understanding the processes of credentialing Speech-Language Pathologists (SLPs) and audiologists, exposure to employment settings in the field, and current legislation and topics affecting service delivery. This course provides coursework on ethics, universal precautions, and patient confidentiality to meet the American Speech-Language-Hearing Association (ASHA) Speech-Language Pathology Assistant (SLPA) Certification requirements.

Enforced Concurrent at Enrollment: CSD 146

CSD 251: Guided Clinical Observations in Communication Sciences and Disorders

1 Credits

This course guides students through clinical observation of assessment and treatment of adult and pediatric clients with communication disorders and differences conducted by ASHA-certified speech-language pathologists and provides additional training of professional and clinical skills. The course is intended for students planning to pursue graduate study in speech-language pathology (SLP) or students who wish to explore the field in more depth (e.g., students interested in pursuing speech-language pathology assistance, audiology, or related fields). During this course, students will complete a minimum of 25 hours of guided clinical observation to meet the American Speech Language and Hearing Association (ASHA) standards required for graduate SLP training and professional certification. This course is designed to facilitate critical thinking about clinical sessions such as by identifying behavioral objectives, analyzing activities, materials, and data, and evaluating client performance and session effectiveness.

Enforced Prerequisite at Enrollment: CSD 146

CSD 269: Deaf Culture

3 Credits

Explores the economic, social, psychological, and political aspects of the deaf culture and its interaction with the majority hearing culture. CSD 269 Deafness and Society (3) (GS;US;IL) explore this community as being a distinct culture having its own rules of social interaction, values, group norms, and identity. The educational objectives are that the student will acquire an understanding of: 1) the development of the American Deaf Community, 2) factors affecting an individual's choice to affiliate with the Deaf Community, 3) history and current trends in deaf education, 4) American Sign Language (ASL) and other forms of communication used by Deaf Americans, 5) social, emotional, and psychological aspects of deafness, 6) diversity with the Deaf Community, and 7) deafness in the literature, media, and the arts.

International Cultures (IL)

United States Cultures (US)

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

CSD 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CSD 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CSD 300: Developmental Considerations in the Assessment and Treatment of Language Disorders

3 Credits

Using a developmental framework to interpret problems in child language acquisition. CSD 300 Developmental Considerations in the Assessment and Treatment of Language Disorders (3) (US;IL) CSD 300, Developmental Considerations in the Assessment and Treatment of Language Disorders (DEV OF LANG DIS), is a 3-credit course typically offered every Fall semester. For Communications Sciences and Disorders majors, CSD 300 is a required course, requiring a grade of 'C' or better, and should be taken during the second or third year (semester standing 3-6). The course is oriented toward students who intend to pursue a career in speech-language pathology and provides the foundation for higher level speech and language courses in Communications Sciences and Disorders. The overall educational objective of the course is to introduce students to child language development as the foundation for assessing and treating children with language disorders. This is done by lecture and active learning experiences so that students understand (a) several theories and information concerning the relations between normal and abnormal language development in children, (b) how individual, cultural, and linguistic differences contribute to language development, (c) the relations between theories of language development and empirical research, and (d) the interaction between normal and abnormal language development in children. Students are required to complete reading assignments and participate in group activities.

Enforced Prerequisite at Enrollment: CSD 146

International Cultures (IL)

United States Cultures (US)

CSD 311: Clinical Phonetics

3 Credits

Introduction to phonetic transcription of speech emphasizing articulatory phonetics of American English, its dialects, and disordered speech; extensive transcription experiences. CSD 311 Clinical Phonetics (3) For Communications Sciences and Disorders majors, CSD 311 is a required course, requiring a grade of "C" or better, and should be taken during the second or third year (semester standing 3-6). The educational objectives of this course are to introduce students to the phonetic transcription of speech sounds using the Internal Phonetic Alphabet, provide an overview of articulatory phonetics, describe representative sounds from languages of the world with primary emphasis on American English and its dialects, and the transcription of disordered speech production. Students will be expected to read and transcribe broad and narrow phonetic symbols, become familiar with sociolinguistic factors and non-organic and organic speech disorders that affect pronunciation. In addition, students will be expected to describe the phonetic capabilities of humans including the articulatory basis of speech sounds, aspects of speech production, and speech sounds produced by the world's languages and disordered speakers. Recitation and extensive practice in transcription of live speech are integral parts of the course.

Enforced Prerequisite at Enrollment: CSD 146

CSD 318: American Sign Language II

3 Credits

In this course, the students will use their knowledge from the introductory course to further their development of comprehension and production

abilities in American Sign Language (ASL). Emphasis will be on recognition and demonstration of more sophisticated grammatical features of ASL with focus on increasing fluency and accuracy. The primary components of this course will be to practice what students are learning in this language class including vocabulary development, grammatical features, conversation and communication skills, and cultural awareness. Speech will not be permitted in the classroom; communication will be in American Sign Language. When possible, classroom instruction will be augmented with guest speakers and videos. Class attendance and outside practice with other people who know or are studying ASL are essential in this course.

Prerequisite: CSD 218

Bachelor of Arts: World Language (All)

CSD 331: Anatomy and Physiology for Speech and Hearing

3 Credits

Structure and function of the physical systems involved in speech and hearing, including respiration, phonation, articulation, perception, and neurology. CSD 331 Anatomy and Physiology for Speech and Hearing (3) For Communications Sciences and Disorders majors, CSD 331 is a required course, requiring a grade of "C" or better, and should be taken during the second or third year (semester standing 3-6). The overarching goal of this course is to provide a comprehensive foundation for understanding normal anatomy and physiology of the speech and hearing mechanisms (respiration, phonation, articulation, neurology, and perception), which is essential for evaluating and treating individuals with speech, language, or hearing disorders. Through lectures and active learning experiences, students will be expected to (a) distinguish between principles of anatomy and physiology, (b) demonstrate knowledge of terminology, concepts, and theories related to anatomy and physiology of the speech and hearing mechanism, and (c) understand how normal anatomy and physiology of the speech and hearing mechanism relates to understanding communication disorders.

Enforced Prerequisite at Enrollment: CSD 146

CSD 341: Acoustic Principles in Communication Sciences and Disorders

3 Credits

Explores the fundamental concepts of acoustics as applied to individuals with communicative disabilities; special emphasis is placed on the acoustic analysis of speech. CSD 301 CSD 301 Acoustic Principles in Communication Sciences and Disorders (3) For Communications Sciences and Disorders majors, CSD 301 is a required course, requiring a grade of "C" or better, and should be taken during the second or third year (semester standing 3-6). The educational objectives of the course are to introduce students to fundamental concepts of acoustics and to apply those concepts to individuals with communicative disabilities and to the acoustic analysis of speech. The course includes a detailed overview of the physics of sound, sound propagation, sound measurement, the generation, acoustic principles, measurement of speech sounds, and the acoustical analysis of speech for normal and disordered speakers. Students are required to have a scientific calculator capable of exponentiation, logarithms, and trigonometric functions.

Enforced Prerequisite at Enrollment: CSD 311 and CSD 331

CSD 397: Special Topics

1-3 Credits/Maximum of 3

Formal Courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CSD 418: American Sign Language III

3 Credits

In this course, the students will continue to further development of comprehension and production abilities in American Sign Language (ASL). Emphasis will be on recognition and demonstration of more sophisticated grammatical features of ASL with focus on increasing fluency and accuracy. The primary components of this course will be to practice what students are learning in this language class including vocabulary development, grammatical features, conversational and communication skills, and cultural awareness. Speech will not be permitted in the classroom; communication will be in American Sign Language. When possible, classroom instruction will be augmented with guest speakers and videos. Class attendance and outside practice with other people who know or are studying ASL are essential in this course.

Prerequisite: CSD 318

Bachelor of Arts: World Language (All)

CSD 428: American Sign Language IV

3 Credits

In this course, the students will continue to further development more advanced comprehension and production abilities in American Sign Language (ASL). Emphasis will be on recognition and demonstration of more sophisticated grammatical features of ASL with focus on increasing fluency and accuracy. The primary components of this course will be to practice what students are learning in this language class including vocabulary development, grammatical features, conversational and communication skills, and cultural awareness. Speech will not be permitted in the classroom; communication will be in American Sign Language. When possible, classroom instruction will be augmented with guest speakers and videos. Class attendance and outside practice with other people who know or are studying ASL are essential in this course.

Enforced Prerequisite at Enrollment: CSD 418

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

CSD 431: Neuroanatomical and Neurophysiological Foundations of Communication Disabilities

3 Credits

This course discusses various modes of communication, including speech perception, speech production, reading, writing, and sign language. All levels of language processing are discussed, from the morpheme level (smallest unit of meaning) to the discourse level, including prosody. The major psycholinguistic and neurolinguistic models of and the basic neuroanatomy responsible for the major aspects of linguistic communication are investigated. For all modes and levels of communication, examples from both normal and disordered language processing perspectives are included. Patterns of disordered language that result from neurological insult or neurodegeneration are discussed. To facilitate understanding, neuroanatomy, brain mapping methods, and the aphasias are the first topics of discussion.

Enforced Prerequisite at Enrollment: CSD 331

CSD 432: Introduction to Deglutition

3 Credits

This course will provide the CSD major with foundational knowledge on the anatomy, physiology, and neurology of the typical, healthy swallowing process (deglutition). This is an elective course for CSD majors and should be taken during the third or fourth year of the major. The overarching goal of this course is to provide the student with a comprehensive foundation on the swallow and to better prepare the student for their graduate course in dysphagia. Through lectures and experiential learning, students will be expected to: (a) understand the anatomy, physiology, and neurology of the typical swallow; (b) understand the different stages of the typical swallow; (c) understand various methods of clinical and instrumental evaluation techniques used to assess the swallow; (d) understand the importance of the ability to swallow on a person's overall quality of life; and (e) understand the legal issues surrounding a person's ability to swallow.

Enforced Prerequisite at Enrollment: CSD 146 and CSD 331 or one of the following BIO courses: BIOL 155 or 161 or BIOL 163 or BISC 2 or BISC 4 or undergraduate standing in the CSD program and/or consent of department.

CSD 433: Aural Rehabilitation

3 Credits

Methods for improving receptive skills of persons with hearing impairments; clinical observation and practice. CSD 433 Aural Rehabilitation (3) Students will gain a basic understanding of the principles of aural rehabilitation for hearing impaired (HI) and deaf infants, children, and adults. Specifically, students will gain an understanding of: 1) hearing loss and hearing handicap in relation to speech understanding and communication, 2) the principles of amplification systems and assistive listening and alerting devices, 3) assessment of communication and communication strategies, 4) auditory training, 5) speech reading, 6) aural rehabilitation for adults, and 7) aural rehabilitation for infants/children. In addition, students will also acquire knowledge concerning the roles and work-sites of professionals working with HI and deaf individuals, and the impact of hearing loss and deafness on the individual, family, and society.

Enforced Prerequisite at Enrollment: CSD 146 and CSD 230

CSD 433H: Aural Rehabilitation

3 Credits

Methods for improving receptive skills of persons with hearing impairments; clinical observation and practice.

Honors

CSD 442: Introduction to Disorders of Articulation and Phonology

3 Credits

This course is required for Communications Sciences and Disorders majors and should be taken during the third or fourth year. The intent of this course is to provide students with a basic understanding of the etiology, diagnosis, and treatment of children having articulatory and phonological disorders. The course is designed to facilitate critical thinking through problem solving. The educational objectives are

that students will acquire an understanding of: 1) the theoretical and practical bases of language and dialectal variations, 2) normal and abnormal articulatory and phonological acquisition, 3) factors related to phonological disorders, 4) assessment procedures and analysis and interpretation of assessment results, and 5) remediation concepts, principles, and methodologies.

Enforced Prerequisite at Enrollment: CSD 311 and CSD 331

CSD 444: Introduction to Organic Disorders of Speech and Language

3 Credits

The profession of speech-language pathology and audiology deals with varied disorders of communication and swallowing. Many clients demonstrate communication challenges due to acquired disorders such as stroke, traumatic brain injury, dementia, laryngeal cancer, stuttering and various voice disorders. This course will introduce basic concepts and pathophysiology of selected organic disorders and the role of the speech-language pathologist in treating organic disorders in adults. Students will gain basic knowledge in the pathophysiology, assessment, and treatment related to a variety of acquired disorders in field of Communication Sciences and Disorders.

Enforced Prerequisite at Enrollment: CSD 300 and CSD 331

CSD 451: An Introduction to Augmentative and Alternative Communication

3 Credits

Examination of assessment and intervention issues in augmentative and alternative communication techniques with persons with severe communication disorders. The course is required for Communications Sciences and Disorders majors, and should be taken during the third or fourth year. The intent of this course is to examine assessment and intervention issues in augmentative and alternative communication (AAC) techniques for persons having severe communication disorders. Students will be expected to spend outside of class time becoming familiar with common AAC devices located in the department's AAC laboratory. The educational objectives are that students will acquire an understanding of: 1) persons with severe communication disorders who may require AAC, 2) terminology and principles of AAC applications, 3) types and evaluation of existing AAC systems and emerging technology, 4) assessment issues for children and adults concerning the use of AAC devices, 5) intervention, learning, and therapy issues for children and adults who use AAC, 6) research in AAC, and 7) theoretical issues. Although the course will focus on non-electronic AAC applications, students will be expected to spend time in or outside of class becoming familiar with common electronic AAC devices located in the department's AAC laboratory.

Enforced Prerequisite at Enrollment: CSD 300

CSD 459W: Principles of Clinical Management in Communication Disorders

3 Credits

CSD 459, Principles of Clinical Management in Communication Disorders (PRIN CLIN MGMT), is a 3-credit writing-intensive course required for Communications Sciences and Disorders majors, and should be taken during the final year of their undergraduate curriculum. The intent of this course is to closely review the principles and practices for assessing and treating people across the life span who have a communication

disorder as well as reviewing, interviewing, counseling, and report writing skills. Overall, this "how-to" course is designed to provide students with practical solutions and methods when serving persons with communication disorders. The educational objectives are that students will acquire an understanding of: 1) report writing with emphasis on different styles and the need for clear documentation and explanations, 2) assessment with emphasis on interviewing skills, preparation and test administration, interpretation of the results, and oral and written presentation, 3) therapy practices with emphasis on task analysis, behavioral objectives, and implementation, 4) documentation with emphasis on lesson plans, mid and final reports, documentation specific to school versus medical settings, and billing, and 5) client and family counseling and group sessions.

Enforced Prerequisite at Enrollment: CSD 300 and (CSD 431 or CSD 442 or CSD 444 or CSD 462 or CSD 451)
Writing Across the Curriculum

CSD 462: Clinical Bases of Language Disorders

3 Credits/Maximum of 3

The course is required for Communications Sciences and Disorders majors. The course is designed to be an overview of language disorders with emphasis given to child language disorders. Specifically, the course provides information with a wide range of language disorders that affect individuals having different disabilities such as autism spectrum disorder, deaf and hard of hearing, intellectual disability, cerebral palsy, specific language impairment, learning disabilities, and traumatic brain injury. Through lecture, active learning experiences, and out-of-class assignments, students will learn to differentiate communication characteristics and associated problems for specific populations and become familiar with basic assessment and intervention principles. In addition, students will gain information of associated educational and medical problems common to individuals with language disorders.

Enforced Prerequisite at Enrollment: CSD 300
International Cultures (IL)
United States Cultures (US)

CSD 494: Undergraduate Research

1-6 Credits/Maximum of 6

Undergraduate research experience under the supervision of a faculty member.

CSD 494H: Senior Honors Thesis

1-6 Credits/Maximum of 6

Independent study related to a student's interests directed by a faculty supervisor and culminating in the production of a thesis.

Prerequisite: Approval of honors thesis advisor.
Honors

CSD 495A: Speech Therapy Practicum

1-6 Credits/Maximum of 6

CSD 495A, Speech Therapy Practicum (SPCH THPY PRACT), is a variable credit (1-6 credit) course offered every semester. The course is not required for Communications Sciences and Disorders majors. Fourth year Communications Sciences and Disorders students having a GPA of 3.0 can apply to take this course by contacting the Penn

State Speech and Hearing Clinic, Coordinator of Clinical Services; however, Communications Sciences and Disorders graduate students are given priority. Typically, undergraduate students enroll in this course for 1-2 credits. Students enrolled in this course are student clinicians and provide assessment and treatment to clients of the Penn State Speech and Hearing Clinic. Students are highly supervised by Communications Sciences and Disorders clinical faculty and may be paired with Communications Sciences and Disorders graduate students. Students must adhere to all of the policies and procedures stated in the Penn State Speech and Hearing Clinical Policy Manual. Students are evaluated using outcome-based competency measures that includes oral and written reports skills.

Enforced Prerequisite at Enrollment CSD 442

CSD 495B: Audiology Practicum

1-5 Credits/Maximum of 5

CSD 495B, Audiology Practicum (AUDIOLOGY PRACT), is a variable credit (1-5 credit) course offered every semester. The course is not required for Communications Sciences and Disorders majors. Fourth year Communications Sciences and Disorders students having a GPA of 3.0 and an interest in Audiology can apply to take this course by contacting the Penn State Speech and Hearing Clinic, Coordinator of Audiological Services; however, Communications Sciences and Disorders graduate students are given priority. Typically, under-graduate students enroll in this course for 1-2 credits. Students enrolled in this course are student clinicians and provide hearing assessment and treatment to clients of the Penn State Speech and Hearing Clinic. Students are highly supervised by Communications Sciences and Disorders clinical faculty and may be paired with Communications Sciences and Disorders graduate students. Students must adhere to all of the policies and procedures stated in the Penn State Audiology Clinic Policy Manual. Students are evaluated using outcome-based competency measures that includes oral and written reports skills.

Enforced Prerequisite at Enrollment CSD 433

CSD 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CSD 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CSD 497A: Neuro Foundation

3 Credits

This course will introduce students to the underlying neuroanatomy and neurophysiology of communication and social disabilities focus will be on the role of the nervous system plays in communication (e.g., speaking, listening, writing). This course will prepare CSD majors for higher level course, dealing with assessment and treatment of individuals who suffer from, neurological insult, injury, lesions, as well as congenital and degenerative, disorders. ,

CSD 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Communications (COMM)

COMM 1: Newspaper Practicum

1-3 Credits/Maximum of 8

A newspaper/print media practicum. Credits do not fulfill Communication major credits in all programs.

COMM 2: Newspaper Editorial Staff

1-3 Credits/Maximum of 8

A newspaper/print media practicum. Credits do not fulfill Communication major credits in all programs.

Enforced Prerequisite at Enrollment: COMM 1

COMM 3: Radio Practicum

1-3 Credits/Maximum of 8

A broadcast media practicum. Credits do not fulfill Communication major credits in all programs.

COMM 4: Television Practicum

1-3 Credits/Maximum of 8

A broadcast media practicum designed to provide students experience with TV and video production in a variety of contexts.

COMM 20N: Critical Media Literacy

3 Credits

We live in a world in which we are surrounded with media messages that influence how we think and act. Since we are so immersed in media culture, it is important that we know how to analyze media content, production and reception, so that media can become tools for liberation and creativity, not control. In this course, we will learn to critically analyze work produced in different forms of mass communication. The course focuses on power, ideology and social inequality, analyzing relationships between media producers and audiences, and between information, the politics of representation, and power, including a focus on the crucial areas of gender, sexuality, class, and race. The course takes a dialectical perspective that focuses on both theory and practice, providing students with the opportunity and knowledge necessary to produce their own short film using the resources of Penn State's media commons.

COMM 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

COMM 99: Foreign Studies

1-6 Credits/Maximum of 6

Courses offered in foreign countries by individual or group instruction. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

COMM 100N: The Mass Media and Society

3 Credits

Mass communications in the United States: organization, role, content, and effects of newspapers, magazines, television, radio, books, and films. The Mass Media and Society is an overview of the interaction between mass media and society. By drawing from selected topics, the course pays particular attention to the social influences (e.g., economics, politics, technology, law and culture) that shape media messages. Among others, the course examines the nature of media controllers as well as the character of users and consumers of media products. By so doing, students are informed about the overall structure and scope of the mass media and led to understand the power and influences associated with media messages and practices. By the end of the semester, each student should have a better understanding of the dynamic nature of the mass media in an information society.

COMM 101N: Understanding and Enhancing Creativity

3 Credits

Creative work challenges the existing ways of seeing and understanding the world and is at the heart of many disciplines. This course will be an integrated general education course (GA-GS) that encourages students to approach Creativity through the concepts, principles, and the methods of scientific inquiry. This course will begin with an overview of the various approaches and theoretical views of Creativity. This will be followed by a module applying these to analyze the role of creativity in several global and cross-cultural works in the fields of art (paintings, sculptures), writing (prose, poetry, comics), mass media (movies, recorded music, magazines), strategic communications (advertisements, public relations, digital/internet marketing) science, and organizations. Students will develop an understanding and appreciation of the comprehensive role of creativity in the creative works, literature, and history of arts. In the third module, students will be introduced to techniques and strategies for creativity enhancement. During this module, students will learn of empirical investigations of how creativity enhancement has been studied

and apply those techniques to their own work. The course will conclude with students producing their own creative work. Over the journey of this course, students will be sensitized and introduced to the science of creativity. Students will develop a better understanding of what is creative and what is not. Students will learn to think in an integrative way across disciplines, improve their critical thinking and analytical skills, while creating their own creative work.

COMM 110: Media and Democracy

3 Credits

COMM 110 Media and Democracy (3) (GH) (BA) This course meets the Bachelor of Arts degree requirements. COMM 110 seeks to introduce students to the important role of the mass media in developing conceptions of democracy and democratic participation in contemporary societies. Utilizing current events, popular culture and the students' own relationship to media as the template, this course is designed to stimulate student thinking about the interrelationship between the dynamics of US culture, news, politics, and civil society in order to develop a greater understanding and appreciation of what civic engagement and global awareness can do towards nurturing democracy's principles and practices.

COMM 118: Introduction to Media Effects

3 Credits

COMM 118 Introduction to Media Effects (3) (GS) Aside from working and sleeping, individuals in the United States spend more time consuming media than any other single activity. By the time the average person reaches the age of 65, he or she will have spent over six full years of life watching television - not to mention the additional time spent reading newspapers and magazines, listening to the radio, using the Internet, and playing videogames. Given the centrality of media in the lives of most people, it is imperative that we understand and critically explore the variety of ways in which we perceived and are influenced by media messages. The purpose of this course is to introduce students to the study of the effects of media on individuals and on society. This course will overview a broad range of media theories that have examined media as a social force, that have explored factors that affect individuals' selection of and perceptions of media messages, and that have studied how media affect viewers' attitudes, beliefs, and behaviors. These theories will be used to examine a variety of different types of content, including media violence, portrayals of race and gender, politics, advertising, and entertainment, among others. Students will be assessed by exams on these theories and topics, by group-based writing assignments, and by an assignment requiring students to locate, identify, and critically evaluate media content that illustrates the theories and issues covered in class.

GenEd Learning Objective: Key Literacies

COMM 150N: The Art of the Cinema

3 Credits

COMM 150 (The Art of Cinema): COMM 150 is an introduction to cinema studies which aims to provide students with media literacy for a world in which communication is increasingly visual and cinematic in its form. The course assumes that films tell stories and make arguments as communicative forms by drawing on a visual language that can be learned. As such, films can be interpreted and analyzed to reveal something about the cultural conditions that produced them. The course seeks to familiarize students with examples of films that speak to both the forms that they follow and the cultural context in which they were produced. Movies, from early silent films to contemporary blockbusters, are examined as formal constructs, market commodities, and cultural artifacts that aim to represent a world for the viewer. Topics include the emergence of the cinema as a communications technology, business industry and cultural institution; the global dominance of classical Hollywood cinema; American film industry organization (production, distribution, exhibition, vertical integration, the studio system, the star system); analysis of film styles (national cinemas, historical movements); analysis of film genres (e.g., silent film melodrama, film noir, comedy, the war film, the western); consideration of film audiences (reception, spectatorship, criticism); introduction to film aesthetics (film art and appreciation); and alternative cinemas (independent, documentary and experimental cinemas). COMM 150 emphasizes media literacy and seeks to help students develop critical thinking, reading and viewing skills while providing them with a historical context for the media that they consume on a regular basis. All sections integrate lectures and readings with viewing feature films during the weekly practicum period. Many sections also incorporate slides and film or video clips during the lecture periods to allow students to exercise their critical viewing skills regarding certain teaching points. Students prepare for film screenings by reading, listening to lectures, and analyzing examples of relevant works. Introductory lectures seek to provide a critical and historical context for each week's screening; follow-up lectures offer critical analysis and examinations reward close viewing. The core purpose of the course, therefore, is to make film viewing a conscious, critical and analytic activity.

COMM 150Q: The Art of the Cinema

3 Credits

COMM 150Q The Art of the Cinema (3) (GA) This course takes a critical and historical approach to cinema, exploring relationships between classical and contemporary films and society and culture. It stresses critical thinking, analytical viewing, and essay writing (rather than memorization of facts or aesthetic evaluation of movies). COMM 150Q

assumes that the cinema reveals, both directly and indirectly, something about collective experience, identity, and culture, and that movies can be analyzed-even psychoanalyzed-to reveal something about the cultural conditions that produced them and attracted audiences to them. The course seeks both to familiarize students with works they probably haven't seen and to "defamiliarize," through critical and historical analysis, works they very well may have seen. Students will examine movies as formal constructs, market commodities, and cultural artifacts-as reflections, however distorted, of society in the twentieth and twenty-first century.

COMM 151N: Film and Extraterrestrial Life: Science Fact or Fiction?

3 Credits

The search for life beyond planet Earth has been the subject of much interdisciplinary scientific search and has stimulated human imagination. Scientific discoveries of exoplanets (outside of our solar system), of extremophiles (life which can survive in extreme conditions) and the discoveries of conditions on other bodies in our solar system which might be able to support life, has provided progress in answering the question of the existence of extraterrestrial life. Not only have a plethora of fictional work appeared in the film media to depict scenarios of life beyond Earth, but there has also been an abundance of video media created to present the scientific ideas to the wider audience beyond the scientific community. This course intends a critical evaluation of both nonfiction and fictional media works in the educational dissemination of scientific ideas and the effective presentation of concepts. We will analyze techniques in photography, mise en scene, editing, sound, dramatization and writing as they are applied to topics in astrobiology.

COMM 160: Basic News Writing Skills

1 Credits

COMM 160 Basic News Writing Skills (1) COMM 160 is a one-credit course that will provide instruction in the basic writing skills required of all journalists. The course will cover three main topics: (1) spelling and word usage, (2) grammar, and (3) punctuation. Students will be assessed by exams on each of the three course parts and a comprehensive final exam. Writing is the lynchpin of the journalism curriculum and it is essential that students possess the basic writing skills necessary to be successful in journalism classes. For that reason, COMM 160 will be a

prerequisite to all writing courses in the journalism curriculum. Students will be advised to take the course in their freshman year.

COMM 165: Build Your Media Brand

1 Credits

is course will explore and apply the concepts, tools, resources and techniques involved in building a strong digital brand as students start preparing for a career in the communications professions. Students conduct guided reflection on their strengths and goals; craft mission statements meant to inspire and focus their curricular and co-curricular activities and internships; learn how to interact professionally with members of the profession; create and use digital tools to network and display their best work; practice an "elevator pitch" to connect their experience and aspirations, learn about internship opportunities and best practices in media-related professions; and hone their interviewing skills.

COMM 168: American Journalism: Values, Traditions, and Practices

3 Credits

This course is designed to give students an overview of American journalism's traditions, principles and values. It examines the historic role of journalism in a democracy and how that is often under economic, legal and political pressure. Students learn the different forms of journalism (print, electronic, internet, and converged.) They gain an understanding of what the forms share in common and how they differ. They also learn to identify the practices of responsible, ethical journalism, and irresponsible, unethical journalism. The goal is to help students understand the nature of journalism & why it is the way it is, how it got to be that way, and what changes are likely in store & so that they can be to be sophisticated consumers of the news.

COMM 170: Introduction to the Sports Industry

3 Credits

COMM 170 Introduction to the Sports Industry (3) Since 1987 the sports industry has grown from \$50 billion to more than \$200 billion. It has become one of the ten leading industries in the United States. It is also an industry that is unlike any other in its structure and operating principles. In traditional business, the participants compete vigorously with one another for revenue and profits. By contrast, in almost every sports venture, the competitors, while competing on the field of play, must cooperate off the field in order for the venture to be profitable. Students in this course will study the unique aspects of the sports industry. They will begin to understand the workings through learning the history. Students will study the effect of the sports industry on the mass media and vice versa. The interrelationships of sports with the print, broadcast and electronic media will be considered. Students will learn how the basic principles of law, marketing, labor relations, profitability, finance and economics apply to the sports industry. The effect of legislation and regulation on the sports industry will be covered. The subject of ethics in sports will also be examined. The course will explore the formation and structure of leagues and governing agents in the sports industry. Professional, amateur, collegiate, international and Olympic sports will be included. An emphasis will be placed on current events in the sports industry. Students will be required to read and discuss the contents of

weekly editions of Sports Business Journal. They will apply the principles learned in class and through the readings to the business problems of the day as reported in the Journal. Career opportunities in the sports industry and related fields will be explored. Students will be able to begin to evaluate their interest and ability to pursue careers in this area. The course will explore the formation and structure of leagues and governing agents in the sports industry. Professional, amateur, collegiate, international and Olympic sports will be included. COMM 175N: Mental Illness and the Movies

3 Credits

This course serves as an introduction to the integration of psychology and film analysis, with a focus upon mental health. PSYCH 175N / COMM 175N seeks to help students understand the extent to which cinema can influence our perceptions of mental illness, and how the experience of mental illness can influence cinema. Students will be guided to critically analyze and discover how cinema can build or break the stigma and stereotypes regarding various types of mental illnesses and their treatments. The course is designed to familiarize students with various mental disorders (e.g., autism, schizophrenia, bipolar disorder, dissociative identity disorder, anxiety disorders, substance abuse, and dementia), aspects of their treatment (e.g., psychotherapy, medication, and ECT), and the creative ways in which filmmakers can choose to portray mental illness and its treatment (e.g., camera angles, lighting, music, costuming, casting, editing, method acting, and marketing) across cinema formats (e.g., in feature, independent, and documentary films). Students will be guided to consider how the cinema has shaped their own perceptions of mental illness, and how they could guide a filmmaker to generate a creative, compelling, and accurate portrayal of various types of mental illness and their treatments. PSYCH 175N / COMM 175N emphasizes integrative thinking, and seeks to help students develop critical reading, viewing, and thinking skills. The course incorporates lectures and assigned readings with the viewing of feature films during a weekly practicum period. Most lectures incorporate case examples and video clips to help students exercise their critical thinking skills. Introductory lectures provide a critical social and historical context for each week's film screening. Follow-up lectures and discussions offer critical and integrative analysis. Course assessment includes both objective measures and essay exams. PSYCH 175N / COMM 175N is an Interdomain General Education course that incorporates student learning criteria from both the arts (GA) and the social sciences (GS). It assumes to prior exposure to psychology or to film studies. As such, the course is designed to have broad accessibility, primarily for introductory level students.

COMM 180: Survey of Electronic Media and Telecommunications

3 Credits

COMM 180 Survey of Electronic Media and Telecommunications (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. This course is an introduction to electronic communications (telecommunications) and their consequences for society and the economy. Until a few years ago, this primarily meant over-the-air television, radio and cable TV, and a dial-up telephone. Increasingly, however, the field has expanded to include a wide variety of broadcast, wire-based and wireless forms of video, data and voice communications. The rapid convergence of previously disparate industries and services, especially the melding of television, telephone and Internet systems, will be a dominant theme in the course. At the same time, a global system of electronic communications has been steadily evolving. This class is also about the dynamics of that changing system; it is about the origins of the telecommunications system, and its future. To better understand these developments, we will examine powerful interacting forces that are shaping the world of information by drawing on history, economics, technology studies, politics, and culture. While the course is intended primarily for Telecommunications majors planning careers in these fields, all students will benefit from the course by learning to critically analyze media structures and programming and to better appreciate the importance of ICTs (Information, Communication and Technology) in their lives. This course serves both as an introductory core course for students in the Telecommunications major and as a broad social science course for students in other departments across the university. For students within the Telecommunications major, the course introduces the key terminology, concepts and issues in the field as well as the range of career options within the telecommunications industries. For students outside the major, this course provides a grounding in the current shift from an industrial society to an information society in which electronic media play a pervasive role in our personal, social, economic, and political lives.

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

COMM 190: Gaming and Interactive Media

3 Credits

COMM 190 (GAME 140) Gaming and Interactive Media (3) The course is an introduction to the digital interactive media industries for students who may consider seeking employment in that sector, which includes video games and simulations, products for education, training, medicine, business, government/military, and virtual environments for a range of applications. Students will learn about industry structures, basic economics, business models, work flow, types of enterprises, job descriptions, and opportunities. It examines both the national and global markets. It provides students with a factually and theoretically informed appreciation of these industries. The course will build on the students' personal and social experiences of these media, but it is not a course about playing or designing games or mastering individual applications. No special knowledge or experience in playing video games, using "serious games," or experiencing virtual worlds is required. It will provide students with the foundation to make a well-informed choice about careers in this sector and respond to their natural curiosity about this pervasive part of their lives. The course is divided into five segments.

The first provides general context: history, scale and scope of the field, information on industry structure, business models and operations, and types of skills required. The second focuses on the video game industry, including social, regulatory and ethical issues. Video games are now a major media industry, having surpassed in U.S. revenue both the movie and recorded music industries. The third section looks at "serious games." A "serious game" is a game designed for a primary purpose other than pure entertainment, such as education, scientific exploration, health care, emergency management, city planning, military, engineering, religion, etc. The fourth segment looks at simulations and virtual worlds and their multiple models and uses (entertainment, learning, business, research, etc.), and the development of related online communities. The final section will examine the interrelationship of these industries with the other entertainment industries in terms of planning, marketing, finance, production, etc. It will conclude with a look ahead at new technologies, markets, business models, advancements in artificial intelligence and the convergence of virtual and material worlds. The course will employ presentations, class discussions, outside readings, demonstrations, videos, class exercises, online explorations, guest experts (in person and via technology), and experiences in virtual worlds.

International Cultures (IL)

COMM 205: Gender, Diversity and the Media

3 Credits

COMM (WMNST) 205 Gender, Diversity and the Media (3) (GS;US)(BA)
 This course meets the Bachelor of Arts degree requirements. This course examines diversity, equity and inclusion issues in media content, media business and media practice. Students examine communications scholarship, theory, media effects research and critical analysis of media content, policy and practice. Students learn about the media industry, its diverse distribution formats and representation patterns and the media role as public educator and social reality framer. Students research scholarship on human diversity issues in media representation and media effects and explore economic, political and social implications of media practice. Students critically analyze media content and media

industry practice to build knowledge about ethical and responsible media practice. Course content is designed to help build deeper knowledge of how media interacts with identity formation, public knowledge and social understanding or misunderstanding of gender, race, ethnicity, ability, sexual orientation and class diversity, equity and inclusion. Students learn relevant communication theory to help explain how media interacts with our identity formation and our capability to navigate human difference in society. Students build critical thinking and media literacy skills, which are essential to navigate media and distinguish truth from fallacy. The course provides a foundation for further study of media in our diverse complex US democracy and global society and empowers students to interpret and pursue their interests, rights, and opportunities with ethics and integrity as media professionals.

COMM 208N: Visual Representations of the Middle East in the US and Middle East

3 Credits

This course is an introduction to the visual culture, the visual experience and sociological/historical context of images of the Middle East in the US mass media. The focus of the course will be on reading and interpreting visual images (painting, photography, film, illustration, digital media) and analyzing the larger social and cultural forces that shape the production, distribution and consumption of these media forms. We will explore these issues by focusing on a series of images/case studies located in a specific historical context, allowing us to introduce some of the major movements in visual culture, explore the social contexts of these images, and the ways in which the visual experience shapes our social lives and personal identities. Course evaluations will include exams, writing assignments, a class blog, and a final art project. The course examines visual representations of cultures over time, providing students with the artistic, historical, political and sociological context of their production. This integrative framework will enable students to understand how the creation of visual media and its interpretations both influence and are influenced by social context. It will introduce students to integrative thinking by providing them with interpretive techniques of the social sciences and the arts to increase their powers of visual analysis so that they can discuss an image's medium, composition, style and iconography. The course will examine the ways that the arts can be an expression of cultural values, helping students to comprehend the hegemonic aspects of image composition, production, exhibition and distribution. The course will explore the social milieus in which media is created, often depicting stereotypical images that poorly represent the complexity of the myriad cultural groups in the Middle East.

COMM 215: Basic Photography for Communications

3 Credits/Maximum of 3

An introduction to digital photography, emphasizing camera skills, aesthetics and storytelling. COMM 215 Basic Photography (3) An introduction to photography as a means of visual communication in the digital age. Students will learn basic picture-taking principles, camera techniques, photographic aesthetics, and the use of digital imaging software. Students will be encouraged to explore photography as an aesthetic, expressive, and socially significant medium. This will be achieved through individual and group critique of each student's photographs, as well as through analysis of examples of the work of prominent photographers. Students will complete a series of assignments that help them learn to produce visual content for a digitally savvy audience. At the end of the semester, students will be able to produce story-telling images as well as write captions for their photographs. They will have a knowledge of the aesthetics of photography, will understand the importance of both form and content, and will have the ability to critically evaluate photographs.

COMM 222N: Social Justice and the Image

3 Credits/Maximum of 3

How do we perceive injustice? What are the roles of images in our perceptions of justice? If justice lies in the eyes of the observer, as the saying goes, what are the eyes seeing? Creating an image does not only mean creating the strictly visual, but also words that capture the imagination. Where do those words lead us? Social Justice and the Image (GA/GH) prompts students to reflect upon image-making and the reception of images in a variety of social justice contexts, to study the public claims made upon these images, and to explore interdisciplinary texts on social justice that assist us in interpreting those claims. Students will be introduced to a variety of critical approaches to social justice, and reflect upon how these images are connected to social movements, visual rhetoric, poetic protest, and rights-building. Readings will generally be determined by the instructor, and may include the work of authors such as Confucius, Plato, Aristotle, Asho Zarathushtra, Mary Wollenstonecraft, Louis Althusser, Gordon Avery, Gloria Anzaldúa, John Rawls, Roland Barthes, Warren J. Blumenfeld, Judith Butler, Virginia Held, Patricia Hill Collins, Donna Haraway, bell hooks, and Seyla Benhabib, and Ximena Zúñiga. The subjects of study will be images, justice, and the categories ascribed to them, but also the possibility of challenging those categories. Rather than focus on how justice and images are treated by various disciplines separately, students will be asked to explain how various disciplines speak to (or perhaps ignore) one another, and what is missing from the analyses. "Interdisciplinary work," Roland Barthes wrote, "is not about confronting already constituted disciplines (none of which, in fact, is willing to let itself go) . . . Interdisciplinarity consists in creating a new object that belongs to no one." Social Justice and the Image invites students to "let go" with scholarly intensity, to explore what happens when disciplinary insights converge. ENGL 15 is recommended prior to COMM 222N

COMM 228: Introduction to Science Writing and Communication

3 Credits

Introduction to Science Writing and Science Communication (3) COMM 228 introduces students to the basics of science writing and communication. Through a combination of lecture, discussion, and writing assignments, students learn how to write science stories that are accurate, clear, and compelling. After completing COMM 228 are students will be able to: demonstrate an understanding of the importance of science communication; write interesting, clear science stories that grab the reader's attention and explain the science in terms that people with a non-scientific background can understand; gather information through the use of interviews, research documents, scientific conference papers, and events.; generate story ideas that reflect an understanding of important science stories; produce copy free of misspellings, grammatical errors, AP style errors, and factual errors; understand the legal, ethical, and historical principles underlying science communication, including the role of science in society; and communicate the latest scientific, technological, and medical findings to create an informed populace.

COMM 230W: Writing for Media

3 Credits

COMM 230 Writing for the Media (3) This course is an introduction to writing for various kinds of mass communication media. Students will practice writing public relations news releases, public information announcements, print, television and radio advertisements, as well as news stories and editorials. Students will be given weekly writing assignments, some of which will be re-writes of earlier submissions. In-class exercises will include various writing exercises designed to get students more comfortable with writing for media. Prerequisite: ENGL 015 and ENGL 202.

Enforced Prerequisite at Enrollment: ENGL 15 and ENGL 202
Writing Across the Curriculum

COMM 232: Communication Strategies for Social Justice

3 Credits

This course provides students in the Communication and Social Justice minor with an overview of how different digital media platforms are used to create and amplify public interest messages in our contemporary media ecosystem. Designed for students who are new to strategic communication, it will instruct them in how to disseminate, optimize and amplify media content designed for public media campaigns on social media. The course will be supported by research about best practices in the various strategic communication domains, focusing on strategies and analytics for using current digital tools while preparing students for new trends in strategic communication.

Recommended Preparation: This course, combined with the skills learned in COMM 270, 282 or LA 235N, will prepare students for the Communication and Social Justice capstone course for the Communication and Social Justice Minor.

COMM 234N: Digital Cultures

3 Credits

This introductory course will combine theory and practice to help students develop a rich understanding of the constantly evolving US digital culture. We will survey a variety of information and communication technologies (ICTs), and their modes of production, distribution, and consumption by individuals and institutions including traditional media, business, and government. Specifically, we will examine the impact of social and mobile technologies on how we consume, share, resist, and participate in digital culture. Students will also develop basic technical and media creation skills. The general theme of the course is analyzing contemporary cases to understand the significance of new ICTs in shaping our identities, behaviors, language, imaginations, and society. Students will read texts authored by some of the most formative thinkers examining the impact ICTs on society, and apply these core concepts in our analysis of digital cultures. Students will actively use microblogging, RSS feeds, social networking and other Web 2.0 tools to produce and consume content, interact with peers, and reflect critically on this experience. This course will emphasize awareness of current events and technology trends, as well as critical thinking skills and the ability to frame and explore issues through written, visual and verbal communication. This is an introductory course in IST and COMM, and meets the requirements for a Social and Behavioral Sciences (GS) and Humanities (GH) Course. This course is delivered with significant student and instructor interaction with computers and digital media.

COMM 241: Graphic Design for Communications

3 Credits

Introduction to basic design principles, critical analysis of visual material, and solving graphics problems utilizing traditional and digital production tools.

COMM 242: Basic Video/Filmmaking

3 Credits

COMM 242 Basic Video/Filmmaking (3) COMM 242 is an introductory course that emphasizes the development of creative expression and technical skills in digital film production. Students will explore modes of moving image representation through screenings, lectures, discussions, and especially through hands-on digital filmmaking. Students are required to construct projects that have both clear intentions and technically competent execution. The work of the course will facilitate the development of basic skills in image design, editing, and writing as they apply to single camera techniques for documentary, narrative, and experimental film modes. The course will also provide a basic cultural and historical context for the various production modes, and students will be encouraged to consider their own projects in relation to the work of other video and film artists. Creative collaboration and group critique are essential elements of the course. Students will be required to produce some collaborative projects, and to respond critically to the work of the other students in the course. Students will make projects using digital

film cameras, microphones, portable lighting, and nonlinear editing stations.

Enforced Prerequisite at Enrollment: COMM 150

COMM 250: Film History and Theory

3 Credits

This is an intermediate film studies course that teaches the student to consider various theoretical approaches to the analysis of film, and to the moving image in general. The course familiarizes the student with formal analysis as a foundation for these various approaches, which include authorship, feminism, cultural studies, realism/montage theory, genre theory, and cultural difference theory.

Enforced Prerequisite at Enrollment: COMM 150

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

COMM 251: The Nature of Media

3 Credits

A theoretical, cultural, and philosophical study of print and non-print media, including their histories, possibilities, limitations, and interrelationships. COMM 251 The Nature of Media (3) An examination of the theory, history, practice, and meaning of media. Within the framework of various media theories, students examine how print media, broadcast media, film, telephones, the Internet, and other technological forms communicate. Executives and practitioners from various media outlets visit the class to discuss what happens in the real world and what career opportunities might be available. Emphasis is placed on a final creative project which should reflect each student's understanding of the nature of media and how it creates the culture we live in.

COMM 260W: News Writing and Reporting

3 Credits

COMM 260W News Writing and Reporting (3) COMM 260W introduces students to the basics of news reporting and writing. Through a combination of lecture, discussion, and writing assignments, students learn how to write news stories that are accurate, fair, clear, and concise. The goals of COMM 260W are to produce students who can: * Demonstrate an understanding of the importance of accurate, thorough, and fair news writing * Write concise, well-organized stories with effective leads that get the reader's attention and tell the most important news * Gather information through the use of interviews, documents, and basic reference materials * Generate story ideas that reflect an understanding of the elements of newsworthiness (timeliness, prominence, proximity, conflict, novelty, and impact) * Produce copy free of misspellings, grammatical errors, AP style errors, and factual errors * Understand the legal, ethical, and historical principles underlying journalism, including the role of journalists in society * Appreciate the joy and importance of being well informed

Enforced Prerequisite at Enrollment: COMM 160 and (ENGL 15 or ENGL 30H)

Writing Across the Curriculum

COMM 261: The Literature of Journalism

3 Credits

Representative nonfiction by writers such as Susan Sheehan, George Orwell, Joan Didion, Alice Walker, Truman Capote, C. D. B. Bryan, Russell Baker. COMM 261 The Literature of Journalism (3) (GH) The Literature of Journalism introduces students to 20th century nonfiction by people who were/are considered journalists. Most of the work originally appeared in magazines or newspapers and in some cases was expanded on before being published as a book. This is not a course in literary journalism, although some of the books assigned might qualify as such. Instead, the course is designed to give students a greater appreciation for the journalistic enterprise and different styles of writing. Students will also see how different writers influenced other writers. Students will read works by Hunter Thompson, Alex Haley, Joan Didion, Truman Capote, George Orwell, and James McBride, among others.

COMM 268: Media Graphics Tools

1 Credits

Over the 10 weeks of this Technology Skills/Tools course students will build a working competency with the industry standard graphics software (such as the Adobe Creative Suite) as used in many careers in the mass media. Specifically, the course will explore how common image editing and page layout graphics programs are utilized for advertising communications as well as for journalistic applications for public relations and news communications. Students will learn an overview of graphics file formats created from the design software, as well as other basic design terminology and how and when each software program could be used appropriately in the development of mass communication messages. By the end of the 10-week course students will understand the basics of image correction (journalistic use) and photo collaging/manipulation (advertising/design use) and how to save these corrected and manipulated images. As the development of communication materials is a cumulative process, students will then learn how these images can be incorporated into end result basic page layouts along with text elements in ads, brochures, posters, web pages & editorial articles.

COMM 269: Photojournalism

3 Credits

COMM 269 Photojournalism (3) Photography as a medium for communication; creating visual content for newspapers, magazines, and online publications; digital camera and editing techniques. Students complete a series of assignments that help them learn to produce visual content for newspapers, magazines, and online publications. Major topics of the course include fundamentals of digital photography for multimedia and print, ethics, composition, caption writing, photo editing, and the use of electronic imaging software. Through individual and class projects, students critically evaluate their own work and the work of others. Students use class assignments to create a portfolio

Enforced Prerequisite at Enrollment: COMM 260W**COMM 270: Introduction to Multimedia Production**

3 Credits

Introduction to multimedia project activities to explore image editing, layout, the integration of texts and images and web architecture.

COMM 271: Principles of Journalism

3 Credits

The course introduces how journalists work with the tools of multimedia and how multimedia is changing journalism. COMM 271 Principles of Journalism (3) Journalists have never had better tools to cover the news than they do today. Every news organization can now tell stories with text, video, sound and images. Reporters can interact with their audience while covering stories in real time. Audiences have unprecedented choice in when and where they can access information. These innovations are allowing the news industry to reinvent itself. But there are major challenges. What does it take to be competitive in a 24/7 news cycle? What is the best way to work with text, video, still images and sound? How much do reporters and editors need to know about these tools? What role do social media have in this mix? Are ethical standards and being lost in the scramble to gain audience and grow revenue? This course will introduce multimedia news and be a foundation for skills courses. It will examine the latest platforms and tools of the trade, adding value with multimedia, the roots and development of multimedia, working in a cross-platform environment, multimedia reporting and editing, data visualization, intellectual property rights, ethical issues, citizen journalism, social media and the news, business models for multimedia journalism, finding a job, and other subjects.

COMM 280: Introduction to Telecommunications Technologies

3 Credits

Students will evaluate content creation and distribution methods and demonstrate proficiency across emerging digital products and services. COMM 280 Introduction to Telecommunications Technologies (3) The media, communication and information industries of the 21st century are built upon the digitization of information. Professionals and consumers alike rely on digital technology for the creation and distribution of content. The technologies used for production, distribution and consumption of this content continue to evolve at a rapid pace. The proliferation of smartphone, tablet, and wearable devices has dramatically altered the way in which consumers interact with media. This course will introduce students to the basic technologies used in the creation of various types of digital content and examine the technologies used to distribute that content across wireless and wired networks. By the end of this course, students will understand the prevalent technologies utilized within the telecommunications industry. Through extensive project work, students will also develop an appreciation for the myriad of compatibility challenges that exist in a world with rapid technology advancements and multi-industry convergence. This course is especially appropriate for students in the Telecommunications major as it will familiarize them with the technologies they will encounter during their course of study and future careers.

COMM 282: Introduction to Video Field Production

3 Credits

COMM 282 provides an introduction to the pre-production, production and post production techniques when creating video content. The course will explore the grammar and syntax of constructing and criticizing video messages in single camera productions. Students will apply shooting and editing concepts while doing a variety of projects typical of single camera shoots. Students will learn the particularities of single camera production from the textbook, the lectures, discussions and classmates' experiences. While learning the technical aspects of video production, the students will learn the managerial aspects of production. Students will practice

and apply the processes of budgeting, topic and location research, script writing, production treatments, dealing with unions, releases, etc.

COMM 283: Introduction to Multicamera Production

3 Credits

Students will learn the technical aspects of multi-camera studio television production. COMM 283 Introduction to Multicamera Production (3) Communications 283W is an advanced video course. The course builds on the principles learned in Communications 282. The purpose of this course is two fold. The first goal is to learn the technical aspects of multi-camera (studio) television production. Students will learn how to brainstorm ideas, write program proposals, treatments and scripts for various formats of television studio production. Incorporated in the technical aspects of the class, the students will learn how to produce and direct a studio production. They will also learn all the crew positions in a television studio production including audio, teleprompter, technical director, assistant director, videotape, floor manager, character generator operator and camera crew. The second goal of this course is to apply the grammar and syntax of constructing and criticizing video messages to multi-camera television productions. Students will apply shooting, producing and directing concepts while doing a variety of projects typical of multiple-camera shoots. They will learn the particularities of multi-camera television production from lectures, discussions and their own experiences.

Enforced Prerequisite at Enrollment: COMM 282 or COMM 242

COMM 290N: Cinema and Globalization

3 Credits/Maximum of 3

This course explores how films reflect (and in some cases attempt to explain, promote and memorialize) the emergence and transformation of global social phenomena. Through course readings, students will become familiar with key texts on globalization produced by social scientists and cultural theorists, and will link those key texts to a diverse array of cinematic representations of various global actors, issues, institutions and processes, as well as historical and theoretical interpretations and debates on globalization. The course introduces students to the work of internationally recognized film directors (for example, Euzhan Palcy, Jia Zhangke, Stephen Frears, Rainer Werner Fassbinder, or Majid Majidi) and studies of globalization (by scholars such as Arjun Appadurai, Guy Standing, Saskia Sassen, John Tomlinson, Robbie Robertson), and asks students to link scholarly perspectives with the visual rhetoric of cinema artists.

Enforced Prerequisite at Enrollment: ENGL 15 and COMM 150
Recommended Preparations: ENGL 202A or ENGL 202B or ENGL 202C or ENGL 202D

Cross-listed with: SOC 290N

International Cultures (IL)

General Education: Arts (GA)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

COMM 292: Introduction to Media & Politics

3 Credits

This course explores the intersection of media and politics, introducing students to the critical analysis of mediated political discourse. COMM 292 Introduction to Media & Politics (3) (GH) COMM 292 examines how mass media and political institutions interact to shape public thinking and debates around social goals, priorities, and policies. The course explores how media structures, routines, and practices shape political decision making; how political forces influence mass media institutions; and how public opinion and media audiences are formed. Students will gain an understanding of these issues through in-depth case studies, class discussions, and written assignments, helping students to develop their own informed views and to learn to express them constructively. The course is designed for both Communications majors and other students with an interest in media and politics.

COMM 294: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

COMM 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

COMM 296A: **SPECIAL TOPICS**

1-6 Credits

COMM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

COMM 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

COMM 300H: Bellisario Honors Colloquium

1 Credits

This course is designed to introduce third-year honors students to research across the communications disciplines. Discussions and guest speaker presentations will cover research from media studies, journalism, advertising, public relations, film and telecommunications. Research opportunities within the college will be explored. Students will learn about the thesis writing process and will be encouraged to select an honors advisor and choose a topic for their honors thesis during the semester.

Honors

COMM 301: Entertainment Media Industries

3 Credits

This course examines the creation of content in film and television from the genesis of an idea to the deals on the back end. It will explore the new business models that enable content creators to keep pace with newer and more mobile technologies, encompassing the various ways viewers consume media content today. The class will include discussions with industry professionals, including from the creative side (actors, writers, directors, showrunners) and the business side (network and studio executives, agents and producers).

COMM 302: Art of Comedy

3 Credits

Comedy is an art. Each and every day, we are touched by comedy, from a movie we love to a sitcom we binge-watch. With the advent of new media, we watch more comedy now than ever before. The artists of comedy are numerous and have dominated television and film from the inception of these media. Their craft is not happenstance, although great comedians may make it look that way. Comedy is crafted through writing and performance and delivered in a variety of forms: from stand-up to musical theater, from television and film to online video. The genesis of this course is the why and how of comedy. It is only by a thorough look back at the evolution of comedy can we understand comedy today. In this course, we will study some of the great comedic films and television programs to get an understanding of comedic timing, rhythm and material. We will also explore comedy writing and take a look at how television and movies are created. Lastly, we will take a look at the creation of a sitcom or film. What can sustain a show over many seasons or a film to be economically successful. Students will learn how to develop an idea into a comedy show, as well as how to pitch that idea to industry executives.

COMM 303: Entertainment Law

3 Credits

Entertainment law is an overarching term that describes the interplay between several areas of law, including contracts, intellectual property, agency, constitutional law, federal and state administrative law, labor law and negotiation. This course explores the key components that comprise entertainment law, including defamation, privacy, the right of publicity, parody and satire, violent and sexual content in media, stalking and paparazzi laws, regulation of talent and literary agents, the role of managers, copyright and trademarks, contractual obligations (step deals and production overall deals, options, permissions, clearances and releases), employment law (unions and guilds, child actors, equal opportunity) and FCC broadcast content regulations.

COMM 304: Mass Communication Research

3 Credits

COMM 304 Mass Communication Research (3) This course provides an introduction to the logic and methods of social science research as it is employed to study topics in media. Students will be introduced to key principles of social scientific reasoning, including aspects of concept explication and effective measurement, evaluation and demonstration of causality, and reliance on empirical data. Core standards of evidence are presented for both quantitative and qualitative data, but a focus is placed on statistical evidence and reasoning. Topics include effective question wording, ethical treatment of research participants, experimental

research designs, sampling and survey research, content analysis, and sound interviewing techniques. In addition, students address key ideas in statistical analysis, including principles of inference, common descriptive statistics, and widely used tests of both bivariate and multivariate relationships. Presentation of this material includes training in effective use of appropriate statistical software. Based on this training, students should be able to contribute to sound research on media-related topics in both the academic and professional environments. In addition, significant attention is paid to evaluating research done by others. Students read and assess original research and consider the merits of such research as well as its applicability to novel studies. Based on this training, students should be prepared to better understand the results presented in social scientific research, particularly within the field of media studies, and apply this knowledge to future coursework. Beyond this, students learn how to critically evaluate quantitative research when presented in media content, such as public opinion polling, and when making professional judgments about sound organizational strategies as a response to research conducted by others. At the end of this course, students should be better prepared to engage with the increasingly complex array of statistical information available to modern companies and citizens.

Enforced Prerequisite at Enrollment: COMM 100N or COMM 110 or COMM 118 or COMM 150 or COMM 180 or COMM 260W or COMM 320 or COMM 370

COMM 305: Introduction to Critical Studies of Media

3 Credits

The course will acquaint students with the key terms, concepts and research areas of critical media studies (e.g. key terms/concepts and topic areas) and prepare them more effectively for advanced material in media studies. The course will also integrate practical insights into professional opportunities for the media studies major concentrations as well as future careers in media industries and media research (including jobs for the public sector, private industry, and academia). In addition, by presenting a critical perspective on the cultural forces represented by media in a global context, students develop media literacy skills to better evaluate their own use of media and the political and social consequences of the modern media industry. The course provides an overview of a diverse set of domains in the study of media throughout the world as well as the underlying principles that drive research in these areas and the skills necessary to both understand and evaluate such research. Perspectives summarized include critical theory, cultural studies, and political economy approaches.

Enforced Prerequisite at Enrollment: COMM 100N or COMM 110 or COMM 118 or COMM 180 or COMM 205

COMM 310: Digital Media Metrics

3 Credits

Analysis of audience data for traditional and new media to create metrics for advertising, content marketing and audience analysis. COMM (IST) 310 Digital Media Metrics (3) The emergence of a converged marketplace where all media are now digital, including broadcasting, websites and social media, has created enormous new opportunities for advertising, promotions and content distribution. The proliferation of media has made the marketplace much more competitive, but simultaneously the availability of data too has increased significantly making possible the much more precise and segmented distribution of messages and content. For media practitioners in this new environment, a familiarity with audience data, metrics and dimensions is essential.

This course is an introduction to the methods for collecting, analyzing and utilizing audience data for traditional and new media. The class will cover the fundamentals of traditional media audience analysis, web metrics, and social media metrics, specifically as they relate to audience measurement, advertising campaign evaluation and content distribution. Students will learn the methods of data collection, analysis and use for traditional broadcast media, and the transformation of these practices in the newly digitized and converged multiplatform, multiscreen environment. The course will also cover the basics of data capture for new media (at an appropriate technical level), and the use of this data for the design of metrics appropriate for various purposes such as monitoring traffic, conversions and revenue generation. The use of metrics in pricing models for advertising, sales generation and content distribution will also be covered. Students will be introduced to data sources for digital media audience analysis, with a special focus on Google Analytics. Students passing this class would be able to pass the Google Analytics Individual Qualification test.

Cross-listed with: IST 310

COMM 315: Applications for Media Writing

3 Credits

Tutorial and practice in various kinds of journalistic and commercial writing, emphasizing basic skills.

Enforced Prerequisite at Enrollment: COMM 160 and (ENGL 202A or ENGL 202B or ENGL 202C or ENGL 202D)

COMM 320: Introduction to Advertising

3 Credits

Advertising management in business, including communication theory; common industry practices; basics of copy, media, and budget decision; and environmental influences. A student may not receive credit for both COMM 320 and MKTG 422. COMM 320 Introduction to Advertising (3) COMM 320 introduces students to the advertising industry and provides a foundation for understanding what advertising is and how it developed to its current state, what it tries to accomplish, how it works, and how it can affect society. The class includes numerous examples of advertising, from the 1880s to the 2010s, to illustrate the topics covered. The goal is have students think more clearly and critically about the commercial actors behind advertising, their strategic objectives, how advertising messages help achieve specific marketing goals, and the possible social impacts. This course provides the basis for all further courses students take in the advertising sequence. During the course students: learn the basic concepts and vocabulary essential to the fields of advertising and brand promotion; understand the process and effects of advertising and brand communications; are introduced to the strategic and conceptual decisions advertisers face when deciding the best way to both say and deliver a message within the public marketplace; learn the landscape of the advertising industry, including understanding how the industry works and how it is organized; understand current trends in the advertising and marketing industries, and examine their implications for both industry and society; are exposed to the history and role of professionals and institutions in shaping communications; gain an understanding of the diversity of groups in a global society in relationship to communications. Specific topics covered in the course include definitions of marketing, advertising, and integrated marketing communication (IMC). Students learn what it means to be a brand, as well as how brand equity is developed by marketers. The fundamentals of brand positioning are also explored, in the context of brand promotion

and evolution. The psychological processes that underlie persuasive commercial messages are explored. The differences between subliminal and non-conscious routes to persuasion are presented and discussed. The course also includes a review of promotional activities outside of traditional advertising, including public relations, direct marketing, personal selling and sales promotions. The role of social media and other online communications in the promotional mix are explored. The legal and ethical dimensions of commercial communication are outlined. Students are asked to think critically about the implications of marketing harmful products, selling to susceptible target audiences, using controversial appeals and the perpetuation of negative stereotypes.

Enforced Prerequisite at Enrollment: Third Semester Standing

COMM 320H: Introduction to Advertising

3 Credits

Advertising management in business, including communication theory; common industry practices; basics of copy, media, and budget decision; and environmental influences. COMM 320H Introduction to Advertising (3) COMM 320 introduces students to the advertising industry and provides a foundation for understanding what advertising is and how it developed to its current state, what it tries to accomplish, how it works, and how it can affect society. The class includes numerous examples of advertising, from the 1880s to the 2010s, to illustrate the topics covered. The goal is to have students think more clearly and critically about the commercial actors behind advertising, their strategic objectives, how advertising messages help achieve specific marketing goals, and the possible social impacts. This course provides the basis for all further courses students take in the advertising sequence. During the course students: learn the basic concepts and vocabulary essential to the fields of advertising and brand promotion; understand the process and effects of advertising and brand communications; are introduced to the strategic and conceptual decisions advertisers face when deciding the best way to both say and deliver a message within the public marketplace; learn the landscape of the advertising industry, including understanding how the industry works and how it is organized; understand current trends in the advertising and marketing industries, and examine their implications for both industry and society; are exposed to the history and role of professionals and institutions in shaping communications; gain an understanding of the diversity of groups in a global society in relationship to communications. Specific topics covered in the course include definitions of marketing, advertising, and integrated marketing communication (IMC). Students learn what it means to be a brand, as well as how brand equity is developed by marketers. The fundamentals of brand positioning are also explored, in the context of brand promotion and evolution. The psychological processes that underlie persuasive commercial messages are explored. The differences between subliminal and non-conscious routes to persuasion are presented and discussed. The course also includes a review of promotional activities outside of traditional advertising, including public relations, direct marketing, personal selling and sales promotions. The role of social media and other online communications in the promotional mix are explored. The legal and ethical dimensions of commercial communication are outlined. Students are asked to think critically about the implications of marketing harmful products, selling to susceptible target audiences, using controversial appeals and the perpetuation of negative stereotypes.

Enforced Prerequisite at Enrollment: Fourth-semester standing; A student may not receive credit for both COMM 320H and MKTG 322 Honors

COMM 325: Effects of digital games

3 Credits

The course explores the influences of digital games on players and society. It helps students make sense of the complex and conflicting evidence from social science research about both positive and negative outcomes from playing games. Topics include violent and stereotypical content, enjoyment and immersion, addiction, learning, and persuasive applications such as games for health. In particular, the class considers prominent debates about the effects of games and how to understand the actual evidence and methodological controversies behind these debates. A significant focus is on the logic of media effects research and the strengths and weaknesses of this approach. Students emerge with greater familiarity with media effects scholarship as a process as well as the specific ways it can help them media literate players of games as well as thinking about how games might be used to promote positive outcomes.

Enforced Prerequisite at Enrollment: COMM 100N or COMM 118 or COMM 190

COMM 326: Effects of social media

3 Credits

The course explores the effects of social media on individuals, organizations and society. It introduces students to social science research about both positive and negative outcomes of using social media. Topics include identity formation, self-esteem, social capital, relational maintenance, addiction, cyberbullying, enterprise social media, crisis management, political mobilization, online activism, philanthropy, online terrorist networks, effects of social media use for news, entertainment, advertising, public relations and other mass communications. Theoretical mechanisms governing the causes and consequences of social media will be explored, with a substantial discussion component. Applications to media practices and implications for design of future media will also be covered.

Enforced Prerequisite at Enrollment: COMM 100N or COMM 118

COMM 327: Effects of entertainment media

3 Credits

This course examines the central role that entertainment plays in the lives of most people in contemporary media landscapes. Today we are almost constantly tied to media entertainment through a variety of mobile devices, second screens, and streaming content. We see and listen to the world through entertainment media, and we construct, share, and post our lives on entertaining platforms. This course will examine the variety of ways that we use, experience, and are affected by entertainment, including its benefits and its harms. Topics include specific types of media content such as music, sports, and humor, as well as outcomes on our self-images, our stereotypes of others, and our feelings of connection with friends, family, and with society at large.

Enforced Prerequisite at Enrollment: COMM 100N or COMM 118

COMM 328: Effects of Science, Environmental and Health Media

3 Credits

This course provides students with a conceptual and applied overview of the effects of media representations of science, the environment, and health topics on different audiences. This course is appropriate for

students interested in media effects as well as for students interested in science-related topics who want to gain a deeper understanding as to how messages about science (broadly defined) impact individuals and society. Class readings and discussions will encourage students to draw connections between theory, research, and message effects related to science, the environment, and health. In addition to learning and applying theories of media effects to the context of messages about science, students will also learn about the history of science, environmental, and health communication efforts and develop skills to critically interpret media messages related to these topics. This is one of multiple 300-level courses in the Media Effects sequences of the Media Studies major that focus on the effects of various types or genres of media on audiences.

Enforced Prerequisite at Enrollment: COMM 118 or CAS 101N or PSYCH 100

COMM 332: Reporting

3 Credits

Practice in researching and gathering material for and preparation of news stories for print media. COMM 332 Reporting (3) The course is an introduction to the various tools and techniques of researching and gathering information, using a combination of traditional research methods and new computer-based technologies. It develops performance and critical skills focusing on concepts of news, fact checking, finding and developing sources, interviewing, writing styles, and structures of different story types. It also provides solid grounding in historical, ethical, and legal dimensions of U.S. newspaper journalism within a comparative media system context. For the duration of the course, there shall also be continuous discussion on the role of the journalist in society, where students shall examine the legal provisions and ethical considerations that govern the practice of journalism, the unwritten "social contract" between journalists and their audiences, and the nature of the relationship between journalists and those who wield political and economic power in the community.

Enforced Prerequisite at Enrollment: COMM 260W

COMM 333: Film History for Filmmakers I: The Development of the Cinema to 1960

3 Credits

Film History I describes the prehistory and history of the medium of cinema to 1960. The course explores the artistic, technical, economic development of the cinema, and the cultural contexts in which this development occurred. The course covers narrative, experimental, and documentary cinema and trains students in the techniques of close formal analysis of the cinema. The course stresses formal, thematic, and cultural analysis of the cinema throughout the first decades of its history. This course is integral to the curriculum in Film-Video. It provides Film-Video students with a detailed description of trends in their art form. It provides students with intensive study in the history of an influential medium in the development of the concept of mass media and communications.

Enforced Prerequisite at Enrollment: COMM 150 and COMM 242

COMM 335N: Media, Social Justice, and the Public Humanities

3 Credits/Maximum of 3

This course introduces students to the ideas and skills that comprise "public humanities," with a focus on digital media tools. It aims to develop student understanding of how public humanities work can address present-day problems, fostering empathy within and building bridges between persons, groups, and communities. It offers hands-on training in three forms of digital media: documentary film, podcasting, and web publishing. Through honest and respectful engagement with a diverse range of ideas, perspectives, and experiences, students will develop creative and critical thinking and problem-solving skills by locating, analyzing and applying information in project formation and production.

Cross-listed with: LA 335N

General Education: Arts (GA)

General Education: Humanities (GH)

General Education - Interdomain

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

COMM 337: Intermediate Documentary Production

3 Credits

Exploration of documentary video techniques and aesthetics through the completion of short exercises and projects. COMM 337 Intermediate Documentary Production (3) This course focuses on intermediate technical and aesthetic aspects of single-camera documentary production with an emphasis on storytelling. In producing a series of short visual exercises students will explore the conventions of the documentary form, formal concepts of the visual image – both still and motion, the principals of controlling light and sound recording, the conventions of editing, and idea development. Written work and group critique will also inform the study of non-fiction modes of visual media. Technically this course builds on the skills and knowledge obtained in the beginning production course. Students work independently and collaboratively on the production of short media projects using video and digital technologies that provide project-driven experience in the disciplines of writing, producing, directing, camera work, sound, and editing. This course introduces new technologies and production techniques in relation to non-fiction modes. Students will develop ideas for one or more documentary projects and will have the opportunity to work in a variety of production roles. The course will require a significant amount of work outside of class. Students are encouraged to participate in class discussions and contribute critical feedback on their classmates' projects.

Enforced Prerequisite at Enrollment: COMM 242 and Film-Video Major

COMM 338: Intermediate Narrative Production

3 Credits

Exploration of narrative film or video techniques and aesthetics through the completion of short exercises and projects. COMM 338 Intermediate Narrative Production (3) This course is an intermediate aesthetic and technical production course in short-form narrative production. Through screenings, discussions, readings and creative production projects, students will explore the collaborative process of narrative filmmaking and the conventions of the fiction form. This course builds on the skills

and knowledge obtained in the beginning production course. Students work independently and collaboratively on the production of short media projects using video and digital technologies that provide project-driven experience in the disciplines of writing, producing, directing, camera work, sound, and editing. The success of any narrative film depends on a focused collaborative effort by a number of individuals to tell a story. In this course, students will explore the process of producing a short narrative video using traditional production techniques. An emphasis is placed on learning the responsibilities and established practices of key production roles such as producer, director, cinematographer, sound designer and editor. Working in small groups, students will develop a short project where they will apply the processes associated with pre-production, production and post-production. Students will be building on their technical and aesthetic knowledge of digital video formats through lectures, demonstrations, outside readings and class exercises; videos will be viewed throughout the semester to demonstrate these concepts. Students will participate in class discussions and contribute critical feedback on their classmates' projects. The emphasis will be on the exploration of visual and aural expression and a fundamental mastery of the digital medium as it applies to traditional narrative production.

Enforced Prerequisite at Enrollment: COMM 242 and Film-Video major

COMM 339: Intermediate Alternative Production

3 Credits

Exploration of alternative film or video production techniques and aesthetics through the completion of short exercises and projects. COMM 339 Intermediate Alternative Production (3) COMM 339 is an intermediate level course in alternative film and video aesthetic theory and technique. The class is designed to expose students to a broad range of alternative and avant-garde filmmaking concepts, including classical and contemporary experimental practices, animation and new forms of cross disciplinary media production. The course is designed to encourage students to think about film and video production as the beginning point in an expanding journey of creative exploration. It exposes students to a diverse range of historical and contemporary alternative or experimental filmmaking practices and forms and enables them to: - Expand their creative horizons beyond preconceived and popular forms of film culture. - Develop their abilities to discover their own personal filmmaking focus and language. - Learn the skills necessary to create unique bodies of work in film and video media. - Critically assess the success of their own and their fellow students' efforts.

Enforced Prerequisite at Enrollment: COMM 242 and Film-Video major or program permission

COMM 340: Intermediate Cinematography and Editing Techniques

3 Credits

Exploration of film and video production techniques through the use of camera, lighting, audio and digital post-production equipment.

Enforced Prerequisite at Enrollment: COMM 242 and Film-Video major

COMM 342W: Idea Development and Media Writing

3 Credits

Introduction to various modalities of idea development and written expression for media production. COMM 342 Idea Development and Media Writing (3) This writing-intensive course is designed to introduce students to various modalities of idea development and

expression for audio-visual projects. Writing as an ideational, descriptive or reflexive tool is an integral element of each modality. Learning objectives encompass the development of skills in the following areas: Conceptualization, Visualization, Decision-making, Intellectual articulation and Manifestation. Emphasis will be placed on using written work as an integral part of the creative process. As a designated W course, students will gain experience in the writing of media criticism and analysis as well as learning the writing styles specific to the profession. Writing assignments will include informal writing such as exercises in intuitive and timed writing, one minute response papers and collective story telling. Formal writing assignments will include observational essays, descriptive essays or stylistic "treatments", formal narrative proposals, analytic and editorial story reports, and self-reflexive critique papers. Students will progress through a series of creative exercises that support the development of the above skills consisting of short (200-500 word) written and oral exercises, exercises in visual thinking, visual storytelling and image composition and longer (750-1500 word) written assignments in various forms (descriptive, persuasive, analytical, editorial and critical) tailored to the professional requirements of the film-video major; these include descriptive essays or stylistic "treatments" formal narrative proposals, analytic and editorial story reports, and self-reflexive critique papers. Written feedback from the instructor will be provided on a regular basis, as well as in class peer critique and story workshops. Students will be required to redraft and rewrite assignments as needed.

Enforced Prerequisite at Enrollment: COMM 242 or COMM 282
Writing Across the Curriculum

COMM 346: Writing for the Screen I

3 Credits

A beginning course in narrative Screenwriting emphasizing analysis, creativity, and critiquing skills necessary for the development of storytelling. COMM 346 Writing for the Screen I (3) The course is about the creative process of conceiving and fashioning films that wish to order experience into a meaningful and expressive narrative structure. It is designed for students who wish to delve more deeply into screenwriting and those wishing to develop a script for senior-level production. It continues to develop screenwriting and storytelling skills introduced in Introductory Film and Video Production and Media Writing, and seeks to further hone their creative skills as writer-filmmakers. A large part of classroom sessions will be conducted in a traditional writers workshop structure, focusing on the presentation, discussion, and critiquing of written work; other sessions will concentrate on the analysis and critiquing of professional screenplays, with particular emphasis on close-reading of individual scenes, and study of screenwriters writing about the process. Scripts produced will be limited to short-form work, target length being no more than 15 pages maximum. Such a length combines both the virtues of disciplined, sharply-focused perceptions with a length sufficient for developed narrative arcs and tonal and thematic complexity. Scripts produced in this class will be appropriate for all of the advanced single semester advanced production courses and submission as part of a student's application for the two-semester advanced production for groups course. Assessment is based on the progress of creative written work throughout the semester, as well as participation within the critiquing process, both verbally in class discussions and in critical writing submitted to each other and the instructor. Each individual will be expected to: (a.) display an understanding of the various creative elements of filmic storytelling - including visual story-telling, character, dialogue, narrative structure, and theme - and how those elements create and amplify meanings in the work; (b.) thoroughly develop original and

meaningful narratives and effectively convey them cinematically; (c.) hone the specific writing and (most especially) re-writing skills needed for successful screenwriting through their application and practice; (d.) illustrate the ability to thoughtfully and constructively critique their own work as well as that of their fellow writers in the class. During the semester students will be expected to learn to write original and creative constructed pitches, treatments, and scripts.

Enforced Prerequisite at Enrollment: COMM 342W

COMM 360: Audio News Production

3 Credits

Reporting, writing, producing, and presenting radio news programs, focusing on the development of news judgment and writing skills. COMM 360 Audio News Production (3) COMM 360 provides an introduction to broadcast news writing and radio production. Students take this course after they have completed an introductory print reporting course but before they take advanced courses that focus on television news production. This course is designed to introduce students to the general principles of broadcast writing used in both the radio and television mediums. As a prerequisite for 400-level courses, COMM 360 is offered on a regular basis to allow students to complete curricular requirements in a timely manner. Students learn the techniques needed to report, write and produce radio news. During the semester, students report on news and learn to produce, anchor and engineer a newscast. Learning objectives for COMM 360 are that students: * demonstrate an understanding of professional ethical principles in news reporting and apply those principles in newsgathering; * demonstrate basic proficiency in the tools used to report and produce broadcast-quality radio news; * demonstrate the ability to write news for a broadcast format; * demonstrate the ability to produce quality work on deadline; * apply an understanding of news values in the creation of a newscast; and * demonstrate the ability to supervise other students in a working newsroom. Students work together in a broadcast facility to produce a radio newscast. They are evaluated throughout the semester on their ability to integrate skills and concepts they learn into their broadcast stories. Upon successful completion of the course, students will have learned the theories and skills at the core of their broadcasting profession.

Enforced Prerequisite at Enrollment: COMM 260W

COMM 361: Entrepreneurial Journalism

3 Credits

This course provides an overview of entrepreneurship and innovation in journalism and teaches students how to recognize and act on opportunities to innovate and launch journalism-related enterprises. Active learning pedagogies are emphasized to support student learning and skill development. First students learn trends, concepts, theories and/or current best practices and then apply them in assignments and major projects. Topics may include innovation in the news business, entrepreneurship, intrapreneurship and self-employment/freelancing in media, disruption caused by technology, globalization, competition and changes in customer/user news habits, opportunity recognition and idea assessment, customer discovery, value proposition design, lean methods, rapid prototyping, due diligence, analyzing/researching markets and competition, negotiation skills, pitching ideas to investors, financing and marketing for start-ups, and digital branding. Students apply what they learned in projects that could include developing and assessing their own news enterprise idea with a completed business plan or lean canvas,

conducting primary market research, designing and implementing a digital brand, practicing negotiation techniques and pitching their idea to potential investors and/or customers.

Enforced Prerequisite at Enrollment: MGMT 215 or ENGR 310 or COMM 271

COMM 362: Podcasting

3 Credits

In this introduction to podcasting, students will explore one of the 21st century's fastest-growing digital journalism platforms. They will learn the skill of audio storytelling by creating, editing and publishing audio projects that include scripted stories and unscripted interview and discussion programs. Students will also examine podcasting's revenue-generating models as well as the ethical challenges of advertising, sponsorship and branding. By the end of the course, students should be able to launch audio podcasts for organizations, such as news sites, or for their own personal use. Beyond getting a broad understanding of podcasting, students will learn important entry-level journalism skills to do podcasts – using microphones, audio recorders and non-linear audio editing software.

Enforced Prerequisite at Enrollment: COMM 260W

COMM 364: Data Visualization for Journalists

3 Credits

In this course, students will learn to recognize and appreciate data-driven stories. They will produce stories from data by demonstrating proficiency in sorting, filtering and using simple functions of Excel. Students will use the U.S. Census website to find and download demographic data, file a federal Freedom of Information Act or state right-to-know request and use tools such as Structured Query Language, Chartbuilder, Tableau and Carto to query databases as well as build charts and maps. Students will also learn how data and visualizations, including graphics and maps, have become integral parts of story-telling in all journalism platforms – print/digital, broadcast and multimedia.

Enforced Prerequisite at Enrollment: COMM 260W

COMM 365: Social Media Communication and Strategy

3 Credits

As social media are profoundly transforming human communication, this course aims to help students develop in-depth knowledge of social media communication. With these soft skills, students are better equipped in assessing and analyzing information flows on social media platforms. More importantly, they will design and improve social media action plans for news media organizations and other institutes. This course aims to study the mechanism of social media communication. Specifically, it focuses on human communication happening on social media, not social media per se. Most of the training materials will be constantly updated to reflect the latest social media trends. All the soft skills learned in this course are directly relevant to communication professions, such as news media, advertising, public relations, and marketing.

COMM 370: Public Relations

3 Credits

Public understanding of organizations and institutions; identification and analysis of public; media relations; public relations practice.

COMM 370 Public Relations (3) This is the introductory course in public relations. It is a survey course that will provide students with a foundation for understanding the role and function of public relations and public opinion in American society, business and industry. The course defines the role of public relations, its societal value, and the workplace settings where public relations is practiced. Students are introduced to the interrelationships between the disciplines of public opinion and public relations and the many definitions of public relations and how they vary from organization to organization. Students learn how individuals, interest groups, organizations, corporations and politicians monitor and analyze public attitudes, opinions and issues that impact individual citizens, groups, organizations, institutions, and society. Students examine public relations from a historical perspective and study important social campaigns that have laid the groundwork for public relations in the modern era. Students are introduced to a myriad of communications theories and how they apply to different scenarios ranging from persuasion to crisis communications. The course helps students develop an understanding of the history, structure, and functions of public relations, the four-step public relations process (research, objectives, programming, and evaluation), the tools used to carry out public relations, ethics in public relations, and legal framework adhered to by public relations practitioners. Additionally, students are taught to appreciate the value of public relations in solving problems and making policy, i.e., the importance of being involved in the decision-making body of a corporation or public relations firm. Students are also shown why individual as well as institutional credibility is critical to public relations practice.

Enforced Prerequisite at Enrollment: Third Semester Standing

COMM 372: Digital Public Relations

3 Credits

This course discusses digital strategies and techniques for public relations. COMM 372 Digital Public Relations (3) This course provides students with a conceptual and applied overview of how digital media are used in the field of public relations. Digital media combines traditional public relations content creation with social media, search and mobile, thus transforming static news into conversations and connecting directly with target audiences online. This hands-on experience will be supported by theoretical, strategic and professional best practices. A specific focus will be on current digital tools while preparing students for future growth and changes by covering trends, strategy, and analytics.

Enforced Prerequisite at Enrollment: COMM 370 or COMM 320

COMM 373: Crisis Communications in Public Relations

3 Credits

The course is designed to introduce students to organizational risk assessment and protecting an organization's reputation in times of crisis. COMM 373 Crisis Communications in Public Relations (3) All organizations, large or small, face the prospect of a crisis. At best, a crisis is a challenge; at worst, it has the potential to destroy the organization's ability to conduct business. Nearly half of Fortune 500 companies operate without a crisis communications plan in place, yet there are scores of examples of crises that should serve as a warning to businesses to prepare for the worst. This course is designed to introduce students to organizational risk assessment and how to protect the company's reputation while minimizing the. Students learn to deliver positive media interviews in order to deliver key messages to target publics. In times of crisis, public perception is reality. It is the

practitioner's job to be prepared and to act quickly and efficiently in times of crisis and be able to work with the media, not against them. It is also important that practitioners address their audiences with the right messages at the right time. Students will learn how to assemble a crisis communication team, hold a news conference to address a crisis, manage key information, and maintain effective media relations during a time of high anxiety. Students will learn the basic anatomy of a crisis in order to be able to respond with clarity and vision in the heat of a crisis. From product-tampering to oil spills, students will be able to recognize the warning signs of a crisis and identify the five stages of a crisis. In a world connected by the Internet and social media, it's likely the news media will be at the organization's doorstep before the public relations director gets there, and it places enormous pressure on corporate leadership and government leaders to make decisions quicker and respond to media queries as quickly as possible. Successful crisis management begins before a crisis occurs. It is the responsibility of crisis management specialists to see the crisis coming and move to minimize the impact or even relegate the impending crisis to a problem. It is far better to be proactive than reactive. Having a crisis management plan is important, but avoiding a crisis by identifying its weaknesses; identifying the resources the company can use before, during and after a crisis; identifying any perceived threats that can turn into a crisis, and identifying the things that company does well in a crisis can go a long way toward negating long-term negative effects of a crisis.

Enforced Prerequisite at Enrollment: COMM 260W and (COMM 370 or COMM 320)

COMM 374: Audio Production

3 Credits

Theory and practice in studio recording and broadcasting techniques, including continuity/news writing, control room operation and audio production. COMM 374 Audio Communication (3) Studio techniques for the production of audio essays, musical portraits, news, and on-air editorials and radio drama are explored through various writing and control room exercises. Students learn how to make interesting, marketable audio material suitable for both broadcast and non-broadcast markets. This course also covers the aesthetic limitations of each format and the marketing potential in the current broadcast and narrowcast markets. The cultural genesis and brief history of each medium and format provides the context for the producer, as will readings covering the ethical and legal constraints particular to each production medium.

Enforced Prerequisite at Enrollment: COMM 180 or COMM 251 or COMM 100 or permission of program

COMM 375: Ad/PR Strategy

3 Credits

Through a combination of case studies and lectures, this class will prepare students to build upon their knowledge of the planning process and to learn how to make strategic communications decisions based on diverse scenarios. Specifically, they will explore problem-solving and decision-making processes in strategic communication through the analysis of case studies and the development of strategic planning documents. A significant amount of work in this class is team-based.

Enforced Prerequisite at Enrollment: COMM 320 or COMM 370

COMM 380: Telecommunications Management

3 Credits

Introduction to basic principles of management as they apply in electronic media industries. COMM 380 Telecommunications Management (3) This course aims to introduce students to the operation and management of the broadcast, cable and telecommunications industries. It is one of three required courses for the telecommunications major of the Bellisario College of Communications, and is the entry-point into the major's management sequence. The learning objectives for the course is to provide an understanding of the management function in the media and telecommunications industries; to familiarize students with sources of information about firm and markets; to provide basic training in critically evaluating and using financial information; and to improve writing skills. An associated objective is to prepare students for successful careers in the media and telecommunications industries, by building awareness about industry events and trends, and communicating information about job designations and career paths. The class provides a broad survey of management topics and includes modules devoted to topics such as financial management, marketing and sales, and human resources. These topics are customized to accommodate the management issues specific to the media and telecommunications industries, such as program management, ratings analysis and the Federal Communications Commission's Equal Employment Opportunity (EEO) guidelines. A special module devoted to management ethics is included in the course. Topical coverage for the course includes not only the radio and television industries that have been the traditional mainstay of telecommunications careers, but also industries such as cable, wireline and mobile telephony, and the dot-com sector in which increasing numbers of telecommunications majors are finding job opportunities.

Enforced Prerequisite at Enrollment: COMM 180

COMM 381: Telecommunications Regulation

3 Credits

Overview of the regulation of electronic media.

COMM 383: Advanced Multicamera Production

3 Credits

COMM 383 uses rotating topics to teach advanced video and television production techniques. Building on the concepts and skills taught in the introductory production course, students will learn advanced techniques in production budgeting, preproduction planning, location scouting, logistics, advanced lighting and audio techniques, post-production techniques, video formats and distribution issues. Throughout the course students will learn how to produce a live remote multi-camera broadcast from the ground up. Each semester the instructor will choose an appropriate project that will serve as the focus of the course. Projects that occur outside the studio will include logistical issues such as power supply and safety and environmental considerations. Examples of projects include coverage of live sporting events, development of scripted and non-scripted programs, and exploration of alternative distribution platforms via the Internet and alternative telecommunications networks.

Enforced Prerequisite at Enrollment: COMM 283

COMM 384: Selling the New: Professional Sales Skills & Technology Innovations

3 Credits

Professional selling is the set of skills, knowledge, values and activities involved in selling a product to a customer. But it is so much more. Every business and non-profit enterprise, whether it's a new startup or big firm, expect all employees to understand or engage with users, audiences and customers. In other words, everyone - from designers and engineers to coders, production line staffers and creatives - is in sales. This is especially true for communications, information and new technology products and services. The two-fold purpose of this course is 1) understanding the sales profession with respect to innovation and 2) learning and practicing customer-focused sales and service skills, including customer relationship management (CRM). The context is the everchanging, globalized marketplace for information, communication and new technologies across industries including news/media, non-profits, health/medicine, food/agriculture, education/training, manufacturing, finance, arts, music, sports, retail, and tourism/hospitality. Topics covered include sales professionalism, the customer-focused selling process; ethics, communication and planning skills; presenting/pitching and negotiating; customer discovery in the context of design thinking; customer relationship management (CRM) systems. Class time is devoted to lectures and active learning including using a CRM system, case study discussion, simulations and roles plays of sales pitches, service and consulting.

Enforced Prerequisite at Enrollment: COMM 180 or COMM 320 or MGMT 215 or ENGR 310

COMM 385: Media Programming Strategies

3 Credits

Framework, principles, and strategies for media programming from perspective of content distributors and media outlets. COMM 385 Media Programming Strategies (3) This course will expose the students to the framework, principles, and strategies for content distribution via wired and wireless networks. Students will learn programming strategies for cable and broadcast networks, local television stations, cable systems, Internet sites, and other distribution outlets. The class will explore programming from the perspective of the network or outlet that acquires programming content as well as the perspective of the content producer trying to obtain distribution. The course explores how new technologies, laws, and social trends influence programming strategies. Students will learn audience analysis including Nielsen ratings and Internet measurement techniques. The class typically includes multiple group projects, presentations and written reports that evaluate programming strategies in addition to quizzes and exams. By the end of the course students should have a fundamental understanding of programming strategies, trends, and terminology. Broader course objectives include the understanding and application of ethics, diversity, the role of professionals in the industry, critical thinking, written and oral presentations including the use of visual information, appropriate use of mathematical concepts, professional writing, clear communication, and conducting and evaluating research.

Enforced Prerequisite at Enrollment: COMM 180

COMM 386: Telecommunications History

3 Credits

Historical development of telecommunications systems in the United States, including telegraph, telephone, radio, television, and the internet. COMM 386 Telecommunications History (3) Telecommunications History examines the development of electric and electronic communication systems in the United States within their economic, political, social and cultural contexts. Students will look at the origins and growth of communications systems and how those systems arise from and are constrained by existing social conditions. The evolution and impact of the telegraph, telephone, radio, television and Internet systems and industries will be among major topics addressed. In the process of examining the evolution of specific industries, students will be exposed to broader theories of technology and social change. As a 300-level course, students will be expected to acquire modest skills in historical research, including library, Internet and some original research such as oral histories.

COMM 388: Production Management

3 Credits

Videos are an important means by which organizations communicate, whether online, through social media, during presentations, or delivered through traditional media platforms. In the professional arena, more and more organizations use videos to raise money, communicate, or market and promote their business. This course teaches students how to manage a video production agency and produce videos for clients. COMM 388, through a combination of lecture, readings, and practical exercises, will teach students how to communicate with clients, assign production team roles, create accurate and effective production timelines and budgets, as well as understand the legal issues that can arise when creating videos for clients that meet their specific needs. Student will bring an actual client's story from the idea phase to final delivery, as well as learn and utilize proper client etiquette, including email, phone, and in person conversations. Student will have the opportunity to learn about the responsibilities of each member on a production team, how to create and manage a production budget, the purpose and use of contracts and release forms, all while working together as a team to create a video for their client. The course will follow a standard production timeline starting with pre-production topics such as the basics of pitching, story development, and budgeting. The second portion of the class will focus on production issues particularly as they apply to client based production. This will include scheduling, interview outlining, location scouting, conducting on camera interviews, and filming footage. Finally, post-production and formatting topics will be addressed including discussions of different delivery platforms, including online, presentation, and social media. Throughout the semester students will complete practical exercises that will help build their skills at translating a client's idea into a realized project with a minimum budget and maximum production value.

Enforced Prerequisite at Enrollment: C or better in COMM 242 or C or better in COMM 282

COMM 395: Experiential Career Exploration

0.5-2 Credits/Maximum of 2

In this unique experiential education opportunity, students visit a variety of companies and businesses in the media and communications ecosystem and have the opportunity to engage in small group settings directly with key industry players. Students will be able to learn from

senior executives who are shaping the fields that our students will soon enter. Students will have the opportunity to engage with alumni and friends of the school through dinner/networking events.

COMM 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

COMM 400: In the Game: TV Sports Magazine

3 Credits

Students will produce, report, anchor and direct half-hour sports magazine show. COMM 400 In the Game: TV Sports Magazine (3) Magazine shows have expanded beyond traditional news subjects to cover various aspects of American culture. None is more prominent and prevalent than the coverage of sports. In the Game: TV Sports Magazine is a sports story-telling course in which students examine sports-related topics in their context within society. Students will use writing, photography, editing and technical skills gained from their journalism skills courses. The goal will be to produce sports enterprise stories.

Enforced Prerequisite at Enrollment: COMM 465 or COMM 283

COMM 401: Mass Media in History

3 Credits

Relationship of news media to social, economic, and political developments in the Western world.

Bachelor of Arts: Social and Behavioral Sciences

COMM 402: International Reporting

3 Credits

International Reporting is an advanced level course in the Bellisario College of Communications designed to give student journalists experience in reporting the news in a foreign country. COMM 402 International Reporting (3) International Reporting is an advanced level course in the College of Communications designed to give student journalists experience in reporting the news in a foreign country. The course is offered in the spring semester only. The key component is a 10-day reporting trip over the spring break to a foreign country. In its first three semesters, the class has gone to Mexico City and Shanghai, and Cape Town, South Africa. The course has been approved as an embedded program by the Office of Global Programs. Admission to the course is highly selective and open only to junior and senior journalism majors. Students must apply for admission and present examples of their work as well as recommendations by a member of the journalism faculty. The aim of this course is to help young journalists acquire the skills they will need to compete in an industry where increasingly the threads of even the most local stories either come from, or lead, overseas. This is not a course aimed at training students to become foreign correspondents. Rather, we hope to prepare students to function in a foreign environment, and to recognize, overcome and ultimately benefit from the linguistic, cultural, economic and legal challenges that working in another country will entail. The course has three segments. In the first half of the semester we study the history, culture, politics and economics of the country to which we are traveling. We also develop and refine our ideas for the stories we will report when we get there. We will also learn about foreign

reporting and how it differs from the reporting we have been used to doing here. The second part of the course consists of supervised travel to our target country. Here, we report the stories we have selected, file blogs and video posts to ComMedia, and also meet with local journalists, officials and students of the host country. Depending on the country in which we are working, students also have the opportunity to collaborate, when appropriate, with students from local universities. The final half of the semester is devoted to supervised individual work aimed at turning our reporting into stories suitable for publication or broadcast. Although students are required to acquire a general working knowledge of the country to which we are traveling, and will be tested on it, in the end they will be evaluated almost entirely on their work product. This results-oriented approach has been chosen because it most closely replicates the environment of a professional newsroom.

Enforced Prerequisite at Enrollment: COMM 260W

COMM 403: Law of Mass Communications

3 Credits

Nature and theories of law; the Supreme Court and press freedom; legal problems of the mass media. COMM 403 Law of Mass Communications (3) This discussion-intensive seminar provides an in-depth analysis of contemporary First Amendment issues ranging from the protection of violent media content and sexually explicit speech to defamation and invasion of privacy. Students explore the legal standards, public policies and theories that protect - and restrict - the Constitutional rights of free speech and free press. The primary area of study in this course is the law of mass communications and, in particular, legal issues facing the entertainment and news media. Using a law school casebook, written by a Harvard Law School professor, we will cover legal issues related to topics such as sex and violence in the media, defamation, privacy, and copyright.

Bachelor of Arts: Social and Behavioral Sciences

COMM 403H: Law of Mass Communications

3 Credits

Nature and theories of law; the Supreme Court and press freedom; legal problems of the mass media. COMM 403H Law of Mass Communications (3) This discussion-intensive seminar provides an in-depth analysis of contemporary First Amendment issues ranging from the protection of violent media content and sexually explicit speech to defamation and invasion of privacy. Students explore the legal standards, public policies and theories that protect - and restrict - the Constitutional rights of free speech and free press. The primary area of study in this course is the law of mass communications and, in particular, legal issues facing the entertainment and news media. Using a law school casebook, written by a Harvard Law School professor, we will cover legal issues related to topics such as sex and violence in the media, defamation, privacy, and copyright.

Honors

COMM 404: Telecommunications Law

3 Credits

Overview of the regulation of electronic media. COMM 404 Telecommunications Law (3) Telecommunications Regulation offers students an introduction to a wide range of regulatory and policy issues affecting the telecommunications industries. These industries include

traditional radio and television broadcasting, cable, satellite, telephone (wired and wireless), broadband, and the internet. This class is especially useful for students interested in careers in telecommunications, electronic commerce, public policy, information science, business management, law, information policy, and other related fields. Students taking this course will learn how regulations can affect business opportunities and how public policy shapes the development of the world's communications infrastructure. New developments in technology, business practices and regulatory philosophy are leading to dramatic changes in the regulatory climate in telecommunications. The goal of this course is to help you understand the implications of these changes for business strategy and for society as a whole. Some of the questions we will consider include: Why do we regulate telecommunications? What are the legal parameters of regulation? How does the regulatory process work? Why do "experts" disagree on the proper way to regulate? How do regulations influence business strategy and industry development? How do regulations affect the way individuals communicate and acquire information? How can we choose the best policies for the future to balance reliance on marketplace forces versus the need for Government intervention? This course emphasizes an economic and legal approach to regulation. Readings will include primary documents such as FCC regulations, court cases, and statutes as well as historical and economic analyses of telecommunications regulation.

COMM 405: Political Economy of Communications

3 Credits

COMM 405 takes a critical look at the structure and practices of the U.S. mass media within the U.S. and global political economy. The normative purpose of the course is to consider whether a media system operates in a manner which supports and promotes the development of a democratic society. As such, the course is both a theoretical and practical exploration of the study of political economy and the development of capitalism as it relates to the mass media. Topics include: the structure of contemporary capitalism (its nature and logic); the ownership and control of mass communications; commercialism, advertising and their impact on U.S. society, the mass media and journalism: the economic structure and organization of the cultural industries and precarious labor; the political economy of digital media; media policy; the tenets of democratic communication.

Enforced Prerequisite at Enrollment: COMM 100N or COMM 110
Bachelor of Arts: Social and Behavioral Sciences

COMM 406: Electronic News Gathering and Editing

3 Credits

Intermediate level skills in creating and editing television news packages. COMM 406 Electronic News Gathering and Editing (3) This course is designed to provide a substantial background in video production techniques coupled with electronic newsgathering and the use of video equipment. Although students enrolled in this course would be expected to have a basic understanding of video production from previous courses, more advanced editing techniques, along with sustained practice in interviewing, taping, organizing and writing various types of news and feature packages, should provide an excellent preparation for subsequent internships or employment. This is a "hands-on" course and will provide extensive opportunities for practical application of material covered in class. Students will be evaluated on the quality of their productions. This course serves as a supporting course in the Communication and Media Studies major.

Enforced Prerequisite at Enrollment: COMM 315 or COMM 283W

COMM 407A: Media and Government

3 Credits

This course examines the relationship between politics, governance, and news media, and provides a foundation for understanding media's role in public policy. COMM 407A Media and Government (3) The course is designed to broaden, inform, and empower thinking about media influence on the ways people think about issues and how that influences public policy choices. The course will also analyze the various ways in which elected officials seek to craft messages and manipulate media to encourage support for policy agendas and initiatives. Through the process of examining the relationship between these powerful forces, students will gain critical thinking skills that will better prepare them to consume and create media and to function as citizens in American democracy. This course will examine the symbiotic relationship between politics, governance, and media, particularly news media, and will provide a foundation of classic media theory combined with new thinking on media's role in public policy formation and its impact on the larger society. The course will emphasize the importance of political narratives, how they are constructed and communicated and also how they influence elections and public policy choices. Primary sources will provide diverse perspectives on the many questions that will emerge from readings and discussions. This course is only offered as part of the Washington, D.C. Program.

COMM 407B: Perspectives on American Journalism

3 Credits

The course examines a number of current issues and topics surrounding journalism including: ethics, state of the industry, and news vs. entertainment. COMM 407B Perspectives on American Journalism (3) Journalism is a unique occupation. News editors, reporters, producers, anchors, and other media professionals have a special responsibility to the public - the responsibility to provide their readers and audience members with the information they need in order to make choices about how to vote, what issues to get involved with, how to live their daily lives. While journalists - unlike members of other professions - have very few laws that exist specifically to govern their work, their duty to the public carries with it a number of important ethical burdens and responsibilities to the public and to society as a whole. The course examines a number of current issues and topics surrounding journalism. While there will be new themes and topics for each week's class, nearly all of the topics are interrelated, and each class will build on what has gone before. Among the topics that will be covered are the current state of the news industry, the ethical guidelines that journalists are supposed to follow, the blurring of lines between news and entertainment, and the news media's role in making people famous or infamous. The issues that we examine in this course will be most directly related to the practice of journalism, although we may touch on other aspects of communications (e.g. advertising or public relations) from time to time. Our goal will be to examine news coverage with a critical eye - to think about the reasoning and decision-making that shape the final products that we read or view. The class meetings themselves will center on discussion of the readings and presentation of real-world examples drawing from current news stories and issues involving the news industry.

COMM 408: Cultural Foundations of Communications

3 Credits

Examination of oral, scribal, print, industrial, and electronic cultures; analysis of impact of technology on communications and social structure. COMM 408 / STS 408 Cultural Foundations of Communications (3)(BA) This course meets the Bachelor of Arts degree requirements. COMM 408 / STS 408 traces the development of communications technologies and their impact on culture over the last 500 years. Students will examine how different tools for communicating changed the way people organized and made sense of their worlds. The course begins by looking at oral cultures and moves on to the scribal, print, industrial, electronic and post-industrial or postmodern cultures, studying the media developments that marked each of these eras. With each period and its corresponding technology students will examine how and why the new media altered not only the form of communication (the type of speech, form of writing and/or speed of information transfer), but also how such changes altered the content of knowledge (how people made sense of their lives and communities). Readings are drawn from a range of disciplinary perspectives on the issues, from history, sociology and anthropology, to philosophy, communication studies and cultural theory. The historical and theoretical knowledge provided by the course will give students a solid foundation for coming to terms with media trends in present-day society and for thinking through their possible epistemological, political and cultural impacts. The course is a communications elective for the Journalism and Telecommunications majors and the Media Studies minor.

Enforced Prerequisite at Enrollment: Select 3 credits from the following: COMM 100 or COMM 110 or COMM 118 or COMM 150 or COMM 180 or COMM 251 or COMM 320 or COMM 370
Cross-listed with: STS 408
Bachelor of Arts: Social and Behavioral Sciences

COMM 409: News Media Ethics

3 Credits

Ethical problems in the practice of journalism; principal public criticisms of news media; case study approach. COMM 409 News Media Ethics (3) Ethics is about doing the right thing - which, in the news business, is rarely as easy as it sounds. Is it ever OK for reporters and photographers to intrude on grieving families? Is it ever OK to lie to get information? Are the sex lives of politicians and celebrities our business? COMM 409 will give students a fuller understanding of how journalists do their jobs and how they should make ethically sound decisions. This class is more about learning to ask the right questions than learning the right answers. We'll rely on recent news coverage to get us in the habit of working through the moral dilemmas that reporters routinely confront.

Bachelor of Arts: Social and Behavioral Sciences

COMM 409H: News Media Ethics

3 Credits

Ethical problems in the practice of journalism; principal public criticisms of news media; case study approach. COMM 409H News Media Ethics (3) Ethics is about doing the right thing - which, in the news business, is rarely as easy as it sounds. Is it ever OK for reporters and photographers to intrude on grieving families? Is it ever OK to lie to get information? Are the sex lives of politicians and celebrities our business? COMM 409H will give students a fuller understanding of how journalists do their jobs

and how they should make ethically sound decisions. This class is more about learning to ask the right questions than learning the right answers. We'll rely on recent news coverage to get us in the habit of working through the moral dilemmas that reporters routinely confront.

Honors

COMM 410: International Mass Communications

3 Credits

The role of international media in communication among and between nations and peoples. COMM 410 International Mass Communications (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the role of international mass media in communications and debates about global questions and/or crises between and among nations and peoples. These roles will be examined using such theories as imperialism, hegemony, information society, modernization, globalization, capitalism, cultural industries, propaganda, and others. Among other issues the course will examine the way in which media report, portray, represent, misrepresent, and construct knowledge about global questions and crises that may border on social injustices, health, the politics of armament, disarmament, and recognition of statuses of states. The course may also explore other issues of international importance not limited to those involving economic questions such as balance of trade, global debt, and financial crises. In addition, this course provides avenue for the appraisal of mediated debates between nations at such platforms as the United Nations (UN), the World Health Organization (WHO), and the World Trade Organization (WTO) among other international and bilateral organizations that serve as platforms for consideration of issues of global importance. Students are led to understand ways in which states relate and communicate with each other in the environment of supranational governance. Students are exposed to these issues through readings in pertinent theories, ICT-enhanced conversations, and critical examinations of applicable concepts, exposure to contemporary issues via media messages; including those presented via newspapers, news magazines, broadcast documentaries, films, and other media products that will aid students' ability to better appreciate issues of historical and contemporary relevance to the global community.

Enforced Prerequisite at Enrollment: COMM 100 or COMM 110 or COMM 118 or COMM 150 or COMM 180 or COMM 251 or COMM 260W or COMM 320 or COMM 370
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

COMM 411: Cultural Aspects of the Mass Media

3 Credits

The mass media as creators and critics of mass culture in American life; relationships between the media and mass culture. COMM 411 Cultural Aspects of the Mass Media (3) This course examines the mass media as creators and critics of mass culture in American life and the relationship between the media and the mass culture. What are the mass media? What is culture? What are the relationships between mass media and culture? How do mass media help construct the way we live our lives? Do the mass media reflect or condition social reality? How does one study or engage the mass media? Why would you want to anyway? This course is designed to answer some of these questions by promoting a critical understanding of the mass media from historical, social, philosophical, cultural, and economic perspectives. Ultimately, the course will equip students to address these opening questions on

their own terms, without simply allowing the mass media to provide their own pictures of how they should be understood. One of the goals of this course is to denaturalize the way people view the mass media-as simply a given, or as pure unmediated reality. Media culture has been and continues to be made. Course materials and lectures will provide several ways of thinking about and studying the conditions of media making and interpretation. Students are encouraged to think as broadly and creatively as possible: to this end, the course will make use of research across a wide range of academic fields such as sociology, history, ethnography, cultural studies, literature, politics, gender studies, economics, art, and philosophy. The course is a communications elective for the Journalism and Telecommunications majors and the Media Studies minor.

Enforced Prerequisite at Enrollment: COMM 305
Bachelor of Arts: Social and Behavioral Sciences

COMM 411H: Cultural Aspects of the Mass Media

3 Credits

The mass media as creators and critics of mass culture in American life; relationships between the media and mass culture. COMM 411H Cultural Aspects of the Mass Media (3) COMM 411H takes a cultural studies approach to media and more generally culture and politics. The class is predicated upon three assumptions about media. First, media must be examined in context. Second, media play a significant role in the construction of our lived reality. Third, these constructions and all attempts to study them are political and implicated in relations of power. As such, this course treats media as part of cultural and political processes that are not separable, but instead co-constitutive. In other words, these three assumptions have some immeasurable effect on each other and impact our understanding of their relationships.

Enforced Prerequisite at Enrollment: COMM 305
Honors

COMM 412: Sports, Media and Society

3 Credits

Sport and media relationship in American culture. COMM 412 Sports, Media and Society (3) This course is designed to help students more critically view the role of sport media in American culture. The influence of/relationship between sport media and issues such as race, gender, sexuality (homophobia), nationalism, capitalism/consumerism, violence and civic life will be examined. Issues in relation to journalism ethics and the production of sport media also will be examined.

COMM 413W: The Mass Media and the Public

3 Credits

Social-level and political theories of the relationships between media and public; media influences on public opinion; social pressure on the media; political communications. COMM 413W The Mass Media and the Public (3) This course is designed to explore the complex and dynamic relationships among the media, public, and government. These relationships are examined through the lenses of sociological and political theories regarding the nature and process of mass communication. The central questions answered in the course are: "How do the media influence the public, its opinions, and social and political behavior?" and "How does the public - through social pressures, and political constraints - influence media performance and content?" Special attention is paid to modes of inquiry in communication research, social functions and control of the media, social construction of reality,

political communication, and public opinion. The goals of the course are to introduce students majoring in professional areas of communications to theoretical frameworks that help explain media practices, advance the understanding of the communications research literature for Media Studies majors, and develop skills of all students to be informed and critical consumers of the media. The course is required of Media Studies majors and is a communications elective for the Journalism and Telecommunications majors, the Corporate Communications and Journalism options in Communications, and the Media Studies minor.

Enforced Prerequisite at Enrollment: (COMM 100 or COMM 110 or COMM 118 or COMM 150 or COMM 180 or COMM 251 or COMM 260W or COMM 320 or COMM 370) and (COMM 304 or COMM 420)
Bachelor of Arts: Social and Behavioral Sciences
Writing Across the Curriculum

COMM 414: Media Management

3 Credits

Theoretical bases and practical approaches for management and administration of communications projects, organizations, and resources. COMM 414 Media Management (3) Students examine various management styles and how they are applied in various media industries. Special issues in media management such as intellectual rights and work-for-hire contracts are covered. General business management topics are also covered, such as human resource management, sales, motivation, working with unions, managing talent and other assets, and maximizing profits within the framework of very basic business principles. In addition, this course includes topics useful for small media business startups and freelance media content producers. Usually this course utilizes a case/book study approach relying heavily on in-class discussion.

Enforced Prerequisite at Enrollment: COMM 100 or COMM 251

COMM 415: Advanced Photography for Communications

3 Credits

Advanced applications in documentary photography emphasizing the narrative qualities of imagery, and utilizing digital technologies. COMM 415 Advanced Photography (3) An advanced undergraduate examination of documentary photography with the goal for each student to produce a portfolio of pictures suitable for exhibition or to show prospective employers. Each week students complete photographic assignments designed to simulate commercial photography work and to give experience with a variety of photographic techniques and subjects. Assignments include topics such as portraiture, documentary photo story production, studio lighting, fill-flash lighting, and sports photography. Classroom exercises include demonstrations of various techniques as well as critique sessions to discuss student assignments and other photography work.

Enforced Prerequisite at Enrollment: COMM 215 or COMM 269

COMM 416: News Practicum

3 Credits

News Practicum is a professionally oriented course for students who have mastered basic news writing and interviewing skills to produce stories for professional news outlets. COMM 416 News Practicum (3) This is a course in which students employ skills they developed in previous classes including: reporting, writing and working in collaboration

with editors to develop a variety of short and long stories that are designed to be used in professional publications. In the course of reporting stories, students will work independently, using sources ranging from first responders to local government officials and experts, to gather information that they will use writing their stories. Students will turn in multiple drafts to the instructor, who will work with them to edit the stories in preparation for publication. Part of the course will include post-publication review of the stories to discuss techniques and how to improve upon them.

Enforced Prerequisite at Enrollment: COMM 260W

COMM 417: Ethics and Regulation in Advertising and Public Relations

3 Credits

Ethical issues in practice of advertising and public relations; legal and regulatory issues; case studies. COMM 417 Ethics and Regulation in Advertising and Public Relations (3) The purpose of this course is to help students gain an understanding of the complex legal and ethical issues they may face in advertising and public relations practice. Through an examination of historic and contemporary issues and cases, students will develop a professional framework for evaluating ethical dilemmas. Perspectives of advertisers, public relations practitioners, agencies, government, media, clients and advocacy groups will be examined, with a focus on social responsibility in professional practice.

Enforced Prerequisite at Enrollment: COMM 320 or COMM 370
Bachelor of Arts: Social and Behavioral Sciences

COMM 418: Media Effects: Theory and Research

3 Credits

Investigation of social and psychological effects of media messages and technologies via theories and empirical evidence pertaining to processes of effects. COMM 418 Media Effects (3) This is an upper-level undergraduate course on the social and psychological effects of media messages and technologies, which moves beyond a simple introduction of media theories. Drawing on social and behavioral research in communication, psychology and related disciplines, it will attempt an advanced understanding of media effects via theories and empirical evidence pertaining to the processes of effects. Emphasis will be placed on rigorous examination of theory testing and theory development. The class will assume a general familiarity of basic communication theories pertaining to the relationship between media and public (COMM 118) and a working knowledge of quantitative research methods (COMM 304).

Enforced Prerequisite at Enrollment: COMM 118 and COMM 304

COMM 419: World Media Systems

3 Credits

Comparative study of modern mass systems and the evolution and structure of specific countries' systems. COMM 419 World Media Systems (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is a comparative study of modern mass media systems with focus on the ways in which two or more countries' media have evolved and are structured by the political, economic, social, and cultural environments within which they exist. Students will be exposed to the theories and practices of media systems - as explained in such normative expositions as the four theories of the press and other contemporary iterations. One objective of the course is for students to gain a better appreciation of the structure and location of the media

system in the United States vis-à-vis greater awareness of media systems in other political contexts where media cultures may vary from the U.S. matrix. Across the board of sampled countries'; media systems, students will be exposed to the ways in which each country's media have developed, are shaped, and are continually shaped by factors that include history, political cultures, evolving legal regimes, media regulations, finances, media economics, new technologies, institutional arrangements, citizens' access to information, or lack thereof. Another objective of this course is to equip students with a toolbox and framework with which they can replicate comparative media systems analyses in other countries and regions of interest as they contemplate study abroad and/or long-term career (employment, graduate studies) engagements. To achieve foregoing objectives students will be exposed to readings in theories of media systems and to academic articles using comparative methodologies to examine structural evolution of media in tandem with countries transformations over time. Students will analyze historical or contemporary media systems' developments through careful comparisons and applying critical thinking skills. In the process, students develop analytical skills useful in contending with academic and professional environments.

Enforced Prerequisite at Enrollment: COMM 410
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)

COMM 419H: World Media Systems

3 Credits

Comparative study of modern media systems of mass communications in selected foreign countries. COMM 419H World Media Systems (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. Students in this course will have the opportunity to discover the variety of media systems in the world today and, more importantly, how they got that way and what functions they perform for their respective societies. Students will evaluate each media system's history and analyze the functions of the mass media in the respective contexts. They will examine the historical, social, economic and cultural forces that influence the adoption of a national media system. They will compare perspectives on the problems and issues in freedom of expression within national media systems and evaluate the organization, regulation and economics of those systems. Finally, students will analyze the national development of media systems and the impact of the mass media in the modernization of peasants.

Enforced Prerequisite at Enrollment: COMM 410
Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)
United States Cultures (US)
Honors

COMM 420: Research Methods in Advertising and Public Relations

3 Credits

Primary and secondary research methods used in the development of solutions to advertising and public relations problems. COMM 420 Research Methods in Advertising and Public Relations (3) This course is designed to provide an introduction to the logic and methods of social science research and its applications in the professional practice of advertising and public relations. Students will be introduced to methods of primary research used in the advertising and public relations fields such as survey, focus group, content analysis, and

experimental design. Students will also become more familiar with basic and advanced statistical techniques and statistical software used in the field. Understanding how research is conducted and the strengths and limitations of research findings is a critical first step in developing the ability to apply research findings to communication problems in advertising and public relations. In addition to helping students understand how to conduct research, this course is also designed to help them become critical consumers of the research conducted by others. Advertising and public relations problems often require the identification, understanding, synthesis, and application of data collected by others in developing problem solutions. Understanding secondary sources of data commonly used in the field, such as Simmons, Nielsen, Arbitron and SRDS, is an essential component of professional expertise. Problem-solving in advertising and public relations requires decision-making in a turbulent and dynamic marketing environment. To help students learn how to relate research tools and outcomes to the advertising and public relations problems at hand, this course will examine the role of research in decision-making at the critical steps in the problem-solution process. As part of developing understanding of this decision-making process, students will also become more aware of the ethical issues associated with research in advertising and public relations.

Enforced Prerequisite at Enrollment: (COMM 320 or COMM 370) and (STAT 200 or SCM 200 or PSYCH 200)

COMM 421W: Advertising Creative Strategies

3 Credits

Planning, designing, writing advertisements; introduction to graphics and production techniques and processes; layout and copywriting practice and critiques. COMM 421W Advertising Communications Problems (3) This course is designed to provide students with an overview of the intellectual and practical skills involved with the development of advertising creative work. Students are introduced to research and thinking strategies that lead to creative ideas and are provided with computer software and other training that facilitates the execution of advertising based on their ideas. The course requires students to complete several creative projects, in distinct product categories (e.g., packaged goods, durable goods, public services, consumer services), over the course of the semester. Before developing advertising, students will be expected to research the product, service or idea that constitutes the creative project. They will gain an understanding of the kinds of information most valuable to creative professionals in the development of ideas, and be provided with an overview of research strategies leading to the discovery of such information. After completing the required research, students will produce briefs that summarize findings and serve as a platform for further work on their creative projects. Given the course's designation as writing intensive, these documents will be evaluated both for their content and the degree of accuracy demonstrated in grammar, spelling, punctuation and word choice. Since the evaluation of creative ideas is inherently subjective, these written research documents are usually weighted more heavily in the calculation of final course grades. Students will use their own research as the platform for generating creative ideas to advertise their product, service or idea. Instruction on creative thinking techniques will be provided as tools for this activity. As ideas are developed, students are encouraged to share their work with their peers and the instructor for feedback. In "workshop" fashion, these in-class critiques of creative work serve to refine and improve ideas. Over the course of the semester, students work toward finalizing creative solutions. By semester's end, each student will be expected to submit a final portfolio of work that demonstrates proficiency in the subject matter

covered by the course. Traditionally, the final portfolio includes creative briefs and ads developed from them.

Enforced Prerequisite at Enrollment: COMM 320
Writing Across the Curriculum

COMM 422: Advertising Media Planning

3 Credits

Analysis, selection, and scheduling of advertising media; examination of algorithms, technologies, and software used in media planning. COMM 422 Advertising Media Planning (3) This course is designed to provide an introduction to the concepts and techniques of media planning. The course will cover traditional and online media options. The student will learn to use software models to facilitate media decisions. Secondary sources of research used in the media planning process will be discussed. The design, construction, implementation and evaluation of effective media plans that meet specific advertising objectives will be detailed. Ethical media planning processes will be reviewed. The goal of the course is to develop critical thinking skills that will improve decision making in a dynamic and turbulent media environment.

Enforced Prerequisite at Enrollment: COMM 320

COMM 424: Advertising Campaigns

3 Credits

Advertising campaign problems from the viewpoint of the national advertiser and advertising agency; production of a complete advertising campaign. COMM 424 Advertising Campaigns (3) This comprehensive capstone course is designed to provide an opportunity to showcase your creativity and knowledge about advertising communications. Strategic integrated marketing communications concepts are emphasized. The campaign proposal developed in this course will showcase the full weight of your knowledge and skill in the area of advertising communications. Students will need a background in creative design and practices, media planning principles and practices, and research methods used to delineate appropriate target groups and evaluate campaign effectiveness. A strong focus will be on understanding the audience and developing message strategies that have a high potential to influence attention and marketing behaviors. During the course you will create a complete advertising/marketing communications campaign proposal that reflects a set of communication goals derived from a set of measurable objectives all designed to meet the needs of your client. A situation analysis will be developed to provide a detailed assessment of the product or service environment. This includes analysis of the product class, life cycle, generic and brand level competition, and target group identification. The goal is to gain relevant information that can be used to make justifiable strategic decisions related to the advertising campaign. Strategic goals and objectives will be developed that allow the direction and efficacy of the campaign to be measured. Tactics must reflect the strategies developed in the campaign. Campaigns include diagnostic and performance benchmarks used to evaluate the progress of a set of predetermined measurable objectives. The goal is to provide timely feedback that allows the agency and client to evaluate the effectiveness of the campaign. This is especially important as client-agency relations continue to adapt a series of formal measures of campaign effectiveness. The class is designed to develop critical thinking skills. For example, each strategic decision presented in a campaign must have a fully explicated rationale that is based on quantitative and qualitative criteria. Research tools will be presented in class that allow

and support the development of measurable objectives. The campaign proposal must include a series of benchmarks designed to evaluate the progress of the campaign at key time points. The campaign will have a complete media plan that includes selected media, cost efficiencies, and media schedule. Students will be expected to be familiar with media principles and media planning software.

Enforced Prerequisite at Enrollment: COMM 420 and COMM 421W and COMM 422

COMM 425: Advanced Advertising Campaigns

3 Credits

An academic option for student AAF members who will develop an integrated advertising campaign to be presented in District competition. COMM 425 Advanced Advertising Campaigns (3) The class is structured along the lines of a real-world advertising agency and the manner in which they might pitch a new account. Students work through the research and situational analysis to develop an integrated communication plan, campaign budget, and message strategies for a client. The client is provided by the National Student Advertising Competition. This group provides undergraduate advertising students with a realistic problem that is solved through team effort, knowledge and creativity. Students might have the opportunity to pitch their plan to the NSAC client.

Enforced Prerequisite at Enrollment: COMM 424 or COMM 473

COMM 426: International and Intercultural Strategic Communication

3 Credits

Advertising and public relations in the international and intercultural arenas; multicultural strategic communications strategies. COMM 426 International and Intercultural Strategic Communication (3) COMM 426 will provide students with a framework for applying their existing public relations and advertising tools in the global arena. Working internationally and/or interculturally challenges the advertising, public relations or marketing executive to think outside his or her own "cultural box." Some of the challenges include finding research about consumers, competitors and the marketplace outside of North America and Western Europe, understanding local cultures and customs, understanding the importance of ethnicity, and building an integrated core of professional communications that work with a common purpose, even if they come from different backgrounds - or are on different continents. The emphasis will be on developing a methodology for researching international and intercultural strategic communications problems, and then discussing possible communications-based solutions. To that end, case studies from both the international advertising and international public relations disciplines will play an important role in the course. Additionally, students will be exposed to a number of frameworks for analyzing culture, coming from the areas of anthropology (Schwartz' 10 Value Domains), social psychology) Bond's essay on impression management in multicultural organizations) and international business (Hofstede's Dimensions of National Culture).

Enforced Prerequisite at Enrollment: COMM 320 or COMM 370

COMM 427: Client/Agency Relations

3 Credits

Building and maintaining client/agency relationships in advertising, public relations and direct response agency business functions.

COMM 427 Client/Agency Relations (3) Client/Agency relations provides students with an understanding of advertising, public relations and direct response agency business functions, and the important role of building and maintaining client/agency relationships. It covers the phases of pre-relationship (identifying, prospecting, pitching and winning accounts), developing relationships with clients and maintaining and enhancing these relationships over time. Client/agency relationships are built on the development of viable partnerships with clients, establishing strategies to support and maintain the vitality of client business success, and the on-going delivery of fresh creative ideas from all agency disciplines. Today's agency has become a resource for all integrated marketing communication (MARCOM) needs. This includes, but is not limited to, advertising, promotion, public relations, direct response marketing, event marketing, customer-relationship marketing, interactive internet communication and branding ideas. This course covers the integration of these disciplines on behalf of an agency's clients.

Enforced Prerequisite at Enrollment: (COMM 421W and COMM 422) or COMM 471

COMM 428A: Principles of Strategic Communications

3 Credits

Principles of Strategic Communications provides an overview of the various media and communications methods that comprise modern integrated marketing campaigns. COMM 428A Principles of Strategic Communications (3) Principles of Strategic Communications will introduce students to strategic communications in the context of integrated marketing communication (IMC). It will overview the industry by providing a foundation for understanding what IMC is and how it developed to its current state, what it tries to accomplish, how it works, and how it can affect society. It lays the groundwork for other courses in the strategic communications sequence. The fundamentals of consumer psychology will be introduced, along with theories of persuasion. In addition to traditional advertising, the course will review other critical functional areas of IMC such as public relations, sales promotion and direct marketing. The role of the internet and emerging new media technologies will also be covered. The advantages and disadvantages for different media will be summarized, and the basics of media planning will be introduced. Course content is present in the context of strategy and planning, with the goal of illustrating how various elements in the promotional mix work together to achieve campaign objectives. The importance of effective measurement and accountability at each point of campaign development and execution will be explained. Finally, the ethical and regulatory environment for IMC will be explored.

COMM 428B: Strategic Communications Law

3 Credits

Analysis of laws and regulations affecting online advertising and strategic communications. COMM 428B Strategic Communications Law (3) Strategic communications law focuses on the key legal issues affecting strategic communications, advertising and marketing in an online environment. Major topics include First Amendment protection for commercial speech; advertising regulation including spam and the use of trademarks and copyrights; privacy regulation including the collection of user data and use of endorsements, and procedural issues such as jurisdiction and analysis of various regulatory authorities. Additional topics will include domain names, marketing to minors and current developments in advertising and Internet law.

Enforced Prerequisite at Enrollment: COMM 428A

COMM 428C: Strategic Communications in a Global Environment

3 Credits

Strategic Communications in a Global Environment will provide students with a framework for applying public relations and advertising tools across media platforms and across cultures. COMM 428C Strategic Communications in a Global Environment (3) Strategic Communications in a Global Environment will provide students with a framework for applying public relations and advertising tools across media platforms and across cultures. While cross-cultural communication has always been a challenge for strategic communicators, introducing online elements to campaigns exposes strategic communications professionals to a host of new challenges, including a wide range of ethical and legal dilemmas emanating from new to abilities to collect sensitive data from audiences, often without their knowledge. Students will be exposed to a number of frameworks for segmenting publics in this new environment, both geographically and psychographically, and will learn the skills to work with colleagues across borders and cultures to create effective, ethical strategic communications campaigns.

Enforced Prerequisite at Enrollment: COMM 428A and COMM 428D

COMM 428D: Research & Analytics

3 Credits

This course covers online research methods for strategic communication, including web analytics, online surveys, online interviews, and content analysis. COMM 428D Research and Analytics (3) Increasingly, organizations are using the web as a vehicle for communicating with key audiences such as customers, shareholders, volunteers, donors, community members, and government entities. In this class students will be exposed to theories and practices in the areas of online research and analytics with a focus on understanding how customers perceive the organization, assessing the engagement with target audiences online, measuring the value of relationships that organizations initiate and build online, and tracking how web site visitors experience an organization's site. The course will expose students to tools for tracking and measuring online communication, and it will help students understand how to prioritize audiences and communication to maximize the effectiveness of measurement. Research methods taught in this class include web analytics, online surveys, online interviews, content analysis, and online focus groups. Gauging the impact of online communication helps organizations engage in more efficient and effective communication practices. Practitioners in strategic communication need to understand how to measure and evaluate the effectiveness of their communication in this medium. This course will prepare students to conduct online research in practice.

Enforced Prerequisite at Enrollment: COMM 428A and STAT 200

COMM 428E: Social Media Strategies

3 Credits

This course covers social media theory, tools and best practices to prepare students for current and future use of social media. COMM 428E Social Media Strategies (3) Social media - including social networking, podcasting, bookmarking, blogging, microblogging, location-based, wikis, and other collaborative content creation platforms - are changing the field of public relations. While many public relations professionals claim to be social media "experts," those who can demonstrate true expertise are rare

and much sought after. This course narrows the focus from the broad field of social media to cover the specific tools and best practices needed to conquer current and future use of social media in public relations.

Enforced Prerequisite at Enrollment: COMM 428A and COMM 428D

COMM 428F: Strategic Communications Campaign Planning

3 Credits

This is an advanced strategic communications class that covers the process and steps involved in campaign planning. Lectures and readings will cover the relevant concepts and strategies in campaign preparation. Students will have the opportunity to apply the concepts and skills and develop a communications campaign for a client. An important part of the class is the final project that students are required to put together. The class will begin by reviewing the key concepts and steps of campaign planning. It will review the tools and resources for students to conduct both primary and secondary research. Based on the research, students will develop the message and communication strategies for a comprehensive campaign. At the end of the semester, students will present the final campaign in the class.

Enforced Prerequisite at Enrollment: COMM 428A and COMM 428B and COMM 428C and COMM 428D

COMM 430: Mass Media and Politics

3 Credits

Study of mass media as institutions and the effects of the mass media on politics, public policy, and citizens. COMM 430 Mass Media and Politics (3) In Mass Media and Politics, we address issues and relations of the political realm, the media institutions, and the public sphere. Particular attention is dedicated to the influence of and coverage by both the domestic and international news media. In addition, we also examine topics such as bias in the media, women and politics, political campaigns, and advertising, ideology and hegemony, and cultural representations in the media. Of importance are notions of how and why mass media influences the national political debate, as well as what mass media exports in terms of culture and what this means to the political reality of other nations. The discussion of these issues is often couched in terms of technologies, especially emerging and traditional mass media technology systems such as convergence technologies, the World Wide Web, television, radio, and newspapers. Prerequisite: COMM 251.

Enforced Prerequisite at Enrollment: COMM 100 or COMM 251

COMM 431: Topics in Television Culture and Communication

3 Credits

Study television technologies, techniques, audiences, genres and trends in relation to a specific decades or cultural periods.

Enforced Prerequisite at Enrollment: COMM 100 and COMM 180 or permission of program.

Bachelor of Arts: Arts

COMM 432: Social Justice Media Project

3 Credits

This course is the Capstone Experience for the Communication and Social Justice Minor. The course provides students with a hands-on

experience applying skills and insights gained during the prerequisite and supporting courses. The focus of the course is the creation of an individual or group Social Justice project on a topic of the student's choosing. The course will culminate with the launch of a social justice-oriented communication campaign to promote this project and engage with a larger public.

Enforced Prerequisite at Enrollment: COMM 232 and one of the following courses: COMM 270 or COMM 282 or LA 235N

COMM 434: Movies, Media, and the Jewish American Experience

3 Credits

Study of Jewish American Film and Popular Culture. COMM (J ST) 434 Movies, Media, and the Jewish American Experience (3) The course examines film and other popular media, including theater, radio, and television, as important sources for understanding the Jewish experience and its impact on and relationship with American culture more generally since the late 19th century. Topics to be considered include US film and popular media as representations of Jewish history, culture, and experience; the role of Jews as prominent directors, producers, actors, and writers in their social-historical context; and the history and function of the representational modes and techniques used in these texts. A major emphasis of the course will be on analyzing film and other media texts as lenses to reflect, refract, and focus on Jewish American identity. By way of analyzing the interrelationships between filmic and other media texts and Jewish American experience, the course will attend to a number of key themes in Jewish cultural history, including Jewish life in late 19th-early 20th century Europe; immigrant life in turn of the century America and questions such as assimilation, preservation of tradition, family life, social mobility, and male/female relations; Jews in show business, organized crime, and sports; American Jews and the Holocaust; American Jews and Israel; Jews in the modern age; generational and denominational differences among Jews; and Jews and anti-Semitism.

Prerequisite: A previous course in Jewish Studies, Film Studies, Media Studies, Art, Music, English, or Comparative Literature.
Cross-listed with: JST 434

COMM 436: Advanced Audio Production

3 Credits

Advanced concepts and techniques of audio production in analog and digital formats with hands-on experience in recording, mixing and editing. COMM 436 Advanced Audio Production (3) This course builds on the concepts and techniques of audio production in both analog and digital formats introduced in COMM 374 and includes in-depth examination of sound theory and hands-on practice in advanced projects involving recording, mixing and editing in analog and digital formats. This course provides an understanding of technical and aesthetic aspects of advanced audio production, and provides students the opportunity to demonstrate advanced skills in recording, editing and mixing. Students gain an understanding of professional studio and field practices and develop advanced studio and field projects suitable for a portfolio.

Enforced Prerequisite at Enrollment: COMM 374

COMM 437: Advanced Documentary Production

3 Credits/Maximum of 6

Advanced exploration of documentary production techniques and aesthetics through the completion of a short video project. COMM 437 Advanced Documentary Production (3 per semester/maximum of 6) This course is designed to enable students to produce portfolio-quality work while bringing together ideas, processes, practices, and theories in the service of documentary production. Students will explore the history, conventions and theory of the documentary film form, while developing and producing a film or video work for screening at the end of the semester. Working in small crews with others from the class and using sophisticated production equipment, students will write and produce short digital video projects. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions as well as on providing the support, guidance, and critique necessary for a successful production. Particular emphasis is given to the traditions of social criticism, the creative treatment of actuality, the individual and collective points of view. The history of documentary form is illustrated by comparing the work of the American 'Direct Cinema' style embodied in the work of Drew Associates to the French 'Cinema Verite' style developed by Jean Rouch. The evolution of these styles into what we now just refer to as 'Verite' filmmaking is put into practice through a series of exercises that incorporate a variety of points of view. Analysis of the above works, as well as examples from Barbara Kopple, Errol Morris, and Frederick Wiseman, provide students with a springboard to develop their own style, vision, and personal creative voice. An examination of Bill Nichols taxonomy of non-fiction film classification further contextualizes aesthetic and theoretical issues for students. A series of lectures, discussions, readings, and screenings move students through the personal and collaborative process of documentary production.

Enforced Prerequisite at Enrollment: COMM 337 and COMM 340 and COMM 342W

COMM 437A: Advanced Documentary Production Abroad

3 Credits

Advanced exploration of documentary production techniques and aesthetics through the completion of a short video project abroad. COMM 437A Advanced Documentary Production Abroad (3) This course is designed to enable students to produce portfolio-quality work while bringing together ideas, processes, practices, and theories in the service of documentary production. Working in small crews with others from the class and using sophisticated production equipment, students will write and produce short digital video projects. While exploring the history, conventions and theory of the documentary film form, students will develop and produce a 3-9 minute video work to be filmed abroad either during the Spring Break, in the middle of Maymester or over the Thanksgiving Break (depending on the semester offered). Upon return from their time abroad, students will edit and screen their final projects. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions as well as on providing the support, guidance, and critique necessary for a successful production. Particular emphasis is given to the traditions of social criticism. The history of documentary form is illustrated by comparing the work of the American "Direct Cinema" style embodied in the work of Drew Associates to the French "Cinema Verite" style developed by Jean Rouch. The evolution of these styles into what we now just refer to as "Verite" filmmaking is put into practice through a series

of exercises that incorporate a variety of points of view. Analysis of the above works, as well as examples from Barbara Kopple, Errol Morris, and Frederick Wiseman, provide students with a springboard to develop their own style, vision, and personal creative voice. An examination of Bill Nichols taxonomy of non-fiction film classification further contextualizes aesthetic and theoretical issues for students. A series of lectures, discussions, readings, and screenings move students through the personal and collaborative process of documentary production.

Enforced Prerequisite at Enrollment: COMM 337 and COMM 340 and COMM 342W

COMM 438: Advanced Narrative Production

3 Credits/Maximum of 6

Advanced exploration of narrative production techniques and aesthetics through the completion of a short film or video project. COMM 438 Advanced Narrative Production (3 per semester/maximum of 6) This course is designed to enable students to produce portfolio-quality short projects that bring together ideas, processes, practices, and theories in the service of narrative production. Over the course of the semester, students will pursue an entire project from conception to completion through intensive pre-production, production, and post-production stages. Working in small crews composed of fellow classmates and using sophisticated production equipment, students will write and produce short digital video projects. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions, as well as providing the support, guidance, and critiques necessary for a successful production. There will be an emphasis on the thorough execution and evaluation of the steps taken toward completion of their project. As a workshop, specific topics pertaining to the three stages of production will be reviewed as necessary. Students will be expected to hand in a pre-production packet (budget, schedule, script breakdown and lined script) before proceeding to the production phase.

Enforced Prerequisite at Enrollment: COMM 338 and COMM 340 and COMM 342W

COMM 439: Advanced Alternative Production

3 Credits/Maximum of 6

COMM 439 Advanced Alternative Production (3) is a senior level course focusing on the development and expression of the individual filmmaker. The emphasis of the course is on exploring the history, conventions and modes that surround the experimental and animation film forms and using this knowledge in creating work that challenges conventions of mainstream media. The course involves viewing works of classic and contemporary alternative media, discussing its contribution or value in communications, and using these examples as models for exploration. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions, as well as on providing the support, guidance, and critique necessary for a successful production. There will be an emphasis on the thorough execution and evaluation of the steps taken toward completion of their project. This course assumes a working knowledge of intermediate film and video production and post-production techniques. Additional production and post-production techniques may be introduced based on the students' interest.

Enforced Prerequisite at Enrollment: COMM 339 and COMM 340 and COMM 342W

COMM 440: Advanced Cinematography and Lighting Techniques

3 Credits

Advanced exploration in camera, lighting, audio, and color-grading techniques, emphasizing technical skills as well as aesthetics. COMM 440 Advanced Cinematography and Lighting Techniques (3) This course is a comprehensive approach to techniques, equipment and procedures of film and video production with an emphasis on both practical skills and aesthetics. The course is divided into four sections that will employ a combination of lectures and workshops in camera, lighting, audio and color grading. The course will focus on understanding the theory and procedures underlying dynamic composition, visual and psychological perspective, practical and emotive lighting and sound, color, and the conveyance of meaning through color and continuity. In addition, students will learn accepted procedures in care and use of film and video cameras, sound recording equipment, lighting and grip gear, as well as proper organization, media storage and maintenance techniques specific to post-production. Students will work individually and collaboratively to produce projects for critique and evaluation. The emphasis of the course is on the artistic and technical aspects that allow an idea to be cinematically realized on celluloid and/or a suitable digital format. The course involves viewing the work of outstanding, established cinematographers and videographers in great detail, and assessing their contributions to film aesthetics and history through the detailed, direct analysis of film excerpts and sequences from landmark films and video work, and the discussion of assigned reading materials on both film and video technique. Students then work in specific film and video production positions to reproduce precisely scenes from the films analyzed. By doing so, students will develop an understanding of the technology and artistic vision used in film and video production so that they may be better prepared to successfully create challenging and thought-provoking projects. In addition, this course also allows for an exploration and comparison of the ever-changing technology used in film and video production. Through this direct use of multiple visual and audio formats, students will discover the creative advantages and disadvantages of various media used to fulfill their artistic vision. COMM 440 is a support course for the senior level production courses. Student cinematographers in COMM 448 (Adv. Production for Groups) are strongly encouraged to take this course concurrently. It can also be taken as an elective technique course in conjunction with any of the one-semester mode specific advanced production courses (COMM 437, COMM 438, or COMM 439).

Enforced Prerequisite at Enrollment: COMM 340 and COMM 342 and (COMM 337 or COMM 338 or COMM 339)

COMM 441: Advanced Graphic Design for Communications

3 Credits

Theory and practice designing graphic visual communication in commercial, non-commercial, and fine art formats for print and on-line media. COMM 441 Advanced Graphic Design (3) An advanced examination of graphic design. Students develop proficiencies in the art, craft, formats, and vocabulary of commercial graphic design by creating original work in a series of hands-on projects. During the semester, students learn to research, organize, and interpret verbal and visual information and to solve increasingly complex communication problems. They will further refine their creative problem solving and collaborative production skills. By semester end, students will have begun

to develop their own styles and are able to verbally articulate it to others. Assignments generally include topics such as interactive media design, animation, advertising design, and infographic design.

Enforced Prerequisite at Enrollment: COMM 241 or COMM 371

COMM 443: Producing Workshop

3 Credits

This course will immerse students in the language and practice of producing film and video projects. COMM 443 Producing Workshop (3) Through a combination of lecture, readings, screenings, and practical exercises, students will learn the fundamental producing skills needed to begin to understand creative producing in an increasingly complex global marketplace. Producing students will learn how to bring stories all the way from development through post-production and beyond. Students will be afforded an opportunity to develop their creative voices, all the while developing their communication and problem-solving skills. The course will follow a standard production timeline starting with pre-production topics such as the basics of pitching, script development, and financing. The second portion of the class will focus on production issues particularly as they apply to independent film production. This will include line producing and production management, including scheduling/budgeting, script breakdowns, assembling talent and crew, location scouting, and running a set. Finally post-production and distribution topics will be addressed including discussions of trends from major trade publications that impact the industry. Throughout the semester students will complete practical exercises that will help build their skills at translating a script into a realized project with a minimum budget and maximum production value. COMM 443 is a support course for the senior level capstone production courses. Student producers in COMM 448 (Adv. Production for Groups) are strongly encouraged to take this course concurrently. It can also be taken as an elective technique course in conjunction with any of the one-semester mode specific advanced production courses (COMM 437, COMM 438, or COMM 439). The prerequisites are in place to ensure students have the necessary production background taught in the intermediate-level courses.

Enforced Prerequisite at Enrollment: COMM 340 and COMM 342 and (COMM 337 or COMM 338 or COMM 339)

COMM 444: Advanced Post-Production Techniques

3 Credits

This course offers intensive practical experience in editing, motion graphics and sound mixing techniques, emphasizing both technical skills and aesthetics. COMM 444 Advanced Post-Production Techniques (3) Through a combination of lectures, readings, screenings, and practical exercises, students will learn advanced post-production techniques needed to produce high quality finished film and video pieces. The course includes modules on the theory and aesthetics of editing, motion graphics, visual effects, 2D animation, audio signal processing and audio mixing. The course will enable students to develop creative skills for translating ideas into short films and to serve as post-production support for senior level productions. Specific design strategies and approaches will be discussed. Students will also be required to demonstrate competence in a variety of digital graphics programs. Throughout the semester students will work individually and collaboratively on practical exercises for critique and evaluation, developing technical, analytical and critical skills. The course is divided into three sections. In the first section students will focus on the procedures for successful post-production supervision and workflow management, including an exploration of

accepted professional practices of editing departments. Students will explore advanced methods of picture editing in all modes and will edit and critique a professionally produced scene. In the second section of the course, students will work on graphics, animation and special effects procedures generally accepted as part of film-video post-production processes. The focus will be on techniques that translate to a variety of software and work environments; including manipulation of picture and text, light and color effects, compositing of multiple images and manipulation thereof. The third section of the course will focus on the practice of preparing elements for a professional audio mix and use of advanced digital audio workstations. This section will feature a discussion of the theory and practice of how tracks are organized, advanced psychoacoustics and signal processing, preparing a multi-track project for mix, and completion of a mixed sound design project.

Enforced Prerequisite at Enrollment: COMM 340 and COMM 342 and (COMM 337 or COMM 338 or COMM 339)

COMM 445: Directing Workshop

3 Credits

An advanced aesthetic and skill production course in directing for the screen. COMM 445 Directing Workshop (3) This course is an advanced aesthetic and skill production course in directing for the screen. The class is designed to introduce more advanced directing concepts and techniques as well as to more deeply explore the collaborative processes of working with a creative team on effectively integrating the aesthetics of cinematography, production design and acting performance in film narrative. The first section of the course will focus on understanding the actor's preparation and process with the goal of developing the appropriate and effective communications skills to coach performance. Students will thoroughly explore scenes for interpretation of subtext and motive, and will learn accepted practices of script preparation. Casting and audition styles will be investigated and demonstrated, as will various types of rehearsal techniques. At the end of this section students will workshop a scene in a small group, blocking it and executing it to illustrate concepts of character relationships, stage and camera craft to produce a short scene for discussion and critique. The second section of the course will be an advanced aesthetic exploration of the visual vocabulary, including cinematic, psychological and fine art concepts that contribute to the planning and design of screen direction. Students will then analyze the technical means to execute this aesthetic vision through production design, lighting and composition. In practice the students will then translate this analysis into a working scene plan and will produce a short scene for discussion and critique. Students will also be introduced to professional practices such as location and studio set protocols and on-set safety procedures. The third section of the course will explore narrative conventions and their relationship to screen genres in the interest of understanding the film language shared between filmmaker and audience. At the end of the section students will produce a short classic scene with an alternative interpretation for discussion and critique.

Enforced Prerequisite at Enrollment: COMM 340 and COMM 342 and (COMM 337 or COMM 338 or COMM 339)

COMM 446: Writing for the Screen II

3 Credits

An advanced course in screenwriting that further develops elements of storytelling technique.

Enforced Prerequisite at Enrollment: COMM 346

COMM 448: Advanced Group Production I

3 Credits

COMM 448 Advanced Group Production I (3) is designed to enable students to produce portfolio-quality work in any production mode (alternative, documentary, narrative) and to bring together ideas, processes, practices, and theories in the service of this production. Over the course of the semester, students will engage in intensive pre-production and production of an approved film or video project. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by collaborative productions as well as providing the support, guidance, and critique necessary for a successful production. There will be an emphasis on the thorough execution of every step of pre-production, principal photography, and preparation for post-production in spring semester. Students will fill a single production role (such as producer, director, cinematographer, sound designer, editor) throughout the two semesters and are strongly encouraged to take concurrently the supporting technique course for that production role. Students will be assigned individual exercises specific to their production role in addition to the collaborative work of the project's production. Production groups will be formed the first week of class. The first part of the semester is devoted to the development of the projects and pre-production. Roughly half way through the semester, the projects will begin production, with shooting and editing to be completed the following semester.

Enforced Prerequisite at Enrollment: COMM 340 and COMM 342 and (COMM 337 or COMM 338 or COMM 339)

COMM 449: Advanced Group Production II

3 Credits

Continuation of advanced production course emphasizing intensive collaborative film-video production from script through post-production. COMM 449 Advanced Film and Video Projects (3) This course is the second half of a two-semester production course designed to enable students to produce portfolio-quality work in any production mode and to bring together ideas, processes, practices, and theories in the service of this production. Students from the fall semester will complete production and engage in intensive post-production in order to have a high-quality finished project to submit to film festivals by the end of the semester. Utilizing a workshop structure, class time will be focused on discussion and analysis of the challenges faced by individual productions as well as providing the support, guidance, and critique necessary for a successfully completed project. Students will continue in the same production role (producer, director, cinematographer, sound designer, editor) from the fall semester, learning new skills for their role in the post-production phase. Students will be assigned individual exercises specific to their production role in addition to the collaborative work of the project's production. It is expected that all production group members will continue into the spring as well.

Enforced Prerequisite at Enrollment: COMM 448

COMM 450: Digital Advertising

3 Credits

Digital advertising has transformed many industry activities related to buying and delivering advertising. Information technology and big data have revolutionized the way media and content providers interact

and negotiate with advertisers, agencies and third parties. This course will explore the digital advertising and media ecosystem, identify key players and trends, and review performance analysis and evaluation. Particular attention will be paid to sources, management, storage, analysis and visualization of data. Trends in industry regulation and ethics will be explored. This includes ad industry selfregulation and data privacy regulations. The implications of big data and artificial intelligence on industry ethics is discussed.

Enforced Prerequisite at Enrollment: COMM 310 or IST 310 or COMM 422
Cross-listed with: IST 450

COMM 450A: Digital Campaigns

3 Credits/Maximum of 3

This project-oriented course provides students with the knowledge and skills necessary to conduct sponsored advertising-based marketing campaigns. This course offers students an opportunity to gain knowledge and hands-on experience on sponsored search and email advertising. Strategies for developing successful digital advertising campaigns will be discussed, including qualifying and researching clients, account and campaign structure, identifying and organizing keywords, bidding strategies and budgeting, and targeting approaches (including geo, time-based, audience, content and domain targeting), and conversion tagging, tracking and attribution. Students will earn certifications for Google Search and Display, and gain experience with the Google Ads platform, including use of the keyword planning tool, setting up campaigns, ad groups and keywords, writing text and display ad copy, and applying proper settings at the account, campaign, ad group and ad levels. Finally, students will learn important principles for landing page design and become proficient building professional landing pages. Students cannot earn credit for both COMM 450A and MKTG 473.

Enforced Prerequisite at Enrollment: COMM 450 or IST 450

Cross-listed with: IST 450A

COMM 451: Topics in American Film

3 Credits/Maximum of 6

Critical and historical studies of American films. Analysis of directing, cinematography, editing, screenwriting, and acting.

Enforced Prerequisite at Enrollment: COMM 250

Cross-listed with: AMST 451

COMM 452: Topics in International Cinema

3 Credits/Maximum of 6

Critical and historical studies of topics in non-American film. Analysis of theory, direction, cinematography, editing, and screenwriting.

Enforced Prerequisite at Enrollment: COMM 250

COMM 453: Narrative Theory: Film and Literature

3 Credits

This course explores the relationships between language and the medium of film through analysis of adaptations between other mediums and the cinema, and by analysis of the influences between the discourses of literature(s) and the cinema. The course has broad applicability not only to students of literature and students of the cinema, but to all students who need to understand ways to compare relationships

between disparate communications and artistic media. Students begin by understanding techniques and theories of both cinematic and literary analysis. Then, they explore theories of adaptation between media, including general theories of artistic and cultural influence. Among the media students may encounter in addition to literary fiction and narrative cinema are the graphic novel, creative nonfiction, drama, poetry, journalism, video games, the documentary cinema, and the experimental cinema. Students work through case studies of adaptation in literal terms, such as the transformation of graphic novels into narrative cinema. Students also work through case studies in influence, in which distinct art and media discourses affect one another, as in the relationship between videogames and the cinema. Students study transmedia storytelling, in which core narratives are expressed in different media. Students also study transcultural and transnational storytelling, in which adaptation and influence are conducted across borders. Students study questions of representation, particularly of difference (race, class, sexuality/gender) and cultural specificity. Students learn the historical and institutional settings which have conditioned these intermediations. The economics of literary and media production and the circumstances of reception of distinct media are explored. Students will experience classical and non-classical forms of storytelling, as well as fictional and non-fictional discourses. In this course, students will meet ancillary concerns in adaptation, such as translation, dramaturgy, and genre scholarship. Students express their individual conclusions in summary projects which apply theory to particular instances of adaptation and influence between media. These projects may include creative work, and multimedia texts which enact as well as analyze adaptation. As advanced scholars in the disciplines of literary and cinematic studies, students are expected to synthesize previous learning in these fields in their summary projects.

Enforced Prerequisite at Enrollment: COMM 150 or ENGL 15 or ENGL 30H or ENGL 137H or CAS 137H

Cross-listed with: CMLIT 453

Bachelor of Arts: Humanities
International Cultures (IL)

COMM 454: Documentary in Film and Television

3 Credits/Maximum of 6

Study of representative films from various documentary movements, examining form, technique, trends, and audience objectives.

Enforced Prerequisite at Enrollment: Fourth Semester Standing

COMM 455: Advanced Film Theory and Criticism

3 Credits/Maximum of 6

Description: This capstone course builds upon scholarly ideas and experiences in COMM 150 to familiarize the student with various theories of film, and their application to specific films and categories of films. This course requires media studies and film/video majors to develop the ability to perform criticism: that is, to select among philosophical, analytical, and rhetorical tools those which best fit the goals of a specific critical engagement with a media text, and to execute this criticism in a manner that will be persuasive to readers, listeners, and/or viewers. Because this extended critical and evaluative act is fundamental to both the study and making of media, this course is designed to have broad applicability to a variety of media-based professions. Among the concepts students will engage in this course are: neoformalism, semiotics, auteurism/authorship, genre theory, feminist film theory, theories of difference (including race, class, and sexuality/gender),

theories of national and transnational cinema, cultural history, realist and montage theories, behavioral studies, psychoanalytic and apparatus theory, reception studies, political economic and convergence theories of the cinema, and theories of the digital in cinema. Students will engage a selection of film styles: narrative, documentary, experimental, and animation; silent and sound, national and international. Students will analyze the cinema as an art form, and as a mass communications medium. Students will also gain knowledge of the history of theory and the history of criticism in the cinematic medium. During the course of their semester's work, students will use the tools of reading, discussion/presentation, analysis, examination, and particularly writing to develop performative skills in criticism. Students are expected to become proficient in the practice of criticism, as well as understanding the principles of criticism. In their summary work in this course, students apply the theories they have learned to cinema in various ways: in group projects, in individual research papers, or through multimedia and digital scholarship settings. Students are expected to demonstrate a synthesis of ideas and experiences from previous course work in cinema studies and media studies. In some iterations of this course, students will address a single overarching topic, such as "Authorship and the Cinema," through which the broad learning objectives and capstone nature of the course will be realized.

Enforced Prerequisite at Enrollment: COMM 250 or COMM 333

COMM 456: Media Criticism and Theory

3 Credits

Critical and theoretical approaches to the analysis of media and communication. To what extent does media (television, movies, print, radio, Internet, etc.) shape our awareness of not only the world around us but also ourselves as thinking human beings? Is it all a matter of perception and relative exposure to these media? How do we approach everyday interfaces with the immense number of media messages in both public and private spaces? Where do our opinions of the validity of both the informational and the aesthetic standards of media messages come from? In this course, we attempt to come to terms with the rise and apparent predominance of media as a dominant cultural institution.

Enforced Prerequisite at Enrollment: COMM 251 Enforced Corequisite at Enrollment: 5th Semester standing

COMM 457: Media Audiences and Contexts

3 Credits

Survey of the ways media attempt to influence audience reception and how audiences hold sway over media content. COMM 457 Media Audiences and Contexts (3) The course begins with an examination of how the mass audience is conceived as a statistical entity by analyzing quantitative methods such as the Nielsen ratings. Much of the course is then spent interrogating how this statistical information is used and by whom. If the audience is created as a commodity and is sold to advertisers, what ethical guidelines are in place? How do audience profiles influence the programs we see and consume? As media become more and more fragmented, how does the problem of audience as a commodity get resolved? Students utilize a case-study approach to explore a variety of audience problems and present their findings in papers, demonstrations, and exhibitions.

Enforced Prerequisite at Enrollment: COMM 100 or COMM 251.

COMM 458: Media Law and Ethics

3 Credits

The study and practice of key issues in media law and ethics, including libel law, conflict of interest, truth in advertising. COMM 458 Media Law and Ethics (3) An examination of the role of the mass media in American society in regard to the rights, responsibilities, and duties of practicing media professionals. The semester is almost evenly divided between law and ethics topics. Students examine current laws in mass media with the goal of preparing them to be lawful and responsible members of the profession. Law topics include defamation, privacy, intellectual property and protection of anonymous sources. Students also get an introduction to ethical theories and their practical applications in media industries. Topics include journalistic responsibilities, objectivity, conflicts of interest, invasion of privacy, and the ethics of persuasion and entertainment.

Enforced Prerequisite at Enrollment: COMM 100 or COMM 251.

COMM 459: Cultural Effects of Interactive and Online Media

3 Credits

Study of the global social impact and rhetorical limitations of converging media, emphasizing cross-cultural media influences. COMM 459 Cultural Effects of Interactive and Online Media (3) An examination of the various effects of digital media on society and culture. The nature of digital media affects content and production, the way people use media, and social interaction. Topics include convergence, the information society, the global village, and the various changes in the ways media producers do their work. Various aspects of changes including philosophical, economical, and political are examined with the goal of helping students understand how to prepare for future changes in media industries.

Enforced Prerequisite at Enrollment: COMM 251

COMM 460W: Reporting Methods

3 Credits

Techniques in reporting news and trends at the local, regional, and county levels. Emphasis on both deadline and interpretive reporting.

Enforced Prerequisite at Enrollment: COMM 260W
Writing Across the Curriculum

COMM 461: Magazine Writing

3 Credits/Maximum of 6

Students will learn about idea conception, writing, and editing of magazine stories. COMM 461 Magazine Writing (3 per semester/maximum of 6) Students will learn about idea conception, writing, and editing of magazine stories. They will walk through the idea process, including how to pitch their ideas to editors. They will learn about research and reporting for stories, and then begin the process of organizing and writing their material. They will write stories and then work with editors to rewrite and improve the story for publication.

Enforced Prerequisite at Enrollment: COMM 260W

COMM 461A: Digital Magazine Production

3 Credits/Maximum of 6

Students will be expected to develop a coherent editorial voice that will engage and educate their identified target audience. This voice will be embodied in a regularly updated web site which will be monitored and improved by a student team. Students will also be expected to manage a coordinated professional social media campaign to expand the reach of the publication well beyond the classroom. The structures in place can easily accommodate students from various campuses. This will allow easily for a diversity of content within a common enterprise.

Prerequisites: COMM 100; COMM 271; LA 101

COMM 462: Feature Writing

3 Credits

Reporting and writing the human interest article for newspapers and magazines. COMM 462 Feature Writing (3) COMM 462 teaches the fundamentals of reporting and writing feature stories for newspapers and magazines. Students learn reporting and writing techniques for various types of feature stories. The course emphasizes the development of sound journalistic judgment and proper ethical standards. Students write various types of features stories.

Enforced Prerequisite at Enrollment: COMM 260W

COMM 463: Newspaper Design

3 Credits

This course will cover newspaper design. Students will learn to solve design problems, edit photos, and work with industry software. COMM 463 Newspaper Design (3) This upper-division course will cover contemporary design theory, grid systems, typography, color and photography as they pertain to newspapers. Students will develop skills necessary to solve design problems associated with the editing process. Students will also learn to use photo editing and page layout software.

Enforced Prerequisite at Enrollment: COMM 260W

COMM 464W: Editorial, Opinion and Commentary Writing

3 Credits

Introduces techniques of editorial, opinion and commentary writing. COMM 464W Editorial, Opinion and Commentary Writing teaches the fundamentals of writing editorial, opinion and commentary articles. Students learn the techniques of gathering information and writing various types of opinion articles. The course emphasizes the development of sound journalistic judgment and proper ethical standards. Students write various types of opinion articles.

Enforced Prerequisite at Enrollment: COMM 260W
Writing Across the Curriculum

COMM 465: Television Reporting

3 Credits

Television news reporting and production. COMM 465 Television Reporting (3) COMM 465 provides an introduction to television news reporting and production. Students learn the techniques of reporting and writing news for television. They also learn the audio and video techniques required to produce television news stories. The course

emphasizes the development of sound news judgment and proper ethical standards. Students complete actual news assignments.

Enforced Prerequisite at Enrollment: COMM 360

COMM 466: Public Affairs Broadcasting

3 Credits

Students research, write, produce and direct public affairs shows and in-depth reports. COMM 466 Public Affairs Broadcasting (3) This is an advanced field production and reporting course focusing on the exploration of timely public affairs issues on the local, state and national level. Students learn to research a topic, conduct effective television interviews in the field, and produce in-depth reports with emphasis on solid broadcast writing, visual storytelling, editing, fairness, balance and accuracy.

Enforced Prerequisite at Enrollment: COMM 465

COMM 467: News Editing and Evaluation

3 Credits

Concepts and procedures involved in processing news for various news media, but with emphasis on print media editing. COMM 467 News Editing and Evaluation (3) The goal of the course is to qualify the student to be a proficient newspaper copy editor. These skills can be easily transferred to editing assignments on a Web site, in magazines and other publications, in broadcasting, and in public relations. Even if the student does not intend to become a copy editor, the course should help him or her do a better job of writing. The course emphasizes editing for accuracy, clarity, precision in language, and fairness of content. Students will learn about evaluating the relative importance of news and writing headlines, captions and other display elements. The course familiarizes the student with editing photographs and graphics and designing a newspaper page. Skill in editing is particularly important to the student majoring in print journalism. It is useful to anyone who regularly works with words. The student is evaluated through written work (editing copy, writing headlines and captions) and through quizzes, examinations, or other methods the instructor chooses to assess a familiarity with the theory and principles of the course. Because students need an opportunity to practice their skills under supervision, the course must be taught in a laboratory setting in which each student has access to a computer connected to the Internet. COMM 260 is a prerequisite. COMM 467 builds on the student's understanding of reporting and news writing techniques by teaching rigor in the use of language.

Enforced Prerequisite at Enrollment: COMM 260W

COMM 468: Graphic Applications in Print Communications

3 Credits

Issues, concepts, and practice identified with contemporary design strategies for print journalism, advertising, and public relations.

Enforced Prerequisite at Enrollment: COMM 260W or COMM 320

COMM 469: Photography for the Mass Media

3 Credits

Development of an informed and critical approach to photocommunication; individual and team projects, seminars, and critiques.

Enforced Prerequisite at Enrollment: COMM 269

COMM 470A: Convergent Media News Service: Newspaper Production

3 Credits

Practicum emphasizing newsgathering and reporting for newspaper and for additional media formats.

Enforced Prerequisite at Enrollment: COMM 260W

COMM 470B: Convergent Media News Service: TV

3 Credits

Practicum emphasizing television news package production for periodic campus news program and for additional media formats. Students must have completed COMM 260W and (COMM 242 or COMM 282) or receive permission from the program before enrolling in COMM 470B. Please complete the Prerequisite Override Form to request permission from the program to override a prerequisite and enroll in the course.

Enforced Prerequisite at Enrollment: COMM 260W and (COMM 242 or COMM 282)

COMM 470C: Convergent Media News Service: Radio and Online Publications

3 Credits

The digital revolution and cross media ownership has challenged all areas of communications, especially the electronic and print news media. Most media outlets now have an online presence along with their traditional operations. Increasingly news outlets are producing news packages for more than one media outlet, which can include online production of breaking news reports presented with text, images, movies and/or sound bites. Currently students preparing for news careers must have traditional news skills across media along with multimedia computer-based skills to develop versatility in reporting and production. This practicum in streaming radio and online news provides opportunities to produce pieces for streaming radio and online publications and also to reformat these pieces for other media outlets such as the newspaper or television. It will also give students the opportunity to produce news pieces suitable for a cross-media portfolio. Students must have completed COMM 260W and (COMM 270 or COMM 374) or receive permission from the program before enrolling in COMM 470C. Please complete the Prerequisite Override Form to request permission from the program to override a prerequisite and enroll in the course.

Enforced Prerequisite at Enrollment: COMM 260W and (COMM 270 or COMM 374)

COMM 471: Public Relations Media and Methods

3 Credits

Analyzing media and audiences for public relations purposes; planning, designing, and writing public relations communications; press relations and publicity methods. COMM 471 Public Relations Media and Methods

(3) COMM 471 introduces students to the methods used in public relations to generate news media coverage for organizations and individuals. The public relations practitioner must understand the goals of the client organization and its publics to establish effective and ethical communication between them. This course focuses on writing and is designed to assist students in developing and improving professional writing skills for public relations practice, in many forms and for a wide variety of media. Students will learn the importance of different writing approaches required for specific publics and news media organizations. In this course students learn to: (1) locate, read, and evaluate research materials; (2) develop clear, concise program objectives based on the organizations' or clients' goals and the results of their research; (3) determine materials that need to be developed and written to achieve the program objectives; (4) develop newsworthy story ideas; (5) write clear, concise copy that is accurate and logically organized; (6) write in a variety of formats commonly used in public relations practice, including: pitch letters, news releases, position papers, backgrounders, public service announcements; and (7) design media kits.

Enforced Prerequisite at Enrollment: COMM 260W and COMM 370

COMM 472: Public Relations Event Planning

3 Credits

Effective planning, organization, implementation and evaluation of events planning. COMM 472 Public Relations Events Planning (3) This course links the public relations theories and practices with skills and techniques required for effective events planning. Students will build on their understanding of public relations introduced in COMM 370 by working on projects that are designed to help them to develop skills in conceptualizing public relations events, designing events, selecting sites, analyzing audiences, budgeting, and promoting/marketing. Students will gain experience in event conceptualization and implementation through in-class exercises and discussions, and public events projects. These assignments will provide students the opportunity to develop portfolio materials.

Enforced Prerequisite at Enrollment: COMM 370

COMM 473: Public Relations Campaigns

3 Credits

Case studies and problems in publicity and public relations in industry, government, and institutions. COMM 473 Public Relations Problems (3) This capstone course in the public relations major is designed to provide the student with the opportunity to develop a comprehensive public relations/marketing communications campaign plan based on the four-step process of public relations programming. Those steps include formative research, objectives, programming, and evaluative research. Initially, students will critically analyze award-winning public relations problems, cases, and programs that will provide a foundation for understanding the public relations planning process. Students will be introduced to public relations and communications theories that provide the foundation for excellence in program development. The public relations campaign plan will be developed from the analysis of primary and secondary research sources. The campaign plan will begin with a situation analysis that includes the client's historical, financial, and competitive position in the marketplace. Previous public relations, advertising, and marketing communications programs will be reviewed and evaluated. Additional secondary research will include a content analysis of the client's news media coverage as well as an analysis of the psychographic and demographic profiles of previously targeted publics.

Account teams will design and conduct surveys and focus groups as part of the formative research required in setting the program objectives, strategies, and tactics. The public relations plan will require the development of a media plan, media objectives, production timetable, and budget for implementing the program objectives, strategies, and tactics. Students will apply their critical thinking skills and creative abilities to design and produce communication executions that will communicate the program message to the targeted publics. Those creative abilities include a working knowledge of writing, desktop publishing, photography, and graphic communication. The final phase of the public relations/marketing communications plan will include the design of evaluative research to measure the effectiveness of the program objectives. Those research methods will include content analysis, survey research, and focus groups. Students will work in account teams where each team will be responsible for developing a public relations counseling firm, where team members will produce a firm manual outlining the firm's mission statement, organizational policies, organizational chart, records of all meetings with clients, records of all firm meetings, time sheets for each firm member, a weekly summary of firm activities, project budget reports, bi-weekly evaluations of firm members, and a client presentation plan. The final public relations plan will be presented to the client for evaluation and critique. The final goal of the course is to provide students with the technical and managerial knowledge and experience required for effective public relations program design and implementation.

Enforced Prerequisite at Enrollment: COMM 370 and COMM 420 and COMM 471

COMM 474: Depth Reporting

3 Credits

Exploration of strategies for developing indepth newspaper or magazine articles, with an emphasis on gathering information and long-form writing. COMM 474 Depth Reporting (3) This is an upper-level undergraduate course designed to prepare students for writing in-depth newspaper or magazine articles, which extends beyond the basics of writing and reporting techniques emphasized in courses such as News Writing and Reporting, Reporting Methods, and the Feature Article. Depth stories are comprehensive accounts that go well beyond a basic news story or feature. An emphasis on longer, more comprehensive stories that require extensive research and interviews gives students an opportunity to be more than technicians following a rigid set of journalistic guidelines or principles. Depth stories require journalists to spend days, weeks or months exploring and investigating a topic and writing a lengthy story that must be cemented with effective transitions.

Enforced Prerequisite at Enrollment: COMM 260W

COMM 476: Sports Writing

3 Credits

Techniques in sports reporting and writing for media. COMM 476 Sports Writing (3) This is an upper-level course designed to prepare students to write sports stories for news outlets. These specialized stories - including contest coverage, analysis, columns, enterprisers, profiles, and sidebars - require skills that go beyond those taught in classes such as News Writing. As the popularity of high-school, college, and professional sports grows, the sports section has become one of the most widely read sections of newspapers. Many magazines as well cover a variety of sports. Modern sports writing requires sportswriters to not only attend games and interview coaches, but also to use statistics, profile sports figures, and explore trends in sports industry. Through a variety of

story assignments, the course provides students with the skills that will prepare them for the demands of being modern sportswriters. The course grounds them in the ethical principles that all journalists must follow.

Enforced Prerequisite at Enrollment: COMM 260W

COMM 477: Sports Broadcasting

3 Credits

Techniques of sports broadcasting for radio and television. COMM 477 Sports Broadcasting (3) This is an upper-level course designed to prepare students to broadcast sports events and news. These specialized broadcasts - including play-by-play, studio sportscasts, field reporting, and features - requires myriad skills that go beyond those taught in classes such as Broadcast Journalism I (Radio News Reporting) and Broadcast Journalism II (Television News Reporting). As the popularity of high-school, college, and professional sports has exploded, sports shows have become some of the most popular on radio and television. Myriad networks and shows are devoted to sports coverage exclusively. But increasingly knowledgeable sports viewers demand more from sports broadcasters than game coverage and opinion pieces. Modern sports broadcasting requires journalists to not only attend games and interview coaches, but also to use statistics, profile sports figures, and explore trends in sports. Through a variety of story assignments, the course will give students the experience that will prepare them for the demands of being modern sports broadcasters. And it will ground them in the ethical principles that all journalists must follow.

Enforced Prerequisite at Enrollment: COMM 260W and COMM 360

COMM 478: Sports Information

3 Credits

Techniques of effective media relations used in a sports information office. COMM 478 Sports Information (3) This is an upper-level course designed to prepare students for a specialized form of modern media relations, sports information. Sports information professionals combine skills of both journalists and public relations specialists, so the advanced techniques go beyond those taught in introductory classes such as News Writing and Public Relations Methods. As the popularity of high-school, college, and professional sports has exploded, sports information professionals have increasing demands put on them. More and more journalists, working for a variety of publications and broadcasts, cover sports today. Moreover, the growing complexities of modern sports - from the impact of drugs to the enormous salaries of many athletes - means that sports information professionals have to provide more than simple information on athletes, coaches and sporting contest. Through a variety of assignments, the course will provide students with the experience that will prepare them for the demands of being sports information professionals. And it will ground them in the ethical principles that all media relations specialists must follow.

Enforced Prerequisite at Enrollment: COMM 260W

COMM 479: Telecommunication Economics

3 Credits

Economic, regulatory/business issues in the design/operation of large-scale telecommunication networks such as telephone, cable, wireless, and computer networks. COMM 479 Telecommunications Economics (3) The objective of the course is to help students understand the economic, regulatory, and business aspects of the physical infrastructures

underlying modern telecommunications. We will discuss the large-scale technological systems such as telephone, cable, wireless and computer networks over which media and telecommunications services are delivered today. We will not be discussing the content offered over telecommunications networks as much as the infrastructures themselves: the conduits over which information is delivered to the home and the workplace. With technological convergence and regulatory changes, telephone, cable and wireless networks have acquired the capability to provide services earlier reserved exclusively for one or the other network. For example, we can now access telephone services over wireless networks or over the Internet. Similarly, Web content is available with the traditional telephone modem, as well as over cable, wireless and even satellite networks. In the not too distant future, it may become more meaningful to talk in terms of consumer network to a broadband conduit for all types of content, rather than to particular services such as cable television or long-distance telephony. It thus becomes necessary for those who wish to participate in the telecommunications industry of the future to have a clear understanding of the way large-scale telecommunications infrastructures are put together and operated. Existing courses in the telecommunications curriculum provide instruction in the technology and content aspects of the media and telecommunications industries. The proposed course will complement these existing courses by focusing on the economic, regulatory and business aspects of large-scale networks, in a historical and policy context. What are the mechanisms by which large-scale telecommunications systems such as telephone, cable, wireless and computer networks are deployed over time? What are the costs involved in the initial deployment and expansion, and how do they influence policy? How do planners evaluate and choose between alternative technologies of delivering services? What are the economic justifications for and against government regulation of networked technologies? How do companies charge for services provided over networked systems? What problems do we face as more and more services—such as real-time gaming and interactive television—are added to telecommunications networks, and what are some of the current proposals to solve these problems? These are some of the questions that will be discussed in class.

Enforced Prerequisite at Enrollment: COMM 180 and COMM 380 or permission of the program.

COMM 480: Television News

6 Credits

Produce a weekly television newscast. COMM 480 Television News (6) COMM 480-Television News will help prepare students for a career in television newscast content, presentation and production with a strong multimedia component. Students will gain experience in all aspects of producing a newscast. The class will meet Mondays and Fridays, but they will be expected to produce content on a daily basis, whenever and wherever stories in Centre County happen. After a few weeks of training, we will produce the Centre County Report each week with elements BOTH ONAIR and ONLINE. This is NOT a newscast focusing only on Penn State activities. Students must be prepared to produce a newscast that informs the larger audience of Central Pennsylvania. COMM 480 needs the best students to produce the Centre County Report. Students will primarily serve as the news-editorial side of the newscast (anchors, reporters, sports, producers and some in-field photojournalists and studio camera operation) or as the technical team (director, technical director, audio, graphics, studio camera operator AND field production/photojournalists). By the end of this course, students will have the skill set to: 1. Pursue a career in television news 2. Write solid television news scripts 3. Enhance your storytelling ability 4. Enhance your ability to produce and technically

support a newscast 5. Understand the importance of multimedia 6. Produce an effective resume tape

Enforced Prerequisite at Enrollment: COMM 465

COMM 481: Advanced Multimedia Production

3 Credits

Advanced work in multimedia production using web authoring, video editing, audio editing, image editing and animation software. COMM 481 Advanced Multimedia Production (3) This course builds on the foundations of multimedia production developed in COMM 270 giving students the opportunities to create multimedia website projects. Students will apply advanced multimedia concepts and techniques to website production and demonstrate versatility in multimedia software. Working individually and in teams, students will develop projects for clients using multimedia software, including web authoring, video editing, audio editing, image editing and animation software. These projects will be uploaded to the World Wide Web, and will serve as portfolio materials for the students. This course emphasizes skills development in multimedia and visual media in support of program objective to help students develop cross-media skills and versatility in media.

Enforced Prerequisite at Enrollment: COMM 465 or COMM 269

COMM 482: Brand Storytelling

3 Credits

This course, in conjunction with the Penn State Office of Strategic Communications or other non-profit groups will teach students how to combine advanced production skills and advanced branding knowledge with social media strategies and brand storytelling techniques to engage and inspire a target audience. COMM 482, through a combination of advanced production workshops, lectures, exercises and assignments students will learn how to create engaging digital content that helps deliver a specific brand message. Students will work directly with a client to develop a semester-long storytelling project. This collaboration will span the entire production process to ensure that the creative vision of the students aligns with the needs of the client. By participating in advanced production workshops, students will be expected to learn how to use professional quality production equipment. They will learn how lens selection and lighting can impact storytelling. Students will interact with creative professionals to understand how brand identity and messaging will impact their assignments. Students will gain hands on experience working in a client driven environment. They will be expected to develop a creative pre-production plan, successfully pitch that plan to a client and produce and deliver a professional quality multi-media project. During this process students will learn advanced branding techniques. They will learn how social media and digital platforms are utilized to reach the desired groups and they will be expected to work effectively in a team environment.

Enforced Prerequisite at Enrollment: B or better in COMM 242 or B or better in COMM 282 or COMM 320 or COMM 370

COMM 483: Wireless Communications Industry

3 Credits

A broad examination of the wireless phone industry including its development, current structure and future. COMM 483 Wireless Communications Industry (3) Since the 1990s, the wireless industry has transformed "how" people communicate. The ability to offer mobile

communication services to consumers allowed the telecommunications industry to rapidly expand and create new products and services. Throughout this period of rapid growth, new players emerged from relative obscurity while incumbent telecommunication providers weighed the benefits & drawbacks of deploying this new technology. Although wireless devices have become pervasive throughout the United States, few people appreciate the technology and partnerships that are required to offer wireless services for millions of customers. This course will address a variety of wireless topics to allow students to develop a greater understanding and appreciation of the wireless industry. In terms of course design, there are three distinct elements: (1) The early days of the wireless and the key figures and events that shaped an industry, (2) A current state view of the tier 1 carriers, device manufacturers and product offerings, (3) The emerging trends in the wireless industry and the potential impact on consumer products and services. By the end of this course, the objective is for students to view the wireless industry quite differently. Students will understand the relationship between wireless spectrum, carrier, device manufacturer and products. The industry landscape will be clearer to students and they will be well positioned to pursue a career in wireless.

Enforced Prerequisite at Enrollment: COMM 180 and COMM 380 or permission of the program.

COMM 484: Emerging Telecommunications Technologies

3 Credits

Overview of technology of electronic media and related societal issues. COMM 484 Emerging Telecommunications Technologies (3) COMM 484 introduces advanced topics related to the technologies in telecommunications and information processing. The course investigates old, new and prospective technologies primarily through analysis of incumbent or emerging companies bringing products and services to market. Students will examine materials not customarily used by undergraduates including stock prospectuses, company annual reports, and Internet searches. The class will consider recent strategic alliances, mergers and acquisitions (whether consummated or not) in the context of whether and how technologies drove the deal.

Enforced Prerequisite at Enrollment: (COMM 180 and COMM 280) or MGMT 215 or ENGR 310 or Permission of program

COMM 484A: Wireless Devices and Global Markets

3 Credits

Wireless devices and applications have become pervasive throughout the world. Global wireless carriers continue to evolve their networks to provide increased access and data speeds for their subscribers. To leverage the increased network capabilities, device manufacturers have responded by introducing Smartphone wireless devices that are feature-rich, complex and dramatically influence the way subscribers access and download wireless applications. This course will specifically focus on the design challenges facing the major wireless device manufacturers across the world. Students will work in teams and utilize IBM's Design Thinking methodology to address a broad array of usability challenges that impede user adoption and threaten long-term success in the global marketplace. Students will also develop an appreciation for the intense competition that exists in the wireless device market as well as how swiftly market conditions can impact the long-term viability of a device manufacturer.

Enforced Prerequisite at Enrollment: (COMM 180 and COMM 280) or MGMT 215 or ENGR 310

COMM 486W: Telecommunications Ethics

3 Credits

Drawing on normative theory and political philosophy, this course explores problems in ethics and social responsibility in telecommunications. COMM 486 Telecommunications Ethics (3) In this course the instructor and students work together to consider and analyze ethical issues in contemporary telecommunications practice. Using the tools of ethical and political philosophy, students will discuss current cases in often long-standing problem areas such as truth, privacy and content control. The intention is that all involved will develop a greater sensitivity to the ethical dilemmas confronting telecommunication professionals and a greater ability to evaluate media performance. The course also strives to help students gain a deeper insight into their own ethical principles and become more keenly aware of the foundations and professional implications of those principles. In the first few weeks of the semester, students will review the major ethical theories and theorists. They will discuss the nature and types of normative analysis, including the major systems of ethical thought, the process of ethical reasoning and the meta-ethical problems of definition and justification. They will also explore the foundations of political philosophy as they relate to the role of telecommunications industries in democratic society. Related topics will include the nature and history of professional norms and values, the development of ethical codes within specific industries and existing organizational processes for the applications of those standards (the clearance process). In the remainder of the semester, students will discuss case studies involving various ethical dilemmas in professional practice across all segments of the relevant industries including, broadcasting, cable, telephony and the Internet. Special attention will be given to contemporary problems in areas such as social networking and Internet search companies. Topics will include: content control in entertainment and advertising, including issues involving race, gender and age; freedom of expression; privacy; intellectual property; international and cross-cultural issues; truth and anonymity; system access and power; questions of civic engagement; image ethics in a digital age; and broader philosophical questions about the inherent social nature of telecommunications technology. There are, of course, no 'correct' answers in these cases; stress is placed on the process of analysis. Students will be evaluated on their ability to articulate their assumptions and formulate coherent ethical rationales based on those assumptions. COMM 180 is a prerequisite for this course.

Enforced Prerequisite at Enrollment: COMM 180 and COMM 280 and COMM 380 or permission of the program.
Writing Across the Curriculum

COMM 487W: Advanced Telecommunications Management and Leadership

3 Credits

Strategic management, leadership and ethics issues including marketing, financing, entrepreneurship, and innovation. COMM 487 Advanced Telecommunications Management and Leadership (3) This senior-level capstone course discusses a range of strategic management, leadership and ethics issues in telecommunications and media firms. Learning objectives include creative problem-solving, critical thinking and writing, basic financial literacy and management considerations in ethics, globalization, diversity and free speech. Specific areas of emphasis include marketing, programming, customer service, technology adoption,

finance and strategic planning. Broadly, the aim is the honing of critical and creative problem solving skills and the enhancement of collaboration and communication skills. The course also stresses the fiduciary and social responsibilities that adhere to the telecommunication manager's role.

Enforced Prerequisite at Enrollment: COMM 180 and COMM 280 and COMM 380 or permission of the program.
Writing Across the Curriculum

COMM 488: Writers' Seminar

3 Credits/Maximum of 99

Workshop designed for advanced students interested in professional writing, involving extensive mutual and self-criticism. COMM 488 COMM 488 Writer's Seminar (3) This course is designed for advanced students interested in professional writing in the theatre, screen, and media arts. The class work involves submission and extensive revision of a variety of written projects. Revisions are based upon direct feedback from the instructor, as well as mutual critiques from classmates. Students will also learn the technique of self-criticism of their writing and in doing so develop a sense of their own writing style and subject matter preferences.

Enforced Prerequisite at Enrollment: COMM 230W or COMM 260W

COMM 489W: Advanced Telecommunications Topics

3 Credits

Exploration of advanced topics related to the telecommunications industries. COMM 489 Advanced Telecommunications Topics (3) This capstone course provides students with an in-depth exploration of current issues facing the telecommunications industries. Students will have the opportunity to synthesize and apply the concepts and skills they have acquired in their previous telecommunications courses. Topics vary by instructor and semester and may include: intellectual property, privacy and surveillance, technology applications, children and media, social impact of telecommunications, impact of telecommunications on democracy, environmental impact of telecommunications, and the relationship of telecommunications to economic development. Students must have senior standing and completed all required core courses in the major before taking this course.

Enforced Prerequisite at Enrollment: COMM 180 and COMM 280 and COMM 380 or permission of the program.
Writing Across the Curriculum

COMM 490A: Convergent Media Seminar

3 Credits

This seminar examines media convergence issues, trends, and effects on society through discussions, presentations, and creation of a capstone project.

Enforced Prerequisite at Enrollment: COMM 470A or COMM 470B or COMM 470C

COMM 491A: International Telecommunications - Travel

3 Credits

This course focuses on how a nation or region's unique cultural and political environment shapes the development and impact of its media

and telecommunications industries, and how those industries in turn influence the nation's or region's cultural and political trajectory. The course includes one week of travel to the country or region being studied during the semester. A passport and an additional mandatory fee to cover partial travel expenses is required. Students will explore how information and communication technologies (ICTs) such as computers, telephone networks, mass media, and the Internet develop within a particular cultural context and how they influence the socio-economic and political development of a society. Students will study the historical development of telecommunications within the country or region being studied and examine how that nation or region's geographic, cultural and political environment shapes its response to technological change and where future opportunities may lie. The class will also explore ways ICTs can be used to foster economic development, human rights and international development. Ultimately, students will come away with a better understanding of how ICTs influence society and how the adoption and use of ICTs is grounded within a particular cultural context.

Enforced Prerequisite at Enrollment: COMM 180

COMM 492: Internet Law and Policy

3 Credits

Development in the law, policy, and business of Internet-mediated communications and commerce; emphasis on impact on existing legal, regulatory, and economic models. COMM 492 Internet Law and Policy (3) This course will provide a forum for students to investigate and debate ongoing or anticipated conflicts in Internet-mediated telecommunications, information processing and commerce. The resulting confrontations may stem from technological innovation, real or perceived changes in the marketplace, or the imperatives of prevailing regulatory, political or economic philosophies. Conflict resolution often results from persuasive advocacy, coalition building, and accommodation of outsiders with new perspectives or entrepreneurial visions, rather than applying legal precedent or treaty interpretations. Internet mediation has the potential to change how we communicate, educate, inform, entertain, and transact business. Technological and marketplace convergence means that Internet mediation will have a profound impact on many legal, regulatory and economic constructs, i.e., the preexisting templates we use to describe and understand the communications process and impact on individuals and society. The course also will examine the growing body of cases that have addressed aspects of Internet-mediation in each of the following general categories: *Speech-commercial and political speech, obscenity, forums analysis *Legal and Regulatory Consequences of Convergence-the juxtaposition of telecommunications and information processing technologies, markets and regulatory regimes *Governance and regulation of the Internet-whether the need exists for government intervention on such matters as numbering and domain registration *Intellectual Property Rights-the impact of Internet-mediation on copyright, trademark and patent laws *Electronic Commerce-the law and policy of Internet-mediated transactions, privacy and encryption concerns *Equity, Competition Policy and Consumer Protection Concerns-what, if anything, should governments do to remedy market failures

Enforced Prerequisite at Enrollment: COMM 180 or COMM 271 or MGMT 215 or ENGR 310

COMM 493: Entrepreneurship in the Information Age

3 Credits

Provides students with knowledge/tools to take their innovation/technology idea through the business planning, capital, and operations

budgeting processes. COMM 493 Entrepreneurship in the Information Age (3) COMM 493 provides students with knowledge and tools to take their own idea for a media or communications innovation and determine the feasibility of launching it as a small business. Students bring their own ideas for a communications product or service. They work through the market feasibility, business planning, capital and operations budgeting processes to finally researching and seeking start up capital. This course is designed for both students plan to pursue careers as entrepreneurs and those who wish to learn more about small business management in the information age. Topics include entrepreneurship, business planning and budgeting, starting and managing a small media or communication technology firm, economic history of media, telecommunications and information innovation, trends and opportunities in media and information sectors, high tech start up legal and employment issues, financing options, overview of venture capital, COMM 493 and market capitalization, market feasibility analysis. Cases of recent successes and failures in the information and media sectors are used to illustrate principles of business planning, market and financing trends and entrepreneurship.

Enforced Prerequisite at Enrollment: COMM 180 and COMM 380 or permission of program.

COMM 494: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

COMM 494H: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

COMM 495: Internship

1-3 Credits/Maximum of 6

Supervised practicum with a variety of communications-specific entities including but not limited to digital media outlets, newspapers, broadcast/cable stations and networks, public relations agencies, advertising agencies, full-service marketing firms and film/video production companies.

COMM 495A: Internship

1-6 Credits/Maximum of 6

Supervised practicum with a variety of communications-specific entities including but not limited to digital media outlets, newspapers, broadcast/cable stations and networks, public relations agencies, advertising agencies, full-service marketing firms and film/video production companies.

COMM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

COMM 496H: Independent Studies

1-6 Credits/Maximum of 6

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses. These are generally used as thesis credits for undergraduate students in the Schreyer Honors College with the area of honors in one of the majors in the College of Communications. The honors thesis may take the form of a scholarly project involving the examination of some aspect of the field of communications, or the thesis may involve the production of a professional project.

Honors

COMM 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

COMM 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

COMM 499: Foreign Study--Mass Communications

1-12 Credits/Maximum of 12

Study of mass communication systems and practices in selected foreign countries, by individual or group instruction.

International Cultures (IL)

Community and Economic Development (CEDEV)

CEDEV 430: Principles of Local Economic Development

3 Credits

Concepts, strategies, and techniques of local economic analysis, planning, and development; case studies and decision-making exercises. CEDEV 430 CEDEV (AG EC) 430 Principles of Economic Development Planning (3) This course is designed to introduce the issues giving rise to concern for rural and regional economies, and the theories, concepts and tools of rural and regional economic development. The goal is to integrate theory and practice and apply them to economic development problems. Tools are presented in a "how to" manner. Topics include current issues in rural economies, the economic view of rural development; business retention, expansion and location; entrepreneurship and its role in the economy; understanding the local economic structure and the forces of change; introduction to economic growth theories; export base theory and economic base analysis; the role of labor and capital in development; techniques of market area, central place, shift-share and input-output analysis; policies of local economic development and growth.

Prerequisite: introductory course in economics**CEDEV 452: Community Structure, Processes and Capacity**

3 Credits

Social organization, processes and change in communities; use of sociological principles in analysis of community problems and development. CEDEV 452 CEDEV (R SOC) 452 Rural Organization (3) This course combines an introduction to the social theories of communities with real-life examples of applications to understanding community problems and concerns. The focus is on the special circumstances facing small towns and rural communities, but the concepts are applicable in all communities, from urban neighborhoods to suburbs. Topics covered include local community in a global economy, power and decision-making, the role of governments and other social institutions, development of community and the importance of building social infrastructure as well as economic and physical infrastructure, multi community collaboration and building sustainable communities. Those taking the class will gain experience in conducting a case study of a small Pennsylvania community, build skills in working in a team, and gain understanding of the complexity of factors that influence community (and your own) well-being. If your future career involves operating within a community setting this course can increase your knowledge of that setting and how to function within it. And, even if you don't plan on working with communities in your job, you will be living in a community. This course can help you to understand the ways that you can contribute to improving your own quality of life by becoming involved in your community. Grades in this class are based on the community case study report, take-home mid-term and final exams, short team exercises, and class participation. Graduate students taking the course also are required to write reaction papers to three different topics during the semester.

Enforced Prerequisite at Enrollment: 6 credits in RSOC or SOC or PSYCH

Community Environment and Development (CED)

CED 102N: Wicked Problems Like Inequality, Sustainability & Climate Change: What's the Right Thing to Do?

3 Credits

Many of the most pressing problems facing humankind, like inequality, sustainability & climate change, are known as Wicked Problems; they are complex with many interconnected components, are difficult to clarify or define, involve different stakeholders with very different views, and often are intertwined with other major problems. They require working within a social and ethical context because their resolution typically requires individual and institutional change, and they are relentless; Wicked Problems can't be solved "once and for all." It is easy to feel overwhelmed by such problems, as if little can be done. Yet there are ways to work proactively and effectively on such problems, 'living your solutions locally.' This discussion-based interdomain course explores how people are addressing Wicked Problems, examining the 'Right Thing to Do' from several dimensions, including (1) what is ethically appropriate to do in response to a Wicked Problem (and how perspectives on this vary); and (2) the social and behavioral means people use to address such problems. In the course students explore the complex nature of Wicked Problems, including how these are shaped by social, political, and other factors. The rules matter. Students then learn major concepts of justice which commonly are applied to such issues, how these views vary across people affected by the problem, and the importance of recognizing other peoples' perspectives. Students use case studies to explore and critique

strategies for engaging Wicked Problems, and how these are used by people working to address these issues. Finally, students work together in small learning teams to analyze a Wicked Problem of their choice, including how various stakeholders view the problem and its potential solutions, and how practitioners are addressing the problem through social and behavior means.

CED 109N: Gentrification in Everyday Life

3 Credits

The concept of *gentrification* offers a framework to understand the rapid urban and rural transformations that have occurred over the past decades all over the world. Since the 1960s, the definition

of gentrification as displacement of the working class by the upper-middle class (the "gentry") has evolved to become more comprehensive and open, recognizing the 21st-century forces of globalism, capital accumulation, class reconfiguration, and landscape transformation. Gentrification is mappable as a structural and public policy force similar to suburbanization, forming one of the major historical trends shaping global cities in the twentieth and early twenty-first centuries. In the first part of the course, students will learn about and identify global gentrification trends in the Global North and Global South using global data. These trends will be explained as a joint effort of cities and investors to remake the social class structure and urban landscapes. Social theory and cultural studies will be used to explain ethical aspects and social mobilization against gentrification. In the second part of the course, different types of gentrification will be reviewed, as well as survival strategies of communities experiencing adverse consequences of gentrification. This is not to say that gentrification cannot improve communities or energize them to curtail unrestrained gentrification. Students will learn to analyze situations where there is debate and uncertainty about gentrification. Next, students will apply their insights to a city of their choice anywhere in the world, using web-based mapping technologies, to develop basic skills in gentrification research. Finally, students will conduct basic community research to discover the everyday lived experiences of a gentrifying community they are familiar with. The purpose of these exercises is for students to learn about the many perspectives and uncertainties that communities, planners and investors must negotiate. The course will end with identifying options for democratic deliberation among communities, government, and investors for creating just landscapes for the future.

CED 152: Community Development Concepts and Practice

3 Credits

Community development is broadly recognized as a process by which places (cities, small towns, neighborhoods) and the people in them, improve their economic and/or social well-being. Health of the environment and sustainable use of natural resources ensure the long-term well-being of human populations and so are central to sustainable community development. The practice of community development requires the ability to identify and understand the interrelationships of economy, society and environment locally, nationally and globally. Community development hinges on the capacity of local communities and residents to influence and determine their own futures. Students will gain an introduction to the concepts and models of community development and will become familiar with the roles of community development practitioners in developed and developing country settings. They will be able to identify the consequences of development strategies for social, economic and environmental well-being, focusing on the interrelationships of these aspects of development. Students will be introduced to strategies to identify capacity and resources available in communities and those that need to be enhanced. Models of decision-making will be introduced and students will work in teams in class with a focus on successful team functioning, identifying commonalities and shared interests to foster decision-making, and being able to extend that experience to working with groups in a community. Students will

gain knowledge and understanding of the relevant concepts, processes and practice through readings and in-class lecture and discussion. Case studies of specific community development issues will give students the opportunity to apply the concepts and skills they learn in class, and to work in teams where students take on perspectives of different stakeholders and attempt to reach a resolution. Examples will be used throughout the course to portray important concepts. This knowledge and associated skills can be used to form the basis for further training and a career in community development or to provide a basic understanding for those interested in volunteering in their own community.

CED 155: Science, Technology and Public Policy

3 Credits

The overarching course objective is for students to understand the roles of science and technology in sustainable development, including public policy formation and implementation. The course consists of three parts. Part I is an introduction to how science has become such a powerful form of knowledge and how it informs public policy. The role of politics, skeptical scientists, media, and citizens on the science-policy interface are discussed as well. Part II deals in depth with theoretical concepts explaining the complex relationship between science, technology, and public policy. In part III we will discuss how researchers, policymakers and the 'public' can nevertheless work together to find solutions to actual sustainability problems. It is expected that after completing this course, students can critically review the factors which shape and constrain the use of science and policy in addressing pressing issues in their field of interest in an academic fashion.

GenEd Learning Objective: Soc Resp and Ethic Reason

CED 160: Introduction into Ethics and Issues in Agriculture

3 Credits

This course covers ethics and the social contract to include substantive ethical theories focusing on rights-based ethical theories (libertarianism and egalitarian theories) and consequentialist theories (utilitarianism and axiology). These theories assist in conceptually defining levels of participation and consent in democracy. This course explores the circumstances in which rational persons and political groups historically agree to be bound in collective decision making. The primary focus by examines four separate ethical themes illustrating why and how individuals accept a variety of terms. The course highlights philosophical/ethical decisions related to agriculture issues during the history of the United States. Issues range from non-interference rights to opportunity rights dealing with food, fiber, natural resource and environmental issues. Procedural theory emphasizes the formation of legitimate and defensible rules rather than ethics. Policy choices are assumed to be legitimate and defensible as long as individuals follow the rules/procedures for decision making. The content of this course meshes the procedural

and the substance theories found throughout historical debates in agriculture communities. The course identifies traditional agrarian problem identification, policy formation, policy adoption and funding, program implementation and program evaluation. How ethics figures historically in agriculture policy processes is applied in a variety of case studies and debates as well as selected readings. The course includes an examination of the ethics of when, how and where the policy process historically influenced agriculture public policies. The course emphasizes the need to critically think about various points of view expressed by various conflicting authors.

CED 201: Introductory Environmental and Resource Economics

3 Credits

Apply principles of economics to analyze environmental protection policies and natural resource use decision. Examine contemporary policy issues. E RRE (AG EC) 201 Introductory Environmental and Resource Economics (3) An introduction to the concepts, theories, and applied methods used in the economic analysis of environment and natural resource issues. The course covers topics such as the principles of market efficiency, why the market often fails where environmental and natural resource issues are concerned, and environmental policy prescriptions and tools designed to correct this market failure. These principles and tools are explored with respect to air and water pollution, management and use of renewable natural resources such as forests and fisheries, and the unique problems of managing nonrenewable resources such as minerals and oil. The course aims to give students an understanding of how traditional economic principles can be used to suggest and evaluate possible responses to the environmental and resource problems facing society.

Enforced Concurrent at Enrollment: AGBM 106 or CMPSC 203 or ERM 300

CED 230: Development Issues in the Global Context

3 Credits

Local communities - in both developed and developing countries -- are influenced by strong global forces that affect the well-being of their residents. Community economic development is one approach to enhance improve economic outcomes. This course will use an issue-oriented approach to help students understand economic development patterns and resultant issues in the U.S. as compared to what is observed and what is of critical concern in other places. Topics will include the concept of globalization, economic restructuring trends, investment in human capital and the ability to retain this often mobile form of capital, migration and change in patterns of migration, and environmental effects of development in different contexts. Each year that the course is taught, there will be a focus on patterns of economic development by region in the U.S. but with comparisons to three other selected countries -- one in Latin America, one in Asia and one in Africa. Students will be encouraged

to compare and contrast economic and related social issues that arise in these contexts, with particular emphasis given to recent economic trends and events and to the rate of change compared to the past.

Enforced Prerequisite at Enrollment: ECON 102 or RSOC 11 or SOC 1

CED 252: Anti-Racist Theory and Practice in Community Work

3 Credits

The career path for many students in the CED program will position them to work in neighborhoods and communities where people come from a diversity of backgrounds, often different from the students' own background. Without proper training in histories of racism and marginalization as well as how those practices continue today, students are likely to perpetuate those harms within the communities they intend to serve. This course addresses issues of race, racism, and privilege, helping students develop a critical lens on community development through exploring questions such as "who is developed and by whom?"; "who has decision making power in the community development world?" and "what does sustainability mean, and whose experience or knowledge counts in working to build more sustainable futures?" The broad theme of social justice is explored by critically analyzing current trends and ethical issues and their implications. Additional focus is directed towards how structural and institutional conditions affect the opportunities and well-being of different populations (advantaged and disadvantaged groups) in society. While this course is primarily focused on the US context, there is also discussion of international issues, especially how race and racism impact media coverage and societal responses to world events impacting different groups. Students will have the opportunity to learn about and engage with community development issues related to race, racism, oppression, and privilege in State College and/or in their home communities through different course assignments. After taking this course, students should feel better equipped to deploy an equity lens in their educational and community-based experiences and practices. The learning objectives and themes of this course are reinforced throughout upper level CED courses so students are able to carry this knowledge and skills into their future professional lives.

Enforced Concurrent at Enrollment: CED 152

CED 275: Community, Environment and Development Professional Seminar

1 Credits

The CED Professional Seminar helps students learn how to be successful in the CED major and in their future professional careers. The emphasis is on career opportunities, important skills to learn and hone, and tailoring the major to fit their future professional interests. The course operates similar to a lab, with most work done in the classroom. It includes frequent interaction with CED professionals from a variety of organizations and topical areas, and hands-on skill training in facilitation and community-process techniques.

Enforced Concurrent at Enrollment: CED 152

CED 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CED 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CED 309: Land Economics and Policy

3 Credits

Land is a key natural resource for society. This course uses economic analysis to examine land use and land use policy, considering how the spatial configuration of landscapes changes in response to changes in land prices, population growth, human preferences, the environment, markets, and institutions. Given current issues including the twin problems of urban sprawl and land abandonment, the course will also examine the role of land use policy and specific programs to guide and provide greater public control over land use decisions, taking into consideration environmental practicality, economic feasibility, and institutional acceptability. Students will gain an appreciation of the importance of land as a resource, and how to use economic tools to understand current land use issues. Knowledge will be gained of the relevant theories, trends and policies through readings and in-class lecture and discussion.

Enforced Prerequisite at Enrollment: (ECON 102 or AGBM 101) and (GEOG 160 or GEOG 260)

CED 327: Environment and Society

3 Credits

Environmental and natural resource problems are not only biophysical in nature but intersect with social, political, economic, belief, value, and knowledge systems. The goals of this course are to introduce students to sociological questions that address the sources and implications of environmental and natural resource problems. The course focuses on the ways that social and environmental systems intersect, and how they are mutually constitutive. The course introduces students to the societal systems that create and exacerbate environmental problems (such as market processes, consumption patterns, political institutions) and how people respond to these problems (environmental concern and beliefs, individual and organizational behavior, social movements, green markets, political change). After taking this course, students should be better prepared to identify core systemic causes and potential pathways to address complex environmental and natural resource problems from local to global scales.

Enforced Prerequisite at Enrollment: RSOC 11 or SOC 1

CED 329H: Intermediate Environmental & Resource Economics (Honors)

3 Credits

This Honors course focuses on intermediate principles of environmental and natural resource economics, with strong emphasis on policy analysis and applications. The central focus in any economics course is how best to allocate scarce resources and this holds true for this course as well. However, in this course the goods and services we will talk about differ from those in other economics courses in that there is typically no market in which to trade them - e.g., air and water quality or a scenic view. Thus, it may be the case that government policies are needed to maintain and enhance their quantity and/or quality. The course is structured around a number of broad thematic areas with individual book chapters, papers,

class discussions, and assignments used to learn the material. The first two parts provide a review of micro and environmental economic theory, and an overview of how economists think about environmental issues. The third section focuses on benefit-cost analysis and valuation issues, and the fourth section looks at government intervention and policy. The final section(s) focus on specific topics in environmental and natural resource economics and related policy issues with the general goal being to provide students a better understanding of current issues related to the environment.

Enforced Prerequisite at Enrollment: (MATH 110 or MATH 140) and CED 201 and ECON 302

Honors

CED 360: The Corporation and Social Responsibility

3 Credits

The corporation has emerged as perhaps the most powerful institution in the world in the 21st Century. A recent estimate listed 31 nations and 69 corporations among the 100 largest economies in the world. These circumstances lead reasonable people to ask how corporations can be held accountable when many of them command more resources and are nimbler than most of the world's governments. This course explores the historical and legal dimensions of the corporation and its contemporary social, environmental, and economic impacts and responsibilities. It further considers the internal and external factors that shape corporate decisions on social responsibility. The internal dimensions that will be discussed in the course include decisions made by top management, relationships between labor and management, and the capacity for lower management and laborers to influence company policies and practices. The external influences will include labor and community organizing, shareholder activism, government regulations, consumer activism, and various government entities to shape corporate policies and practices.

Enforced Prerequisite at Enrollment: 6 credits of CED

CED 375: Community, Local Knowledge, and Democracy

3 Credits

Understanding community decision-making, citizen-expert interactions and methods for resolving seemingly intractable conflicts associated with public issues. CED 375H Community, Local Knowledge, and Democracy (3) Decisions made in our communities have far reaching effects on individuals, families, neighborhoods, the local economy, the environment, the health and welfare of all citizens, and the community as a whole. These decisions or choices are the result of the collective action of community leaders and citizens, either through governmental, non-governmental, or community organizations. This course will familiarize students with principles, concepts and skills essential to understanding processes of community decision making and community development. These processes involve countless human interactions, which ultimately lead to choices that affect the future economic, environmental, political, and social viability of citizens, their families, and the sustainability of their communities. These interactions are central to community decision making and community development, and to the functioning of local democracy. The nature of these interactions and the way in which they take place determine if desired community outcomes occur or not. This course seeks to reveal important, sometimes neglected or underdeveloped, factors in community decision making, specifically issue framing, tensions between local and expert knowledge, methods for resolving seemingly intractable conflicts associated with public issues, and the nature and role of participatory processes in debate, deliberation,

and doing public work. This course will enable students to use these factors for analyzing community decision making situations and as community development tools in professional practice. In addition, students will be challenged to examine ethical issues in community decision making and community development professional practice.

CED 400N: Exploring Indigenous Ways of Knowing in Great Lakes Region: Lecture

3 Credits

Exploring Indigenous Ways of Knowing in the Great Lakes Region explores concepts and values distinctive to indigenous ways of knowing (IK) in the Great Lakes Region through readings, video segments, and lectures. Five structural concepts or key themes - local knowledge, relational knowledge, empirical knowledge, spiritual knowledge, and traditional knowledge - provide a conceptual framework for understanding indigenous cultures and knowledge production and their unique contributions to western society in the 21st century. Students will be introduced to the Algonquian cultures of the Great Lakes Region and to the Ojibwe (Anishinaabeg), Odawa, and Potawatomi (Three Fires) cultures in particular. This course will introduce students to the distinctive ways indigenous people experience, understand, and know the world through their relationship with the land or region to which they belong. Too often, colonizers around the world have ignored indigenous knowledge systems even though these ways of knowing have sustained peoples, cultures, and environments for thousands of generations. Because these ways of knowing are generally preserved and transmitted through stories, music, ceremony, and embodied traditions, they are seldom understood and frequently dismissed by those who control the production of knowledge in the modern world. The knowledge of the indigenous peoples of the Great Lakes region will, in this course, be presented as an empirically grounded scientific body of knowledge and theory comparable and complementary to the European tradition and, in specific ways, enhancing the sustainability of western scientific knowledge and practice. This course is a prerequisite for the Maymester field experience - Exploring Indigenous Ways of Knowing among the Ojibwe CED 401 which offers students an opportunity to experience indigenous ways of knowing by engaging with Ojibwe educators, traditional knowledge holders, elders, and families in several of the three largest Ojibwe reservations in the US.

CED 401: Exploring Indigenous Ways of Knowing Among the Ojibwe

0.5 Credits

Through an intensive cultural engagement students will learn skills important to the pursuit of ethnographic research in cross-cultural contexts. CED 401 Exploring Indigenous Ways of Knowing Among the Ojibwe (0.5) (US) Exploring Indigenous Ways of Knowing among the Ojibwe- CED 400B, a 2-3 week field experience, transports students from the classroom to the Red Lake, Leech Lake, and White Earth Nations in northern Minnesota. During travel, students will follow part of the 800 year Great Migration route of the Ojibwe from their ancestral home around the St. Lawrence River estuary to western Lake Superior and the headwaters of the Mississippi River. This field experience will immerse students in the Anishinaabeg community, the largest of the "three fires" (Ojibwe, Odawa, Potawatomi) of the Great Lakes region. While most Americans learn history facing west, history will be presented through the experiences and memories of people facing east. Early Ojibwe history will be outlined while the period of contact, colonization, and restoration (late 1700 to the present) will be covered in greater detail. Ojibwe cultural codes and spiritual values will be explored through "the teachings" and participation in important ceremonies (sweat lodge, pipe, big drum, wiping the tears, shake tent, intertribal traditional powwow). The political and social injustices of colonialism will be examined, including removal, allotment, religious oppression, and the boarding school era. To experience family and social life, students will live for two days with Ojibwe host families on the Red Lake Nation (one of 2 closed reservations in the US). Students will be introduced to indigenous science and environmental justice (climate change, water quality, biodiversity and endangered species, traditional and sustainable agriculture, fish and game, wild edible and medicinal plants, forest management, etc.). Finally, a canoe trip through the headwaters of the Mississippi River will focus on nature and environmental health. The five key IK themes explored in the classroom -Local knowledge, relational knowledge, empirical knowledge, spiritual knowledge, and traditional knowledge will provide a framework for engaging with and understanding Ojibwe culture and knowledge production and their unique contributions to western science and American culture. Students will meet and learn from more than 25 prominent Ojibwe elders, educators, scientists, political leaders, medicine men/women, environmentalists, ethnobotanists, storytellers, and host family members. Students will also learn listening, observing, attending, respecting, critical thinking, and recording skills, all important to the study of cultures and the pursuit of ethnological research in cross cultural contexts. Exploring Indigenous Ways of Knowing among the Ojibwe- CED 400A, offered during spring semester, is a prerequisite for this field experience.

Enforced Prerequisite at Enrollment: CED 400N
United States Cultures (US)

CED 404: Community, Environment and Development Research Methods

4 Credits

CED 404 teaches students practical approaches to empirical research in the areas of community, environment, and development (CED). Through classroom work and the data lab, the course covers research tools commonly used by CED professionals at the local level, including secondary data analysis, surveys, focus groups, and participatory research. As importantly, students learn and practice the basic mindset required for developing and exploring research questions. Students discuss and practice appropriate methods for presenting research

results, including writing for different genres. The course includes a weekly data lab for hands-on work.

Enforced Prerequisite at Enrollment: STAT 200 Enforced Concurrent at Enrollment: AGBM 106 or CMPSC 203

CED 409: Land Use Planning and Procedure

3 Credits

This course provides students with an understanding of the legal and procedural aspects of land use planning as found in the United States. The emphasis of the course is to explain the sources of land use planning authority, the processes by which it is applied and the potential conflicts that arise in the application of this authority. As a result of taking this course, students will be expected to learn and explain a) the objectives of land use planning systems and a comparative analysis of these systems; b) the bases on which land use planning law and procedure is applied across the U.S.; c) policies, strategies and principles that can be applied to land use planning decisions; d) several land use planning models currently applied in American jurisdictions, including the structure of each land use planning system; e) the procedural steps used to engage the land use planning system by property owners and government officials; f) typical conflicts that arise in creating, changing or enforcing land use planning measures; g) how land use planning conflict is resolved in various systems. Student performance will be measured in two midterm exams and a final exam. The instructor reserves the right to give additional exams to aid in measuring student knowledge and understanding of course material. Each test will primarily be short essays questions that ask for an explanation, discussion, comparison or application of specific concepts and principles. Case studies also will be used to present students with situations to hone their analytical, organizational and problem solving skills on specific problem situations. This will ask students to analyze a given set of facts, assess the issues raised by the facts from the perspectives of individuals who are described in the situation and form and present a response that addresses a specific question posed to the student.

Enforced Prerequisite at Enrollment: 6 credits of CED

CED 410: The Global Seminar

3 Credits

Exploration of critical global issues relevant to sustainable development and the environment. Collaborative with other universities worldwide. CED 410 The Global Seminar (3) The Global Seminar course will help students gain an understanding of the implications of global change in a world of limited natural resources. The course will help students to understand the difficulties that society faces in balancing the environment with human needs; appreciate the challenge of balancing competing needs at different levels (individuals, communities, organizations, governments); understand trade-offs and the role of policy; and explore and critically assess avenues for effectively dealing with global issues. Students participating in the Global Seminar have the opportunity of direct interaction with students from other universities and academic institutions who may have different perspectives on these issues. To allow this interaction, the Global Seminar is offered jointly with other universities from across the world, with students engaging in global videoconferences, virtual classroom discussions and group work with student peers at other universities. Case studies are used, with critical assessment of important global issues related to development and environment, with a particular focus on food production and natural resources. Specific cases vary by course offering but may include

cases related to: population dynamics, biodiversity, water quality, waste management, GMOs, BSE, organic food production, novel protein foods, among others. Issues of long-term sustainability are explored to gain a better understanding of the implications of alternative choices. The course is offered in collaboration with Cornell University, with students using Cornell's Blackboard system. The course is intended to strengthen linkages for students with other universities for study and research.

CED 417: Power, Conflict, and Community Decision Making

3 Credits

Community decision making and public choice is the result of collective action among individuals. The purpose of this course is to develop frameworks for analyzing conflict, power, and public choice. This course enables students to understand how culture and institutions affect the nature of human interdependence and behavior, shape patterns of influence and power, and impact community decision making and policy.

Enforced Prerequisite at Enrollment: (RSOC 11 or SOC 1) and 6 credits of CED

CED 420W: Gender and International Development

3 Credits

This course examines gendered processes of economic and social change in the Global South in a context of rapid globalization. We will study how gender inequities and inequalities shape and are shaped by economic restructuring, environmental change, international migration, the global spread of ideas and culture, and the shifting goals of International Development agencies. Readings and discussions are organized around three main learning units: 1) Approaches to Gender in Development; 2) Gender, Work, and Identity in the Global Economy; and 3) Rights, Reproduction and the Body. Particular attention will be paid to representations of women and men by Western organizations acting in the name of Feminism and/or Development, and to the responses of feminist communities in the South to these portrayals. In studying these issues, we will resist the tendency to conflate "gender" with "women", instead looking comprehensively at the identities, rights, and lived experiences of diverse gendered identities. We will carefully consider differences using an intersectional frame that considers social factors such as sexuality, race, economic class, and legal status. Students will explore issues through diverse materials including reports, articles, book chapters, documentaries, presentations, and popular media.

CED 425: International Community and Economic Development

3 Credits

International community and economic development. CED 425 International Community and Economic Development (3) Eight of ten people on the planet live in developing countries where problems such as hunger, malnutrition, infant mortality, inadequate housing, underemployment, over-urbanization, and environmental degradation often are severe. This class will focus on community and economic development in developing countries. Through lectures, readings, a series of topical videos, and in-depth class discussions, students will obtain a firm grounding in the ways development has been defined, the social and

economic problems facing developing countries today, the basic ways in which economic development has been approached theoretically and empirically, the implications for developing countries of being embedded in a globalizing economy, the influence of multinational corporations, the policies that developing countries have followed to foster economic growth, the nature of foreign aid, the causes and consequences of Third World debt, the promise of micro-enterprise and the informal economy, rural development and land reform, and other topics.

Enforced Prerequisite at Enrollment: CED 152 and CED 230

CED 429: Natural Resource Economics

3 Credits

Optimal management of resources; roles of markets and other institutions; resources and economic development; public policy.

Enforced Prerequisite at Enrollment: ECON 302 and (MATH 110 or MATH 140)

CED 430W: Principles of Community Economic Development

3 Credits

This course is designed to introduce the issues giving rise to concern for rural and regional economies, and the theories, concepts and tools of rural and regional economic development. The goal is to integrate theory and practice and apply them to economic development problems. Tools are presented in a "how to" manner. Topics include what is meant by 'Economic Development' and how perspectives on it vary; national and state policies on economic development; economic development theory, including Economic Base, Product Cycle, Central Place Theory, and Attraction Models, and their implications; basic analytical tools for community economic development, including Location Quotients, Shift Share, and Input-Output analysis; business retention, expansion, and location; and economic development strategies, such as entrepreneurship, business development, locality development, and human resources. As a writing-intensive course, strong emphasis is placed on using the written word to apply these concepts and tools to real world situations, with most homework assignments modeled on the types of analysis and reports conducted by economic development practitioners.

Enforced Prerequisite at Enrollment:

(ENGL 15 or ENGL 30 or ENGL 137H or CAS 137H) and 6 credits of CED Writing Across the Curriculum

CED 431W: Economic Analysis of Environmental and Resource Policies

3 Credits

In this course students learn economic analysis methods for understanding environmental and natural resource issues, and for analyzing environmental and natural resource policies. Methods considered include benefit-cost analysis, non-market valuation techniques, and resource damage assessments. As a writing-intensive course, students learn and practice professional-style writing appropriate for economic analysis, project findings, and policy papers. Homework assignments include a blend of analysis and written reports explaining findings.

Enforced Prerequisite at Enrollment: (ENGL 15 or ENGL 137H or ENGL 30H or CAS 137H) and ECON 302

Writing Across the Curriculum

CED 440: Labor in the Global Economy

3 Credits

This course examines laborers in the global economy and the economic, political, and social forces that shape worker experiences of precarity and empowerment. We will study the global division of labor, experiences of work, and how workers claim rights. The course is divided into three main learning units. In Unit 1, Theorizing Labor in the Global Economy, we will discuss how the changing global political economy, including the consolidation of corporate power in global commodity chains, enables regimes of precarious work. In Unit 2, Vulnerable Workers, we will examine specific groups in different context across the globe and their experiences of both exploitation and empowerment in the workplace, including child workers, migrant workers, women, and agricultural workers. In Unit 3, Resistances and Solutions, we will examine and compare different proposed solutions to worker vulnerability, including 'top-down' initiatives such as corporate social responsibility campaigns and voluntary sustainability standards, and 'bottom-up' approaches such as workers' centers and worker-led social responsibility. Invited guest speakers who represent and work with workers around the world will provide their perspectives on key topics to enhance student learning of contemporary events in this field. Students will have the opportunity to deepen their knowledge through writing assignments including case studies of workers and worker movements, a blog connecting concepts learned in class to news stories from around the world about labor, and take-home essays. This is a discussion-based course and students are expected to contribute actively to the learning community. Many examples discussed in class will be from companies in the agri-food system.

Enforced Prerequisite at Enrollment: 6 credits of CED

CED 442: Changing Food Systems: Comparative Perspectives

3 Credits

The course begins with an overview of the scope of food systems and an orientation to interdisciplinary and community - based approaches for understanding and addressing social and ecological problems and potential changes in food systems. Two weeks are dedicated to reviewing selected challenges facing the food and agricultural system to underscore the complexity of these issues and illustrate how they have been approached and analyzed by different disciplinary fields. The next two weeks of the course are devoted to critical exploration of theoretical and policy models for understanding how food systems function and change. These conceptual and analytical tools are then applied in three subsequent course modules, focused on 1) Changing Agricultural Production Systems; 2) Changing Food and Farm Work; and 3) Changing Food Consumers and Eaters. Each of these three - week modules will focus on 3 - 4 cases of change efforts either led from "above" through government policies or business initiatives or from "below" by grassroots groups or social movements. Cases will be selected to compare and contrast U.S. contexts with other international contexts and to highlight the diverse experiences and perspectives across racial - ethnic, class, cultural and gender differences within the food and agricultural system. The course will conclude by synthesizing ideas and insights about the limitations and potentials of different approaches to food systems change. In the last week of class, students will also give "lightning talks" distilling their learning about food systems change through an individual semester long field - project with a local or regional community group, business, agency or farm.

Enforced Prerequisite at Enrollment: AGBM 170

Cross-listed with: FDSYS 442

CED 445: International Development Practice

3 Credits

The goal of this 400-level course is to facilitate students' development of the hands-on skills and practical knowledge needed to engage successfully in international development work in the public, private, and non-governmental sectors. The course emphasizes competencies needed to effectively secure employment and work in occupations and sub-fields of international development that are most related to the CED major. It is organized into a series of modules that correspond to the major phases of international development projects - design, implementation, and evaluation. Students will integrate these phases by working through a "case study" of a specific development project for each semester. The course includes guest lecturers and budget requests accordingly who are currently working in the international development sector.

Enforced Prerequisite at Enrollment: CED 230 and CED 404

CED 450: International Development, Renewable Resources, and the Environment

3 Credits

Theories of agricultural and economic development, with particular attention to interactions between development, renewable resources, and the environment. CED 450 International Development, Renewable Resources, and the Environment (3) (IL) This course introduces the key economic concepts and theories used to analyze agricultural and economic development in developing countries, with particular attention to interactions between development, natural resources, and the environment. The course examines how economic development can affect natural resources and the environment, and how resource and environmental conditions affect development. The course integrates theory with empirical evidence from developing countries, so that students gain an understanding of how different development strategies have actually fared in practice.

Prerequisite: 6 credits in Environmental Economics, Resource Economics or Economics
International Cultures (IL)

CED 452: Community Organization

3 Credits

This course combines an introduction to the social theories of communities with real-life examples of applications to understanding community problems and concerns. The focus is on the circumstances facing the range of places from small towns and rural communities to urban neighborhoods and suburbs. Topics covered include local community in a global economy, power and decision-making, the role of governments and other social institutions, community development and sustainability, and the importance of social as well as economic and physical infrastructure. Those taking the class will gain experience in conducting a case study of a Pennsylvania community, build skills in working in a team, and gain understanding of the complexity of factors that influence community and individual well-being. If your future career involves working within a community setting, this course can give you insights into its dynamics. And, even if you don't plan on working with communities in your job, you will still be living in a community. This course can help you to understand the ways that you can contribute

to improving your own quality of life by becoming involved in your community.

Enforced Prerequisite at Enrollment: 6 credits in RSOC or SOC or PSYCH

CEC 460W: Policy, Politics and Perspectives on Social & Environmental Responsibility

3 Credits

Social and environmental responsibility often is viewed very differently by various stakeholders, such as consumers, investors, businesses, labor government, and others. The elements and issues they consider as important elements within social and environmental justice, and how they weight each element, can vary significantly across stakeholders. The terminology used to describe this work similarly differs (i.e. sustainability, social responsibility, corporate citizenship, corporate social responsibility, etc.), which can lead to misunderstandings. This course examines the differing perspectives that consumers, investors, businesses, labor, government, and others have towards social and environmental responsibility, and the differing roles that each stakeholder plays. Such roles can range from individual choices about what to purchase and consume, where to invest, and where to work, to collective and organizational choices, such as about what services or products to offer, how these are produced, and where/how supplies are obtained. The course uses institutional and behavioral economic concepts of the interdependent nature of the market, as a theoretical framework for understanding the interdependence of various stakeholders' opportunities and decisions, and the influence of the public policy.

Enforced Prerequisite at Enrollment: 6 credits of CED Writing Across the Curriculum

CEC 462: Corporate Social and Environmental Performance

3 Credits

This seminar-style course uses speakers from a range of stakeholder groups to highlight and discuss the performance of Corporate Social Responsibility (CSR) programs in industry. The influence of government, non-profits and selected activist's groups on CSR programs will be evaluated. Recognized speakers will discuss social and environmental issues in the supply chain related to land use, farm workers, farmers, women in agriculture, youth development, climate change, food security and water rights. Speakers from industry will highlight industry topics such as corporate governance, ethics, employee engagement and public policy. Students will write weekly reviews for each topic for discussion in class. They will complete two case studies over the course of the semester to better understand how CSR goals are accomplished in industry. To determine company performance, students will work in teams to evaluate the CSR program of a company and rank their performance relative to peers.

Enforced Prerequisite at Enrollment: 6 credits of AGBM or CED

CEC 475: CED Integrated Capstone Experience

3 Credits

A well-designed capstone experience provides students with a valuable reflective and integrative experience as they complete their baccalaureate degree programs. This course is designed to encourage students to reflect, integrate and apply the knowledge that they have learned in previous coursework for the CED major. The course is built on discussion and exercises that require integration. Like the CED program more

generally, this course relies on case studies to help students apply the skills that they have learned to actual cases that challenge communities and regions in developed and developing areas of the world. The CED program is also designed to include experiential-learning exercises throughout the program; this course engages students in a significant in-depth experience or project that will vary year-by-year. The experience could be in the United States or in another country. The project will be hands-on and action-oriented. Evaluation is based on assessment of active participation in class discussions, papers that provide critical assessments of the case studies assigned to the class, and a final project conducted in the field, either in the U.S. or internationally.

Enforced Prerequisite at Enrollment: 7th semester standing or (18 credits of CED and 6th semester standing)

CEC 494: Undergraduate Research

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

CEC 494H: CED Honors Research Project

1-12 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

CEC 495A: Internship in Community, Environment, and Development

1-15 Credits/Maximum of 15

Supervised field experience in an environmental setting.

Enforced Prerequisite at Enrollment: prior approval of program Full-Time Equivalent Course

CEC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CEC 497: Special Topics

1-18 Credits/Maximum of 18

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CEC 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Comparative Literature (CMLIT)

CMLIT 1: Introduction to Western Literatures Through the Renaissance

3 Credits

CMLIT 1 provides a survey of Western literary tradition and considers a variety of genres – such as epic, drama, sonnet, essay, saga, chronicle, folktale, and novel – with attention to the literary and historical contexts which these works reflect in the Ancient, Medieval, and Renaissance (Early Modern) periods. Universal themes and cultural values, along with individual differences, will be discussed and compared in works from such authors as Homer, Dante, Chaucer, Cervantes, and Marguerite de Navarre. Comparative study focuses on the understanding and appreciation not only of the individual works, but also of their influence on other literary works and artistic forms and the ways in which they relate to their cultures. You will articulate and compare interpretations of texts spanning 2500 years of Western literary history. The variety of the Western tradition will lead you to an understanding and critical discussion of the process by which certain works become regarded as "great." This course will also allow you the pleasure of encountering a wide variety of creative literary expressions from three distinct periods. Along with CMLIT 2, this course forms a 6-credit overall Western literature series – but either half may be taken separately. CMLIT 1 may be selected to fulfill one of the course requirements for the CMLIT major or the World Literature Minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and International Cultures requirement.

Bachelor of Arts: Humanities
International Cultures (IL)
General Education: Humanities (GH)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Global Learning

CMLIT 3: Introduction to African Literatures

3 Credits

Comparative analysis of drama, essay, novel, poetry, and stories from traditional oral forms to contemporary expressions of African literary styles. CMLIT 3 Introduction to African Literatures (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 3, Introduction to African Literatures, provides an introduction to the wonderful variety of African literary production, from early oral epic traditions, through the colonial/post-colonial period, to recent Nobel Prize winning authors. We will read texts written in English or translated into English from French or African languages, including several recorded from the oral tradition, as well as some texts from the African Diaspora. These literatures come from different geographic and cultural areas of Africa, and are composed in a variety of forms (novel, drama, epic, poetry), and range in date from 2,000 BCE to the colonial period to the modern national era. The focus of the course, however, is on the 20th century. We will also consider the ways in which history, culture and geography impact literary production. African literary and cultural influences on Western traditions may also be explored. Students will be evaluated on some or all of the following: short answer/essay exams, in-class discussion and group work, written assignments, collaborative presentations, and a final comprehensive exam/essay. Writing and speaking will always be included. This course fulfills a requirement for the Comparative Literature major and the World Literature minor. This course also fulfills the General Education Humanities requirement and

the Bachelor of Arts Humanities and Other Cultures requirement. It also satisfies the United States and International Competence requirement.

Bachelor of Arts: Humanities
Bachelor of Arts: World Cultures
International Cultures (IL)
General Education: Humanities (GH)
GenEd Learning Objective: Global Learning
GenEd Learning Objective: Key Literacies

CMLIT 4: Introduction to Asian Literatures

3 Credits

Satisfies General Education (GH), International Cultures (IL), Other Cultures (BA) requirements. This course is designed to act as a gateway to Asian literatures and cultures - through English translation - of selected fictional and cinematic texts from Japanese, Chinese, Korean, and Asian diaspora literature (our main focus is on literature of modern Asia). Exploring the historical and cultural contexts of each work, we will pay attention to the ways in which each text depicts the diversities within geographical areas (for instance, "Japanese culture" is not monolithic than "U.S. Culture" is, and writers might see the same social reality in quite differently). The cross/inter-cultural approach used in this course invites students to acquire a global perspective on the rich traditions of Asian cultures and literatures. Students are expected to develop the ability to comparatively analyze and express, in speech and writing, their views through the reading of literary texts and watching of films.

CMLIT 5: Introduction to Literatures of the Americas

3 Credits

Comparative interpretation of the oral and written literary traditions of North, Central, and South America. CMLIT 5 Introduction to Literatures of the Americas (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 5, Introduction to Literatures of the Americas, allows you to explore the great variety of literatures of the Americas, including translations of texts written in Spanish, French, Portuguese, and Amerindian languages, as well as texts originally written in English. Readings include many genres and artistic forms dealing with histories and accounts of "American" issues, such as conquest, nationalism, slavery, diaspora, and immigration. You will also consider the various influences among these traditions in terms of time period and genre. This course investigates the literary and cultural notion of "America," and what it means to be "American," in terms of the entire hemisphere. We will deal with issues of race, ethnicity, class, religion, as well as other vital concerns of identity and "Americanness" as reflected in both oral and written literary traditions through the history of the Americas. At the conclusion of this course, you should be able to understand and make - comparisons among the many "American" literary traditions. This course fulfills requirements for the Comparative Literature major, the World Literature minor, General Education Humanities,

Bachelor of Arts Humanities, and General Education United States and International Competency.

CMLIT 6: Literature and Philosophy

3 Credits

This course serves as an introduction to philosophy through the critical and analytic reading of popular, classic, and insightful literature - novels, plays, poetry, and creative non-fiction - from both Western and Non-western authors and cultures. We ask questions about the experience, purpose, and value of reading these works: Why do we sympathize with fictional characters? What do "coming of age" books contribute to our own maturity? Does literature give us insight into other people, and even into ourselves, unavailable in any other way? What is happening when someone says that a work belongs to the "canon"? What does a literary artist need to know to create the works of great insight she or he creates?

CMLIT 7: Introduction to Middle Eastern Literatures

3 Credits

This course provides an introduction to the diverse literatures of the region known as the Middle East. Through a study of translations of works from Arabic, Turkish, Persian, Hebrew and other languages as well as Anglophone Middle Eastern literatures, students will study Middle Eastern literatures and cultures in their diversity. Approaching works from the modern period in the context of shared histories of modernization, secularization, postcolonial nation-building, and globalization, this course will emphasize important thematic continuities across modern literatures of the region. Though the focus will be on the modern period, students will also be introduced to the rich literary networks of the so-called premodern era, exploring past literary connections and their legacies for the present. The relationship between literature, film, and other media may also be explored. Topics to be discussed may include Orientalism, Middle Eastern refugee and migration literatures, cross-cultural encounters, women's and minority writings, prison and protest literatures, petrofiction and climate fiction. This course fulfills the General Education Humanities requirement, the International Cultures requirement, and the Bachelor of Arts Humanities and Other Cultures requirement.

CMLIT 10: World Literatures

3 Credits

The development of literature around the world - from epic, legend, lyric, etc. in the oral tradition to modern written forms. CMLIT 10 The Forms of World Literature: A Global Perspective (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. As a one-semester introduction to the range and diversity of world literature from the ancient past to the present, CMLIT 10 is intended to help you read (or listen to) a work of literature from any time or place and to appreciate it more fully - whether it belongs to the more familiar types of literature you may have read in the Western tradition or is a fable, folktale, hero story, play, or narrative from another cultural tradition. You will practice expressing your ideas through written exams and in-class and on-line discussions/activities. Discussion sessions allow interaction with the instructor and with other students in the class. This course presents a global sampling of masterpieces of world literature. Students will become familiar with various literary genres and become proficient in the analysis of the similarities and differences between texts from many different time periods and cultures. CMLIT 10 is one of the choices of survey courses which can count toward the Comparative Literature major and the World Literature minor. This course also fulfills the General Education humanities requirement, the Bachelor of Arts humanities requirement, and the United States and International requirement.

CMLIT 11: The Hero in World Literature

3 Credits

The figure of the hero/heroine examined in world literature as a vehicle for expressing social and cultural values. CMLIT 11 The Hero in World Literature (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the concept of heroism and of heroes throughout the world in different time periods and different literary genres. We will examine different types of heroes and theories of heroism, as well as gender relations involved in concepts of heroes/heroines, and the roles of anti-heroes, villainous heroes, and the enemies of heroes. Heroes represent the most ideal values of a particular society. By examining heroes revered by a variety of societies, a greater awareness of values both specific to individual cultures and universal across cultures can be reached. Through comparisons of a variety of heroes, literary and social roles in the formulation and manipulation of heroic types can be assessed. The objectives of this course include expanding students' awareness of the values of different cultures, examining the consequences of value systems as explored in literature, and increasing their skills of critical analysis on a body of literature designed to encourage the student to accept, reject, or question specific ideas of good and evil, proper behavior, and appropriate action within cultural contexts. CMLIT 11 is one of the many choices of survey courses which count towards the Comparative Literature major and the World Literature minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, or the United States and International requirement.

CMLIT 12: Introduction to World Drama and Performance

3 Credits

The power, ethics, and excitement of drama and related forms of performance literature, presented in a global and comparative context. CMLIT 12 Introduction to World Drama and Performance (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. Introduction to World Drama will enable students to discover the power and excitement of drama in a global context. Students will encounter a variety of cultural contexts as they observe how playwrights portray local histories and lifestyles, in settings from many parts of the world. The course will offer (1) an introductory overview of concepts and terms associated with understanding drama. It will present (2) traditional dramatic forms such as tragedy, comedy, history play, allegory, Noh, etc., as seen in plays prior to the twentieth century; and (3) recent dramatic forms such as testimonial, other politically engaged plays, drama online or on film, etc., as seen in plays from the twentieth and twenty-first centuries. Attention will be given to (4) the dramatic contributions of multiple cultural groups in the U.S., with African American, Asian

American, Latino, and other U.S. plays seen not in isolation, but in relation to world drama. Finally, (5) the course will consider ways in which drama, as a form of world literature, can have an international and intercultural impact, both in earlier periods and recently, when global circulation and international collaboration are increasingly frequent.

CMLIT 13: Virtual Worlds: Antiquity to the Present

3 Credits

Virtual worlds from ancient to postmodern, in a comparative and global context that includes literature, film, and online multiplayer games. CMLIT 13 Virtual Worlds: Antiquity to the Present (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. What are virtual worlds? And why do they speak so intensely to us about the present? This course puts immensely popular online virtual worlds like World of Warcraft into a historical perspective. Beginning with Homer, students will work through some of the major imaginative worlds of literary history, including those of the Bible, Dante, Shakespeare, Goethe, Lu Xun, Basho, Balzac, and others. We will conclude by reading and discussing about the meaning and value of contemporary online virtual worlds. We will analyze the ways in which virtual worlds represent/reflect on the cultures from which they emerge; their ethical stances and structures; and the alternative imageries they embody.

CMLIT 19N: Being in the Universe

3 Credits

"Being in the Universe" considers three fundamental questions of human existence from both humanistic and scientific perspectives: (1) What is the nature of our universe, and to what extent are creatures like ourselves a predictable consequence of it? (2) What is the nature of time, and what does it mean to be a conscious being living our lives through time? (3) What would it mean for humans to be alone in the Galaxy or the universe, or alternatively, not alone? "Being in the Universe" is an integrative GH+GN GenEd course. The course's three major units cover the following topics: (1) We discuss cosmology and religion as human enterprises, as well as the history of science; (2) We study the basic scientific theory of the Big Bang universe, and consider its implications for human life; (3) We address contemporary theories of the multiverse from scientific, philosophical, and literary perspectives; (4) We consider the thermodynamic and relativistic theories of time, and the basic philosophical approaches to time, and discuss the implications of these for our ordinary human experience of the past, present, and future; (5) We discuss the history of life in the universe, the possibility of life on other planets, and the social, religious, and imaginative reactions to those possibilities in literature and film.

CMLIT 83S: First-Year Seminar in Comparative Literature

3 Credits

International topics in literature and culture; each seminar will have a specific topic as announced (see the Comparative Literature Web site). CMLIT 83S First-Year Seminar in Comparative Literature (3) (GH;FYS;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course has two main purposes: to introduce first-year students to college study in the Liberal Arts, especially in literature as a humanities field of lifelong value, regardless of their majors; and to explore one of the most important trends of our time, which is the emphasis upon globalization and intercultural competence. In a small-class format that fosters individual engagement, the course includes practical guidance to help students optimize the opportunities available to them at Penn State, along with experiencing an international, intercultural approach to ways that literature addresses issues of crucial personal and social importance. With an entire world of literature to choose from, the theme of each seminar varies. Sample themes include "Hero-Tales: Boundaries between Fact and Fiction," "Literature, Health, and Wellness," "Cosmopolitan Cities, Real and Imagined," "Books that Change Lives," "America Seen from Elsewhere," "World Literature, Human Rights, and the Environment," "Myth, Legend, and Gender Identities," or "Forbidden Stories: Literature and Censorship." Course materials will cross boundaries of time, place, identities, languages, and cultures, and will often include media such as graphic narrative (comics) and film.

CMLIT 100: Reading Across Cultures

3 Credits

CMLIT 100 Reading Across Cultures, is an introductory course to the discipline of Comparative Literature. The course is generally based upon a central theme (or series of themes) around which the reading assignments are chosen. Through a range of traditional (poems, short stories, drama, novellas, novels) and non-traditional (film, multimedia, hypermedia) texts from around the world, students will develop the ability to analyze literature in a variety of ways. Students will examine works both within their individual and diverse cultural contexts, and in relation to broader themes that transcend the boundaries of time and place. As an introductory course, CMLIT 100 is intended to lay a solid foundation for further study in any college-level courses on cultures and/or literature. Through an examination of a wide range of world literature, we will explore the practical aspects of what it means to deal with literary works in a comparative global context. The course is intended to help you develop your analytical and comparative skills and to simultaneously introduce you to a wide variety of interesting world literatures.

CMLIT 101: Race, Gender, and Identity in World Literature

3 Credits

CMLIT 101 The Theme of Identity in World Literatures; Race, Gender, and Other Issues of Diversity (3) (GH;US;IL)(BA) This course examines issues of race, gender, religions, and ethnicity as expressed in literary, social, and cultural contexts. We will address these questions in works from a variety of traditions and time periods. Literary works from around the world show a wide range of response to the "other" -- idealization of difference as exotic, fear of difference as threat, the desire to suppress difference or force it into conformity, the recognition of difference within ourselves, etc. The scope includes authors who are themselves members of racial, sexual or ethnic groups with which you may be less familiar. You will also consider the question of who and what constitutes identity as perceived by oneself and by others.

CMLIT 105: The Development of Literary Humor

3 Credits

Literary humor expressed as satire, comedy, and farce--from ancient times to the present--in an international and multicultural context. CMLIT 105 The Development of Literary Humor (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 105 is a broadly international course dealing with the nature of comedy and humor in literature. You will read samples from a broad spectrum of

humor, including comedy, wit, satire, parody, irony, and farce. Through discussion and writing, you will also examine the techniques through which humor criticizes human nature, analyzes society, and expresses differing world views. The syllabus may be represented chronologically or divided into topics or literary forms that suggest various emphases, functions, and objects of literary humor. This course will provide opportunity to discuss both the widespread, or even universal, aspects of literary humor, and the diversity of literary humor across cultures and time periods. At the conclusion of this course, you should be able to understand and compare various literary forms and social, political, and cultural contexts that define humor and to assess the extent to which literary humor is or is not translatable across cultures or ethnic communities, or other groups. This course fulfills requirements for the Comparative Literature major, the World Literature minor, General Education Humanities, Bachelor of Arts Humanities, and General Education International/Intercultural Competency.

CMLIT 106: The Arthurian Legend

3 Credits

The growth and development of the legend of King Arthur, from medieval Europe to modern Japan. CMLIT 106 The Arthurian Legend (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course is designed to familiarize students with the legends about and surrounding King Arthur and the Round Table fellowship. Through a series of readings, students will survey the development of the legends of Arthur from their beginnings in early medieval Europe to their modern adaptations in many cultures around the world. The Arthurian legend is an ideal vehicle for showing the ways in which literary works capture and express changing value systems in different cultural and historical situations, and thus the course is a good example of comparative (international) approaches to literary study. Classes will discuss the changing cultural ideals represented, the different characterizations of the central figures, and the literary techniques employed. Lectures and discussions will be supplemented by overheads, slides, music, and films or film clips dealing with Arthurian themes. Throughout, the course will ask why and how the stories of Arthur and the Round Table fellowship have captured the imagination of artists, political and religious leaders, and readers throughout the ages and around the world. Finally, it will ask how the practical concerns of daily life are developed in this literature—for example, how does this highly imaginative literature address practical concerns such as striking a balance between one's short-term goals and personal gratifications, and one's long-range obligations to other people? Means of evaluation will be selected from the following (always including writing): essay exam questions, short answer and objective questions, reading journals, quizzes, in-class discussion, group projects (including web sites), research and critical papers, and final comprehensive written exam. CMLIT 106 is not required for the Comparative Literature major but may be selected to fulfill one of the course requirements for the major or the World Literature Minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and the IL requirement.

CMLIT 107: Exploration, Travel, Migration, and Exile

3 Credits

CMLIT 107 The Literature of Exploration, Travel, Migration, and Exile (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 107 compares the literatures of travel, migration, exploration, and exile from ancient times to the future, from narratives of journeys actually experienced through narratives of journeys imagined in the mind. The notion of the journey is broadly defined as encompassing both literal and metaphorical experiences, including travel journals and diaries, epic adventures, quests of introspection, dreams and visions, and depictions of the future. Through reading, discussion, and writing, you will examine and compare the different roles that travel can play in the imaginations of both the individual writers and the cultures from which they come. You will not only explore recurrent themes and timeless topics, but also the ways in which travel writing can both reinforce and subvert the basic value-systems, stereotypes, or other assumptions present in its cultural context. For many writers, traveling elsewhere is a means of evaluating their own societies, as well as a means of recording their responses to encountering real or imagined new places. The journeys of this course, which vary greatly from each other, will also allow you to consider some of the vast unknowns of the individual human mind and imagination. By traveling through this course, you will have the opportunity to develop the analytic reading, thinking, and writing skills necessary for the understanding of a variety of literatures and cultures, as well as the exploration of your own identity as an individual. This course fulfills requirements for the Comparative Literature major, the World Literature minor, General Education Humanities, Bachelor of Arts Humanities, and General Education International/Intercultural Competency.

CMLIT 108: Myths and Mythologies

3 Credits

World mythology: myths primarily of non-Western cultures, based on selected areas and traditions around the world. CMLIT 108 Myths and Mythologies (3) (GH;IL)(BA) This course offers a survey of several different cultural traditions as expressed in myth, as well as discussion of myth in its literary, social, geographical, political, and religious contexts. Various theories of the evolution and analysis of myth will be examined. Mythological traditions from around the globe will be compared in order to determine qualities which they share and examine ways in which they are unique. This course will help you see the world in new and exciting ways, based on the wide variety of global myths. At the same time, you will consider the permanent human issues which connect all of these traditions to each other, to the modern world, and to you. CMLIT 108 is one of the choices of survey courses, which count toward the Comparative Literature major and the World Literature minor. This course also fulfills the General Education humanities requirement, the

Bachelor of Arts humanities requirement, and the International Cultures requirement.

CMLIT 109: Native American Myths, Legends, and Literatures

3 Credits

Myths, legends, and literatures of Native American cultures. CMLIT 109 Native American Myths, Legends, and Literatures (3) (GH;GI)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 109, Native American Myths, Legends, and Literatures, will allow you to read many traditional tales and selected works of modern literature representing a variety of American indigenous peoples. We will be examining the ways in which the myths, legends, and literary works reflect the cultural values and religious beliefs of the tribal nations from which they derive. You will learn how to read critically, analyzing symbols, archetypes, and motifs through the comparison of selected tales to others from the same and from different cultures, allowing you to recognize the rich diversity and unique oral traditions of Native American culture. You will also examine various geographical, historical, political, and social conditions which contribute to myth-making. Through the application of various theories of myth analysis, you will also synthesize the information learned about various Native American traditions with a view toward understanding the distinctive identities of Native American cultures, including where applicable their position as minority cultures, and also seeing their participation in universal human beliefs and concerns. CMLIT 109 can serve as a foundation for other courses dealing with the literatures of the Americas or for other courses dealing with minority literatures and cultures. CMLIT 109 is not required for the CMLIT major but may be selected to fulfill one of the course requirements for the major or form part of a student's choices for the World Literature minor.

CMLIT 110: Jewish Literature: An International Perspective

3 Credits

Literature of the Jewish tradition in various cultures and contexts, such as Europe, Israel, Islamic countries, and the Americas. J ST 131 (CMLIT 110) Jewish Literature: An International Perspective (3) (GH;US;IL) (BA) This course meets the Bachelor of Arts degree requirements. CMLIT 110 (JST 131) will provide an introduction to the multiple worlds of Jewish experience and the different literatures they continue to inspire. Jewish literary creativity has varied widely with the personal and communal experience of writers in many parts of the world, and in many different time periods. Readings usually range from the first Jewish literary text, the Hebrew Bible, to twentieth- and twentieth-century

works, including writings about the Holocaust. The course typically includes units such as Jewish writing and culture in Eastern Europe, in the Americas, in Spain during the Middle Ages, and in Israel and the Middle East today. The material may be organized chronologically, thematically, or by regions or languages. Texts that critique or apparently suppress Jewish identity, as well as texts with representations of Jews by writers of other heritages, may be included for comparative purposes. We will include writings by Jewish authors who have written in languages usually associated with Jewish tradition (such as Hebrew and Yiddish) and in other languages (such as Spanish, Arabic, German, English, etc.). Topics discussed in the literature may focus on questions of Jewish identity and continuity, the situation of Jews as a minority people, the immigrant and diasporic experience, representations of the Holocaust, and the establishment of Israeli culture as a mixture of several traditions. We will question generalizations about the meaning of "Jewish" by showing the wide range of characteristics associated with Jewish literary productions, and the great diversity of depictions of Jews and Jewish lifestyles, in different times and places. In addition to our primary focus on literary texts, we may include examples of other cultural productions (film, music, the visual arts, philosophy, etc.). CMLIT 110 (JST 131) counts towards the Comparative Literature major and the World Literature minor. No prior knowledge of Jewish tradition is required, and General Education students are welcome. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and the United States and International Cultures requirement.

CMLIT 111: Introduction to Literatures of India

3 Credits

CMLIT 111 Introduction to Literatures of India (3) (GH;IL)(BA) This course examines readings and cultural texts from India and other parts of South Asia, including both classical and modern texts from a variety of traditions. Readings from languages other than English will be in translation. You will read, discuss, and write about these texts from the viewpoint of race, gender, culture, religion, philosophy, and ethnicity in a comparative, global, and historical perspective. While improving your understanding of difference and diverse cultures, this course incorporates lesser known and even marginalized works by Asian writers in this study of cultural and social identities and contexts. CMLIT 111 will also help you understand the influence of classical texts, as well as classical and modern culture, on recent literary productions of South Asia. You will gain an understanding of different national literatures and cultures, as well as knowledge of the historical, philosophical, and political contexts that produced them. Ideas such as "the other," gender, and Orientalism will also be included in discussions of the texts. CMLIT 111 is one of the many choices of survey courses which count towards the Comparative Literature major and the World Literature minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and International Cultures requirement.

CMLIT 112N: Introduction to Global Drama, Theatre, and Performance

3 Credits

Introduction to Global Drama, Theater, and Performance will enable students to discover the power and excitement of drama in a global context. Students will encounter a variety of cultural contexts as they observe how playwrights portray local histories and lifestyles, in settings from many parts of the world. The course will offer (1) an introductory overview of concepts and terms associated with understanding drama and the technical aspects of theater. It will present (2) traditional dramatic forms such as tragedy, comedy, history play, allegory, Noh, etc., as seen in plays prior to the twentieth century; and (3) the dramatic contributions of multiple cultural groups in the U.S., with African American, Asian American, Latino, and other U.S. plays seen not in isolation, but in relation to world drama. (4) the course will consider ways in which drama, as a form of world literature, can have an international and intercultural impact, both in earlier periods and recently, when global circulation and international collaboration are increasingly frequent. Finally, (5) this course will look at world drama and theater from a design and performance perspective. Class work may include lectures or presentations by the instructor, presentations by students, web based activities, and focused discussions.

CMLIT 113: Jewish Myths and Legends

3 Credits

Comparative study of diverse interpretations of stories from the Bible in Judaism and Christianity. CMLIT 113 / JST 113 / CAMS 113 / RLST 113 Myths and Legends of the Jews (3) (GH;IL) The impact of the Bible on Western Culture is immense. Beyond its religious importance, the motifs and images from its myths and stories permeate literature and art, providing a basic frame of reference that for much of history could be taken for granted. A degree of familiarity with these motifs so as to be truly fluent is no longer common, and so it requires special effort to discern allusions to biblical traditions. Moreover, these traditions are not static: religious communities continually re-interpret them and appropriate them in very different contexts. Many prominent traditions in Judaism, Christianity, and Islam do not appear explicitly anywhere in the Hebrew Bible, but are the product of imaginative and ingenious interpretation and re-tellings. Why, for example, is Noah an example of a righteous person in Christian tradition, but in rabbinic tradition is more often portrayed as a profane, earthly-minded man who was saved only because he was the least bad of an evil generation? Why is Moses commonly portrayed with horns in medieval art? Underlying

such different traditions are centuries of debate and reflection on these texts as sacred scripture, and competing religious communities often authorized their distinctive beliefs and practices by reading them into scripture. The differences are often too subtle to discern apart from careful comparison. This course will explore the boundaries between Scripture and tradition by means of a close examination of the myths and stories in the Hebrew Bible and their subsequent interpretation and re-tellings in Judaism, Christianity, and Islam. Using methods from comparative mythology and folklore, as well as comparative midrash, our procedure will be to compare these traditions closely with the biblical text, asking: What are the main motifs in the mythology of Judaism? Does Judaism have a coherent mythology? How do their myths compare with the myths of their neighbors? Where did these myths come from? How do these traditions relate to the Bible? What was the function of these myths? Why are there competing myths? How is it possible that Judaism affirms belief in only one God, but has myths that include other divine beings? We will also compare with later interpretive traditions (Jewish, Christian, Islamic). Can we trace trajectories of interpretation? Can we discern particular interpretive methods in operation? We will seek to answer: what do these re-workings of the traditions tell us about the development and function of Scripture, and the social circumstances of the communities? Finally, we will seek to detect reflections of these interpretive traditions in literature and art from the medieval to the modern periods. The course is organized around major topics in the Jewish Scriptures: God, creation, heaven and hell, Torah, Sabbath, Abraham and other ancestors, Israel and holy land, exile, and Messiah. Throughout we will consider how sacred stories function to form ethical perspectives and values.

CMLIT 116: Jewish Great Books

3 Credits

Historical and cultural survey of key texts of the Jewish Tradition, from The Bible to the present. CMLIT (J ST) 116 Jewish Great Books (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course will introduce students to the rich and diverse expanse of the Jewish tradition through a survey of that tradition's most important texts. Starting from the Bible, moving up through the contemporary world, and spanning the globe, the course will examine religious, cultural, folkloric, philosophical, national, and literary traditions, and attention will be paid to both breadth emphasizing the vast range and diversity of Jewish thought and writing and depth emphasizing the complexity and subtlety of particular texts in examining the material. Students will learn methods and practices of textual, cultural, and historical criticism as they engage in analysis of Jewish textual traditions, of the relationship between representation and history, and of the productive interchanges between representation, history, and identity.

CMLIT 120: The Literature of the Occult

3 Credits

Important literary works dealing with witchcraft, demonology, vampirism, ghosts, and related concepts, from biblical times to present. CMLIT 120 The Literature of the Occult (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 120 is the study of literatures of the occult. Through readings of creative and critical works, you will develop an enhanced awareness of the variations among cultures and historical periods in accepting, fostering, tolerating or sometimes suppressing-unorthodox traditions. Our range of readings from world literature will show that what is rejected or scorned in one cultural context may be tolerated or even honored in another. You will also explore the social, political, ethical and religious implications of "occult." The course will be designed to compare various manifestations of the occult in literatures from around the globe and throughout history. You will explore issues of difference, and will develop an awareness of the tendency to demonize the 'strange' and 'inaccessible.' Through various texts from around the world, you will develop the ability to analyze literature in different ways. Readings will be examined both within their cultural context, and in relation to widely found or perhaps universal themes of the occult which transcend the boundaries of time and place. CMLIT 120 is one of the many choices of survey courses which count towards the Comparative Literature major and the World Literature minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, or the United States and International Cultures requirement.

CMLIT 122: Global Science Fictions

3 Credits

A study of the relationships between science, literature, and film, from an international and interdisciplinary perspective. CMLIT 122 Global Science Fictions (3) (GH;US;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course examines science fiction and the fictions of science from an international and interdisciplinary perspective. Course content includes a history of the idea of science, of its engagement with and by fictional, filmic, dramatic, and poetic narratives, within an explicitly comparative framework that includes material from Europe, the Americas, Asia, and Africa. Students will develop a theory of genre and its development over time; they will recognize regional, cultural, and historical differences and forms of change that affect the intellectual development of the arts and sciences.

CMLIT 128N: The Holocaust in Film and Literature

3 Credits

This class studies how art, literature, film, and other media can help us to gain a perspective on one of the most horrific events in human history, the Holocaust: the genocidal murder of more than six million men, women, and children (mostly Jewish) under the Nazi regime during World War II. We will also examine the theoretical questions involved in any attempt to capture what appears to be beyond our comprehension, in terms of moral outrage and the sheer scale, inhumanity, and bureaucratic efficiency. To this end we will study literary works, such as Primo Levi's *Survival in Auschwitz*, films such as Steven Spielberg's *Schindler's List*, Roman Polanski's *The Pianist*, and Roberto Benigni's *Life is Beautiful*, as well as photographs, poems, artworks, installations, museum architecture, the design of monuments and other artifacts. We will also examine questions of memorialization (Holocaust museums and memorials), national guilt, survivor's guilt, stigmatization, and the ethics of historical representation.

CMLIT 130: Banned Books: International and Comparative Perspectives

3 Credits

The world of banned books, their history, and their politics, studied comparatively and internationally. CMLIT 130 Banned Books: International and Comparative Perspectives (3) (GH;IL) This course examines one of the most documented events in the history of book reception - the banning of books. Bannings provide a useful window onto the myriad functions of culture in social identity formation. In order to understand how and why offense is given and taken, students will learn to place texts in a specific context of their historical production and reception and also to extrapolate connections between disparate moments when taboos were named. Incorporating examples from a range of global systems of censorship, the course examines differences in the modes and effects of repression and the sometimes surprising connections between church and monarchy, fascism and democracy. This course raises the following questions:-How has censorship been justified? When, if ever, is censorship justifiable? What are the grounds on which censorship can be judged successful or incomplete? Who censors? Who is censored? What are local categories of censorship? Though books are banned for reasons of blasphemy, sedition, and obscenity in various guises in several cultures, are these global categories? How do writers write against a ban? How do they write within it? What are the roles of importation, technologies of circulation, and geography in the censorship of texts? How do border-crossings and forms of miscegenation offend?

Is there a unifying aesthetics to books that offend? The course will help students understand value systems and historical contexts in which they were produced and in which they caused offense. It will also ask students to draw connections between seemingly unrelated moments of offense in order to assist students in developing both analytical and expressive abilities. The course is designed to be suitable for all students, whether or not they have previously studied literature or comparative literature.

CMLIT 131: Crime and Detection in World Literature

3 Credits

Issues of ethics, truth, justice, and social order as embodied in crime and detective literature, presented in comparative contexts. CMLIT 131 Crime and Detection in World Literature (3) (GH;IL) This course studies the origins and development of crime and detective literature from an international and interdisciplinary perspective. Beginning with early Greek tragedies, the course traces literature's investment in issues of crime, violence, detection, forensics, and social justice through a variety of historical and cultural contexts; this may include the classical era, the early modern period, the Enlightenment, the industrial era, and the modern/contemporary world. Some of the questions addressed may include reigning myths about law and order; the rise of urban societies and mass culture; the construction of the detective figure, the witness, the criminal, and the victim as models of subjectivity; issues of gender and sexual violence; and the nature of justice. Students will learn about the history of the idea of crime and its relationship with literary form. They will develop ideas about the contribution of literary thinking to ideas of social justice, as well as a theory of genre and its development over time; they will recognize regional, cultural, and historical differences and forms of change that affect the intellectual development of literature and detection alike.

CMLIT 132: Nobel Prize Literature

3 Credits

Introduction to Nobel Prize winning literature and the culture of the prize in international and historical context. CMLIT 132 Nobel Prize Literature (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course will provide an introduction to Nobel prize-winning literature. Students will learn about the authors and their works in cultural and historical context. Readings will cover several genres (such as poetry, drama, short story, and novel) and will include authors from an array of linguistic and cultural traditions (such as African, Latin American, Middle Eastern, European, North American, and Asian). In addition to reading primary literature, students will enrich their understanding of literary history by exploring secondary material such as essays, short biographies, reviews of author's works, and the authors' Nobel Prize acceptance lectures. The course will begin by introducing Alfred Nobel, founder of the Nobel Prize, and by surveying the parameters guiding how the prize has been awarded since its inauguration in 1901.

Further readings may be organized temporally or thematically, but will be structured so that students develop a global perspective, allowing them to understand the variety of cultural contexts that have inspired the creative works under study. By examining the primary literature in connection with developing trends in prize culture, students will investigate such topics as pacifism and optimism in international prize culture, narrative and rhetorical techniques, the formation and expression of identity, changing gender roles and social expectations, the development of global Englishes, the emerging notion of world literature, and the changing climates of censorship and freedom of expression. The course is designed to be suitable for all students generally interested in literature and the globalization of culture. Prior study of literature is not required and all materials will be available in English.

CMLIT 133N: Global Satire and Modern Politics

3 Credits

Across cultures and across history, people have used political satire to call out abuses of power, manipulation, deception, and absurdity. While there are examples of political satire everywhere, its growth has been on the rise since the turn of the 21st century. Drawing on examples from Stephen Colbert to Bassem Youssef to Charlie Hebdo and studying a range of different types of satirical media this course examines the role that satire has played in shaping political discourse and advancing democracy. Possible topics include the use of satire to bring down Serbian dictator Slobodan Milosevic, the attacks on the French satirical magazine Charlie Hebdo, the political comedy of Jon Stewart and Stephen Colbert, the street art of Banksy, and the use of political cartooning in Africa. Students will hone their analytical skills through critical response papers, cross-cultural assessment of satire, comparative analysis of satirical forms, group projects, assessment of the effects of satire on shaping political debates, and quizzes on readings from the social sciences and humanities. This class is a GenEd inter-domain course for GH/GS; and International Cultures (IL) course.

CMLIT 140: Literature and the Other Arts: International and Comparative Perspectives

3 Credits

A comparative, international examination of the relationship between literature and non-literary art forms. CMLIT 140 Literature and the Other Arts: International and Comparative Perspectives (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. All around the world, literature and other forms of creative expression are related in

many fascinating ways. Writers and artists often find inspiration from each other, and some artists work across a wide spectrum of genres and embody several identities at once. In different times and places, how have writers and artists reacted to critical events or lifecycle experiences? What techniques have writers, artists, composers, and choreographers shared? In examining a broadly international range of materials, in this course we will consider (1) how artists and writers depict common themes such as nature, death, aging, love, and more; (2) ways in which art and literature relate to each other; and (3) how literature and other arts are influenced by, and in turn exert influences upon, their cultural and social contexts. Using a global perspective, we will examine relationships between literature and a variety of artistic forms, such as painting, photography, comics, film, theatre, opera, music, sculpture, and more. Students will practice enabling skills for reading across genres, media, and cultures, and for expanding their skills in analyzing and synthesizing information, their awareness of a wide variety of value systems and cultural traditions in different times and places, and their horizons of literature in global contexts.

CMLIT 141: Religion and Literature

3 Credits

Major religious themes as expressed in literary masterpieces; sacred texts from various cultures read as literature. CMLIT 141 Religion and Literature (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. CMLIT 141 is an introduction to literature, to religious writing, and to the many ways in which literature draws upon or interacts with religion. Among the many possible relationships between religion and literature are: straightforward dramatization of sacred texts; allegory; expression of mystical experience; exploration, dramatization, and individualization of theological issues; the creation of literature to promote or to meet the needs of piety; and utilization of religious imagery and symbolism as a poetic resource. Readings will include sacred texts, and also literature that draws upon or responds to sacred texts and religious traditions. It may also include avowedly secular literature that shows some relationship to religious tradition, and even literature questioning or critical of specific religious traditions or their adherents. Students will read works from a range of historical periods and world societies, both Western and non-western. CMLIT 141 is not required for the CMLIT major but may be selected to fulfill one of the course requirements for the major or for the World Literature Minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and the United States and International Cultures requirement.

CMLIT 142: The Psychology of World Literature

3 Credits

A comparative, psychological approach to world literature from the perspectives of writer, narrative, character, and reader. CMLIT 142 The Psychology of World Literature (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course explores various psychological approaches to the discussion of literature from the perspectives of writer, narrative, character and reader. Can authors, narrators, and fictitious characters be "psychoanalyzed"? To what extent do cultural variants affect a psychological approach to literature? Are there psychological universals that transcend time and culture? How does an awareness of psychology affect the reader? All of these issues will be discussed and compared with an eye to speculating the ways in which the human mind creates literature and literature impacts the human mind.

CMLIT 143: Human Rights and World Literature

3 Credits

Human rights violations discussed in tandem with their literary representation, presented in a global and comparative context. CMLIT 143 Human Rights and World Literature (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. "Human rights" refers to basic rights and freedoms to which all humans are entitled, often held to include the right to life and liberty, freedom of thought and expression, and equality before the law. But these ideas have not always been a part of human thought and some scholars believe that without certain forms of literature today's understanding of human rights would not exist. Through comparative analysis of a variety of human rights storytelling genres that reflect a range of contexts, this course will suggest that it is impossible to understand human rights without also thinking about the stories that create and sustain their idea. One main premise of this course is that the representation of human rights violations is always a vexed undertaking. It is both urgent and necessary, while also incomplete and inadequate. In order to explore this dilemma, this course focuses on the intersection between human rights advocacy and the various cultural forms that explicitly attempt to participate in human rights discourse. The course will cover a variety of cultural forms such as comic books, movies, photography, novels, testimonials, poetry, plays, etc. that reflect on human rights atrocities such as slavery, the Holocaust, war, dictatorships, apartheid, genocide, and more. At the center of the course are questions about aesthetics and ethics. What are the risks and obligations of human rights storytelling and how are these linked to specific cultural forms and aesthetic practices? This course examines a range of human rights stories through a balance of context and close reading, where stories are studied both for what they say and how they say it.

CMLIT 147N: Displacement and Migration

3 Credits

Why do we live in a world where so many people must flee their homes to survive? This course focuses on the rise in forced migration in response to violence, persecution, war, natural disasters, poverty, and environmental degradation from the late twentieth century onward. In the news media, the story of "the global refugee crisis" tends to be told through images of unprecedented disaster and spectacular havoc. To historicize displacement, students will consider the legacies that have led to violence and conflict, giving special consideration to European colonialism and the transatlantic slave trade. They will further learn about the impact of World War II, the Holocaust, and the Cold War on the emergence of the modern human rights architecture and on legal definitions that remain relevant to this day. To investigate this wide-ranging global topic, this course brings together frameworks and contributions from the social sciences and the humanities, inviting students to study the histories, experiences, and voices of those living in a world that moves. Students will engage with artistic representations of displacement through literature and film, in dialogue with migrant testimonies, archival material, international agreements, legal documents, and statistical data. This course adopts a comparative approach, inviting students to consider regimes of (im)mobility from a number of global contexts. Finally, to connect the international content of this course to the local environment, the class will also consider how forcible migration has reshaped communities in Pennsylvania. Given the large scope of the course topic, students can expect some variance in course content as reflective of faculty expertise and interest. Course activities might include interactions with guest speakers, representatives from organizations, interviews with various stakeholders, field trips, creative work, and participation in a public showcase. Students are encouraged to contact the listed instructor for more detailed information.

CMLIT 153: International Cultures: Film and Literature

3 Credits

Comparison of narrative techniques employed by literature and film in portraying different cultures, topics may vary each semester. CMLIT 153 International Cultures Through Literature and Film (3) (GH;IL) (BA) This course will compare narrative and artistic techniques employed by literature and film in portraying different social and cultural environments, which will range widely around the globe and may include Africa and the Middle East, East Asia, and South America, as well as European and North American examples. Students will view films and read novels or other texts such as short stories, plays, and poems. The purpose of this course is to have students examine how the selected artists have developed their intentions and their subject matter in their respective

medium, literature or film, and to allow students to study modes of narration across different cultures and media. Through a combination of lectures and comparative discussions, students will examine how components, including plot, genre, environment, character, and point of view are developed in films and fiction from diverse cultures. The course will also discuss techniques that are exclusive to each medium such as editing and cinematography. The comparative nature of the course allows students to understand, evaluate, and appreciate both the universal and unique qualities of the human condition. The study of narrative technique will help students develop analytical skills in discussing and writing about the literary and cinematic expression of cultural values.

CMLIT 183Q: From Beast Books to Resurrecting Dinosaurs

3 Credits

In this honors course, we'll explore changing perspectives on life and approaches to studying life. More specifically, we'll examine, through an historical lens, humankind's quest to describe and explain and, ultimately, to expand the diversity of the living world. We begin with early attempts to classify living things for example, Aristotle and Pliny. We then see how medieval bestiaries appropriated classical ideas about nature while adding to them in the context of Christian historia. In the Enlightenment, Linnaeus's taxonomic work provided a new way of naming and systematizing organisms. On the other hand, the nascent scientific methods of Sir Francis Bacon anticipate the shift from the descriptive to the theoretical and mechanistic that accompanied Darwin's first sketch of a phylogenetic tree and the theory of evolution. We consider new theories, methods, and language in our examination of Watson and Crick and the double helix, molecular biology, and genomics. The course concludes with a glimpse at future possibilities enabled by what was studied previously in the course: genetic engineering, synthetic biology, and de-extinction. The course's original structure offers the experiential engagement of the sciences through laboratory experiments and fieldwork along with the workshop and directed discussions characteristic of the humanities seminar. The content and type of "readings" also reflect both areas and include primary and secondary sources in a variety of media. A visit to a natural history museum and/or zoo provides important physical contexts where students learn about type specimens, live specimens, and how scientists today use collections. They will assemble and curate their own zoological collection, juxtaposing various approaches to describing and classifying animals. The integration of the humanities and the sciences into a single course, along with the incorporation of significant experiential work, helps students gain a broad and deep understanding of and appreciation for each of these intellectual disciplines and for life itself.

CMLIT 184: The Short Story

3 Credits

This course is designed to introduce students to the art of the short story and to acquaint them with some of its most talented writers. During the semester we will read short stories from various cultures and countries, ranging from stories written in the early nineteenth-century to those written within the last few years. Readings will include works from authors like Hawthorne, Melville, Tolstoy, Dostoevsky, Gogol, Bierce, Chekhov, Kafka, Chopin, Crane, Gilman, James, Cather, Joyce, Woolf, Faulkner, Hemingway, Lawrence, Orwell, O'Connor, Baldwin, Olson, Silko, Erdrich, Ondaatje, Barth, Barthelme, Atwood, Mukherjee, Walker, Tan, Calvino, Garcia Marquez, and Cortazar. All readings will be in English. This course is intended to help one learn how to read fiction, how to understand it, and how to talk about it. The desire to tell stories and to be told stories is one of the most basic human needs, and all cultures have been defined in part by the stories they hear and the stories they tell. We are not born knowing how to read the short story or any fiction for that matter. Rather it is a skill that one acquires, and the more one does it, like playing tennis or any other activity, the better one becomes at it, for we learn what to look for. We will explore the historical development of the short story genre, and examine how historical contexts relate to the content and style of the stories under discussion. We will become familiar with how stories are put together and with the vocabulary that is used to discuss fiction—terms such as plot, narrative, character, tone, language, closure, irony, imagery, and so forth. CMLIT/ENGL 184 is not required for the Cmlit major but may be selected to fulfill one of the course requirements for the major or the World Literature Minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and International Cultures requirement.

CMLIT 185: World Novel

3 Credits

Development of the modern novel in the last century (outside the British Isles and the United States); lectures, discussions, readings in translation. CMLIT 185 / ENGL 185 The Modern Novel in World Literature (3) (GH) (BA) This course meets the Bachelor of Arts degree requirements. In this course, students will read examples of the modern novel from around the world. Focusing on novels written outside of America and England, this class will explore the development of the modern novel as a genre across a number of world cultures. As an example, moving from the beginnings of literary modernism (the late nineteenth century) through the early and mid twentieth century, the course will consider works by writers such as the following: Chinua Achebe, Italo Calvino, Albert Camus, Simone deBeauvoir, Fyodor Dostoevsky, Isak Dinesen, Marguerite Duras, Natalia Ginzburg, Herman Hesse, James Joyce, Thomas Mann, Gabriel Garcia Marquez, Kenzaburo Oe, and Marcel Proust. This course will address the ways in which the world novels under consideration constitute examples of various literary forms and styles. The class will examine the differences and distances

between literary movements such as social realism and magical realism, modernism and postmodernism. The goals of this course will be to hone students' critical reading and writing skills while granting them the ability to think about the modern novel as a distinct genre in a comparative global context. This course will help students to develop the analytical skills necessary to analyze complex written texts..

CMLIT 191N: Introduction to Video Game Culture

3 Credits

This course is a comparative introduction to the nature and history of video games as cultural artifacts, from Pong to online role-playing. It introduces students to academic discussion on and creative work in new digital forms including hypertexts, video games, cell phone novels, machinima, and more. Students will survey major debates over the meaning and value of video games, and study some of the major theoretical terms and perspectives developed to elaborate the cultural and sociological value of video games. The course extends students' skills in literary interpretation to a variety of new objects, and makes them aware of the role medium plays in aesthetic development and production. Students will leave with a far sharper understanding of how the interpretive tools used in the humanities can be extended to include new media, and with a sense of the historical role video games have played and will continue to play in global cultural production. Because the course is historically focused, it will spend significant time looking at the differential development of video games in three major regions: the United States, Europe, and East Asia (especially Japan).

CMLIT 240Q: Artistic Patronage in Europe

3 Credits

This course surveys the institutions and social networks in which European fine arts were created, consumed and critiqued. Beginning with the medieval period and ranging to the early 20th century, the course will examine the variety of communities where public and private often intersected and which sponsored innovations in the arts. Often indexing social movements and political change, such communities include convents and cathedrals, royal academies and courts, coffee houses, salons, and theaters. Artists, performers, patrons, politicians, journalists, and others collaborated and competed in these spaces. Such communities could embody political and economic power, or foster resistance to it. This approach to the history of the arts in western culture puts the focus less on the individual creative genius of great composers, writers, painters, and sculptors, and more on the social exchanges and institutions that sponsored and received their work. Such an approach brings to light particularly the ways in which women played significant roles in the production and reception of culture: as salon hostesses, patronesses, and divas, women often enabled and enacted cultural production. Some examples of particular units of study might include: the German convent of Hildegard of Bingen (1098-1179), where monophonic chant and allegorical morality plays developed; the Mantuan (Italy) court of Isabella d'Este, the first lady of the world, (1474-1539) where the roots of the madrigal began and where notable painters found support and sponsorship; the French salons of Mme. Geoffrin (1699-1777) and Mme. de Staël (1766-1817); and the student residences in Madrid where avant-garde writers and artists interacted. Each unit will also consider the relationships between the aesthetic norms and values of a period and the economic and political realities of sponsorship. The course will require that students attend at least one musical performance or concert held on campus during the semester and complete a brief writing project based on that experience. This requirement will encourage students to think about their own university as a contemporary space of cultural sponsorship.

CMLIT 403: Latina/o Literature and Culture

3 Credits

Literary and other forms of cultural expression (film, music, art, and theater) are compared across different Latina/o communities. LTNST (CMLIT) 403 Varieties of Latina/o Cultural Expression (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This course provides students with a multi-faceted comparative view of Latina/o literature in relation to other forms of cultural expression. First, the course presents a variety of cultural expressions to students in an effort to teach them the different ways that form affects content. Each text will be studied in its historical context as well, thereby providing students with a sense of Latina/o cultural history. Second, this course compares

works from within the same genre, allowing students to recognize the ways that Latina/o culture has worked to build identity, to deconstruct identity, and to challenge cultural stereotypes. Such comparison further facilitates comparison of the ways that different cultural forms have been used by diverse Latina/o communities. Third, this course compares cultural forms, allowing students to see how Latina/o poetry affects music or how Latina/o theater affects novels. Fourth, this course will include texts that represent a variety of linguistic and national contexts, including many countries in Latin America, thereby allowing students to see the relationship between history, culture, language, geography, and identity. These are all themes that are at the center of both Latina/o Studies and Comparative Literature. A comparative perspective facilitates appreciation of the vast and varied ways that Latina/o communities have used cultural expression. A particular point of contact between Latina/o Studies and Comparative Literature is the influence of hybridity. A central issue explored in this course concerns the intricate connections between multiple ways of expressing identity, in the arts, literature, music, etc., in diverse circumstances, such as locations where Latina/o cultures may be in the mainstream (such as in Latin America) and in the minority (in the U.S.). Drawing upon approaches offered by comparative literature and theories such as post-structuralism, feminism, and post-colonialism, we will examine the complex process through which Latina/o culture has been defined, disseminated, contested, and commercialized. Of particular interest from a comparative perspective are the ways that Latina/o cultures are created through hybridization, processes of mutual borrowing and differentiation, as well as through transnational processes of migration, urbanization, and cultural contact. The course's objective is to show not only how complex societies consolidate a shared culture but also how diverse Latina/o communities have produced a multiplicity of cultures that have been expressed via a broad range of cultural registers. These communities often span vast geographical areas, not only in the U.S. but across the Americas as people continue to look to their countries of origin for artistic inspiration.

CMLIT 404Y: Topics in Asian Literature

3 Credits

Selected works from the major poetry, fiction, and drama of such countries as India, China, Japan. CMLIT 404 / ASIA 404 Topics in Asian Literature (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course focuses on Asian literature in a comparative and international frame. Different iterations of this course will have different topics as well as different historical or geographic foci, but may include literatures from the countries of East Asia (China, Japan, Korea), Southeast Asia (Thailand, Vietnam, Laos, Indonesia, Cambodia), or South Asia (Bangladesh, India, Pakistan). Because the course is comparative it will highlight relationships between and among literary traditions of Asia, or between Asia and the rest of the world, whether in the fields of poetry, drama, or fictional and non-fictional prose.

Prerequisite: 3 credits in literature or related field appropriate to this course

Cross-listed with: ASIA 404Y

Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 408: Heroic Literature

3 Credits

Traditional heroes, their traits and adventures; typical themes and examples chosen from the epics and sagas of world literature.

Prerequisite: 3 credits in literature or folklore

Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 410: Literary Translation: Theory and Practice

3 Credits

Emphasizing literary translation, a study of the theoretical and practical problems encountered in the processes of translation, transmission, and interpretation. CMLIT 410 Literary Translation: Theory and Practice (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course focuses on the history and practice of literary translation, ranging across space and time to provide a comparative, international perspective. It addresses such issues as the difficulties of literary language; theories of translation and translatability; theories of semantic equivalence; alternative modes of translation including sound- and graph-translation; and the history of important moments of translation in shaping the literary imagination. No second language is required, but students interested in learning how to translate literature may be given assignments allowing them to practice important skills connected to that task.

Prerequisite: 18 credits in a foreign language

Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 415: World Graphic Novels

3 Credits

Critical analyses of form, genre, medium, and discourse of the graphic novel and its historical precedents in an international and comparative context. CMLIT 415 World Graphics Novels (3) (GH; US;IL) (BA) This

course meets the Bachelor of Arts degree requirements. This course considers the graphic novel (also known as graphic fiction, comics, or sequential narrative) as an emergent literary medium and global phenomenon. The course focuses on texts that engage issues of contemporary identity, ethnicity, sexuality, technology, and/or history (personal, family, and national). These graphic novels engage these issues through the medium of text joined with image. This course explores the aesthetic of sequential narrative, its methods of production and consumption, and its place in a contemporary culture of reading. Assigned texts include titles from the United States, France, Japan, Italy, Canada and Norway. All texts will be read in English translation.

Prerequisite: 3 credits in literature

Bachelor of Arts: World Cultures
International Cultures (IL)

CMLIT 424: Transnational Korean Literature

3 Credits

Exploration of seminal Korean texts, including poetry, fiction, autobiography, and criticism, from the early twentieth century to the contemporary era. This course provides a comprehensive overview of modern Korean literature within a transnational context. As we learn how to critically analyze seminal Korean texts, we will locate them in the social, political, economic, and cultural conditions under which they were produced and received. In grappling with some of the fundamental issues they raise; including colonialism, migration, national division, war, gender relations, developmentalism, urbanization, democratization, and contemporary consumer culture; we will also seek to situate these writings in the Korean vernacular within the larger context of global modernity. Rather than take Korean literature and global modernity as given or apart from each other, we will attend to their intersections by raising such questions as: How did modern experiences, constructed through the interface with unfamiliar Others, change preexisting ways of writing and reading? How did foreign occupations affect the formation of a national literature? In what ways do Korean writers' representations of the inter/national events and phenomena on and beyond the Korean peninsula at once enrich and complicate empirical investigations into modern histories of Korea, East Asia, and the world? In an increasingly

borderless world, can we draw a boundary around what is called "Korean" literature? In parallel with these questions, we will further discuss why and how to engage in literary practices in the current age of digital reproduction. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

Prerequisite: KOR 120; KOR 121; ASIA 100; ASIA 102; ASIA 83; ASIA 4; CMLIT 4; 5th Semester standing
Cross-listed with: ASIA 424, KOR 424
Bachelor of Arts: Humanities
Bachelor of Arts: World Cultures
International Cultures (IL)

CMLIT 425: Global Korean Cinema

3 Credits

Exploration of Korean cinema from the early twentieth century to the present, with an emphasis on its global/local dynamics. This course offers an introductory overview of Korean cinema. As we trace its history from the colonial period to the current "Korean wave," we will also engage with film criticism, the trans/national contexts of film productions, the particular aesthetics of selected auteurs/genres, and local/global receptions of Korean cinema. Our discussion of formal elements and key issues featured in these films; modernity, colonialism, division, nation, class, gender, identity, tradition, ideology, desire, violence, and migration, among others; will be informed by readings of secondary sources and theoretical works, as well as literary materials produced during the same period. Throughout our analyses, we will seek to contextualize the cinematic texts within moments of major shifts not only in modern Korean history, but also in the transnational film industry and screen culture. In pursuing a broad and detailed perspective of Korean cinema, this course will ultimately enrich, and simultaneously complicate, our understanding of Korea, cinema, and the world. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

Prerequisite: KOR 120; KOR 121; ASIA 100; ASIA 102; ASIA 83; ASIA 4; CMLIT 4; 5th Semester standing
Cross-listed with: ASIA 425, KOR 425

Bachelor of Arts: World Cultures
International Cultures (IL)

CMLIT 429: New Media and Literature

3 Credits

New media literary genres; critical discussion of creative works in digital media.

Cross-listed with: ENGL 429
Bachelor of Arts: Humanities

CMLIT 435: Cultures of Globalization

3 Credits/Maximum of 3

Cultural and literary effects of the process of globalization, with an emphasis on world literatures and transnationalism. CMLIT 435 Cultures of Globalization (3 per semester/maximum of 6) (IL) This course focuses on the cultural and literary effects of the process of globalization, with an emphasis on world literatures and transnationalism. It invites students to think about the ways in which the globalization of culture, politics, and/

or the economy affects literary production, and the ways in which such literary features as genre, form, medium, style, and theme in turn reflect and attempt to shape our understanding of the global and its becoming. The course will have a significant focus on primary material (literature, film, other media) and secondary material (philosophy, journalism, criticism, and so on). It will introduce students to the main theoretical concepts that govern thinking about globalization and global culture, as well as to important literary and cultural texts that articulate those values. It will prepare them for further research in comparative literary studies and in the critical history of globalization.

Prerequisite: 3 credits of literature
International Cultures (IL)

CMLIT 438: Fantastic Worlds: International and Comparative Perspectives
3 Credits

A comparative, international study of fantastic worlds in literature and visual culture. CMLIT 438 Fantastic Worlds: International and Comparative Perspectives (3) (IL) This course will explore a wide range of "fantastic" narrative voices, crossing the boundaries of genres, periods, and nations, through literary and visual texts from the 19th century to contemporary eras, and from Asia to Americas. Students will examine various types of literary techniques and concepts, such as magic realism, grotesque realism, the absurdity, the fantastic, etc., and learn how texts best capture/grasp the nature of "realities" in their creation of "fantastic" worlds. Students will develop more profound understanding of literatures through global lenses, develop and refine critical thinking, in speech and writing, and comparative methods of literary analysis, and develop communications skills in essays, response papers, class discussions, presentation and research papers. Instructional objectives: 1) Students will develop more profound understanding of literature's through global lenses 2) Students will develop and refine critical thinking, in speech and writing, and comparative methods of literary analysis 3) Students will develop communications skills in essays, response papers, class discussions, presentation and research papers.

Prerequisite: 3 credits in literature
International Cultures (IL)

CMLIT 440: War Stories: The Literature of War
3 Credits

War Stories: The Literature of War (US/IL): an exploration of representations of war in culture. This course considers how war is represented in a variety of cultural artifacts including literature, film, television, video games, music, art, etc. What stylizations, omissions, and blindspots are necessary in order to represent the reality or the surreality of war? Readings are from the Classical period (the Iliad) to the current wars. Issues of memory, of traumatic reconstruction after the fact, and of the glorification of war as a necessary aftermath will complement some specific readings and films about (and often against) war. Texts and focus may vary but can include novels, film, video games, television, comics, social media, music, art, and more. Some of the major objectives of this course are to identify formal and aesthetic aspects of literary texts dealing with the topic of war and its aftermath including genre, period, style, theme, language, and narrative structure as well as analyze those texts and other artistic media within a comparative or global context. We will also compare written and visual texts from different cultures, regions, languages, time periods, and genres that deal with the concept of war.

International Cultures (IL)
United States Cultures (US)

CMLIT 446: Postcolonial Literature and Culture
3 Credits/Maximum of 3

Postcolonial literature and theory in a comparative and international context. CMLIT 446 Postcolonial Literature and Culture (3 per semester/ maximum of 6) (IL) (BA) This course meets the Bachelor of Arts degree requirements. Taking a comparative and transnational approach, this course will provide an advanced introduction to the field of postcolonial literature and theory. Readings will include the foundational anti-colonial writings of the early twentieth century, the postwar literature of decolonization, and the most recent literature on cultures of globalization. Themes to be discussed may include nationalism, subalternity, neocolonial formations, migration, and cultural translation. In general, this course will be taught in the active learning mode, featuring in-class discussion, writing projects, and group presentations. CMLIT 446 is one of the many courses, which count towards the Comparative Literature major and the World Literature minor.

Prerequisite: 3 credits in the study of literature
Bachelor of Arts: Humanities
Bachelor of Arts: World Cultures
International Cultures (IL)

CMLIT 448: Literary Cultures of Buddhism
3 Credits

Comparative exploration of various Buddhist literary cultures, from the classical Indian subcontinent to modern movements like the Beats and dalit writing. CMLIT 448 Literary Cultures of Buddhism (3) (IL) This course will provide an in-depth exploration of various cultures of Buddhist literary production. Readings will cover a broad temporal and geographical range. Prior study of Buddhism or literature is not required and materials will be in English. Students will learn about major genres of Buddhist literature, such as sutras (scripture), j'ataka (stories of the Buddha's previous incarnations), hagiography, miracle tales, religiously inspired poetry, and k'an meditative riddles. The course will also examine the various forms into which contemporary authors have adapted these materials (such as manga, novels, memoirs, and film). The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the literary cultures that gave rise to the works under study. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students' appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. The course is designed to be suitable for all students generally interested in religious cultures of writing, in Buddhism, or in literature, whether or not they have previously studied in any of these areas. The Comparative Literature major requires a certain number of electives at the 400-level, of which this could be one, depending on its content. Further, the course is designed to count as General Education and as an IL ("International") course. It will be taught, as feasible, every 2-3 years with an enrollment of 20-30 students. With the addition of supplementary reading and research assignments, the course may also be suitable for certain graduate students. This course would benefit from access to a laptop and digital projector.

Prerequisite: 3 credits in literature

International Cultures (IL)

CMLIT 449: Literary Cultures of Islam

3 Credits/Maximum of 3

Comparative discussion of the literary cultures of Islam from the seventh century to the present. CMLIT 449 Literary Cultures of Islam (3-6) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course is an advanced introduction to the literary cultures of the Islamic world, from the seventh century to the present. No prior knowledge is required. Works will be read in translation. Students will study the foundational text of Islam, the Quran, as a literary text, and learn about major genres of Islamic literatures (ghazal, masnavi, and maqamah, among others). They will also examine how these genres have been adapted in modern literature and media (novels, memoirs, and film). Supplementary historical readings will be provided to contextualize the primary texts. CMLIT 449 is one of the many courses which count toward the Comparative Literature major and the World Literature minor.

Prerequisite: 3 credits in the study of literature
Bachelor of Arts: Humanities
Bachelor of Arts: World Cultures
International Cultures (IL)

CMLIT 453: Narrative Theory: Film and Literature

3 Credits

This course explores the relationships between language and the medium of film through analysis of adaptations between other mediums and the cinema, and by analysis of the influences between the discourses of literature(s) and the cinema. The course has broad applicability not only to students of literature and students of the cinema, but to all students who need to understand ways to compare relationships between disparate communications and artistic media. Students begin by understanding techniques and theories of both cinematic and literary analysis. Then, they explore theories of adaptation between media, including general theories of artistic and cultural influence. Among the media students may encounter in addition to literary fiction and narrative cinema are the graphic novel, creative nonfiction, drama, poetry, journalism, video games, the documentary cinema, and the experimental cinema. Students work through case studies of adaptation in literal terms, such as the transformation of graphic novels into narrative cinema. Students also work through case studies in influence, in which distinct art and media discourses affect one another, as in the relationship between videogames and the cinema. Students study transmedia storytelling, in which core narratives are expressed in different media. Students also study transcultural and transnational storytelling, in which adaptation and influence are conducted across borders. Students study questions of representation, particularly of difference (race, class, sexuality/gender) and cultural specificity. Students learn the historical and institutional settings which have conditioned these intermediations. The economics of literary and media production and the circumstances of reception of distinct media are explored. Students will experience classical and non-classical forms of storytelling, as well as fictional and non-fictional discourses. In this course, students will meet ancillary concerns in adaptation, such as translation, dramaturgy, and genre scholarship. Students express their individual conclusions in summary projects which apply theory to particular instances of adaptation and influence between media. These projects may include creative work, and multimedia texts which enact as well as analyze adaptation. As advanced scholars in the disciplines

of literary and cinematic studies, students are expected to synthesize previous learning in these fields in their summary projects.

Enforced Prerequisite at Enrollment: COMM 150 or ENGL 15 or ENGL 30H or ENGL 137H or CAS 137H
Cross-listed with: COMM 453
Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 455: Ethics, Justice, and Rights in World Literature

3 Credits

Concepts of ethics, justice, and rights, appearing in world literature and/or film. CMLIT 455 Ethics, Justice, and Rights in World Literature (3) (IL) The course will consider how literature and culture address common concerns, including morality, justice, equality, and agency from different perspectives, aesthetic styles, and formal constraints. Students will consider how cultural texts, like legal and philosophical texts, have the power to influence politics and society. Literature is important for understanding ethics, justice, and rights because it teaches ways of thinking and of relating to others that are central to social values. How do we develop the commitment to social equity? How do stories develop ideas of altruism, of prejudice, of pathos, and more in their audience? What role does culture play in developing the moral imagination required to think through social crises? Each class will explore one or more interrelated topics through a variety of cultural and philosophical works. Readings might include works by Melville, Shakespeare, Kafka, Glaspell, Morrison, Capote, Garcia Marquez, and others. Topics might include: formalism; the paradoxes of equity; narrative, storytelling, and framing; custom, law and the political order; law, society, and power; interpretation, authority, and legitimacy; punishment, retribution, and redemption; and others. This course will provide an opportunity to think about the law and ethics in a new way, to read engaging works of fiction and non-fiction, and to examine the humanistic and philosophical perspectives that are at the core of the ethical imagination.

Prerequisite: 3 credits in the study of literature
International Cultures (IL)

CMLIT 470: The Modern Novel

3 Credits

Major novels of Joyce, Proust, Kafka, Thomas Mann, Nabokov, and others; their contributions to the art of the novel. CMLIT 470 The Modern Novel (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course focuses on the modern novel in a comparative and transnational perspective. It explores the basic connections between the modern period and the novel as a form, noting the rise to prominence of the novel in the modern period, and focuses on several important examples of the genre. Some versions of this course may adopt specific organizing themes, such as the novel and the city, the novel and war, the novel and love, and so on. Other versions may focus on the historical development of the novel over time or on crucial interpretive or narratological issues, including the problems of character, time, or point of view; still others may concentrate on major sub-genres of the modern novel, including realism, magic realism, modernism, and postmodernism.

Prerequisite: 3 credits in literature
Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 471: Poetry and Poetics

3 Credits

Theoretical and practical concepts in the comparative, global history of poetry and/or poetics. CMLIT 471 Poetry and Poetics (3) (IL) This course explores theoretical and practical concepts in the history of poetry and/or poetics. Like all comparative literature courses, it pursues this task through discussions of poetry from a wide variety of national or linguistic origins and ranges widely across historical period, medium, and social form, where appropriate. Students will develop a broad array of interpretive skills appropriate to poetry and poetics; they will acquire a knowledge of a wide variety of poetic forms; they will undertake comparative analyses of poems and poetic structures; they will learn how to think about poetics outside poetry.

Prerequisite: 3 credits in literature
International Cultures (IL)

CMLIT 480: The International Folktale

3 Credits

Traditional tales from various parts of the world: their origin, characteristics, forms; their transmission as oral narrative and written literature.

Prerequisite: 3 credits in literature or folklore
Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 486: Tragedy

3 Credits

Development of tragic drama and its relationship to social background and philosophical theory.

Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 487: Comedy

3 Credits

Development of comic drama and its relationship to social background and philosophical theory.

Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 489: Contemporary World Fiction

3 Credits

A survey of developments in contemporary world fiction in translation. CMLIT 489 Contemporary World Fiction (3) (IL) The purpose of this course is to expose students to the developments in world fiction in the last 50 years and to expose them to a range of authors from a number of countries. This course, then, also involves getting to know the novel-writing histories of those countries and in many cases, the recent histories of those countries (for example, in novels like Rushdie's *Midnight's Children* or Garcia Marquez's *Hundred Years of Solitude*). The class will approach these fictions from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Pamuk, Grass,

Murakami, and Marquez. Time allotted for the study of the works under consideration will vary.

Prerequisite: 3 credits in literature
International Cultures (IL)

CMLIT 490: Video Game Lit Studies

3 Credits

A comparative look at the nature and history of video games as cultural artifacts, from Pong to online role-playing. This course meets the Bachelor of Arts degree requirements. The video game industry is larger than the film industry, and yet the academic study of video games has only just begun. This course is a comparative introduction to the nature and history of video games as cultural artifacts, from Pong to online role-playing. It introduces students to academic discussion on and creative work in new digital forms including hypertexts, video games, cell phone novels, machinima, and more. Students will learn basic narrative theory, and study its impact on game studies and game production. They will survey major debates over the meaning and value of video games, and review its history from Pong to contemporary games, including online world-based games. The course extends students' skills in literary interpretation to a variety of new objects, and makes them aware of the role medium plays in aesthetic development and production. Students will leave with a far sharper understanding of how the interpretive tools used in the humanities can be extended to include new media, and with a sense of the historical role video games have played and will continue to play in global cultural production.

Prerequisite: GAME 160 , GAME 140 , or 3 credits in literature; Concurrent: GAME 160 or GAME 140 if desired
Cross-listed with: GAME 460
Bachelor of Arts: Humanities

CMLIT 491: Literary Adaptation: International and Comparative Perspectives

3 Credits/Maximum of 3

A comparative, international study of adaptations between literature and other media (film, theater, photography, music). CMLIT 491 Literary Adaptations: International and Comparative Perspectives (3 per semester/maximum of 6) (IL) (BA) This course meets the Bachelor of Arts degree requirements. From the very first expressions of literary impulses in prehistoric times, and continuing through the present, literary material has been re-used and creatively recycled through processes of adaptation and appropriation, often involving translations not only between languages, but also between media. This course uses a global perspective to explore the processes and aesthetics of adaptations of literary works, including adaptations into other genres or media, such as the visual arts, a film, opera, stage play (or vice versa adaptations from other media into literature). Drawing upon a broadly international selection of materials, we will explore multiple discourses surrounding adaptation; address the importance of translation and the dynamics between languages, audiences, and texts; study how adaptations address common themes such as race, class, gender, and sexual orientation; discuss international taxonomies of literary genres; and critically assess different cultural notions of authorship, intellectual property, and communal vs. individual ownership. From year to year the works and authors studied in this course may change. Course objectives include (1) to encourage students to think critically about adaptations within and between cultures and media, in different parts of the world (2) to critically evaluate several of the often conflicting analytical paradigms

which characterize the study of literary adaptations; (3) to assess varied approaches to genre in adapted works in different cultural settings; (4) to understand different perspectives on the concept of the author, such as the literary author and the 'author' in theatre studies; (5) to question assumptions about the world, re-examine personal points of view, and understand an expanded international range of ethical and value systems as expressed in literature. For methods of student evaluation, see the syllabus for each section; options include class presentations, response papers, research projects, and exams. This course may form part of the Comparative Literature major, the World Literature minor, and other majors.

Prerequisite: 3 credits in literature or other fields relevant to this course
Bachelor of Arts: Humanities
International Cultures (IL)

CMLIT 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

CMLIT 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities
Honors

CMLIT 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

CMLIT 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

CMLIT 499: Foreign Study--Comparative Literature

3-6 Credits/Maximum of 6

Advanced courses offered on comparative literary topics as part of a foreign-study program.

Prerequisite: 18 credits or equivalent in the appropriate foreign language; 6 credits in literature or related field appropriate to this course
Bachelor of Arts: Humanities
International Cultures (IL)

Computer Engineering (CMPEH)

CMPEH 472: Microprocessors

4 Credits

This course is designed to provide students with strong foundation in microprocessor programming and hardware interfacing both in the classroom and laboratory settings. This course is a required course in the Electrical Engineering BS curriculum and is intended to be taken by students who have completed their digital systems and first electronics course requirements. As such, the course integrates materials from the above undergraduate electrical courses in addition to related math, engineering, and science courses.

Prerequisite: (CMPSC 101; CMPSC 121; CMPSC 131; CMPSC 201; CMPSC 202) (CMPEN 271, CMPEN 275; CMPEN 270)

Computer Engineering (CMPEN)

CMPEH 111: Computers and Computer Hardware

1 Credits

A brief orientation to University life and resources and an introduction to computers and computer hardware. CMPEN 111S Computers and Computer Hardware (1) This course contains two components: an orientation to University life and an introduction to the hardware aspects of computer engineering. In the orientation to University life, students learn about the responsibilities of and expectations on a student including ethical behavior, and explore some of the academic and non-academic resources of the University. In the introduction to computer engineering students learn about some of the fundamental concepts, devices, and methodologies that are involved in the design and use of digital and computer hardware. This exploration begins with a foundation of logic and critical thinking. Logic is examined first from a theoretical problem solving standpoint. The discussion then progresses to an implementation perspective examining how logic devices are created and used. Included is a look at some CAD tools and some logic design laboratory exercises. Using logic as a basic building block, the organization and design of a computer is then examined, ending in an exploration of some of the contemporary methods used to make computers faster and more efficient.

First-Year Seminar

CMPEH 270: Digital Design: Theory and Practice

4 Credits

Introduction to digital systems and their design. Topics include combinational and sequential devices and circuits, modern design tools and design practices. Students may take only one course for credit for CMPEN 270 or CMPEN 271 and CMPEN 270 or CMPEN 275. CMPEN 270 Digital Design: Theory and Practice (4) CMPEN 270 is a first course in digital systems and digital system's design. It lays the groundwork for many later courses in computer organization and architecture and switching theory. The course includes both a lecture component to introduce important concepts, principles, methodologies and theories and a laboratory component in which the lecture material can be applied and practiced. The course introduces the theoretical foundation for digital systems including number systems, a variety of commonly used codes and Boolean algebra. Combinational devices, logic gates, and sequential devices, latches and flip-flops are introduced along with

design techniques, methods and tools. Design criteria and objectives are considered and design trade-offs are examined. Higher level design elements are also examined such as decoders, multiplexers, counters, and registers, and their use in system design. Students are exposed to a variety of design tools and implementation techniques, including schematic capture tools, simulation tools, Hardware Description Languages (HDL) and HDL design tools. Laboratory work includes the design, construction and debugging of a variety of digital circuits, and the use of standard laboratory tools such as the oscilloscope and logic analyzer, and various software design tools.

Enforced Concurrent at Enrollment for: PHYS 212

CMPEN 271: Introduction to Digital Systems

3 Credits

Introduction to logic design and digital systems. Boolean algebra, and introduction to combinatorial and sequential circuit design and analysis. Students may take only one course for credit for CMPEN 270 or 271. CMPEN 271 CMPEN 271 Introduction to Digital Systems (3) This course introduces students to logic design and digital systems. The course begins with an overview of number systems, base conversions, and binary arithmetic. Boolean algebra is presented and several basic theorems and postulates are introduced. Boolean algebra is then used to model digital devices. Canonical forms for expressing Boolean functions are introduced including sum-of-products and product-of-sum forms. Basic Small Scale Integrated (SSI) combinational devices are introduced along with a description of their operations characterization, and use. The basic symbols used in a logic diagram/schematic are introduced and the principles involved in reading and creating logic diagrams/schematics are discussed. A systematic design methodology for combinational circuits is covered, including the concepts of function minimization using Karnaugh maps, handling don't care conditions, and designing multiple output circuits. Medium Scale Integrated (MSI) combinational devices and functions such as multiplexers and decoders are discussed and their use in a variety of applications is explained. Simple programmable logic devices and their use in implementing combinational functions is covered. The process of combinational circuit analysis is discussed and the use and interpretation of timing diagrams is introduced. Binary arithmetic is reviewed along with binary addition and subtraction circuits. Various negative number codes are discussed including 2's complement, 1's complement and sign-magnitude representation. The concept of state and memory is introduced along with various sequential devices including the R-S latch, the D latch and the D, T, and J-K flip-flops. Timing considerations such as set-up and hold times for sequential devices is discussed along with various flip-flop triggering methods. The basic model for a sequential circuit/finite state machine is introduced. A systematic design methodology for creating synchronous sequential circuits is covered including state table/diagram creation, state reduction, state assignment, and circuit implementation. The process of sequential circuit analysis is also described. Special sequential devices and circuits are introduced including counters and registers. Their use in various applications is highlighted. The course ends with a discussion of memory devices including RAM's and ROM'S. Throughout the course, students use a schematic capture and design simulation CAD tool to model and test a variety of circuits.

Enforced Concurrent at Enrollment: PHYS 212

CMPEN 275: Digital Design Laboratory

1 Credits

Introduction to digital design techniques. Students may take only one course for credit for CMPEN 270 or 275.

Enforced Concurrent at Enrollment: CMPEN 271 and PHYS 212

CMPEN 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CMPEN 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CMPEN 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CMPEN 331: Computer Organization And Design

3 Credits

INTRODUCTION TO MAJOR COMPONENTS OF A COMPUTER SYSTEM, HOW THEY FUNCTION TOGETHER IN EXECUTING A PROGRAM, HOW THEY ARE DESIGNED. CMPEN 331 Computer Organization and Design (3) The goals of the course are to introduce students to the major components of a computer system (the data path, the control path, the memory system, the I/O system), how they function together in executing a program, and how they are designed. The relationships between instruction set design, addressing modes, fetch and execute operations, and their impact on the underlying architecture are presented. Students will develop skills both in assembly language programming and in designing architecture components in a hardware description language (VHDL or verilog). CMPEN 331 is a required course for both computer engineering and computer science majors. CMPEN 331 requires access to PCs/workstations with commercial hardware description language tools (e.g., Synopsys VSS compiler and simulator) and a modern assembler/debugger (e.g., SPIM MIPS assembler, simulator, and debugger).

Enforced Prerequisite at Enrollment: (CMPEN 270 or CMPEN 271) and (CMPSC 121 or CMPSC 131 or CMPSC 201)

CMPEN 351: Microprocessors

3 Credits

Microprocessor architecture; memory system design; assembly language programming; interrupts; the stacks and subroutines; memory and I/O interfacing; serial I/O and data communications; microprocessors applications.

Enforced Prerequisite at Enrollment: CMPEN 271 and CMPEN 275

CMPEN 352W: Embedded Systems Design

3 Credits

Design/development of embedded systems for data acquisition, process control, and special-purpose computing systems; peripheral interfacing, serial/parallel communications and bus systems. CMPEN 352W Microprocessor-based System Design (3) In this course students learn how to design application specific embedded systems. Embedded systems are increasingly important as they are used in industrial applications, personal computing, and consumer products. Embedded systems are based on microprocessors and microcomputers, but are not intended to be general-purpose computers. In the laboratory students will design, implement, and validate application specific embedded systems. Being a writing-across-curriculum course, students will learn effective techniques of reporting their technical designs.

Enforced Prerequisite at Enrollment: (CMPEN 351 or CMPEN 472) and EE 210

Writing Across the Curriculum

CMPEN 362: Communication Networks

3 Credits

Data transmission, encoding, link control techniques; communication network architecture, design; computer communication system architecture, protocols. CMPEN 362 CMPEN (E E) 362 Communication Networks (3) CMPEN (E E) 362 is an elective course in both the electrical and computer engineering curricula which provides an overview of the broad field of data and computer communications. First, a general model of the communication task is presented, including the layered concept by which each layer provides services for the layer above. First, the lowest (physical) layer is studied. This involves signal design, Fourier analysis representations, bandwidth concepts, transmission impairments and communication media properties. Then the next higher (link) layer is considered which involves organizing bits into frames, data link and error control methods (including frame sequence numbering and error detection principles). Multiplexing to share a link is studied, including frequency division multiplexing, dedicated time division multiplexing, and statistical time multiplexing. At the network layer level, there are two categories: broadcast (usually local area) and switching networks. Broadcast and local area network studies include bus, tree and star topologies, Ethernet, optical fiber bus networks, ring networks, and medium access control protocols. Switching and routing concepts for networks are explained, including both circuit and packet switching, datagrams and virtual circuits. Properties of frame relay and asynchronous transfer mode (ATM) networks are described. Internetworking frame structures, routing and protocols are studied. Also, bridge routing for local networks is described. At the still higher transport (network end-to-end control) layer, transport protocols, including TCP/EP, are described.

Enforced Prerequisite at Enrollment: CMPEN 270 or CMPEN 271
 Concurrent Courses: STAT 318 or STAT 401 or STAT 414 or MATH 414 or STAT 418 or MATH 418
 Cross-listed with: EE 362

CMPEN 371: Advanced Digital Design

3 Credits

Theory, design, and implementation of digital circuits based on combinational and sequential circuits; implementation of designs using

hardware description language. CMPEN 371 Advanced Digital Design (3) Students will learn advanced concepts in digital design for complex combinational and sequential logic, and learn how to effectively use minimization and synthesis techniques. Contemporary CAD tools and target digital technologies including Field Programmable Gate Arrays (FPGAs) are utilized. The use of a hardware-description language for digital design is introduced. In the laboratory portion, students will implement, simulate, and test designs.

Enforced Prerequisite at Enrollment: CMPEN 271 and CMPEN 275 and (CMPSC 121 or CMPSC201) and (EE 210 or EE 211)

CMPEN 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

CMPEN 396: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CMPEN 396A: Current Technologies in Computer Engineering

1-6 Credits

Investigation of a current technology relevant to computer engineering.

CMPEN 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CMPEN 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CMPEN 411: VLSI Digital Circuits

3 Credits

Basic building blocks of CMOS design, design rules, chip planning, layout design, system power and timing, simulation of VLSI structures.

Enforced Prerequisite at Enrollment: (CMPEN 371 or CMPEN 471) and EE 310

CMPEN 416: Digital Integrated Circuits

3 Credits

Analyses and design of digital integrated circuit building blocks, including logic gates, flip-flops, memory elements, analog switches, multiplexers, and converters. CMPEN 416 CMPEN 416 Digital Integrated Circuits (3) CMPEN 416 is a technical elective available to electrical and computer engineering students. It is intended for students who wish to specialize

in the field of digital circuits. This course introduces the basic concepts involved in the design of digital circuits, which find practical application as logic and memory circuits in computers and other digital processing systems. The course emphasizes integrated circuit process-compatible circuit design techniques in recognition of the amazing synergy that has characterized the relationship between computer circuits and integrated circuit processing technology. This course includes three lectures and a two-hour laboratory each week. The only prerequisite is E E 310, a basic circuits course required for both electrical engineering and computer engineering students. CMPEN 416 begins with a review of the bipolar junction transistor (BJT) device and proceeds into the more advanced Ebers-Moll device model. This is followed by an examination of a series of BJT-based saturating and non-saturating digital circuits of ever increasing complexity illustrating the evolution of the modern bipolar logic circuit families. The next phase of the course reviews the metal oxide semiconductor field effect transistor (MOSFET) and proceeds along the same path taken for the bipolar transistor circuits. Various MOSFET logic circuit families are introduced and analyzed. Computer semiconductor memory circuits are considered next. Both BJT and MOSFET versions of both static and dynamic read-write and read-only memories are considered. The cell array, memory addressing circuits, and sense amplifier designs are all examined in detail. This is followed by the related subject of programmable logic arrays, the final topic. The emphasis of the laboratory component of the course is to compare the performance of representatives of each class of circuits to computer simulations of the same circuits. Parameters such as input-output voltage transfer characteristics, noise margins, and propagation delays are evaluated by building and measuring laboratory models. Most of the laboratory exercises require the student to evaluate a specified circuit, but the final exercise requires the student to design a circuit to meet a predefined set of specifications, then to prove that the design meets the requirements by measuring the circuit performance. Students are required to write a formal engineering report detailing the results of each laboratory exercise.

Enforced Prerequisite at Enrollment: EE 310

Cross-listed with: EE 416

CMPEN 417: Digital Design Using Field Programmable Devices

3 Credits

Field programmable device architectures and technologies; rapid prototyping using top down design techniques; quick response systems. CMPEN 417 CMPEN (E E) 417 Digital Design Using Field Programmable Devices (3) Field Programmable Devices, such as Field Programmable Gate Arrays (FPGAs) and Complex Programmable Logic Devices (CPLDs) are widely used for rapid prototyping and quick response-time designs. The objective of this course is to introduce the student to digital design using Field Programmable ICs, and to provide an understanding of the underlying technologies and architectures of these Integrated Circuits. The course begins by introducing design alternatives for modern electronic systems identifying and classifying alternative system solutions, and evaluating when particular design solutions are optimal. These alternatives include microprocessors, microcontrollers, off-the-shelf digital ICs, Programmable logic ICs (FPGAs and CPLDs), and various forms of Application Specific Integrated Circuit (ASIC) designs. A homework assignment requires the student to quantitatively evaluate the cost, complexity, packaging, and time-to-market issues for a complex system design specification. Next, the underlying Field Programmable Logic IC architectures and technologies are studied in detail. Following a broad survey of available programmable IC vendors and on-chip programming technologies (and their cost/performance trade-offs),

several specific case studies are presented in the class. The first is the Xilinx XC4000xl line, because of the target boards used in the CAD laboratory component for this class. The initial lab portions of the class help the students to specify their design using various forms of design entry tools and also allows them to see how their design map on to the underlying FPGA architecture. The students also learn the underlying algorithms used by the design software they use in their Labs. Next, the systematic top-down method for specifying complex designs using VHDL is introduced. Students are given a supporting homework assignment to develop high-level behavioral models for a simple digital system to reinforce this segment of the course. VHDL behavioral synthesis is now introduced as a preferred path to go from high-level system behavior to actual implementation on the FPGA. The strengths and weaknesses of synthesis are discussed, as are the emerging CAD tool trends. Additional VHDL-based homework assignments reinforce behavioral design and synthesis using commercial CAD tools. The final segment of the class covers special topics that identify current trends in digital system architecture and programmable logic design. These include such topics as partially reconfigurable architectures and dynamic reconfiguration techniques, system design for testability, and field programmable analog arrays. Applications of FPGAs in special purpose computing environments such as signal processing, Java acceleration and image processing are also introduced. In the laboratory, student design project assignments explore larger and more complete system specifications of such things as controllers, CPU and memory design, and signal processing blocks. These assignments reinforce the lecture content as the students model, synthesize and implement their digital designs on the target Xilinx FPGA boards.

Enforced Prerequisite at Enrollment: CMPEN 331

Cross-listed with: EE 417

CMPEN 431: Introduction to Computer Architecture

3 Credits

Introduction to computer architecture. Memory hierarchy and design, CPU design, pipelining, multiprocessor architecture. CMPEN 431 Introduction to Computer Architecture (3) This course will introduce students to the architecture-level design issues of a computer system. They will apply their knowledge of digital logic design to explore the high-level interaction of the individual computer system hardware components. Concepts of sequential and parallel architecture including the interaction of different memory components, their layout and placement, communication among multiple processors, effects of pipelining, and performance issues, will be covered. Students will apply these concepts by studying and evaluating the merits and demerits of selected computer system architectures.

Enforced Prerequisite at Enrollment: CMPEN 331 or CMPEN 371

CMPEN 441: Operating Systems

3 Credits

Resource management in computer systems. Process scheduling, memory management, file system design, I/O management, Unix operating system.

Enforced Prerequisite at Enrollment: CMPSC 360

CMPEN 454: Fundamentals of Computer Vision

3 Credits

Introduction to topics such as image formation, segmentation, feature extraction, matching, shape recovery, object recognition, and dynamic scene analysis. CMPEN 454 CMPEN 454 Fundamentals of Computer Vision (3) CMPEN 454 is an introduction to computer vision. The goal of computer vision is to make computers understand and interpret visual information. Computer vision systems bring together imaging devices, computers, and sophisticated algorithms for solving problems in areas such as industrial inspection, medicine, document analysis, autonomous navigation, and remote sensing. The course involves both pedagogical written assignments and computer projects. The beginning of the course gives an overview of computer vision and introduces low level image analysis techniques for binary images. Binary vision systems are useful when the silhouette of imaged objects convey enough information to recognize them. Examples can be found in optical character recognition, chromosome analysis and recognition of industrial parts. Moreover, many techniques developed for binary systems can be applied to gray level or color images. Next, the course covers image segmentation and contours. These topics are the foundation of most computer vision techniques. For an image to be correctly interpreted, it must be partitioned into regions that correspond to distinct objects or parts of objects. First, region based techniques such as thresholding, split and merge, region growing and texture analysis are introduced. Next, edge based techniques using gradient and Laplacian operators are discussed. Finally, contour representations and curve approximations linking edges into region boundaries are studied. Next, depth from vision, with emphasis in stereo vision, is considered. Calculating distances to and among various points in the scene is important in many computer vision tasks such as inspection, robot manipulation, and autonomous navigation. In this part of the course the geometry of stereo systems and how to obtain depth maps from stereo image pairs is studied. Also, alternative 3D imaging sensors such as laser based range finders and radars are discussed. Following stereo, the topic of computer vision is broadened to understand sequences of images over time. In this section techniques using information on spatial and temporal changes are used to design computer vision systems capable of coping with moving and changing objects, changing illumination and changing viewpoints. Visual motion is important primarily for two reasons. First, motion is a very important cue to understand the scene structure. Second, biological systems do use motion to infer properties of the surrounding world with very little a priori knowledge. Finally, the topic of 3D object recognition is discussed. Object recognition entails two main issues: object identification and object localization. Identification determines the objects being imaged while localization determines their position in the world and with respect to the sensors. This topic builds upon all the different techniques discussed until this point.

Enforced Prerequisite at Enrollment: (MATH 230 or MATH 231) and MATH 220 and (CMPSC 121 or CMPSC 131 or CMPSC 201)
Cross-listed with: EE 454

CMPEN 455: An Introduction to Digital Image Processing

3 Credits

Overview of digital image processing techniques and their applications; image sampling, enhancement, restoration, and analysis; computer projects. E E (CMPEN) 455 An Introduction to Digital Image Processing (3) E E/CMPEN 455, a technical elective available to both electrical and computer engineering seniors and graduate students, discusses many

current techniques for processing and manipulating digital images. The course involves both pedagogical written assignments and computer projects. The beginning of the course gives an overview of digital image processing systems and digital image fundamentals. During this unit, important elements of human visual perception are reviewed; these ideas help motivate many of the computer-based techniques described in subsequent units. Also, the standard model for a digital image, in addition to the concepts of sampling and quantization, are described. Finally, basic topological concepts between digital image pixel are discussed. The next unit considers image transform analysis, with a primary focus on Fourier-based techniques. The one-dimensional Fourier transform is reviewed, and then two-dimensional Fourier transform analysis is discussed. To bridge the gap from the continuous world to the digital world, the sampling theorem is introduced. Next, the Discrete Fourier Transform and its properties are described. Fourier-based filtering techniques, such as the ideal low-pass and Butterworth filters are then introduced. The Fast Fourier Transform is also discussed. Finally, the Discrete Cosine Transform, used later in JPEG and MPEG, is introduced. The next unit discusses techniques for image enhancement and segmentation. These techniques include point-based techniques based on histogram analysis. They also involve linear and nonlinear mask-based methods for noise reduction and region sharpening. Further, techniques of mathematical morphology, which involve an application of set-theoretic concepts to image processing, are described. Finally, image segmentation methods, based on edge detection and thresholding, are described. The final unit considers the concept of image compression. Techniques for image encoding and decoding are discussed. A brief model of the encoding-decoding process is described. Next, compression techniques, such as run-length encoding and Huffman coding, are described. Finally, the multimedia image-compression methodologies, JPEG and MPEG, are discussed.

Enforced Prerequisite at Enrollment: (EE 350 or EE 353 or EE 352) and (CMPSC 121 or CMPSC 131 or CMPSC 201)
Cross-listed with: EE 455

CMPEN 461: Communication Networks

3 Credits

Data transmission, encoding, link control techniques, network architecture, design, protocols, and multiple access. CMPEN 461 Communication Networks (3) This course introduces students to fundamental concepts and principles underlying data communication networks, with an emphasis on the Internet and its five-layer architecture: the application, transport, network, link, and physical layers. The fundamental issues to be covered include, but not limited to, reliable communication over an unreliable network layer, connection establishment/teardown and handshaking, congestion and flow control, path determination, multiple access control. The student learning these principles will gain knowledge that lasts long after today's network standards and protocols have become obsolete.

Enforced Prerequisite at Enrollment: CMPEN 271 and (CMPSC 121 or CMPSC 201)

CMPEN 462: Wireless Communications Systems and Security

3 Credits

This course explores the fundamental concepts and engineering processes of wireless communication systems, sensors, and security algorithms through the design, implementation, and evaluation of next generation wireless network architectures, and network and

cryptographic protocols. This course is intended as a senior level course for computational majors such as computer science and computer engineering since it covers hardware and software design concepts associated with wireless access, data transmission, and computational security, security models, and privacy in a broad range of settings. The first part of the course studies programmatic, computational, and engineering issues associated with wireless systems and sensors at the physical protocol layer. Hardware, software, and engineering design considerations associated with MIMO, low latency, high reliability, and high data rate constraints will be analyzed. The next part of this course will introduce virtual machines, function virtualization, and network-slicing for constraint matching, resource scheduling, and mobility management at the data link and network protocol layers. The final component of the course focuses on the security and privacy for wireless systems and sensors including models and algorithms. The design and implementation of cryptographic algorithms for cellular, Wi-Fi, Bluetooth, Zigbee, and next generation systems including Device to Device (D2D), Vehicle to Vehicle (V2V), and Machine Type Communications (MTC) are studied and analyzed. Upon completion of the course students will be able to critically analyze the design, implementation, and protocols associated with wireless systems and sensors and assess the computational security and privacy vulnerabilities associated with these systems.

Enforced Prerequisite at Enrollment: CMPEN 362 or EE 362

CMPEN 472: Microprocessors and Embedded Systems

3 Credits

Microprocessors: architecture, design, assembly language, programming, interfacing, bus structure, and interface circuits and their use in embedded systems. CMPEN 472 Microprocessors and Embedded Systems (3) In this course students should learn about the operation and design of microprocessor-based systems, including both hardware and software aspects with an emphasis on real time control environments and embedded systems. After completing the course, students should be able to develop, write and debug programs in a microprocessor's assembly language and use standard assembly language program development tools. They should also be able to interpret and analyze basic microprocessor system hardware. This course is a senior level elective for students in computer engineering and computer science. The course requires the use of general department computing facilities consisting of UNIX workstations running the appropriate program development tools.

Enforced Prerequisite at Enrollment: CMPEN 331

CMPEN 473: Microcomputer Laboratory

3 Credits

Design of digital systems using microprocessors. CMPEN 473 Microcomputer Laboratory (3) This laboratory course provides senior students with both theory and practice in designing, implementing, and debugging microprocessor-based systems. Students are guided through a series of projects in which they design, develop, and implement all of the components in a microprocessor based single-board system. After completing the course students will be able to design microprocessor based systems, including both software and hardware design. Students will also be able to use standard system design tools including standard laboratory equipment. This course is a senior level elective for computer engineering majors. CMPEN 472 is a prerequisite for this course. The course requires the use of a design laboratory including standard test

equipment such as an oscilloscope, logic analyzer and signal generator as well as a PC with appropriate design software and a microprocessor or EPROM emulation system.

Enforced Prerequisite at Enrollment: CMPEN 472

CMPEN 475: Functional Verification

3 Credits

Introduce concepts, methods, and technology for effective functional verification of modern electronic systems. CMPEN 475 Functional Verification (3) Verifying design correctness of increasingly complex system-on-chip designs poses a major challenge to the semiconductor industry. Functional or logic errors in a chip design that are not identified early in the design phase can dramatically increase a project's overall cost and schedule. Further, design verification is consuming an ever-increasing portion of IC development time and cost. As much as 70% of effort in a complex IC design project is now attributed to verification. This course will cover five key aspects of verification: an introduction to verification; a detailed description of simulation-based dynamic verification; formal verification; verification methodologies and advanced techniques; and case studies. First, the course will place verification in the context of the chip design process and introduce the verification cycle. Then, it will cover essential methodology principles and introduce the first hands-on example. It will also delve into various topics in dynamic verification, including the basic constructs of stimuli, monitors, checkers, observations categories, assertions, and test benches. Various case studies on actual industry and research designs will be provided. The course will be supplemented by lab-assignments that provide hands-on experience to experiment with methodologies taught in lectures.

Enforced Prerequisite at Enrollment: CMPEN 331

CMPEN 480: Computer Engineering Design

3 Credits

Engineering design and modeling, engineering economy, project planning, capstone project selections, and technical communication skills. CMPEN 480 Computer Engineering Design (3) This course prepares senior computer engineering students for industrial engineering design and project management. It covers the engineering design process, project planning and evaluation, engineering ethics, and engineering economy. In addition, students select, specify, and start their capstone design project, which is completed, in the follow-up course, CMPEN 481. Students are expected to carry out a group design project that is on par with industrial expectations. Upon completion of this course a student should have a solid understanding of the engineering design process, a clear capstone project description, should have completed some preliminary design work, and be adequately prepared to complete the project in CMPEN 481.

Enforced Prerequisite at Enrollment: CMPEN 352W and CMPEN 431

CMPEN 481: Computer Engineering Project

3 Credits

Group or individual design projects in the area of computer engineering.

Enforced Prerequisite at Enrollment: CMPEN 480

CMPEN 482W: Computer Engineering Project Design

3 Credits

Computer engineering design project, project management, documentation, reporting, and group and individual communication skills. CMPEN 482W Computer Engineering Project Design (3) The two principle goals of CMPEN 482W are (1) to introduce the fundamentals of systems engineering and systems engineering management, and (2) to develop written and oral communication skills. The course explores the process of translating a problem statement into an effective and economical computer system that meets the needs of the customer. Topics include a comparison of popular process models, analysis and derivation of requirements, requirements allocation and flow down, the work breakdown structure, object-oriented analysis and modeling, the design and development of the user interface, reliability engineering, scheduling, costing, and ethics. Communication skills are developed through oral presentations and a sequence of writing assignments, beginning with a description of requirements and leading to a final design document. CMPEN 482W is not a prerequisite for any other course. CMPEN 482W requires access to PCs or Unix workstations having a C++ compiler. Other specialty hardware or software may be required on a semester-by-semester basis.

Enforced Prerequisite at Enrollment: CMPSC 311 and EE 310 and EE 353 Enforced Concurrent at Enrollment: CMPSC 473 Recommended Preparation: ENGL 202C Writing Across the Curriculum

CMPEN 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

CMPEN 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

CMPEN 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

CMPEN 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CMPEN 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CMPEN 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Computer Engineering Technology - CA (CMPET)

CMPET 5: Engineering Methods in Engineering Technology

1 Credits

Introduction to experimental and computer methods in engineering technology; applications of experimental concepts through student involvement in computer exercises. CMPET 005 Engineering Methods in Engineering Technology (1) Engineering Methods in Engineering Technology is a follow-on computer skills course to EET 002S. Its purpose is to teach EET students how to use computers to help solve technical problems. The course begins by focusing on the use of the mathematical and graphing capabilities of spreadsheet programs to help analyze and present technical data. This is followed by investigation of more sophisticated problem-solving and analytical software such as Mathcad, Matlab, Mathematica, etc. (depending upon availability). Finally, the basic electronic simulations introduced in EET 002S are extended to include more sophisticated circuit analyses using PSpice, Electronic Workbench, etc. In all cases, the problem studied in CMPET 005 are typical of the applications that will be seen in future technology classes and in the engineering technology field. In some cases, again depending on availability of the software, students are exposed to the capabilities of modern 4th generation programming languages such as Visual Basic, LabView, HPVee, etc.

Enforced Prerequisite at Enrollment: EET 101 and MATH 81

CMPET 117: Digital Electronics

3 Credits

Fundamentals of digital circuits, including logic circuits, boolean algebra, Karnaugh maps, counters, and registers. CMPET 117 Digital Electronics (3) Digital Electronics covers fundamentals of both combinatorial and sequential digital logic circuits. Basic topics include Boolean algebra, binary codes, Boolean logic simplification and minimization theorems, and Karnaugh maps. Combinatorial and sequential logic topics include the theory and operation of arithmetic circuits, registers, counters, multiplexers, encoders/decoders, all major types of flip-flops, A-D and D-A conversions, counters, and memory systems. The course focuses primarily on small and medium scale devices using TTL logic with some use of MOS devices. Significant emphasis is placed on the use of manufacturers' data books to define device operating characteristics. CMPET 117 is generally taken concurrently with CMPET 120, which is a digital electronics laboratory course. The lab exercise in CMPET 120 are coordinated with the CMPET 117 lecture material.

Enforced Concurrent at Enrollment: EET 105

CMPET 120: Digital Electronics Laboratory

1 Credits

Laboratory study of digital electronics circuits. CMPET 120 Digital Electronics Laboratory (1) Digital Electronics Laboratory is a one credit laboratory that meets for a single 2-hour session each week. It is normally taken concurrently with CMPET 117. The lab exercises in CMPET 120 expose students to the digital devices that are described in the CMPET 117 lecture course and give them an opportunity to observe and understand their operation in practical terms. The exercises cover basic logic gate functions using AND, OR, NOT, NAND, and NOR devices. Students also investigate the operation of flip-flops, adder circuits, binary counters, shift registers, encoders and decoders, and memory units. Often, students are required to complete a digital design project as part of the CMPET 120 course. Many faculty also require selected labs to be submitted as formal reports. Digital simulation software is also commonly used in this course.

Enforced Concurrent at Enrollment: EET 105 and CMPET 117

CMPET 211: Embedded Processors and DSP

3 Credits

Introduction to micro-controllers and embedded controllers with applications, including concepts of digital signal processing. CMPET 211 Embedded Processors and DSP (3) CMPET 211 provides students with a basic understanding of microprocessors and microcontrollers with an emphasis on integrated embedded control of real world applications. The course provides a background in micro-processor/controller architecture, presents the operation and application of microcontroller peripherals, and introduces assembly language and higher level structured programming language. This can be a structured language such as C++ or PIC Basic. The intent is to introduce the students to a more powerful programming language capable of developing algorithms for embedded control of real world processes. Students will learn the analog to digital (ADC) and digital to analog (DAC) process and understand the resolution and aliasing consequences of these conversions. With the ADC and DAC material mastered, the course will then introduce students to basic applications of Digital Signal Processing (DSP), such as digital filtering and noise reduction. Simple discrete Fourier transforms can be covered along with sampling theory and digital aliasing. Although some of the mathematical theory underlying DSP techniques, such as Fourier and Hilbert Transforms, digital filter design and signal compression, can be fairly complex, the numerical operations required to actually implement these techniques are relatively simple and will be shown. DSP chips and applications will be covered to illustrate how to carry out such operations incredibly fast and efficiently. Topics covered include:- Microprocessor, microcontroller, and embedded system architecture- Microcontroller peripherals- Assembly Language Syntax and Programming- Structured Programming and Algorithms- Input and Output interfacing- ADC and DAC conversions- Sampling and DSP The course will emphasize the concepts, principles, procedures, and programming models used by engineers and technologists to design, develop and implement digital control for real world instrumentation. Particular emphasis will be given to embedded controllers for process control. Lectures will be supported by laboratory exercises in which the student will develop, assemble, download, and run programs on the target processor. Programming activities will focus on the development of algorithms for control of real world processes. Students will be required to prepare written laboratory reports outlining the program documentation. Reports will be graded based both on their

technical quality and their grammatical and professionalism. Students in CMPET 211 will be required to use computers in both class and laboratory exercises to develop and test their programs.

Enforced Prerequisite at Enrollment: CMPET 117 and CMPET 120

CMPET 301: Algorithmic Processes for Electrical Systems

3 Credits

Algorithms, languages, notations and applications of object- and procedure- oriented languages to electrical and electronic problem solving. CMPET 301 Algorithmic Processes for Electrical Systems (3) Algorithmic Processes for Electrical Systems is a required course for junior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. It is essential for Electrical Engineering Technology students to acquire a working knowledge of a computer language commonly used in practice. This course will prepare the student to analyze a problem and implement a structured procedural design and also an object-oriented design. This course is a follow-up course to CMPET 5 and CMPET 211, and prepares the student for several more advanced courses in the program related to computer analysis of circuits and systems. This course covers properties of algorithms and languages, software development process, notations for describing algorithms, applications of object- and procedure-oriented languages to electrical and electronic problem solving, high-level language programming, integrated development environment, and structured programming. Laboratory exercises parallel lecture material.

Enforced Prerequisite at Enrollment: CMPET 211 Enforced Concurrent at Enrollment: MATH 141 or MATH 210

CMPET 333: Computer Networking

3 Credits

Introduction to Local Area Networks (LANs) and Wide Area Networks (WANs), including transmission mediums, protocols, topologies, software, and hardware. CMPET 333 Computer Networking (3) The purpose of the course is to understand the principles of networking as applied to local area networks (LANs) and wide area networks (WANs). The students learn internet working models such as the OSI seven-layer, Ethernet, and Cisco three-layer models. Network topologies and various connectivity devices are investigated to form networks. Cisco IOS is introduced and console port and web interfaces are used for configuring Cisco devices. Subnetting is discussed and Cisco switches and routers are used for the implementation of LANs and WANs. Various protocols such as ARP, ICMP, IP, and TCP are presented and a software protocol analyzer is utilized. Applications such as file-sharing and remote data collection are investigated. Laboratory exercises reinforce concepts developed in lecture.

Enforced Prerequisite at Enrollment: EET 212W and CMPET 301

CMPET 355: Intermediate Microprocessors and Microcomputers

3 Credits

Microprocessor architecture and assembly language programming. Hardware and software of basic microprocessors. Input/output structure in microcomputers. CMPET 355 CMPET 355 Intermediate Microprocessors and Microcomputers (3) Intermediate Microprocessors and Microcomputers is a required course for junior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. This course builds upon prerequisite digital logic,

microprocessors and electronics courses. It includes microprocessor architecture and assembly language programming, hardware and software of basic microprocessors, and input/output structure in microcomputers. The course covers a review of number systems, digital logic, computer architecture, software development process; the microcontroller, specifications, block diagrams; assembly language programming; jump, loop and call instructions; I/O port programming, addressing modes, arithmetic instructions and programs, logic instructions and programs, single-bit instructions and programs, counter/timer programming, serial communication, interrupts programming, real world interfacing, and bus interfacing to external memory. Laboratory exercises parallel lecture material.

Enforced Prerequisite at Enrollment: EET 212W and CMPET 301 and EET 341

CMPET 401: Data Communication and Networking

3 Credits

Signal representations, communication techniques, interfacing, serial and parallel communication, modems, error detection, LAN and WAN protocols. CMPET 401 CMPET 401 Data Communication and Networking (3) This course is designed to provide the students with a foundation in signal presentation, communication techniques, serial and parallel communication, modems, and other interfacing methods. The networking technologies for local and wide area networks are also studied in detail. The range of topics covered depends on students' background. Topics: Part 1. (2 weeks) Overview: Introduction Protocols and Architecture; Part 2. (9 weeks) Data Communications: Data Transmission Media Data encoding Communication techniques Data Link Control Multiplexing; Part 3. (4 weeks) Local and Wide Area Networks: LAN and WAN protocols Switching techniques Bridges and routers High speed networks Internetworking Internet resources. This course is a required course in the Computer Engineering Technology Option of the Electrical Engineering Technology BS curriculum.

Enforced Prerequisite at Enrollment: CMPEN 271 or CMPET 117

CMPET 402: Data Communication and Networking Laboratory

1 Credits

Network operating systems, LAN and WAN protocols, serial and parallel communications, modems, FAX, and other interfacing methods.

Enforced Concurrent at Enrollment: CMPET 401

CMPET 403: Switching Circuit Design

4 Credits

Analysis and design of advanced combinational and sequential circuits using IC logic devices and PLD's while promoting the use of software development tools. CMPET 403 Switching Circuit Design (4) This course is designed to enhance students' abilities to analyze and design complex digital systems. The course will include the following topics: 1. Review of combinational circuits' analysis and design using, karnaugh maps with up to six variables and Quine-McCluskey method 2. Advanced combinational logic analysis and design with MSI logic circuits 3. Hazard in digital systems 4. Review of analysis and design of synchronous finite state machines (Moore and Mealy methodologies) 5. Synchronous sequential logic design using One-hot finite state machines 6. State reduction for completely and incompletely specified circuits/systems 7. Analysis and design of asynchronous sequential circuits/systems 8. Logic circuit

testing and testable design 9. Introduction to Hardware Description Language This course is a technical elective in the Electrical Engineering Technology BS curriculum and is intended to be taken by students who have completed their first digital systems course requirements. As such, the course integrates materials from the above undergraduate electrical course in addition to related math, engineering, and science courses. No special facilities are required for this course other than laboratories available to the Electrical Engineering Technology Program.

Enforced Prerequisite at Enrollment: (CMPEN 271 or CMPET 117) and (CMPEN 275 or CMPET 120)

CMPET 412: Microcomputers

4 Credits

Design, architecture, programming, and interfacing of microprocessors, enhanced by lab experiments. CMPET 412 Microcomputers (4) E E T 412 is an intermediate course in microprocessor architecture, programming, and interfacing. It details the inner workings of a contemporary microprocessor, including its registers, busses, external connections, instruction set, and its available support devices for memory management, data transfer, clocking and interfacing. It includes a laboratory in which students program in machine language, assembly language, and high level language. Labs also teach students to interface a microprocessor to the user keyboard, the user display, floppy and hard disk drives, and external serial and parallel devices. E E T 412 is intended as an intermediate course, offered to students who have already had some exposure to microprocessor systems, microcomputer architecture, and low-level computer programming.

Enforced Prerequisite at Enrollment: (CMPEN 271 or CMPET 117) and (CMPEN 275 or CMPET 120)

CMPET 456: Advanced Microprocessors, High Level Interfacing

3 Credits

Operating systems; systems programming; high-level application programming; high-level hardware and software protocols; serial and parallel digital communications. CMPET 456 CMPET 456 Advanced Microprocessors, High Level Interfacing (3) Advanced Microprocessors, High Level Interfacing is a required course for senior-level students pursuing the computer engineering technology (CET) option in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. Topics of this course include operating systems, systems programming, high-level application programming, high-level hardware and software protocols, serial and parallel digit communications. The purpose of this course is to extend and augment the topics covered in the earlier computer oriented courses, and build upon the foundations established there. It covers large scale embedded systems along with the related hardware and software design considerations. It is organized around a few intensive projects that cover the breadth of the material. The need for operating systems is discussed, as well as their important features including system services, command processing, device drivers, interrupt handling, memory and device management, system libraries, dynamic linking, virtual memory, multitasking, and inter-task communication. Unique considerations of real time operating systems are reviewed, such as throughput, task blocking, semaphores and special services. The gray area between operating systems and application programming known as systems programming is addressed, including standardization, generalization, choice of language, and make-buy decision issues. A large part of the course is spent on high-level application programming. Topics include

structured programming, user-written functions, data structuring and packetizing, and use of commercial libraries and other intellectual property. Protocols based on current technology such as EPP, RS232, RS485, IIC, DeviceNet, USB, IEEE488, IEEE1394, are covered. Binary and character-based data transfer is discussed, along with communication layers and error detection, correction, and recovery issues. Serial and parallel communication topics include analysis and evaluation of the pros and cons of each protocol, debugging, monitoring, timing, and throughput.

Enforced Prerequisite at Enrollment: CMPET 355

CMPET 457: Software Engineering

3 Credits

Application of modern techniques in software development, including program design based on new methods and tools. CMPET 457
CMPET 457 Software Engineering (3) Software engineering is a required course for senior-level students pursuing the computer engineering technology (CET) option in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. Topics of the course include application of modern techniques in software development including program design based on current methods and tools. The purpose of this course is to stress a rigorous and systematic approach to embedded software development that represents current best practices and is widely accepted by business, industry and regulatory agencies governing embedded software. This includes proper planning and implementation. Knowledge of generally accepted core standards and guidelines is stressed, including safety planning, hazards analysis, software management planning, requirements specification, design documents, coding, test plans, test specifications, test logs, test reports, design reviews, structured code walk-throughs, verification and validation, and reporting. The Unified Modeling Language (UML) is introduced and followed, including the components of UML, class diagrams, object diagrams, use-case diagrams, state diagrams, sequence diagrams, activity diagrams, collaboration diagrams, component diagrams, and deployment diagrams. Object oriented concepts include classes, abstraction, inheritance, polymorphism, encapsulation, message sending, associations, and aggregation.

Enforced Prerequisite at Enrollment: CMPET 355

Computer Science (CMPSC)

CMPSC 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CMPSC 100: Computer Fundamentals and Applications

3 Credits

Introduction to computer fundamentals and applications to data processing environments.

Enforced Prerequisite: MATH 21 or satisfactory performance on the mathematics placement examination.

CMPSC 101: Introduction to Programming

3 Credits

This course introduces the fundamental concepts and processes of solving computational problems through the design, implementation, testing, and evaluation of basic computer programs. The concepts include basic computational constructs such as calculation, iteration, conditions, functions, and data types. These provide the basic building blocks found in virtually all programming languages. The processes include the step-by-step refinement of a problem description into individual components that can be implemented, tested, and integrated into an effective solution. As a general education course, the central theme to the course is computational thinking which includes a wide range of approaches to solving problems and designing systems that draw upon concepts fundamental to computer science. Computational thinking includes thinking about various types and sources of data, and the correctness, efficiency, elegance, and simplicity of various potential solutions. Computational thinking is applying principles of abstraction at multiple levels to focus on important details; it is applying problem decomposition to identify small problems that can be individually solved then combined to form a solution to the original problem. Upon completion of this course, the student will be able to conceptualize and implement computational solutions to problems; to utilize the imperative model of computation to solve problems; to reason about problems at multiple levels of abstraction; and to analyze code for its behavior, efficiency, and correctness. A student may receive credit for only one of the following courses: CMPSC 101, CMPSC 121, CMPSC 131, CMPSC 200, CMPSC 201

Enforced Prerequisite: MATH 21 or satisfactory performance on the mathematics placement examination.

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

CMPSC 102: Introduction to Visual Programming

3 Credits

Problem solving for non-majors; high-level language programming; control structures, functions, parameters, recursion, arrays, records/structures; verification; debugging; documentation.

Prerequisite: 2 entrance units in mathematics

CMPSC 111: Logic for Computer Science

1 Credits

An introduction to logic and its application to problem solving and computer science. CMPSC 111S Logic for Computer Science (1) Computer Science provides the fundamental tools for analyzing problems and designing solutions to these problems which can be implemented on a computer. Logic plays an important role in this process, from a general-purpose tool for reasoning about knowledge to a special-purpose language for specifying the behavior of programs and designing hardware. This course examines the role of logic in problem solving and its application to computer science and computer engineering. Example problems will be drawn from a variety of sources, including brain teasers, puzzles, and mathematics. We will show how these problems and their solutions apply to real problems involving

computers. We will also explore a number of the important areas of computer science and computer engineering including Boolean and Digital Logic, Designing Arithmetic Hardware, Cryptography and Security Programming Languages, Networking and Wireless Communication, Artificial Intelligence, and Computer Ethics.

First-Year Seminar

CMPSC 121: Introduction to Programming Techniques

3 Credits

Design and implementation of algorithms. Structured programming. Problem solving techniques. Introduction to a high-level language, including arrays, procedures, and recursion.

Enforced Prerequisite at Enrollment: MATH 110 or Enforced Concurrent at Enrollment: MATH 140

Bachelor of Arts: Quantification

CMPSC 122: Intermediate Programming

3 Credits

Object-oriented programming, recursion, fundamental data structures (including stacks, queues, linked lists, hash tables, trees, and graphs), the basics of algorithmic analysis, and an introduction to the principles of language translation.

Enforced Prerequisite at Enrollment: CMPSC 121

CMPSC 122H: Intermediate Programming

3 Credits

Object-oriented programming, recursion, fundamental data structures (including stacks, queues, linked lists, hash tables, trees, and graphs), the basics of algorithmic analysis, and an introduction to the principles of language translation.

Honors

CMPSC 131: Programming and Computation I: Fundamentals

3 Credits

This course introduces the fundamental concepts and processes of solving computational problems through the design, implementation, testing and evaluation of efficient and robust computer programs. The concepts include basic computational constructs found in imperative, object-oriented and functional programming languages such as iteration, conditionals, functions, recursion, and datatypes. These provide the basic building blocks found in virtually all programming languages. The processes include the stepwise refinement of a problem description into individual components that can be implemented, tested, and integrated into an effective solution. A central theme to the course is computational thinking which includes a wide range of approaches to solving problems and designing systems that draw upon concepts fundamental to computer science. Computational thinking includes thinking recursively, considering parallel processing, thinking about types and type checking, judging a program not just for correctness and efficiency but also for its esthetics, and judging a system design for its simplicity and elegance. Computational thinking is applying principles of abstraction at multiple levels to focus on important details; it is applying problem decomposition to identify small problems that can be individually solved then combined to form a solution to the original problem. Computational thinking uses

program invariants to describe a system's behavior succinctly and declaratively. Computational thinking considers multiple models of computation when designing an effective solution to a problem.

Enforced Concurrent at Enrollment: MATH 110 or MATH 140

CMPSC 132: Programming and Computation II: Data Structures

3 Credits

This course builds upon the foundations of programming and computation by introducing and studying the data structures and programming language features that support the design and construction of large-scale software systems. It introduces the foundations of object-oriented programming, the design and analysis of efficient algorithms using important data structures, and programming techniques that support reusable and modular program components, including data abstraction, polymorphism, and higher-order functions. Topics from object-oriented programming include classes, objects, inheritance, methods, message passing, static and dynamic type checking. These topics form the core of most object-oriented languages and provide a foundation for learning more advanced language topics. Data structures capture the common organization of many kinds of data arising in the design of efficient solutions to computational problems. Specific data structures covered include stacks, queues, trees, graphs and linked lists. The design and analysis of efficient algorithms using these data structures provide a foundation for the study of computing, where understanding the complexity of a problem and the availability of efficient solutions are essential skills. Finally, topics including higher-order functional programming, data abstraction and parametric polymorphism, as well as principles from object-oriented programming, come together to support the design and implementation of modular, reusable and robust code.

Enforced Prerequisite at Enrollment: CMPSC 121 or CMPSC 131

CMPSC 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CMPSC 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CMPSC 200: Programming for Engineers with MATLAB

3 Credits

This course introduces basic programming concepts including algorithm development, simple data types, number representation, control structures, functions, plotting, and basic numerical analysis techniques, all in the context of science and engineering. The course enables students to develop computer programs in a scientific programming language to solve simple engineering and science problems. The basic numerical analysis techniques covered in the course include matrix operations, systems of equations, solving equations, roots, curve fitting, interpolation, numerical integration, and numerical solutions of ordinary differential equations. Students analyze engineering and science

problems, develop algorithms to solve those problems, implement their algorithms in an appropriate programming language, and produce informative output in both numerical and graphical form. The general programming concepts learned in the course are commonly found in most programming languages. The problem-solving skills learned in the course can then be utilized in upper-level engineering and science courses. This course includes an exploration of the conceptual and syntactical background needed for the successful completion of practical programming assignments. The course also includes an emphasis on the actual design and implementation of computer programs necessary for solving computational problems. This course satisfies University quantification requirements because it assists students in assessing and interpreting quantitative data and information. In addition, the course assists students with recognizing patterns, establishing relations, exercising conceptual thinking, developing problem-solving skills, and thinking logically and critically. Finally, the course supports students in their efforts to draw accurate and useful conclusions, to make informed decisions based on quantitative analysis, and to use mathematical skills to solve conceptual problems. A student may use only one of the following courses to satisfy degree requirements: CMPSC 101, 102, 121, 131, 200, 201.

Enforced Prerequisite at Enrollment: MATH 140 or MATH 140A or MATH 140B or MATH 140E or MATH 140G or MATH 140H
Enforced Concurrent at Enrollment: MATH 141 or MATH 141B or MATH 141E or MATH 141G or MATH 141H
Recommended Preparation: MATH 220
 Bachelor of Arts: Quantification
 General Education: Quantification (GQ)
 GenEd Learning Objective: Creative Thinking
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

CMPSC 201: Programming for Engineers with C++

3 Credits

Development and implementation of algorithms in a procedure-oriented language, with emphasis on numerical methods for engineering problems. A student may receive credit for only one of the following courses: CMPSC 101, CMPSC 102, CMPSC 200, CMPSC 201, or CMPSC 202.

Enforced Prerequisite at Enrollment: MATH 140
Enforced Concurrent at Enrollment: MATH 141
 Bachelor of Arts: Quantification
 General Education: Quantification (GQ)

CMPSC 203: Introduction to Spreadsheets and Databases

4 Credits

Design, use, and programming of spreadsheets and data bases with applications from a range of disciplines.

Prerequisite: 2 entrance units in mathematics
 Bachelor of Arts: Quantification
 General Education: Quantification (GQ)

CMPSC 204: Introduction to Computational Sciences Programming

3 Credits

This introductory programming course teaches the foundations of programming and computational problem solving for scientific and

engineering domains. The emphasis of the course is on computation as a problem-solving tool for highly mathematical intensive applications. The course includes the study of core programming concepts, including data types, data structures, control structures, functions, and problem decomposition, and then continues with techniques applicable to modeling and visualizing scientific data. Students gain experience solving scientific and engineering problems by translating mathematical specifications into computational solutions, using a variety of mathematical and related libraries. They also gain experience developing solutions that provide visual representations of the results.

Enforced Prerequisite at Enrollment: MATH 141

CMPSC 205: Intermediate Computational Sciences Programming

3 Credits

This course introduces intermediate concepts of programming including object-oriented programming, dynamic data structures, and data visualization and data modeling. The core of this course covers data analysis, efficient usage of data structure, simulations, data visualization, and data structure collections. The topics include, but are not limited to, the study and the use of lists, stacks, queues, and hash tables. Emphasis will revolve around application to scientific computing libraries in conjunction with data abstraction, object-oriented program design, data visualization, and data manipulation. Hands-on programming assignments and usage of scientific libraries are the integral part of this course.

Enforced Prerequisite at Enrollment: CMPSC 204 or CMPSC 121 or CMPSC 131

CMPSC 208: Technical Game Development

3 Credits

Introduction to the tools and techniques required to implement games in a virtual environment. GAME 250 / CMPSC 208 Technical Game Development. First, students learn about game and player elements by creating characters and objects and the means of user interactivity. Both orthographic and perspective views are introduced to assist in character design. Objects and characters are created using fundamental geometric primitives like scale, rotation, translation and extrusion. The set operations, union, intersection, and subtraction, are applied to create compound objects. Bezier and NURB curves are introduced to create objects with irregular contours. Students also learn to design graphical user interfaces (GUIs) and handle mouse and keyboard events to support user interactions. Second, students are introduced to methods of storytelling and guide them to build narratives for games. Methods of proximity and collision detection in the environment are studied for both static and dynamic objects. Dynamic objects are programmed to move and behave in a deterministically, random, or probabilistically under a variety of lighting methods including ambient, directional, point and diffuse lights are introduced. A number of particle systems are developed with different considerations of randomness, vector direction and velocity. The concept of linear interpolation is illustrated and applied to texture mapping to improve the look and feel of objects. Third, students are introduced to functions, propositional logic, loops, and randomness to model game behavior. Students will learn to combine a series of primitive actions into a function for control and reuse. Propositional logic will guide students to define conditions and develop game rules. Loops are introduced to simplify the implementation of repeated game behavior. Randomness enables the simulation of many life-like object movements.

Students will learn and practice how to write concurrent, event driven and sequential processing algorithms for game objects. Fourth, students are introduced to the game development process of pre-production, production and post-condition phases and have them apply it to their own project. The topic of maintenance will be introduced with an emphasis on refactoring techniques, critical to improving the quality of game and providing flexibility for future updates. This course has a significant applied element. Game engine tools are used to develop prototypes of games and playtest them. Lab assignments are given throughout the semester and a final project requires students to demonstrate mastery of all aspects of the course.

Enforced Prerequisite at Enrollment: MATH 21

Cross-listed with: GAME 250

Bachelor of Arts: Quantification

General Education: Quantification (GQ)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Key Literacies

CMPSC 221: Object Oriented Programming with Web-Based Applications

3 Credits

The course covers advanced object-oriented principles and their application to web-based, net-centric computing. Major topics include virtual machines, intermediate code generation (Java-specific), graphical user interfaces (GUI) design, event handling, server-side programming with database queries, and security, permissions and file management concepts for client/server systems. Extensive programming assignments provide an understanding of the entire process of client/server development including interface prototyping, program design, implementation of both client and server programs, unit testing, and documentation. This course prepares students to meet immediate demands in solving complex computational problems.

Enforced Prerequisite at Enrollment: CMPSC 122 or CMPSC 132

CMPSC 263: Blockchain and Modern Web Development

3 Credits

This course covers the technical aspects and development behind blockchain technology with a primary focus on software implementation including Web3 development and the basics of JavaScript. Students will be taught the fundamentals of web development, blockchain-based application and architectures, smart contracts for running blockchains as decentralized applications, introduction to UI development, and applications of blockchain in industry. Overall, this class teaches the implementation of blockchain technology and web development in the modern world.

Enforced Prerequisite at Enrollment: CMPSC 132 or CMPSC 122

CMPSC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CMPSC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CMPSC 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CMPSC 301: Event Driven Programming for Computational Sciences

3 Credits

This course focuses on the development of event-driven applications for problems found in science and engineering disciplines using object-oriented programming concepts, application programming interfaces, and event-driven programming techniques. Additional topics include stream I/O, data visualization, and user-interface design. Students will gain experience in the design and construction of independent and deployable applications that leverage their mathematical and problem-solving skills.

Enforced Prerequisite at Enrollment: CMPSC 205

CMPSC 302: Intermediate Visual Programming

3 Credits

OO programming, visual programming, classes, objects, ADTs, inheritance, recursion, regular expressions, user-defined controls, documentation, testing, verification, productivity tools. CMPSC 302 Intermediate Visual Programming (3) This course forms the second of a two course sequence of courses for non-major students. It is designed to build upon concepts and skills presented in the first course, CMPSC 102, with the intent of enabling the student to develop larger scale programs and interface with databases and Web servers using a visual programming language. Some of the topics covered in this course will be object-oriented programming, inheritance, string manipulation, regular expressions, creating custom controls, creating controls dynamically, interfacing with databases and using an appropriate platform, such as ASPX.net to create web pages. This course forms the second of a two course sequence of courses for non-major students. It covers advanced features of the target language, building larger scale programs and interfaces to databases and web servers. It builds on the skills covered in CMPSC-102 and introduces creating new controls, dynamically placing controls at run time, arrays and lists of controls, the use of regular expressions, more in-depth treatment of classes and objects, including inheritance and polymorphism, multi-dimensional arrays, lists, unit testing and project deployment.

Enforced Prerequisite at Enrollment: CMPSC 102 or CMPSC 121

CMPSC 311: Introduction to Systems Programming

3 Credits

Unix system programming in C; organization of programs and data; program analysis and support tools; software standards; common system functions. CMPSC 311 CMPSC 311 Introduction to Systems Programming (3) System Programming concerns the development of software components and methods for their combination, independent

of any particular application. This course will provide information and experience required to understand, design and implement components of large software systems. In general, students should be able to evaluate design alternatives according to standard practice, specifications, performance analysis, robustness, etc. To concentrate attention, we investigate one system and one programming language in detail, through demonstration programs, short- and long-term programming assignments. The specific system is Unix, a family of operating systems forming a complete standardized programming environment based on the idea of software tools. The specific language is C, which is widely used for operating system implementations, and which forms the basis for the C++ and Java languages studied in the prerequisite courses. This will help students understand operating system services available to application programmers, and provide a firm ground for study of operating systems in general. There are several themes of the course: (1) Understand computer systems, especially low-level influences on high-level goals. This includes the machine-level representation of programs and data structures; the memory hierarchy and its impact on performance; access to stored information via file systems, and access to other computer systems via networks. (2) Understand existing system software and software standards, especially the UNIX toolset. This includes preparing a program (editors, static analysis, development environments); running a program (compilers and interpreters, assembler, linker, loader, debugger, profiler, tracer); controlling parts of a program (memory management, threads); communication between programs (within one system using signals, between systems using sockets and communication protocols); and combinations of software tools with scripting languages. (3) Understand "real code", such as selections from the Linux operating system kernel and GNU utilities and libraries, and through comparative selections from Solaris, Linux, and Mac OS X. (4) Understand system performance, including experiments on program performance and optimization techniques.

Enforced Prerequisite at Enrollment: CMPSC 221

CMPSC 312: Computer Organization and Architecture

3 Credits

Data representation, digital logic, instruction set/control logic, machine/assembly languages, advanced architectures, memory hierarchy, I/O devices, overall system design.

Enforced Prerequisite at Enrollment: CMPSC 121 or CMPSC 131

CMPSC 313: Assembly Language Programming

3 Credits

Program design, addressing modes, subroutines, parameter passing, stacks, bit manipulation, text processing, DOS functions, macros, I/O, high level language interfaces. CMPSC 313 CMPSC 313 Assembly Language Programming (3) This is a course in assembly language programming for IBM PCs and compatibles. Students will gain experience writing efficient, well-documented programs that are easily maintained. The course investigates the architecture and instruction set of a typical microcomputer based on the Intel 80x86 microprocessors. Topics include the basic structure of computers, the internal behavior of computers, program design, testing, debugging, machine architecture, addressing, BCD and binary arithmetic, subroutines and parameter passing, stacks, text processing, bit manipulation, DOS functions, macros, I/O routines, high level language interfaces and the assembly process. This course is important because assembly language is often used in programs where small size or fast execution is critical. Knowledge of assembly

language is also useful in debugging programs written in high level languages. It also helps bridge the gap between hardware and high level languages. After successfully completing CMPSC 313, the student should be able to: explain the 80x86 architecture, including registers and segment:offset addressing; describe different ways data are represented in a computer and work with binary and hexadecimal numbers; describe the functions of an assembler; implement program designs in 80x86 assembly language, including: writing, documenting, testing and debugging a program in PC assembly language; manipulating strings; coding basic algorithms such as searching and sorting in assembly language; calling and passing parameters to subroutines; utilizing DOS functions; and interfacing with a high level language; explain how the underlying hardware affects software design and performance; appreciate the factors that contribute to program efficiency. Students will be evaluated on homework (35% of grade), semester exams (35%), and a final comprehensive exam (30%). The major only requires that a student have experience with assembly language programming. This course is intended for students who have not had any experience with assembly language programming before entering the program. It will also serve as an elective. The material learned in this course is beneficial in understanding concepts in the required courses CMPSC 422, CMPSC 472, and CMPSC 460, as well as in the elective courses CMPSC 428 and CMPSC 470. No special facilities are required for this course. The software necessary is available in the computer labs or for students to use at home. This course will be offered once per year, with an expected enrollment of 55.

Enforced Prerequisite at Enrollment: CMPSC 312

CMPSC 330: Advanced Programming in C++

3 Credits

In-depth study of various programming paradigm including procedural, object oriented, and generic programming in C++ programming language. The primary goals of this course are (1) to provide students with an in-depth knowledge of different programming paradigms, (2) to provide students with the ability to design and develop software using the paradigm that is appropriate to a given problem, and (3) to provide students with the programming concepts that are applicable to programming in other languages. The secondary goal of this course is to expose students to a diverse range of programming tasks using C++ programming language that is frequently used in the follow up courses as well as in industry.

Enforced Prerequisite at Enrollment: C or better in CMPSC 122 or C or better in CMPSC 132

CMPSC 335: Fundamentals of Communication Networks

3 Credits

Introduction to the composition of communication networks, including transmission mediums and protocols, transfer methods, topologies and software, and communications hardware.

Prerequisite: 3 credits of programming

CMPSC 348: Data Science and Machine Learning for Computational Sciences

3 Credits

This course will introduce students from different engineering and sciences disciplines to the data driven problem solving methods using

machine learning techniques including clustering, classification, data modeling, and data visualization. The course will focus on processes, techniques, and algorithms for data mining and machine learning. Processes and phases include data preparation, exploration, modeling, and prediction. Specific clustering and classification techniques will be used to emphasize machine learning models using high-level language and their libraries. Students will learn and apply key concepts of modeling, analysis and validation from machine learning and data mining to analyze and develop data-driven predictive models. Upon completion of the course, students will be able to develop machine learning based solutions with applications in different science and engineering domains.

Enforced Prerequisite at Enrollment: CMPSC 301 and (MATH 414 or MATH 418 or STAT 414 or STAT 418 or EE 465)

CMPSC 360: Discrete Mathematics for Computer Science

3 Credits

Discrete mathematics and foundations for modern computer science. Topics include sets, relations, logic, algorithms, graphs, finite state machines and regular expressions.

Enforced Concurrent at Enrollment: CMPSC 122 or CMPSC 132

CMPSC 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Full-Time Equivalent Course

CMPSC 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CMPSC 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CMPSC 410: Programming Models for Big Data

3 Credits

Recommended Preparations: DS 310; CMPSC 448 This course introduces modern programming models and related software stacks for performing scalable data analytics and discovery tasks over massive and/or high dimensional datasets. The learning objectives of the course are that the students are able to choose appropriate programming models for a big data application, understand the tradeoff of such choice, and be able to leverage state-of-the-art cyber infrastructures to develop scalable data analytics or discovery tasks. Building on data models covered in DS 220, this course will introduce programming models such as MapReduce, data flow supports for modern cluster computing environment, and programming models for large-scale clustering (either a large number of data samples or a large number of dimensions). Using these frameworks and languages, the students will learn to implement data aggregation algorithms, iterative algorithms, and algorithms for generating statistical

information from massive and/or high-dimensional data. The realization of these algorithms will enable the students to develop data analytic models for massive datasets.

Enforced Prerequisites at Enrollment: (CMPSC 122 or CMPSC 132) and (DS 220 or CMPSC 221)

Cross-listed with: DS 410

CMPSC 412: Data Structures Lab

1.5 Credits

Programming with common data structures; recursion; stacks, queues, dictionaries, priority queues; string searching and manipulation; sorting; trees; combinatorics.

Enforced Concurrent at Enrollment: CMPSC 462 or CMPSC 465

CMPSC 413: Algorithms Lab

1.5 Credits

Programming with common algorithm design techniques; divide and conquer, greedy method, dynamic programming, and tree and graph traversals.

Enforced Concurrent at Enrollment: CMPSC 463

CMPSC 414: Contest Programming

1 Credits/Maximum of 4

This course provides hands-on practice with a wide range of computer science topics that are used to solve programming contest questions. These topics include common data structures; strings; sorting; combinatorics; number theory; graph traversal and other algorithms; dynamic programming. In the course, students will solve a range of programming contest questions, both using an online judge in practice sessions and during actual programming contests. In addition to solving programming problems, the course time will also be used to explore topics mentioned above and the relationship to specific problems, solution techniques, and the analysis of proposed solutions to specific problems. This course is envisioned to be a hands-on lab, with instructor supported, self-guided study. The course topics will be chosen from topics that commonly appear in current programming contests, including but not limited to: · Contest Programming · Common Data Structures · Strings · Sorting · Combinatorics · Number Theory · Graph Traversal and Other Algorithms · Dynamic Programming

Enforced Concurrent at Enrollment: CMPSC 221 or CMPSC 330

CMPSC 421: Net-centric Computing

3 Credits

This course introduces JavaScript and AJAX for creating Rich Internet Applications, and XML for client-server communication and Web Services. CMPSC 421 Net-centric Computing (3) This course will build on the client-server computing concepts and techniques that students learned about in prerequisite courses. The goal of the course is to introduce students to the most significant and fundamental of those technologies that are used in the computing paradigm known by a number of terms including "Net-centric", "Web 2", and "cloud" computing. On the client: We will use Dynamic XHTML, Cascading Style Sheets, JavaScript and AJAX to develop the client side of Rich Internet (or Web) Applications. For client-server-communication: We will learn how

to create and validate XML documents and use these as the primary language for transmission of data from the server to the client. We will also consider how JavaScript Object Notation (JSON) can sometimes be used as a viable alternative to XML for server to client data transmission. On the server: We will learn about a variety of server-side technologies for consuming, storing, transforming, and generating content. We will use the three main types of XML parsers to consume, transform, and generate XML; we will use XSL and XPath to style and transform XML; we will use XML binding tools to convert XML to and from classes (in some high-level language); we will use Data Access Objects and object-relational mapping tools for data persistence. We will learn how servers use Web services and RSS feeds to provide XML structured content, and we will consume existing Web services and RSS feeds and produce simple Web services.

Enforced Prerequisite at Enrollment: CMPSC 221 or SWENG 311

CMPSC 430: Database Design

3 Credits

The main goal of this course is to explore the relational database model, with special emphasis on the design and querying of relational databases. Secondary goals include exploration of the mathematical basis for relational databases and exploration of the relationship of database to the rest of computer science. Study of these topics should improve student skills in programming, modeling the structure of data and using and administering databases. After completing CMPSC 430 the student should be able to: (1) Demonstrate comprehension of general database concepts (2) Identify key issues in developing database systems and applications (3) Explain the general organization of a relational database and explain the functions of the basic relational operators (4) Use query languages, in particular, Structured Query Language (SQL), to define, maintain, and query relational databases (5) Model a relational database through entity-relationship (ER) modeling and construct ER diagrams (6) Explain the methodologies used to conceptualize and design database systems (7) Apply decomposition and analyze/construct functional dependencies (8) Demonstrate an understanding of the concepts of relation normalization and the supporting fundamental knowledge of efficient database implementation

Enforced Concurrent at Enrollment: CMPSC 462

CMPSC 431W: Database Management Systems

3 Credits

Topics include: conceptual data modeling, relational data model, relational query languages, schema normalization, database/Internet applications, and database system issues.

Enforced Prerequisite at Enrollment: CMPSC 221 and ENGL 202C Writing Across the Curriculum

CMPSC 432: Exploratory Data Mining

3 Credits

This course teaches fundamental concepts, algorithms and problem-solving techniques for exploratory data mining and their applications, with an emphasis on the algorithmic aspects. The course covers extensively the design of algorithms and implementations of software solutions to various exploratory data mining tasks. In addition, we discuss in depth various requirements and technical issues arising in the design and implementations of robust, efficient, effective and

scalable software solutions. Topics covered include types and quality of data, similarity measures of data, algorithms and approaches for data processing/cleaning/analysis, data exploration, cluster analysis, association analysis, and anomaly detection. Additionally, basic concepts and techniques for predictive data mining, i.e., regression and classification, are reviewed. Students will exercise the obtained knowledge to address important technical issues in realistic exploratory data mining tasks and applications. Because the knowledge of various data structures (e.g., index structures, hash trees, graphs, lattices, and pointers) and algorithmic concepts (e.g., recursions, traversal, and pruning) are essential background to many data mining algorithms taught in the course. Students who are interested in the course are required to take the prerequisite courses in order to equip themselves with appropriate background knowledge and programming skillsets to succeed in the course.

Enforced Prerequisite at Enrollment: CMPSC 221 and (CMPSC 465 or CMPSC 463) and (STAT 318 or STAT 414 or STAT 418)

CMPSC 436: Communications and Networking

3 Credits

Data transmission, basic signaling, data encoding, error control, communication protocols, security, network topologies, routing, switching, internetworking, emerging high speed networks. CMPSC 436CMPSC 436 Communications and Networking (3)This course introduces the elements and architecture of computer and data communication networks, demonstrates the fundamental principles of computer networking, and provides experience in the practical use of current networking technology. Topics in this course include: data communications (basic signaling, data transmission, data encoding, errors and error control), communications architecture and protocols (communication protocols, internetworking, transport protocols, layered network architecture, network security) and computer networks (WANs, LANs, network topologies, internetworking, routing and switching strategies and emerging high speed networks).After taking CMPSC 436, students should be able to:1) understand the fundamentals of networking concepts and terminology2) define and contrast the classifications local area network (LAN), metropolitan area network (MAN), and wide area network (WAN)3) name and describe basic networking elements4) define the roles of clients, servers, and peers as they relate to computer networks5) define the term "protocol" and explain how it relates to computer networks6) identify specific network management areas and describe the organizational issues relating to each of themStudents will be evaluated on homework (35% of grade), semester exams (35%), and a final comprehensive exam (30%).This course is an elective in the computer science (COMP) BS curriculum. This course is intended to be taken by second semester juniors or seniors.No special facilities are required for this course. This course will be offered once per year, with an expected enrollment of 60.

Enforced Prerequisite at Enrollment: CMPSC 312

CMPSC 438: Computer Network Architecture and Programming

3 Credits

This course introduces elements and architecture of computer and data communication networks, demonstrates the fundamental principles of computer networking, and provides practical experience in the network application development. This course will provide an overview of computing network architectures and programming that are essential knowledge for many professionals working in computer science and

information systems fields. Students will gain hands on experience in a range of network programming assignments.

Enforced Prerequisite at Enrollment: CMPSC 312 and (CMPSC 221 or CMPSC 330)

CMPSC 440: Data-driven Security Analytics

3 Credits

Today's security event monitoring and correlation tools are being taxed more than ever before. The constant deluge of data being output by the many devices in our security infrastructures and input into log managers, SIEM (Security information and event management) and other security management interfaces creates quite a load on our analytics systems. In the noise of all this security and event-related data, it is difficult to sort through and obtain real, actionable events that need attention. The market is in need of a new generation of security tools - ones that process much larger datasets, are capable of deep-dive analytics and rely more on intelligence than attack signatures. The proposed course will cover the fundamental data science techniques that are applied to enhance security intelligence. This course will complement the existing computer science and software engineering curriculum. It also prepares students for both a career as a data scientist and as a cybersecurity analyst.

Enforced Prerequisite at Enrollment: CMPSC 335 or CMPEN 461

CMPSC 441: Artificial Intelligence

3 Credits

Problem solving, search techniques including local search and genetic algorithms, knowledge representation, planning, learning, and neural networks. CMPSC 441 Artificial Intelligence (3) The primary goals of this course are (1) to provide the students with an introduction to Artificial Intelligence concentrating on some fundamental areas of AI, and (2) to provide the students with a working knowledge of LISP so that they can investigate some basic problems in AI using LISP as a vehicle language.

Enforced Prerequisite at Enrollment: CMPSC 462

CMPSC 442: Artificial Intelligence

3 Credits

This course provides an overview of the foundations, problems, approaches, implementation, and applications of, artificial intelligence. Topics covered include problem solving, goal-based and adversarial search, logical, probabilistic, and decision theoretic knowledge representation and inference, decision making, and learning. Through programming assignments that sample these topics, students acquire an understanding of what it means to build rational agents of different sorts as well as applications of AI techniques in language processing, planning, vision.

Enforced Prerequisite at Enrollment: CMPSC 221. Enforced Concurrent at Enrollment: CMPSC 465

Cross-listed with: DS 442

CMPSC 443: Introduction to Computer and Network Security

3 Credits

Introduction to theory and practice of computer security with an emphasis on Internet and operating system applications.

Enforced Prerequisite at Enrollment: CMPEN 362 Enforced Concurrent at Enrollment: CMPSC 473

CMPSC 444: Secure Programming

3 Credits

Secure software design principles/practices, common threats, applied cryptography, trust management, input validation, OS-/programming language- specific issues, software validation. CMPSC 444 Secure Programming (3) This course presents an overview of the principles and practices of secure software design. The course begins with a presentation of overarching principles of secure software development that enable the design, implementation, and testing of secure systems that can withstand attacks. These principles and strategies for realizing them will be illustrated through an analysis of common security issues and pitfalls in the software development process. The course will cover a variety of programming languages including C/C++, Java, and scripting languages; different classes of systems including standalone applications, client/server systems, and peer-to-peer applications; and development issues specific to different operating systems. Students will develop and analyze programs that demonstrate security principles, strategies, coding techniques, and the use of tools that can help make code more resistant to attacks.

Enforced Prerequisite at Enrollment: CMPSC 221 or CMPSC 330

CMPSC 445: Applied Machine Learning in Data Science

3 Credits

Applied machine learning techniques are used in many different areas, such as the classification, visualization and analysis of data, clustering, and understanding of natural languages for human-computer interactions. These applications are crossing the boundaries of computer science and data science. Big technology firms have all started offering their own cloud machine learning platforms. This course will start with an overview of supervised and unsupervised learning, and introduce the associated libraries. It covers basic machine learning concepts, tasks, and workflow using an example classification problem based on K-nearest neighbors, Naïve Bayes, Support Vector Machine (SVM), K-means, and implementation using Python libraries. Natural language processing (NLP) techniques including n-gram models, grammar, parse trees, and part-of-speech tagging will be discussed. The issue of dimensionality of data will be discussed, and the task of clustering data, as well as supervised approaches for creating predictive models will be described, and learners will be able to apply Python predictive modeling methods while understanding process issues related to data generalizability (e.g. cross validation, overfitting). The course will also look at more advanced techniques, such as neural network, feed-forward network, back-propagation and deep learning with cloud AI services. Technological differences between using cloud services at a higher level of abstraction and coding locally will be discussed. Students will be able to identify the difference between a supervised (classification) and unsupervised (clustering) technique, identify which technique they need to apply for a particular dataset, manage and understand data, and engineer features to meet that need. Students will work in teams to develop web applications

that use industry standard cloud services provided by one of the AI cloud service providers.

Enforced Prerequisite at Enrollment: STAT 318 and MATH 220 and (CMPSC 122 or CMPSC 132)

CMPSC 446: Data Mining

3 Credits

Data Mining is the process of discovering patterns, correlations, and trends, in large data sets. This course is designed to provide an overview of the data mining process, with an emphasis on data management, pattern discovery, and cluster analysis. Data management includes data selection, cleaning, clustering, visualization, and distributed data storage and processing. The course covers pattern mining concepts, including pattern discovery concepts, efficient pattern mining algorithms, and graph pattern mining. The classification problem is illustrated through decision tree algorithms and ensemble methods. Basic concepts of cluster analysis are introduced, followed by typical clustering algorithms, including partitioning methods, hierarchical clustering, and graph clustering. Applications of cluster analysis are also covered. The course concludes with a study of data mining in the context of graphs used to model a wide range of networks from social networks to biological networks to web pages on the Internet.

Enforced Prerequisite at Enrollment: MATH 220 and (DS 220 or CMPSC 430 or CMPSC 431W) and (MATH 318 or STAT 318 or MATH 414 or STAT 414)

CMPSC 447: Software Security

3 Credits

This course explores the fundamental concepts and engineering processes of software development and testing to produce software that is designed for security. This course is intended as a senior-level course for computational majors such as computer science and computer engineering since it covers the exploitation of programs based on computer architecture, systems, and software concepts. First, software engineering considerations associated with a variety of software vulnerabilities will be analyzed, along with defensive programming techniques to avoid such vulnerabilities. The next part of this course will introduce systematic software engineering principles for building secure software to defend its attack surface, such as reference monitors, privilege separation, information flow, and program verification. The third part will focus on methods for security testing of software including fuzz testing, symbolic execution, grey-box testing, and forensics. The final week of the course will examine adding security into the software engineering life cycle. The design and implementation of techniques to develop reference monitors, information-flow secure programs, testing mechanisms and enhancements, as well as defensive programming against prominent software vulnerabilities will be studied and analyzed. Upon completion of the course students will be able to critically analyze the design and implementation of software for security flaws and build security mechanisms to prevent exploitation of such flaws.

Enforced Prerequisite at Enrollment: CMPSC 443 Recommended preparation: CMPSC 360

CMPSC 448: Machine Learning and Algorithmic AI

3 Credits

Evaluation and use of machine learning models; algorithmic elements of artificial intelligence.

Enforced Prerequisite at Enrollment: (STAT 319 or STAT 415) and (CMPSC 122 or CMPSC 132)

CMPSC 450: Concurrent Scientific Programming

3 Credits

Problems of synchronization, concurrent execution, and their solution techniques. Design and implementation of concurrent software in a distributed system.

Enforced Prerequisite at Enrollment: (CMPSC 121 or CMPSC 131 or CMPSC 201) and MATH 220 and (MATH 230 or MATH 231)

CMPSC 451: Numerical Computations

3 Credits

ALGORITHMS FOR INTERPOLATION, APPROXIMATION, INTEGRATION, NONLINEAR EQUATIONS, LINEAR SYSTEMS, FAST FOURIER TRANSFORM, AND DIFFERENTIAL EQUATIONS EMPHASIZING COMPUTATIONAL PROPERTIES AND IMPLEMENTATION. STUDENTS MAY TAKE ONLY ONE COURSE FOR CREDIT FROM MATH 451 AND 455.

Enforced Prerequisite at Enrollment: (CMPSC 101 or CMPSC 121 or CMPSC 131 or CMPSC 200 or CMPSC 201) and (MATH 230 or MATH 231)
Cross-listed with: MATH 451
Bachelor of Arts: Quantification

CMPSC 455: Introduction to Numerical Analysis I

3 Credits

Floating point computation, numerical rootfinding, interpolation, numerical quadrature, direct methods for linear systems. Students may take only one course for credit from MATH 451 and MATH 455.

Enforced Prerequisite at Enrollment: (CMPSC 201 or CMPSC 202 or CMPSC 121 or CMPSC 131) and MATH 220 and (MATH 230 or MATH 231)

Cross-listed with: MATH 455
Bachelor of Arts: Quantification

CMPSC 456: Introduction to Numerical Analysis II

3 Credits

Polynomial and piecewise polynomial approximation, matrix least squares problems, numerical solution of eigenvalue problems, numerical solution of ordinary differential equations.

Enforced Prerequisite at Enrollment: MATH 455
Cross-listed with: MATH 456
Bachelor of Arts: Quantification

CMPSC 457: Computer Graphics Algorithms

3 Credits

Graphics systems/hardware, color models, transformations, projections, clipping, hidden line/surface removal, aliasing, parametric curves/

surfaces, 3D modeling animation. CMPSC 457 CMPSC 457 Computer Graphics Algorithms I (3) Concepts and techniques needed to draw geometrical objects with a discrete device: Coordinate systems, clipping, curves and regions, geometric transformations, parallel and projective projections, hidden line and surface removal, animation.

Enforced Prerequisite at Enrollment: CMPSC 330 and MATH 220

CMPSC 458: Fundamentals of Computer Graphics

3 Credits

Fundamentals of computer graphics: input/output devices, transformation, projection, clipping, hidden line/surface elimination.

Enforced Prerequisite at Enrollment: CMPSC 311 and MATH 220 and (MATH 230 or MATH 231)

CMPSC 460: Principles of Programming Languages

3 Credits

Design and implementation of high level programming languages and survey of language paradigms including imperative, functional, and object-oriented programming. CMPSC 460 Principles of Programming Languages (3) The primary topics of this course include run-time systems for imperative programming languages and aspects of the object-oriented, functional and declarative paradigms that have applications in industrial software development. Study of these topics should improve student skills in programming, debugging and problem solving.

Enforced Prerequisite at Enrollment: CMPSC 312 and CMPSC 462
Enforced Concurrent at Enrollment: CMPSC 469

CMPSC 461: Programming Language Concepts

3 Credits

Fundamental concepts of programming language design, specifications, and implementation; programming language paradigms and features; program verification.

Enforced Prerequisite at Enrollment: CMPSC 221 and CMPSC 360

CMPSC 462: Data Structures

3 Credits

In-depth theoretical study of data structures such as balanced trees, hash tables, priority queues, B-trees, binomial heaps, and Fibonacci heaps. CMPSC 462 Data Structures (3) The primary goals of this course are (1) to provide the students with a set of basic data structures useful in the design of efficient algorithms, and (2) to provide the students with the ability to design and analyze new data structures as needed to solve problems. The secondary goal of this course is to introduce basic algorithm analysis techniques to prepare the students for the follow up course CMPSC 463, Design and Analysis of Algorithms. This is a required course in the BS COMP program. It is also a prerequisite for a number of other courses in the COMP program such CMPSC 463, 460, 430, etc.

Enforced Prerequisite at Enrollment: C or better in MATH 141 and (C or better in CMPSC 122 or C or better in CMPSC 132) and C or better in CMPSC 360 and CMPSC 330

CMPSC 463: Design and Analysis of Algorithms

3 Credits

Recurrences, algorithms design techniques, searching, sorting, selection, graph algorithms, NP-completeness, approximation algorithms, local optimization algorithms. CMPSC 463 Design and Analysis of Algorithms (3) The primary goals of this course are (1) to provide the students with fundamental techniques for designing and analyzing algorithms, and (2) to introduce some techniques for dealing with inherently intractable problems. This is a required course in the BS COMP program.

Enforced Concurrent at Enrollment: MATH 318 or STAT 318 or STAT 414 or MATH 414
Enforced Prerequisite at Enrollment: CMPSC 462

CMPSC 464: Introduction to the Theory of Computation

3 Credits

Computability/Complexity: finite automata, regular & context-free languages, Turing machines, Church-Turing Thesis, undecidability, reducibility, completeness, time/space complexity, P versus NP. CMPSC 464 Introduction to the Theory and Computation (3) CMPSC 464 introduces students to an essential part of theoretical computer science: how to define abstract mathematical models of computational devices (automata), how to characterize their computational power by studying the family of languages that they can recognize (formal languages), and what the limitations of even the most powerful computational devices are (computability). The course studies regular languages by means of deterministic and nondeterministic finite-state automata and regular expressions; it studies context-free languages through the use of context-free grammars and pushdown automata; and it studies computability by means of Turing machines and recursive and recursively-enumerable languages. The unsolvability of the halting problem for Turing machines is proved by a diagonalization argument, and this result is then used to show that various problems about languages are unsolvable, such as the problem of determining whether two context-free grammars generate the same language. Finally, the concept of computational complexity is introduced, and the classes P and NP are defined. (Informally, the former class consists of problems that can be solved computationally in a manageable amount of time, and the latter consists of problems for which a proposed solution can be verified in a manageable amount of time.) The concept of an NP-complete problem is defined, and some specific problems are proved to be values to the variable of a Boolean formula that will make the formula true).

Enforced Prerequisite at Enrollment: CMPSC 465

CMPSC 465: Data Structures and Algorithms

3 Credits

Fundamental concepts of computer science: data structures, analysis of algorithms, recursion, trees, sets, graphs, sorting.

Enforced Prerequisite at Enrollment: (CMPSC 122 or CMPSC 132) and (CMPSC 360 or MATH 311W)

CMPSC 466: Introduction to Quantum Computation

3 Credits

In this course, we will focus on the benefits brought by quantum mechanics to information processing and computation tasks. The content of this course is theoretical, i.e., we will give an overview of various topics in quantum computation from a theoretical computer

science perspective. We will first introduce the fundamental framework for quantum information processing and computation. Then, we will introduce topics in quantum algorithms, quantum information theory, and quantum cryptography.

Enforced Prerequisite at Enrollment: MATH 220 and (MATH 318 or STAT 318 or MATH 414 or STAT 414 or MATH 418 or STAT 418)

CMPSC 467: Factorization and Primality Testing

3 Credits

Prime sieves, factoring, computer numeration systems, congruences, multiplicative functions, primitive roots, cryptography, quadratic residues. Students who have passed MATH 465 may not schedule this course.

Enforced Prerequisite at Enrollment: CMPSC 360 or MATH 311W

Cross-listed with: MATH 467

Bachelor of Arts: Quantification

CMPSC 469: Formal Languages with Applications

3 Credits

Regular, context free, recursive, and recursively enumerable languages; associated machine models; applications. CMPSC 469 Formal Languages with Applications (3) The primary goal of this course is to explore formal language theory, including regular, context free and recursively enumerable languages. Notations for specifying these languages (regular expressions, finite automata, context free grammars and Turing machines) are emphasized. Applications of these languages, including pattern recognition, scanning, parsing, specification of programming language syntax and Unix shell programming, are also discussed. Study of these topics should provide a solid theoretical basis for students to draw on in studying diverse areas such as algorithm analysis, complexity theory and compiler construction.

Enforced Prerequisite at Enrollment: CMPSC 360

CMPSC 470: Compiler Construction

3 Credits

Compiler design and implementation; scanning, parsing, semantic analysis, optimization (including static analysis), code generation, garbage collection, and error detection. CMPSC 470 Compiler Construction (3) The primary topics of this course are areas of compiler construction that are applicable both in building compilers and in many other areas of computer science. Both the concepts and the implementation of these techniques will be emphasized. Study of these topics should improve student skills in programming, debugging and software engineering. This course is an elective for students in both the BS COMP and MS COMP programs. The course builds on concepts learned in earlier programming, data structure and computer organization courses.

Enforced Prerequisite at Enrollment: CMPSC 312 and CMPSC 330 and CMPSC 462 and CMPSC 469

CMPSC 471: Introduction to Compiler Construction

3 Credits

Design and implementation of compilers; lexical analysis, parsing, semantic actions, optimization, and code generation.

Enforced Prerequisite at Enrollment: CMPSC 461

CMPSC 472: Operating System Concepts

3 Credits

Theoretical and practical issues of operating systems design and implementation, process management, concurrent programming, memory management, scheduling, I/O, and security. CMPSC 472 CMPSC 472 Operating Systems Concepts (3) A course on operating systems is an essential part of a computer science education. This course is intended as an introduction to study the concepts, structure and mechanisms that underlie operating systems. A tremendous range and variety of computer systems exist for which operating systems are designed. Rather than focus on individual operating systems, this course discusses the key mechanisms of modern operating systems, the types of design trade-offs and decisions involved in operating system design and the context within which the operating system functions. After completing CMPSC 472 the student should be able to: (1) describe and understand the four major components of an operating system: process management (including synchronization, scheduling, mutual exclusion, deadlocks and concurrency), input/output (including disk scheduling and disk I/O), memory management (including virtual memory, paging, segmentation and addressing) and management of the file systems (2) describe and understand how a centralized operating system functions (3) describe and understand the various components of an operating system (4) describe the various goals of protection and the security problem in general (5) compare centralized operating systems with distributed operating systems. Students will be evaluated on homework (35% of grade), semester exams (35%), and a final comprehensive exam (30%). This course is required in the computer science (COMP) BS curriculum. It is intended for seniors to take this course in their fall semester. This course is also an admission requirement for the (COMP) MS program. No special facilities are required for this course. The software necessary is available in the computer labs or for students to use at home. This course will be offered once per year, with an expected enrollment of 80.

Enforced Prerequisite at Enrollment: CMPSC 312 and (C or better in CMPSC 330) and CMPSC 462 and CMPSC 469

CMPSC 473: Operating Systems Design & Construction

3 Credits

Design and implementation of computer operating systems; management of various system resources: processes, memory, processors, files, input/output devices.

Enforced Prerequisite at Enrollment: CMPSC 311 and CMPEN 331

CMPSC 474: Operating System & Systems Programming

3 Credits

Operating Systems overview and principles; processes and signals; concurrency and synchronization; memory and file management; client-server computing; scripts; systems-programming.

Enforced Prerequisite at Enrollment: CMPSC 122 and CMPSC 312

CMPSC 475: Applications Programming

3 Credits

Development of software for devices including smart phones, tablets, handheld units, and other general purpose computing platforms.

Enforced Prerequisite at Enrollment: CMPSC 221 and (CMPSC 311 or CMPSC 312) and (CMPSC 462 or CMPSC 465)

CMPSC 476: Systems Debugging

3 Credits

Debugging is a practical and essential skill for any computer scientist to be able to properly diagnosis and fix problems (i.e., bugs) in systems and/or code. The goal of this course is for students to develop debugging skills through extensive practice. The course will cover general methodologies for debugging such as instrumentation, consistency checking, and divide & conquer. The course will also cover how to effectively utilize a variety of debugging tools such as debuggers, memory error detectors, race condition detectors, etc. Lastly, the course will explain specific types of bugs such as race conditions, deadlocks, and corrupted memory, which is necessary for finding these types of bugs. This is a project-based course that will involve extensive reading and writing of C code and use of Linux, so a solid background knowledge in C and Linux is expected.

Enforced Prerequisite At Enrollment: CMPSC 311 or CMPSC 472 or CMPSC 474 or CMPEN 441

CMPSC 483W: Software Design Methods

3 Credits

Applications of scientific knowledge and methods in the design and construction of computer software using engineering concepts.

Enforced Prerequisite at Enrollment: CMPSC 311 and CMPSC 465;
Recommended Preparation: ENGL 202C
Writing Across the Curriculum

CMPSC 484: Computer Science Senior Project I

2 Credits

Computer science capstone project with documentation emphasis. CMPSC 484 CMPSC 484 Computer Science Senior Project I (2) This course is phase one preparation for completing a design for a project to serve as the capstone to the computer science degree program. The course provides instruction and specification of a simulated real-world work environment and associated activities to employ and integrate computer science concepts. Technical instruction and delivered products will be required. Students enrolled in the program will: 1) produce a design for a significant senior project using a cooperative, team approach, 2) present concepts, progress, and products to and interact with peer and faculty review boards. The course will: 1) provide the student with an opportunity to work in a team environment designed around sound development practice, 2) present to students current team organization and management techniques, 3) describe various forms of written communication targeted to different audiences, and 4) reinforce the technical knowledge attained through the computer science curriculum.

Enforced Prerequisite at Enrollment: ENGL 202C and CMPSC 221 and CMPSC 465

CMPSC 485W: Computer Science Senior Project II

3 Credits

Computer science capstone project with documentation emphasis.

Enforced Prerequisite at Enrollment: CMPSC 484
Writing Across the Curriculum

CMPSC 487W: Software Engineering and Design

3 Credits

Software development process, life cycle; requirements analysis, specification, design, prototyping, testing, project management, and documentation. CMPSC 487W Software Engineering and Design (3) The primary goal of this course is to familiarize students with the wide variety of techniques and methodologies used in software engineering to assist in the development of large software systems. Issues discussed include the human factors involved in developing software, models of the software development process, the use of formal methods in software engineering, software validation and verification, and software maintenance. A second goal is to help students understand the importance of written communication in software engineering, and to provide opportunities for students to improve the quality of their writing - specifically in describing software systems. The primary means of accomplishing this goal is a semester long project in which students write requirements for a large software system. In writing these requirements, students describe the system for non-technical readers (clients and users) and specify it for technical readers (other system developers). A final goal is to emphasize the role of teams in software development. Modern software systems are simply too large to reasonably be produced by one person, so the ability to work as part of a team is vital. To support achieving this goal, techniques and tools for working in groups are discussed in the course, and students work on the semester project in teams. This course is a required course in the computer science (COMP) BS curriculum, and is intended to be taken by seniors as the capstone course for the major. As such, the course integrates material from many (potentially all) of the undergraduate computer science courses. This course is also available as an elective for students in the MS COMP program.

Enforced Prerequisite at Enrollment: ENGL 202C and CMPSC 330
Writing Across the Curriculum

CMPSC 488: Computer Science Project

3 Credits

Project design and implementation with an emphasis on team work, documentation, and the employment and integration of computer science concepts. CMPSC 488 Computer Science Project (3) This class provides a hands-on experience designing and developing a real-world software system. The course will emphasize collaboration and teamwork to employ and integrate computer science concepts. Students will work on a project that will serve as the capstone to the computer science degree program. Technical instruction, research, software implementation and delivered products will be required.

Enforced Prerequisite at Enrollment: CMPSC 487W

CMPSC 494: Senior Honors Thesis

1-6 Credits/Maximum of 6

Supervised Honors thesis research in computer science and engineering.

Honors

CMPSC 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experience, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor
Full-Time Equivalent Course**CMPSC 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CMPSC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CMPSC 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Corporate Communication (CC)

CC 200: Introduction to Corporate Communication

3 Credits

As a field, Corporate Communication involves taking organizational goals and translating them into communication strategies and tactics inside and outside the organization as well as managing communication processes on an ongoing basis. Corporate Communication is complex, dynamic, and involves navigating various communication channels. As a lower-level introduction to Corporate Communication, this course introduces fundamental concepts, theories, and practices in Corporate Communication by providing a basic overview for students within the major/minor, as well as those who may not necessarily go on to major in the field. The course emphasizes the application of Corporate Communication concepts for any contemporary professional.

Bachelor of Arts: Social and Behavioral Sciences
 General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

CC 401: Internal Communication

3 Credits

Explores the various ways organizations communicate with internal stakeholders, including senior leaders, managers, and frontline employees. CC 401 focuses on strategic communication processes between the organization and internal stakeholders such as senior leaders, managers, and frontline workers. The course explores the effective use of internal media, including intranet content, emails, social media content (strongly directed at internal audiences), memos, reports, newsletters, brochures, training content, and speeches. Considerable attention will be given to how to write effectively for each channel. Emphasis will also be placed on the importance of strategically coordinating internal communication and sustaining the overall function. CC 401 provides a thorough grounding in one of the two major subdivisions of the Corporate Communication field (with external communication as the other major subdivision). As an advanced course in the major, CC 401 provides considerable depth in terms of concepts, theories, and practices. Students will mainly need to apply, analyze, evaluate, and synthesize/create in this course. Students will primarily explore internal communication in terms of present day practices and future trends.

Prerequisite: CC 200 with 5th Semester Standing**CC 402: External Communication**

3 Credits

Explores the various ways organizations communicate with external stakeholders. CC 402 focuses on the process of communication with external stakeholders. An integral part of Corporate Communication, external communication is an integrated function that includes building relationships and writing for the traditional media, creating materials such as advertisements and brochures, writing for the web, and creating credible spokespeople. As such, this course focuses on identifying and defining methods of external communication, as well as, how to write effectively for each communication channel. Students will gain experience in core Corporate Communication competencies, including writing media releases, integrating content and design, and evaluating communication effectiveness.

Prerequisite: CC 200 with 5th Semester Standing**CC 404: Risk and Crisis in Corporate Communication**

3 Credits

Explores crisis communication theory and practice as related to internal and external processes. Every organization will encounter crisis. Understanding how to communicate before, during, and after a crisis can dramatically alter the trajectory of an organization. This course approaches the topic of crisis holistically, as part of the organizational lifecycle, with a focus on internal and external organizing, and ultimately positions crisis as an organizational learning opportunity. The course is broken into four sections: key concepts, and pre-, during, and post-crisis organizing and communicating. The first section will cover foundation concepts such as crisis, risk, and uncertainty, as well as provide an overview of crisis types and stages. The second section of the course will explore pre-crisis issues such as risk assessment, crisis management teams and plans, and contingencies for crisis eventualities. The third section will focus on the acute stage of crisis, including activating the crisis management plan and exogenous variables that affect crisis

communication. The final section of the course will focus on the post-crisis stage, including organizational learning, evaluation, and preparing for future crises.

Prerequisite: CC 200 and Fifth semester standing

CC 405: Strategic Speaking

3 Credits

This course addresses the design and delivery of strategic spoken word communications with stakeholders inside and outside organizations. CC 405 concentrates on strategic spoken word communications used to advance overall Corporate Communication goals inside and/or outside the organization. The course specifically addresses group-based speaking and/or speaking potentially shared with a large number of individuals through electronic means. For each of various contemporary modes of strategic spoken expression, students will learn standard elements, examine industry examples, create an original design, and deliver an original performance. CC 405 will be an additional elective course in the Corporate Communication major. It is designed to integrate with the internal-external conceptual model used throughout the Corporate Communication major. As an advanced course in the major, CC 405 provides considerable depth in terms of concepts, theories, and practices. Students will mainly need to apply, analyze, evaluate, and synthesize/create in this course. Students will primarily explore strategic speaking in terms of present day practices and future trends.

Prerequisite: CC 200 and Fifth semester standing

CC 406: Social Media in Corporate Communication

3 Credits

Explores the internal and external functions of social media in organizations, with a focus on organizational-stakeholder relationships. Social media allows organizations to connect and build dialogic relationships with stakeholders, and is therefore an integral part of the Corporate Communication field. This course discusses the role of social media in Corporate Communication, the communicative and social functions that social media technology enables, issues of appropriate and effective use, social media use from both the organizational and stakeholder point of view, and the ethical considerations of using social media. Emphasis will be placed on theoretical understanding and practical application in the context of organizations seeking to advance internal and external communication goals. This course integrates the internal/external communication focus that shapes the Corporate Communication major by focusing on the different types of messages, platforms, and issues that are unique to each audience, while also emphasizing how to create synergistic organizational messages that resonate with both internal and external audiences.

Prerequisite: CC 200 and Fifth semester standing

CC 490W: Seminar in Corporate Communication

3 Credits

Explores and applies concepts and theories to various cases, emphasizing written development of strategies relevant to the internal and external organization. This course explores Corporate Communication as it encompasses both the internal and external organization. It takes a comprehensive approach to exploring theory and application in the context of specific cases. Course content builds on and unifies other required courses in the major. Coursework will primarily

involve students developing major strategies and related tactics for existing or newly emerging organizations. Coursework may also involve students applying Corporate Communication concepts and theories to the development of their own career plans. This course emphasizes student synthesis and creativity in applying theory and research from Corporate Communication and allied fields to the total organization. The course will typically include analysis and evaluation of practitioner and scholarly readings, students' work, and case studies.

Prerequisite: CC 401 or CC 402 and 6th Semester Standing Writing Across the Curriculum

CC 495: **SPECIAL TOPICS**

3 Credits

CC 495A Internship in Corporate Communication (3) Communications experience in businesses or agencies that may include activities in writing, media production, planning, public relations, advertising, employee relations, or training.

Prerequisite: Prior approval of proposed assignment by instructor. CC 401 or CC 402, and 6th Semester standing

CC 495A: Internship in Corporate Communication

3 Credits/Maximum of 3

CC 495A Internship in Corporate Communication (3) Communications experience in businesses or agencies that may include activities in writing, media production, planning, public relations, advertising, employee relations, or training.

Prerequisite: Prior approval of proposed assignment by instructor and CC 200 and CC 401 or CC 402 and 6th Semester standing

Counselor Education (CNED)

CNED 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 100: Effective Career Decision-Making

3 Credits

Examination of internal and external factors that contribute to career development to assist students undecided about major or career. CN ED 100CN ED 100 Effective Career Decision-Making (3) CN ED 100 teaches students career decision-making skills by closely examining internal factors, the world of work, and decision-making styles and strategies. The premise of this course is that career decisions are greatly enhanced by: (1) considering personal traits such as interests, values, abilities, decision-making styles and other factors; (2) gathering information about the world of work and education; and (3) integrating knowledge about the self and the world through an on-going process. Learning the career decision-making process is empowering and skills learned in the course can be valuable throughout life as individuals encounter crossroads that may prompt career changes. CN ED 100 is intended for students who are undecided about their major and career selection. The course format consists of lectures, discussions, and experiential learning activities designed to help students analyze their personal traits and to relate their traits to career theories, occupational fields and work

settings. Self-assessment activities include reflective writing, use of established career assessment inventories, and completion of various activities. Diverse information is shared on majors and occupations as well as information gathering strategies. Students more closely discuss their career development and progress in formal small group sessions, facilitated by career counseling professionals. Five classes of the semester are devoted to these meetings.

CNED 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 198: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 200: Peer Mentoring

1 Credits

This course will prepare students for the roles and responsibilities of being a Peer Mentor. CN ED 200 Peer Mentoring (1) "Peer Mentoring" is designed to present to the student the basic principles, characteristics, and benefits of a peer mentoring relationship. Peer Mentoring is a beneficial relationship to both the mentee and mentor and ultimately can aid in college retention rates. Once this knowledge is gained, students in the course will learn how to deal with the various situations that could occur during the transition process. This course offers the student the opportunity to develop intellectual relationships with faculty, current campus peer mentors, and fellow classmates who share similar academic interests in leadership, mentorship, and role modeling. In this course, students will be introduced and learn to apply active listening skills, the hidden rules of college, how to conduct mentee interactions both virtually and in person, intrinsic and extrinsic motivation, along with cultural and self-awareness. Once introduced to the multi-layer elements of the course, students will demonstrate their knowledge of these skills through their in class involvement. The course is delivered as an interactive learning environment where in class exercises and hands-on demonstrations help the student understand the principles and implications of peer mentoring. Additionally, students will work on a campus resource project outside of the classroom that will be presented to the entire campus community at the conclusion of the semester. The course is open to all students, however, students interested in taking the course must get course entry approval by the faculty member in charge to determine the student's true interest in peer mentoring.

CNED 280: Job/Internship Search and Professional Skills

1 Credits

This course will teach students how to implement a career strategy to effectively secure a job/internship.

CNED 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CNED 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 298: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 301: Student Organization Management

2 Credits

Exploration and development of leadership and group process skills necessary for effectively managing student organizations in higher education settings.

CNED 303: Career Search Strategies for Educators

1 Credits

An aid in preparing students with information helpful for entry into education and alternative job markets.

CNED 304: Education of the Peer Assistant

3 Credits

Student development theories: skill development in listening, informing, and referring culturally diverse peers in individual and group situations.

Prerequisite: limited to students selected as peer assistants or similar positions

CNED 393: Peer Support Counseling

2 Credits/Maximum of 8

CNED 393 is a course that prepares and supports students in their role as a Peer Counselor (PC) on campus to help support fellow students as they navigate difficult decisions, points of crisis, or everyday aspects of student life. Student Peer Counselors approved to participate in this course will learn how to work cooperatively with their respective campus to respond to fellow student needs, promote student safety and personal wellness, meet individually with students to discuss any emotional concerns, facilitate support groups, and hold events that cater to student wellness and stress reduction. This 2-credit course consists of the CNED 393 seminar taught by a qualified faculty member, who has clinical counseling experience, along with clinical group supervision conducted by campus psychological and counseling services staff members.

Prerequisite: B or better in (PSYCH 100 or RHS 100) and 6 additional credits in (RHS or PSYCH) Concurrent: RHS 301 or HDFS 301 Corequisite: Reference from a faculty member and approval from the CNED 393 instructor Recommended Preparation: SOC 1 and (PSYC

CNED 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 401: Foundations of Chemical Dependency Counseling

3 Credits

An overview of diagnosis and assessment, models for chemical dependency prevention, counseling, and recovery; contexts of chemical dependency treatment.

Prerequisite: 3 credits in general psychology

CNED 404: Group Procedures in Guidance and Counseling

3 Credits

The nature and functioning of groups in educational and agency settings. Provides prospective counselors with experience in the group process.

Prerequisite: 6 credits in counselor education; 6 credits in psychology, sociology, or individual and family studies

CNED 416: Interpersonal Relationships and Alcohol and Other Drugs (AOD) Dependency

3 Credits

This course examines families with chemically dependent members, dynamics, appropriate interventions, and treatment.

Prerequisite: CN ED401 or RHS 301

CNED 420: Chemical Dependency: Youth at Risk

3 Credits

Study of youth who are at-risk of developing chemical dependency including the characteristics and factors related to chemical dependency.

Prerequisite: CN ED401

CNED 421: Counseling Strategies for Preventing Chemical Dependency

3 Credits

Examines helping professional's role in primary and secondary prevention of substance abuse, and related problems like delinquency, suicide, and pregnancy.

Prerequisite: CN ED401

CNED 422: Foundations of Addictions Counseling

3 Credits

Study of the fundamental principles of counseling individuals with a wide variety of addictions. CN ED 422 Foundations of Addictions Counseling (3) Students explore the fundamental principles of addictions counseling from a wide range of perspectives. These include the psychopharmacological aspects of alcohol and abusable drugs, along with theories and assessments of addictive disorders. Many treatment models are considered, and are examined in the context of individual, group, and family therapy perspectives. The course also addresses the research literature on codependence, COA's AA and other 12-step programs, dual diagnosis, relapse, prevention, and multicultural and gender issues.

Prerequisite: a minimum of 12 hours of coursework in sociology, psychology, education, or family studies.

CNED 423: Student Assistance Programs

3 Credits

Exploration of early stages of adolescent "at-risk" behavior and skills for student assessment and intervention within schools and communities.

Prerequisite: CN ED401

CNED 424: Facilitating Career Development

3 Credits

This course provides individuals with relevant skills and knowledge to assist others in planning careers and obtaining meaningful work. CN ED (WF ED) 424 Facilitating Career Development (3) This course provides individuals with relevant skills and knowledge to assist others in planning careers and obtaining meaningful work. This course addresses the following 12 Career Development Facilitator (CDF) competencies: 1) helping skills, 2) labor market information and resources, 3) assessment, 4) diverse populations, 5) ethical and legal issues, 6) career development models, 7) employability skills, 8) training clients and peers, 9) program management/implementation, 10) promotion and public relations, 11) technology, and 12) consultation. These 12 competencies are identified by the National Career Development Association (NCDA) for those who (will) deliver career development programs and services in a variety of settings. Potential job titles of CDFs include career group facilitator, job search trainer, career resource center coordinator, career coach, career development case manager, intake interviewer, occupational and labor market information resource person, human resource career development coordinator, employment/placement specialist, and workforce development staff. With certain years of work experience in career development, students who complete this course are eligible to apply for the Global Career Development Facilitator (GCDF) certification through the Center for Credentialing & Education (CCE), which is affiliated with the National Board for Certified Counselors (NBCC). A GCDF is a person who works in any career development setting or who incorporates career development information or skills in their work with students, adults, clients, employees, or the public. As of January 2011, about 18,000 individuals acquired the GCDF certification world-wide including Bulgaria, Canada, China, Germany, Japan, Romania, Turkey, South Korea, and New Zealand. The goal of the GCDF credential was to provide standards, training specifications, and credentialing for diverse career development practitioners. This GCDF credential differentiates two levels of career practice, which are 1) career counseling and 2) career facilitation that does not require a counseling degree. This differentiation reflected the reality where many individuals who are currently providing career assistance are not professional counselors. This course is taught by a nationally and internationally trained CDF Instructor (CDFI) who is certified by the NCDA. In addition, the CDF curriculum is updated every three years by the Career Development Leadership Alliance (CDLA) under the supervision of the NCDA CDF Advisory Council in order to keep up with recent changes in the field.

Prerequisite: 300-400 level Psychology, HD FS, or Education courses or permission of the program
Cross-listed with: WFED 424

CNED 430: Couples and Family Counseling

3 Credits

The theory and practice of counseling with couples and families emphasizing family development and major intervention approaches. CN

ED 430 Couples and Family Counseling (3) Students study the theory and practice of couples and family counseling with an emphasis on models of family development and major approaches to intervention with couples and families. Systemic models of family intervention are emphasized as well as the study of other historically important and contemporary approaches to couples and family therapy. The course blends didactic and experiential learning.

Prerequisite: A minimum of 12 hours of coursework in sociology, psychology, education, or family studies.

CNED 431: Counseling and Teaching Youth at Risk

3 Credits

This course is focused on how to counsel and/or teach youth at risk for a variety of social, emotions, and educational problems. CN ED 431 Counseling and Teaching Youth at Risk (3) This course is designed to provide participants with an overview of information focused on counseling and teaching youth at-risk. Emphasis will be placed on identifying youth-at-risk for depression, suicide, eating disorders, pregnancy, AIDS, use and/or abuse of alcohol and drugs, homelessness, gang membership, difficulties related to sexual orientation, and several other at-risk behaviors. Ideas for primary, secondary and tertiary prevention from individual, family, school and community perspectives will also be presented. The course provides a varied format structured to include lecture/discussion, audio-visual presentations, participant self-evaluation of their own at-risk behaviors, role-plays and small group discussion.

Prerequisite: A minimum of 12 hours of coursework in sociology, psychology, education, or family studies.

CNED 432: Ethical, Legal, and Professional Issues in Counseling

3 Credits

Examination of the current ethical and legal issues related to professional counselors and counseling. CN ED 432 Ethical, Legal, and Professional Issues in Counseling (3) Participants explore an overview of ethical and legal issues related to the professional practice of counseling. Topics include responsibility, competence, public statements, confidentiality, professional relationships, licensing and other regulatory programs, and research. The course emphasizes clinical strategies relevant to legal and ethical issues.

Prerequisite: A minimum of 12 hours of coursework in sociology, psychology, education, or family studies.

CNED 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CNED 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CNED 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Criminal Justice (CRIMJ)

CRIMJ 12: Criminology

3 Credits/Maximum of 3

Criminology is the study of the causes of criminal behavior. As such this course is an introduction to the topic with special focus on the major theories and concepts explaining criminal behavior. A key focus of the class is examining the most recent scientific research testing the basic theories in criminology. The students learn the various research techniques that have been methods and data sources used to study criminal behavior. Several important areas of study that link understanding criminal behavior and its distribution across the social system are investigated including age, gender, race and ethnicity. One goal of the course is to promote a more complete understanding of crime and how it is enmeshed in human social life. Students read a general text, as well as scholarly articles in Criminology.

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

CRIMJ 12H: Honors Criminology

3 Credits

Criminology is the study of the causes of criminal behavior. As such this course is an introduction to the topic with special focus on the major theories and concepts explaining criminal behavior. This honors version of Introduction to Criminology is especially designed to be appropriately challenging for Schreyer Honors College students. A key focus of the course is examining the most recent scientific research testing the basic theories in criminology. Students learn the various research methods and data sources used to study criminal behavior. Several important areas of study that link understanding criminal behavior and its distribution across the social system are investigated including age, gender, race and ethnicity. One goal of the course is to promote a more complete understanding of crime and how it is enmeshed in human social life. Students read a general text, as well as scholarly articles in criminology.

CRIMJ 13: Juvenile Delinquency

3 Credits

Juvenile conduct, causes of delinquency, current methods of treatment; organization and function of agencies concerned with delinquency.

Cross-listed with: SOC 13

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Integrative Thinking

CRIMJ 100: Introduction to Criminal Justice

3 Credits

Criminal Justice 100 is an overview of the United States criminal justice system and the major components of police, courts and corrections. Students will engage in reviews of, evaluate and consider legal foundations, types and causes of crime, the development of policing, the influence and evolution of the court process, and rehabilitative and reintegrative components of corrections. Specific topics can include, but are not limited to, the extent of crime in the United States; competing and complementary goals within the criminal justice system; sources of criminal law; interactions between various agencies within the criminal justice system; and the impact of crime on victims. During the course of study of the criminal justice system, students will have various opportunities to examine how age, gender, race and ethnicity impact and are impacted by the criminal justice system at critical phases.

CRIMJ 113: Introduction to Law

3 Credits

Introduction to law in society with a focus on criminal law, judicial code, laws of sentencing and corrections, criminal procedure. CRIM (CRIMJ) 113 Introduction to Law (3) Introduction to the law is designed to provide CLJ majors with an introductory level of knowledge of the criminal law, and other legal codes such as the Judicial Code, laws of corrections, probation and parole, and the rules of criminal and appellate procedure. The course will serve as a gateway course to taking more advanced criminology and criminal justice courses. CRIMJ (CRIM) 113 is one of the Prescribed Courses in the CLJ curriculum and is used as a prerequisite for many 400 level courses including CRIM 467 AND 469.

Cross-listed with: CRIM 113

United States Cultures (US)

CRIMJ 150N: Safe and Sound: The Intersection of Criminal Justice and Public Health

3 Credits

This course will consider the overlapping responsibilities and epistemologies of criminal justice and public health. Both fields

concerned with the promotion of population welfare, the public health and criminal justice systems nevertheless confront the same social problems from different ethical perspectives, research methodologies, and knowledge bases. Each may further mobilize different institutional actors driven by divergent political agendas. While we will discuss the productive collaboration between public health and public safety agencies, we will also consider ongoing ownership struggles over certain issues, behaviors, and even populations. Given its practical relevance to many ongoing social issues and controversies of general importance, this course is motivated by a commitment to community-engaged scholarship, and thus will include topics, readings, assignments, speakers, and field trips of local and state importance. At the same time, specific topics will be framed in terms of their national and international importance, and students will be encouraged to link micro-level problems to macro-level processes.

CRIMJ 159: History of the FBI

3 Credits

Chronological survey of the History of the FBI since its founding in 1908, focused on the evolution of Federal law enforcement, bureaucracy, the increasing power of the Executive branch, the targeting of various minority groups, civil rights and civil liberties issues, and the growth of a national security role for the federal government over time. In its long history the FBI has intersected with a wide variety of groups and issues, and this reality will further expose students to the histories of African Americans, gays and lesbians, women's groups, Latinos, Native Americans, war protesters, students, various political dissenters, immigrants, targeting of morality, obscenity, and labor organizing. Because the FBI is responsive to both the political and policy interests of presidents and the influences of American society, students will come to appreciate the influences that politics has on bureaucracy and law enforcement, as well as the different social, political, economic, and cultural influences that each historical time period have exerted on the FBI to help shape its priorities and structure.

Courses offered in foreign countries by individual or group instruction.

CRIMJ 200: Introduction to Security and Loss Control

3 Credits

A general introduction to the field of private security and asset protection. CRIMJ 200CRIMJ 200 Introduction to Criminal Justice (3) (GS)(BA)

This course meets the Bachelor of Arts degree requirements. This course focuses on a body of scholarship addressing the critical issues, policies, and complexities of the criminal justice system. It includes specific topics on key components of the system while demonstrating the intra-relationships of the system. Students will be provided numerous opportunities to broadly survey the concept of justice as well as investigate comparative issues on a governmental level and internationally. Students will also focus on specific social and justice system challenges such as substance abuse, family violence, minorities and justice, street crime, corrections for adults and juveniles, sentencing patterns, and ethics. Students will also analyze the global impact of criminality as they study transnational crime and the challenges faced by the collaboration of nations. Students will be required to familiarize themselves with electronic web sites, refereed journals, and national and international events for class discussion, research, and writing assignments. Students will learn how to comprehend legal decisions and legal procedures. By the end of the course students will be expected to integrate the information of the semester into comparisons and critical evaluation of the criminal justice system components. Frequency of enrollment: Every semester with 35 students.

CRIMJ 205N: Critical Race Theory in the Humanities and Social Sciences

3 Credits

This course closely examines the place and power of race in America. By tracing the history of how race works in particular American institutions, such as public education, criminal justice, and federal housing, students will gain a deep sense of how social categories and understandings shape material conditions and human welfare. Through the study of policies, court cases, memoirs, documentary films, and freedom struggles, this course will interrogate the many Americas that race has created and their implications for democracy and justice. Not only will this course focus on making race visible, but also the many ways that race intersects with class, gender, and sexuality and how these concepts empower and marginalize at the same time. All the while, students will use Critical Race Theory methods to reach empathy and strengthen social (GS) and historical (GH) literacies. Discussion, writing, critical reading, and primary source analysis will be integral to this class. Class sessions will include whole- and small-group discussion where active listening and thoughtful participation will be taught and required. Students will be encouraged to explore their own conceptions of race and how those ideas shape knowledge and experience. Ultimately, this is a course that will weave data, theory, and story as we encourage students to move toward empathy through comprehensive understandings of race. This course therefore examines race as both deeply personal and structural.

CRIMJ 210: Policing in America

3 Credits

Police organization and operations in America.

Prerequisite: or concurrent: CRIMJ100

CRIMJ 220: Courts and the Prosecution Process

3 Credits

Purpose and function of criminal courts in society, organization, jurisdiction and staffing; prosecution, adjudication, and sentencing of offenders.

Prerequisite: CRIMJ100

CRIMJ 221: Issues in the American Criminal Justice System

3 Credits

Examination of the models of the criminal process, functions of the justice system, and approaches to crime and punishment.

Prerequisite: CRIMJ100

CRIMJ 230: Corrections in America

3 Credits

Punishment and treatment of sentenced offenders, correctional institution organization, staffing, inmates, and subcultures.

CRIMJ 234: Fundamental Techniques of Scientific Criminal Investigation

3 Credits

Traditional and innovative technical approaches utilized by law enforcement scientists; capabilities and limitations of technical techniques highlighted. CRIMJ 234 CRIMJ 234 Fundamental Techniques of Scientific Criminal Investigation (3) This course is designed to introduce students to the fundamental methods by which scientific-criminal investigations are pursued. Course objectives focus upon a familiarity with various strategies and techniques of scientific criminal investigation within the law enforcement context so that students may understand both the potentials and limitations of such methods. The course maintains a focus upon traditional methods of scientific criminal investigation as well as examination of scientific developments that have altered investigation in recent years. While this course cannot produce expertise in the more sophisticated technologies of criminal investigation, it serves as a basic introduction to the field. As such, it is designed to give an overview of various possibilities, so that students completing the course will have a general grasp of the various strategies and techniques that are available for criminal investigation and will be in a position to call upon the necessary and appropriate expertise when the occasion arises. The course design alerts students to many of the limitations of the various strategies and techniques of scientific criminal investigation, equipping, them to judge the validity of various findings and to assess the qualifications, and methods employed by different experts. The course gives special attention to strategies and tactics of interrogation and to means of corroborating interrogation data with scientific data obtained from other investigative techniques. The course provides an introduction to various techniques of fingerprinting, including ink pads and dusting techniques, as well as several techniques for bringing out latent fingerprints, with an emphasis on the careful collection and preservation of this evidence. It will introduce methods of drug testing, including techniques for insuring the validity of specimens and basic chemical analysis kits currently available for drug testing, with an emphasis on the careful collection and preservation of this evidence. It demonstrates and provides practical experience in breathalyzer utilization, as well as other investigative techniques for assessing driver

impairment resulting from excess alcohol intake. It provides a basic introduction to DNA technology to the point of equipping students with a fundamental understanding of DNA evidence, including probabilities associated with various findings. Throughout the course, there is special stress on the concept of crime scene investigation, including strategies for cordoning off crime scenes and restricting contamination of evidence, basic crime scene mapping, and analysis of evidence such as blood splattering, foreign objects, unusual markings, hair and fiber samples, and other aspects of evidence. Finally, the course stresses preparation of investigative reports, with an emphasis upon clarity of presentation, attention to relevant details, preparation for presentation of evidence in court, and careful and concise writing. Faculty Member Proposing Course : Richard A. Ball

CRIMJ 240W: Field Research in the Criminal Justice

4 Credits

Field research and observational strategies appropriate to the identification, investigation, and analysis of research questions in criminal justice. CRIMJ 240W CRIMJ 240W Field Research in Criminal Justice (4) Administration of Justice majors who are interested in completing an internship must first complete CRIMJ 240W. As augmented, this course attempts to introduce students to research strategies appropriate to the identification, investigation, and analysis of research questions in the administration of justice, while also providing intensive training in the use of various investigative strategies and intensive training in analysis of findings derived from such research, as well as preparation for an internship and extensive writing experience. As augmented, it will involve additional writing assignments by which students will demonstrate their ability to identify researchable questions, lay out their investigative strategies in written form and produce in writing analyses of their findings and conclusions, with recommendations for policy if appropriate. Considerable time is devoted to strategies for identification of research questions. Students will be required to perform an analysis of a setting in administration of justice, locate and specify aspects of the setting that require systematic research in order to explicate the setting or provide information on problems that might be solved by various administrative approaches or promising programs, projects or policies that might be adopted by other agencies. The course will provide an overview of field research methods appropriate to investigation of administration of justice issues such as those identified earlier. The course will include introduction to the theory and rationale of field research in the social sciences and considerable training and experience in field research methods across several different areas of methodology. The overview of field research methods introduces students to the variety of field methods that are available to researchers in administration of justice. Students will then proceed to an understanding of the issues associated with the theoretical perspectives and epistemological assumptions underlying the various field methods examined in the preceding overview. Here attention will be given to the assumptions upon which each research method is built and the strengths and weaknesses of each method. As augmented, this course is designed to require students to take special account of the weaknesses of the various methods and learn how to counter these weaknesses by augmenting the research strategy by complementary methods where appropriate. As augmented, the course is designed to teach students the reasons for use of various methods as well as the methods themselves. Because this course places such emphasis on data collection, and because research is best learned by doing it, the course is further augmented with additional research exercises. Students are required to spend additional time in the field research exercises beyond that required for a 3-credit course, completing as much as 20 hours of

participant observation for sharpening their observational skills, as 10 hours of focus group work, with much of this effort aimed at sharpening their ability to interpret communications from several different sources with respect to the same events, and as 20 hours of interviewing, using several different interviewing techniques. These efforts concentrate upon developing students' ability to elicit information from interviewees and cross-validate the information through a variety of interview techniques. Students must complete several papers demonstrating their ability to organize their research finding and present them in understandable form. The research writing elements in this course include development of hypotheses, preparation of a research proposal, development of literature reviews, description of research settings, and preparation of research bibliographies. Finally, this course is designed to serve as a bridge in preparation for a successful internship experience. As such, it must succeed in teaching students how to develop and conduct a research study on their own before graduation. Faculty Members Proposing Course : Lisa Morris and Richard A. Ball

Prerequisite: CRIMJ100
Writing Across the Curriculum

CRIMJ 241: Computer Applications in Public Affairs/Criminal Justice

3 Credits

Introduction to computer applications for criminal justice and public affairs agencies. CRIMJ 241 CRIMJ (PUBPL) 241 Computer Applications in Public Affairs (3)The student will gain a working knowledge of microcomputer and Internet applications to utilize them in course and/or job functions. The class will be treated primarily as a lab. The purpose is to make the student familiar with popular computer applications in current use. Applications covered include: Word Processing (Microsoft Word); Spreadsheet (Microsoft Excel); Presentation Package (Microsoft PowerPoint); Database (Microsoft Access). Internet Applications include: email - Webmail; World Wide Web Browser - Netscape Communicator and Internet Explorer; and creating a Homepage.

Cross-listed with: PUBPL 241

CRIMJ 250W: Research Methods in Criminal Justice

3 Credits

Fundamental concepts of social science research including design, measurement, sampling, and interpretation of the study of crime, law, and justice.

Prerequisite: CRIM 012
Writing Across the Curriculum

CRIMJ 260: Statistical Analysis for the Social Sciences

3 Credits

Methods of collection, presentation, and analysis of quantitative data in the social science; procedures, interpretation, and application. CRIMJ 260 Statistical Analysis for the Social Sciences (3)This course covers the theory and methodology of statistical analysis. This course includes mathematical calculation of Univariate and Bivariate models, including mean, mode median, variance and standard deviation, Crosstabs with Chi-Square, Independent and Paired Samples t-tests, Anova and Tukey's H.S.D, Correlation and Regression. It also makes use of SPSS and publically available data sets to examine univariate data, and test hypotheses at both the bivariate and multivariate level. Students become

familiar with the calculations behind the analysis, and engage in the analysis and reporting of actual data.

Prerequisite: (Placement into MATH 21 Or higher) and CRIMJ 100 or Permission of program

General Education: Quantification (GQ)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

CRIMJ 290: Introduction to Internship Experience

1-3 Credits

Planning and preparation for field experience in a criminal justice agency setting. This course provides the student learner with an intimate understanding of the academic requirements of the criminal justice internship. Students will engage in practical application of the skills, traits, characteristics and qualities necessary to be successful in the criminal justice internship, as well as their chosen career. Guidance will be provided as to how to conduct themselves in a professional setting and learn to utilize critical thinking and problem-solving in the day-to-day encounters in the field.

Prerequisite: CRIMJ100 ; Prerequisite or concurrent: CRIMJ240W

CRIMJ 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

CRIMJ 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CRIMJ 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CRIMJ 304: Security Administration

3 Credits

Interdisciplinary analysis of security and loss prevention; its administration, role in crime control and prevention, and relationship to criminal justice.

CRIMJ 310: Forensic Science I

3 Credits

Presentation of the techniques, skills, and limitations of modern crime laboratory. CRIMJ 310 CRIMJ 310 Forensic Science I (3) Presentation of techniques, the principles underlying the techniques, skills and limitations of the modern crime laboratory for student who has no background in the forensic sciences form the basis of the course. The nature of physical evidence is emphasized along with limitations that technology and knowledge impose on its individualization and characterization. Particular attention is paid to the meaning and role

of probability in interpreting the individual significance of scientifically evaluated evidence. Major, lecture topics include the following: The Crime Scene; Physical Evidence; Physical Properties of Glass, Soil, and Plastics; Organic Analysis; Inorganic Analysis; the Microscope; Hairs, Fibers, and Paints; Drugs; Forensic Toxicology; Forensic Aspects of Arson and Explosion Investigation; Forensic Serology; Forensic Anthropology; DNA; Finger Prints; Fire Arms; Tool Marks and Other Impressions; Document and Voice Examination; and Forensic Science on the Internet. To understand the techniques used in crime scene analysis hands-on activities as formal experiments in the laboratory setting form part of the course. The specific objectives of the laboratory components of the courses are: 1) To provide a first set of laboratory experiments for criminal justice and general science students who have had little or no previous science laboratory experience. 2) To show beginning students in criminal justice and general science the significance of physical evidence at the scene of a crime. 3) To demonstrate what happens to physical evidence when it is sent to the laboratory so that students will know what is needed, how much is needed, and how to prepare 4) To educate the student in basic laboratory practices so that they can ask and/or answer questions more intelligently in a court of law. And probably most important, to educate students so that they will not unintentionally destroy physical evidence at a crime scene, and will in fact try to preserve it for the trained forensic scientist. The experiments are designed to provide students with an overview of what can be done as a prelude to making them potential professional forensic scientists/criminologists. The proposed courses are meant for students majoring in the Administration of Justice Programs and should augment their knowledge of criminology and reinforce approaches utilized by law enforcement scientists. Students will carry out hands on experiments in biology, chemistry and physics in a dedicated laboratory setting. Use of instrument to analyze specimens and gather/interpret data using computers and statistical techniques form part of the course. Students will be graded based on their understanding of the principles involved in selecting and using specific laboratory techniques and on the quality of results of their laboratory experience. It is anticipated that the course will be offered once a year, first part during fall semester and the second part during the following semester. Since laboratory space and instruments are limited class size will not exceed fifteen.

Prerequisite: CRIMJ100

CRIMJ 345: Criminal Justice and the Community

3 Credits

Justice agencies and the community's crime prevention and participation strategies; community involvement in policy development.

Prerequisite: CRIMJ100

CRIMJ 389: Gangs and Gang Behavior

3 Credits

The history, structure, and practices of gangs in America as well as societal reaction to them. CRIMJ 389 CRIMJ 389 Gangs and Gang Behavior (3) This class takes a look at gangs: their history, structure, activities, and practices-as well as law enforcement practices targeting gangs and gang members. This class examines the following types of gangs: Outlaw Motorcycle Gangs, Supremacists and Militias, Skinheads, African-American, Latino, and Asian Gangs. It also addresses relatively recent phenomena in gang involvement: (1) the rise of the independent girl gang; (2) middle class suburban gangs (Goths); and, (3) anti-drug and anti-sex Straight-Edge gangs. Both the positive and negative functions

of gangs are examined critically through a comparison of conventional and non-conventional youth activities. It concludes with an examination of emerging trends in gang development and activities, including the link between street gangs and organized crime. This course complements CRIMJ 403-Juvenile Law and Justice and is recommended for students wishing to pursue a career in juvenile intervention. It consists of three examinations (objective and subject measures), three traditional essays (out-of-class), and four directed asynchronous message board essays (using ANGEL course management software). This course will be offered annually with a projected enrollment of 25 students.

CRIMJ 406: Sociology of Deviance

3 Credits

Theory and research concerning deviant behaviors and lifestyles viewed as significant departures from a group's normative expectations. SOC (CRIMJ/CRIM) 406 Sociology of Deviance (3) (BA) This course meets the Bachelor of Arts degree requirements. Sociology of Deviance focuses on the theory and research in social construction of social norms, the violation of norms, and social reaction to the violation of norms. The course focuses on the role of social structure and power in the definition of deviance, on structural, cultural, and social psychological processes involved in deviant behavior, and the dynamics of social reaction to deviance. The course includes some content focusing on criminal deviance, but also emphasizes non-criminal deviance, as well as the role of social movements and social change in constructing and contesting deviance definitions. CRIMJ/SOC/CRIM 012 and CRIM/CRIMJ 250W are prerequisites. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the 'Crime' component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

Enforced Prerequisite at Enrollment: 3 credits of SOC or CRIM or CRIMJ

Cross-listed with: CRIM 406, SOC 406

Bachelor of Arts: Social and Behavioral Sciences

CRIMJ 407: Victimology

3 Credits

This course will explore the legal, emotional, and social responses to the process of victimization by offenders and third parties. CRIMJ 407 Victimology (3) (US) Victimology studies the victim-offender relationship. Victimization is analyzed using the Bible, Anglo-Saxon Law, Common Law, and legal precedent as a historical development of the status of "victim." Cultural changes during the 1950s and 1960s resulted in the reemergence of the victim and the designation of social services and community awareness for victims. Social scientific studies of the status of unique groups analyzed victimizations according to demographics and socioeconomic status. Political viability of victims in terms of restitution and community response are viewed in terms of Census data, the Department of Justice's National Crime Victimization Survey and The Uniform Crime Reports, Morbidity Reports, Emergency Room Reports, and the Insurance Industry Reports. The above data is evaluated in terms of age, race, education, socioeconomic status, and gender. The development and merging of culture, sub-cultural liaisons, social relationships, leisure activities, and routine transactions are reviewed as they apply to personal and unique group victimizations. Comparative issues and transnational crime are addressed under the format of globalization, gender, economics, and cultural mores. Interdisciplinary evaluation of Victimology considers psychology, medicine, sociology, criminal justice, legal studies, and mass media. Documentaries, case

studies, problem based learning, and popular films provide numerous activities for discussion, analysis, and integration in writing and for discussion.

United States Cultures (US)

CRIMJ 408: Police Administration

3 Credits

Principles of administration as they relate to a police organization; and policy development. CRIMJ 408CRIMJ 408 Legal Aspects of Law Enforcement (3) This course is one of the law enforcement offerings directed at students interested in pursuing a career in the field. This course builds upon legal courses and the police administration course. It is intended to challenge students to comprehend the complexities of working within a litigious society where policing is often the target of simultaneous praise and criticism. Research is introduced to allow students to consider alternatives to conflicts and the court's interpretation of the efficacy and constitutionality of such efforts. Civil liberties, use of force, use of technology, and communications have played significant roles challenging public safety. The consistent expansion of the role of law enforcement presents complexities that are often different according to the jurisdiction and community sentiment. Issues of hiring, training, education, accreditation, force, and racial profiling are the basis for assignments, research, and directed projects and class discussion.

Prerequisite: CRIMJ100 or CRIM 100 and CRIMJ210 or CRIM 210

CRIMJ 409: White Collar Crime

3 Credits

In this course students will learn what kinds of offenses constitute the various types of white collar crime including occupational crime, corporate crime, governmental crime, state-corporate crime, avocational white collar crime, and entrepreneurial crime. The course will explore how white collar crime is measured and will examine the victimization and offending patterns revealed by data on white collar crime. The course will further examine the usefulness of various criminological theories such as strain, control, and learning theories in explaining white collar offending. Comparisons to street crime in terms of seriousness, punishment, and offender and victimization patterns will be discussed throughout the course.

Prerequisites: CRIM 12 or CRIMJ 12 or CRIMJ 100 or CRIM 100

CRIMJ 410: The Pennsylvania Court System

3 Credits

Tracing the steps of criminal cases through the investigative stage, arrest, trial, sentencing and appellate review in Pennsylvania.

Prerequisite: CRIMJ100 , CRIMJ113

CRIMJ 412: Crime, Social Control, and the Legal System

3 Credits

Legal and extralegal control; public opinion on crime; criminal justice and correctional processes; legal sanctions; control strategies. Field trip.

Prerequisite: CRIM 012 , CRIM 013 , or SOC 005

Cross-listed with: CRIM 412

CRIMJ 413: Advanced Criminological Theory

3 Credits

This course provides an in-depth look at theories of crime and examines influential empirical studies designed to these theories. CRIMJ 413 (CRIM/SOC) 413 Advanced Criminological Theory (3) Advanced criminological theory is intended to extend and deepen students' knowledge of core ideas in criminology. The course has four main emphases: 1) learning major schools of thought in criminology, 2) learning about the uses and construction of theory, 3) learning about approaches to integrating criminological theories, and 4) exploring how criminological concerns are grounded in and interrelated with core issues in sociology. The course is offered once a year with 50 seats per offering. CRIMJ/CRIM/SOC 012 is a prerequisite. Students will be evaluated on research or analytical papers, written assignments on course readings, and/or in-class essay-style exams. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with a Deviance and Criminology specialization.

Enforced Prerequisite at Enrollment: (SOC 12 or CRIM 12) and CRIMJ 250W

Cross-listed with: CRIM 413, SOC 413

CRIMJ 414: Criminal Careers and the Organization of Crime

3 Credits

Research on and theory of criminal careers and crime organizations, emphasizing recruitment and disengagement; offender characteristics and lifestyles; policy implications.

Enforced Prerequisite at Enrollment: CRIMJ 12 or CRIMJ 13 or SOC 5

Cross-listed with: SOC 414

Bachelor of Arts: Social and Behavioral Sciences

CRIMJ 415: Drug Control Policy in Comparative Perspective

3 Credits

Examines the history of drug control policy in the United States; comparisons and contrasts with other countries' experiences. CRIMJ 415 (PUBPL) 415 Drug Control Policy in Comparative Perspective (3) This course focuses on the history of drug control policy in the United States and the internationalization of drug prohibition. We also examine the experience of other countries with drug use, abuse and control, including alternative regulatory policies in Western Europe. This class is both historical and comparative in orientation: in tracing the roots of drug prohibition, and examining the experience of other countries, we seek to enrich our understanding of American style drug control and the feasibility of alternative approaches.

Prerequisite: CRIMJ200 or PL SC001 or PL SC014 or SOC 001

Cross-Listed

CRIMJ 416: The Death Penalty

3 Credits

The death penalty is the ultimate punishment in the criminal justice systems in the world. The United States is one of the few democratic nations that still uses this punishment. The death penalty is also one of the most central and debated topics for candidates in high-profile political elections. In this course, students are introduced with the

complexity and implications of this punishment to better understand the American exceptionalism regarding criminal sanctions in comparison to the rest of the world; the focus is on the development of the death penalty in the modern-era United States. Surrounding the death penalty debate, issues such as deterrence, retribution, incapacitation, cost, innocence, and constitutionality are critically examined using key Supreme Court cases and important scholarly readings. In addition, six foreign countries are discussed to offer a comparative view in the procedural and substantive domains of the death penalty.

Prerequisite: SOC 12 or CRIM 12 or CRIMJ 12 or CRIM 100 or CRIMJ 100

International Cultures (IL)

United States Cultures (US)

CRIMJ 417: Hate Crime, Extremism, and Terrorism

3 Credits/Maximum of 3

This course is primarily a discussion-based seminar, engaging in a critical analysis of hate crime, extremism, and terrorism from a criminological perspective. First, students will engage with issues related to genocide and the role of the state in fostering hate. Students will then grapple with the arguments surrounding legislation relevant to hate speech and hate crime. There will also be an overview of the nature of hate crime, focusing on victims, motivations, and explanations of such crime. After discussing organized hate and extremist groups, students will also engage with the debate on the nature of the hate crime-terrorism relationship. The second half of the course focuses on terrorism as students learn about complexity of defining and explaining terrorism, focusing on the wide array of definitions of terrorism and the main theories of terrorism across a variety of disciplines. Students will examine different types of terrorism, including state and dissident terrorism generally as well right-wing, left-wing, religious, and international terrorism in the United States. The course will end with an overview of responses to hate crime, extremism, and terrorism, including issues surrounding the War on Terror. Students will further develop research, writing, and critical analysis skills after writing a term paper addressing a topic related to hate crime, extremism, and/or terrorism.

Prerequisites: CRIMJ 12 or SOC 12

CRIMJ 420: Criminal Law and Procedure

3 Credits

Common law and statutory crimes; constitutional rights of accused persons, liability of criminal justice professionals.

Prerequisite: CRIMJ113

CRIMJ 421: Violent Crime in the United States

3 Credits

The impact of violent crime on victims, their families, and communities; the police process as it relates to violent crime. CRIMJ 421 (CRIM) 421 Violent Crime (3) This course will examine the nature, frequency, and causes of violence, generally and of assault, robbery, rape, and homicide, specifically. Several different theoretical and research perspectives are reviewed, including biological, psychological, social, and cultural. The course also examines individual and societal responses to violence. Students are evaluated on three objective exams (25% each) and a series of short assignments (25%). CRIM/CRIMJ 421 may be used by both CLJBA and CLJBS degree candidates to satisfy a 400-level course

requirement in the major. This course will be offered twice a year with 60 seats per offering.

Prerequisite: CRIMJ012
Cross-listed with: CRIM 421

CRIMJ 422: Victimization

3 Credits

Examines the history, how victimization is measured/studied in social sciences, public policy implications of victimization movement in U.S. CRIM 422 / CRIMJ 422 Victimization (3) Victimology has emerged as an important area of study for the social sciences and an important arena for policy development. This course will familiarize students with the historical development of the research into victimization and the importance of the victims' movement to public policy. Areas explored will include the relationship between victim and offender, the cultural images of victims and their impact on the victim and the response of the criminal justice system to them, and how research has attempted to measure victimization. The course will be one of the supporting courses where the student must select 6 credits at the 400 level.

Prerequisite: CRIM 250W
Cross-listed with: CRIM 422

CRIMJ 423: Sexual and Domestic Violence

3 Credits

Legal, sociological, and psychological perspectives on sexual and domestic violence. CRIMJ 423 / CRIM 423 / WMNST 423 Sexual and Domestic Violence (3) (US) This course investigates violence against women, specifically domestic, sexual, and relationship violence. Students will examine some of the legal, sociological, and psychological perspectives about sexual, domestic, and relationship violence as well as the social and cultural roots of violence against women. Students will also gain an understanding of the experiences of victims of domestic and sexual violence as well as the issues presented by perpetrators. Students will be evaluated based on performance on exams, and two research papers. CRIMJ 423 / CRIM 423 / WMNST 423 is a supporting course in both the WMNST major and minor as well as a supporting course in the CLJ major. It may also be used to satisfy a GI requirement. This course is offered fall and spring semester with an enrollment of 60 students each semester.

Prerequisite: CRIMJ100
Cross-listed with: CRIM 423, WMNST 423
United States Cultures (US)

CRIMJ 424: Drugs, Crime, and Society

3 Credits

Why do people take drugs? Why and how does society attempt to control drug use and distribution? What is the association between drugs and crime? Exploring questions such as these will be central in CRIM 429. The focus of this course will be examining explanations of drug use and the social construction of drug policies. We will begin by asking the question "What are drugs?" From there, we will discuss theories of drug abuse and the methods used to study patterns of drug use. We will also take an in-depth look at the histories, pharmacologies, and patterns associated with the most popular drugs in modern society. In the second half of the semester, we will focus on the social control of drugs and the connections between drugs and crime. At the heart of

this discussion will be the causes and consequences of modern U.S. drug policies. We will conclude with a look at alternative drug policies and what the future may hold for drug use in America. Throughout the semester, you will be asked to think critically about material and evaluate its strengths and weaknesses. To foster critical thinking skills, you will have ample opportunities to discuss topics in class, analyze arguments in written assignments and in-class exercises, and apply ideas to real world situations through course projects and presentations.

Cross-listed with: CRIM 424

CRIMJ 424W: Drugs and Crime

3 Credits

Analysis of international narcotics trafficking in the twentieth century.

Prerequisite: CRIMJ100
Writing Across the Curriculum

CRIMJ 425: Organized Crime

3 Credits

This course examines organized crime in terms of historical antecedents, structure, related theories, and policy issues. CRIM (CRIMJ) 425 Organized Crime (3) This course will provide students with a historical and theoretical overview of organized crime. Students will gain an understanding of the structure of organized crime as well as an understanding of the businesses associated with traditional and nontraditional organized crime groups. The course will also provide students with a detailed analysis of state and federal laws and policies regarding organized crime. Students will be evaluated by two mid-term exams (25% each), an essay final exam (40%), and class participation (10%). Crime, Law, and Justice students may use this course to satisfy a 400-level course requirement in the Bachelor of Arts and Bachelor of Science majors. This course will be one of the supporting courses from which students are required to select six credits.

Prerequisite: CRIM 100
Cross-listed with: CRIM 425

CRIMJ 426: Special Offender Types

3-6 Credits/Maximum of 6

Study of special offender types; relationships with criminal justice system (drug abuse, victimless crime, white collar crime considered different semesters).

Prerequisite: 3 credits in Criminal Justice or permission of program

CRIMJ 430: Alternatives to Incarceration

3 Credits

Control and treatment of offenders in the community, probation and parole organizations, diversion programs, innovative sentences, supervision techniques. This course introduces students to the system of "criminal justice" as defined and interpreted by the Supreme Court as well as lower courts. Students study the judicial process, the intricacies of opinion formation, the nature and extent of judicial power, the willingness of the courts to hear appeals, and the reality of criminal sanctioning and procedure. The adversarial process, the willingness of the courts to hear appeals, and the conflicting opinions of the court introduce students to the lack of conformity that is part of upholding Constitutional rights.

Court attitudes and how the changing system is studied through stare decisis and case briefing. Particular cases and issues are critiqued such as capital punishment of the mentally ill, juveniles, and those who are mentally challenged. The tension between justice versus law is studied through cases, evaluation of court behavior, and changing attitudes towards racial inequities.

Prerequisite: CRIMJ100, and CRIMJ113, and CRIMJ230, or permission of program

CRIMJ 431: Offender and Prisoner Rights

3 Credits

The identification of correctional problems and the setting of objectives as reflective of court rulings, legislative change, and administrative law.

Prerequisite: CRIMJ100, CRIMJ113, CRIMJ230 or permission of program

CRIMJ 432: Crime and the American Court System

3 Credits

This course examines the American court system including structure and the way courts process offenders with special focus on sentencing. CRIM (CRIMJ) 432 Crime and the American Court System (3) CRIM/CRIMJ 432, Crime and The American Court system, studies the courts from the lower courts to the Supreme Court and the various actors that play important roles in the functioning of the courts. First, the course studies the jurisdictions of the various courts and their organization in various state systems as well as the federal courts as well as the organization of state and federal administrative offices that manage the courts including the training of judges and the preparation of the court budget. Subsequent to the development of the basic understanding of the court jurisdiction and organization, the class studies the roles of the key actors in the day-in and day-out operation of the courts. In the spotlight are judges, prosecutors and defense attorneys although the role of the probation officers and clerk of courts are also intertwined with the processing of defendants. Of particular importance in this component of the course is the development of what is referred to as the court community and the focal concerns and goals that the court must consider as it processes cases. An understanding of court community and focal concerns serves as crucial context for understanding the role of public policy as it attempts to shift or change the decision making of the court. One important dynamic of this course is the understanding that the court, although functioning as an institution to provide a neutral field on which accusations of criminality are to be played out, operates similarly to other organizations in that they are to be efficient (move cases with minimum overhead) and to be effective (provide justice, and protect the public). How the courts balance these competing demands and the informal processes that emerge in the processing of defendants is the key focus of the class. Finally, the course explores the attempts to reform the courts from the sentencing reforms such as determinate sentencing, mandatory minimums including '3 strikes' and sentencing guidelines. These issues highlight the political context of the courts and adaptability of the courts to attempts to change their values, and decisions. This course serves as one core 400-level course in the major. Each student must take two of the five core 400-level courses.

Prerequisite: CRIM 100

Cross-listed with: CRIM 432

CRIMJ 435: Border Security

3 Credits

This course provides knowledge about government organizations charged with American border security, guiding laws and policies. CRIMJ 435 Border Security (3) The Border Security course provides depth of knowledge of key border issues for students of homeland security. The course achieves this goal by focusing on border integrity strategies, the motivation and nature of criminal and other organizations which violate borders, the policies established by governments to maintain border integrity, identification of the key players in maintaining the border, and the relevant legal issues in enforcing laws on the border. This course allows the student to apply principles and concepts of homeland security to a specialized and very relevant area.

Prerequisite: 6th semester standing

CRIMJ 439: The Politics of Terrorism

3 Credits

Analysis of political terrorism as a violent alternative for peaceful change and traditional warfare in the nuclear age.

Prerequisite: CRIMJ100 or PL SC014, or permission of program

Cross-listed with: PLSC 439

Bachelor of Arts: Social and Behavioral Sciences

CRIMJ 441: The Juvenile Justice System

3 Credits

Historical and contemporary view of the juvenile justice system. Focus on analyzing components of the system, their interactions, processing, and handling of youths. CRIMJ 441 CRIMJ (CRIM) 441 Delinquency and Juvenile Justice (3) This course examines delinquency and the juvenile justice system from a variety of viewpoints. It looks at the problems the system is expected to address, how the problems have changed through the ages, how the current juvenile justice system developed, and the programs used to prevent and control delinquency and their effectiveness. By the end of the course, students should be able to think critically about the research and issues in the field. Evaluation methods include exams, brief writing assignments and a longer paper on policy issues. Students will be evaluated through brief written assignments, a term paper, a mid-term essay, and essay final. This course will be offered twice a year with 60 seats per offering. Students in the major may select CRIM (CRIMJ) 441 as one of several required courses in either the BA or BS program. This course is one of the core courses in the curriculum from which students must choose six credits from five core courses offered. It also serves as one of the supporting courses in the curriculum from which the students must take six credits at the 400-level.

Prerequisite: CRIMJ100

Cross-listed with: CRIM 441

United States Cultures (US)

CRIMJ 441W: The Juvenile Justice System

3 Credits

Historical and contemporary view of the juvenile justice system. Focus on analyzing components of the system, their interactions, processing, and handling of youths.

Prerequisite: CRIMJ100 or permission of program

Writing Across the Curriculum

CRIMJ 450W: Senior Seminar

3 Credits/Maximum of 6

Capstone course exploring past, current and future developments in criminal justice.

Prerequisite: CRIMJ100 or CRIM 100 and sixth semester standing or permission of program.

Writing Across the Curriculum

CRIMJ 451: Race, Crime, and Justice

3 Credits

This course focuses on the significance of race, class, and ethnicity to criminal justice processing and criminal offending. CRIMJ 451 CRIMJ (CRIM) 451 Race, Crime, and Justice (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This class is designed to explore the relationship between the criminal justice system and racial minorities in the United States. Students will examine theoretical issues of race and justice, as well as empirical understandings of the relationship between race, crime, and the criminal justice system. Students will endeavor to understand some of the economic, political, and sociological reasons why racial minorities are over-represented in the criminal justice system. Students will also explore normative issues of justice and equity in broader social interactions that influence and are influenced by crime and the criminal process. This course may be used towards the additional courses requirements for the CLJ BS/BA and ADM J degrees. It will also satisfy the Intercultural/International competence (GI). Students will be evaluated by a midterm and final exam, a term paper and class participation. This course will be offered twice a year with 60 seats per offering.

Prerequisite: CRIMJ100

Cross-listed with: CRIM 451

Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)

CRIMJ 453: Women and the Criminal Justice System

3 Credits

This course focuses on the experiences of women as offenders, victims, and professionals in the criminal justice system. CRIMJ 453 / CRIM 453 / WMNST 453 Women and the Criminal Justice System (3) (US) The course will examine the role of women in the criminal justice system and look at the issues related to women as offenders, victims of crime, and as professionals in the system. Students will gain an understanding of the issues concerning women in the criminal justice system, examine how societal arrangements affect women as offenders, victims, and criminal justice professionals, and better understand the overlooked problems faced by women in the criminal justice system. Students will be evaluated on the basis of exams, presentations, and papers. CRIMJ 453 / CRIM 453 / WMNST 453 is a supporting course for both WMNST and CLJ majors, as well as the WMNST minor. This course may also be used to satisfy a GI requirement. This course will be offered twice a year with 60 seats per offering.

Prerequisite: CRIMJ100 or WMNST100

Cross-listed with: CRIM 453, WMNST 453

United States Cultures (US)

CRIMJ 455: Contemporary Issues in Law Enforcement

3 Credits/Maximum of 3

This course will examine some of the current and most pertinent issues facing law enforcement today. This course will examine some of the current and most pertinent issues facing law enforcement today. The course is designed to provide both insight and application of some of the fundamentals necessary to be successful as a law enforcement professional. An interactive and collaborative learning approach will focus on various topics of concern which are vital to effective law enforcement personnel. Examples of these topics may include; use of force, drug enforcement, search and seizure, interviewing and interrogation, stress in policing, as well as any other topics which may develop as an issue of concern for law enforcement.

Prerequisite: CRIMJ 100; CRIMJ 210

CRIMJ 457: American Guns: History, Law & Criminal Justice Challenges

3 Credits

Although violent crime has generally been on the decline since the mid-1990's, the subjects of gun ownership, gun violence, and gun control have become ubiquitous in election campaigns. This course explores the historical, legal, and cultural context of this debate. To address historical context, the course examines the US Constitution, early U.S. history, and American gun culture. The course then shifts to modern history to outline what is known about gun ownership and gun crime today. With this background, students explore both sides of the gun control debate and resulting legislation from the 1800's to the present. Current laws regulating gun ownership and purchase, conceal carry and self-defense are also addressed. Law enforcement efforts, including crime scene investigation, are explored. Lastly, the course highlights examples of international and transnational efforts related to gun control and trade. Students will have the opportunity to explore controversial gun-related topics in an independent course project. At the completion of this course, students will be able to: 1. Describe the early history of gun ownership in the U.S. 2. Detail the known trends in gun ownership and the life cycle of a gun. 3. List arguments for and against regulation of gun ownership. 4. Describe the laws regulating gun ownership, purchase, and conceal carry. 5. Detail law enforcement and legislative efforts to restrict or deter the use of guns in crime. 7. Identify examples of international and transnational attempts to address gun ownership and trade. 8. Detail and evaluate the future of a modern issue related to firearms and Criminal Justice.

Prerequisites: CRIMJ 100, CRIMJ 210 Recommended Preparations: SOC 207

CRIMJ 460: History and Function of Criminal Justice Components

3 Credits

Historical development of criminal justice system components (police, courts, corrections) related to formulation and function of the state.

Bachelor of Arts: Social and Behavioral Sciences

CRIMJ 462: Comparative Criminal Justice Systems

3 Credits

A comparison of American and selected foreign justice systems to illustrate the variety of possible responses to crime.

Prerequisite: CRIMJ100 or permission of program
Bachelor of Arts: Social and Behavioral Sciences

CRIMJ 465: Ethics in Criminal Justice

3 Credits

Ethical behavior in the criminal justice system.

Prerequisite: CRIMJ100 or permission of program

CRIMJ 467: Law and Society

3 Credits

Law and society studies the social origins of law and legal systems; occupational careers, and decision-making of legal officials. SOC (CRIMJ/CRIM) 467 Law and Society (3) (BA) This course meets the Bachelor of Arts degree requirements. Law and society teaches students' knowledge of key concepts and core ideas about the role of law in society. The course will cover the basics of key legal philosophies, major social science theories of law and society, research in law and society, the structure of the legal profession, and vital contemporary issues involving the role of law in society. CRIM/CRIMJ 113 and CRIM/CRIMJ 250W are prerequisites. The evaluations methods will include written assignments on course readings, and essay-style exams. Law and Society may be counted toward the credits required for the B.A. and B.S. in Crime, Law and Justice. It would fulfill one of the 400-level requirements in the 'Law' component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

Enforced Prerequisite at Enrollment: CRIM 12 or CRIMJ 12 or CRIMJ 100 or permission of program

Cross-listed with: CRIM 467, SOC 467

Bachelor of Arts: Social and Behavioral Sciences

CRIMJ 469: Drugs and Drug Policy in the United States

3 Credits

Examines the history and dimensions of drug use and analyzes the impact of drug policy. CRIMJ 469 / HIST 469 Drugs and Drug Policy in the United States (3) For nearly a century, the United States has been waging its version of a hundred years' war on drugs, spending billions of dollars and incarcerating thousands of offenders while failing to significantly reduce the use of illicit drugs. This course examines drug use in a historical context while addressing the changing nature and dimension of drug use, including the pharmacology of drugs, patterns of drug use, and sentencing policies. Because drug control is inextricably linked to social, political, and public policy, the course will provide the student with a foundation for critical thinking and rational decision making relative to the efficacy of the various drug control initiatives. Since drugs seemingly permeate every level of American society and directly or tangentially touch most Americans' lives, issues such as drug testing in the workplace, the use of drug courier profiles, legalized medical marijuana, and needle exchange programs are evaluated. Students will be expected to learn the pharmacology of various drugs, the history of drug use in the United States since the colonial era, the evolution of federal drug agencies, and acquire knowledge about contemporary drug issues. They also will be expected to develop and strengthen their critical thinking skills as they assess the consequences of implementing particular anti-drug policies and their impact on reducing the use of illicit drug use. An example of the evaluation methods would be: students will be evaluated on the basis of three exams and four "think

pieces" (requiring students' critical responses to an assigned topic) scheduled throughout the semester. Class attendance also will influence the grade. Faculty Member Proposing Course : John C. McWilliams

Prerequisite: CRIMJ100 or HIST 021

Cross-listed with: HIST 469

Bachelor of Arts: Humanities

CRIMJ 471: Legal Rights, Duties, Liabilities of Criminal Justice Personnel

3 Credits

Civil law issues within a justice agency and between criminal justice agencies and members of the public.

Prerequisite: CRIMJ100

CRIMJ 473: Criminal Procedure and Evidence in the Business Community

3 Credits

Law of evidence and proof, constitutional constraints on police procedures (arrest, search, etc.) in society and the business community.

Prerequisite: CRIMJ100

CRIMJ 482: Seminar, Criminal Justice Agency Administration

3 Credits

Relates organizational and public policy management approaches to police, courts, and correctional institutions. CRIM (CRIMJ) 482 Seminar, Criminal Justice Agency Administration (3) In this course, you will learn about the nature of criminal justice organizations, individual and group behavior within the system, and the issues involved in reforming the system. This course will NOT teach you how to become an administrator in the criminal justice system, but hopefully will teach you about the issues and theories surrounding organizations and reform- and most importantly, teach you to think and communicate (in both written and verbal form). After taking this course, you should have a more accurate perception of criminal justice organizations and have a better understanding of the complexity surrounding the administration and management of these organizations. Criminal Justice Agency Administration may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice.

Prerequisite: CRIM 100

Cross-listed with: CRIM 482

CRIMJ 489W: Victimology: Predatory Crime

3 Credits

This course uses medical, social scientific and legal research to study the complexities of predatory crime. CRIMJ 489W/CRIMJ 489W Victimology: Predatory Crime (3) This course builds upon CRIMJ 407, Victimology. Students are directed toward the development of forensic knowledge, crime scene analysis, comprehension of predatory injuries, films, and current serial crimes to initiate research and critical thinking. Issues such as gender, family abuse, protective services, trends in victim selection, and societal responses provide numerous opportunities for learning communities and interaction with other classes. The use of WEB based assignments and Department of Justice information encourages students to expand their research skills for writing assignments, short research papers, and legal research. The course also uses graphic slides to introduce students to the reality of physical and sexual child abuse,

sexual assault, and homicide. Students are expected to review anatomy and use proper terminology when speaking about predatory behavior, victimization injuries, and psychological issues. Crime classification is introduced using the Federal Bureau of Investigation Manual and the DSM IV is used to classify aberrant behavior. Research completed by leaders in the field are assigned readings and special topics such as female serial killers, angels of death, spree killers, and terrorism provide a basis for class discussions and projects. The course also includes the "high crime low-war" classification of international terrorism and concepts of lethality of attack.

Prerequisite: CRIMJ407
Writing Across the Curriculum

CRIMJ 494: Research Topics

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis. CRIMJ 494
CRIMJ 494. Research Topics
This common course will focus on specific research issues. Issues to be covered will be social violence, legal issues, and impact on crime control. Students will study the design and implementation of topical issues as they address specific issues. The course will add to the diversity offerings within the criminal justice program. Faculty member proposing course: M. A. DuPont-Morales

CRIMJ 494H: Research Topics

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

CRIMJ 495: Internship in Criminal Justice

3-12 Credits/Maximum of 12

Experience with a criminal justice agency coordinated through readings and discussion.

Prerequisite: CRIMJ100

CRIMJ 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CRIMJ 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CRIMJ 499: Foreign Studies

6 Credits

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Criminology (CRIM)

CRIM 12: Criminology

3 Credits/Maximum of 3

Criminology is the study of the causes of criminal behavior. As such this course is an introduction to the topic with special focus on the major theories and concepts explaining criminal behavior. A key focus of the class is examining the most recent scientific research testing the basic theories in criminology. The students learn the various research techniques that have been methods and data sources used to study criminal behavior. Several important areas of study that link understanding criminal behavior and its distribution across the social system are investigated including age, gender, race and ethnicity. One goal of the course is to promote a more complete understanding of crime and how it is enmeshed in human social life. Students read a general text, as well as scholarly articles in Criminology.

Cross-listed with: CRIMJ 12, SOC 12

Bachelor of Arts: Social and Behavioral Sciences

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

CRIM 12H: Honors Criminology

3 Credits

Criminology is the study of the causes of criminal behavior. As such this course is an introduction to the topic with special focus on the major theories and concepts explaining criminal behavior. This honors version of Introduction to Criminology is especially designed to be appropriately challenging for Schreyer Honors College students. A key focus of the course is examining the most recent scientific research testing the basic theories in criminology. Students learn the various research methods and data sources used to study criminal behavior. Several important areas of study that link understanding criminal behavior and its distribution across the social system are investigated including age, gender, race and ethnicity. One goal of the course is to promote a more complete understanding of crime and how it is enmeshed in human social life. Students read a general text, as well as scholarly articles in criminology.

CRIM 100: Introduction to Criminal Justice

3 Credits

Criminal Justice 100 is an overview of the United States criminal justice system and the major components of police, courts and corrections. Students will engage in reviews of, evaluate and consider legal foundations, types and causes of crime, the development of policing, the influence and evolution of the court process, and rehabilitative and reintegrative components of corrections. Specific topics can include, but

are not limited to, the extent of crime in the United States; competing and complementary goals within the criminal justice system; sources of criminal law; interactions between various agencies within the criminal justice system; and the impact of crime on victims. During the course of study of the criminal justice system, students will have various opportunities to examine how age, gender, race and ethnicity impact and are impacted by the criminal justice system at critical phases.

CRIM 113: Introduction to Law

3 Credits

Introduction to law in society with a focus on criminal law, judicial code, laws of sentencing and corrections, criminal procedure. CRIM (CRIMJ) 113 Introduction to Law (3) Introduction to the law is designed to provide CLJ majors with an introductory level of knowledge of the criminal law, and other legal codes such as the Judicial Code, laws of corrections, probation and parole, and the rules of criminal and appellate procedure. The course will serve as a gateway course to taking more advanced criminology and criminal justice courses. CRIMJ (CRIM) 113 is one of the Prescribed Courses in the CLJ curriculum and is used as a prerequisite for many 400 level courses including CRIM 467 AND 469.

CRIM 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CRIM 201: Presumed Innocent? Social Science of Wrongful Conviction

3 Credits

The criminal justice system is a human creation and some errors are expected. Sometimes guilty parties go free and sometimes innocent people are convicted. In this course, we will employ the perspective of the social scientist to understand why and how wrongful convictions occur. How can social science help to predict, explain, and prevent wrongful convictions? This course is organized into three units. In the first unit, we will examine the large body of social science research that demonstrates disparities in all stages of the criminal justice system. For example, young Black and Latino men are disproportionately arrested, charged, convicted and imprisoned for violent crimes. This is partly due to these men disproportionately living in environments that foster crime, but social science research shows sometimes it's also partly due to the discretionary decisions of police, prosecutors, and courts. As a result, these demographic groups are most likely to be wrongfully convicted. In the second unit, we'll explore the factors in the justice system that might lead to a wrongful conviction, including false confessions, eyewitness misidentification, poor legal representation, government misconduct, and informants and snitches. Social scientific findings elucidate how each of these factors influence conviction accuracy. Finally, we'll discuss

how social science research on the risks and factors that contribute to wrongful convictions can be used to improve policies to reduce the risk of such convictions. Simple reforms such as openness about plea-bargaining, eyewitness identification reform (e.g., sequential lineups, double-blind procedures, etc.), recording of interrogations, and introducing Innocence Commissions in every state can improve our criminal justice system.

CRIM 225N: Organized Crime in Film and Society

3 Credits

IT 225N / CRIM 225N, Organized Crime in Film & Society, examines the relationship between criminological and justice theories regarding organized crime and the portrayal of the mafia in popular Italian American film. The course follows two simultaneous threads of inquiry: an examination of historical and theoretical models of organized crime in the United States and the state and federal laws that address them; and an analysis of how such models are depicted in American films and television about the the Italian American community. By the end of the course, students will gain key literacy skills by identifying varied definitions of organized crime and distinguishing between structural models, particularly La Cosa Nostra and network models. Students will also sharpen analytical and critical thinking skills through written and spoken interpretations of films and the scholarly approaches to studying organized crime (e.g. research methods). Throughout the semester students will also be able to apply knowledge of the social scientific aspects of organized crime to guide their observations and analyses of film and Italian American culture, thus refining Integrative Thinking across the humanities and social sciences.

CRIM 249: Criminology Theory and Evidence

3 Credits

This course provides criminology majors a more in-depth understanding of the theories, methodologies, and research results within the scientific discipline of criminology. Students will first focus on concepts and definitions associated with theory development and research methods prior to applying these to historical and present theories of criminal behavior. Sociological theories and methods will be given greater weight in the course. At the end of the course, students will apply what they've learn to theoretically motivate a testable research question and outline this in a short research proposal. Throughout the course, theoretical concepts and evidence will be connected to current and historical criminal justice policies. This course serves as the foundation for later courses on specific substantive criminological topics, such as violence, race, gender, and neighborhood crime. The course also provides

students the theoretical and methodological background for completing CRIM 250W, Research Methods in Criminal Justice, which includes an empirical research paper component. The Criminology program learning objectives directly relevant for this course are: - Recognize the causes and consequences of crime at the micro and macro levels and match these with prominent criminological Course Justification perspectives. - Apply theories of crime to explain actual and hypothetical scenarios, behaviors, and trends. - Explain the various social science methods of inquiry and use these to test specific criminological research questions.

Prerequisite: CRIM 12; SOC 12 CONCURRENT: CRIM 100; CRIM 100H

CRIM 250W: Research Methods in Criminology

3 Credits

The purpose of this writing-intensive course is to engage students in the social scientific research process used by criminologists to answer empirical research questions. It is the second course (after CRIM 249) that overviews theory and research in criminology. Students learn to use social science research methods through instructor-led demonstrations and applications of research methods, data analysis exercises, and critical reading of published research. Students apply their research knowledge and skills to an empirical research project completed in a sequence of steps producing written drafts that receive instructor feedback. After completion of this course, students will have acquired the following knowledge and skills: (1) The ability to generate a research question and effectively and efficiently search and review the relevant research literature. (2) A working knowledge of how to apply social science research methods and research designs to answer research questions. (3) The ability to strategically read published research articles to extract different types of information. (4) An understanding of the inductive and deductive aspects of the research process. (5) The ability to collect, analyze, and interpret quantitative and qualitative data. (6) The ability to design a quantitative research project to test hypotheses of interest to criminologists. (7) The ability to summarize and explain in writing the methods used and results derived from studies seeking answers to a common research question. (8) An understanding of social science research methods needed to be critical consumers of research and claims about crime, criminal behavior, and social response to them. (9) A certified knowledge about ethical issues in social science research.

Prerequisite: CRIM 249, STAT 200
Writing Across the Curriculum

CRIM 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

CRIM 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CRIM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CRIM 298: Preceptorship in Criminology

1-6 Credits/Maximum of 6

CRIM 298 Preceptorship in Criminology (1-6 per semester/maximum of 6) The Preceptorship provides undergraduates with an opportunity to work closely with a faculty member in a regularly scheduled course as a teaching assistant. Undergraduate juniors and seniors who have done well in a particular course can deepen their understanding of the material by assisting in teaching about the subject. The Preceptorship also provides greater opportunity for interaction between faculty and students. Moreover, if graduate students also are involved in teaching, they provide role models for undergraduates.

CRIM 395: Internship in Criminal Justice

1-9 Credits/Maximum of 9

Field experience focusing on the student's major interest within the area of criminal justice.

Prerequisite: CRIM 250W

CRIM 406: Sociology of Deviance

3 Credits

Theory and research concerning deviant behaviors and lifestyles viewed as significant departures from a group's normative expectations. SOC (CRIMJ/CRIM) 406 Sociology of Deviance (3) (BA) This course meets the Bachelor of Arts degree requirements. Sociology of Deviance focuses on the theory and research in social construction of social norms, the violation of norms, and social reaction to the violation of norms. The course focuses on the role of social structure and power in the definition of deviance, on structural, cultural, and social psychological processes involved in deviant behavior, and the dynamics of social reaction to deviance. The course includes some content focusing on criminal deviance, but also emphasizes non-criminal deviance, as well as the role of social movements and social change in constructing and contesting deviance definitions. CRIMJ/SOC/CRIM 012 and CRIM/CRIMJ 250W are prerequisites. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the 'Crime' component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

Enforced Prerequisite at Enrollment: 3 credits of SOC or CRIM or CRIMJ
Cross-listed with: CRIMJ 406, SOC 406
Bachelor of Arts: Social and Behavioral Sciences

CRIM 412: Crime, Social Control, and the Legal System

3 Credits

Legal and extralegal control; public opinion on crime; criminal justice and correctional processes; legal sanctions; control strategies. Field trip.

Prerequisite: CRIM 012, CRIM 013, or SOC 005
Cross-listed with: CRIMJ 412

CRIM 413: Advanced Criminological Theory

3 Credits

This course provides an in-depth look at theories of crime and examines influential empirical studies designed to these theories. CRIMJ

413CRIMJ (CRIM/SOC) 413 Advanced Criminological Theory (3)Advanced criminological theory is intended to extend and deepen students' knowledge of core ideas in criminology. The course has four main emphases: 1) learning major schools of thought in criminology, 2) learning about the uses and construction of theory, 3) learning about approaches to integrating criminological theories, and 4) exploring how criminological concerns are grounded in and interrelated with core issues in sociology. The course is offered once a year with 50 seats per offering. CRIMJ/CRIM/SOC 012 is a prerequisite. Students will be evaluated on research or analytical papers, written assignments on course readings, and/or in-class essay-style exams. This course may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice. It would fulfill one of the 400-level requirements in the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with a Deviance and Criminology specialization.

Enforced Prerequisite at Enrollment: (SOC 12 or CRIM 12) and CRIMJ 250W

Cross-listed with: CRIMJ 413, SOC 413

CRIM 421: Violent Crime in the United States

3 Credits

The impact of violent crime on victims, their families, and communities; the police process as it relates to violent crime. CRIMJ 421CRIMJ (CRIM) 421 Violent Crime (3)This course will examine the nature, frequency, and causes of violence, generally and of assault, robbery, rape, and homicide, specifically. Several different theoretical and research perspectives are reviewed, including biological, psychological, social, and cultural. The course also examines individual and societal responses to violence. Students are evaluated on three objective exams (25% each) and a series of short assignments (25%). CRIM/CRIMJ 421 may be used by both CLJBA and CLJBS degree candidates to satisfy a 400-level course requirement in the major. This course will be offered twice a year with 60 seats per offering.

Prerequisite: CRIMJ012

Cross-listed with: CRIMJ 421

CRIM 422: Victimization

3 Credits

Examines the history, how victimization is measured/studied in social sciences, public policy implications of victimization movement in U.S. CRIM 422 / CRIMJ 422 Victimization (3) Victimology has emerged as an important area of study for the social sciences and an important arena for policy development. This course will familiarize students with the historical development of the research into victimization and the importance of the victims' movement to public policy. Areas explored will include the relationship between victim and offender, the cultural images of victims and their impact on the victim and the response of the criminal justice system to them, and how research has attempted to measure victimization. The course will be one of the supporting courses where the student must select 6 credits at the 400 level.

Prerequisite: CRIM 250W

Cross-listed with: CRIMJ 422

CRIM 423: Sexual and Domestic Violence

3 Credits

Legal, sociological, and psychological perspectives on sexual and domestic violence. CRIMJ 423 / CRIM 423 / WMNST 423 Sexual and Domestic Violence (3) (US) This course investigates violence against women, specifically domestic, sexual, and relationship violence. Students will examine some of the legal, sociological, and psychological perspectives about sexual, domestic, and relationship violence as well as the social and cultural roots of violence against women. Students will also gain an understanding of the experiences of victims of domestic and sexual violence as well as the issues presented by perpetrators. Students will be evaluated based on performance on exams, and two research papers. CRIMJ 423 / CRIM 423 / WMNST 423 is a supporting course in both the WMNST major and minor as well as a supporting course in the CLJ major. It may also be used to satisfy a GI requirement. This course is offered fall and spring semester with an enrollment of 60 students each semester.

Prerequisite: CRIMJ100

Cross-listed with: CRIMJ 423, WMNST 423

United States Cultures (US)

CRIM 424: Drugs, Crime, and Society

3 Credits

Why do people take drugs? Why and how does society attempt to control drug use and distribution? What is the association between drugs and crime? Exploring questions such as these will be central in CRIM 429. The focus of this course will be examining explanations of drug use and the social construction of drug policies. We will begin by asking the question "What are drugs?" From there, we will discuss theories of drug abuse and the methods used to study patterns of drug use. We will also take an in-depth look at the histories, pharmacologies, and patterns associated with the most popular drugs in modern society. In the second half of the semester, we will focus on the social control of drugs and the connections between drugs and crime. At the heart of this discussion will be the causes and consequences of modern U.S. drug policies. We will conclude with a look at alternative drug policies and what the future may hold for drug use in America. Throughout the semester, you will be asked to think critically about material and evaluate its strengths and weaknesses. To foster critical thinking skills, you will have ample opportunities to discuss topics in class, analyze arguments in written assignments and in-class exercises, and apply ideas to real world situations through course projects and presentations.

Cross-listed with: CRIMJ 424

CRIM 425: Organized Crime

3 Credits

This course examines organized crime in terms of historical antecedents, structure, related theories, and policy issues. CRIM (CRIMJ) 425 Organized Crime (3) This course will provide students with a historical and theoretical overview of organized crime. Students will gain an understanding of the structure of organized crime as well as an understanding of the businesses associated with traditional and nontraditional organized crime groups. The course will also provide students with a detailed analysis of state and federal laws and policies regarding organized crime. Students will be evaluated by two mid-term exams (25% each), an essay final exam (40%), and class participation

(10%). Crime, Law, and Justice students may use this course to satisfy a 400-level course requirement in the Bachelor of Arts and Bachelor of Science majors. This course will be one of the supporting courses from which students are required to select six credits.

Prerequisite: CRIM 100

Cross-listed with: CRIMJ 425

CRIM 429: Seminar in Criminal Behavior

3-4 Credits/Maximum of 7

This course explores the study of the application of criminological theories to our understanding of various forms of criminal behavior. CRIM 429 Seminar in Criminal Behavior (3-4/maximum of 7) The course is intended to provide in the curriculum an avenue for the faculty to offer special focus courses on emerging forms of criminal behavior. For example, during the past several years the criminal justice system has had to respond to new forms of criminal behavior that have developed as we have developed new technologies. Recent use of the Internet as a means of committing crime has been the focus of federal and state legislation. Thus, societies have developed new forms or new means to old forms of criminal behavior through the use of technology. CRIM 429 will provide the faculty with the opportunity to develop special criminal behavior topic courses on offenses such as these and many other topics on our understanding and ability to explain criminal behavior. The course can satisfy 400 level requirements for the students in the CLJ major. This course will evaluate the students using a combination of written assignments and oral presentations.

Prerequisite: CRIM 012

CRIM 430: American Correctional System

3 Credits

Study of corrections from probation, intermediate punishment, adult and juvenile correctional institutions to parole. CRIM 430 American Correctional System (3) This course examines the correctional system from the sentencing decision to reentry or release from the correctional system. The course focuses on the choices that decision-makers face in sentencing, classification and responding to violations by offenders as well as the problems that offenders face as they confront their treatment/punishment. As part of the analysis the course explores the persistent conflicting expectations that society imposes on our correctional system and the effectiveness of the system in rehabilitating, deterring and incapacitating offenders. This course expands on the brief introduction of the topic in CRIM/CRIMJ 100 and relies on the student's understanding of social science research developed in CRIM/CRIMJ 250W to critically analyze what we know about corrections. This course provides the opportunity for students to study in depth a major component of the criminal justice system and is one of five classes students may select from to meet a major core course requirement.

Prerequisite: CRIM 100 , CRIM 250W

CRIM 432: Crime and the American Court System

3 Credits

This course examines the American court system including structure and the way courts process offenders with special focus on sentencing. CRIM (CRIMJ) 432 Crime and the American Court System (3) CRIM/CRIMJ 432, Crime and The American Court system, studies the courts from the lower courts to the Supreme Court and the various actors that

play important roles in the functioning of the courts. First, the course studies the jurisdictions of the various courts and their organization in various state systems as well as the federal courts as well as the organization of state and federal administrative offices that manage the courts including the training of judges and the preparation of the court budget. Subsequent to the development of the basic understanding of the court jurisdiction and organization, the class studies the roles of the key actors in the day-in and day-out operation of the courts. In the spotlight are judges, prosecutors and defense attorneys although the role of the probation officers and clerk of courts are also intertwined with the processing of defendants. Of particular importance in this component of the course is the development of what is referred to as the court community and the focal concerns and goals that the court must consider as it processes cases. An understanding of court community and focal concerns serves as crucial context for understanding the role of public policy as it attempts to shift or change the decision making of the court. One important dynamic of this course is the understanding that the court, although functioning as an institution to provide a neutral field on which accusations of criminality are to be played out, operates similarly to other organizations in that they are to be efficient (move cases with minimum overhead) and to be effective (provide justice, and protect the public). How the courts balance these competing demands and the informal processes that emerge in the processing of defendants is the key focus of the class. Finally, the course explores the attempts to reform the courts from the sentencing reforms such as determinate sentencing, mandatory minimums including '3 strikes' and sentencing guidelines. These issues highlight the political context of the courts and adaptability of the courts to attempts to change their values, and decisions. This course serves as one core 400-level course in the major. Each student must take two of the five core 400-level courses.

Prerequisite: CRIM 100

Cross-listed with: CRIMJ 432

CRIM 433: Sentencing

3 Credits

This course studies sentencing from prosecutorial charging decisions through revocation of probation, and the complex goals and responsibilities at sentencing. CRIM 433 Sentencing (3) This course focuses on the key decision in our court system—sentencing. The course covers the historical development of sentencing both within the United States and internationally as a backdrop to the reform efforts of the late 20th Century. The course explores how sentencing has changed from a judge-based discretionary system to a system where numerous restrictions to judicial discretion have been imposed by state and federal legislatures. Students will be evaluated on two essay exams (midterm and final) with the midterm worth 20 and the final 30 percent of the grade. A research analysis paper will be required that will be completed in three stages. The first stage will be the setting forth of a research problem and a scheme for analyzing the data (10%). The second stage will be an oral presentation of the findings (20%). The final stage will be a written term paper on the project (20%). This course will be used by CLJ majors as one of the six credits of 400-level elective credits required in the major.

Prerequisite: CRIM 100 , CRIM 250W

CRIM 435: Policing in America

3 Credits

This course will focus on current, historical, theoretical, and research issues surrounding law enforcement in the United States. CRIM 435

Policing in America (3) This course is designed to provide a basic knowledge of the structure of policing in America and to explore findings from research considering police behavior. Students will examine and discuss controversial issues relating to policing in American society. Current trends in policing philosophies and strategies will be identified and their effectiveness will be debated. The relationship between police and citizens will be stressed. CRIM 435 can be used to satisfy a core 400-level course requirement in the CLJBA and CLJBS majors.

Prerequisite: CRIM 100 , CRIM 250W

CRIM 441: The Juvenile Justice System

3 Credits

Historical and contemporary view of the juvenile justice system. Focus on analyzing components of the system, their interactions, processing, and handling of youths. CRIMJ 441 CRIMJ (CRIM) 441 Delinquency and Juvenile Justice (3) This course examines delinquency and the juvenile justice system from a variety of viewpoints. It looks at the problems the system is expected to address, how the problems have changed through the ages, how the current juvenile justice system developed, and the programs used to prevent and control delinquency and their effectiveness. By the end of the course, students should be able to think critically about the research and issues in the field. Evaluation methods include exams, brief writing assignments and a longer paper on policy issues. Students will be evaluated through brief written assignments, a term paper, a mid-term essay, and essay final. This course will be offered twice a year with 60 seats per offering. Students in the major may select CRIM (CRIMJ) 441 as one of several required courses in either the BA or BS program. This course is one of the core courses in the curriculum from which students must choose six credits from five core courses offered. It also serves as one of the supporting courses in the curriculum from which the students must take six credits at the 400-level.

Prerequisite: CRIMJ100

Cross-listed with: CRIMJ 441

United States Cultures (US)

CRIM 451: Race, Crime, and Justice

3 Credits

This course focuses on the significance of race, class, and ethnicity to criminal justice processing and criminal offending. CRIMJ 451 CRIMJ (CRIM) 451 Race, Crime, and Justice (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This class is designed to explore the relationship between the criminal justice system and racial minorities in the United States. Students will examine theoretical issues of race and justice, as well as empirical understandings of the relationship between race, crime, and the criminal justice system. Students will endeavor to understand some of the economic, political, and sociological reasons why racial minorities are over-represented in the criminal justice system. Students will also explore normative issues of justice and equity in broader social interactions that influence and are influenced by crime and the criminal process. This course may be used towards the additional courses requirements for the CLJ BS/BA and ADM J degrees. It will also satisfy the Intercultural/International competence (GI). Students will be evaluated by a midterm and final exam, a term paper and class participation. This course will be offered twice a year with 60 seats per offering.

Prerequisite: CRIMJ100

Cross-listed with: CRIMJ 451

Bachelor of Arts: Social and Behavioral Sciences
United States Cultures (US)

CRIM 453: Women and the Criminal Justice System

3 Credits

This course focuses on the experiences of women as offenders, victims, and professionals in the criminal justice system. CRIMJ 453 / CRIM 453 / WMNST 453 Women and the Criminal Justice System (3) (US) The course will examine the role of women in the criminal justice system and look at the issues related to women as offenders, victims of crime, and as professionals in the system. Students will gain an understanding of the issues concerning women in the criminal justice system, examine how societal arrangements affect women as offenders, victims, and criminal justice professionals, and better understand the overlooked problems faced by women in the criminal justice system. Students will be evaluated on the basis of exams, presentations, and papers. CRIMJ 453 / CRIM 453 / WMNST 453 is a supporting course for both WMNST and CLJ majors, as well as the WMNST minor. This course may also be used to satisfy a GI requirement. This course will be offered twice a year with 60 seats per offering.

Prerequisite: CRIMJ100 or WMNST100

Cross-listed with: CRIMJ 453, WMNST 453

United States Cultures (US)

CRIM 459: Communities and Crime

3 Credits

In this course you will learn about how crime levels vary across different types of neighborhoods and about the role of different socioeconomic, demographic, spatial, and informal social control aspects of neighborhoods in promoting or buffering crime. We will address the patterns, concepts, theories, methods, and policies related to communities and crime. We will critically assess theory and research on the effects of neighborhood structure and social organization on crime, focusing in particular on the classic and contemporary thinking on poverty, social disorganization, disorder, collective efficacy, institutional trust, cultural heterogeneity, segregation, immigration and how they affect criminal behavior and victimization. Through readings, class discussions, and activities, writing projects, and presentations, you will be given the opportunity to reflect on what you are learning and to apply the theoretical concepts to real-life examples and to new contexts in and out of the class.

Enforced Prerequisite at Enrollment: SOC 12 or CRIM 12

Cross-listed with: SOC 459

CRIM 466: Solving Community Problems

3 Credits

Explains how communities solve local problems by partnering with researchers, practitioners, and policy makers. Demonstrates how such partnerships help communities tackle complex problems by clarifying their causes, identifying solutions, leveraging resources, and mobilizing stakeholders to act. Examines community-engaged research projects - such as collaborative efforts to revitalize neighborhoods, reduce crime & violence, empower youth, house the homeless, improve health, and promote sustainability - that address local manifestations of broader societal problems. Students will collaborate with community partners to design, implement, and evaluate problem-solving projects. Provides

students with skills and knowledge needed to collaborate productively in community-engaged problem-solving initiatives.

Enforced Prerequisite at Enrollment: SOC 207 or CRIM 250W

Recommended Preparation: 5th Semester standing

Cross-listed with: SOC 466

CRIM 467: Law and Society

3 Credits

Law and society studies the social origins of law and legal systems; occupational careers, and decision-making of legal officials. SOC (CRIMJ/CRIM) 467 Law and Society (3) (BA) This course meets the Bachelor of Arts degree requirements. Law and society teaches students' knowledge of key concepts and core ideas about the role of law in society. The course will cover the basics of key legal philosophies, major social science theories of law and society, research in law and society, the structure of the legal profession, and vital contemporary issues involving the role of law in society. CRIM/CRIMJ 113 and CRIM/CRIMJ 250W are prerequisites. The evaluations methods will include written assignments on course readings, and essay-style exams. Law and Society may be counted toward the credits required for the B.A. and B.S. in Crime, Law and Justice. It would fulfill one of the 400-level requirements in the 'Law' component of the major. The course may also be counted toward credits required for the B.A. and B.S. in Sociology for students with the Deviance and Criminology specialization.

Enforced Prerequisite at Enrollment: CRIM 12 or CRIMJ 12 or CRIMJ 100 or permission of program

Cross-listed with: CRIMJ 467, SOC 467

Bachelor of Arts: Social and Behavioral Sciences

CRIM 469: Seminar in the Law

3-4 Credits/Maximum of 7

The focus of this seminar is the law such as the laws of sentencing, appellate court decisions and their impact. CRIM 469 Seminar in Law (3-4 per semester/maximum of 7) This seminar explores topics related to the law and will vary from semester to semester depending on current events, faculty research and other areas of study related to the criminal law. Evaluation methods will vary depending on the focus of the seminar, however, student evaluations will rely on techniques such as writing and presentations to enhance student presentation skills as well as evaluate their understanding of the course material. Students may take this course twice. This course serves as one of the supporting courses from which students must select 6 credits at the 400-level. It also serves as one of the additional courses from which students must select 18 credits under the Legal Studies Option.

Prerequisite: CRIM 113

CRIM 480H: Honors Research Topics in Crime, Law, and Justice

1 Credits

Supervised experience in planning the honors thesis and a criminological career. In this 1 credit Honors course, criminology students who are in the Schreyer Honors College, who are Criminology majors, and who are in the fall of their Junior year will begin the thesis research process with faculty supervision. The course focuses on a variety of activities and assignments that help students learn about criminological research, become acquainted with Criminology faculty research projects, develop their own research interests, identify potential faculty thesis supervisors,

and develop a concrete idea for their Honors thesis research project in cooperation with a faculty thesis supervisor.

Prerequisites: CRIM 250

Honors

CRIM 481H: Honors Information Literacy in Crime, Law, and Justice

1 Credits

This one-credit seminar is intended for Scholars in the spring semester of their third year who intend to complete their honors thesis in Crime, Law, and Justice. This course surveys the structures of information, patterns of information retrieval, and the resources and technologies used to research topics related to crime, law, and justice. Students complete a series of assignments involving information retrieval and the effective use of information technologies. This includes working with their faculty supervisor and collecting information on the topic they have selected for their honors thesis. At the conclusion of the class, students present a research proposal for their honors thesis, including a review of the relevant literature and a schedule for completing the thesis during their fourth year.

Prerequisites: CRIM 480H

Honors

CRIM 482: Seminar, Criminal Justice Agency Administration

3 Credits

Relates organizational and public policy management approaches to police, courts, and correctional institutions. CRIM (CRIMJ) 482 Seminar, Criminal Justice Agency Administration (3) In this course, you will learn about the nature of criminal justice organizations, individual and group behavior within the system, and the issues involved in reforming the system. This course will NOT teach you how to become an administrator in the criminal justice system, but hopefully will teach you about the issues and theories surrounding organizations and reform- and most importantly, teach you to think and communicate (in both written and verbal form). After taking this course, you should have a more accurate perception of criminal justice organizations and have a better understanding of the complexity surrounding the administration and management of these organizations. Criminal Justice Agency Administration may be counted toward the credits required for the B.A. and B.S. in Crime, Law, and Justice.

Prerequisite: CRIM 100

Cross-listed with: CRIMJ 482

CRIM 490: Crime Policy

3 Credits

This course focuses on criminal justice policy and the factors that influence policy development and implementation. CRIM 490 Crime Policy (3) This class will study crime and criminal justice in the context of law and the development and implementation of public policy. The course will focus on the politics of law and social control by exploring the construction of crime as a social problem, fundamental aspects of the policy development and implementation process, the legal interpretation of public policy, and the role of federal, state, and local governments in crime control. Students will be evaluated on essay exams and a term paper. This course is intended to be a capstone course for advanced undergraduates. The course will draw on the broad range of course work that students will have taken prior to taking this course to develop a

course that takes what we know about crime, the law and the justice system and focus on public policy as it relates to these areas. The course may be used toward the six credits required at the 400 level under Additional Courses or as one of the courses under the Legal Studies Option.

Prerequisite: CRIM 250W or permission from department
Cross-listed with: PPOL 490

CRIM 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

CRIM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CRIM 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CRIM 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Curriculum and Instruction (CI)

CI 105N: Improv Theater, Curriculum & Instruction

3 Credits

This course will engage students in the study and practice of longform improv theatre in ways that will develop their knowledge of the field of curriculum and instruction. At Penn State, we are all familiar with the chant, "We Are!" and the purpose of this course is to learn together about ourselves and our collectiveness through creative performance. Improv theater is the performing art of spontaneous, collaborative, embodied story-telling. It is often presumed to be a comedic art form, and while it is true that there are often joyful moments that arise from shared experiences of surprise or upended expectations, we will be studying the disciplined practice of longform improvisational theater, which consists of more sustained, narrative constructions. In longform improv, creative outcomes are just as likely to be serious, or tragic, or thought-provoking, or any number of emotions, but in all cases: what we create together says something about who "We Are!" to each other as co-performers and as observers. The course will culminate with a public performance. Throughout the course, students will write and reflect on practitioner and academic readings from the field of curriculum and instruction, which are relevant not only to aspiring professionals in education (e.g., Educators preparing to teach in both formal and informal settings, Instructional Leaders, School Administrators, and Athletic Coaches), but also to university students who will benefit from more scholarly-

informed reflection on their own educational experiences. In particular: we will draw from literature on learning theories and epistemologies; curricular approaches to diversity and inclusion; and improvisational pedagogies. We will learn improv theater exercises, but more importantly: we will practice the collective embodiment of an improvisational ethos, such that we develop our skills at affirming difference, embracing risk-taking, vulnerability, and uncertainty, listening without judgment, and attuning to our entanglements with one another. Participants will cultivate skills to be responsive to students and other populations for whom they may be providing care or leadership. These are the skills and practices that contribute to living a wholehearted life-as individuals and as communities.

General Education: Arts (GA)

General Education: Health and Wellness (GHW)

General Education - Integrative: Interdomain

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

CI 185: Principles of Social Justice in Education

3 Credits

This course explores the foundations of equity-based educational practices and helps students construct individual working definitions of social justice. The course includes engagement with foundational, historical, and contemporary scholarly and popular literature; guest lecturers from the University and local communities; and multimedia. Students explore tensions between theory and practical application and begin developing a language of critique for considering issues within the world of education. Progress is assessed via a variety of artifacts including self-assessment, guided journal entries, reflection upon campus and community social justice events, and written and oral research reports on a social justice topic of choice. For students interested in the Social Justice in Education minor, the course provides a conceptual foundation and skill set.

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

CI 195: Early Observation Experience for Teacher Preparation

1-2 Credits/Maximum of 2

Early observational work in educational settings with a variety of age/grade levels.

CI 197: Special Topics

1-3 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CI 200: Peer Tutoring

1 Credits

Prepares students to develop successful practices as a peer tutor.

CI 210: Small Group & One-on-one Tutoring

1 Credits

The course gives students knowledge in one-on-one peer tutoring as well as in a small group setting.

CI 280: Introduction to Teaching English Language Learners

3 Credits

Introduction to language, culture, instruction, assessment, and professionalism as they relate to teaching English Language Learners in U.S. schools. CI 280 Introduction to Teaching English Language Learners (3) (GH) CI 280 focuses on the development of foundational knowledge to successfully assist English language learners in U.S. school contexts. The basic premise of the course is that teachers play an important role in creating a positive classroom learning environment and bringing school success for English language learners. This course is designed to develop essential dispositions, skills, and knowledge for teacher education students to fulfill their important role. Course objectives are to understand culture, language, learning contexts, and pedagogy. Culture focuses on a) sociocultural characteristics of English language learners, b) how English language learners' cultural communication and learning styles affect the learning process, c) how English language learners' cultural values affect their academic achievement and language development, d) negative effect of cultural bias in instruction, materials and assessments, and e) the importance of developing cross-cultural competence in interactions with colleagues, administrators, school and community specialists, students and their families.

General Education: Humanities (GH)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Key Literacies

CI 285: Active Engagement for Social Justice in Education

3 Credits

The course prepares students for pedagogical thinking and active engagement in social justice education in community and school-based contexts. This course is a core class of the Social Justice in Education minor and is taken either together with or subsequent to CI 185, Foundations of Social Justice in Education. It builds on the key theoretical content of the minor's Foundations course, introducing students to the major patterns of thought that have shaped the history of education and curriculum design in the United States, and guiding students through a process of curricular reasoning. Students will engage in argumentation to investigate ways in which theoretical concepts have implications for the design of curricular interventions. Case studies or 'live' examples of social justice-oriented advocacy or educational projects being implemented in the US and abroad will provide a space for analysis and discussion. Students will explore curricular assumptions, identify instructional objectives, and articulate learning outcomes based on the cases they explore. Additionally, an action research project conducted in a classroom or community group will ask students to identify and research a problem, and develop a preliminary plan of action in collaboration with community or school-based stakeholders. Students are introduced to ethnographic data gathering techniques, problem-posing, and pedagogical reasoning and documentation. Team-building, listening and communication skills, and reflective practices are emphasized. A final project encourages students to document and

express their work through visual and digital technologies directed at both their peers and the community partners.

Concurrent Courses: CI 185

CI 288: Foundations of Teaching Multilingual Learners

3 Credits

This course will examine language and its structures and the ways that language mediates learning in classrooms and schools. Our charge in this course will be to better understand the nature of language learning, asking specifically how English as a Second Language (ESL) Program Specialists, in collaboration with content area teachers, can support the holistic learning and success of language learners in ways that value home languages and acquisition of multilingual literacies. Students will develop a critical understanding of foundational concepts related to first and second language acquisition and the development of bilingualism and biliteracy for children and young people. Students will explore English as a language system, including linguistic forms and functions, as well as the fundamentals of early literacy and strategies to build semantic networks across languages and support learners' emergent biliteracy. Analysis of curricular materials at different grade levels will guide students to identify genre and linguistic features and consider how teachers can integrate learning of content and language in lesson plans and larger curricular units. Direct instruction of academic language will be a focus as well as how language mediates learning in content area classrooms. In sum, this course will consider features of language and how to create opportunities for MLs to think analytically, build explanations, and explore conceptual understandings through classroom interactions.

Prerequisite: CI 280

CI 295: Introductory Field Experience for Teacher Preparation

1-3 Credits/Maximum of 6

This introductory teacher preparation course utilizes a variety of field experiences (both observations within secondary school classrooms and individualized tutoring) to engage prospective education majors in issues related to teaching and learning. Students will learn about adolescent learners and elements of socially and emotionally safe classrooms. Inquiry into teacher beliefs as well as student diversity is a focus of the course. Students will be introduced to elements of teacher professionalism and professional identity.

Prerequisites: 2nd Semester Standing Recommended Preparation: Official Clearances Required. See: <http://www.ed.psu.edu/preservice/clearance.htm>

CI 295A: Introductory Field Experience for Teacher Preparation

1-3 Credits

CI 295A is designed to enable students interested in early childhood education as a potential major and career to gain experience observing and assisting in a variety of school and community settings. Students will be engaged in observing as well as tutoring individual children and small groups of children in pre-kindergarten settings as well as in kindergarten through fourth grade settings. As students have not yet been exposed to methods of instructional planning and delivery, their tutoring of individuals and small groups will be carried out under the direct supervision of a professional teacher. Through their observation and participation in these educational settings, students will develop

an awareness of observation as a tool for understanding and analyzing educational environments, teaching and learning. They will develop an understanding of the nature of participant observation as well as a variety of frameworks and strategies that can be used for observation as well as the skills necessary to communicate observations professionally and ethically. Engaging in extended observations in educational settings provides students with an opportunity to enrich and deepen their understanding of a variety of educational concepts that they will encounter in prerequisite or concurrent courses including child development, English language learning and development, principles of human learning, individual differences in human ability including special needs students, cultural diversity, and contemporary issues in education and their impact on childhood educational settings. Finally, CI 295A will provide an opportunity for students to examine childhood education as a future career. They will be introduced to notions of teaching in general as a career as well as to specialized aspects of teaching in both pre-kindergarten and elementary school settings. Students will examine their own biographies as learners and the implications of their biographies for the development of a teacher identity and the potential suitability of childhood education as a career. Students will also be engaged in examining a variety of codes for professional and ethical conduct for educators. Through examining, critiquing and synthesizing these various articulations of professionalism, students will begin the development of a personalized code of ethical, and professional conduct.

Prerequisites: 2nd Semester standing Recommended Preparation: EDPSY 11 or HD FS229 or C I 280 or EDPSY014 or EDTHP115

CI 295B: Introductory Field Experience in Middle Level Education

1-3 Credits/Maximum of 3

C I 295B Introductory Field Experience for Middle Level Education (1-3)CI 295B is designed to enable students interested in middle level education (Grades 4 to 8) as a potential major and career to gain experience observing and assisting in a variety of school settings. Students will be engaged in observing as well as tutoring individual children and small groups of children in middle level educational settings. As students have not yet been exposed to methods of instructional planning and delivery, their tutoring of individuals and small groups will be carried out under the direct supervision of a professional teacher. Through their observation and participation in these educational settings, students will develop an awareness of observation as a tool for understanding and analyzing educational environments, teaching and learning. They will develop an understanding of the nature of participant observation as well as a variety of frameworks and strategies that can be used for observation as well as the skills necessary to communicate observations professionally and ethically. Engaging in extended observations in educational settings provides students with an opportunity to enrich and deepen their understanding of a variety of educational concepts that they will encounter in prerequisite or concurrent courses including child development, English language learning and development, principles of human learning, individual differences in human ability including special needs students, cultural diversity, and contemporary issues in education and their impact on middle level educational settings. Finally, CI 295B will provide an opportunity for students to examine middle level education as a future career. They will be introduced to notions of teaching in general as a career as well as to specialized aspects of teaching in both pre-kindergarten and elementary school settings. Students will examine their own biographies as learners and the implications of their biographies for the development of a teacher identity and the potential suitability of middle level education as a career. Students will also be engaged in

examining a variety of codes for professional and ethical conduct for educators. Through examining, critiquing and synthesizing these various articulations of professionalism, students will begin the development of a personalized code of ethical, and professional conduct.

Prerequisites: Second semester standing

CI 295D: ****SPECIAL TOPICS****

3 Credits

CI 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CI 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CI 304N: Food, Farms & Justice: What's Education Got To Do With Them?

3 Credits

This course intends to unite students' minds, hearts, and bodies in an historical, sociological, and experiential exploration of food and farms and their educational possibilities. Students' minds will be engaged as they explore the 20th century history, contributions, and legacy of industrial agriculture and the emergence of alternative approaches related to food and farming in recent decades. Students' hearts will be engaged as they consider their own relationship to food, to soil and place, and to learning. Finally, students' bodies will be engaged as they directly participate in farming/gardening and communal meal preparation and enjoyment. The uniting of mind, heart and body culminates as students become teachers - applying their embodied knowledge in the creation of learning activities that are taught to others. Guiding questions for students' explorations include: (1) How is food - its cultivation, preparation and enjoyment - a cultural, ecological and moral activity? and (2) How might farm/garden based education cultivate abiding relationships between people and their places/communities, their soils, their bodies, and to more just and humane relationships to others? In the first half of the course, students will be introduced to influential writers representing diverse perspectives within the humanities. The aim is that students conduct a reckoning of industrial, large-scale and corporate orientations to agriculture. Why? To discern desirable alternatives that promote the health and well-being of people, soils, and communities. Students will discern a vision of a just, sustainable and meaningful life. In the second half of the course, students apply their understandings of food, farm, justice and sustainability to developing farm/garden based learning experiences for others. To this end students will be introduced to farm/garden based education; constructivist, student-centered learning theories; curriculum development approaches; and the design of performance assessments. Finally, having studied instructional/curricular theory and practice, students will apply their learning through a "field-based" teaching practicum, showcasing their skills in developing farm/garden based curriculum and instruction.

General Education: Humanities (GH)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Creative Thinking
 GenEd Learning Objective: Integrative Thinking
 GenEd Learning Objective: Soc Resp and Ethic Reason

CI 333: Education and the Student in Recovery

3 Credits

This highly interdisciplinary course provides a broad exploration of how students accomplish abstinent recovery from Alcohol Use Disorders (AUDS) and other Substance Use Disorders (SUDs) in high-risk environments with the support of Recovery High Schools and Collegiate Recovery Programs. In particular, the course examines the problem posed by alcohol and substance use disorders on high school and college campuses, and explains the benefits of expanding the continuum of student health services to include ongoing support for the major lifestyle changes required to sustain recovery from chronic health conditions. Educational environments can pose challenges to students in recovery, and without proper support, students often return to active use of alcohol and other substances, which often invites disastrous life consequences, including educational failure. With the proper supports in place, students often thrive across multiple domains. Recovery High Schools provide access to social systems, coping mechanisms, recreational activities, and pro-recovery peer groups. Collegiate Recovery Programs are expanding rapidly: they are typically low-cost, featuring a small staff, a space on campus in which to meet, a peer-support community, and recovery-protective programming. A growing body of evidence suggests that these programs have very low relapse rates, low attrition, and higher GPAs than their host institutions. The course builds awareness of terminology, especially in relation to stigma-reduction and recovery messaging. It explores various theoretical contexts, including ecological theory and resiliency theory. It explores new paradigms in the management of chronic health conditions, through Recovery-oriented Systems of Care (ROSC) and the expansion of the continuum of care that colleges and universities offer their students to include ongoing support for recovery. Since participation in 12-step recovery programs is very high in RHSs and CRPs, we explore the known mechanisms of 12-step programs such as Alcoholics Anonymous and Narcotics Anonymous. Building on these insights, the role of narrative in making "storied" identity changes is also explored. The course also examines the way in which educational and recovery curricula complement one another to bring about lasting personal transformations. Students will apply their understandings in the course by completing a final project in which they demonstrate various ways that the course content might inform the work of practitioners who work with students in recovery in healthcare, education, and beyond. This course is especially suited for students intending to work in schools and other education-related settings, including Recovery High Schools and Collegiate Recovery Programs.

CI 385: DC Social Justice in Education: Empowering Communities through Transformative Teaching

3 Credits

CI 385 is the first course in a two-part sequence, the "DC Social Justice in Education Experience." This course is ordinarily followed by a two-week teaching internship in Washington, DC (CI 395). Together, these courses aim to increase students' capacity to understand diversity issues, while living and working in diverse, multicultural residential settings and workplaces. The experience infuses diversity issues, topics, and perspectives into a sequence for undergraduates that focuses on the skill set necessary for advocacy in educational equity and social justice.

It is a hands-on experience that delivers a service learning opportunity for Penn State students to work with diverse, underserved communities in the District of Columbia. CI 385 is a required preparatory course for students who want to participate in the Washington DC CI 395 internship, and students are expected to enroll in CI 395 upon successful completion (a grade of a C or better) of CI 385.

CI 387: Education, Culture, and Society in Brazil and Colombia

3 Credits

Given the increasing need to instill students with global perspectives, students from a range of backgrounds and academic majors will benefit from an in-depth exploration of the educational systems, cultures, and societies of Brazil and Colombia – additionally, the course may also prepare students for (optional) summer travel to Brazil and/ or Colombia (provided they are interested in either of both of those opportunities). Students are invited to use their emerging understandings to reflect upon the U.S. educational system, its culture, and its society. Throughout the course, students will examine the structure of educational systems, educational policy, educational inequality across nations, education as a constitutional right, colonial histories, Dependency Theory, government corruption, urban and rural environments, labor issues, economics (i.e. Marxism, socialism, communism, inflation, currency devaluation, neoliberalism), politics, Colombia's ongoing civil war, and Brazilian culture (including music, beauty obsession, and sports). In addition, the course also provides a grounding in basic travel skills and basic Portuguese. Although the course's main emphasis is on education, students from a broad variety of backgrounds and educational interests are encouraged to enroll, since they are likely to find a broad array of topics that will increase their international acumen considerably.

Honors

CI 388: Sociopolitical Contexts of Teaching Multilingual Learners

3 Credits

This course will examine the micro-level experiences of language learners and macro-sociopolitical context in which they are embedded. This course will prepare English as a Second (ESL) Program Specialists to better understand political and social dynamics shaping the experiences of culturally and linguistically diverse students. As such, ESL Program Specialists will develop a strong understanding of the technical qualities of formalized and standardized assessment, and the potential biases they hold in relation to multilingual populations. This course will discuss alternative forms of assessments that can inform curriculum and instruction. Professional resources and organizations at the state, national and international levels will be explored to help teachers with their future career development. As a result, this course will help build ESL Program Specialists' capacity to collaborate with other educators and school personnel, advocate on behalf of MLs, and partner with families and communities to support MLs.

Prerequisite: CI 280

CI 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required.

CI 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CI 400: Introduction to Research Literature

3 Credits

Introduction to research literature and methodology; stress on interpretation, sources, and research reporting.

Prerequisites: 6th Semester standing or Graduate Status

CI 405: Strategies in Classroom Management

3 Credits/Maximum of 3

Managing and coping with disruptive student behavior in instructional settings so that they support the teaching/learning process. EDLDR 405 / CI 405 Strategies in Classroom Management (3) This course has been designed to engage students in in-depth examination of the process of creating and sustaining a classroom learning community that fosters and enables success for all children. Emphasis is placed on understanding a variety of theoretical models of classroom management as well as observing and studying individual children to develop a better understanding of their needs. The result should be the development of a coherent set of beliefs concerning the creation of classroom learning environments that support learners and meet their individual needs.

Concurrent Courses: CI 495A; CI 495B; CI 495C; Non Degree Graduate Status or Graduate Status

CI 444: Writing Support for IUG and Honors Scholars

3 Credits

The purpose of this course is to support IUG/Reading Specialist MED students in writing their Master's papers as well as Schreyer Honors Scholars in The College of Education writing their Honors theses. The course provides an overview to the conventions of academic writing, and divides a major task into manageable sections. This class walks students through each section, provides models, and engages students in the actual practice of writing. Substantial working time is dedicated to writing the thesis. Students often have more faith in their ability to structure writing time into their week than is actually warranted. This course provides structured writing time, and students work in close proximity to other writers and to instructor feedback.

Prerequisite: 4th Semester Standing Honors

CI 460: The Creative Child

3 Credits

This course will explore the relationships among the various arts and material inquiries and learning for children in the preschool and elementary years via research, theory, and pedagogical application. CI 460 is one component in the PSU teacher education program that is unified by the basic set of principles supporting the development of a broader and more inclusive understanding of texts, art, children, and communities. Students will learn about theories of child art, creativity, and multimodal learning as they engage in their own creative processes

and plan to integrate the creative arts in early childhood and elementary classrooms.

Prerequisites: CI 295A and EDTHP 115

CI 485: Social Justice in Education Capstone Course

3 Credits

This capstone course is a culminating experience taken at the end of the Social Justice in Education minor. In this course, students apply theory toward action and develop meaningful partnerships with an appropriate community. It provides students the opportunity to revisit major ideas and themes learned during minor coursework. In doing so, students reflect on their learning journeys, synthesize key understandings, and complete a community-oriented project. Key components of the capstone project include manifesting theories into action; developing meaningful partnerships with community stakeholders; advocating for educational equity; and designing and implementing justice-focused curriculum for schools, community-based educational programs, or other non-traditional educational settings. Students will assess community needs, while working collaboratively to prepare a civic action plan/local initiative. Upon completion of the capstone experience, students present their final reflections to colleagues - presentations that examine their growth throughout their studies and lay out their trajectories as advocates for social justice in education.

Prerequisites: CI 185, CI 285 and one course from the list below AEE 100; AFAM 103; AFAM 431; AFAM 492; BBH 446; CED 375; CIED 440; CMLIT 100; CRIMJ 230; CRIM 453; EDTHP 200; EDTHP 440; ENGL 245; GLIS 101; GLIS 102; HDFS 410; PHIL 437; PLSC 428; PLSC 451

CI 488: Designing Assessment and Curriculum for Multilingual Learners

3 Credits

English as a Second Language (ESL) Program Specialists play multiple roles in schools and classrooms. They collaborate with classroom teachers to identify and assess newcomers, assist in the adjustment of new students into the school and classroom, and most importantly, build a caring and pedagogically sound classroom environment for multilingual learners (MLs). In this course, our focus will be on how teachers can design and implement a curriculum that integrates language and content-area learning. The course will prepare ESL Program Specialists to better attend and develop MLs' literacy skills while engaging them in rigorous grade-level curriculum to meet Pennsylvania content and English language development standards. The course will cover topics such as linguistic differentiation, translanguaging pedagogies, classroom discourse practices, multimodal learning strategies, and ongoing formative assessments.

Prerequisite: CI 280 Recommended Preparations: CI 288 and CI 388

CI 492: Identities, Power and Perceptual Pedagogies in Teaching and Learning

3 Credits

Students will perform inquiries into the intersections of identities, power, and pedagogical formations in relation to urban teaching/learning contexts. AFAM 492 / CI 492 / EDTHP 492 Identities, Power and Perceptual Pedagogies in Teaching and Learning (3) In this course, students will take part in inquiries into the intersections of identities, power, and perceptual pedagogies, particularly as these phenomena pertain to methods of teaching and learning in urban contexts. To

develop new knowledge and analytic skills, students will be introduced to perceptual and conceptual frameworks that assist deep engagements with youth- and teacher-centered case studies. These cases will depict actual lived experiences among racially and economically diverse students and teachers in urban contexts.

Prerequisite: 5th semester standing
Cross-listed with: AFAM 492, EDTHP 492

CI 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisites: 7th Semester standing

CI 495A: Clinical Application of Instruction - PK-4

1-6 Credits/Maximum of 6

Practicum situation for demonstration of selected instructional strategies and management skills acquired in professional training.

Recommended Preparation: Official clearances required. See: <http://www.ed.psu.edu/preservice/clearance.htm>; Suggested concurrent: regular professional methods courses in area of certification.

CI 495B: Clinical Application of Instruction - Middle Level Education

3-15 Credits/Maximum of 15

CI 495B Clinical Application of Instruction—Elementary and Kindergarten Education (3) CI 495B for Middle Level Education is a full-time teaching practicum. It provides an opportunity for teacher candidates to integrate concepts, theories, and ideas from their coursework. Specifically, CI 495B engages candidates in examining 1) what it means to be a professional and establish professional relationships with colleagues, students, and families, 2) how to use various tools (e.g., observation, writing, reflection, teaching, case studies, etc.) that are available to them in learning to be a teacher, 3) how to make connections across the various courses and experiences they are taking during the semester, and 4) how effectively they are developing their knowledge and skills as a beginning teacher and what sources of evidence they should use in judging their effectiveness. Teacher candidates in CI 495B are expected to achieve desired outcomes in four domains: 1) planning and preparing for student learning, 2) teacher, 3) inquiry and analysis of teaching and learning, and 4) fulfilling professional responsibilities. CI 495B is a part of a block of courses in a PSU teacher education program that is unified by a basic set of principles and a field experience component.

Prerequisites: Admission to Middle Level Education Major

CI 495C: Clinical Application of Instruction – Secondary Education

3 Credits

This is a pre-student teaching field experience and seminar for secondary education and world languages majors that is taken in the same semester with a discipline-specific methods class. The course takes place in 7th-12th grade classrooms and in seminars with university supervisors where students apply, extend, and reflect on concepts, questions, theories, and models of teaching studied in the university-based methods courses. Throughout the semester, students are engaged in weekly sessions on the university campus providing

instructional support on professional behavior, ethics, school culture, time management, motivation, portfolio development, lesson planning, writing objectives, questioning techniques, formative and summative assessments, instructional strategies, differentiated instruction, and classroom management.

Prerequisites: CI 295, EDPSY 14 Corequisites: LLED 412W; MTHED 412W; SCIED 412; SSED 412W Recommended Preparation: Official Clearances Required. See: <http://www.ed.psu.edu/preservice/clearance.htm>

CI 495D: Practicum in Student Teaching—Childhood and Early Adolescent Education

12 Credits/Maximum of 12

Full-time classroom instruction in elementary and early childhood education. Students supervised by University personnel and practicing teachers. No corequisite courses other than CI 495F permitted.

Prerequisites: 7th Semester standing and CI 495A; CI 495B; Corequisites: CI 495F Recommended Preparation: Official clearances required. See: <http://www.ed.psu.edu/preservice/clearance.htm> Take concurrently with CI 495F

CI 495E: Practicum in Student Teaching—Secondary Education

15 Credits

Full-time classroom instruction in secondary education. Students supervised by university personnel and practicing teachers.

Prerequisites: LLED 412W; MTHED 412W; SCIED 412; SSED 412W, CI 495C, 7th Semester standing Recommended Preparation: Grades of C or higher are required in all specified and professional courses. No courses may be taken concurrently, other than those speci

CI 495F: Professional Development Practicum

3 Credits/Maximum of 3

Instruction concurrent with student teaching practicum. Students focus on the solution of instructional problems identified at the practicum site.

Prerequisites: 7th Semester standing; COREQUISITE: CI 495D; Recommended Preparation: Official clearances required. See: <http://www.ed.psu.edu/preservice/clearance.htm>

CI 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CI 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CI 497N: Special Topics - Inter Domain

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest. This Special Topics is an Inter-Domain GenEd course

General Education: Humanities (GH)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

Cybersecurity Analytics and Operations (CYBER)

CYBER 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CYBER 100: Computer Systems Literacy

3 Credits

This is an introductory university-level course in computer systems literacy. The history, architecture and operation of computing systems and underlying computing theory are covered. The intent of this course is to ensure that students with diverse backgrounds can gain the information technology fundamental skills and understanding to succeed with subsequent in-depth courses in the Cybersecurity Analytics and Operations curriculum. At the same time the general nature of the introduction may make it useful for other programs that involve education in concepts and skills relating to information and computing systems.

CYBER 100S: Computer Systems Literacy

3 Credits

This is an introductory university-level course in computer systems literacy. The history, architecture and operation of computing systems and underlying computing theory are covered. The intent of this course is to ensure that students with diverse backgrounds can gain the information technology fundamental skills and understanding to succeed with subsequent in-depth courses in the Cybersecurity Analytics and Operations curriculum. At the same time the general nature of the introduction may make it useful for other programs that involve education in concepts and skills relating to information and computing systems.

First-Year Seminar

CYBER 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CYBER 262: Cyber-Defense Studio

3 Credits

This studio course teaches four basic hands-on cyber-defense skills: configuring a firewall, implementing a host-based intrusion detection software tool, using the Metasploit tool to do penetration testing, and implementing a network intrusion detection tool. The first cyber-defense skill is on configuring an ACL (Access Control List) firewall. This module provides the students with a practical exercise applying their analytical skills to properly configure the ACL of a firewall and to verify the correctness of their firewall configurations. Through this exercise, the students also learn firewall oriented network security policies. The second cyber-defense skill is on implementing a host-based intrusion detection software tool which can detect suspicious user sessions on a computer. This module provides the students with a practical exercise applying their programming skills to solve anomaly detection problems. The third cyber-defense skill is on using the Metasploit tool to do penetration testing. This module provides the students with a practical exercise applying their programming skills to do penetration testing. The fourth cyber-defense skill is on implementing a network intrusion detection software tool which can detect suspicious network flows. This module provides the students with a practical exercise applying their programming skills to solve signature-based intrusion detection problems

Enforced Prerequisite at Enrollment: (CYBER 100 or CYBER 100S) and (IST 140 or CMPSC 121 or CMPSC 131)

CYBER 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

CYBER 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CYBER 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CYBER 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CYBER 342W: Cyber Incident Handling and Response

3 Credits

Cyber Incident Handling and Response is an intermediate course appropriate for students who are majoring in Cybersecurity. This course provides the student with the background, experience and perspective that is required to document organizational preparation for cyber incidents, document cyber incident impact and resolution, document response strategies, as well as integrate business continuity

planning into the organization. This is a writing intensive course, which requires each student to individually document cyber security incidents and communicate the impact of those incidents to the organization. Peer writing evaluation will help students to consider how effective their written communication skills are. Team writing assignments will provide students with the real-world experience of writing portions of organizational documents such as preparedness documentation, documenting the organization of computer incident response teams, documenting organizational disaster recovery plans, and documenting post-incident recovery plans. Students will receive peer feedback on their writing assignments, as well as direct feedback from the instructor with a goal of improving writing skills and conforming their writing styles to the expectations of organizations and industry.

Enforced Prerequisite at Enrollment: CYBER 262 and SRA 221 and SRA 231

Writing Across the Curriculum

CYBER 362: Cybersecurity Analytics Studio

3 Credits

Cyberattacks involve advanced and sophisticated techniques to infiltrate corporate computers, networks and enterprise systems and critical infrastructures. Types of attacks include advanced malware, zero day attacks and advanced persistent threats. Advance warning about attackers and intelligence about the threat landscape is considered by many security leaders to be essential features in cyber-defense. The massive increase in the rate of novel cyberattacks has made data-mining-based analytics techniques a critical component in detecting security threats. Big data analytics in security involves the ability to gather massive amounts of digital information to analyze, visualize and draw insights that can make it possible to predict and stop cyberattacks. This studio course teaches fundamental data-driven cybersecurity analytics skills using programming skills acquired in earlier courses. The course will be divided into three modules. The first module prepares students for security analytics, by refreshing or making them familiar with two popular data analytics programming languages (e.g., R and Python). The second module focuses on understanding the key cybersecurity analytics process including data exploration, data visualization and data preparation and examining popular data mining algorithms such as linear and logistic regression, decision trees, support vector machine, and neural networks and similar techniques for security analytics. In the third module, students use analytics process and methods for selected cybersecurity problems, such as security breaches, ZeroAccess Infection, Log Analytics, Access Analytics and Web Hacking Analytics. Through this studio course, the students will gain concrete understanding of security analytics processes, methodologies and how to apply these concepts and tools to real-world cybersecurity. A major component of the course will be several hands-on exercises and a final team-based project. Hands-on exercises provide students with knowledge, skills and hands-on experience of learning security analytics process and methodologies to address security problems. The team-based project allows students to apply what they have learned to address real world security threat. This course will incorporate collaborative and action-learning experiences wherever appropriate. Emphasis will be placed on developing and practicing writing and speaking skills through application of the concepts, theories and technologies that define the course.

Enforced Prerequisite at Enrollment: (STAT 200 or SCM 200) and (IST 256 or IST 261 or IST 361) and CYBER 262

CYBER 366: Malware Analytics

3 Credits

Malware Analytics is an intermediate course required for students who are majoring in Cybersecurity Analytics and Operations. It is a three-credit hands-on course that teaches principles and practice of malware detection, analysis, and defense. The course begins by introducing the foundations of malware, including history, vulnerability, types, analysis methods, and defenses. It then builds on this foundation by teaching students how to address malware issues using analysis techniques such as reverse engineering and static program analysis, as well as how to use analytic approaches such as automatic malware trace classification and clustering. The course relies extensively on hands-on laboratory activities to help students obtain practical experience in malware analysis and analytics. Through this course, the students will gain concrete understandings on principles and practices of malware analysis and defense.

Enforced Prerequisite at Enrollment: (IST 256 or IST 261 or IST 311) and CYBER 262

CYBER 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CYBER 440: Cybersecurity Capstone

3 Credits

Cybersecurity Capstone is an advanced, culminating course for students who are majoring in Cybersecurity. This course provides the student with a practical exercise, designed by the instructor. The initial weeks of the semester provide the student with an overview of several analytic frameworks that are used in cybersecurity shops and organizations. Then, the student reviews specific technical analysis methods in malware, static and dynamic analysis, file system exploration, security log file analysis and network analysis. The findings from these analyses are then integrated into the analytic framework, gaps are identified, further analysis is conducted to fill the gaps. In the final weeks of the semester, students construct a high level briefing that supplies appropriate levels of technical detail to top level executives.

Enforced Prerequisite at Enrollment: CYBER 342W and (ENGL 202C or ENGL 202D or IST 489) and 7th semester standing

CYBER 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

CYBER 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CYBER 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses offered infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CYBER 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Dance (DANCE)

DANCE 100: Dance Appreciation

3 Credits

Explore dance as a vital, communicative and performing art, reflecting social values and cultural beliefs. DANCE 100 Dance Appreciation (3) (GA;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. An introduction to dance as a vital, communicative and performing art reflecting social values and cultural beliefs. Through a combination of lectures, video samples, and active participation in scheduled movement classes, lecture demonstrations and live performances, this course will examine a wide range of dance across cultures and time periods. Students will learn to identify the key components of movement: time, space, shape and effort. Once identified, these elements will become the building blocks for further analysis and understanding of the myriad forms of movement that can be called dance. Emphasis will be placed on the integration of dance within various cultural belief systems and the relationship between dance and cultural identity. The influence of social and political values as they relate to the development of specific dance forms will also be examined. Students will be graded on their ability to clearly and intelligently articulate their observations and analysis through participation in threaded discussions and online quizzes. Students will also be graded on their level of participation in scheduled movement classes, lecture demonstrations and attendance at live performances. The mid-term and final exams will assess the student's ability to integrate and synthesize the experiential components of the course.

DANCE 170: Dance Conditioning

1.5 Credits/Maximum of 3

This course is designed to improve technique through strengthening, toning, improving coordination, increasing balance, and helping alignment. The course also addresses common areas of injury. Dance Conditioning is designed to enhance the efficiency of movement and body usage by applying a mind-body for increasing strength and flexibility in the body. Dance is both athletics and an art form, and equal training is essential for both. This course applies the tools and principles of

athletic dance training to health and fitness for the non-dancer to achieve efficient and effective usage of the body while increasing well-being. In addition to increased strength, muscle tone, and flexibility the Kinesthetic and proprioceptive senses are developed resulting in greater balance, coordination, and dynamic alignment. The course completes with the creation of a Personal Practice.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

DANCE 199: Dance Foreign Study

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

DANCE 220: Mojah Fusion Dance

1.5 Credits/Maximum of 3

Mojah introduces intermediate/advanced level dance students to a unique dance technique that blends Horton, Dunham, West African and jazz movements in one form. DANCE 220 Mojah Fusion Dance (1.5 per semester/maximum of 3) DANCE 282 is an introduction to the Mojah dance form. Moja is a Swahili term meaning one. Mojah fuses various forms to create a unique style of modern African dance that blends Horton, Dunham, West African and jazz movements into one form. The objectives of the course include: learning/executing Mojah terminology and technique; and learning/executing the techniques from which Mojah is derived. Mojah is a dance course and is directly related to other dance courses, theatre/arts courses and African American studies courses.

Enforced Prerequisite at Enrollment: DANCE 222 or DANCE 230 or DANCE 231 or DANCE 240 or DANCE 241 or DANCE 261

DANCE 221: Introduction to African Dance and Culture

1.5 Credits

Africa, with its diverse people, languages, and history has a rich cultural foundation that includes many artistic elements including music, dance, folk tales, poems, graphic/plastic arts, mask making and more. According to Lynne Emery, author of Black Dance in America, "music and dance are two of the most highly developed of the arts and the complexities of African rhythmic structure. . . dance is a fundamental element of African aesthetic expression that historically was recreational and secular, but in one form or another pervaded all of African life." This course will introduce you to traditional West African based dance movements and culture. The course focuses on integrating music, movement, drama, costume, and vocalization.

DANCE 222: Beginning Hip Hop Dance

1 Credits

Beginning Hip Hop dance introduces the student to Hip Hop culture through dance, free expression with the body/freestyle and choreography. DANCE 222 Beginning Hip Hop Dance (1) Hip Hop dance is designed for students with an interest in Hip Hop dance/culture. This class introduces students to Hip Hop through movement that includes freestyle dancing, locomotive movements, and choreography. In addition, this class includes lecture sessions and discussions about Hip Hop culture and its role in society. This course seeks to introduce students to a

culturally significant art form, enhance mind/body awareness, and provide practical opportunities for students to apply skills learned in class via performances. This course is directly related to dance, theatre, African American history and other arts based and humanities based courses.

DANCE 225: Introduction to Hip Hop

1.5 Credits/Maximum of 6

Introduction to Hip Hop. Dance 225 Intro to Hip Hop (1.5 per semester/maximum of 6) (GA) (BA) This course meets the Bachelor of Arts degree requirements. Dance 225 is an introduction to Hip Hop and the many elements of this genre of dance. The course is designed for any student with an interest in Hip Hop. This class explores the many influences and components of Hip Hop developed through history. Emphasis is placed on the development of technique, expression, and performance. Each semester the student will be introduced to different aspects of Hip Hop which will require an increasing awareness of Hip Hop and its' impact on all of dance. Technique classes will be supported through viewing historical and contemporary dance footage. In every class, daily movement experiences will be introduced to build coordination, self-awareness, strength and flexibility, as well as the understanding of the Hip Hop genre of dance.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

DANCE 230: Ballet

1.5 Credits/Maximum of 6

An exploration of Ballet technique. DANCE 230 Ballet (1.5 per semester/maximum of 6) (GA)(BA) This course meets the Bachelor of Arts degree requirements. DANCE 230 is an exploration of Ballet technique. The course is designed for any student with an interest in Ballet and to support the Dance Studies Minor. This class explores the many styles and genres of Ballet developed through history. Emphasis is placed on the development of a strong technique, vocabulary, and performance. Ballet, as a technique class, has at its core, increasing the strength, alignment and flexibility of each dancer. Each semester, the dancer will be introduced to different aspects of ballet which will require an increasing awareness of ballet and its' impact on all of dance. Technique classes will be supported through viewing historical and contemporary dance footage. In every class, daily movement experiences will be introduced to build coordination, flexibility and strength, as well as the understanding of the ballet technique. These experiences will take place at the barre, in the center floor, adagios and allegros, and culminate in a combination of all these experiences in a combination to develop their potential as a performer.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

DANCE 231: Beginning Ballet I

1.5 Credits

An introduction to the techniques of ballet. DANCE 231 Beginning Ballet I (1)In DANCE 231, the student will learn the basics of ballet. These include the structure of a ballet class and the required focus and behavior of the successful student, as well as the fundamental positions and vocabulary of movement characteristic of ballet. The course is designed for any beginning student of ballet and, in particular, to instruct the first-year BFA Music Theatre candidate with a foundation of technique to support their success in the prescribed sequence of dance courses in that major. The student will be introduced to alignment exercises from the Zena Rommett floor barre technique and the Pilates technique to develop strength and flexibility in their execution of dance. The course also is designed to help the student develop greater physical self-awareness and discipline. The student's grade is determined by their attendance, attitude, and progress. More than three absences or lateness will affect the grade. Their attitude should be positive, receptive to correction, and exhibit an eagerness to work, and their progress should reflect growth in their abilities to perform the choreography and to know the terms used. The student will be required to identify and explain the meaning of the terms used in class, as well as perform choreography with confidence and a sense of character. This course serves as a prerequisite for DANCE 232. Together, these two semesters satisfy requirements for the BFA Music Theatre option and can also fulfill optional requirements for the Dance Minor. For the BFA Music Theatre candidates: part of the final exam for this course will be a performance juried by members of the School of Theatre Performance Faculty. Their evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance course sequence. Required dress for this course for women is black leotard, pink or tan tights, pink ballet shoes and for men is black tights, white t-shirt, black ballet shoes, and dance belt. Belts, suspenders, leg warmers are optional. Sweat clothes are not to be worn. All hair must be secured so that it cannot fly into the face.

Enforced Prerequisite at Enrollment: Admission into THRMT_BFA major

DANCE 232: Beginning Ballet II

1.5 Credits

A continuation of Beginning Ballet I to augment technical proficiency. DANCE 232 Beginning Ballet II (1)DANCE 232 allows the student who has successfully completed DANCE 231 to continue broadening their knowledge of fundamental movements in ballet. The barre warm-up and the center floor work is more demanding and challenges the student to learn the combinations of movement quicker. Choreography is more complex, involving more different kinds of turns, large jumps, and adding beats to the petit allegro. Adagios are longer and demand more stamina to sustain. The ability to communicate character and mood through dance is emphasized more strongly. The student will deepen their knowledge of the Zena Rommett floor barre techniques and Pilates techniques to develop more strength and flexibility. The development of increased self-awareness and discipline is stressed. The student's grade is determined by their attendance, attitude, and progress. Also, to supplement their understanding of the variety of ways ballet can be performed, the student is required to write two papers, expressing their reactions to two different dance concerts viewed during the semester. Classical ballet concerts are preferred, but the student is encouraged to consult the instructor concerning a performance they are interested in viewing. Dates will be designated for the completion of these papers. No late papers will be accepted. Attendance is mandatory; more than

three absences or lateness will affect the grade. The attitude should be positive, receptive to correction, and exhibit an eagerness to work, and the student's progress should reflect growth in their ability to perform the choreography and to know the terms used. The student will be required to identify and explain the meaning of the terms used in class, as well as perform choreography with confidence and a sense of character. Students enrolling in this course should have successfully complete DANCE 231 or have received the permission of the instructor. For the BFA Music Theatre candidate, this course serves as a prerequisite for DANCE 241, Beginning Jazz I. Part of the final exam for this course will be a performance juried by members of the School of Theatre Performance Faculty. Their evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance course sequence. Required dress for this course for women is black leotard, pink or tan tights, pink ballet shoes and for men is black tights, white t-shirt, black ballet shoes, and dance belt. Belts, suspenders, leg warmers are optional. Sweat clothes are not to be worn. All hair must be secured so that it cannot fly into the face.

Enforced Prerequisite at Enrollment: DANCE 231 and DANCE 230

DANCE 240: Jazz Dance

1.5 Credits/Maximum of 6

An exploration of jazz dance technique throughout history. DANCE 240 Jazz Dance (1.5 per semester/maximum of 6) (GA) (BA) This course meets the Bachelor of Arts degree requirements. DANCE 240 is an exploration of Jazz Dance. The course is designed for any student with an interest in Jazz Dance and to support the Dance Studies Minor. This class explores the many styles and genres of jazz dance developed through American history. Emphasis is placed on the development of a personal jazz dance style, exploration, and self-expression. Jazz dance, as a technique class, has at its core, increasing the strength, alignment and flexibility of each dancer. Each semester the dancer will be introduced to different styles of jazz which will require a changing perspective of the body and its' movement. Movement classes will be supported through viewing a variety of the dance styles being studied. In each style, daily movement experiences will be introduced to build coordination, flexibility and strength, as well as the understanding of the particular jazz dance idiom. These experiences will take place in the center floor, across the floor accumulations, and culminate in a combination of all these experiences in a dance to develop their potential as a performer. Connections to the social aspect of jazz dance will be consistently addressed, as all dance forms are vernacular in origin. Jazz dance, being a true American dance form, has its roots in the late 1800's and early 1900's with a pre-history in Africa and West Indies. The desire for self-expression through physical movement drove the dance form to a formal art expression on the concert stage. This connection to the vernacular has been maintained in the jazz dance idiom. The exploration in Jazz Dance emphasizes the individual expression through movement in response to music particular to the style being presented in each semester.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

DANCE 241: Beginning Jazz I

1.5 Credits

An introduction to the techniques of Jazz dance. DANCE 241 Beginning Jazz I (1)DANCE 241 is an introduction to basic jazz techniques. The course is designed for any beginning student with an interest in jazz dance, those who are BFA Music Theater candidates, and Dance Minors. The work will include awareness of space as related to the barre, floor, other dancers, and environment. The student will learn basic jazz dance vocabulary as well as the awareness of space to stage elements such as audience, direction, focus, and energy. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students are responsible for learning and executing all material taught in class. This course serves as a prerequisite for DANCE 242. Together, the two semesters of jazz satisfy requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: Jazz shoes, t-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: Jazz shoes, leotard and tights (possible character shoes).

Enforced Prerequisite at Enrollment: DANCE 232

DANCE 242: Beginning Jazz II

1.5 Credits

A continuation of Beginning Jazz I to augment technical proficiency. DANCE 242 Beginning Jazz II (1)DANCE 242 allows the student who has successfully completed DANCE 241 to continue to broaden their knowledge of beginning jazz dance. The course will emphasize a broader dance vocabulary and more complex dance combinations. The repetition and rehearsal techniques will be reinforced and intensified. The ability to communicate character and setting through dance is strongly emphasized. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences and lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students are responsible for learning and executing all material taught in class. Students enrolling in this course should have successfully completed DANCE 241 or have permission of the instructor. JAZZ 242 satisfies requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: Jazz shoes, t-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: Jazz shoes, leotard and tights (possible character shoes).

Enforced Prerequisite at Enrollment: DANCE 241

DANCE 250: Tap Dance

1.5 Credits/Maximum of 6

An exploration of tap dance technique throughout history. DANCE 250 Tap Dance (1.5 per semester/maximum of 6) (GA)(BA) This course meets the Bachelor of Arts degree requirements. DANCE 250 is an exploration of Tap Dance. The course is designed for any student with an interest in Tap Dance and to support the Dance Studies Minor. This class explores the many styles and genres of Tap Dance developed through American history. Emphasis is placed upon the understanding of the origins of tap, exploration, and self-expression. Tap Dance is grounded in rhythm, exploration and importance of improvisation and origins with a focus on the entertainment component. DANCE 250 will introduce the dancer to different styles of tap, which will require a changing perspective of rhythm and expression. In each style, daily movement experiences will be introduced to build coordination, stamina and flexibility with rhythms, as well as the understanding of the particular historical aspect of Tap Dance. These experiences will take place in the center floor, across the floor accumulations, and culminate in a combination of all these experiences in a dance to develop their potential as a performer. The origins and influences of tap are rich and deep, imbedded in the history of the country and the people. The richness of this history allows the dancer to take on a personal and individual style important to the further development of tap and dance in general. Tap Dance will emphasize this importance and assist the student in their exploration of this dance form.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

DANCE 251: Beginning Tap I

1.5 Credits

An introduction to the technique of tap dance. DANCE 251 Beginning Tap I (1) DANCE 251 is an introduction to basic tap techniques. The course is designed for any beginning student with an interest in tap dance, those who are BFA Music Theater candidates, and Dance Minors. The work will include awareness of space, sound, rhythm, and tempo. The work will also introduce counting, executing rhythm, and developing confidence for a beginner level tap dancer. The student will learn basic tap vocabulary as well as the awareness of space and stage elements such as audience, direction, focus, and energy. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students are responsible for learning and executing all material taught in class. This course serves as a prerequisite for DANCE 252. Together, the two semesters of jazz satisfy requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: tap shoes, or hard soled shoes with taps attached. T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: tap shoes, leotard and tights

(possible character tap shoes). The clothing must allow movement, and still be able to distinguish an outline of the dancer's body.

Enforced Prerequisite at Enrollment: DANCE 232 or DANCE 250**DANCE 252: Beginning Tap II**

1.5 Credits

A continuation of Beginning Tap I to augment technical proficiency. DANCE 252 Beginning Tap II (1) DANCE 252 allows the student who has successfully completed DANCE 251 to continue to broaden their knowledge of beginning tap dance. The course will emphasize a broader dance vocabulary and more complex dance combinations. The repetition and rehearsal techniques will be reinforced and intensified. The ability to communicate character and setting through dance is strongly emphasized. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). They are responsible for learning and executing all material taught in class. Students enrolling in this course should have successfully completed DANCE 251 or have permission of the instructor. Tap DANCE 252 satisfies requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: tap shoes, or hard soled shoes with taps attached. T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: tap shoes, leotard and tights (possible character tap shoes). The clothing must allow movement, and still be able to distinguish an outline of the dancer's body.

Enforced Prerequisite at Enrollment: DANCE 251**DANCE 260: Introduction to Modern Dance**

1.5 Credits/Maximum of 6

Introduction to Modern Dance. DANCE 260 Intro to Modern Dance (1.5 per semester/maximum of 6) (GA) (BA) This course meets the Bachelor of Arts degree requirements. DANCE 260 is an introduction to modern dance and the many elements of this vast form of dance. The course is designed for any student with an interest in Modern Dance and to support the Dance Studies Minor. This class explores the many influences and components of modern dance developed through history. Emphasis is placed on the development of strong technique, performance and exploration. Each semester the dance will be introduced to different aspects of modern dance which will require increasing awareness of modern dance and its' impact on all of dance. Technique classes will be supported through viewing historical and contemporary dance footage. In every class, daily movement experiences will be introduced to build coordination, self-awareness, strength and flexibility, as well as the understanding of modern dance.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

DANCE 261: Beginning Modern Dance I

1.5 Credits/Maximum of 6

Introduction to modern dance as an art form; development of dance technique and composition; teaching methods for improvisational skills. DANCE 261 Beginning Modern Dance I (1.5) (GA) (BA) This course meets the Bachelor of Arts degree requirements. DANCE 261 is an introduction to Modern Dance. The course is designed for any student with an interest in Modern Dance and Dance Minors. This class explores the use of weight, time, space, and energy in relation to a release based modern dance technique. There is emphasis placed upon the development of a personal movement vocabulary, experimentation, and self-expression. Modern dance is grounded in somatic practices with importance placed upon finding organic or efficient ways to engage the body in movement. Students should demonstrate an opening and willing attitude in every class situation. Students are responsible for learning and executing all material taught in class. This class serves as a prerequisite for DANCE 262. Together these two semesters serve as core technique classes for all dance minors.

Bachelor of Arts: Arts
General Education: Arts (GA)

DANCE 262: Beginning Modern Dance II

1.5 Credits

A continuation of Beginning Modern Dance I to augment technical proficiency and to further comprehension of choreographic methods. DANCE 262 Beginning Modern Dance II (1.5) DANCE 262 is a continuation of Beginning Modern Dance I. The course is designed for any student with an interest in Modern Dance and Dance Minors. This class explores the use of weight, time, space, and energy in relation to a release based modern dance technique. There is emphasis placed upon the development of a personal movement vocabulary, experimentation, and self-expression. Modern dance is grounded in somatic practices with importance placed upon finding organic or efficient ways to engage the body in movement. The students grade is based upon attendance, participation, attitude, progress, keeping a dance journal, setting dance goals, doing a mid-semester self evaluation, and attending a mid-semester 'check-up' with the instructor. More than three absences (excused or unexcused) will automatically drop the final grade one letter. Students should demonstrate an opening and willing attitude in every class situation. Students are responsible for learning and executing all material taught in class. Beginning Modern Dance I and Beginning Modern Dance II serve as core technique classes for all dance minors.

Enforced Prerequisite at Enrollment: DANCE 261

DANCE 270: Introduction to Bartenieff Fundamentals

3 Credits

Physical and theoretical approach to movement: facilitates efficiency, and expression through dynamic alignment, mobility, kinesthetic awareness; reduce physical injuries.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

DANCE 285: Contemporary Dance Performance

1-2 Credits/Maximum of 8

Contemporary Dance Performance is designed to introduce the beginning performer to the choreographic and rehearsal process as preparation for performance. DANCE 285 Contemporary Dance Performance (1-2 per semester/maximum of 8) This is a dance course to introduce the beginning performer to the rehearsal process, creative process and performance experience. The class will develop around the building of an original dance piece, created on and for the participating students by the instructor of record. The students will perform this piece at the end of the semester in a formal performance situation, on a proscenium stage with full lighting and sound accompaniment. The instructor will create an original dance on students enrolled in this course which will provide the student with performance experience in a live dance concert. The student will learn original choreography, be responsible for retention of movement, experience and assist in the choreographic process, participate in discussions concerning choreography, expression, rehearsal expectations and roles. The student will keep a journal and complete written assignments which demonstrate cognitive understanding of the artistic process. Each student will be expected to execute the choreography at a level suitable for concert performance, show an understanding of the choreographic process through written work, demonstrate growth as a dancer and artist through performance and written work and participate fully in a concert performance of the dance work created in class.

DANCE 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

DANCE 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DANCE 301: Movement Analysis

2 Credits

Introduce student to principles of practical and abstract movement analysis to determine individual physical limitations and potentials.

DANCE 331: Intermediate Ballet I

1.5 Credits/Maximum of 6

A continuation of the course work established in Beginning Ballet II. DANCE 331 Intermediate Ballet I (1) Dance 331 allows the student who has had a solid introduction to the fundamental movements and style of ballet to develop more strength and flexibility in their technique. The pace of the class is faster. Choreography is more complex and taught more quickly. The student is expected to know the elements that constitute a ballet class and is ready to embrace seriously the study of the skill and artistry required to perform ballet. The student is expected to be able to execute a double pirouette and simple beats in petit allegro. Interpretation of choreography taught for exams is emphasized more strongly than in the previous courses. The attitude should be positive, receptive to correction, and exhibit an eagerness to work, and the student's progress should reflect growth in their abilities to perform the

choreography and to know the terms used. The student will be required to identify and explain the meaning of the terms used in class, as well as perform choreography with confidence and a sense of character. Required dress for the course for women is black leotard, pink or tan tights, pink ballet shoes and for men it is black tights, white T-shirt, black ballet shoes, and dance belt. Belts, suspenders, leg warmers are optional. Sweat clothes are not to be worn. All hair must be secured so that it cannot fly into the face.

Enforced Prerequisite at Enrollment: DANCE 230 or DANCE 231 or DANCE 232

DANCE 332: Intermediate Ballet II

1.5 Credits/Maximum of 6

A continuation of the course work established in Intermediate Ballet I. DANCE 332 Intermediate Ballet II (1) Dance 332 allows the student who has a strong background in the basics of ballet technique to be challenged with more difficult movements and choreography and to develop a more mature approach to healthy alignment. The Zena Rommett floor barre and the Pilades techniques will be explored with more emphasis than in the beginning semesters of ballet study. The student is expected to know the terms used in ballet in French, their meaning, and how to execute them. The student should be able to perform choreography with a sense of character and style, as well as strong technique. The attitude should be positive, receptive to correction, and exhibit an eagerness to work, and the student's progress should reflect growth in their abilities to perform the choreography and to know the terms used. Required dress for the course for women is black leotard, pink or tan tights, pink ballet shoes and for men it is black tights, white T-shirt, black ballet shoes, and dance belt. Belts, suspenders, leg warmers are optional. Sweat clothes are not to be worn. All hair must be secured so that it cannot fly into the face.

Enforced Prerequisite at Enrollment: DANCE 230 or DANCE 231 or DANCE 232

DANCE 361: Intermediate Modern Dance I

1.5 Credits/Maximum of 6

This course is a development of techniques and principles of modern dance at the intermediate level. DANCE 361 Intermediate Modern Dance I (1.5), continues to build on the technical foundation from Beginning Modern I and Beginning Modern II in relation to a release-based modern dance technique. Along with technique, students should develop greater flexibility, strength, and alignment. The emphasis of this course is movement as a lexicon used with specificity for expression of context, content, metaphor, image, and representation. Through this course, students gain a greater understanding of the body as a vehicle for communication and develop skills for creating and performing a specific vocabulary for expression. This course builds upon exploring the use of weight, time, space, energy, initiation, isolation (gesture), integration (whole body or body segment), suspension, and grounding as well as the Bartenieff/Laban vocabularies.

Enforced Prerequisite at Enrollment: DANCE 262 and THEA 225B
Bachelor of Arts: Arts
General Education: Arts (GA)
GenEd Learning Objective: Creative Thinking
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

DANCE 362: Intermediate Modern Dance II

1.5 Credits/Maximum of 6

This course is a continuation of Modern Dance to augment technical proficiency. DANCE 362 Intermediate Modern Dance II (1.5) continues to build on the technical foundation from Intermediate Modern Dance I (DANCE 361) in relation to a release-based modern dance technique. This course also highlights elements of the genre Dance Theatre. This intermediate level class centers on continuing developing a strong technical foundation in modern dance and how to apply that in performance. Along with technique, students should develop greater flexibility, strength, and alignment. The concepts of weight, time, energy, and space are central to the class. The body as a tool of expression and communication and using dance as a language is stressed. The emphasis of this course is movement as a lexicon used with specificity for expression of context, content, metaphor, image, and representation. Through this course, students gain proficiency in communication with the body and develop skills for creating and performing a specific vocabulary for expression. This course builds upon exploring the previous explorations and moves into a more formal structure of creating dance theatre. This class serves as a prerequisite for DANCE 461.

Enforced Prerequisite at Enrollment: DANCE 361

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

DANCE 365: Contemporary Movement Lab I

3 Credits

An intermediate level modern dance technique utilizing improvisation to enhance technical and performance issues: alignment, connection, balance, transition, expression, discovery. DANCE 365 Contemporary Movement Lab I (3) DANCE 365 is an intermediate level modern dance course utilizing improvisation as a tool for understanding technique and performance. This class is designed specifically for the Dance Studies Minor student to enhance the efficient and expressive use of the body as a vehicle for expression. The student will not only develop greater flexibility, strength, and alignment, but also will gain self-awareness and begin to develop a personal dance vocabulary. Contemporary Movement Lab I will meet four hours a week, with an additional 1 hour studio lab for personal discovery. CML I is designed to further expose the intermediate level dancer to the style and techniques of modern dance as it uses improvisation for expression and performance. The intermediate level dancer will be developed through more thorough movement requirements, floor work, and strengthening experiences with the support of improvisation as a tool. Full articulation of body, feet and arms will be fostered through regular exercises, which will bring about stronger connections through the body to support complicated and difficult movement. Each class period will allow time to be spent in the traditional aspects of an intermediate modern dance technique class: floor warm up and connection to center of weight, center floor balance and strengthening technique exercises and combinations, traveling sequences across the floor, and final accumulative combination. An equal amount of time will be spent in the exploration of improvisation: personal introspection, group interaction based on conceptual themes, weight sharing and beginning contact improvisational techniques, and development of a group structured performance improvisation. Improvisation will be explored regularly through individual and group

work. The students will experience moving without specific directions for the body, but rather with directions for content, sensing, theme, or task oriented physicality. Observation of self and others will aid in the discovery of the freedom of moving improvisationally. Outside reading and follow up discussions will further support their experience in the studio. Discussion, journals, goal setting and writing assignments will allow for opportunities to express and share levels of comfort and personal discoveries with various experiences. This is an important aspect of the process of opening up to the act of improvisation.

Enforced Prerequisite at Enrollment: DANCE 230 or DANCE 240 or DANCE 250 or DANCE 260

DANCE 366: Contemporary Movement Lab II

3 Credits

An intermediate level modern dance technique utilizing composition to enhance technical and performance issues: alignment, connection, balance, transition, expression, discovery. DANCE 366 Contemporary Movement Lab II (3) DANCE 366 is an intermediate level modern dance course utilizing the techniques, tools and theories of composition for understanding technique and performance. This class is designed specifically for the Dance Studies Minor student to enhance the efficient and expressive use of the body as a vehicle for expression. The student will not only develop greater flexibility, strength, and alignment, but also will gain self-awareness and further develop a personal dance vocabulary. Contemporary Movement Lab II will meet four hours a week, with an additional 1-hour studio lab for personal discovery. CML II is designed to further expose the intermediate level dancer to the style and techniques of modern dance as it uses composition for expression and performance. The intermediate level dancer will be further developed through a more thorough level of movement requirements: floor work, and strengthening experiences while exploring the connections of technique to composition and performance. Full articulation of body, feet and arms will be fostered through regular exercises, which will bring about stronger connections through the body to support complicated and difficult movement. Each class period will allow time to be spent in the traditional aspects of an intermediate modern dance technique class: floor warm up and connection to center of weight, center floor balance and strengthening technique exercises and combinations, traveling sequences across the floor, and final accumulative combination. An equal amount of time will be spent in discovering the many theories and tools of composition: time, weight, space, rhythm/phrasing, theme based creative experiences, and dance as a tool for communication. Students will be expected to create a variety of studies regularly through individual and group work. Outside reading and follow up discussions will further support their experience in the studio. Discussion, journals, goal setting and writing assignments will allow for opportunities to share and express levels of comfort and personal discoveries with various experiences.

Enforced Prerequisite at Enrollment: DANCE 230 or DANCE 240 or DANCE 250 or DANCE 260

DANCE 370: Anatomy and Physiology for Performers

3 Credits

The purpose of this course is to provide performers with anatomical theory and concepts to apply to movement. The course will progress through the body in systems as they relate to the biomechanics of movement and the body in performance. All body systems will be covered, but we will explore the musculoskeletal system in depth including

specific bones and muscles most commonly used in the movement of the performing arts. Students will not only become proficient in the anatomy and physiology of the moving body, but also learn to apply this material to specific movements to facilitate the efficiency of movement in their area of interest. This course will be grounded in specific principles of western anatomy and physiology, but will also focus on application to analyze movements for the biomechanical basis that allows each movement, and the way the body system function and interact when performing. This knowledge is to aid in more efficient moving, performing, better body awareness/understanding, and injury prevention. The class covers different topics each week and will build upon practices learned in each previous session. Within each class period, lecture will be immediately followed by experiential hands on exercises and experiential learning application.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or THEA 112 or DANCE 100 or DANCE 230 or DANCE 240 or DANCE 260 or DANCE 270

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

DANCE 370H: Anatomy for Performers

3 Credits

To provide performers with anatomical theory and concepts applicable to the disciplines of the performing arts.

DANCE 381: Dance Composition I

2 Credits

Introduction to the basic principles and craft of choreography. DANCE 381 Dance Composition I (2) This course is an introduction to the basic principles and craft of the art of choreography. The students will work with the principles and craft of choreography through practical methods to foster and enhance the creative process with relation to the solo form. Each student will develop an understanding of the architectural strengths of the proscenium stage and how best to use these for the solo form; gain knowledge of professional working methods through the exploration and use of the choreographic tools; develop an individual vocabulary through improvisational and choreographic elements; gain a knowledge of the craft for original creative expression; and demonstrate an overall understanding of the course by choreographing an original solo work as a culminating project.

DANCE 382: Music Theatre Dance–Style I

1.5 Credits

A practical study of dance styles from the 1890'S to the 1990'S. DANCE 382 Music Theatre Dance –Style I (1.5) DANCE 371 allows the student who has successfully completed two semesters of ballet (DANCE 231 and 232), two semesters of jazz (DANCE 241 and 242), and two semesters of Music Theatre Studio (THEA 223 and 224) to expand their capabilities of combining their skills of dancing and acting through the use of different stylistic approaches. In this semester, the BFA Music Theatre candidate will study and perform choreography characteristic of Vaudeville, Charleston, Ragtime, Ballet, Folk/Ethnic and elements of Modern and Jazz. In particular, Agnes deMille's use of ballet and Jerome Robbins' use of Ballet/Jazz/Modern will be studied. The goals of the course include enabling the student to feel confident in identifying,

performing, and competing in the professional audition venue using these styles. Also, the student should deepen their understanding of how the use of varied dance styles contributes to the development of character and/or the furthering of plot in Music Theatre. Successfully completing DANCE 371 is the prerequisite for DANCE 372.

Enforced Prerequisite at Enrollment: THEA 224

DANCE 383: Performance Devising

3 Credits/Maximum of 9

Devised performance is that which that does not proceed from a published script or score. In this course, students will use the various languages of the stage—including movement, dance, and design—as equal partners in creating new works. Students will use various methodologies for creation, including some that come from dance such as Viewpoints, and others that come from Theatre, such as Moment Work. Through a collaborative auto-course based process, students will create new performances in collaboration with others. The semester will end with one or more new devised performance pieces that will be performed as classroom projects and/or public showings. Although everyone in class is expected to move/perform as part of the learning process, contributions from designers, dramaturgs, and directors are encouraged.

Enforced Prerequisite at Enrollment: DANCE 100 or THEA 100 or THEA 101N or THEA 105 or THEA 112
Bachelor of Arts: Arts

DANCE 384: Music Theatre Dance--Style II

1.5 Credits

A continuation of course work established in Music Theatre Dance Style I. DANCE 384 Music Theatre Dance --Style II (1.5) DANCE 372 allows the student who has successfully completed DANCE 371 to continue broadening their understanding and expanding their performance skills of different stylistic approaches to choreography. In this course the student will study and perform choreography using stronger Jazz and Folk/Ethnic/Social influences. In particular, the works of Jerome Robbins, Ron Field, Michael Bennett, and Bob Fosse will be studied. The goals of the course include enabling the student to feel confident in identifying, performing, and competing in the professional audition venue using these styles. Also, the student should deepen their understanding of how the use of varied dance styles contributes to the development of character and/or the furthering of plot in Music Theatre.

Enforced Prerequisite at Enrollment: DANCE 382

DANCE 385: Leadership Practicum: Dance

1 Credits

Supervised experiences in teaching and assisting with the teaching of dance techniques.

Enforced Prerequisite at Enrollment: DANCE 100

DANCE 399: Dance Foreign Study

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

DANCE 405: Conditioning, Self-Defense, and Combat for Theatre

3 Credits/Maximum of 18

This course is designed to build and enhance physical awareness, control, stage movement, impulse work, self-defense skills, confidence, and athleticism. The course focuses on conditioning, breath and stretch, coordination, mind-body connection, fight/flight response, multiple forms of martial arts, SAFD technique, and specific Tae Kwon Do training. Movement training, at its best, is both an exploration of creative possibilities and a specific connection to the craft of acting. Self-defense training at its best gives the student the confidence, skills, and ability to effectively defend himself/herself/themselves in a dangerous situation.

Enforced Prerequisite at Enrollment: THEA 100 or THEA 105 or THEA 106 or THEA 101N

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Key Literacies

DANCE 410: Dance History

3 Credits

Survey of dance history concerning perspectives of culture, race, and gender with a focus on Nineteenth and Twentieth centuries. DANCE 410 Dance History (3) (US/IL) DANCE 484 (US;IL) Dance History (3) Survey of dance history concerning perspectives of culture, race, and gender with a focus on Nineteenth and Twentieth centuries. Dance History (3) General Education: None Diversity: US;IL Bachelor of Arts: None Effective: Fall 2006 Note : Class size, frequency of offering, and evaluation methods will vary by location and instructor. For these details check the specific course syllabus.

International Cultures (IL)

United States Cultures (US)

DANCE 412: Practical Applications of Movement in the Classroom

3 Credits

This course will guide the students in movement-oriented activities and explore how these activities relate to learning academic concepts. DANCE 412 Practical Applications of Movement in the Classroom (3) Moving and learning is the focus of this course. Classrooms vary in size, age, understanding, world experience and venue. Being able to recognize all these situations as learning opportunities is a talent built on experience. This class will challenge the students to see learning not just as an event that must happen in desk chairs with only the use of traditional classroom technology to support the 'lesson' but also as an opportunity for expansion into the whole child, including the moving child. Experience in designing and applying movement ideas into curriculum ideas and concepts will be developed throughout the semester. The student will begin to see ideas and learning themes as opportunities to engage the child through their physicality while expressing ideas, challenging the expected way of learning and yes, even having fun. Teaching is a creative act, learning is a creative act, and designing moving opportunities to reinforce the act of learning creates a sense of knowing within the child that becomes embodied. Reading, discussion, classroom application of material, and critical assessment of self and others will create an environment, at times, modeling some of the potential venues in which the student may expect to find themselves.

Using this information will be critical to their growth into visualizing movement as a viable option for teaching and learning.

Enforced Prerequisite at Enrollment: 3 credits in HDFS or PSYCH or EDPSY or DANCE

DANCE 422: Advanced Hip Hop Dance

1.5 Credits

Advanced Hip Hop Dance reinforces and expands concepts from Beginning Hip Hop Dance. Free expression of the body, freestyle, and choreography are emphasized. DANCE 422 Advanced Hip Hop Dance (1.5) Advanced Hip Hop Dance is designed for the serious minded dance student with an interest in Hip Hop dance/culture. This class provides an intensive study of dance, choreography and culture. As in Beginning and Intermediate Hip Hop Dance, freestyle dancing, locomotive movements, and choreography are emphasized. In addition, this class includes lecture sessions and discussions about Hip Hop culture and its role in society. By the end of this course students should be able to articulate why Hip Hop is a culturally significant art form and choreograph and perform a Hip Hop dance combination. This course also enhances mind/body awareness, and provides choreographic and performance opportunities. This course is directly related to dance, theatre, African American studies and other arts based and humanities based courses.

Enforced Prerequisite at Enrollment: DANCE 222

DANCE 431: Advanced Ballet I

1.5 Credits

An advanced ballet training course. DANCE 431 Advanced Ballet I (1)DANCE 431 allows the student who has successfully completed DANCE 232, or who has interviewed with the Instructor concerning their previous training in ballet, to develop greater proficiency in performing ballet. The barre work continues to emphasize proper alignment, supported by exercises using the Zena Rommett floor barre technique and the Pilates technique, and the floor work moves more quickly than in the beginning levels of study. The student will learn more complex steps requiring greater strength and coordination, and the class will move at a faster pace, thus enabling the student to learn choreography more quickly. The student will also develop their ability to communicate character and mood through their dancing. More advanced ballet terminology will be taught, and the student will learn the French terms, their English meanings, be able to identify the steps and perform them. DANCE 431 can satisfy one of the two semesters of advanced dance study required by the BFA Music Theatre degree option and can satisfy requirements for the Dance Minor. The student's grade is determined by their attendance, attitude, and progress. Attendance is mandatory. More than three absences or lateness will affect the grade. The attitude should reflect a serious focus on improving their abilities with a positive approach to applying corrections to their dancing. Their progress will be assessed through observation of their classroom work and especially the video-taped performances of their mid-term and final exam choreography. There will be a final showing at the end of the semester with an invited audience. The exams will also include an oral section, covering the terms used in class. Required dress for class is – for men, dance belt, black tights, white t-shirt, and black ballet shoes, and for women, pink or tan tights, leotard, and pink ballet shoes. All hair must be pulled back and secured away from the face. No sweat clothes may be worn, but leg warmers, belts, and suspenders are optional.

Enforced Prerequisite at Enrollment: DANCE 230 or DANCE 232 or DANCE 331 or DANCE 332

DANCE 432: Advanced Ballet II

1.5 Credits

A continuation of Advanced Ballet I to augment technical proficiency. DANCE 432 Advanced Ballet II (1)DANCE 432 allows the student who has successfully completed DANCE 431, or who has interviewed with the Instructor concerning their previous dance training, to challenge themselves further in the study of ballet. The barre work continues to emphasize proper alignment, supported by exercises using the Zena Rommett floor barre technique and the Pilates technique. The center work expands on some of the vocabulary taught in DANCE 431, requiring more confidence, strength, and stamina in different ways of turning and jumping, as well as adagio work. The student will learn more complex steps requiring greater strength and coordination, and the class will move at a faster pace, thus enabling the student to learn choreography more quickly. The student will also develop their ability to communicate character and mood through their dancing. More advanced ballet terminology will be taught, and the student will learn the French terms, their English meanings, be able to identify the steps and perform them. DANCE 432 can satisfy one of the two semesters of advanced dance study required by the BFA Music Theatre degree option and can satisfy requirements for the Dance Minor. The student's grade is determined by their attendance, attitude, and progress. Attendance is mandatory. More than three absences or lateness will affect the grade. The attitude should reflect a serious focus on improving their abilities with a positive approach to applying corrections on their dancing. Their progress will be assessed through observation of their classroom work and especially the video-taped performances of their mid-term and final exam choreography. There will be a final showing at the end of the semester with an invited audience. The exams will also include an oral section, covering the terms used in class. Required dress for class is - - for men, dance belt, black tights, white t-shirt, and black ballet shoes, and for women, pink or tan tights, leotard, and pink ballet shoes. All hair must be pulled back and secured away from the face. No sweat clothes may be worn, but leg warmers, belts, and suspenders are optional.

Enforced Prerequisite at Enrollment: DANCE 431

DANCE 441: Advanced Jazz I

1.5 Credits

An advanced course in the techniques of jazz dance. DANCE 441 Advanced Jazz I (1)DANCE 441 allows the student who has successfully completed DANCE 242 to continue their study of jazz technique and performance. The focus of the course is to improve capability through learning and performing more challenging choreography at a faster pace. Eight combinations of choreography are taught, to music of various types – pop, jazz, and musical theatre. Performing with confidence and a sense of character will be emphasized. The student will also become familiar with the fundamentals of the Pilates technique to improve alignment, strength, and flexibility. The student will also be given opportunities to develop confidence in improvisation. DANCE 441 enables the BFA Music Theatre candidate to satisfy one semester of advanced level dance training. For the Dance Minor and other students of dance, it provides challenges in technical execution and a greater range of jazz styles. The student's grade will be determined by their attendance, attitude, and progress at learning quickly and performing the dance combinations, as well as the completion of two projects. Attendance is mandatory; more than three absences or lateness will affect the grade. The attitude

should be focused, positive, receptive to correction, and eager. Progress will be assessed in frequent performance 'quizzes'. The mid-term and final exams will be video-taped and viewed by the class. The two projects consist of paper and one minute of original choreography. The paper should consist of the student's personal analysis of jazz dancing and their abilities, based on their past and present experience. The choreography should reflect work learned in class and be performed to instrumental music. The student will perform their choreography for the class. Required dress for DANCE 441 consists of dance belt, dance pants, t-shirt and jazz shoes for men and tights and leotard, jazz and character shoes for women. Dance sneakers are not appropriate for warm-ups and certain combinations.

Enforced Prerequisite at Enrollment: DANCE 240 or DANCE 242 or DANCE 341 or DANCE 342

DANCE 442: Advanced Jazz II

1.5 Credits

A continuation of Advanced Jazz I to augment technical proficiency. DANCE 442 Advanced Jazz II (1) DANCE 442 allows the student who has successfully completed DANCE 441 to continue to broaden their knowledge of advanced jazz dance. The purpose of this course is to improve capability through learning and performing more challenging choreography at a faster pace. Technique will be stressed, but performance and interpretation will be emphasized with the following standard in mind: to develop character, mood, and ability to improvise and choreograph jazz dance. A variety of choreographed dances ranging from pop, jazz, to musical theater styles will be taught. Students are responsible for learning and executing all material taught in class. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students enrolling in this course should have successfully completed DANCE 441 or have permission of the instructor. JAZZ 442 satisfies requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: Jazz shoes, t-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: Jazz shoes, leotard and tights (possible character shoes).

Enforced Prerequisite at Enrollment: DANCE 240 or DANCE 341 or DANCE 342 or DANCE 441

DANCE 451: Advanced Tap I

1.5 Credits

An advanced course in the techniques of tap dance. DANCE 451 Advanced Tap I (1) DANCE 451 allows the student who has successfully completed DANCE 251 and 252, or has permission of the instructor, to continue to broaden their knowledge of tap dance. The work will include expanding the student's knowledge of tap vocabulary, rhythm, tempo and counting. The work introduces audition techniques from the dancer's perspective and expands the awareness of proper rehearsal discipline. Professional conduct and behavior is now cultivated into a useful marketing tool. Material is taught faster and with greater detail to reinforce audition techniques and equate professional challenges.

Audition classes will be held at the instructor's discretion. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or lateness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students are responsible for learning and executing all material taught in class. Students enrolling in this course should have successfully completed DANCE 251, 252 or have permission of the instructor. Tap DANCE 451 satisfies requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: tap shoes, or hard soled shoes with taps attached. T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: tap shoes, leotard and tights (possible character tap shoes). The clothing must allow movement, and still be able to distinguish an outline of the dancer's body.

Enforced Prerequisite at Enrollment: DANCE 250 or DANCE 252

DANCE 452: Advanced Tap II

1.5 Credits

A continuation of Advanced Tap I to augment technical proficiency. DANCE 452 Advanced Tap II (1) DANCE 452 allows the student who has successfully completed DANCE 451 to continue to broaden their knowledge of advanced tap dance. The course will emphasize a broader dance vocabulary and more complex dance combinations. The repetition and rehearsal techniques will be reinforced and intensified. The ability to communicate character and setting through dance is strongly emphasized. Material is taught faster and with greater detail to reinforce audition techniques and equate professional challenges. The student's grade will be based on attendance, attitude, and progress of learning and performing dance combinations. More than three absences or tardiness will affect the grade. Maintaining a positive attitude, proper discipline, and willingness to work and learn are essential. The student is required to perform individual rehearsal hours (as homework). Students are responsible for learning and executing all material taught in class. Students enrolling in this course should have successfully completed DANCE 451 or have permission of the instructor. Tap DANCE 452 satisfies requirements for the BFA Music Theater option and the Dance Minor. The BFA Music Theater student will be juried by the School of Theatre Performance Faculty as a part of their final grade. The jury will consist of a showing of the pieces taught in class. This evaluation will help to determine whether the candidate may be allowed to enroll into the next level of the performance sequence. The required dress for men: tap shoes, or hard soled shoes with taps attached. T-shirt or muscle shirt, dance belt, Jazz pants or tights. For women: tap shoes, leotard and tights (possible character tap shoes). The clothing must allow movement, and still be able to distinguish an outline of the dancer's body.

Enforced Prerequisite at Enrollment: DANCE 250 or DANCE 451

DANCE 461: Advanced Modern Dance I

1.5 Credits/Maximum of 9

Development of dance technique and movement combinations on the advanced level. DANCE 461 Advanced Modern Dance I (1.5) DANCE 461 is Advanced Modern Dance. This class continues the technique foundation from DANCE 261 & DANCE 262 of exploring the use of weight, time,

space, and energy in relation to a release-based modern dance technique. DANCE 461 also works with focus, style, and performance techniques. Students should gain greater technical proficiency, flexibility, strength, and alignment. Understanding and demonstrating the different uses of weight and the concept of grounding is essential. Students should begin to develop as an individual mover (personal artistic voice) and gain greater confidence in using the body as a tool of expression and communication. Students should demonstrate an opening and willing attitude in every class situation. Students are responsible for learning and executing all material taught in class. This class serves as a prerequisite for DANCE 462. Together these two semesters serve as core technique classes for all dance minors.

Enforced Prerequisite at Enrollment: DANCE 262 or DANCE 361 or DANCE 362 or DANCE 365 or DANCE 366

DANCE 462: Advanced Modern Dance II

1.5 Credits/Maximum of 9

A continuation of Advanced Modern Dance I to augment technical proficiency. DANCE 462 Advanced Modern Dance II (1.5) DANCE 462 is a continuation of Advanced Modern Dance I. This class continues the technique foundation from DANCE 261, 262, and 461 of exploring the use of weight, time, space, and energy in relation to a release based modern dance technique. DANCE 462 also works with focus, style, and performance techniques. Students should gain greater technical proficiency, flexibility, strength, and alignment. Understanding and demonstrating the different uses of weight and the concept of grounding is essential. Students should begin to develop as an individual mover (personal artistic voice) and gain greater confidence in using the body as a tool of expression and communication. Students should demonstrate an opening and willing attitude in every class situation. Students are responsible for learning and executing all material taught in class. DANCE 461 and 462 serve as core technique classes for all dance minors.

Enforced Prerequisite at Enrollment: DANCE 361 or DANCE 362 or DANCE 365 or DANCE 366 or DANCE 461

DANCE 466: Contemporary Movement Lab III

3 Credits/Maximum of 6

An advanced exploration of modern dance techniques supported by the choreographic process. DANCE 466 Contemporary Movement Lab III (3 per semester/maximum of 6) DANCE 466 is an advanced level modern dance course using the choreographic process and experience as a way to enhance and further understand technique and performance. This class is designed specifically for the Dance Studies Minor student to enhance the efficient and expressive use of the body as a vehicle for expression. The student will not only develop greater flexibility, strength, and alignment, but also will gain ability for self-awareness and increase in personal dance vocabulary. Contemporary Movement Lab III will meet four hours a week, with a minimum additional 1-hour studio lab for personal discovery. CML III is designed to further expose the advanced level dancer to the choreographic process as a means of expression of modern dance as it influences the discovery of personal style and communication. The advanced level dancer will be further developed through higher levels of movement requirements: floor work, and strengthening experiences while exploring the connections of movement as a goal for communication and performance. Each class period will allow time to be spent in the traditional aspects of an advanced modern dance technique class: floor warm up and connection to center of weight, center floor balance and strengthening technique

exercises and combinations, traveling sequences across the floor, and final accumulative combination. An equal amount of time will be spent in discovering the choreographic process utilizing the tools of composition from Dance 366 and improvisation from Dance 365 to successfully communicate personal ideas or themes through fully explored dances. Students will be expected to create a number of dances/studies throughout the semester with the goal of producing one for the concert stage. Outside reading and follow up discussions will further support their experience in the studio. Discussion, journals, goal setting and writing assignments will allow for opportunities to express levels of comfort and personal discoveries with various experiences.

Enforced Prerequisite at Enrollment: DANCE 365 or DANCE 366

DANCE 472: Introduction to Laban Movement Analysis

3 Credits

Observe and analyze movement elements by exploring concepts of Body, Effort, Shape, and Space to increase personal communication and expression. DANCE 472 Introduction to Laban Movement Analysis (3) Laban Movement Analysis (LMA) is a method and language for describing, visualizing, interpreting and documenting all varieties of human movement. It is one type of Laban Movement Study originating from the work of Rudolf Laban. In addition many derived practices have developed with great emphasis on LMA methods. This course focuses on elements known as Laban/Bartenieff Movement Analysis, which uses a multidisciplinary approach, incorporating contributions from anatomy, kinesiology, psychology, Labanotation and many other fields. It is used as a tool by dancers, actors, musicians, athletes, physical and occupational therapists, psychotherapy, peace studies, anthropology, business consulting, leadership development, health & wellness and is one of the most widely used systems of human movement analysis today. In this course, students will study and practice the basic categories of LMA: Body (Bartenieff Fundamentals, total-body connectivity), Effort (Energetic dynamics), Shape, and Space (Space Harmony). In addition students will discover how LMA looks at the categories in terms of Phrasing and themes of opposites. The themes are: Mobility/Stability, Inner/Outer, Function/Expression, and Exertion/Recuperation.

Enforced Prerequisite at Enrollment: DANCE 230 or DANCE 240 or DANCE 250 or DANCE 260

DANCE 480: Choreographic Projects

2 Credits

Choreographic practicum experiences for concert performances. DANCE 480 Choreographic Projects (2) This course is a forum for choreographic practicum experiences for concert performances. This course will provide an opportunity to students to develop their artistic and creative abilities in the field of dance. The student will create a group choreographic work to be presented in concert dance. This course will cover skills for advanced group dances, the creative process, selection of music of dance, costuming for dance, lighting for dance, rehearsal techniques, performance techniques, and organizational/leadership skills. Each student will submit a written proposal of the dance s/he intends to create, specifying the number of dancers, choreographic intent, and movement phrases as well as ideas for music, costumes, and lighting. The student will complete one choreographic dance to be performed in concert, which is presented each semester. The student must attend technical week prior to the concert, use past choreographic experiences gained from compositional study and be responsible for organizing weekly rehearsals. The student is required to hand in a self-

evaluation paper reflecting on the original proposal and completed dance, and to maintain a journal throughout the semester documenting the choreographic process. This course will be offered fall semester with an enrollment of 10 students.

Enforced Prerequisite at Enrollment: DANCE 381

DANCE 485: Contemporary Dance Repertory

1-2 Credits/Maximum of 12

An advanced dance course in the choreographic process with emphasis on original choreography in performance. DANCE 485 Contemporary Dance Repertory (1-2) This is an advanced dance course in the choreographic process with emphasis on original choreography. The instructor will create an original dance on students enrolled in this course which will provide the student with performance experience in a live dance concert. The student will learn original choreography, experience and assist in the choreographic process, participate in discussions concerning choreography, performance and style. The student will keep a journal and complete written assignments which demonstrate cognitive understanding of the artistic process. Each student will demonstrate proper rehearsal protocol and behavior, execute the choreography at a level suitable for concert performance, show an understanding of the choreographic process through written work, demonstrate growth as a dancer and artist through performance and written work and participate fully in a concert performance of the dance work created in class.

Enforced Prerequisite at Enrollment: permission of the program

DANCE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

DANCE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DANCE 499: Dance Foreign Study

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Data Analytics (DA)

DA 101: Introduction to Data Analytics

3 Credits

This course is designed around storytelling with data. It is designed to introduce students to foundational concepts in data analytics. Students will learn key concepts used in the data analytics industry to understand and frame projects. The core dimensions of analytics prescribed by current data analytics professional guidelines will be introduced and demonstrated through case studies. Students will be exposed to spreadsheets, scripting languages for analytics, and current statistical

software packages. The importance of communicating findings to different constituents will be emphasized throughout this class.

Enforced Prerequisite: MATH 21 or satisfactory performance on the mathematics placement examination.

General Education: Quantification (GQ)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

DA 201W: Descriptive Analytics

4 Credits

DA 201W is a four-credit course with lecture and writing components. (DA201W, DA 302W, and DA 401W each carry only one credit of "writing"; completion of all three courses is required to meet the writing requirement.) This course introduces students to the core areas of descriptive analytics, where the main objective is to answer "what happened" in the project. Students will learn how to accurately describe the attributes of data variables available to them for their projects. Students will have the opportunity to work on real-life projects and cases throughout the course. The course will expose students to spreadsheets, scripting languages for analytics, and current statistical software packages. The instructor will emphasize the importance of communicating findings to different constituents throughout this class.

Enforced Prerequisite at Enrollment: (PSYCH 200 or STAT 200 or STAT 250 or SCM 200) and (DA 101 or DS 200) and (CMPSC 131 or CMPSC 121)

Writing Across the Curriculum

DA 301: Diagnostic Analytics

3 Credits

This course introduces students to the core areas of diagnostic analytics. The diagnostic analysis takes descriptive data a step further by examining the relationships between variables through root cause analysis. Students will learn current tools and techniques, including external environmental factors, that allow analysts to explain why the patterns are observed in data and discover relationships between two or more attributes of the data. Students will have the opportunity to review case studies and work on real-world projects throughout the course.

Enforced Prerequisite at Enrollment: DA 201W

DA 302W: Predictive Analytics

4 Credits

DA 302W is a four-credit course with lecture and writing components. (DA201W, DA 302W, and DA 401W each carry only one credit of "writing"; completion of all three courses is required to meet the writing requirement.) The principal objective of this course is to help students predict what will happen in future events based on historical data. This course exposes students to predictive analytics techniques that are consistent with best practices in the data analytics industry. Students will learn how to properly examine problem contexts to use the most appropriate method to develop the best predictive model. Students will also learn how to evaluate their results and interpret findings to users at different levels of an organization. This course focuses on the application of spreadsheets, scripting languages for data analytics, and current statistical software packages.

Enforced Prerequisite at Enrollment: DA 301
Writing Across the Curriculum

DA 305: Data Ethics and Privacy

3 Credits

DA 305 will cultivate students' awareness of ethical, privacy, and security rules and standards to guide how to use and analyze data and communicate the report findings. The course will demonstrate appropriate ethical, privacy, and security standards. This course will utilize case studies to demonstrate the realworld implications of these topics in data analytics and identify the appropriate communication styles. The course will emphasize ethics at various stages of data analytics. This includes the communication of the implications of the data analysis to stakeholders, including how data are collected and stored as well as how it is analyzed and presented to different stakeholders. Students will be able to define who has access to which data, where and how long the data will be stored, and which procedures will be implemented for further use.

Enforced Prerequisite at Enrollment: DA 101

DA 401W: Prescriptive Analytics

4 Credits

DA 401W is a four-credit course with lecture and writing components. (DA201W, DA 302W, and DA 401W each carry only 1 credit of "writing"; all three courses must be taken to meet the writing requirement). This course will introduce students to how data analytics assists in making decisions and advocating for a course of action. The core objective of this course is to help students develop a set of viable decision options (based on considerations including costs and benefits, key stakeholder preferences, ethical guidelines, etc.), ranking those decision options to create alternative courses of action, and how to achieve an optimal decision. Topics covered will include optimization, sensitivity analysis, decision making, linear programming, and simulation.

Enforced Prerequisite at Enrollment: DA 302W
Writing Across the Curriculum

DA 402: Qualitative Analytics

3 Credits

The majority of non-numeric data is unstructured (e.g., blogs, emails, forums). DA 402 is an overview of data analytics techniques for non-numeric data (e.g., text, videos or images). The methodological reasons for a qualitative rather than a quantitative approach, and the underlying challenges with this type of data depend on the hypothesis or research question. Often, research questions and organizational problems can best be answered by qualitative, non-numeric data. Students in data analytics will be exposed to situations and conditions where these practical analyses would be applicable rather than students in data sciences who create or improve the algorithm for analysis. This course will enable students to pursue further study in these types of practical applications. Students need a strong background in statistics before scheduling this course.

Enforced Prerequisite at Enrollment: DA 201W Enforced Concurrent at Enrollment: (ENGL 202A or ENGL 202B or ENGL 202C or ENGL 202D)

DA 475: Data Analytics Implementation Capstone I

3 Credits

DA 475 is the first semester of a two-semester sequence and completion of the BS in Data Analytics. The course requirements enable the student to demonstrate the student's ability to use industry or organization data to develop a descriptive, diagnostic, predictive, and prescriptive analysis. This portion of the capstone addresses the understanding of the industry data, project scope, data journalism, and descriptive analysis.

Enforced Prerequisite at Enrollment: DA 302W and DA 305 and MIS 447
Enforced Concurrent at Enrollment: MGMT 409

DA 476: Data Analytics Implementation Capstone II

3 Credits

DA 476 is the second semester of a two-semester sequence and completion of the BS in Data Analytics. The course requirements will include a continuation of industry project (assigned in DA 475) and the remaining three-part analysis of organization-specific analysis (diagnostic, predictive, and prescriptive).

Enforced Prerequisite at Enrollment: DA 475

Data Sciences (DS)

DS 97: SPECIAL TOPICS

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DS 99: Foreign Studies

1-12 Credits/Maximum of 999

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

DS 120: Scripting for Data Sciences

1 Credits

Introductory course in computer-based scripting languages for use in data analyses. DS 120 Scripting for Data Sciences (1) This introductory course aims to teach practical skills in data manipulation and preprocessing scripting, including the fundamentals of an interpreted programming language for use in the data sciences. The goal of the course is to provide an accessible (no pre-requisites) and brief (1 credit) introduction, preparing students for hands-on data analytics assignments in DS 200 Introduction to Data Sciences. This practical course teaches fast manipulation of datasets on the Unix command line, scripting in spreadsheets, and fundamental control structures and data manipulation in a modern interpreted programming language. It is expected that students gain an overview of the available tools and techniques that allows them to acquire basic proficiency in select techniques in the course of applications in most other courses in Data Sciences.

DS 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DS 197G: Special Topics - GenEd

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is a GenEd course.

DS 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

DS 200: Introduction to Data Sciences

4 Credits

The course introduces students to data sciences, an emerging discipline focused on the knowledge and skills needed to harness the power of data to advance science and engineering, address complex national and global challenges, inform public policy, and improve human lives. It demonstrates how the discipline of data science integrates knowledge and skills in computer sciences, statistics, and informatics (with exposure to application domains such as life science, health science, cyber security, astronomy, etc). Through a combination of lectures, hands-on labs, and case studies, students are introduced to the "big picture" of data sciences including elements of understanding data through exploratory data analysis, testing hypotheses against data, building predictive models, all using real-world examples. The course also introduces students to opportunities to specialize in Applied Data Sciences (with an emphasis on data sciences applications in the real world), Computational Data Sciences (with an emphasis on well-engineered data analytics systems), and Statistical Data Sciences (with an emphasis on advanced statistical theory and methods).

DS 220: Data Management for Data Sciences

3 Credits

The course introduces students to the fundamentals of data models: organizing, managing, and using different types of data that arise in real-world applications. The course introduces students to several alternative data models and database solutions, emphasizing their strengths and limitations in the context of real-world applications. Topics covered include the relational databases, key-value stores, column-oriented databases, vector-space databases, graph databases, and distributed file systems together with their applications in solving real-world big data management problems. Upon completion of the course, the students will be able to choose an appropriate data model and database solution for a given application, and use the chosen database to organize, manage, and use data in the context of specific applications.

Enforced Prerequisite at Enrollment: C or better in CMPSC 121 or CMPSC 131
Enforced Concurrent at Enrollment: CMPSC 122 or CMPSC 132

DS 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

DS 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

DS 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DS 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

DS 300: Privacy and Security for Data Sciences

3 Credits

This course provides an overview about data privacy and security implications arising in the context of data analytics, as well as the techniques and processes for managing privacy and security of large-scale structured and unstructured data sources. Concepts are taught in reference to a variety of data types and application areas. Students will learn design principles to enhance privacy and security in data science practice.

Enforced Prerequisite at Enrollment: C or better in (DS 200 or STAT 200) and DS 220 and (IST 230 or CMPSC 360 or MATH 311W)

DS 305: Algorithmic Methods and Tools

3 Credits

This course teaches students how to formulate data science problems that arise in different applications that involve different types of data (tabular, sequence, network, matrix data); and introduces students to common strategies for formulating, and solving those problems. The course will cover (1) how to formulate data science problems (e.g., text analysis, biological sequence analysis, social network analysis, recommender systems) and how to evaluate alternative formulations, (2) common algorithmic methods and tools (as implemented in software libraries) for representing, processing, and sampling data, (3) how to apply the methods and tools to solve well-formulated data science problems. The course will also teach students how to understand and use results about the correctness, efficiency, and scalability of the techniques and tools, and they will learn to recognize when specific algorithmic tools can be used to improve the performance of their data science tasks. Through exercises, students will gain hands-on experience in problem formulation and solution development for data science problems that arise in applications.

Enforced Prerequisite at Enrollment: Prerequisites: (CMPSC 122 or CMPSC 132 or IST 242) and (IST 230 or CMPSC 360 or MATH 311W)

DS 310: Machine Learning for Data Analytics

3 Credits

The course teaches students the principles of machine learning (and data mining) and their applications in the data sciences. DS 310 Machine Learning for Data Analytics (3) The course introduces the principles of machine learning (and data mining), representative machine learning algorithms and their applications to real-world problems. Topics to be covered include: principled approaches to clustering, classification, and function approximation from data, feature selection and dimensionality reduction, assessing the performance of alternative models, and relative strengths and weaknesses of alternative approaches. The course will include a laboratory component to provide students with hands-on experience with applications of the algorithms to problems from several domains. Prerequisites for the course include basic proficiency in programming, elementary probability theory and statistics, and discrete mathematics.

Enforced Prerequisite at Enrollment: C or better in (CMPSC 122 or CMPSC 132) and (STAT/MATH 318 or STAT/MATH 414 or STAT/MATH 418) and MATH 220 and (IST 230 or CMPSC 360 or MATH 311W)
Recommended Preparation: DS 305

DS 320: Data Integration

3 Credits

Recommended Preparations: DS 310 Modern data-intensive applications (healthcare, security, public policy, science, commerce, crisis management, education, among others) increasingly call for integration of multiple types of data from disparate sources. This course introduces students to the principles and the practice of data integration, with particular emphasis on relational, knowledge-based, graph-based, and probabilistic methods. Carefully crafted assignments will help enhance the students' mastery of both the theoretical underpinnings as well as practical aspects of data integration. The students will work in teams to solve representative data integration problems drawn from real-world applications. Upon completion of the course, students should be able design, implement, and evaluate data integration solutions to support data intensive applications.

Enforced Prerequisites at Enrollment: DS 220 and (STAT/MATH 318 or STAT/MATH 414 or STAT/MATH 418)

DS 330: Visual Analytics for Data Sciences

3 Credits

The course introduces visual analytics methods and techniques that are designed to support human analytical reasoning with data. DS 330 Visual Analytics for Data Sciences (3) Visual analytics is the science of combining interactive visual interfaces and information visualization techniques with automatic algorithms to support analytical reasoning through human-computer interaction. People use visual analytics tools and techniques to synthesize information and derive insight from massive, dynamic, ambiguous, and often conflicting data, and to communicate their findings effectively for decision-making. This course will serve as an introduction to the science and technology of visual analytics and will include lectures on both theoretical foundations and application methodologies. The goals of this course are for students to (1) develop a comprehensive understanding of this emerging,

multidisciplinary field, and (2) apply that understanding toward a focused research problem in a real-world application or a domain of personal interest.

Enforced Prerequisite at Enrollment: C or better in (DS 200 or STAT 200) and (CMPSC 122 or CMPSC 132 or IST 242)

DS 340W: Applied Data Sciences

3 Credits/Maximum of 3

This course builds up the students' understanding of data sciences by discussing the fundamental principles in the context of real-world examples, and then shows specifically how the principles can provide understanding of many of the most common methods and techniques covered in previous data science courses. The course features three individual projects as well as a team project spanning the entire course. After taking this course, the students should be able to cover the entire pipeline of a data science project, from problem formulation to data science solutions. That is, start from a data driven problem, identify pertinent datasets to the problem and collect data, reason about the best techniques that should be used to solve the problem, implement algorithms and models, assess performance, and communicate actionable insights through both written reports and oral presentations. As one example, a fundamental principle of data science is that solutions for extracting useful knowledge from data must carefully consider the problem in the real world scenarios. This may sound obvious at first, but the notion underlies many choices that must be made in the process of data analytics, including problem formulation, method choice, solution evaluation, and general strategy formulation. Another fundamental principle is that predictive modeling can both inform and be informed by relevant knowledge (including theories, models, frameworks) of the relevant domains. This principle manifests itself throughout data science: in the specific design of many particular data sciences applications, and more generally as the basis for all intelligent solutions. In this course, this principle will be highlighted by case studies from multiple domains so that students can be inspired to apply this principle to their term projects. Lastly, as most data science projects are delivered as solutions as opposed to software deliverables, the ability for data scientists to communicate their results through concise and actionable insights plays a critical role in a data science project. This course places a particular focus on developing student writing abilities, through formal project reports and presentations. The individual projects will offer an interactive experience for students through feedbacks on their reports provided by the instructor. The term-long project will also train students in writing in a collaborative environment.

Enforced Prerequisite at Enrollment: DS 300 and (DS 310 or CMPSC 448).
Recommended Preparation: DS 330.
Writing Across the Curriculum

DS 396: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

DS 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DS 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

DS 402: Emerging Trends in the Data Sciences

3 Credits/Maximum of 9

This course exposes and trains students in the analysis of emerging trends in data sciences. DS 402 Emerging Trends in the Data Sciences (3) Data sciences is a rapidly evolving field affected by innovations in a variety of technical domains, including data generation, capture, storage, and processing. Staying abreast of new developments can be a daunting task but is critical for success. This course provides an in-depth analysis of a particular innovation, but starts with developing generally applicable skills for analyzing new technologies. In particular, the analytic framework considers the innovation's technical aspects and potential for widespread adoption, but also its social, organizational and policy implications. As a course focused on a new data sciences technology or analytic innovation, it is repeatable. As such, the course enables students to be exposed to the cutting edge of data sciences, supporting a forward looking view of the field for students across the university.

Enforced Prerequisite at Enrollment: DS 220

DS 410: Programming Models for Big Data

3 Credits

Recommended Preparations: DS 310; CMPSC 448 This course introduces modern programming models and related software stacks for performing scalable data analytics and discovery tasks over massive and/or high dimensional datasets. The learning objectives of the course are that the students are able to choose appropriate programming models for a big data application, understand the tradeoff of such choice, and be able to leverage state-of-the art cyber infrastructures to develop scalable data analytics or discovery tasks. Building on data models covered in DS 220, this course will introduce programming models such as MapReduce, data flow supports for modern cluster computing environment, and programming models for large-scale clustering (either a large number of data samples or a large number of dimensions). Using these frameworks and languages, the students will learn to implement data aggregation algorithms, iterative algorithms, and algorithms for generating statistical information from massive and/or high-dimensional data. The realization of these algorithms will enable the students to develop data analytic models for massive datasets.

Enforced Prerequisites at Enrollment: (CMPSC 122 or CMPSC 132) and (DS 220 or CMPSC 221)

Cross-listed with: CMPSC 410

DS 420: Network Analytics

3 Credits

Networks constitute a useful representational abstraction for data from many real-world applications, such as social networks, biomolecular networks, brain networks, among others. This course aims to cover the conceptual, algorithmic, and applied aspects of network analytics to prepare the students to analyze network data. Specific topics to be covered include different kinds, e.g., undirected, directed, weighted, unweighted, labeled, unlabeled, networks; network properties and

network statistics; statistical models of static and dynamic networks; classes of networks, different classes of network structure, e.g., random, small-world, modular hierarchical; methods for community detection, information propagation, node and link classification, network embedding, and their applications in life sciences e.g., predicting protein function, social sciences, e.g., analyzing social ties, e-commerce e.g., recommender systems.

Enforced Prerequisites at Enrollment: DS 220 and DS 310

DS 435: Ethical Issues in Data Science Practice

3 Credits

This course explores social and ethical dimensions of data science. Datafication can be a powerful force for good, but it can also do harm to individuals and society. Oriented primarily around case studies, the course investigates when, why, and how data is collected, analyzed, and used, and explores the ethical stakes of data-driven systems. In addition to diagnosing ethical problems-e.g., invasions of privacy, algorithmic bias, and lack of transparency and accountability-students are asked to think creatively and constructively about how the tools of data science can be used to realize shared ethical and social commitments. The course will be comprised of both "theory" and "lab" components. The former will contextualize ethical problems, introducing students to ethical theories and frameworks for addressing them. The latter will ask students to put those ideas to work, using the tools of data science to identify examples of ethical issues in data science practice, and proposing means of addressing them.

Enforced Prerequisite at Enrollment: DS 220

DS 440: Data Sciences Capstone Course

3 Credits/Maximum of 3

This course provides opportunities for students to develop their data science problem solving skills via a semester long group project. Projects typically involve analyses of real data. Students should be able to conceptualize a research project, plan its execution, implement the plan, and communicate their results. The capstone projects will integrate knowledge gained in technical subjects such as machine learning, data mining, data integration, and visualization. Other aspects of problem solving including considerations of security, privacy, fairness and ethical issues will often be required. At the end of the semester, students will communicate the results of their projects through a written report and an oral project presentation.

Enforced Prerequisite at Enrollment: C or better in DS 220 and DS 340W
Enforced Concurrent at Enrollment: DS 435 and (DS 305 or CMPSC 465)

DS 440W: Data Science Capstone

3 Credits

The Data Sciences capstone develops the research orientation and creative problem solving necessary for successful careers. The capstone develops these skills in the context of a semester long project, the solution to which requires integration of knowledge, skills and analytic techniques taught in the core curriculum. The Data Sciences capstone will also give student a real world experience in which they will need to work in teams and will be coached on ways to translate analytic outcomes into meaningful and actionable information for decision makers. The course is intended for seniors who have successfully completed the core courses. The capstone projects will integrate

knowledge gained in technical subjects such as machine learning, data mining, data integration and visualization. The project will also require students to analyze the privacy and security aspects of the problem as well as apply concepts of decision analysis. Students will also hone their presentation and technical writing skills, generating effective reports that not only explain their analytic processes, assumptions underlying the processes and outcomes, but also communicate the limitations of their approach and potential alternate strategies.

Enforced Prerequisite at Enrollment: Data Science Major or 7th semester standing
Writing Across the Curriculum

DS 441: Information Retrieval and Organization

3 Credits

The practices and foundations of access to textual and nontextual information using the principles of information retrieval and web search. Introductory course for undergraduate students in the last year of their academic program and graduate students covering the practices, issues, and theoretical foundations of organizing and analyzing information and information content for the purpose of providing access to textual and nontextual information resources. Introduces students to the principles of information storage and retrieval systems and databases. IST 441 Information Retrieval and Organization (3) This is an introductory course for Information Sciences and Technology senior and graduate students covering the practices, issues, and theoretical foundations of organizing and analyzing information and information content for the purpose of providing access to textual and non-textual information resources. This course will introduce students to the principles of information storage and retrieval systems and databases. Students will learn how effective information search and retrieval is interrelated with the organization and description of information to be retrieved. Students will also learn to use a set of tools, such as search engines, and procedures for organizing information. They will become familiar with the techniques involved in conducting effective searches of information resources.

Enforced Prerequisite at Enrollment: C or better in MATH 141 and DS 220 and (IST 230 or CMPSC 360 or MATH 311W)

DS 442: Artificial Intelligence

3 Credits

This course provides an overview of the foundations, problems, approaches, implementation, and applications of, artificial intelligence. Topics covered include problem solving, goal-based and adversarial search, logical, probabilistic, and decision theoretic knowledge representation and inference, decision making, and learning. Through programming assignments that sample these topics, students acquire an understanding of what it means to build rational agents of different sorts as well as applications of AI techniques in language processing, planning, vision.

Enforced Prerequisite at Enrollment: CMPSC 221. Enforced Concurrent at Enrollment: CMPSC 465
Cross-listed with: CMPSC 442

DS 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

DS 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

DS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

DS 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction

International Cultures (IL)

Digital Arts (DART)

DART 100: Introduction to Digital Art & Media Design

3 Credits

DART 100 Introduction to Digital Arts and Media Design (3) This course introduces students to concepts, skills, language and principles of practice in digital arts and design. This course introduces concepts and principles of practice necessary for digital arts and media design creative research and production. Students develop technical and critical proficiencies in design by applying problem-solving skills and exploring issues and ideas in digital arts and design; this is achieved by completing a series of individual and collaborative projects in a hands-on, digital studio setting.

DART 102N: Introduction to 2d Digital Art and Technology

3 Credits

DART 102N Introduction to 2d Digital Art and Technology (3) A General Education Integrative Studies, digital arts course introducing 2D graphics software through explorations of the 2d digital art medium. This is a General Education Integrative Studies, digital arts course introducing 2D graphics software through the creation of original digital artwork and the exploration of the 2d digital art medium. Course content explores technology, digital art, and visual culture, and concepts of identity, digital culture, and propaganda. Students create original artwork using graphic software such as Adobe Photoshop. They acquire skills and methods of research and development, creative production, critical review, reflection, and strategies for revision. Learning focuses on problem solving, exploration of creative options, visual communication, critique of images and ideas, and reflective writing. Students apply this process of visual research as a personal means of exploring topical issues and ideas, responding in informed ways to the images created by others, and reacting critically and creatively to the visual world around them. The course looks at topics such as the impact of technology on

personal identity and community practices as they are represented in the mix of visual culture. Methods of visual expression and graphic communication such as advertising, messaging and propaganda are examined and critically analyzed as cultural practices that serve many purposes, from education, entertainment, marketing, and politics. The purpose of the course is to introduce students to the creative use of digital technologies in responding critically and imaginatively to this changing visual world of image, text and story in which they live. By developing original digital artwork, students learn to formulate and communicate their ideas related to the course topics from a personal perspective and build an understanding of how they make an impact on a world beyond the classroom.

Bachelor of Arts: Arts
 General Education: Arts (GA)
 General Education: Humanities (GH)
 General Education - Integrative: Interdomain
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Creative Thinking
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

DART 200: Creative Research in Digital Arts & Media Design

3 Credits

DART 200: Creative Research in Digital Arts and Media Design (3) provides digital artists and designers with a studio-based exploration of critical, theoretical, and historical understandings of digital media and research. This course provides digital arts and media design majors with a studio-based exploration of critical, theoretical, and historical understandings of digital media processes and creative research methodologies. Students practice formal art and design skills, acquire and expand digital proficiencies, and reflect upon their creative research in studio-based inquiry and production.

Enforced Prerequisite at Enrollment: DART 100 or DART 202

DART 201: Focused Realization Studio

3 Credits

DART 201: Focused Realization Studio (3) Provides students with the opportunity for the realization of more focused studio explorations in digital arts and design disciplines. This course provides digital arts and media design students the opportunity for the realization of more focused digital media explorations, creative research and studio production while building upon material introduced in previous courses. Students will create individual and team-based studio work that investigates more advanced issues and problems in the digital arts and design from a variety of disciplinary understandings, resulting in a portfolio of completed and fully realized studio-based projects. A primary purpose of the course is to bring together students engaged in a range of studio explorations and create a synergistic group dynamic that will inform and advance the work of all participants; hence, personal initiative and strong self-learning skills are a given expectation.

Enforced Prerequisite at Enrollment: DART 200 enforced Concurrent at Enrollment: ART 211Y

DART 202: 2D Digital Art & Computer Graphics

3 Credits

DART 202 2D Digital Arts and Computer Graphics (3) Introduces 2D digital imaging techniques and concepts for the production of original art and design using graphics software. This course will introduce 2D digital art and design concepts and computer graphics imaging techniques for artists and designers through creative exploration of the medium using industry standard software like Adobe Photoshop and Illustrator. Students look at key concepts relating to art and digital culture, identity and visual culture through the development of conceptual criticality, creativity and problem solving to better understand how to express ideas visually in interesting ways. The course also looks at the impact of technology on visual culture and the relevance to artistic creation. In developing their artwork, students will learn to formulate their own ideas in relation to the topics and build an understanding of how they relate to them beyond the classroom. The course provides students the requisite 2D computer graphics and conceptual skills to take more advanced new media, digital arts and media design courses in the School of Visual Arts.

DART 203: 3D Digital Art & Design Fundamentals

3 Credits

DART 203 3D Digital Art and Design Fundamentals (3) Introduces 3D foundational skills for producing images, videos, objects, and interactive real-time virtual spaces with 3D software. This course will introduce 3D digital art and design foundational skills, concepts, and methodologies for producing images, videos, objects, and interactive real-time virtual spaces using 3D software. Student will master and apply 3D tools in exploring creative expression, design possibilities, and effective and compelling means of communication. 3D design concepts and tools extend the means by which we respond to change in a purposeful way & connected to a wide range of media formats that create, communicate, and respond to new ideas, forms, and questions. In this course, students will respond to project and exercise prompts through the production of textured polygonal surfaces, animated 3D scenes, image and video renders, and thoughtful critique. Students will engage with readings and film screenings through discussions and writing to encourage critical understanding and reflection. Students will come away from this course with a broad repertoire of creative design approaches and the ability to apply digital 3D production concepts, methodologies, and skills in publishing creative works in a variety of media settings including the web, film, print, and product design. The course provides students the requisite 3D computer graphics and conceptual skills to take more advanced new media, digital arts and media design courses in the School of Visual Arts.

Bachelor of Arts: Arts

DART 204: Animation Fundamentals

3 Credits

DART 204 Animation Fundamentals (3) Introduces time-based animation fundamentals along with core skills and knowledge necessary for producing animated work. This course focuses on creative work that is grounded in fundamentals and engages students in studio-based research methods to advance their skills and critical competence in time-based media. Students are introduced to core skills and knowledge necessary for producing animated works that communicate ideas, enhance user interface and interaction, and inspire critical reflection. Through a series of animation exercises students apply visual digital concepts in the creation of original animated projects that are further

enhanced by critical responses to screenings and discussions of key texts about animation. Initial exercises cover animation principles and tools, creating assets, production planning, layout and composition, keyframes, transformation and deformation, and interpolation. Character animation design and development, rigging, asset preparation, cameras are covered, along with various forms of interface prototypes such as interaction design, wireframes, interface elements. Students are also introduced to typography, sound design and Foley, motion design, color, masking, post effects, and color grading. Later in the course, students also develop a series of more ambitious animation projects using an iterative design process that further develops their digital competencies and creative and critical capabilities in time-based media.

DART 205: Creative Coding: Scripting for Art and Design

3 Credits

DART 205 Creative Coding: Scripting for Art and Design (3) Introduces object-oriented programming fundamentals for the production of expressive interactive experiences such as animations, interfaces and games. This course introduces object-oriented programming fundamentals for the production of expressive interactive experiences such as animations, interfaces and games. This course focuses on creative work that is exploratory and experimental and engage students in studio research methods to advance their skills and critical competence in new media. Students apply computation concepts based on readings and discussions of key texts about interactive design, media art, and game design to the creation of original interactive projects. The course offers a series of scripting exercises in which students learn to develop applications using both a top-down and bottom-up design process. Students also develop a series of more ambitious computational projects using an iterative design process. They produce detailed design treatments and working prototypes before turning in final applications developed using an object-oriented programming language. The course gives students the requisite computational and conceptual skills to take more advanced new media, digital arts and media design courses in the School of Visual Arts.

Bachelor of Arts: Arts

DART 206: Web Design and Visual Web Development

3 Credits

DART 206 Web Design and Visual Web Development (3) Introduces essential techniques and concepts of modern web design, focusing on how visual graphics and layout contribute to user experience. This course introduces students to essential techniques and concepts of web design, focusing on how visual graphics and layout contribute to user experience. Students will examine historical and emerging trends in web design, while producing original websites and digital media work. The course will include frontend skills such as designing icons, responsive layouts, and typography as well as essential development skills like HTML, CSS, and a general understanding of web protocols. Accessibility standards, multi-language audiences, and other vital aspects of online culture will be discussed to help students create flexible and modern web projects.

DART 213: 3D Printing for Artists and Designers

3 Credits

DART 213 3D Printing for Artists and Designers (3) This course explores the potential of 3D printing as a vehicle for creative expression. Studio sessions include hands-on printing with materials both hard and soft,

from bio-plastics to ceramics. The class is designed to be collaborative and interdisciplinary. We will investigate the role 3D printing can play in the working processes of Artists & Designers presently and in the future. We'll ask questions about the potential of this technology and we'll discuss our answers and opinions. Our class will spend a significant amount of time making and iterating designed objects and sculptural forms via 3D modeling, 3D scanning, and 3D printing. We will become familiar with 3d modeling software programs and printer control programs via course projects, tutorials, and one-on-one instruction. Our software and hardware choices will be focused particularly on tools that are open source and free, emphasizing a D.I.Y. approach to this emerging technology. We will also spend a great deal of time investigating a range of approaches to 3D printing from craft processes to industrial applications, large and small. Each week we will introduce a discussion topic and a hands-on project.

DART 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

DART 297: Special Topics

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

DART 300: Digital Portfolio Elements

3 Credits

DART 300: Digital Portfolio Elements (3) An intermediate level studio course in which students develop digital art and design work that promotes creative thinking and problem-based learning in producing digital media projects to be included in their digital portfolio. Students also gain increased ability and independence in the application of relevant digital tools and technologies. The structure of the assignments and overall course will prepare and guide the students towards increased critical awareness and professionalism through the creation of a body of work, greater understanding of the languages of art and design, and an increased ability to analyze and critique the work of others. This course relies on the active and collective participation of each student.

Enforced Prerequisite at Enrollment: DART 202 or DART 203 or DART 204 or DART 205 or DART 206

DART 301: Creative Collaboration Studio

4 Credits

DART 301 Creative Collaboration Studio (4) Provides students with an advanced studio exploration of interdisciplinary collaborative projects in the digital arts and design disciplines. This course will consider and develop advanced studio work that investigates, from a variety of disciplinary understandings, increasingly complex issues and problems in the digital arts and design disciplines. The course will emphasize collaborative and team-based projects, exploring the creative potential within the group dynamic as well as in relation to a client. A primary purpose of the course is to bring together students engaged in a wide range of studio explorations and create a synergistic group dynamic that will inform and advance the work of all participants; hence, personal initiative and strong self-learning skills are a given expectation.

Enforced Prerequisite at Enrollment: DART 300 and ART 211Y

DART 302: Digital Painting Studio

4 Credits

DART 302 Digital Painting (4) A digital arts studio course that focuses on creating and critically evaluating digital painting. This digital arts studio course focuses on creating and critically evaluating digital painting and builds upon previous digital arts studio courses by extending students experience with the creative exploration of the digital medium. This course will engage art and design students on the principles, techniques and relevant technologies to advance their skills and critical competencies in digital painting and concept art through hands-on studio production in collaboration with SoVA studio faculty. The course is for students enrolled in the Art BA, Art BFA, Art Education BS, Digital Arts and Media Design BDes or Photo BDes degree programs

Enforced Prerequisite at Enrollment: DART 202 and ART 250

DART 303: 3D Studio

4 Credits/Maximum of 8

DART 303 3D Studio (4) A digital arts studio course focusing on developing 3D computer generated digital art and design work. This course will build upon previous digital arts studio courses and provide students with an in-depth studio experience to further develop 3D production techniques and strategies; incorporating workflows for modeling, animation, and rendering in support of creative exploration of the medium.

Enforced Prerequisite at Enrollment: DART 202, and enrollment in the ARTBA_BA, ARBFA_BFA, AED_BS, DIGMD_BDES, IDS_BDES, PHOTO_BDES or ARTAB_BA degree program
Bachelor of Arts: Arts

DART 304: Motion Graphics Studio

4 Credits

DART 304 Motion Graphics Studio (4) A digital arts studio course focuses on developing and critically evaluating motion graphics and time-based media art and design. This course will build upon previous digital arts studio courses and provide students with an in-depth studio experience to further develop motion graphics and time-based media techniques and production strategies through the creative exploration of the medium. This course will focus on the production of creative work that is exploratory and experimental and engage digital art and design students on the principles, processes, methods and relevant technologies to advance their skills and critical competence in motion graphics, animation and time-based media. The course is for students enrolled in the Art BA, Art BFA, Art Education BS, Digital Arts and Media Design BDes or Photo BDes degree programs.

Enforced Prerequisite at Enrollment: DART 202

DART 305: Mobile and Touch Studio

4 Credits

DART 305 Mobile and Touch Studio (4) A studio course focusing on designing and developing interactive stories, games and expressive applications targeting mobile and touch screen devices This course teaches students how to design and develop interactive applications for mobile and touch screen devices. Through lectures, discussions

and exercises, students are exposed to the latest methods of gestural interface design. They produce through an iterative design process a series of short projects and learn to integrate interface elements, interactive storytelling techniques, and implement design patterns using a scripting language.

Enforced Prerequisite at Enrollment: DART 202 and DART 205

DART 314: Video Art and Time-Based Media

4 Credits/Maximum of 8

DART 314 Video Art and Time-Based Media (4 per semester/maximum of 8) A digital arts studio course that focuses on video art, new media and time-based work. This digital arts course provides an in-depth studio experience in video art and time-based media production through the creative exploration of the medium. The course will engage art and design students on the principles, methods and relevant technologies to help advance critical competencies and technical proficiencies with an emphasis on integrating digital video and time-based media into current studio practice.

Enforced Prerequisite at Enrollment: DART 304

Bachelor of Arts: Arts

DART 315: Game Studio

4 Credits/Maximum of 8

DART 315 Game Studio (4 per semester/maximum of 8) A digital arts studio course concentrating on authoring interactive games as a creative vehicle for self-expression. This digital arts course provides an in-depth studio experience that will concentrate on authoring and critically evaluating interactive games as a creative vehicle for self-expression. This course will focus on creative work that is exploratory and experimental and engage students in research methods to advance their skills and critical competence in new media. Students will learn fundamentals of game design as it applies to board games and digital games. Through a series of small projects, students will design and develop both individually and in teams, analog, 2D and 3D game prototypes using a scripting language.

Enforced Prerequisite at Enrollment: DART 202 and DART 205

DART 400: Digital Arts & Media Design Capstone I

4 Credits

DART 400 Digital Art and Design Capstone I (4) Provides digital arts and media design students an opportunity to conceptualize an undergraduate thesis. Each student will have the opportunity to identify the primary issue of theoretical concern based on his/her personal interest, and pursue research in a rigorous, in-depth manner. The preparation and initiation of the undergraduate thesis will occur within a collaborative team-based studio environment. Students in DART 400 will begin to research and synthesize disciplinary and interdisciplinary understandings through the exploration of critical, theoretical, and historical perspectives of digital media. This understanding will foster the spirit of in-depth arts and design inquiry and research, and will build upon arts and design awareness, skills, and methods introduced in previous courses. The student will integrate studio and theory while creating a significant work of digital art or design. The student will work with a faculty adviser(s) in addition to the instructor of record for the course towards the

completion of design documents, proof of concepts and prototypes for the undergraduate thesis.

Enforced Prerequisite at Enrollment: DART 301 Enforced Concurrent at Enrollment: ART 476

DART 401: Digital Art & Media Design Capstone II

4 Credits

DART 401 Digital Art and Media Design Capstone II (4) Provides digital arts and media design students an opportunity to implement an undergraduate thesis. This course is the second part of a two-course undergraduate digital arts and media design thesis to be taken in the final year of study. Each student will have the opportunity to further explore the primary issue of theoretical concern based on his/her personal interest, and complete research in a rigorous, in-depth manner. The creation and implementation of the undergraduate thesis will occur within a collaborative team-based studio environment. Students in DART 401 will build upon the preliminary research and studio investigations undertaken in DART 400. The thesis will synthesize the student's arts and design awareness, skills, and methods introduced in previous courses. The student will integrate studio and theory while creating a significant work of digital art or design, which demands a high degree of responsibility, self-motivation, and personal commitment. The student will work with a faculty adviser(s) in addition to the instructor of record for the course towards the completion and presentation of the undergraduate thesis.

Enforced Prerequisite at Enrollment: DART 400

DART 404: Animation Studio

4 Credits/Maximum of 8

DART 404 Animation Studio (4 per semester, maximum of 8) An in-depth digital arts production course focusing on exploring animation and time-based media through the development of self-initiated projects. This course will build upon previous digital arts studio courses and provide students with an in-depth studio experience to produce animated and time-based media works. In animation studio, students will explore animation and time-based media in relationship to their creative interests and studio practice while seeking to integrate course lectures, discussions and screenings into the realization of new work. This course is receptive to all forms of traditional and experimental animation techniques (analog, digital, hybrid) as well as creative and time-based media approaches.

Enforced Prerequisite at Enrollment: DART 303 or DART 304 or DART 314
Recommended Preparation: DART 204

DART 405: Physical Computing Studio

4 Credits/Maximum of 8

DART 405 Physical Computing Studio (4 per semester, maximum of 8) A studio course concentrating on interactive physical systems using software/sensors that can sense and respond to the analog world. This course will build upon previous digital arts studio courses and will concentrate on interactive physical systems using software/hardware that can sense and respond to the analog world. Physical Computing Studio will focus on creative work that is exploratory and experimental and engage students in research methods to advance their skills and critical competence in new media. Assignments will cover both a technical introduction to basic electronics, analog circuit design,

and micro controllers as well as design concepts and philosophies for building interactive art objects.

Enforced Prerequisite at Enrollment: DART 202 and DART 205

DART 406: Advanced Web and Multimedia Publishing Studio

4 Credits/Maximum of 8

DART 406 Advanced Web and Multimedia Publishing Studio (4 per semester/maximum of 8) A digital arts studio course concentrating on advanced web and multimedia publishing practice for art and design. This course will build upon previous digital studio courses and provide students with an in-depth experience on web authoring and multimedia publishing practice through readings, discussions and hands-on studio production towards the realization of new work and representative online portfolio.

Enforced Prerequisite at Enrollment: (ART 101 or DART 203 or DART 305) and 8 credits in DART
Bachelor of Arts: Arts

DART 410: Integrating Media: Convergence in Practice

4 Credits/Maximum of 12

DART 410 Integrating Media: Convergence in Practice (4 per semester/maximum of 12) A studio course focusing on integrating new media concepts and related technologies into digital arts, media design and contemporary studio practice. This course is designed to provide an intensive studio experience for more focused creative research, media exploration and studio practice in new media. Students will seek to engage and synthesize a wide range of technologies, techniques and digital workflows in 2d, 3d, 4d or interactive media towards the development of a compelling and cohesive body of work.

Enforced Prerequisite at Enrollment: DART 302 or DART 303 or DART 304
Bachelor of Arts: Arts

DART 411: Advanced New Media: Capstone

4 Credits/Maximum of 8

DART 411 Advanced New Media: Capstone (4 per semester/maximum of 8) A new media and digital arts capstone course concentrating on the integration of art and technology in advanced thesis projects. This is an advanced senior level capstone experience for new media. The course concentrates on advanced media theory and discourse, the integration of new media technologies into contemporary studio art and design practice, and on the creation and documenting of senior thesis projects. DART 411 will also focus on the final preparation of professional portfolios. Student thesis projects may cover a range of digital multimedia applications in sound, image, motion, interactivity, interface design, 2D, 3D, 4D media authoring, etc. in relation to their focus in new media art and design practice.

Enforced Prerequisite at Enrollment: (DART 302 or DART 303 or DART 304 or DART 305) and 12 credits in DART and 7th semester standing or higher
Recommended Preparation: ART 101 or DART 206 or DART 406

DART 412: Portfolio Design and Professional Practices

3 Credits

DART 412 Portfolio Design and Professional Practices (3) This course emphasizes the development of presentation skills for digital artists in

audience/client interactions. This course is the concluding experience for all students enrolled in the Digital Arts Certificate (DAC) program. The course provides opportunities for students to learn about the practical application of professional practices and portfolio development tools specific to careers that require knowledge of digital art and design principles and culminates in the development of a professional-quality creative portfolio. The course is taught fully online and comprises coursework supported by online presentations and guest talks, assigned readings, and other resources and reference materials relevant to the professional development of digital artists and designers. Students engage in both individual and team-based projects and interactions via activities such as asynchronous group discussions and guest talks delivered by streaming media. Students are required to have access to the Internet.

Enforced Prerequisite at Enrollment: DART 300

DART 495: Internship

1-18 Credits/Maximum of 18

Supervised on or off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

DART 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

DART 497: Special Topics

1-9 Credits

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Digital Media, Arts, and Technology (DIGIT)

DIGIT 100: Introduction to Digital Humanities

3 Credits/Maximum of 3

The traditional theories and methods that underwrote the study of literature, history, and philosophy in the 20th century are now being supplemented with new techniques and tools. While this class will give a sense of the breadth of theoretical writings that have defined digital humanities (DH), we will imagine how current debates in DH share similarities to a longer history of philosophy, literature, and technology. Intended for students unfamiliar with digital humanities, this course surveys an array of tools, techniques, and cultures related to the field. We will be reading a survey of literature that emerged alongside computing and digital humanities properly. This course will challenge you to experiment with new techniques, and students who are resourceful, creative, and energetic will find this course an ideal forum to test their curiosity and inquisitiveness.

General Education: Humanities (GH)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

DIGIT 110: Text Encoding Fundamentals

3 Credits

DIGIT 110 teaches students standardized encoding techniques for archival quality data creation, storage, and analysis.

DIGIT 210: Large Scale Text Analysis

3 Credits

Course teaches students programmatic and algorithmic techniques and tools for accessing and analyzing unstructured text.

DIGIT 297: Special Topics

3-6 Credits/Maximum of 6

Formal courses given infrequently to explore, in dept, a comparatively narrow subject which may be topical or of special interest.

DIGIT 400: Digital Project Design

3 Credits

This course will introduce students to the tools and resources available to design and implement digital project.

Prerequisite: DIGIT100 , DIGIT110 , DIGIT210

DIGIT 409: Advanced Digital Creations

3-6 Credits/Maximum of 6

Students will develop 3d digital creation skills in relation to their field(s) of study. DIGIT 409: Advanced Digital Creations is a problem-based learning class that uses the digital media concepts and tools introduced in Art 168 to develop an in-depth understanding of 3d digital art. They will enhance their creative and philosophical sensibilities in the technology, software, and media relevant to the field (s) of study they are pursuing. Through a series of learning problems, students will synthesize advanced skills and knowledge needed to accomplish techniques used in the creation of digital 3d imagery. They will integrate 3d sculpting, modeling, animation, and/or painting practices with computer-based image processing for creative, and professionally oriented results. They will develop critical and conceptual sensibilities needed to discuss and evaluate their work and the work of others using these methods. Students will identify, research, and analyze effective professional and creative practices in the field of digital creativity with emphasis on developing skillful digital processing techniques. These practices include creating mockups of concepts, art-making practices for enhanced digital workflow, and choosing the 3d processing techniques most appropriate for the end-use of the work. The digital medium has a relatively short history, however, as the advancement of digital technology continues these techniques have entered the popular mainstream. This shift has raised challenges in graphic-reliant fields such as the arts, engineering, advertising, simulation, and gaming. This course will give students of these fields the opportunity to develop their artistic skills further than possible in Art 168. Students will analyze and assess the factors related to their fields in in order to make sound design decisions.

Prerequisite: ART 168

DIGIT 410: Data Visualization

3 Credits

In-depth understanding of techniques and software for data visualization. Students will be introduced to complex data sets and learn how to present findings in interactive and innovative ways.

Prerequisite: PSYCH200 or STAT 200

DIGIT 430: Simulations of Human Behavior

3 Credits

In Modeling and Simulation, students will develop an understanding of the systems, processes, tools, and implications of this field.

Prerequisite: 3 credits of programming; 3 credits of mathematics
Cross-listed with: GAME 430

DIGIT 489: Professional Development in Digital Media, Arts, and Technology

1 Credits/Maximum of 2

Students taking this course will have completed or be enrolled in Digital Project Design (DIGIT 400) or Senior Project (DIGIT 494) or Internship (DIGIT 495). This class will extend the content knowledge of those courses into professional applications. Specifically, students will gain experience in communicating their digital competence orally and in writing for their post-baccalaureate life. Students will complete a professional digital portfolio of their work that presents themselves, their ideas, and their projects. They will write and revise cover letters, resumes, and portfolio materials to feature their DIGIT projects as they prepare for a career or graduate school. Topics include: - Mapping potential careers and/or graduate programs - Writing, reviewing, and revising job letters, personal statements - Developing resumes and/or curriculum vitae - Mock job interviews - Portfolio development and review - Planning, sharing, and delivering project presentations Conference participation

Concurrents: DIGIT 400 or DIGIT 494 or DIGIT 495 Recommended preparations: Students should have taken or should be taking concurrently any of the following courses: DIGIT 400, DIGIT 494, or DIGIT 495

DIGIT 494: Senior Project

3 Credits

DIGIT 494 is a senior capstone course that allows students to design, complete, and present an independent digitally based project.

Prerequisite: DIGIT100 , DIGIT110 , DIGIT400

DIGIT 495: Internship

3 Credits

A professional internship opportunity with a business, organization, or non-profit agency.

Prerequisite: DIGIT100 , DIGIT110 , DIGIT400

DIGIT 496: Independent Study

3-9 Credits/Maximum of 9

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal course.

DIGIT 497: Special Topics

3-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

DIGIT 499: Foreign Study

3-6 Credits/Maximum of 6

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Digital Multimedia Design (DMD)

DMD 100: Digital Multimedia Design Foundations

3 Credits

This course introduces students to concepts, skills, language and principles of practice in art and design, communication, and information sciences. DMD 100 Digital Multimedia Design Foundations sets a strong foundation of design process and thinking skills to support and facilitate creative and reasoned approaches to ambiguous and ill-defined problem spaces related to the fields of art and design, communication, and information sciences. Design leadership balances design management with creative vision to guide creative teams, frame complex issues, and effectively communicate. To prepare students for transformative design leadership roles, students will think, evaluate, and respond to local and global issues leveraging the digital medium and peer collaboration. In this course, students are exposed to basic concepts, skills, ethics, language, and other principles of practice by engaging in critical discussions, activities, projects, writing, and work presentation. Students will be introduced to a basic historical perspective of art and design, technology, and communications through case studies and readings. They will write critical reflections on current and historical issues, ethical quandaries, and social impacts in blog posts to generate peer discussion. Independent and collaborative activities will guide students through skill mastery and research-based design projects will reinforce a breadth of concepts including universal design principles, research methods, reasoning and decision making strategies, speculative design and forecasting, curation and remix, narrative and communication, community, tools and technology, and professionalism.

DMD 300: Digital Multimedia Design Studio

3 Credits

Students adapt skills and knowledge of digital media to solve problems and communicate ideas in producing collaborative multimedia projects. In DMD 300 Digital Multimedia Design Studio, students synthesize the concepts, theories, and applications acquired in the introductory courses and begin to think critically about their professional objectives. Students will work on projects aimed to help them understand available learning pathways and real world applications based on their scholarly and professional interests. Students will work collaboratively to investigate a problem space, conduct a needs assessment, write a design plan

or proposal, develop deliverables, and implement and evaluate the final product(s). Students will develop a sense of stewardship over the project development process by completing project milestones that reinforce time management behaviors, participating in team building activities that facilitate discussion and interaction, co-authoring project proposals that prompt critical analysis, and distributing production tasks to encourage ownership in completing both defined and open-ended assignments. Students will also be required to thoroughly document and reflect on the production process and project impact through blogging and discussions. Through the duration of the course, students are encouraged to interact with industry advisors for feedback and direction as they work through real-world challenges in their selected digital tools and methodologies.

Enforced Prerequisite at Enrollment: DMD 100 and 9 credits from the following list: IST 140, IST 250, COMM 230W, COMM 215, DART 202, ART 211Y

DMD 400: Digital Multimedia Design Capstone

3 Credits

In this capstone, students develop portfolio projects by applying creative production concepts, tools, and approaches to a contemporary issue. DMD 400 Digital Multimedia Design Capstone is an advanced, senior-level capstone experience, students will synthesize the concepts, tools, and approaches learned throughout their studies and demonstrate competencies in creative and technical production in an applied human-centered thesis project. Students will work as change agents to address a critical, real-world, local or global issue or challenge and work through the design process to complete a capstone project. Students will explore processes in interdisciplinary problem spaces and connect to broader context of design decisions promoting agency over project outcomes, applications, deliverables, and knowledge-sharing. Student projects will include design proposals and/or implementations for digital or physical products and systems. To examine their understanding of design leadership, students will practice design thinking and production methods to generate project ideas, discover opportunities, and communicate intent; practice systems thinking to define the boundaries and impact of a problem space; and practice critical thinking to evaluate research issues, develop meaning, and inspire creative output. Students will be able to deploy project management skills to ensure on-time delivery of final project, communicate project concepts through visual models, and will leverage a variety of digital resources and methods to disseminate work in online contexts including social media, websites, and others.

Enforced Prerequisite at Enrollment: DMD 100 and DMD 300

Earth and Mineral Sciences (EMSC)

EMSC 100S: Earth and Mineral Sciences First-Year Seminar

3 Credits

Writing, speaking, and critical thinking skills applied to topics of general interest in Environmental and Materials Science. EM SC 100S Earth and Mineral Sciences First-Year Seminar (3) (GWS;FYS) The EMS First-Year Seminar is designed to encourage students to begin the important process of 'thinking for a living.' The primary focus of the seminar is to promote critical reading and thinking skills, and to help students develop effective written and oral arguments. Students learn the importance of reading, sharing ideas and collaborating, through independent and group

research, discussion and debate. We want our students to think about some of the major issues facing the world today, the role that science and technology have played in defining and addressing these issues, the way in which present-day thinking has been shaped by the past, and the development of scientific thought. The Seminar's content focuses on communication skills, but these are addressed within the context of issues relevant to the disciplines represented in EMS. As such, the discussions range across topics such as the Earth and its resources; scientific and technical aspects of global habitability; development of the advanced materials necessary for sustaining and advancing civilization in the 21st century; and the social, economic, and political factors that shape and constrain society's view of the Earth system. Students undertake three to five major writing projects throughout the semester, as well as several smaller one to two paragraph written assignments. Grades are determined from their performance on the written papers, oral presentations, and in-class participation. The Seminar is a required course for all EMS first-year students at the University Park campus and, together with English 015 and either English 202 or Speech Communications 100, will satisfy the Writing and Speaking requirements of General Education.

First-Year Seminar

General Education: Writing/Speaking (GWS)

EMSC 101: Resource Wars

3 Credits

"Resource Wars" presents an analysis of natural resources and how competition for them shapes national and international cultures and geopolitics. EM SC 101 Resource Wars (3) (US;IL) The faculty of the College of Earth and Mineral Sciences are uniquely qualified to teach "Resource Wars", a course that presents an analysis of natural resources and how competition for them shapes contemporary and historical culture and geopolitics. "Resource wars" will examine the extent to which the Gulf War of 1991, the explosive conflict between the United States and Islamic extremists, and present engagement in Iraq are manifestations of a foreign policy that comes from a desire for resource security. While the current Iraq war is the most recent manifestation of the clash between US and IL cultures, there are many examples of past resource wars in world history. Although the present conflict in the Middle East is about petroleum, past conflicts involve the entire spectrum of natural resources from gold and diamonds to rubber and tea to water, clean air, and living space. Class discussion will meld the technical aspects of discovery and extraction with its impact on society from a cultural and geopolitical points of view (US & IL). Technical analysis starts with the geology of the natural resource. The extraction, harnessing, or mining of that natural resource and resource transportation come next. The use of that natural resource as a material follows. Of course, short term and long climatic instability may play roles. The human elements (US & IL) involved in the trading and development of the resource lead to both armed interstate conflicts and intrastate disputes. Cultural questions might include how the digital age impact resource control and trade, how global resource distribution impacts energy security and utilization, and how international resource competition impacts the climate. Ultimately, the class is led to an understanding about how scarcity has impacted cultures throughout human history (US & IL). The tentative plan is that each lecture period consists of two parts starting with a moderator (the lead faculty member throughout the entire semester) who summarizes the resource under discussion in a 10-15 minute introduction. Then, appropriate EMS faculty will offer detailed accounts of their particular expertise. This format requires two 75-minute classes per week (30 per semester). The moderator shall be responsible

for grading the class including the discussion and written responses in a large classroom format (50+ students) taught in one lecture hall. Active learning shall include discussion sessions with a wireless response pad technology for in-class interaction between student and instructor.

International Cultures (IL)
United States Cultures (US)

EMSC 121: Minerals and Modern Society

3 Credits

Production and use of mineral resources in modern society with an emphasis on the interrelationships and their effect on the Earth system.

Bachelor of Arts: Natural Sciences

EMSC 125: Plastics in the Environment

3 Credits

This course introduces students to various aspects of plastics in the environment. Major topics covered include the production and uses of plastics, the science of plastics in the environment (distribution and degradation), the impacts of plastics on ecosystems and humans, and potential solutions. The various ways in which plastics are used in a variety of products and applications are discussed. Plastics production has accelerated and evolved over the past several decades, now utilizing multiple raw materials, including recycled plastics, to create different types of plastics, including primary (nurdles) and secondary forms. Themes covered under the fate of plastics include timescales of transport and degradation, measurement techniques, size range classifications, and the distribution in the environment (water, soil, and air). The global plastics budget is discussed, including the low rate of recycling. The degradation of plastics includes fracturing, photolysis, and microbial decomposition. Ecological impacts are separated into those due to macroplastics and microplastics. Effects on humans include those resulting from the consumption of food and from inhalation of airborne fibers. Existing laws and policies surrounding plastics are discussed at local, national, and international levels, including bans on certain types of plastics (e.g., bags and microbeads). The course culminates in the analysis of solutions to plastics pollution, including recycling, bioplastics, compostable plastics, and non-plastic replacements. This course will provide a BA student with the intended breadth of a BA degree.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

EMSC 240N: Energy and Sustainability in Contemporary Culture

3 Credits/Maximum of 3

In this course students are guided through an engaging exploration and the critical evaluation of selected media (e.g., books, film) in contemporary culture on topics related to energy and sustainability. Three selections are used each term, typically two books and one film. Students consider the subject matter in light of humanistic values, where the science, ideas and history presented in the selected media are critically evaluated relative to the viability of our planet's ability to support life. Opening lessons cover the foundational science of energy and sustainability, with a global perspective and consideration of the

human dimension. The science is presented without technical jargon or advanced mathematics, to promote a genuine and sound understanding of these essential concepts for college-level students of all academic backgrounds. Learning units are devoted to each media selection, with all content, activities and assessments within the unit contributing to this concentrated focus. After completing this course, students will possess the foundational science knowledge necessary to evaluate contemporary topics related to energy and sustainability, from the perspective of universal humanity on a planet of finite resources. This knowledge prepares students to develop observations, questions and opinions on topics related to energy and sustainability and to self-express them, in both written and oral presentations, to others with different backgrounds and points of view. Students will have the foundational knowledge necessary to be skilled critical readers of energy and sustainability subject matter, knowing how to raise (and answer) questions related to scientific clarity and soundness and how to test assumptions and scope of arguments, especially as related to inclusion of humanistic values and planetary limits. This knowledge prepares students to be willing and able to avoid entrenched ideology-based positions on issues related to energy and sustainability and to develop, instead, a personal position based in science and data with a humanistic perspective. Students will gain the knowledge of credible resources and organizations for ongoing research related to energy and sustainability and be prepared to participate in public dialogue on some of the most challenging and complicated issues of our time, including activities such as letters to the editor, online commenting, political engagement, and public advocacy.

Bachelor of Arts: Humanities
Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)
General Education - Integrative: Interdomain
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Soc Resp and Ethic Reason

EMSC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EMSC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EMSC 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

EMSC 302: Orientation to Energy and Sustainability Policy

1 Credits

Orientation to goals of the Energy and Sustainability Policy program and resources available to help students succeed. EM SC 302 Orientation to Energy and Sustainability Policy (1) EM SC 302 provides an orientation to the goals of the Energy and Sustainability Policy (ESP) degree program, helping students to successfully prepare for the five program

learning outcomes. The course is conducted as a group seminar, with topics that are designed to provide an initial understanding of program outcomes: energy industry knowledge, global perspective, analytical skills, communication skills, and sustainability ethics. Students are expected to actively participate in discussions and work hands-on with online tools in activities that will allow them to gain an understanding of what it means to successfully participate as an ESP student in different educational and course contexts. Students are evaluated based on active class participation, written assignments, and class presentations. This course is intended to be taken during the first semester after being admitted to the ESP program.

EMSC 420: Energy and Modern Society

3 Credits

Technology and economics of energy resources, production, and consumption; environmental factors, exhaustion, new technology.

Enforced Prerequisite at Enrollment: 3 credits of SOC

Cross-listed with: SOC 420, STS 420

Bachelor of Arts: Social and Behavioral Sciences

EMSC 440: Science Diving

4 Credits

Advanced scuba diving skills applied to underwater research. EM SC 440 Science Diving (4) EM SC 440 is a four credit intermediate science diving course for students already holding a basic open water scuba diving certification from an internationally recognized certification agency (e.g. PADI, NAUI, CMAS, YMCA, SSI etc.). Scientific diving is concerned with the observation of underwater phenomena and the acquisition of scientific data. This course introduces students to advanced scuba diving skills following the standards established by the American Academy of Underwater Sciences (AAUS) – with a significant emphasis on diver safety. The course covers theoretical aspects of the physics of diving, dive physiology, and underwater environments. There is a strong emphasis on diver safety with theoretical and practical training in cardiopulmonary resuscitation, diving-related first aid, accident management and dive rescue. The course will cover advanced recreational diving techniques, including deep diving and enriched air (nitrox) diving. A significant component of the course will involve scuba diving accident analysis, the focus of the course textbook. The course will also include an introduction of advanced underwater sign language. The course will include classroom sessions, pool sessions, and open water dives focusing on underwater skills development for eventual application in research settings. Each government or university underwater research program certifies its own divers based on standards that, at a minimum, conform to those of the AAUS. Successful completion of the course will allow the student diver in training to enroll in EM SC 441, Advanced Science Diving. Successful completion of EM SC 441 will allow the student diver in training to apply for science diver certification from the Penn State Science Diving Program. Certification is also dependant on a medical examination and is at the discretion of the University Dive Safety Officer; it is not automatically offered on completion of the course. The course is usually offered once a year in the spring semester and will involve several day trips (usually at weekends) to various river, lake, and quarry locations within the state. There will be an additional fee charged to cover the costs of the open water dives and administrative charges for recreational dive certifications.

Prerequisite: basic open water SCUBA certification and approval of program

EMSC 441: Advanced Science Diving

4 Credits

Advanced scuba diving skills applied to underwater data collection and research. EM SC 441 Advanced Science Diving (4) EM SC 441 is a four credit advanced science diving course for students who have completed EM SC 440 (Science Diving), an equivalent course at a recognized AAUS member institution, or have been approved by the University Dive Safety Officer based on acceptable demonstration of practical and academic dive experience. Students must have a minimum of 20 logged dives beyond their basic open water certification dives by the start of the course. Scientific diving is concerned with the observation of underwater phenomena and the acquisition of scientific data. This course introduces students to some of the basic skills and techniques used in scientific diving, following the standards established by the American Academy of Underwater Sciences (AAUS) – with a significant emphasis on diver safety. The course covers theoretical aspects of science diving techniques. The course will focus on advanced techniques in underwater ecology, geology, paleontology and archaeology, leveraging expertise from PSU faculty in these disciplines. The course will include classroom sessions, pool sessions, and open water dives. The classroom and pool sessions and the open water dives will involve skills development and their application in research settings. Research will involve a variety of projects (e.g. fish surveys, lake sediment sampling for climate reconstruction, underwater mapping) – the exact nature of which will vary depending on the areas of expertise of the faculty and students involved. Each government or university underwater research program certifies its own divers based on standards that, at a minimum, conform to those of the AAUS. Successful completion of the course will allow the student diver in training to apply for science diver certification from the Penn State Science Diving Program. Certification is also dependant on a medical examination and is at the discretion of the University Dive Safety Officer; it is not automatically offered on completion of the course. The course is usually offered once a year in the fall semester and will involve several day trips (usually at weekends) to various river, lake, and quarry locations within the northeastern United States. There will be an additional fee charged to cover the costs of the open water dives and administrative charges for recreational dive certifications.

Prerequisite: successful completion of EM SC440 or waiver by University Dive Safety Officer based on acceptable demonstration of practical and academic dive experience

EMSC 460: Environmental Data Analytics

3 Credits

With the rapid increase in quality and quantity of environmental data, emerging data-driven analytical methods are becoming important for discovering patterns and making predictions about our Earth and environmental systems. The datasets, such as in-situ measurements, remote sensing observations acquired by satellite, airborne, and UAV systems, Earth system modeling outputs, and energy datasets, are generally characterized by different spatial and temporal scales and coverage, complex data structures, high dimensionality, and large data volume. It is important to understand the principles, strengths, and limitations of data-driven methods for Earth and environmental science applications, and to learn the practical skills for applying them to real-world datasets. This course introduces various data analytical methods focused on machine learning for Earth and environmental sciences.

A range of supervised and unsupervised methods for regression, classification, and clustering problems will be discussed with real-world examples, including but not limited to climatological data, biodiversity data, remote sensing imagery classification, and geomorphological analysis. This 3-credit course is designed to include lectures and class projects. The lectures will focus on the basic principles and environmental and earth science applications of machine learning algorithms, including regression (e.g., OLS, Ridge, LASSO, PCR), gradient descent optimization, classification (e.g., logistic regression, naïve Bayes, decision trees, random forest, support vector machine), neural networks and deep learning, and clustering (e.g., k-means, hierarchical, self-organizing map) techniques, etc. The class projects will include practical programming exercises in using these techniques for various real-world datasets. Students are encouraged to bring datasets from their own domain (e.g., geography, geoscience, materials science, meteorology, and energy) for analysis in the final project.

Prerequisite: (GEOG 365 or GEOG 485 or GEOG 489 or GEOSC 210 or GEOSC 444 or METEO 273 or EME 210 or MATSE 219 or CMPSC 101 or CMPSC 200 or CMPSC 201) and (MATH 110 or MATH 140 or MATH 140A or MATH 140B or MATH 140E or MATH 140G or MATH 140H)

EMSC 470W: Undergraduate Collaborative Research in Earth and Materials Sciences

1-6 Credits/Maximum of 6

Interdisciplinary research seminar involving students in the process of discovery, writing, and debate on issues of broad interest to Earth and Materials Sciences.

Writing Across the Curriculum

EMSC 494: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

EMSC 494H: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

EMSC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EMSC 497: Special Topics

1-9 Credits/Maximum of 18

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest. Several different topics may be taught in one year or semester. A specific title may be used in each instance and will be entered on the student's transcript.

Earth Sciences (EARTH)

EARTH 2: The Earth System and Global Change

3 Credits

EARTH 2 is a broad introduction to the Earth and to the forces and processes that shape the present-day global environment. The course focuses on global-scale changes, both natural and human-induced. These include: global climate change, destruction of stratospheric ozone, tropical deforestation, species extinction, and the loss of biodiversity. The discussion of these modern environmental issues occupies about 40% of the course. Unlike other "environmental" courses, this one sets these issues in the context of the long-term evolution and natural variability of the Earth systems. Thus, the course is structured around three major themes—the issues of global change, time scales of change, and understanding the Earth as a system. By the end of this course, we expect students to: 1) Recognize that: - the Earth operates as a complex system, - there is considerable interaction between the different components of this system (e.g. atmosphere, oceans, solid Earth, and biota), - changes in one part of the system can be expected to impact all others to a greater or lesser degree. 2) Develop an understanding of how the Earth system operates at the global scale, and the consequences this has for regional variability. 3) Understand how this system has evolved through time. 4) Understand how to use systems and graphical analyses to predict system response to perturbations. As a result of this course, we expect students to: 1) Synthesize this information to better appreciate the complexity of modern global change issues. 2) Be in a position to make more informed judgments on the nature and seriousness of these issues.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

EARTH 10: Energy and Earth's Climate

1 Credits

Energy and Earth's Climate examines the immense value we get from energy, where we get most of our energy, why the energy system must change eventually, and why a faster change would help us. Our ancestors burned trees and whales far faster than nature produced more, gaining good from the energy but causing big problems. Our use of fossil fuels allows us to live well, and to let the whales and trees grow back. But highly confident science shows that fossil-fuel-sourced carbon dioxide promises even bigger problems in a warming future, if we don't change course. This course is based on the widely viewed PBS series Earth: The Operators' Manual. In the series, Dr. Richard Alley's (Evan Pugh University Professor of Geosciences) presents an objective, accessible assessment of the Earth's problems and possibilities. Through this course, successful students will be able to: - Recognize the natural and human-driven systems and processes that produce energy and affect the environment - Explain scientific concepts in language non-scientists can understand - Find reliable sources of information on the internet - Use numerical tools and publicly available scientific data to demonstrate important concepts about the Earth, its climate, and resources

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

EARTH 100: Environment Earth

3 Credits

This course is designed to introduce students to issues surrounding the development and maintenance of human civilization on Earth. This includes developing an understanding of how human population has grown over time, the resources required by humans and how this has changed over time, and the by-products of activities related to resource extraction on the environment and, hence, on human health and the cost of maintaining human civilization. A considerable focus is placed on developing critical thinking skills by using scientific data to describe, and evaluate the relative importance of, environmental issues. Accordingly, the course presents, and explains, scientific data in formats that students are likely to find in scientific journals, mass media, and websites. In this course, students will: * Develop an understanding of the Earth system and how it operates, * Quantify human demands on natural resources, * Learn how resource extraction and use impacts the environment, * Foster the ability to critically evaluate scientific arguments, and * Practice expressing reasoned opinions on complex problems. By the end of the semester, students will be able to: * Identify important, and human-relevant, environmental issues. * Understand the breadth and complexity of environmental issues. * Think critically about environmental issues. * Have scientifically-accurate discussions about environmental issues with others. * Propose, and evaluate critically, solutions to environmental issues.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

EARTH 100H: Environment Earth: Environment and Energy

3 Credits

Examination of climate change and energy issues. EARTH 100H Environment Earth: Environment and Energy (3) (GN) In this course, students will be asked to investigate the natural processes that affect the Earth's climate and their effects on Life on Earth. Once a fundamental understanding of natural processes is developed, then an examination of the anthropogenic atmospheric changes covers the increases in greenhouse gases mainly due to fossil fuel use and agriculture. After discussing the potential environmental and economic impacts of increased greenhouse gases on Man and Nature, the major energy sources will be studied for their potential to meet increasing energy needs and their possible ability to mitigate climate change.

Honors

EARTH 101: Natural Disasters: Hollywood vs. Reality

3 Credits

"Natural Disasters: Hollywood vs. Reality" investigates a variety of natural hazards and disasters. We use the popular media as a starting point to motivate discussions and development of tools for analyzing the causes of disasters. Using excerpted segments of 'disaster films' in conjunction with scientific treatments, the class identifies the causes, consequences

and public perceptions of natural hazards. Small group discussions and cooperative research activities held 'real time' in the classroom are a major component of this course. The goal is to help students develop both an understanding of natural hazards and disasters, and enhance their understanding of scientific approaches to problem solving.

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

EARTH 103N: Earth in the Future: Predicting Climate Change and Its Impacts Over the Next Century

3 Credits

Earth has a complex, fascinating, interconnected system of processes that control the state of the climate. If we can understand how this system works, then we can make intelligent predictions about the climate in the future. The future of climate is of great importance to the quality of life in the future. In this class, we will explore the workings of the climate system ζ at the present, and in the past ζ through a series of modules with hands-on learning activities. We will learn how simple and sophisticated computer models can provide useful tools for making predictions about what our climate will be like in the next few hundred years, which will be a critical time for our species as we endeavor to find a more sustainable way of living. A changing climate means changes in, among other things, temperature and precipitation, which will affect our water supplies, our energy consumption, and our ability to grow enough food to feed the people of Earth. A changing climate also means a range of stresses on the global economy. We will examine these climate impacts, but we will not stop there ζ we will also focus our attention on what can be done to help us successfully meet these challenges

Bachelor of Arts: Natural Sciences

General Education - Integrative: Interdomain

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

EARTH 104N: Climate, Energy and Our Future

3 Credits

This class explores how we can shift our society to a sustainable energy system that improves our quality of life, our economy, and our natural environment. Energy provides well-being, jobs and about 10% of our economy, while powering the rest. But, energy is also the least sustainable part of our economy—we rely on fossil fuels that we are burning about a million times faster than nature saved them for us. These fossil fuels, mostly coal, oil and gas, help us grow food and avoid some environmental disasters, but the limited fossil-fuel supplies mean we must move toward a more sustainable system. And, we will be better off by avoiding damaging climate changes from fossil-fuel CO₂ if we move before all of the fossil fuels are gone. The warming influence of fossil-fuel CO₂ is shown by physics known for more than a century and really refined by the US Air Force after WWII. History, data, and models confirm the physics, giving us high confidence that burning much of the remaining

fossil-fuel resource and releasing the CO₂ will cause much larger climate changes than we have experienced so far. This class will explore the big issues in energy, including the value of burning oil rather than whales, and other historical insights. Then, after looking at the basic science and engineering of our energy system and how it affects climate, we will examine the multitude of options for the future, including alternative energy sources, conservation, and intentionally manipulating the climate. The economics, policies and ethics of these options will help us consider how to build a sustainable energy system that will encourage economic growth and improved quality of life, while at the same time defending against potentially catastrophic future climate change.

EARTH 105N: Environments of Africa: Geology and Climate Change

3 Credits

Significant natural features of Africa as related to human endeavor; case studies include the Nile, climate change, and natural resources. EARTH 105N Environments of Africa: Geology and Climate History (3) (GN/GS;IL)(BA) This course meets the Bachelor of Arts degree requirements. Environments of African: Geology and Climate History investigates the interrelationships between geology, hydrology, land use, societies and human development in several areas of Africa. We focus primarily on regions north of the equator, although there is a brief segment on South Africa mining. Specific topics include the Nile River (sources of the Nile, agricultural practices, effects of damming the Nile, hydropolitics), the Sahara and Sahel (salt mines, climate change, drought, water resources), and natural resources and their role in politics (gold, diamonds, oil, and gas). The theme of climate change cuts across the entire semester. The quantitative and analytical components of the course involve working through a combination of map exercises and data manipulations (flood stage, groundwater age, rainfall and temperature records). Writing exercises are conducted both individually (essays, analysis of readings) and in collaborative teams (climate change analysis). Readings for the course come from the popular scientific literature; current refereed research journals, and transcribed oral histories of African people. Faculty lectures will comprise ~30% of the course, and student presentations ~20%, with the remainder of the time devoted to in-class collaborative exercises. There are no pre-requisites for this course. It will be offered annually with a maximum enrollment of 100 students. The goals of the course are to (1) explore the relationship between human society and the natural world; (2) develop quantitative and scientific reasoning skills; (3) introduce the scientific study of Africa. The topics that we explore (e.g., global climate change, allocation of limited water resources) are important political issues that affect people in developed and developing countries throughout the world. It is crucial that the next generation of citizens be informed as to how scientific data is obtained, presented, and interpreted by scientists as well as politicians. Students will work individually and (more commonly) in teams to analyze real data from natural African systems, and will then report their findings to the class both orally and in writing. Examples of the data sets include 100-year records of monthly rainfall and temperature from stations throughout the continent, fossil suites from ancient lake cores in the modern Sahara, and historical writings of Nile flood levels

from pre-Biblical times. Through these exercises students will gain an appreciation of the scope of geological time and change, and will be able to incorporate this new long-term perspective into identification and resolution of modern questions.

EARTH 107N: Coastal Processes, Hazards and Society

3 Credits

Ten percent of the world's population or approximately 600 million people live on land that is within 10 meters of sea level. This low elevation coastal zone includes some of the world's most populous cities including New York, London, Miami, Calcutta, Tokyo, and Cairo. This zone is threatened by a host of environmental challenges, including but not limited to sea level rise. The overarching goal of this course is to provide students with a global perspective of coastal landscapes, the processes responsible for their formation, diversity and change over time, as well as socioeconomic and policy responses to current biophysical changes in the coastal zones around the world. Students will use real-world coastal data sets to evaluate hazards such as hurricanes and tsunamis and their effects on coastal populations. Coastal processes to be considered include tectonic settings, effects of glaciation, sediment supply, and wave and tidal energy. The impacts of sea level rise and its local effects on communities will be a focus. Engineering solutions to projected sea level rise impacts such as coastal flooding and habitat loss in coastal areas will also be examined.

EARTH 109: The Fundamentals of Shale Energy Development

3 Credits

Energy is a critical component of modern society, yet we face significant challenges associated with balancing energy demands, energy security, environmental sustainability, and stable economics with sound regulations and policy. Unconventional energy development from shale formations has been a game changer for the fossil fuel industry over the past decade and is projected to continue to grow over the next several decades. But there are still many uncertainties on how to optimally develop these largely untapped resources to maximize the social benefits while minimizing environmental impacts. This course covers key topics needed to provide students with an overview of the science, engineering, environmental impacts, geopolitics, economics and societal impacts of shale energy development. These topics include geology, resource assessment, drilling technology, hydraulic fracturing methods,

environmental impacts, economics, workforce needs, infrastructure, utilization trends, regulation, energy policy, energy exports, international geopolitics, societal considerations, and the future of unconventional energy and its relationship with other energy forms. The class is geared toward a broad audience of students to provide a big picture view of the shale energy landscape. The course is structured in four parts. The course begins with the geology of shale (part 1), then examines engineering and environmental aspects of shale energy production (part 2), then explores relevant economic, geopolitical and societal issues (part 3) and ends with a capstone project (part 4). Shale energy development in a key U.S. shale basin is used in parts 1 -3 to provide examples and illustrate concepts, impacts and problems. In the capstone project, students will learn about the shale energy development in another basin of their choosing and present their findings to the class, thereby developing further the students' understanding of the core course content while gaining an overview of shale energy development beyond the U.S. shale basin presented in the course.

 GenEd Learning Objective: Key Literacies

EARTH 111N: Water: Science and Society

3 Credits

The Earth is often called "The Blue Planet", a reference to the fact that over two-thirds of its surface is covered by water. Despite its apparent abundance, water is a valuable and limited resource; less than 2.5% of the water on the planet is fresh, and only one third of that is potable. The small fraction of Earth's water that is useable to humans is distributed very unevenly. As a result, conflicts over water occur from the local level, for example: pitting rancher against developer - to the global level, at which nations square off against one-another in war and use water as a mechanism for imposing sanctions. The dire situation in some regions has spurred numerous research and technological endeavors, such as water desalinization, genetic engineering of crops, and major overhauls of agricultural practice. In this course, we explore the relationships between water and human populations, with emphasis on water resources and quality in the Western U.S., and how these have shaped history and modern politics. We will focus first on developing the scientific underpinnings of water's unique properties, behavior, movement, occurrence, and quality. With this background, we will then discuss key issues relating to modern and historical conflicts, human impacts on the natural world, and human engineering accomplishments driven by our thirst for this valuable resource. We will discuss historical examples from the American West, specifically the development of water resources in Arizona, Colorado and California. We will also explore modern and historical conflicts between stakeholders. Major themes will include political and economic conflicts over (1) water resources - for example, balancing agricultural and urban demands in the American west in the Denver and Los Angeles metropolitan areas, (2) water quality - for example, considering the impact of economically profitable human activities on water quality and transmission of disease, and (3) human impacts on natural processes, specifically connecting human activity with our cultural history of water use and exploration in the American West.

EARTH 112: Climate Science for Educators

3 Credits

Concepts of climate sciences highlighted by evidence-based explanations and scientific discourse in preparation for K-6 science teaching. This introductory, multidisciplinary course will focus on the interactions among physical science concepts, earth science concepts, and scientific practices to develop understandings about Earth's climate system. The course is primarily intended for prospective elementary school teachers (Childhood and Early Adolescent Education, PK-4 and 4-8 majors), although it is available to other non-science majors. The development of models is an integral part of the course as a means to facilitate climate systems thinking by serving as a means to explain phenomena and predict outcomes. In addition, students in the course consider how what they are learning applies to teaching by offering opportunities to think about how they might extend their knowledge to teaching contexts. This course consists of integrated lectures and laboratory investigations in class meetings each week, with work on collaborative projects outside of class.

Cross-listed with: SCIED 112

EARTH 150: Dinosaur Extinctions and Other Controversies

3 Credits

One of the most dramatic developments in the Earth sciences is the suggestion that extinction of the dinosaurs was caused by a meteorite impact. Evidence for and against this controversial idea is just one of the subjects addressed by this course, dealing broadly with the history of our planet, the evolution of life upon it, and the sometimes rocky development of our understanding of Earth history. In addition to dinosaur extinction, we will discuss issues relating to catastrophic vs. gradual theories about the Earth's history, fossils and the history of life, and mass extinctions, including whether or not we're in the middle of one now. How are scientific discoveries made? What distinguishes a scientific argument from a non-scientific one? What roles do social and historical factors play in the construction and acceptance of scientific theories? Questions such as these will permeate the course. Readings will include selected texts by leading scientists, with supplements from the primary scientific literature, including current discoveries published in Science and Nature.

EARTH 155N: Scientific Controversies and Public Debate

3 Credits

EARTH 155N Scientific Controversies and Public Debate is an introduction to critical thinking about the messages consumers get from public relations (PR) on behalf of industry, and from scientists

regarding environmental health risks. Because such messages may be contradictory, the course seeks to help students understand the extent to which message communication influences our perception of risk. The course is designed to familiarize students with science topics that, because of message manipulation, are (or historically were) perceived as controversial (e.g., smoking, secondhand smoke, flame retardants, nuclear energy, the ozone hole, global climate change, acid rain, junk science, rBGH milk, biosolids, pesticides, vaccines, and endocrine disrupting chemicals). Students will learn the science and environmental health risks underlying several controversial topics. They will be guided to consider how industry and science messaging has shaped their own perceptions of risk. Then, using tools for effective communication, and avoiding communication pitfalls and deceptive tactics, students will combine accurate science content with compelling storytelling in a professional-quality video to inform the public about a targeted environmental health risk and persuade the public to avoid that risk. EARTH 155N focuses on the intersection between science and communication in the realm of environmental health. The course guides students to closely examine controversial environmental health topics, learn the science to understand public health risks, learn strategies to identify false or misleading arguments, and then think critically about industry and science messaging, including the impact of such messaging on their own lives. EARTH 155N Scientific Controversies and Public Debate is an interdomain course that integrate GN environmental health topics with GH message evaluation. It has no prerequisites, and is designed for students who may be unfamiliar with, or have only introductory knowledge of controversial environmental health topics, the norms of science communication, and public relations techniques.

EARTH 200N: Earth Systems Through a Soc & Envir Justice Lens

3 Credits

EARTH 200N Earth Systems through a Social and Environmental Justice Lens is an introduction to critical thinking about the intersectionality between environmental degradation and human harm. The course seeks to help students understand the relationships among lack of access (e.g., to credit, affordable housing, good schools, greenspace, healthcare, nutritious food, walkable streets), social factors (e.g. racism, poverty, unemployment), and environmental hazards (e.g., pollution, natural disasters, disease, heat islands, rising sea level, melting permafrost) for marginalized groups, and the institutional structures that support inequality. The course is designed to familiarize students with commonly misunderstood SJ topics such as race as a social (not biological) construct, historical racial inequality, and its present-day consequences (e.g., wealth and education gaps), environmental racism, the root causes of urban poverty, redlining, etc. Case studies will familiarize students with major environmental issues in each sphere (anthroposphere, biosphere, geosphere, hydrosphere, cryosphere, and atmosphere). In addition to academic content, research suggests that case studies help students make meaningful affective connections and practice empathy. The case studies presented in EARTH 200N show EJ issues from the perspective of marginalized groups that have organized to reduce inequalities. Students will learn the science underlying major environmental issues associated with exceeding Earth's planetary boundaries in areas such as biogeochemical cycling, climate change,

chemical pollution, and freshwater use. The scale (local, regional, global) of various environmental issues will be discussed. EARTH 200N Earth Systems through a Social and Environmental Justice Lens is an interdomain course that integrates GN Earth systems science with GS social justice (SJ) and environmental justice (EJ). It has no prerequisites, and is designed for students who may not be familiar with the intersectionality between environmental degradation and human harm.

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Integrative Thinking

EARTH 240: Coral Reef Systems

4 Credits

The geography, geology, biology ecology and chemistry of coral reef ecosystems; threats to reef environments; and techniques for reef surveying and monitoring; with local geologic and distant modern field studies. EARTH 240 Coral Reef Systems (4) (GN) The course introduces students to coral reef environments, past and present. It describes the processes that control the distribution, growth, and morphology of reefs and introduces students to the complexity of the coral reef ecosystem. The course emphasizes the role that reefs play in the natural environment and examines their importance to society both globally (e.g. in terms of biodiversity and its potential benefits) and locally in terms of, for example, food supply and tourism. We then look at the natural disturbances (such as disease, storms, sea surface temperature variations) that affect the reef, as well as ways in which reefs are threatened from human impacts, with an emphasis on global climate change and the long-term outlook for reef survival. Students will work in groups to research elements of the system, first at a global scale, and then focusing specifically on one region – the Bahamas platform. Students will look at the history of the Bahamas platform and its relationship to the present nature and distribution of coral reefs. They will then examine these in the context of their social, cultural, and economic importance to local communities. A third component of the course will concentrate on the identification of vertebrate and invertebrate species and substrate conditions that are important indicators of reef health. There will then be a one-week field trip to a coral reef system to conduct reef surveys. The surveys follow the Reef Check protocol (a volunteer, community-based monitoring protocol designed to measure the health of coral reefs on a global scale). Reef Check is administered out of the University of California at Los Angeles. The coral reef surveys will be conducted on scuba and the field trip and participation in the survey are required elements of the course. Students who are not scuba certified will be given the opportunity to obtain open water scuba certification as part of the course, through Penn State's Science Diving Program (The PSU Science Diving Program is a member of the American Academy of Underwater Sciences). There will be an additional charge for the scuba certification course and the field trip. Student assessment will be through group presentations, term papers, 3 exams and their contribution to the field program. The course satisfies part of the field requirement for the University's Marine Science Minor and serves as an introduction to the Science Diving Program.

Prerequisite: Prerequisite or concurrent: KINES045 or Nationally Recognized Scuba Certification

EARTH 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EARTH 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EARTH 303: Analysis of Earth Future Scenarios

3 Credits

Climate change is an existential threat that will impact every aspect of life in countries around the world, including basic needs for human survival such as food and water. Understanding the systems that control Earth's climate is key to making predictions about the future. Even though the direction of climate change is clear, predictions are uncertain because of the complexity of the climate system and the ability of countries to curb carbon emissions. Widespread understanding of the scientific issues and choices among citizens is central to making sound decisions about sustainability in their own lives. Beyond this, communication of this understanding to business leaders and lawmakers is critical to making changes in policy and the corporate world that will impact future sustainability. In this course, students will learn about the climate system, predictions for the coming century and how they are made, the impact on food, water, and sea level, and what changes are necessary to help us successfully meet these challenges. A fundamental part of the course will be the development and communication of sound policy aimed at lawmakers and corporate leaders.

Prerequisite: (ENGL 15 or CAS 100A) and (GEOSC 001 or GEOSC 020 or EARTH 002 or EARTH 100 or GEOG 30N)

EARTH 400: Earth Sciences Seminar

3 Credits

Interdisciplinary study of environmental problems in the earth sciences.

Prerequisite: seventh-semester standing in the Earth major

EARTH 402: Modeling the Earth System

3 Credits

Earth 402 is a course that focuses on modeling Earth systems with a focus on the climate system, including the economic and policy aspects of energy and carbon emissions. By building and experimenting with numerical models of these systems, students gain insight into the dynamics of these systems, including the future consequences of different policy decisions that impact the climate system.

Prerequisite: EARTH 2; EARTH 103 MATH 140; MATH 110; MATH 83; CHEM 110

EARTH 412: Urban Sustainability

3 Credits

EARTH 412 examines the relationships between people and the environment in the context of urban spaces with international

context, United States national conditions and perspectives, and local implementation and practice. The course explores the fundamental question of "What is urban sustainability?" by: First, framing sustainability through the unique aspects of urban sustainability including political, economic, and social challenges; and investigating the roots of unsustainability and possible ways to address it. Second, the dimensions of sustainability will introduce urban food production and food systems issues; challenges linking affordable housing and transportation alternatives; urban waste management problems; and urban water systems incorporation of green infrastructure and low-impact development research and implementation. And third, improving sustainability with an introduction to industrial ecology; the role of intermediaries and civic engagement; and an examination of the role of government policy in addressing urban sustainability through legislation, regulation, and judicial action. Concepts of sustainable development principles, justice and equity, urban food policy, affordable housing, transportation options, water and green infrastructure, waste management, industrial ecology, sustainable design, and community development will be addressed via in class activities and (virtual or in-person) field trips.

Prerequisites: EARTH 2 or SOILS 101 or SUST 200 or GEOG 30N or GEOSC 1; Recommended Preparation: Completion of one of the listed prerequisite courses, or permission of program instructor.

EARTH 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

EARTH 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EARTH 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EARTH 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Economics (ECON)

ECON 14: Principles of Economics

3 Credits

ECON 14 Principles of Economics (3)(GS)(BA) This course meets the Bachelor of Arts degree requirements. Economics is the study of how people satisfy their wants in the face of limited resources. Economics is a consistent set of methods and tools that is valuable in analyzing

certain types of problems related to decision-making, resource allocation, and the production and distribution of goods and services. There are two main branches of economics, microeconomics, and macroeconomics. Microeconomics deals with the behavior of individual households and firms and how that behavior is influenced by government. Macroeconomics is concerned with economy-wide factors such as inflation, unemployment, and overall economic growth. ECON 14 is a survey course that covers introductory topics from both microeconomic and macroeconomics. The course is designed as a general education course in basic economics for non-majors. An important goal of this course is to take each student as far down the road of "thinking like an economist" as possible. The course begins by studying microeconomic topics, including supply and demand, elasticity, and market efficiency. The course then switches course to macroeconomics topics, including GDP, income, growth, inflation, unemployment, fiscal policy, and monetary policy. A variety of mechanisms is used to assess student performance. These evaluation methods typically include exams, quizzes, and homework assignments. Students who have passed ECON 102 or ECON 104 or who are registered in the College of Business Administration may not schedule this course.

Bachelor of Arts: Social and Behavioral Sciences
 General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

ECON 102: Introductory Microeconomic Analysis and Policy

3 Credits

Methods of economic analysis and their use; price determination; theory of the firm and distribution. ECON 102 Introductory Microeconomic Analysis and Policy (3)(GS)(BA) This course meets the Bachelor of Arts degree requirements. Economics is the study of how people satisfy their wants in the face of limited resources. One way to think about economics is that it is a consistent set of methods and tools that is valuable in analyzing certain types of problems related to decision-making, resource allocation, and the production and distribution of goods and services. There are two main branches of economics, microeconomics, and macroeconomics. Macroeconomics is concerned with economy-wide factors such as inflation, unemployment, and overall economic growth. Microeconomics deals with the behavior of individual households and firms and how government influences that behavior; it is the subject of this course. More specifically, ECON 102 is an introduction to microeconomic analysis and policy. The principal objective of the course is to enable students to analyze major microeconomic issues clearly and critically. Students will be introduced to the methods and tools of economic analysis, and these analytical tools will be applied to questions of current policy interest. Learning these methods and tools and applying them to interesting policy questions and issues is sometimes called "thinking like an economist." An important goal of this course is to take each student as far down the road of "thinking like an economist" as possible. A variety of mechanisms are used to assess student performance. These evaluation methods typically include exams, quizzes, homework assignments, and group projects. ECON 102 is an introductory course in economics and as such, serves as a prerequisite for several microeconomics-oriented 300-level courses. It is also a required course for all majors and minors in economics, and meets requirements for a General Education (GS) or Bachelor of Arts social science course. Students who have completed ECON 302 may not enroll in this course.

Bachelor of Arts: Social and Behavioral Sciences

ECON 104: Introductory Macroeconomic Analysis and Policy

3 Credits

This course meets the Bachelor of Arts degree requirements. Economics is the study of how people satisfy their wants in the face of limited resources. One way to think about economics is that it is a consistent set of methods and tools that is valuable in analyzing certain types of problems related to decision-making, resource allocation, and the production and distribution of goods and services. There are two main branches of economics, microeconomics, and macroeconomics. Microeconomics deals with the behavior of individual households and firms and how that behavior is influenced by government. Macroeconomics is concerned with economy-wide factors such as inflation, unemployment, and overall economic growth; it is the subject of this course. More specifically, ECON 104 is an introduction to macroeconomic analysis and policy. The principal objective of the

course is to enable students to analyze major macroeconomic issues clearly and critically. Students will be introduced to the methods and tools of economic analysis, and these analytical tools will be applied to questions of current policy interest. Broadly, the course focuses on the determination of national income, on unemployment, inflation, and economic growth in the context of a global economy, and on how monetary and fiscal policy, in particular, influence the economy. Learning the methods and tools of economics and applying them to interesting policy questions and issues is sometimes called "thinking like an economist." An important goal of this course is to take each student as far down the road of "thinking like an economist" as possible. A variety of mechanisms is used to assess student performance. These evaluation methods typically include exams, quizzes, homework assignments, and group projects. ECON 104 is an introductory course in economics, and as such, serves as a prerequisite for 300-level courses in intermediate macroeconomic analysis, international economics, and money and banking. It is also a required course for all majors and minors in economics, and meets requirements for a General Education or Bachelor of Arts Social Science (GS) course. Students who have completed ECON 304 may not enroll in this course.

ECON 302: Intermediate Microeconomic Analysis

3 Credits

ECON 302, Intermediate Microeconomics (3 credits) (GS) (BA). This course teaches microeconomic theory at an intermediate undergraduate level, taking a more mathematical approach. Major components of the course are constrained maximization, the theory of the consumer, the theory of the producer, general equilibrium, market structures, and game theory. The goal of this course is to give the student the fundamentals of microeconomics that will be applied widely to upper level courses in economics. The course begins by developing a model of consumer behavior. This model is extended to derive a consumer's demand for a good, and then numerous applications of this model are investigated, including income and substitution effects of a price change, as well as the determination of relative prices in a general equilibrium framework. The supply side of the market is then discussed. The theory of the firm is developed, and students will explore firm behavior and welfare analysis in various market settings including perfectly competitive markets, monopoly, and oligopoly with strategic interaction between firms. Economics is an analytical subject. Students will learn to use inductive reasoning and other scientific methodology necessary to understand this and other (social) sciences. In short, students will learn to think like an economist. The goal of this course is to extend student understanding of the topics introduced in the principles-level class to the way they are applied in the upper level courses in economics.

Enforced Prerequisite at Enrollment: ECON 102

Bachelor of Arts: Social and Behavioral Sciences
 General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

ECON 302H: Intermediate Microeconomic Analysis (Honors)

3 Credits

ECON 302H Intermediate Microeconomic Analysis (Honors) (3) (GS) (BA) This course is the honors version of ECON302 and meets the Bachelor of Arts degree requirements. There are two branches within the discipline of economics: microeconomics, focused on the behavior of individual economic actors (consumers, firms, and government) and macroeconomics, focused on economic aggregates (e.g., inflation, unemployment, aggregate economic growth). There are four core courses in economics that are required of all majors and minors: introductory and intermediate courses in microeconomics and macroeconomics. This course is the upper-level core course in microeconomic analysis. Students will learn, at a deeper level than that covered in the beginning microeconomics course (ECON 102), and with extensive use of calculus, about supply and demand, consumer theory, the theory of the firm, market structure and market power, factor markets, and extensions to consider uncertainty, missing markets, and limited information. Students will develop their skills for analysis of microeconomic issues. The skills learned in this course are necessary for a student to succeed in advanced courses. As such, this course is a prerequisite for a large number of microeconomics-oriented courses at the 400 level. This honors version of intermediate microeconomics is designed to provide the opportunity for students with advanced knowledge to pursue this key course at a more rigorous and in-depth level.

Enforced Prerequisite at Enrollment: ECON 102 and (MATH 110 or MATH 140)

Bachelor of Arts: Social and Behavioral Sciences
 General Education: Social and Behavioral Scien (GS)
 Honors
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

ECON 304: Intermediate Macroeconomic Analysis

3 Credits

ECON 304 (Intermediate Macroeconomics) (3) (GS) (BA). This course looks at the causes and consequences of business cycles. Students begin by examining key macroeconomic variables, including nominal and real interest rates, nominal and real GDP, unemployment rates, and potential economic growth. A two-period consumption model is also analyzed with the life cycle theory of consumption. Economic models are studied to analyze these topics, and macroeconomic goals for a society are discussed. After acquiring many analysis tools, the course discusses general equilibrium, where formal theories can model a variety of shocks that hit the macroeconomy and the corresponding reactions in a variety of markets. Related topics include the production function, marginal productivity of capital, firm investment, labor demand, labor supply, marginal product of labor, the supply side of the economy, and aggregate demand. After establishing a solid understanding of general equilibrium, students will examine the Federal Reserve, monetary policy, the market for reserves, open market operations, and quantitative easing. The course finishes with lessons comparing and contrasting classical economic theory vs. Keynesian economic theory. The strengths and weaknesses of each theory are considered relative to the business cycle data.

Enforced Prerequisite at Enrollment: ECON 104

Bachelor of Arts: Social and Behavioral Sciences
 General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

ECON 304H: Intermediate Macroeconomic Analysis (Honors)

3 Credits

ECON 304H Intermediate Macroeconomic Analysis (Honors) (3) (GS) (BA) This course is the honors version of ECON304 and meets the Bachelor of Arts degree requirements. There are two branches within the discipline of economics: microeconomics, focused on the behavior of individual economic actors (consumers, firms, and government) and macroeconomics, focused on economic aggregates (e.g., inflation, unemployment, aggregate economic growth). There are four core courses in economics that are required of all majors and minors: introductory and intermediate courses in microeconomics and macroeconomics. This course is the upper-level core course in macroeconomic analysis. Students will learn, at a deeper level than that covered in the beginning macroeconomics course (ECON 104), and with extensive use of calculus, about the measurement and structure of the national economy, long-run economic performance and the factors that influence it, business cycles and macroeconomic policy, and the environment and institutions that are pertinent to macroeconomic policy. Students will develop their skills for analysis of macroeconomic issues and policy. The skills learned in this course are necessary for a student to succeed in advanced courses. As such, this course is a prerequisite for a large number of macroeconomics-oriented courses at the 400 level. This honors version of intermediate macroeconomics is designed to provide the opportunity for students with

advanced knowledge to pursue this key course at a more rigorous and in-depth level.

Enforced Prerequisite at Enrollment: ECON 104 and (MATH 110 or MATH 140)

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
Honors

GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

ECON 306: Introduction to Econometrics

3 Credits

The implementation of statistical techniques to analyze data and address economic questions. Econometric results are produced and assessed.

Enforced Prerequisite at Enrollment: ECON 106

ECON 306H: Introduction to Econometrics

3 Credits

The implementation of statistical techniques to analyze data and address economic questions. Econometric results are produced and assessed. ECON 306H Introduction to Econometrics (3) In this course students learn basic quantitative methods used in applied economics, focusing on linear regression models and their applications. The course will cover topics similar to those covered in ECON 306 but with more mathematical rigor (i.e., using calculus). Following an introduction and reviews of probability and statistics, the course will focus on: (1) the statistical properties of commonly-used estimators and test statistics in regression models, (2) how to use them in practice for statistical inference, and (3) the issue of endogeneity and instrumental variables. Students will study both practical and theoretical aspects of econometrics, by which they will be able to implement the basic methods in practice and to understand the limitations of these methods. This course is an honors version of the second quantitative course in economics that is now required of all economics majors. As noted above, students will learn both theoretical and practical aspects of econometrics, so that they will be able to carry out econometric analyses of data. Evaluation of student performance will be based on homework assignments, midterm exams, and a final exam. Typically, the homework assignments would account for 20 percent of the overall course grade, each of two midterm exams would count for 25 percent of the grade, and the final exam would count for the remaining 30 percent of the grade. This course has ECON 106/106H, Statistical Foundations for Econometrics, as a prerequisite, and will use calculus. Further, the course is a prerequisite for advanced course work in econometrics, such as ECON 465W, ECON 466W, and ECON 483W, as well as other 400-level courses requiring econometrics.

Enforced Prerequisite at Enrollment: ECON 106 and (MATH 110 or MATH 140)

Honors

ECON 315: Labor Economics

3 Credits

Labor Economics, ECON 315 (3 credits) (GS) (BA). This course is designed to develop the concepts and techniques of labor economic theory and its applications. Key questions to consider for the course include: Why do some people earn more than others? When would people

choose to work or not? When would someone choose to further his or her education? Do earnings differences necessarily mean discrimination? To answer these questions, students will begin the course by learning the basics of the labor market, including labor demand and labor supply. Employment and earnings are then discussed, including the definition of unemployment, different types of unemployment, and reasons individuals would choose to work or not. Data is used to examine labor market trends and their implications. The course also explores human capital, wage determination, collective bargaining, wage differentials, discrimination, and related government policies. Considerable emphasis will be placed on problem solving and the application of labor economics to selected public policy issues and current economic events. Knowledge and understanding will be assessed through exams, homeworks, and a final project. This course is one of several 300-level electives which can be used toward the Economics major and meets requirements for a General Education (GS) or Bachelor of Arts social science course.

Enforced Prerequisite at Enrollment: ECON 102

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

ECON 323: Public Finance

3 Credits

ECON 323, Public Finance (3) (GS) (BA). This course examines contemporary fiscal institutions in the United States, public expenditures, public revenues, and the incidence of major taxes such as the personal income tax, the corporate income tax, and consumption taxes. We also discuss intergovernmental fiscal relations in a federal system of government, and public debt (or deficit financing). We explore the economic rationale for, the current data, and status of the political debate on these topics and others as time permits. Some of the key topics discussed in the lectures include externalities and solutions to market failure associated with them, efficient provision of public goods, and cost-benefit analysis as a nonmarket way to allocate scarce resources. We also devote a substantial amount of time to the market for health care and the role of government in the provision of health care in the United States. In addition to government's role in health care, we spend a great deal of time on other major federal government spending programs including social security and a number of spending programs targeted at low income citizens. The latter includes the Temporary Assistance for Needy Families (TANF) and the Supplemental Nutrition Assistance Program (SNAP). Here, students are expected to critically analyze the major effects of these programs on poverty as well as incentives to work. On the revenue side of public finances, we focus on both the redistributive and efficiency effects of taxation. We discuss the statutory and economic incidence of consumption taxes, the personal income tax, and the corporate income tax. The last part of the course includes two major topics deficit financing and intergovernmental fiscal relations. In the deficit-financing chapter, we focus on the federal government debt. Students learn about the different measures of public debt, which include gross national debt, intergovernmental debt, and debt held by the public. Under intergovernmental fiscal relations, we discuss the delineation of spending responsibilities between the federal and state governments. We also discuss major funding sources for states and local governments in the United States.

Enforced Prerequisite at Enrollment: ECON 102

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

ECON 333: International Economics

3 Credits

ECON 333, International Economics (3 credits) (GS) (BA). This course applies the knowledge from Introductory of Microeconomics (ECON 102) and Introductory of Macroeconomics (ECON 104) into International trade. Students will learn about why nations trade and the effects of trade on both consumer and producer. Some people will gain and some people will lose from trade and students will learn how to measure gain and loss from trade. This class also introduces trade barrier policies imposed by the government such as tariff, quota, subsidy and other commercial policy such as dumping and countervailing duty. The creation of the international organizations, such as the World Trade Organization (WTO) and General Agreement on Tariffs and Trade (GATT) are discussed. Later in the course, the Macroeconomics side of the international trade is discussed as well as the Balance of Payments, which is a way to summarize and measure a countries trade with the rest of the world. Students will also examine some of the basics of the foreign exchange market and the relationship with the interest rates. Toward the end of the course, the lessons will cover the International monetary systems, which include the gold standard, Bretton Woods system, fixed exchange rates, and flexible exchange rates

Enforced Prerequisite at Enrollment: ECON 102 or ECON 104 or ECON 14

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

ECON 342: Industrial Organization

3 Credits

Industrial Organization (3 credits) (GS) (BA) Industrial Organization focuses on the study of markets with imperfect competition. After reviewing the Perfect Competition model, the assumptions of that model are systematically relaxed, allowing us to focus on market failures that result, and how they might be remedied. The Structure-Conduct-Performance paradigm is followed. The structure of an industry affects the behavior of firms in that industry, which in turn affects the performance of that industry, evaluated from an efficiency standpoint. Much current material is discussed, especially potential mergers in certain industries and how they might affect market outcomes. Attention is given to oligopolies, using game theory as a tool with which to analyze the performance of these types of markets. Pricing strategies, asymmetric information, advertising, and antitrust law are also covered. The course is designed to provide students with a theoretical background with which to understand current market structures and events. Empirical data is discussed to test the models and theories presented in class.

Enforced Prerequisite at Enrollment: ECON 102

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

ECON 351: Money and Banking

3 Credits

Money, credit, commercial and central banking, financial intermediaries, treasury operations, monetary policy. Students who have already taken ECON 451 may not schedule this course. ECON 351 Money and Banking (3)(BA) This course meets the Bachelor of Arts degree requirements. In this course, students learn all about the Federal Reserve and the conduct of monetary policy: both conventional and unconventional. Students will examine many different interest rates and learn how they are determined. Students will study the importance of the Federal Reserve's dual mandate and become familiar with business cycles in the US economy since 1970 and the associated Fed policy during these episodes. Term structures of interest rates are analyzed as well as the risk structure of interest rates. The Taylor Rule and various specifications of the Taylor Rule are applied to these topics. Students also study the efficient market theory and the determination of stock and bond prices. The course finishes by engaging students in the topics of futures, options, and futures options and hedging with futures and options. The objective of the course is help students get a better understanding of macroeconomic and monetary topics and policy. Upon successful completion of this course, students will be able to contribute to any discussion about the U.S. economy and Federal Reserve policy, analyze real world events as they relate to U.S. monetary policy, and share their newly acquired human capital with others. The prerequisite for this course is ECON104. Students who have taken ECON451 cannot schedule ECON351.

Enforced Prerequisite at Enrollment: ECON 104

Bachelor of Arts: Social and Behavioral Sciences

ECON 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor.

Bachelor of Arts: Social and Behavioral Sciences

ECON 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

ECON 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

ECON 400M: Honors Seminar in Economics

3-12 Credits/Maximum of 12

Readings, discussion, and oral and written reports on selected topics in economics.

Enforced Prerequisite at Enrollment: ECON 302 and ECON 304 and fifth-semester standing and admission into Honors program

Bachelor of Arts: Social and Behavioral Sciences
Honors
Writing Across the Curriculum

ECON 402: Decision Making and Strategy in Economics

3 Credits

Development and application of the tools for decision making under uncertainty and for game theoretic analysis of economic problems.

Enforced Prerequisite at Enrollment: ECON 302 and (ECON 106 or SCM 200 or STAT 200)

Bachelor of Arts: Social and Behavioral Sciences

ECON 407: Political Economy

3 Credits

Applications of the tools of game theory to analyze topics in collective decision making.

Enforced Prerequisite at Enrollment: ECON 302

ECON 410: Economics of Labor Markets

3 Credits

Economic analysis of the employment relationship from the microeconomic perspective, with emphasis on current labor-market problems and public policy issues.

Enforced Prerequisite at Enrollment: ECON 102

ECON 411: Behavioral Economics

3 Credits

Topics in behavioral economics; selected games; evolutionary models of social behavior, herding, overconfidence.

Enforced Prerequisite at Enrollment: ECON 302 or ECON 444

ECON 412: Labor Economics and Labor Markets: Theory, Evidence, and Policy

3 Credits

Advanced topics in labor economics: theory, empirical evidence, and policy. ECON 412 Labor Economics and Labor Markets: Theory, Evidence, and Policy(3)This course is an advanced course in labor economics. Its coverage of topics overlaps somewhat with the topics covered in ECON 315, but typically the treatment of the topics considered will be distinctly more rigorous for this 400-level course. The broad areas that will be focused on in the course include labor supply, investment in human capital, labor demand, wage determination, search and unemployment, and earnings inequality. The objective of this course is to introduce students to topics in labor economics with a rigorous and advanced analytical approach. For each topic, the course will consider the underlying theory, pertinent empirical evidence, and implications for public policy. The instructional and educational objectives are to provide students with a strong background in labor economics. This will allow them to take advanced seminar courses in the labor field. This course is an advanced introduction to labor economics, and as such has a prerequisite of either ECON 302 or ECON 315. In turn, this course will serve as a gateway to advanced seminar courses in labor economics at

the 400 level that the Economics Department is in the midst of creating. The course will count toward both the major and the minor in economics.

Enforced Prerequisite at Enrollment: ECON 306 and (ECON 302 or ECON 315)

Bachelor of Arts: Social and Behavioral Sciences

ECON 413: Economic Growth and the Challenges of World Poverty

3 Credits

This course is for those who are interested in the challenge posed by persistent world poverty. We will address many different poverty related issues and the goal is to examine how economists can contribute to shedding light on the problem of world poverty and providing insights into its alleviation. Among the questions that we will address are: How persistent is the extent of world poverty? Does rapid economic growth help the poor? Why do some countries grow fast and others fall further behind? What is economic life like when living under a dollar a day? How do we deal with the disease burden? Does providing meals in schools help students perform better? Is microfinance overrated? Has globalization hurt or help the poor? Does foreign aid help or hinder the economic prospects of poor countries?

Enforced Prerequisite at Enrollment: ECON 304 and ECON 471

ECON 415: The Economics of Global Climate Change

3 Credits

Evidence on climate change; economic models of the environment and market failure; cost-benefit analysis of policy options; carbon markets.

Enforced Prerequisite at Enrollment: ECON 302 and ECON 306

ECON 417: The Economics of Uncertainty

3 Credits

Uncertainty and Risk as related to finance, insurance, health, labor, industrial organization, and macroeconomics.

Enforced Prerequisite at Enrollment: ECON 302

ECON 422: Applying Monetary Theory and Monetary History

3 Credits

This course provides a framework for the analysis of monetary history. The course objectives are to introduce students to the theoretical framework used by economists to study monetary theory, and to apply that framework in order to explain various monetary systems that have existed in the past. We will examine the empirical evidence, and also consider policy issues in this area. There is scope for re-examining existing analyses of many of those historical systems. Topics discussed in the course include the Federal Reserve control of the money stock, the demand for money, money as part of economic activity, economic indicators and monetary policy, the Lucas critique, interest rates and the frequency at which they are changed, the creation and purpose of central banking, and private banking regulations. Historical monetary events to be discussed include monetary policy before and during the Great Depression, monetary policy during the Great Recession of 2007 - 2009, the gold standard monetary system, the Bretton Woods system, and the termination of these standards. Among all topics, both current and historical, we will examine the incentives of individuals, firms, banks, borrowers, and lenders, and governments as responses to

monetary policy changes. Finally, advances in monetary theory based on macroeconomic events, both national and global, will be analyzed. The course will count toward both the major and minor in economics.

Enforced Prerequisite at Enrollment: ECON 302

ECON 425: Economics of Public Expenditures

3 Credits

Analytic and policy aspects of public expenditure decisions; applications from areas of contemporary public interest.

Enforced Prerequisite at Enrollment: ECON 302 or ECON 323

Bachelor of Arts: Social and Behavioral Sciences

ECON 428: Environmental Economics

3 Credits

Environmental pollution, the market economy, and optimal resource allocation; alternative control procedures; levels of environmental protection and public policy.

Enforced Prerequisite at Enrollment: ECON 302 or ECON 323

Bachelor of Arts: Social and Behavioral Sciences

ECON 429: Public Finance and Fiscal Policy

3 Credits

Analysis of public revenue and expenditure structure primarily at the federal level; federalism; fiscal policy and public debt.

Enforced Prerequisite at Enrollment: ECON 323 and (ECON 302 or

ECON 304)

Bachelor of Arts: Social and Behavioral Sciences

ECON 430: Regional Economic Analysis

3 Credits

Analysis of personal and industrial location decisions, regional economic growth, migration patterns, and regional policy; emphasis on tools and techniques.

Enforced Prerequisite at Enrollment: ECON 102 or ECON 104

ECON 432: Urban Economics

3 Credits

Theories and methods for economic analysis of such urban problems as housing, segregation, government services, and transportation.

Enforced Prerequisite at Enrollment: ECON 302 or ECON 323

Bachelor of Arts: Social and Behavioral Sciences

ECON 433: Advanced International Trade Theory and Policy

3 Credits

Causes/consequences of trade; effects of tariffs and quotas; strategic trade policy; political economy of trade restrictions and other topics.

Enforced Prerequisite at Enrollment: ECON 302 or ECON 333

Bachelor of Arts: Social and Behavioral Sciences

ECON 434: International Finance and Open Economy Macroeconomics

3 Credits

Trade balance movements, exchange rate determination; monetary and fiscal policies in open economies; international policy coordination; the world monetary system.

Enforced Prerequisite at Enrollment: ECON 304 or ECON 333

Bachelor of Arts: Social and Behavioral Sciences

ECON 436: Economics of Discrimination

3 Credits

Analysis of the economic characteristics of women and minorities; with examination of race and sex discrimination and related government policies.

Enforced Prerequisite at Enrollment: ECON 302 or ECON 315

ECON 437: Multinationals and the Globalization of Production

3 Credits

Globalization entails many dimensions: trade, migration, FDI, offshoring, cross-border licensing of technologies.

Enforced Prerequisite at Enrollment: ECON 302 or ECON 333

ECON 438: Winners and Losers from Globalization

3 Credits

Globalization, US, International, Trade, Finance, Growth, Labor, Industrial Organization, Political Economics.

Enforced Prerequisite at Enrollment: ECON 306 and (ECON 302 or

ECON 333)

ECON 442: Managerial Economics

3 Credits

Application of economic theory to managerial decision making; risk, uncertainty; models and statistical techniques.

Enforced Prerequisite at Enrollment: ECON 102

ECON 443: Economics of Law and Regulation

3 Credits

An economic analysis of property rights, contractual arrangements, illegal activities, and regulation; competitive problems due to externalities and market failure.

Enforced Prerequisite at Enrollment: ECON 302 or ECON 342

Bachelor of Arts: Social and Behavioral Sciences

ECON 444: Economics of the Corporation

3 Credits

Coordination and incentive issues within a corporation. Topics include employment contracts, performance incentives and pricing of financial assets.

Enforced Prerequisite at Enrollment: ECON 302

Bachelor of Arts: Social and Behavioral Sciences

ECON 445: Health Economics

3 Credits

Economic analysis of U.S. health care system; planning, organization, and financing; current public policy issues and alternatives.

Enforced Prerequisite at Enrollment: ECON 302 or ECON 315 or ECON 323

Cross-listed with: HPA 445

Bachelor of Arts: Social and Behavioral Sciences

ECON 447: Economics of Sports

3 Credits

Topics in sports; demand, owners, ticket resale, leagues, markets, efficiency, antitrust, discrimination, collegiate sports.

Enforced Prerequisite at Enrollment: ECON 302 or ECON 306

ECON 448: Economics of Auctions and Procurements

3 Credits

Theoretical and empirical analyses of auctions and procurements; different modeling environments; econometric analysis of auction and procurement data.

Enforced Prerequisite at Enrollment: ECON 302 and ECON 306

ECON 449: Economics of Collusion

3 Credits/Maximum of 3

Collusion, Bidding Rings, Antitrust, Price Fixing, Incentives, Law

Enforced Prerequisite at Enrollment: (ECON 302 or ECON 342) and ECON 306

ECON 451: Monetary Theory and Policy

3 Credits

Monetary and income theory; monetary and fiscal policy.

Enforced Prerequisite at Enrollment: ECON 304 or ECON 351

Bachelor of Arts: Social and Behavioral Sciences

ECON 452: Economics of the Financial Crisis

3 Credits

This course studies the economics of financial crises with special emphasis on 2008.

Enforced Prerequisite at Enrollment: ECON 304

ECON 454: Economics of Mergers

3 Credits

It is not uncommon for two separate and distinct corporate entities within an industry to merge and become one firm. This course includes topics that examine the economics of mergers as well as economic policy with regard to mergers. There often are both pro-competitive and anti-competitive effects of mergers. In the U.S. the Federal Trade Commission has primary responsibility for assessing the balance between effects.

Along with the FTC, the antitrust division of the department of justice can analyze potential mergers using economic data and forecasts with tools such as the HHI and four-firm concentration ratio. Legality of non-competitive markets and mergers is also analyzed using the Clayton and Sherman antitrust acts. Topics discussed related to pro-merger economic effects include reduction in the duplication of costly capital, economies of scale, reducing costs by cutting management, human resources, payroll, and other jobs not directly related to production of output. Further, some firms may contend that they are non-viable as a small business, but can survive as a larger competitor as the result of a merger. Finally, mergers may have positive implications for shareholders who effectively own the company. Negative effects of mergers topics are discussed, including a reduction in the number of competing firms, increase in market power, higher prices, reduction in consumer choice, and increased lobbying power of larger firms. This course examines unilateral effects and coordinated effects as identified in the horizontal merger guidelines. Vertical mergers are analyzed as well, where multiple parts of the production process of a final good come under the same ownership. Econometric issues associated with the measurement of unilateral and coordinated effects are discussed. The course concludes with ex-post merger reviews. This course is an applied microeconomics seminar in the field of industrial organization and will seek to provide students with the analytical methods of both the theoretical and empirical analysis of mergers. The course will count toward both the major and the minor in economics.

Enforced Prerequisite at Enrollment: ECON 302

ECON 460: Issues in Sports Economics

3 Credits

Economic analysis of professional and collegiate sports: organization, input and output markets, the public sector, decision-making, and public policy. ECON 460 Issues in Sports Economics (3) This course is designed to provide students the opportunity to examine and understand the sports industry. The course integrates the perspectives of various economic areas (i.e., industrial organization, managerial economics, labor economics, public economics) with those of marketing, finance, and accounting into a single approach to industry analysis. It provides students with an appreciation for the unique realities of the professional and amateur sports enterprise. Case studies and assignments are developed so students can apply theoretical and statistical concepts to real sports activities and/or policies. Students have the opportunity to complete case analyses in teams, present their results and suggestions to the class, and respond to questions and critical reviews by their peers.

Enforced Prerequisite at Enrollment: ECON 102. Credit can be earned from taking ECON 447 or ECON 460 but not both.

ECON 465: Cross Sectional Econometrics

3 Credits

Econometrics, simultaneous equations, discrete choice, sample selection.

Enforced Prerequisite at Enrollment: ECON 106 and ECON 306

ECON 470: International Trade and Finance

3 Credits

Economic analysis of why nations trade, barriers to trade, the international monetary system, and macroeconomic policy in an open economy.

Enforced Prerequisite at Enrollment: ECON 102 or ECON 104
International Cultures (IL)

ECON 471: Growth and Development

3 Credits

Problems of capital formation, institutional considerations, theories of economic growth.

Enforced Prerequisite at Enrollment: ECON 302 or ECON 304
Bachelor of Arts: Social and Behavioral Sciences

ECON 472N: Russian Economic History

3 Credits

Russia is the largest country on earth. It has had a major influence on world events, especially during the Soviet period. The Soviet period represents the greatest economic experiment ever undertaken. Russia has had a vast imperial experience, and its economy has proven capable of producing nuclear weapons and space exploration. Yet, its economy remains dependent on natural resources. Russia is a literary, nuclear and geopolitical superpower but not an economic superpower. This juxtaposition is unique. The aim of the course is to provide a review of Russian economic history together with main concepts explaining the peculiarities of economic and institutional development of the country. The course combines historical narrative with formal economic analyses. We will utilize both an economics and a history perspective. We will explore the development of the Russian economy in the Tsarist period, the abolition of serfdom and Russian industrialization before the Russian Revolution, and we will explore the economic history of the Soviet period. We will also explore the interaction of economic history with social history. The course will conclude by examining the myriad economic and social difficulties encountered in transitioning from a socialist to capitalist economy.

Enforced Prerequisite at Enrollment: ECON 102 and ECON 104

Cross-listed with: HIST 402N

GenEd Learning Objective: Key Literacies

ECON 474: Experimental and Behavioral Economics

3 Credits

experimental methods and experimental design and uses this framework to inform a careful examination of the strengths and limitations of economic theory in explaining actual human behavior in economic situations. When economic theories do not seem to fit the data

the course draws on findings from other social sciences such as psychology and sociology to explore reasons for divergence of theory and practice. The content begins with a brief history of experiments in economics. Then it outlines key features of experimental design and an introduction to the basics of game theory, which are commonly utilized in experiments. After establishing the basics, the course investigates decision making under uncertainty and compares how various theoretical explanations predict actual human decisions. We then discuss bargaining experiments and bargaining theory. The course concludes with a description of common behavioral influences and biases in judgment and decision making. There is a common theme throughout the course showing how theory and experiments can be used in conjunction to improve of understanding of economic behavior.

Enforced Prerequisite at Enrollment: ECON 102 and ECON 104

ECON 475: Migration and Development

3 Credits

Human Capital Approach to Migration; Economics of Family Migration; Evidence: Micro and Macro Perspectives; Migration Policies.

Enforced Prerequisite at Enrollment: ECON 306 and (ECON 302 or ECON 304)

ECON 479: Economics of Matching

3 Credits

There are many resource allocations that are not unilateral decisions but instead require approval from two sides of the market. This course provides the theoretical constructs for the analysis of matching in market environments. Following a review of game theory, the course develops the theory of matching. The topic at large is introduced by the seminal paper in matching "College Admissions and the Stability of Marriage" by Gale and Shapley. Other peer-reviewed literature on the topic will be discussed. Topics that follow include economic applications in the areas of employment, marriage, college admissions, human organ donations, medical residents, and other current topics. Within each of these topics, analysis is performed to study the following questions: 1) What are the preferences and incentives of all of the market participants involved in the matching market? 2) What was the method in which matching occurred? 3) Is this end result Pareto efficient and stable? 4) If the result isn't Pareto efficient, could another method or algorithm be used to improve efficiency? 5) Does the efficient outcome yield equal (or near equal) gains to all market participants involved, or is there a large discrepancy in the utility of the participants post-matching? For example, in a marriage matching algorithm, do women end up much happier than men? In medical residencies, do hospitals end up with larger gains than the doctors? Within certain topics, specific models are also discussed, including the Beveridge curve, Cobb-Douglas matching functions, labor market frictions, Nash bargaining games, feasibility sets, disagreement points, egalitarian and non-egalitarian bargaining solutions, and risk aversion. This course is an applied economics course with relevance to the areas of microeconomics, macroeconomics, and labor economics. The course objective is for students to learn the analytical methods for understanding the economics of matching. Students will develop skills in applying matching models and analysis to practical situations. The course will count toward both the major and minor in economics.

Enforced Prerequisite at Enrollment: ECON 302

ECON 480: Mathematical Economics

3 Credits

Mathematical techniques employed in economic analysis; formal development of economic relationships.

Enforced Prerequisite at Enrollment: ECON 302 and ECON 304 and MATH 110

Bachelor of Arts: Social and Behavioral Sciences

ECON 481: Business Forecasting Techniques

3 Credits

A survey of contemporary business forecasting techniques, with emphasis on smoothing, decomposition, and regression techniques.

Enforced Prerequisite at Enrollment: SCM 200 or STAT 200

ECON 483: Economic Forecasting

3 Credits

Forecasting time series, using linear regression models and econometric software; useful forecasting models; financial and seasonal time series; trends. ECON 483 Economic Forecasting (3) This course is an applied econometrics course, and will seek to provide students with hands-on experience in forecasting. The goal of this course is to teach the students how to forecast time series, using econometric software, and what kinds of models are useful for that purpose. Topics to be covered include a review of regression analysis, with applications to forecasting; introduction to an econometric software package; introduction to time series regression analysis, with applications; the Box-Jenkins approach to time series modeling and forecasting; modeling and forecasting seasonal time series; deterministic and random trends, and how to distinguish them; and modeling and forecasting volatility of financial time series. The course will count toward both the major and the minor in economics. This course is one of a series of 400-level seminars in each of seven broad areas of economics; this is a seminar in econometrics.

Enforced Prerequisite at Enrollment: ECON 306

ECON 485: Econometric Techniques

3 Credits

Applying statistical techniques to test and explain economic relationships; integration of economic theory with observed economic phenomena.

Enforced Prerequisite at Enrollment: (ECON 102 or ECON 104) and (SCM 200 or STAT 200)

ECON 489M: Honors Thesis

1-6 Credits/Maximum of 6

No description.

Enforced Prerequisite at Enrollment: ECON 302 and ECON 304 and admission into the departmental honors program

Bachelor of Arts: Social and Behavioral Sciences
Honors

Writing Across the Curriculum

ECON 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

ECON 494A: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences

ECON 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Social and Behavioral Sciences
Honors

ECON 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor

Bachelor of Arts: Social and Behavioral Sciences
Full-Time Equivalent Course

ECON 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Social and Behavioral Sciences

ECON 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Social and Behavioral Sciences

ECON 499: Foreign Study--Economics

2-6 Credits/Maximum of 6

Study in selected countries of economic institutions and current economic problems.

Enforced Prerequisite at Enrollment: ECON 102 and ECON 104

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

Education (EDUC)

EDUC 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDUC 100: First-Year Seminar in Education

1-3 Credits

This seminar explores theories of teaching and learning, the education of teachers and other school employees, issues of professional practice, and selected topics in national educational policy. The seminar also supports students' transition to college through small group discussions and other activities. Class sizes are limited; the frequency of offering and evaluation methods vary by location and instructor.

First-Year Seminar

EDUC 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDUC 199: Foreign Studies

1-12 Credits/Maximum of 12

Study of educational topics in a country other than the United States.

International Cultures (IL)

EDUC 205N: Critical Race Theory in the Humanities and Social Sciences

3 Credits

This course closely examines the place and power of race in America. By tracing the history of how race works in particular American institutions, such as public education, criminal justice, and federal housing, students will gain a deep sense of how social categories and understandings shape material conditions and human welfare. Through the study of policies, court cases, memoirs, documentary films, and freedom struggles, this course will interrogate the many Americas that race has created and their implications for democracy and justice. Not only will this course focus on making race visible, but also the many ways that race intersects with class, gender, and sexuality and how these concepts empower and marginalize at the same time. All the while, students will use Critical Race Theory methods to reach empathy and strengthen social (GS) and historical (GH) literacies. Discussion, writing, critical reading, and primary source analysis will be integral to this class. Class sessions will include whole- and small-group discussion where active listening and thoughtful participation will be taught and required. Students will be encouraged to explore their own conceptions of race and how those ideas shape knowledge and experience. Ultimately, this is a course that will weave data, theory, and story as we encourage students to move toward empathy through comprehensive understandings of race. This course therefore examines race as both deeply personal and structural.

Recommended Preparations: ENGL 15 and CAS 100

Cross-listed with: CRIMJ 205N, SOC 205N

General Education: Humanities (GH)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

EDUC 294: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

EDUC 295: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, non-group instruction including field experience, practica, or internships.

EDUC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDUC 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDUC 302: Basic Preparation for Teaching

3 Credits

Philosophical, psychological issues in education; instructional objectives, lesson planning; evaluation, grading procedures; assessment, instruction of individual children. Field experience.

Prerequisite: admission into Elementary Education Major

EDUC 303: Inclusive Practices in General Education Classrooms

3 Credits

This course is designed to examine the procedures, characteristics and strategies for working with special learners in the elementary school. EDUC 303 Inclusive Practices in General Education Classrooms (3) This course examines the foundations and strategies for educating exceptional learners and for including students with disabilities in general education classrooms /inclusive settings, grades PK-4 and 4-8. Students will gain the knowledge and skills to respond effectively to learners with varying abilities and diverse needs in inclusive classrooms. Course content will address the following: foundations for inclusive education including legal provisions, ethical principles and policies; characteristics of various disabilities; the special education process including evaluation, IEP and service delivery models; assessment of student learning in a standards aligned system including diagnostic, formative, benchmark and summative assessment; pre-referral intervention, including universal screening and response to intervention; evidence-based instructional strategies that are effective in meeting

the needs of students with disabilities in inclusive settings including universal design, accommodations, modifications and adaptations of curriculum and instruction, differentiated instruction, improving memory, attention and independent learning; and partnerships including effective communication and collaboration, teaming, co-teaching and communication with families. The course format will include discussion, collaborative group work, student presentations, simulations, classroom observations, case studies, online activities, review of research and some lectures.

Prerequisite: seventh-semester standing in Elementary Education Major

EDUC 304: Classroom Organization and Management

3 Credits

Organization, integration of the elementary school day; classroom management, control techniques; audio-visual techniques.

Prerequisite: sixth-semester standing in Elementary Education Major

EDUC 305: Creative Arts

3 Credits

Experiences in self-expression through a variety of visual and performing arts. Techniques for guiding school children in artistic expression.

EDUC 305 Creative Arts (3) This is an arts education course for elementary education majors. The course is designed to provide pre-service teachers with knowledge of the elements of the performing arts and the visual arts. Today's public school population is diverse, and teachers encounter heterogeneous groups of students with unique interests, distinctive strengths, special needs, and varied languages. The arts provide a beneficial bridge to assist teachers in connecting with all persons. Not only do the arts enhance the quality and depth of lesson content, each of the arts contains the possibility of reaching students of all levels and backgrounds no matter what their cognitive ability, learning style, or native language. The purpose of this course is to equip students with the necessary tools to implement meaningful and effective arts education into the regular education curriculum.

Prerequisites: Admission to ED program

EDUC 306: Physical Education, Health, and Safety in Elementary Schools

2 Credits

A study of appropriate activities for elementary-age children. Student participation in physical activities is required. This course is designed to prepare elementary classroom teachers to provide age appropriate instruction related to issues of health and safety encountered in the school, home, and community. Understanding and demonstrating a knowledge of foundations, lesson planning, instructional strategies, and assessment is a key component of the program. In addition, the pre-service teachers are prepared to organize and implement physical education activities that may be carried out in the classroom, playground and/or appropriate indoor facilities. The physical education aspects of the program are generally provided as ancillary activities to the program provided under the guidance and direction of a certified Health and Physical Education instructor.

Prerequisite: 5th semester standing

EDUC 313: Field Observation

2 Credits

Observation techniques; classroom observation and participation.

Prerequisite: admission into Secondary Teacher Certification Program. Prerequisite or concurrent: EDUC 314

EDUC 314: Learning Theory and Instructional Procedures

3 Credits

Theories of learning in relation to instructional practices. Analysis of motivation, transfer of learning, and retention. Field practicum.

Prerequisite: admission into Secondary Teacher Certification Program. Prerequisite or concurrent: EDUC 313

EDUC 315Y: Social and Cultural Factors in Education

3 Credits

Critical examination of how different experiences linked to race, ethnicity, religion, gender, and sexual orientation influence education.

Prerequisite: admission into Elementary Education Major or Secondary Teacher Certification Program
United States Cultures (US)
Writing Across the Curriculum

EDUC 320: Methods in Teaching Beginning Readers

3 Credits

Concepts, methods, and materials for developing beginning reading abilities, with emphasis on personalized instruction through diagnostic teaching.

Prerequisite: sixth-semester standing in Elementary Education Major

EDUC 321: Methods in Teaching Intermediate and Advanced Readers

3 Credits

Concepts, methods, and materials for personalizing reading instruction with emphasis on extending personal and functional reading abilities beyond beginning reading.

Prerequisite: EDUC 320

EDUC 322: Adolescent Literature and Developmental Reading

3 Credits

Adolescent literature materials, reading principles, and practices suitable for an English class. EDUC 322 Adolescent Literature and Developmental Reading (3) This course is designed to prepare candidates with the objectives, content, methods and knowledge necessary to teach adolescent literature in today's secondary language arts classrooms in middle and high schools. Candidates will gain understandings of adolescent literature in contemporary sociocultural life and how it can be used to develop critical literacy perspectives, reading strategies, and communication that is developmentally appropriate for 21st century literacy. Particular emphasis will be placed on instructional methods to comprehend, interpret, evaluate, integrate prior experience, and apply a range of texts (print, non-print, digital, and multimodal) in authentic contexts; developing and struggling adolescent readers will be

highlighted. Course readings include research-based, adolescent literacy publications as well as a selection of adolescent literature. Adolescent literature selections include social and cultural issues relevant to adolescent development and diverse student populations. Candidates will compose and discuss critical responses to readings, participate in and contribute to the design of literature circles to discuss adolescent literature selections, and develop research-based lesson plans consistent with Commonwealth of Pennsylvania Common Core standards (PACC) and NCTE/IRA Standards for the English Language Arts. This course adheres to professional and content area standards and practices from: National Council of Teachers of English (NCTE), the National Writing Project (NWP), International Reading Association (IRA), and National Center for Literacy Education (NCLE).

Prerequisites: Admission to ED program

EDUC 352: Teaching Language Arts

3 Credits

Teaching the writing process, including speaking and listening skills in relation to oral and written composition.

Prerequisite: sixth-semester standing in Elementary Education Major

EDUC 353: Teaching Elementary Social Studies

3 Credits

The theory and practice of elementary social studies instruction.

Prerequisite: seventh-semester standing in Elementary Education Major

EDUC 371: Teaching Music in the Elementary School

3 Credits

Music methods course for elementary education majors; students will learn elements of music, and instructional techniques.

Prerequisite: seventh-semester standing in Elementary Education Major

EDUC 385: Professional Development in Teaching

3 Credits

This course addresses practical issues central to the profession of teaching and, in some cases, specific to Pennsylvania.

Prerequisite: eight-semester standing, approval of program

EDUC 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required. A specific title may be used in each instance and will be entered on the student's transcript.

EDUC 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDUC 399: Foreign Studies

1-12 Credits

Courses offered in foreign countries by individual or group instruction

International Cultures (IL)

EDUC 400: Diversity and Cultural Awareness Practices in the K-12 Classroom

3 Credits

This course addresses diversity, cultural awareness and sensitivity about cultures, concepts and methods in society, communities and educational settings. EDUC 400 Diversity and Cultural Awareness Practices in the K-12 Classroom (3) This course is an examination of diverse cultures, stereotypes, concepts and issues that impact the way individuals interact with one another in society. In relation to EDUC 315, it takes students to the next level as they experience cultural attributes from a media perspective, as well as being immersed into diverse settings throughout the course. It is designed for students to develop sensitivity and awareness of cultural influences in America and the public school systems. An emphasis is placed on sociopolitical aspects of the United States and other world cultures, sources of cross-cultural conflict, and approaches to cross-cultural conflict resolution as they relate to P-12 settings, their communities and the communities in which they teach. Cultural awareness is concrete and/or visible in society and is necessary for promoting sensitivity and respect of cultural beliefs and values amongst teachers, administrators and students. Course participants will be required to demonstrate knowledge of with regard to developing sensitivity and awareness of cultural influences on behavior as these relate to the community, society and schooling processes. Course participants will be required to analyze methods of teaching Multicultural Education and its various camps including: Culturally Responsive Pedagogy, Critical Multiculturalism, and Anti-Racist Pedagogy. The creative tension between dominant and subordinate voices will lead to both visual and written responses. The major goal of the course is to help students identify their diversity in American society and to develop their own creative voices, while drawing on issues of race, ethnicity, gender, geographical location, sexual identity, age, ability, social class, social status and other cultural attributes that make individuals uniquely diverse.

EDUC 402: Early Learning: Language and Concept Development

3 Credits

Examining the development of language and self-expression in young children, and the role of children's literature in facilitating development. EDUC 402 Early Learning: Language and Concept Development (3) This course examines foundations and strategies related to encouraging language development and concept acquisition of young children infant through age five. Students will gain the knowledge and skills to design relationships, environments, activities, and responses to young children at varying stages of early language and conceptual development. Course content will address the following: foundations for approaches to early learning including young children's characteristics, multiple factors that influence child construction of language and concept development, the importance of teacher child relationships, the emerging nature of children's learning patterns, and the benefits of providing books and experiences that support present knowledge levels while challenging new learning. Students will gain knowledge to use to design supportive relationships, documentation of observation, other assessment tools,

and intentional instructional strategies that encourage early development of vocabulary and content concepts. Students will design instruction that encourages child awareness of concepts of receptive language, such as phonemic awareness; concepts of self-expression, such as vocabulary, concepts of comprehension, such as read aloud recall; concepts of early writing, such as alphabet and phonics; and concepts related to reading, such as illustrations and meaning. In science, students will design instruction that encourages child awareness of the value of questioning, observing and experimenting for answers about life science, earth science and physical science issues. In mathematics, students will design instruction that encourages child awareness of numbers, operations, geometry, measurement, patterns, and data representation. In social studies, students will design instruction that encourages child awareness of concepts related to families, communities, early economics, and local geographical characteristics. In the arts, students will design instruction that encourages child awareness of ways to express self with drawings, paintings, sculpture, drama, music and dance. In the areas of social and emotional skills, students will design instruction that encourages child sensitivity to social and emotional skills that do and do not work well in group settings. Emphasis will be placed on the need to differentiate instruction for each young learner and the need to differentiate relationship interactions with each family. The course format will include discussion, collaborative group work, student presentations, simulations, child care classroom observations, case studies, online activities, review of research and some lectures. In addition, each student will design and complete a teacher inquiry.

EDUC 403: Curriculum for Early Childhood

3 Credits

Examining early childhood programs and methodology, focusing on areas of social studies, mathematics, and science.

EDUC 404: Young Children's Behavior: Observation and Evaluation

3 Credits

Observation, recording and evaluation of student behaviors, and the use of prescription techniques for early childhood students with special needs.

EDUC 408: Administration of Early Childhood Education Programs

3 Credits

The role of the early childhood administrator as it relates to regulations, staffing, management, funding and curriculum.

Prerequisite: EDUC 401

EDUC 410: The Child and Social Institutions

3 Credits

The effects of the family on a child's development, especially in the infancy and preschool years.

EDUC 414: Teaching Secondary Science

3 Credits

Study of the objectives, content, methods, and evaluation procedures of science. This course is designed to prepare students with the knowledge and methods necessary to teach secondary science in authentic integrative contexts. Teaching science with integrative concepts requires

educators to be proficient in integrating various technologies and highlighting interdisciplinary connections to other disciplines such as engineering (the national and state standards for science call for science educators to teach both science and engineering concepts). Science pedagogies, strategies, approaches, content knowledge, and practices needed to teach with a focus on building students' problem-solving skills and understanding will be highlighted. Research-based learning theories and their role in science classrooms/labs are discussed and sample teaching strategies are safely modeled. Discussions are also based on prior and/or current field experiences and case study analyses. State and national science, technology, and engineering standards emphasized and demonstrated throughout the course. Long- and short-range planning of teaching units and lesson plans address disciplinary core content, practices, assessment, technological integration, historical connections and current trends in science and engineering education disciplines, equity for all students, English learners, and adaptations or modifications for students with special needs. A problem-solving/constructivist approach to learning and assessment is emphasized. Students are engaged in cooperative learning experiences, using lab equipment/materials and technology such as spreadsheets, statistical simulation and analysis software, and probeware. They are assessed through both formative and summative evaluations, including the creation of an interdisciplinary secondary science unit plan. The content and processes of scientific inquire and engineering design emphasized throughout this course are presented with three principal goals in mind: (1) to inform students about current research related to teaching science and engineering, (2) to enhance students' pedagogical scientific and engineering knowledge and skills, and (3) to help students develop as competent secondary science teaching professionals.

Prerequisite: Admission into the Secondary Education Program required and EDUC 314

EDUC 415: Teaching Secondary Social Studies

3 Credits

Study of the objectives, content, methods, and evaluation of procedures of social studies. Students design units and lesson plans. EDUC 415 Teaching Secondary Social Studies (3) This course is designed to prepare social studies candidates with the teaching methods and content knowledge required to teach the many social studies subjects at the middle and high school level. Stressing a constructivist approach, students learn to utilize various instructional strategies to meet learning goals and objectives based on the National Council for the Social Studies (NCSS) thematic strands and relevant PA Academic and Core Standards. Long and short range planning of teaching units address content, assessment, technological integration, historical connections, equity for all students, ELL, and adaptations for special needs students. Students engage in focused classroom discussions on assigned readings and analyze critical issues in teaching social studies in order to develop a coherent and relevant social studies teaching and assessment philosophy. Students are evaluated based on lesson planning competence, the knowledge of and ability to promote NCSS thematic strands and PA standards in both planning and teaching, leading discussions on relevant social studies topics and readings, implementing a preplanned lesson to the class, and the development of a complete middle level or high school level unit of study.

Prerequisite: EDUC 315Y and admission into Teacher Education Programs

EDUC 416: Teaching Secondary English and the Humanities

3 Credits

Study of the objectives, content, and methods of English and humanities courses. EDUC 416 Teaching Secondary English and the Humanities (3) This course is designed to prepare candidates with the objectives, content, methods and knowledge necessary to teach English in today's secondary classrooms in middle and high schools. The pedagogical approaches, dispositions, and skills appropriate for adolescent learners will be highlighted. Instructional strategies include multiple types of texts, genres, and modes to address diverse learners' needs and 21st century literacies in society and the workplace. Developmentally appropriate practices and theories will be discussed and modeled. Course content, strategies, and dispositions are consistent with literacy research, adolescent development, best practice pedagogy, and content and professional standards appropriate for English language arts candidate preparation. This course adheres to professional and content area standards and practices from: National Council of Teachers of English (NCTE), the National Writing Project (NWP), International Reading Association (IRA), and National Center for Literacy Education (NCLE). Candidates will design a range of learning experiences for their future students consistent with Commonwealth of Pennsylvania Common Core standards (PACC) and NCTE/IRA Standards for the English Language Arts. Candidates will engage with constructivist learning practices that center on collaboration, authentic learning, critical reflective practice, ongoing assessment, instructor coaching, and peer review.

Prerequisite: EDUC 315Y and admission into Teacher Education Programs

EDUC 417: Teaching Secondary Mathematics

3 Credits

Study of the objectives, content, methods, and evaluation procedures of mathematics. EDUC 417 Teaching Secondary Mathematics (3) This course is designed to prepare students with the methods and knowledge necessary to teach mathematics in today's middle level and secondary classrooms. The pedagogical approaches and content needed to teach with a focus on understanding will be highlighted. Learning theories and their role in the mathematics classroom will be discussed and sample teaching strategies will be modeled. Discussions will also be based on field experiences and case study analyses. The National Council of Teachers of Mathematics standards addressed in the Principles and Standards for School Mathematics (2000), the Common Core State Standards for Mathematics (2010), the PA Core Standards in Mathematics (2013), as well as the Pennsylvania Standards Aligned System will be emphasized and demonstrated throughout the course. Long and short range planning of teaching units will address content, assessment, technological integration, historical connections, equity for all students, ELL, and adaptations for special needs students. A problem solving/constructivist approach to learning and assessment will be emphasized. Students will be engaged in cooperative learning experiences, use manipulatives and technology, and will be assessed through both formative and summative evaluations. The content and processes of mathematics emphasized throughout this course will be presented with three principal goals in mind: to inform students about current research related to teaching mathematics, to enhance students' pedagogical mathematical knowledge and skills, and to help students develop as competent mathematics teaching professionals.

Prerequisite: EDUC 315Y and admission into Teacher Education Programs

EDUC 418: Positive Classroom Climate for Positive Attitudes About Learning

3 Credits

Participants will learn strategies for creating classroom climates which encourage positive attitudes toward learning while preventing and correcting student misbehavior.

Prerequisite: permission of program

EDUC 421: Children's Literature

3 Credits

Knowledge of literature appropriate for elementary school children and utilization of literature-related activities in teaching reading.

Prerequisite: admission into Elementary Education Major

EDUC 422: Literature for Children and Adolescents

3 Credits

Literature for children and adolescents, approaches for using such literature in the school curriculum. EDUC 422 Literature for Children and Adolescents (3) This course, which is required for students enrolled in the Reading Specialist Program and those who wish to complete the language arts option in the Teaching and Curriculum Program, is designed to assist Pre-K through grade 12 educators who are interested in incorporating children's and/or adolescent literature into the curriculum. The course will focus on an in-depth exploration of selecting, evaluating, and using a wide range of contemporary (published in the last ten years) literature for children and young adults. This course will provide participants the opportunity to explore reader response theory and its relationship to classroom teaching practices, in particular to reading and literacy instruction. The study and application of principles and techniques of integrating literature circles, discussion strategies and literature extension projects will be addressed.

EDUC 425: Literacy Assessment

3 Credits

This course emphasizes alternative literacy measures focusing on portfolio assessment and performance assessments.

Prerequisite: permission of the program

EDUC 432: Children's Literature in Teaching Writing

3 Credits

Introduction to introduces methods for transferring writing skills and literary devices from literature to student writing in all subject areas.

EDUC 435: Addressing the Needs of Special Learners

1 Credits

An examination of attitudes toward, barriers experienced by, and special needs of special learners in the schools.

Prerequisite: eighth-semester standing in Secondary Teacher Certification Program

EDUC 436: Inclusion Practices in Education

3 Credits

The educational, social, and political foundations for inclusion practices in public education.

Prerequisite: permission of program

EDUC 440: Educational Statistics and Measurements

3 Credits

Descriptive statistics, correlation, reliability, validity, scaling techniques, and introduction to item analysis.

EDUC 450: Current Topics in Education

1-15 Credits/Maximum of 15

No description.

EDUC 452: Teaching Writing

3 Credits

Techniques for teaching the writing process, kindergarten through grade 12, including writing in content areas; workshop format.

EDUC 454: Modern Elementary Science Education

3 Credits

This course exposes candidates to content, knowledge and teaching pedagogy as they relate to science and science education. The science content knowledge is primarily focused on Biological Sciences, Physical Sciences and Earth and Space Sciences at the K-5 level. Current research is used to ensure that the best practices in teaching and learning K-5 Sciences are explored. At the conclusion of this course, all candidates should have a strong understanding of the best practices in teaching and learning K-5 science. Candidates should have an awareness of the Physical Sciences, Biological Sciences, and Earth Space Sciences taught at the K-5 level. They should be able to utilize best practices in the teaching of these sciences.

Prerequisites: Admission to ED program

EDUC 458: Behavior Management Strategies for Inclusive Classrooms

3 Credits

Provides knowledge and skills essential for designing positive learning environments in secondary classrooms with the inclusion of exceptional learners. EDUC 458 Behavior Management Strategies for Inclusive Classrooms (3) Well-organized and effectively managed classrooms provide task-focused instructional environments where students are actively engaged in learning. The inclusion of exceptional learners in the general education classroom has brought the need for a unique set of knowledge and skills to promote student task engagement and prosocial behavior. Topics to be addressed include: characteristics and specific (or unique) needs of exceptional learners and their effect on student learning; components of effective classroom organization and management; principles of applied behavior analysis and research-based behavior management strategies appropriate for use with exceptional

learners in the secondary classroom. This course will be a required course for all Secondary English, Math, and Social Studies students seeking initial certification. Course delivery methods will include lectures, reflections, online discussions, projects, class presentations, library research, and other relevant media

Prerequisite: admission to teacher education

EDUC 459: Strategies for Effective Teaching in Inclusive Classrooms

3 Credits

Course examines effective strategies for accommodating and adapting instruction for exceptional learners in secondary classrooms. EDUC 459 Strategies for Effective Teaching in Inclusive Classrooms (3) This course will examine strategies for teaching exceptional students in inclusive secondary classrooms. The course will focus on academic assessment; instructional planning, development and implementation; and strategies for making the curriculum more accessible, flexible and supportive for diverse learners. Topics to be addressed include the following: multidisciplinary evaluation and programming for exceptional learners; designing instruction based on assessment data; progress monitoring; technology for teaching and learning as a way to promote access to curriculum; designing appropriate and legally acceptable accommodations and/or modifications to promote access to the standards-based curriculum for students with exceptional learning needs; research-based instructional strategies to facilitate literacy development and instruction across academic content areas and collaborative structures to support exceptional learners in general education classrooms. This course will be required for all Secondary English, Math, and Social Studies Education students seeking initial certification and will be offered during the 8th semester (student teaching) to optimize performance of students during their student teaching experience. Course delivery methods will include lectures, reflections, online discussions, projects, class presentations, case studies, and other relevant forms of media.

Prerequisite: admission to Teacher Certification Program or Approval of program

EDUC 463: Teaching With Modern Web Technologies

3 Credits

Relates educational theory and practice to applications of the modern Web, applying content from educational foundations, curriculum, and research. EDUC 463 Teaching With Modern Web Technologies (3) This course focuses on the World Wide Web as a valuable resource for P-12 education. Designed for teachers, curriculum supervisors, and building administrators, this course relates educational theory and practice to applications of the Web and Web 2.0 technologies in classrooms and schools. Class participants apply resources available through the Web to content from the fields of educational foundations, learning theories, curriculum development, educational assessment and evaluation, and educational research. The impact that the Web and technology in general has had on the educational experience of both teachers and students, including the working relationship between the two, is also a main focus. Students maintain a documentation of weekly assignments that form the basis for the final project: the development of a web-based teaching portfolio. Students also complete a mid-term project that entails the design of an online learning activity for students that utilizes Web technologies. This activity requires the student to apply principles of learning theory to web-based resources identified and evaluated to support an identified classroom learning objective or set of objectives.

The final project consists of a technology-based teaching portfolio, demonstrating application of the key concepts covered in the course.

EDUC 464: Technology and the Learning Process

3 Credits

Evaluates the relationship between technology-based resources and learning theories through design, implementation, and evaluation of online instructional modules. EDUC 464 Technology and the Learning Process (3) Designed for teachers, curriculum supervisors, and building administrators, this course examines and evaluates the relationship between technology-based resources and learning theories. Students explore learning theories in terms of how technology may or may not support implementation of those theories in the classroom. Students also examine problem-based learning approaches and how they can be combined with technology, resulting in what has been defined by Dr. Bernie Dodge as a 'WebQuest' for classroom use. In the WebQuest development process, students identify a real life problem for their students to solve. They correlate that problem to their academic standards and district curriculum. They then design, implement, and evaluate instructional modules with integrated technology resources designed to lead to a solution of the identified problem, while promoting student acquisition of higher order thinking skills. Through this experience, students must plan for their students' learning tasks and activities, resource needs, performance evaluation and rubrics. As a culminating experience, students design an action research project related to the implementation of their learning module in the classroom setting.

Prerequisite: EDUC 462 or EDUC 463 or permission of program

EDUC 466N: Foundations of Teaching English as a Second Language

3 Credits

Overview of various legal, historical, and socio-cultural implications of teaching and learning English as a Second Language. This course is the first course in a five-course sequence designed to meet the Pennsylvania Department of Education's (PDE) requirements for the ESL Program Specialist endorsement. EDUC 466 addresses the legal, historical, and socio-cultural issues related to non-native speakers of English, and the implications for ESL curriculum, instruction, and assessment within the K-12 school setting. The course is designed: (1) to encourage understanding and appreciation for language diversity and culture, and (2) to enhance the knowledge and skills of teachers working with culturally and linguistically diverse learners, their families, and their communities. The course specifically addresses two of the PDE competencies necessary for a teacher to acquire in order to be endorsed as an ESL Program Specialist: PDE Competency IV-Developing cultural awareness/sensitivity. The four areas of emphasis within EDUC 466 are: a) The legal, historical, and cultural implications of English as a Second Language, which explores the legal and historical bases of ESL and analyzes the differences among home and school cultures, especially as they relate to language; b) Fundamentals of developing English language skills, which provides an introduction to the structure of the English language, grammar, and pronunciation, including lexical, morphological, syntactical, and phonological components; c) An overview of second language acquisition, which introduces the topics of linguistic skill development, and first and second language acquisition; and d) Multicultural education, which focuses on helping teachers acquire knowledge, develop cultural sensitivity, and identify educational

strategies that address the needs of multilingual and multicultural learners and their families.

Prerequisite: EDPSY 10 or EDPSY 14 or EDTHP 115 or EDUC 100 or HDFS 129 or PSYCH 83S or PSYCH 100 or PSYCH 105

General Education: Humanities (GH)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Soc Resp and Ethic Reason

EDUC 467: English Language Structure for English as a Second Language Teachers

3 Credits

An in-depth study and review of general linguistic concepts and their application to ESL pedagogy. EDUC 467 English Language Structure for ESL Teachers (3) EDUC 467 is the second course in a four-course, 12-credit sequence designed to meet the Pennsylvania Department of Education's (PDE) requirements for an ESL Program Specialist Certificate. The 12-credit sequence which has previously been approved by PDE has been offered as 'Special Topics' courses. The 12-credit sequence is consistent with other approved ESL certificate programs. EDUC 467 introduces students to general linguistic concepts and their application to ESL pedagogy and practice. The course provides an intensive study and review of major linguistic concepts and issues, including but not limited to: phonetics, phonology, morphology, syntax, semantics, pragmatics and discourse analysis, sociolinguistics and dialectology, historical linguistics and world languages, and writing systems. The course specifically addresses two of the PDE competencies necessary for a teacher to acquire to meet the minimum requirements as an ESL Program Specialist: PDE Competency I-English usage and developing linguistic awareness; and PDE Competency III-English language learners [ELLS] language and language services knowledge. The three areas of emphasis within EDUC 467 are: a) Language and communication, which explores the use of dictionaries, English use and usage, social conventions and English usage, American English variations, meaning and significance. b) Grammar, pronunciation, literacy development for second language learners, which focuses on the significance of these areas for ESL learners; and c) Evaluative classroom instruments to measure student progress in grammar, pronunciation and English language structure, which highlights the incorporation of linguistic tools in the assessment of ESL learners' language skills and needs.

Prerequisites: EDUC 100 or EDTHP 115S or EDPSY 10 or EDPSY 14 or EDUC 466 or Admission to ED program

EDUC 468: Language Acquisition for English as a Second Language Teachers

3 Credits

Study of the theory, research, and processes involved in first and second language development, acquisition, and assessment. EDUC 468 Language Acquisition for ESL Teachers (3) EDUC 468 is the third course in a four-course sequence designed to meet the Pennsylvania Department of Education's (PDE) requirements for an ESL Program Specialist Certificate. The 12-credit sequence has previously been approved by PDE. The 12-credit sequence is consistent with what other PDE-approved ESL certificate programs offer. This course builds upon EDUC 466, Foundations of Teaching English as a Second Language, and EDUC 467, English Language Structure for Teachers, with an emphasis

on the processes involved in second language acquisition. EDUC 468 explores first and second language learning, socio-cultural contexts and learner variables, and the issues related to cognition and developmental psycholinguistics. The course specifically addresses two of the PDE competencies necessary for a teacher to acquire to meet the minimum requirements as an ESL Program Specialist: PDE Competency I-English usage and developing linguistic awareness; and PDE Competency III-English language learners [ELLS] language and language services knowledge. The four areas of emphasis within EDUC 468 are: a) Learning a first language, which provides an in-depth study of the process involved in the acquisition and development of first language interrelations between psycholinguistics and cognition, as well as understanding of the processes involved in the acquisition and development of language in human species. b) Learning a second language, which explores the interrelationships between psycholinguistics and cognition, and first and second language acquisition, as well as identifying issues related to developmental psycholinguistics? c) Differences in how children, adolescents and adults learn language, major contributions of leaders in the field of the psychology of language learning. d) Evaluative classroom instruments to measure student progress in listening, speaking, reading and writing, which identifies linguistic tools that can be used to assess the language skills and needs of ESL learners.

Prerequisites: EDUC 100 or EDTHP 115S or EDPSY 10 or EDPSY 14 or EDUC 466 or EDUC 467 or Admission to ED program

EDUC 469: Teaching Methods and Assessment of English as a Second Language

3 Credits

Integration of theory, research, and practice about ESL curriculum, instructional methods, assessment, and literacy development. EDUC 469 Teaching Methods and Assessment of English as a Second Language (3) EDUC 469 is the fourth and final course in a four-course sequence designed to meet the Pennsylvania Department of Education's (PDE) requirements for an ESL Program Specialist Certificate. The 12-credit sequence has previously been approved by PDE. The 12-credit sequence is consistent with what other PDE-approved ESL certificate programs offer. The emphasis in EDUC 469 is to learn and integrate curricular, instructional, and assessment theories and practices into the K-12 classroom setting to promote language and literacy development. The course specifically addresses three of the PDE competencies necessary for a teacher to acquire to meet the minimum requirements as an ESL Program Specialist: PDE Competency I-English usage and developing linguistic awareness; PDE Competency II-English as a Second Language-instructional materials/development; and PDE Competency III-English language learners [ELLS] language and language services knowledge. The three areas of emphasis within EDUC 469 are: a) English as a Second Language methods and collaboration with academic content areas, which focuses on: the preparation for ESL teaching by exploring trends, major theories, methodologies, and assessment in second language learning; the study of second language teaching approaches applicable to elementary and secondary students; materials development and evaluation; and the development of a broad base of knowledge and skills that will enhance teacher effectiveness in meeting the needs of diverse learners through appropriate instructional, curricular, and behavioral strategies; b) Assessment and evaluation of English Language Learners (ELLs), which explores: the use of multiple measures of assessment to evaluate academic achievement; the development and implementation of authentic assessment tools; and various approaches and challenges to classroom assessment; and c) Literacy development, which focuses on elementary and secondary ESL students by exploring ways in which to

enhance English language learning in elementary students and to enrich content-area instruction for secondary ESL students.

Prerequisites: EDUC 468

EDUC 470W: Higher-Order Thinking for Educators

3 Credits

Presentation of strategies, techniques, and principles of higher-order thinking which are grounded in relevant research and practice will be presented. EDUC 470W Higher Order Thinking for Educators (3) This required course for elementary education majors focuses on three primary objectives. The first objective is to develop students' metacognitive, critical thinking, creative thinking, decision making, problem solving and reflection skills. A second objective is for students to become aware of ways to increase the higher order thinking of children in the elementary classroom. The third objective is to improve the students' ability to write critical thinking/reflection papers on educational problems and issues. This course serves as one of the foundation courses for the Elementary Education Program as one of the goals of the program is to develop reflective practitioners. Students are evaluated on the quality of eight writing samples, the quality and quantity of their contributions during whole class discussions, and the quality of their performance during cooperative group activities.

Prerequisite: admission into Elementary Education Major Writing Across the Curriculum

EDUC 471: Best Practices in Literacy

3 Credits

An application of best literacy practices to classroom instruction and assessment of reading, writing, listening, and speaking. EDUC 471 Best Practices in Literacy (3) This course is offered to support the Masters of Education degree in Teaching and Curriculum at Penn State Harrisburg by providing an application of research in best language arts. It is a required course in the Reading Specialist Certification Program. The course acquaints students with an instructional and assessment framework that has been embraced by the educational community on a nationwide basis. Objectives for the course include the following: (1) Students will demonstrate an understanding of the theoretical underpinnings of the established best practices in literacy. (2) Students will demonstrate the ability to implement effective literacy practices. (3) Students will be able to assess and evaluate student performance according to established best practices. Evaluation methods will include: (1) attendance and participation in class discussion and exercises (10%); (2) a 5-7 page paper dealing with the use of children's books to teach reading and writing (25%); (3) a 5-7 page paper on the most current methods of assessing students' reading, writing, speaking, and listening skills (25%); and (4) the creation of an integrated Thematic Unit for instruction (40%).

Prerequisite: EDUC 320 or EDUC 321

EDUC 472: Teaching Reading Through the Content Areas

3 Credits

Designed to enable teachers of content areas to improve the reading/skyl skills needed by their students.

EDUC 475: ESL Leadership, Research and Advocacy

3 Credits

Teachers will develop their skills as instructional leaders and researchers by conducting school-based action research projects. EDUC 475 ESL Leadership, Research and Advocacy (3) EDUC 475, the capstone course in the ESL Specialist and Leadership Certificate program (now the online SCOPE program), is a hybrid course involving online readings and discussions and field-based action research in PreK-12 educational settings with English Language Learners. ESL faculty will provide mentoring/coaching in the field. This course is designed to familiarize ESL candidates with the processes for developing, implementing, and evaluating action research projects. The ESL candidates will explore best practices in ESL pedagogy through implementation of various models of action research. The four areas of emphasis within EDUC 475 are as follows: a) the principles of ethical and methodologically sound action research related to ELLs; b) culturally and linguistically inclusive best practices supported by ESL research; c) collaborative partnerships between school and community to advocate for ELLs and their families; and d) ESL research, evaluation, and assessment for dissemination of research findings, professional development, and continuous quality improvement within ESL programs. ESL faculty will coach and mentor ESL candidates in the field while they conduct action research. By the conclusion of this course, ESL candidates will have gathered, analyzed, and summarized their data into a research paper for potential publication, as well as developed either: a) a workshop training presentation for their school or district; or b) a draft of a conference proposal for a national, regional, or state conference. By conducting action research projects and subsequently disseminating the results of their research through professional development presentations and potential publications, candidates are expected to become instructional leaders in the ESL field. This course is the final capstone 3-credit ESL course for the ESL Specialist and Leadership Certificate program.

Prerequisite: EDUC 469**EDUC 477: Literacy Instruction and Evidence-Based Interventions**

3 Credits

Students in this course will demonstrate knowledge of multi-tiered comprehensive literacy programs that incorporate all essential elements of reading: vocabulary development, early intervention, early literacy, assessment, phonological awareness, phonics, phonemic awareness, comprehension, fluency, and literacy grouping and instruction. Students will also be able to determine appropriate literacy screening, diagnostic, and progress monitoring assessments and align evidence-based instruction to identified student needs.

EDUC 478: Secondary Transition for Students with Disabilities

3 Credits

Process and procedures for successful transition of secondary students with disabilities.

Prerequisite: EDUC 459**EDUC 484: School Law for Teachers**

3 Credits

This course will focus on increasing teacher awareness of law and how it impacts on daily performance and job security.

Prerequisite: permission of program**EDUC 490: Student Teaching**

1-12 Credits/Maximum of 12

Observation and teaching in selected elementary or secondary schools under direction of cooperating classroom teachers and University supervisors. Regular seminars. GPA 3.0 or higher. Passing scores on required Praxis I tests. EDUC 490 Student Teaching (1-12) This course fulfills one of the certification requirements established by the Commonwealth of Pennsylvania. Students are assigned for a period of twelve weeks to teach in either an elementary or secondary school. Students have the option of selecting either the primary or intermediate level in elementary education, or the middle or high school level in secondary education. Cooperating classroom teachers provide the day-to-day direction, evaluation and mentoring, and an assigned university supervisor makes weekly visits and observations. Students are phased into the full responsibilities of a classroom teacher, with the ultimate goal being, the assumption of all duties and responsibilities for a period of several weeks. Students plan, implement, evaluate and reflect on a variety of instructional activities throughout their experience. In addition to planning and implementing instruction, students assume responsibilities for classroom management, assessing student progress, communicating with all stakeholders, and participating in professional and co-curricular activities. Student teacher evaluations are based on clearly defined expectations and criteria. The assessment criteria are linked to Commonwealth and national standards.

Prerequisite: eight semester standing, approval of program**EDUC 494: Research Project**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

EDUC 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

EDUC 495: Internship

1-15 Credits/Maximum of 15

Supervised off-campus, non-group instruction including individual field experiences, practicums or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor**EDUC 495A: Junior Field Experience**

1 Credits

EDUC 495A Junior Field Experience (1) This course is designed to provide Elementary Education majors with an intensive field experience that acquaints the student with the 'real' world of elementary education in a suburban setting. The experience will be under the direction of a certified elementary teacher in a suburban Harrisburg setting. Students will have an opportunity to actively work at the primary (K-3) and/or

the intermediate (4-5) level, and will be directed to accomplish specific field tasks assigned by their course instructors. These tasks are directly related to each course in which the student is enrolled. Students are assigned a university supervisor who observes and consults with the students throughout the experience. Specific activities will vary depending on the grade level and the school district's curriculum. Students are evaluated by both the cooperating teacher and the university supervisor, and the evaluations are based on classroom observations. This course is offered each semester and is required of all students enrolled in the Elementary Education program.

Prerequisite: prior approval of proposed placement by instructor.

EDUC 495B: Senior Field Experience

3 Credits

EDUC 495B Senior Field Experience (1) This course is designed to provide Elementary and Middle-Level Education majors with an intensive field experience that acquaints the student with the "real" world of elementary education in an urban or suburban setting. The experience will be under the direction of a certified elementary and middle-level teacher in a school setting in the Harrisburg area. Students will have an opportunity to actively work at the K-4 or the middle (4-8) level, and will be directed to accomplish specific field tasks assigned by their course instructors. These tasks are directly related to each course in which the student is enrolled. Students are assigned a university supervisor who observes and consults with the students throughout the experience. Specific activities will vary depending on the grade level and the school district's curriculum. Students are evaluated by both the cooperating teacher and the university supervisor, and the evaluations are based on classroom observations. This course is offered each semester and is required of all students enrolled in the Elementary Education program.

Prerequisite: prior approval of proposed placement by instructor.

EDUC 495C: Early Childhood Field Experience

1 Credits

EDUC 495C Early Childhood Field Experience (1) This course is designed to provide Early Childhood Education majors with an intensive field experience that acquaints the student with the "real" world of early childhood education in an urban setting. The experience will be under the direction of a certified elementary teacher in an urban Harrisburg setting. Students will have an opportunity to actively work at the primary (K-3) level and will be directed to accomplish specific field tasks assigned by their course instructor. These tasks are directly related to early childhood courses in which the student was previously enrolled. Students are assigned a university supervisor who observes and consults with the students throughout the experience. Students are evaluated by both the cooperating teacher and the university supervisor. The evaluations are based on classroom observations and the completion of learning activities correlated with the required text. This course is offered each semester and is required of all students enrolled in the Early Childhood Education program.

Prerequisite: prior approval of proposed placement by instructor and completion of all four early childhood prerequisite courses.

EDUC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

EDUC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDUC 499: Foreign Studies

1-12 Credits/Maximum of 12

Study of educational topics in a country other than the United States.

Prerequisite: permission of instructor
International Cultures (IL)

Education Mathematics - CA (EDMTH)

EDMTH 301: Mathematics in Elementary Education I

3 Credits

Survey of content, pedagogy, and psychology of mathematics instruction relating to numbers, operations, geometry, measurement, and algebraic thinking for pre-school through fourth grade. EDMTH 301 Mathematics in Elementary Education I (3). The course will provide students with the opportunity to explore and develop research-based practices needed to teach elementary mathematics in alignment with national and state content standards. This course will focus on the big ideas and learning trajectories associated with the mathematical content strands of numbers and operations, geometry, measurement, and algebraic reasoning across grades PK - 4. Course content will also focus on curriculum materials and considerations, planning effective lessons, pedagogical practices, and assessment of students' knowledge related to these mathematical content areas. The course will also emphasize the use of manipulatives and technology to represent the essential understandings needed to help students make sense of mathematical operations and make mathematical connections. Throughout the course, students will engage in mathematical tasks and mathematical discussions, and observe videos of elementary mathematics classes to explore the focus, coherence, and rigor needed across PK-4 grade levels relative to the content strands of numbers and operations, geometry, measurement, and algebraic reasoning. They will also learn about various formative and summative assessment strategies to identify students' misconceptions and learn various intervention strategies to clarify students' mathematical understandings. The course will also emphasize instructional approaches designed to help all students develop the mathematical behaviors associated with the Common Core Mathematical Practices across grade levels.

EDMTH 302: Mathematics in Elementary Education II

3 Credits

Survey of content, pedagogy, and psychology of mathematics instruction relating to rational numbers, algebraic thinking and functions, geometry, measurement, data analysis, and probability for fourth through eighth

grades. The course will provide candidates with the opportunity to explore and develop research-based practices needed to teach elementary mathematics in alignment with national and state content standards. This course will focus on the big ideas and learning trajectories associated with the mathematical content strands of rational numbers, algebraic thinking and functions, geometry, measurement, data analysis, and probability across grades fourth through eight. Course content will also focus on curriculum materials and considerations, planning effective lessons, pedagogical practices, and assessment of students' knowledge related to these mathematical content areas. The course will also emphasize the use of manipulatives and technology to represent the essential understandings needed to help students make sense of mathematical operations and make mathematical connections. Throughout the course, teacher candidates will engage in mathematical tasks and mathematical discussions, and observe videos of elementary mathematics classes to explore the focus, coherence, and rigor needed across 4- 8 grade levels relative to the above content strands. They will also learn about various formative and summative assessments strategies to identify students' lack of knowledge or misconceptions and learn various intervention strategies to clarify students' understanding. The course will also emphasize instructional approaches designed to help students develop the mathematical behaviors associated with the Common Core Mathematical Practices across grade levels.

Prerequisites: Two MATH/STAT courses at 100-level or above

EDMTH 441: Geometry and Measurement Across the K-12 Curriculum

3 Credits

The course presents participants with investigations of reports, research, and recent trends related to teaching geometry and measurement. EDMTH 441 Geometry and Measurement Across the K-12 Curriculum (3) This course addresses the areas of Geometry and Measurement as defined by the National Council of Teachers of Mathematics (NCTM) standards and the Pennsylvania academic standards. Designed for graduate students who teach mathematics in K-12 grades or are leaders in mathematics education, the course focuses on discussions and teaching practices related to the fundamental concepts of geometric and measurement. Also, participants will become familiar with current research, reports and recent trends related to the teaching of a geometry or measurement topic.

Prerequisite: permission of program

EDMTH 442: Algebra and Functions Across the K-12 Curriculum

3 Credits

The course presents participants with investigations of reports, research, and recent trends related to teaching algebra and function concepts. EDMTH 442 Algebra and Functions Across the K-12 Curriculum (3) This course addresses the areas of Algebra and Functions as defined by the National Council of Teachers of Mathematics (NCTM) standards and the Pennsylvania academic standards. Designed for graduate students who teach mathematics in K-12 grades or are leaders in mathematics education, the course focuses on current research and recent trends related to teaching algebra. The course will also focus on teaching algebraic concepts and algebraic reasoning from patterns, mathematical modeling, and variables of change using manipulatives, graphical representations, and technology.

Prerequisite: permission of program

EDMTH 443: Data Analysis and Probability Across the K-12 Curriculum

3 Credits

The course presents participants with investigations of reports, research, and recent trends to teaching data analysis and probability concepts. EDMTH 443 Data Analysis and Probability Across the K-12 Curriculum (3) This course covers the concepts of Data Analysis and Probability as defined by the National Council of Teachers of Mathematics (NCTM) standards and the Pennsylvania Academic Standards. Designed for K-12 teachers of mathematics or mathematics leaders, the course focuses on discussions related to the teaching of data analysis and probability through problem sets, written assignments, classroom-based projects and research. Topics will also include incorporating activities to address teaching probability and statistics to diverse populations. Also, participants will become familiar with current research and recent trends related to the teaching of a topic on data analysis and probability. Attention will be given to practices utilizing manipulatives, writing, problem solving, technology, and simulations.

Prerequisite: permission of program

EDMTH 444: Numbers and Operations Across the Curriculum

3 Credits

The course focuses on investigating reports, research, and recent trends related to teaching number and operation concepts K-12. A student who has passed MATH 200 may not take EDMTH 444 for credit.

EDMTH 455: Current Issues in Mathematics Education

3 Credits

An examination and analysis of contemporary trends and concerns in the teaching of mathematics.

Prerequisite: EDMTH302 or EDUC 417

Educational Psychology (EDPSY)

EDPSY 10: Individual Differences and Education

3 Credits

This course is an overview of the major theories and significant research on the development and explanation of individual differences and how those differences affect the education of school-age children. Specific topics include physical, cognitive, language, social-emotional, and cultural development in children and youth ages 3-20. By its very nature, the course will include a diversity focus, with special attention to ethnic, cultural, and gender issues as well as the needs of special populations. Within each topics area, the course will pay special attention to theoretical and empirical work on how and why variations occur, how they are to be interpreted and measured, and the implications those variations have for society, especially for schooling. Traditional and alternative practices in schools will be examined to see which approaches best meet the needs of in increasingly diverse American society. The course will also address cross-cultural comparisons to identify similarities and differences in developmental patterns, what these patterns tell us about development, and the societal impacts of these patterns. While the course will focus on individual differences in education it will not be exclusively oriented toward future teachers. The course will also help parents (or future parents) and citizens understand

the nature of development and individual differences of students as they progress through the educational system.

Bachelor of Arts: Social and Behavioral Sciences
 General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Global Learning
 GenEd Learning Objective: Integrative Thinking
 GenEd Learning Objective: Soc Resp and Ethic Reason

EDPSY 11: Educational Implications of Individual Differences in Childhood

3 Credits

EDPSY 11 is a course about individual differences in learners that may stem from biological and environmental influences on development and wellness. This course addresses the ways in which we consider these differences as we design environments for learners in early and middle childhood. Course content includes cognitive, language, social-emotional, moral and physical development of students in pre-elementary through middle school settings. Content also includes understanding and promotion of health and wellness in educational settings; as well as individual differences that stem from gender, ethnic, racial, and other forms of diversity in children and youth. Both primary and secondary sources serve as foundational readings for the course. Readings share research on how and why variations occur, how to measure and interpret them, and what implications such variations have on traditional and non-traditional educational environments with emphasis on developmentally appropriate and individually appropriate educational practice. Specific applications for teacher certification are included. Within each topic area, the course will pay special attention to theoretical and empirical work on how and why variations occur, how they are to be interpreted and measured, and the implications those variations have for social policy and ethical dilemmas with particular attention to educational settings. Traditional and alternative practices in schools will be examined to see which approaches best meet the needs of an increasingly diverse American society. While the course will focus on individual differences in education, it will not be exclusively oriented toward future teachers. The course will also help students understand how course content relates to parents (or future parents) understand the nature of development and individual differences of children and the students as they progress through the educational system.

General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Global Learning
 GenEd Learning Objective: Soc Resp and Ethic Reason

EDPSY 14: Learning and Instruction

3 Credits

This introduction to educational psychology provides students with an understanding of the major concepts, principles and theories, and related research of learning and teaching. The research on learning and teaching is a primary emphasis, with clear connections made to diverse real-world contexts such as home, family life, informal and formal teaching and learning settings, as well as the influence of mass media and digital technologies on the learning process.

Bachelor of Arts: Social and Behavioral Sciences
 General Education: Social and Behavioral Scien (GS)
 GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

EDPSY 14H: Learning and Instruction

3 Credits

Psychology of human learning applied toward the achievement of educational goals; evaluation of learning outcomes. EDPSY 014H Learning and Instruction (3) This course is designed to give honors students an applied introductory course in learning and instruction, particularly for students who may work in an educational setting. The honors section is designed to give students a more in-depth look at content in learning and instruction and the principles underlying learning theory and effective instructional processes. The class uses a seminar approach to discuss readings related to topics in learning theory, classroom management, effective instruction, student motivation, and applied assessment. Class discussions will focus on deeper understanding of the principles of learning and instruction with a focus on how one would apply those principles in teaching others.

Honors

EDPSY 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDPSY 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDPSY 101: Analysis and Interpretation of Statistical Data in Education

3 Credits

This course is an introduction to quantitative methods in educational and social science research emphasizing the interpretation of frequently encountered statistical procedures. Students will learn both conceptual and technical aspects of common approaches to understanding score interpretation and ranges, relationships among variables, and hypothesis testing and group comparisons. Students will learn how to use these approaches to interpret findings and draw conclusions from quantitative data.

Bachelor of Arts: Quantification
 General Education: Quantification (GQ)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

EDPSY 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDPSY 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDPSY 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EDPSY 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EDPSY 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDPSY 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDPSY 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDPSY 400: Introduction to Statistics in Educational Research

3 Credits

The foundations of statistical techniques used in educational research; distributions, central tendency, variability, correlation, regression, probability, sampling, hypothesis testing.

EDPSY 406: Applied Statistical Inference for the Behavioral Sciences

3 Credits

This course introduces evidence-based decision making in education and the social sciences. The topical focus is on descriptive and inferential statistical concepts and procedures applied to univariate distributions including central tendency, variability, confidence intervals, error, p-values, mean differences, correlation, and the general linear model. Students will also gain experience with the use of statistical software to analyze and interpret data.

Prerequisites: EDPSY 101; STAT 200 and PSYCH 200; or Graduate Status

EDPSY 408: Meeting Instructional Needs of English Language Learners with Special Needs

3 Credits

A major objective of this course is for students to be able to develop or modify instructional plans that reflect evidence based practices for adapting for the needs of English Language Learners (ELL) with special needs. The course has been developed to fulfill Pennsylvania Department of Education requirements and in recognition of the growing number of ELLs in the general population and thus, in special education settings. This course covers (1) theory and research on the instructional needs of ELLs and (2) the knowledge base on effective instruction for students with special needs and assists students in bringing these two areas of research together. Major topic areas include principles and issues in second language acquisition; ELLs characteristics including linguistic and cultural factors that affect second language acquisition; techniques and methods of research-based instruction for ELLs with special needs; lesson planning and instructional modifications for ELLs with special needs; and appropriate assessment practices for ELLs with special needs.

Prerequisites: EDPSY 14, EDPSY 10; EDPSY 11 or Graduate Status
Corequisites: SPLED 395W, SPLED 401, SPLED 425; Graduate Status
Cross-listed with: SPLED 408

EDPSY 421: Learning Processes in Relation to Educational Practices

3 Credits

This course covers the major theories used to explain learning across educational settings. Students will learn foundational assumptions and concepts in each theory with a primary focus on the principles that have been forwarded to explain learning. The emphasis in this course is on how these principles can be understood in applied settings and how knowledge of these principles can inform learning and instruction. This course is appropriate for students who are interested in understanding students' learning processes.

Prerequisites: EDPSY 14; EDPSY 10; EDPSY 11; PSYCH 212 or Graduate Status
Recommended Preparation: Permission of program

EDPSY 450: Principles of Measurement

3 Credits

This is an introductory course about properties of test scores such as reliability and validity. In addition, the course focuses on the construction and evaluation of measurement instruments used in educational and psychological settings and may include topics such as test development, score reporting, and interpretation. Basic statistics are introduced throughout the course to interpret the psychometric properties of scores.

Enforced Prerequisite at Enrollment: PSYCH 100 or STAT 200 or PSYCH 200 or EDPSY 101 or Graduate Status
Cross-listed with: PSYCH 404
Bachelor of Arts: Social and Behavioral Sciences

EDPSY 475: Introduction to Educational Research

3 Credits

This is an introductory course about research methods used in educational research. Students will learn how to evaluate research in educational and applied settings and acquire knowledge needed to design a research study. Overall goals are that students will appreciate

the value and limitations of research and continue to seek research articles related to their interests or expertise throughout their careers. The course offers a general survey of research methods commonly used in education and other social sciences; the primary emphasis focuses on various stages of quantitative research with less time spent on qualitative or mixed methods research.

Prerequisites: EDPSY 101; STAT 200 or Graduate Status

EDPSY 493: Child Maltreatment and Advocacy Studies: Capstone Experience

1-3 Credits/Maximum of 3

This course serves as the capstone experience for students enrolled in the Child Maltreatment and Advocacy Studies minor.

Enforced Prerequisite at Enrollment: CMAS 258N or HDFS 258N or SOC 258N Enforced Concurrent at Enrollment: (CMAS 465 or HDFS 465) and (CMAS 466 or NURS 466)
Cross-listed with: CMAS 493

EDPSY 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EDPSY 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Educational Theory and Policy (EDTHP)

EDTHP 99: Foreign Studies

1-12 Credits

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDTHP 115: Education in American Society

3 Credits

This course introduces students to the historical, political, philosophical, and sociological forces that have shaped the course of schooling in the United States. Through a semester-long analysis of a range of educational policies, practices, reforms, and developments, students will develop a stronger knowledge of American schooling and strengthen their skills in finding, interpreting, and presenting evidence in such a way so as to inform and guide both teaching and policy making.

United States Cultures (US)

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

EDTHP 115A: Competing Rights: Issues in American Education

3 Credits

An examination of educational issues relevant to democratic citizenship; emphasis is on understanding the relationship among politics, schools, and society. EDTHP 115A Competing Rights: Issues in American Education (3) (GS;US)(BA) This course meets the Bachelor of Arts degree requirements. This course offers students a chance to practice solving skills necessary for active and responsible citizenship. Because the course requires students to engage in detailed analysis of contested issues, students will: acquire information about the history and governance of public schools; develop an understanding of ideologies underlying existing schools and proposed reforms; and, as a result, be better equipped to make informed choices as voters. Major topics include curriculum design; school accountability; education of minority populations; the conflict between students' rights and the need of a school to maintain order; and the teaching of values. The course will require extensive reading, discussion (in-class and/or on-line), writing, and field research, to include such activities as interviewing teachers and politicians, or attending a school board meeting. Readings may include editorials, proposed legislation, court decisions, chapters from texts, essays and scholarly articles, and material from web sites of interested organizations (such as the National Education Association, the Christian Coalition, or the American Civil Liberties Union). After readings, analysis and discussion, students will prepare and defend a position on each issue, either individually or in groups, formally or informally, in speech or in writing. Students will be graded on their ability to support a particular stance with credible evidence, and on their ability to articulate the ideology underpinning a stance. Therefore, the ability to identify credibility of sources is inherent to success in the course. In general, this course draws upon concepts and information from history, political science, economics and philosophy as well as from education. As a General Education course, it seeks to help students broaden their perspective on social issues; to offer them practice in informed decision-making; and to understand and accept the responsibilities of active citizenship. The course might be particularly useful to social science majors because it will reveal interdisciplinary connections, while it will also be useful to the wider student body as a form of civic education.

EDTHP 200: Educational Reform and Public Policy

3 Credits

This course uses an interdisciplinary approach to explore the policies and reforms that shape the nation's largest social institution: public schools. This course is designed for students interested in understanding broad issues in public policy and in exploring fundamental questions about the United States through the lens of public educational institutions. Drawing from multiple social science disciplines, the course analyzes how ideologies, institutions, and social groups have interacted to shape formal schooling. Both past and present school reforms are used to interpret the relations of schools to historic changes in legal norms, the distribution of power and resources in public institutions, and the access of different social groups to leadership and leverage in the political process of American society. The course has no prerequisites. The lectures, discussions, readings, and projects are designed for students interested in studying public policy and are intended to lead to informed interpretation of educational policy dilemmas.

GenEd Learning Objective: Soc Resp and Ethic Reason

EDTHP 220: Children, Parents and Schools

3 Credits

This course examines the space within which parents, children and schools interact. We will look in depth and breadth at economic, social, cultural, and emotional factors that shape these relationships. Sociological perspective will be applied to examine children's and parents' experiences with schooling within the context of time and place. The course will cover a variety of topics, including parenting in historical perspective, social class differences in parental practices, race/ethnicity and education, education of immigrant children, school discipline, and others.

EDTHP 234: Honors Leadership Jumpstart

3 Credits

Intensive survey of contemporary leadership theory joined with practice, team-building skills, policy formation and influence, and service leadership. EDTHP 234H Honors Leadership Jumpstart (3) This is an intensive honors course for incoming First-Year students in the Schreyer Honors College with an interest in leadership. It provides introductory skills, perspective and background to prepare for and participate in a variety of leadership roles at Penn State and in the university community. Contemporary leadership theory joined with increasingly complex practice situations will be introduced. Content matter will include personal assessments, team building skills, organizational leadership, collaborative leadership, civics and diversity, policy formation and influence, and lessons about service learning and public scholarship. Considerable reading, writing, and discussion, as well as a first-year orientation project and a semester-long team service project will be required.

Prerequisite: first-semester Penn State student in the Schreyer Honors College
Honors

EDTHP 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

EDTHP 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDTHP 394: Professional Development in Education and Public Policy

3 Credits

This course develops professional skills and opportunities to prepare students for field placement and future employment or study. EDTHP 394 Professional Development in Education and Public Policy (3) This course focuses on the development of personal understanding of educational policy in a wide range of governmental, private, and civic organization with interest in educational policy, broadly defined. Students are provided opportunities to discover their policy interests, develop their professional communication and research skills, and design an on-site research project to be implemented during a summer field experience. The culminating project, the Field Experience Proposal, synthesizes readings, research, professional presentation, and details of the field placement. This becomes the blueprint for the students' summer field experience in EDTHP 395.

EDTHP 395: Field Experience in Education and Public Policy

3 Credits

This course structures a summer field experience, research project, and service in an off-site educational policy organization. EDTHP 395 Field Experience in Education and Public Policy (3) This course structures a summer semester field placement for EPP majors in a non-profit, governmental, or civic organization with an educational policy component. Students gain hands-on, real-world experience implementing their Field Experience Plan (created in EDTHP 394) while serving internships in regional and national settings. Student-directed Field Placement Plans include identification of a policy issue relevant to the placement, implementation, evaluation, and analysis and can apply to broad topics such as diversity, multiculturalism, social justice, and educational equity in rural, suburban, and urban settings. Communication, assignment submission, and instructor assessment will take place on the ANGEL Course Management System.

Prerequisite: EDTHP394

EDTHP 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDTHP 401: Introduction to Comparative Education

3 Credits

Origins, nature, scope, basic literature, and methodology of comparative education. Study of sample topics. CI ED 401 CI ED (EDTHP) 401 Introduction to Comparative and International Education (3) (IL) The course introduces undergraduate students to global issues in education and provides a survey of schooling practices used in various educational systems around the world. Students will have the chance to create an individual research project that will allow them to explore one country and one global educational issues in depth. Students are required to attend all classes, participate in the discussion sections, and take notes on the films shown. These films play an integral part in the course and provide students with views into classrooms and schools around the world. Students will also have access to international databases and be expected to make use of these databases in developing their projects. Finally, in-class discussions will focus on how comparative educational

studies have been used by politicians to influence educational reform around the world. In this course, we will survey the state of public education in the world today. Each student will focus on one nation and provide a synopsis of educational practice in that nation. We will then move on to focus on global or cross-national issues such as how competition between "core" nations like Singapore and the U.S. drives reform (GOALS 2000 or No Child Left Behind). Other issues will include power differences between north and south, education for democracy, barriers to girls and women's education in developing nations, as well as education and national identity.

Prerequisite: 5th semester standing or higher

Cross-listed with: CIED 401

International Cultures (IL)

EDTHP 410: The Global Impact of Education

3 Credits

This course examines the global impact of education on human rights, health, economic development, political mobilization, religion, and environmental sustainability. The education revolution has significantly changed the world's population from one largely unschooled to one mostly schooled in just the last 150 years, yet the full impact of this major transformation is only now emerging through social science research. The course will explore, at both the individual and societal levels, how education changes many dimensions of global society in both positive and negative ways. It also focuses on the use and misuse of educational programs in social and economic development worldwide through Non-Government Organizations (NGO's), national governments, and multinational agencies.

Enforced Prerequisite at Enrollment: 5th semester standing

Cross-listed with: CIED 410, GLIS 410, SOC 410

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Soc Resp and Ethic Reason

EDTHP 412: Education and the Status of Women

3 Credits

An examination of the relationship of education to the status of women in American society.

Cross-listed with: WMNST 412

EDTHP 416: Sociology of Education

3 Credits

The theoretical, conceptual, and descriptive contributions of sociology to education.

Cross-listed with: SOC 416

Bachelor of Arts: Social and Behavioral Sciences

United States Cultures (US)

EDTHP 420: Education and Public Policy

3 Credits

Focus on the development and analysis of education policy, and policy's influence on schools. EDTHP 420 Education and Public Policy (3) This

course examines the inherently political process in which educational policies are developed and implemented. It also considers how these formal policies interact with the practice of teaching and learning in U.S. schools. In this course, students will be expected to actively participate in classroom discusses and activities as we examine the development of policies and their implementation, with a focus on understanding pressing policy dilemmas in education today. Course evaluation includes quizzes, a midterm paper analyzing a policy issue, and a series of final exam essays.

Prerequisites: 5th Semester standing

EDTHP 426: Economic Foundations of Education Policy

3 Credits

This course is designed for undergraduate students interested in understanding the economic dimensions of education. Students will be shown how to apply economic models to fundamental questions of education policy. Concepts and principles such as returns to education, education production function, market failure in education, signaling model of education, and externalities of education will be introduced with a specific eye towards the application of those concepts to real world education policy issues. The concepts and methods of analysis addressed in this class would enable you to assess the validity of the arguments put forth by economists and education policy makers in various situations and hopefully make you a more discerning consumer of news and education policy topics. The main goals of the course are to (1) introduce students to the theoretical frameworks and empirical methods used by economists to understand and analyze core questions and problems in education; and (2) To teach students how to apply economic concepts, modes of analysis, and methods to analyze real-world education policy issues affecting the United States.

Prerequisites: ECON 102

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

EDTHP 427: Intelligence and Educational Policy

3 Credits

This course explores the concept of intelligence and its assessment from historical, psychological, educational and policy perspectives. EDTHP 427 Intelligence and Education Policy (3) In this course, we will focus on two main content areas. First, we'll explore the concept of intelligence and its assessment from historical, psychological, educational, and policy perspectives: What does intelligence look like in different cultures and at different points in history? What forces help to shape conceptions of intelligence? Second, we will consider the ways in which conceptions of intelligence influence students' opportunities to learn. For example, how are students assigned to higher-level or remedial classes and on what bases should admission to elite educational programs be allocated? What policies govern such decisions? The study of intelligence has been a controversial one. This course will touch on several controversies associated with the topic, including the "nature/nurture" debate and the "merit/affirmative action" debate. Readings and discussion will draw on opposing sides of these issues.

Prerequisites: 5th Semester standing

EDTHP 430: History of Education in the United States

3 Credits

American educational ideas and practice critically examined in terms of their historical development and contemporary significance.

EDTHP 433: Education and Civil Rights

3 Credits

The United States is in the midst of a demographic transformation and by the middle of the 21st century, demographic projections suggest no one racial group will constitute a majority in the U.S. More than half of children under 5 are children of color, and the nation's K-12 public schools are also serving a majority of minoritized children. At the beginning of the 21st century, economic inequality grew, as well. Policies and laws that had been implemented to expand access to educational opportunity during the civil rights movement have been curtailed as a result of legal and political pushback. Yet, communities, educators, advocates and leaders continue to push for new strategies to fully realize protecting the civil rights of all students in the U.S. This course will help students examine the history of efforts to adopt policies and laws to advance civil rights in education as well as resistance to them.

Cross-listed with: EDLDR 433

EDTHP 434: Honors Teaching Experience in Leadership Jumpstart

1 Credits/Maximum of 3

Guided instruction and practical experience for teaching assistants to the Honors Leadership Jumpstart course (EDTHP 234H). EDTHP 434H Honors Teaching Experience in Leadership Jumpstart (1) This course trains and supports the teaching assistants (TAs) who work with the first-year students in the Leadership Jumpstart course (EDTHP 234H). The TAs help guide the first-year students through their course by assisting in the design, implementation, and evaluation of the course and the student projects, providing feedback for what worked and what did not work, and providing important perspective from when they were first-year students. The TAs are expected to be a role model, assist in the instruction of the course, assist in the functional elements of the course, be a confidant/mentor to new students, and occasionally serve as an evaluator of students' work. The TAs' grades will be based on attendance at all class sessions and interactive assistance and leadership during the EDTHP 234H course and on the TA's reflections on the course, its effectiveness to achieve the objectives, and possible improvements.

Prerequisite: EDTHP234H and permission of program Honors

EDTHP 435: Child Labor and Education in the Global Economy

3 Credits

The legal instruments and social science theories useful for understanding and combating child labor through education policy and practice.

EDTHP 440: Introduction to Philosophy of Education

3 Credits

Introduction to the examination of educational theory and practice from philosophical perspectives, classical and contemporary. CI ED 440 CI ED (EDTHP) 440 Introduction to Philosophy of Education (3) The major

objective of EDTHP (CI ED) 440, Introduction to Philosophy of Education, is to broaden and deepen the students' understanding of the nature of education. Such a study involves exploring the ends as well as the means of education. It includes both an examination of some of the distinctive or defining characteristics of "educated persons" as well as the different elements of the learning experience (including curricula, pedagogies, and evaluative processes) that encourage the development of such persons. As part of developing an understanding of the educational enterprise, this course will introduce students to some of the important ideas and theories that comprise the rich tradition of educational philosophy. In the design of a course of this nature with constraints established by space, time, and the background of the student, it is necessary to confront the task of making judicious selections from the vast literary wealth accumulated over the centuries. In doing so, the decision made has been to focus primarily on the literary contributions of western philosophers of education. In the interest of making the sample varied and interesting, however, an effort has been made to include writings of some philosophers of education from different cultural contexts. The educational thoughts of A.S. Neill, John Dewey, Eliot Wigginton, Maxine Greene, Paolo Freire, Mohandas Karamchand Ganddhi, David Orr, Ivan Illich, and Wendell Berry, among others, will be explored in this class. The exposure to diverse, rich, and provocative ideas of the educators included for study here will, it is hoped, stimulate students to re-examine and further develop their own philosophy of education into a more comprehensive, coherent, and consistent one.

Prerequisite: ENGL 015
Cross-listed with: CIED 440

EDTHP 441: Education, Schooling, and Values

3 Credits

Studies in education and schooling as problems in value; axiological problems and positions; examination of practical applications, including moral education.

EDTHP 447: Ethnic Minorities and Schools in the United States

3 Credits

Analysis of the social and cultural factors which affect educational outcomes among minority pupils, especially Blacks, Hispanics, and Indians.

Cross-listed with: SOC 447
United States Cultures (US)

EDTHP 492: Identities, Power and Perceptual Pedagogies in Teaching and Learning

3 Credits

Students will perform inquires into the intersections of identities, power, and pedagogical formations in relation to urban teaching/learning contexts. AFAM 492 / CI 492 / EDTHP 492 Identities, Power and Perceptual Pedagogies in Teaching and Learning (3) In this course, students will take part in inquiries into the intersections of identities, power, and perceptual pedagogies, particularly as these phenomena pertain to methods of teaching and learning in urban contexts. To develop new knowledge and analytic skills, students will be introduced to perceptual and conceptual frameworks that assist deep engagements with youth- and teacher-centered case studies. These cases will depict

actual lived experiences among racially and economically diverse students and teachers in urban contexts.

Prerequisite: 5th semester standing
Cross-listed with: AFAM 492, CI 492

EDTHP 496: Individual Studies

1-18 Credits/Maximum of 18

Creative projects supervised on an individual basis and which fall outside the scope of formal courses.

EDTHP 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

Electrical Engineering (EE)

EE 8: Introduction to Digital Music

1 Credits

First-year seminar that discusses digital music from an electrical engineering perspective; topics include sampling, digital filtering, compression, and music synthesis. E E 008S Introduction to Digital Music (1) (FYS) E E 008S is a lab-oriented first-year seminar course aimed at students interested in the field of digital music. Specifically, this course discusses how the various digital music formats (and other types of digital audio) relate to the electrical engineering sub-discipline of digital signal processing. Students will come out of this course with a more technical understanding of the digital audio formats that they listen to every day. This course is structured to have alternating periods of lecture and lab. New concepts are first covered in the lectures and then reinforced with a variety of laboratory activities. In the laboratory experiments, students will use various computer programs and will also get exposure to standard test equipment used by electrical engineers. Topics covered in the lectures/labs include investigating the physics of sound, sampling and quantization of music signals, generating audio special effects through the use of digital filters, compression techniques used in digital audio, and mathematically synthesizing instrument sounds. Current popular digital audio formats such as compact disc audio, WAV, MP3, and MIDI will also be investigated throughout this course. No musical experience/talent is necessary.

First-Year Seminar

EE 9: First-Year Seminar in Electrical Engineering

1 Credits

First-year seminar covering a variety of Electrical Engineering topics that vary from year to year. E E 009S First-Year Seminar in Electrical Engineering (1) (FYS) The overall objectives of Engineering First-Year Seminars are to engage students in learning about engineering and orient them to the scholarly community in a way that will bridge to, and enhance their benefit from, later experiences in the College and the University. Seminars adhere to the two specific goals identified below by including one or more of the three strategies following each goal: (1) Introduce students to a specific field, or encourage their exploration of a number of fields, of study in engineering; familiarization with the engineering majors and career options and with the objectives of general

education and other components of the curriculum; development of a particular topic, contemporary issue, emerging or interdisciplinary field of concentration, or professional responsibilities in engineering; plant tours or demonstrations of engineering facilities(2)Acquaint students with tools, resources and opportunities available to them in the department(s), College and University; exposure to learning support services and career development resources

First-Year Seminar

EE 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EE 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EE 200: Design Tools

3 Credits

A working knowledge of electrical engineering design tools and hardware realization of electrical engineering systems. E E 200 Design Tools (3) E E 200 provides students with a working set of design tools that are required to complete subsequent courses in the electrical engineering design curriculum. This course directly builds upon circuit analysis/ design concepts in the required introductory courses in electrical circuits, digital systems and computer programming. Specific topics covered in this course include automated instrument control, hardware realization using field programmable devices, hardware realization using embedded microcontroller systems, circuit simulation and printed circuit board layout. Student performance is evaluated using exams, homework assignments, and projects. Concepts introduced in lecture are reinforced with hands-on experience provided by laboratory projects.

Enforced Prerequisite at Enrollment: [C or better in CMPEN 270 or ((C or better in CMPEN 271) and CMPEN 275)] and (CMPSC 201 or CMPSC 121 or CMPSC 131)

EE 210: Circuits and Devices

4 Credits

EE 210 serves as the gateway course for all subsequent coursework in Electrical Engineering. It introduces engineering circuit analysis to students headed towards Electrical Engineering and related fields. The course includes both a theoretical component, covered in the lecture portion of the course, and a practical hands-on component, covered in the laboratory portion of the course. The lecture portion of the class begins with a review of basic concepts of charge, current, voltage, electric power and electric energy. Next, circuit elements and devices used in DC circuits are introduced - independent and dependent sources, resistors, potentiometers, and operational amplifiers. Circuit analysis theorems (KVL, KCL, resistor and source combinations, voltage division, current division, source transformations, nodal analysis, mesh analysis, linearity, superposition, Thevenin's theorem, and Norton's theorem) are then presented and used to analyze DC circuits. In the next part of the course, circuit elements with time-varying properties (capacitors and

inductors) are introduced and algorithms for analyzing transient RC, RL, and RLC circuits are formulated. In the final part of the course, the concepts of phasors and impedances are developed and these tools are used to analyze AC steady state circuits. These tools are then extended to calculate the frequency response of RLC circuits. In the laboratory portion of the course, students first learn how to use basic electrical engineering test equipment - oscilloscopes, function generators, digital multimeters, and power supplies. Students then perform a series of experiments that parallel the theory learned in the lecture-portion of the course. Experiments involve electrical devices such as resistors, potentiometers, capacitors, and operational amplifiers. Circuit analysis modeling software is introduced as a tool for circuit analysis and design.

Enforced Prerequisite at Enrollment: C or better in PHYS 212 Enforced Concurrent at Enrollment: MATH 250 or MATH 251

EE 211: Electrical Circuits and Power Distribution

3 Credits

D.C. and A.C. circuits, transformers, single and three-phase distribution systems, A.C. motors and generators.

Enforced Prerequisite at Enrollment: PHYS 212

EE 212: Introduction to Electronic Measuring Systems

3 Credits

Electronic devices and characteristics, amplifiers and feedback, electronic instruments and recording systems. Designed for non-electrical engineering students.

Enforced Prerequisite at Enrollment: PHYS 212

EE 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EE 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EE 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EE 300W: Design Process

3 Credits

Introduction to the electrical engineering design process, project teaming and management, and technical communication. E E 300W Design Process (3) E E 300W course will introduce students to the electrical engineering design process, project teaming, and project management in preparation for conducting a senior design project. In the lab, students will get practice managing a project from pre-definition to completion within constraints of customer needs, technical parameters

and budgets. The principles of systems engineering will be introduced. The student-engineer will gain professional skills (in areas such as technical communication, teaming, conflict resolution and life-long learning) important for a successful career in a wide range of engineering environments. There will also be discussion of engineering ethics and the responsibilities of the engineer in the emerging global marketplace. A series of lectures by outside speakers will provide perspectives on life as an engineer.

Enforced Prerequisite at Enrollment: EE 200 and EE 310 Enforced Concurrent at Enrollment: ENGL 202C Writing Across the Curriculum

EE 310: Electronic Circuit Design I

4 Credits

EE 310 provides the foundational education in electronic circuit analysis and design through lecture, laboratory, and out-of-class assignments. In EE 310, students learn about the electrical properties of different fundamental semiconductor devices and their basic circuit design applications. This course deals explicitly with both linear and nonlinear applications of devices, and with the practical aspects of design such as the inherently nonlinear nature of semiconductor devices. The lecture portion of the class begins with the introduction of diodes (their characteristics and DC/AC models), followed by methods for analysis and design of diode circuits, such as rectifiers, regulators, and limiters. Next, both metal-oxide-semiconductor field-effect transistors (MOSFET) and bipolar junction transistors (BJT) are introduced with an emphasis on their characteristics and DC/AC models as well as the analysis (gain and input/output resistance) of different amplifier configurations with transistors. The design and analysis of integrated-circuit analog MOSFET amplifiers and digital MOSFET logic gates are also covered in this course. EE 310 also introduces the design and analysis of circuits containing ideal operational amplifiers (op amps), such as buffers, inverting/noninverting amplifiers, summers, integrators, differentiators, and instrumentation amplifiers, as well as the effects of non-ideal op-amp characteristics on circuits. In the laboratory portion of the course, students first learn how to use basic electrical engineering test equipment. Students then perform a series of experiments that parallel the theory learned in the lectures. Experiments involve electronic devices such as diodes, transistors (both MOSFET and BJT), and operational amplifiers. Circuit analysis modeling software is utilized as a tool for circuit analysis and design.

Enforced Prerequisite at Enrollment: C or better in EE 210 or C or better in EE 315 or C or better in EET 310

EE 311: Electronic Circuit Design II

3 Credits

Electronic circuit design with consideration to single and multi-device subcircuits, frequency response characteristics, feedback, stability, efficiency, and IC techniques. E E 311 Electronic Circuit Design II (3) E E 311 is intended to provide competency in the application of basic electronic principles to design with operational amplifiers and integrated circuits. The course will include passive and active filter design, and feedback principles and non-ideal aspects of operational amplifiers (op-amps) including compensation, stability, and sensitivity needed for advanced design with op-amps, as well as some nonlinear op-amp circuits including comparators, Schmitt triggers, pulse width modulators, and waveform generators.

Enforced Prerequisite at Enrollment: C or better in EE 310

EE 312: Electrical Circuit Analysis

3 Credits

Circuit analysis techniques; mutual inductance; frequency response; FOURIER series; LAPLACE transform.

Enforced Prerequisite at Enrollment: EE 210

EE 313W: Electronic Circuit Design II

4 Credits

Design/analysis of electronics circuits including: single/multistage transistor amplifiers, op amp circuits, feedback amplifiers, filters, A/D and D/A converters. E E 313W Electronic Circuit Design II (4) The prerequisite course, E E 310 - Microelectronics 1, covers the basic operation of microelectronic devices and their use in logic circuit design. This course focuses on the design of electronic circuits for amplification, filtering, and A/D and D/A conversion. Advanced circuit design concepts, such as IC biasing, feedback, and frequency response, are covered. This course is designated as writing intensive, and students are required to produce a variety of technical documents based on laboratory work.

Enforced Prerequisite at Enrollment: EE 310

Writing Across the Curriculum

EE 314: Signals and Circuits II

3 Credits

Circuit analysis including op-amps, and ideal transformers; one/two port network models; three-phase and industrial loads; engineering professionalism.

Enforced Prerequisite at Enrollment: EE 210 and (CMPSC 201 or CMPSC 121 or CMPSC 131 or CMPSC 200)

EE 315: Electrical Signals and Circuits with Lab

5 Credits

Introduction to circuits, signals, energy, circuit analysis; frequency response, Bode diagrams, two-port networks; Laplace transforms, Polyphase circuits.

Enforced Concurrent at Enrollment: MATH 250

EE 316: Introduction to Embedded Microcontrollers

3 Credits

Introduction to microcontrollers in electronic and electromechanical systems. Hardware and software design for user/system interfaces, data acquisition, and control.

Enforced Prerequisite at Enrollment: (CMPSC 121 or CMPSC 131 or CMPSC 200 or CMPSC 201) and (CMPEN 271 or CMPEN 270) Enforced Concurrent at Enrollment: EE 310

EE 317: Circuits II and Data Acquisition

2 Credits

E E 317 Circuits II and Data Acquisition This course is a follow up to the introductory circuit analysis course. The first part of this course is

devoted to the study of multi-phase circuits, magnetic coupling, two-port networks and their applications. The second part of the course is devoted to automated instrument control with emphasis on data acquisition and processing, and printed circuit boards manufacturing. Student performance is evaluated using exams, homework assignments, and projects. Concepts introduced in lecture are reinforced with hands-on experience provided by laboratory projects.

Enforced Prerequisite at Enrollment: EE 210 and (CMPSC 201 or CMPSC 121 or CMPSC 101)

EE 320: Introduction to Electro-Optical Engineering

3 Credits

An introduction covering several fundamental areas of modern optics, optical PROCESSES, AND DEVICES.

Enforced Prerequisite at Enrollment: EE 210 and (MATH 230 or MATH 232)

EE 330: Engineering Electromagnetics

4 Credits

Static electric and magnetic fields; solutions to static field problems, Maxwell's equations; electromagnetic waves; boundary conditions; engineering applications.

Enforced Prerequisite at Enrollment: (C or better in EE 210 or C or better in EE 315) and (MATH 230 or MATH 232)

EE 331: Electromagnetic Fields and Waves

3 Credits

Electromagnetic field theory and applications; Maxwell's equations; plane wave propagation; boundary conditions; basic antenna theory; impedance matching. E E 331 Electromagnetic Fields and Waves (3) After completing this course the student should understand, and be able to demonstrate a working knowledge of the following topics: 1)Vector Calculus 2)Coulomb's Law and applications 3)Gauss's Law and applications 4)Electric potential and electric fields 5)Static boundary conditions 6)Computation of capacitance 7)Laplace's equation 8)Current density and Ohm's Law 9)The Biot-Savart Law 10)Magnetic field characteristics 11)Computation of Inductance 12)Faraday's Law of electromagnetic induction 13)Maxwell's equations 14)Time-harmonic fields 15)Plane electromagnetic waves in various media 16)Plane waves at boundaries 17)Transmission lines 18)Smith charts 19)Basic antenna theory 20)Impedance matching.

Enforced Prerequisite at Enrollment: EE 210 and MATH 230

EE 337: Introduction to Quantum Information Science and Engineering

3 Credits

This course will introduce quantum mechanics from the perspective of quantum information science and engineering, focusing on two-level systems and the concepts of entanglement and decoherence. It will educate students on how quantum information can be used in quantum communication and quantum computing, both in theory and experiment. The course covers basic concepts such as two-level systems, Schroedinger equation, Bloch sphere, superposition, entanglement, quantum bits, quantum gates, Bell's inequalities, and mixed states. Covering these basic concepts prepare the students for

more advanced courses in the minor where they learn in depth about quantum algorithms, physical implementation of different quantum systems, and how to compute with existing quantum computers.

Enforced Prerequisite at Enrollment: MATH 220 and PHYS 214
Cross-listed with: ESC 337, PHYS 337

EE 340: Introduction to Nanoelectronics

4 Credits

Introduction to the physics and technology of nanoelectronic devices. E E 340 Introduction to Nanoelectronics (4) This is a required course for junior-level electrical engineering students. The first part of the course provides an introduction to the key aspects of electronic materials, quantum mechanics, and solid state physics needed to understand nanoelectronic devices. The second part is devoted to the fundamental theory of carrier transport including ballistic transport, drift, diffusion, and recombination/generation. The third part of the course applies the fundamentals to describe the operation of several basic semiconductor devices: p-n junctions, metal-semiconductor junctions, and metal oxide semiconductor field effect transistors (MOSFETs), and provides an introduction to fabrication methods used to create these devices. This portion of the course also highlights contemporary concepts in thin film electronics, optoelectronic devices, and solar energy conversion. The course includes several in-class demonstrations and also web-based remote device measurement laboratories. One of the in-class demonstrations uses a Breeze interface to link a field emission scanning electron microscope session to the classroom. The students can see and communicate with the microscope operator to visualize real nanoelectronic materials and devices at different levels of magnification. The remote device measurement laboratories use web-based labview software to collect device characteristics from silicon p-n junctions and MOSFETs fabricated in the senior level device technology class. The students are given microscope images of the devices and an assignment to analyze the device performance. This allows the students to compare ideal text book performance to non-ideal device response.

Enforced Prerequisite at Enrollment: PHYS 214 and C or better in EE 210

EE 341: Semiconductor Device Principles

3 Credits

This course prepares students to learn electronic design by providing an understanding of how semiconductor devices work, how they are made, how they are modeled, how they fail, and how they are applied as discrete and integrated components. Emphasis will be placed on silicon devices, especially diodes, bipolar junction transistors, field-effect transistors, optoelectronic devices, microelectromechanical devices, and integrated circuits. Lectures will transition along the progression from the underlying physics to the fabrication process, and end with an introduction to diode and transistor circuit design, using material from the textbook, with supplemental material added where applicable.

Enforced Prerequisite at Enrollment: CHEM 110 and PHYS 214
Enforced Concurrent at Enrollment: EE 210

EE 350: Continuous-Time Linear Systems

4 Credits

Introduction to continuous-time linear system theory: differential equation models, sinusoidal steady-state analysis, convolution, Laplace transform and Fourier analysis.

Enforced Prerequisite at Enrollment: (C or better in EE 210) and MATH 220 and (MATH 250 or MATH 251)

EE 351: Discrete-Time Linear Systems

3 Credits

Introduction to discrete-time signal processing: sampling, linear time-invariant systems, discrete-time Fourier transform and discrete Fourier transform, Z transform.

Enforced Prerequisite at Enrollment: C or better in EE 350

EE 352: Signals and Systems: Continuous and Discrete-Time

4 Credits

Transient response, frequency response, Bode plots, resonance, filters, Laplace transform, Fourier series and transform, discrete-time signals/systems; sampling z-transform. E E 352 Signals and Systems (4) E E 352 is a course designed to study the characteristics of continuous and discrete time linear systems. These include signal and power input/output relationships in both domains, impulse responses, and the differential equations that describe these systems. Convolution is an essential component of any linear systems course, therefore several classes will be devoted to this topic in order that students fully understand the concept. Fourier series is used to determine the spectral content of periodic signals thus illustrating how a signal is distributed in frequency. This is very important when determining bandwidth requirements. There will be a brief refresher on the trigonometric Fourier series then the exponential series will be studied extensively. The Fourier transform can be used to determine the spectral content of virtually any signal encountered in the undergraduate curriculum, aperiodic, or periodic. It is also valuable in determining the frequency response characteristics of linear systems. Some filter theory is included in the course along with the Laplace transform. Much of the signal processing performed today is done digitally so the remainder of the course will approach most of the aforementioned topics from the viewpoint of the discrete domain with a strong emphasis on sampling and aliasing. Finite impulse response filters will be introduced along with recursive filters using the bilinear transform method.

Enforced Prerequisite at Enrollment: MATH 250 and (EE 210 or EE 314 or EE 315)

EE 353: Signals and Systems: Continuous and Discrete-Time

3 Credits

Fourier series and Fourier transform; discrete-time signals and systems and their Fourier analysis; sampling; z-transform. E E 353 Signals and Systems: Continuous and Discrete Time (3) is a core course taken by all computer engineering students that provides exposure to a variety of topics in linear systems. The material in this course is needed for further study in image processing and data communications, both of which are major areas of specialization within the computer engineering curriculum. This course is divided into three main sections - continuous-time linear system analysis, sampling and reconstruction, and discrete-

time (digital) linear system analysis. Although the material covered in the first and last sections is similar, fundamental differences between continuous- and discrete-time exist. One of the goals of this course is to make the student aware of these differences. The first part of the course discusses continuous-time linear system analysis. It begins with basic time-domain mathematical descriptions of various signals and systems. The bulk of the analysis, however, is in frequency domain approaches such as the Fourier Series and the Fourier Transform. Applications such as modulation and multiplexing are understood much easier using frequency-domain analysis approaches. The middle part of the course deals with the bridge between continuous- and discrete-time, namely signal sampling and reconstruction. Theoretical and practical approaches to sampling/reconstruction are covered. Finally the Nyquist sampling theorem, which is the key to all digital signals, is developed. At this point, students are ready to study discrete-time systems. The final part of this course revisits system analysis, although now discrete-time (or digital) systems are considered. As in the continuous-time case, both time-domain and frequency-domain approaches to the analysis problem are discussed. The course ends with select topics in the z-transform, which is the digital counterpart to the Laplace transform.

Enforced Prerequisite at Enrollment: EE 210 and (MATH 250 or MATH 251)

EE 360: Communications Systems I

3 Credits

Generic communication system; signal transmission; digital communication systems; amplitude modulation; angle modulation. E E 360 Communications Systems (3) E E 360 is a junior-level elective course in the electrical engineering curriculum that provides a detailed foundation of communications systems, expanding on the topics covered in a standard linear systems class. The first part of the course deals with analog communications. First, analog amplitude modulation (AM) is presented, covering double-sideband suppressed carrier, double-sideband large carrier, single sideband, and vestigial sideband modulation formats. Detection techniques for these modulation schemes are also covered. The phase-locked loop for coherent carrier tracking is also presented. Second, analog angle modulation is presented in the forms of frequency modulation (FM) and phase modulation (PM). Estimating the bandwidth of the angle modulated carrier is covered, as well as various generation and detection methods. After analog communications are covered, the basics of digital modulation are presented. Sampling theory and analog-to-digital conversion are covered. Particular attention is paid to the signal-to-noise ratio and the aggregate bit rate at the output of the digital modulator. The principles of Nyquist pulse shaping are presented. Particular topics include intersymbol interference, line coding, and power spectral density. A presentation of emerging digital communications technologies concludes the course. Topics may include mobile radio, high definition television, broadband services, video compression, and high-speed local area networks.

Enforced Prerequisite at Enrollment: C or better in EE 350 or C or better in EE 352

EE 362: Communication Networks

3 Credits

Data transmission, encoding, link control techniques; communication network architecture, design; computer communication system architecture, protocols. CMPEN 362 CMPEN (E E) 362 Communication Networks (3) CMPEN (E E) 362 is an elective course in both the electrical

and computer engineering curricula which provides an overview of the broad field of data and computer communications. First, a general model of the communication task is presented, including the layered concept by which each layer provides services for the layer above. First, the lowest (physical) layer is studied. This involves signal design, Fourier analysis representations, bandwidth concepts, transmission impairments and communication media properties. Then the next higher (link) layer is considered which involves organizing bits into frames, data link and error control methods (including frame sequence numbering and error detection principles). Multiplexing to share a link is studied, including frequency division multiplexing, dedicated time division multiplexing, and statistical time multiplexing. At the network layer level, there are two categories: broadcast (usually local area) and switching networks. Broadcast and local area network studies include bus, tree and star topologies, Ethernet, optical fiber bus networks, ring networks, and medium access control protocols. Switching and routing concepts for networks are explained, including both circuit and packet switching, datagrams and virtual circuits. Properties of frame relay and asynchronous transfer mode (ATM) networks are described. Internetworking frame structures, routing and protocols are studied. Also, bridge routing for local networks is described. At the still higher transport (network end-to-end control) layer, transport protocols, including TCP/IP, are described.

Enforced Prerequisite at Enrollment: CMPEN 270 or CMPEN 271
 Concurrent Courses: STAT 318 or STAT 401 or STAT 414 or MATH 414 or STAT 418 or MATH 418
 Cross-listed with: CMPEN 362

EE 380: Introduction to Linear Control Systems

3 Credits

State variables; time-domain and frequency-domain design and analysis; design of feedback control systems; Root Locus.

Enforced Prerequisite at Enrollment: (C or better in EE 350 or C or better in EE 312) and MATH 220

EE 383: Signals and Controls Laboratory

1 Credits

Design, computer simulation, and practical implementation of systems in the areas of filtering, digital signal processing, and controls. E E 383 Signals and Controls Laboratory (1) In this course, students will be exposed to designing, simulating and implementing practical circuits for filtering of signals, digital signal processing, and control of physical processes. The design aspect of the course will be a direct extension of the two associated lecture courses (E E 352 and E E 380). The simulations will use industry standard software tools (e.g., MATLAB, Hyperception, C/C++) while the actual implementation will be accomplished using PC based DSP hardware in addition to analog circuitry. This will be a hands-on laboratory intended to augment the material presented in E E 352 and E E 380. Students will be expected to do a large portion of pre-lab work before starting the laboratory session.

Enforced Concurrent at Enrollment: EE 352 and EE 380

EE 387: Energy Conversion

3 Credits

Modeling of induction machines, synchronous machines, transformers, and transmission lines. E E 387 Energy Conversion (3) E E 387 is an

electrical engineering technical elective course intended for students with an interest in energy conversion in electrical, electromagnetic, electromechanical, and electrochemical systems. The course begins with a review of static and quasi-static electromagnetics. In particular, methods of determining electromagnetic forces and torques will be discussed in detail. The course will then present methods of developing models for electromagnetic, electromechanical, and electrochemical systems and discuss the use of these models in the analysis and design of devices such as inductors, transformers, actuators, transducers, and rotating machines. Furthermore, fundamental concepts related to the operation of power electronic circuits, which often interface with these types of devices, will be presented. The course includes a lab component where students gain experience with the analysis and design of energy conversion systems. E E 350, Continuous-Time Linear Systems, is a prerequisite for this course.

Enforced Prerequisite at Enrollment: EE 350 or EE 312

EE 388: Energy Conversion Laboratory

1 Credits

Learn the basic rules of electrical safety, power factor correction, and power measurement for balanced/unbalanced loads. This also includes operation and characteristics of single-phase and three-phase power transformers, main characteristics and operation of synchronous generators, and synchronization of a three-phase synchronous generator to an ac power network. Operation and the main characteristics of synchronous motors, three-phase squirrel-cage induction motors, and characteristics of various dc motors are also covered.

Enforced Concurrent at Enrollment: EE 387

EE 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor
 Full-Time Equivalent Course

EE 396: Independent Studies

1-4 Credits/Maximum of 4

Junior-level honors course involving special individual projects under the direction of an electrical engineering faculty member.

Enforced Prerequisite at Enrollment: Fifth semester standing or higher Honors

EE 397: Special Topics

1-9 Credits/Maximum of 9

FORMAL COURSES GIVEN INFREQUENTLY TO EXPLORE, IN DEPTH, A COMPARATIVELY NARROW SUBJECT THAT MAY BE TOPICAL OR OF SPECIAL INTEREST.

EE 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EE 400: Engineering Design Concepts

3 Credits

Engineering design and modelling, engineering economy, project planning, capstone project selection, and technical communication skills. E E 400 Engineering Design Concepts (3) This course prepares senior electrical engineering students for industrial engineering design and project management. It covers the engineering design process, project planning and evaluation, engineering ethics, and engineering economy. . In addition, students select, specify, and start their capstone design project which is completed in the follow-up course, EE BD 481. Students are expected to carry out a group design project that is on par with industrial expectations. Upon completion of this course a student should have a solid understanding of the engineering design process, a clear capstone project description, should have completed some preliminary design work, and be adequately prepared to complete the project in E E 401.

Enforced Prerequisite at Enrollment: EE 313W and EE 316 and EE 352 and EE 380 and seventh-semester standing or higher

EE 401: Electrical Design Projects

3 Credits

Group design projects in the areas of electronics and electrical/computer systems. E E 401 Electrical Design Projects (3) In this course students complete their senior design project started in E E 400. Design groups meet regularly with a faculty advisor to report progress and resolve design issues. Oral and written progress reports are expected at selected times. The class culminates with a final technical defense of the project.

Enforced Prerequisite at Enrollment: EE 400 and eighth-semester standing or higher

EE 403W: Capstone Design

3 Credits

Design projects in the various areas and subdisciplines of electrical engineering, with an emphasis on technical communication skills. EE 403 Capstone Design (3) will give electrical engineering students a "real-world simulation" of a total design experience. Students will address design challenges in one of several ways: a. Projects submitted by corporate sponsors which emphasize teaming and interaction with a customer and with professional engineers in a pseudo-professional engineering environment. Some of these projects require multi-disciplinary teams. b. Projects in "Special Focus" sections in which all of the projects will loosely deal with a particular electrical engineering topic. Examples of Special Focus topics include: Microwave engineering, RF engineering, Acoustics and Microcontrollers. Small-team projects or class-wide projects will be offered at the discretion of the instructor. c. "Projects with Faculty" are arranged on the initiative of individual students or student teams, who solicit a mentoring relationship with faculty in an area of shared interest. Projects with faculty may include research projects, projects associated with internship experiences, and projects associated with student organization competitions or activities. In addition to

the completion of a capstone project, EE 403 includes an emphasis on technical communication and professional behavior. Students will develop their skills at conveying technical information through technical writing, oral presentation and graphics (such as a project poster or web page). Students will be expected to conduct themselves in a professional manner during project-related interactions with fellow students, faculty, and practicing engineers. Student work is evaluated on the technical merit of the completed project and the degree to which constraints and priorities (as expressed in the engineering requirements) are acknowledged throughout the design process.

Enforced Prerequisite at Enrollment: EE 300W and ENGL 202C Writing Across the Curriculum

EE 405: Capstone Proposal Preparation

1 Credits

Performing the initial research needed for the capstone course, and the preparation of the written project proposal. E E 405 Capstone Proposal Preparation (1) The capstone design course will incorporate engineering standards and realistic constraints including most of the following considerations: economic; environmental; sustainability; manufacturability; ethical; health and safety; social; and political. While engineering constraints are included in the earlier courses, the senior capstone design requires integration of the appropriate engineering constraints into the capstone design course. This course will mimic the problems encountered by an engineer working in commercial, industrial, and governmental entities. This basically requires that students in the Electrical Engineering BS program select a topic prior to starting the semester of their capstone design course, do the initial research for the topic, prepare a timeline, and prepare a well written proposal that would make a suitable capstone project. The time devoted to the careful topic selection, research, timeline, and proposal preparation, makes for a much better capstone design experience.

Enforced Prerequisite at Enrollment: Seventh semester standing or higher and ENGL 202C and CAS 100

EE 406W: Electrical Engineering Capstone Design

3 Credits

Project designs of analog and digital systems, interfacing, and relevant electronic circuits, with an emphasis on technical communications skills. EE 406 Electrical Engineering Capstone Design(3) is designed with the following goals and objectives: * The students will enter the course with a well-defined capstone design proposal and a timeline for which the first task will be to write the specifications. Upon the specifications' approval, the student teams will begin designing and building the projects. * Each student will maintain a laboratory notebook that documents the day-to-day activities of the project in a style that could be used for patent documentation. * Team members will provide short oral and written reports every week for the first five to six weeks, and then, every two weeks until the end of the semester. * The students will incorporate engineering standards and constraints, i.e., consideration of economic, environmental, sustainability, manufacturability, ethical, safety, etc., in their project and final report. * A draft copy of the final report will be collected, critiqued, and returned to students with comments and suggestions for changes. * A final project oral report (20 - 25 minutes) will be given by the project team during the last week of the semester. * An extensive well-written report describing the project that has been designed and built, is the major outcome of the capstone design course. This course is a required course in the Electrical Engineering BS

curriculum and is intended to be taken by seniors as the capstone course for the major. As such, the course integrates materials from many of the undergraduate electrical courses in addition to related math, engineering, and science courses.

Enforced Prerequisite at Enrollment: EE 405

Writing Across the Curriculum

EE 410: Linear Electronic Design

3 Credits

Linear circuit design via integrated circuit processes; A/D converters, switched capacitor filters, phase lock loops, multipliers, and voltage-controlled oscillators. E E 410 Linear Electronic Design (3) E E 410 is a technical elective intended for electrical engineering students who wish to specialize in semiconductor circuits, especially in linear circuit design. The course emphasizes integrated circuit process-compatible circuit design techniques in recognition of the amazing synergy that has characterized the relationship between modern circuits and integrated circuit processing technology. This course is the third in a series of three courses dealing with the analysis and design of electronics circuits, following E E 310 and E E 311. E E 410 includes three lectures and a two-hour laboratory each week. E E 410 begins with a deeper look into several key concepts previously considered in earlier course work, such as node voltage and mesh current methods for solving circuits, which are emphasized throughout the course. The small-signal method is revisited and thoroughly examined. The more advanced Ebers-Moll bipolar junction transistor model is introduced and the metal oxide semiconductor field effect transistor device model is reviewed. The next phase of the course introduces the vertical geometries of integrated circuit devices commonly used in linear circuits. Unwanted parasitic devices that are introduced as a result of the integrated circuit processes are revealed and their effects on circuit sign techniques operation are discussed. Both the limitations and the opportunities provided by integrated circuit technology are examined, particularly in the light of de used to minimize the problems and to take advantage of the features. The last half of the course is devoted to applications of linear circuits, especially those which students have not previously encountered. The first topics in this series are analog-to-digital and digital-to-analog conversion. Various methods of accomplishing each of these functions are examined. The inverse relationship between speed and accuracy is emphasized. These topics are followed by studies of switched capacitor filters, phase lock loops, analog multipliers, and voltage-controlled oscillators. The emphasis of the laboratory component of the course is to successfully accomplish a student-chosen linear circuit design project. Students work in two- or three-person teams to select their project and do the design and evaluation. A three-way methodology is emphasized; mathematical analysis by hand, computer simulation, and laboratory breadboarding and measurement. At the end of the project students give an oral presentation and submit a formal engineering report.

Enforced Prerequisite at Enrollment: EE 311

EE 413: Power Electronics

3 Credits

Switch-mode electrical power converters. Electrical characteristics and thermal limits of semiconductor switches. E E 413 Power Electronics (3) E E 413 is an elective course taken by undergraduate and graduate electrical engineering students. The objective of E E 413 is to introduce techniques for the analysis, design, and application of the switch-mode power converters that are used in power supplies, motor and

actuator drives, and the interface between power distribution systems and emerging energy sources such as fuel cells, photovoltaics, and superconducting magnetic energy storage systems. Several laboratory experiments provide an opportunity to characterize the switching behavior of semiconductor devices, build and test various dc/dc and ac/dc converters, and consider alternatives for gate/base drive and feedback isolation circuits required to build practical converters. This course draws upon the students' background in time-domain circuit analysis, electronic devices and circuits, Fourier analysis, and use of software such as PSPICE and MATLAB. It does not require a background in power or electric machinery, although students with such a background will be able to appreciate many of the applications more fully. The course is divided into four major areas: rectifiers and phase-controlled converters, dc-to-dc converters, inverters, and design considerations for practical converters. The focus in each of the first three areas is to determine the relationship between the magnitude of the fundamental frequency component and/or average value of the voltages and currents at the two ports of the particular converter. Additional harmonic or ripple components are then considered and design guidelines for the switching and reactive components are derived. The fourth area encompasses the study of power device characteristics, the design of gate drive and feedback circuits, and the analysis/design of elementary controllers. As the name implies, students interested in either electronics or power will find this course worthwhile. Electronics students will gain a new perspective on the operation and analysis of electronic circuits as well as an opportunity to discover what has powered the circuits that they have studied up until this course. Power students will see how and why power electronics are revolutionizing motor control and power distribution as well as the power quality issues associated with electronic power conversion.

Enforced Prerequisite at Enrollment: EE 310

EE 416: Digital Integrated Circuits

3 Credits

Analyses and design of digital integrated circuit building blocks, including logic gates, flip-flops, memory elements, analog switches, multiplexers, and converters. CMPEN 416 CMPEN 416 Digital Integrated Circuits (3) CMPEN 416 is a technical elective available to electrical and computer engineering students. It is intended for students who wish to specialize in the field of digital circuits. This course introduces the basic concepts involved in the design of digital circuits, which find practical application as logic and memory circuits in computers and other digital processing systems. The course emphasizes integrated circuit process-compatible circuit design techniques in recognition of the amazing synergy that has characterized the relationship between computer circuits and integrated circuit processing technology. This course includes three lectures and a two-hour laboratory each week. The only prerequisite is E E 310, a basic circuits course required for both electrical engineering and computer engineering students. CMPEN 416 begins with a review of the bipolar junction transistor (BJT) device and proceeds into the more advanced Ebers-Moll device model. This is followed by an examination of a series of BJT-based saturating and non-saturating digital circuits of ever increasing complexity illustrating the evolution of the modern bipolar logic circuit families. The next phase of the course reviews the metal oxide semiconductor field effect transistor (MOSFET) and proceeds along the same path taken for the bipolar transistor circuits. Various MOSFET logic circuit families are introduced and analyzed. Computer semiconductor memory circuits are considered next. Both BJT and MOSFET versions of both static and dynamic read-write and read-only memories are considered. The cell array, memory addressing circuits, and sense amplifier designs are all examined in detail. This is followed

by the related subject of programmable logic arrays, the final topic. The emphasis of the laboratory component of the course is to compare the performance of representatives of each class of circuits to computer simulations of the same circuits. Parameters such as input-output voltage transfer characteristics, noise margins, and propagation delays are evaluated by building and measuring laboratory models. Most of the laboratory exercises require the student to evaluate a specified circuit, but the final exercise requires the student to design a circuit to meet a predefined set of specifications, then to prove that the design meets the requirements by measuring the circuit performance. Students are required to write a formal engineering report detailing the results of each laboratory exercise.

Enforced Prerequisite at Enrollment: EE 310
Cross-listed with: CMPEN 416

EE 417: Digital Design Using Field Programmable Devices

3 Credits

Field programmable device architectures and technologies; rapid prototyping using top down design techniques; quick response systems. CMPEN 417 CMPEN (E E) 417 Digital Design Using Field Programmable Devices (3) Field Programmable Devices, such as Field Programmable Gate Arrays (FPGAs) and Complex Programmable Logic Devices (CPLDs) are widely used for rapid prototyping and quick response-time designs. The objective of this course is to introduce the student to digital design using Field Programmable ICs, and to provide an understanding of the underlying technologies and architectures of these Integrated Circuits. The course begins by introducing design alternatives for modern electronic systems identifying and classifying alternative system solutions, and evaluating when particular design solutions are optimal. These alternatives include microprocessors, microcontrollers, off-the-shelf digital ICs, Programmable logic ICs (FPGAs and CPLDs), and various forms of Application Specific Integrated Circuit (ASIC) designs. A homework assignment requires the student to quantitatively evaluate the cost, complexity, packaging, and time-to-market issues for a complex system design specification. Next, the underlying Field Programmable Logic IC architectures and technologies are studied in detail. Following a broad survey of available programmable IC vendors and on-chip programming technologies (and their cost/performance trade-offs), several specific case studies are presented in the class. The first is the Xilinx XC4000xl line, because of the target boards used in the CAD laboratory component for this class. The initial lab portions of the class help the students to specify their design using various forms of design entry tools and also allows them to see how their design map on to the underlying FPGA architecture. The students also learn the underlying algorithms used by the design software they use in their Labs. Next, the systematic top-down method for specifying complex designs using VHDL is introduced. Students are given a supporting homework assignment to develop high-level behavioral models for a simple digital system to reinforce this segment of the course. VHDL behavioral synthesis is now introduced as a preferred path to go from high-level system behavior to actual implementation on the FPGA. The strengths and weaknesses of synthesis are discussed, as are the emerging CAD tool trends. Additional VHDL-based homework assignments reinforce behavioral design and synthesis using commercial CAD tools. The final segment of the class covers special topics that identify current trends in digital system architecture and programmable logic design. These include such topics as partially reconfigurable architectures and dynamic reconfiguration techniques, system design for testability, and field programmable analog arrays. Applications of FPGAs in special purpose computing environments such as signal processing, Java acceleration and image

processing are also introduced. In the laboratory, student design project assignments explore larger and more complete system specifications of such things as controllers, CPU and memory design, and signal processing blocks. These assignments reinforce the lecture content as the students model, synthesize and implement their digital designs on the target Xilinx FPGA boards.

Enforced Prerequisite at Enrollment: CMPEN 331
Cross-listed with: CMPEN 417

EE 420: Electro-optics: Principles and Devices

3 Credits

Spatially linear system and transform; diffraction theory, partial coherence theory, optical image detection, storage and display, holography.

Enforced Prerequisite at Enrollment: EE 320 or EE 330 or PHYS 400 or ESC 400

EE 421: Optical Fiber Communications

3 Credits

Operational principles of optical components, including sources, fibers and detectors, and the whole systems in optical fiber communications. E E 421 Optical Fiber Communications (3) E E 421 is an introduction course to fiber optic communications. This course is designed as an elective course for both the E E senior undergraduate students and E E graduate students. Students are expected to have a general knowledge on fiber optic communications after taking this course. The content of this course focuses on the engineering aspects of fiber optic communications. This course is offered once a year. This course basically consists of four major parts: The first part introduces the motivations of using fiber optic communication systems, which include the huge bandwidth, low attenuation, immune from the electromagnetic field interference, et al. (1 week) The second part of this course deals with light propagation in the optical waveguides. Both the simple geometrical approach and wave optics approach are used to calculate the light propagation in the optical fiber. The geometrical approach (i.e., total internal reflection) provides an intuitive feeling about light propagation in the fiber while the wave optics approach (i.e., Maxwell's equations) provides more accurate solutions. In particular, it can explain important concepts such as the conditions for single mode fiber and intramodal dispersions in single mode optical fiber. With the help of popular calculation software (e.g., Matlab, Mathcad), students are required to solve waveguide equations for single shape optical fibers (such as step index fiber). (5 weeks) The third part of this course introduces some critical components that are needed in fiber optic communication systems. This includes the optical transmitter (laser diode), optical receiver (i.e., photodetector), modulators and demodulators (such as driving current approach and optical waveguide modulators), optical coupler (how to connect more than two fibers together), optical amplifier (including the basic principle of erbium doped fiber optic amplifiers), fiber optic gratings (a critical component for the multiple wavelengths fiber optic network systems), dispersion compensation device (such as chirped fiber optic grating based device) et al. (6 weeks) The fourth part of this course talks about fiber optic networks. The major contents include fiber optic network architectures (such as star connect), multiplexing techniques in fiber optic networks (such as wavelength division multiplexing and time division multiplexing), connection fiber optic networks with non-fiber

optic networks (such as copper wire based networks), current trends in fiber optic networks, et al. (2 weeks).

Enforced Prerequisite at Enrollment: EE 320 or EE 330 or PHYS 400 or ESC 400

EE 422: Optical Engineering Laboratory

3 Credits

Hands-on experience covering areas of optical transforms, electro-optics devices, signal processing, fiber optics transmission, and holography.

Enforced Prerequisite at Enrollment: EE 320 or EE 330 or PHYS 400 or ESC 400

EE 424: Principles and Applications of Lasers

3 Credits

Principles of lasers--generation, propagation, detection and modulation; applications in fiber optics communication, remote sensing, holography, optical switching and processing.

Enforced Prerequisite at Enrollment: EE 320 or EE 330 or PHYS 400 or ESC 400

EE 430: Principles of Electromagnetic Fields

3 Credits

This course provides the grounding in fundamental laws of electromagnetics and provides practical training in solution of engineering electromagnetics problems. In particular, it investigates electric fields due to stationary charges and magnetic fields due to stationary currents in practical geometries, and solution of problems involving polarization and magnetization effects in material media. The course covers Maxwell's equations and propagation of transverse electromagnetic waves in lossy and lossless media. It explores the behavior of electromagnetic waves at the interface between different media at normal and oblique incidence, wave polarization, and applications to optics and fiber optics. The transmission line equations, transmission line transient waves and sinusoidal time variations are covered putting emphasis on solution of practical problems involving arbitrary impedance terminations. The retarded potentials, linear antennas and array antennas are also considered.

Enforced Prerequisite at Enrollment: C or better in EE 330

EE 432: RF and Microwave Engineering

3 Credits

Transmission line and waveguide characteristics and components; design of RF and microwave amplifiers, oscillators, and filters; measurement techniques; design projects.

Enforced Prerequisite at Enrollment: C or better in EE 310 and C or better in EE 330

EE 434: Introduction to Signal Integrity for Interconnects

4 Credits

This course provides a solid foundation in signal integrity for interconnects, the performance of which becomes the key factor in ensuring reliable system operation as the speed of new digital systems

is pushed higher into the gigabit range. This course introduces parasitic elements that can impair the signal, such as coupling capacitances, ground capacitances, mutual inductances, self-inductances, and wire resistances. These parasitic elements can produce data losses, crosstalk, jitter, and time delays that can significantly degrade system performance and reliability. Students will also learn how the characteristics of materials and interconnect layout affect system performance and will develop models that can be simulated to verify that performance before production. This course will also cover necessary supporting ideas such as transmission line theory, impedance mismatch and reflection, lossy transmission lines, rise time degradation, material properties, crosstalk, and jitter. Students will be taught to make and interpret measurements in both the time and frequency domains.

Enforced Prerequisite at Enrollment: EE 330 and (EE 350 or EE 352)

EE 437: Physical implementation of qubits

3 Credits

Introduction to the physical implementation of quantum bits (qubits) based on state-of-the-art technologies. The course will consider issues in quantum information technology from an experimental point of view. The various types of qubits that will be discussed include those made with superconducting circuits, atoms (including ions, atoms and molecules), electron spins, and photons. In each case, the goal will be to develop a physical understanding of the various approaches, to get a sense of their strengths and weaknesses, and to learn about the state of the art and future prospects.

Enforced Prerequisite at Enrollment: PHYS 337

Cross-listed with: ESC 437, PHYS 437

EE 438: Antenna Engineering

3 Credits

Radiation from small antennas, linear antenna characteristics, arrays of antennas, impedance concepts and measurements, multifrequency antennas, and aperture antennas. E E 438 Antenna Engineering (3) E E 438 is an electrical engineering technical elective course intended for students with a specialization in electromagnetics. This course presents antenna engineering concepts including in-depth studies of various antennas and arrays and computer modeling of antennas for analysis and design. The course has three lectures each week as well as an additional period for demonstrations and discussions of outside lab and computer projects. This course requires E E 330, the undergraduate electromagnetics course, as a prerequisite. E E 438 begins with a review of electromagnetics which leads into an introduction of antennas. A lecture is given which shows how the evolution of a guided wave on a transmission line eventually leads into a device that can act as a wave launcher or antenna. A series of lectures are then given introducing the various classes and types of antennas. Performance parameters such as input impedance, radiation patterns, directivity, gain, polarization, and efficiency are then discussed. Examples and pictures of many antennas and their respective patterns are shown as part of these lectures. Next, extensive lectures are given which describe definitions and antenna parameters in detail. Much time is spent on how to visualize radiation patterns and beamwidth. Derivations are carried out for directivity and gain adhering to IEEE standard definitions. Theorems are discussed on the subject of reciprocity and how it can be related to practical measurements of patterns. Another lecture deals with the subject of antenna polarization and cross-polarization. Link analysis is discussed for communication systems and real-world examples are given for its

use. The second half of the course involves extensive study of various types of antennas including center-fed dipoles, monopoles, loops, phased arrays, broadband antennas, Yagi antennas, traveling wave antennas, frequency antennas, and aperture antennas. Throughout the course, students are introduced to and utilize an advanced antenna computer modeling software package for carrying out assigned projects and use in homework problems. They are also assigned a group design project during the last third of the course where extensive use of the software package is required. Each group gives an oral presentation of the project and the results during the last week of class and turns in a final report.

Enforced Prerequisite at Enrollment: C or better in EE 330

EE 441: Semiconductor Integrated Circuit Technology

3 Credits

An overview of fundamentals of processes involved in silicon integrated circuit fabrication through class lectures and hands-on laboratory. E E 441 Semiconductor Integrated Circuit Technology (3) E E 441 is an elective electrical engineering course typically taken by seniors and graduate students from various majors including electrical engineering, materials engineering, engineering science, physics, and chemistry. Its objective is to introduce students to the processes and procedures involved in the manufacture of advanced silicon integrated circuits (IC) using tools and methods of semiconductor nanotechnology. In the sequence corresponding to the order of IC fabrication steps, the lecture portion of the course covers fundamentals of the formation of single-crystal silicon wafers, epitaxial deposition of thin silicon layers, fundamentals of thin film semiconductors, dielectric and metal deposition techniques, pattern definition by photolithography and etching, dopant introduction, and finally, contact and interconnect metallization. In selected cases theoretical considerations regarding manufacturing steps discussed are supported by process simulation using dedicated software. Besides the specific objectives listed above this course has a more general goal. Manufacturing methods and tools used to process nanochips represent the most advanced technology across a broad range of engineering domains. Experiences gained in this course advance student's knowledge and understanding of state-of-the-art manufacturing technology that is applicable in several other domains such as nanomaterials, including nanowires, nanotubes, and nanodots, MEMS fabrication, as well as in bioelectronics, molecular electronics, spintronics and others. In addition to lectures, EE 441 has a laboratory portion that gives students an opportunity to gain hands-on experience with key processes used to manufacture advanced silicon integrated circuits. The laboratory experience helps students appreciate the intricacies of the integrated circuit fabrication procedures as well as establish connection between theoretical concepts and the outcome of the real-life manufacturing process. In the course of ten laboratory sessions students first process from scratch a simple MOS integrated circuit and then test its performance by carrying out a set of electrical tests.

Enforced Prerequisite at Enrollment: EE 340 or EE 341 or ESC 312 or ESC 313 or ESC 314 or MATSE 413 or PHYS 412 or PHYS 414

EE 442: Solid State Devices

3 Credits

The physics of semiconductors as related to the characteristics and design of solid state electronic devices. E E 442 Solid State Devices (3) The objective of E E 442, an electrical engineering elective course taken by seniors and graduate students, is to develop a rigorous introduction to

the relevant concepts in quantum mechanics and statistical mechanics pertaining to understanding the key physical mechanisms that govern the electrical, optical and even mechanical behavior of semiconductor materials and devices. This course explicitly deals with the physics of operation of electronic and optoelectronic devices, and expounds on the practical aspects of device design given the inherently non-ideal nature of semiconductor devices in real life. The course typically features a couple of invited guest lectures from leading experts involved in the state-of-the-art research on semiconductor materials and devices so that seniors and first year graduate students learn about the recent advances in electronic and optoelectronic devices which reside outside the scope of the recent text books. Nanoelectronics today is a very broad discipline that extends the traditional solid-state devices such as transistors, diodes, resistors, capacitors, photodetectors, laser diodes commonly found in electronic and optoelectronic integrated circuits to a variety of emerging technologies such as large area flexible electronics, energy conversion devices, chemical and biological sensors, microelectromechanical devices. A continuous trend of fundamental breakthroughs at the materials and device architecture level keeps this field exciting and opens up new application space hitherto unexplored. The opportunity exists for the students taking this course to get introduced at a broad level to each of these areas. This course will serve as a cornerstone of the students' electronics education should they join the 275 billion dollar global semiconductor industry or should they decide to pursue graduate education in the area of advanced materials and devices.

Enforced Prerequisite at Enrollment: EE 340 or EE 341 or ESC 312 or ESC 314 or MATSE 413 or PHYS 412 or PHYS 414

EE 453: Fundamentals of Digital Signal Processing

3 Credits

Design of FIR and IIR filters; DFT and its computation via FFT; applications of DFT; filter implementation; finite arithmetic effects. E E 453 Fundamentals of Digital Signal Processing (3) The objective of E E 453, an electrical engineering elective course taken by seniors and graduate students, is to develop a rigorous, yet elementary, introduction to the fundamentals of one-dimensional discrete-time (digital) signal processing. The main topics in the course are the analysis and design of finite impulse response (FIR) and infinite impulse response (IIR) digital filters, the discrete Fourier transform (DFT) and its computation via the fast Fourier transform (FFT), and error analysis due to the constraints of finite arithmetic. The emphasis on the analysis and design of linear time-invariant discrete-time filters rests on the background acquired in the time as well as transform domain analysis of continuous-time and discrete-time signals and systems interfaced via the Shannon sampling theory. The students are alerted about topics outside the main thrust of the course mentioned above and these peripheral issues (that lead to more advanced subject matter pursued in depth in subsequent signal processing courses) include interpolation, decimation, and multirate digital signal processing. There is also a laboratory portion of E E 453 that exposes students to the use of digital signal processing workstations – a collection of hardware and software that is used to acquire, digitize, filter, analyze, and display a variety of real-life signals. This hands-on experience helps the student appreciate and understand theoretical concepts covered in class like the sampling and reconstruction of continuous-time signals, IIR and FIR filter design, and error analysis.

Enforced Prerequisite at Enrollment: EE 351 or EE 352 or EE 353

EE 454: Fundamentals of Computer Vision

3 Credits

Introduction to topics such as image formation, segmentation, feature extraction, matching, shape recovery, object recognition, and dynamic scene analysis. CMPEN 454 CMPEN 454 Fundamentals of Computer Vision (3) CMPEN 454 is an introduction to computer vision. The goal of computer vision is to make computers understand and interpret visual information. Computer vision systems bring together imaging devices, computers, and sophisticated algorithms for solving problems in areas such as industrial inspection, medicine, document analysis, autonomous navigation, and remote sensing. The course involves both pedagogical written assignments and computer projects. The beginning of the course gives an overview of computer vision and introduces low level image analysis techniques for binary images. Binary vision systems are useful when the silhouette of imaged objects convey enough information to recognize them. Examples can be found in optical character recognition, chromosome analysis and recognition of industrial parts. Moreover, many techniques developed for binary systems can be applied to gray level or color images. Next, the course covers image segmentation and contours. These topics are the foundation of most computer vision techniques. For an image to be correctly interpreted, it must be partitioned into regions that correspond to distinct objects or parts of objects. First, region based techniques such as thresholding, split and merge, region growing and texture analysis are introduced. Next, edge based techniques using gradient and Laplacian operators are discussed. Finally, contour representations and curve approximations linking edges into region boundaries are studied. Next, depth from vision, with emphasis in stereo vision, is considered. Calculating distances to and among various points in the scene is important in many computer vision tasks such as inspection, robot manipulation, and autonomous navigation. In this part of the course the geometry of stereo systems and how to obtain depth maps from stereo image pairs is studied. Also, alternative 3D imaging sensors such as laser based range finders and radars are discussed. Following stereo, the topic of computer vision is broadened to understand sequences of images over time. In this section techniques using information on spatial and temporal changes are used to design computer vision systems capable of coping with moving and changing objects, changing illumination and changing viewpoints. Visual motion is important primarily for two reasons. First, motion is a very important cue to understand the scene structure. Second, biological systems do use motion to infer properties of the surrounding world with very little a priori knowledge. Finally, the topic of 3D object recognition is discussed. Object recognition entails two main issues: object identification and object localization. Identification determines the objects being imaged while localization determines their position in the world and with respect to the sensors. This topic builds upon all the different techniques discussed until this point.

Enforced Prerequisite at Enrollment: (MATH 230 or MATH 231) and MATH 220 and (CMPSC 121 or CMPSC 131 or CMPSC 201)
Cross-listed with: CMPEN 454

EE 455: An Introduction to Digital Image Processing

3 Credits

Overview of digital image processing techniques and their applications; image sampling, enhancement, restoration, and analysis; computer projects. E E (CMPEN) 455 An Introduction to Digital Image Processing (3) E E/CMPEN 455, a technical elective available to both electrical and computer engineering seniors and graduate students, discusses many

current techniques for processing and manipulating digital images. The course involves both pedagogical written assignments and computer projects. The beginning of the course gives an overview of digital image processing systems and digital image fundamentals. During this unit, important elements of human visual perception are reviewed; these ideas help motivate many of the computer-based techniques described in subsequent units. Also, the standard model for a digital image, in addition to the concepts of sampling and quantization, are described. Finally, basic topological concepts between digital image pixel are discussed. The next unit considers image transform analysis, with a primary focus on Fourier-based techniques. The one-dimensional Fourier transform is reviewed, and then two-dimensional Fourier transform analysis is discussed. To bridge the gap from the continuous world to the digital world, the sampling theorem is introduced. Next, the Discrete Fourier Transform and its properties are described. Fourier-based filtering techniques, such as the ideal low-pass and Butterworth filters are then introduced. The Fast Fourier Transform is also discussed. Finally, the Discrete Cosine Transform, used later in JPEG and MPEG, is introduced. The next unit discusses techniques for image enhancement and segmentation. These techniques include point-based techniques based on histogram analysis. They also involve linear and nonlinear mask-based methods for noise reduction and region sharpening. Further, techniques of mathematical morphology, which involve an application of set-theoretic concepts to image processing, are described. Finally, image segmentation methods, based on edge detection and thresholding, are described. The final unit considers the concept of image compression. Techniques for image encoding and decoding are discussed. A brief model of the encoding-decoding process is described. Next, compression techniques, such as run-length encoding and Huffman coding, are described. Finally, the multimedia image-compression methodologies, JPEG and MPEG, are discussed.

Enforced Prerequisite at Enrollment: (EE 350 or EE 353 or EE 352) and (CMPSC 121 or CMPSC 131 or CMPSC 201)
Cross-listed with: CMPEN 455

EE 456: Introduction to Neural Networks

3 Credits

Artificial Neural Networks as a solving tool for difficult problems for which conventional methods are not applicable. E E (E SC/EGEE) 456 Introduction to Neural Networks (3) This course is in response to students needs to learn Artificial Neural Networks (ANN) as a solving tool for difficult problems for which conventional methods are not available. The objective of this course is to give students hands-on experiences in identifying the best types of ANN, plus developing and applying ANN to solve difficult problems. Students will be introduced to a variety of ANN and will use their training skills to solve their own applications. During this course the students will develop a final project, in which they will apply ANN to widely varied problems. Examples: I) students from E E may be interested in applying ANN to solve control problems; II) students from Material Sciences may be interested in applying ANN to predict the pitting corrosion of components; III) students from Petroleum Engineering may be interested in applying ANN to characterize the life of a reservoir; IV) students from Agricultural Engineering may be interested in applying ANN to sort apples automatically, etc.

Enforced Prerequisite at Enrollment: (CMPSC 201 or CMPSC 121 or CMPSC 131) and MATH 220
Cross-listed with: EGEE 456, ESC 456

EE 458: Digital Image Processing and Computer Vision

3 Credits

Principles of DSP and computer vision, including sensing preprocessing, segmentation, description, recognition, and interpretation.

Enforced Prerequisite at Enrollment: EE 352

EE 460: Communication Systems II

3 Credits

EE 460 is an elective course in the electrical engineering curricula that provides detailed performance analysis of communications systems first studied in introductory communications courses such as EE 360 or EE 461. The course begins with a review of topics in linear system theory, communication theory, and probability/random processes. Following the review of this important background material, this course studies the behavior of communication systems in the presence of noise. First, the behavior of analog communication systems in the presence of additive white Gaussian noise (AWGN) is analyzed. As a benchmark, signal-to-noise ratio is derived for a base band system. This is followed by a performance assessment of amplitude modulated and frequency modulated systems and comparison is made to the base band system performance. Concepts of optimum pre- and de-emphasis systems are explained. Next, behavior of digital communication systems in AWGN is studied. This includes optimum threshold detection and general analysis of optimum binary receivers. Performance of carrier modulation systems ASK, FSK, PSK and DPSK is derived in terms of average bit error rate (BER) as a function of bit-energy-to-noise density height. M-ary communications systems are analyzed. Synchronization issues are discussed. This is followed by the theory of optimum signal detection; geometrical representation of signals and signal spaces, Gaussian processes, optimum receiver and equivalent signal sets are illustrated by several examples. BER performance analysis of complex digital modulated systems is demonstrated, using the developed signal space concepts.

Enforced Prerequisite at Enrollment: (EE 360 or EE 461) and (STAT 418 or MATH 418 or STAT 414 or MATH 414 or STAT 200)

EE 461: Communications I

4 Credits

Element of analog and digital communication systems, AM, FM, and digital modulation techniques, receivers, transmitters, and transmission systems, noise.

Enforced Prerequisite at Enrollment: EE 352

EE 465: Probability for Electrical and Computer Engineers

3 Credits

This course covers basic concepts in probability, including random variables, conditioning, independence, laws of large numbers, and statistical confidence. While covering these basic probability concepts, illustrative examples drawn from Electrical and Computer Engineering topics such as communications, signal processing, networking, image processing, and control systems will be used to show engineering applications of the probability and statistical theory. The course concludes with a module on linear filtering of wide-sense stationary processes, including in the frequency domain via power spectral density. The course consists of lectures and recitations. Recitations reinforce

concepts learned in lecture through problem solving. Recitations are also used to study applications such as information theory and signal detection using binary hypothesis testing. Laboratory exercises demonstrate the use of software packages for simulation and calculations.

Enforced Prerequisite at Enrollment: EE 350 or EE 352 or EE 353

EE 466: Introduction to Software-Defined Radio

3 Credits

An overview of the principles of software-defined radio systems with laboratory component.

Enforced Prerequisite at Enrollment: (EE 351 or EE 352 or EE 353) and (EE 360 or EE 461)

EE 471: Introduction to Plasmas

3 Credits

This course provides the education on models that are used for description of plasma phenomena as applicable to plasma confinement, plasma assisted materials processing, astrophysical plasmas and plasmas in the near Earth's space environment. It provides practical training in solution of problems involving collisional and collisionless plasmas. In particular, it investigates dynamics of charged particles in specified uniform, non-uniform and time varying electric and magnetic fields. It explores collective behavior of plasmas, including various electrostatic and electromagnetic waves that can be excited and propagate in plasmas parallel and perpendicular to the externally applied magnetic field. The course considers non-linear effects in plasmas, as typically occurring in the sheath regions near the plasma confining walls. It discusses concepts of equilibrium and stability of plasmas, and various models of unstable plasma motions, especially in relation to plasma confinement.

Enforced Prerequisite at Enrollment: (C or better in EE 330) or PHYS 400
Cross-listed with: AERSP 490, NUCE 490

EE 472: Space Astronomy and Introduction to Space Science

3 Credits

The physical nature of the objects in the solar system; the earth's atmosphere, ionosphere, radiation belts, magnetosphere, and orbital mechanics.

Enforced Prerequisite at Enrollment: (C or better in EE 330) or PHYS 400
or (METEO 421 and METEO 431)
Cross-listed with: AERSP 492

EE 474: Satellite Communications Systems

3 Credits

Overview of satellite communications systems, principles, space platforms, orbital mechanics, up/down links and link budgets, modulation techniques. EE 474 Satellite Communications Systems (3) This course is designed to give seniors and graduate students an overview of the principles of satellite communications systems. Building on junior-level courses in electromagnetics and communications, it shows how complex satellite systems operate and provide services that we depend on, such as telephone, television, weather forecasting, and global positioning. Specific topics include: historical background on how satellite systems

came to be, present uses of satellite systems, and future trends in satellite systems design, construction, and uses; orbital mechanics and launch systems and vehicles; earth stations; radio propagation and link analysis; signals and satellite access methods. Student performance is evaluated via exams, homework assignments, and projects. Hands-on experience in the design of satellite communications links is gained through the use of industry-standard satellite system analysis software. In their design, the student must achieve specific goals of satellite accessibility, earth coverage footprint, orbital launch and stability, and communications link budget.

Enforced Prerequisite at Enrollment: EE 360 and C or better in EE 330

EE 477: Fundamentals of Remote Sensing Systems

3 Credits

The review of fundamental physical properties leads into discussions of various techniques, including imaging, spectroscopy, radiometry, and active sensing.

Enforced Prerequisite at Enrollment: (C or better in EE 330) or METEO 436
Cross-listed with: METEO 477

EE 480: Linear Systems: Time Domain and Transform Analysis

3 Credits

Signals and systems representations, classifications, and analysis using; Difference and Differential equations, Laplace Transform, Z-Transform, Fourier series, FT, FFT, DFT. The major topics covered in this course include; Signals and Systems representations, classifications, and analysis using; Difference and Differential Equations, Laplace Transform, Z-Transform, Fourier series, Fourier Transform, Fast Fourier Transform (FFT), Discrete-Time Fourier Transform (DTFT) and Discrete Fourier Transform (DFT). The objective of this course is to develop intuitive and practical understanding of the essentials in signals and systems. The stress is on fundamentals of representation, and analysis of signals and their applications to systems in both discrete and continuous time and frequency domains. This course is designed to prepare the students for more advanced work in broad range areas including communications, control systems, power systems, computer engineering, signal processing and image processing.

Enforced Prerequisite at Enrollment: EE 350 or EE 352 or permission of program

EE 481: Control Systems

4 Credits

Classical/modern approaches to system analysis/design; time/frequency domain modeling, stability, response, optimization, and compensation. E E 481 Control Systems (4) This course presents both classical and modern approaches to the modeling, analysis and control system design for continuous time systems. Students learn how to model both mechanical and electrical systems in the time and frequency domains using differential equations, transfer functions, state space methods and frequency domain (Bode) techniques. The goal of developing linear system models is to facilitate system analysis and control design. Modeling is followed by an in-depth study of systems analysis, including stability, transient response and steady state characteristics. The study of stability involves examining the effects of pole and zero placement, and the Routh criterion is used extensively. In the consideration of transient response characteristics, students investigate rise time, peak

time, overshoot, and settling time. The primary steady state feature studied is the error between the reference signal input and the system output, and students learn to characterize steady state error through the determination of system type and computation of the error constants. Design of control systems focuses on altering one or more of the system characteristics by adding compensation. Students employ a variety of root locus techniques, proportional-plus integral-plus-derivative (PID), state feedback, and frequency response methods. Students begin with simple proportional, closed-loop control and examine pole migration through root locus plots. They then learn to apply more robust pole placement techniques using proportional and derivated (PD) control. Next, PID controllers are examined with a number of opportunities for design. After learning the classical control techniques, students then concentrate on state feedback control methods, including the design of partial- and full-order observers. Finally, students learn the relationship between time domain analysis and design and frequency domain (Bode) analysis of both magnitude and phase. This course includes a laboratory in which students use MATLAB and Simulink for modeling, analysis and control system design. A minimum of seven laboratory exercises offer students the opportunity to experiment with nearly every concept in a powerful simulation environment. To be successful in this course, students should have a solid background in differential equations, Laplace transform techniques, Bode analysis, linear algebra, complex variables, and they should have a familiarity with MATLAB.

Enforced Prerequisite at Enrollment: PHYS 211 and EE 352

EE 482: Introduction to Digital Control Systems

3 Credits

Sampling and hold operations; A/D and D/A conversions; modeling of digital systems; response evaluation; stability; basis of digital control; examples. E E 482 Introduction to Digital Control Systems (3) E E 482 introduces fundamental concepts that will enable the student to analyze, design, and synthesize closed-loop systems that contain a digital computer. In order to successfully complete this course the student must have a foundation in classical control (E E 380 or equivalent) and discrete-time system concepts (E E 351 or equivalent). Problem solving is emphasized. Concepts introduced in lecture are reinforced by a series of laboratory projects and weekly problem sets. Through these exercises the student will acquire competence in analytical and computer aided analysis techniques. The course covers several topic areas including modeling of sampled-data systems, system identification using the batch least squares method, time response characteristics, stability analysis techniques, discrete-time approximation of continuous-time controllers, classical design methods based on root locus and frequency response, and modern design methods including state and observer feedback design. Laboratory projects include system identification and control design based on the root locus, frequency response, and state-feedback methods. Each project involves the use of either a servomechanism or a fluid testbed. Laboratory projects and problem sets will develop the student's appreciation for computer aided control system analysis and design techniques. Student performance is assessed using homework, laboratory projects, hour exams, and a final exam.

Enforced Prerequisite at Enrollment: EE 380 and (EE 351 or EE 352)

EE 483: Introduction to Automation and Robotics Systems

3 Credits

Introduction to robotics systems with emphasis on robotic motion and control, and robotic components such as actuators and sensors.

Enforced Prerequisite at Enrollment: EE 481

EE 485: Energy Systems and Conversion

3 Credits

EE 485 is designed to give students an overview of available energy alternatives, and to study the fundamental theory of operation and system models for major energy conversion devices. The course is interspersed with consideration of emerging technologies and the power industry's impact on the environment, public safety, power quality, and health of the nation's electrical grid. Various forms of raw energy sources used in powering conventional electric generating plants such as coal, natural gas, oil, and uranium will be studied, along with worldwide distribution and reserves. The course also covers energy storage technology, power electronics, three phase power systems, and theory and applications of electric machines, including DC, induction, and synchronous motors.

Enforced Prerequisite at Enrollment: EE 210 or EE 314 or EE 315 or EET 310
Enforced Concurrent at Enrollment: MATH 141

EE 486: Sustainable Energy System Integration

3 Credits

EE 486 (Sustainable Energy System Integration) is an elective course that introduces typical renewable energy units and their integration and control strategies, including photovoltaic devices, wind power, batteries, supercapacitors, flywheels, and micro-turbines. Maximum power point tracking (MPPT), droop control, and V-F control will be discussed to integrate those sustainable energy units into the AC power system. Computer models will be developed for the sustainable energy units. Simulations will be given to show the control and system integration details. After completing this course, students should be able to: ζ Describe the key operational features of typical sustainable energy resources ζ Understand the operations and controls of typical sustainable energy resources ζ Know the integration of sustainable energy units into the AC power system ζ Calculate and analyze an energy system dominated by sustainable energy units ζ Model and demonstrate the integration and operations of sustainable energy systems

Enforced Prerequisite at Enrollment: (EE 210 or EE 211 or EE 212) and (CMPSC 121 or CMPSC 131 or CMPSC 200 or CMPSC 201)

EE 487: Electric Machinery and Drives

3 Credits

Analysis of variable-speed drives comprised of AC electric machines, power converters, and control systems. EE 487 Electric Machinery and Drives (3) This course is a technical elective intended for seniors and graduate students interested in electromechanical systems. The first part of the course (approximately two thirds) is devoted to fundamental theory in the modeling and analysis of power converters and AC electric machines. The second part is devoted to the theory and implementation of two specific control schemes: simple volts-per-hertz control applied to the induction machine and high-performance field-oriented control applied to the induction machine and to the permanent magnet machine.

The course includes a significant laboratory component consisting of hands-on experience with DSP-based control of drives. Each station in the Electric Machinery and Drives Laboratory is comprised of a dynamometer, an induction machine, a permanent magnet machine, a 3-phase inverter with built-in diode rectifier, a 3-phase power supply, and a DSP-based controller. The DSP-based controller is programmed in the MATLAB/Simulink graphical environment, allowing a student to modify control algorithms easily. Separate computer software allows easy access to controller variables for modification and display. This course builds upon basic knowledge of continuous-time linear systems theory and electric machine modeling. The materials in this course has applications in hybrid/electric vehicles and other transportation systems, industrial processes and automation, and power generation/energy storage systems.

Enforced Prerequisite at Enrollment: EE 387

EE 488: Power Systems Analysis I

3 Credits

Fundamentals, power transformers, transmission lines, power flow, fault calculations, power system controls.

Enforced Prerequisite at Enrollment: EE 387 or EE 485

EE 489: Power Systems Analysis II

3 Credits

Symmetrical components, unbalanced networks, unsymmetrical faults, unbalanced operation of rotating machines, transient transmission line modeling, system protection.

Enforced Prerequisite at Enrollment: EE 488

EE 494: Senior Thesis

1-9 Credits/Maximum of 9

Students must have approval of a thesis adviser before scheduling this course.

EE 494H: Senior Thesis

1-9 Credits/Maximum of 9

Students must have approval of a thesis adviser before scheduling this course.

Honors

EE 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor
Full-Time Equivalent Course

EE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EE 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Electrical Engineering Technology (EET)

EET 2: Introduction to Engineering Technology

1 Credits

Introduction to engineering technology and the use of computer methods for analyzing and solving engineering technology problems; microcomputer fundamentals, word processing, spreadsheet, and database software packages. EET 2 Introduction to Engineering Technology (1) The primary objective of this course is to teach basic computer skills and the use of basic computer word processing and spreadsheet applications, as well as the fundamentals of formal report writing. More specifically, students learn to use Microsoft Word (word processing) and Excel (spreadsheet) for the preparation of laboratory reports and business documentation. In addition to these applications, the course should also address as many of the following topics as possible: * Windows operating system * Selection of a personal computer * Communication through electronic mail (e-mail) * Use of the World Wide Web * Preparation of professional letters and reports * Use of an HTML editor to create web pages and use of File Transfer Protocol * Integration of drawing, image, and spreadsheet files into word processing documents * Technical problem solving The course should also provide the student with an introduction to the field of engineering technology, with a discussion of job and educational opportunities in the field. Homework and other exercises should, wherever possible, allow the student to investigate the different aspects of engineering technology, or to interact with other faculty, students, or professionals involved with engineering technology.

First-Year Seminar

EET 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EET 100: Electric Circuits, Power, and Electronics

3 Credits

AC and DC circuits; machinery; controls; and introduction to electronic devices, circuits, and instrumentation. EET 100 Electric Circuits, Power, and Electronics (3) Electric Circuits, Power, and Electronics is a course for non-major students who will be working with electronic equipment in industry. This course starts with basic knowledge of DC and AC components and concepts used in industrial electrical work. Topics such as circuits, electromagnetism, sources, energy conversion and electrical instruments prepare students to continue with topics in electronics. Beginning with the basics of semiconductors and moving through diodes and transistors, the student is prepared to learn the concepts of rectification and amplification. These form a foundation for the completion of the course with a look at understanding the concepts and use of analog and digital circuitry found in Programmable Logic Control (PLC) systems used in industry today.

Enforced Prerequisite at Enrollment: MATH 82 or MATH 41

EET 101: Electrical Circuits I

3 Credits

Fundamental theory of resistance, current, and voltage; capacitance, inductance. Direct current and alternating current concepts through series/ parallel circuits. EET 101 Electric Circuits I (3) Electric Circuits I has been designed to accomplish several related goals. A basic understanding of voltage, electric current and resistance is established early in the course. Then resistance becomes a focal point of the course as resistance of copper and other materials is examined. Resistance as a function of temperature is also considered. Efficiency, electric energy and electric power concepts are developed. A considerable effort is devoted to resistors in series, parallel and series parallel arrangements. Voltage sources in series and parallel are also considered. Resistive circuits with one voltage source are considered. Branch circuit analysis using Kirchhoff's Voltage Law (KVL) and Kirchhoff's Current Law (KCL) receives considerable attention. The basic nature of Capacitance and Inductance is examined in great detail. Transient analysis of resistive-capacitive circuits and resistive - inductive circuits is covered. Sinusoidal waveforms, frequency and phase relations are introduced. Complex and polar numbers are introduced, as tools for AC circuit analysis. AC circuits with resistance, capacitance and inductance are explored. Power factor and power in AC circuits also receive considerable attention. Throughout the course, computer software is utilized for circuit analysis and evaluation.

Enforced Concurrent at Enrollment: MATH 81

EET 105: Electrical Systems

3 Credits

Introduction to the study of electrical systems, with a focus on applications in our society. EET 105 Electrical Systems (3) is an introductory course in electrical systems and circuits. It is an entry level course intended to give students the big picture of the electrical technology spectrum. The course will cover the fundamentals circuit analysis such as: Kirchoff's laws, parallel and series circuits, and superposition. The course then applies this knowledge to various commonplace electrical systems (toaster, electric toothbrush, fan, etc.). The course also gives students a broad, limited exposure to the breath of electrical systems by including components and topics such as resistors,

capacitors, inductors, switches, relays, fuses, amplifiers, transformers and motors. Topics covered include: - Electrical Safety and House Wiring - Electrical Science - Electrical Generation and Utilization - Electrical Circuits and Analysis - Electrical Instrumentation and Measurements - Electronics - Electrical Systems - Electrical Machines The course will emphasize the basic concepts, principles, and analytical models used by engineers and technologists to design, develop and test electrical systems The course does so from a top down, non-detailed systems perspective. Upon completion of this course, students will have a broad perspective of the electrical technology spectrum as they gain a deeper focused knowledge in subsequent courses. Lectures will be supported by laboratory exercises in which the student learns about electrical instrumentation and performs electrical measurements on circuits and systems. Students will also be required to complete an electrical system project of their choosing. Students will be required to prepare written laboratory reports outlining the laboratory activity. Reports will be graded based both on their technical quality and their grammatical and professionalism. Students in EET 105 will be required to use computers in both class and laboratory exercises to simulate electrical circuits and systems and also produce high quality laboratory reports.

Enforced Prerequisite: MATH 21 or satisfactory performance on the mathematics placement examination.

EET 109: Electrical Circuits Laboratory I

1 Credits

Use of basic electrical instruments to measure AC and DC voltage, current, power, resistance. Introduction to report writing. EET 109 Electric Circuits Laboratory I (1) Electric Circuits Laboratory I provides a variety of experiences building electric circuits and utilizing voltmeters, ammeters, ohmmeters and oscilloscopes to take electrical readings. Emphasis is placed on using computer spreadsheet software and computer analysis software. Throughout the course, technical writing is utilized to describe electrical experiment results. Concepts presented in EET 101 are utilized through this course. Experiments related to resistor color code, the ohmmeter and Ohm's Law provide a elementary understanding of resistance as well as the measurement of voltage, electric current and resistance. Experiments with resistors in series, parallel and series-parallel arrangements provide experience with electric circuit construction and electric circuit analysis in a laboratory situation. Kirchhoff's Voltage Law (KVL) and Kirchhoff's Current Law (KCL) receive considerable attention. Capacitors are studied in charging and AC circuits. The oscilloscope and signal generator are introduced and utilized in later experiments. AC resistive- capacitive circuits and resistive - inductive circuits are built and analyzed.

Enforced Concurrent at Enrollment: EET 101

EET 114: Electrical Circuits II

4 Credits

Direct and alternating current circuit analysis including Thevenin and Norton Theorems, mesh, node analysis. Capacitance, inductance, resonance, power, polyphase circuits. EET 114 ELECTRICAL CIRCUITS II (4) Electrical Circuits II is the second of two circuit courses aimed at developing fundamentals of electrical circuit operation and analysis. It covers topics in graphical analysis of circuit operation; capacitive, inductive, and magnetic circuits; and sinusoidal excitation and AC reactance due to inductors and capacitors. EET 114 is normally taken in the second semester of the freshman year concurrently with a coordinated lab course, EET 118. Completion of EET 114 provides a

student with all the circuit analysis fundamentals that will be needed for later courses in electronics and AC machinery.

Enforced Prerequisite at Enrollment: EET 105 and MATH 26

EET 118: Electrical Circuits Laboratory

1 Credits

Use of basic electrical instruments to measure AC and DC voltage, current, power, resistance, and lab reporting. EET 118 Electrical Circuits Laboratory II (1) Electrical Circuits Laboratory is typically taken concurrently with EET 114. The course is a 1 credit course that meets for one 2-hour session each week. Exercises in the lab guide are coordinated with materials being covered in the EET 114 course. All lab exercises involve hands-on work with equipment, and many of the labs are supported by computer activities that help the student collect and interpret data. The computer exercises are coordinated with the lab guide materials. Students are required to submit formal, written lab reports for many of the exercises. Material covered in the EET 118 lab include exercises in graphical circuit solutions, charging and discharging characteristics of capacitors, reactance and impedance measurements in AC circuits, and circuit resonance. The EET 118 lab is the first lab in which students get significant exposure to the oscilloscope, function generator, and other more sophisticated laboratory equipment.

Enforced Prerequisite at Enrollment: EET 105 Enforced Concurrent at Enrollment: EET 114

EET 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EET 212W: Op Amp and Integrated Circuit Electronics

4 Credits

Analysis and design of amplifier, rectifier, filter, comparator, oscillator, and other practical circuits using op amps and integrated circuit devices. EET 212W Op Amp and Integrated Circuit Electronics (4) EET 212W provides students with a basic understanding of the operation and functions of general-purpose linear and non-linear electronic circuits typically found in industrial applications. The course provides background on the basic operating characteristics of key semiconductor devices (diodes, transistors, FETs, etc.); however, the emphasis is on the operation, analysis, design, and application of circuits that use op-amp's and various linear integrated circuit devices to perform typical electronic functions. Topics covered include:- Open- and closed-loop amplifier operation and feedback concepts - Inverting, non-inverting, differential, and instrumentation amplifiers - Summing, comparators, clippers, clamping, and function generator circuits - Integrators and differential circuits - Filter and oscillator circuits - Rectifier and regulator circuits The course will emphasize the concepts, principles, procedures, models, and computations used by engineers and technologists to analyze, select, specify, test, maintain, and design modern electronic systems. Particular emphasis will be given to circuits and applications prevalent in modern instrumentation and control systems. Modeling detail and the sophistication of mathematical analyses will emphasize the application of standard methods with the aid of computers. Lectures will be supported by laboratory exercises in which students will investigate actual operating characteristics of devices and circuits explained in the classroom. Lab activities will emphasize comparisons of theoretical

and actual performance. Students will also be expected to develop proficiency making electronic circuit measurements using standard laboratory instruments. Laboratory activities will also form the basis for the 'W' designation assigned to this course. Students will be required to use standard analysis and reporting tools to prepare formal, written laboratory reports for a substantial portion of all laboratory activities undertaken in the class. Reports will be graded based both on their technical and grammatical quality and on their professionalism. A complete understanding of the electronic circuits covered in this course requires the use of computers. Thus, students in EET 212W will be required to use computers in both class and laboratory exercises to model and simulate the relevant performance of circuits studied.

Enforced Prerequisite at Enrollment: EET 114 and ENGL 15 and (MATH 22 or MATH 40 or MATH 82)

Writing Across the Curriculum

EET 213W: Fundamentals of Electrical Machines Using Writing Skills

5 Credits

AC and DC machinery principles and applications; introduction to magnetic circuits, transformers, and electrical machines including laboratory applications. EET 213W Fundamentals of Electrical Machines Using Writing Skills (5) EET 213W is devoted to the study of ac and dc electrical machines and power conversion equipment. The course teaches fundamental concepts of electromagnetic circuits as they relate to the physical forces that act on electrical conductors moving in magnetic fields, and the electrical currents and voltages induced in those conductors by that same motion. The course covers characteristics of magnetic materials and how they influence the operation of electrical machines, and investigates how these properties and principles are used to develop simple yet practical models of various electromotive and power conversion devices. Presentation of principles and theory will be relatively rigorous; however, the level of modeling detail and the sophistication of mathematical analyses of machine operation will be limited to first order (i.e., linear) and some simple second-order (non-linear) approximations. Students in EET 213W should gain a sound understanding of how and why ac and dc motors and generators, and single phase ac transformers work as they do. The understanding should extend to cover most types of motors, generators, and transformers commonly used in industry today. Students should also understand and be able to apply the basic mathematical and electrical models developed in the course to determine the power requirements, power capability, efficiency, operating characteristics, control requirements, and electrical demands of these machines when used in typical applications. Students will also gain a general knowledge of how motors, generators, and transformers are constructed, and understand the reasons behind the various construction techniques that are used. EET 213W is also a 'writing-intensive' course, which means one of the course objectives is to teach students to prepare formal, written documents about technical subjects. Thus, students will be required to do a significant amount of writing in the course.

Prerequisite: EET 114 , EET 118 , ENGL 015

Writing Across the Curriculum

EET 214: Electric Machines and Energy Conversion

3 Credits

Fundamental operating principles, characteristics, and analysis of electric machines, transformers, and power systems. EET 214 Electric Machines and Energy Conversion (3)The purpose of EET 214 is to

introduce students to the electromechanical energy conversion components associated with power system generation, utilization, transmission, and distribution. The course teaches fundamental concepts of electromagnetic circuits as they relate to the induced voltages and physical forces acting on electrical conductors within magnetic fields. The course covers characteristics of magnetic materials and how they influence the operation of rotating electrical machines and transformers, and investigates how these properties and principles are used to develop simple yet practical models of various power conversion devices. Basic control of AC motors, such as starting, reversing, plugging, and variable speed operation using volts per hertz is discussed in the course. Following the study of the basic components of the power system (motors, generators, and transformers), the course will provide an introduction to power systems engineering. This introduction shall include any the following topics: power distribution fundamentals and protection, power flow, analysis and load flow studies of small power systems, and computer solutions for larger power system studies. Topics covered include:- Magnetics: energy conversion principles, motor and generator action- Transformers: Single-phase, 3-phase, and autotransformers; per-unit representation- Induction Machines: construction, operation, modeling, characteristics, and basic control methods- Synchronous Machines: construction, operation, modeling, characteristics, motor and generator operation, power factor control, power delivery- Power System Representation- Power System Analysis Presentation of the principles and theory will be relatively rigorous; however, the level of modeling detail and the sophistication of the mathematical analyses of machine operation will be limited to first order (i.e. linear) and some simple second-order (non-linear) approximations. Students in EET 214 should gain a sound understanding of electrical machines and transformers and their models, and this knowledge should be extended so that the models are used in the analysis of power systems. Students should be able to apply the basic mathematical and electrical models developed in the course to determine power requirements, power capability, efficiency, operating characteristics, and electrical demands of these components when used in typical applications. The course will require that students apply basic knowledge of electric circuit analysis, electric machines, and engineering concepts to analyze and solve technical problems, using the assistance of computer tools as necessary.

Enforced Prerequisite at Enrollment: EET 114 and EET 118

EET 214H: Electric Machines and Energy Conversion

3 Credits

Fundamental operating principles, characteristics, and analysis of electric machines, transformers, and power systems. EET 214 Electric Machines and Energy Conversion (3)The purpose of EET 214 is to introduce students to the electromechanical energy conversion components associated with power system generation, utilization, transmission, and distribution. The course teaches fundamental concepts of electromagnetic circuits as they relate to the induced voltages and physical forces acting on electrical conductors within magnetic fields. The course covers characteristics of magnetic materials and how they influence the operation of rotating electrical machines and transformers, and investigates how these properties and principles are used to develop simple yet practical models of various power conversion devices. Basic control of AC motors, such as starting, reversing, plugging, and variable speed operation using volts per hertz is discussed in the course. Following the study of the basic components of the power system (motors, generators, and transformers), the course will provide an introduction to power systems engineering. This introduction shall

include any the following topics: power distribution fundamentals and protection, power flow, analysis and load flow studies of small power systems, and computer solutions for larger power system studies. Topics covered include:- Magnetics: energy conversion principles, motor and generator action- Transformers: Single-phase, 3-phase, and autotransformers; per-unit representation- Induction Machines: construction, operation, modeling, characteristics, and basic control methods- Synchronous Machines: construction, operation, modeling, characteristics, motor and generator operation, power factor control, power delivery- Power System Representation- Power System Analysis Presentation of the principles and theory will be relatively rigorous; however, the level of modeling detail and the sophistication of the mathematical analyses of machine operation will be limited to first order (i.e. linear) and some simple second-order (non-linear) approximations. Students in EET 214 should gain a sound understanding of electrical machines and transformers and their models, and this knowledge should be extended so that the models are used in the analysis of power systems. Students should be able to apply the basic mathematical and electrical models developed in the course to determine power requirements, power capability, efficiency, operating characteristics, and electrical demands of these components when used in typical applications. The course will require that students apply basic knowledge of electric circuit analysis, electric machines, and engineering concepts to analyze and solve technical problems, using the assistance of computer tools as necessary.

EET 215: Electric Machines and Energy Conversion Laboratory

1 Credits

Laboratory study of electric machine applications, transformers, and power systems. EET 215 Electric Machines and Energy Conversion Laboratory (1)The purpose of EET 215 is to provide students with practical experience with electromechanical energy conversion components associated with power system generation, utilization, transmission, and distribution. The laboratory experiments in this course will demonstrate empirically the concepts introduced in the companion lecture course, EET 214. Topics covered include: -Magnetics: energy conversion principles, motor and generator action -Transformers: single-phase, 3-phase, autotransformers; per unit representation - Induction machines: operation, modeling, characteristics, basic controls -Synchronous machines: motor, generator, power factor control -Power system representation and analysis Laboratory activities will require that students apply basic knowledge of electric circuit analysis, electric machines, and engineering concepts to analyze and solve technical problems, using the assistance of computer tools as necessary. Students will be expected to develop proficiency in instrumentation using standard lab equipment, and will be required to use standard analysis and reporting tools to prepare formal laboratory reports and oral presentations.

Enforced Prerequisite at Enrollment: EET 114 and EET 118 Enforced Concurrent at Enrollment: EET 214

EET 215H: Electric Machines and Energy Conversion Laboratory

1 Credits

Laboratory study of electric machine applications, transformers, and power systems. EET 215 Electric Machines and Energy Conversion Laboratory (1)The purpose of EET 215 is to provide students with practical experience with electromechanical energy conversion components associated with power system generation, utilization, transmission, and distribution. The laboratory experiments in this course will demonstrate empirically the concepts introduced in the

companion lecture course, EET 214. Topics covered include: -Magnetics: energy conversion principles, motor and generator action -Transformers: single-phase, 3-phase, autotransformers; per unit representation - Induction machines: operation, modeling, characteristics, basic controls -Synchronous machines: motor, generator, power factor control -Power system representation and analysis Laboratory activities will require that students apply basic knowledge of electric circuit analysis, electric machines, and engineering concepts to analyze and solve technical problems, using the assistance of computer tools as necessary. Students will be expected to develop proficiency in instrumentation using standard lab equipment, and will be required to use standard analysis and reporting tools to prepare formal laboratory reports and oral presentations.

EET 275: Introduction to Programmable Logic Controls

3 Credits

Principles of industrial control, programming, interfacing, input/output devices, and applications. EET 275 Introduction to Programmable Logic Controls (3)Introduction to Programmable Logic Controls is a required course for sophomore-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. Programmable Logic Controllers are one of the fastest growing multi-billion dollar segments of industry. This course provides an in-depth introduction to these devices and their use in modern process industries. Starting with an overall look at the block and modular type PLC, digital inputs, digital outputs and devices such as pushbuttons, pressure switches, motors, and indicators demonstrate the elementary application and system design to which they are applied. Ladder logic programming techniques encompass gate logic, contact/coil logic, timers, counters, arithmetic functions and number comparisons. An introduction to analog input and output applications, along with study of the Proportional +Integral+Differential (PID) process function, and PLC communication networks prepare the technologist for advanced courses on these topics. The lab component of this course provides live experience with all these concepts along with industrial problem solving experience by using indicating and actuating real-time positional and process applications.

Enforced Prerequisite at Enrollment: CMPET 117 and CMPET 120

EET 280: System Integration Project

1 Credits

Schematic design, circuit board layout and fabrication, mechanical housing fabrication.

Enforced Prerequisite at Enrollment: EET 212W Enforced Concurrent at Enrollment: EGT 119

EET 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

EET 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EET 310: Direct and Alternating Current Circuits

5 Credits

EET 310 provides an introduction to basic electrical principles and covers the DC and AC circuit analysis techniques necessary for most upper-level EET courses. The course covers DC and AC sources, capacitors and inductors, impedance, mutual inductance, ideal transformers, phasor diagrams, power and energy calculations in DC and AC Circuits, signal and energy transfer, and an introduction to three-phase systems. It also introduces ideal amplifier models and ideal operational amplifiers and their use in performing mathematical operations on analog signals. Circuit analysis techniques covered include nodal analysis, mesh analysis, linearity, superposition, source transformation, and one-port networks (Thevenin's and Norton's Theorems) and two-port networks (Z, Y, h, and T) as equivalent circuits. Topics covered in the course are supported by weekly hands-on laboratory experiences.

Enforced Concurrent at Enrollment: MATH 140 and (PHYS 150 or PHYS 250 or PHYS 211)

EET 311: Alternating Current Circuits

4 Credits

EET 311 Alternating Current Circuits (4) EET 311 is intended to provide competency in analysis of circuits and application of basic electrical principles including equivalent circuits and models, power and energy, and signal/energy transfer. The course will introduce ideal amplifier models, ideal op-amps and ideal transformers as circuit elements and one-port networks (Thevenin, Norton, and driving point impedance), and two-port networks (Z, Y, H, G, T, and T-I) as equivalent circuits. Since this is the first required course taken by all upper division electrical engineering technology students, ethics and professionalism will be discussed by and expected of the students. This course requires calculus through integral and differential calculus of transcendental functions. It provides the circuit analysis skills required in almost every other EET course and is a specific prerequisite for analysis of signals and systems (EET 312) and understanding semiconductor models and electronic circuits (EET 330).

Enforced Prerequisite at Enrollment: EET 114 Enforced Concurrent at Enrollment: MATH 140 and (PHYS 150 or PHYS 211 or PHYS 250)

EET 312: Electric Transients

4 Credits

EET 312 is designed to provide students with a strong foundation in transient circuit analysis in addition to introduction to signals and systems. The primary objective of the course is to reinforce continuous-time system fundamentals in order to prepare the students for more advanced work in a broad range of areas including communications, control, signal processing and image processing. The topics covered in this course include: Applied differential equations; Transient analysis of RC, RL, and RLC circuits, using differential equations; Complex frequency; Network functions; Bode plots and frequency response; Filter networks and resonant circuits; Laplace transform pairs and their applications in circuit analysis; Fourier analysis techniques and their applications in circuit analysis; State-variable circuit analysis. This course is a required course in the Electrical Engineering Technology BS curriculum and is intended to be taken by students who have completed their first circuits course requirements.

Enforced Prerequisite at Enrollment: EET 310 or EET 311 or EE 314

Enforced Concurrent at Enrollment: MATH 141 and (PHYS 151 or PHYS 212 or PHYS 251)

EET 315: Linear and Discrete System Analysis

3 Credits

Introduction to the principles and operation of linear and discrete systems. EET 315 Linear and Discrete System Analysis (3) Linear and Discrete System Analysis is a required course for junior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to introduce the students to linear system analysis, primarily using Laplace transforms. Students learn the concept of a transfer function, and are able to analyze both the transient and steady state response of a system. Students then learn about discrete time systems, including z-transforms, difference equations, and basic digital filters. Laboratory exercises reinforce concepts developed in lecture.

Enforced Prerequisite at Enrollment: CMPET 301 Enforced Concurrent at Enrollment: MATH 250 or MATH 211

EET 320: Industrial Electricity and Electronics

3 Credits

Basic circuit theory applied to DC/AC circuits containing resistors, inductors, capacitors; magnetic circuits; power; control; electronic applications. EET 320 Industrial Electricity and Electronics (3) This course is designed to offer non-electrical students the opportunity to become familiar with the theory and operation of electrical, electronic, and electromechanical devices that are widely used in practice. The course concentrates on the most important concepts, rather than in-depth treatment of any individual area. The number of units covered depends on the class background. The topics covered in this course include: 1. Introduction 2. DC Networks 3. AC Networks 4. Magnetics 5. DC & AC Machinery 6. Selected topics depending on class background (if time permits): Basic electronic devices and their applications; Integrated circuits and their applications; Power Distribution; Transducers & signal conditioning; Control Systems Electronic Instrumentation.

Enforced Prerequisite at Enrollment: MATH 140 and (PHYS 150 or PHYS 250 or PHYS 211)

EET 330: Wireless Communications Systems

3 Credits

Wireless communications technology, transceivers, modulation techniques, serial communications, and applications. Personal area networks, local area networks, RFID systems. EET 330 Wireless Communications Systems (3) Wireless Communications Systems is a required course for junior-level students pursuing the Electrical Engineering Technology (EET) option in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The course provides a foundation in spectrum analysis, filtering, serial communications, analog modulation and demodulation, and digital modulation and demodulation. The course discusses applications utilizing infrared (IR) and radio frequency (RF) technologies. Applications for wireless networking include the development of personal area networks (PAN) and local area networks (LAN). The course also introduces radio frequency identification (RFID) systems

and applications. Laboratory exercises reinforce concepts developed in lecture.

Enforced Prerequisite at Enrollment: EET 341 and CMPET 301 Enforced Concurrent at Enrollment: EET 315 and MATH 211

EET 331: Electronic Design

4 Credits

Analog/Digital and Digital/Analog Converters; advanced and nonlinear Op-Amp circuit design; noise analysis; Active Filters and Waveform Generators. EET 331 Electronic Design (4) EET 330 is intended to provide competency in the application of basic electronic principles to design with operational amplifiers and integrated circuits. The course will include analog-to-digital and digital-to-analog conversion techniques; introduction to the feedback principles and non-ideal aspects of operational amplifiers including noise - needed for advanced design with op-amps; some nonlinear op-amp circuits - including comparators, Schmitt triggers, pulse width modulation, and ideal rectifiers, active filter design and waveform generator design. Grades will be based on 3 or 4 exams including a final exam (65%), laboratory work, computer projects requiring the use of circuit simulation software, spreadsheets, and math packages, and homework (30%), and student professionalism (5%). The IEEE code of ethics and the Penn State policy on academic integrity will be applied in the instructor's judgment of student professionalism. This course requires calculus through integral and differential calculus of transcendental functions, advanced circuit analysis techniques (EET 311, E ENG 354, or E ENG 352), and knowledge of frequency response analysis techniques (EET 312). It provides the electronic circuit analysis and design skills required in the Electronics, Systems, and Technical Electives in the General Electrical Engineering Technology Option and the Applications and Technical Electives in the Computer Engineering Technology Option.

Enforced Prerequisite at Enrollment: EET 311 or EE 314 or EE 315 and Concurrent EE 310 and EET 312

EET 341: Measurements and Instrumentation

3 Credits

Measurement concepts, transducers, electronic-aided measurement, mechanical and electrical measurements. Intended for electrical engineering technologists. EET 341 Measurements and Instrumentation (3) Measurements and Instrumentation is a required course for junior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to understand the principles of measurement systems. The course enables students to design software for programming PC-based data acquisition (DAQ) systems, understand various sensors, design signal conditioning circuits for interfacing sensors to DAQ systems, and design various types of measurement systems. Laboratory exercises reinforce concepts developed in lecture.

Enforced Prerequisite at Enrollment: CMPET 117 and EET 212W Enforced Concurrent at Enrollment: MATH 141 or MATH 210

EET 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

EET 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EET 402: High-Frequency Circuit Design

4 Credits

EET 402 provides students with fundamental concepts in high frequency (RF and microwave) circuit design used in the development of front-end electronics in telecommunication systems. Students will gain familiarity with high frequency circuit design topics including (but not limited to) limitations of lumped elements at high frequencies, parasitic effects, transmission line and distributed circuits, various types of transmission lines including (but not limited to) coaxial and planar transmission lines, Smith Chart, impedance matching, resonators and filters, scattering parameters, multiport networks, power divider and combiners, directional couplers, and RF and microwave circuit modeling through computer aided design (CAD). The laboratory portion of the course provides students with the opportunity to learn about the operation of high frequency test equipment, such as network analyzers and spectrum analyzers, and to build and evaluate high-frequency and transmission-line-based circuits.

Enforced Prerequisite at Enrollment: (EET 212W or EE 310) and EET 312

EET 408: Communication System Design

4 Credits

This course is for students in Electrical Engineering Technology to gain understanding of the fundamental concepts and components of communication systems, supported by hands on experiments. Fundamentals of communication systems are covered and include signal analysis, noise, main building blocks and circuit components, effect of nonlinearities, signal generation, concepts of modulation and demodulation, analog modulation schemes such as AM, DSB, SSB, FM, and PM, transmitter and receivers architectures, and, if time permits, an introduction to digital communication schemes. After overviewing basic terminology and concepts such as signal spectrum, bandwidth, filtering, harmonics, power, and signal to noise ratio in communication systems, this course, in two parts, will expose students to two distinct aspects of communication technology. In the first part, the students will learn about the main components such as filters, resonators, amplifiers, mixers, oscillators, and phase locked loops. The second part will cover the main amplitude and angle modulation schemes and familiarize the students with modulator and demodulator circuits for those schemes. Topics covered in the course are supported by hands on labs performed each week during a lab session.

Enforced Prerequisite at Enrollment: EET 312

EET 409: Power System Analysis I

4 Credits

This course will help students to understand power generation units, transmission lines, distribution systems and load flow. The main power system elements will be studied in detail. These elements include: generators (to generate electricity), transformers (to step up/down voltage levels for transmission purposes), transmission lines (in order to transmit the power from one location to another with minimum

dissipation), and distribution systems (in order to distribute the transmitted power to customers). The course also helps students to learn the concept of fault analysis, the effect of line length on transmission lines, and the calculation of losses in synchronous generators. The basic theory of complex numbers will be used to simplify the analysis and calculations. Students will understand the typical operating principles for different types of power plants including: nuclear, coal, gas, wind, and solar.

Enforced Prerequisite at Enrollment: EET 312

EET 410: Power System Analysis II

4 Credits

Power System Analysis II follows up the material from Power System Analysis I with more details on the analysis and calculation during faults or transients. Students will understand symmetrical faults such as three-phase and single-phase short circuits. Next, symmetrical components in power system will be introduced and impedance loads, series impedances, three-phase transmission lines, rotating machines, and transformers will be modeled. This course (Power System Analysis II) helps students to understand unsymmetrical faults such as single line to ground, double line to ground, and line to line faults. Furthermore, students will understand how to analyze the power system components under different fault conditions. Protection and relaying play an important role in a power system. Having equipment such as generators or transformers in power grids, engineers and power system planners should protect these expensive devices from faults or any transients. Relays and breakers are the best tools for protection. Relays sense the currents/voltages in multiple locations. If the measured current/voltage is not within the limit, they send the command to the breakers to disconnect the circuit and protect the equipment. Students in Power System Analysis II will analyze the protection devices and operation principles of relays. The last topic in this course is the transient stability of synchronous machines using equivalent dynamic model and generator control. This course will help students to model the generators in power systems and apply various control mechanisms such as: voltage, frequency, or power control to the synchronous generator model.

Enforced Prerequisite at Enrollment: EET 409

EET 413: Optoelectronics

4 Credits

Principles and applications of optoelectronics including sources, detectors, imagers, transmitters, fiber optics, systems and integrated optics. This course is designed as an elective course for the EET senior undergraduate students. This course introduces some critical components that are needed in fiber optic communication systems. This includes optical transmitters (Light emitting diode, and laser diodes), optical receivers (i.e., photodetector), modulators and demodulators, optical couplers (how to connect more than two fibers together), and optical amplifiers (including the basic principle of erbium doped fiber optic amplifiers). The topics covered in this course include Optics Review, Lightwave Fundamentals, Measuring Light, Optical Waveguides, Light Sources and Detectors, Couplers and Connectors, Noise and Detection, and System Design. Relevant laboratory experiences are used to reinforce the topics covered in class.

Enforced Prerequisite at Enrollment: EET 312

EET 414: Biomedical Instrumentation

4 Credits

Introduction to transducers and circuits used to detect and process medical physiological data with focus on cardiovascular and respiratory systems.

Enforced Prerequisite at Enrollment: EET 312 and EET 331

EET 416: Fluid and Thermal Design in Electrical Systems

3 Credits

Introduction to basic electrical engineering technology concepts and applications of thermodynamics, heat transfer, and fluid power in electrical/ electronic systems. EET 416 Fluid and Thermal Design in Electrical Systems (3) Fluid and Thermal Design in Electrical Systems is a required course for senior-level students pursuing the electrical engineering technology (EET) option in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to teach principles of thermal sciences with an emphasis on electrical/electronic system applications. The course enables students to understand fundamental principles of thermodynamics, heat transfer, and fluid mechanics as they apply to thermal management of electronic systems. These principles include the first law of thermodynamics, the continuity equation, basic principles of system pressure loss and fans, the three modes of heat transfer, resistance analogy for heat flow, and the finite difference method for analyzing two-dimensional heat flow. Specialized CFD software is used to analyze temperatures in electronic systems. Laboratory exercises reinforce concepts developed in lecture.

Enforced Prerequisite at Enrollment: EET 315 and (MATH 211 or MATH 231) and MATH 250

EET 419: Project Proposal Preparation

1 Credits

This course is required for all senior students in the Bachelor of Science in Electrical Engineering Technology (BSEET) program. It is the first course in a two-semester sequence that comprises the capstone design experience. In this course, students work in teams to develop an idea for an innovative product or system, including the determination and weighting of customer requirements, design constraints, applicable standards, engineering specifications, a functional decomposition (block diagram), work breakdown structure (WBS), project schedule, and proposed project budget. The culmination of the course is a proposal that guides the project into the second semester, which is the implementation phase. In the proposal, students will also provide background information on the history of relevant technologies, state of the practice in similar products and the life cycle of related products. Weekly presentations focus on important components of the proposal and drafts of these components are submitted for review on a regular basis.

Enforced Prerequisite at Enrollment: ENGL 202C and CAS 100

EET 420W: Electrical Design Project

3 Credits

Design, construction, and testing of a project either selected by the students with approval or assigned by the instructor. EET 420W Electrical Design Project (3) This course is designed with the following goals and objectives: 1. The students will enter the course with a well-defined

project proposal and a timeline for which the first task will be to write the specifications. Upon the specifications' approval, the student teams will begin designing and building the project. 2. Each student will maintain a laboratory notebook that documents the day-to-day activities of the project in a style that could be used for patent documentation. 3. Team members will provide short oral and written reports every week for the first five to six weeks, and then every two weeks until the end of the semester. 4. The students will incorporate engineering standards and constraints, i.e., consideration of economic, environmental, sustainability, manufacturability, ethical, safety, etc., in their project and final report. 5. A draft copy of the final report will be collected, critiqued, and returned to students with comments and suggestions for changes. 6. A final project oral report (20-25 minutes) will be given by the project team during the last week of the semester. 7. An extensive, well-written report describing the project that has been designed and built is the major outcome of the project course. Grades for the course will be based on: Weight Factor a. Written specifications for the project b. General conduct in the laboratory including lab notebook c. Oral and written progress reports including question-and-answer sessions d. Final oral and written reports including question-and-answer sessions This course is a required course in the Electrical Engineering Technology BS curriculum and is intended to be taken by seniors as the capstone course of the major. As such, the course integrates materials from many of the undergraduate electrical courses in addition to related math, engineering technology, and science courses. This course should be taken during the last semester (prior to graduation).

Enforced Prerequisite at Enrollment: EET 312 and EET 331 and EET 419 and ENGL 202C

Writing Across the Curriculum

EET 431: Advanced Electronic Design

4 Credits

Applications of analog and digital integrated circuits; introduction to analog and digital communication techniques.

Enforced Prerequisite at Enrollment: EET 331

EET 433: Control System Analysis and Design

4 Credits

Classical and modern control analysis and design approaches, such as Laplace and state-space, aided by analog and digital computers.

Enforced Prerequisite at Enrollment: EET 312

EET 440: Applied Feedback Controls

3 Credits

Analysis and design of analog and digital feedback control systems. EET 440 Applied Feedback Controls (3) Applied Feedback Controls is a required course for senior-level students pursuing the electrical engineering technology (EET) option in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to teach principles of feedback control systems. The course enables students to understand different elements of a feedback control system. System stability is determined, including phase and gain margin, through the use of Bode analysis techniques. Different control schemes are investigated, with emphasis on PID control.

Laboratory exercises, including the construction of various control systems, reinforce concepts developed in lecture.

Enforced Prerequisite at Enrollment: EET 315

EET 456: Automation and Robotics

4 Credits

Introduction to robotic systems and automation. Emphasis includes robot motion, control, and components, as well as programming PLCs. EET 456 Automation and Robotics (4) The objective of this course is to use a hands-on approach to introduce the basic concepts in robotics, focusing on mobile robots and illustrations of current state of the art applications. The course is offered at the senior undergraduate level with emphasis on kinematics, dynamics and control of robot arms. Course materials are tied to lab experiments in which students will work in teams to build and test mobile robots (such as LEGO-based robots).

Enforced Prerequisite at Enrollment: EET 331 and CMPET 403 Enforced Concurrent at Enrollment: MATH 220 or EET 433

EET 461: Power Electronics

3 Credits

Fundamentals of power electronic circuits, semiconductor power devices, power conversion equipment. Circuit topologies, closed-loop control strategies, equipment design consideration. EET 461 Power Electronics (3) Power electronics is a technical elective for senior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The course introduces students to the different topologies used to convert electrical power via the use of solid state switching. Specifically, the course presents ac-dc, ac-ac, dc-dc and dc-ac converters. The different switching devices used (diodes, SCRs, MOSFETs, etc.) are discussed. Laboratory exercises complement the lecture material. Relevant topics such as power quality, EMI and applications of power electronics are presented.

Enforced Prerequisite at Enrollment: EET 212W and (EET 214 or EET 213W) and (EET 315 or (EET 312 and EET 331))

EET 475: Intermediate Programmable Logic Controllers

3 Credits

Application of programmable logic controllers (PLCs) to data acquisition, automation and process control. EET 475 Intermediate Programmable Logic Controllers (3) Programmable logic controllers (PLCs) are the workhorse of the automation and process control industry. Their rugged design and ease of programming enables PLCs to operate in almost any manufacturing environment. PLCs are employed wherever measurement equipment and computers are needed to control large electrical equipment such as motors and actuators. In this course, students apply their knowledge of basic PLC programming to see how the PLC can be used to communicate with other equipment, sense and react to external stimuli, and provide both open loop and closed loop system control.

Enforced Prerequisite at Enrollment: (EET 275 or CMPET 211) and (EET 315 or EET 312)

EET 478: Digital Communication Systems

4 Credits

Discrete signal analysis, A/D conversion, digital modulation techniques, encoding, decoding, data communication, noise.

Enforced Prerequisite at Enrollment: CMPET 403

EET 480: Electrical and Computer Systems Senior Seminar

1 Credits

Concepts of career development; project management; engineering design documentation; industrial design examples. EET 480 Electrical and Computer Systems Senior Seminar (1) Electrical and Computer Systems Senior Seminar is a required course for senior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to introduce students to the practices associated with managing an industrial-based project. Student teams begin working on a capstone project. Project definition, specification development, scheduling, engineering constraints, and budgeting of both time and money are discussed. Other issues of career development are presented, such as interviewing, resume preparation, and career opportunities. Ethical issues related to the discipline are discussed. Engineering economy is introduced.

Enforced Prerequisite at Enrollment: EET 341 and (EET 330 or CMPET 333) and CMPET 355 and ENGL 202C . Enforced Concurrent at Enrollment: ECON 102 or ECON 104

EET 490W: Electrical/Computer Senior Design Project

3 Credits

Individual or group design projects in electrical and computer engineering technology. EET 490W Electrical/Computer Senior Design Project (3) The Electrical/Computer Senior Design Project is a required course for senior-level students in the Electrical and Computer Engineering Technology (ECET) baccalaureate degree program. The purpose of the course is to have teams of senior students continue the senior design project they had started the prior semester in their Senior Seminar. The course focuses on project-based work where teams design, build, test and document the results of their senior design project effort. The course integrates and applies prior knowledge learned throughout the curriculum.

Enforced Prerequisite at Enrollment: EET 480

Writing Across the Curriculum

EET 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experience, practica or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor
Full-Time Equivalent Course

EET 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EET 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Electro-Mechanical Engineering Technology (EMET)

EMET 100: Computation Tools for Engineering Synthesis

1 Credits/Maximum of 1

EMET 100 is a first semester course intended to introduce first-year EMET students to a core set of computational tools and simulation software that will be used repeatedly throughout the EMET curriculum to investigate engineering/technical problems. The course is conducted in a computer-based laboratory format to ensure that students gain hands-on experience with the tools, learn the capabilities and limitations of each, and come to understand the types of problems best handled by each tool.

EMET 215: Manufacturing Engineering

3 Credits/Maximum of 3

EMET 215 is intended to introduce the student, in both a lecture and site visit setting, to production planning, and production routing for the purpose of part creation and assembly, manufacturing process and equipment layout required for an assembly of artifacts from raw materials to shipping, including material handling. The course will provide students with a thorough understanding of the manufacturing processes and material handling equipment necessary to formulate a facility layout for producing an assembly of artifacts. Additionally, EMET 215 is intended to provide the student, in both a laboratory and site visit setting, learn the skills necessary to design, manufacture, and assemble a simple engineered product. The course will provide the experience and interactions to give them the knowledge necessary to develop basic hands-on skills for processing and assembly operations, 3d printing, operating and programming CNC machinery. Course activities will be based upon equipment/resources available at each campus. It is suggested that students observe manufacturing processing and assembly operations during site visits to local companies, based on availability.

Enforced Prerequisite at Enrollment: MET 105 or IET 101 Enforced Corequisite at Enrollment: EGT 114

EMET 222: Applied Mechanics

3 Credits/Maximum of 3

The purpose of this course is to give students the ability to calculate engineering stresses, strains, and deflections in members subjected to different types of loading using the applied forces and reactions obtained from static equilibrium calculations. Various types of components are analyzed such as rods subjected to axial loading, shafts subjected to torsion, and beams of various cross-sectional geometries subjected

to bending moments. Additionally, members under combined loadings are analyzed to determine principal stresses and maximum shear stresses using stress transformation equations and Mohr's circle. For all applications, free body diagrams will be used in order to relate external and internal reactions.

Enforced Prerequisite at Enrollment: MET 111 Enforced Concurrent at Enrollment: MATH 83 or MATH 140

EMET 225: Applied Dynamics

2 Credits/Maximum of 2

This course is designed to provide engineering technology students with knowledge in solving problems using fundamental laws and equations of motion that are applied to particles and rigid bodies. Dynamics is typically broken into two categories: (1) kinematics (the study of motion without considering the causes of the motion; and (2) kinetics (the study of motion due to applied external forces). Topics addressed in dynamics for technology include: kinematics of particles, application of Newton's laws to particles and rigid bodies, energy and momentum of particles, kinematics of rigid bodies, impact of particles and rigid bodies, and energy and momentum for rigid bodies.

Enforced Prerequisite at Enrollment: MET 111 and (MATH 83 or MATH 140)

EMET 230: Computerized I/O Systems

3 Credits

Introduction to concepts of structured programming, data acquisition, computerized interfaces, and graphical user interfaces. EMET 230 Computerized I/O Systems (3) EMET 230 is designed to provide the students with the knowledge of steps and issues to be addressed when deciding on computerized input-output systems. Understanding the basics property, classification and types of signals, significant figures, rounding off, etc. Steps in choosing hardware and understanding the principles used in the software design to develop friendly user interfaces.

Enforced Concurrent at Enrollment: EET 212W

EMET 325: Electric Drives

3 Credits

Study of operation, application and specification of AC/DC electrical drive motors, servos, actuators, control units and power converters. EMET 325 Electric Drives (3) EMET 325 provides students with a basic understanding of the operation, capabilities, limitations, and selection of electrical drive devices and drive controls typically found in industrial manufacturing and production systems. The course provides background on the basic operating characteristics of variety of drive devices, both AC and DC; however, the emphasis is on the practical limitations and typical application of these devices. Particular emphasis will be given to concepts and topics important to the selection, implementation and operation of electrical drives in common industrial applications. Lectures will be supported by classroom demonstrations of setup, connection, and operating characteristics of devices covered in lectures. These demonstrations will emphasize typical uses of the devices studied.

Enforced Prerequisite at Enrollment: EET 212W

EMET 326: Mechanical Drives

3 Credits

Transmission of force and motion using linkages, cams, gears, belts, and hydraulic and pneumatic drives. EMET 326 Mechanical Drives (3) EMET 326 is designed to provide the students with the knowledge of various mechanical drives used in engineering. The course introduces the concepts displacement, velocity and acceleration analysis of linkages, cams, gears and belts. Instructor may employ purely geometric methods or combine it with vector approaches. Differential and integral calculus for some of the topics and may considering using techniques of optimizations for mechanism synthesis. Static and dynamic force analysis of linkages is studied.

Enforced Prerequisite at Enrollment: EMET 222

EMET 330: Measurement Theory and Instrumentation

3 Credits

Fundamentals of measuring, transmitting, and recording temperature, pressure, flow, force, displacement, and velocity; laboratory component emphasizes systems used in manufacturing. EMET 330 Measurement Theory and Instrumentation (3) The purpose of EMET 330 is to familiarize students with the measurement and instrumentation systems typically used in automated manufacturing and automated process industries. The primary focus of the EMET degree program is the technology of automated control, and measurement and instrumentation systems are essential elements in the control of any industrial or manufacturing process. This course is designed to cover those topics in process measurement, data monitoring, signal conditioning, and data acquisition that are typical in such control systems. The majority of industrial instrumentation systems involve measurement of position, displacement, velocity, force, flow, pressure, or temperature. EMET 330 will cover the common techniques used to make these types of measurements. Measurement systems also require signal conditioning and amplification to convert primary sensor signals into practical analogs that can be used in electronic controls. EMET 330 will also cover fundamentals of signal conditioning and amplification, including analog and digital data acquisition techniques, D-to-A and A-to-D conversion methods and equipment, and fundamentals of automated data acquisition and instrumentation-computer interfacing. Finally, accurate application of any measurement requires an understanding and proper application of basic statistical methods of data reduction. EMET 330 will include coverage of these topics as well. EMET 330 is also a lab-based course. Thus, students in the course will be required to conduct lab exercises in which they actually use industrial-quality sensors, transmitters, signal conditioning equipment, and data acquisition systems to gain experience with how these devices actually perform.

Enforced Prerequisite at Enrollment: EMET 230 Enforced Concurrent at Enrollment: MATH 211 or MATH 250

EMET 350: Quality Control, Inspection, and Design

3 Credits

Fundamentals of quality including statistics, probability, and design of experiments. EMET 350 Quality Control, Inspection, and Design (3) The purpose of EMET 350 is to familiarize students with the use of statistical methods to measure, describe, and control the quality of products and processes. This will be done by teaching students the statistical and probabilistic methods that are applied to quality

monitoring and quality control; the typical methods used to monitor, describe, and control quality; and the accepted methods for designing effective statistical experiments to characterize quality. Specific topics that will be covered include: ♦ Basic statistical concepts, measures, and tools ♦ Basic concepts of continuous and discrete probability, probability distributions, populations, and samples ♦ Standard sampling methods ♦ Data presentation tools, including histograms, frequency charts, stem-leaf plots, Pareto charts, etc. ♦ Control charting tools and methods as applied to both variables and attributes, including x-bar/R charts, x-bar/s charts, median/R charts, trend charts, charts of non-conformities or nonconforming items, etc. ♦ Standard measures of process capability ♦ Acceptance sampling techniques, methods, and tools ♦ Concepts of gage control ♦ Methods and tools for design of statistical experiments. The course will also introduce students to standard computer tools for statistical and quality control computations.

EMET 351: Quality Control, Inspection, and Design

2 Credits

The objective of Quality Control, Inspection, and Design is to introduce the student to fundamentals of quality including statistics, probability, and process control. EMET 351 will provide a fundamental understanding of modern statistical quality control methods used by industry. It covers the concepts, principles, procedures, statistical tools, and computations used to analyze and maintain statistical control of manufacturing and production processes and systems. Standard statistical methods are emphasized rather than the mathematical theory of statistical models.

EMET 394: EMET Student Design Competition

1-3 Credits/Maximum of 3

Students collaborate on research and design of appropriate solutions to real-life problems and projects.

Enforced Prerequisite at Enrollment: Sixth semester standing

EMET 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

EMET 396: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

EMET 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EMET 402: Fundamentals of Engineering Review

2 Credits

Overview of the topics covered on the Fundamentals of Engineering Exam administered by the NCEES for the purpose of earning a Professional Engineering license. EMET 402 Fundamentals of Engineering Review (2) EMET 402 Fundamentals of Engineering Review is intended to provide students with an overview of topics covered on the morning portion of the Fundamentals of Engineering Exam. Passage of the exam, administered twice per year by the National Council for Examiners for Engineering and Surveying (NCEES), is the first step toward Professional Engineering licensure. Since students have already taken courses that cover all of the subject areas, this course merely serves as a review of these topics in order to help the student prepare for the exam.

Enforced Prerequisite at Enrollment: Seventh semester standing

EMET 403: Electromechanical Design Project Preparation

1 Credits

This course involves the planning and preliminary design activities for the capstone electro-mechanical design project. EMET 403 Electromechanical Design Project Preparation (1) EMET 403, Electromechanical Design Project Preparation, involves the planning and development of a design plan for a project to be completed in the capstone electro-mechanical project design course, EMET 440, which is required for all Electro-Mechanical Engineering Technology baccalaureate degree students. Both EMET 403 and EMET 440 require formal report writing, project documentation, and group presentations. In EMET 403, students will present design plans to a faculty panel for review and approval. In this planning and design development process, students will be required to follow a rigorous design methodology. To support the process, EMET 403 will include instruction in the use of project management software, and students will undergo the typical process of periodic design reviews and critiques as their plans evolve. Finally, EMET 403 is a team-based course. All project designs will be prepared by teams of two or more students. Generally, these same teams will be maintained through actual completion of the project in the following project design course, EMET 440. Because of this linkage of EMET 403 and EMET 440, both in design plans and team structure, it is essential that students schedule EMET 403 in the semester immediately prior to the semester in which they will register for EMET 440.

Enforced Prerequisite at Enrollment: Seventh semester standing

EMET 405: Fluid Mechanics and Heat Transfer

3 Credits

Introduction to the principles of fluid mechanics and heat transfer with emphasis on the application to practical problems. EMET 405 Fluid Mechanics & Heat Transfer (3) This course is designed to provide students with knowledge in fluid statics, fluid dynamics, and heat transfer. The emphasis of the course is to introduce them to the fundamental laws and principles of these engineering sciences, and to give them experience in solving problems using these laws and principles. The instructor may employ methods of differential and integral calculus as a part of selected topics. The fluid mechanics portion of the course introduces the students to fluid statics (e.g. hydrostatic pressure on submerged surfaces) and to fluid dynamics (e.g. continuity equation, energy equation, and laminar and turbulent flow). The heat transfer portion of the course introduces the three modes heat transfer.

conduction, convection and radiation. It also covers an important type of heat transfer equipment, the heat exchanger.

Enforced Prerequisite at Enrollment: EMET 326 and (MATH 211 or MATH 250)

EMET 410: Automated Control Systems

4 Credits

Introduction to analog feedback control theory and computer simulation and analysis using Matlab; laboratory study of feedback systems. EMET 410 Automated Control Systems (4) Automated Control Systems is a required course for senior-level students in the Electro-Mechanical Engineering Technology (EMET) baccalaureate degree program. The main goal of the course is to teach students the concepts of automated control by coupling theory, industrial practices, and appropriate laboratory activities. The course demonstrates that physical processes can be represented by differential equations and hence, Laplace transforms. It teaches students how to measure and modify a system's performance in a variety of ways as well as how to make use of time-domain techniques, root locus and Bode plots. Improving student communication skills is also a goal of this course. The specific EMET program outcomes addressed by the course are: OUTCOME 1: * Students will readily recognize the availability of and be able to apply electrical, fluid and mechanical analogues for use in system models. * In laboratory exercises, students will correctly design and test control systems as applied to integrated electrical and mechanical systems. OUTCOME 2: * Students will develop linear, constant coefficient, ordinary differential equations from electromechanical system models, and solve them using Laplace transform techniques. OUTCOME 6: * Students will correctly analyze and design analog control systems to meet performance requirements by using computer tools to perform root locus, frequency domain, and time domain analysis and design. OUTCOME 8: * Students will correctly design and test analog control systems, including proportional, integral and derivative (PID) feedback control and other compensators in laboratory exercises. This includes tuning PID controllers.

Enforced Prerequisite at Enrollment: (MATH 211 or MATH 250) Enforced Concurrent at Enrollment: EMET 330

EMET 430: Programmable Logic Controls II

3 Credits

A second course in PLCs covering sequencing/shift instructions, program flow control, data and math instructions, PID loops, and machine communication. EMET 430 Programmable Logic Controls II (3) The objective of EMET 430 - Programmable Logic Controls (PLC) II course is to give students an in-depth understanding of the advanced control, programming, I/O, communications, and distributed processing capabilities of modern PLCs. The objective is achieved through coordinated lecture and laboratory activities. Lectures cover theoretical and operational concepts; laboratory exercises will require students to apply lecture concepts to actual control problems using real equipment. EMET 430 is a senior-level elective in the Electro-Mechanical Engineering Technology program. It is intended for those students who want to expand their PLC knowledge beyond the basics covered in required courses in the EMET curriculum. Students must have prior knowledge of basic PLC capabilities, ladder logic programming, and general methods of interfacing PLCs with external devices. This background is typically obtained via the EE T 220 - Programmable Logic Controls (or equivalent) course. By building on prior concepts of

ladder logic and simple relay/contactors style programming, EMET 430 can focus on the applications, programming, and use of specialty I/O modules and advanced control technologies available in state-of-the-art PLCs. The following major topical areas will generally be covered: ♦ advanced programming instructions related to program flow control, data manipulation, mathematical computations, and timing/sequencing functions; ♦ use of specialty processor and I/O modules (viz., analog current and voltage I/O, digital I/O, thermocouple and RTD interface devices, specialized motor controls, etc.); ♦ advanced technology that adapts PID capabilities to PLC systems permitting them to be used when circumstances require dynamic, closed-loop feedback control; and ♦ standard installation and safety practices for PLC installations. Programming tasks in the course will be carried out using modern operator interface equipment and software to ensure that students understand the capabilities and limitations of those systems. The course will also examine the capabilities, flexibility, and limitations of computer-linked, distributed PLC systems, including study of the communication technologies and systems currently used by industry. Generally, a capstone student project will be used to tie all these concepts together and to give students direct, hands-on experience with actually setting up and operating a PLC-based control system. Performance in the lecture portion of the course will typically be evaluated by a combination of major exams, short quizzes, and out-of-class problem and programming assignments. Performance in the laboratory will typically be evaluated based on a series of both formal and informal lab reports documenting programming solutions to assigned control problems.

Enforced Prerequisite at Enrollment: EET 275

EMET 432: Electromechanical Devices for Biomedical Instrumentation

3 Credits

A study of electromechanical devices, transducers, and instrumentation used in the biomedical field. EMET 432 Electromechanical Devices for Biomedical Instrumentation (3) This course concentrates on electromechanical devices and equipment (used in a hospital setting) that involve determining information about a patient's health or controlling treatment. Basic components of such equipment include transducers that convert physiological events to electrical signals, imaging devices such as charge coupled arrays, electronic control systems, and mechanical systems such as pumps. The design and use of such equipment will be demonstrated. Upon completion of this course, the student should be able to: describe basic human physiology and systems; explain how various biomedical instrumentation functions and how biomedical measurements are made; explain how a variety of biomedical transducers work and how they are interfaced to biomedical equipment; describe various physiological signals such as ECG and EEG; perform various mechanical and electrical calculations that are used in biomedical instrumentation; complete and explain a block diagram for the design process of biomedical instrumentation; design electronic amplifier circuits used in biomedical instrumentation; explain how various regulatory agencies such as the FDA, FCC, IEC, and UL are involved in the regulation of biomedical equipment. This course is a 400 level technical elective course in the EMET program. Students will use their knowledge in math, science, and physics to understand biomedical instrumentation devices and systems. This course will apply previous knowledge in measurement theory and instrumentation to various devices and measurements in the biomedical field. In addition, this course will look at total systems for biomedical instrumentation, including transducers, data acquisition, analysis and feedback. System design that includes both digital and analog circuits will be covered in detail. The type of required

equipment that should be demonstrated and explained should include: electrodes, sensors, cardiovascular measurement devices such as EKG equipment, respiratory therapy equipment, and ultrasound equipment. In addition, a study of the electrical, mechanical, and system schematics should be included. A hospital demonstration tour should be included for larger radiological equipment. Students' academic achievement will be evaluated using exams, quizzes, term paper and/or research project.

Enforced Prerequisite at Enrollment: EMET 330 and (PHYS 151 or PHYS 212 or PHYS 251)

EMET 433: Smart Manufacturing

3 Credits

Exploration of central concepts and technologies of smart manufacturing with focus on the internet of things, data analytics for production data, simulation and digital twins, and process and manufacturing systems optimization. Smart Manufacturing introduces the concepts and technologies of modern data-driven smart manufacturing. The purpose of the course is to empower students to incorporate smart manufacturing thinking and technologies into manufacturing processes. Key smart manufacturing topics that the student will explore include the industrial internet of things, data analytics and predictive machine learning, simulation and the digital twin, and process and manufacturing systems optimization. The course includes a laboratory component to provide students experience with implementing these technologies. The laboratory exercises are a mix of hardware development via internet of things sensor collection, software use for data analysis and visualization, numerical modeling for digital twin creation, and systemic process optimization.

Enforced Prerequisite at Enrollment: (EET 275 and CMPET 211 and EMET 330) or (ME 345W and ME 357)

EMET 440: Electro-Mechanical Project Design

3 Credits

Planning, development, and implementation of electro-mechanical design project; includes formal report writing, project documentation, group presentations, project demonstrations. EMET 440 Electro-Mechanical Project Design (3) Electro-Mechanical Project Design is to provide students with theoretical and practical experience associated with the integration of the various disciplines within the field of electromechanical engineering technology. Students working in teams will employ previously developed and approved design plans to construct, demonstrate, and document an integrated, electromechanical system. Plans for designs will come from the results of the project design preparation course, EMET 403, conducted in the immediately preceding semester. Thus students in EMET 440 are expected to have participated in the design development process that occurred in that same offering of EMET 403. Projects will be required to use a variety of electromechanical equipment, including such items as robots, machine vision systems, programmable logic controllers, personal computers, electric motors, CNC equipment, etc. Appropriate project documentation exercises, project presentations, progress reporting, budgeting and scheduling, system performance to specifications, and development of final design reports will be required elements of the course.

Enforced Prerequisites at Enrollment: EMET 325 and EMET 326 and EMET 410 and EMET 403

EMET 441: Mechatronics Project Design

2 Credits

Planning and development activities for the capstone electro-mechanical design project. Mechatronics Project Design involves working as a team member using appropriate management techniques in the investigation, analysis, and design of electromechanical systems by demonstrating the ability to allocate effectively time, responsibilities, and resources to a project. All Electro-Mechanical Engineering Technology baccalaureate degree students take EMET 441 followed by EMET 442 in the next semester. This is a 2 credit/4 contact-hour course.

Enforced Prerequisite at Enrollment: EMET 325 and EMET 326 Enforced Concurrent at Enrollment: EMET 410

EMET 442: Mechatronics Project Implementation

2 Credits

Assembly and testing activities for the electro-mechanical design project. Mechatronics Project Implementation provides students with theoretical and practical experience associated with the integration of the various disciplines within the field of electromechanical engineering technology. Students working in teams will employ previously learned material to plan, construct, and test an integrated, electromechanical system. Projects will require a variety of electromechanical equipment, including such items as robots, machine vision systems, programmable logic controllers, personal computers, electric motors, CNC equipment, etc. Appropriate project documentation exercises, project presentations, progress reporting, budgeting and scheduling, and development of final project reports will be required elements of the course. This is a 2 credit/4 contact hour course.

Enforced Prerequisite at Enrollment: EMET 410 and EMET 441

EMET 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

EMET 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

EMET 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Elementary Education in Multicultural Settings (ELEDM)

ELEDM 395W: **SPECIAL TOPICS**

2 Credits/Maximum of 6

Prerequisite: C I 295 , EDPSY014 , EDTHP115; Concurrent: SPLED444, ELEDM400 , ELEDM401A , or ELEDM402
Writing Across the Curriculum

ELEDM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

Energy and Geo-Environmental Engineering (EGEE)

EGEE 12: Energy Science and Engineering Lectures

1 Credits

Lectures and discussion by faculty and visiting scientists/engineers on energy science and engineering, job selection, patents, licensing, ethics, and other professional issues and challenges. EGEE 012 Energy Science and Engineering Lectures (1) The objective of the course is to expose students through a lecture or seminar format to a wide range of topics on energy science and engineering. The lectures would be presented by faculty and visiting scientists. Occasionally, students may be asked to make presentations. Students would be required to write a short summary of each presentation and provide a critique of the presentation. Seminar topics will cover aspects of energy production, processing, utilization, and conservation, and the associated environmental, health and safety, and policy, economics, and management issues. Students are expected to keep up with current developments on each topic and to actively participate in the discussions. Students will be evaluated based on their class participation, and written summary and critique of each presentation. This is a required course in the energy engineering major.

Enforced Prerequisite at Enrollment: Fifth-semester standing in Energy Engineering major (ENENG_BS) or Chemical Engineering (CHE_BS)

EGEE 101: Energy and the Environment

3 Credits

Energy utilization and technological development, energy resources, conversion and consequences on the local and global environment, and future energy alternatives. EGEE (MATSC) 101 Energy and the Environment (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Energy is the life-blood of any society. The information and principles learnt in this course will allow the students to make sound judgments in the area of personal energy choices; There is increasing concern about the influence of human activities, particularly energy use, on global climate change. This has an impact on global business aspects. Students in all walks of life need to be exposed to the basic concepts to appreciate the positions of policymakers, scientists, and industry over the interrelationship between greenhouse gas emissions and global climate change. The students will acquire

knowledge, which will enable them to critically evaluate any energy-related concerns of the society. This is important for any college graduate for responsible citizenship and stewardship. The main objectives of this course are to: provide basic understanding and appreciation of energy and environmental concepts and interconnectedness; analyze energy consumption patterns; discuss various energy resources that power the modern society; examine the energy conversion processes; explore interrelationships between energy use and industrial progress and environmental consequences; discuss future energy alternatives. Student performance will be evaluated continuously through homework assignments, exams, group activities, class participation and a final examination. Position papers or term papers may be used in lieu of homework assignments in some sections. This course is a stand-alone General Education course.

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Key Literacies

EGEE 102: Energy Conservation for Environmental Protection

3 Credits

Energy is a vital component of modern society. Much of the general population believes that the energy sources we depend on are perpetual. While people believe that energy use is the culprit for environmental damage, they are not aware of the methods and principles by which energy conversion devices operate. This general education course will provide you with the necessary knowledge and information on the main operating principles of devices/appliances that are in common use and information on which to make the right decision in selecting the most energy efficient and economical choice. These devices are day-to-day appliances such as refrigerators, washers and dryers, ovens, etc., and home heating or cooling and transportation choices. The course also provides necessary information on heating furnaces, insulation, doors and windows, lighting, and air conditioning principles. The objective of the course is to expose you to energy efficiency in day to day life in order to save money and energy and thereby protect the environment. I hope the information in this course will help you become an environmentally-responsible individual of this Global Village. This course is a stand-alone General Education course that contributes to the General Education Learning objectives of Key Literacies, Critical and Analytical Thinking, Global Learning, and Social Responsibility and Ethical Reasoning. Furthermore, this course meets the Bachelor of Arts degree requirements.

Bachelor of Arts: Natural Sciences

EGEE 110N: Environmental Health and Safety Science

3 Credits

EGEE 110 Environmental Health and Safety Science (3) (GN) (GS). Environmental Health and Safety is an applied field with many aspects. It has engineering, science, psychology, and management components. For an understanding of how humans interact with their working and living environment, one has to understand basic sciences such as physics, biology, chemistry, mathematics, and psychology as well as some of the traditional engineering disciplines. This general education course is intended to provide students with a basic understanding of how these science and engineering principles are applied in an environmental health and safety context to topics and hazards commonly encountered in our lives. At the conclusion of the course, participants should be able to: 1) Demonstrate an understanding of how the dynamic processes of both the natural and man-made world impact the health, safety, and well-being of all of us in our daily lives; 2) Identify and understand common hazards inherent in industries, residences, transportation systems, and natural environments; 3) Explain the definition of risk including the concepts of probability, severity, presence of a hazard, and exposure to a hazard; 4) Recognize and understand ways of quantitatively expressing risk; 5) Explain risk perception and some of the factors that influence it; 6) Understand and apply control strategies and protective measures to hazards and risks to self, family, friends, and co-workers throughout daily activities;

EGEE 120: Oil: International Evolution

3 Credits

Oil is the world's most important commodity. Access to oil was decisive in the great military struggles of the 20th century. The economic and strategic value of oil has led to the evolution of a fascinating array of business, political, and strategic alliances around the world. The objective of this course is to describe this evolution and the technological, commercial, and political innovations shaping its current face. This knowledge is vital in achieving a more complete understanding of the role of oil in international affairs and economic development. The course begins with a discussion of the development of the American and European oil industries during the 19th century and the formation of the first great industrial oil monopolies. The emergence of oil as a strategic commodity prior to and during World War I will then be discussed. The economic and technological reasons for the recurring boom-bust cycles of oil markets and the political arrangements developed to cope with their effects is the third major topic of the course. The focus then shifts back to military affairs with a discussion of the role of oil in the battles of World War II. We then examine the social and cultural roots of the post-war dissolution of company ownership and the nationalization of oil reserves. Also in the policy arena is a discussion of the policy response of western governments to a growing dependence upon low-cost oil from the Middle East, Africa, and South America. The analysis then focuses on the ideology and strategy behind the formation of the Organization of Petroleum Exporting Countries (OPEC) and the motivations and execution of their strategies to drive up oil prices during the 1970s and early 1980s. The last part of the course discusses the emergency of oil as a commodity traded in open commodity market exchanges, the development of reserves in deep water and in Africa, and the relationship between oil policy and the war on international terrorism. Allowing students to gain a new perspective on global relations, and domestic politics. By the end of the semester, students will have broad understanding of oil and its pervasive impact on society over the years, better writing ability, and improved critical reading and thinking skills. This general education course will provide a multi-disciplinary approach to understanding how oil affects international relations and commerce. The relationships between oil technology, social and political institutions, and the unique cultures in oil-producing regions.

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EGEE 302: Principles of Energy Engineering

3 Credits

Basic engineering calculations and mathematical methodologies on material and energy balances and reaction rates during chemical transformations in energy systems. EGEE 302 Principles of Energy Engineering (3) This introductory energy engineering course enables students to identify and apply fundamental principles of chemistry and physics, as they pertain to energy and fuels, and mathematics to describe materials and energy flow through a process. Examples of the processes studied will include stoichiometry in combustion and other reactions and material flows with recycle streams. This course also enables students to describe the energy transformations in energy systems. The examples of the processes we would be applying energy conservation principles to include calculation of adiabatic flame temperature during combustion of fuels. In addition, the course will present an introduction to chemical kinetics with an overview of solid, liquid and gaseous fuel transformations. This is a required introductory course to the BS in Energy Engineering degree program. It will be a prerequisite to several of the 400 level energy engineering curriculum courses. Students will be evaluated based on homework, projects, class participation, and mid term and final exams.

Enforced Prerequisite at Enrollment: CHEM 112 and MATH 141

EGEE 304: Heat and Mass Transfer

3 Credits

Introduces the fundamentals of heat and mass transfer. Conduction, convection, radiation, and diffusion mass transfer will be emphasized. EGEE 304 Heat and Mass Transfer (3) This course will emphasize the modes of heat and mass transport in energy engineering systems. Students will know, understand, and solve heat transfer problems that involve conduction, convection, and radiation. The course will provide an integrated treatment of heat, mass and momentum transfer by convection and mass transfer by diffusion. Students will also learn and use software that will enable them to solve problems that involve exploratory, what-if, and parameter sensitivity considerations. The course will also assist students to understand the design and operation of different types of heat exchangers. This course also enables students to identify and describe the energy transformations in energy systems. The examples of the processes we would be applying energy conservation principles to include power plant, geothermal energy systems, and industrial reactors and combustors. This is an essential and required thermal science course in the BS in Energy Engineering degree program. Students will be evaluated based on homework, projects, class participation, and mid term and final exams.

Enforced Prerequisite at Enrollment: EME 301 and EGEE 302

EGEE 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

EGEE 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EGEE 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EGEE 401: Energy in a Changing World

3 Credits

Energy is in transition, with increased international energy demand and increasing environmental pressures. Energy transitions, approaches, and outcomes are addressed. EGEE 401 Energy in a Changing World (3) The role of energy is increasingly important with increasing environmental constraints, transitioning energy policies, supply disruption, international pressure on climate change compliance and competition for energy. This course evaluates the existing energy infrastructure and energy/fuel use, both domestic and international, along with evolving technologies, implementation and challenges in meeting energy demands. The class provides a holistic view and serves all students interested in an energy or energy-related career. Students will understand the interrelationship between legislative, technology, environmental, and international factors associated with energy production, processing, distribution and utilization.

Enforced Prerequisite at Enrollment: EGEE 101 or EGEE 102 or CHEM 112

EGEE 405: Renewable Energy in Electricity Markets

3 Credits

This course covers the structure and economics of the power grid in the US and the role played by renewable generation on the existing system. The course begins by introducing students to the structure of the power grid and teaches them to use typical analysis methods that are used to describe power transmission. The regulatory structure of US electricity markets is described to develop the framework for interpreting electricity pricing. Power analyses are used in conjunction with economic analyses to describe the interplay between transmission and cost of electricity to consumers. Unique aspects of renewable generation are introduced to this established context to begin to describe future drivers in the marketplace. Specific challenges associated with renewables are discussed, including the need for power system reserves, flexibility, the potential for overgeneration and the need for frequency and demand response. Methods to manage or overcome these challenges will also be discussed. Finally, this knowledge will be applied via discussion of several case studies of real power generation and transmission systems in the world.

Enforced Prerequisite at Enrollment: EE 210 and (ECON 102 or ECON 104)

EGEE 411W: Energy Science and Engineering Lab

3 Credits

A comprehensive introduction to classic and modern laboratory skills and experimentation of relevance to energy science and engineering practice.

Enforced Prerequisite at Enrollment: FSC 401 or EGEE 302 or permission of program

Writing Across the Curriculum

EGEE 412: Green Engineering & Environmental Compliance

3 Credits

Material and energy flows as they relate to industrial systems, environmental concerns, pollution prevention, and the development of clean technologies. EGEE 412 Green Engineering & Environmental Compliance (3) The primary objective of EGEE 412 is to introduce students to how engineering and industrial decisions affect the environment and how clean technologies can reduce environmental impact. Students will also be exposed to global mass and energy flows from an environmental perspective that relate to both industrial and natural systems. Students will be exposed to environmental concepts, principles, and evaluation techniques within the framework of green engineering, pollution prevention, and environmental sustainability. The course is for students with a general science or engineering background. By examining mass and energy flows on the unit operation, plant-wide, local and regional scale, students will understand the interaction of anthropogenic flows with natural cycles of materials and energy. Students will understand how environmental concerns and regulations provide the motivation and incentive behind reducing pollution during the design phase rather than as an 'add-on' or 'end of pipe' treatment technology. Students will evaluate plant flow sheets to identify engineering means by which to reduce plant-wide environmental impact.

Enforced Prerequisite at Enrollment: EGEE 302

EGEE 420: Hydrogen and Fuel Cells

3 Credits

Course will cover the fundamental principles of electrochemical engineering, hydrogen production and storage, and the design and application of the main types of fuel cells. EGEE 420 Hydrogen and Fuel Cells (3) The primary objective of the course is to help students understand the fundamental principles of electrochemistry, the production and storage of hydrogen from biomass and fossil fuels, and the design and operation of different types of fuel cells. Students will begin with electrochemistry and electrochemical engineering systems including fuel cells. The chemical and biochemical methods used for producing hydrogen for fuel cells applications and the current technologies available for hydrogen storage will follow next. Students are expected to be able to apply their knowledge and understanding in the analysis of fuel cell systems. Students are also expected to be able to distinguish between the design, operation, and advantages and disadvantages of the different types of fuel cells available. This is an elective course for the energy engineering major. It complements the required course on electrochemical energy conversion in the energy engineering curriculum.

Enforced Prerequisite at Enrollment: EME 301

EGEE 430: Introduction to Combustion

3 Credits

Concepts related to laminar and turbulent premixed and nonpremixed combustion with applications to propulsion and stationary systems. EGEE (M E) 430 Introduction to Combustion (3) This course provides an introductory treatment of combustion science. The objectives of the course are to develop in the students an understanding of combustion kinetics, combustion thermochemistry, flame dynamics, flame stability, and pollutant formation. Coverage includes laminar and turbulent flames, premixed and diffusion flames, and detonations. Emphasis is placed on the role that Kinetics, heat transfer, mass transfer, and fluid dynamics have on flame structure and flame stability. The course includes some laboratory demonstrations of flat flame and diffusion flame burners, and incorporates numerical calculations of thermodynamic and kinetic combustion phenomena. The course begins with a review of transport phenomena, physical gas dynamics, and thermochemistry. Then, the concept of the laminar flame speed is introduced in the context of a one-dimensional flame and a propagating chemical wave. Issues of premixed flame structure and stability are presented along with a discussion of flammability limits. Next, laminar diffusion flames are presented via the Burke-Schumann analysis. From laminar flames, the emphasis shifts to turbulent premixed and diffusion flames, and the concepts of flame stretch and strain. Detonations are considered, with emphasis on thermodynamic analysis of the detonation and the structure of the detonation wave. Details of chemical kinetics for the hydrogen-oxygen and hydrocarbon-air reaction systems are presented, with linkage back to earlier topics such as flame stabilization and flammability limits. After kinetic phenomena, the course then considers pollutant formation focusing on soot and NO_x. The fundamental aspects of combustion are applied to analysis of the combustion process and pollutant formation in international combustion engines and catalytic combustors. The course wraps up with discussion of atmospheric chemistry, the fate of pollutants, and the formation of secondary pollutants.

Enforced Prerequisite at Enrollment: ME 201 or ME 300 or EME 301

Cross-listed with: ME 430

EGEE 436: Modern Thermodynamics for Energy Systems

3 Credits

Thermodynamics of external fields, theory of stability and fluctuations, irreversible and non-linear thermodynamics, and bifurcation theory and their applications in energy and environmental processes are discussed. This course will be an advanced thermodynamics class that will expose students to the thermodynamics of irreversible processes and the thermodynamic analysis of dynamic systems. Students will learn to analyze the thermodynamics of conductivity, diffusion, gravitation, electrochemical systems, stability, fluctuations and critical phenomena. Students are expected to be able to understand and apply their knowledge to analyze problems involving fuel cells, membrane potential in electrolysis systems for hydrogen production, and other energy and environmental processes. This is an elective course in the energy engineering major and will be offered once a year in the spring semester to about 40 students. Student performance will be evaluated based on homework, mid term exams, class participation, project, and final exams.

Enforced Prerequisite at Enrollment: EME 301 and EGEE 302 and (MATH 230 or MATH 231)

EGEE 437: Design of Solar Energy Conversion Systems

3 Credits

A review of fundamental concepts in solar energy conversion including photovoltaic (PV) and solar thermal conversion systems. EGEE 437 Design of Solar Energy Conversion Systems (3) The course examines the principles of solar energy conversion to build a foundation for explaining the basic concepts and implementation of conversion processes. It reviews the properties and availability of solar radiation and geometric relationship of sun/collector, principles of photovoltaic conversion and properties of materials used in PV systems, designing PV systems, procedures for solar thermal engineering calculations, and thermal power plants for electricity generation. This course will complement the existing courses on fossil fuels and other renewable energy sources. Students will be engaged to actively participate in learning through team projects, semester papers, class presentations, and field trips.

Enforced Prerequisite at Enrollment: EGEE 304 or permission of program

EGEE 438: Wind and Hydropower Energy Conversion

3 Credits

Principles of sustainability and renewable energy conversion with emphasis on wind and hydrokinetic energy resources. EGEE 438 Wind and Hydropower Energy Conversion (3) This course examines the principles of sustainability and renewable energy conversion with emphasis on wind and hydrokinetic energy resources. Concentration is placed on the relationships between the renewable resources, conversion technology and economic feasibility along with consideration of the associated risks and environmental impacts. It will complement existing energy engineering courses on fossil fuel and solar energy conversion. Students will actively participate in learning through team projects, semester papers, class presentations, and field trips. This is a required course in the energy engineering major. The course will be offered every spring with an expected enrollment of 60 students.

Enforced Prerequisite at Enrollment: EGEE 302 and EME 303

EGEE 439: Alternative Fuels from Biomass Sources

3 Credits/Maximum of 3

This course will examine the chemistry of technologies of bio-based sources for power generation and transportation fuels.

Enforced Prerequisite at Enrollment: CHEM 110

EGEE 441: Electrochemical Engineering Fundamentals

3 Credits

Course covers fundamental principles of electrochemistry, including electrochemical thermodynamics, kinetics, catalysis, and corrosion and focuses on applications such as fuel cells, batteries, and photovoltaics. Each application covers: principles of method, criteria determining performance, present state of development, and advantages/disadvantages. Laboratory demonstration of the performance (current-voltage) measurements of an electrochemical converter is scheduled in this course. EGEE 441 Electrochemical Engineering Fundamentals (3) The course will cover the fundamental principles of electrochemistry, including electrochemical thermodynamics, kinetics, catalysis, and

corrosion. Students will be exposed to the application of these principles in fuel cells, batteries, and photovoltaics. Students will be able to perform efficiency analysis in these systems. They will also be able to understand the differences between types of fuel cells and distinguish between electrochemical and chemical energy systems. For each of the above application areas students will learn the criteria used to determine their performance, their current state of development, and their advantages/disadvantages. Laboratory demonstration will help to enhance student knowledge and understanding. Student performance will be evaluated through problem sets, quizzes, midterm, project papers, class participation, and final examination. This is a required course in the energy engineering major.

Enforced Prerequisite at Enrollment: (EME 301 and EME 303) or (CHE 220 and CHE 330) or (ME 300 and ME 320) or (MATSE 401 and MATSE 402)

EGEE 442: Electrochemical Methods

3 Credits

This course is for senior undergraduates, graduate students and professionals to learn electrochemical techniques and data analysis. EGEE 442 Electrochemical Methods (3) This course is (1) for undergraduate and graduate students in engineering who have already knowledge of electrochemical engineering/electrochemistry fundamentals but would like to understand how the electrochemical techniques can be used, and (2) for professionals who would like to be trained in electrochemical methods and learn how to correctly treat the obtained data.

Enforced Prerequisite at Enrollment: EGEE 441

EGEE 451: Energy Conversion Processes

3 Credits

Emphasizes processes for conversion of fossil fuels, nuclear and biomass to other fuel forms as transportation fuels and electricity. EGEE 451 Energy Conversion Processes (3) The primary objective of this course is to expose students to the principles of chemical and nuclear reactions that underlie most major energy conversion processes, particularly with reference to the conversion of energy resources such as fossil and nuclear energy to fuels and electric power. The emphasis of the first major unit of the course is on fundamental reaction chemistry including nuclear. The second objective is to connect chemical and nuclear principles to practical energy conversion processes by an analysis of case studies used as examples of such processes as ethanol via fermentation, biodiesel via transesterification, formation of light liquids by pyrolysis, coal gasification and Fischer-Tropsch synthesis, direct coal liquefaction, fissionable and fertile isotopes chain reactions, breeding cycles and reactors, and electric power from nuclear reactions. This is a required course for the energy engineering major and will be offered in fall semester with an enrollment of about 50. Student performance will be assessed through weekly homework, mid-term tests, student projects and final exam.

Enforced Prerequisite at Enrollment: FSC 431

EGEE 455: Materials for Energy Applications

3 Credits

Overview of key principles and technologies for materials relevant to energy applications, including membranes, catalysis, supercapacitors, adsorbents, and semi-conductors. EGEE 455 Materials for Energy

Applications (3) The primary objective of this course is to introduce engineers and scientists to key principles in the design of materials relevant to energy applications. Application areas will include separations, catalysis, adsorption, semi-conductors, and photovoltaics. Students will be able to understand and apply principles in solid state chemistry/physics, material science and engineering, adsorption, surface science, and catalysis in analyzing materials for energy applications. Introductory information will be followed by case studies, state of the art review of current materials, and research needs for development. Students will be evaluated on their ability to understand and apply basic concepts in material science, solid state chemistry, and surface chemistry; report on an in depth study of one surface characterization technique; perform literature search and understand basic technical concepts in one application area. Term projects will provide an opportunity to apply concepts and skills to real world applications, and require students to report on current 'state of the art' technology and research needs. Groups of three or four students will be asked to choose from a variety of applications and then asked to present their findings. This is an elective course for energy engineering majors with particular interest in materials for energy applications.

Enforced Prerequisite at Enrollment: EGEE 302 and MATSE 201

EGEE 456: Introduction to Neural Networks

3 Credits

Artificial Neural Networks as a solving tool for difficult problems for which conventional methods are not applicable. E E (E SC/EGEE) 456 Introduction to Neural Networks (3) This course is in response to students needs to learn Artificial Neural Networks (ANN) as a solving tool for difficult problems for which conventional methods are not available. The objective of this course is to give students hands-on experiences in identifying the best types of ANN, plus developing and applying ANN to solve difficult problems. Students will be introduced to a variety of ANN and will use their training skills to solve their own applications. During this course the students will develop a final project, in which they will apply ANN to widely varied problems. Examples: I) students from E E may be interested in applying ANN to solve control problems; II) students from Material Sciences may be interested in applying ANN to predict the pitting corrosion of components; III) students from Petroleum Engineering may be interested in applying ANN to characterize the life of a reservoir; IV) students from Agricultural Engineering may be interested in applying ANN to sort apples automatically, etc.

Enforced Prerequisite at Enrollment: (CMPSC 201 or CMPSC 121 or CMPSC 131) and MATH 220

Cross-listed with: EE 456, ESC 456

EGEE 464W: Energy Design Project

3 Credits

A team and capstone design project on an industrial energy-related problem.

Enforced Prerequisite at Enrollment: Seventh-semester standing in ENENG_BS or CHE_BS and ENGL 202C Writing Across the Curriculum

EGEE 470: Air Pollutants from Combustion Sources

3 Credits

Generation of pollutants in combustion chambers; reduction by combustion control; pre- and post-combustion treatment of fuels and effluents.

Enforced Prerequisite at Enrollment: EME 301

EGEE 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

EGEE 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

EGEE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

EGEE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EGEE 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Energy and Mineral Engineering (EME)

EME 210: Data Analytics for Energy Systems

3 Credits

Data Analytics for Energy Systems merges introductory statistics with coding through simulation-based inference. Class lectures are split between discussing the concepts and illustrating their application through coding examples. The course is highly data-centric, using mostly datasets pertaining to the energy industry or grand challenges related to energy and sustainability (although some data are generated through fun in-class exercises). The course starts by discussing different types of data and introducing students to basic coding skills to manipulate datasets and extract summary statistics. The course then moves into data visualization, discussing common types of graphical tools and the types of data for which they are appropriate. Simulation-based inference then begins around the third week with bootstrapping in the context of finding confidence intervals, which then moves into hypothesis testing

through randomization distributions. The concepts from hypothesis testing carry over into chi-square tests, ANOVA, and regression, which also delves into prediction. Neural Networks and Random Forests are covered at a conceptual and applied level (not getting into the theory) towards the end of the course. The course concludes with some topics in basic probability that weren't covered earlier in the semester.

Enforced Prerequisite at Enrollment: MATH 22 or higher

General Education: Quantification (GQ)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

EME 301: Thermodynamics in Energy and Mineral Engineering

3 Credits

Treatment of classical thermodynamics targeted to the needs of students in the Department of Energy and Mineral Engineering.

Enforced Prerequisite at Enrollment: CHEM 112 and PHYS 212 and (MATH 250 or MATH 251)

EME 303: Fluid Mechanics in Energy and Mineral Engineering

3 Credits

Treatment of fluid mechanics targeted to the needs of students in the Department of EME.

Enforced Prerequisite at Enrollment: (MATH 250 or MATH 251) and PHYS 211

EME 407: Electrochemical Energy Storage

3 Credits

Electrochemical concepts in energy storage devices, cell construction and materials involved in batteries and capacitors, electrochemical testing methods and applications.

Enforced Prerequisite at Enrollment: (EME 301 or ME 300 or CHE 220) and (EME 303 or ME 320 or CHE 330)

EME 432: Energy Policy

3 Credits

Analysis, formulation, implementation, and impacts of energy-related policies, regulations, and initiatives.

Enforced Prerequisite at Enrollment: EBF 200 and EGEE 120 and PLSC 490

Cross-listed with: GEOG 432

EME 444: Global Energy Enterprise

3 Credits

Global Energy Enterprise provides in-depth insight into the role that public and private nonmarket actors and actions play in contemporary energy markets through a variety of artifacts and case studies. Students perform a nonmarket analysis of a current energy policy case study through series of guided steps using a well-regarded analytical framework. The course also provides an overview of technical, environmental, economic, and sociopolitical aspects of modern energy sources, as well as an overview of international energy and policy regimes.

Enforced Prerequisite at Enrollment: ECON 104 and EGEE 102 and EGEE 120

EME 450: Energy Crisis Leadership

3 Credits

Energy Crisis Leadership prepares students to lead in high-pressure, high-stakes environments. This is an interactive class that utilizes case studies to help students solve open-ended and complex problems. The case studies are from rare, but significant events with challenges that students are likely to experience someday in the energy and natural resource industries. In addition to the case studies, we will have guest speakers from the energy industry discuss their experiences with various operational upsets and their roles in addressing them. The culmination of the class is a competition where teams of students must formulate a plan to deal with a major crisis.

Enforced Prerequisite at Enrollment: 7th Semester standing or higher

EME 460: Geo-resource Evaluation and Investment Analysis

3 Credits

The course covers engineering evaluation of geo-resources, present value and rate of return analysis, mineral property and reserve estimation, and cost estimation and engineering economy concepts applied to geo-resources including energy and minerals.

Enforced Prerequisite at Enrollment: 5th semester or higher

EME 466: Energy and Sustainability in Society

3 Credits

EME 466 provides the culminating experience for Energy and Sustainability Policy majors through an individualized inquiry-based capstone project in which students tackle the wicked problems of sustainability they see and experience in their own communities. Students identify, organize, execute, and reflect on a local issue related to energy, the environment, or sustainability with particular emphasis on policy-based solutions.

Enforced Prerequisite at Enrollment: GEOG 30N and CAS 100 and GEOG 432

Energy Business and Finance (EBF)

EBF 200: Introduction to Energy and Earth Sciences Economics

3 Credits

Resource use decisions and their effect on local, national, and global development. EBF 200 Introduction to Energy and Earth Sciences Economics (3) (GS)(BA) This course meets the Bachelor of Arts degree requirements. Facing the challenge of ever-increasing demand for energy, and limited energy resources to meet those demands, will be one of the great problems/opportunities of the 21st century. This class will help students understand and discuss the current event items you hear about every day, and help to prepare many of you to work to address this challenge. This class introduces the economic method of analysis to the environmental and resource questions facing society. It introduces a "paradigm," a way of thinking, that has four elements: What advantages can be gained by using market forces? What are the drawbacks of the market ("market failures") that may lead to a rationale for government

intervention? What are the drawbacks of using government intervention ("government failure")? How do you apply these three concepts to real-world situations? Examples are drawn from both the United States economy and from the worldwide community. Both analytical and quantitative methods are used to understand the environmental and resource challenges faced by modern society.

Enforced Prerequisite at Enrollment: ECON 102 and (MATH 22 or MATH 26 or MATH 41 or MATH 110 or MATH 140 or satisfactory performance on the mathematics placement examination)

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Science (GS)

GenEd Learning Objective: Critical and Analytical Thinking

GenEd Learning Objective: Key Literacies

EBF 301: Global Finance for the Earth, Energy, and Materials Industries

3 Credits

The aim of this course is to introduce fundamental concepts of financial management and illustrate their global applications.

EBF 304W: Global Management for the Earth, Energy, and Materials Industries

3 Credits

The real world is often complex and unstructured. A major goal of this course is to teach you how to structure "real-world" environmental and energy problems that involve business decisions in the face of uncertainty. The focus of this course is problems in environmental and resource management, but rather than teaching you specific facts, the goal of this course is to teach you how to think systematically about problems at the interface between business, society, and the environment. The course develops a number of tools for analyzing decision problems where impacts on the environment or human health and safety are important components. These tools include benefit-cost analysis, technological and environmental risk assessment, decision-making under uncertainty (perfect and imperfect information), and Monte Carlo analysis. Students will then use these models in the homework assignments and projects to solve a number of different decision problems.

Enforced Prerequisite at Enrollment: EBF 200 and EME 460 and (STAT 401 or EBF 472 or ECON 306)

Writing Across the Curriculum

EBF 401: Strategic Corporate Finance for the Earth, Energy, and Materials Industries

3 Credits

The objective of this course is to give students a working knowledge of the major tools used by financial managers for making investment and financing decisions. Topics include, but are not limited to: time value of money, trade-off between risk and expected return, Capital Asset Pricing Model, valuation and role of debt and equity, capital budgeting/project evaluation techniques, cost of capital, cash flow estimation, real and financial options, company valuation, and capital structure decisions. As an illustration of the theory, we will discuss examples and cases, with a focus on the energy industry. Students will learn the fundamentals of capital budgeting and structure analysis; how capital structure decisions affect the value of the firm; and how to develop financial statements for energy projects.

Enforced Prerequisite at Enrollment: EBF 200 and EBF 301 and EME 460 and (EBF 472 or STAT 200 or STAT 401 or ECON 106 or SCM 200)

EBF 402: Energy Law and Contracts

3 Credits

An examination of the law that applies to acquiring the property rights for exploration and drilling of energy sources. This course examines the area of energy law and contracts, which is crucial to successful drilling in natural gas and oil properties. The course begins with a description of ownership and rights in the mineral estate, and how those rights have evolved over time. Students will be instructed in the how different types of land affect legal rights, and the details of the law of capture. They will also review the Statute of Frauds and examine how it applies to land drilling contracts. The second part of the course presents the basic tenets of real estate law, examining the seminal cases in this area. It will review the standard oil and gas lease used in the United States. Issues reviewed will include the nature of lease clauses and implied covenants, as well as farmout and joint operating agreements. It will also examine how royalty payments can be structured. Environmental regulation is a critical component of energy exploration. To address this topic, students will be introduced to the regulatory process. They will study regulatory compliance and how to deal with government officials. They will also be instructed in corporate liability for property clean up and pollution, and in strategies for minimizing both that liability and harm to the environment. In addition, the course will review topics of environmental due diligence and the joint and several nature of environmental liability.

Enforced Prerequisite at Enrollment: BLAW 243 or BA 242 or BA 243

EBF 404W: The Great Energy Transition: Law, Economics, and New Frontiers

3 Credits

The U.S. energy sector is in the process of a great transformation. This Writing Across the Curriculum course examines how evolving federal, state, and local policies; regulatory efforts toward electricity market deregulation; and the technical innovations driving shale gas development and renewable energy generation have changed markets for energy and electricity in the United States. This all occurs in the context of a movement towards lower carbon emissions. The Great Energy Transition explores these energy topics from a law, policy, and economics perspective. It analyzes energy topics such as natural gas development and renewable energy by asking how law, policy, and economics are driving changes in these types of sectors, how these changes impact society, and how these changes present both opportunities and challenges in their design and implementation. Successful completion of the course will enable students to productively engage with prospective employers, energy experts, policymakers, and administrative professionals on a broad range of modern energy topics. The Writing Across the Curriculum aspects of this course will hone students' skills at outlining and structuring their writing, identifying sources, incorporating feedback, and making their writing more concise.

Enforced Prerequisite at Enrollment: ECON 302
Writing Across the Curriculum

EBF 410: Petroleum and Natural Gas Operations

3 Credits

The course is designed to instruct energy land management option students of the EBF major in the drilling of petroleum and natural gas

wells and the challenges in that process. EBF 410 Petroleum and Natural Gas Operations (3) Energy landmen graduating from the energy land management option (ELMO will work directly with natural gas and petroleum engineers on drilling projects. This course will present the basics of natural gas and petroleum operations, so that ELM graduates will be able to assist engineering and other personnel in solving drilling operating problems. After taking this course, ELM students will have the background to move to a production company and start their training in assisting at a well site. The challenges students will be introduced to include (i) being able to develop plans for oil and gas field drilling, as well as for product recovery and treatment, (ii) coordinating the installation, maintenance, and operation of mining and oil field equipment, (iii) assessing costs and estimating production capabilities and economic value of oil and gas wells, (iv) evaluating the economic viability of potential drilling sites, and (v) participating in the completion and evaluation of wells, well testing, or well surveys. Students will also have an understanding of several other important facets of drilling operations, including (i) maintaining records of drilling and production operations, (ii) writing reports on the success or lack thereof of particular wells, and (iii) becoming aware of the challenges involved in the removal of drilling equipment, the removal of any waste, and the safe return of land to structural stability when wells are exhausted.

Enforced Prerequisite at Enrollment: (PHYS 211 or PHYS 250) and GEOSC 1

EBF 411: Petroleum and Natural Gas Geology for Land Professionals

3 Credits

This course provides energy land students with a knowledge base, as well as a set of notes and references, that they can draw on during a career in the petroleum industry. EBF 411 Petroleum and Natural Gas Geology for Land Professionals (3) The aim of this course is to provide students with a knowledge base, as well as a set of notes and references, that they can draw on during a career in the petroleum industry. This course will cover most aspects of geology and petroleum geology that students are likely to encounter in their professional endeavors. Open note examinations will encourage students to take well organized and thorough notes that can be used as a future reference. Two class projects are designed to reinforce the petroleum systems concept, which is probably the single most important concept in this course. Throughout the course, key concepts will be illustrated with examples from the Pennsylvania portion of the Appalachian Basin. This is an active petroleum province, and many oil and gas companies in the Pittsburgh area are involved in exploration and production in this field setting. This course does not cover petroleum engineering. The course begins with an overview the geologic subdisciplines that are most pertinent to petroleum geology. In the second part of the course, the petroleum system is reviewed. The third part of the course is designed to introduce students to the various roles that geologists play at petroleum companies. Finally, the concept of the petroleum system is extended to unconventional plays, which will play an increasingly large role in the petroleum industry in the coming decades. Depending on time constraints, the course may include some discussion of the world's remaining petroleum reserves.

Enforced Prerequisite at Enrollment: GEOSC 1

EBF 472: Quantitative Analysis in Earth Sciences

3 Credits

Quantitative analysis of decision making in atmospheric/geophysical sciences: exploratory data analysis, quantification of uncertainty, parametric/non-parametric testing, forecasting, time series analysis.

Enforced Prerequisite at Enrollment: MATH 110 or MATH 140

EBF 473: Risk Management in Energy Industries

3 Credits

All major firms engage in financial risk management. In this course, we will learn quantitative techniques for describing of how firms can use financial instruments to manage their financial risk. In particular, we will focus on risk management with respect to threats to financial viability from the weather. The course takes a highly statistical approach to the valuation and analysis of financial derivatives such as futures and options. Specific topics to be covered include the structure and pricing of options, the theory of arbitrage, financial statistics and the use of options to hedge financial risk. Students will gain experience using the Black-Scholes equation to value financial options, and will also learn strategies for hedging financial exposure to large commodity price variations. The techniques discussed in this class will be primarily illustrated using weather and energy commodity derivatives, but can be applied to a large variety of different commodity markets.

Enforced Prerequisite at Enrollment: EBF 200 and (MATH 111 or MATH 141) and (EBF 472 or STAT 200 or STAT 401 or ECON 106 or SCM 200)

EBF 483: Introduction to Electricity Markets

3 Credits

This course is designed to teach students about the structure of the electricity industry, the regulatory institutions that oversee the industry, and the new market institutions that have been put into place since electricity restructuring. Much of the focus will be on the U.S. electricity industry. Since Pennsylvania has been a national leader in electricity restructuring, we will place particular emphasis on events in the Mid-Atlantic region, but will also discuss other market structures in the U.S. and in other countries. Specific topics covered will include cost models for power generation, transmission and distribution; rate of return regulation for electric utilities; the process of electricity restructuring and creation of electricity markets; Locational Marginal Pricing of electric energy; financial risk management in electric power; and detecting and mitigating market power.

Enforced Prerequisite at Enrollment: EBF 200 and MATH 140 and EBF 301 and (EBF 472 or STAT 200 or STAT 401 or ECON 106 or SCM 200)

EBF 484: Energy Economics

3 Credits

What is the role of energy in the economic system? What are the implications of the energy transformation on economic welfare? How can we efficiently meet new demand while also addressing the myriad social, environmental, and regulatory challenges related to the energy system? This course will examine these questions from an intermediate microeconomics perspective. The course covers topics in the organization and conduct of firms operating in energy markets,

measuring and detecting the manipulation of energy markets, and regulating the environmental impacts of energy production, delivery and consumption.

Enforced Prerequisite at Enrollment: (MATH 110 or MATH 140) and EBF 200 and EBF 301 and (ECON 302 or MATH 250 or MATH 251)

EBF 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

EBF 499: Foreign Study

1-15 Credits/Maximum of 15

This course is designed to enable students to study in EBF study abroad programs.

International Cultures (IL)

Engineering (ENGR)

ENGR 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ENGR 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ENGR 100: Introduction to Engineering

1 Credits

A seminar providing information about different engineering majors, coping with college life, and exploring educational and career goals. ENGR 100S ENGR 100S Introduction to Engineering (1) (FYS)Engineering 100 is a First-Year Seminar designed as an introduction to the majors available to students in engineering. There are three main goals:1. To introduce students to the areas of study that the college has to offer - this is to assist students in deciding whether engineering is for them. It also helps students decide which major within engineering is for them. This introduction is accomplished through homework exercises and guest speakers - graduates in industry, graduate students, department heads, faculty, and current undergraduates.2. To introduce students to the university in general - what resources are available and what it means to be a student at a university instead of high school. This is accomplished through guest speakers, lectures by your professor, and homework exercises.3. To provide students with an opportunity to interact with faculty members, academic advisers, and other students. The class meets twice a week. All sections meet together once a week to listen to presentations from people representing each major. On the other class day, sections meet separately with their professor for presentations and activities unique to that instructor.

First-Year Seminar

ENGR 110: Introduction to Engineering for Educators

3 Credits

This course focuses on physics content, engineering design principles, and elementary science education pedagogy.

Cross-listed with: SCIED 110

ENGR 111: Introduction to Cross-Cultural Communication for Engineers

1 Credits

Introduction to theoretical approaches and practical applications of intercultural communications for engineering students.

International Cultures (IL)

ENGR 115N: Science, Humanity and Catastrophe: Scientific Discovery in Germany

3 Credits

The 20th century was a time of great scientific advancement - advancements that were used both for good and for evil (and for other purposes that lie somewhere in between). Germany and German-speaking scientists played central roles in many of these discoveries. In this course we will take an interdisciplinary approach to discussing key scientific advancements, including the discovery of nuclear fission and the development of the nuclear bomb, the discovery of polymers and the invention of pain medicines such as morphine and oxycodone, learning about the science behind these discoveries alongside the social and historical contexts in which they occurred, and the impact these discoveries had on society. While a majority of the scientific discoveries that we will focus on took place in the first half of the 20th century, we will also discuss the ways in which the long-term consequences of these discoveries are still relevant today, especially as they relate to current issues on sustainability (e.g., the use of plastics) and the ethical considerations that arise more generally when thinking about the relationship between science, technology, engineering and society. This course will count as an interdomain, GH/GN.

Cross-listed with: GER 115N

General Education: Humanities (GH)

General Education: Natural Sciences (GN)

General Education - Integrative: Interdomain

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

ENGR 118: Impact of Culture on Engineering in China

3 Credits

Study of engineering in the context of cultural, historical, societal, political, and environmental considerations to understand the relationship between Chinese culture and engineering projects and policies; brief introduction to the basic engineering principles underlying the engineering projects and their design. ENGR 118 Impact of Culture on Engineering in China (3) (GS;IL) This summer-session course is delivered in China. Chinese culture, history, society, environment, politics, population, economics, and policies are related to engineering practice, design, manufacturing, processes, engineering education, and transportation. Exposure to Chinese cultural components and how they influence engineering project implementation are presented

and demonstrated through site visits and participation in relevant activities. Sites and activities in China are selected to expose students to examples that illustrate the impact of Chinese culture on engineering in an integrated manner. For example, ancient engineering projects, such as the Great Wall, Forbidden City, and Terracotta Warriors, and modern engineering projects, such as the Three Gorges Dam, Hangzhou Bay Bridge, the Shanghai Dongtang Eco-city project, may be selected. In addition to site visits and local cultural and transportation experiences, the course includes guest lectures, documentaries, readings, class discussions, and projects. This course is designed to provide basic understanding of Chinese culture and to relate it to historical and contemporary applications of technology. A program fee is charged for course costs that are not covered by tuition. Students are required to participate in all aspects of the course: scheduled site visits, presentations, lectures, readings, and cultural experiences. An interest in technical applications and not necessarily a technical background is required. However, engineering and technical principles are presented.

Enforced Prerequisite at Enrollment: ENGR 111
International Cultures (IL)

ENGR 120N: Design Thinking and 3D Printing in Engineering and Healthcare

3 Credits

Design Thinking and 3D Printing in Engineering and Healthcare (ENGR 120N) is an introductory general education interdomain course. The course will introduce basic concepts of design processes, engineering, and medicine. The course will assist students in realizing the power of creativity and imagination as it is applied to the use of emerging technologies to solve design dilemmas at the local, regional, national, and international levels. Students will be encouraged to secure an interdisciplinary and collaborative foundation through an exploration of topics including basic engineering, human anatomy and health, design (proportion, structure, integrity, design, scale, manufacturing, iteration), Design Thinking concepts (empathize, define, create, prototype, and test), problem-solving processes (brainstorming, free thought, think aloud, reverse engineering), 3D production processes, Bioprinting (use of biofilm to create human tissue and organs), Engineering, Medicine, and Microprinting (creating works of art from photos taken from microscope slides). Students will be encouraged to view projects from the User/Patient perspective. Promotion of integrative thinking will be encouraged throughout the coursework with the goal of increasing the incorporation of design, problem-solving, engineering and medicine in the disciplines of study for individual students. Integrative thinking will be assessed through student involvement in online discussions, case studies, class conversations encompassing ethical/legal/financial considerations to design issues, studio time, image production and manipulation, internet file sharing, materials/properties selection, production processes, and interdisciplinary individual and team-based projects encompassing creative expression and science. By the end of the course, students will be furnished with basic knowledge and strategies to evaluate the role of design in the world and to independently act on the information. This course will fulfill 3 credits of the General Education requirements addressing the interdomain fields of Art (GA) and Natural Sciences (GN). No prerequisites are required for the course. This course will serve as an introduction to the basic ideas of design, creativity, imagination and problem-solving to complement development in science disciplines across the university community.

General Education: Arts (GA)

General Education: Natural Sciences (GN)
 General Education - Integrative: Interdomain
 GenEd Learning Objective: Creative Thinking
 GenEd Learning Objective: Integrative Thinking
 GenEd Learning Objective: Key Literacies
 GenEd Learning Objective: Soc Resp and Ethic Reason

ENGR 185: Short Term/Short Duration Internship

1 Credits/Maximum of 4

This short-term or short-duration internship course allows undergraduate engineering students to be enrolled for credit while working at a professional research, industry, or government agency internship relevant to their major that does not meet the requirements for any other established internship course. Students enrolled in ENGR 185 may earn 1 credit while working fewer than 15 hours per week or fewer than 10 weeks during the semester of enrollment. Credit for this course may not be applied to degree requirements. Students enrolled in ENGR 195B gain real-world experience in a professional setting while learning other needed skills including communication, ethics, and time and project management. Students will complete an End-of-Semester Evaluation (with their workplace adviser) and an End-of-Semester Report at the conclusion of the internship; grading will be PS/FL.

ENGR 191: Millennium Scholars Summer Seminar

2 Credits

The Millennium Scholars Program, Summer Seminar (ENGR 191) will introduce first-year scholars to the expectations and standards of the Millennium Scholars Program. Throughout the summer, scholars will meet different faculty and campus leaders, engage in community building with peers, and network with present and past Scholars. Scholars will understand the importance of presenting themselves professionally, learn how to engage in the various learning environments, learn how to hold the cohort accountable, and get acclimated to the Program and Penn State. This particular section of seminar is unique because only students participating in the Millennium Scholars Program will be enrolled.

ENGR 192: Millennium Scholars First-Year Seminar

1 Credits

Millennium Scholars Program (MSP) First-Year Seminar is a one credit course designed for First-Year MSP students. This course is designed to assist new scholars in understanding and meeting the expectations of the Millennium Scholars Program. The course will focus on professional development including developing networking and interviewing skills, preparing applications for summer research experiences (REUs), wellness and self-care, learning self-advocacy, and learning how to effectively access and use university resources. This section of seminar is unique because only first-year students participating in the Millennium Scholars Program will be enrolled. At the conclusion of the seminar students should have the foundational elements of an REU application completed and a list of fifteen REUs they will apply to in the spring semester. Students will also discuss what it means to be a Millennium Scholar.

First-Year Seminar

ENGR 194: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

ENGR 195: Engineering Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Full-Time Equivalent Course

ENGR 195A: Engineering Internship

1 Credits/Maximum of 4

A supervised work experience in a professionally relevant position in research, industry or government. ENGR 195A Engineering Internship (1 per semester/maximum of 4) This course provides students the opportunity to apply fundamental skills and academic concepts in a professional laboratory, industry, or government agency setting within the United States. The final grade (SA/UN) will be based on the final report submitted by the student and a mid-term and final evaluation submitted by the employer. This course will be offered fall, spring, and summer semesters, and may be repeated.

Full-Time Equivalent Course

ENGR 195I: Engineering International Internship

0.5-1 Credits/Maximum of 4

A supervised work experience in a professionally relevant position in research, industry, government or service sector. ENGR 195I Engineering International Internship (1 per semester/maximum of 4) (IL) This course provides students the opportunity to apply fundamental skills and academic concepts in a professional laboratory, industry, or government agency setting outside of the United States. The final grade (SA/UN) will be based on the final report submitted by the student and a mid-term and final evaluation submitted by the employer. This course will be offered fall, spring, and summer semesters, and may be repeated.

International Cultures (IL)

Full-Time Equivalent Course

ENGR 196: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

ENGR 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ENGR 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ENGR 287: Career Preparation and Development for Engineers

1 Credits

This course will provide engineering students with awareness of University support structures and resources for career development and training in a variety of key career topics (resume writing, interviewing, networking, etc.). The course will develop understanding of how skills such as time management and goal setting are applied to professional development and the impact of effective written, spoken, and digital communication in the job search process. Students will experience a variety of professional interactions through course assignments and learn to manage deadlines and submit deliverables as expected in work environments.

Enforced Prerequisite at Enrollment: Third-semester standing or above

ENGR 290: Millennium Scholars Professional Development Seminar

0.5 Credits/Maximum of 2.5

The Millennium Scholars Program prepares undergraduates to enter graduate school. As part of this preparation, each scholar participates in a professional development seminar. Students will be exposed to various professional development topics through lecture, visiting guest speakers and interactive activities. The topics covered include Learning about career development tools; Gain knowledge from peers and professionals in the industry; Learn about summer research and graduate opportunities at other institutions; Learn about Penn State on campus resources; Participate in stress management and self-care exercises; Participate in team building and networking events; Career opportunities for people with graduate degrees. Third- and fourth-year students will be given an opportunity to develop mentoring skills. In addition, students will practice holistic well-being and use their learning to be a productive, empathetic member of their cohort and MSP community.

ENGR 291: The Role of the Engineering Peer Advising Leader

1 Credits/Maximum of 2

ENGR 291 is a 1-credit class designed to facilitate the preparation and professional development of students serving as College of Engineering Peer Advising Leaders (EPALs). EPALs support College of Engineering students through conversations about resources (Department, College, and/or University), about their individual experience as a Penn State engineering student, and about navigating the various Penn State management, registration and advising systems. Through this course, students who are training to become peer advising leaders will be familiarized with appropriate College and University resources that can support social and academic integration and success for students. Students will explore key aspects of communication in a 1-on-1 setting that will be critical to their work as an EPAL. Engineering 291 will serve to build cohesion and a shared experience culture for EPALs. The course experience will provide robust opportunities for targeted development, critical analysis, and reflection for specific professional skills relevant to the long-term success of engineering students.

Recommended Preparation: 5th semester standing or higher

ENGR 292: Millennium Scholars Second-Year Seminar

1 Credits

Millennium Scholars Program (MSP) Second-Year Seminar is a one-credit course designed for Second-Year MSP students. This one credit course is designed to assist scholars in developing research and presentation skills, prepare for the summer research experience (REU) application process and to understand the role of ethics and morals in the conduct of scientific research. This course will focus on the skills necessary to be an effective researcher and presenter of research; how to identify and apply for summer research experiences; clarifying personal research interests and understanding professional ethics. This section of seminar is unique because only second-year students participating in the Millennium Scholars Program will be enrolled. At the conclusion of the seminar students should have the foundational elements of an REU application completed and a list of ten REUs they will apply to in the spring semester. Students will also discuss issues relating to ethics and equity in science.

ENGR 295: Engineering Co-Op Work Experience I

1-3 Credits/Maximum of 3

A supervised work experience where the student is employed in an engineering position in industry or government. (To be offered only for SA/UN grading.)

Enforced Prerequisite at Enrollment: CHEM 110 and CMPSC 122 and MATH 140 and (MATH 141 or PHYS 211)
Full-Time Equivalent Course

ENGR 295A: Engineering Cooperative Education

1 Credits/Maximum of 1

ENGR 295A Engineering Cooperative Education (1) This course provides students the opportunity to apply the fundamentals and academic concepts learned in their major classes in a professional laboratory, industry, or government agency setting in the United States. This course is the first in a series that provides progressive semesters of career-related experience in the Cooperative Education Program (defined as two or more work semesters). The final grade (SA/UN) will be based on the end-of-semester report submitted by the student and mid-semester and end-of-semester evaluations submitted by the employer and student. This course will be offered fall, spring, and summer semesters.

Full-Time Equivalent Course

ENGR 295I: Engineering International Cooperative Education

1 Credits/Maximum of 1

ENGR 295I Engineering International Cooperative Education (1) This course provides students the opportunity to apply the fundamentals and academic concepts learned in their major classes in a professional laboratory, industry, or government agency setting outside of the United States. This course is the first in a series that provides progressive semesters of career-related experience in the Cooperative Education Program (defined as two or more work semesters). Full-Time Equivalent Course

ENGR 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

ENGR 297: Special Topics

0.5-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ENGR 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ENGR 310: Entrepreneurial Leadership

3 Credits

This course develops leadership and entrepreneurial skills using collaborative, problem-based projects, with engineering and business students working in teams. ENGR 310

ENGR 320: Materials Properties Measurement I

3 Credits

Measurement and experimental procedures determination of the mechanical properties of engineered materials under deflection, compression, tension, fracture and fatigue conditions. ENGR 320 Materials Properties Measurement I (3) Materials Laboratory I introduces students to the experimental procedures in determining mechanical properties (elastic modulus, shear modulus, Poisson's ratio, and fracture toughness) of engineered materials. Students gain hands-on experience in strain gage mounting and material properties measurement using strain gages. In conjunction with mathematical modeling software, finite element analysis is used to analyze engineering components subjected to mechanical and thermal loading (static and dynamic). Experiments and lectures are designed to demonstrate the theory and practice of mechanical measurement of material. Students utilize state-of-the-art equipment for experimentation in conjunction with advanced modeling software such as ANSYS to predict and evaluate material behavior under mechanical and thermal loading.

Enforced Prerequisite at Enrollment: EMCH 213 Enforced Concurrent at Enrollment: ENGR 350 or EMCH 407 or EMCH 461

ENGR 320Y: Design for Global Society

3 Credits

ENGR 320Y examines engineering design from a societal perspective by asking the question, "What are the responsibilities and challenges of designers in considering the needs and welfare of current and future societies, and of specific segments and groups within those societies?" Students investigate and analyze a diverse range of perspectives

on technology and consider and apply those perspectives to actual design projects and case studies. ENGR 320Y is designed as writing-intensive with the goal of having students practice a variety of writing assignments. Those assignments include short, informal assessments and longer research papers. Also, students will work in collaborative groups on an academically-themed project related to the design intent of this course. Student teams will write proposals for projects that explore the means of environmental improvement. Teams will deliver presentations in class and at related events such as campus Earth Day celebrations. Beyond the writing-intensive focus, the course has three other stated goals. One is to enhance student understanding by adopting a writing-to-learn approach for course assignments. The second is to help students appreciate and understand the formal design process with a focus on the diversity of the end users of their designs. The third is to have students take responsibility for their design during the process by recognizing the impact of technology on society. Meeting these goals involves readings and critical analyses in the areas of ethics, history, economy, ecology, science, and engineering.

Enforced Prerequisite at Enrollment: ENGL 202A or ENGL 202B or ENGL 202C or ENGL 202D

Writing Across the Curriculum

ENGR 350: Computational Modeling Methods

3 Credits

Computational Modeling Methods is intended to introduce students to strategies in mathematical modeling of physical phenomena using modern computer simulation software. The course provides theoretical understanding and hands-on experience of the modeling techniques used in current engineering practice and allows students to apply these skills to engineering computational problems. Modeling of engineering processes requires users to have a working knowledge of computer simulation software and modeling techniques such as mesh construction and analysis. This course teaches the principles of mathematical modeling of various physical phenomena and allows students to learn the basic strategies of mathematical modeling and the proper use of computational tools for the analysis of topics involving structural, thermal, and materials engineering.

Enforced Prerequisite at Enrollment: EMCH 213 and (ME 201 or ME 300 or EME 301) and (CMPSC 121 or CMPSC 131 or CMPSC 200 or CMPSC 201)

ENGR 390: Millennium Scholars Third-Year Seminar

1 Credits

Millennium Scholars Program (MSP) Third-Year Seminar is a one credit course designed for Third-Year students MSP students. This one credit course is designed to assist scholars in preparing for the graduate school application process. This course will focus on the documents, skills and knowledge needed to apply for graduate school. Additionally, the course will provide resources to help students make decisions about graduate school and opportunities to practice skills like interviewing and presenting research. This section of seminar is unique because only students participating in the Millennium Scholars Program will be enrolled. At the conclusion of the seminar, students should have the

foundational elements of a graduate school application completed and a list of ten schools they will apply to in the fall semester. Students will complete a thesis proposal and a timeline for the completing of their undergraduate research thesis. Students will participate in GRE or MCAT preparation according to their goals.

ENGR 394: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

ENGR 395: Engineering Co-Op Work Experience II

1-3 Credits/Maximum of 3

A supervised work experience where the student is employed in an engineering position in industry or government. (To be offered only for SA/UN grading.)

Enforced Prerequisite at Enrollment: ENGR 295
Full-Time Equivalent Course

ENGR 395A: Engineering Cooperative Education

1-2 Credits/Maximum of 2

ENGR 395A Engineering Cooperative Education (1-2) This course provides students the opportunity to apply the fundamentals and academic concepts learned in their major classes in a professional laboratory, industry, or government agency setting in the United States. This course is the second in a series that provides progressive semesters of career-related experience in the Cooperative Education Program. The final grade (SA/UN) will be based on the end-of-semester report submitted by the student and mid-semester and end-of-semester evaluations submitted by the employer and student. This course will be offered fall, spring, and summer semesters.

Enforced Prerequisite at Enrollment: ENGR 295A or ENGR 295I
Full-Time Equivalent Course

ENGR 395I: Engineering International Cooperative Education

1-2 Credits/Maximum of 2

ENGR 395I Engineering International Cooperative Education (1-2) This course provides students the opportunity to apply the fundamentals and academic concepts learned in their major classes in a professional laboratory, industry, or government agency setting outside of the United States. This course is the second in a series that provides progressive semesters of career-related experience in the Cooperative Education Program. The final grade (SA/UN) will be based on the end-of-semester report submitted by the student and mid-semester and end-of-semester evaluations submitted by the employer and student. ENGR 405: Project Management for Professionals

3 Credits

Covers the essential concepts and skills needed to make effective contributions on projects, on time and within budget. WF ED (ENGR) 405 Project Management for Professionals (3) Professionals in the workplace carry out many different projects every day ranging from somewhat small tasks, e.g., planning events and designing courses, to big projects, e.g., launching an enterprise wide system. Project Management for Professionals is a practical "hands-on" course designed for mid-career adult students and covers the essential concepts and skills needed to make effective contributions and have an impact on the successful accomplishment of projects on time and within budget. Project management principles and techniques are presented with an emphasis on how they are applied to real world workforce development projects. Topics include the project management life cycle and process; techniques for planning, scheduling, budgeting, and controlling project performance; project manager responsibilities and skills; project team development and effectiveness; project communication; and organization structures.

Enforced Prerequisite at Enrollment: 4th semester standing. Students with no 4th semester standing need to provide evidence to the instructor of their work experience.

Cross-listed with: WFED 405

ENGR 407: Technology-Based Entrepreneurship

3 Credits

Technology innovation coupled with business planning and development.

Enforced Prerequisite at Enrollment: ECON 102 or ECON 104

ENGR 408: Leadership Principles

3 Credits

A project-based exploration of theories and principles of engineering leadership applicable to technical careers. This leadership course provides the basic theories, principles, skills, and relevant literature germane to leadership within the engineering discipline in particular. Leadership in an engineering context will be explored. This will range from developing awareness of personal leadership strengths to analysis

of corporate mission, vision, values, and strategies. Students will apply these to semester-long team projects. Lectures, assignments, and group projects develop knowledge of the impacts of globalization, different cultural values, traditions, beliefs, and customs to develop leaders ready to impact an international workforce. Students will apply leadership theory to the global engineering industry through the following: - Describe leadership concepts, principles, and theories in the context of global engineering business practices - Demonstrate knowledge of how leadership behaviors impact cross-cultural teams (US) - Analyze their own personal leadership strengths and weaknesses through course projects - Evaluate and critique engineering leadership effectiveness displayed by others through project work and current event analysis - Demonstrate appreciation for life-long learning of leadership and teaming skills Course assignments and projects align with the current nature of a global market and require that students cultivate awareness of social identity such as ethnicity, race, class, religion, gender, physical/mental disability, age, or sexual orientation (US). Students are also evaluated on interpersonal communication through team projects, presentations, and written assignments as they apply to interactions within a culturally diverse team completing a semester-long project (US). Application of learning objectives will occur within a small team environment through the completion of a semester-long project dedicated to developing an engineering leadership solution to a challenging problem. The course will be offered each fall and spring semester.

Enforced Prerequisite at Enrollment: Fifth semester standing or program approval
United States Cultures (US)

ENGR 409: Leadership in Organizations

3 Credits

Development of leadership skills essential for engineers to guide colleagues or an organization in a productive direction.

United States Cultures (US)

ENGR 410: Coaching Skills and Practice for Engineering Leaders

3 Credits

This course provides an applied approach to engineering leadership education. Students will develop a deeper understanding of leading engineering teams through applying coaching techniques designed to foster innovative and creative thinking through a nondirective process. Leader-as-coach theory will be explored and applied to teams in pre-requisite Engineering Leadership courses. The course centers on experiential learning by providing a real-world organizational structure of student teams reporting to their leadercoach on project progress. Students previously completing courses in the Engineering Leadership Minor will be assigned as leadercoaches for students currently completing a pre-requisite course. Leader-coaches will apply coaching techniques to positively impact their teams' progress through a semester-long engineering design project. Coaching through the design process, students in the course will gain experience in motivating and supporting engineers in creative and innovative design solutions. Leader-coaches will spend time critiquing technical solutions and apply coaching skills to support the design thinking process. Students will practice giving feedback to individual students based on observed performance. Upon completion of this course, students will be able to describe coaching skills and their application for effective leadership, recognize appropriate coaching skills for use in various situations, implement coaching techniques to foster creativity and innovation through the design thinking

process, prepare clear and informative written performance reviews, conduct effective one-on-one performance reviews focused on individual personal development, and build self-awareness of personal leadership strengths and areas for growth. Course assignments require application of the design process, review of technical concepts, and coaching skills and support personal leadership development.

Enforced Prerequisite at Enrollment: ENGR 408

ENGR 411: Entrepreneurship Business Basics

3 Credits

Three critical entrepreneurship skills are covered for non-business majors: business finance, intellectual property, and marketing. Untitled Document

Enforced Prerequisite at Enrollment: Three credits in ECON

ENGR 415: Launching Innovation: Ideas to Opportunities

3 Credits

This course engages students in the processes involved in creating a technology-based product or service. This course will require students to manage, create, build and introduce a product to the market place within a tightly defined time frame. The course will begin with exploring the creative process by factoring out existing products leading to a clearly defined and well researched idea or service. The course will develop to include an overall product design, planning for manufacturing, prototyping, resource allocation, and market identification. Students will be assigned readings, experience guest speakers and engage in activities on topics related to the product development process that includes: project ideation, determining a distinct value proposition and competitive position, technology product design, management, strategic differentiated and integrated marketing techniques, customer identification/sales, sourcing manufacturers domestically and abroad, modeling and prototyping, costing, pricing, assessing start-up costs, calculating cash flow, and intellectual property issues. The product development organization will be examined to include human interactions, reporting guidelines, and financial relationships. Students will be required to maintain a binder that will serve as a measure of progress related to the topics noted. Students will have the opportunity to "pitch" their ideas and demonstrate the workings in the form of a competition or be evaluated in a non-competitive setting by a panel of local entrepreneurs, faculty and/or business leaders.

Enforced Prerequisite at Enrollment: ENGR 407 and (MGMT 215 or ENGR 310) and 5th semester standing

ENGR 421: Materials Properties Measurements II

4 Credits

Materials powder characterization, compaction and densification techniques, density measurements, micro structural evaluation, thermal and electrical properties of materials. ENGR 421 Materials Properties Measurement II (4) Materials property measurement II introduces students to experimental procedures in the determination of thermal properties (heat transfer/conduction and thermal expansion) and electrical properties (resistance and dielectric measurements) of materials through demonstrations and experiments. Lectures provide a theoretical understanding of the characterization techniques and provide information for the design and interpretation of experimental results. This laboratory complements lectures in materials characterization, materials

processing and materials design courses allowing students to apply theoretical knowledge to experimental processes. Students gain hands-on knowledge of testing equipment and experience in data acquisition and interpretation. Students gain experience in the processing of material (powder characterization, consolidation, and densification), the analysis of material microstructures and investigations of structure property relationships.

Enforced Prerequisite at Enrollment: ENGR 320 and MATSE 201 and MATSE 400

ENGR 422: Leadership of International Virtual Engineering Teams

3 Credits

ENGR 422 provides students with the opportunity to develop intercultural engineering collaboration skills. The course focuses on developing leadership competence in cross-cultural teaming through a virtual learning environment. Students will team with students from other countries on completing a project with socially relevant solutions. Students will work virtually with students from other institutions outside the US to complete a project throughout the semester. Students completing this course will: Acquire and apply a theoretical foundation in appropriate engineering design across cultural and international boundaries; Discuss contemporary international engineering development, ethics, and project leadership principles as they relate to intercultural communication in engineering teams; Demonstrate engineering project collaboration and leadership skills in the context of virtual cross-cultural interdisciplinary teams; Assess business and leadership skills displayed by others and critically evaluate current international events and assigned reading material. Students will be evaluated on these learning objectives through a variety of methods such as presentation of a semester long team project, critiques and reflection of relevant literature, papers, and peers reviews. This course is part of the international track within the engineering leadership development minor.

Enforced Prerequisite at Enrollment: ENGR 408 International Cultures (IL)

ENGR 425: New Venture Creation

3 Credits

Via problem-based learning, students define new business ventures to meet current market needs, develop business models, and present to various stakeholders. The goal of New Venture Creation is to better prepare undergraduate students to be leaders in adaptive, globally-minded, technology-savvy organizations. The course is structured so students develop skills that are of high value in any workplace: leadership skills, self-efficacy, creativity and the ability to deal with ambiguity. Upon course completion, students will have a working knowledge of traditional and non-traditional ways for identifying a new product or business opportunity, quantifying the potential, understanding the key competitive factors, researching the audience, and producing a convincing plan for financing and launch. Students who want to augment the skills and knowledge from their major with the ability to develop a new product/service/process, will find New Venture Creation a valuable course. This is a novel problem-based learning (PBL) course, where the learning is student-centered, with faculty acting primarily in the role of facilitators. Active/Experiential learning happens in this course because students develop ownership of their venture concepts and are fully responsible for the genesis of ideas.

Enforced Prerequisite at Enrollment: (ECON 102 or ECON 104 or ECON 14 or MGMT 215) and (CAS 100 or CAS 138T or EMSC 100S)
Cross-listed with: IST 425, MGMT 425

ENGR 426: Invention Commercialization

3 Credits

Working with Penn State inventions selected by the Intellectual Property Office, student teams define an optimum commercialization path each technology. ENGR 426ENGR (MGMT/IST/ENR) 426 Invention Commercialization (3) The goal of ENGR (MGMT/IST/ENR) 426 is to have students understand why invention commercialization is complicated and difficult by participating in the process. For example, the inventor rarely has insights into the markets for his/her invention, is often not interested in the details of commercialization, and can be secretive. In addition, the business and financial communities often do not take the time, or have the resources, to understand new technologies and perform complex due diligence. Thus lack of due diligence often leads to rejection of innovation because existing companies often discount new technologies from outside the company as NIH - 'not invented here'. Effective transfer of new invention or innovation to a commercial product requires at least three different functional communities to interface: technical, legal and business. Each uses a different language, comes from different educational and cultural backgrounds, and may have an inherent distrust of the others. These functional barriers are difficult to overcome. This course teaches how these barriers can be broken down as student teams help bridge the perceived chasm between key players in the invention commercialization process. In these teams, students bring the skills and knowledge from their major to develop an invention commercialization recommendation for the Technology Transfer Office and the inventor. For example, business students focus on finance and market opportunity assessment; engineering and IST students focus on design refinements, prototyping support, and (if appropriate) making technology suggestions to the inventor. Upon completing the course, the students will have a working knowledge of different university and corporate technology or invention commercialization processes, important intellectual property management tools for inventions (patents, license agreements, option agreements) source of funding to move inventions toward product development, and delivering top quality presentations which outline the recommended commercialization path. Students who enjoy open-ended projects which involve the interplay of business and invention of who wants to work on interdisciplinary teams with the newest inventions will find this course a valuable course. NOTE: Because the inventions/products are based on Penn State faculty intellectual property, students must sign the Penn State Special Intellectual Property Agreement For Students - For Use When Assigning Intellectual Property to The Pennsylvania State University. The form can be viewed at <http://guru.psu.edu/policies/RAG13.html> The course will be offered both Spring and Fall semesters with an enrollment of 40 students.

Enforced Prerequisite at Enrollment: (ECON 102 or ECON 104 or ECON 14) and CAS 100
Cross-listed with: IST 426, MGMT 426

ENGR 450: Materials Design and Applications

3 Credits

Engineering design considerations for materials selection, organization of property trends of materials families, materials design strategies and property compatibility. ENGR 450 Materials Design and Applications (3) ENGR 450 introduces students to the process of materials organization and selection for application needs. Students select materials for

applications based on desired properties, materials compatibility, and economic factors and learn how to design materials (composites) to fulfill critical materials requirement of an engineering application. The course facilitates students with the understanding of the engineering design process to make educated decisions on the materials selection and/or design for industry application needs. Students learn to understand trends in property characteristics associated within given families of materials, i.e. metals, ceramics and polymers, and to balance engineering needs and economic considerations with the application design process.

Enforced Prerequisite at Enrollment: (ENGR 350 or EMCH 407 or EMCH461) and ENGR 421

ENGR 451: Social Entrepreneurship

3 Credits

Students develop business models and implementation strategies for social ventures in diverse world regions. ENGR 451 Social Entrepreneurship (3) Social Entrepreneurship is about pursuing direct action to address a social problem in a manner that leads to a truly sustainable solution. A similar perspective on social entrepreneurship is based on Jean-Baptiste's definition of entrepreneurs as permanent value creators. If the primary objective of value creation is positive social change, then the entrepreneur can be categorized as a social entrepreneur. Sustainability and scalability of the venture to create social change on a larger scale is essential. Metaphorically, while conventional entrepreneurs might pursue the creation of multi-million dollar enterprises, social entrepreneurs strive to create multi-million smile enterprises, while understanding that their ability to expand their social returns bears a dynamic interdependence with their economic bottom line. The mission of the venture must be strongly aligned with the measured outcomes, and this emphasis on measuring social and economic impact is crucial to the efficacy and success of social enterprises. The theory and praxis of social entrepreneurship is constantly evolving within the complex framework of political, economic and social changes occurring at the global, national and local levels in the US and other countries. Students study the dynamics of social challenges, approaches to address them, and the conceptual framework of social innovation and social entrepreneurship from theoretical and practical perspectives. Students explore technology solutions to addressing global social problems with a systems thinking approach. Case studies of successful and failed social ventures from diverse world regions and fields like healthcare, energy, food and agriculture, education, income generation, and access to capital are employed. There is an emphasis on the opportunities and challenges to multi-sectoral collaboration to address social challenges. Students learn how to develop appropriate business models and implementation strategies for a "sustainable" social venture. Sustainability, in this regards, refers to ventures that are technologically appropriate, environmentally benign, socially acceptable and economically sustainable. There is a specific emphasis on understanding the customers and their context and economic sustainability of the ventures. The course draws heavily from cases to understand the diverse business structures and execution strategies used by social entrepreneurs and the varied challenges faced by them. Students work in multidisciplinary cross-functional teams to develop a business/implementation model for a social venture in diverse world regions. These are real ventures that are connected to other Humanitarian Engineering and Social Entrepreneurship (HESE) course offerings.

Enforced Prerequisite at Enrollment: Fifth semester standing

ENGR 455: Humanitarian Engineering and Social Entrepreneurship Reflection and Research Dissemination

3 Credits

This post-fieldwork course focuses on reflection on ethical issues and grassroots diplomacy challenges, and workshops on research dissemination. ENGR 455 Humanitarian Engineering and Social Entrepreneurship Reflection and Research Dissemination (3) The HESE Reflection and Research Dissemination course provides students an opportunity to reflect and build upon their experiences following the EDSGN 454 class involving travel to the partnering community to advance their HESE venture. There are three intertwined themes. One theme explores the ethical intricacies of conducting research and advancing entrepreneurial ventures in developing communities. The grassroots diplomacy theme delves into the complicated and delicate challenges of working in developing communities in a harmonious and effective manner. The research dissemination theme provides students with just-in-time information and skill-sets necessary for developing their research manuscripts into refereed publications. Post-travel reflection on ethical issues: This theme explores the ethical intricacies of conducting research and advancing entrepreneurial ventures in the context of developing communities. The ethics-related discussions help students reflect on their experience and develop a mindset where they want to make better ethical decisions because they are emotionally engaged and can effectively assess the implications of their actions. Grassroots Diplomacy: During their field experience, HESE students interact with diverse parties including local communities, non-governmental organizations, governmental and UN agencies, religious organizations, political groups, bureaucrats, local industry, US corporations, tourists, etc. Students observe and experience ego and community tensions and dynamics. They might get asked for grease payments or be propositioned for dowry. They might experience conflict or observe other groups, or their own group, compromise the core concept of self-determination. Workshops in the grassroots diplomacy theme delve into the complicated and delicate challenges of working in developing communities in a harmonious and effective manner to catalyze social change with their technology-based ventures. Research Dissemination: HESE students are engaged in an IRB-approved research study related to their venture, for which they gather data during the summer field experience. This workshop series provides students with just-in-time information and skill-sets necessary for developing their research manuscripts. The workshops lower the barriers to the scholarly dissemination of their work. Sharing designs, business/implementation strategies, and lessons learned is extremely important for the praxis of HESE worldwide. For examples, published designs for low-cost greenhouse can help people in many world regions. A paper on the non-technical challenges to the growth of the small-scale wind power industry in Kenya served as a starting point for a windmill venture.

Enforced Prerequisite at Enrollment: EDSGN 454

ENGR 460: Teaching Intern Seminar

0.5 Credits

This course prepares students for the responsibilities involved in serving as Teaching Interns in the College of Engineering. Topics addressed in the course include: Individual differences and implication for learning, preparing for and conducting office hours, grading and assessment, instructional design, effective teaching practices, and faculty careers. Findings from research on how people learn and strategies for increasing

student engagement are integrated into the course discussions. Issues related to academic integrity and ethical aspects of teaching are addressed as they evolve from in-class discussions.

ENGR 467Q: Robots and Their Role in Society

3 Credits

This course explores and critically analyzes the growing influence and impact of robots and automation on society. In particular, the course introduces students to the ever widening role that intelligent robots are playing and will come to play in our workplaces, on our battlefields, and in our homes. Emphasis will be placed on understanding and critically analyzing how the technical, computational, and systems role of the machine effect the behavior and values of individuals and segments of society. The course is not technical in its treatment of robots and robotics, rather the focus is on critically investigating how the development of robotic technologies have impacted society in the past, present, and future. This is an honors course.

Enforced Prerequisite at Enrollment: Fifth Semester standing

General Education: Humanities (GH)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

Honors

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

ENGR 475: Space Systems Engineering Seminar

1 Credits

Seminar overviewing the systems engineering approach as applied to practical space systems. ENGR 475 Space Systems Engineering Seminar (1) As a requirement for the Space Systems Engineering (SPSYS) Certificate, this course is offered to students in the Certificate and others interested in Space Systems and more broadly in systems engineering. The course exposes students to the systems engineering approach as applied to practical space systems. The goal of this course is to prepare the student to understand and implement the systems approach to designing, building, testing, and flying space systems. The course begins with a series of lectures and discussions on the systems approach to engineering and how it applies to space systems in particular. Students then explore past, present, and future space systems and report on the use of systems principles in their design, fabrication, test, and flight operations-for both successful and unsuccessful space systems.

Enforced Prerequisite at Enrollment: Fifth semester standing or higher

ENGR 486: Business Opportunities in Engineering

2 Credits

Business principles, leadership and management strategies, accounting fundamentals, engineering and business ethics, creativity, and personal character as a formula for success. ENGR 486 Business Opportunities in Engineering (2) This course focuses on business principles that will help Engineering students transition from academia to the business world. Engineers can be highly successful and climb the corporate ladder or transition to entrepreneurship. Awareness of what is needed to succeed in business is the key to success. This course opens the horizon to new ideas, business opportunities, and profitability. Fundamental aspects of accounting including budgeting, cash flow, profit-loss statements,

job cost ledgers, overhead and fringe computation are examined.

Creativity, critical thinking methods, and ethics as applied to engineering and business are studied in conjunction with case studies. Business plan structure and content are analyzed along with case histories of successful companies. Students will learn how to articulate a business viewpoint, create a mission or vision statement, and present a creative idea clearly and concisely using an "elevator ride" or "billboard" approach via essays, proposals, and business plan preparation and presentation. Students will learn leadership and management strategies that will be applicable immediately.

Enforced Prerequisite at Enrollment: Fifth semester standing or higher.

This course is not open to Business students.

ENGR 486H: Business Opportunities in Engineering

2 Credits/Maximum of 2

Business principles, leadership and management strategies, accounting fundamentals, engineering and business ethics, creativity, and personal character as a formula for success.

Honors

ENGR 487: Business Opportunities in Engineering: The Business Plan

1 Credits

Essential elements, development, and presentation of the Business Plan from both an engineering and business point of view. ENGR 487 Business Opportunities in Engineering: The Business Plan (1) This course focuses on business opportunities in engineering. Students will learn about the essential elements of the Business Plan and the value of, and methods for, developing and presenting a Business Plan to start a business. Topics include The Business, Marketing, Financials, Supporting Material, Writing and Presentation Tips and Practice, and Case Studies. Aspects of creativity, winning business plans, strategies, strengths, competition, litigation, insurance, marketing, distribution, sales, and funding will also be discussed. This course complements Business Opportunities in Engineering that must be taken as a prerequisite or in conjunction with this course.

Enforced Concurrent at Enrollment: ENGR 486

ENGR 490W: Senior Design I

1 Credits

Analysis of environmental impacts on a design, designing products for the global environment and discussion on engineering ethics and professionalism. ENGR 490W Senior Design I (1) Senior design I provides students with experience in solving engineering problems independently and/or working in groups on an open-ended design problems. Students refine skills in information gathering, analysis of market and technical considerations, critical thinking of project/design scope and effective communication of project/design objectives. This course builds on previous knowledge and applies it to a global consideration of design criteria to a specific projects provided by relevant faculty. The course is the first installment of a senior capstone program in which students start to understand the global aspects of the engineering design process with respect to individual/group projects. Students gain perspective on project selection and research expectations from faculty and gather the relevant technical knowledge required to initiate the project. Projects are appropriately scoped for undergraduate research and are faculty initiated sponsored by regionally based industry (similar to The Learning Factory

Experience at UP). Faculty provides research opportunities and external industry collaborations to students for selection based on common interest.

Enforced Concurrent at Enrollment: ENGR 350 or EMCH 407 or EMCH 461 or ME 461

Writing Across the Curriculum

ENGR 491W: Senior Design II

3 Credits

Capstone of research projects from conception to prototype through industry sponsored collaboration on common technical interests between faculty and student. ENGR 491W Senior Design II (3) Senior design I provides students with experience in solving engineering problems independently and/or working in groups on an open-ended design problems. Students refine skills in information gathering, analysis of market and technical considerations, critical thinking of project/design scope and effective communication of project/design objectives. This course builds on previous knowledge and applies it to a global consideration of design criteria to a specific projects provided by relevant faculty. The course is the first installment of a senior capstone program in which students start to understand the global aspects of the engineering design process with respect to individual/group projects. Students gain perspective on project selection and research expectations from faculty and gather the relevant technical knowledge required to initiate the project. Projects are appropriately scoped for undergraduate research and are faculty initiated sponsored by regionally based industry (similar to The Learning Factory Experience at UP). Enforced Prerequisite at Enrollment: ENGR 490W

Writing Across the Curriculum

ENGR 493: Individual Leadership Experience

1 Credits

Approved individual project or internship for students to practice the leadership skills developed in the Engineering Leadership Development Minor.

Enforced Concurrent at Enrollment: ENGR 408

ENGR 494: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

ENGR 494H: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

ENGR 495: Engineering Co-Op Work Experience III

1-3 Credits/Maximum of 3

A supervised work experience where the student is employed in an engineering position in industry or government. (To be offered only for SA/Un grading.)

Enforced Prerequisite at Enrollment: ENGR 395

Full-Time Equivalent Course

ENGR 495A: Engineering Cooperative Education

1-3 Credits/Maximum of 3

ENGR 495A Engineering Cooperative Education (1-3 per semester/ maximum of 3) This course provides students the opportunity to apply the fundamentals and academic concepts learned in their major classes in a professional laboratory, industry, or government agency setting in the United States. This course is the third in a series that provides progressive semesters of career-related experience in the Cooperative Education Program. The final grade (SA/UN) will be based on the end-of-semester report submitted by the student and mid-semester and end-of-semester evaluations submitted by the employer and student. This course will be offered fall, spring, and summer semesters.

Enforced Prerequisite at Enrollment: ENGR 395A or ENGR 395I

Full-Time Equivalent Course

ENGR 495I: Engineering International Cooperative Education

1-3 Credits/Maximum of 3

ENGR 495I Engineering International Cooperative Education (1-3 per semester/maximum of 3) This course provides students the opportunity to apply the fundamentals and academic concepts learned in their major classes in a professional laboratory, industry, or government agency setting outside of the United States. This course is the third in a series that provides progressive semesters of career-related experience in the Cooperative Education Program. The final grade (SA/UN) will be based on the end-of-semester report submitted by the student and mid-semester and end-of semester evaluations submitted by the employer and student. This course will be offered fall, spring, and summer semesters.

Enforced Prerequisite at Enrollment: ENGR 395A or ENGR 395I

International Cultures (IL)

Full-Time Equivalent Course

ENGR 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

ENGR 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ENGR 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Engineering Design (EDSGN)

EDSGN 11: Explorations in Design First-Year Seminar

1 Credits

Students explore topical issues in engineering design.

First-Year Seminar

EDSGN 13: Ethics of Star Trek First-Year Seminar

1 Credits

The Star Trek television series is used as an introduction to ethics, with application to student life and engineering practice. EDSGN 013S Ethics of Star Trek First-Year Seminar (1) In this first-year seminar, The Ethics of Star Trek, students explore ethical issues that arise in various episodes of Star Trek, from The Original Series with Captain James T. Kirk and company, through The Next Generation, with Captain Jean Luc Picard. Students learn how to methodically approach tough ethical decisions in their lives, especially those in professional life. This course helps them to identify, understand, and examine their moral values, and especially to plan actions that are consistent with these values. The class explores the current thinking on the responsibilities of engineers to society, community, family, and themselves. This is a discussion and application oriented course with emphasis placed on applying key concepts to realistic problems and on developing skills such as team work, argumentation, and communication skills. Underpinning the viewing of Star Trek episodes, the course starts with a foundation on moral and ethical theory. After discussing the ethical issues faced by the Star Trek crews, the class investigates similar situations faced by students and by engineers. Teams analyze and solve progressively more complex ethical cases in engineering and in general. The goal of the course is for students to develop their moral imagination and to understand how to make the best choices in difficult circumstances.

First-Year Seminar

EDSGN 97: Special Topic

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest. Several different topics may be taught in one year or semester. A specific title may be used in each instance and will be entered on the student's transcript.

EDSGN 100: Cornerstone Engineering Design

3 Credits

EDSGN 100 Cornerstone Engineering Design provides students with a foundation for engineering design through hands-on team projects that address specified design opportunities. Through this course, students will recognize the role that engineering and design have in improving the health, safety, and welfare of the global community, as well as identifying when a solution is technically feasible, economically viable,

and desirable. Students will use a range of design tools and techniques to carry out and communicate their design processes as applied to their projects. Additionally, students will develop and practice professional skills, such as communication, teamwork, and ethical decision making. Course delivery will be via faculty-led lessons, hands-on activities, and discussions.

EDSGN 100H: Introduction to Engineering Design

3 Credits

Introduction to engineering design processes, methods, and decision making using team design projects; design communication methods including graphical, verbal, and written.

Honors

EDSGN 100S: Introduction to Engineering Design

3 Credits

Introduction to engineering design processes, methods, and decision making using team design projects; design communication methods including graphical, verbal, and written.

First-Year Seminar

EDSGN 110: Spatial Analysis in Engineering Design

2 Credits

Spatial analysis techniques using advanced computer-aided drafting and design systems, with an emphasis on engineering concepts, analysis and design. EDSGN 110 Spatial Analysis in Engineering Design (2) EDSGN 110 is a continuation of EDSGN 100, moving toward an introduction to computer-aided engineering. Emphasis is on the design of mechanical systems using two-dimensional (2D) drawings and three-dimensional (3D) solid modeling techniques commonly used in the mechanical design and structural systems. This course covers spatial relationships using the advanced functionality of computer-aided drafting and design systems. Students will be able to: (1) create and interpret advanced 2D engineering models and drawings; (2) create and manipulate 3D solid models; and (3) use these techniques in practical engineering design problems. Students will become proficient in the use of computers for the simulation of mechanical systems, design documentation, network storage and retrieval, and presentation technologies. The student will create and interpret advanced 2D engineering drawings which may include auxiliary views and working drawings. Using the engineering design process and solid modeling software, the student will create and manipulate 3D solid models and assemblies to aid in the design and documentation of simple mechanical systems.

Enforced Prerequisite at Enrollment: EDSGN 100

EDSGN 130: Architectural Graphics and CAD

3 Credits

Principles of architectural drawing; spatial relations with architectural applications; introduction to computer graphics (CAD) with project.

EDSGN 196: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses. A specific title may be used in each instance and will be entered on the student's transcript.

EDSGN 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest. Several different topics may be taught in one year or semester. A specific title may be used in each instance and will be entered on the student's transcript.

EDSGN 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)**EDSGN 210: Tolerancing and Spatial Models**

2 Credits

Tolerances; form and size; unilateral, bilateral, and symmetric; form control, critical fits, tolerances specifications precedence; applications in spatial models. EDSGN 210 Tolerancing and Spatial Models (2) Professional parametric solid modeling software will be applied to produce complete, industry-typical and standard working drawings, including part detail drawings and various types of assembly drawings; to implement the appropriate tolerance design of interfacing components and to explore advanced productivity-enhancing add-in modules. Students will be introduced to the variety and relative precedence of specifications for feature tolerances, and to the basic differences between form and size tolerance. Topics covered include: unilateral, bilateral and symmetric size tolerances, form control and tolerances, calculations for critical fits, specification precedence for tolerances, e.g., stock size vs. size directly specified in the drawing field vs. title block tolerances vs. drawing notes, etc. Laboratory assignments will include: part drawing with standard three orthographic views, complete dimensions, and a section view; part drawing with complete dimensions and a broken view; part drawing with complete dimensions and a primary auxiliary view; part drawing with complete dimensions and a secondary auxiliary view; part drawing with complete dimensions and removed detail view(s); detail drawing with correct limit tolerances on features which are critical for fit and function, assembly file with separate sub-assemblies, assembly drawing (with part identification balloons and a bill-of-material) which uses sectional views to expose fine internal detail and part interrelationships, assembly drawing (with part identification balloons and a bill-of-material) which is based upon an exploded view, assembly drawing of a tooling fixture (with part identification balloons and a bill-of-material) which shows the subject work piece transparently with phantom lines, Configured part file with tabulated drawing, welding of an assembly using advanced software capabilities and production of a welding drawing with correct symbols, production of an injection mold cavity from the subject part file, exploration of the functionality of sheet metal modules, applications of top down design and layout sketches, application of motion-simulating modules and functionality. The differences between coordinate tolerancing and geometric tolerancing

are included in the course. The American Society of Mechanical Engineers Y14.5M will be referenced. The following topics will be covered: Eight key GD&T terms, GD&T modifiers and symbols, Rule #1 and #2, concepts of GD&T, introduction to the flatness control, straightness control, circularity control, perpendicularity control, angularity control, parallelism control, concentricity control, symmetry control, the datum system (planar datum, introduction to datum targets, FOS datum specifications (RFS), FOS datum specifications (MMC).

Enforced Prerequisite at Enrollment: EDSGN 110**EDSGN 270: Summers by Design: An International Engineering Design Experience**

3 Credits

The School of Engineering Design, Technology, and Professional Programs (SEDAPP) offers this Penn State faculty-led study abroad program. Students will practice design with international collaborators in international environments and conduct design for global markets. In addition, students will learn to function in cross-cultural engineering design teams, partnering with students from both the U.S. and other global institutions. Specific locations of study are varied, and have included San Sebastian, Spain, and Nantes, France. This study abroad program takes place at a partnering university over a two-week period at the end of May. While enrolled in the course, participants will also experience many cultural activities relevant to the part of the world in which they find themselves, including partaking in local cuisine, visiting historical landmarks, and interacting with local engineering companies. This is an ideal program for Penn State engineering students as it allows students the opportunity to participate in a study abroad program while still having time to return home to complete a summer engineering internship. The objectives of the course include identifying global engineering design problems, developing effective engineering solutions within a cultural context, evaluating engineering designs with global parameters, working with a team consisting of designers from different global backgrounds, and effectively communicating engineering designs to a cross-cultural audience. Students will be evaluated through completion of pre-departure activities, participating in a design project while abroad, and completing a final project report upon their return. The course will be offered once a year through SEDAPP and Penn State Global Programs.

Enforced Prerequisite at Enrollment: EDSGN 100**International Cultures (IL)****EDSGN 294: Research Project**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

EDSGN 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

EDSGN 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDSGN 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDSGN 367: Design Thinking and Making

3 Credits

Creating innovative products and services that matter for society and users, i.e. designing for impactful results, involves a complex process of thinking and making-both thinking and making strengthen each other-that uses a plethora of design methods, some of which are elaborated in conversation with the context in which they operate. Successful design practitioners channel their ability to read cultural contexts, empathize with users, and design and communicate compelling solutions to complex problems. They seek to offer solutions that are human-centered; foster deep and positive cultural change; and strive to achieve sustainable goals that consider society, culture, the economy, and the environment. Students enrolled in this class will be tasked with finding, in a team, a solution to a complex problem. They will develop a thorough understanding of the design process through collaboratively thinking (user-researching, framing, analyzing, formulating) and making (preparing fieldwork, prototyping, role-playing, user-testing). Students who take the course will be prepared to conduct qualitative research, design creatively for a variety of contexts and users, and demonstrate the pertinence of their solution to a wide audience.

Enforced Prerequisite at Enrollment: 3rd Semester standing

EDSGN 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique or activity required.

EDSGN 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDSGN 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDSGN 401: Engineering Systems Design

3 Credits

Design requirements for complex systems; trade-offs between market opportunities and technology; translation of priorities and needs into

an operational concept. EDSGN 401 Engineering Systems Design (3) This course provides the knowledge and skills necessary to translate needs and priorities into system requirements, and develop derived requirements, which together form the starting point for engineering of complex systems. Students will develop an understanding of the larger context in which requirements for a system are developed, and learn about trade-offs between developing mission needs or market opportunities first versus assessing available technology first. Techniques for translating needs and priorities into an operational concept and then into specific functional and performance requirements will be presented. Students will assess and improve the usefulness of requirements, including such aspects as correctness, completeness, consistency, measurability, testability, and clarity of documentation. The course explores the role of techniques such as decision analysis, cost-benefit analysis, and risk assessment. Students will understand the limitations of the way that current systems engineering is practiced in terms of dealing with complexity, lifecycle uncertainty and other factors.

Enforced Prerequisite at Enrollment: EDSGN 100 and 4th Semester standing

EDSGN 402: Materials and Manufacturing

4 Credits

Students will study principles and properties of engineering materials and manufacturing processes with a focus on their appropriate selection in design. Based on these principles and properties, as well as hands-on laboratory experiences, students will develop systematic methods for matching material and process choices to the mechanical, thermal, electro-magnetic, and environmental constraints set by the technical requirements of a design problem or project. Knowledge of current manufacturing processes is required to align appropriate processes and materials with the requirements of designed products. Students will develop basic, practical knowledge and skills in operating manual and CNC machine tools. Both subtractive and additive manufacturing processes will be explored, and students will learn best practices for making informed choices between them based on design needs. Computer aided manufacturing will be introduced to provide background for future courses (e.g., senior capstone projects).

Enforced Prerequisite at Enrollment: CHEM 110 and EMCH 211 and EMCH 213 and EDSGN 401 and (CMPSC 200 or CMPSC 201 or CMPSC 121 or CMPSC 131)

EDSGN 403: Product Realization

3 Credits

This course provides students with practical experience in the product design and development process. Computer aided design and a variety of related analytical tools are employed in team-oriented design activities, as well as defined in-class team interactions. Team progress will be monitored through weekly team check-ins, during which two project status communication tools will be reviewed an updated Gantt Chart and a Weekly Project Activity Plan document. The hands-on design activities will culminate in the presentation and demonstration of a functioning engineering system. In working toward this goal, students will employ several industry-standard product design tools and techniques. In addition to Gantt charts for project management, they will employ formal ideation techniques, such as '6-3-5 Brainwriting' and Mind Maps. Conceptual designs will be communicated through morphological charts, preceding the process of reconciling conflicting Customer Needs via deterministic engineering design techniques. They will utilize the House

of Quality to implement Quality Function Deployment. The hands-on aspect of the course will utilize programmable manufacturing equipment, both one additive manufacturing technique (3D printing) and three subtractive manufacturing techniques (CNC milling, water-jet, and laser cutting). Design Verification Testing will be conducted in the context of design-build-test iterations of their functional engineering prototype.

Enforced Prerequisite at Enrollment: (EDSGN 402 or IE 312) and (EE 316 or ME 357) Enforced Concurrent at Enrollment: ENGR 490W

EDSGN 410: Robotics Design and Applications

4 Credits

Introduction to robotics, with emphasis on the design of robotics systems through multidisciplinary integration of electrical, mechanical, and software components. EDSGN 410 Robotics Design and Applications (4) The objective of this course is to apply the basic concepts of electrical, mechanical, and software technologies to analyze, design and test a robotics system. This course will draw from skills in prior coursework in electricity and electronics, statics and dynamics, and software design. The course includes a discussion of present applications and future directions of robotics in such areas as manufacturing, science, transportation, military, healthcare, and entertainment. Students will be introduced to mechanical systems analysis, sensors, software development, electrical systems, control algorithms, testing, prototyping, design, modeling, and simulation of robot systems. Students will work in teams to design and prototype a robot to perform a task and to satisfy a set of design requirements. Professional communication and documentation will be included in the course experience. This course is a multi-disciplinary, project-based course and will have a substantial laboratory component supporting team-based design, integration and testing of a robot system.

Enforced Prerequisite at Enrollment: (EE 316 or CMPEN 472) and (CMPSC 200 or CMPSC 201 or CMPSC 121 or CMPSC 131) and EE 310 and EMCH 212

EDSGN 420: Advanced Robotics Design and Applications

3 Credits

The objective of this course is to apply advanced topics in robotics. It serves as the second course of a possible two-course sequence in robotics design and applications. This second course will enable students to explore advanced topics not covered in the first course, or to continue a complex robot system design that would incorporate advanced topics and span two semesters in duration. One or more advanced topics, such as computer vision, artificial intelligence, biologically-inspired robots, multi-robotics, collaborative robots, human-robot interface, advanced navigation, or others, will be introduced based on background of the instructor. Students will work in teams to design and prototype a robot that integrates the advanced algorithms and technology and satisfies a set of design requirements. Laboratory exercises will provide experience in key areas to support the design and implementation process. Professional communication and documentation will be included in the course experience. This course is a multi-disciplinary, project-based course and will have a substantial laboratory component supporting team-based design, integration, and testing of an advanced robot system.

Enforced Prerequisite at Enrollment: EDSGN 410

EDSGN 452: Projects in Humanitarian Engineering

2 Credits

Multidisciplinary student teams engage in integrated design of real-world humanitarian ventures. EDSGN 452 Projects in Humanitarian Engineering (2) EDSGN 452 is intended to promote civic responsibility and enhance the student's abilities to engage in research and design, project management, communications, professional conduct and the understanding of user needs. This is accomplished by students undertaking team-based engineering projects in community service with partner community organizations. The projects offer real-world engineering design experience, from problem formulation through performance assessment. The project offerings will include a mix of local and international offerings. Students work on multidisciplinary teams with a project supervisor (i.e., faculty or practicing engineer) and a representative from the partner community organization. Projects are selected based on academic content, potential significance to the partner community, commitment of the partner community organization, and student safety. Students also examine the politics of technology, the relationship between engineering and communities (either domestic or international), and ethics in engineering practice. This includes the ways that engineering can be used positively and negatively in development. In the course of their work, the students will examine the ways that economic, social, cultural, political, and other contextual considerations are implicated in engineering design. Students are challenged to think critically about how engineering can be done most effectively to support community goals, and how engineering can weaken community efforts if done insensitively. These issues are explored through discussions of the relevant scholarly theory and through their manifestation in the course projects.

Enforced Prerequisite at Enrollment: 5th semester standing Enforced Concurrent at Enrollment: EDSGN 453

EDSGN 453: Design for Developing Communities

1 Credits

A seminar series related to the context and integrated design of Humanitarian Engineering and Social Entrepreneurship ventures in developing communities. EDSGN 453 Design for Developing Communities (1) The Design for Developing Communities seminar course grounds students in EDSGN 452, BIOE 401, and other related courses in the basics of user-centered / context-driven design, extreme affordability, systems thinking, research ethics, privilege systems, travel and fieldwork, and related issues for technology-based social ventures in developing communities. These seminars directly help students across various classes and professional programs with their Humanitarian Engineering and Social Entrepreneurship (HESE)-related ventures. Typically, three sections of this course are offered: one focusing on international ventures, one on local ventures and an honors section focusing on international ventures. Designing appropriate products for customers inherently requires a thorough understanding of their needs. However, what happens when your target customers live in a developing country and have radically different needs than what you are accustomed to? Similarly, what happens when your audience lives in the United States, but in an unfamiliar environment? How do you know your product will be used by your intended customers? What pre-existing systems must your product work in harmony with? Open to students of all majors, the seminar class prepares students working on HESE ventures to create sustainable enterprises in resource-constrained environments. Students are introduced to the contextual factors that must be taken into

consideration throughout their design process. Relevant philosophies and methodologies that relate to the integrated design, business and implementation strategy development of social enterprises are introduced to the students in the seminar class. The objective is to light a fire and not fill a pail. The relevant methodologies and philosophies are then reinforced in an experiential manner in the concurrent design classes (like EDSGN 452, BIOE 401, etc.) where students work on their ventures. Through the use of open discussion, videos, pictures, stories, and lectures, the course covers concepts such as systems-thinking, user-centered design, value creation, and effective communication. The seminar is highly interactive; students are encouraged to ask questions and provide examples of real-world situations that relate to the topics of conversation.

Enforced Prerequisite at Enrollment: 5th semester standing

EDSGN 454: Humanitarian Engineering and Social Entrepreneurship Field Experience

0.5 Credits

A hands-on integrated learning research and entrepreneurial engagement experience for students working on various humanitarian projects. EDSGN 454 Humanitarian Engineering and Social Entrepreneurship Field Experience (0.5) The Humanitarian Engineering and Social Entrepreneurship (HESE) Field Experience is a hands-on integrated learning, research and entrepreneurial engagement experience for students engaged in HESE ventures in the EDSGN 452 and allied courses (e.g. BIOE 401, ME 440W). Students travel to project site(s) for three weeks to advance their ventures by conducting field-testing of their technologies, testing their preliminary business models, and gathering data for research projects. They work closely with community members and various partnering agencies during the course. The partnering agencies range from community members to non-profits, community-based organizations, and governmental and United Nations agencies. Students work in cross-national cross-functional teams and make several presentations to community members, potential partners and investors. In the past, HESE students have worked in Kenya, Tanzania, Rwanda, India, El Salvador, Jamaica, Ecuador and other countries. There is no set schedule for the three weeks in the partnering community. A (two-hour long) debriefing meeting is held every evening to discuss progress made by all the teams on that day and decide the action plan for the next day. Administrative issues, technological challenges, ethical or diplomatic issues are also discussed in this meeting and solutions are developed by consensus. The field experience is also a rich environment for students to explore the ethical intricacies of engaging in projects in international contexts. Students engage in debates on ethical issues related to science, technology and society in an applied setting -the people are real, the ethical dilemma is real and most importantly, a consensus is required to address the ethical issue and decide on the further course of action. A collaborative and integrated approach of system design, business strategy, and implementation strategy development is employed. The process of operationalizing the design and the business / implementation strategies is as important as the product itself. This integrated design and implementation process encompasses conceptualization, validation, design, field-testing, implementation, and evaluation, all done in an iterative fashion. Several tools, from literature, industry (like the IDEO Human-Centered Design toolkit) and those developed by our teams (like the E-Spot Canvas) are employed during fieldwork. Student evaluation is by a reflective essay written 3-4 weeks after the completion of the trip.

Enforced Prerequisite at Enrollment: EDSGN 453

EDSGN 460W: Multidisciplinary Capstone Design Project

3 Credits/Maximum of 6

Course provides multidisciplinary industry-sponsored and service-based senior design projects in conjunction with the Learning Factory.

Prerequisite: BIO E, CH E, CMPEN, E E, I E, or M E; BME 440 or E E 300W or I E 302, I E 305, I E 323, I E 327, I E 330, I E 405 or M E 340 Writing Across the Curriculum

EDSGN 462: Introduction to Design for Additive Manufacturing

3 Credits

Additive manufacturing (AM, colloquially 3D printing) is rapidly changing the face of modern manufacturing. This layer-by-layer manufacturing approach allows for parts to be created with significant levels of complexity and in cost-effective small batches, with reduced raw material waste when compared with traditional manufacturing processes. This technology has given rise to the need for Design for Additive Manufacturing (DfAM) techniques capable of accounting for both the possibilities and restrictions offered by AM in product design. In this class, students will be introduced to the core design advantages behind DfAM at the desktop printer scale, including lattice structures, topology optimization, and mass customization. Students will learn how to balance these opportunities with the limitations inherent to AM process types, including minimum feature sizes and support material removal. Throughout the course, students will be tasked with applying specific DfAM concepts to improve end-use product design. The objectives of the course include demonstrating the workflow for creating objects with desktop AM, identifying proper use of AM in the design process, describing the role of the digital thread, utilizing the concepts of geometric complexity and mass customization, and identifying the limits and challenges imposed by desktop-scale AM on design.

Enforced Prerequisite at Enrollment: EDSGN 100

EDSGN 467: Prototyping to Launch

3 Credits

This course will focus on strengthening the fundamentals of human-centered design taught in the Design Thinking and Making course (EDSGN 367), which serves as a prerequisite to this course. The course will be a team- and project-based course, encouraging hands-on learning through action; students will be given a problem prompt at the start of the semester, but the project and solution are to be of their choosing. Students will develop a prototype each week that advances their understanding of design methodologies and project-specific design knowledge. The goal of the course will be to "launch" a solution in some meaningful way. This could include getting market validation via online platforms, for example, having users sign-up for a beta release. The course will focus on teaching hands-on design-thinking skills via intentional prototyping practice, leveraging a series of design methods and toolsets. Students will also be exposed to a variety of "maker" technologies, and become proficient in not only using this technology to manufacture prototypes, but selecting appropriate maker tools dependent upon design need and context.

Enforced Prerequisite at Enrollment: EDSGN 100 and EDSGN 367

EDSGN 468: Engineering Design and Analysis with CAD

3 Credits/Maximum of 6

This course delivers methods and techniques necessary to become proficient in applying CAD as a design tool for engineering design and analysis. Students will gain a deep understanding in principles, best practices, and strategies for solid-model representation of engineering designs. The use of CAD as a design tool will prepare students to effectively develop, analyze, and communicate engineering designs. Learning is reinforced through lectures, tutorials, quizzes, laboratory assignments, design projects, and online design portfolios. Students will learn how to recognize and capture design intent by using symmetry and parametric associativity; virtually test fit, form, and function of assembled components; analyze and improve models using analysis tools (e.g., finite element analysis); obtain, edit, and integrate existing non-native file formats; prepare models for stereolithography apparatus and other CNC machinery for prototyping; produce and manage part family models, and prepare technical drawings and illustrations. Through all these, students will be able to master special techniques for engineering design and analysis with CAD. The exercises, laboratory assignments, quizzes, midterm design projects, final design projects, and online design portfolios will enhance students' understanding of how engineering design and analysis efforts are supported through the use of CAD as a design tool and will prepare students to effectively develop, analyze, and communicate engineering designs with the use of CAD. The course will be taught in each semester with different sections utilizing different CAD packages, such as AutoCAD, CATIA, and SolidWorks. The course may be repeated if taken to learn a second software package. Credit toward the major will not be granted a second time for taking the course with the same CAD package.

Enforced Prerequisite at Enrollment: EMCH 210 or EMCH 211**EDSGN 479: Human Centered Product Design and Innovation**

3 Credits

Consumer product design for a global market, incorporating human factors principles and user desires in a multicultural perspective. EDSGN (I E) 479 Human Centered Product Design and Innovation (3) This course will focus on consumer product design for a global market, incorporating human factors and ergonomics principles as well as user needs and emotional desires. The students will be led through product design process, various product design strategies, product planning, managing the development process, product evaluation, decision making tools, and market entry. Special emphasis will be placed on user centered design, incorporating user characteristics, user needs and emotional desires (including Kansei engineering approaches), survey methodology, and usability testing. To emphasize the multicultural perspectives in today's global product design, interdisciplinary teams from two universities on opposite sides of the globe will apply these principles on actual industrial product designs for leading consumer product manufacturers.

Enforced Prerequisite at Enrollment: IE 408 or IE 419**EDSGN 485: Engineering Design Portfolio**

1 Credits

Positions in engineering design typically require a portfolio representing an applicant's best work. In preparation for this requirement, students in this course will develop the skills needed to design a portfolio that represents the depth and breadth of their engineering design training,

by collecting, sorting, and sequencing visual information from relevant previous design experiences. The material will be presented through a series of Web-based modules. The objectives of this course include organizing a collection of graphics and text to effectively communicate engineering design experiences and development, summarizing both the depth and breadth of design experiences, analyzing and interpreting information for presentation to third party readers, and using modern engineering graphics and text communication methods to present information. Students will be evaluated on their ability to visually, textually, and sequentially present their design work in a design portfolio. The course will be taught once a semester as an online-course. The course is required for students pursuing the Engineering Design Certificate.

Enforced Prerequisite at Enrollment: EDSGN 100 and 7th Semester standing or higher**EDSGN 494: Research Project**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

EDSGN 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

EDSGN 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practice, or internships. Written and oral critique of activity required.

EDSGN 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

EDSGN 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EDSGN 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Engineering Graphics Technology (EGT)

EGT 60: 3D Visualization and Spatial Development

1 Credits

Supplemental course designed to improve spatial skills through the use of interactive hands-on activities, such as clay modeling and multi-media software. EG T 060 3D Visualization and Spatial Development (1) The ability to visualize objects and situations in one's mind, and more specifically the ability to manipulate those visualizations is an important skill for those in the engineering field. For example, EG T 120 Introduction to Graphics and Solid Modeling requires strong visualization skills to create orthographic (2D) and isometric (3D) representations of mechanical parts. Students must also be able to sketch an object 3-dimensionally from a 2D drawing and vice-versus. Strong visualization skills are also essential to successfully model 3D parts in a solid modeler, such as Pro/ENGINEER. In addition, research has shown students with poorly developed spatial skills, especially women, tend to become discouraged and drop out of engineering altogether if they are struggling in their very first 'engineering' course. EG T 060 is designed to improve these spatial skills through the use of interactive hands-on activities, such as clay modeling (building a 3D object from a 2D drawing), snap cubes, and multi-media software specifically designed to improve these skills.

EGT 102: Introduction to Computer Aided Drafting

1 Credits

A first course presenting an intensive study utilizing a computer assisted drafting and design system to obtain graphic solutions.

EGT 114: Spatial Analysis and Computer-Aided Drafting

2 Credits

Spatial relations of applications in engineering technology with more advanced functionality of computer-aided drafting and design systems. EG T 114 Spatial Analysis and Computer-Aided Drafting (2)The EG T 114, Spatial Analysis and CAD course is a continuation of CADD (Computer Aided Drafting and Design) and an introduction to CAE (Computer Aided Engineering) with an emphasis on the state-of-the art 2-D drawing and 3-D solid modeling techniques commonly used in mechanical design and analysis of structural systems. This course is also designed to cover spatial relations of applications in engineering technology, with more advanced functionality of computer-aided drafting and design systems. Building on the knowledge and experience of Engineering Design from prior courses, the student will be able to: understand, create and interpret more advanced 2-D Engineering drawings; understand, create and manipulate 3-D solid models; use these two techniques in practical Engineering Design problems. Having an understanding of computer systems, students will become proficient in the use of computers for the simulation of mechanical systems, design documentation, network storage and retrieval, and presentation technologies. With a basic understanding of 2-D drawing software, the student will also be able to understand, create and interpret more advanced 2-D Engineering drawings, which may include auxiliary views and working drawings. Finally, having an understanding of the Engineering Design process and a basic understanding of solid modeling software, the student will be able

to understand, create and manipulate 3-D solid models and assemblies to aid in the design and documentation of simple mechanical systems.

Enforced Prerequisite at Enrollment: EDSGN 100

EGT 119: Introduction to CAD for Electrical and Computer Engineering

2 Credits

Introduction to computer-aided drafting (CAD) for Electrical and Computer Engineering Technology students with a focus on three dimensional assemblies. EG T 119 Introduction to CAD for Electrical and Computer Engineering (2) This course is intended to teach Electrical and Computer Engineering Technology students to use a 3-D CAD software package to communicate their ideas so that they may transfer their ideas to others including engineers, designers, and lay people. Students will successfully create 3-D objects such as rectangular solids, spheres, and cylinders. Those 3-D objects will then be employed to create actual samplings of electrical and electronic components (such as resistors, capacitors, transformers, etc), as well as electro-mechanical components (such as relays, motors, solenoids, etc), enclosures (chassis), and operator interfaces (knobs, buttons, displays, etc) and similar items. Students will successfully create 3-D assemblies. Students will successfully create working drawings of components and assemblies. The designated course outcomes are as follows: visualize mechanical part(s) 2-D to 3-D and vice versa; incorporate design intent into solid models using extrusions, revolves, shells, ribs, chamfers and rounds; construct datum references (e.g. planes and axes) to facilitate solid modeling; properly execute duplicating operations to create circular and linear patterns of features and mirrored features; use mathematical relations to drive solid models; create a detail drawing of a mechanical part; create 3-D assemblies.

Enforced Prerequisite at Enrollment: MATH 81

EGT 120: Introduction to Graphics and Solid Modeling

3 Credits

Development of visualization skills; introduction to parametric solids modeling techniques with constrained and unconstrained geometry, and assemblies.

EGT 121: Applied Solid Modeling

3 Credits

Creation of working drawings from solid models; dimensioning, GD&T, fastener, weld and finish symbols, layouts and bill of materials.

Enforced Prerequisite at Enrollment: EGT 120

EGT 201: Advanced Computer Aided Drafting

2 Credits

Application of the principles of engineering graphics; preparation of working drawings; details, examples, and bill of material using CAD. EG T 201 Advanced Computer Aided Drafting (2) Professional parametric solid modeling software will be applied to produce complete, industry-typical and standard working drawings, including part detail drawings and various types of assembly drawings; to implement the appropriately toleranced design of interfacing components; and to explore advanced productivity-enhancing add-in modules. Additionally, students will be introduced to the variety and relative precedence of specifications for feature tolerances and to the basic differences between form and

size tolerancing. Topics that will be covered in the course include: Unilateral, bilateral and symmetric size tolerances, Form control and tolerances, Calculations for critical fits, Specification precedence for tolerances, e.g., stock size vs. size directly specified in the drawing field vs. title block tolerances vs. drawing notes, etc. The following laboratory assignments will include: Part drawing with standard three orthographic views, complete dimensions, and a Section View, Part drawing with complete dimensions and a Broken View, Part drawing with complete dimensions and a Primary Auxiliary View, Part drawing with complete dimensions and a Secondary Auxiliary View, Part drawing with complete dimensions and removed Detail View(s), Detail drawing with correct limit tolerances on features which are critical for fit and function, Assembly file with separate sub-assemblies, Assembly Drawing (with part identification balloons and a bill-of-material) which uses Sectional Views to expose fine internal detail and part interrelationships, Assembly Drawing (with part identification balloons and a bill-of-material) which is based upon an Exploded View, Assembly Drawing of a tooling fixture (with part identification balloons and a bill-of-material) which shows the subject workpiece transparently with phantom lines, Configured part file with tabulated drawing, Welding of an assembly using advanced software capabilities and production of a welding drawing with correct symbols, Production of an injection mold cavity from the subject part file, Exploration of the functionality of sheet metal modules, Applications of Top Down Design and Layout Sketches, Application of motion-simulating modules and functionality. The differences between coordinate tolerancing and geometric tolerancing are included in the course. The American Society of Mechanical Engineers Y14.5M will be referenced. The following are among the topics that will be covered: Eight key GD&T terms, GD&T modifiers and symbols, Rule #1 and #2, Concepts of GD&T, Introduction to the flatness control, straightness control, circularity control, perpendicularity control, angularity control, parallelism control, concentricity control, symmetry control, The datum system (planar datums, Introduction to datum targets, FOS datum specifications (RFS), FOS datum specifications (MMC).

Enforced Prerequisite at Enrollment: EDSGN 100 and EGT 114

EGT 205: Transition From 2-D CAD to Solid Modeling

1 Credits

Supplemental course designed to introduce students (primarily transfer) to a solid modeling program. EG T 205 Transition From 2-D CAD to Solid Modeling (1) This is a one credit course in parametric solid modeling. Students will learn how to do basic geometry creation as well as how to create and use reference geometry such as points and planes. Duplicating features through the use of patterns and mirroring will be covered. More advanced geometry creation such as sweeps and blends are introduced, as well as the use of top-down as well as bottom-up modeling techniques. Assembly modeling and detailing topics are covered. Evaluation is done through both weekly homework assignments and a final, comprehensive project. This course is designed to bring students (especially transfer students who already have taken EG T 201) up to a base level of proficiency on the specific CAD package used in MET 306.

Enforced Prerequisite at Enrollment: EGT 201

Engineering Mechanics (EMCH)

EMCH 210: Statics and Strength of Materials

5 Credits

Equilibrium of particles, rigid bodies, frames, trusses, beams, columns; stress and strain analysis of rods, beams, pressure vessels. E MCH 210 E MCH 210 Statics and Strength of Materials (5) This course is a combination of E MCH 211 and E MCH 213. Students taking E MCH 210 may not take E MCH 211 or 213 for credit, or vice versa. Students will learn how forces and moments acting on rigid and deformable bodies affect reactions both inside and outside the bodies. Students will study the external reactions, and their inter-relationships; the discipline of statics (E MCH 211), as well as the associated internal forces and deformations, quantified by their corresponding stresses and strains; the discipline of strength of materials (E MCH 213). The student will be able to analyze and design simple structural components based on deflection, strength, or stability. Students will be prepared to analyze and design simple structures and take upper division courses in mechanics of materials and structural analysis and design. Students will communicate their analysis through the use of free-body diagrams and logically arranged equations.

Enforced Prerequisite at Enrollment: MATH 140 or MATH 140B or MATH 140E or MATH 140H

EMCH 210H: Statics and Strength of Materials, Honors

5 Credits

Equilibrium of particles and rigid bodies, frames, trusses, beams, columns; stress and strain analysis of rods, beams, pressure vessels. E MCH 210H E MCH 210H Statics and Strength of Materials, Honors (5) This honors course is a combination of E MCH 211 and E MCH 213. Students taking E MCH 210H may not take E MCH 211 and 213 for credit, or vice versa. The same general topics are covered as in E MCH 210, but in a more advanced fashion and with more advanced applications. Students will learn how forces and moments acting on rigid and deformable bodies affect reactions both inside and outside the bodies. Students will study the external reactions, and their inter-relationships - the discipline of statics (E MCH 211), as well as the associated internal forces and deformations, quantified by their corresponding stresses and strains - the discipline of strength of materials (E MCH 213). The student will be able to analyze and design simple structural components based on deflection, strength, or stability. Students will be prepared to analyze and design simple structures and take upper division courses in mechanics of materials and structural analysis and design. Students will communicate their analysis through the use of free-body diagrams and logically arranged equations.

Enforced Prerequisite at Enrollment: MATH 140 or MATH 140B or MATH 140E or MATH 140H
Honors

EMCH 211: Statics

3 Credits

Equilibrium of coplanar force systems; analysis of frames and trusses; noncoplanar force systems; friction; centroids and moments of inertia. E MCH 211 E MCH 211 Statics (3) Engineering Mechanics is the engineering science that relates forces and moments to the motion (displacement, velocity, acceleration) of bodies. The understanding

of the concepts of force, moment, and motion is essential to design efficient engineering components ranging from a bridge to a wing strut to a robot arm to the mother board of a computer. Statics (E MCH 211) is the foundational course for both Dynamics (E MCH 212), which is the study of motion and the forces causing motion, and Strength of Materials (E MCH 213), which is the study of deformation and strength design of solids. Statics will provide students with the tools and guidance to master the use of equilibrium equations and Free Body Diagrams (FBD's) and to solve real engineering problems. Students should leave this class with the ability to logically approach a variety of static engineering problems, to translate a physical situation into an analytic model, and to use various mathematical tools to determine desired information. Course topics include: introduction and vectors, problem solving, force vectors, particle equilibrium, moments/couples, equivalent systems, distributed loads/FBDs, rigid body equilibrium, trusses, frames and machines, 3-D equilibrium, friction, centroids and center of gravity, and moments of inertia.

Enforced Prerequisite at Enrollment: MATH 140 or MATH 140B or MATH 140E or MATH 140H

EMCH 212: Dynamics

3 Credits

Motion of a particle; relative motion; kinetics of translation, rotation, and plane motion; work-energy; impulse-momentum. E MCH 212 E MCH 212 Dynamics (3) Dynamics (E MCH 212) is the study of forces causing motion and, at least in engineering, its primary goal is the determination of loads on moving structures for the purpose of design. Dynamics will provide students with the tools and guidance to analytically model a wide variety of mechanical and structural systems. In Dynamics, this is done by drawing free-body diagrams of the relevant parts of the system and then applying the laws of Newton and Euler, laws governing material behavior, and equations describing the geometry of motion of points and bodies (kinematics) to those free-body diagrams to obtain the equations governing the motion of the system. Once a system has been modeled, Dynamics will also provide students with the tools to obtain desired information from those models by solving the equations governing the motion of the system. Topics covered in Dynamics include: kinematics of particles, application of Newton's laws to particles, energy and momentum methods for particles, kinematics of rigid bodies, application of the laws of Newton and Euler to rigid bodies, and energy and momentum methods for rigid bodies.

Enforced Prerequisite at Enrollment: (EMCH 211 or EMCH 210H or EMCH 210) and (MATH 141 or MATH 141B or MATH 141E or MATH 141H)

EMCH 212H: Dynamics

3 Credits

Motion of a particle; relative motion; kinetics of translation, rotation, and plane motion; work-energy; impulse-momentum. E MCH 212H E MCH 212H Dynamics (3) Dynamics (E MCH 212) is the study of forces causing motion and, at least in engineering, its primary goal is the determination of loads on moving structures for the purpose of design. Honors Dynamics (E MCH 212H) will provide students with the tools and guidance to analytically model a wide variety of mechanical and structural systems. In Dynamics, this is done by drawing free-body diagrams of the relevant parts of the system and then applying the laws of Newton and Euler, laws governing material behavior, and equations describing the geometry of motion of points and bodies (kinematics)

to those free-body diagrams to obtain the equations governing the motion of the system. Once a system has been modeled, Honors Dynamics will also provide students with the tools to obtain desired information from those models by solving the equations governing the motion of the system. Topics covered in Honors Dynamics include: kinematics of particles, application of Newton's laws to particles, energy and momentum methods for particles, kinematics of rigid bodies, application of the laws of Newton and Euler to rigid bodies, and energy and momentum methods for rigid bodies. In addition to what is done in Dynamics (E MCH 212), students in Honors Dynamics will typically do a project in which they design an experiment and use what they have learned to compare theory with experiment. They will also make use of modern mathematical software to solve the nonlinear differential equations obtained in their analysis of mechanical and structural systems to obtain further understanding of the behavior of these systems.

Enforced Prerequisite at Enrollment: (EMCH 211 or EMCH 210H or EMCH 210) and (MATH 141 or MATH 141B or MATH 141E or MATH 141H)

Honors

EMCH 213: Strength of Materials

3 Credits

Axial stress and strain; torsion; stresses in beams; elastic curves and deflection of beams; combined stress; columns. E MCH 213 E MCH 213 Strength of Materials (3) In this elementary course on the strength of materials the response of some simple structural components is analyzed in a consistent manner using i) equilibrium equations, ii) material law equations, and iii) the geometry of deformation. The components analyzed include rods subjected to axial loading, shafts loaded in torsion, slender beams in bending, thin-walled pressure vessels, slender columns susceptible to buckling, as well as some more complex structures and loads where stress transformations are used to determine principal stresses and the maximum shear stress. The free body diagram is indispensable in each of these applications for relating the applied loads to the internal forces and moments and plotting internal force diagrams. Material behavior is restricted to be that of materials in the linear elastic range. A description of the geometry of deformation is necessary to determine internal forces and moments in statically indeterminate problems. The underlying mathematics are boundary value problems where governing differential equations are solved subject to known boundary conditions. Students will be able to: a) Identify kinematic modes of deformation (axial, bending, torsional, buckling and two dimensional) and associated stress states on infinitesimal elements and sketch stress distribution over cross sections b) Analyze determinate and indeterminate problems to determine fundamental stress states associated with kinematic modes of deformation c) Apply strength of materials equations (and formulas) to the solution of engineering and design problems d) Recognize and extract fundamental modes in combined loading and do the appropriate stress analysis e) Extract material properties (modulus of elasticity, yield stress, Poisson's ratio) from data and apply these in the solution of problems f) Calculate the geometric properties (moments of inertia, centroids, etc) of structural elements and apply these in the solution of problems which will enable them to solve real engineering problems.

Enforced Prerequisite at Enrollment: EMCH 211

EMCH 296: Independent Studies

1-18 Credits

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

EMCH 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EMCH 302H: Thermodynamics, Heat Conduction, and Principles of Modeling, Honors

4 Credits

EMCH 302H is a required course for engineering science students. This course presents the fundamental principles of classical thermostatics, thermodynamics, and heat transfer with relevant engineering applications. The students are expected to develop skills necessary to apply these principles to common engineering problems involving properties of matter, energy, non-reacting mixtures, and energy transport. The classical thermostatics and thermodynamics instruction will typically take 9 weeks. Control volume analysis techniques are introduced for closed and open systems undergoing both quasi-static and dynamic processes. The techniques are applied to analyze common power and refrigeration cycles, including gas and vapor systems. Diffusion in fluid and solid mixtures will also be considered. Special attention will be devoted to the notions of Helmholtz and Gibbs free energies as well as enthalpy. Use and significance of these concepts constitutive theories of gas, fluid, and solid materials systems will be discussed. The heat transfer component of the course will typically take 4 weeks. Instruction on heat transfer, will cover the three classical modes of heat transfer: conduction, convection, and radiation. Heat exchangers and heat transfer from extended surfaces are presented at a very basic level. Two weeks will be devoted to an introduction to statistical thermodynamic concepts in which a thermodynamic system is viewed as an ensemble whose state can be characterized in phase space. Enough background will be provided to compare and contrast the classical and statistical notions of entropy.

Enforced Prerequisite at Enrollment: (CHEM 110 or CHEM 110H) and (PHYS 211 or PHYS 211H) **Enforced Concurrent at Enrollment:** (MATH 230 or MATH 231 or MATH 231H or MATH 230H) Honors

EMCH 315: Mechanical Response of Engineering Materials

2 Credits

Mechanical response measures and design theories for engineering materials; elastic and plastic response as affected by stress, strain, time, temperature. E MCH 315 E MCH 315 Mechanical Response of Engineering Materials (2) The main goal of E MCH 315 is to present mathematical models to describe mechanical behavior of materials and develop skills relevant to understanding the mechanical response of an engineering design using realistic materials. Engineering analysis is emphasized by introducing various material responses to external factors including static loading, cyclic loading, and elevated temperatures. The student will gain a broad base in this area that serves as a foundation for subsequent employment in systems design and testing, or further study in engineering analysis, mechanical design, materials engineering or

materials selection. E MCH 315 is an extremely useful and versatile class that has many applications in all engineering disciplines. The general topics include: elastic, viscoelastic, plastic, and creep deformation; temperature effects, stress based failure criteria for ductile and brittle material behavior; creep rupture; fracture mechanics prediction of brittle failure; and failure by fatigue.

Enforced Prerequisite at Enrollment: EMCH 213 or EMCH 210H or EMCH 210

EMCH 316: Experimental Determination of Mechanical Response of Materials

1 Credits

Experimental techniques for mechanical property measurement and structural testing. E MCH 316 E MCH 316 Experimental Determination of Mechanical Response of Materials (1) The objective of EM CH 316 is to introduce students to the relevant technology and methods used to determine the mechanical responses of engineering materials and structural components. Student teams will apply stress and strain measurement techniques; conduct tensile, torsion, creep, internal pressurization, and fatigue tests; then characterize mechanical behavior and explain the material parameters obtained. The laboratory assignments are designed to complement the lecture course E MCH 315, which must be taken as a prerequisite of concurrently.

Enforced Prerequisite at Enrollment: (MATSE 259 and ME 360) or Concurrently enrolled in EMCH 315.

EMCH 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

EMCH 400: Advanced Strength of Materials and Design

3 Credits

Combined stresses; energy methods; special problems in bending and torsion; plates; thin-walled structures; buckling and stability; design projects.

Enforced Prerequisite at Enrollment: EMCH 213 or EMCH 210H or EMCH 210

EMCH 402: Applied and Experimental Stress Analysis

3 Credits

Experimental design of structural and machine components; photoelasticity, electrical resistance strain gauge techniques, Moire techniques, interferometry, holography.

Enforced Prerequisite at Enrollment: EMCH 213 or EMCH 210H or EMCH 210

EMCH 403: Strength Design in Materials and Structures

4 Credits

Determination, interpretation, significance, and application of mechanical properties such as plastic flow, fatigue strength, creep resistance, and dynamic properties.

Enforced Prerequisite at Enrollment: EMCH 213 or EMCH 210H or EMCH 210

EMCH 407: Computer Methods in Engineering Design

3 Credits

Computer methods in mechanical design: solid modeling, graphics, surface smoothing/interpolation and underlying numerics: simultaneous equations, quadrature, eigen problems, discrete models. E MCH 407 Computer Methods in Engineering Design (3) E MCH 407 teaches computer methods and the use of modeling tools for doing mechanical design and the underlying numerical methods necessary to design, design analysis and development of design-related computer tools. The programming tool used in the course is MATLAB. E MCH 407 provides preparation for study of finite element analysis and professional practice. It is well suited to students who expect to work in design, manufacturing and/or project engineering. E MCH 407 is not a typical numerical methods course; for example, it treats solution of differential equations using finite differences only as minor application. Nonetheless the mathematics is at times rather abstract. Course Objectives (labels for ABET criterion met are appended to each objective). Students will be able to: ♦ Apply methods prerequisite to finite element analysis to solve well-defined problems (a, e, f, g, i, k) ♦ Generate splines and curves for the smoothing of surfaces (a, b, e, f, g, h, i, j, k) ♦ Write computer code to do computer graphics and object manipulation (a, c) ♦ Do solid modeling, create rapid-prototypes, generate meshes using a commercial package (c, e, h, j, k) ♦ Calculate eigenvalues/eigenvectors and plot mode shapes (a, e, j, k) 2. Evaluation Methods include homework, mini-project submittals, midterm and final exams. 3. Special Facilities: E MCH 407 is taught in classrooms with computers. 4. Frequency of Offering/Enrollment: E MCH 407 is offered every spring semester. Enrollment is limited to the number of computers in the classroom.

Enforced Prerequisite at Enrollment: (ESC 261 or CMPSC 200 or CMPSC 201) and (EMCH 210 or EMCH 210H or EMCH 213)

EMCH 409: Advanced Mechanics

3 Credits

Continuation of E MCH 012; Euler's equations for the rotation of a rigid body, gyroscopic motion, impulsive motion, Lagrangian mechanics.

Enforced Prerequisite at Enrollment: (EMCH 212 or EMCH 212H) and MATH 230

EMCH 416: Failure and Failure Analysis of Solids

3 Credits

Examination and analysis of the various modes of failure of solid materials.

Enforced Prerequisite at Enrollment: 5th Semester standing or higher and (EMCH 213 or EMCH 210 or EMCH 210H)
Honors

EMCH 440: Nondestructive Evaluation of Flaws

3 Credits

Methods and limitations of nondestructive evaluation of mechanical flaws; optical, acoustical, electromagnetic, x-ray, radiography, thermography, and dye techniques.

Enforced Prerequisite at Enrollment: EMCH 213 or EMCH 210H or EMCH 210

Cross-listed with: MATSE 440

EMCH 446: Mechanics of Viscoelastic Materials

3 Credits

Nature of viscoelastic materials, constitutive relations, thermorheological materials, viscoelastic stress analysis, rubber elasticity, viscoelastic liquids, experimental techniques for material characterization.

Enforced Prerequisite at Enrollment: (EMCH 315 and EMCH 316) or EMCH 416

EMCH 461: Finite Elements in Engineering

3 Credits

Computer modeling and fundamental analysis of solid, fluid, and heat flow problems using existing computer codes. E MCH (M E) 461 Finite Elements in Engineering (3) This is an introductory course in the Finite Element Method. Through this course, students gain knowledge in finite element theory and problem modeling. The mathematical formulation of the method is presented and then applied to problems in elasticity and heat transfer. Projects are assigned to demonstrate the finite element method in simplified problems using hand-calculations and computer programs such as Matlab. The use of commercial FEA programs is introduced and problems of increased complexity are assigned to demonstrate their use in a computer lab. Finally, problems of realistic complexity are assigned such that students can practice solving, documenting and presenting their use of commercial FEA programs.

Enforced Prerequisite at Enrollment: (EMCH 213 or EMCH 210H or EMCH 210) and (CMPSC 201 or CMPSC 200)

Cross-listed with: ME 461

EMCH 470: Analysis and Design in Vibration Engineering

3 Credits

Application of Lagrange's equations to mechanical system modeling, multiple-degree-of-freedom systems, experimental and computer methods; some emphasis on design applications. In this course, students will learn basic techniques for modeling and analyzing linear multidegree-of-freedom (MDOF) mechanical systems, and will learn how to use these techniques for mechanical design. Students will learn to obtain equations of motion using energy methods (Lagrange's equations), with emphasis on the efficient formulation and reduction to the linear case. The basic theory of MDOF systems will be presented, including: eigenvalue problems; natural frequencies and normal modes; superposition and modal analysis; and frequency response. Numerical methods for solving static, dynamic and eigenvalue problems will be presented. Introductions to the theory of linear continuous systems and experimental methods of vibrations will be presented. A substantial portion of the course will be spent discussing design applications of the basic theory, such as: finite element numerical analysis and experimental modal analysis of beams and plates; vehicle suspension design; and vibration isolation and absorption.

Enforced Prerequisite at Enrollment: (EMCH 212 or EMCH 212H) and (ME 370 or ESC 407 or EMCH 407)

Cross-listed with: ME 470

EMCH 471: Engineering Composite Materials

3 Credits

Properties, manufacture, forms of composites; micromechanics; orthotropic lamina properties; laminate analysis; theories; failure analysis; thermal, environmental effects.

Enforced Prerequisite at Enrollment: (EMCH 213 or EMCH 210 or EMCH 210H) and (CMPSC 200 or CMPSC 201 or ESC 261)

EMCH 473: Composites Processing

3 Credits

An introduction to the principles of mechanics governing manufacturing, computer-aided design, and testing of composite materials and structures.

Enforced Prerequisite at Enrollment: EMCH 471
Cross-listed with: AERSP 473

EMCH 480: Mechanism Design and Analysis

3 Credits

Design and analysis of mechanical linkages including kinematic synthesis and dynamic analysis. Linkages for a variety of applications are considered. M E 480 Mechanism Design and Analysis (3) The student who takes this course will develop a basic understanding of the analysis and synthesis of planar linkage mechanisms. Students will develop the ability to model real linkage mechanisms using kinematic diagrams, including identification of links and joints. They will also learn to use Gruebler's equation to calculate the mobility or number of degrees of freedom of linkages based on the kinematic diagram. Students will also become familiar with real mechanism applications in the context of mechanism synthesis, where they will learn to determine the required dimensions of a mechanism for a specific application. Students will apply these dimensional synthesis methods in a design project which includes building a simple linkage prototype. They will learn kinematic analysis methods, i.e., analysis of position, velocity, and acceleration of planar linkages. These methods consist of graphical, algebraic, and complex number approaches. Students will also learn to use commercial software packages, e.g. Working Model, to predict position, velocity, and acceleration of planar linkages, and will compare their predictions to those using analytical approaches. Finally, students will learn to do dynamic force analysis of planar linkages to predict joint forces and motor torques. They will use commercial software packages to predict joint forces and motor torques of planar linkages, and will compare their predictions to those using analytical approaches.

Enforced Prerequisite at Enrollment: (EMCH 212 or EMCH 212H) and (CMPSC 201 or CMPSC 200 or ESC 261)
Cross-listed with: ME 480

EMCH 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

EMCH 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Engineering Science (ESC)

ESC 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ESC 120: Design for Failure--First-Year Seminar

1 Credits

This seminar, through the utilization of commonly used examples, discusses the engineering principles which are exploited by such designs. ESC 120 Design for Failure (1) (FYS) Although an important facet of engineering design is to minimize the possibility of failure of a system component, there are many devices which actually protect a system by their controlled 'failure'. Further, some components are designed to "work" through failure. In the former situation are such devices as: a shear pin in an outboard motor driveline, a fuse in an electrical circuit, a valve actuated by heat in a sprinkler system. In the latter situation, "tab tops" allow one to open a beverage can, perforations cause the paper towel to "tear" in a prescribed manner, plasticity/elasticity allows stamped parts, such as automobile hoods, to retain their new shape following stamping.

First-Year Seminar

ESC 121: Science/Engineering Fiction and the Engineering Sciences--First-Year Seminar

1 Credits

Examines the technology predictions of authors in view of the engineering sciences on which the underlying devices of their stories are based. ESC 121S Science/Engineering Fiction and the Engineering Sciences (1) (FYS) From the times of Jules Verne, books, then movies and TV, have utilized engineering/science and pseudo-engineering, in envisioning devices which were not then available, but perhaps became so in later times. From Verne's nuclear driven submarine to his voyage to the moon; to Mary Shelly's electrically created monster; to Dick Tracy's wrist radio (cell phone); to the warp speed of the Jedi, there are successes and failures as to predictions of what would some day be possible. These are examined and discussed.

First-Year Seminar

ESC 122: Weird, Wild, and Wonderful Materials and Devices--First-Year Seminar

1 Credits

First-year seminar that surveys the use of novel materials and material systems to create practical devices. ESC 122S Weird, Wild, and Wonderful Materials and Devices (1) (FYS) There are many materials whose response to a particular stimulus (mechanical, thermal, electrical, etc.) is of a completely different type. For example, if a piezoelectric material is mechanically 'squeezed' (stimulus) the response is the creation of an electrical signal. Birefringent (photoelasticity) materials

change their optical properties under mechanical displacement. Thermoluminescent 'remember' their configuration under certain environmental combinations, to which they will abruptly return when these same combinations are repeated. This seminar surveys many classes of such materials and material systems and provides examples of engineers utilizing their behavior for sensors, transducers, and actuators. Examples include acoustic refrigerators, phonograph cartridges, door openers, and stress concentration locators.

First-Year Seminar

ESC 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ESC 211: Material, Safety and Equipment Overview for Nanotechnology

3 Credits

Nanotechnology processing equipment and materials handling procedures with a focus on safety, environment, and health issues. E SC 211 Material, Safety, and Equipment Overview for Nanotechnology (3) This course overviews basic material properties as well as environment, health, and safety (EHS) issues in equipment operation and materials handling in "top down" and "bottom up" nanofabrication. The chemical and physical materials properties underlying nanotechnology are surveyed. EHS topics arising from the processing and disposal of these materials are addressed including: cleanroom operation, OSHA lab standard safety training, health issues, biosafety levels (BSL) guidelines, and environmental concerns. Specific safety issues dealing with nanofabrication equipment, materials, and processing will also be discussed including those pertinent to wet benches, thermal processing tools, vacuum systems and pumps, gas delivery systems and toxic substance handling and detection.

Enforced Prerequisite at Enrollment: CHEM 101 and MATH 81 and (PHYS 150 or PHYS 250H or PHYS 250 or PHYS 211 or PHYS 211H)

ESC 212: Basic Nanotechnology Processes

3 Credits

Step-by-step description of equipment and processes needed in top-down, bottom-up, and hybrid nanotechnology processing. E SC 212 Basic Nanotechnology Processes (3) This course is an overview of the broad spectrum of processing approaches involved in "top down", "bottom up", and hybrid nanofabrication. The majority of the course details a step-by-step description of the equipment, facilities processes and process flow used in today's device and structure fabrication. Students learn to appreciate processing and manufacturing concerns including safety, process control, contamination, yield, and processing interaction. The students design process flows for micro- and nano-scale systems. Students learn the similarities and differences in "top down" and "bottom up" equipment and process flows by undertaking hands-on processing. This hands-on overview exposure covers basic nanofabrication processes including deposition, etching, and pattern transfer.

Enforced Concurrent at Enrollment: ESC 211

ESC 213: Materials in Nanotechnology

3 Credits

The processing of materials in nanotechnology as well as the unique material properties available at the nano-scale. ESC 213 Materials in Nanotechnology (3) This course is an in-depth, hands on exposure to the producing and tailoring of the materials used in nanofabrication. The course will cover chemical materials production techniques such as colloidal chemistry; atmosphere, low-pressure and plasma enhanced chemical vapor deposition; nebulization; and atomic layer deposition. It will also cover physical techniques such as sputtering, thermal and electron beam evaporation, and spin-on approaches. This course is designed to give students experience in producing a wide variety of materials tailored for their mechanical, electrical, optical, magnetic, and biological properties.

Enforced Concurrent at Enrollment: ESC 211 and ESC 212

ESC 214: Patterning for Nanotechnology

3 Credits

Pattern transfer techniques from photolithography to nanoimprinting and nanomolding. ESC 214 Patterning for Nanotechnology (3) This course is a hands-on treatment of all aspects of advanced pattern transfer and pattern transfer equipment including probe techniques; stamping and embossing; e-beam; and optical contact and stepper systems. The course is divided into five major sections. The first section is an overview of all pattern generation processes covering aspects from substrate preparation to tool operation. The second section concentrates on photolithography and examines such topics as mask template, and mold generation. Chemical makeup of resists will be discussed including polymers, solvents, sensitizers, and additives. The role of dyes and antireflective coatings will be discussed. In addition, critical dimension (CD) control and profile control of resists will be investigated. The third section will discuss the particle beam lithographic techniques such as e-beam lithography. The fourth section covers probe pattern generation and the fifth section explores imprinting lithography, nano-molding lithography, step-and-flash, stamp lithography, and self-assembled lithography.

Enforced Concurrent at Enrollment: ESC 211 and ESC 212

ESC 215: Nanotechnology Applications

3 Credits

Applications of nanotechnology including those in medicine, biology, electronics, energy, and materials. E SC 215 Nanotechnology Applications (3) This course covers the applications of nano-scale devices and systems and the material chemical, physical, biological, or multiple-property requirements necessitated in these applications. Material modifications to meet these requirements will be addressed including structure control, composition control, surface property control, strain control, functionalization, and doping.

Enforced Concurrent at Enrollment: ESC 211

ESC 216: Characterization, Testing of Nanotechnology Structures and Materials

3 Credits

Measurements and techniques essential for controlling device fabrication. E SC 216 Characterization, Testing of Nanotechnology

Structures and Materials (3) This course examines a variety of techniques and measurements essential for testing and for controlling material fabrication and final device performance. Characterization includes electrical, optical, physical, and chemical approaches. The characterization experience will include hands-on use of tools such as the Atomic Force Microscope (AFM), Scanning Electron Microscope (SEM), fluorescence microscopes, and fourier transform infrared spectroscopy.

Enforced Concurrent at Enrollment: ESC 211 and ESC 212

ESC 220N: Ethics, Society, and Science Fiction

3 Credits

This inter-domain (GH and GS) course will introduce students to the application of technology-ethics and bioethics, as well as the humanities (especially health and medical humanities) and the social sciences, through the lens of science fiction and speculative fiction. As an inter-domain course, it will: (1) develop foundational knowledges across the disciplines of the humanities and the social and behavioral sciences; and (2) encourage an appreciation for the plethora of stakeholders and often-competing values and interests underlying bioethical/technology-ethics concerns. By applying ethics-based, analytical arguments and counterarguments, students will engage in civil, reasoned debate on highly charged, challenging topics using ethical frameworks. In addition, given exposure to a wide range of non-canonical authors and other creators with varied intersectionalities, students will engage with the concepts of diversity, equity, and inclusion.

Cross-listed with: BIOET 220N, HHUM 220N

General Education: Humanities (GH)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

ESC 261M: Computational Methods in Engineering

3 Credits

Computational methods for solving engineering problems using C++ and MATLAB. Reports on root finding, systems of algebraic equations. ESC 261M Computational Methods in Engineering (3) ESC 261M covers programming language fundamentals (organization strategies) and language grammar (syntax) of C++, MATLAB software libraries and packaged tools, and the following numerical methods: root searching techniques, solvers for systems of algebraic equations, curve fitting methods. ESC 261M is taught in a modern technology classroom. ESC 261M is essential for courses on advanced computational methods for engineers, finite element methods, and for all the other engineering courses which rely on computational methods and computer programs to analyze and interpret experimental data.

Prerequisite: or concurrent: MATH 141

Honors

Writing Across the Curriculum

ESC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

ESC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ESC 312: Engineering Applications of Wave, Particle, and Ensemble Concepts

3 Credits

The engineering applications of the wave and ensemble pictures of the physical world. ESC 312 Engineering Applications of Wave, Particle, and Ensemble Concepts (3) This course covers the engineering applications of wave based and ensemble-formulated pictures of the physical world. It begins by discussing criteria for the applicability of geometrical optics and of physical optics and moves into a general discussion of wave phenomena. An introduction to the formalism of physical optics is then given along with examples of its use in engineering applications. The course then moves to discussing the criterion for the applicability of classical mechanics and of quantum mechanics. The parallelism between the geometrical optics/physical optics and classical mechanics/quantum mechanics criteria is underscored. An introduction to the formalism of quantum mechanics is then undertaken followed by a discussion of engineering applications of quantum mechanics. The impact of quantum mechanics on particle, quasi-particle, and cooperative phenomena is discussed. The course then treats the problem of determining the physical properties of ensembles of particles and quasi-particles. Statistical mechanics concepts are introduced and the effects of quantum mechanics on ensemble predictions is covered. Fermi-Dirac, Bose-Einstein, and Boltzmann statistics are developed and discussed. The connection is also made between statistical mechanics and thermodynamics. Engineering applications of statistical mechanics are presented and discussed. The objective of this course is to give engineering students a broad technical picture of physical concepts that will affect much of the engineering advances of this century. Students will be exposed to the duality of the wave-particle picture and to that picture's critical engineering importance to the fields of optics and mechanics. They will be taught the influence of quantum mechanics on physical properties and the need for ensemble approaches for predicting the expected values of those properties for many particle systems. The impact of wave and ensemble approaches on engineering applications will be stressed and the students will be given hands-on exposure to this impact in three laboratory experiences. Evaluation methods to be used in this course will be two in-class examinations and one final period examination.

Enforced Prerequisite at Enrollment: PHYS 214

ESC 313: Introduction to Principles, Fabrication Methods, and Applications of Nanotechnology

3 Credits

Principles, fabrication methods and applications of nanoscale. ESC 313 Introduction to Principles, Fabrication Methods, and Applications of Nanotechnology (3) This course covets the unique opportunities

provided by the nano-scale and focuses on the engineering issues of fabricating and applying structures designed to take advantage of these opportunities. The course begins with defining nanotechnology and nanofabrication. It then moves to the unique features available in nano-scale structures such as large surface-to-volume ratios, quantum size effects, unique chemical bonding opportunities, dominance of physical optics, surface control of reactions and transport, and the creation of structures on the same size scale as basic features in living cells. With this understanding of the uniqueness of the nano-scale, the course progresses into the fabrication methods used in nanotechnology and then into nanostructure applications. The various nanofabrication approaches found in top-down, bottom-up, and hybrid fabrication approaches are explained and discussed in the lecture format. The principles behind the application of structures fabricated at the nano-scale are then addressed in more depth. This section of the course includes an introduction to nano-scale electronic devices, an introduction to nano-scale sensing devices, an introduction to nano-scale optics and optical devices, an introduction to material property modification at the nano-scale, and an introduction to the biology/nano-scale interface. Specific applications of the structures made using various combinations of top-down and bottom-up fabrication techniques are overviewed in various applications including sensors, nano-electronics, molecular electronics, photonics, nano-optics, information storage and computing, materials, nano-mechanics, and nano-biotechnology and medicine. The course concludes with an introduction to the manufacturing issues encountered when fabricating, assembling, and interfacing nano-scale structures as well as with an overview of health, environmental, and societal issues. The objective of this course is to give a broad technical picture of nanotechnology to engineering students from various engineering disciplines. In so doing, the course will develop a sound background for making informed judgments concerning the potential of nanotechnology for various technical applications and a sound background for assessing the societal and health issues as well as environmental impact of nanotechnology. The course objectives are to have students be able to consider nanotechnology solutions to technical problems, be able to fabricate these nanotechnology solutions in a manufacturable manner, be able to determine if there are any potential health or environmental issues involved in their solutions, and be able to assess the societal impact of their solutions. The course will require a college-level chemistry and physics background. Evaluation methods to be used in this course will be two in-class examinations and one final period examination.

Enforced Prerequisite at Enrollment: (CHEM 110 or CHEM 110H) and PHYS 212

ESC 337: Introduction to Quantum Information Science and Engineering

3 Credits

This course will introduce quantum mechanics from the perspective of quantum information science and engineering, focusing on two-level systems and the concepts of entanglement and decoherence. It will educate students on how quantum information can be used in quantum communication and quantum computing, both in theory and experiment. The course covers basic concepts such as two-level systems, Schrodinger equation, Bloch sphere, superposition, entanglement, quantum bits, quantum gates, Bell's inequalities, and mixed states. Covering these basic concepts prepare the students for more advanced courses in the minor where they learn in depth about quantum algorithms, physical implementation of different quantum systems, and how to compute with existing quantum computers.

Enforced Prerequisite at Enrollment: MATH 220 and PHYS 214

Cross-listed with: EE 337, PHYS 337

ESC 386: Engineering Principles of Living Organisms

3 Credits

This course will explore how engineering principles apply to living organisms. E SC 386 Engineering Principles of Living Organisms (3) This course uses an engineering approach that applies basic physical and mathematical principles to the fundamental problems living organisms encounter. The objectives of the course are to understand the role of scaling in size and construction trade-offs in living organisms, how diffusion shapes and limits cellular processes, the role of electrical fields and concentration gradients in signaling, the statistical mechanics of ion channel and receptor gating, how the dynamics of transcriptional interactions can generate genetic circuits, the role of mechanical amplification in hearing. At the completion of the course, students will have insight into how to use quantitative techniques from engineering and the physical sciences to analyze biological systems.

Enforced Prerequisite at Enrollment: CHEM 110 and MATH 251 and PHYS 214

ESC 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ESC 400: Electromagnetic Fields

3 Credits

Irrrotational and solenoidal fields, potentials, vector and scalar field and wave equations, harmonic and wave functions in various coordinates, radiation. E SC 400H Electromagnetic Fields (3) E SC 400H is a required senior-level course for students pursuing a bachelor's of Engineering Science. At the conclusion of this course, students will be able to: 1. Apply the basic principles of electrostatics, such as Coulomb's Law, electric field intensity, electric flux density, Gauss's Law, the concepts of divergence and gradient, and potential functions to solve basic and applied problems. 2. To compute resistance and capacitance for a variety of geometric configurations. 3. They will apply the basic principles of steady magnetic fields, such as the Biot-Savart Law, Amper6s Circuital Law, magnetic flux and flux density, Stoke's Theorem and the concept of the curl and Maxwell's equations for static electric and steady magnetic fields to solve basic and applied problems. 4. Compute self and mutual inductance for a variety of geometric configurations. 5. Understand the necessary modifications of Maxwell's equations for time varying fields including Faraday's Law and the concept of displacement current and apply these to solve basic and applied problems. 6. Understand the solutions of the reduced wave equation, for time-harmonic excitations, for plane wave propagation in both perfect and lossy dielectrics, the concepts of skip depth and wave polarization, plane wave reflection at planar boundaries, Snell's Law, Brewster's angle, and the concept of standing wave ratio and apply these to solve basic and applied problems. 7. Understand the basic principles of waves on transmission lines and apply these to solve basic and applied problems. Topics include: Vector Analysis; Coulomb's Law and Electric Field Intensity; Electric Flux Density, Gauss's Law, and Divergence; Energy and Potential; Conductors, Dielectrics, and Capacitance; Poisson's and Laplace's Equations; the Steady Magnetic Field; Magnetic Forces, Materials, and Inductance; time-

Varying Fields and Maxwell's Equations; the Uniform Plane Wave; Waves at Boundaries and in Dispersive Media. A typical course assessment includes homework assignments, mid-semester examinations and a final examination. The course is offered, in a lecture format, each spring at the University Park Campus. A typical enrollment is 25-30 students. This course is not a prerequisite for other courses.

Enforced Prerequisite at Enrollment: EE 210 and (MATH 250 or MATH 251 or MATH 251H)
Honors

ESC 404: Analysis in Engineering Science

3 Credits

Unified application of coordinate transformations; Laplace's, heat, and wave equations to boundary value problems and problems of continua in engineering.

Enforced Prerequisite at Enrollment: MATH 250 or MATH 251
Honors

ESC 407: Computer Methods in Engineering Science, Honors

3 Credits

Numerical solution of differential equations including fundamentals: roots of single nonlinear and simultaneous (Matrix) equations, least squares fitting and statistical goodness, interpolation, finite differences, differentiation, integration, eigensolutions. ESC 407H Computer Methods in Engineering Science, Honors (3) The overall objective of this course is the creation of mathematical continuum models in the form of differential equations and the application of numerical methods to solve them.

To reach this goal, fundamental methods dealing with numerical approximation, specifically starting with Taylor's series, are covered: differentiation, integration, and root search of single nonlinear equations. Mathematical models are transformed into discrete models using the finite difference method, hence the solution of simultaneous algebraic equations in matrix and iterative forms is also covered. In addition, eigenvalue problems are also covered in order to characterize models, both continuous and discrete. The concept of vector-variable and vector-valued functions are used to form algorithms, cast them into computer code, in a language of student choice, usually Mathematica or MATLAB because graphical output is required in doing assignments. This course relates to programs of study in most engineering disciplines based upon the physics of solids and fluids. Evaluation methods include assessment of written reports, at least one midterm examination and either a final examination or a final report.

Enforced Prerequisite at Enrollment: (CMPSC 200 or CMPSC 201 or ESC 261) Enforced Concurrent at Enrollment: (MATH 220 or MATH 220H)
Honors

ESC 409: Senior Research and Design Project Preparation, Honors

1 Credits

Preliminary identification and planning for the senior year research and design project. ESC 409 Senior Research and Design Project Preparation, Honors (1) is the first of a three-part series of courses that constitute the Engineering Science honors capstone research and design project. Engineering Science students participate in projects in all engineering disciplines and employ design principles before, during, and after analysis, experimentation and/or simulation. The resulting designs of systems, components or processes are then

tested and refined by changing material, geometric, stochastic or other parameters, as required. Students will spend the first few weeks of the course investigating various areas of research being conducted at the university. They will then interview key faculty and graduate students in several research groups and ultimately select one area to be the focus of their senior thesis research. After obtaining the agreement of a faculty member to supervise the thesis project, they will spend time familiarizing themselves with the people, equipment, materials, and software available in their selected research group as well as reading and summarizing key literature in preparation for conducting research. As an end product of this 1 credit course, students will develop a detailed set of project objectives and create a timeline for the year-long project. Class time will be spent exposing students to a variety of different research areas. In addition, time will be given for students to support each other through facilitated discussions to share their success stories as well as difficulties encountered in the process of identifying and selecting their research topics. Students will also be given the opportunity to present the preliminary details of their intended research topic. ESC 409 (1 credits) will be followed by ESC 410 (3 credits) where students will conduct their research, subsequently followed by ESC 411 (2 credits) where students will complete their research and prepare a written honors thesis. Through these combined 6 credits, students will integrate the scientific principles of research, design, and analysis and apply them to a particular field of engineering.

Enforced Prerequisite at Enrollment: Fifth Semester standing
Honors

ESC 410H: Senior Research and Design Project I, Honors

3 Credits

Design and synthesis in the context of a specific design project undertaken during the senior year. ESC 410 Senior Design Project, Honors (3) is the second of a three-part series of courses that constitute the Engineering Science honors capstone research and design project. Engineering Science students participate in projects in all engineering disciplines and employ design principles before, during, and after analysis, experimentation and/or simulation. The resulting designs of systems, components or processes are then tested and refined by changing material, geometric, stochastic or other parameters, as required. ESC 410 is the continuation of ESC 409 and constitutes the core effort in the honors senior research and design project for Engineering Science majors. It is followed by ESC 411. All three courses are required of Engineering Science majors and together they comprise the capstone research and design project, which integrates the scientific principles of research, design, and analysis and applies them to a particular field of engineering. In-class lectures and discussions on a wide range of topics such as design, engineering ethics, international relations, engineering management, safety, government and public policy, environmental issues, workforce preparation and graduate school occur in tandem with the students' development of their individual topics.

Enforced Prerequisite at Enrollment: ESC 409
Honors

ESC 411: Senior Research and Design Project II, Honors

2 Credits

Design and synthesis in the context of a specific design project undertaken during the senior year. ESC 411 Senior Research and Design Project II, Honors (3) is the third of a three-part series of courses that constitute the Engineering Science honors capstone research and

design project. Engineering Science students participate in projects in all engineering disciplines and employ design principles before, during, and after analysis, experimentation and/or simulation. The resulting designs of systems, components or processes are then tested and refined by changing material, geometric, stochastic or other parameters, as required. ESC 411 is the continuation of ESC 409 and ESC 410. All three courses are required of Engineering Science majors and together they comprise the capstone research and design project, which integrates the scientific principles of research, design, and analysis and applies them to a particular field of engineering. In-class lectures and discussions on a wide range of topics such as design, engineering ethics, international relations, engineering management, safety, government and public policy, environmental issues, workforce preparation and graduate school occur in tandem with the students' development of their individual topics.

Enforced Prerequisite at Enrollment: ESC 410 Honors

ESC 412: Nanotechnology: Materials, Infrastructure, and Safety

3 Credits/Maximum of 999

Cleanroom based nano/micro fabrication and related environmental health and safety issues. The nanotechnology consumer products market currently has more than 1,000 nanomaterial-containing products varying from makeup, sunscreen, food storage products, appliances, clothing, electronics, computers, sporting goods, and coatings to drug delivery systems. These products exist in the market place and are expanding in number because nano-scale materials and structures can have properties that are very different from larger size-scale versions of the same materials and structures. These property differences at the nano-scale can make nanotechnology products unique and desirable for specific applications. However, the uniqueness of the nano-scale can also affect toxicity and environmental repercussions due to differences in physicochemical properties arising from size but also from shape, chemistry, surface properties, agglomeration, bio-persistence, solubility, and charge, as well as from differences caused by attached functional groups, as outlined in this course. The greater surface-area-to-mass ratio of nanoparticles makes them generally more reactive than their macro-sized counterparts. These properties that make nanomaterials unique and valuable in manufacturing many products also make manufacturing at this scale an endeavor which must be studied and appreciated for its potential safety, health, and environmental impact. Practicing engineering at the nano-scale requires awareness of the nanotechnology safety, health concerns, and environmental issues laid out in E SC 412.

Enforced Prerequisite at Enrollment: Seventh semester standing

ESC 414M: Elements of Material Engineering

3 Credits

Structure and imperfections in engineered materials; their influence on properties, behavior, and processing. Applications of metals, ceramics, polymers, and composites. E SC 414M Elements of Material Engineering (3) This course is a junior-level, writing-intensive engineering science course designed to introduce students to the fundamentals of materials science and engineering. In the early part of this honors course, structure property relationships in materials are explored. The student will examine how atomic structure and bonding influence engineering properties such as strength and electrical properties Next, solidification, strengthening mechanisms, and phase diagrams for some common engineering materials are discussed to further examine structure property relationships and to provide the basis for the study of more complex

materials The second half of the course introduces properties and attributes of each of the major classes of materials (metals, ceramics, polymers, and composites) to acquaint the student with the wide array of material properties and choices available for design. Next, electrical, optical, and thermal properties of the various classes of materials are introduced Finally, the course closes with an introduction to the topics of materials selection and design Throughout the course, integrated writing assignments allow the student to explore the properties of a specific material or materials process in detail and gain insight the design process.

Enforced Prerequisite at Enrollment: EMCH 213 or EMCH 210H or EMCH 210 Enforced Concurrent at Enrollment: ESC 312 or PHYS 237 Honors Writing Across the Curriculum

ESC 417: Electrical and Magnetic Properties

3 Credits

Electrical conductivity, dielectric properties, piezoelectric and ferroelectric phenomena; magnetic properties of ceramics. ESC 417 / MATSE 417 Electrical and Magnetic Properties (3) is designed to provide students with a fundamental understanding of the different responses a material can have to crapped electrical or magnetic fields. Important properties are introduced and correlated with knowledge of material chemistry, crystal structure, and microstructure to provide an understanding of the mechanisms responsible for controlling the observed properties, as well as the ways in which properties can be engineered. Electronic and magnetic properties encompass dielectric, ferroelectric, conductor, superconductor, and ferromagnetic materials. Material properties and structures are related to sensors, energy storage and conversion devices, biomedical devices and electronic components in telecommunications.

Enforced Concurrent at Enrollment: MATSE 400 and MATSE 413 Cross-listed with: MATSE 417

ESC 419: Electronic Properties and Applications of Materials

3 Credits

The course covers the electrical, optoelectronic, dielectric, and other electron-based properties of solids, semiconductors in particular, and their engineering/ device applications. E SC 419 Electronic Properties and Applications of Materials (3) This course is designed primarily as a Foundation Elective for Engineering Science majors. It covers the electron-based properties of materials and their engineering applications. Building upon the strong foundation of wave, particle and ensemble concepts covered in the prerequisite course (E SC 312), it will offer an advanced introduction to the behavior of electrons in crystalline as well as non-crystalline solids, and its impact on properties. A comprehensive treatment of electrons in solids is essential to understand the electronic, optical, thermal, magnetic and other properties of materials and their incorporation in functional devices. The topics will address many facets of electrons in solids, their interaction with fields, cooperative phenomena and low-dimensional effects, and lead up to a broad range of elementary device applications. It will draw upon the results of quantum mechanics and band theory of solids that will provide the broad umbrella needed for understanding the properties of materials and designing them into practical devices and nanosystems. The importance of structure on material properties will be emphasized, so as to bring forth the importance of artificially synthesized structures and emergence of new phenomena. Along with a detailed coverage of semiconductors due to their widespread applications and their dominance in modern micro-

and optoelectronics, dielectric, magnetic and superconducting materials will also be discussed in the course. The role of defects, impurities and interfaces on electrical, optical, dielectric and other properties will be discussed, along with corresponding applications in device structures. The broad topical coverage will prepare students for advanced studies in a variety of fields including micro- and optoelectronics, functional nanosystems and synthesized nanostructures. The course will provide a solid background for senior technical electives such as E SC 481 (Elements of Nano/Micro-electromechanical Systems Processing and Design) E SC 445 (Semiconductor Optoelectronic Devices) offered in ESM, as well as Electrical Engineering and Materials Science and Engineering Courses. It will also complement (and be independent of) E SC 414M that encompasses atomic structure and mechanical properties of materials.

Enforced Prerequisite at Enrollment: ESC 312

ESC 433: Engineering Science Research Laboratory Experience

1 Credits

Hands-on lab experience and exposure to campus-wide interdisciplinary experimental research. Experimental probability and statistics. Applications across all Engineering Science disciplines. E SC 433H Engineering Science Research Laboratory Experience (1) This course provides an introduction to experimental research, including hands-on laboratory experience. In addition, students take part in campus-wide laboratory tours that illustrate the variety of experimental practice, as well as the strongly interdisciplinary nature of contemporary experimental research in Engineer Science. Lab tours involve laboratories in a variety of disciplines, both within the Department of Engineering Science and Mechanics, and in other departments with related interdisciplinary activities. The classroom content focuses on the fundamentals of experimental probability and statistics, including: the experimental process; probability distributions and error; statistical estimators; least squares; and confidence limits and hypothesis testing. Applications of the statistical analysis of experimental data are drawn from across all Engineering Science disciplines and illustrated in the labs and lab tours. There will be three hands-on laboratories. Each lab will include additional introductory lecture material, specific handouts, and readings A report will be required for each lab that represents a significant writing component to the class, and includes both descriptive and analytical components Assessment for the course is based on the laboratory reports, which include analytical and descriptive components, as well as exercises involving the material discussed in lectures.

Enforced Prerequisite at Enrollment: MATH 141 or MATH 141B or MATH 141E or MATH 141H
Honors

ESC 437: Physical implementation of qubits

3 Credits

Introduction to the physical implementation of quantum bits (qubits) based on state-of-the-art technologies. The course will consider issues in quantum information technology from an experimental point of view. The various types of qubits that will be discussed include those made with superconducting circuits, atoms (including ions, atoms and molecules), electron spins, and photons. In each case, the goal will be to develop a physical understanding of the various approaches, to get a sense of their strengths and weaknesses, and to learn about the state of the art and future prospects.

Enforced Prerequisite at Enrollment: PHYS 337

Cross-listed with: EE 437, PHYS 437

ESC 445: Semiconductor Optoelectronic Devices

3 Credits

The course will present the basic engineering science and technology involved in modern semiconductor optoelectronic devices. E SC 445 Semiconductor Optoelectronic Devices (3) This course deals with the optoelectronic properties of semiconductors and their application in functional devices for detection, emission, amplification and conversion of optical and electrical signals. A comprehensive introduction to the various optical absorption and emission processes in semiconductors is followed by an outline of specific properties of important optoelectronic semiconductors. The physical basis of detectors operating in the visible and near-visible regions is covered with an exploration of various photon detection phenomena present in solids. The devices discussed at length include intrinsic and extrinsic photoconductive detectors, p-n and Schottky detectors, p-i-n and heterojunction devices, avalanche photodiodes and photoemissive detectors, and light emitting and laser diodes Novel structures based on variable gap and superlattice structures are also considered The topical coverage includes basic operating principles, design considerations and performance assessment of each of these devices The course will enable students to apply the physics of optoelectronic devices to applications such as displays, fiber optic communications, imaging, and integrated optoelectronics. The course is offered once every year, and complements related courses on semiconductor device offered by the departments of Engineering Science and Mechanics, and Electrical Engineering. Student assessment is from homework, exams and a writing assignment involving a device application note.

Enforced Prerequisite at Enrollment: ESC 419 or ESC 314

ESC 450: Synthesis and Processing of Electronic and Photonic Materials

3 Credits

The materials science of applying thin film coatings, etching, and bulk crystal growth; includes materials transport, accumulation, epitaxy, and defects.

Enforced Prerequisite at Enrollment: (MATSE 201 or ESC 414M) and Sixth Semester standing

Cross-listed with: MATSE 450

ESC 455: Electrochemical Methods Engineering and Corrosion Science

3 Credits

The objective of the course is to give students hands-on experience in assessing environmental degradation of engineering materials. E SC 455 E SC 455 Electrochemical Methods in Corrosion Science and Engineering (3) The objective of the course is to give students hands-on experience in assessing environmental degradation of engineering materials. Students will be introduced to a variety of experimental electrochemical methods and will use their training to evaluate corrosion of steel, stainless steel, and aluminum. Techniques that will be used in this laboratory-intensive course include potentiodynamic and potentiostatic polarization, galvanic corrosion measurements, localized corrosion measurements (scratch, critical pitting temperature, and metastable pitting experiments), evaluation of sensitization (double-loop electrochemical potentiokinetic

reactivation), cyclic voltammetry, and electrochemical impedance spectroscopy of painted and unpainted specimens.

Enforced Prerequisite at Enrollment: MATSE 259 or ESC 414 or EGEE 441

ESC 456: Introduction to Neural Networks

3 Credits

Artificial Neural Networks as a solving tool for difficult problems for which conventional methods are not applicable. E E (E SC/EGEE) 456 Introduction to Neural Networks (3) This course is in response to students needs to learn Artificial Neural Networks (ANN) as a solving tool for difficult problems for which conventional methods are not available. The objective of this course is to give students hands-on experiences in identifying the best types of ANN, plus developing and applying ANN to solve difficult problems. Students will be introduced to a variety of ANN and will use their training skills to solve their own applications. During this course the students will develop a final project, in which they will apply ANN to widely varied problems. Examples: I) students from E E may be interested in applying ANN to solve control problems; II) students from Material Sciences may be interested in applying ANN to predict the pitting corrosion of components; III) students from Petroleum Engineering may be interested in applying ANN to characterize the life of a reservoir; IV) students from Agricultural Engineering may be interested in applying ANN to sort apples automatically, etc.

Enforced Prerequisite at Enrollment: (CMPSC 201 or CMPSC 121 or CMPSC 131) and MATH 220

Cross-listed with: EE 456, EGEE 456

ESC 460M: Multidisciplinary Design Project

3 Credits

This course will provide students with the opportunity to learn the design process in the context of an industry- or government-sponsored or service-based design project that demands delivering a working solution. The design projects in this course will be structured for students from two or more different engineering majors, as defined by the project sponsors in collaboration with the instructor and departmental project coordinators. While the projects may be supplied/supported/initiated by industry, topics may be related to the cutting-edge multidisciplinary research areas represented by the strengths and diversity of the Engineering Science faculty, such as nanotechnology, biomaterials, and other areas requiring cross-discipline collaboration. The project sponsor will provide the technical expertise for the project, a clear definition of all project deliverables, and the financial support to cover needed materials and supplies and travel costs. Project sponsors will be invited to attend two key events each semester: Project Kickoff in week 1 of the semester to define the project and answer questions from the students as well as the Design Showcase in week 15 of the semester, when teams present their project results to sponsors, faculty, other students, and the public. The College of Engineering will provide the facilities where the design teams will work together to develop the design concept and prototype solutions. Faculty members in the Department of Engineering Science and Mechanics will administer the course, including reading, evaluating, and grading the final project report, provide lectures on topics including on project management, design, product manufacturing, intellectual property, engineering ethics, societal/global/contemporary/professional issues, and related technical topics, and organize invited technical lectures related to industry projects. In accordance with standard procedures, specific multidisciplinary projects will be selected for this course to provide challenging design experiences for all students. The

selection of these projects will be done by the course instructor prior to the start of each semester of the course offering. Multidisciplinary teams are be formed based on specific technical elements of the project and project scope.

Enforced Prerequisite at Enrollment: (5th semester standing in ESC or 7th semester standing or Schreyer Honors College) and (MATH 250 or MATH 251 or MATH 251H) and (PHYS 212 or PHYS 212H)

Honors

Writing Across the Curriculum

ESC 460W: Multidisciplinary Design Project

3 Credits

This course will provide students with the opportunity to learn the design process in the context of an industry- or government-sponsored or service-based design project that demands delivering a working solution. The design projects in this course will be structured for students from two or more different engineering majors, as defined by the project sponsors in collaboration with the instructor and departmental project coordinators. Multidisciplinary teams are be formed based on specific technical elements of the project and project scope.

Enforced Prerequisite at Enrollment: (5th semester standing in ESC or 7th semester standing or Schreyer Honors College) and (MATH 250 or MATH 251 or MATH 251H) and (PHYS 212 or PHYS 212H)

Writing Across the Curriculum

ESC 475: Particulate Materials Processing

3 Credits

Fundamentals of processing particulate materials including production, characterization, handling, compaction, and sintering of metal, carbide, intermetallic, and composite powders.

Enforced Prerequisite at Enrollment: EMCH 315 or ESC 414M or MATSE 259

Cross-listed with: MATSE 475

ESC 481: Elements of Nano/Micro-electromechanical Systems Processing and Design

3 Credits

Interdisciplinary fundamentals of nano/microelectromechanical systems (NEMS/ MEMS), including design, fabrication and machining of miniature systems. Draws from mechanics, science and materials. E SC 481 Elements of Nano/Micro-electromechanical Systems Processing and Design (3) The objective of the course is to introduce students to the theory and technology of nanofabrication. This objective is realized via the study of materials and devices for NEMS as well as nano-system's design, manufacture and packaging,. Emphasis on the interrelationships between material properties and processing, device/system structure, and the mechanical, electrical, optical, or (bio)chemical behavior of devices/systems. As taught, the course is multidisciplinary and requires adequate background in materials science, mechanics, and device physics. The course comprises lecture presentations and laboratory demonstrations. Students attending this course come from different engineering majors, physics, and materials science. The students are assessed using a combination of homework assignments, class presentations, group projects, and written quizzes and exams.

Enforced Prerequisite at Enrollment: EMCH 213 or EMCH 315 or ESC 312

ESC 482: Micro-Optoelectromechanical Systems (MOEMS) and Nanophotonics

3 Credits

Principles and applications of Micro-Optoelectromechanical and Nanophotonic devices and systems. E SC 482 Micro-Optoelectromechanical Systems (MOEMS) and Nanophotonics (3) E SC 482 provides the engineering student with a unifying and multifaceted description of MOEMS and nanophotonics. Students will learn the fundamental principles behind many novel micro- and nanophotonic devices and systems and their practical applications in the fields of communication, sensor and image technology. The course starts with an overview of the fundamental physics of semiconductors with emphases on silicon, III-V and II-V compound semiconductors due to their important applications in MOEMS and active nanooptoelectronic devices. Semiconductor nanostructures, such as epitaxial grown quantum wells and quantum dots, and chemically synthesized nanowires and colloidal nanocrystals will be introduced through discussions on their unique electronic structures carrier transport and excitonic dynamics. In addition to inorganic materials, the structures and critical characteristics of electro-optic and light emitting polymers will also be reviewed for their fast-growing applications in display technology, sensory and information processing systems. The general principles for the design and operation of MOEMS and nanooptoelectronic devices will be discussed in the frame of geometrical optics, electromagnetic theory, and semiconductor physics. The reflection of light at dielectric interfaces will be reviewed to reveal the critical features of optical waveguide structures and to introduce the concept of surface plasma waves. In-depth descriptions will be given for the interband-and intraband-electron transition and exciton emission process in semiconductor quantum structures. Important instances of applying the 'quantum confinement' in nanostructures to tailor their optical and optoelectronic properties will be underscored during the mechanism-analysis of laser diodes, detectors and modulators. The new concept of 'photonic crystals' will be introduced through the analysis of parallelism between electron transport in semiconductor lattices and light propagation in

periodic dielectric media. Following a brief survey of the state-of-the-art technologies for the fabrication of MOEMs and nanophotonic devices, the course topics will move to their application examples in the fields of communication, sensor and image technology. For each application example, analysis will be carried out on the design, fabrication, and characterization issues of the involved systems/devices. Their merit-of-performance will be linked to the application practice to illustrate how the introduction of MOEMs/nanophotonic devices advances the technology in each specific field. Important topics to be covered in this part include micromachined lightwave systems, microcavity light emitting devices, fiber based biological nanosensors, nanoparticle enhanced surface plasma resonance sensors, microspectrometers, and digital micromirror device (DMD)-based projection display engine.

Enforced Prerequisite at Enrollment: PHYS 214

ESC 483: Simulation and Design of Nanostructures

3 Credits

Introduction to computer simulation techniques and their applications at the physical/life sciences interface. E SC (MATSE) 483 Simulation and Design of Nanostructures (3) Students will learn the simulation techniques and the design rules of nanostructures. Basic concepts of computer modeling will be introduced using quantum and classical approaches. Fundamental physical phenomena encountered in the molecular fields of computational physics, chemistry, and biology will be studied. Applications are drawn from a broad range of fields including soft and condensed matter to build an understanding of nanostructures. The course will assume knowledge and skill developed in the prerequisite courses of PHYS 214 and MATH 230. Students are expected to combine knowledge from other courses with information presented here to develop sophisticated interpretations and understanding of physical and chemical principles of nanostructures and their design rules. Evaluation methods to be used in this course will be two in-class examinations and one final period examination. The course contains a computer code generation and implementation component. Students will use commercial or educational computer codes (e.g. Matlab, Mathematica, AMBER, CHARMM, VASP, etc.) which are available at our high performance computing clusters (<http://gears.aset.psu.edu/hpc/>) Students will use the computing clusters to perform simulations which are accessible from any classroom or laboratory at Penn State. The principal objectives of the course is to learn the fundamental physics of nanostructures and to design them with computer simulations. This approach starts from classical molecular dynamics that apply on the large scale biological and synthetic assemblies and encompasses quantum mechanics for the molecular and atomic sizes. This course will give a broad scientific picture of simulation techniques in the area of nano-science and technology.

Prerequisite: PHYS 214 or ESC 312, MATH 230

Cross-listed with: MATSE 483

ESC 484: Biologically Inspired Nanomaterials

3 Credits

Advances in biomolecular-based Science and technology at the physical/life sciences interface. E SC 484 Biologically Inspired Nanomaterials (3) Students will learn the concepts of molecular engineering and the advances in biomolecular-based science and technology at the physical/life sciences interface. Basic concepts of protein structure and function will be introduced. Applications from a broad range of fields, including condensed and living matter to build an understanding

of device applications including biologically-inspired molecular-scale devices will be introduced. The course will assume knowledge and skill developed in the prerequisite courses of PHYS 214 and MATH 230. Students are expected to combine knowledge from other courses with information presented here to develop sophisticated interpretations and understanding of physical and chemical principles of molecular structures and their design rules. Evaluation methods to be used in this course will be two in-class examinations and one final period examination. The course contains a substantial writing component. Students will prepare bio-science and technology reports. The principal objective of the course is to learn and analyze molecular engineering technologies at the bio and nano interface. This course will give a broad technological picture of emerging protein technologies in the area of biomolecular materials.

Prerequisite: PHYS 214 , MATH 230

ESC 494: Senior Thesis

1-9 Credits/Maximum of 9

Students must have approval of a thesis adviser before scheduling this course.

ESC 494H: Senior Thesis

1-9 Credits/Maximum of 9

Students must have approval of a thesis adviser before scheduling this course.

Honors

ESC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ESC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Engineering Technology (ET)

ET 200: Graphic Communications

3 Credits

The study of graphic communications relating to the design and construction industry.

Prerequisite: 2-credit drafting course

ET 300: Mechanics I: Statics

3 Credits

Equilibrium of coplanar force systems; analysis of frames and trusses; shear and moment diagrams; friction; centroids and moment of inertia. ET 300 Mechanics I: Statics (3) This course is intended to provide the students with both the theory and application of the fundamental principles of static analysis by introducing free-body diagrams as a

tool for solving statics problems. Students gain knowledge of Vector Mechanics, representation of physical quantities by a vector notation. Grasp the meaning of magnitude and direction of a vector; understand the definition of a unit vector. Master the mechanics of Vector Algebra. Emphasis will be placed on equations of equilibrium for particles and rigid bodies. Students are able to understand the physical meaning of a force and moment equilibrium. Master the balance of forces and moments to ensure equilibrium for 2D and 3D structures. This will be followed by analyzing internal forces in cables and bending moments in beams.

Prerequisite: MATH 140

ET 321: Dynamics

3 Credits

Motion of a particle, relative motion; kinetics of translation; rotation and plane motion; conservation of energy and momentum. ET 321 Dynamics (3) The students will be introduced to the fundamental concepts of dynamics for particles motion along straight and curved paths. The students will learn and utilize concepts in particle kinematics and study the relationship between the forces acting on a body, the mass of the body and the motion of the body by using Newton's second law of motion, the principle of work and energy and the principle of linear momentum and impulse. This will be followed by analyzing the rotation of a rigid body about a fixed axis, and extending kinematic concepts to plane motion of rigid bodies. The concepts of work, energy, linear momentum and angular momentum of a rigid body in plane motion will be introduced. The students will learn how to apply the principle of impulse/momentum to solve rigid-body planar kinetic problems that involve force, mass, velocity and time, and the principle of work/energy to solve problems that involve force, mass, velocity and displacement. Dynamics course will also provide students with the tools to obtain desired information from those models by solving the equations governing the motion of the system. Topics covered in Dynamics include: kinematics of particles, application of Newton's laws to particles, energy and momentum methods for particles, kinematics of rigid bodies, application of the laws of Newton and Euler to rigid bodies, and energy and momentum methods for rigid bodies.

Prerequisite: EMCH 211 or ET 300 or MET 111

ET 322: Strength of Materials

3 Credits

Axial, torsional, bending, and combined stress analysis; deformation and deflection analysis of cables, shafts, and beams; column design and analysis. ET 322 Strength of Materials (3) Strength of materials deals with the relationship among the external forces acting on a body, the resulting stresses (intensity of internal forces) and the deformation (change of size or shape). The determination of proper sizes and material of construction of mechanical components and structural members to satisfy strength and deformation requirements are important topics of strength of materials. The students will be introduced to the concept of stress - normal, shear and bearing stress, and relate strain to stress using material properties. The students will develop an understanding of design parameters such as design stresses, factors of safety for axial loads, transverse loads and torsional loads, to design components such as beams and circular shafts satisfying strength and deformation requirements. The students will also learn to calculate moments of inertia, centroids and apply parallel axis theorem for moment of inertia. The students will be introduced to the concept of combined stresses and

their analysis using graphical and analytical methods. Finally, the concept of buckling in columns will be introduced.

Prerequisite: ET 300 , EMCH 211 or MET 111

ET 323: Strength of Materials Laboratory

1 Credits

Measurement of mechanical properties of materials, structural testing. ET 323 Strength of Materials Laboratory (1)The objective of the strength of materials laboratory is to demonstrate the basic principles in the area of strength and mechanics of materials to the undergraduate students through a series of experiments. Students will be conducting experiments using Universal Testing Machines to calculate tensile strength of steel and aluminum samples and experiments to measure hardness of non-heat treated and heat treated steels. Students will also test steel samples in single shear, double shear and impact loading, followed by experiments on the torsion testing machine to calculate torsional strength of aluminum samples and the strut apparatus to analyze different modes of buckling in a slender aluminum column. The laboratory demonstrates important concepts from the strength of materials theory course.

PreRequisite or concurrent: ET 322 , EMCH 213 or MET 213

ET 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written or oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

ET 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

English (ENGL)

ENGL 2: The Great Traditions in English Literature

3 Credits

This course provides fundamental skills of textual analysis in the context of literary texts written in English, drama, and poetry (from the Middle Ages to the twentieth century) that address large questions of ethical and social value. Course reading includes English-language texts from around the world. Students learn to speak and write clearly about the ideas generated by the texts as they consider interpretive issues found in their assigned readings and participate actively in the various forms of critical thinking required to address those issues.

Bachelor of Arts: Humanities

International Cultures (IL)

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

ENGL 4: Basic Writing Skills

3 Credits/Maximum of 6

Intensive practice in writing sentences and paragraphs and instruction in grammar, usage, and punctuation. Designed for students with deficient preparation. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

ENGL 5: Writing Tutorial

1 Credits

Tutorial instruction in composition and rhetoric for students currently enrolled in ENGL 4 or ENGL 15. This course may not be used to satisfy the basic minimum requirements for graduation in any baccalaureate degree program.

ENGL 6: Creative Writing Common Time

1-8 Credits/Maximum of 8

Required one hour a week meeting time; readings, professional development, advising, community-building. ENGL 006 Creative Writing Common Time (1 per semester/maximum of 8) This course is to be required of all B.F.A. in Creative Writing majors at Penn State Erie as long as they are students in that degree program. This means that every semester they are working toward the B.F.A. in Creative Writing they must sign up for this course, and they must complete it successfully. Successful completion is based on regular attendance at the various functions, all held at the same one hour time period each week. The purpose of this course is to provide students with the necessary experience of listening to the writers of national stature brought to campus through The Smith Series, to provide them with lectures by both faculty and outside experts to help them develop professionally as writers, to allow for essential group advising for successful completion of the major, and to foster a sense of community among the student writers in the program.

Bachelor of Arts: Humanities

ENGL 10: Group Writing Tutorial

1 Credits/Maximum of 2

Course Description: ENGL 10 is a one-credit course that provides group tutorial instruction in writing for students currently enrolled in ENGL 15. It is not a replacement for composition classes or individual conferences with the ENGL 15 instructor. Rather, ENGL 10 offers the opportunity to learn about and practice writing in a collaborative, group setting and to become an active part of the writing community at Penn State. Throughout ENGL 10, students work directly with texts and assignments from their ENGL 15 course.

Enforced Concurrent at Enrollment: ENGL 15

ENGL 15: Rhetoric and Composition

3 Credits

ENGL 15 is an intensive, rhetorically based experience in reading and writing that will prepare you both to understand the communications that surround you and to succeed in your own communication efforts. Thus, in this course, we will focus specifically on analyzing verbal and visual texts (our reading) as well as on producing such texts (our writing),

always in terms of rhetorical principles. Even if the term rhetoric isn't familiar to you, you bring a good deal of rhetorical skill to this class: you already know how to gauge the way you perceive and produce language according to the speaker, the intended audience, and the purpose. You may not always gauge perfectly, your perception may not always be accurate, and your production may not always be successful, but you still often try to interpret and choose language that is appropriate to the rhetorical situation. When you do not succeed, you often try again. The goal of ENGL 15, then, is to help you build on what you already know how to do as you become a more confident reader and writer. You will become more attuned to your goals as a writer, more aware of the ongoing conversation surrounding the topic, and more resourceful in terms of the appropriate delivery of your information, the rhetorical appeals at your disposal, and the needs and expectations of your audience. You will also learn to research and synthesize multiple outside sources in order to support your arguments effectively and ethically. In other words, we hope you'll come to write with skill, conviction, sophistication, and grace, if not immediately, then soon. In the process, you'll learn how to read more critically as well.

General Education: Writing/Speaking (GWS)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

ENGL 15A: Rhetoric and Composition

3 Credits

English 15A is an intensive, rhetorically based experience in reading and writing that will prepare you both to ENGL 15A is a version of ENGL 15 with an added emphasis on culture and diversity. The term diversity can have multiple definitions. During this class, you will sharpen your argumentation skills by exploring the many layers of this term as well as how it relates to issues of social justice, race, class, gender & sexuality, higher education, and more. By focusing on diversity and rhetoric & composition, you can become critical citizens inside and outside the university by using writing as a tool to engage actively and influentially with the communities you belong to and as an act of inquiry. This course attempts to emphasize diversity in a safe and yet provocative learning environment where you can develop sophistication as both a producer and consumer of knowledge as you explore and respect the diverse perspectives and backgrounds of your classmates. Major writing assignments for this course typically deal with issues of diversity in some form. understand the communications that surround you and to succeed in your own communication efforts. Thus, in this course, we will focus specifically on analyzing verbal and visual texts (our reading) as well as on producing such texts (our writing)-always in terms of rhetorical principles. Even if the term rhetoric isn't familiar to you, you bring a good deal of rhetorical skill to this class: you already know how to gauge the way you perceive and produce language according to the speaker, the intended audience, and the purpose. You may not always gauge perfectly, your perception may not always be accurate, and your production may not always be successful-but you still often try to interpret and choose language that is appropriate to the rhetorical situation. When you do not succeed, you often try again. The goal of English 15A, then, is to help you build on what you already know how to do as you become a more confident reader and writer. You will become more attuned to your goals as a writer, more aware of the ongoing conversation surrounding the topic, and more resourceful in terms of the appropriate delivery of your information, the rhetorical appeals at your disposal, and the needs

and expectations of your audience. You will also learn to research and synthesize multiple outside sources in order to support your arguments effectively and ethically. ENGL 15E: Rhetoric and Composition Enhanced

3 Credits

ENGL 15E Enhanced prepares students to understand the functions of and produce a variety of texts for public and academic audiences. Class size is limited to 18 (as opposed to the regular 24) and provides individualized instruction, regular engagement with peers, and weekly online tutorials. The combination of these resources helps familiarize students with conventional genres and practices of usage and style written discourse. The course is cohort-based and paced, which means that there is an established start and end date, and that students will have weekly deadlines to meet throughout the term.

Even if the term rhetoric isn't familiar to you, you bring a good deal of rhetorical skill to this class: you already know how to gauge the way you perceive and produce language according to the speaker, the intended audience, and the purpose. You may not always gauge perfectly, your perception may not always be accurate, and your production may not always be successful, but you still often try to interpret and choose language that is appropriate to the rhetorical situation. When you do not succeed, you often try again. The goal of English 30, then, is to help you build on what you already know how to do as you become a more confident reader and writer. You will become more attuned to your goals as a writer, more aware of the ongoing conversation surrounding the topic, and more resourceful in terms of the appropriate delivery of your information, the rhetorical appeals at your disposal, and the needs and expectations of your audience. You will also learn to research and synthesize multiple outside sources in order to support your arguments effectively and ethically. In other words, we hope you'll come to write with skill, conviction, sophistication, and grace-if not immediately, then soon. In the process, you'll learn how to read more critically as well. As an honors section, ENGL 30H is enriched by more rigorous requirements (longer papers, additional research component where the student is required to cite and engage critical sources and conversations). Participation requirements are also enhanced, making for a richer honors experience.

ENGL 30T: Honors Freshman Composition First-Year Seminar

3 Credits

English 30T is an intensive, rhetorically based experience in reading and writing that will prepare you both to understand the communications that surround you and to succeed in your own communication efforts. Thus, in this course, we will focus specifically on analyzing verbal and visual texts (our reading) as well as on producing such texts (our writing)- always in terms of rhetorical principles. Even if the term rhetoric isn't familiar to you, you bring a good deal of rhetorical skill to this class: you already know how to gauge the way you perceive and produce language according to the speaker, the intended audience, and the purpose. You may not always gauge perfectly, your perception may not always be accurate, and your production may not always be successful-but you still often try to interpret and choose language that is appropriate to the rhetorical situation. When you do not succeed, you often try again. The goal of English 30T, then, is to help you build on what you already know how to do as you become a more confident reader and writer. You will become more attuned to your goals as a writer, more aware of

the ongoing conversation surrounding the topic, and more resourceful in terms of the appropriate delivery of your information, the rhetorical appeals at your disposal, and the needs and expectations of your audience. You will also learn to research and synthesize multiple outside sources in order to support your arguments effectively and ethically. In other words, we hope you'll come to write with skill, conviction, sophistication, and grace-if not immediately, then soon. In the process, you'll learn how to read more critically as well. As an honors section, ENGL 30T is enriched by more rigorous requirements (longer papers, additional research component where the student is required to cite and engage critical sources and conversations). ENGL 50: Introduction to Creative Writing

3 Credits

If you enjoy writing to express yourself creatively - you will be at home in this course. You will also be at home here if you are an avid reader of fiction, poetry, and nonfiction, but have never tried your hand at writing it. In ENGL 50 you will explore the genres of nonfiction, fiction, and poetry by reading published essays, short stories, and poems and by writing personal essays, sketches, scenes, and poems. We'll discuss the relationship between the genres and also discuss what makes each a distinct art form. You'll hand in regular writing assignments in addition to completing longer writing projects. You'll share some of your creative work to discuss in class.

ENGL 50H: Introduction to Creative Writing

3 Credits

This course provides students with an introduction to, and extensive practice in, creative writing in the three genres of fiction, nonfiction, and poetry. The course includes instruction in principles of composition in each genre, as well as techniques of literary composition that cross and interlink those genres. If you enjoy writing to express yourself creatively- you will be at home in this course. You will also be at home here if you are an avid reader of fiction, poetry, and nonfiction, but have never tried your hand at writing it. In English 50H you will explore the genres of nonfiction, fiction, and poetry by reading published essays, short stories, and poems and by writing personal essays, sketches, scenes, and poems. We'll discuss the relationship between the genres and also discuss what makes each a distinct art form. You'll hand in regular writing assignments in addition to completing longer writing projects. ENGL 83S: First-Year Seminar in English

3 Credits

Each section of the course will focus on a well-defined body of scholarship that is topical in the discipline, such as "Ethical Dilemmas in Literature," "Individual Freedom and Social Constraint in Literature," "Global Cultures, Local Identities," "American Landscapes, American Literatures," "Shakespeare," "Vital Rhetorics," and "Turning 2000: Nostalgia and Popular Culture at the Turn of the Century." In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests. Each section of 83S will require active class participation from all students and a minimum of three substantial written assignments. Each of these written assignments will take one of the following forms: essay, essay exam, or a semester long reading journal. The course fulfills a General Education humanities requirement or a bachelor of arts humanities requirement.

ENGL 88: Australian/New Zealand Cultural Perspectives

3 Credits

Australian and New Zealand cultural and social perspectives, with emphasis on the historical development of intellectual, aesthetic, and humanistic values. ENGL 88 Australian/New Zealand Cultural Perspectives (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. Students are expected to learn fundamental skills of close textual analysis in the context of the study of a variety of works by authors from Australia and New Zealand. Studying a range of novels, poems, plays, and works of non-fiction, students will discuss the development of Australian and New Zealander literatures in historical context and gain understanding of the historical development of societal values in nations other than the U.S.A. The course aspires to relate geography and history to emerging social and cultural developments as the state and status of the two countries changed during the nineteenth and twentieth centuries, and to track their increasing separation from the "Mother Country"; (i.e. Great Britain) as they developed a sense of themselves as different and separate from European societies. The process was neither comfortable nor easy, nor steadily progressive, but the record of it is an often fascinating story of human endeavor and struggle, very frequently against great odds and disappointments, which in turn affected the development of national character if such a thing can be said to exist. The literatures reflect some of the attitudes and qualities that emerged as the two societies were coming into being and forging their own unique identities.

3 Credits

An examination of English sounds, words, and syntax using traditional, structural, and transformational grammar.

Bachelor of Arts: Humanities

ENGL 101: Introduction to Literature

3 Credits

In ENGL 101 students will study a wide variety of forms of literature -- poetry, novel, short story, drama, graphic novels -- from different time periods and cultures to gain a better understanding of how literature explores human values and issues. Throughout the course, students might use the texts to ask such questions as: of what value is a play, a novel, a poem, or a short story? Is literature worthwhile for its ability to tell a good story or for its questions that do not lend themselves to easy answers? Can literature improve our lives, individually and collectively? The course may also take advantage of literary events occurring on campus each semester--such as poetry readings, dramatic performances, even films relating to the course -- to enrich the experience both of literature and of campus life.

ENGL 103: The Great Traditions in American Literature

3 Credits

Fred Lewis Pattee's career at Penn State marks the beginning of a heyday for the study of American literature. By the 1930s, prominent American critic Granville Hicks hailed what he dubbed "the great tradition of American literature" as a series of key themes in American writing, including folk traditions, politics, business, labor, social critique, fugitives,

and flight. Since Hicks's time, literary scholars have contested the very notion of any "great tradition," because so many different authors have always participated in the American literary scene. This course examines American literature by looking at the dynamic and varied literary productions that, across time, have comprised the American literary canon, even as it calls into question the notion of whether America ever had a single literary canon, whether historically or in the present day. Students will learn how access to educational institutions, to writing equipment, and to printed and graphic materials all influenced who might become an author, and who, a reader. They will also learn how changing political and cultural institutions influenced writers' literary production and literary achievements. With text selection at the instructors' discretion, students will study poetry, fiction, non-fiction, oratory, and drama, and they will examine many of the most enduring themes in American literature: religion; moral and ethical ideals; the lure of mobility, especially upward mobility (or absence of it); gender dynamics; enslavement, abolitionism, and emancipation; race and ethnicity; the lure (and social complications) of the American West; American pragmatism; love and loss; hope and despair. Students will be asked to take up such questions as the following: Who has had a voice in American literary history? Why are some writers more frequently studied than others? Who determined what should be considered "great" literature inside the academy? In what ways does the study of American literary history uphold American values of freedom and freedom of expression? Who had access to publication, when, and under what circumstances? How does the publishing marketplace influence readers' choices regarding "great" American literature? How do educational institutions influence readers' choices? The course aims to provide a foundation for further study of American literature by equipping students with an understanding of the American literary past and its complex relationship to American culture and to American educational, political, and marketing institutions. Instructors might examine one or two key themes in the tradition, or they might ask students to learn about sweeping literary movements across time.

ENGL 104: The Bible as Literature

3 Credits

This course examines the literature of the Bible. Throughout this course, students will study the language, thought, images, and structures of the book that has arguably proved the central text of Western literature. Students will also actively explore the ways in which the Bible has shaped the literature of English-speaking cultures around the world. Students will read substantial portions of the Old and New Testaments, learning to read critically and to interpret the Bible as they would any other literary text. They will also learn about the historical construction of the Bible, some history of its translation, and contemplate the competing versions of existing Biblical texts. Accordingly, reading the Bible as literature by necessity requires critical engagement with different international cultures from different historical periods.

ENGL 105: American Popular Culture and Folklife

3 Credits

AMST 105 / ENGL 105 offers a survey of popular culture and folklife in America's past and present. The course synthesizes a broad scope of materials from areas such as literature, movies, television, sports, amusement parks, music, media, and advertising. While selected topics for readings, lectures, and discussion vary from class to class, all courses focus on a critical examination of a variety of popular and folk cultures in order to produce an enriched understanding of America, its past, its diverse cultures, its evolving values and traditions, and its inhabitants. To meet this goal, popular and folk cultures will be examined from a variety of perspectives, including race, gender, and class. AMST 105 may be taken by students pursuing the American Studies major; for them, the course provides preparation for more advanced courses in American folklore, American literature, and American cultural history. Non-American Studies students may use this course to fulfill the general education requirement (GH). Students will receive the US designation for this course, and it meets the Bachelor of Arts degree requirements.

ENGL 106: The Lynd Ward Graphic Novel Prize

1 Credits/Maximum of 3

This course is offered in tandem with The Lynd Ward Graphic Novel Prize, sponsored and administered by Penn State University (the first prize of its kind in the United States). The Lynd Ward Prize is awarded annually to the best graphic novel, fiction or non-fiction, published in the previous calendar year by a living U.S. or Canadian citizen or resident. The course provides background for the history of the graphic novel in the United States, with a focus on Lynd Ward's woodcut novels from the 1930s. Students also study the winning book, attend the award ceremony and public talk from the creator(s), and meet with the creator(s) to discuss their work. This is a one-credit course with limited meetings.

ENGL 108N: Buddhism and US Society

3 Credits

This course focuses on Buddhism in the United States. We will overview the historical factors that led to the development of Buddhism in the U.S., the many traditions that currently exist in the U.S., the role of Buddhism in the daily lives of different types of Americans, and various problems or frameworks that have characterized American Buddhism (such as race, gender, technology, and media representations). One major theme of the course is literary expressions of American Buddhism, such as the writings of Jack Kerouac and bell hooks. A second major theme, Buddhist meditation, will be explored through interdisciplinary perspectives drawing from both the humanities and social sciences. In the final portion of the class, we will focus on Buddhism in Pennsylvania, involving

students in an ethnographic exploration of the religious pluralism in our home state.

ENGL 112: Pennsylvania Literature

3 Credits

This course introduces the variety of literature that has been written and published by Pennsylvania authors from the colonial era through the present day. This course explores how the literature written in Pennsylvania relates to historical developments within the Commonwealth, and to literary, cultural, and historical developments across the United States and throughout the world. Toward that end, the course provides a chronological survey of developments in the literature of Pennsylvania through readings from the work of Pennsylvania authors whose work illuminates developments in literary history and exemplifies important aspects of Pennsylvania history and culture.

ENGL 114: Modern Pagan Traditions and Texts

3 Credits

This course introduces students to modern Paganism through the literary traditions that inform contemporary Pagan religions. From popular culture approaches to Norse myths to the ancient tales of Slavic folklore and Celtic Fairy Faith, this course builds understanding of the beliefs and foundational narratives of modern Pagan religion(s). Students will examine some of the stories of Norse, Slavic, Hellenic, Egyptian, and Celtic mythology from a Pagan perspective. Finally, this course will engage students in interpretation and analysis of the literary and religious significance of these stories.

ENGL 115N: Arts of Love

3 Credits

This course will familiarize students with expressions of love in Western arts and literature. Students will analyze the artistic, philosophical and literary representations of courtship, friendship, homoeroticism, sexuality, marriage, adultery, and familial bonds and explore how the preceding phenomena are inflected by gender roles, race and miscegenation, and class and religious differences. We will also trace the way particular narratives about love have been adapted by different artistic media. Love is a universal human experience and its study transcends disciplinary boundaries. It is a linchpin of human existence, uniting and enriching nearly any subject worthy of serious study.

ENGL 120: Difference in Early Literature

3 Credits

This course explores representations of identity and community in early literature, from classical traditions through the early modern era. How did early literature engage issues of cultural contact, conflict, and/or exchange, such as those created through trade, warfare, religious conflict, migration and/or travel? How did early writers conceive of and represent difference, and to what ideological and/or aesthetic end? Additionally, students will consider how these early representations have influenced later cultural productions and events, from modern politics (nationalism, neo-paganism) to popular entertainments (films, video games, graphic novels).

ENGL 124: Legal Fictions: Law, Justice, Literature

3 Credits

This course explores intersections between literature and law, with attention to issues of social justice. How are social concepts and procedures of law and justice represented in different texts and media over time, both fictional and nonfictional? How have texts worked to define and justify the law and its application at different historical moments in the United States? Course content includes select literary works with legal content and themes, and the ways in which those texts represent different forms of justice, crime, and punishment. Students may also analyze legal writing (judicial decisions, jurisprudence, statutes); examples of the 'true crime' genre (visual and textual); memoir; and/or essay writing.

ENGL 125: On the Farm: Agriculture and Literature

3 Credits

This course explores representations of farming in literature, with a focus on American texts. How have literary and popular texts shaped cultural perceptions of agriculture in the United States? How have novels, poetry, drama, and films defined and challenged cultural understanding of the practices, participants, and values (economic, cultural, ethical) of farming? Topics might include representations of the family farm and its significance, concepts of property and cultivation, historical developments in agri-business, and/or the U.S. farm and farmer in the cultural imagination.

ENGL 126: Bad Literature

3 Credits

This course explores texts and traditions that were once considered non-literary but are now the object of critical inquiry and/or aesthetic appreciation. In other words, how does trash become literature? Course content includes texts and media once considered to be in bad taste or to have come from disreputable publishers and venues. Other considerations might include aesthetic and commercial issues (genre and series fiction, bestsellers); the presence of polemics and propaganda in fiction; and/or the formation and influence of different processes of critical exclusion and inclusion.

General Education: Humanities (GH)
 GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

ENGL 128N: The Holocaust in Film and Literature

3 Credits

This class studies how art, literature, film, and other media can help us to gain a perspective on one of the most horrific events in human history, the Holocaust: the genocidal murder of more than six million men, women, and children (mostly Jewish) under the Nazi regime during World War II. We will also examine the theoretical questions involved in any attempt to capture what appears to be beyond our comprehension, in terms of moral outrage and the sheer scale, inhumanity, and bureaucratic efficiency. To this end we will study literary works, such as Primo Levi's *Survival in Auschwitz*, films such as Steven Spielberg's *Schindler's List*, Roman Polanski's *The Pianist*, and Roberto Benigni's *Life is Beautiful*, as well as photographs, poems, artworks, installations, museum architecture, the design of monuments and other artifacts. We will also examine questions of memorialization (Holocaust museums and memorials), national guilt, survivor's guilt, stigmatization, and the ethics of historical representation.

ENGL 129: Shakespeare

3 Credits

English 129 constitutes a broad introduction to Shakespeare's dramatic works from a variety of thematic, historical, formal, and/or generic vantages. Students practice close reading Shakespeare's language while also learning how his plays reflect upon the social and theatrical conventions of the historical period in which they were written and performed. The class will consider issues such as gender, social class, politics, sexuality, and race, as students learn how early modern perspectives on these issues may differ from their own. In order to analyze how Shakespeare's plays continue to be adapted and transformed around the world, the class may also involve the study of modern stage and film performances of Shakespeare. This class prepares students for advanced courses in early modern literatures as well as other academic courses that engage in the verbal and written analysis of complex written texts.

ENGL 130: Reading Popular Texts

3 Credits

READING POPULAR TEXTS explores a variety of popular texts across various media with the goal of enabling students to sharpen their ability to interpret the social, political, and cultural significance of such texts in the contemporary world. Since these texts are primarily examples of popular culture-pervasive, selfreplicating, commercialized artifacts of the contemporary scene-they are familiar to the general student outside the classroom. Too often, however, students have not seen such texts subjected to the same kind of critical readings more elite cultural forms (e.g., canonized literature, art, and music). The purpose of the course is fulfilled if such students come away from it with a sharpened awareness of the role that popular texts play in their daily lives and the means to discuss and explain their influence-in short, to read their culture more critically.

General Education: Humanities (GH)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

ENGL 132: Jewish American Literature

3 Credits

This course will provide an introduction to Jewish American literature through a historical survey of the tradition's key texts, figures, and themes. The course will focus on the defining aspects of the literature and on what the literature "thinks" about Jewish American culture and identity. But rather than assuming a unity to Jewish-American culture, this course will use Jewish literature to seek ways of articulating and representing both the points of cohesion and the points of divergence that characterize Jewish life in America. The United States has absorbed large numbers of Jewish immigrants hailing from many parts of the world, holding many different ideas about Jewish practice, and affiliating themselves with many different political, social, and cultural traditions. Moreover, Jews have settled and made homes in a wide variety of American communities. This course aims to explore Jewish American culture's marked diversity by offering a literary window onto the major fault-lines running through Jewish American culture: lines demarcated by gender, by political affiliation, by geography, by pre-immigration community by religious practice, by attitude toward world Jewry, by national allegiance, and by minhag (or custom), to name just a few. The class therefore provides an opportunity to consider the constitution, origin, and development of Jewish American's identity and social formations by looking at how that identity and those social formations exist and what they "do" in literature written by and about Jews in America. Materials will consist predominantly of primary texts, including prose fiction and nonfiction, poetry, drama, and film. Course methodology will emphasize the close reading of these texts. The course complements offerings in Jewish Studies and English, and it will satisfy the GH and US requirements. Most obviously, the course will offer students of Jewish literature, world literature, and American literature an opportunity for contextualization. It enables students in Jewish Studies to study the rich literature of American Jews, and it adds to courses covering Jewish American history, religion, and culture. The course offers students in English a valuable, sustained introduction to an important U.S. and world sub-culture.

ENGL 133: Modern American Literature to World War II

3 Credits

ENGL 133 Modern American Literature to World War II (3) (GH)(BA)(US)
This course meets the Bachelor of Arts degree requirements. ENGL 133 will constitute a wide ranging study of modernist American literature, and may include novels, short stories, poems, plays, and non-fictional prose, written roughly between the turn of the 19th century and the end of the Second World War. The class will approach this literature from a variety of thematic, historical, and/or generic vantages. Topics under consideration

will vary from class to class, but may include a chronological introduction to the development of modernist American literature, a consideration of a principle theme or themes common to modernist American literature through a number of works from across the period, a consideration of a number of modernist works in the context of historical events central to the period, such as the American participation in the First World War and/or the effect on American literature of the ensuing world-wide economic depression. This class will prepare students for advanced courses in modernist literatures as well as other academic courses that engage in the verbal and written analysis of complex written texts. The course may be used as English Major elective credit or as credit towards the English Minor. Non-English majors may use this course to fulfill a general education, U.S. cultures, or Bachelor of Arts/Humanities requirement.

ENGL 134: American Comedy

3 Credits

ENGL 134 serves as a survey of and introduction to strands of American comedy and satire from its eighteenth- and nineteenth-century roots through its many directions in the twentieth century. Students will read works from multiple literary genres-poetry, novel, short story, drama, and essay, for instance. The course will help students to understand how both formal and contextual considerations shape American comedy through the centuries. Authors under consideration will vary from class to class, but selected texts will represent many variations of comedy embodied in American literature and present across an evolving media landscape. ENGL 134 is a General Education course in the General Humanities domain. ENGL 134 can also be used as a requirement for the English major and minor.

ENGL 137H: Rhetoric and Civic Life I

3 Credits

Rhetoric and Civic Life (RCL) is a year-long honors course offering comprehensive training in oral, written, visual, and digital communication. It unites these various modes under the flexible art of rhetoric and uses rhetoric both to strengthen communication skills and to sharpen awareness of the challenges and advantages presented by oral, written, visual, and digital modes. This portion of the course, CAS/ENGL 137 focuses particularly on two critical academic capacities: analyzing and contextualizing. In this semester, students learn to rigorously examine the rhetoric surrounding them, compellingly present their findings in various modes, and thoughtfully contextualize their research. In this course, students will: -Develop a rich understanding of rhetorical concepts - Practice application of concepts and terms in expressing understanding of effectiveness of rhetoric through analysis and contextualization of existing texts -Enhance communication skills by practicing and applying in a variety of communication modes (written, oral, digital)

ENGL 138T: Rhetoric and Civic Life II

3 Credits

This course builds rhetorical skills in oral, written, visual, and digital contexts and introduces deliberation and advocacy in civic and disciplinary spheres. CAS (ENGL) 138T Rhetoric and Civic Life II (3) (GWS)ENGL/CAS 138T, Rhetoric and Civic Life II, expands knowledge and aptitudes built in ENGL/CAS 137H by asking students to use rhetorical skills and principles to develop strategies for persuasion and advocacy in the context of civic issues. The course continues the multimodal emphasis-the focus on oral, written, visual, and digital communication-used in 137H and adds new components as well. Students will develop a repertoire of communication skills through hands-on practice at composing and delivering speeches and essays, and they will work with digital media to create multimedia texts, podcasts, and websites. Students will reflect on these different modes as themselves rhetorical choices. The course's civic and ethical components take center stage

as students learn how to deliberate important public issues thoughtfully and with civility and respect. They will learn the difference between persuasion and advocacy and develop strategies for both in the context of pertinent local, national, and global issues. They will participate in a public deliberation forum on topics they generate and vote on. The forum will be organized to allow small deliberative action groups as well as large forum-style meetings. The course focuses on ethics in many contexts, e.g., community action and public deliberation; ethics of persuasion; ethical controversies in the disciplines. Students will be encouraged to explore percolating disciplinary interests and to share knowledge in online disciplinary communities. Students will work throughout the semester to design and build a final electronic portfolio that represents their academic work with an eye to their imagined professional futures. The portfolio assignment offers students an opportunity to reflect on their work, assessing the merits and themes of inquiries, and to curate and present their work to both targeted and broad online audiences.

ENGL 139: African American Literature

3 Credits

This course offers an introduction to African American literature from the early writings of slavery and freedom to the works of present-day African American authors. We will explore the major themes, literary traditions and narrative strategies that merge and shape this body of literature, considering, for example, the influence of double-consciousness, questions of authenticity and performance, representations of blackness and whiteness, the significance of place, and the persistent presence of folklore and vernacular traditions. Our analyses of texts will be attentive to the intersections of race, class, gender, and sexuality, and by the end of the course you will be able to discuss fluently several literary techniques and strategies including irony, satire, narration, voice, characterization, imagery, style and setting. We will situate texts in their various historical and cultural contexts, and you will be introduced to key literary concepts and terms that should inform your reading and writing about these texts. You will learn how to analyze literature, do close and careful readings of texts and write persuasively about literary works. Students will engage in thoughtful, creative and open-minded class discussions, analyze literature and do close and careful readings of texts.

ENGL 140: Contemporary Literature

3 Credits

Writers such as Baldwin, Beckett, Bellow, Ellison, Gordimer, Lessing, Lowell, Mailer, Naipaul, Pinter, Plath, Pynchon, Rushdie, and Walker. ENGL 140 Contemporary Literature (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. ENGL 140 will constitute a wide-ranging study of contemporary literature written in English, including novels, short stories, poems, plays, and prose, written roughly between the end of the Second World War and the present. The class will approach this literature from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Baldwin, Beckett, Bellow, Ellison, Erdrich, Delillo, Kingston, Lee, Pynchon, Gordimer, Lessing, Lowell, Mailer, Naipaul, Pinter, Plath, Rushdie, Silko, and Walker. Topics under consideration will vary from class to class, but may include a chronological introduction to the development of contemporary literature, a consideration of a principle theme or themes common to contemporary literature through a number of works from across the period, a consideration of a number of contemporary works in the context of historical events central to the period, a consideration of a number of contemporary works in the context of formal or aesthetic elements common to those works and their various effects. Time allotted for the study of the works under consideration will vary. This class will prepare students for advanced courses in post-modern and contemporary literatures as well as other academic courses that engage in the verbal and written analysis of complex written texts. Students will be evaluated by means of essays written in and out of class, essay exams, term-long reading journals, and class participation. Students should expect to complete a minimum of three written assignments in the course of the term. The course may be used as English major elective credit or as credit towards the English minor. Non-English majors may use this course to fulfill a General Education or Bachelor of Arts/Humanities. The course will be offered once a year with 60 seats per offering.

ENGL 141N: African American Read-In Engaged Learning Experience

1-3 Credits/Maximum of 6

This course will allow students to study African American literature, culture, history, and arts in connection with an annual public event, the African American Read-In (AARI). The AARI, promoting literacy and appreciation of African American literature, is a national event established in 1990 under the auspices of the National Council of Teachers of English. It has become a regular feature of Black History Month celebrated by community, neighborhood, and church groups as well as schools and institutions of higher education throughout the United States and elsewhere on a given Sunday and Monday in February attracting more than a million participants annually. This course offers students an engaged learning experience in which they will produce original intellectual and artistic content to be presented publicly at an AARI event on campus. Students will study texts from a range of historical periods and/or genres, and thus gain a solid introduction to the African American literary tradition. At the same time, the primary organizing principle of the course will be a particular theme that both allows a broad and coherent overview of a significant cultural or historical topic and engages issues of cultural diversity in the United States. The specific theme, thus, will bring the study of African American literature into a broader interdisciplinary context that intersects with African American culture, history, identity, and the struggle for equality. Students will study texts that relate to this annual theme and participate in a relevant field trip (museum, theater, cultural site, library, etc.) to deepen their understanding of the significance and contexts, social, historical, cultural, artistic of these materials and this theme. They will then develop this knowledge through creative and critical engagements into exhibitions, presentations, or performances to communicate their insights about a particular author, text, or topic in the African American literary tradition. As shapers of the AARI program on their campus, class members will also have a voice in designing and planning the AARI as well as a stake in its overall success. As this course necessarily spans semesters, students who enroll in the Fall course will be expected to enroll in the Spring course in order to present their projects at the AARI in February. Only students who were enrolled in the Fall course will be permitted to enroll in the Spring, as it is the culmination of the same course.

ENGL 142N: Science in Literature

3 Credits

The course explores two streams in parallel. Students will examine selected historic landmarks in science (e.g. evolution, atomic energy/weapons, climate change, biotechnology), with a focus on common misconceptions about the facts and practice of science. The course

will also examine the development of literary and popular portrayals of science and scientists in their political, economic, social and cultural contexts, paired to these particular scientific developments. By considering past and current scientific problems, students will refine their quantitative and analytical skills. By considering scientific writing, novels, short stories, graphic novels, cinema, poetry, and other forms, students will refine their critical and reflective writing and speaking about both the rhetorical and discursive practices of science writing, and the social and cultural impact of literature in popular understandings of science.

ENGL 144: Everyday Rhetoric

3 Credits

This course provides a general introduction to the practices and traditions of rhetoric, as well as its presence and use in daily life. How do speakers and writers use language to move audiences in strategic ways? How have different forms of technology facilitated or limited different modes of persuasion? Additional topics include the consideration of different rhetorical situations, the study of the enduring influence of established rhetorical traditions and devices, and the rhetorical analysis of current popular texts and media (written, aural, visual, digital).

ENGL 145: Modern Irish Literature

3 Credits

Students will learn about Irish literature in the twentieth century and beyond; focus on the interplay of political, social, and cultural forces brought to bear on Irish literature, history, and politics from the early twentieth century to the present. The course will begin with the socio-political implications of the Home Rule movement and the important figures associated with the rise of the Irish Literary Renaissance. Instructors will spend much of the course focusing on canonical figures of modern Irish Literature (such as Joyce, Yeats, Synge, Beckett, Shaw, O'Casey, O'Flaherty, and Lady Gregory). The course will introduce students to the political context and themes of Irish Literary Renaissance (Irish Literary Renaissance), including cultural nationalism. Instructors may draw upon contemporary literary critics, such as Declan Kiberd, Seamus Deane, and Terence Brown, by way of introduction to the ILR. The class will then move on to Post-World War II Irish Literature. In this component of the course, instructors will select literature from writers who began publishing in the Post-War era. These authors may be examined as they follow the legacy of the ILR, or as they challenge it and forge new courses for Irish literature. In other words, these authors can be writing within or against the traditions and themes of ILR artists' or, more likely, doing both things at once. This component of the course will help students see the enduring legacy of the themes and forms of

the ILR, as Irish authors continually reckon with its massive political and cultural inheritance. The course fulfills IL requirements in its emphasis on postcolonial relationships between Irish identity and culture and issues of British colonial occupation and the influence of American popular culture in the later twentieth century. The interpretive framework of postcolonial studies will inform the instructor's approach to the literature. Postcolonial studies seeks to examine the conditions and tropes of colonial and post-colonial writers and peoples. While postcolonial studies offers broad theories and concepts that can be applied to any postcolonial scene, the movement nonetheless has an interest in studying and honoring the regional particularities and the specific reaction of its writers to the postcolonial moment. This interplay of the unifying, international experience of colonialism with the particularity of individual nations and writers helps students to become sensitive to ideas of nation, unity, and difference. More so, the tropes of postcolonial literature, and Irish literature especially—focus on concepts of hybridity, the Other, contact zones, modernity vs. tradition, national identity, and personal identity, all on which seek to understand the self and others within an intercultural context. The literature of the IRL also explores the corrosive effects of British imperialism, which helps students to consider whether might makes right; and interrogate various forms of cultural imperialism, then and now. The literature of the IRL also promotes themes of intercultural understanding, featuring examples of reconciliation and compromise between tradition and modernity, and, more importantly, between Irish, American, and British characters. Assignments will help students focus on issues of identity construction, and social and political conflicts within and between cultures (Ireland in relationship to British and American culture and influence) within a post-colonial context.

ENGL 161N: The Pursuit of Happiness in American Life: Historical Literature and Modern Practice

3 Credits

When Thomas Jefferson elevated one pursuit to stand with life and liberty as inalienable rights, he eschewed others. The Declaration of Independence features the pursuit of happiness rather than that of amusements, consumer goods, status, money, or ease. Happiness carried a history of deeper meanings in philosophy and religion. In 1776, "happiness" peppered discussions of individualism, rights, civilization, economics, and government, and echoed Ancient Greek dialogues about virtue and civil society. In America, "happiness" joined the religious language of salvation, rapture, and joy to define states of grace. By the twentieth century, happiness became suspect as the term frequently represented a superficial type of enjoyment in needless consumption manipulated through marketing. As happiness came to be twined with wealth and goods, so too did it align increasingly with success in all pursuits. Happiness became a form of winning and a status marker whose overt pursuit was as likely to lead to psychological and social problems as to health. We open with ancient philosophers and modern positive psychologists. The pursuit of happiness reached zenith speed in the history of American literature. From transcendentalists, to pragmatists, self-help, children's fantasy, psychoanalysis, or post-modernism, genres fell out of themselves in the pursuit to merely understand happiness. Novels, poems, memoirs,

films, popular psychology, medical literature, memes, and blogs addressed happiness from nearly every conceivable angle to explore strategies such as choosing positive thoughts; stilling thoughts; cultivating enriching interests and habits; influencing our moods and emotions; and optimizing strategies for securing the resources, skill-sets, possessions, and relationships that encourage happiness. Some of these achievements aligned with health and economic benefits and introduced limitations in access or cultural relevance. Bio-behaviorists are exploring correlation vs. causation and ways of assessing social and individual well-being. Bringing modern bio-behavioral methodologies into the chronological narrative creates unprecedented opportunities for integrative study. Experiential elements of wellness fulfill goals of General Health and Wellness, identifying "wellness as a positive state of well-being, not merely the absence of disease." Students will learn the most promising research on generating tangible, healthful benefits in individuals and communities and be introduced to sources for further learning, continuing to learn and pursue long-term happiness.

ENGL 162N: Communicating Care

3 Credits

Communicating Care ENGL 162N / SOC 162N / CAS 162N What do we talk about when we talk about health? Our states of well-being and illness are topics that, like the weather, drive our daily conversations, but we rarely have time to study and practice these vital exchanges. Spoken in emergency rooms or on long-distance calls, by medical professionals, family members, or strangers making small talk, the languages we use to share pain and recovery require our knowledge of long-established scripts and our willingness to improvise. By exploring how these encounters draw from and work as textual and dramatic performances, this course will guide students to achieve a new level of literacy in the most essential communicative art of caring. Students will analyze health conversations in literary texts, such as short stories, poems, memoirs, and graphic novels. They will explore real-life scenarios drawn from their own experiences, fieldwork, social science theories, and published case studies. Developing skills in the humanities (GH), they will see how subjective, often individual experience, historical perspectives, and creative expression help people to communicate about health and care. Developing their abilities in the social and behavioral sciences (GS), they will see how theory provides insights to predict and understand health and practices of care, investigate objective perspectives and recognize the contributions of fieldwork and data-driven studies to analyzing and improving communication when health is a main concern. They will integrate these methodologies especially to pursue these fields' common goals of making beneficial connections between individuals and groups, and managing private and public life.

ENGL 163N: Defining the Animal

3 Credits

Is it possible to comprehend the mind of another species? Can humans communicate with other animals? Do they have anything to say? In 1859, the publication of Darwin's *The Origin of Species* set the stage for the scientific investigation of animal minds. This course studies both scientific and non-scientific approaches to the study of thinking and emotion in animals. Students contemplate what researchers, artists, philosophers, writers and filmmakers learn by investigating the minds of animals, focusing on breakthroughs as well as misconceptions. Students conduct their own research on such topics as animal cognition and intelligence, animal language, anthropomorphism, animal testing and bioethics. Examples will be drawn from a range of disciplines in an effort to answer the central question: what is an animal, and what is a human?

ENGL 165N: Work and Literature

3 Credits

If you get a job out of college, work eight hours a day, fifty weeks a year, and retire at age 65, at that point you have will spent roughly one third of your adult, waking life at work. And that is just paid work. Add in housework, childcare, and other forms of unpaid labor and the share of your waking hours devoted to work creeps closer to one half. And those calculations may actually underestimate the influence work has over your life. What you do will determine where you live, how you live, and, perhaps, whether you believe you have ultimately done something meaningful with your life. With work playing such an outsized role in a life, you may as well understand it as best you can. Hence this class. In it, we approach the question of work from the perspective of two disciplines: labor and employment relations and literature. The field of labor and employment relations asks about the social and economic forces—markets, compensation, globalization, immigration, etc.—that shape work. By contrast, the discipline of literature takes a more subjective approach to the question of work. Very broadly speaking, it shows how the forces that shape work play out in individual lives. In short, it shows how individuals feel about the work they do or, in the case of the unemployed, they do not do. Together, the two disciplines provide a global and personal perspective on one of the most important parts of our lives. Students registering for the course will read representative selections from both domains, engage in course discussions, take exams, and write essays as they explore the variety of ways both labor and employment relations and Literature can prepare them for their work lives and help them understand the place of work in culture and society.

ENGL 170N: Introduction to American Folklore

3 Credits

This course introduces the verbal and nonverbal genres of folklore that have influenced literature, economics, politics and culture in North America. Approaching folklore as traditional patterns, practices, and performances, the course explains folklore to be fundamental to human cultural life, and therefore an intimate part of the identities and values that Americans express in contemporary society. It will explore these identities and values on various levels: the individual, the family, the community, the region, the nation, and the world. Folklore, you will discover, is not something confined to the past, but all around us in the present, and is continually emerging anew. Students will read and discuss a number of folk genres, including folk speech, narratives, beliefs and religious experiences, use of space, and material culture. Students will learn strategies for researching, "reading," and understanding the verbal and nonverbal folklore of diverse communities. The class may include readings on cultural traditions drawn from Native American, Latinx, African American, and immigrant cultures, as well as other folk groups defined by social identities such as age, occupation, gender, sexuality, or religion. By the end of the course, students will be able to recognize the cultural, political, and historical implications of such traditions. Assignments will include a fieldwork project; involving first-hand interviews, site observations, and archival research; to document, annotate, and analyze oral traditions. Students will be evaluated on the basis of class discussion, oral presentation and group exercises, in-class examinations, and the fieldwork portfolio.

ENGL 179: Exploring the Literature of Food: Current Trends in American Food Writing and Environmentalism

3 Credits

"Exploring the Literature of Food: Current Trends in American Food Writing and Environmentalism" begins by demonstrating the deep history of environmentally-minded agriculture in American thought. In the sample course, an understanding of the relationship between environmentalism and farming is developed through a consideration of thinking about food and food production in texts from the seventeenth through nineteenth centuries. These texts might touch on the importance of notions about the political importance of yeoman farmers, thoughts on the blending of cultivation and wildness, and late-nineteenth-century critiques of cruel and unsanitary industrial food production. The class might then turn to texts that argue for a return to sustainable agriculture in terms of Jeffersonian democracy and the ideal of the citizen-farmer. The

topics raised in the first portion of the course include environmentalism, the role of labor in America, and the history of the industrialization of farming in the post-World War II era. From these origins, the course progresses into a consideration of the contemporary moment. It is clear that a great deal of change has occurred since mid-twentieth century critiques, and students are encouraged to trace the development of topics from the first portion of the syllabus in the later material. For example, the development of organic food standards by the FDA has resulted in a new system of organic industrial agriculture, which is compared to small scale agriculture by Michael Pollan, and Eric Schlosser updates muckraking investigations of labor and sanitation by turning to modern investigative journalism into the production of meat and the standards of uniformity set by fast food chains. The course ends with a consideration of the future of food as writers have imagined it. With a recommended experiential component, students are learning about the history of food production and writing about it while they encounter farmers who practice sustainable agriculture. Ideally, students learn from both the literature and from the farmer how something as practical as the production of food can be informed by philosophy and literature.

ENGL 180: Literature and the Natural World

3 Credits

This course is an introduction to literature that takes as its subject the natural world. Students will practice the methods of ecologically oriented literary analysis (eco-criticism) and they will learn to contextualize the major historical periods, movements, and arguments for the necessity of literature about the natural world as it intersects with environmental studies. The course can cover anything considered "literature," but namely fiction, poetry, nonfiction, and drama. Students will examine not only strategies of description, but also literature's unique ability to showcase conflict, reflection, and insight when it comes to protecting our environment. The course should include literature that addresses the human impact on nature. Students should learn about familiar environments and unfamiliar environments. Students should also come to understand the motivations of the authors.

ENGL 181A: Adventure Literature: Exploring the Chesapeake Bay

4.5 Credits

Examines the interconnection of culture and nature in the Chesapeake Bay region through the literature of the region. ENGL 181A Adventure Literature: Exploring the Chesapeake Bay (4.5) The course focuses on a specific place—the Chesapeake Bay and its watershed—that has generated a distinctive regional identity and literature from its natural and social context. The course begins consideration of the concept of watershed, both as a geographical concept and a literary metaphor,

before turning to an examination of the culture(s) and nature of the largest and most important tributary of the Bay, the Susquehanna River. Students will read texts associated with the history and the development of the Susquehanna, with some emphasis on logging, rafting, mining, and hydropower development. Readings here should aim at helping students see how a regional cultural identity has evolved from the river's geography and economics. Focus on the Bay itself, students can learn similar lessons. We begin by looking at the rich native cultures that occupied the region before the advent of Europeans and then move to initial European exploration and settlement. The class might then focus on development (agricultural, cultural, and industrial) of the Bay and Bay Region generally, through readings that might include regional histories and literary works like James Michener's *Chesapeake: A Novel*. Significant attention should be devoted to the sub-culture of the Chesapeake waterman, a regional identity that has generated its own mythology and folklore and has been the focus for numerous writers. Texts might be chosen to show the role nostalgia plays in conceptions of the Bay or the ways in which issues of race, class, and gender are raised by examining representations of the waterman culture. What students should see is how literature and culture are transformed over time, while resonances of former place identities remain. Finally, the course will turn to the Bay as it is today and how the representation of place and regional identity in literature has changed over time. This course was designed to include out-of-the-classroom educational experiences on the Susquehanna River and other tributaries of the Bay and on the Chesapeake Bay itself. The trips should provide students opportunities to fully understand the interconnections of nature and culture in the Bay region. They should also allow students the chance to travel in the footsteps of the writers they read in venues throughout the region. The goal is to both see how a distinctive culture derived from the natural circumstances of the Chesapeake and to understand how that culture might continue (or not) into the future.

ENGL 181B: Adventure Literature: Exploring Cape Cod

4.5 Credits

Examines the interconnection of culture and nature on Cape Cod through considerations of texts in various literary genres that have contributed to development of a distinctive regional identity and culture. ENGL 181B Adventure Literature: Exploring Cape Cod (4.5) The purpose of this course is to teach students how natural and cultural contexts contribute to the production of meaning in literary texts. In this case, the locality that serves as the focus of study is Cape Cod, arguably the most written-about locale in the United States. The course begins with classes devoted to the Cape's natural history its formation and the ever-present effect of wind and water and then moves to its early human history. Readings in the first part of the course will focus on the period just before and after European settlement and readings could include selections from William Bradford's *Of Plymouth Plantation* or Mourt's *Relation*, both contemporaneous accounts of the Pilgrim's landing on and exploration of the Cape and appropriate chapters from Paul Schneider's history of the Cape, *The Enduring Shore*, and Nathaniel Philbrick's excellent account of the Pilgrim adventure, *Mayflower*. These readings could be enhanced

with selections on the European settlement of the Cape in Robert Finch's anthology of writing about the Cape, *A Place Apart*. This introductory material will lead to the major part of the course, which will be devoted to reading and study of classic literature about the Cape, such as Thoreau's *Cape Cod*, Henry Beston's *The Outermost House*, Wyman Richardson's *The House on Nauset Marsh*, and John Hay's *The Great Beach*, as well as selections of poetry poets associated with the Cape. Each of these works, in its time, represents the writer's attempt to somehow capture and come to terms with the landscape and natural exigencies of the Cape. The focus will then turn to representations of the Cape in the work of contemporary writers, and might include work by Michael Cunningham, Annie Dillard, David Gessner, Cynthia Huntington, and Mary Oliver among others. The course ends with a brief look at Cape Cod's literary and natural future as it has been imagined over the last 140 years. This course was designed to include an out-of-the-classroom education experience on Cape Cod. The trip to the cape should include experiences related to the cultural and natural history of the region, and it should provide students the opportunities to walk in the footsteps of William Bradford, Thoreau, Beston, and Hay, as well as opportunities to see for themselves how the natural features that have inspired the classic and contemporary writers of the Cape will continue to inspire future generations of artists.

ENGL 181C: The Beach: Exploring the Literature of the Atlantic Shore

4.5 Credits

ENGL 181C - "The Beach: Exploring the Literature of the Atlantic Shore" begins with some exploration of the dynamic forces at work on the barrier beach, with special attention to the ways in which great literature has taken what is described in the scientific literature and turned it into art. Examples for discussion are drawn from the work of such writers as Rachael Carson and Henry Beston. The general concerns of the course then move to environmental ethics, specifically as ethical questions are embodied in literature's representation of the human relationship with the other-than-human world, from such difficult-to-personify species as starfish, snakes, and spiders. General ethical questions then lead to specific treatments of human and wild animal interaction by various writers. The point is to explore how writers represent the optimal sort of relationship humans can have with the wild world, and what such representation might mean to the ways we personally interact with nature. From these opening considerations, the course turns to an examination of the way in which writers who focus on a specific region of the coast—South Atlantic barrier islands, for example—establish a sense of the place in their writing. The course then narrows its focus even more, moving from a consideration of a regional cultural identity to that of specific towns or narrowly defined areas within the general region. This narrowed subject is explored in specific detail, beginning with pre-European cultures, the first explorers and settlers and then moving on to other aspects of the American culture history that make the subject area distinctive. For example, a course on the Low Country of South Carolina might start with the accounts of John Lawson, who published his journal of his own trip up the Santee River in 1701, move to accounts of the rice culture so important to the region in the nineteenth century and to the an examination of the Gullah Geechee culture established by West African

slaves on Low Country plantations, and then move to writing from more recent writers, all of which help to define the area's distinctive cultural and particularly its literary identity.

ENGL 181D: Adventure Literature: Exploring the Literature of American Wilderness

3 Credits

The purpose of ENGL 181D - "Exploring the Literature of American Wilderness" is to study the literature and ideas associated with American wilderness in an experiential context; that is, the heart of this course should be an extended backpacking trip into a federally protected wilderness preserve. So the basic assumption on which this course is founded is that our understanding of literature and other cultural concerns can be enhanced by knowledge of and experience in a place. To achieve its purpose, this course will expose students to the following: - The history of wilderness in American culture, including the ongoing political debate about the meaning, value, and place of wilderness/wildness in that culture. - A representative sampling of the writing that has been directly inspired by wilderness experience. - Philosophical ideas directly associated with wilderness experience. - The rudiments of safe and low-impact backcountry travel and the manner in which to engage in that travel most ethically. - The direct experience of legally protects wilderness itself. - An opportunity, however briefly, to experiment with the Thoreavian notion of "living deliberately." To accomplish this purpose, students will be asked to accomplish some reading and writing (of various types). In a version of this course previously offered, the exploration of the literary representation of wilderness over time—from Puritan historians and Enlightenment philosophers; to Thoreau, John Muir, and Theodore Roosevelt; to contemporary poets, novelists and literary journalists—is framed by reading Roderick Nash's standard history of wilderness in the United States, *Wilderness and the American Mind*

ENGL 182: Literature and Empire

3 Credits

This course examines literature written in English from countries that were once part of the British Empire or some other European empire. The class will approach this literature from a variety of thematic, historical, and/r generic perspectives. Topics under consideration will vary, but the course will often discuss matters of colonialism, race, and ethnicity, as well as matters of religion, gender, sexual orientation, and global contexts. The principle emphasis of the works in this course will be the consideration of non-European/ non-American societies and the differences between their culture and that of Europeans or Americans. This class will accordingly prepare students to consider social and

cultural problems from a variety of cultural perspectives. This course meets the Bachelor of Arts degree requirements. This course may be used as English Major elective credits or as credit towards the English Minor.

ENGL 182A: Literature and Empire

3 Credits

Literature written in English from countries that were once part of the British Empire or some other European empire., e.g., India, Canada, South Africa, and others. ENGL 182A Literature and Empire (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. English 182A will constitute a wide ranging study of literature written in English, including novels, short stories, poems, plays, and prose, from countries that were once part of the British Empire or some other European empire. The class will approach this literature from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Chinua Achebe, Buchi Emecheta, Alan Paton, David Malouf, Robertson Davies, Ngugi Wa Thiongo, J. M. Coetzee, R. K. Narayan, Amitabha Ghosh, Salman Rushdie, Christina Stead, Thomas Keneally, Jill Ker Conway, V. S. Naipaul, Wilson Harris, and Michael Ondaatje. Topics under consideration will vary from class to class, but the course will often discuss matters of race and ethnicity, as well as matters of religion, gender, sexual orientation and global context, where appropriate. The principle emphasis of the works in this course will be the recognition of non-European/non-American societies and the differences between their culture and that of Europeans or Americans. The conflicts generated by clashing cultures will drive the choice of readings. By the end of the course, students will have studied works from a minimum of five different cultural perspectives. This class will also prepare students to consider social and cultural problems from a variety of cultural perspectives. The course may be used as English Major elective credit or as credit towards the English Minor.

ENGL 183: Adventure Literature

3-4.5 Credits/Maximum of 12

Adventure Literature (ENGL 183) students not only read Thoreau, but like him, they travel to the mountains, the river, or the seashore; they hike, climb, and/or kayak; they interview residents with a stake in the area; and they synthesize their experiences through writing. In this course, students analyze works of fiction, poetry, and nonfiction (including scientific and historical texts) that interrogate human relationships with a specific natural environment or region. As part of the course, students visit the region that inspires that literature they explore its wild places on foot and/or by water, and meet authors, activists, and experts invested in its continued legacy. The course combines physical adventure with intellectual rigor; students of all majors will hone their writing and close reading abilities, enhance their analytical and integrative thinking skills, and gain unique insight into diverse US values, traditions, beliefs, and customs rooted in place and environmental practice.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

ENGL 183N: The Cold War in Literature, Politics, and History

3 Credits

The course will focus on the history and politics of the Cold War and its depiction in literature and film, especially in British and American literature, but also in that of other countries. Students will read political science and history texts, novels, short stories, and poetry, and view

films. Students will analyze the reasons that the Cold War has been and continues to be a major inspiration for literary production and a transformative influence on literary style. Students will be encouraged to explore alternative methodologies for research on cold war topics including the use of primary sources, for ex. documents from the intelligence community archives that have since been declassified. In addition to a class field trip, students will be encouraged to make additional site visits to appropriate institutions in U.S. intelligence history. They'll be making a series of visits to relevant sites.

ENGL 184: The Short Story

3 Credits

This course is designed to introduce students to the art of the short story and to acquaint them with some of its most talented writers. During the semester we will read short stories from various cultures and countries, ranging from stories written in the early nineteenth-century to those written within the last few years. Readings will include works from authors like Hawthorne, Melville, Tolstoy, Dostoevsky, Gogol, Bierce, Chekhov, Kafka, Chopin, Crane, Gilman, James, Cather, Joyce, Woolf, Faulkner, Hemingway, Lawrence, Orwell, O'Connor, Baldwin, Olson, Silko, Erdrich, Ondaatje, Barth, Barthelme, Atwood, Mukherjee, Walker, Tan, Calvino, Garcia Marquez, and Cortazar. All readings will be in English. This course is intended to help one learn how to read fiction, how to understand it, and how to talk about it. The desire to tell stories and to be told stories is one of the most basic human needs, and all cultures have been defined in part by the stories they hear and the stories they tell. We are not born knowing how to read the short story or any fiction for that matter. Rather it is a skill that one acquires, and the more one does it, like playing tennis or any other activity, the better one becomes at it, for we learn what to look for. We will explore the historical development of the short story genre, and examine how historical contexts relate to the content and style of the stories under discussion. We will become familiar with how stories are put together and with the vocabulary that is used to discuss fiction—terms such as plot, narrative, character, tone, language, closure, irony, imagery. and so forth. CMLIT/ENGL 184 is not required for the CmLit major but may be selected to fulfill one of the course requirements for the major or the World Literature Minor. This course also fulfills the General Education Humanities requirement, the Bachelor of Arts Humanities requirement, and International Cultures requirement.

ENGL 185: World Novel

3 Credits

Development of the modern novel in the last century (outside the British Isles and the United States); lectures, discussions, readings in translation. CMLIT 185 / ENGL 185 The Modern Novel in World Literature (3) (GH) (BA) This course meets the Bachelor of Arts degree requirements. In this course, students will read examples of the modern novel from around the world. Focusing on novels written outside of America and England, this class will explore the development of the modern novel as a genre across a number of world cultures. As an example, moving from the beginnings of literary modernism (the late nineteenth century) through the early and mid twentieth century, the course will consider works by writers such as the following: Chinua Achebe, Italo Calvino, Albert Camus, Simone deBeauvoir, Fyodor Dostoevsky, Isak Dinesen, Marguerite Duras, Natalia Ginzburg, Herman Hesse, James Joyce, Thomas Mann, Gabriel Garcia Marquez, Kenzaburo Oe, and Marcel Proust. This course will address the ways in which the world novels under consideration constitute examples of various literary forms and styles. The class will examine the differences and distances between literary movements such as social realism and magical realism, modernism and postmodernism. The goals of this course will be to hone students' critical reading and writing skills while granting them the ability to think about the modern novel as a distinct genre in a comparative global context. This course will help students to develop the analytical skills necessary to analyze complex written texts..

ENGL 190Q: Medievalism

3 Credits

In English 190Q / INART 203Q students will gain an understanding of medievalism, defined by Leslie J. Workman in 1987 as "the study of the Middle Ages, the application of medieval models to contemporary needs, and the inspiration of the Middle Ages in all forms of art and thought." As this definition suggests, understanding medievalism and, thus, the popular works students know, such as Game of Thrones and Lord of the Rings' benefit from learning something about the Middle Ages and the reach of its re-mediation across various kinds of expression. Therefore, ENGL 190Q / INART 203Q begins by introducing students to medieval works and a few of the forms that characterize it. More particularly, the medieval works to be studied are those combining more than one genre, media, and/or form. For example, students will read and listen to (or sing!) medieval lyrics, read and perform short medieval plays such as Robin Hood, be introduced to manuscripts of the bestiary with its illuminations, historiated letters, and scribal copying. They also will be introduced to Romanesque and Gothic architecture The first medievalist remediations—works adapted in other media—to be examined will be Book I of Spenser's Faerie Queene, with the woodcut of the Redcrosse Knight and Dryden/Purcell's King Arthur, which will introduce students to Early Modern English medievalism and how it reflects prevailing values in new combinations of old and new artistic forms. Still greater emphasis will be placed on the English Medieval Revival of the nineteenth century, including John Ruskin and the PreRaphaelites poetry, paintings,

and essays, as well as William Morris's poetry, painting and Arts and Crafts Movement. Then, as now, medievalism served multiple purposes, including aesthetic, political, and social. To put into practice what students learn and to engage their creativity, one assignment involves hand crafting an art project to be accompanied by an artist statement. In the last part of the course, the focus shifts to contemporary medievalist arts and theory. In keeping with the contemporary direction, another assignment asks students to remediate their handcrafted medievalist work, or to create a new one, using digital resources to engage both their creativity and understanding of key medievalist concepts.

ENGL 191: Science Fiction

3 Credits

As a genre of literature, science fiction enables human beings to model themselves as a cosmic species, a life form that imagines and inhabits an entirely new scale of being. No longer confined to a tribe, nation or tradition, science fiction narrates and explores the galactic magnitudes of both the external world of astronomical exploration (billions and billions of stars) and the inner world of subjective reality and imagination (billions and billions of neurons). This course introduces students to the surprisingly long history of science fiction as a way of exploring both the microcosm and the macrocosm, mapping a species imagining themselves into the future.

ENGL 192: The Literature of Fantasy

3 Credits

Perhaps more than any other genre of speculative fiction, fantasy is richly varied. This course examines the development of literary traditions in fantasy literature from their earliest origins in mythology and folklore, through the historical development of classic fantasy works, into the books, movies and other fictions of the modern day. The course specifically considers how the fantasy genre has incorporated a range of international traditions. The course also explores different critical and theoretical approaches to the student of fantasy literature and related artistic traditions, as surrealism and magical realism.

ENGL 193N: The Craft of Comics

3 Credits

This course combines the literary analysis of comics and graphic novels with the creative practice of making comics. Students will learn through an integrated and ongoing process of interpreting select comics texts and also making their own work in that same medium. Students will gain a technical vocabulary for discussing and assessing comics, which they will then apply to formal analysis of compositional and narrative elements in select assigned texts. This analysis will occur first in class discussion, facilitated by the instructors, and then through a sequence of individual written assignments. At the same time, students will receive formal instruction in making comics as they create their own work over the course of the semester, workshoping with peers and instructors as a way of gaining further insight into the creative and technical processes of the studied texts. Formal analysis and creative work will be coordinated and progressive across the course of the semester. The culmination of this collaborative learning would be an integrated understanding and appreciation of comics art.

ENGL 194: Women Writers

3 Credits

Short stories, novels, poetry, drama, and essays by English, American, and other English-speaking women writers. ENGL (WMNST) 194 Women Writers (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. English 194 will constitute a wide ranging study of works by American, British, and other English-speaking women writers, including novels, short stories, poems, plays, and prose. The class will approach this literature from a variety of thematic, historical, and/or generic vantages. Authors under consideration will vary from class to class, but may include writers such as Bradstreet, Wollstonecraft, C. Rosefti, M. Shelley, Austen, C. Bronte, E. Bronte, G. Eliot, D. Wordsworth, Dickinson, Wharton, Stowe, Freeman, Jewett, Fuller, H.D., Moore, Sitwell, Bishop, Brooks, Plath, Cather, Woolf, Stein, Lessing, Bowen, O'Connor, Welty, Porter, Oates, Olsen, Sarton, Gordimer, Atwood, Morrison, Kinkaid, McCarthy, and Churchill. The course seeks to make students aware of the extensive body of literature written by women through the analysis, evaluation, and appreciation of specific works by women writers. The course also seeks to help students understand the female perspectives—the varying values and interests of women—reflected in the texts at hand and to position these perspectives within wider social, historical, and political contexts. The course also seeks to make students aware of the special problems faced by both women writers and the female inhabitants of the societies they describe in their work. As a course in women's literature, ENGL/WMNST 194 concerns itself with questions of gender. In so far as some of these women writers are black or women of color, it concerns itself with questions of race and ethnicity. In as far as the course looks at women's literature in the context of men's literature, it is concerned with the inter-relationship between dominant (male) and non-dominant (female) culture in the United States as well as in Britain.

In so far as the course covers lesbian writers, it is concerned with sexual orientation. Topics under consideration will vary from class to class, but may include a chronological introduction to the development of women's literature, a consideration of a principle theme or themes common to women's literature through a number of works from across a number of historical periods, a consideration of a number of women's works in the context of historical events central to their creation, a consideration of a number of women's works in the context of formal or aesthetic elements common to those works and their various effects. This class will prepare students for advanced courses in women's literature as well as other academic courses that engage in the verbal and written analysis of complex written texts.

ENGL 200W: Introduction to Critical Reading

3 Credits

Responses to a variety of literary texts written in English that evoke different approaches. ENGL 200W Introduction to Critical Reading (3)(BA) This course meets the Bachelor of Arts degree requirements. When we read a work of literature, how do we determine what it means? Why do readers and critics come up with different interpretations of the same work? How do we decide if a literary work is valuable or not? This course addresses these and other questions by introducing students to the variety of literary questions on which critics and scholars base their interpretations of literature. Each theory poses different questions about a literary text's meanings and focuses our attention on different aspects of a text's language and background. We will examine the theory and practice the application of the following schools of criticism: formalism, psychoanalytic criticism, new historicism, Marxism, and feminism. We will apply different methods to particular literary texts, and students will practice different types of approaches in in-class writing assignments as well as in four papers (4-5 pages each). At the end of the semester, each student will put together a portfolio containing careful revisions of three of those papers as well as an introductory commentary of 1-2 pages.

Bachelor of Arts: Humanities

Writing Across the Curriculum

ENGL 201: What is Literature

3 Credits

ENGL 201 What is Literature acquaints students with theory and practice relevant to studies of narrative, lyric poetry, and drama. This course meets the Bachelor of Arts degree requirements. English 201 will familiarize students with theories and practices that are foundational for thinking about literature, and for studying narrative fiction, poetry, and drama. The course will pose such questions as what is narrative fiction?; what is poetry?; what is drama?; It will introduce students to how conventions of literary genres operate, how they generate meaning, and how they require and manipulate reader's responses. English 201 will also encourage students to explore whether or not literary discourse, as instanced in the genres that have been named, can be distinguished from other written or spoken discourses. While asking such questions, the course will acquaint students with technical vocabularies used by literary scholars and literary historians, and will provide students with sample scholarly rationales for hypothesizing the singularity of literary discourse, for constructing literary history, and for understanding literature's relation to life. It will teach students close analytic practices of reading, both those that have shaped the discipline of English studies and those emerging currently. The course will be required of all English majors and will be a part of their 36 credit degree requirement.

ENGL 202A: Effective Writing: Writing in the Social Sciences

3 Credits

ENGL 202A introduces students to the types of writing that social scientists typically do in the workplace, including research proposals, proper citation practices, literature reviews, and research reports. In discussing writing and writing activities, this class will focus on some of the more common forms of social science research - among them, experiments, interviews, observations, and surveys. Students will learn to formulate ideas and create coherent pieces of writing from the research they have conducted and read about. In short, this course will introduce students to a variety of writing and research strategies from which they can begin to develop their own identity as a social scientist. (A student may take only one course for credit from ENGL 202A, 202B, 202C, and 202D.)

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H and 4th Semester

GenEd Learning Objective: Crit and Analytical Think

ENGL 202B: Effective Writing: Writing in the Humanities

3 Credits

Instruction in writing persuasive arguments about significant issues in the humanities. (A student may take only one course for credit from ENGL 202A, 202B, 202C, and 202D.) ENGL 202B Advanced Writing in the Humanities encourages students to develop professional writing skills most likely required in humanities careers. These writing modes include professional materials and then a wider range of writing projects that may include a professional narrative, analysis of a controversy, argumentation, persuasion, and synthesis. Students may analyze a wide-variety of texts - both verbal, digital, and visual - to learn skillful argumentation with advanced writing techniques.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H and 4th Semester

GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Creative Thinking
GenEd Learning Objective: Integrative Thinking
GenEd Learning Objective: Key Literacies

ENGL 202C: Effective Writing: Technical Writing

3 Credits

Writing for students in scientific and technical disciplines. (A student may take only one course for credit from ENGL 202A, 202B, 202C, and 202D.) ENGL 202C is an advanced writing course designed to help students in science and engineering develop the writing strategies that they will need to communicate successfully on the job and to help them understand why those strategies are appropriate and effective. A key emphasis will be on the rhetorical principles of effective communication, including context analysis and defining clear, actionable purposes. Students will gain experience with a wide range of technical writing genres, including reports, descriptions, definitions, procedures, job application documents, emails, memos, and web applications. Students will also learn about the importance of document and graphic design, including how best to design communications to maximize their potential for success.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H and 4th Semester

General Education: Writing/Speaking (GWS)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

ENGL 202D: Effective Writing: Business Writing

3 Credits

Writing reports and other common forms of business communication. (A student may take only one course for credit from ENGL 202A, 202B, 202C, and 202D.) ENGL 202D is an advanced writing course designed to help students develop the writing strategies that they will need to write successfully on the job and to help them understand why those strategies are appropriate and effective. A key emphasis will be on rhetorical principles of effective communication, including audience analysis and defining clear, actionable purpose. Students will gain experience with a wide range of business writing genres, including reports, letters, job application documents, emails, memos and web applications like business blogs, online articles, social media profiles and personal branding. Students will also learn about the importance of document design, including how best to utilize headings, page layout, graphics and other visuals to maximize the potential for communication success.

Enforced Prerequisite at Enrollment: 4th Semester standing and one of the following courses: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

General Education: Writing/Speaking (GWS)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think

ENGL 202H: Effective Writing: Honors

3 Credits

ENGL 202H teaches the distinctive features of professional and scholarly writing across disciplines, while inviting students to develop their professional identities. Unlike existing 202 versions 202H is designed for students in all majors, with assignments that address more area-specific expectations while highlighting commonalities and the need

to communicate with non-specialist audiences. 202H is intended as rigorous preparation for third-year students preparing for an honors thesis or project, by examining how to identify and develop a topic, how to contextualize it within wider scholarship, and how to convey its significance within and beyond the field.

Enforced Prerequisite at Enrollment: 4th semester standing and one of the following courses: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Creative Thinking
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

ENGL 205: Children's Literature

3 Credits

As a child, what you read, or what is read to you, forms your first and foundational experience with literature. Moreover, what you read, and what is read to you, introduces you to the values that your culture holds dear. Despite its importance to individuals and their culture, we-instructors, students-only rarely approach children's literature with the same seriousness that we approach other works of literature. This course sets out to correct that. It assumes that texts like Alice's Adventures in Wonderland, Harry Potter and the Sorcerer's Stone, or Don't Let the Pigeon Drive the Bus! reward the kind of close and careful study that scholars and students usually reserve for more canonical works of literature. Students who take this course will leave it with a sense of the history and development of children's literature in English, the methods of studying children's literature, and, most of all, an understanding of how children's literature reproduces and occasionally challenges the values of the culture that produces and disseminates it. Its overall premise is that you can learn a lot about a culture-how it feels about childhood, race, gender, work, religion, and so on-by what that culture does and does not offer its children to read.

ENGL 206: Business and Literature

3 Credits

For many people, literature and business could not have less to do with each other. According to this view, literature escapes from reality to the imaginative, while nothing could be more focused on the real than business and its buying and selling of commodities and services. The problem is that no one told literary writers of this mutual incompatibility. For centuries, writers have peered into the world of business and brought back stories intended to document, inspire, and warn. True, writers have often, and sometimes unthinkingly, condemned business and those who follow it, but they have just as often had genuine insights into its workings. In this course, we will follow the relationship between literature and business over the course of modern history. Although one version of the course would begin with literature that dates back to the invention of capitalism in (more or less) the sixteenth century, our course will begin at the turn of the nineteenth century, with the Industrial Revolution in

England and the United States, and follow the literature of business up to the present. Our aim in reading is not just to understand how writers have represented business and those who pursue it, which, it has to be admitted, has often been with contempt. But, rather, in reading more sympathetic works, to understand the drama of business, why those who pursue it find it so invigorating, and why those who have historically been excluded from it-women, African Americans, colonial subjects-have been so eager to join it. Money, of course, is one answer to those questions, but it is neither the only nor the most important one.

 GenEd Learning Objective: Soc Resp and Ethic Reason

ENGL 208N: The Music of the Beatles and American Popular Culture

3 Credits

The Beatles are the most significant musical group in the history of popular music. Their songs are derived from diverse sources, such as rhythm 'n' blues, rock 'n' roll, country 'n' western, Motown, soul, folk music, folk rock, the British Music Hall, and European and Indian classical music traditions. Two ideas define their work: an emphasis on freedom, and how song texts can be interpreted in different ways. The Beatles had a great impact not only on American popular music during their heyday in the 1960s but also on the country's popular culture in which they were considered philosopher kings. Beatle albums mirrored changing trends in the culture, from the pre-Vietnam War youthfulness of A Hard Day's Night, to the psychedelia of Revolver and Sgt. Pepper, to the countercultural mindset of The White Album. This inter-domain course will focus on how the Beatles influenced American popular culture from the 1960s to the present day. It will examine how the Beatles were a part of a mid-twentieth-century British youth subculture that was shaped by the cultural attitudes of American rock 'n' roll. The course will then turn its attention to the seismic shift initiated by the Fab Four in both music and pop culture in the US from 1964 to 1970, demonstrating how it has permeated the popular culture of the 1970s to the present day. The course will enhance the appreciation of the Beatles and their music through its interdisciplinary focus, contextualizing the Fab Four's work in order to show how both popular music and culture can influence one another. One way the course will facilitate this goal is through the inclusion of selected readings from English literature and popular culture upon which students will write reflection essays.

ENGL 209: Journal or Magazine Practicum

1-6 Credits/Maximum of 8

A practicum in the editing and publishing of a magazine or journal.

Bachelor of Arts: Humanities

ENGL 210: The Process of Writing

3 Credits

Examination of the relation between fiction and nonfiction; practice in principles common to all writing.

Bachelor of Arts: Humanities

ENGL 211: Introduction to Writing Studies

3 Credits

This course introduces students to the most salient issues and theories in writing studies. Students explore contemporary theories and issues about writing in order to understand writing as a skill and a complex object of study in various professional contexts.

ENGL 211W: Introduction to Writing Studies

3 Credits

This course introduces students to the most salient issues and theories in writing studies. Students explore contemporary theories and issues about writing in order to understand writing as a skill and a complex object of study in various professional contexts. ENGL 211W Introduction to Writing Studies (3) Most students know that writing is something one does; they are less aware that writing is something one studies, and that doing so is a challenging and fascinating intellectual endeavor. In this class, students explore the multifaceted nature of writing. As the list of major topics indicates above, students study a broad range of contemporary theories and issues, from the socially-constituted self in the act of writing, to plagiarism as it is variably defined in professional settings, to the role of the writer in social change. The course is designed for both breadth and depth. Breadth is achieved through the many topics described above. The exams are designed to encourage students to make connections from one topic to another, to see how each builds on and intertwines with others. For example, early semester study on a writer's individual agency is later complicated by issues of power determined by race, class, and gender. Writers' ethical choices are made more challenging when confronted with questions of ideology and social justice. Depth is achieved through the written essays. Each essay requires that students examine a narrow topic in depth, building on an assigned reading with limited and manageable primary and secondary research. For example, students may study their own writing as intertextual, drawing conclusions about originality and creativity in the process. Throughout the course, students are encouraged to apply issues and theories to real-world situations, in such realms as professional settings, politics, media, and social justice. Several speakers come to class throughout the semester to expose students to the many kinds of writing professional writers do, the expectations and standards required of professional writers, and the avenues to success as professional writers.

Writing Across the Curriculum

ENGL 212: Introduction to Fiction Writing

3 Credits

English 212 is a course for students who want to try writing fiction for the first time and for more seasoned writers who are ready to develop greater courage for expression, complexity of craft, and skills for analysis and revision. You will find new sources of inspiration and sharpen your senses for observation. You will master the core components of fiction,

such as character, setting, point of view, dialogue, and plot, and you will learn to improve your writing by sharing and reworking it. The course typically involves short exercises designed to help you strengthen key areas of your writing; analysis of published short stories and essays for examples and advice; and, centrally, workshop settings, where you will gain experience giving and receiving generous, useful criticism. You will complete at least one longer, cohesive work of fiction, such as a short story or section of a novel. You will learn to take up the writing life with a spirit of adventure and play, even as you get serious about the disciplined work and vital stakes of making fiction. By inspiring the production, analysis, and appreciation of creative arts, this course satisfies Bachelor of Arts and General Education requirements for Arts.

Bachelor of Arts: Humanities

General Education: Arts (GA)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

ENGL 213: Introduction to Poetry Writing

3 Credits

Written exercises in the components and techniques of poetry writing in conjunction with selected readings.

Bachelor of Arts: Humanities

General Education: Arts (GA)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

ENGL 214: Introduction to Creative Nonfiction Writing

3 Credits

Introduces lyric and narrative forms in memoir writing and the personal essay. ENGL 214 Introduction to Creative Nonfiction Writing (3) Creative nonfiction borrows techniques from fiction and poetry while adhering to but also sometimes questioning notions of truth. It stretches the bounds of literary or narrative journalism by asking the reader to consider it as art, primarily, versus as testimony, fact, or information-delivery. Students taking this course will explore the genre's influences in fiction, research, and poetry; critical analyses will complement this exploration, and formal experimentation will prepare students to imagine novel relationships between form and content. Discussing traditional storytelling technique, the course introduces students to story rudiments including the inciting episode, rising and falling action, climax and denouement and the so-called swerve ending. The course also introduces students to the possibilities of the nonlinear "lyric essay" as outlined in Seneca Review and elsewhere, as well as to the "modular" essay; uses of blank space for communicating the unsayable; and how poetic style can circle elusive meaning. In exploring issues of nuance and implied or glanced-at meaning, the course also discusses the place of truth in nonfiction - differing constructions and conceptions of truth; reader expectations for factuality in a work of nonfiction; and the complications of unreliability when the fallibility of memory or a multiplicity of perspectives color testimony. Finally, the course examines the role of nontraditional structure in conveying a postmodern understanding of subjectivity, for instance by looking at the use of multiple voices and personae in the works of certain contemporary authors. While ENGL 215 teaches skills for the journalist in developing feature-style journalism and narrative personal essays,

ENGL 214, alternatively, will explore and exploit the influence of fiction, poetry, and other lyric forms. Students in this course will produce writing more appropriate to a literary journal than a news magazine; their writing will concern broad, sometimes disjunctive themes, and stray away from the nut-graf, news-hook, or even an obvious narrative focus.

ENGL 215: Introduction to General Nonfiction Writing

3 Credits

Students will be directed in a variety of commercial and professional nonfiction forms, including but not limited to blog posts, feature articles, reported narratives, investigative reporting, literary journalism, criticism, and commentary. Specifically, students will discuss the basic elements or building blocks of commercial and professional nonfiction, such as structure, setting, quotation, point of view, and narrative distance. Students will practice those techniques by producing writing exercises and longer pieces, and by reading a variety of published works that showcase these techniques and skills. Students will also participate in full-class workshops, in which each student's original writing is read and collectively discussed by the class. All students will participate in in-depth discussions of their peers' work. To hone their skills, students will practice, experiment, improvise, and revise, and in doing so, develop an appreciation for writing as a form of creative and social expression.

Bachelor of Arts: Humanities

ENGL 221: British Literature to 1798

3 Credits

Introduction to literary history and analysis; Beowulf and writers such as Chaucer, Shakespeare, Donne, Milton, Swift, Pope, and Fielding. ENGL 221 British Literature to 1798 (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. Focusing on major writers and their cultural contexts, English 221 surveys British literature to 1798. A remarkable amount of important work was produced over this period. Students will read major texts like Beowulf, Romeo and Juliet, and Tom Jones; learn about renowned authors such as Chaucer, Shakespeare, and Fielding; and be introduced to influential literary forms, such as the epic, the revenge tragedy, and the picaresque novel. The tradition of British literature evolved over periods of significant upheaval and change. Students will also learn about the shifting historical and ethical orientations that energized this tradition, from the Heroic Ethos to Christian Humanism to Neoclassicism. As an introductory survey of British literature, English 221 welcomes non majors: no previous course in literature is required. By reading and discussing some of the best-known works in British literature, students will sharpen their skills of interpretation while surveying an important literary tradition.

ENGL 222: British Literature from 1798

3 Credits

Focusing on major writers and their cultural contexts, ENGL 222 surveys British literature from 1798 to the present. A remarkable amount of important literature was produced during this period. Students will read major texts like Pride and Prejudice, Hard Times, and Jane Eyre; learn about renowned authors such as William Blake, Charles Dickens, and Virginia Woolf; and be introduced to influential literary forms, such as the dramatic monologue, the gothic novel, and stream-of-consciousness narrative. The tradition of British literature since 1798 evolved over periods of significant political and cultural upheaval and change. Thus students will also learn about the shifting historical and ethical orientations that energized this tradition, from rising industrialization and changing class and gender relations as manifested in Romanticism, Modernism, and Postmodernism. As an introductory survey of British literature, ENGL 222 welcomes non majors; no previous course in literature is required. By reading and discussing some of the best-known works in British literature, students will sharpen their skills of interpretation while surveying important literary traditions and gaining crucial critical insight into an international culture that literally influenced-through its imperial reach-countries around the world.

ENGL 223N: Shakespeare: Page, Stage, and Screen

3 Credits

This course will explore the relation between literary analysis and both film and theatrical performance by asking students to approach a limited set of plays from multiple perspectives, using texts, film, and theatrical performance from around the world to integrate these methodologies. Students will work closely with Shakespearean texts, practice textual and poetic analysis, and will also examine critically different forms of international performance: film and live theatre. In particular, the course will explore the interrelation of these elements, revealing a deeper imaginative understanding of works that continue to influence English-speaking literature and culture.

ENGL 224N: Authors and Artists

3 Credits

This course explores the many links between modern art and literature, including fiction about artists, illustrations of fiction and poetry, efforts to

write in the styles associated with modern art, and practices of ekphrasis (the evocation of visual art in language). These links between authors and artists have exerted a formative influence on the development of modern fiction and poetry as authors and artists in various avant-garde groupings collaborated and competed to generate modes of artistic expression appropriate to modernity. This course examines those interactions. Course objectives are to bring together for comparative examination: * Formal or generic relationships between texts and images at particular historical moments; under this rubric we will consider issues such as ekphrasis. * Creative collaboration and cross-pollination between writers and artists, which have been crucially important in the history of literature and poetry; examples include Pre-Raphaelite poetry and painting, Virginia Woolf and Post-Impressionism, Gertrude Stein and Cubism * Conceptions of creativity as these have been expressed by writers using the figure of the artist; texts in this category range from Balzac's *The Unknown Masterpiece*, through Hawthorne's *The Marble Faun*, to Paul Auster's appropriation from the performance artist Sophie Calle This course explores the ways knowledge of literature and skills in critical reading can be rewardingly brought to bear on the visual arts, and considers how visual art can illuminate the workings of literature both for individual readers and in the classroom.

ENGL 225N: Sexuality and Modern Visual Culture

3 Credits

ENGL 225N / ARTH 225N / WMNST 225N Sexuality and Modern Visual Culture (3) (GA;GH) An examination of the visual expression of gender and sexual identities in English-speaking cultures since the late nineteenth century. The terms "feminist" and "homosexual" were invented by the Victorians and reflect profound shifts in conceptions of identity. Another invention of the nineteenth century was the idea of the literary and artistic "avant-garde" as a minority contingent with politically and/or aesthetically advanced views. These ideas of minority culture were deeply enmeshed with one another, and have exerted profound influence ever since. This course explores that history with the objectives of expanding students' knowledge of modern art and literature, and of fostering more sophisticated understandings of how evolving socio-political ideas affect our sense of who we are and how we relate to texts and images. The course is relevant to students of American and English studies, art, art history, and women's, gender and sexuality studies.

ENGL 226: Latina and Latino Border Theories

3 Credits

English 226 will constitute a wide-ranging examination of contemporary texts (1960-present) central to the construction of contemporary Latino/a culture. ENGL 226 Latina and Latino Border Theories (3) (GH;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course focuses on contemporary Latina/o cultural production, placing it in historical context and analyzing it through the framework of borders. We make connections between Latina/o groups, showing both similarities and differences. We examine the politics of representation, asking how artistic texts define community and individual identities that are coherent yet also embody the complexity of these identities. The texts cross and claim borders- cultural, sexual, gender, geographical, generational, spiritual, and institutional. We will ask how these art forms work to claim border spaces: How are cultural differences retained without constructing hierarchies of exclusion? What models of identity do these artists propose in response to structures of domination? We'll read novels, short stories, poems, history, and theoretical essays; we will also watch several films. Throughout the course, we will attend to particular histories and cultures of Latina/o groups; it is crucial to both maintain the specificity of each culture (Chicana/o, Puerto Rican, Cuban-American, and Dominican-American) and their connections to each other as Latinas/os in the U.S. Inquiring into these intersections leads one to ask the following: how can Latinos unite against the assault on immigrants and bilingual education without erasing very important differences among Latina/o populations? How can Latinas unite against ongoing sexism and homophobia within their communities and the U.S. in general? How should we view the marketing category "Hispanic" and/or "Latino" and how do artists offer alternative conceptions of group identity?

ENGL 227: Introduction to Queer Theory

3 Credits

ENGL 227 Introduction to Sexuality Studies (3) (GH;US) This course focuses on the body of critical writings known as queer theory in order to analyze issues of sexuality and gender since 1969. The course interrogates sexual norms and their deviations, with a particular focus on the relationships between sexuality, imagination, and ethics in the making of sexual communities and fostering activism around sexuality and gender. We will study how class, race, and gender have been shaped, and themselves shape, the production of and resistance to sexual norms. Queer Theory engages issues "queer space" and "queer time," related concepts that relate bodies and environments to history and memory, and to fantasy, imagination, and utopianism. We will also explore the ways marginalization, shame, and criminalization have been transformed into visionary acts of "world-making" that have changed contemporary understandings of bodies, identities, social formations, literature and visual culture. Throughout, our focus will be on the relationships between sexuality and ethics, and how both shape the history of queer culture and activism.

ENGL 228: Introduction to Disability Studies in the Humanities

3 Credits

ENGL 228 provides a humanities-based interdisciplinary introduction to Disability Studies. This is one of two paired introductory courses developed as required courses for the Disability Studies minor. (The other is RHS 100.) Students will have wide exposure to both the lived experiences of disability, past and present, and to the unstable cultural norms that have traditionally stigmatized disability. The course explores valuable varieties of human embodiment and mindedness; it also asks central questions about what counts as "normal," and who gets to say why. Making use of historical tracts, novels, poetry, movies, plays, art exhibits, memoirs, youtube clips, and activist documents, ENGL 228 offers important new dimensions and challenges to traditional accounts of human value and political agency.

United States Cultures (US)

General Education: Humanities (GH)

GenEd Learning Objective: Soc Resp and Ethic Reason

ENGL 229: Digital Studies

3 Credits

This course will introduce students to concepts, methods, and resources for digital studies, meaning both the study of culture using digital means and the study of digital culture and digital cultural objects in themselves. In some cases, digitization and digital production enrich existing approaches to English studies; in other cases, they present new paradigms and practices, requiring the cultivation of new analytic and theoretical approaches along with new technical skills. Accordingly, the course will emphasize both that enrichment of existing approaches to English studies, in the use of computers to present and analyze English-language materials preserved in the past, and the application of computing to the creation of expressive cultural artifacts unique to networked and programmable media (at the instructor's discretion, the creation of such artifacts may be incorporated into the course). Working in this balance of modes, students will also acquire familiarity with the intellectual history of digital studies and its key debates. Topics to be covered may include the fundamentals of the digital representation of linguistic, visual, and other cultural data; differences between language and code, including the difference between human languages and artificial languages, including computer programming languages; data storage methods and media; electronic archiving and digital preservation, both personal and institutional; issues and debates in electronic publishing, including intellectual property and open access; computer-assisted methods of cultural analysis; the history of creative and expressive computing, from video games to electronic literature, code poetry, glitch culture, esoteric programming languages, etc.; data privacy and security issues; differences between the traditional qualitative approaches of humanities research and the quantitative approaches to the study of writing and language preferred by some social sciences, and what is at stake in blending these approaches.

 GenEd Learning Objective: Key Literacies

ENGL 231: American Literature to 1865

3 Credits

This course offers students a broad introduction to key moments and authors in the literary traditions that shaped US literature up to 1865. While individual authors and works discussed in class will vary, the course addresses the overall development of literatures in the United States by time periods and genres that may range from pre-Columbian oral traditions to American fiction and poetry published until the end of the Civil War. The class may feature the study of representative examples of both oral traditions and written works. In addition to highlighting enduring literary voices, the class may also highlight the development of specific genres (such as slave narratives), literary movements (such as Transcendentalism), periods of literary production (such as the American Renaissance) or other groupings of authors (such as the Fireside Poets) over the course of US literary history. Likewise, the class may include works both by authors who were popular at the time when they published their works (and thus able to impact American literature and culture during their lifetime) and those whose contributions to literary history were recognized only later. While it should be expected that no version of this course will be able to cover all authors whose works emerged before 1865, selected authors and works might include the following: examples of Native American, African American, and other oral traditions; excerpts from works by authors such as Anne Bradstreet, Edward Taylor, Cotton Mather, Phillis Wheatley, Samson Occom, Benjamin Franklin, Washington Irving, James Fenimore Cooper, Harriet Beecher Stowe, William Cullen Bryant, Henry Wadsworth Longfellow, John Greenleaf Whittier, James Russell Lowell, Oliver Wendel Holmes, Frederick Douglass, Harriet Jacobs, Edgar Allan Poe, Nathaniel Hawthorne, Henry David Thoreau, Ralph Waldo Emerson, Margaret Fuller, Herman Melville, Walt Whitman, or Emily Dickinson.

ENGL 231Y: American Literature to 1865

3 Credits

This course offers students a broad introduction to key moments and authors in the literary traditions that shaped US literature up to 1865. While individual authors and works discussed in class will vary, the course addresses the overall development of literatures in the United States by time periods and genres that may range from pre-Columbian oral traditions to American fiction and poetry published until the end of the Civil War. The class may feature the study of representative examples of both oral traditions and written works. In addition to highlighting enduring literary voices, the class may also highlight the development of specific genres (such as slave narratives), literary movements (such as Transcendentalism), periods of literary production (such as the American Renaissance) or other groupings of authors (such as the Fireside Poets) over the course of US literary history. Likewise, the class may include

works both by authors who were popular at the time when they published their works (and thus able to impact American literature and culture during their lifetime) and those whose contributions to literary history were recognized only later. While it should be expected that no version of this course will be able to cover all authors whose works emerged before 1865, selected authors and works might include the following: examples of Native American, African American, and other oral traditions; excerpts from works by authors such as Anne Bradstreet, Edward Taylor, Cotton Mather, Phillis Wheatley, Samson Occom, Benjamin Franklin, Washington Irving, James Fenimore Cooper, Harriet Beecher Stowe, William Cullen Bryant, Henry Wadsworth Longfellow, John Greenleaf Whittier, James Russell Lowell, Oliver Wendel Holmes, Frederick Douglass, Harriet Jacobs, Edgar Allan Poe, Nathaniel Hawthorne, Henry David Thoreau, Ralph Waldo Emerson, Margaret Fuller, Herman Melville, Walt Whitman, or Emily Dickinson.

ENGL 232: American Literature from 1865

3 Credits

Focusing on major writers and their cultural contexts, English 232 surveys American literature from 1865 to the present. A remarkable amount of important literature was produced during this period. Students will read major texts like *The Great Gatsby*, *The Grapes of Wrath*, and *Beloved*; learn about renowned authors such as Ernest Hemingway, Flannery O'Connor, and James Baldwin; and be introduced to influential literary forms, such as the imagist poem, the modernist novel, and New Journalism. The tradition of American literature since 1865 evolved over periods of significant upheaval and change. Students will also learn about the shifting historical and ethical orientations that energized this tradition, from Naturalism to Modernism and Postmodernism. As an introductory survey of American literature, English 232 welcomes non majors: no previous course in literature is required. By reading and discussing some of the most important works in American literature, students will sharpen their skills of interpretation while surveying an important literary tradition.

ENGL 233N: Chemistry and Literature

3 Credits

This pedagogically innovative course will be team taught by an instructor from the English department and one from the Chemistry department. Both instructors will be present in the classroom throughout the semester, providing joint presentations and leading discussions. The integration of humanities and natural sciences domain content will encourage students from humanities and natural science backgrounds, as well as other interested students, to take the course and learn how to integrate these two domains of knowledge in their education and their lives after leaving Penn State. This course teaches both basic concepts of chemistry and their cultural elaboration in literature, and it models a critical assessment of the implications of chemistry and literature emerging from a shared cultural field, rather than autonomously from two separate cultures. The course seeks to provide students with a nuanced understanding of how literature and science inform each other and negotiate cultural, religious, and political tensions. Understanding the origin and development of these ideas, perspectives, and discoveries is an essential component of science and scientific achievement, but too often our methods of teaching science focus almost exclusively on teaching facts and theories at the expense of the historical discovery, creation, and development of those facts and theories. This course teaches both the scientific facts and theories and the contexts of their production in order to sharpen students' abilities at critical evaluation of facts. The literary and scientific focus will vary from class to class, but may include writings by literary authors such as Mary Shelley, Edward Bulwer-Lytton, Bram Stoker, H. G. Wells, Garrett Serviss, Aldous Huxley, Roald Hoffmann, Carl Djerassi, Don DeLillo, William Butler Yeats, Arthur Machen, D.H. Lawrence, A. E. Waite, Aleister Crowley, Arthur Conan Doyle, Camille Flammarion, and Rachel Carson, and scientific texts by scientists such as T.H. Huxley, William Crookes, William Ramsay, Frederick Soddy, Ernest Rutherford, Wilhelm Conrad Roentgen, Henri Bequerel, J.J. Thomson, Niels Bohr, and Marie Curie. Key concepts of environmental chemistry. The specific focus of this class will vary from class to class, but all sections will spend approximately 40% of the class on units specifically devoted to key concepts in basic chemistry, 40% of the class on literary interpretations of and influences upon concepts in chemistry in specific historical periods, and 20% of the class on significant methods of theorizing the boundaries between and interrelationships of science and culture., and on the concept of the "culture of science." However,

these subjects will be interwoven throughout the semester. Indeed, the pedagogy of the course depends upon the literature and the science not being neatly separated from each other. Instead, students will learn up-to-date science while exploring the origins, development, and cultural dimensions of that science, and will learn to integrate their understanding of the domains of science and the humanities through the course. The course will be offered once every year with approximately 20-35 seats per offering.

ENGL 234: Sports, Ethics, and Literature

3 Credits

A passing glance at a newspaper sports page is enough to confirm how ethically fraught the sports world is. This course explores the ethical issues that arise in a culture of competition, and it uses a variety of literary texts to ground that exploration. It seeks to provide students with a nuanced understanding of how dependent sports are on narratives, and how a variety of ethical issues underwrite existing narratives about sports. With a focus on "the big three" (baseball, basketball, and football), the course has a U.S. focus but also has opportunities for students to write about other sports and in non-U.S. contexts. The course connects issues in literature to issues that arise in real time as the semester unfolds. Through the readings, students will develop a heightened awareness of how different a sport can look from the "inside," as an athlete or coach. The literature, that is, develops ethical imaginations and helps students think in a more complicated way about one of the most talked-about phenomena in American culture: athletics, at all levels. Units on baseball, basketball, and football focus on issues specific to those sports (e.g., the basketball unit features texts and discussions about Title IX and gender equity in sport; football on violence, injury, and athlete expendability. The course seeks to equip students to have more sophisticated conversations about sports issues, and to be more discerning as spectators and consumers of sports.

ENGL 235: From Folk Shouts and Songs to Hip Hop Poetry

3 Credits

The origins, forms, and function of the oral folk tradition of African Americans. ENGL 235 / AFAM 235 From Folk Shouts and Songs to Hip Hop Poetry (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This course contemplates connections between African oral traditions and contemporary trends in Black poetry including hip-hop and spoken word poetry. The central objective of the course is to examine the degree to which the most contemporary forms of African American poetry continue to function as folk expression; it provides an opportunity for students to examine the oral roots of African American literature in general and contemporary hip-hop and spoken word poetry, in particular. Music, particularly the Blues and Jazz, will be a prominent feature of this

class as we try to discover the peculiarities of Black poetry. Students will begin by comparing African and African American folk forms such as proverbs and epic poetry, continue with early African American poets such as Phyllis Wheatley, George Moses Horton, Frances Ellen Watkins Harper, and Paul Laurence Dunbar, and continue through the 20th century with the poetry of the Harlem Renaissance and Black Arts Movement to contemporary Hip-Hop and Spoken Word, including Def Poetry Jam recordings. Background readings will include important essays (such as James Weldon Johnson's "Preface to the Book of Negro Poetry" and Langston Hughes's "The Negro Artist and the Racial Mountain") that reveal the kinds of aesthetic issues African American artists faced in crafting their art in the face of a dominant culture that consistently questioned their capacity for artistic production. Students will listen as Margaret Walker reads her famous poem, "For My People," and they will consider the importance of the Black Arts Movement, its poets and critics to the development of contemporary hip-hop and spoken word poetry. Other course materials will include videotaped interviews and poetry readings. Readings would come from an appropriate anthology and/or a combination of other appropriate texts selected by the instructor.

ENGL 236N: Inequality: Economics, Philosophy, Literature

3 Credits

The Cubists were a group of painters including George Bracques, Pablo Picasso, working in Paris in the 1910s who, in addition to other painterly innovations, depicted objects not from one perspective but from multiple perspectives simultaneously. The final painting could sometimes look like a blur, but, or so the theory went, such multiplicity of perspectives could offer a truer, more complete representation of reality than any single perspective. In this class, we shall adopt a Cubist strategy of taking multiple perspectives. But instead of a guitar or a nude, our object of study will be inequality, and the multiple perspectives will not be different angles of seeing but different disciplines: economics, sociology, education, philosophy, and literature. How does each discipline define inequality? What does each have to say about it? And what does each argue, if anything, should be done about it? The class will mostly focus on economic inequality, but as you will discover, discussions of economic inequality quickly involve discussions of other forms of inequality (principally race and gender) besides economic inequality, and we shall consider those as well.

ENGL 237N: Reading and Writing Documentary Poetry

3 Credits

You've probably heard of documentary photographs and documentary films, but you may not be familiar with documentary poetry. In this course, we will discuss how poets can use letters, diaries, transcripts, and other materials to create poems that capture historical events and everyday life in order to bear witness to particular moments in time.

An important element of the course will be the role of documenting our world in terms of social justice and ethical responsibility. Whether focusing on public education, poverty, race, class, disability, gender, environmentalism, or other subjects, documentary poets personalize issues that are typically represented with broader brushstrokes. As Paul Metres observes, documentary poets invite "the real life outside the poem" into the poem itself, thereby "testing" the boundaries of what Wallace Stevens called "the pressure of reality." We will begin by viewing and discussing documentary poetry within the context of photography and filmmaking. Next, we will read and discuss documentary poems, including persona, collage, and erasure poems. These readings will also include interviews with select documentary poets about their processes. An overview of poetry terminology, research methods, and the ethics of documentary art will provide you with the basis for composing your own documentary poems. The last third of the course will be spent writing and workshopping your original documentary poems.

ENGL 245: Introduction to LGBTQ Studies

3 Credits

An introduction to the dominant themes in Lesbian, Gay, Bisexual, Transgender, and Queer Studies, with an emphasis on both literary & cultural studies. This course explores the history of modern, western ideas about sexual identity as manifested in literature, theater, film, and other narrative forms of popular culture. Drawing on the substantial body of "queer theory" generated by scholars in the humanities since the 1990s, this class examines sexuality not as a "natural" or consistent phenomenon, but as a set of beliefs that have changed over time and manifest themselves differently in different cultural and historical contexts. Starting in the late nineteenth century, scientific and medical authorities began categorizing individuals into sexual types based on their manifestations of gendered characteristics and their erotic attractions and practices. This medical typing corresponded with the development of subcultures associated with deviance from sexual norms; these subcultures produced a rich variety of texts, images, performances, and social forms, many of which became central to both popular and high culture. This course explores this rich archive, moving among media. It investigates constructions of sexual conformity and how sexual

nonconformists positioned themselves in relation to cultural and medical group identities. It examines how distinctions between gendered, raced, and classed bodies were historically produced and culturally contested. It considers what commonalities gay identities may - or may not - share with lesbian identities and how transgender and other identities have altered perceptions of sexual identity. The course also explores the relationship of the avant-garde to the mass media and how sexual subcultures have shaped literary and other cultural forms of expression. Comparative study of issues of sexual mobility beyond and between the borders of the United States expands the course's critical scope beyond dominant forms of western culture. This course does not propose definitive answers to the questions of identity it addresses. Instead it negotiates the ways sexualities have enabled individuals to articulate - and disarticulate - themselves within social bodies past and present. This course, therefore, has wide relevance for students interested in how group identities come into being and transform over time in dynamic relation to other historical forces. Exploring a wide variety of cultural forms associated with the history of sexual identity as well as a variety of interpretations of that history, this course opens students to an archive of literature, theater, film, and other narrative arts with the potential to inform and enrich their understandings of many kinds of challenges to regimes of normativity today.

GenEd Learning Objective: Key Literacies

ENGL 261: Exploring Literary Forms

3 Credits/Maximum of 6

What is genre and why does it matter to the study of literature? This course takes up the question of genre - what it is and why it matters - using a particular literary form (the early novel, epic poetry, episodic drama, memoir detective fiction, etc.) as its focus. Students will examine specific genre iterations across time and media, with attention to how conventional forms can both value tradition and incorporate innovation.

GenEd Learning Objective: Key Literacies

ENGL 262: Reading Fiction

3 Credits

ENGL 262 examines the critical, theoretical, and practical issues that readers face when reading fiction. Students will examine critical concepts ranging from fundamental analytical concerns such as plot structure, characterization, and themes, to broader ethical, philosophical, social, and political questions raised by fiction. As a genre course, ENGL 262 will pay special attention to the critical issues and problems raised by reading fiction, as opposed to reading poetry, drama, or non-fiction. Authors might include the following: Defoe, Richardson, Fielding, Walpole, Burney, Sterne, Smollett, C.B. Brown, Austen, J.F. Cooper, Hawthorne, Melville, Child, Chopin, Shelley, the Brontes, G. Eliot, Dickens, Hardy, Thackeray, James, Joyce, Woolf, Bellamy, Faulkner, Hemingway, Morrison, Delillo, Reed, Barthe, Coover, Ellison, Nabokov, Wright, Welch, Erdrich, and others.

Bachelor of Arts: Humanities

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

ENGL 263: Reading Poetry

3 Credits

English 263 will take up the questions, problems, and delights involved in reading poetry in British, American, and other English-language traditions. Examining the fundamental tools of reading poetry (meter, rhyme, image, diction, poetic forms, figurative language, and other rhetorical devices), students in English 263 will pay special attention to the critical issues and problems raised by reading poetry, as opposed to reading fiction, drama, non-fiction, or social texts. Authors under consideration will vary from class to class, but may include writers such as Chaucer, Shakespeare, Marvell, Herbert, Donne, Jonson, Milton, Pope, Blake, Coleridge, Wordsworth, Byron, Shelley, Keats, Tennyson, Clare, Browning, Hopkins, Rossetti, Wheatley, Melville, Whitman, Dickinson, Poe, Dunbar, Justice, Frost, Stevens, Williams, Pound, Eliot, Moore, Loy, H.D., Cummings, Crane, Robinson, Yeats, Hughes, Cullen, Olson, O'Hara, Creeley, Duncan, Auden, Lowell, Plath, Ginsberg, Lorde, Atwood, Brooks, Baraka, GLOck, Doty, and many others. The course may be taught in a number of different ways, for instance, simply by breaking the course down into relatively equally weighted units on particular formal aspects of poetry (rhyme, meter, genre-epic, dramatic, lyric, and various sub-genres-fixed forms, and the like) and then moving on to units designed

to explore how poetry addresses specific social, cultural, and historical contexts.

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

ENGL 265: Reading Nonfiction

3 Credits

Reading Nonfiction will provide students with a historical context and the reading skills necessary for this "fourth genre" of creative writing, with an emphasis on memoirs and the essays that have defined the genre across different eras. Biographies, autobiographies, travel narratives, science writing, and political writing could be included along with hybrid nonfiction such as graphic memoir and the video essay. As a reading (not writing) class, content will focus on the implicit contract of truth between the writer and the reader, with discussions to focus on the impact of a "true story" told creatively. What must the writer accomplish on the page in order for a reader to become engaged with this genre? The course will bring to the table questions of ethics and morals when applied to our latest understanding of the fallibility or reliability of memory and how authors use their memories to write nonfiction. Later weeks in the course will examine publishing trends in nonfiction and identify career paths for students wishing to further explore the scholarship of nonfiction.

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

ENGL 268: Reading Drama

3 Credits

Reading Drama is a course that will cover elements of drama including plot, character, dialogue, staging, and dramatic forms in primarily British, American, and other English-language traditions. Students will explore different techniques for reading drama through a literary lens, including the overlap of reading for history, reading for theory, reading for pleasure, and reading as a preparation for the eventual staging of drama. Students can expect to encounter a range of drama presented in such a way that learning outcomes explore historical trends, artistic movements, critical reception, and drama's effect on culture, society, politics, and art. Students will by the end of the course have a solid foundation in comparing and contrasting styles of drama and will also be able to engage in the scholarly dialogue of analyzing dramatic literature to a depth that goes beyond appreciating the entertainment value of a good play.

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

ENGL 281: Television Script Writing

3 Credits

An introduction to the writing of scripts for television production.

Bachelor of Arts: Humanities

ENGL 282: TV Script Writing 2

3 Credits

This creative writing course will further explore the specialized techniques and requirements of television script writing. Students will complete a first draft of a pilot episode (begun in ENGL281) and then revise the draft, focusing especially on the main character's story arc, plot structure, adding multiple narrative lines, scene and dialogue revision, and developing larger narrative lines for future episodes. Through script readings, discussions, writing exercises, and workshopping, students will come to understand the revision process and develop skills that can be applied to future scriptwriting.

Enforced Prerequisite at Enrollment: ENGL 281

ENGL 294: Research Topics

1-12 Credits/Maximum of 12

Individual or small group instruction.

Bachelor of Arts: Humanities

ENGL 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

ENGL 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

3-6 Credits/Maximum of 6

Advanced studies in English language and/or literature.

Bachelor of Arts: Humanities
International Cultures (IL)

ENGL 400: Authors, Texts, Contexts

3 Credits/Maximum of 6

Styles, cultural milieus, critical perspectives toward particular English-language authors and/or movements they represent, and the idea of authorship. (Section subtitles may appear in the Schedule of Courses.)

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 401: Studies in Genre

3 Credits/Maximum of 6

English-language texts exemplifying particular genres, with attention to critical theories, historical development, rhetorical strategies, and social, cultural, and aesthetic values. (Section subtitles may appear in the Schedule of Courses.)

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 401W: Creative Writing Theory

3 Credits

Theories of art and creativity which inform the making of literary works.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

Writing Across the Curriculum

ENGL 402: Literature and Society

3 Credits/Maximum of 6

Texts confronting social, political, technological, or other issues in the English-speaking world. (Section subtitles may appear in the Schedule of Courses.) ENGL 402 Literature and Society (3)(BA) This course meets the Bachelor of Arts degree requirements. One variation will focus on Literature and Censorship by first considering general arguments for and against censorship and then by examining texts by writers who sought publication in their own country but whose books were censored or banned. The course will consider such questions as, Are there ever legitimate grounds for censorship? How do standards of censorship differ between countries? What is the relation between censorship on political and on moral grounds? What does artistic merit have to do with concern about moral or political subversion? Works from England, South Africa and the United States will be read and discussed, and where available, excerpts from trial transcripts will be read in order to examine arguments for and against publication. Readings will include works by Milton, D. H. Lawrence, Alan Paton, Nadine Gordimer, Athol Fugard, Eugene O'Neill, Henry Miller, and Alan Ginsberg. Another variation will focus on war and gender in 20th century American literature by examining the ways male and female authors write about war. Texts will vary from battlefield experiences to repercussions of war to the symbolic implications of war. Questions will be raised about literary authority. Does one need to be combatant to write about war? If not, how does one find the authority to speak, particularly as a woman? How does race and/or ethnicity complicate one's perceptions of American participation in war? Readings will include works by Ernest Hemingway, William Faulkner, Joseph Heller, Cynthia Ozick, Leslie Marmon Silko, Norman Mailer, Bobbie Mason, Tim O'Brien, and Toni Morrison. Another variation will focus specifically on the writings which emerged from the postwar African-American struggle for civil rights. The course will include not only fiction and poetry but also those speeches, sermons, editorials, and other forms of discourse to have emerged from the era. The emphasis will be both traditional literary concerns as well as on the various rhetorical strategies involved in each work. Ideally, the course would make visible to students the

difficulties attendant upon any attempt to separate the concerns of rhetoric and persuasion too firmly from the concerns of literature. The course could conclude with a look at some of the various biographies, autobiographies, and histories written over the last twenty-five years, which attempt to shape our national memory. Other variations include literature as a response to Newtonian science or to Darwinism or to the American Depression or to postwar technology or to new dystopias or to AIDS or, as in the sample outline, the Civil Rights movement.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 403: Literature and Culture

3 Credits/Maximum of 6

Historical, theoretical, and practical issues within cultural studies in relation to English-speaking texts. (Section subtitles may appear in the Schedule of Courses.) ENGL 403 Literature and Cultural Studies (3)(BA) This course meets the Bachelor of Arts degree requirements. Topics covered in this course will vary from semester to semester, but a broad framework will be to introduce students to literary and other texts read in relation to cultural studies. Individual instructors may take up different historical periods, while other versions may suggest ways cultural studies draws on different theoretical discourses such as rhetoric, deconstruction, feminism, or the New Historicism for its problems. All Reading Culture courses should serve as an introduction to cultural studies, moving from theoretical to practical readings of literature and culture. In any case, a common goal would involve examining cultural studies as constituted by plural theories and ends.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 404: Mapping Identity, Difference, and Place

3 Credits/Maximum of 6

Ethnicity, gender, class, race with reference to theoretical inquiry into identity, difference, and place in English-language literatures. (Section subtitles may appear in the Schedule of Courses.)

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 405: Taking Shakespeare From Page to Stage

3 Credits

Students experience a Shakespeare play as a text to be explicated and as a script to be performed.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 406M: Honors Course in English: General Topic in Recent Literature

3-12 Credits/Maximum of 12

This advanced Honors Seminar in literature, rhetoric, and cultural studies allows students to explore and research a topic related to recent literary culture. Topics will vary depending on the course instructor but may include the study novels, poetry, drama, theory, film, nonfiction, or rhetoric. Recent topics have included Alfred Hitchcock, contemporary novels, prison narratives, authors and artists, and apocalyptic fiction. Assignments will include extensive primary and secondary reading, participation in class discussion, and a substantial paper or final project. Departmental approval required (for more special information please refer to the notes section in LionPATH).

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or (ENGL 137H and ENGL 138T)

Bachelor of Arts: Humanities

Writing Across the Curriculum

ENGL 407: History of the English Language

3 Credits

This course provides an accessible overview of the English language from its earliest beginnings as an insular language to its current place as a global language. One central issue will be the ways in which the external history (culture, political power, geography) of the language has impacted its internal history (spelling, pronunciation, dialect) over time. In the process, we will examine several representative English texts which illustrate significant moments in this long process of language change. Other topics will include the traces of early English vocabulary and structures in modern English, sound changes and pronunciation, English's heavy lexical borrowing from other languages, the politics of language and language use, longstanding debates over what constitutes standard English, the impact of prescriptive language guides, varieties of spoken and written English, the English language and colonialism, English as a global language, and the influence of technologies.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

International Cultures (IL)

ENGL 408M: Honors Seminar in English: General Topic in Post-1800 Literature

3-12 Credits/Maximum of 12

This advanced Honors Seminar in literature and literary and cultural history allows students to explore and research a topic related to post-18th century literary culture. Topics will vary depending on the course instructor but may include the study 19th- or 20th-century novels, poetry, drama, theory, film, nonfiction, or rhetoric. Recent topics have included critical medical humanities, historical novels, Victorian underground literature, spiritual biography, and the 1890s. Departmental approval required (for more special information please refer to the notes section in LionPATH).

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or (ENGL 137H and ENGL 138T)

Bachelor of Arts: Humanities

ENGL 409: Composition Theory and Practice for Teachers

3 Credits

An overview of the theory and practice of writing for teachers, with emphasis on the writing process. ENGL 409 Composition Theory and Practice for Teachers (3)(BA) This course meets the Bachelor of Arts degree requirements. ENGL 409 is intended to help teachers improve their writing instruction by immersing them in composition theory and providing them with the opportunity to learn the writing process through personal experience. On completion of the course, participants will be able to: ♦ Articulate and test composition theory in written works ♦ Work through each phase of the writing process in assigned essays ♦ Develop strategies for writing effectively in various genres and styles, including journal writing ♦ Produce written works which demonstrate an awareness of audience ♦ Implement recommendations for effective revisions ♦ Provide responsive feedback to peers' written work ♦ Develop a precis for a model lesson
Evaluation: Students will be evaluated on their knowledge and understanding of instructional objectives, demonstrated in written assignments, class discussions and other projects.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H
Concurrent at Enrollment: EDUC 452
Bachelor of Arts: Humanities

ENGL 411M: Honors Seminar in English: Creative Writing

3-12 Credits/Maximum of 12

Advanced Seminars in Creative Writing focus on a particular genre and/or topic. Genres include poetry, fiction, graphic novel, memoir, creative non-fiction, essay, or drama. Topics vary. Students work as apprentice writers, reading the work of published and expert authors, experimenting within the genre, engaging in structured peer review and group workshops, and preparing texts for publication and contest submission. Students discuss a number of issues relevant to the practice of creative writing and the production of literature, such as innovation and circulation, and numerous techniques, including the establishment of voice, creation of character plot development, pacing, and principles of prosody. Students may also consider the responsibilities of literary citizenship and the ethics of artistic representation. The courses offer an intense investigation of creative writing craft. Students develop skills in close, critical reading through the examination of exemplary works of contemporary literature and craft analysis, often reading an entire book per week. They also learn to read analytically and practically in workshop critiques of peer writing. In workshop discussion, students engage in a range of critical and editing tasks from close reading to broad conceptualization; they develop the ability to communicate ideas clearly and extemporaneously, and to negotiate meaning with others. Students experiment with and hone various writing techniques by executing focused exercises and drafting and developing pieces for final submission. They apply critical and analytical reading skills to revise and strengthen their own writing. The final project may include drafts and polished versions of two to three stories or essays, and up to a dozen poems.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or (ENGL 137H and ENGL 138T)

Bachelor of Arts: Humanities
Honors
Writing Across the Curriculum

ENGL 412: Advanced Fiction Writing

3 Credits/Maximum of 12

Advanced study of the techniques of fiction writing; regular practice in writing the short story; group discussion of student work.

Enforced Prerequisite at Enrollment: ENGL 212 and (ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H)
Bachelor of Arts: Humanities

ENGL 413: Advanced Poetry Writing

3 Credits/Maximum of 12

Advanced study of the techniques of poetic composition; regular practice in writing poetry; group discussion of student work. ENGL 413 Advanced Poetry Writing (3 per semester/maximum of 6)(BA) This course meets the Bachelor of Arts degree requirements. Students enrolled in the Advanced Poetry Workshop will have successfully completed ENGL 213, Introduction to Poetry Writing. In the advanced course, they continue their study of prosody through the close reading of published poems, including entire volumes of poetry by a single author. Students will also study articles and books that discuss various elements of craft. They can expect to prepare written reading responses and formal classroom presentations on the assigned readings. They will also draft approximately one new poem or revision each week, in addition to completing various writing exercises in or outside of class. All students will prepare for and engage in the workshop critiques; participation in these conversations is essential and subject to assessment. The writing, revision, and workshop process prepare the student to compile a portfolio of 8-10 poems, which they will submit as a final project for the course.

Enforced Prerequisite at Enrollment: ENGL 213 and (ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H)
Bachelor of Arts: Humanities

ENGL 414: Biographical Writing

3 Credits

Writing of biography and autobiography, character sketches, "profiles," and literary portraits; analysis and interpretations of source materials.

Enforced Prerequisite at Enrollment: ENGL 214 and [ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or (ENGL 137H and ENGL 138T)]
Bachelor of Arts: Humanities

ENGL 415: Advanced Nonfiction Writing

3 Credits/Maximum of 12

Advanced study of the principles of nonfiction; substantial practice in writing and submitting magazine articles for publication.

Enforced Prerequisite at Enrollment: (ENGL 212 or ENGL 215) and [ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or (ENGL 137H and ENGL 138T)]

Bachelor of Arts: Humanities

ENGL 416: Science Writing

3 Credits/Maximum of 6

Prepares scientists and writers to gather, interpret, and present scientific information to the layman with clarity and accuracy.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 417: The Editorial Process

3 Credits

The process of editing from typescript through final proof.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 418: Advanced Technical Writing and Editing

3 Credits/Maximum of 6

Preparing and editing professional papers for subject specialists and for others interested in careers as writers or editors.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 419: Advanced Business Writing

3 Credits

Preparing and editing reports and presentations common to business, industry, and government.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 420: Writing for the Web

3 Credits

Analysis and composition of informative, persuasive, and "creative" Web texts, based on rhetorical principles; no prior Web writing experience required. ENGL 420 Writing for the Web (3)(BA) This course meets the Bachelor of Arts degree requirements. This course, designed for writers and potential writers, will explore the unique opportunities and constraints of writing for the Web. As a writing course, it should appeal to students in the Humanities; however, because of the growing importance of Web texts in fields such as business and the social sciences and given the opportunity to compose/construct a variety of fictional and non-fictional "creative" and informative/persuasive Web texts, this course should be of value to students across the college. In this course, students will survey a wide variety of Web texts—webs, electronic journals and books, learning to analyze these as to their efficacy in light of each text's rhetorical situation. As students learn to compose

and construct such texts themselves, rhetorically based principles of audience awareness and persuasive appeal will be emphasized. Rather than focusing on writing html codes and java scripts, this course will build on the rhetorical principles taught in first-year writing courses, teaching students how to apply those principles to more sophisticated, multi-sensory, multi-media hyper textual writing. The course will be taught primarily in a hands-on workshop environment in a PC computer lab or laptop-equipped classroom. Although no prior Web writing experience is required, some experience with Web navigation and computer word processing will be helpful. Students will be evaluated on the basis of their participation/attendance in the course's workshop environment, written web analyses, and constructed web texts.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 421: Advanced Expository Writing

3 Credits

Develops skill in writing expository essays, with particular attention to style. Intended for liberal arts majors.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 422: Fiction Workshop

3 Credits/Maximum of 6

Practice and criticism in the composition of the short story and the novel.

Enforced Prerequisite at Enrollment: ENGL 412

Bachelor of Arts: Humanities

ENGL 423: Poetry Writing Workshop

3 Credits/Maximum of 6

Extensive practice in writing poetry; consideration of contemporary poetic forms; selected readings.

Enforced Prerequisite at Enrollment: ENGL 413

Bachelor of Arts: Humanities

ENGL 424: Creative Writing and the Natural World

3 Credits

Creative writing workshop focused on the environment and related issues. ENGL (ENVST) 424 Creative Writing and the Natural World (3) American literature includes a long and rich tradition of writing that focuses on the natural world. From the oral stories of indigenous people to the journals of the first European settlers, many have looked for a way to understand their own place in the world based upon their relationship to the earth and its creatures. While Puritans often discerned the pleasure or wrath of God in the environmental changes they experienced, Transcendentalists like Henry David Thoreau and Ralph Waldo Emerson sought out moments of spiritual enlightenment by immersing themselves in the natural order. More recently, such poets as Galway Kinnell, James Wright, and Robert Bly have attempted to connect with the depths of collective unconsciousness by exploring the natural world, while others,

like Mary Oliver, Dan Gerber, Jim Harrison, Gary Snyder and Wendell Berry, have used transcendental thought and melded it with Christian and Buddhist insights. Still others, like Gary Paul Nabhan, Rachel Carson, and Alison Hawthorne Deming have brought science to bear upon the riches that nature, art, and scientific exploration may offer when joined in the pursuit of a deeper understanding of, and relationship with, the natural world. This course will acquaint students with the tradition of American nature writing, as well as contemporary nature writing, in the genres of nonfiction, poetry and fiction. Students will be introduced to issues of style, philosophy, and content, as they produce their own essays, poems, and stories. The course culminates in the production of a portfolio of nature writing. Much of this work will begin in class with specific assignments, which will include field work, and feedback from other students in the class. As a workshop course in creative writing, the emphasis will be upon the production of literary texts that interact with the natural world and upon the revision of those texts.

Enforced Prerequisite at Enrollment: ENGL 50 or ENVST 100N

Cross-listed with: ENVST 424

ENGL 426: Chicana and Chicano Cultural Production: Literature, Film, Music

3 Credits/Maximum of 3

An in-depth study of Chicana/Chicano literature, film, and music from the inception of the Chicano Movement (1965-1975) to the present. ENGL 426 Chicana and Chicano Cultural Production: Literature, Film, and Music (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. ENGL 426 will constitute an in-depth study of Chicano/a literature, film, and music from the inception of the Chicano movement (1965-1975) to the present. In addition to primary aesthetic texts, students will read historical, political, and theoretical essays designed to situate the Chicano/a cultural texts in historical and political context. The aim of the course is to give students a better understanding of Chicano/a cultural production by situating these works of art against other U. S. artistic traditions and within wider historical and political movements. Authors and artists under consideration in this class will vary, but will likely include Luis Valdez, Tomas Rivera, Estella Portillo Trambley, Oscar Zeta Acosta, Corky Gonzales, Gloria Anzaldua, Norma Alarcon, Cherrie Moraga, Richard Rodriguez, Dagoberto Gilb, Rolando Hinojosa, Alfredo Veal, Charlie Trujillo, Diego Vasquez Jr., Joe Rodriguez, Tomas Almaguer, Jose Esteban Munoz, Manuel Ramos, Lucha Corpi, Rudolfo Anaya, Michael Nave. This class will prepare students for advanced courses in Latin/a literatures as well as other academic courses that engage in the verbal and written analysis of complex texts. Students will be evaluated by means of essays written in and out of class, essay exams, group projects, term-long journals, and class participation. Students should expect to complete a minimum of three written assignments in the course of the term. The course may be used as ENGL major elective credit or as credit towards the ENGL minor and will be offered once a year with 40 seats per offering.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Cross-listed with: LTNST 426

Bachelor of Arts: Humanities
United States Cultures (US)

ENGL 427: Topics in Jewish American Literature

3 Credits/Maximum of 9

An in-depth examination of important themes, writers, and/or historical developments in Jewish Literature of the United States. ENGL (J ST) 427 Topics in Jewish American Literature (3) This course will provide sustained examination of major themes, texts, and figures in the Jewish American literary tradition. The course will focus on depth rather than breadth in its analysis of the defining aspects of the literature and on what the literature reveals about Jewish American culture and identity. The United States has absorbed large numbers of Jewish immigrants from many parts of the world, holding many different ideas about Jewish practice, and affiliating themselves with many different political, social, and cultural traditions, and moreover Jews have settled and made homes in a wide variety of American communities. Close analysis of literature will therefore provide an opportunity to consider the constitution, origin, and development of Jewish America's wider cultural, political, and social contexts. Materials will consist predominantly of primary texts, including prose fiction and nonfiction, poetry, drama, and film, and the methodology will emphasize the close reading of these texts. The course complements offerings in Jewish Studies, English, and Comparative Literature. Most obviously, the course will offer students of Jewish literature, world literature, and American literature an opportunity for contextualization. It enables students in Jewish Studies to study the rich literature of American Jews, and it adds to courses covering Jewish American history, religion, and culture. The course offers students in English and Comparative Literature a valuable, sustained introduction to an important U.S. and world sub-culture and -literature.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Cross-listed with: JST 427

ENGL 428: Asian American Literatures

3 Credits/Maximum of 6

This course explores contemporary Asian American literary production by reading a wide variety of texts focused on the possibilities and limits of space and place. Our goal in this class is two-fold: to orient ourselves in relation to Asian American literatures and to orient Asian American literatures in relation to other geographical formations such as the nation, the hemisphere, the transpacific, and the world. To accomplish this, we will consider how physical and geographical spaces map on to psychic and historical ones, in the process focusing on a diverse set of locations-including ethnic enclaves, detention camps, islands, the transpacific, and the hemisphere. We will engage key concepts in Asian American literary studies such as transnationalism, globalization, racialization, imperialism, history, culture, and postracialism. Additionally, we will think about how issues of identity, belonging, contestation, aesthetics, diaspora, and genre are critical to Asian American literary production. Finally, we will interrogate the constructed, pan-ethnic nature of "Asian America" as itself an imagined nation. In the process, we will familiarize ourselves with the richness and diversity of Asian American literature by considering a variety of genres, including short stories, novels, drama, memoir, comics, and film. In encouraging students to develop understanding of the historical backgrounds, cultural and scientific contributions, economic, social, psychological, and political circumstances of Asian Americans, they will 1) Learn to see nations, cultures, and/or social identities not in isolation, but in relation to each other; 2) Gain increased knowledge of different cultural values, traditions, beliefs, and customs;

3) Appreciate the diversity that exists among persons who share a particular social identity; 4) Recognize and be sensitive to the different ways social identities have been valued; 5) Increase their understanding of stereotypes and biases; and 6) Increase their awareness of the nature of social justice and equity. These goals are supported by every aspect of the course: the reading list, the in-class conversation and lectures, the collaborative projects, the quizzes and exams, and the analytical essays. Students are not simply exposed to texts and topics but must demonstrate engagement with, understanding of, and critical analysis in relation to the course's focus.

Cross-listed with: ASIA 428
Bachelor of Arts: Humanities
United States Cultures (US)

ENGL 429: New Media and Literature

3 Credits

New media literary genres; critical discussion of creative works in digital media.

Cross-listed with: CMLIT 429
Bachelor of Arts: Humanities

ENGL 430: The American Renaissance

3 Credits

Studies in the works and the interrelationships of writers such as Emerson, Hawthorne, Poe, Thoreau, Whitman, Melville, and Dickinson. The course will cover Transcendentalism and the authors who contributed to this movement, many of whom lived in Concord, MA. Though the class will feature the works of Emerson, Hawthorne, and Thoreau, it can also branch out to address other authors such as Margaret Fuller, Jones Very, and Elizabeth Peabody. Departing from Concord, the course will explore Walt Whitman and Emily Dickinson, both of whom read and were inspired by Emerson. Finally, the course will include works by Herman Melville, who formed a friendship with Hawthorne prior to writing *Moby-Dick*. Though literature constitutes the center piece of this course, iterations of the course may bring in other parts of the cultural, social, and political landscape: slavery, abolitionism, Jacksonian Democracy, western settlement, art, science, and technology.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

ENGL 440: Studies in Shakespeare

3 Credits

Focused study of a single genre, topic, or critical approach to selected plays by Shakespeare and contemporaries.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 441: Chaucer

3 Credits

This course surveys the literary career of Geoffrey Chaucer, perhaps the most celebrated English-language poet of the medieval ear. The course primarily examines Chaucer's own writings, with consideration of the several international authors and traditions that informed his own literary productions. Selections may vary, but students will read texts from across Chaucer's career, including from major works like *Troilus and Criseyde* and *The Canterbury Tales*. Readings from Chaucer's sources and models may include translated selections from Boethius's *Consolation of Philosophy* or from Guillaume de Lorris and Jean de Meun's *Romance of the Rose*, and/or examples from relevant literary genres such as romance, fabliaux, beast fable, sermon, tragedy, and exemplum. Accordingly, students will develop a knowledge and appreciation of how Chaucer shaped (and was shaped by) his continental influences and the ways in which he developed a poetic tradition in English that proved deeply influential for many centuries.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

International Cultures (IL)

ENGL 442: Medieval English Literature

3 Credits

Study of major works and genres of medieval English literature, exclusive of Chaucer.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 443: The English Renaissance

3 Credits

Study of different early modern texts and traditions, with attention to poetry, drama, fiction, and nonfiction.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 444: Shakespeare

3 Credits

Selected tragedies, comedies, and histories.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 445: Shakespeare's Contemporaries

3 Credits

Selected plays by Shakespeare's major predecessors and contemporaries: Kyd, Marlowe, Jonson, Webster, Marston, Middleton, and others.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 446: Milton

3 Credits

Analysis of principal poems and their background.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 447: The Restoration and the Eighteenth Century

3 Credits

Study of different English writers and traditions from the neoclassical age (1660-1776), with attention to poetry, fiction, romance, and drama.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 448: The English Novel to Jane Austen

3 Credits

Study of different writers and traditions in the early English novel.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 449M: Honors Seminar in English: Pre-1800s literature

3-12 Credits/Maximum of 12

This course offers honors students the opportunity to explore in depth a period of early English literature before 1800. Topics will vary from year to year, but may include Beowulf and Anglo-Saxon literature and culture, late medieval authors such as Chaucer, Gower, and Langland, sixteenth-century lyric poets, Shakespeare, Shakespeare and film, Elizabethan dramatists, authorship and book history, early women authors, seventeenth-century writers such as Donne, Herrick, Wroth, and Bacon, writers of the English Revolution, Milton, and eighteenth-century writers such as Pope, Dryden, and Swift. Assignments will include extensive primary and secondary reading, participation in class discussion, and a substantial paper or final project. Departmental approval required (for more special information please refer to the notes section in LionPATH).

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

Writing Across the Curriculum

ENGL 450: The Romantics

3 Credits

Writers of the British Romantic period (roughly 1790 to 1832) often made sweeping claims for the power of poetry and imagination. Percy Bysshe Shelley contended that "poets are the unacknowledged legislators of the world," while John Keats declared that "beauty is truth, truth beauty." Against the background of political revolution in France, the rise of industrialization and empire, and increasing social instability, Romantic writers turned to nature as a source of the self and looked back to childhood as a site of both innocence and ambivalence. Others turned their efforts to the supernatural and the gothic, hoping to inspire what Samuel Taylor Coleridge called "that willing suspension of disbelief for the moment which constitutes poetic faith." This course is designed to provide an introduction to the richness and diversity of Romantic-era literature. It is not intended to be an exhaustive overview of the entire period, but rather an introduction to the best known Romantic ideas' many of which still influence the way we think about art and literature in the present day as well as an invitation to further study and engagement. In that spirit, we will not work from a predetermined definition of "romanticism," but instead will build a collective, working understanding of the concept.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 454: Modern British and Irish Drama

3 Credits

From Wilde and Shaw to the present season. ENGL 454 Modern British and Irish Drama (3)(BA) This course meets the Bachelor of Arts degree requirements. ENGL 454 will introduce students to some of the most exciting playwrights and important trends in modern British and Irish drama from the late nineteenth century to the present. The course will examine a number of plays, exploring not only how they work formally, but also how changing cultural and historical contexts helped to shape the plays and British and Irish drama more generally. Authors under consideration will vary from class to class, but may include writers such as Oscar Wilde, George Bernard Shaw, John Synge, Lady Gregory, William Butler Yeats, Sean O'Casey, Samuel Becket, Denis Johnston, Brendan Behan, Brian Friel, Tom Murphy, Martin McDonagh, Noel Coward, John Osborne, T. S. Eliot, Robert Bolt, Harold Pinter, Caryl Churchill, and Tom Stoppard. The course will explore such topics as the role of drama in the Irish Revival, nationalism, and the revolution, the use of myth and folklore in drama, the emergence of realism, the function of Wilde and Shaw's humor in their plays, drama's response to the decline of the British empire, the modernist verse drama, post-modernism in drama, issues of stagecraft and performance, and the political function of such theaters as the Abbey Theatre or the Field Day Company. Students will write at least two papers on particular plays, and can expect to take a mid-term exam and a final exam. The course may be used as English Major elective credit or as credit towards the English minor, and will be offered once a year with 40 seats per offering.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Bachelor of Arts: Humanities

ENGL 455: Topics in British Literature

3 Credits/Maximum of 99
