An applicant seeking to pursue a degree program and holding a high school diploma or its equivalent may be admitted to enroll in credit courses at the University as a degree-seeking student conditionally enrolled in the Division of Undergraduate Studies (DUS). A degree-seeking student in DUS with conditions is considered a regular student for registration and academic advising and is entitled to all services provided to all students of the University. A degree-seeking student conditionally enrolled in DUS who is admissible to the University may enroll in credit courses if the following criteria are met:

1. The applicant provides evidence of academic success based on credentials submitted with the application; however, does not meet all criteria specified in Senate Policies 05-00 and 06-00: Degree Candidates (<https://senate.psu.edu/policies-and-rules-for-undergraduate-students/05-00-and-06-00-degree-candidates/>).
2. The applicant has not been dismissed for unsatisfactory scholarship from any other college or university previously attended.
3. The applicant has not been dismissed or suspended for nonacademic reasons from any college or university.
 - a. An applicant who has any criminal or disciplinary issues and is not in good standing at another accredited college or university must have received clearance from the Office of Student Conduct.

Nondegree Students

A person enrolled in a course who is not a degree candidate or degree-seeking student conditionally enrolled in DUS is classified as a nondegree student. A nondegree student must either hold a high school diploma or its equivalent to take undergraduate courses. Exceptions may be made by the Undergraduate Admissions Office for students currently enrolled in high school (dual-enrollment students).

A nondegree student who has not been academically suspended or dismissed may enroll in any number of credits, not to exceed the typical semester credit load of a full-time student if criteria 1, 2, and 3 are met. Nondegree students who change from degree candidates to nondegree or who intend to become degree candidates must also meet criterion 4.

1. The student has completed the prerequisites for the courses to be scheduled or has obtained permission from the instructor to schedule the course.
2. Space is available after degree candidates have been accommodated.
3. The student has not been dismissed or suspended for nonacademic reasons from any college or university. An applicant not in good standing at another accredited college or university for disciplinary reasons must consult with the director of the Office of Student Conduct for admissions clearance.
4. The student has obtained academic advising/counseling from an adviser/counselor designated by the academic unit to which admission, or reinstatement and re-enrollment, is desired.

Note: A student must be admitted, or reinstated and re-enrolled, as a degree candidate to apply the credits earned as a nondegree student toward fulfilling the requirements for a degree. The dean of the college of enrollment shall decide which credits may be used to fulfill the degree requirements.

Limitations to Enrollment as a Nondegree Student

A student in nondegree status may remain in that status for a maximum of 30 credits, at which time the student must be accepted into a degree program to continue taking credit courses at Penn State. If a student in nondegree status is not eligible for a degree program after completing 30 credits in that status, s/he may continue to take credit courses at Penn State only as long as a semester grade point average of more than 2.00 continues to be earned and the student has the written support of the major s/he intends to enter or re-enter. In this situation, the student must enter a degree program immediately upon reaching eligibility. Nondegree students whose cumulative grade point average is below 2.00, who have reached the 30-credit limit, are not eligible for a degree program and will be dismissed from the University at the end of the semester and may only re-enter the University through academic renewal (as defined by Senate Policy 54-90: Academic Renewal (<https://senate.psu.edu/policies-and-rules-for-undergraduate-students/54-00-academic-progress/#54-90>)). Nondegree students who have reached the 30-credit limit, are in good academic standing (defined as at least a 2.00 cumulative grade point average), and do not intend to earn a degree may self-identify and continue taking credit courses at Penn State as an "enrichment course taker" for as long as a cumulative grade point average of at least 2.00 is maintained.

A student must be admitted or re-enrolled as a degree candidate to apply the credits earned as a nondegree student toward fulfilling the requirements for a degree. The dean of the college or school of enrollment shall decide which credits may be used to fulfill the degree requirements.

A nondegree application can be obtained on the Office of the University Registrar website (<https://registrar.psu.edu>).

Admission of Nondegree Student as a Degree Candidate

A nondegree student may apply for admission as a baccalaureate degree candidate with advanced standing to a college or school of the University, or to the Division of Undergraduate Studies, upon completion of at least 18 credits earned at this University with at least a 2.00 cumulative grade-point average. An applicant who has completed at least the equivalent of two years of baccalaureate degree work before applying for admission as a baccalaureate degree candidate must have the approval of either the dean of the college or school in which enrollment is desired or of the director of the Division of Undergraduate Studies if the student wants to enroll in that division. To be eligible for degree admission, the nondegree student must meet the academic requirements of the University and the college or school in effect at the time of application.

Tuition and Financial Aid

Penn State participates in the major federal and state grant, loan and work-study programs. These funding sources make up the majority of all student aid funding with education loans the largest program. Eligibility is determined based on information on the Free Application for Federal Student Aid (FAFSA) (<https://studentaid.gov/h/apply-for-aid/fafsa/>). Student aid funds are awarded based on each applicant's relative financial need until all funds are exhausted. Program regulations limit the University's ability to make exceptions to the eligibility criteria.

Student Aid and Scholarships Policy

As a public university, Penn State receives limited support from the state.

Undergraduate enrollment across all Penn State campuses exceeds 90,000 a year. An outstanding academic experience for our students comes at a cost, and the University recognizes that Penn State may not be affordable to all who wish to enroll.

While Penn State continues to build its scholarship endowment, available funds do not yet reach all deserving students. Student aid, including education loans, can help defray some costs, but students and parents have the primary responsibility of paying educational expenses. Students and their families are encouraged to devise a financial plan for this important investment and to determine the level of education loan debt that both student and families are willing to incur.

Tuition and Costs

To view the most current costs for attending Penn State, including tuition and associated expenses, visit the Office of Student Aid website (<https://studentaid.psu.edu/>).

MORE INFORMATION ABOUT TUITION AND COSTS (<https://studentaid.psu.edu/tuition-costs/>)

Residency Classification for Tuition Purposes

Effective January 1, 2020

Pennsylvania Classification

A student shall be classified as a Pennsylvania resident for tuition purposes if that student has a Pennsylvania domicile **and** that student's presence in Pennsylvania is not primarily for educational purposes. Domicile is a person's existing and intended fixed, permanent, and principal place of residence. A student whose presence in Pennsylvania is primarily for educational purposes shall be presumed to be a non-Pennsylvania resident for tuition purposes. Thus, most students who come to Pennsylvania for the primary purpose of attending the University will ordinarily continue to be classified as non-residents for purposes of tuition throughout their attendance at the University. The following are considerations that may be used by the University in determining whether a student is a Pennsylvania resident for tuition purposes:

1. An undergraduate student under the age of 24 is presumed to have the domicile of their parent(s) or legal guardian(s). An undergraduate student may rebut this presumption with clear and convincing evidence that they are financially emancipated from their parent(s) or legal guardian(s). If the parent(s) of an undergraduate student under the age of 24 are domiciled in Pennsylvania, the student is presumed to be domiciled in Pennsylvania.
2. A student who has continuously resided in Pennsylvania for purposes other than education for at least 12 consecutive months immediately preceding their initial enrollment at the University or an institution of higher education is presumed to have a Pennsylvania domicile for purposes of tuition. A student who has not continuously resided in Pennsylvania for at least 12 consecutive months immediately preceding their initial enrollment at the University or another institution of higher education is presumed not to be a resident of Pennsylvania for purposes of tuition but may rebut this presumption by clear and convincing evidence.
3. A United States government employee or member of the armed forces who was domiciled in Pennsylvania immediately preceding their entry into government service and who has continuously

maintained Pennsylvania as their legal residence will be presumed to have a Pennsylvania domicile.

4. Military personnel and their dependents who are assigned to an active duty station in Pennsylvania and who reside in Pennsylvania shall be deemed Pennsylvania residents for purposes of tuition.
5. Veterans and their dependents may be eligible for in-state tuition regardless of residency status. The Office of Veterans Programs (<http://equity.psu.edu/veterans/>) should be contacted regarding eligibility.
6. Students who are not United States citizens, and have visas (excluding F and J) or lack visas, are presumed to be domiciled in Pennsylvania if they:
 - a. Undergraduate students: attended an accredited Pennsylvania high school for at least four years and thereafter (a) graduated from an accredited Pennsylvania high school or (b) received a Pennsylvania General Educational Development High School Equivalency Certificate (GED) and,
 - i. Meet items 1 and 2 above; or,
 - ii. Meet items 3, 4, or 5 above.
 - b. Graduate student: attended and earned a baccalaureate degree from a U.S. regionally accredited Pennsylvania institution and,
 - i. Meet items 2, 3, 4, or 5 above.
7. A student receiving a scholarship, guaranteed loan, grant, or other form of financial assistance dependent upon maintaining domicile in a state other than Pennsylvania is presumed not to be a Pennsylvania resident for tuition purposes.

Reclassification as Pennsylvania Resident

A student requesting reclassification as a Pennsylvania resident for tuition purposes must demonstrate by clear and convincing evidence that his/her domicile is in Pennsylvania, and that his/her presence in Pennsylvania is not primarily for educational purposes. Each request shall be decided individually on the basis of all facts submitted by the petitioner. Accordingly, it is not possible to list a specific combination of factors or set of circumstances which, if met, would ensure reclassification for tuition purposes.

Residency Reclassification Procedure

Review of Classification

A student may request a review of their residency classification by submitting a written request, including all necessary documentation to support classification as a Pennsylvania resident for purposes of tuition. Each case will be decided on the basis of an evaluation of all relevant facts and documentation submitted. Although not conclusive, the factors listed below may be given weight that the University may assign to them under the circumstances of each case. The University will consider the quality of evidence, rather than merely the quantity. A student is not required to establish a specific number of factors or a specific combination of factors for Pennsylvania domicile. Further, providing some or all of the documentation suggested or requested by the University will not necessarily result in being classified as a resident.

The following factors may be considered by the University in determining whether a student is domiciled in Pennsylvania:

1. Lease or purchase of a permanent, independent residence in Pennsylvania;
 - Note: A copy of the real estate listing or sales agreement to the previous domicile in the previous state of residence should also be sent, if applicable.

2. Payment of applicable state and local taxes and the filing of appropriate returns for such taxes;
 - Note: Returns should demonstrate an adequate level of income to support an independent domicile in the Commonwealth of PA.
3. Transfer of bank accounts, stock(s), automobile(s) and other registered property to Pennsylvania;
4. Pennsylvania driver's license;
5. Registration to vote in Pennsylvania;
6. Acceptance of an offer of permanent full-time employment in Pennsylvania, as well as evidence that job has been started, documented through the employer (generally applicable for adult students);
7. Continuous presence in Pennsylvania during significant periods while not enrolled as a student;
8. Membership in Pennsylvania social, athletic, civic, political and/or religious organizations which require residency as a membership requirement; and
9. For undergraduate students under age 24 claiming independence, evidence that the student is not a dependent. Such evidence may include copies of the tax returns of the student and/or his/her parent(s) or legal guardian(s) or sworn statements from the parent(s) or legal guardian(s) setting forth facts which establish the student's financial independence and separate residence.
10. If you (or your parent, if a dependent) are presently in the military and stationed in Pennsylvania, submit your Active Duty Military Orders. If you (or your parent, if a dependent), are stationed outside of Pennsylvania, but have maintained Pennsylvania residency, submit your current Leave and Earnings Statement (LES). If you (or your parent, if a dependent) have been discharged from the military, submit your DD-214.
11. Effective summer 2015, all eligible veterans regardless of benefit use, and military/veteran dependents actively using Chapter 33, Chapter 35 or Fry Scholarship benefits, will be eligible for in-state tuition regardless of residency. If you are a veteran and you are not using VA education benefits, please contact your campus Certifying Official to determine requirements to establish eligibility for the in-state rate.

Requests for review must be submitted by the student (requests from parents will not be considered) and no review will be entertained unless provided in writing.

Students requesting a review of their residency classification prior to the first day of the student's first semester at the University need to submit the written request to the following office:

- **Undergraduate Students:**

Undergraduate Admissions Office
The Pennsylvania State University
201 Shields Building
University Park, PA 16802

ATTN: Residency Review Officer for Undergraduate Admissions

- **Graduate Students:**

Office of the Bursar
The Pennsylvania State University
103 Shields Building
University Park, PA 16802

ATTN: Residency Review Officer for the Bursar's Office

Students requesting a review of their residency classification after the first day of the student's first semester at the University must submit the written request to:

- **Undergraduate and Graduate Students:**

Office of the Bursar
The Pennsylvania State University
103 Shields Building
University Park, PA 16802
ATTN: Residency Review Officer for the Bursar's Office

The review will be conducted based on the documentation submitted by the student to support reclassification. All review of classification decisions will be made in writing addressed to the student. Students may only request a review of the initial classification if they believe it was wrongly determined, or if during the course of their enrollment, their circumstances change and the student can present information demonstrating residency in Pennsylvania for purposes other than education.

Appeal of Classification

A student may challenge the review of classification decision by filing a written appeal to the University Appeals Committee on Residency Classification. Appeals must be submitted to the Committee within 30 days of the date of the written decision issued by the reviewing office. Contact information for the University Appeals Committee on Residency Classification will be included in the review of classification decision.

Appeals must set forth an explanation for why the student believes the reviewing officer's decision is incorrect and should include documentation supporting their claims. All materials relating to a student's appeal must be submitted at the time they submit the request for appeal. Materials submitted as part of the initial review will be provided to the Committee by the reviewing officer. Upon review of the appeal, if the Committee determines it needs additional information, the student will be notified.

While supporting letters from parents or guardians can be included in the appeal for the Committee's review, absent extraordinary circumstances, the student must be the individual to submit the request for appeal. The University will not entertain appeals submitted by a parent or legal guardian.

The student will be notified in writing of the Committee's decision and the Committee's decision is considered final.

Effective Date for Reclassification

It is each student's responsibility to request reviews and any related appeals in a timely manner. Any reclassification of a student's residency resulting from a student's request for review or appeal shall be effective as of the first day of the semester or session during which the request for review was received by the University or the first day of the following semester or session. The decision as to which semester or session becomes the effective date shall rest with the unit rendering the decision on reclassification.

Where it is deemed appropriate based upon the circumstances, the University, within its sole discretion, may reclassify a student's residency classification prior to the date in which the student submitted their request for review, but under no circumstances will reclassification occur more than one year prior to the semester in which the request for review was originally received.

TIME LIMIT: A request for review for reclassification will not be considered if submitted after the student has graduated from the University.

Notifications and Adjustments

1. The University reserves the right to require transcripts of tax filings from the Internal Revenue Service or Commonwealth of Pennsylvania rather than taxpayers' copies of those returns.
2. A student who changes his/her domicile from Pennsylvania to another state is required to give prompt written notice of this change to the Residency Review Officer in the Bursar's Office. The student shall be reclassified as of the date of such change. Students must also inform the Residency Review Officer in the Bursar's Office of any changes in the student's circumstances which might affect his/her residency status to determine whether reclassification of residency is necessary.
3. A dependent undergraduate student whose parent(s) or legal guardian(s) move outside of Pennsylvania may remain a Pennsylvania resident for tuition purposes if he/she maintains a separate domicile within Pennsylvania and remains continuously enrolled at the University.
4. The University reserves the right to conduct audits regarding Pennsylvania resident classification and make any appropriate adjustments in the residency classifications of all students.

False Statements

Any student who provides false or misleading information or deliberately conceals or omits relevant facts in connection with a residency application or appeal will be subject to disciplinary action. In addition, such students will be subject to retroactive reclassification as a non-resident and will be responsible for the payment of non-resident tuition and fees for the period during which he/she was classified as a resident.

PLEASE NOTE: A page of frequently asked questions concerning residency classification for tuition purposes can be found at <https://www.bursar.psu.edu/faq> (<https://www.bursar.psu.edu/faq/>).

How to Apply for Financial Aid

Submission of the Free Application for Federal Student Aid (FAFSA) (<https://studentaid.gov/h/apply-for-aid/fafsa/>) is the only action required to apply for most financial aid at Penn State, however, some private scholarships and Penn State scholarships require separate applications.

Project GO!

The Project Global Officers' (Project GO!) goal is to develop future military officers within all of the U.S. Armed Forces with the necessary linguistic and cross-cultural communication skills required for effective leadership in the 21st century operational environment. Any member, scholarship/contracted or not, can apply to attend.

MORE INFORMATION ABOUT PROJECT GO! (<http://www.rotcprojectgo.org/>)

Military Studies Minor

This interdisciplinary minor (p. 1129) is designed for all students with special interests in military and national security affairs. Military emphasis is provided in one of three areas: Aerospace Studies, Military Science, or Naval Science. American military forces have played an important role in our domestic and international history and will continue to have significant involvement in policy arenas relating to national security and international relations. Students elect one military service branch for their prescribed courses and select two additional courses from appropriate history and political science courses emphasizing national security policy. At least 6 credits must be taken at the 400 level.

Military Honor Cords

Undergraduate and graduate students who have honorably served, are serving, or are commissioned to serve in the U.S. military will be awarded an honor cord to wear at their commencement ceremony in recognition of their duty and sacrifice. The red, white and blue cords will be given to eligible graduating students, including associate degree recipients, in the following groups: active duty, reserve and National Guard service members; veterans; and graduates receiving a commission through Reserve Officers' Training Corps (ROTC) and official U.S. Armed Forces recruiting programs. Penn State faculty members who meet the eligibility criteria also may receive a military honor cord.

Air Force ROTC

Program Description

The Air Force ROTC program trains qualified young men and women for service as commissioned officers in the United States Air Force and United States Space Force.

The program is offered at the University Park campus and by special arrangement as follows:

- students attending **Penn State Altoona** may complete freshman and sophomore requirements at the University Park campus
- students attending **Penn State Scranton**, **Penn State Hazleton**, or **Penn State Wilkes-Barre** may complete freshman and sophomore requirements at **Wilkes College**, Wilkes-Barre, PA
- students attending **Penn State Abington** or **Penn State Brandywine** may complete freshman and sophomore requirements at **St. Joseph's University**, Philadelphia, PA
- students attending **Penn State Greater Allegheny** or **Penn State New Kensington** may complete freshman and sophomore requirements at **The University of Pittsburgh**, Pittsburgh, PA

The junior and senior requirements may then be completed upon relocation to University Park campus.

Four-year (High School Scholarship Program (<https://www.afrotc.com/scholarships/>)), three-year, and two-year, In College scholarships are available to selected applicants. These scholarships provide tuition and fees benefits, a monthly stipend, and textbook allowance.

Also, all cadets in the junior and senior courses not already on scholarship are paid at the rate of \$400 to \$500 per month (tax free), respectively, and are eligible to receive the Charles McGee Leadership Award a tuition or housing assistance scholarship. Uniforms and ROTC textbooks are provided for free by the Air Force.

What is the Air Force ROTC?

Air Force ROTC is a 4-year program that inspires, develops, and trains future officers of the United States Air Force and the United States Space Force. AFROTC is a pathway to grow mentally and physically as you acquire leadership skills. The opportunity to pay for school is available through scholarships. Plus, you'll have a position waiting for you after graduation at one of the world's top high-tech organizations- the under the Department of the U.S. Air Force.

MORE INFORMATION ABOUT THE AIR FORCE ROTC (<https://www.airforce.psu.edu/>)

You Might Like This Program If...

- You are of good moral character.
- You are an undergraduate student with three or more years remaining of college.
- You are physically fit or willing to be.
- You are in good academic standing.
- You are ready for a challenge.

MORE INFORMATION ABOUT WHY STUDENTS CHOOSE THE AIR FORCE ROTC (<https://www.youtube.com/watch?v=wowxq4a-IE8>)

Program Requirements

The instruction consists of a General Military Course (freshmen and sophomores) and a Professional Officer Course (juniors and seniors) of four semesters each. Subjects and credits appear under course descriptions (ROTC) in this bulletin. Students have an opportunity to visit Air Force bases throughout the school year and summer months, where they may receive instruction on parachuting, flying gliders, and other Air Force and Space Force-related activities.

Completion of eight semesters, completion of one two-week summer training period and medical qualification confers eligibility for a commission in the Air Force Reserve and assignment to active duty in the USAF or USSF with the rank of second lieutenant.

Registering for Courses

Air Force ROTC students attending Penn State Altoona should visit the Air Force ROTC website (<https://www.airforce.psu.edu/new-site-g-registration/>) for instructions on registering for AFROTC courses.

Career Paths

AFROTC commissions Penn State graduates as Second Lieutenants for every Air Force and Space Force officer career field in every part of the world.

Careers

- Aircraft: pilot, navigator, maintenance
- Space and Missiles: operations, maintenance, ground support
- Intelligence: Office of Special Investigations, Foreign Area Officer
- Engineering: research, development or technical management in virtually all fields of engineering
- Scientific: mathematics, nuclear physics, meteorology, chemistry
- Computer Science: cyberwarfare operations, development, programming systems analysis
- Management: personnel, intelligence, communications and electronics, public relations, logistics, finance, security forces, information, munitions, air traffic control

Opportunities for Graduate Studies

If you already have your bachelor's degree and are interested in participating in the AFROTC program, you are welcome to apply. To join, you must have six semesters* as a full-time student (9 credits hours of combined master and AFROTC courses), a 2.0 cumulative GPA, passing fitness and medical standards, and good character.

* *Summer semesters do not count.*

Army ROTC

Program Description

The Army Reserve Officers' Training Corps (Army ROTC) offers qualified students the opportunity to Commission as a US Army Second Lieutenant (2LT), while earning a college degree. After graduation/commissioning, 2LTs fulfill their service obligation in the Active Duty (full-time), National Guard or Army Reserve components, while maintaining a civilian career.

Over the course of your four years in the program, nearly all Cadets earn a scholarship through the national high school or campus-based programs, after enrolling. Scholarship benefits include: **100% tuition** (Resident or Non-Resident), **\$600 semesterly book allotment** and a **\$420 monthly stipend**. The stipend and other potential bonuses are available to non-scholarship Cadets.

The traditional four-year program requires one class and a weekly leadership lab, totaling 24x academic credits. Army ROTC Course credits replace electives for all Penn State Majors, though the exact number varies by Academic College (6-18x). Course subjects and credits appear under ARMY course descriptions in this Bulletin.

The program is comprised of two successive phases: the Basic Course and Advanced Course. While the Advanced Course cannot be altered, there are two and three-year paths that allow students to complete the program, regardless of their start point in the Basic Course. Interested students should contact the NLB Enrollment Officer (<https://forms.office.com/r/CaUAm8VAjJ/>), to determine the most appropriate path to commissioning.

What is the Army ROTC?

The Penn State Army ROTC – Nittany Lion Battalion (NLB) is located entirely at the University Park campus. It is the country's largest traditional ROTC Program and one of the most successful. It is the **only Army ROTC Host Program located on any Penn State Commonwealth Campus**. Several other Penn State campuses offer Army ROTC through cross-enrollment agreements with other universities.

Penn State Commonwealth Campuses with Army ROTC (Host Universities in parentheses:

- Abington (Widener University)
- Berks (Lehigh University)
- Brandywine (Widener University)
- Erie (Gannon University)
- Harrisburg (Dickinson College)
- Lehigh Valley (Lehigh University)
- Mont Alto (Shippensburg University)
- Penn Tech (Lock Haven University)
- Wilkes-Barre (Scranton University)
- Scranton (Scranton University)

Points of Contact for these programs can be found on the Contact tab or at the NLB website (<https://army.psu.edu/campuses/>).

Interested Penn State 2+2 students, transitioning from ANY Commonwealth Campus, MUST verify eligibility with the NLB Enrollment Officer (<https://forms.office.com/r/CaUAm8VAjJ/>), no later than the semester preceding their transition. Summer training may be required to satisfy Basic Course requirements.

For additional information on Penn State Army ROTC, connect with the Scholarship and Enrollment Officer at 207 Wagner Building on the University Park campus or call 814-865-7255 or visit our the Nittany Lion Battalion website (<https://army.psu.edu>).

You Might Like This Program If...

- You want professional flexibility and proven leadership skills that every industry desperately seeks.
- You value the comradery and relationships built when teams strive for a common goal.
- You're seeking to become the best version of yourself.
- You want to join an organization, seeking to build and maintain members' holistic health and fitness.
- You're seeking the fulfillment that only comes from serving something greater than yourself.

MORE INFORMATION ABOUT WHY STUDENTS CHOOSE THE ARMY ROTC FROM THE US ARMY CADET COMMAND - NATIONAL ARMY ROTC HEADQUARTERS WEBSITE (<https://www.goarmy.com/rotc/>)

VIEW THE ARMY ROTC - HIGH SCHOOL SCHOLARSHIP APPLICATION (<https://hs.usarmyrotc.com/my.policy/>)

Program Requirements

Overall Requirements

Cadets must complete both Basic and Advanced Course requirements.

- Basic Course – There are several ways to meet Basic Course eligibility requirements.
 - Progression – Complete Army ROTC Classes 101, 102, 201 and 202 in succession, during a student's freshmen-sophomore years.
 - Compression – Complete the above-listed Army ROTC classes in one year, with simultaneous enrollment in Army 101/201 and Army 102/202.

- Basic Camp (<https://armyrotc.army.mil/basic-camp/>) – Inability to complete the four ROTC classes requires attendance at the 32-day Army ROTC Basic Camp, designed to introduce Cadets to the Army.
- Basic Combat Training – Prior service soldiers, sailors or airmen qualify for the Advanced Course, based on their completion of Basic Combat Training.
- Advanced Course – The Advanced Course is very rigid, with programs only able to shift Camp attendance from one summer to another, if necessary.
 - Classes – Complete Army ROTC Classes 301, 302, 401 and 402 in succession, during a student's junior-senior years.
 - Advanced Camp – Cadets complete Army ROTC Advanced Camp between their junior and senior years (exceptions considered for injury or academic conflicts).

Campus Requirements

These are the requirements Cadets must complete throughout the school year.

Army ROTC Cadets commit about eight hours to weekly Army ROTC requirements:

- Two Army ROTC Classes on Tuesdays/Thursdays (3 hours)
- Three Physical Fitness Sessions (3 hours)
- One Military Studies Lab (2 hours)

Additionally, there is one field training exercise (FTX) and one formal event, per semester.

Training Requirements

- Advanced Camp is the only required summer training event; traditionally occurring between a Cadet's junior and senior years.
- Advanced Camp (<https://armyrotc.army.mil/advanced-camp/>) is the capstone leader development opportunity for all Cadets between their junior and senior years in ROTC.
- Advanced Camp is 35-days long and held at Fort Knox, Kentucky.

Cadet Professional Development Training (CPDT)

Though optional, there are many training opportunities available to Cadets (<https://armyrotc.army.mil/cadet-leader-training/>) that can enhance their experience, while in Army ROTC.

- Cadet Troop Leader Training (CTLT) – CTLT provides Cadets an opportunity to develop leadership skills in a training environment as they shadow and learn from platoon leaders.
- Cadet Advanced Individual Training (CAIT) – CAIT provides Cadets an opportunity to attend a variety of specialized training courses, including Airborne, Air Assault, Combat Diver Qualification Course, Basic Military Mountaineer Course, Jungle Operations and more.
- Nurse Summer Training Program (NSTP) – NSTP provides opportunities to practice and develop leadership skills in a clinical environment. Cadets work side-by-side with an Army Nurse Corps Officer in this 4-week long program.
- Cadet Internships – Provides additional training opportunities for Cadets in specialized areas, technical fields, and research. Some examples of available internships, include: U.S. Army Cyber (ARCYBER), MIT Lincoln Lab Internship (MITLL), National Security Agency (NSA), Nuclear Science & Engineering Research Center (NSERC), JAG Corps (JAG) and the Army Medical Department (AMEDD) as well as opportunities at West Point and the FBI.

- Project Global Officer (GO) (<https://www.rotcprojectgo.org/>) – Project GO is a nationwide program open to all qualified ROTC students offering fully-funded opportunities in critical language education, overseas study, and cross-cultural experience.

Entrance to Army ROTC

There are many paths to join Army ROTC and the Nittany Lion Battalion. Reach out and discover the one that's best for you!

- ARMY ROTC – HIGH SCHOOL SCHOLARSHIP APPLICATION (<https://hs.usarmyrotc.com/my.policy/>)
- Penn State Army ROTC Interest Form (<https://forms.office.com/r/CaUAm8VAJj/>)

Career Paths

Commissioned Officers are the managers, problem solvers, key influencers and planners who lead Enlisted Soldiers in all situations.

Officer Branches / Career Fields

- **Adjutants General Officer:** An Adjutant General Officer is responsible for helping Soldiers with the tasks that affect their overall welfare and well being, while assisting commanders by keeping Soldiers combat-ready. In many cases, the duties of an Adjutant General Officer are very similar to the function of a high-level human resources executive in the civilian world. Officers are leaders, and being a leader in the Army requires certain qualities such as self-discipline, initiative, confidence and intelligence.
- **Air Defense Artillery Officer:** The role of an Air Defense Artillery Officer is to be a leader in operations specific to the Air Defense Artillery Branch and to be an expert in the tactics, techniques and procedures for the employment of air defense systems.
- **Armor Officer:** Armor Officers are responsible for tank and cavalry/forward reconnaissance operations on the battlefield. The role of an Armor Officer is to be a leader in operations specific to the Armor Branch and to lead others in many areas of combat operations.
- **Aviation Officer:** An Officer within the Aviation Branch is first an expert aviator but is also responsible for the coordination of Aviation operations from maintenance to control tower operations to tactical field missions. From providing quick-strike and long-range target engagement during combat operations to hauling troops and supplies, Army helicopter units play a critical role in getting the job done in many situations.
- **Chemical, Biological, Radiological and Nuclear (CBRN) Officer:** The Chemical, Biological, Radiological and Nuclear (CBRN) Officer advises the commander on issues regarding nuclear, biological and radiological warfare, defense and homeland protection. Chemical Officers also employ Chemical units in combat support with chemical, smoke and flame weapons, technology and management. Officers are leaders, and being a leader in the Army requires certain qualities such as self-discipline, initiative, confidence and intelligence.

- **Engineer Officer:** An Officer in the Army Corps of Engineers is responsible for providing support in a full spectrum of engineering duties. Engineer Officers help the Army and the Nation in building structures, developing civil works programs, working with natural resources as well as providing combat support on the battlefield.
- **Field Artillery Officer:** The Army's Field Artillery Branch is responsible for neutralizing or suppressing the enemy by cannon, rocket and missile fire and to help integrate all fire support assets into combined arms operations. The role of a Field Artillery Officer is to be a leader in operations specific to the Field Artillery Branch and to be an expert in the tactics, techniques and procedures for the employment of fire support systems.
- **Finance Officer:** Finance Officers direct and coordinate finance and accounting functions and serves as the advisor to the Commander on all financial matters and matters pertaining to Finance Corps personnel and units. They also establish, control and audit all finance and accounting systems. Finance Officers also prepare and distribute reports and financial statements to provide the commander and staff with adequate information for management, status of funds and budget purposes.
- **Infantry Officer:** An Infantry Officer is responsible for leading and controlling the Infantry and combined armed forces during land combat. They are also involved in coordinating employment of Infantry Soldiers at all levels of command, from platoon to battalion and higher, in U.S. and multi-national operations. Officers are leaders and being a leader in the Army requires certain qualities such as self-discipline, initiative, confidence and intelligence.
- **Medical Service Corps Officer:** Medical Service Corps Officers are essential in treating and helping the overall health of Soldiers and their families. They are also responsible for much of the medical research that takes place in the Army. From medical fields such as optometry and podiatry to laboratory sciences to behavioral sciences, the Army Medical Service Corps includes many areas of specialty.
- **Military Intelligence Officer:** Military Intelligence (MI) Officers are always out front, providing essential intelligence and in many cases saving Soldiers who are fighting on the front lines. MI Officers assess risks associated with friendly and enemy courses of action and act to counter or neutralize identified intelligence threats. The MI Officer also uses intelligence systems and data to reduce uncertainty of enemy, terrain and weather conditions for a commander.
- **Military Police Officer:** Military Police Officers are utilized in direct combat and during peacetime to lead other Military Police Soldiers while they serve five main functions:
 - Maneuver and mobility support operations,
 - Area security operations,
 - Law and order operations,
 - Internment and resettlement operations and
 - Police intelligence operations.
- **Nurse Corps Officer:** Army Nurse Corps Officers lead diverse nursing teams in a variety of settings and provide holistic multi-disciplinary care for Soldiers and their families. Officers are leaders. All Army leaders require self-discipline, initiative, confidence, the ability to problem solve and make timely decisions.
- **Ordnance Officer:** Ordnance Officers are responsible for ensuring that weapons systems, vehicles and equipment are ready and available - and in perfect working order - at all times. Thus, Ordnance Officers and the Soldiers they lead are a critical component in the Army's success. Ordnance Officers also oversee the developing, testing, fielding, handling, storage and disposal of ammunitions.
- **Quartermaster Officer:** Quartermaster Officers are responsible for making sure equipment, materials and systems are available and functioning for missions. More specifically, the Quartermaster Officer provides supply support for Soldiers and units in field services, aerial delivery and material and distribution management. Officers are leaders, and being a leader in the Army requires certain qualities such as self-discipline, initiative, confidence and intelligence.
- **Signal Corps Officer:** A Signal Corps Officer must be an expert in planning, installing, integrating, operating and maintaining the Army's voice, data and information systems, services and resources. Signal Officers must be highly intelligent, forward-thinking and have a complete knowledge of communications and data management technologies.
- **Transportation Officer:** Transportation Officers are experts in the systems, vehicles and procedures in moving troops and supplies in the Army. Transportation Officers are responsible for commanding and controlling Transportation operations and combined armed forces during land combat. Officers are leaders, and being a leader in the Army requires certain qualities such as self-discipline, initiative, confidence and intelligence.

US Army Components

- **Active Duty Component** (<https://www.goarmy.com/careers-and-jobs/become-an-officer.html>) (Full-Time): The Army counts on active duty Soldiers for day-to-day operations. Each Soldier has his or her own specialized training and serves a critical function within his or her unit. Active duty Soldiers serve in the Army 24 hours a day, seven days a week for the duration of their service commitment. Think of it as working a **full-time** job. Active duty Officers will live on or near a military installation that serves as your unit's base of operations, will be paid a full salary, and have access to all of the benefits of a full-time Soldier. Benefits include medical and dental health coverage for the service member and their dependents (if applicable) and basic housing allowance.
- **US Army Reserve** (<https://www.goarmy.com/reserve.html>) (Part-Time): The Army Reserve the Army's pool of extra resources and personnel. Reserve Soldiers perform critical Army jobs on a **part-time** basis and are a Federal entity. Unlike active duty, Army Reserve Soldiers serve part time, allowing them to earn an extra paycheck, go to school, or work a civilian job while still maintaining many of the benefits of military service. As a Reserve Officer, you will spend one weekend a month on duty and two weeks a year in training. Soldiers in the Army Reserve may be called to active duty to provide their expertise.
 - Unlike serving on Active Duty, you will be able to live anywhere in the United States. If you are planning on attending college or advancing within your civilian career, Army Reserve service will provide you with the flexibility to live where you choose. Part of the benefit of becoming a Soldier in the Army Reserve is the free time you will have to accomplish your personal goals.
 - Career fields in the US Army Reserve do not include Combat Arms branches (Infantry, Air Defense Artillery, Armor, Field Artillery).
- **Army National Guard** (<https://www.nationalguard.com/>) (Part-Time): The Army National Guard offers you the chance to be part of a team your community and nation can count on. The Army National Guard is a state funded entity and is a unique and essential element of the U.S. military. Founded in 1636 as a citizen force organized to protect families and towns from hostile attacks, today's National Guard Soldiers hold civilian jobs or attend school while maintaining their military training part-time, always ready to defend the American way of life in the event of an emergency.

- The Army National Guard has a unique dual mission. Domestically, the Army National Guard operates under the direction of state governors and is tasked with protecting communities here at home. The Guard's federal mission puts it under the control of the president, which allows Guard units to support active duty military forces in responding to threats abroad and humanitarian disasters.
- The Army National Guard serves in more than 2,000 communities across all 50 states, the District of Columbia, Guam, Puerto Rico, and the U.S. Virgin Islands. Each state and territory has its own Army National Guard, which means you can serve close to where you work or attend school. Typically, Guard Soldiers live with their families in communities of their choosing, rather than on a military base. Service in the Army National Guard is part-time, which allows Guard Soldiers to pursue their educational and civilian career goals on a full-time basis. At a minimum, Guard Soldiers train one weekend a month and two weeks a year, although additional training may be required of certain units and in support of specific missions.
- Army National Guard Soldiers can choose from more than 150 military jobs, including public affairs, transportation, law enforcement, healthcare, and STEM (science, technology, engineering and mathematics) fields. Soldiers can serve in positions that complement their civilian careers, or in a military job completely unrelated to their education and civilian experience. No matter which Guard job a Soldier chooses, the Soldier will receive fully paid Army training to provide them with the skills and knowledge needed to succeed in their military position. Career opportunities in the Army National Guard are subject to the availability of jobs in the state a Cadet will want to serve in.

Naval Science/Naval Reserve Officer Training Corps (NROTC)

Program Description

The Naval Reserve Officer Training Corps (NROTC) trains qualified young men and women at the University Park campus for service as commissioned officers in the Navy, the Navy Nurse Corps, or the Marine Corps.

Entering freshmen may be accepted into Penn State NROTC either by receiving the NROTC National Scholarship (Scholarship Program (<https://www.netc.navy.mil/commands/naval-service-training-command/nrotc/apply/>)) or applying directly through Penn State NROTC to participate as a College Program student. These College Program freshmen, who do not receive scholarship monies, may be eligible to compete for the Scholarship Program based upon their performance in the Unit. Qualified sophomores, either in attendance or planning to commence studies at University Park Campus during their junior year, may compete for the special Two-Year College Program Advanced Standing or Two-Year Scholarship Programs. Navy, Nurse, and Marine Corps scholarships provide full tuition, book allotment, laboratory and instructional fees, and a \$250-\$400 per month subsistence allowance. In addition, Nurse scholarship students are issued special equipment required by the BSN curriculum.

Students who receive their baccalaureate degree and complete the NROTC program receive commissions as either Navy Ensigns or Marine Corps Second Lieutenants. After commissioning, these individuals are obligated to serve a minimum of four years on active duty, though these service obligations may vary dependent upon which warfare community the officer enters.

What is Naval Science?

Naval Science is a field of study that offers university students an introduction to the operations, technology and culture of the United States Navy and Marine Corps. Naval Science courses are available for all university students but are designed to operate in conjunction with the Pennsylvania State University NROTC program to provide

professional development and service knowledge to perspective officers. Naval Science courses can also be utilized to fulfill prescribed course requirements for the Military Studies minor.

You Might Like This Program If...

- You are enrolled in the NROTC program at Penn State (Required).
- You are enrolled or considering enrolling in the Military Studies minor at Penn State.
- You are interested in learning about Naval operations, technology and culture.

MORE INFORMATION ABOUT THE NAVAL ROTC (<http://nrotc.psu.edu/>)

Program Requirements

All students must complete at least 18 credits of Naval Science (NAVSC) courses; subjects and credits appear under course descriptions (ROTC/NAVSC) later in this bulletin. College Program students must participate in one active duty training period (cruise) during the summer between junior and senior years. Scholarship students are required to participate in either two (Nurse) or three (Navy and Marine Corps) summer cruises prior to commissioning.

In addition, all Navy scholarship students must complete University courses in calculus, physics, national security policy, and American military affairs. Requirements for Nurse and Marine Corps scholarship students are somewhat less. College Program students must complete University courses in national security policy and American military affairs.

Career Paths

Students who receive their baccalaureate degree and complete the NROTC Program are commissioned as either Navy Ensigns or Marine Corps Second Lieutenants. Post-commission career paths for Navy option students include Surface Warfare Officer, Submarine Warfare Officer, Naval Aviator, Naval Flight Officer, or Special Operations Warfare Officer. Marine Corps option students can serve as either Ground or Aviation Marine Corps Officers. All students are obligated to serve a minimum of four years of active duty, though select career paths may require a greater minimum service time.

Schreyer Honors College

About the College

Patrick Mather, Dean, Schreyer Honors College

The Schreyer Honors College, regarded as one of the nation's top programs of its kind, promotes achieving academic excellence with integrity, building a global perspective, and creating opportunities for leadership and civic engagement. Schreyer Scholars, including Scholars admitted after their first or second year of enrollment, are a diverse and motivated group of approximately 2,000 students at University Park and 20 Commonwealth campuses. The College strives to educate students who will have an important and ethical influence in the world, to improve educational practice, and to continue to be recognized as a leading force in honors education nationwide.

MORE INFORMATION ABOUT THE COLLEGE (<https://www.shc.psu.edu>)

College Procedures

Academic Warning

Failure to attain a GPA of at least 3.40 in one full-time semester places a student in warning status for the following semester and removes them from good academic standing in the College. Students on Academic Warning will continue to receive honors scholarships but will not be eligible for grants.

MORE INFORMATION ABOUT ACADEMIC WARNING (<https://www.shc.psu.edu/academics/handbook/#status>)

Change of Campus

Schreyer Scholars may start at any of Penn State's undergraduate campuses but must complete their junior and senior years at Abington, Altoona, Behrend, Berks, Brandywine, Harrisburg, or University Park. Current Penn State students may be admitted into the Schreyer Honors College through the current student admission process.

MORE INFORMATION ABOUT CHANGE OF CAMPUS (<https://www.shc.psu.edu/academic/resources/handbook/>)

Honors Courses

First-year and sophomore students should expect to fulfill most or all of their honors requirements via honors courses, with limited exceptions by major and campus. A grade of C or higher is required for an honors course to meet honors credit requirements. With approval of the instructor and their honors adviser, students may take honors option courses that are typically not honors courses. A list of honors courses can be found via LionPATH (<https://lionpath.psu.edu>).

Resources

Academic

The College's Academic Team supports Scholars through their academic journey. They maintain the requirements and the academic deadline calendar, provide thesis support, and coordinate resources for research, advising, and more. Scholars can also schedule one-on-one appointments with the College's academic staff.

MORE INFORMATION ABOUT ACADEMIC RESOURCES (<https://www.shc.psu.edu/academics/>)

Study Abroad

Schreyer Honors College offers signature travel programs, including semester, summer, and short-term opportunities. The College can also help Scholars identify international service learning opportunities. Travel grants are available to Scholars in good standing for travel programs, international research, and internships.

MORE INFORMATION ABOUT STUDY ABROAD OPPORTUNITIES (<https://www.shc.psu.edu/academics/global/>)

Honors Advising

Honors advisers serve as principal resources for students for helping them choose majors, which enrichment and professional development opportunities should be pursued in addition to their coursework, and thesis preparation. Advisers can be faculty members or full-time academic advisers, depending on the academic college.

MORE INFORMATION ABOUT HONORS ADVISING (<https://www.shc.psu.edu/academics/advising/>)

Career Services

Scholars can schedule individual appointments with Schreyer's director of career development, attend career events, join alumni mentoring programs, and travel to cities like New York and Washington, D.C., to meet with Scholar alumni. The College's signature Connect Networking and Career Day event brings together Scholars and Scholar alumni.

MORE INFORMATION ABOUT CAREER SERVICES (<https://www.shc.psu.edu/life/career/>)

Student Aid

Scholars in Schreyer Honors College can meet with our student aid counselor to explore financial support, including Schreyer-specific need-based scholarships, emergency funding, and grants.

MORE INFORMATION ABOUT STUDENT AID (<https://www.shc.psu.edu/admissions/cost-aid/>)

UNIVERSITY COURSE DESCRIPTIONS

The University Course Descriptions section lists all currently active courses at Penn State. Please note that not all courses are offered in any given academic semester. To find class offerings for a specific semester, please view the LionPATH Schedule of Classes (https://public.lionpath.psu.edu/psp/CSPRD/EMPLOYEE/HRMS/c/COMMUNITY_ACCESS.CLASS_SEARCH.GBL?psInkid=PE_S201801181044562576711220).

Below are definitions for the various components of a course description.

Course-Numbering System

These course descriptions are arranged alphabetically. If any course cannot be located readily, refer to the index. Courses are numbered as follows:

Undergraduate Courses (1 to 399): General courses accepted in fulfillment of requirements for the bachelor's degrees. These courses are described in the Undergraduate Courses section (p. 3297).

Advanced Undergraduate Courses (400 to 499): Courses open to graduate students and to juniors and seniors and, with the special written permission of the head of the department or the chair of the program sponsoring the course, to qualified students in earlier semesters. These courses are described in the Undergraduate Courses section (p. 3297).

Graduate Courses (500 to 699; 800 to 899): Courses restricted to students registered in the Graduate School, seniors with an average of at least 3.50 (500- and 800-level only; excludes 600-level), and other students who have been granted permission to enroll by the dean of the Graduate School. These courses are described in the Graduate Courses section (<https://bulletins.psu.edu/university-course-descriptions/graduate/>). Undergraduate students who wish to enroll in 500- or 800-level courses should review the policy and follow the necessary procedures outlined in GCAC-507 Undergraduate Students Taking Graduate Courses (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-500/gcac-507-undergraduate-students-taking-graduate-courses/>).

Medical Courses (700-799): Courses restricted to students registered in the College of Medicine. These courses are described in the College of Medicine Courses section (<https://bulletins.psu.edu/university-course-descriptions/medicine/>).

Law Courses (900-999): Courses restricted to students registered in Penn State Law and Dickinson Law. These courses are described in the Penn State Law Courses section (<https://bulletins.psu.edu/university-course-descriptions/pennstatelaw/>) and Dickinson Law Courses section (<https://bulletins.psu.edu/university-course-descriptions/dickinsonlaw/>).

Common Course Numbers

The following course numbers for which students may register have been set up for common use by major programs, with University Senate approval, to encourage innovation and provide flexibility in designing programs, but in no case may a course be scheduled for 0 credits.

First-Year Seminar 187. Listed under some liberal art-related academic headings, this course has prerequisites of first-semester standing and enrollment in the College of the Liberal Arts.

Research Project Courses 294, 494. 1-12 credits. Supervised student activities on research projects identified on an individual or small-group basis. A specific title may be used in each instance and will be entered on the student's transcript.

Internship 295, 395, 495. 1-18 credits. Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required. A specific title may be used in each instance and will be entered on the student's transcript.

Independent Studies 296, 496. 1-18 credits. Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses. A specific title may be used in each instance and will be entered on the student's transcript.

Special Topics 97, 197, 297, 397, 497; 98, 198, 298, 398, 498. 1-9 credits. Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest. Several different topics may be taught in one year or semester. A specific title may be used in each instance and will be entered on the student's transcript.

Foreign Studies 99, 199, 299, 399, 499. 1-12 credits. Courses offered in foreign countries by individual or group instruction. A specific title may be used in each instance and will be entered on the student's transcript. These courses typically carry the International Cultures (IL) attribute.

Graduate Common Courses

Colloquium 590. Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

Research Topics 594. Supervised student activities on research projects identified on an individual or small-group basis.

Internship 595. Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Individual Studies 596. Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Special Topics 597, 598. Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Foreign Studies 599. Courses offered in foreign countries by individual or group instruction.

Thesis Research 600, 610. In registering for thesis research, a student uses the appropriate number (600, 610) preceded by the abbreviation designating the major field. The numbers 600 (on campus) and 610 (off campus) are available for credit in thesis research in all graduate major programs. The bursar assesses charges for these courses at the current rate of tuition, according to the student's status at the time of registration.

Ph.D. Dissertation 601, 611. The numbers 601 and 611, with associated special fees, are available to Ph.D. degree candidates who have passed the comprehensive examination and met the two-semester residence requirement. They may be used for dissertation preparation work during its later stages, when the academic activity of the candidate consists

partly (611) or solely (601) of work on the completion of research and writing of the dissertation.

SUBJ 601 and SUBJ 611 do not carry academic credit. They are entered on the academic transcript to indicate the registration and the nature of the candidate's academic activity. A candidate registered for SUBJ 601 is classified as a full-time student, while one registered for SUBJ 611 is classified as a part-time student.

The numbers 600, 601, 610, and 611 may not appear in the Schedule of Courses for each semester.

Supervised Experience in College Teaching 602. May be offered by any graduate program in a department that also offers undergraduate courses. A graduate program with no counterpart undergraduate program may offer SUBJ 602 when cooperative arrangements are made with an administrative unit that does not offer graduate degrees but that uses graduate assistants in its teaching. SUBJ 602 may be offered in any semester and is subject to the following restrictions:

1. SUBJ 602 will not be counted in fulfilling any specific credit requirement for an advanced degree.
2. SUBJ 602 will be graded (A, B, C, D, F). The grade will appear on the student's transcript.
3. SUBJ 602 will not be used in calculating grade-point averages.
4. SUBJ 602 shall be offered only in those graduate programs that want to provide opportunity for supervised and graded teaching experience. Enrollment will be restricted to students for whom the major program is prepared to provide such experience.
5. SUBJ 602 will be counted as a part of the student's credit load unless the program specifies otherwise.

Foreign Academic Experience SUBJ 603. Foreign study and/or research approved by the graduate program for students enrolled in a foreign university constituting progress toward the degree.

Colloquium 890. Continuing, professionally oriented seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

Capstone Experience 894. Supervised, professionally oriented student activities that constitute the culminating experience for the program.

Internship 895. Supervised, professionally oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Individual Studies 896. Creative projects with a professional orientation, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Special Topics 897, 898. Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently; several different topics may be taught in one year or semester. A specific title may be used in each instance and will be entered on the student's transcript. Multiple offerings may be accommodated by the use of suffixes A, B, etc.

Foreign Studies 899. Courses with a professional orientation offered in foreign countries by individual or group instruction.

Course Attributes and Suffixes

Attributes and attribute values are course designations that are used to define specific characteristics for courses. The search for specific types of courses uses attributes and attributes are the most important notation for a course to satisfy a given requirement.

Suffixes are letters that follow a course number and allow for easier identification of a course's characteristics. Not all attributes and characteristics are captured in available suffixes and suffixes are not the feature used to determine if a course satisfies a requirement. The degree audit and what-if reports use attributes, not suffixes, to determine applicability of a course to a requirement.

Bachelor of Arts

Attributes

- BA: Arts
- BA: Humanities

Course Credits

In accordance with Senate Policy 42-23 (<https://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-20>), for the typical student, a total of forty-five (45) hours of work planned and arranged by the University faculty is required to gain 1 credit. While the distribution of time varies from course to course, generally one-third of the time is devoted to formal instruction and two-thirds of the time to outside preparation. Course credit by instruction may be achieved by a variety of educational experiences that allow the student to work toward mastery of the course objectives. With the acknowledged goal of educational excellence, more than the minimum established here may be required for mastery of course objectives.

The number of credits for each course is indicated in parentheses and can be earned with classroom, practicum, or laboratory work as designated in LionPATH.

A department may schedule an entire section in an undergraduate course for fewer credits than the maximum authorized. In 400-level courses, a department may schedule an individual student for fewer credits than the maximum authorized. In no case, however, may the course be scheduled for 0 credit, or may the total credits scheduled for any student exceed the maximum number authorized for the course.

Repeatable and Variable Credit Courses

Some courses are designated as repeatable; they may be taken more than once for credit. These courses may be repeated indefinitely unless the department stipulates a maximum number of credits allowed. These courses appear with the maximum number of credits allowed following the number of credits for the course—for example (1.5 credits/maximum of 3).

Courses may have variable credits, such as (1-3), (2-6), or (3-10). Here, the larger number signifies the total credits that can be accumulated for the course over an indefinite number of semesters, unless otherwise specified. For example, a course listed with (1-6) could be taken six semesters for 1 credit each semester, or two semesters for 3 credits each semester, or once for 6 credits, etc.

In some courses with variable credits, students may be permitted to accumulate more than the larger number shown. Such courses will be listed as, for example, (1-3 per semester, maximum of 12).

Any special departmental limitations are indicated by footnotes.

Prerequisites, Concurrent Courses, Co-requisite Courses, and Recommended Preparation

See also: Senate Policy 34-60 (<https://senate.psu.edu/policies-and-rules-for-undergraduate-students/34-00-course-scheduling/#34-60>).

Prerequisites, concurrent courses, and co-requisite courses approximate the necessary specific coursework or general academic knowledge,

background, or semester classification required to succeed academically in a given course.

- Prerequisites are courses or other requirements that must be completed prior to the start of a given course.
- Concurrent Courses are similar to prerequisites except that they may be taken prior to, or in the same semester as, the given course.
- Co-requisite Courses are pairs of courses required to be taken together in the same semester.

Registration in a given course is limited to students who have satisfied the stated prerequisite, concurrent, or co-requisite requirements. The course instructor has the right to permit students to take the course without having the stated prerequisite, concurrent, or co-requisite requirements, if the student demonstrates mastery of the material through some other means.

Recommended Preparation relates to preparatory skills or companion courses deemed useful, but not necessary, for successful completion of a course. Recommended preparation has no bearing on registration in a given course.

UNDERGRADUATE COURSES

A

- Accounting (ACCTG) (p. 3299)
- Adult Education (ADTED) (p. 3306)
- Aerospace Engineering (AERSP) (p. 3307)

Accounting (ACCTG)

ACCTG 151: Introductory Financial Accounting I

3 Credits

Basic concepts, principles, and practices for the recording, summarizing, and interpreting of accounting data.

ACCTG 152: Introductory Financial Accounting II

3 Credits

Accounting for partnerships, corporations, cash flows, certain liabilities and assets, and the analysis of financial statements.

Enforced Prerequisite at Enrollment: ACCTG 151

ACCTG 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

ACCTG 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ACCTG 201: Introduction to Financial Accounting

3 Credits

This course is an introduction to the basic concepts of financial accounting including the collection, recording, summarization, and interpretation of accounting data. Emphasis in the course is placed on using financial accounting information for external decision making. Accounting theory of commonly used accounts such as cash, investments, receivables, inventory, fixed assets, payables, bonds, and stocks are studied. Students who successfully complete ACCTG 211 may not schedule ACCTG 201

Enforced Prerequisite at Enrollment: MATH 21 or a higher math course or a satisfactory score on the mathematics placement examination

ACCTG 202: Introduction to Managerial Accounting

3 Credits

This course is a continuation of ACCTG 201 (Introduction to Financial Accounting) with an in-depth analysis and explanation of the statement of cash flows and how understanding cash flows is important for all users (internal versus external). Then, the course emphasizes the use of accounting information for internal purposes (managerial accounting). The course teaches the vocabulary and method of accumulating and allocating costs in a manufacturing company as well as the understanding of budgets and how they can be used to motivate personnel. Among the topics covered are cost behavior, cost-volume analysis, relevant costs, variance analysis, and the use of cost information for decision making (i.e. capital investment, product pricing, etc.). Current issues, careers, and topics for managerial accounting will also be addressed. Students who pass ACCTG 211 may not schedule ACCTG 202.

Enforced Prerequisite at Enrollment: ACCTG 201

ACCTG 211: Financial and Managerial Accounting for Decision Making

4 Credits

Introduction to the role of accounting numbers in the process of managing a business and in investor decision making. ACCTG 211

Financial and Managerial Accounting for Decision Making (4)The objective of this course is to introduce students to the discipline of accounting through an introduction to two of accounting's sub-disciplines, financial and managerial accounting. The more specific purpose is to provide students a basic understanding of the role of financial and managerial accounting information in the decisions of capital market participants external to a business enterprise (e.g., stockholders, banks, financial analysts, prospective stockholders), and in the decisions of those who manage business enterprises. Accounting information has an important role in the resource allocation process in our socio-economic system as a whole, as well as in each individual business enterprise. This course provides students an understanding of (1) the nature of the accounting function, and (2) how the information in accounting reports are used by various decision makers in their resource allocation decisions. In this course students will develop an understanding of (a) the five activity dimensions of accounting (the collection, recording, analysis, interpretation and reporting of information to decision makers for (mainly) their investment decisions), (b) the issues surrounding the five activity dimensions, (c) the environment in which accounting is practiced, and (d) what information is used in a number of specific decision situations, and how such information is used in such decision situations. The analysis, interpretation and decision-making orientation of this course includes a study of the procedural (mechanical and processing) aspects of the recording activity dimension which is an important means to the end --where the end is the analysis and interpretation of the information, and the reports produced by the recording/processing part of accounting. Through this focus on the recording activity dimension, students will obtain an understanding of (a) the nature and quality (strengths and weaknesses) of accounting information, (b) how to proceed in analyzing and interpreting accounting information, and (c) numerous other aspects of financial and managerial accounting. This course is an important background course for all business majors, as well as for numerous non-business majors.

Enforced Prerequisite at Enrollment: MATH 21 or a higher math course or a satisfactory score on the mathematics placement examination

ACCTG 211H: Financial and Managerial Accounting for Decision Making

4 Credits

The objective of this course is to introduce students to the discipline of accounting through an introduction to two of accounting's sub-disciplines, financial and managerial accounting. The more specific purpose is to provide students a basic understanding of the role of financial and managerial accounting information in the decisions of capital market participants external to a business enterprise (e.g., stockholders, banks, financial analysts, prospective stockholders), and in the decisions of those who manage business enterprises. Accounting information has an important role in the resource allocation process in our socio-economic system as a whole, as well as in each individual business enterprise. This course provides students an understanding of (1) the nature of the accounting function, and (2) how the information in accounting reports are used by various decision makers in their resource allocation decisions. In this course students will develop an understanding of (a) the five activity dimensions of accounting (the collection, recording, analysis, interpretation and reporting of information to decision makers for (mainly) their investment decisions), (b) the issues surrounding the five activity dimensions, (c) the environment in which accounting is practiced, and (d) what information is used in a number of specific decision situations, and how such information is used in such decision situations. The analysis, interpretation and decision-making orientation of this course includes a study of the procedural

(mechanical and processing) aspects of the recording activity dimension which is an important means to the end –where the end is the analysis and interpretation of the information, and the reports produced by the recording/processing part of accounting. Through this focus on the recording activity dimension, students will obtain an understanding of (a) the nature and quality (strengths and weaknesses) of accounting information, (b) how to proceed in analyzing and interpreting accounting information, and (c) numerous other aspects of financial and managerial accounting. This course is an important background course for all business majors, as well as for numerous non-business majors.

Enforced Prerequisite at Enrollment: MATH 21 or a higher math course or a satisfactory score on the mathematics placement examination Honors

ACCTG 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ACCTG 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ACCTG 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ACCTG 305: Financial Statements and Management Decisions

4 Credits

Impact of management's financing, investing, and operating decisions on GAAP-based financial statements. This course is a one-semester condensed version of the traditional two-semester intermediate accounting sequence (ACCTG 371 or 471; and 472) intended for the non-accounting major. Students who have passed ACCTG 371 or 471; and 472 may not take this course for credit. It is a required course for the Finance major. Students will gain a fundamental understanding of the information conveyed in the financial statements and, as a result, develop an appreciation for its usefulness and limitations in decision making. They will also develop the prerequisite knowledge base necessary to conduct financial statement analysis as required in Level I of the Chartered Financial Analyst (CFA) exam. A financial statement user decision-making perspective, rather than the accountant/preparer approach found in the traditional intermediate accounting sequence, is emphasized. Student success in meeting the learning objectives will be assessed through a combination of exams, quizzes, assigned homework problems, and participation. The comprehensive final exam will test the student's comprehension of the relevant material.

Enforced Prerequisite at Enrollment: ACCTG 211 and FIN 301

ACCTG 310: Federal Taxation I

3 Credits

Study of income determination concepts for individuals and corporations, impact of taxation on decisions, elementary research techniques, and ethical standards. ACCTG 310 Principles of Taxation (3) This course is directed to the study of concepts relative to: (a) the determination of taxable income and tax liability, (b) the influence of tax considerations on the decisions of taxpayers, and (c) elementary tax research techniques. Primary emphasis is given to concepts that are fundamental to the federal taxation of income with respect to business entities. Also, basic aspects of the taxation of individuals are introduced. The objectives of this course are to enable students to do the following: 1) apply basic tax rules and regulations to compute the taxable income and federal income tax liability for corporate and individual taxpayers, 2) incorporate tax costs and tax benefits into calculations of the net present value of cash inflows and outflows from taxable activities, 3) recognize tax planning opportunities or problems inherent in common transactions, and 4) appreciate the impact of the basis of accounting on both tax and financial reporting. Typical topics include sources of authority, structure of an income tax, property transactions, choice of entity, distribution of income, selection of jurisdiction, means of financing, and taxation of individuals. Students should be familiar with basic accounting concepts, should understand the nature of financial instruments, and should be able to apply the concept of present value and future value in estimating cash inflows and outflows. This is a required course for accounting majors and, for many of them, the only tax course that they take. Other students who meet the prerequisite requirements may take this course as an elective. Also, this principles course in taxation is a prerequisite requirement for an advanced course in taxation. Evaluation is based primarily on periodic examinations. No special facilities are required. However, students have on-line access to tax laws and regulations, tax cases, and administrative guidance. This course is generally offered every semester with enrollments of twenty to thirty students per section.

Enforced Prerequisite at Enrollment: ACCTG 211 or FIN 301

ACCTG 311: Accounting Systems and Control

3 Credits

Introduction to accounting procedures to gather, to aggregate, and to report accounting data to managers and to external readers. ACCTG 311 Accounting Information Systems (3) This course pertains to the study of accounting information systems as an important part of a firm's total information systems. The accounting cycle, as the key process providing financial information to management, is thoroughly reviewed and documented. Emphasis is given to the importance of computer-based accounting information systems in supporting internal controls and improving financial reporting, asset security and efficiency and effectiveness of performance. Course objectives: 1.) to understand the accounting model and specifically, the accounting cycle within a business entity; 2.) to process business and accounting transactions and complete the accounting cycle within a computer-based accounting information system; 3.) to analyze accounting information and related internal controls within a computer-based accounting information system; 4.) to examine relevant ethical issues; 5.) to gain an appreciation for evolving technology advancements, such as ERP's and e-commerce, and their impact on the accounting cycle and internal controls. This is a prescribed course for majors in Accounting and it serves as a foundation and prerequisite for most 300-level and 400-level accounting courses. Students will be evaluated based on performance on exams, computer-

based accounting system project, and periodic homework assignments. Typically, 50% or more of student's grade is based on performance on exams. Course will be taught in either a technology classroom with computers for all students or periodic sessions in the computer lab. [Students will require consistent access to a computer to complete computer-based accounting system project].

Enforced Prerequisite at Enrollment: ACCTG 211

ACCTG 312: Accounting Technology Lab

3 Credits

Hands-on course to teach accounting software, applications of spreadsheets and databases in accounting, and surveying of underlying database theory. ACCTG 312 Accounting Technology Lab (3) This is a hands-on course to teach accounting software, applications of spreadsheets and databases in accounting, and surveying of underlying database theory .

Enforced Prerequisite at Enrollment: ACCTG 305 or ACCTG 371

ACCTG 340: Cost Accounting

3 Credits

Accounting for manufacturing concerns; actual and standard cost systems, and managerial uses of cost data.

Enforced Prerequisite at Enrollment: ACCTG 211 or ACCTG 311

ACCTG 371: Intermediate Accounting I

4 Credits

Financial accounting methods, theory and concepts; analysis of problems in applying concepts to financial statements and asset accounts.

Enforced Prerequisite at Enrollment: ACCTG 211

ACCTG 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ACCTG 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ACCTG 403: Auditing

3 Credits

Financial compliance, internal, and operational audits; standards and procedures; sampling; EDP auditing; professional issues; application of concepts through written responses. ACCTG 403 Auditing (3) Financial statement, regulatory and contract compliance, internal and operational audits, professional standards and ethical conduct; statistical and judgmental sampling; the audit-impact of information technology; audit

risk and internal control structure evaluation; application of procedures in transaction cycles; audit reporting; professional issues.

Enforced Prerequisite at Enrollment: ACCTG 371 or ACCTG 471

ACCTG 403W: Auditing

3 Credits

Financial, compliance, internal, and operational audits; standards and procedures; sampling; EDP auditing; professional issues; application of concepts through written responses. ACCTG 403W Auditing (3) Financial statement, regulatory and contract compliance, internal and operational audits, professional standards and ethical conduct; statistical and judgmental sampling; the audit-impact of information technology; audit risk and internal control structure evaluation; application of procedures in transaction cycles; audit reporting; professional issues.

Enforced Prerequisite at Enrollment: ACCTG 371 or ACCTG 471

Writing Across the Curriculum

ACCTG 404: Managerial Accounting: Economic Perspective

3 Credits

Accounting techniques as planning, control, and motivating devices in business and other organizations; accounting data for decision making and performance evaluation. ACCTG 404 Managerial Accounting (3) This course emphasizes the use of accounting information for internal purposes as opposed to the external disclosure focus of the financial accounting course. The cost covers the vocabulary and mechanics of cost accounting and the design of management accounting systems for planning and controlling operations, and for motivating personnel. The course integrates accounting with ideas from data analysis, decision analysis, finance, microeconomics, and operations management. The themes stressed throughout the course will be the notion that information is costly; the circumstances that necessitate cost allocation, the idea that different costs and different allocation schemes apply for different purposes; and fundamentals of incentive and compensation plans. Among the topics covered are cost behavior, cost-volume analysis, relevant costs, and the use of cost information for decision making. The course will rely on lectures and discussion of case studies.

Enforced Prerequisite at Enrollment: ACCTG 211 and (SCM 200 or STAT 200) and ECON 102

ACCTG 405: Principles of Taxation I

3 Credits

Elements of tax policy and tax-planning concepts for personal and business decision making; with emphasis on taxation of individuals. ACCTG 405 Principles of Taxation (3) Introduction to Taxation, is the first course that undergraduate accounting majors take that is devoted entirely to taxation. Although the course is intended for accounting majors, the content is relevant to finance majors seeking elective courses. The objective of the course is to provide students with a basic understanding of the concepts, terminology, and decision-making skills specific to the discipline of taxation that are germane to the professional development of those preparing for a career in accounting. Although the course surveys the many forms of taxation that are found in industrialized societies, and the comparisons thereof, the main focus is on the federal income taxation of individuals. However, coverage is provided regarding the manner in which the taxation of individuals relates to corporate and partnership entities. ACCTG 405 is related to

other accounting courses through its coverage of income concepts, and micro-economic principles. The former compares differences in the measurement of financial accounting income with the manner in which income is determined according to the tax laws. The latter emphasizes business decision-making principles that are important in the managerial portion of the accounting program. The course covers topics that illustrate fundamental tax strategies and how such enable taxpayers to achieve business and personal economic objectives. The assessment process in ACCTG 405 incorporates examinations, homework assignments, and individual and group projects. The exams are combinations of objective questions and open-ended problems. Exams are often given in the evening. Course learning aids include a text book, on-line tax research services, spreadsheet software, and a packet of handouts prepared by instructors to keep the classes updated on the many changes in the tax laws that occur each year.

Enforced Prerequisite at Enrollment: ACCTG 211 and (BA 301 or FIN 301)

ACCTG 406: Principles of Taxation II

3 Credits

Impact of federal tax structure on business decisions, research methodology, tax planning; ethical considerations of tax practice.

Enforced Prerequisite at Enrollment: ACCTG 405

ACCTG 410: Federal Taxation II

3 Credits

An examination of the rules and forms used to compute the federal tax liability of corporations and partners.

Enforced Prerequisite at Enrollment: ACCTG 310

ACCTG 411: Accounting Practicum: VITA

3 Credits

Introduces students to practical aspects of tax preparation through the IRS' VITA program and completion of a tax research project.

Enforced Prerequisite at Enrollment: ACCTG 310

ACCTG 417: Corporate and Managerial Communication

2-3 Credits

Developing student's expertise in interpreting and communicating accounting and financial information to business professionals. ACCTG 417 Corporate and Managerial Communication (2-3) This course provides an opportunity for business students to develop oral, graphic, and written communication skills essential to success in a corporate environment, with emphasis on corporate accounting, finance, and/or consulting contexts. The course provides a framework for understanding the characteristics of effective business communication. It further provides guidelines for the successful development and delivery of professional messages. This course employs individual and team activities designed to strengthen skills in the development and delivery of corporate messages. Participants will gain experience analyzing and discussing financial and accounting data, evaluate and prepare professional responses to corporate problems/opportunities, and develop strategies for conversing with multiple business audiences. Specific

selection of topics will evolve to reflect current issues in business, finance, and accounting.

Enforced Prerequisite at Enrollment: CAS 100 and ACCTG 211

ACCTG 422: Accounting Systems

3 Credits

Understanding flow and documentation of accounting information and internal controls in the context of accounting cycles. ACCTG 422 Accounting Systems (3) This course primarily investigates accounting transactions cycles-processes and procedures by which an organization's financial information is recorded, processed, reported, and disposed of. The processes covered in this course range from manual to fully automated and Web-enabled systems. The documentation and analysis of the accounting cycles for the revenue, expenditure, conversion, and managerial reporting areas are explored via flowcharts and narrative descriptions. The concepts of files, transaction updates, editing, and reporting in the automated accounting systems are explored. The course also covers internal controls in the manual and automated systems. Additional topics may include fraud examination, applicable laws and regulations, and computerized auditing.

Enforced Prerequisite at Enrollment: ACCTG 312

ACCTG 423: Accounting Data Analytics

3 Credits

This course focuses on helping students develop data analytic skills using accounting data. Data has proliferated in business and managers and accountants need to understand the implications for decision-making and tap into the data to provide better insights into a firm/client/customer/supplier. This course is intended to provide students with an understanding of data analytic thinking and terminology as well as hands-on experience with data analytics tools and techniques. It is designed to help accounting students develop an analytical mindset and link data analytics to four major subdomains of accounting (i.e., financial, managerial, audit, and tax). It will cover how to use programming software to automate data analytic tasks. Students will learn how to analyze large amounts of data to find actionable insights. The first half of the course introduces the accounting data analytics framework. Under this framework, students will learn the importance of assembling accounting data, the desirable characteristics of data for effective calculations and visualization, and analysis and interpretation of fundamental data analytic tools, such as regressions. The second half of the course focuses on how to apply data analytic skills to the four major subdomains of accounting: financial, managerial, audit, and tax. Respective hands-on examples will be used for demonstration. Students should leave this course with the skills necessary to translate accounting and business problems into actionable proposals that they can competently present to managers and data scientists.

Enforced Prerequisite at Enrollment: ACCTG 471 and ACCTG 310 and ACCTG 340 and Enforced Concurrent at Enrollment: ACCTG 403

ACCTG 426: Financial Statement Analysis

3 Credits

The exploration of conventional and advanced methods of analyzing financial statements, including the assessment of earnings quality. ACCTG 426 Financial Statement Analysis (3) The objective of this course is to explore conventional and advanced analytical methods of analyzing

financial statements. Expanding on the material covered in the principles of accounting and principles of finance courses and using actual financial statements, students: review and apply the traditional methods for analyzing financial statements, such as ratio analysis, trend analysis, and common-size analysis, apply advanced tools for analyzing financial statements, such as financial distress prediction models and earning manipulation prediction models, and evaluate accounting policies and disclosures and their impact on the financial statements through the assessment of earnings quality.

Enforced Prerequisite at Enrollment: FIN 301

ACCTG 431: Advanced Auditing

3 Credits

Examination of legal liability, EDP, statistical sampling, SEC reporting, internal control, and financial reporting in specialized industries.

Enforced Prerequisite at Enrollment: ACCTG 403 or ACCTG 403W

ACCTG 432: Accounting Information Systems

3 Credits

Accounting data are utilized as information in making decisions and as a control mechanism. The focus of this course, however, will be upon the actual production of accounting data. The purpose of the course is to learn how accountants collect relevant data and transform them into reports appropriate for managers and external readers. Procedural details will focus first on the traditional accounting cycle and the journal entries for business transactions and events. Then we shall examine in detail the principle accounting cycles: sales cycle, cash receipts cycle, purchases cycle, cash disbursements cycle, payroll cycle, facilities cycle, general ledger cycle, production cycle. For each cycle, you should be able to explain the relation of the accounting process to the business enterprise, the basic journal entries, the basic internal control features, and the document flow.

Enforced Prerequisite at Enrollment: (ACCTG 371 or ACCTG 471) and (MIS 204 or MIS 250)

ACCTG 440: Advanced Management Accounting

3 Credits

Management accounting topics such as decision models, quantitative techniques, variance analysis, and their use in accounting. ACCTG 440 Advanced Management Accounting (3) An in-depth examination of accounting techniques used within modern organizations. The course is designed for students interested in pursuing careers in corporate accounting or financial management. The portfolio of managerial accounting procedures, including cost measurement and allocation, budgeting practices, transfer pricing, and variance analyses appropriate to an organization's unique circumstances are derived. The student will learn to apply psychological and sociological theories of behavior to practical problems of control and to apply quantitative methods and models to managerial decision-making. Other topics covered by the course may include, financial management of working capital, long-term assets and liabilities; techniques for managing inventory; and strategic cost management including inter-organizational cost management.

Enforced Prerequisite at Enrollment: ACCTG 340 or ACCTG 404

ACCTG 450: Advanced Accounting

3 Credits

Accounting theory and practice for business combinations, branches, international operations, partnerships, consolidated financial statements, corporate liquidations, nonprofit organizations, estates, and trusts.

Enforced Prerequisite at Enrollment: ACCTG 472

ACCTG 461: International Accounting

3 Credits

Study of international accounting issues with emphasis on need, use, and interpretation of financial accounting required in global business environment.

Enforced Prerequisite at Enrollment: ACCTG 471 and ACCTG 472 International Cultures (IL)

ACCTG 462: Governmental and Not-for-Profit Accounting

3 Credits

Provides an understanding of governmental and not-for-profit accounting theory, procedures, and financial statements.

Enforced Prerequisite at Enrollment: ACCTG 311 or ACCTG 471

ACCTG 471: Intermediate Financial Accounting I

3 Credits

Theory and practice issues in income concepts and value measurement; GAAP; revenues, costs, assets, liabilities, and equities. ACCTG 471 Intermediate Accounting I (3) This course provides students with an understanding of generally accepted accounting principles and procedures so that they properly account for and present information in financial statements prepared for external users. The student should acquire a complete understanding of the accounting issues relating to cash, receivables, inventory, plant assets, natural resources, and intangibles. The student should be able to evaluate alternative accounting methods and choose the methods which will best convey the financial information related to the above areas. The student should be able to apply appropriate generally accepted accounting principles and procedures to account for transactions related to the above asset areas. The student should be able to demonstrate an understanding of the transaction analysis, recording, classification, summarization, and reporting procedures in the accounting cycle, and an understanding of the information contained in the financial statements. Finally, student should be able to demonstrate written communication skills required of accountants.

Enforced Prerequisite at Enrollment: ACCTG 211 or ACCTG 311

ACCTG 472: Intermediate Financial Accounting II

3 Credits

Off-balance-sheet financing; special issues in cost capitalization, liabilities, and equities; matching; funds flow statements; statement analysis; inflation accounting.

Enforced Prerequisite at Enrollment: ACCTG 371 or ACCTG 471

ACCTG 473: Advanced Financial Accounting

3 Credits

Reporting for multi-corporate enterprises, business combinations, quasi-reorganizations, and selected contemporary reporting problems. ACCTG 473 Advanced Financial Accounting (3) This course explores four major topics: accounting for business combinations, introduction to derivatives and special purpose entities, accounting for foreign currency transactions and consolidating foreign subsidiaries, and ethics and policy issues for the profession.

Enforced Prerequisite at Enrollment: ACCTG 472**ACCTG 481: Financial Statement Analysis: Accounting Based Evaluation and Decision Making**

3 Credits

An accounting based evaluation and decision making approach to analyzing financial statements by studying business and firm valuation. ACCTG 481 Financial Statement Analysis (3) The proposed course in financial statement analysis is structured to improve the student's ability to extract and interpret information from actual financial statements and to expose the student to how financial statement information is integrated into equity valuation and credit analysis. The course would not only rely upon textbook-based and lecture-based learning, but also emphasize case-based learning. The course will consist of two main sections. The first will deal with accounting and business analysis. This part will explore the types of financial information data typically available for publicly traded companies and introduce a model of the economic drivers of company performance. It would incorporate some technical accounting as well as some standards business economics/strategy concepts. Students will be forced to recast financial statements that they believe do not reflect the underlying economic state of the company. Financial reporting issues relating to revenue and expense recognition, leases and consolidations will be discussed. The other section of the course will deal with firm valuation. Students would be exposed to some standard approaches to equity valuation and the analysis activities underlying these approaches. Aspects of valuation that would be covered in this section of the course are financial ratio analysis, forecasting, pro-forma statements, cost of capital and valuation methods. The course will rely on lectures and extensive use of case studies.

Enforced Prerequisite or Concurrent at Enrollment: ACCTG 472**ACCTG 483: Forensic Accounting**

3 Credits

Study of investigative accounting, consulting and litigation support activities undertaken in forensic accounting engagements. ACCTG 483 Forensic Accounting (3) ACCTG 483 is the exploration of the broad discipline known as "forensic accounting" which includes a variety of investigative accounting, valuation, damage assessment and litigation support services. Forensic accounting is an evolving discipline which is distinguished from assurance services in that it does not involve reporting on the fairness of financial statements. It generally involves the investigation and analysis of financial data for some specific purpose - obtaining an in-depth understanding of information that enables the forensic accountant to prove, disprove or at least confidently speculate about allegations related to the information and to report those findings objectively. Forensic accountants are involved in presenting analyses that might be valuable for such things

as settling legal disputes, calculating economic damages, valuing intellectual property, determining the extent of damage or loss due to fraud, or tracing elusive assets or revenue sources. A forensic accountant might also participate in pro-active engagements such as the development of systems and procedures to prevent fraud. The first part of the course deals with the technical and ethical framework of forensic accounting and focuses on the understanding of forensic and investigative accounting including investigation methodology, the nature of fraud, fraud risk factors, financial statement fraud, litigation support and dispute resolution services and development of the skills needed in those professional activities. These skills include the ability to integrate knowledge of accounting, finance, economics, business law and other business disciplines in gathering, analyzing and evaluating evidence and drawing conclusions. The second part of the course focuses on forensic accounting investigation and analysis of financial information in connection with litigation, dispute resolution, estimation of economic damages, or other specific objectives, and the preparation of comprehensive, objective reports of findings and conclusions.

Enforced Prerequisite or Concurrent at Enrollment: ACCTG 472 and (ACCTG 403 or ACCTG 403W)**ACCTG 494: Research Project**

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

ACCTG 494H: Research Project

1-6 Credits/Maximum of 6

Supervised student activities on research projects identified on an individual or small-group basis. ACCTG 494H Research Project (1-6) ACCTG 494H, Senior Honors Thesis in Accounting - Investigation of an original problem area associated with accounting, including literature review. A thesis topic must be approved and a thesis supervisor must be identified before the course may be scheduled. Students sign up for three credits in each of their last two semesters for a total of six credits.

Honors

ACCTG 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor
Full-Time Equivalent Course**ACCTG 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ACCTG 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ACCTG 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest. .

ACCTG 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Adult Education (ADTED)

ADTED 100: Adult Learners in the University

3 Credits

ADTED 100 is an opportunity for adult learners to develop effective learning and writing strategies. This course is designed for the adult learner who is entering the university for the first time, or who is returning after an absence from studies. In this course we will help you: develop or renew effective academic writing, study skills, learning strategies, and time management tools that will help you succeed at Penn State and in your career. In the course, we will identify useful university resources and you will learn effective writing skills and hone critical reading abilities to meet the requirements of academic coursework. We will also practice public speaking skills so you will feel more confident and articulate in your classes and your career after graduation.

General Education: Writing/Speaking (GWS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Key Literacies

ADTED 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

ADTED 300: Social Movements and Education: Global Perspectives

3 Credits

Social Movements are some of the most important contemporary actors influencing both societies and individuals. Social movements are also educational, transforming participants' worldviews and developing innovative pedagogical practices for both non-formal contexts and formal schooling systems. This course examines the role education plays in social movement struggles in the United States and globally. In the first part of the course, we analyze the informal, non-formal, and formal educational initiatives that were part of the U.S. Civil Rights Movement. Then, in the second part of the course, we read the Brazilian educator Paulo Freire's *Pedagogy of the Oppressed* and examine how popular

education - a pedagogy created by and for social movements - has been integrated into a diversity of grassroots struggles in Latin America. In the third part of the course, we go beyond the Americas and explore social movement-led educational practices in Africa, Asia, and the Middle East. Finally, in the fourth student-led part of the course we return to the United States and learn about education in a diversity of contemporary U.S. social movements. During these final weeks, students will lead a class discussion based on their secondary and primary research on one social movement. This course will introduce students to a diversity of social movements in unique geographical and social contexts and show how these movements have incorporated education into their broader fights for economic, racial, gender, environmental, and social justice.

GenEd Learning Objective: Global Learning

ADTED 456: Introduction to Family Literacy

3 Credits

Introduces family literacy concepts, models, and components supporting families; adult, child, and parent education, interactive literacy activities, and case management. ADTED 456 Introduction to Family Literacy (3) This 3-credit course examines the concept of family literacy and different models and services that support families. Students will review the main parts of family literacy services and programs that support vulnerable families: adult education, early childhood education, parent education, interactive literacy activities, case management, and collaboration with partners who provide services to families (such as libraries, community centers, school districts, one-stop services, Head Start.) The course attends to issues such as racial/ethnic, cultural, and linguistic diversity among families, continuous program improvement, and professional development.

Prerequisites: 5th Semester standing or Graduate Status or Non-Degree GRAD status

ADTED 457: Adult Literacy

3 Credits

Surveys adult basic and literacy education research, theory, programming, and instruction; highlights learners' roles as parents, workers, and community members. ADTED 457 Adult Literacy (3) This 3-credit course explores adult literacy research, theory, programming, and instructional practices in the context of family literacy. The course examines the role of adult education as it pertains to adult learners' needs and their roles as parents, workers, and community members. The course addresses a broad range of topics, including adult learning theories, considerations for English language learners, reading and numeracy, health literacy, workforce and corrections education, and transitioning adults to postsecondary education or training. Readings and activities will draw on theoretical and practical aspects of adult education and family literacy literature.

Prerequisites: 5th Semester standing or Graduate Status or Non-Degree GRAD status

ADTED 458: Early Literacy Development

3 Credits

Focuses on young children's language and literacy development, including parental and staff support, grounded in scientifically based reading research. ADEED 458 Early Literacy Development (3) This is a three-credit, post-baccalaureate course that focuses on young children's language and literacy development. This course examines research related to how children acquire language, reading, and writing skills, as well as how family partnerships between the home and school can further support language and literacy development and children's academic success. This course will cover a wide array of topics related to language and literacy development, including the influence of play and technology, the impact of read-alouds on literacy development, and the role of racial/ethnic and cultural diversity in learning. Students will examine early literacy development through a series of activities and readings.

Prerequisites: 5th Semester standing or Graduate Status or Non-Degree GRAD status

ADTED 459: Interactive Literacy and Parental Involvement: Supporting Academic Success

3 Credits

Explores parental involvement in education and parent-child literacy activities that support children's language and literacy development, especially among diverse families. ADEED 459 Interactive Literacy: Parents and Children (3) Interactive Literacy: Parents and Children is one of five 3-credit courses in the 15-credit Certificate in Family Literacy developed by the Goodling Institute for Research in Family Literacy in the College of Education in partnership with the National Center for Family Literacy (Louisville, KY). It is offered during the summer and fall semesters to about 20 students per class. The course is 15 weeks in length, entirely online, and cohort-based. Study materials are both web- and print-based. Students work in teams for most of their assignments although they are also expected to produce a portfolio of individual application activities. An Associate's Degree or 60 baccalaureate credits at an accredited institution are required to enter the course. Technological requirements, registration, and other support are provided. The course focuses on the component of family literacy in which the low-literate parents engage in language and literacy development activities with their young children (birth to age 8). During interactive literacy the teachers both model and supervise the literacy interactions. Students learn to use planned and intentional activities that are developmentally appropriate for the children. They also learn how to teach the parent the necessary interaction skills as well as how to debrief the parents afterwards. They also learn how to assess the literacy interactions between parents and their children.

Prerequisites: 5th Semester standing or Graduate Status or Non-Degree GRAD status

ADTED 460: Introduction to Lifelong Learning and Adult Education

3 Credits/Maximum of 3

History, methods, agencies, program areas, and problems of lifelong learning and adult education in the United States.

Prerequisites: 5th Semester standing or graduate status or non-degree GRAD status

ADTED 470: Introduction to Distance Education

3 Credits

An introduction to the history, philosophy, organizations, learning theories, and instructional procedures used in American and foreign distance education.

Cross-listed with: CIED 470

ADTED 480: Teaching Math and Numeracy to Adults

3 Credits

ADTED 480 examines issues of learning math as an adult and explores effective strategies for teaching math and numeracy to adults. ADEED 480 Teaching Math and Numeracy to Adults (3) Many international assessments show that the numeracy skills of U.S. adults are lower than those of adults in many other countries and that their numeracy skills are even weaker than their literacy skills. This online course is designed for teachers, administrators, and others concerned with helping adults develop the math skills and abilities they need to function successfully in workplace, educational, and community settings. This course will focus on (1) how adults develop math skills in informal and work contexts and in classes or programs for students who wish to obtain a high school credential; (2) considerations for teaching math to immigrant adults and those with learning disabilities; and (3) the identification and implementation of instructional strategies for helping adults acquire the numeracy skills they need. Using current research from the U.S. and other countries, course participants will consider the benefits and limitations of various instructional and programmatic approaches to helping adults learn. Through this course, students will (1) identify the implications of adult learners'; prior experiences with math and numeracy for their reengagement with math in a non-formal learning setting; (2) differentiate between numeracy and math and consider the relevance of the distinction to teaching adult learners; (3) identify adult processes for learning math and compare and contrast them with those of children; (4) gain current knowledge about math standards that guide instruction and policy for adults; and (5) develop and evaluate instructional strategies and initiatives to teach math to adults, including accommodating immigrant learners and those with learning disabilities. Further, students will consider the knowledge and skills needed to help adults acquire functional numeracy skills.

Prerequisite: Associate degree or 60 undergraduate credits

ADTED 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

Aerospace Engineering (AERSP)

AERSP 1: Aerospace Explorer--First-Year Seminar

1 Credits

First-Year Seminar explores aerodynamics, structural mechanics, flight mechanics, rotorcraft systems, high performance computers, air/space propulsion, and space systems. AERSP 1 Aerospace Explorer--First-Year Seminar (1) (FYS) Aerospace Engineering deals with vehicles that fly -- airplanes, sailplanes, jets, helicopters, rockets, satellites, the space shuttle, space stations, etc. Students with an interest in these

subjects can learn more about the variety of challenges and opportunities in the aerospace field through the small-class environment of the Aerospace Explorer First-Year Seminar. An introduction to both the academic major and career paths in Aerospace Engineering, this seminar deals with the design, analysis and operation of aircraft and space vehicles. Students will learn about aerodynamics, structural mechanics, flight mechanics, rotorcraft systems, high performance computers, air-breathing propulsion, space propulsion, and space systems. The classes will include presentations by the Aerospace Engineering faculty, tours of the Aerospace Engineering laboratories, and presentations by student officers in the Penn State chapters of the American Institute of Aeronautics and Astronautics (AIAA) and the American Helicopter Society (AHS), as well as introductions to the use of scientific plotting, graphing, and analysis software.

First-Year Seminar

AERSP 55: Space Science and Technology

3 Credits

The science and technology of space exploration and exploitation; physical principles; research and development; history, space policy, and social implications.

Cross-listed with: STS 55

Bachelor of Arts: Natural Sciences

Bachelor of Arts: Social and Behavioral Sciences

AERSP 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

AERSP 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AERSP 204: Flight Vehicle Design and Fabrication I

2 Credits/Maximum of 8

Integrated project management, design, fabrication, testing, and flight evaluation of an advanced composite flight vehicle.

Honors

AERSP 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AERSP 301: Aerospace Structures

3 Credits

Aerospace structural design concepts, flight safety. Stiffness, strength, stability of thin-walled structures under combined loads. Energy methods, finite element analysis. AERSP 301 Aerospace Structures (3) AERSP 301

covers essential topics in aerospace structures. The objectives of the course are to help students: 1) appreciate the roles that structures and structural materials play in aerospace vehicles; 2) understand general design concepts for aerospace structures: vehicles, components, and materials; 3) develop the analysis tools and skills needed to analyze the performance of aerospace structures; and 4) gain experience identifying, formulating, and solving aerospace structural engineering problems. AERSP 301 builds on structural mechanics topics from required foundational courses in mechanics, statics, dynamics and strength of materials. It prepares students for study of advanced topics such as plates and shells, composites, structural stability, finite element analysis, structural dynamics, and aeroelasticity. It also provides students with the basic background needed to contribute effectively to multidisciplinary trade studies in vehicle design activities. AERSP 301 begins with an overview of the general features of flight vehicle structures, with emphasis on thin-walled members and advanced materials. Then, the implications of assured safety of flight for structural design are explored, leading to coverage of: load cases, flight envelopes, load factors, factors of safety, kinds of structural failures, and margins of safety. Topics in structural analysis proceed from an initial review of topics in elasticity, structural materials, and beam bending. Then, the deflection and stress responses of thin-walled beams under transverse shear and torsional loading are addressed. More than a third of the course is devoted to energy principles and the development of the finite element method of structural analysis. The course finishes with a treatment of the structural stability of beams and panels, a key topic with respect to the behavior of thin-walled aerospace structures.

Enforced Prerequisite at Enrollment: (EMCH 210 or EMCH 213) and MATH 220 and [MATH 230 or (MATH 231 and MATH 232)] and (MATH 250 or MATH 251)

AERSP 304: Dynamics and Control of Aerospace Systems

3 Credits

Vibrations of single, multiple, and infinite degree-of-freedom systems; operational methods applied to aerospace vehicles; design of controllers.

Enforced Prerequisite at Enrollment: AERSP 313 and EMCH 212

AERSP 305W: Aerospace Technology Laboratory

3 Credits

Experiments in measurement systems, aerodynamics, aerospace structures, dynamics and control, and propulsion, technical report writing and presentations. AERSP 305 Aerospace Technology Laboratory (3) AERSP 305 is a junior-level experimental laboratory course in Aerospace Engineering. The purpose of this course is to expose students to the key principles and methods of experimentation as related to the field of aerospace engineering. Students learn the fundamentals of measurement techniques to determine quantities such as temperature, force, pressure, displacement, velocity, acceleration and strain in various laboratory situations. The course employs weekly "set-up" experiments that provide an opportunity for students to familiarize themselves with modern measurement techniques and gain valuable experience regarding the calibration and use of aerospace engineering research equipment. Students are expected to apply their knowledge of mathematics, science, and engineering in order to complete successfully the experiments encountered in the laboratory. The subsequent interpretation and analysis of the laboratory data requires the use of standard engineering tools and practices. Students work in lab groups to process data and then identify, formulate, and solve engineering questions associated

with the experimental results. Throughout the semester, students communicate their knowledge and understanding of the course material through a series of class assignments, written technical reports, and one final exam. Because writing and revising laboratory reports significantly enhances the understanding and interpretation of the research data, this course is "writing-intensive." As such, students are expected to improve their writing skills as they gain experience writing abstracts, informal reports and formal reports. Peer review of reports helps students to recognize good writing, and to learn how to provide constructive criticism. The course instructor provides written feedback for revised formal reports, and the quality of writing is a factor in determining final grades.

Enforced Concurrent at Enrollment: AERSP 301 and AERSP 311 and ENGL 202C

Writing Across the Curriculum

AERSP 306: Aeronautics

3 Credits

Lift and drag characteristics of aircraft; propulsion systems; airplane performance; introduction to stability and control.

Enforced Prerequisite at Enrollment: AERSP 311 and AERSP 313

AERSP 308: Mechanics of Fluids

3 Credits

Kinetics and dynamics of fluids; perfect fluid theory using complex variables; introduction to viscous flow theory; fundamentals of compressible flow.

Enforced Prerequisite at Enrollment: (EMCH 212 or EMCH 212H) and MATH 251

AERSP 309: Astronautics

3 Credits

Introduction to space and space flight; laws of particle mechanics; orbits and trajectories; space vehicles and propulsion. AERSP 309 Astronautics (3) This course, required for aerospace engineering majors, focuses primarily on the dynamics of spaceflight, including both orbital and attitude (orientation) motion of spacecraft. Topics include: three-dimensional rotational kinematics (direction cosine matrices, vector components in different coordinate systems, Euler angles, the angular velocity vector, and velocity and acceleration in different reference frames), three-dimensional particle dynamics (Newton's laws of particle motion, energy, angular momentum, and systems of particles), two-body orbital mechanics (Newton's law of universal gravitation, the orbit equation, conic sections and orbit terminology, Kepler's equation, classical orbital elements, and representations of satellite position and velocity), orbital maneuvers and transfers (impulsive maneuvers, Hohmann transfers, simple inclination changes, and relative motion between spacecraft), rigid-body dynamics (angular momentum and energy, the inertia matrix, principal-axis system, Euler's equations of rigid-body motion, torque-free motion, and effects of external torques), rocket performance (the rocket equation, specific impulse, estimating propellant requirements for a mission, and a survey of propulsion technology), and the space environment (standard atmosphere, simple radiative heat-transfer analysis, the Van Allen radiation belts, meteors and debris hazards). The course relies upon a sound understanding of mechanics,

matrix algebra and vector calculus. Assignments include analytical and numerical problems, some of which require computer programming.

Enforced Prerequisite at Enrollment: EMCH 212 and MATH 220 and [MATH 230 or (MATH 231 and MATH 232)] and (MATH 250 or MATH 251) and (CMPSC 121 or CMPSC 131 or CMPSC 200 or CMPSC 201)

AERSP 311: Aerodynamics I

3 Credits

Fluid statics and kinematics; fluid dynamics of inviscid and viscous flows; Navier-Stokes equations; introduction to boundary layers. AERSP 311 Aerodynamics I (3) This is a first course in incompressible inviscid and viscous flows. It includes an introduction to fluids, fluid statics and hydrostatics. Fluid kinematics, including Eulerian versus Lagrangian viewpoint, steady versus unsteady flows, volume and mass flow rates, vorticity and circulation, and streamlines are described. Derivation of the governing equations for the conservation of mass, momentum and energy is presented. Dimensional analysis is covered. Potential flow with and without the effects of viscosity is analyzed. A derivation and exact solutions of the Navier-Stokes equations are given and boundary layers are introduced. This is the first of a two course sequence in aerodynamics, where both courses are required for senior-year propulsion and design courses. Evaluation of student performance will be by two midterm exams worth approximately 25% each, a final exam worth approximately 35% and weekly homework assignments worth approximately 15%.

Enforced Prerequisite at Enrollment: EMCH 212 and MATH 220 and [MATH 230 or (MATH 231 and MATH 232)] and (MATH 250 or MATH 251) and (CMPSC 121 or CMPSC 131 or CMPSC 200 or CMPSC 201)

AERSP 312: Aerodynamics II

3 Credits

Fluid mechanics of viscous and compressible flows, laminar boundary layers, turbulent flows, isentropic flows, shock waves, supersonic lift and drag. AERSP 312 Aerodynamics II (3) Exact solutions of the Navier-Stokes equations for unsteady flow. Boundary layers solved by the methods of Blasius, Falkner-Skan and Thwaites. Boundary layer stability and transition to turbulence. Turbulent flow and solution methods. Fluid flow measurement techniques and numerical methods. Derivation of the governing equations for the conservation of mass, momentum and energy for compressible flow. Steady one-dimensional isentropic flow. Normal, traveling and oblique shock waves. Compressible flow with area change and converging-diverging nozzle flows. Prandtl-Meyer expansions and supersonic lift and drag. One-dimensional flow with friction or heat transfer. Unsteady and linearized compressible flow. Introduction to the method of characteristics. This is the second of a two course sequence in aerodynamics and is a prerequisite for senior level courses in propulsion and design. Evaluation of student performance will be by two midterm exams worth approximately 25% each, a final exam worth approximately 35% and weekly homework assignments worth approximately 15%.

Enforced Prerequisite at Enrollment: AERSP 311 and AERSP 313 and (ME 201 or ME 300)

AERSP 313: Aerospace Analysis

3 Credits

Mathematical methods applied to aerospace engineering: Fourier series, ordinary and partial differential equations, complex variables, numerical methods, data analysis. AERSP 313 Aerospace Analysis (3) This course is designed to reinforce the mathematical concepts learned in the prerequisite mathematics and computer science courses and to present new mathematical material that is necessary for aeronautics, astronautics, dynamics and control, and fluid dynamics analysis. In practice, analytical and numerical approaches to problems solving are complementary, hence, this course will emphasize a combined analytical and numerical treatment.

Enforced Prerequisite at Enrollment: MATH 220 and [MATH 230 or (MATH 231 and MATH 232)] and (MATH 250 or MATH 251) and (CMPSC 121 or CMPSC 131 or CMPSC 200 or CMPSC 201)

AERSP 397: Special Topics

1-18 Credits/Maximum of 18

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

AERSP 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AERSP 401A: Spacecraft Design–Preliminary

3 Credits

Conceptual and preliminary design of a spacecraft, its constituent subsystems, and related systems, to satisfy a given set of specifications. AERSP 401A Spacecraft Design - Preliminary (3) AERSP 401A is the first of a two-semester sequence of senior capstone design courses. In this course, students will begin to learn the design process, complete a conceptual design, and to begin a preliminary design of a spacecraft, working in teams. This process is inherently multidisciplinary, requiring the use of engineering practices in such subjects as structures, dynamics, electrical and thermal systems, propulsion, controls, and information systems. In addition to the technical design content, this course seeks to enhance students' skills in verbal and written communications, ethical thinking, and the team approach to design, which is widely used in industry and government. Classes (115 minutes each, twice weekly) include lecture and time for team meetings. Students are evaluated on the technical merit of the designs (presented in written and oral reports), as well as their ability to function on a team.

Enforced Prerequisite at Enrollment: AERSP 309 . Enforced Concurrent at Enrollment: AERSP 450

AERSP 401B: Spacecraft Design–Detailed

2 Credits

Detailed design of the constituent subsystems and related support systems for a spacecraft. AERSP 401B Spacecraft Design – Detailed (2) AERSP 401B is the second of a two-semester sequence of senior capstone design courses. In this course, students work in teams,

continuing the design process begun in AERSP 401A. This process is inherently multidisciplinary, requiring the use of engineering practices in such subjects as structures, dynamics, electrical and thermal systems, propulsion, controls, and information systems. In addition to the technical design content, this course seeks to enhance students' skills in verbal and written communications, and the team approach to design, which is widely used in industry and government. Classes (115 minutes each, twice weekly) include lecture and time for team meetings.

Enforced Prerequisite at Enrollment: AERSP 301 and AERSP 401A

AERSP 402A: Aircraft Design–Preliminary

3 Credits

Conceptual and preliminary design of an aircraft, its constituent subsystems, and related systems, to satisfy a given set of specifications. AERSP 402A Aircraft Design – Preliminary (3) AERSP 402A is the first of a two-semester sequence of senior capstone design courses. In this course, students will complete the preliminary design for an aircraft such that it satisfies the assigned specifications. Students completing this course will have the ability to design a system, component, or process to meet desired needs in aircraft systems; they will have the ability to function on multi-disciplinary teams; and they will have the ability to identify, formulate, and solve engineering problems. In addition, students will have the background to help determine what the ethical responsibilities are to themselves, to employers, and to society. Classes (115 minutes each, twice weekly) include lecture and time for team meetings.

Enforced Prerequisite at Enrollment: AERSP 306 . Enforced Concurrent at Enrollment: AERSP 413

AERSP 402B: Aircraft Design–Detailed

2 Credits

Detailed design of the constituent subsystems and related support systems for an aircraft. AERSP 402B Aircraft Design - Detailed (2) AERSP 402B is the second of a two-semester sequence of senior capstone design courses. In this course, students will complete the detailed design for an aircraft, and all of its constituent and related support systems, such that it satisfies the assigned specifications. Students completing this course will have the ability to design a system, component, or process to meet desired needs in aircraft systems; they will have the ability to function on multi-disciplinary teams; and they will have the ability to identify, formulate, and solve the associated engineering problems. Classes (115 minutes each, twice weekly) include lecture and time for team meetings.

Enforced Prerequisite at Enrollment: AERSP 301 and AERSP 402A

AERSP 403A: Autonomous Aerospace Vehicle Design - Preliminary

3 Credits

The Autonomous Aerospace Vehicle Capstone concentrates on automation and autonomy concepts for vehicles in flight, including complex avionics for manned aircraft; unmanned aircraft systems and launch vehicles; and complex autonomous spacecraft, such as planetary rovers. Student teams will not only learn and exercise the design process by generating a hardware architecture, design, and performance simulation, but they will also build, integrate, and test their design during a live demo event. AERSP403A is the first course in a two-

semester sequence beginning with preliminary design and continuing with detailed design (AERSP403B) in the second semester.

Enforced Concurrent at Enrollment: (AERSP 413 or AERSP 450) and AERSP 462 Recommended Preparations: Although not required, successful completion of, or registration in, AERSP424 will assist students in coding skills necessary for this class.

AERSP 403B: Autonomous Aerospace Vehicle Design - Detailed

2 Credits

The Autonomy Aerospace Vehicle Capstone concentrates on automation and autonomy concepts for vehicles, including complex avionics for manned aircraft; unmanned aircraft systems and launch vehicles; and complex autonomous spacecraft, such as planetary rovers. Student teams will not only learn and exercise the design process by generating a hardware architecture, design, and performance simulation, but they will also build, integrate, and test their design during a live demo event. AERSP403B is the second in a two-semester sequence beginning with preliminary design (AERSP403A) in the first semester and continuing with detailed design (AERSP403B) in the second semester.

Enforced Prerequisite at Enrollment: AERSP 403A Recommended Preparations: Although not required, successful completion of, or registration in, AERSP424 will assist students in coding skills necessary for this class.

AERSP 404: Flight Vehicle Design and Fabrication II

3 Credits/Maximum of 12

Project management, design, fabrication, aerodynamic and structural testing, and flight evaluation of an advanced composite flight vehicle.

Enforced Prerequisite at Enrollment: AERSP 204 Honors

AERSP 405: Experimental Methods and Projects

3 Credits

Experimental methods involving a variety of aerospace engineering topics; teams of students focus on advanced measurement techniques and project engineering. AERSP 405 Experimental Methods and Projects (3) This is a senior-level elective laboratory course that builds on AERSP 305 "Aerospace Technology Laboratory." The first part of AERSP 405 addresses the engineering of typical data acquisition systems through a series of lectures and laboratory experiments. Data acquisition and processing are covered as they relate to a broad range of engineering experiments. Several sessions in the laboratory provide students with hands-on experience with data acquisition, followed by computer program exercises to complete the assignments. Initially the lectures are twice a week (75 minutes each). This activity comprises approximately 20 % of the total course. The major portion of the course introduces students to "real-world" projects in engineering and laboratory research. Students work in teams to identify, formulate, plan and solve engineering problems associated with a design or system, the completion of an experiment, or an extensive computational simulation requiring a team of students. Teams of 2 to 4 students are assigned, following student input on preferences from a list of proposed projects. Students learn, through practice, the methodology of team project engineering. The teams each develop goals for the semester's project, performed following a careful work breakdown analysis with realistic time estimations and scheduling. Many of the projects involve the design and completion of an experiment.

As part of the project, students will assemble, analyze and interpret relevant data, and prepare progress and final reports (written and oral). The reports should contain graphs that go with the text to provide the necessary data interpretation. The topics in the projects have application to a variety of research programs currently underway at Penn State. At the initiation of the project activity, lectures on principles of project planning including Gantt chart preparation, work breakdown structures and critical path considerations are presented. Common best practices for the preparation of project proposals, reports, presentations and general record keeping are discussed. Overall meetings with the course instructor become bi-weekly once the projects are underway. Many of the projects also have knowledgeable graduate student or faculty consultants to assist with project planning and implementation. Project consultants conduct occasional individual review meetings with each team. Much of the project coordination work is undertaken within the regularly scheduled hours for the course. The class meetings include a combination of informal presentations by the students and, occasionally, the instructor on important technical issues. Considerable class time is spent discussing the goals and progress of individual tasks, and each student gives several brief oral presentations.

Enforced Prerequisite at Enrollment: AERSP 305W

AERSP 407: Aerodynamics of V/STOL Aircraft

3 Credits

Rotary wing aircraft; VTOL and STOL performance; propeller-wing combinations; jet flap; high lift devices.

Enforced Prerequisite at Enrollment: AERSP 312

AERSP 410: Aerospace Propulsion

3 Credits

Analysis and performance characteristics of reciprocating engine, turbo-jet, turbo-prop, turbo-fan, ram-jets, and chemical rockets. Aerothermodynamics of inlets, combustors, and turbomachinery.

Enforced Prerequisite at Enrollment: AERSP 312

AERSP 412: Turbulent Flow

3 Credits

Homogeneous turbulence; spectral transfer of energy, viscous dissipation; turbulent shear flow: mixing-length theory, eddy viscosity, scaling laws, energy budget.

Prerequisite: one course in fluid mechanics

AERSP 413: Stability and Control of Aircraft

3 Credits

Static and dynamic stability and control of aircraft; open and closed loop systems.

Enforced Prerequisite at Enrollment: AERSP 304 and AERSP 306

AERSP 415: Spacecraft/Environment Interactions

3 Credits

This course examines the effects on spacecraft design and operation, both short and long term, by the four aspects of the space environment:

the neutral environment, the plasma environment, the radiation environment, and the micrometeoroid and orbital debris environment, both in near-Earth as well as interplanetary space. The neutral space environment includes the three regimes of rarefied gas dynamics; slip, transition, and free molecular flow, as determined by the Knudsen number; spacecraft surface degradation due to physical, chemical, and mechanical processes, and an introduction to the Direct Simulation Monte Carlo (DSMC) computational method for calculating rarefied flows. The calculation of spacecraft drag, lift, and pitching moments in free molecular flow is detailed. The plasma space environment in space is examined and the confinement of plasma via magnetic fields is derived. Spacecraft charging of both spacecraft bodies and solar cell arrays due to the plasma environment with the resultant damage due to arcing is analyzed. The effect of spacecraft grounding scheme, positive, negative, or floating, on spacecraft charging is examined. The sources of space radiation; trapped radiation belts (Van Allen belts), galactic cosmic rays (GCR), and solar proton events (SPE) and coronal mass ejections (CME); are quantified and the various types of radiation, high energy photons or particles, are covered. The effects of radiation on spacecraft materials, in particular solar cells and electronic components, and biological occupants such as humans, along with means of shielding against them are quantitatively examined. The space micrometeoroid and orbital debris environments are examined with a particular emphasis on the increasing population of orbital debris. Impact dynamics to calculate cratering and penetration distances and current methods such as the Whipple shield for protecting spacecraft from micrometeoroids and orbital debris are covered. Methods to prevent the formation of orbital debris as accepted by the international community are discussed.

Enforced Prerequisite at Enrollment: AERSP 308 or AERSP 312 or ME 420

AERSP 420: Principles of Flight Testing

3 Credits

In-flight and analytical studies of airplane performance, stability, and control; reduction of data; instrumentation; flight test techniques.

Enforced Prerequisite at Enrollment: AERSP 306

AERSP 423: Introduction to Numerical Methods in Fluid Dynamics

3 Credits

This course provides an introduction to the important and growing field of Computational Fluid Dynamics (CFD). The student will become familiar with a short history and relevance of CFD, the basic differential models of fluid dynamics, discretization and linearization practices, and solution strategies of CFD. Fundamentals of algorithm classification, error and stability analysis will be covered. Also, several advanced topics of relevance to modern CFD analysis will be covered. A term project will involve coding a CFD model of one of several choices including: 2D shallow wave equations for application to a tsunami, unsteady conjugate flow+heat transfer analysis of a pin array, and others per the instructor's discretion.

Enforced Prerequisite at Enrollment: (AERSP 312 or ME 320) and (MATH 250 or MATH 251) and (CMPSC 200 or CMPSC 201)
Cross-listed with: ME 423

AERSP 424: Advanced Computer Programming

3 Credits

Engineering and scientific programming topics: object oriented programming, parallel programming, and various modern languages (e.g. C++, Java, and Ada). AERSP 424 Advanced Computer Programming (3) This course presents an advanced view of computer programming, mainly using Java, C++, and Ada95. The use of current operating systems (e.g. Linux and Unix) and compilers (e.g. gcc) will also be presented. Object Oriented Programming will also be discussed in detail. Object Oriented Programming is quite different than functional or procedural programming, and it is difficult to learn on your own. The differences and similarities between Java and C++ and Ada95 will also be discussed. Hands-on programming will be a key part of the course. This course is one of the Core Courses for the Graduate Minor in High Performance Computing, and will also be a technical elective in Aerospace Engineering.

Enforced Prerequisite at Enrollment: (CMPSC 121 or CMPSC 131 or CMPSC 200 or CMPSC 201) and MATH 220

AERSP 425: Theory of Flight

3 Credits

Advanced wing and airfoil theory, conformal mapping, slender body theory.

Enforced Prerequisite at Enrollment: AERSP 306

AERSP 430: Space Propulsion and Power Systems

3 Credits

Analysis and performance of chemical and nuclear rockets, electric propulsion systems. Introduction to solar, chemical, thermoelectric, and nuclear power sources.

Enforced Prerequisite at Enrollment: AERSP 410 or ME 432

AERSP 440: Introduction to Software Engineering for Aerospace Engineers

3 Credits

Software engineering for safety- and mission-critical systems, including requirements, management, processes, designs, programming, validation/ verification, and other aspects of software development. AERSP 440 Introduction to Software Engineering for Aerospace Engineers (3) This course is an introduction to software engineering. Software engineering includes all aspects of professional software production, and is especially important for safety-critical and mission-critical software. It includes documentation, management, processes, requirements, design models, computer programs, validation, verification, and other aspects of the development process. Aerospace systems, including aircraft, spacecraft, onboard avionics, ground-based systems, flight simulators, and air transportation systems, rely heavily on software. Software is a major cost of all aerospace systems. For example, the Boeing 777 has more than 1000 onboard processors and more than 4 million lines of software which is primarily written in Ada. The F/A-22 fighter has more than 2 million lines of software onboard, and much of this is Ada also. Aerospace systems also demand a level of reliability far beyond that of most other systems, which means the software must be designed using rigorous mission-critical and safety-critical procedures, which makes the software quite unique compared

to most other software. The FAA and DOD are both involved in certifying aircraft software, for example, through the DO-178B and DOD-2168 standards. This course is required option in Aerospace Engineering (take one of AERSP 440, EE 305, or EE 210). If not taken to satisfy that requirement, it can be used as a technical elective. This course is a required option in Aerospace Engineering (take one of AERSP 440, EE 305, or EE 210). If not taken to satisfy that requirement, it can be used as a technical elective.

Enforced Prerequisite at Enrollment: CMPSC 201

AERSP 450: Orbit and Attitude Control of Spacecraft

3 Credits

Principles of mechanics and vector analysis applied to basic concepts of satellite motion and control, rocket ballistics, and gyroscopic instruments.

Enforced Prerequisite at Enrollment: AERSP 304 and AERSP 309

AERSP 458: Advanced Orbital Mechanics

3 Credits

This course is an introduction to the mathematics and practices in orbital mechanics as applied to spacecraft mission design and operation. The major topics are: the n-body problem, the two-body problem, Keplerian orbits, the Kepler problem (position as a function of time), three-dimensional specifications of Keplerian orbits (classical orbital elements and modified equinoctial elements), Lambert's problem (determining a conic section that joins two specified points for a given time of flight), impulsive transfers, the Hohmann transfer and its extension to other problems, spherical trigonometry and its use in plane-change maneuvers and in gravitational modelling, the sphere of influence, the patched-conic approximation, the circular restricted three-body problem, linear orbit theory (relative motion between vehicles in neighboring orbits), gravitational modelling via spherical harmonics, perturbation methods (Encke's method and variation of elements), orbit determination, tracking kinematics, and time systems.

Enforced Prerequisite at Enrollment: AERSP 450 or EMCH 409 or PHYS 419

AERSP 460: Aerospace Control Systems

3 Credits

Design and analysis of feedback control systems for aerospace applications; stability, root locus, time- and frequency-domain, state-space methods. AERSP 460 Aerospace Control Systems (3) This course is an introduction to the design and analysis of feedback control systems as applied to aerospace systems. The course covers control theory that is commonly used in the aerospace industry and presents practical applications of this theory to aerospace systems. The course does not emphasize rigorous mathematical derivation, but instead emphasizes the application of control theory. It provides a comprehensive overview of classical control theory and single-input/single-output (SISO) design methods. The course also presents an introduction to modern control theory and multi-input/multi-output (MIMO) design methods. Aerospace examples and applications are emphasized throughout the course. The course builds upon a required junior-level course in system dynamics and controls (AERSP 304), which provides students with basic dynamic system theory and a brief introduction to feedback control. The course also supplements required senior-level courses in either aircraft or

spacecraft dynamics (AERSP 413 and 450) which provides background on vehicle dynamics. AERSP 460 provides an additional level of depth in dynamics and control theory, and prepares students for entry-level work or graduate studies involving the design of automatic control systems for aircraft and spacecraft.

Enforced Prerequisite at Enrollment: AERSP 304

AERSP 462: Aerospace Autonomy

3 Credits

Aerospace autonomy is the blending of aerospace engineering and computer science - an interdisciplinary topic that will boost your skills in both domains. From advanced decision-making algorithms to sensing and state estimation to advances in machine learning applications, aerospace autonomy covers a lot of territory. In this class we introduce some of the techniques and challenges so that the vehicle will "fly itself" while maintaining awareness of sensors, safety, and software along the way through homework and coding assignments.

Enforced Prerequisite at Enrollment: MATH 220 and (CMPSC 121 or CMPSC 131 or CMPSC 200 or CMPSC 201 or AERSP 424)

AERSP 470: Advanced Aerospace Structures

3 Credits

Design and analysis of aerospace structures. Plates and sandwich panels; composite materials; structural dynamics; aeroelasticity; damage tolerance. AERSP 470 Advanced Aerospace Structures (3) AERSP 470 covers important topics in aerospace structures beyond basic stress and deflection analysis of thin-walled beams. The objectives of the course are to help students: 1) appreciate the roles that structures and structural materials play in aerospace vehicles; 2) understand general design concepts for aerospace structures: vehicles, components, and materials; 3) develop the analysis tools and skills needed to analyze the static and dynamic performance of aerospace structures; and 4) gain experience identifying, formulating, and solving aerospace structural engineering problems. AERSP 470 builds on structural, dynamics, and aerodynamics topics covered in PHYS 211, EMCH 11 & EMCH 13 (or EMCH 210), EMCH 215 & EMCH 216, AERSP 301, AERSP 306, and AERSP 304. It prepares students for entry-level work or graduate study in the analysis and design of aerospace structures. It also provides students with the strong background needed to contribute effectively to multidisciplinary trade studies in vehicle design activities. AERSP 417 begins with a review of the general features of flight vehicle structures and aerospace structural design concepts. Then, the deflection and stress responses of flat plates and sandwich panels under lateral and in-plane loading are addressed. About a third of the course is devoted to the behavior of advanced composite panels, and another third to structural dynamics and aeroelasticity. The course finishes with treatments of joining and damage tolerance, both key topics with respect to the design of aerospace structures.

Enforced Prerequisite at Enrollment: AERSP 301. Enforced Concurrent at Enrollment: AERSP 304 and EMCH 315

AERSP 473: Composites Processing

3 Credits

An introduction to the principles of mechanics governing manufacturing, computer-aided design, and testing of composite materials and structures.

Enforced Prerequisite at Enrollment: EMCH 471

Cross-listed with: EMCH 473

AERSP 490: Introduction to Plasmas

3 Credits

This course provides the education on models that are used for description of plasma phenomena as applicable to plasma confinement, plasma assisted materials processing, astrophysical plasmas and plasmas in the near Earth's space environment. It provides practical training in solution of problems involving collisional and collisionless plasmas. In particular, it investigates dynamics of charged particles in specified uniform, non-uniform and time varying electric and magnetic fields. It explores collective behavior of plasmas, including various electrostatic and electromagnetic waves that can be excited and propagate in plasmas parallel and perpendicular to the externally applied magnetic field. The course considers non-linear effects in plasmas, as typically occurring in the sheath regions near the plasma confining walls. It discusses concepts of equilibrium and stability of plasmas, and various models of unstable plasma motions, especially in relation to plasma confinement.

Enforced Prerequisite at Enrollment: (C or better in EE 330) or PHYS 400

Cross-listed with: EE 471, NUCE 490

AERSP 492: Space Astronomy and Introduction to Space Science

3 Credits

The physical nature of the objects in the solar system; the earth's atmosphere, ionosphere, radiation belts, magnetosphere, and orbital mechanics.

Enforced Prerequisite at Enrollment: (C or better in EE 330) or PHYS 400 or (METEO 421 and METEO 431)

Cross-listed with: EE 472

AERSP 494: Aerospace Undergraduate Thesis

1-12 Credits/Maximum of 12

Individual problem investigations reported in written thesis and seminar lectures. Cooperative research with faculty guidance on topics of current interest.

Enforced Prerequisite at Enrollment: Seventh-semester standing

AERSP 494H: Aerospace Undergraduate Thesis

1-3 Credits/Maximum of 6

Individual problem investigations reported in written thesis and seminar lectures. Cooperative research with faculty guidance on topics of current interest.

Enforced Prerequisite at Enrollment: Seventh-semester standing
Honors

AERSP 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AERSP 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

AERSP 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

African American Studies (AFAM)

AFAM 3: Scholarship and Community

1 Credits

Introduction to college life for new students in a designated residential community to help them optimize their Penn State experience.

Prerequisite: students must be participating in the Pennpacker Experience to take this course

AFAM 4: Educational Equity Scholarship and Community II

1 Credits

The purpose of the second-semester seminar is to support scholars' success through demonstration of engaged scholarship through course curriculum and co-curricular program opportunities at University Park. This course is taught by the Office of Scholars Program staff as a living-learning program, with monthly seminar meetings and required programs through the Educational Equity Scholars Special Living Option (SLO). This unique structure provides an experiential education experience, which supports students' transition to college through campus engagement, encouraging a sense of belonging, and the development of self-awareness and self-advocacy skills. The course will also allow scholars to continue opportunities to develop relationships with key leaders, multicultural leadership, and resources across the University Park campus that will lead to their continued growth and strengthen emerging academic skills. AFAM 4 further challenge students to think more deeply and critically about the concepts of goal setting, reflection, responsibility, critical thinking, engagement, community, and ethical decision-making that were introduced in AFAM 3.

Prerequisites: AFAM 3

AFAM 83: First-Year Seminar in African American Studies

3 Credits

AFAM 83 has two primary purposes. First, it is designed to introduce students to college life and help them identify the resources and opportunities that will be most helpful to their future personal and professional path. Secondly, this seminar will introduce students to

the interdisciplinary field of African American and Diaspora Studies. They will learn about major themes and topics in the field and meet faculty from various disciplines (History, English, Anthropology, Religion, Communication) who are researching those topics. Both aspects of the course will give students a clearer sense of the academic and personal opportunities available at Penn State and in African American Studies.

AFAM 100N: Black Freedom Struggles

3 Credits

This course focuses on Black freedom struggles in the United States and selected examples from other countries in Latin America and the Caribbean. Themes addressed may include enslaved Africans' resistance to capture and enslavement as well as post-Emancipation attempts to combat white supremacy, racial and gender inequality, labor and sexual exploitation, and political disenfranchisement. Resistance strategies include but are not limited to forging of prophetic religious tradition, marching, boycotting, forming strong families and communities, collective organizing, making art, and serving in the military in the late 19th through 21st centuries. This course will address key moments, movements, and texts in the history of Black struggles for freedom in various realms including the legal, political, religious, literary, and educational. It will also cover major (as well as lesser-known) artists, activists, writers, orators, scholars, community organizers and teachers involved in Black struggles for freedom. Students will acquire a strong basic knowledge of freedom struggles in the United State, the Caribbean, and Latin America. They will also begin to understand the relationship of black resistance to broader anti-racist, anti-colonial and anti-imperialist struggles. Assigned readings, films, and lectures will foster critical thinking, speaking, and writing skills.

AFAM 101N: African American Women

3 Credits

This course offers an introduction to the sociological, historical, and political experiences of African American women, their roles and contributions to society. Through an interdisciplinary approach, we will pay particular attention to historical and contemporary responses to intersectional challenges African American women face. Drawing from the 19th, 20th, and 21st centuries, through the use of print and digital texts, oral histories, film, music, poetry, and local events, we will investigate various forms of social and political activism including

work in labor, civil rights, black power, feminist, womanist, and other movements, the impact of popular culture on what it means to be an African American woman, as well as the implications of claiming such an identity. By focusing on key moments, institutions, and figures in history, the course demonstrates African American women's central roles in the development of American institutions as we know them today, and challenges students to engage critically with questions of race, gender, class, and sexuality, as they wrestle with theories of Black Feminist Thought and Womanism.

AFAM 102: Women of the African Diaspora

3 Credits

Women of the African Diaspora is an introduction to studying the lives of African Diaspora women and the systems of power that shape them across cultures and geographies. The course centers on the politics of race and gender, on notions of origins and belonging and the meaning of resistance as a cultural and political tool. We will engage with patriarchy as a system of power implicated in identity formation and social relations. We will pay particular attention to the ways colonial histories and racial legacies have shaped the experiences of women in Diaspora. To this end, students will explore the complex and contested ways in which multiple economic, political, and cultural institutions affect the lives of women in the diaspora and examine a variety of issues including economy and labor, mobility and Activism, creativity and literary production and spirituality and social change. Rooted in a diasporic and transnational feminist framework, the course addresses issues of power, culture, racial formation, and citizenship and explores spatiality, movement and border crossings. It follows an intersectional approach to the politics of race and gender and engages diaspora as a historical and contemporary condition that addresses the realities of women in African descent as shaped by the legacy of slavery and the contemporary racial and social pattern of globalization. Students will explore broad patterns, changes, and continuities between diasporic communities globally and the way they shaped women's experiences through an analysis of the history of colonization, slavery, independence struggles, nation-building, imperialism, neo-colonialism, revolution, violence and social movements. The course will provide an interdisciplinary perspective to develop a nuanced understanding of the histories and the lived experiences of women of African descent both globally and in the context of their local geographies. To this end, the course explores both similarities and differences of diasporic experiences. It examines the complex and contested ways in which multiple economic, political, and cultural institutions affect lives of women of African Descent both in the US and globally and by addressing the relationship between economy and labor, mobility and Activism, creativity and literary production, spirituality and social change. It challenges universal and homogenous notions of blackness and engages feminist politics of solidarity as a site of both difference and commonality. The course incorporates interdisciplinary approaches and materials such as films, music, novels, short stories to

examine how racial, gender, sexual, and class identities are constructed in the context of the diaspora.

AFAM 103: Racism and Sexism

3 Credits

This survey course examines racism and sexism as cultural, political and economic processes that shape contemporary social life in the United States. It provides an historical overview of the roots of modern racism and sexism and will explore these structural inequalities continue to matter in a "post-racial" and "post-feminist" era. Students will engage a broad range of texts that discuss these forms of inequality as intersecting, mutually constituted forms of marginalization. Students will develop a deeper understanding of how race, gender, sexuality, and class conditions identity formation; racism as a structural process that shapes and limits the life chances of non-white communities; and the long tradition of resistance that women and communities of color have developed to combat these social inequalities. The course is divided into two sections. The first introduces a range of terms: race, gender, class, sexual politics, intersectionality and neoliberalism. The second half considers various case studies: mass incarceration, toxic waste, (un)natural disasters, reproductive justice, and Islamophobia in the war on terror. Students will leave with both an understanding of key theoretical terms in the study of racism and sexism and be able to apply these concepts to contemporary social issues.

AFAM 105N: Afro-Latin America: Race and Revolution

3 Credits

Too often the history of race in the Americas is overly defined by concepts of racial identity and race relations in the United States. When examined quantitatively, fewer than five percent of the approximately 10 million slaves who survived the Middle Passage arrived in what we know as the United States of America. This course will examine the impact of slavery throughout the Americas, from the establishment of the plantation in Brazil through the impact of Black migration throughout the Americas today. Through lecture and discussion, we will identify patterns of racial identity and participation in the formation of the Latin American nation state that will give us a more nuanced understanding of both race and nation in the Americas. We will examine the development of the modern plantation from the sixteenth to the nineteenth century as well as the role of urban slavery in this era throughout Latin America. We will study the various paths to abolition with a particular focus on the Haitian Revolution and the common practice of military service among slave populations during the early nineteenth century struggles for Latin

American independence. Additionally, we will look at the comparative abolition of slavery in the United States and Latin America, the role of slaves and free blacks in Central America, as well the role of race in the tensions between Haitians and Dominicans on the island of Hispaniola. The second half of the course will move to an examination of contemporary black politics, patterns of anti-black racism and state violence, and the emergence of new social movements for racial, gender, and economic justice in the Americas. This course meets the criteria for General Education designation in the B.A. fields of Humanities (GH), Social and Behavioral Sciences (GS), and International Cultures (IL).

AFAM 110N: Introduction to African American Studies

3 Credits

This course is an introduction to African American Studies as both a political and intellectual project. We will look at the discipline's history, its most prominent thinkers and institutional locations, as well as the influence of African American Studies both inside and outside of the academy. We will consider how student protests, political and cultural movements, important thinkers, and critical debates have shaped the field and how it has changed over time in response to new political and demographic realities. Beginning with the field's origins in 1960s-era student protests, this course considers the major concepts and methodological approaches - sociological, anthropological, historical, literary - that have shaped the field since its inception in 1968. We will consider the major themes and debates that have dominated African American Studies and how they have changed over time. Focusing on critical texts including W.E.B. DuBois' *The Souls of Black Folks*, Angela Y. Davis' *Woman, Race and Class* and Michael Gomez' *Reversing Sail* we will follow the field's evolution from one focused on the U.S. to one that encompasses African Diasporic populations around the globe. We will assess the impact of African American Studies in colleges and universities as well as in grassroots communities. Some topics we will examine include: the difference between African American Studies as an intellectual project and African American Studies as a political project; how theories about gender inequality have shaped the field; how theories about class inequality have shaped the field; how the diasporic turn has shaped the field; what U.S. demographic trends may mean for the future of African American Studies.

AFAM 111N: Introduction to Anti-Black racism in the United States: The African American Experience

3 Credits

This interdisciplinary course for undergraduate students on anti-racism will examine the historical, sociological, representational, and psychological effects of racism on the experiences of African Americans. In 2020, three significant events: the killings of Ahmaud Arbery, George Floyd, Breonna Taylor, and many others, the COVID-19 pandemic, and benchmark studies on economic inequalities created a national and global demand for anti-Black racism education. An intersectional lens will guide the course to examine the core modules and recent events, providing a holistic racial, gender, and class analysis. Experiential activities and journal reflections will allow students to evaluate their personal beliefs about race, cultural identity, privilege, and social advocacy. The course concludes with students creating and presenting campus or community-based anti-racism projects. Faculty may include field trips to regional and/or national African American historical sites and guest speakers throughout the course in order to provide expert scholarship, insights, and experiences.

AFAM 114N: Race, Gender and Sport

3 Credits

In 1969, sociologist Harry Edwards declared that a surge of protest among African American athletes marked "the newest phase of the black liberation movement in America." Nearly five decades later, athletes such as Richard Sherman, Serena Williams, and Michael Sam proved that the relationship between race, gender, and sport remains complicated, and that athletes continue to offer meaningful contributions to a variety of struggles for liberation. This course addresses the race, gender and sport relationship from two complementary angles. First, we will examine the ways that sport gives meaning to racial and gender identity. As concepts that shift over time, race and gender derive their influence from prevailing forms of scientific reason, social attitudes, and cultural mythologies. From Jack Johnson to Serena Williams, sport has found and intervened itself in each of these contexts, particularly as society and culture produce marginal or subordinate identities. We will consider, for example, how and why sport posits the differences between men and women according to assumptions about physical strength, and how and why sport reinforces dubious assumptions regarding the physical superiority and cognitive inferiority of black athletes. Second, we will examine the ways that sport works as a setting in which political struggles around race and gender are imagined and expressed. From the 1968 stand by black track and field Olympians, to Billie Jean King's 1973 famous "Battle of the Sexes," to tennis player Venus Williams' achievement of gender pay equity in 2007, to sports figures protesting on behalf of the Movement for Black Lives in 2016, athletes have long placed their social identities at the center of political speech. Finally, we will consider the historical trajectory of a narrative about the "activist athlete," which once held that athletes had abdicated political obligations in pursuit of wealth, but

which now seems to herald athletes' return to the nation's political scene in examples like LeBron James and Colin Kaepernick. This course will address sport's potential to rethink, resist, or challenge race and gender relations and other social hierarchies.

AFAM 116: Muslims in America

3 Credits

This course is a study of Muslims in North America, primarily the United States. It examines the multiple racial, cultural, and national groups that comprise this diverse community, starting with the historical record of the Muslims that came to the Americas as African slaves. Next, we examine African American Islam in its myriad formations. The influx of immigrants in the 1960s from the Middle East, Africa and Asia, dramatically shifted demographics in U.S. Muslim communities. Finally, we consider the post-9/11 period, which has put Islam and Muslims at the center of U.S. political and cultural discourse.

AFAM 126N: The Popular Arts in America: The History of Hip-Hop

3 Credits

Hip-hop is an important and historically significant genre in popular music that initially began in the South Bronx in the early 1970s and has grown to become one of the most influential, controversial, and important genres to emerge in the last quarter of the 20th century. Beyond music, hip-hop has also been defined as a commercial enterprise, a lifestyle, and a sociocultural movement. This course explores the various meanings and manifestations of hip-hop throughout its evolution from the early 1970s to the present day. Students will examine the cultural, economic, social, and political implications of hip-hop nationally and globally. Drawing on frameworks like critical race theory and Black feminist/womanist theory, students will engage enduring debates at the heart of hip-hop-debates about art, race, class, gender, citizenship, power, and the body. Topics to be covered include: four foundational elements of hip-hop (rap, DJ arts, graffiti & visual arts, dance); the cultural, economic, political, and social conditions under which hip-hop emerged and developed; impact of hip-hop on the culture industries and the commercialization of the genre; stylistic principles that constitute the hip-hop aesthetic; racial parameters of hip-hop and notions of authenticity; gender and hip-hop's framing of black femininity and masculinity; and global circulation of hip-hop culture. Throughout the course students will explore the following questions: Under what social, political, and economic conditions did hip-hop emerge? Who were the key producers,

fans, and detractors of hip-hop in its earliest years? Whose voices are privileged (and marginalized) within hip-hop studies as an academic project? How has hip-hop been framed within and/or transcended traditional notions of art and beauty? In what ways has hip-hop style been criminalized and degraded as low culture? In what ways has hip-hop style been (mis)appropriated? What is authentic hip-hop and how is it measured? To what extent do hip-hop artists pander to stereotypes? What is the relationship between hip-hop and capitalism? What are the benefits and limitations of the commercialization of hip-hop? How do fans and producers impact the genre in the contemporary digital era? What are the primary impediments to rappers who are neither black, nor male achieving the level of popularity and respect that hip-hop's biggest stars have attained? To what extent does the music industry use talent and marketability as a stand in for racial identity? How has hip-hop been taken up by marginalized groups in countries such as Brazil, Cambodia, and South Africa?

AFAM 132: Afro-Hispanic Civilization

3 Credits

A general introduction to human and cultural elements of African origin in Spanish- and Portuguese-speaking countries of Latin America. SPAN 132 / AFR 132 / AFAM 132 Afro-Hispanic Civilization (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. The nations and peoples of Latin America have a unique, interesting history and cultural heritage that are rooted in the traditions, beliefs, experiences, values, and struggles of Native American, European, African and other populations. This course focuses on the presence and participation of African peoples and their descendants in the formation and development of societies and cultures in representative areas of the Caribbean, South America, and Central America and on the evolution, diversity, and richness of the African heritage therein. Course content includes the African background, the experience and impact of slavery, the social, cultural, and economic heritage of slavery, the role of race in Latin America, and Afro-Hispanic intellectual, literary, and artistic developments (e.g., aspects of folklore, music). The course aims to provide students with a general introduction to human and cultural elements of African origin within the Spanish- and Portuguese-speaking nations of the Americas so that they may be more knowledgeable of the meaning, significance and widespread influence of the African diaspora. It proposes to provide the student with a better understanding of Africa's contribution to Latin American identity, diversity, culture, and development; to promote appreciation for the values and practices of other cultures, and greater awareness of the relations between the nations of the region and the United States.

AFAM 136: Race, Gender, and Employment

3 Credits

This course will ask how race and gender affect work in the contemporary United States. We will consider how race and gender shape people's work opportunities, their wages at work, and whether they participate in paid or unpaid labor (or both). We will begin with an overview of work and the changes in the workforce over time; we will move to investigate how workplace structures reproduce gender and race inequalities; will ask how race and gender inequalities are informally maintained through education systems and social networks; will consider differing dimensions of inequality across poverty, immigration, and sexuality; and will consider how studying unpaid labor helps us better understand the formal paid economy. This course meets the Bachelor of Arts degree requirements.

AFAM 139: African American Literature

3 Credits

This course offers an introduction to African American literature from the early writings of slavery and freedom to the works of present-day African American authors. We will explore the major themes, literary traditions and narrative strategies that merge and shape this body of literature,

considering, for example, the influence of double-consciousness, questions of authenticity and performance, representations of blackness and whiteness, the significance of place, and the persistent presence of folklore and vernacular traditions. Our analyses of texts will be attentive to the intersections of race, class, gender, and sexuality, and by the end of the course you will be able to discuss fluently several literary techniques and strategies including irony, satire, narration, voice, characterization, imagery, style and setting. We will situate texts in their various historical and cultural contexts, and you will be introduced to key literary concepts and terms that should inform your reading and writing about these texts. You will learn how to analyze literature, do close and careful readings of texts and write persuasively about literary works. Students will engage in thoughtful, creative and open-minded class discussions, analyze literature and do close and careful readings of texts.

AFAM 141N: African American Read-In Engaged Learning Experience

1-3 Credits/Maximum of 6

This course will allow students to study African American literature, culture, history, and arts in connection with an annual public event, the African American Read-In (AARI). The AARI, promoting literacy and appreciation of African American literature, is a national event established in 1990 under the auspices of the National Council of Teachers of English. It has become a regular feature of Black History Month celebrated by community, neighborhood, and church groups as well as schools and institutions of higher education throughout the United States and elsewhere on a given Sunday and Monday in February attracting more than a million participants annually. This course offers students an engaged learning experience in which they will produce original intellectual and artistic content to be presented publicly at an AARI event on campus. Students will study texts from a range of historical periods and/or genres, and thus gain a solid introduction to the African American literary tradition. At the same time, the primary organizing principle of the course will be a particular theme that both allows a broad and coherent overview of a significant cultural or historical topic and engages issues of cultural diversity in the United States. The specific theme, thus, will bring the study of African American literature into a broader interdisciplinary context that intersects with African American culture, history, identity, and the struggle for equality. Students will study texts that relate to this annual theme and participate in a relevant field trip (museum, theater, cultural site, library, etc.) to deepen their understanding of the significance and contexts, social, historical, cultural, artistic of these materials and this theme. They will then develop this knowledge through creative and critical engagements into exhibitions, presentations, or performances to communicate their insights about a particular author, text, or topic in the African American literary tradition. As shapers of the AARI program on their campus, class members will also have a voice in designing and planning the AARI as well as a stake in its overall success. As this course necessarily spans semesters, students who enroll in the Fall course will be expected to enroll in the Spring course in order to present their projects at the AARI in February. Only students who were enrolled in the Fall course will be

permitted to enroll in the Spring, as it is the culmination of the same course.

AFAM 145: African Diaspora Religions and Spiritualities

3 Credits

This course is an introduction to religions and spiritual traditions of the African Americas including the United States, the Caribbean and Latin America, emphasizing present institutions and practices, their relationship to Africa and African spirituality, their shape and function during slavery, and their development from Emancipation to the present. Through various examples and case studies, we will trace the relationship between religion and resistance, race politics, gender and sexuality, religion and social change. The course addresses core ideas of the disciplines of religious studies and African Diaspora theory. The category of religion is explored through a diasporic framework that considers the legacy of slavery and contemporary racial and social hierarchies. The course approaches religions of the African Americas as epistemologies of resistance to white oppression introducing students to the diaspora condition as marked by historical violence and the dialectics of loss and displacement. Central to the course are concepts of religious orthodoxy and authenticity, cultural retentions and transformations and the dynamics of religious power and authority. The course follows a comparative framework in investigating religious life, introducing students to diaspora theory as a discourse of difference that engages critically with the particularities of the religious traditions of the African Americas without collapsing their differences. By addressing identity formations, the course focuses on religion as a discourse of power and one that articulates religious life as shaped by gender and race politics and by economics and social realities. To this end, the course follows an interdisciplinary approach and engages a variety of material including literary and historical texts, visual arts and music and dance makes it possible for students to understand the complexity of religious life in the African Americas.

AFAM 147: The Life and Thought of Malcolm X

3 Credits

The life of Malcolm X/El Hajj Malik El Shabazz (1925-1965) and his social, political, economic, and moral thought. AFAM 147 / RLST 147 The Life and Thought of Malcolm X (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine in-depth the life, speeches, and thoughts of Malcolm X/El Hajj Malik El Shabazz. While the Autobiography will be a major source, we will also use other sources to develop an understanding of the philosophy and thought of Malcolm X. We will explore the social, economic, political, cultural, religious, moral, and spiritual context of America in general and of African Americans in particular. We will examine Malcolm X's influence on the period in which he lived and since his assassination. We will compare and contrast his view on issues of race, culture, politics, education, crime, human rights, civil rights, morality, and economics with those of other African American leaders and with the prevailing views of most Americans on those subjects. We will devote a large portion of the course to the examination of the social movements that impacted on Malcolm and those that he influenced. The speeches of Malcolm X and the writings about Malcolm X are instructive and will be utilized along with other documents. Videotapes and audiotapes will also be employed as instructional materials. Students are expected to be ACTIVE participants in the learning/teaching experience. Students are required to participate in class discussions centered on the readings and related topics. There will be a written mid-term examination and a written final examination. Students are expected to complete an individual research project related to the course and write a paper on that research as well as to participate in a collaborative group project of their choosing on a subject related to the class. This course will count in the supporting courses category of the major and minors in African/African American studies. It also will fulfill credits in the Religious Studies Program. It may also be used to fill GH and US requirements.

AFAM 152: African American History

3 Credits

Chronological and topical survey of the history of African Americans from the colonial period to the early twenty-first century. This course covers major themes in African American history including the societies and cultures of Africa, the Middle Passage, the Colonial experience, slavery, abolition, and the quest for freedom, Civil War and emancipation, Reconstruction, Jim Crow, the Great Migration, African American cultural expressions, WWII and the seeds of Civil Rights, the Freedom Movement, Black politics and White backlash. While "knowing the facts" is obviously important to historical understanding, this course helps students develop critical thinking skills. These skills include: close and thoughtful reading and analysis of primary and secondary sources; looking for a broader coherence or "order" to the material; independent analysis and effective articulation (both in writing and in class discussion) of well-reasoned, well-crafted conclusions and interpretations and arguments

(conclusions/interpretations/arguments which are supported by specific factual evidence derived from a variety of sources). The three specific course objectives underscore its scholarly dimensions: (1) Students will gain a knowledge and understanding of the relationship between the experiences of African Americans and United States history as a whole. (2) Students will gain an understanding and knowledge of the political, economic, and social processes that shaped African American history. (3) Students will learn how to "think historically" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. By the end of the course students will: Demonstrate an understanding of the chronology of African American history. Demonstrate an understanding of the diverse experiences of different groups of Americans. Demonstrate an understanding of the social, political, and ideological structures that shaped African American history and continue to shape the modern United States.

AFAM 164: The History of Brazil

3 Credits

This course will study the history of Brazil, the only Portuguese-speaking nation in Latin America, from the colonial to the present period. We will examine Brazil's transformation from Portuguese colony to the seat of a nineteenth century transcontinental empire ruled by the only European monarch to rule from the Americas, and discuss developments such as plantation slavery and industrialization that transformed Brazil into an international powerhouse. We will examine political, economic, cultural and racial movements and institutions that defined Brazilian history during the empire, the first republic, the Vargas era, and the military dictatorship. We will conclude with a look at Brazil's struggles with democracy from the 1980s to the present as well as the rise of contemporary populist leaders, Brazil's struggles surrounding policing, political corruption, affirmative action, and its hosting international sporting events in the twenty-first century. This course is designed to introduce students to the making of the modern Brazilian state focusing on the period from the rise of the Brazilian Empire in 1808 through the modern day. We will survey major historical trends in Brazilian society, from its roots as a Portuguese colony and its role at the center of slavery and the slave trade in the Americas to its distinctive patterns of independence and nationhood. Brazil's experience as an independent nation during the nineteenth century (it became the only long-term monarchy in the Americas) offers an interesting point of comparison to the history of republican nationhood elsewhere in North and South America. We will also examine the challenges of state and nation building during the nineteenth and early twentieth century as well as the challenges associated with late industrialization and state-sponsored development.

AFAM 207N: Jazz and the African American Experience

3 Credits

The history and evolution of jazz is a significant cultural manifestation of the African American experience. The music and its artists provide a lens through which to examine questions surrounding the African American experience and what it means to be Black in America, engaging with questions about identity, authenticity, freedom, activism, gender, and sexuality, as well as the role of music in African American life. Drawing upon curricular elements from MUSIC 7, Evolution of Jazz, and AFAM 100, Living While Black: Themes in African American Thought and Experience, this course traces the history of jazz through an examination of the lives and art of thirty great jazz artists, juxtaposed with an examination of seminal writings of twenty African American poets, playwrights, novelists, critics, activists, philosophers, and scholars. Preliminary objectives will include basic musical information associated with tonality and with jazz. The main objectives of the course are: to explore the antecedents of jazz and the social-historical contexts in which they developed; to explore the pioneering artistry of selected twentieth-century jazz musicians, tracing the evolution of jazz styles in the process; to delve into the lives of these jazz artists and the social-historical contexts in which they lived; to explore the writings of historically contemporary African Americans, which articulate many of the major issues that have shaped black life in America; to enhance appreciation for the art of jazz and for the musical and literary contributions of African Americans; to encourage reflection, empathy, and a greater understanding of the cultural-historical circumstances that have informed the lives and art of African Americans. The narrowing of scope allows for a more detailed examination of the selected jazz artists, their music, and their lives. Similarly, the selected writings will allow students to reflect on the relationships and connections between these writings and the artistry and life experiences of the selected jazz artists. These objectives will be met by utilizing an interactive, multimedia online curriculum, including demonstration videos, a virtual keyboard, music notation files (e.g., Sibelius), audio recordings, audio-video recordings, selected readings, open forums, and discussion boards. Evaluation methods will include quizzes, tests, open forums, discussion boards, and reflection papers. Students will receive GA and GS credit for this course, as well as US designation. The course will not satisfy any requirements for the major or minor in music. All pieces, excerpts, examples, videos, and texts will be made available to students online.

AFAM 207W: Methods in African American Studies

3 Credits

Methods in African American Studies offers an introduction to the interdisciplinary methods employed in African American Studies. This writing intensive, required course for the major in African American Studies exposes students to a wide range of scholarly method used in allied academic disciplines. Students will be given the opportunity to identify a research question in African American Studies that interests them, and then to use various methods to develop a research topic. Every couple of weeks students will be required to write response papers in which they analyze and identify AFAM methods as they are used in various disciplines. Toward the end of the course, students will write a research prospectus that will serve as the basis for their capstone seminar research paper and will undergo a process peer review to developed a final draft. The research prospectus will be presented in the final class in a student colloquium.

Writing Across the Curriculum

AFAM 208: Workshop: Theatre in Diverse Cultures

3 Credits

A performance-oriented class which explores the historic and contemporary theatrical works of various culturally diverse peoples. THEA 208 / AFAM 208 Theatre Workshop in Diverse Cultures (3) (GA;US;IL) (BA) This course meets the Bachelor of Arts degree requirements. Theatre Workshop in Diverse Cultures is a performance-oriented class that aims to introduce students to the broad cultural diversity that exists in artistic expression. The class will focus on several plays throughout the semester that will represent cultural, ethnic, and gender diversity as well as different literary styles. Students will be exposed to various cultures by working on plays created by artists from those cultures. The course will concentrate on a specific playwright, culture, or region, such as plays from the Caribbean. Students will be required to read, study, analyze, and perform plays from the genre. For example, the class may focus on the works, life, and philosophy of August Wilson and read Joe Turner's Come and Gone, Seven Guitars, Piano Lesson, and Fences. The class may explore Asian styles such as Noh Theatre and Asian American works by D. H. Hwang or work by Nigerian playwright and Nobel Prize winner Wole Soyinka. The presentation of these plays will be a principle part of the class, but the reading and discussion of the material will be as important. Students will participate in some capacity with the production of these plays in areas such as stage management, dramaturgy, sets and props, lights, sound, costumes, house management, publicity, and acting. These pieces will be performed in class, in workshop, and occasionally for the general public. Students will work as an ensemble and become acquainted with basic acting and theatre techniques. The course objectives are: 1) to develop and enhance students' appreciation for the discipline and commitment required for multicultural theatrical presentations 2) to help to sensitize all students to the broad cultural diversity in artistic expression 3) to provide students with an introductory engagement with drama. THEA 208 / AFAM 208 serves as a primary selection for students pursuing the Theatre minor.

AFAM 210: Freedom's First Generation: African American Life and Work, from the Civil War to World War II

3 Credits

HIST/AFAM 210 explores the context and events that shaped African American life during the post-abolition period from the U.S. Civil War until WW II. The course begins with a comparative examination of the decline of African slavery and of emancipation throughout the Americas, and then focuses on Black lives in the United States. The course explores a wide range of topics, including: Black identity in the U.S., the criminalization and disposability of Black bodies, Reconstruction, Jim Crow Laws, lynching, forced labor, the rise of African American leadership, gender and reproduction under slavery and in freedom, the development of protest strategies, the impact of industrialization and urbanization, and the significance of African American culture and art.

AFAM 211: Slavery and Freedom in the Black Atlantic

3 Credits

This course examines the history of African and Afro-descended people throughout the Atlantic world from the 15th through the 21st centuries. Historical topics include African societies before and after the advent of European trade systems, the Atlantic Slave Trade, the role of enslaved Africans in the conquest, establishment, and independence of the Americas, and the role of free and freed Afro-descended people in resistance, in service, and as citizens of American colonies and nations. This course compares and contrasts the systems of slavery that appeared throughout the Americas, the resistance that developed against these systems, and the nations that developed out of these institutions.

AFAM 212: African Americans in the New Jim Crow Era, 1968-present

3 Credits

An examination of Black political, economic, social, and cultural life in America from the era of colonization to 1905. AFAM 212 African Americans in the New Jim Crow Era, 1968-present (3) (US) This course covers the Black experience after the 1960s and the post-World War II Civil Rights Movement ended in the late 1960s. It begins with a brief overview of the major events and achievements of the Civil Rights

Movement and its waning that followed in the wake of the Vietnam War and the social upheaval of the late 1960s. The course focuses on the the Black experience during the rightward shift in American politics, culture, and society in the last one third of the 20th century and the beginning decades of the 21st century. We look at the disintegration of the Democratic Party that grew out of the party's support of the Civil Rights Movement, the War on Poverty, and the Vietnam War. We discuss the recreation of the Republican Party that followed a southern strategy to rebuild the party on the racism and discontent of white people in the southern rim and in white suburbia throughout the nation. The new Republican Party pursued a new state's rights philosophy that fused with a growing libertarianism that rejected a strong federal government and was hostile to any efforts to address social justice issues in American society. We discuss the efforts of the New Right Republicans and the newly formed Democratic Leadership Conference of the Democratic Party to dismantle many of the achievements of the Civil Rights Movement, focusing on welfare reform, new sentencing laws, the privatization of the prison system and public education, all changes that forged a New Jim Crow society. We look at the role of black elected officials in this process, discussing the various differences between black members of the Democratic Leadership Conference, and those of the Progressive Black political groups. There were major political achievements in terms of more black elected officials, the Jesse Jackson Presidential Campaign, and the election of Barack Obama. However, the late 20th and early 21st Centuries were marked by growing class and racial inequality, perhaps made most visible by Hurricane Katrina when the entire world saw the consequences of decades of conservative policies that favored the rich over the poor. We discuss the popular notion of a post-racial and color blind society and the contradictions it embodies. The course ends with a discussion of newly emerging grassroots efforts to address issues such as environmental racism, school inequality and the schoolhouse to jailhouse track, police brutality, and the prison industrial complex. We discuss how African Americans today may build on the struggles and insights from the past to forge a stronger and more just future.

United States Cultures (US)

AFAM 213Y: African American Women's History

3 Credits

This course examines the social, political, and economic history of African American women in the United States from slavery to the present. Using secondary and primary sources along with film and discussion, we will explore the varied lived experiences of African American women paying special attention to the themes of family, sexuality, labor, politics, and religion. We will examine how the simultaneity of racial and sexual oppression influence African American women's actions. Additionally, we will consider dominant images of African American women in a historical context. While the course is primarily discussion in format, the professor will lecture when necessary. As the course is writing-intensive, papers of various lengths constitute the bulk of student assessment.

AFAM 226N: Critical Approaches to Hip-Hop

3 Credits

This course will examine the politics of hip-hop art and culture. To do so, we will place hip-hop in broad historical context and trace its aesthetic and cultural roots from Africa to Jamaica to 1970s New York City and then forward to 1980s gangsta rap and former President Barack Obama's iPod. We will think through the implications of hip-hop's addiction to Italian-American mobsters, bling, and all-things keepin' it real. We will also search for hip-hop's political foundations in funk records, 1960s community organizing, and poetry of the Harlem Renaissance. All the while, we will analyze the varieties of hip-hop politics by paying close attention to how hip-hoppers vie for authenticity, recognition, and power through cultural practices—b-boying/girling, graffiti art, emceeing, djing, e.g.—at odds with the State, inequality, and injustice. We will also situate hip-hop politics within the ongoing history of American social movements. To avoid over-romanticizing, we will equally examine hip-hop's appetite for conspicuous consumption, misogyny, homophobia, trappin', and criminality. A deep understanding of hip-hop politics, then, requires examining its contradictions as well as the ways race, class, gender, sexuality, and geography shape hip-hop—and therefore American culture, art, and identity. To get at these and other ideas, we will read, listen, and think broadly about why a full understanding of hip-hop truly matters.

AFAM 235: From Folk Shouts and Songs to Hip Hop Poetry

3 Credits

The origins, forms, and function of the oral folk tradition of African Americans. ENGL 235 / AFAM 235 From Folk Shouts and Songs to Hip Hop Poetry (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. This course contemplates connections between African oral traditions and contemporary trends in Black poetry including hip-hop and spoken word poetry. The central objective of the course is to examine the degree to which the most contemporary forms of African American poetry continue to function as folk expression; it provides an opportunity for students to examine the oral roots of African American literature in general and contemporary hip-hop and spoken word poetry, in particular. Music, particularly the Blues and Jazz, will be a prominent feature of this class as we try to discover the peculiarities of Black poetry. Students will begin by comparing African and African American folk forms such as proverbs and epic poetry, continue with early African American poets such as Phyllis Wheatley, George Moses Horton, Frances Ellen Watkins Harper, and Paul Laurence Dunbar, and continue through the 20th century with the poetry of the Harlem Renaissance and Black Arts Movement to contemporary Hip-Hop and Spoken Word, including Def Poetry Jam recordings. Background readings will include important essays (such as James Weldon Johnson's "Preface to the Book of Negro Poetry" and Langston Hughes's "The Negro Artist and the Racial Mountain") that reveal the kinds of aesthetic issues African American artists faced in crafting their art in the face of a dominant culture that consistently questioned their capacity for artistic production. Students will listen as

Margaret Walker reads her famous poem, "For My People," and they will consider the importance of the Black Arts Movement, its poets and critics to the development of contemporary hip-hop and spoken word poetry. Other course materials will include videotaped interviews and poetry readings. Readings would come from an appropriate anthology and/or a combination of other appropriate texts selected by the instructor.

AFAM 250: Introduction to the Caribbean

3 Credits

A survey course exploring the emergence and historical evolution of the modern Caribbean. This course will explore the evolution of the Caribbean region from the eve of the arrival of Columbus to the 21st century. It will explore Indigenous societies prior to the arrival of Columbus and the interactions that lead to their destruction and the consolidation of European colonial empires. We will explore the coercive labor systems that emerged in the region including indentureship, Indigenous enslavement, transportation of Europeans, the establishment of African slavery, and the establishment of the plantation system that defined the region until the 20th century using both free and unfree labor to maintain its dominance in these island societies. Themes examined will include revolutions in Haiti and Cuba, the struggle for independence, slavery and racial hierarchy, the rise of U.S. neo-colonialism and hegemonic control in the region, nationalism, tourism, and the economic underdevelopment that defines the Caribbean until today.

AFAM 280: Historical Ethnography of Freedom

3 Credits

Studies the Underground Railroad movement to guide slaves to freedom, and public heritage surrounding this institution. Students use ethnographic approaches. AFAM 280 Historical Ethnography of Freedom (3) (GH;US) The course will introduce students to the origins, impact, and changing public interpretations of Underground Railroad. The Underground Railroad was a movement to secretly rescue slaves and send them to places of freedom in the northern states and territories, and Canada. Students will learn about the origins, leaders, and locales of this multi-racial movement. The course assignments will include scholarly readings, as well as research locating historic materials that shed light on the Underground Railroad. Course text and research materials will include historical studies, as well as newspapers, census materials, church records, and rare books that shed facts on the Underground Railroad. Students will be challenged to weigh stereotypical views about the Underground Railroad in scholarship and public life against the literature, historical documents, and places they discover that were actually associated with local and national Underground Railroad activities.

AFAM 302: Diversity and Health

3 Credits

Examines the relationship diverse personal and sociocultural factors (e.g., socioeconomic class, race-ethnicity, gender, age, and sexual orientation) have with health. BBH 302 / AFAM 302 Diversity and Health (3) (US) is an introduction to the interdisciplinary study of the impact of diversity on health in America. The course is designed to provide an understanding of the complex interaction between concepts of diversity, including but not limited to race, ethnicity, culture, gender, age, socioeconomic status, and sexual orientation. The course will also consider and critique the methods used in the study of these concepts and issues related to the measurement of health among diverse groups. The ultimate goal of this examination is to assist students in developing an appreciation of diversity and the impact diversity has on assessments and study of health, health status, and health promotion in America. The course is also designed to integrate different sources of information about diversity by utilizing critical thinking skills for the consumption of health information. The educational objectives will be to enable students to: 1) Consider the implications of race, ethnicity, gender, age, socioeconomic status and sexual orientation on health/social policies in light of research findings, 2) Understand the legacies and historical events that have impacted our view, status, and treatment of diverse populations, 3) Appreciate the importance of understanding the origins of different health behaviors that impact biological processes, as well as the impact of biological processes in the context of social, environmental, and cultural influences when examining health issues.

Enforced Prerequisite at Enrollment: PSYCH 100 or SOC 1

Cross-listed with: BBH 302

United States Cultures (US)

AFAM 303: Race and Gender in the Americas: Latin American and Caribbean Cultures

3 Credits

Utilizing a theoretical framework of intersectionality, this course examines historical and cultural constructions of race and gender in Latin America and the Caribbean. AFAM 303 / ANTH 303 / WMNST 303 Race and Gender in the Americas: Latin American and Caribbean Cultures (3) (GS;IL) Utilizing a theoretical framework of intersectionality this course examines how racial, gender, sexual, and class identities are constructed in Latin American/Caribbean societies. The course applies an anthropological perspective to a wide range of countries in the region to reflect on how historical events such as the conquest, colonization, slavery, and independence movements are relevant to understanding the region today, as well as how race, gender, and sexuality inform contemporary themes of empire, nation-building, imperialism, neo-colonialism, revolution, violence, militarization, social movements, religion, neoliberalism, U.S. involvement/relations, and

popular culture. The course addresses issues of power, culture, racial formation, and citizenship by incorporating interdisciplinary material beyond ethnography such as newspapers, grassroots media, biographies, films, music, novels, personal testimonies, etc. Rooted in feminist anthropological scholarship, this course emphasizes how power (from above and below) and culture mediate relationships between individual/community agency and institutions/structures. As an effort to encourage students to think about Anthropology and culture beyond superficial or romanticizing celebrations of multiculturalism, food, and music, the course stresses the theoretical importance of situating power and privilege amidst difference. We conceptualize culture not only as socially transmitted patterns of behavior and ideas/meanings, but as a complex and dynamic process/medium grounded in unequal relations in which power is constituted and resisted. The ethnographic emphasis of the course centers on the complex lived realities and voices of people, encouraging students to learn, understand, and respect cultural difference. The course offers students a broad sense of how power is central in the production of knowledge (particularly within the disciplines of Anthropology and History). Students will critically engage an array of topical issues in Latin America beyond dichotomous thinking. Discussion of course material includes contemplating issues of ethics, subjectivity, bias, and privilege. Conversations regarding processes of "Othering" and traditional "us vs. them" debates that often occur when discussing developing countries will prompt students to situate their own power/privilege and challenge our assumptions and preconceived notions of Latin America. Moreover, this course teaches Latin American Cultures within a global context of racialization. As such it also stresses the historical and contemporary social, economic, cultural and political significance of the U.S. in Latin America, to demonstrate how we are connected and responsible to what happens "over there."; In order to promote service learning, a core tenant of feminist pedagogy, this course also offers students the opportunity to participate in an optional embedded program entitled "Cuba: Identity, Diversity and Popular Culture". This two week course in Havana, Cuba promotes interactive learning in and outside the classroom with international study. This course component successfully combines academic classes, hands-on activities, and service learning.

International Cultures (IL)

AFAM 364N: Black & White Sexuality

3 Credits

This course explains how narrow, "black and white," ways of thinking limit our understanding of the diverse expressions of human sexuality. The course title's double meaning also references the various ways that sexuality is socially constructed in relation to race. For example, we will explore how stereotypical beliefs about the sexuality of people of African descent persist in the United States and have been legitimized historically by various cultural discourses, social institutions, and academic fields. Course assignments will require us to rethink and challenge what we understand as "sexuality" and consider its many influences like race, gender, class that shape our emotions, needs, desires, relationships, representations, practices, and public policies. An aim of this course is to begin to make sense of the long, entangled, and inextricable relationship between race and sexuality in the United States.

A seminar examining theoretical and methodological issues in Afro-American Studies.

Prerequisite: AF AM100 , AF AM101

AFAM 409: Racial and Ethnic Inequality in America

3 Credits

The impact of inequality and discrimination on individual and group identity among various racial and ethnic groups. SOC 409 / AFAM 409 Racial and Ethnic Inequality in America (3) (US) (BA) This course meets the Bachelor of Arts degree requirements. This course explores the impact of inequality and discrimination on individual and group identity for a wide range of social groups with special focus on racial and ethnic majorities and minorities. Using an extensive list of readings, writing assignments, small group activities, and journals (for personal reflection and scholarly critique) the students join the instructor in exploring the effects of inequality and discrimination. While emphasis is given to the inequality and discrimination experienced by local and national populations, a significant portion of the class will address issues rooted in international structures and institutions. Students are evaluated on quizzes, reaction papers, and analysis journals. AFAM 409 / SOC 409 is not a required course in Sociology; it is, however, an optional 400-level course for all majors and minors that fulfills one of their upper-level course requirements. AFAM 409 / SOC 409 is not required for the major or minor, but it is one of several optional courses from which they can choose to fulfill major and minor requirements.

3 Credits

Exploration of the development of African American theatre from its roots in Africa through the diaspora, to the present time. THEA 412 / AFAM 412 African American Theatre (3) (US;IL) (BA) This course meets the Bachelor of Arts degree requirements. In this course, we will explore the development of African American theatre from its roots in Africa and Europe, through the diaspora, to the present time. We will learn something of the rich diversity of African American people and their contribution to the world's creative mainstream. We will become acquainted with both historical and contemporary artists who created and continue to create this unique American art form. The goals of the course are: 1) to develop familiarity with African American theatre and the socio-historic context in which it was created 2) to develop an understanding of the relationship of African American theatre to mainstream American theatre 3) to acquire an appreciation of the schools, styles, and techniques of African American theatre We will do this by reading and engaging plays in the context of the period in which they were created, viewing films of plays, and attending relevant productions where possible.

AFAM 422: Contemporary African American Communication

3 Credits

A focused study on the continuities between African and African American culture and communication. CAS 422 / AFAM 422 Contemporary African American Communication (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. At least once a year, this multidisciplinary course is designed to serve both Speech Communication and African and African American Studies. It is concerned with the relationship between a people's culture and world view and their systems of rhetoric/communication. It also provides a focus on the continuities between African and African American culture and communication. Specifically, it offers an approach to ascertaining the salient features of African and African American communication for community development. Special emphasis is given to the development and rhetoric of the Civil Rights Movement. The course utilizes videos, guest lectures, tapes of speeches, etc. to clarify objectives and stimulate classroom discussion. Students will be evaluated on two exams, one oral report, a final paper and class participation. Even though students need 400-level courses for their major and minor, this course is not required for Speech Communication majors. However, it does meet the Intercultural and International Competency requirement because it focuses on the

communication of African Americans and how that communication has affected all Americans. The course will accommodate ten students in Speech Communication and ten students in African and African American Studies to ensure active discussion of issues.

AFAM 431: Black Liberation and American Foreign Policy

3 Credits

This course deals with American foreign policy and Black liberation in Africa since 1945. AFAM 431 / HIST 431 Black Liberation and American Foreign Policy (3) (US;IL)(BA) This course meets the Bachelor of Arts degree requirements. Black Liberation and American Foreign Policy in Africa since 1945 presents an interdisciplinary approach to the study of American foreign policy in Africa. Course readings will consist of both secondary and primary sources to explore the evolution of American policy toward the continent over the last half-century, and the meaning of the American engagement with Africa for American politics and society. The course will also examine the reasons that Africa has served as a focus of concern among African Americans both prior to, and, over the period 1945 to the present. Of particular concern will be the ways in which American policy has reflected pressures from African Americans as a constituency in foreign policy. The focus of the course will be student-centered written research and discussion. Students will be required to select topics from the course outline for presentation in class with the instructor serving as the moderator of discussion and guide to relevant research materials. Students will be encouraged to use both primary and secondary sources for their research. Students will be expected to prepare two individual written presentations which will serve as the basis for class discussion (30% of the grade), a book review (10% of the grade), and a research paper of 15 pages (40% of the grade) on a topic drawn from the areas identified in the course outline. The final 20% of the grade will be awarded for participation in class discussion.

AFAM 432: Between Nation and Empire: The Caribbean in the 20th Century

3 Credits

An exploration of the political evolution of the Caribbean Region over the course of the 20th Century. HIST 432 / AFAM 432 Between Nation and Empire: The Caribbean in the 20th Century (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will explore the political evolution of the Caribbean Region over the course of the 20th century. Its focus will be the ways in which imperial rule and the search for national identity have been the parameters that have shaped Caribbean political history over that period. Students will explore, in written assignments and class presentations, the ways in which the region which has historically been a theatre of confrontation among the major powers in the international system continued to serve that role over the course of the 20th century. The costs that have been borne by the people of the region from these conflicts have been enormous

and crippling for several societies, especially Haiti, Cuba, Jamaica, and the Dominican Republic. Among those costs have also been the continued dependence of these societies upon human migration, limited economic strategies of transformation, increasing levels of poverty, and the emergence of a wide variety of political systems that reflect different historical experiences, demographic diversity, varying levels of political autonomy, and a remarkable level of cultural similarities. Evaluation will be based upon two class presentations; one research paper and class participation. The course will be required for students pursuing the African Diaspora minor and for those seeking to broaden their diversity requirements. It can be used to meet non-Western history requirements in the History major.

Prerequisite: HIST 250

Bachelor of Arts: Humanities
International Cultures (IL)

AFAM 435N: Black Ecologies

3 Credits

African and African Diasporic peoples have been central to the creation and transformation of global ecologies and landscapes. As the birthplace of humankind, the African continent features the longest archaeological record in the world, with abundant, yet often underrepresented, material and historical evidence for remarkable Indigenous African innovations in the areas of technology, food production, and resource and land use. This course specifically examines Black ecologies preceding and then radically transformed by the Trans-Atlantic Slave Trade. Beginning in the late fifteenth century, the enslavement of millions of Africans and their forced translocation to the Americas and Caribbean precipitated ecological transformations on all sides of the Atlantic, as African peoples, knowledge, resources and ecological inheritances were appropriated by the European mercantile system. Enslaved Africans transformed American landscapes via extractive industries of plantations and mines and suffered the emergence of toxic landscapes and disease alongside Native American communities. Africans also recreated African ecologies as they created livelihoods and landscapes of resistance and freedom in the Americas. The legacies of the Atlantic Era maintain a persistent dynamic in which African and African Diasporic communities experience disproportionate burdens of environmental injustice today. The concept of Black ecologies reflects the marginality, systemic racism and dispossession experienced by Black peoples and their landscapes. Black ecologies also allow us to understand African and African Diasporic ecological innovations, resistance and resilience, and the pathways to future sustainability and justice they promise.

AFAM 445Y: Politics of Affirmative Action

3 Credits

Examines history, politics, and economics of the use of special programs to advance racial interests in the U.S. PLSC 445Y / AFAM 445Y / LER 445Y Politics of Affirmative Action (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. The objectives of this course are to introduce students to the relationship between affirmative action and other policies purportedly designed to end racial inequality in the U.S. This course approaches the study of affirmative action in the context of the historic racial discrimination and inequality that Black Americans have faced since the founding of the Nation. The purpose of this course is to help students think about how contemporary and historic affirmative action policies relate to race, concepts racial inequality, the historic and continuing causes for racial inequality, public opinion, American politics and economic thought. The course materials will lead students through scholarly and popular articles, books and video presentations on the topic. It is hoped that students will become familiar with the history of affirmative action from its conception. Students will gain an intimate understanding of affirmative action economic and social outcomes on various racial groups. No prior knowledge is assumed, however a knowledge of civil rights history, quantitative methods, and constitutional law will be useful. The Politics of Affirmative Action satisfies the requirements for major and minor electives for the African American Studies, and major and minor electives for Political Science, and Labor Studies and Industrial Relations. Students are evaluated on the basis of an examination, term paper, class participation and class presentations of papers.

Prerequisite: AAA S 100 level course and PL SC001 or PL SC007

Writing Across the Curriculum

AFAM 460: African American Philosophy

3 Credits

This course will explore central questions and themes guiding the evolution of African American philosophy in the 19th and 20th centuries. Our course will study three different movements from the era. We begin with slavery and questions of reason, civility, and nationality. We move on to philosophies of value and culture in the early twentieth century, with the focus on secularization and the historical nature of philosophical truth. Finally, we will read the work of black political philosophers, and the turn to Marxism and Hegelianism. Issues to be discussed include the foundation and source of race as knowledge of the world, the nature of blackness and identity, the nation as a locus of consciousness and action, God's role in the universe, and the possibility of an Afro-Pessimism about these things.

AFAM 463: African American Autobiography

3 Credits

The African American literary quest for identity and its adaptation to Euro-American culture and autobiographies. ENGL 463 African American

Autobiography (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. Starting with the slave narratives which initiate the literary quest of African Americans for identity, this upper-division course will examine the trope of writing (the "talking" book) as the (w)rite of passage into the dominant Euro-American culture. The course will identify, describe, and analyze how the major elements of the "quest" found in the slave autobiographies have been adapted as textual strategies by many contemporary African American writers of autobiography, semi-autobiography, and fictional autobiography. Authors under consideration will vary from class to class, but may include writers such as Frederick Douglass, Harriet Jacobs, W. E. B. Du Bois, Ida B. Wells, Richard Wright, Zora Neale Hurston, Maya Angelou, Martin Luther King, Alex Haley, Harriet E. Wilson, James Weldon Johnson, and Ernest Gaines. Topics explored will vary from class to class, but will likely consider slave narratives, the role of autobiography in the fashioning of identity and self, gender issues, genre questions, and the historical development of the genre and its shifting preoccupation from slave times through the early twentieth-century, the pre-Civil Rights era, the Civil Rights Movement, the Black Power Movement, and the present. The course will prepare students for other courses that engage in the verbal and written analysis of complex written texts, and will also prepare students to consider the social and cultural issues involved in the role of race in American history. Students will be evaluated by means of essays written out of class, essay and short answer exams, a term-long reading journal reflecting upon issues of the student's own "autobiography"; an oral class presentation, and class participation. The course may be used as English Major elective credit or as credit towards the English Minor and will be offered once a year, with 40 seats per offering.

AFAM 465: The Post-World War II Civil Rights Movement

3 Credits

The civil rights struggle and its impact upon American politics. AFAM 465 / HIST 465 The Post-World War II Civil Rights Movement (3) (US) This course focuses on the post-World War II Civil Rights Movement. It begins with a discussion of the "Long Civil Rights Movement," briefly looking at the roots of the movement in the labor movement and social struggles of the Great Depression and World War II. We then turn to the impact of World War II on African Americans, the growing militancy during the war, the struggles over segregation in the military, the growing role of blacks in the labor movement, and the growing link between African Americans and the rising anti-imperial movements that accelerated after the war. We discuss the role of African Americans in the Cold War and the struggles over the role of Communism and Socialism in the emerging Civil Rights Movement. The course is broken down into key topics of the movement years: the rise of localized grassroots movements all over the United States that were led by local people who sought to challenge school segregation, political disfranchisement, poor housing conditions, police brutality, and job discrimination. While legal disfranchisement and segregation existed solely in the southern states, the entire country practiced both and black people suffered the consequences universally. Much time is spent on the more famous southern civil rights movement, with discussions of the Emmett Till Murder of 1955; the Montgomery Bus Boycott and the rise of Martin Luther King, Jr. and the Southern Christian Leadership Conference;

and the Little Rock Crisis of 1957. The beginning of the 1960s saw the creation of the Student Non-Violent Coordinating Committee and the emergence of key women leaders in the struggle such as Mrs. Ella Baker, Mrs. Fannie Lou Hamer, Mrs. Rosa Parks, and Mrs. Septima Clark, to name only a few. We discuss key moments in the 1960s, beginning with SNCC and CORE and the Freedom Rides, the SCLC in Birmingham and Albany; the March on Washington, the 1964 Mississippi Freedom Summer and the murders of Chaney, Goodman, Schwerner, and Medgar Evers; the 1965 Selma to Montgomery March, and the final passage of the 1964 Civil Rights Act and the 1965 Voting Rights Act. The emphasis on the southern struggle is on the local, ordinary people who achieved extraordinary things.

Cross-listed with: HIST 465
Bachelor of Arts: Humanities
United States Cultures (US)

AFAM 466: African American Novel I

3 Credits

This course examines the origins of the African American novel and follows the genre's evolution into the early twentieth century, outlining the relationships among the texts that form the body of African American narrative as well as the relationships of those texts to the constantly shifting cultural and political realities surrounding their writing. From the earliest novels, written during the period of slavery, through the Reconstruction era, the nadir of Black Codes and Jim Crow Supreme Court decisions, and into the Renaissance heralded by Alain Locke and others, course readings encompass a broad range of styles and genres, from early proto-documentary modes, through the realism and naturalism of a later time. The course takes up Robert S. Levine's claim that "the history of the early African American novel is not fixed or stable" by mapping the genre's early history and by developing an understanding of the novel as genre according to both early African American authors and later scholars. It addresses the fact that this history continues to be updated and that some texts whether in part or in whole remain lost. Authors covered in the course might include William Wells Brown, Frederick Douglass, Frank J. Webb, Julia C. Collins, Hannah Crafts, Martin Delany, Frances Ellen Watkins Harper, Charles Chesnut, Pauline Hopkins, Paul Laurence Dunbar, Sutton Griggs, James Weldon Johnson, Oscar Micheaux, Nella Larsen, Jessie Fauset, and others. Scholarly readings accompany primary texts in order to give students a sense of the critical work that has gone into and continues to go on in the study of African American literature. Course topics may include the issue of firsts; the challenges of publication and the attendant realities of early African American print cultures; questions of tradition and influence; and the political, social, religious, and philosophical aims of early African American novels. Readings and discussions also attend to questions of form, specifically regarding intertextuality and generic blurring and hybridity. The study of early African American novels necessarily includes attention to issues of race, identity, nation, diaspora, and the question of authenticity, and each is taken up in turn. Course assignments and discussions engage students in critical work that demands careful attention to both content and context in order that all students might strengthen their close reading capabilities and engage with course figures and materials within their historical milieus.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Cross-listed with: ENGL 466

Bachelor of Arts: Humanities
United States Cultures (US)

AFAM 467: African American Novel II

3 Credits

This course examines the African American novel, its forms, and its traditions starting during the Harlem Renaissance. It follows the genre's evolution into the twenty-first century, outlining the relationships among the texts that form the body of African American narrative as well as the relationships of those texts to the constantly shifting cultural and political realities surrounding their writing. From the Renaissance heralded by Alain Locke, through the Civil Rights and Black Power Movements -and their attendant Black Arts Movement- and into the era of the Movement for Black Lives, course readings encompass a broad range of styles and genres, from realism, naturalism, and naturalist primitivism, through the experimental forms, magical realism, and "postrace aesthetics" of later times. The course invites students to think critically about the African American novel as a socially and politically engaged form, and to identify and analyze the long tradition of resistance that variously informs its development. Authors covered in the course might include major figures such as Claude McKay, Zora Neale Hurston, Nella Larsen, Wallace Thurman, Richard Wright, Ralph Ellison, Ann Petry, James Baldwin, Ishmael Reed, Earnest Gaines, Alice Walker, Toni Morrison, Toni Cade Bambara, Octavia Butler, Gayle Jones, Samuel Delany, Charles Johnson, John Edgar Wideman, Colson Whitehead, and others. Still, the course gives due attention to lesser known/studied materials from the period, including graphic novels, satire, speculative fiction, performance novels, and various other experimental forms. Course readings and instruction give particular attention to how African American novels of the twentieth and twenty-first centuries variously engage social identity categories, like race, gender, class, and sexuality, and how they engage and resist various literary conventions associated with naturalism, modernism, and postmodernism. The course also traces the development of new thematic and aesthetic interests in a generation of writers whose fiction has been influenced by the explosion of interest in the graphic novel, the popularity of cultural forms such as hip hop, and the ascendancy of the digital age. Scholarly readings accompany primary texts to give students a sense of the critical work that has gone into and continues to go on in the study of African American literature. In this course, students learn how to analyze literature, do close and careful readings of texts, conduct related research, and write persuasively about literary works. Assignments and discussions are designed such that students may engage with course figures and materials within their historical milieus.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

AFAM 468: African American Poetry

3 Credits

Meta duEwa Jones argues, "We cannot afford to continue to treat black poetry and poetics as loose change among the more highly valued paper currency of fiction and nonfiction prose. . . . The myriad aesthetic forms and concomitant political functions of black poetry and poetics should be seriously considered as grounds for broader and more nuanced theoretical and sociocultural claims." This course takes as its subject

matter these aesthetic forms and political functions of the poetry of black America. It surveys the broad history of African American poetry and poetics, tracing the evolution of formal structures and aesthetics, but also taking a critical view of the reception of African American verse. Whether reading Phillis Wheatley or the contemporary poet Ed Roberson, all the poets included in this course have contended within the writing itself with the racially striated nature of the literary spaces they occupy. Course readings may come from poets including Wheatley, Frances Ellen Watkins Harper, Paul Laurence Dunbar, Alice Dunbar Nelson, Claude McKay, Langston Hughes, Robert Hayden, Melvin Tolson, Gwendolyn Brooks, Amiri Baraka, John Coltrane, Ishmael Reed, Nathaniel Mackey, Rita Dove, Maya Angelou, Audre Lorde, Natasha Trethewey, Sonia Sanchez, Nikki Giovanni, Nikky Finney, Roberson, Claudia Rankine, and others. The course addresses works by many of the key figures of this American literary tradition so that students may develop an understanding of the various contributions and legacies formal, musical, cultural, critical, political of African American poetry from the eighteenth century to today. Scholarly readings accompany primary texts to give students a sense of the critical work that has gone into and continues to go on in the study of African American poetry and poetics. The course surveys early African American poetry through works from the Harlem Renaissance and the Black Arts Movement, and through contemporary movements and formations. Topics will cover a range of thematic and formal issues relevant to individual poets, to major movements and periods, to regions, and to various smaller organizations and collectives. Course assignments, lectures, and discussions engage students in critical work that requires careful attention to form, content, and context such that all students might strengthen their explicatory skills and approach course figures and texts from an informed, analytical perspective.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

AFAM 469: Slavery and the Literary Imagination

3 Credits

The impact of slavery on the petitions, poetry, slave narratives, autobiographies, and novels of African Americans. ENGL 469 / AFAM 469 Slavery and the Literary Imagination (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. ENGL 469 /AFAM 469 provides an opportunity for undergraduate students to examine African American petitions, poetry, slave narratives, autobiographies, and novels as literary reconstructions of the economics, politics, ethics, and poetics of slavery. Authors under consideration will vary from class to class, but may include writers such as Paul Laurence Dunbar, Phillis Wheatley, F. Harper, James Weldon Johnson, Langston Hughes, Claude McKay, Sterling Brown, Booker T. Washington, Harriet Jacobs, W. W. Brown, Harriet Wilson, Margaret Walker, Arna Bontemps, D. Bradley, S. A. Williams, Toni Morrison, Ishmael Reed, and Charles Johnson. The course will focus on the complex relationship of slavery to the literary imagination of Americans of African descent as they increasingly discovered the limitations and possibilities of reading and writing themselves into freedom, literacy, and wholeness as human beings and American citizens. Topics covered will vary, but will include issues of the legacy of slavery in the west; the political aims and rhetorical conventions of African-American autobiography; the myths and realities of slavery; economic, political, ethical, and aesthetic issues of the representation of slavery;

understandings of black consciousness and black culture on the road from slavery to freedom; the rise of African American realism as a response to the legacy of slavery; Black Feminism and issues of slavery; the role of history and memory in the construction of slavery; post-modern configurations of slavery; and the like. This class will prepare students for advanced courses in African American literature, as well as other academic courses that engage in the verbal and written analysis of complex written forms.

AFAM 492: Identities, Power and Perceptual Pedagogies in Teaching and Learning

3 Credits

Students will perform inquires into the intersections of identities, power, and pedagogical formations in relation to urban teaching/ learning contexts. AFAM 492 / CI 492 / EDTHP 492 Identities, Power and Perceptual Pedagogies in Teaching and Learning (3) In this course, students will take part in inquiries into the intersections of identities, power, and perceptual pedagogies, particularly as these phenomena pertain to methods of teaching and learning in urban contexts. To develop new knowledge and analytic skills, students will be introduced to perceptual and conceptual frameworks that assist deep engagements with youth- and teacher-centered case studies. These cases will depict actual lived experiences among racially and economically diverse students and teachers in urban contexts.

Prerequisite: 5th semester standing
Cross-listed with: CI 492, EDTHP 492

AFAM 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

AFAM 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

AFAM 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships.

AFAM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

AFAM 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AFAM 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

African Studies (AFR)

AFR 105: African Biodiversity and Conservation

3 Credits

AFR 105 African Biodiversity and Conservation introduces the topic of Biodiversity in Africa, with a focus on how natural features, flora and fauna, and human livelihood systems interact. Additionally, the course will examine forces driving change Biodiversity Loss and Environmental Change in Africa and how humans are contributing to and adapting to these changes. The course uses an integrated approach to study how humans interact with their environments across different environments and scales. We will look at traditional human livelihood systems will include hunting and gathering, agriculture, and pastoralism. Drivers of environmental change and approaches to conservation will be critically compared, as well as how these impact human well-being. Concepts that will be covered include paired social-ecological systems, habitat and ecology, ecological change and thresholds, sustainable resource use, forces of change (including climate change) and impact of environmental change and uncertainty on human well-being and conservation.

AFR 110N: Introduction to Contemporary Africa

3 Credits

Consideration of influences and forces shaping modern African society; analysis of current local and global problems and issues facing Africa are the central focus of the course. "Introduction to Contemporary Africa" offers students a view of contemporary Africa as a complex, significant, and richly diverse continent which has been heavily impacted by its colonial history. The course presents an introduction to African history, politics and cultures by drawing on intellectual resources from the continent combined with those from the rest of the world. The course aims to expand students' knowledge of intersecting cultures, histories, policies, and economics in a globalized world. The course provides students with an opportunity to deconstruct some of the influences and forces that have shaped and continue to shape modern Africa and thus providing students with an opportunity to investigate, explore and analyze the current local and global issues facing Africa. In this course the student will engage with some of the literature about contemporary Africa and develop skills at reading, analyzing, and writing within the interdisciplinary approach of African Studies. The overarching goal of this course is to help students understand contemporary African

societies and their socioeconomic characteristics. The course provides students the opportunity to investigate Africa's multifaceted realities, explore: (1) The continent and its history; (2) Africa's dichotomous political, economic and institutional systems and their impacts and implications for governance and development; (3) The continent's social and environmental conditions and their impacts and implications on issues, such as demography, urbanization, gender relations public and social services and lastly; and (4) Characteristics of African culture whereby we explore African literature, theater, cinema, the arts, and belief systems.

AFR 132: Afro-Hispanic Civilization

3 Credits

A general introduction to human and cultural elements of African origin in Spanish- and Portuguese-speaking countries of Latin America. SPAN 132 / AFR 132 / AFAM 132 Afro-Hispanic Civilization (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. The nations and peoples of Latin America have a unique, interesting history and cultural heritage that are rooted in the traditions, beliefs, experiences, values, and struggles of Native American, European, African and other populations. This course focuses on the presence and participation of African peoples and their descendants in the formation and development of societies and cultures in representative areas of the Caribbean, South America, and Central America and on the evolution, diversity, and richness of the African heritage therein. Course content includes the African background, the experience and impact of slavery, the social, cultural, and economic heritage of slavery, the role of race in Latin America, and Afro-Hispanic intellectual, literary, and artistic developments (e.g., aspects of folklore, music). The course aims to provide students with a general introduction to human and cultural elements of African origin within the Spanish- and Portuguese-speaking nations of the Americas so that they may be more knowledgeable of the meaning, significance and widespread influence of the African diaspora. It proposes to provide the student with a better understanding of Africa's contribution to Latin American identity, diversity, culture, and development; to promote appreciation for the values and practices of other cultures, and greater awareness of the relations between the nations of the region and the United States.

AFR 202N: Women, Gender, and Feminisms in Africa

3 Credits

This introductory course provides students with a broad interdisciplinary overview of scholarly research and theory related to women and gender studies in Africa, using both historical and contemporary examples from across the continent. We will explore the complex, and oftentimes contradictory, meanings attached to gender and sexuality in various African contexts. For example, what does it mean to be a "good" woman in Uganda today? How does this definition change (or not) if she comes out as a lesbian? What if s/he identifies as a transgender man or rejects gender binaries altogether? What if gender did not matter, or even, did not exist? In addition to exploring these types of questions, we will also examine African feminist thought, paying close attention to the ways in which African feminisms are similar to and/or different from other forms of feminism worldwide. We will also consider what these movements looked like in practice. What strategies did African feminists utilize to promote social change? What challenges did they face? What victories resulted from their efforts? Although topics may vary from semester to semester, key themes include environmental activism, anti-war/peace activism, political activism, sex worker rights activism, activism to support peoples living with HIV/AIDS, and activism against harmful traditional practices. Finally, we will examine the ways in which African feminists have contributed to global debates and initiatives on women's rights and gender equity. Students in this course can expect to engage with diverse texts from the humanities (esp. history, literature, film studies, and philosophy), as well as from the social and behavioral sciences (esp. anthropology, geography, sociology, and political science).

AFR 205: Development and Sustainability in Africa

3 Credits

AFR 205 Development and Sustainability in Africa introduces the development and sustainability strategies and theories in Africa, with a focus on how. This course will trace the history of change across the continent and critique the narratives about development in Africa, relative to colonial legacies and African peoples' hopes for autonomy. We will cover the concepts of development and sustainability at different scales, from local to international. Students will become familiar with Theories of Development and how they have impacted social, political and economic pathways in Africa. Students will be exposed to an array of development strategies (including agriculture, resource extraction, education and health) and will be asked to interrogate and critically analyze examples of development and sustainability policies and projects: those that have worked and those that have not. Students will learn to assess which future pathways are sustainable and ethically sound. Finally, the course will provide students with the opportunity to practice some participatory development methods used to build consensus and make decisions with communities.

AFR 209: Poverty in Africa

3 Credits

African countries are generally considered to be among the poorest countries on the planet. On average, their incomes are low as are their levels of education. Poor African countries also have a range of peculiar characteristics that negatively affect their living standards. As these standards decline, western audiences have increasingly been targeted by aid organizations seeking donations to help the African cause. Despite growing awareness of African poverty, however, few attempts have been made to locate discourses on African poverty within historical, theoretical, and contemporary contexts. This course provides an overview of the key issues foundational for understanding the dynamics of poverty and human development in African societies. It examines various academic conceptualizations of poverty, the dimensions of poverty in African countries, as well as poverty's various causes and consequences. The course also intends to highlight the complex nature of the social, political, and economic causes of African poverty and their implications. Furthermore, it will identify the important challenges to poverty alleviation in African societies, the effectiveness of foreign aid, and alternative strategies to poverty alleviation. The course will also provide unique opportunities for students to develop a focused understanding of specific issues that affect Africa's socioeconomically vulnerable groups as well as related issues relevant for understanding the dynamics of poverty in specific areas on the continent.

AFR 230N: Language and Social Justice

3 Credits

This course examines the contribution of language to a variety of social justice agendas by exploring how language is used to form and support unjust social structures. The course has two main aims. First, drawing from sociolinguistic theories of linguistic ideologies, the course aims to show the significance of language in how the hierarchization and ranking of languages in a society are produced, maintained, and reinforced. The second aim is to demonstrate the effects of such a hierarchization and ranking of languages on (in)equality in educational institutions and before the law. The topics covered in this course include the role of language in structuring individual identity and human relations and how this process characterizes the nature of social institutions in producing social inequality. As the course touches on issues pertinent to our daily lives, students' questions, comments, and relevant personal experiences and observations will play an important role in our exploration of how the language we use can affect opportunities and privileges in society.

AFR 234: Environment, Climate Change and Resilience in Africa

3 Credits

This course provides an overview of the relationship between environment, climate change and livelihood resilience in Africa. The AFR 234: Environment, Climate Change and Resilience (3 credits) course uses an interdisciplinary approach and a combination of conventional scientific and indigenous knowledge about environmental change, to enable students to develop a critical understanding of the concepts of environment, climate change, and sustainability and resilience in the face of environmental degradation in Africa. Topics to be covered in the course will include environmental change and extreme climatic conditions such as hurricanes, droughts, floods and winds in Africa; climate change and agriculture, natural resource conservation and conflicts, population growth and climate change, environmental sustainability, and indigenous resilience strategies to combat climate change and its sundry impacts on the continent and its peoples. Various ongoing resilient ecological management strategies, including indigenous knowledge, expertise of locally trained environmentalists, along with regional and global institutional perspectives of climate change, will be identified and discussed using case studies to provide a more comprehensive understanding of environmentally, friendly and climate change management policy debates in Africa. The course will be taught through class lectures, seminars, workshops, and scheduled

field coursework in specific regions in Africa as a summer study abroad component of the course.

Bachelor of Arts: Humanities

Bachelor of Arts: Natural Sciences

Bachelor of Arts: Social and Behavioral Sciences

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

AFR 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

AFR 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

AFR 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AFR 305: Introduction to Global Health Issues

3 Credits

Course will develop awareness of contemporary issues in global health. BB H 305 Introduction to Global Health Issues (3) This course is an introduction to health and related issues in the global context. It is intended to be an overview of fundamental perspectives about the historical, current, and future public health challenges facing developing and industrialized countries. The course will explore the interrelationships among social structure, culture, demography, health promotion/disease prevention, biology, ecology and health policy of various countries and international health organizations. This course will 1. present key issues related to the history, conceptual frameworks, economic conditions, and policy affecting public health in the global context, 2. examine reports and studies pertaining to major global health issues and comparative research, 3. discuss the role of social structure, culture, gender roles, government policies, and the increasing numbers of the elderly in preventive health behaviors and health promotion in the global context, and 4. critique theories and models used to inform health and development programs in non-Western nations.

Enforced Prerequisite at Enrollment: BBH 101

Cross-listed with: BBH 305

International Cultures (IL)

AFR 310: Language Rights, Policy, and Planning

3 Credits

This is a course on language rights, policy, and planning from individual, group, inter-ethnic, and national perspectives. Linguistic minorities are a consequence of colonization by European powers in different regions of the globe. Other effects of colonization and political conflicts include mass movement, migration, and the emergence of nationalism. In such

contexts, minorities have made demands for language rights and used language policy and planning as strategies to realize demands for social justice. This course will examine how linguistic minorities secure opportunities to use their own languages and have them accommodated in official legislation as mother tongue, second, or foreign languages. The course will adopt a global perspective and analyze language rights as well as language policy and planning in diverse regions of the globe, including but not restricted to, Africa, Asia, and South America. Analysis will primarily focus on how language policies can be carried out from different perspectives (e.g., literary, linguistic, and political) in different geographical regions. After examining how language policies operate in and influence society, the course will use sociopolitical ideologies to explore the nature of the relationship between language policies and language rights and the ways this relationship enables one to achieve an expanded understanding of the impact of language policies and language rights on local language practices.

Cross-listed with: APLNG 310, GLIS 310

International Cultures (IL)

AFR 335: African Art

3 Credits

Introduction to the visual arts of Africa, including contemporary African art and the influence of African art outside Africa. ARTH 335 / AFR 335 African Art (3)(GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. The course will examine the arts of various African peoples in historical, religious, sociological and geographic contexts, providing an introduction to the many visual art forms of Africa including masquerade, costume, and indigenous architecture. While many of the arts in this field of study are from west and central Africa, the course will also include materials from southern and eastern Africa. Contemporary African art, African Diaspora arts, and the influence of African art on European art are important topics that may be included. In addition to the traditional format of a geographic organization of the material, students will explore thematic approaches. Each of the assignments requires completion of essays which draw upon the multiple course texts and readings. Exams include image identification and short essays.

AFR 382: Language and Culture in Africa

3 Credits

This course will provide an introduction to language in Africa from linguistic and cultural perspectives. Course topics include: the study of African language families and what they teach us about the history of the continent, the analysis of unusual linguistic structures found in indigenous African languages, multilingualism in Africa and the interaction between colonial and indigenous languages, linguistic traditions such as storytelling, ceremonies, ethnobotany, etc., and language development, including literacy practices and language and technology. The course will explore these topics in-depth through case studies focusing on four diverse geographical areas in West, North, East

and Southern Africa. The capstone of the course will be a two-week trip for interested students to study linguistic practices in Benin, West Africa in both urban and rural settings.

Prerequisite: LING 100 or AFR 110

Cross-listed with: LING 382

Bachelor of Arts: World Cultures

AFR 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

AFR 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AFR 399: Foreign Studies

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AFR 403: South Africa Today

3 Credits

A course examining the South African government's policy of apartheid: its history, why it exists, how it works, and the prospects for change.

Prerequisite: AAA S110

AFR 405: African Studies Methodologies

3 Credits

Multidisciplinary research techniques for studying in and about Africa.

AFR 434: War and Development in Africa

3 Credits

This course will examine the relationship between war and development in sub-Saharan Africa in the post colonial era. PLSC 434 / AFR 434 War and Development in Africa (3) (IL) This course will examine the relationship between development and war in sub-Saharan Africa in the modern era. Specifically, it will analyze the extent to which the processes of state building, nation building, and international intervention have contributed to the incidence of both civil war and international conflict in Africa. We will begin with a review of several theoretical arguments on the causes of warfare in Africa and then turn to a discussion of theses on African political development. This course complements present offerings in international relations and comparative politics in the PLSC department and can serve as an advanced undergraduate offering in the African Studies concentration in AFR. The course directly complements our present offerings in international conflict given that we don't have a regularly offered course that focuses on conflict in a specific region. In addition, it will augment our comparative politics offerings with an examination of prominent issues in comparative politics such as political

development, democracy, and modernization. The course will fulfill the IL requirement and encourage students understanding of the historical background as well as the political, economic, and cultural factors that influence African politics. African conflicts are often viewed as "ethnic conflicts" and in this class students have an opportunity to assess the extent to which ethnic, linguistic, or religious factors influence the likelihood of conflict and contribute to development in African states. Students will also be required to write essays evaluating the contribution of a range of theoretical arguments on Africa's conflicts in order to assess the degree to which cultural more than political or economic factors contribute to their onset. Students will then have the opportunity to conduct more extensive research on a specific African case to develop their analyses further. These exercises will often require that students reevaluate their beliefs about social identities such as race (e.g. in Rwanda the difference between Tutsi and Hutu is often viewed as a "racial" difference between black Africans, which is at odds with most Western conceptions of race). They also require students to challenge stereotypes regarding the subordination of African values in conflicts to a simple concern with "tribe". Students will gain a broader knowledge and appreciation of the different values, traditions, and cultures evident in Africa and understand how these can both exacerbate and mitigate conflict. Evaluation in the course will consist largely of examination of the students' brief expository essays and larger case studies for which students will be encouraged to conduct original research. The course should be offered biannually with a class limit of about 40 students.

Bachelor of Arts: Social and Behavioral Sciences
International Cultures (IL)

AFR 435N: Black Ecologies

3 Credits

African and African Diasporic peoples have been central to the creation and transformation of global ecologies and landscapes. As the birthplace of humankind, the African continent features the longest archaeological record in the world, with abundant, yet often underrepresented, material and historical evidence for remarkable Indigenous African innovations in the areas of technology, food production, and resource and land use. This course specifically examines Black ecologies preceding and then radically transformed by the Trans-Atlantic Slave Trade. Beginning in the late fifteenth century, the enslavement of millions of Africans and their forced translocation to the Americas and Caribbean precipitated ecological transformations on all sides of the Atlantic, as African peoples, knowledge, resources and ecological inheritances were appropriated by the European mercantile system. Enslaved Africans transformed American landscapes via extractive industries of plantations and mines and suffered the emergence of toxic landscapes and disease alongside Native American communities. Africans also recreated African ecologies as they created livelihoods and landscapes of resistance and freedom in the Americas. The legacies of the Atlantic Era maintain a persistent dynamic in which African and African Diasporic communities experience disproportionate burdens of environmental injustice today. The concept of Black ecologies reflects the marginality, systemic racism and dispossession experienced by Black peoples and their landscapes. Black ecologies also allow us to understand African and African Diasporic ecological innovations, resistance and resilience, and the pathways to future sustainability and justice they promise.

AFR 444: African Resources and Development

3 Credits

Ecological and cultural factors in the geography of Africa; natural resources and development. GEOG 444 / AFR 444 African Resources and Development (3) (BA) This course meets the Bachelor of Arts degree requirements. This course is designed to analyze the ecological, economic, political and cultural factors, which influence development in sub-Saharan Africa. The traditional system, colonialism, modernization, post-colonial philosophies are four conceptual artifacts used to address some of these issues. Within these broad frameworks, the course focuses on existing debates surrounding key development ideologies and narratives in the region, including, poverty, conservation, population, debt, food security, land reform, foreign intervention and global politics. The topics and texts for the course are chosen carefully to provide general factual material as well as exposure to the major discourses surrounding the region's development. The views of many Americans concerning Africa are often both unitary (Africa is a country) and unidimensional (Africa is a place of conflict, poverty, corruption and crisis). Assuming that a number of students are likely to join the class with this general background, the main objectives of the course will be : (i) to provide a broad geographic and historical tutorial to dispel myths and stereotypes about the region; (ii) to explore the literature, which analyzes the historical, geographic and political factors that underlie the region's present status in the global economy; and (iii) to gain insights into the intellectual and ideological dimensions of the "raging" debates surrounding issues like environment, conservation, population, corruption,

and poverty in the region. By the end of the semester, students should have acquired the skills to accomplish the following goals: *develop a "mental map" of the broad physiographic, ecological, economic and political zones (blocs) in the region; *be able to discriminate between stereotype and reality on information pertaining to the region; *be able to interpret and analyze the internal (national, regional) dynamics of the region's development; *be able to interpret and analyze the global factors, which influence the environment, economy, and politics of the region; *develop an informed background on the ideological narratives that guide policy in the region, for example, population, sustainable development, post-colonialism, "empire" (whether, American, European, Indian, Chinese, South African?).

AFR 449: Sport in African History

3 Credits

Recent events in sporting history have precipitated changes in perception for many in Africa relative to the historic legacies of racism and colonial rule. These events lead to pivotal questions -What are the broader social and political meanings of sport in African society? And what does the study of sport in Africa tell us about Africa's place in world history? This course uses the lens of sport to examine the social and political histories of Africa and the wider diaspora in historical perspective. From the racial and gendered hierarchies of colonialism to the use of sport to protest against social injustices, students are challenged to analyze the interdisciplinary significance of sport far beyond the playing field. One of the main intellectual goals of this course is to use sport to deepen our understanding of specific outcomes in African sport (e.g. South Africa's remarkable transformation from pariah of international sport to host of global events like the 2010 World Cup, and Kenyan running successes) from a variety of perspectives. We also consider how Americans travelled

to and engaged with African societies as athletes, ambassadors, and activists. Broadly, this course explores sport and social change in Africa from the late nineteenth century to the present. It examines the sporting lives of African athletes, fans, reporters, coaches, and organizers and then connects them to shifting racial identities and power relationships on the continent as well as elsewhere around the world. These histories shed light on the pivotal role of sport in the everyday lives of people across the continent. In the process, we pay attention to primary sources, analyzing the ways in which Africans thought, talked, and represented themes discussed in assigned readings. Ultimately, this course will strengthen student skills of critical thinking, oral communication, collaboration, research, and writing.

AFR 454: Government and Politics of Africa

3 Credits

Contemporary African politics, institutions, and ideologies; patterns of change, social forces, and nation building in selected African states. PLSC 454 / AFR 454 Government and Politics of Africa (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. In this course, we will discuss the current democratization trend in Africa by focusing on the experiences of African countries. The course is divided into three sections. Part One considers a range of factors that affect politics in Africa. We will discuss in depth the following factors: colonialism, nationalism, the relationship between state and society, ruler-ship, the military, political parties, and economic development. Then, we will consider the experiences of our four cases, to gain a historical background. In part two, we will focus on democratic transitions. We will discuss the factors that enable transitions to occur, as well as the process that transitions follow. Then, we will consider four transitions: two that resulted in the installation of a democratic government (Nigeria in 1979, Sudan in 1986) and two that ended in continued authoritarianism (Angola in 1992, Kenya in 1978). Part three considers the prospects of democracy. We will discuss the probability of a democratic transition occurring in the near future. The goals of this class are four fold. First, students will gain detailed knowledge about four African countries. Second, we will learn how to compare countries. Third, students will have a better understanding of the democratization process in general, and will be able to explain or predict democratization beyond the four cases discussed in this class. Finally, the experiences of these four countries offer a deeper understanding of what democracy is and provide students with greater flexibility to fulfill requirements in either the African and African American Studies major or the Political Science/International Politics major. PLSC 454 / AFR 454 will be offered once per year with 35-50 seats per offering.

Cross-listed with: PLSC 464

International Cultures (IL)

AFR 479: History of Imperialism and Nationalism in Africa

3 Credits

A selective overview of the history of imperialism and nationalism in Africa. HIST/AFR 479 History of Imperialism and Nationalism in Africa. This course meets the Bachelor of Arts degree requirements. History/African Studies 479 will provide a selective introduction to major developments and issues concerning Africa's colonial and postcolonial history. The beginning of this course will concentrate on the meanings of imperialism and nationalism and the fact that there is no "single" African experience with either of them. This will be followed by a discussion of 19th and 20th century political history in specific contexts in North, East, West, and Southern Africa. The course concludes with a review of African decolonization and the most notable manifestations of recent nationalism on the continent. Special attention will be given to the methods of colonial takeover, methods of African resistance, the West's role in Africa, and Africa's formative role on the West. Religion, the military, and racial/ethnic identity politics will be recurring themes in the course. The actual time devoted to each topic and the sequence of topics will vary from instructor to instructor. The objective of the course is to introduce to the causes, nature, and consequences of modern imperialism in Africa. In doing so, students will receive a comprehensive history about a region of the world that is often misunderstood and misrepresented. Also, the course emphasizes critical thinking and analytical writing. The course will consist of polls, practice discussions, quizzes, response papers, and a final project. As a general education course, this class will provide an introduction to African political history for students of any major. Students majoring or minoring in History, African Studies, International Relations, or Political Science will learn vocabulary and information that is basic to the field and broaden their knowledge of History.

Agribusiness Management (AGBM)

AGBM 101: Economic Principles of Agribusiness Decision Making

3 Credits

This course introduces students to microeconomic principles in the context of food and agriculture. More specifically, the course examines market supply and market demand in various food and agricultural products, then examines how consumers make decisions about food to maximize their utility subject to a budget constraint, then examines profit-maximizing decisions by farms and food industry firms, and finally looks at special topics related to food and agriculture. By the end of the course, students will have key literacies on economic modeling and decision making as well as the food and agricultural sectors of the U.S. economy.

Bachelor of Arts: Social and Behavioral Sciences
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

AGBM 102: Economics of the Food System

3 Credits

Introduction to topics designed to develop an understanding of how the food production, processing, and marketing system works and evolves.

AGBM 106: Agribusiness Problem Solving

3 Credits

Development of quantitative problem-solving skills applied to specific examples of agribusiness management problems, using EXCEL spreadsheets. AGBM 106 Agribusiness Problem Solving (3) The goal of

this course is to develop agribusiness problem solving skills. These skills include optimization, marginal analysis, time discounting, and measuring efficiency. Examples will be implemented using Microsoft EXCEL spreadsheets rather than algebra, calculus and abstract mathematics. This course, then, plays an important role by building skills for use in later agribusiness management courses as well as teaching important problem-solving skills to non-majors who want to learn quantitative economics problem-solving skills in the context of agribusiness management. Material will be organized according to the course topics areas: optimization, marginal analysis, time discounting, and efficiently measurement. Each topic area presentation will rely on specific examples of agribusiness management problems. The first lecture of each week will be a standard lecture emphasizing concepts, presented in a passive learning format. The second lecture of each week will be presented in a technology classroom with spreadsheet examples being worked out by the professor in front of the class, who will guide the students. The third lecture of each week will be taught in a computer laboratory, with students solving the problems actively, but with supervision. Problem solving skills will be reinforced by assigning problem sets for students to do on their own after the computer laboratory experience. It is permitted for students to submit identical lab answers but problem sets should not be identical.

AGBM 170: Investigating the U.S. Food System: How food moves from field to table

3 Credits

Our food system is a product of complex interaction of three systems: the natural ecosystem, the managed agricultural system, and the socio-economic system. Farming, food processing, food distribution, and consumption decisions are all governed by the interaction of these systems. Consequences of these decisions, along with the interactions themselves, have generated a number of overarching scientific and social "hot-button" topics that affect or are affected by the food system such as genetically modified organisms (GMOs), organic crops and food, agricultural and food policy, environmental implications from agriculture food safety, food safety, diet and health, agricultural trade and international development, and food insecurity and food access.

United States Cultures (US)

GenEd Learning Objective: Integrative Thinking

AGBM 170N: Investigating the U.S. Food System: How food moves from field to table

3 Credits

The American food system is a product of complex interaction of three systems: the natural ecosystem, the managed agricultural system, and the socio-economic system. Farming, food processing, food distribution,

and consumption decisions are all governed by the interaction of these systems. Consequences of these decisions, along with the interactions themselves, have generated a number of overarching scientific and social "hot-button" topics that affect or are affected by the food system such as genetically modified organisms (GMOs), organic crops and food, agricultural and food policy, environmental implications from agriculture, food labeling, food safety, diet and health, agricultural trade and international development, household food insecurity and food access, and food waste. Students in this course will investigate and discuss all of these topics by reading both popular press accounts and peer-reviewed academic research, and by hearing guest speakers from a variety of fields and academic disciplines. However, to provide additional relevance, the course will use specific foods or crops to provide a more concrete examination of these topics. For a wide range of foods and crops grown in or imported to the U.S, students will learn the following:

1. Where many of our crops are grown and why.
2. How labor intensive, chemical intensive, biotechnology intensive, equipment intensive, and land intensive many of our crops are.
3. What U.S. policies affect production, distribution, and consumption of many crops and food.
4. How large agribusiness companies may influence our crops' production, distribution, and consumption.
5. How consumer groups may influence our crops' production, distribution, and consumption. And,
6. Whether or not alternative production and marketing systems exist for many crops.

In general, most of these questions will be answered in a social science framework that includes business, economics, and sociology, but also from a natural science framework that includes agronomy, plant science, environmental science, and climate science. The following individual foods or crops examined within both the social science and natural science contexts will be featured as case studies: tomatoes, bananas, lettuce, corn, apples, chicken, and beef. Finally, when attempting to answer the above six main questions for each of the individual foods and crops, the class will explore the context of current U.S. cultural attitudes and beliefs, and when possible, a cultural history.

AGBM 200: Introduction to Agricultural Business Management

3 Credits

Application of management principles and processes to agricultural business firms in their planning and operating in domestic and international markets. AGBM 200 Introduction to Agricultural Business Management (3) AGBM 200 is the course for people who wish to combine a technical major with an interest in the business management of agricultural and food based businesses. This is the combination of skills that employers most desire when they look for potential employees. Examples from a variety of industries in agribusiness are used to present the principles of business management. In addition, emphasis is also given to exploring the institutions, and issues such

as food safety and biotechnology that are unique to managers in the agribusiness sector. The presentation of the material in an agricultural and food context enhances your chances for learning so you can become more "employer ready." Regardless of your major, most people will find themselves as business managers some time during their careers because they will have to manage time, money and people. The material you will learn in this class focuses on the principles of agribusiness management. Principles endure and are always applicable regardless of when and where you apply them. When you have completed AGBM 200 successfully you will have a firm grasp of the critical agribusiness management skills you will need to successfully handle just about any management situation you might face. **NO PRIOR BUSINESS EXPERIENCE IS REQUIRED OR EXPECTED OF THOSE TAKING THIS COURSE.** AGBM 200 deals primarily with the principles of agribusiness management. I will not be teaching you the material in the book. Classroom time will be spent discussing and applying the reading material and decision cases that were assigned for that day. This approach will allow us to cover more material in greater depth. It should enhance your learning because it will engage your higher level thinking skills.

AGBM 296: Independent Studies

Enforced Prerequisite at Enrollment: (AGBM 101 or ECON 102) and AGBM 102 and AGBM 106

AGBM 308W: Strategic Decision Making in Agribusiness

3 Credits

This course is designed to analyze strategic decision making among agribusiness firms and other economic agents in a market environment

characterized by imperfect information and market power. The course draws upon game theory and other strategic decision tools to analyze four broad types of strategic decisions, each of which corresponds with the four main parts of the course: 1) Strategic Decisions Between Rival Firms : Focusing on firm decisions made between rivals with full information, part one includes the following topics and strategies: limit pricing, entry deterrence, predatory pricing, excess capacity, wars of attrition, strategic commitment, tit-for-tat pricing, and retaliation. 2) Strategic Firm Decisions in an Uncertain World : Focusing on firm decisions made with incomplete information, part two, includes topics on probabilities, expected value and expected utility, learning curves, investment decisions, flexibility, and option value. 3) Strategic Decisions Between Unequal Partners: Focusing on firm decisions made between unequal partners with asymmetric information, part three includes topics on vertical coordination, incentive compensation, franchising, and auctions. 4) Cooperation and Strategic Alliances: Part four investigates how firms can overcome informational problems described above through the use of strategic partnerships. This writing, intensive course will rely on both class lectures and a substantial amount of class discussion. The course content will feature eight to ten industry applications and case studies of individual companies to reinforce economic theory. Learning Objectives- Students will: Classify practical agribusiness problems by the type of available information - full, incomplete, or imperfect and by the nature of market power in an industry. Construct and analyze game trees and other representative models of strategic decisions facing businesses and employees. Solve strategic business problems using economic models based on game theory and other economic principles. Write business-style memos and reports that summarize a business decision, plan, or solution that is supported by economic analysis.

Enforced Prerequisite at Enrollment: (AGBM 101 or ECON 102) and AGBM 102 and AGBM 106
Writing Across the Curriculum

AGBM 320: Markets and Prices: Analysis and Forecasting

3 Credits

Students learn how prices are determined and learn how to analyze and forecast how prices change as the underlying conditions change. This involves learning those tools that are used to analyze and understand how commodity markets work and how prices are determined. The class mixes theory with practical knowledge and examples, and aims to create a balanced representation of the tools used in market analysis. The students learn how to find data, manipulate it and analyze and apply these skills to test the validity of simple economic models, to forecast commodity prices, to understand market trends and learn the use of derivative instruments to manage price risk. One objective of this class is to improve the understanding of economic modeling and to increase the familiarity of students when applying statistical functions and regression analysis to solve applied problems. These core competencies rely on previous knowledge of basic statistic tools and data manipulation. In the process, students will learn to analyze market fundamentals and better understand those forces that affect prices. This will also help them better understand supply and demand and the ability of market participants to adjust to changing conditions.

Enforced Prerequisite at Enrollment: (AGBM 101 or ECON 102) and AGBM 102 and AGBM 106 and (SCM 200 or STAT 200)

AGBM 338: Agribusiness in the Global Economy

3 Credits

Managing agribusinesses in the global food industry, international food product marketing, key public institution and policies affecting food trade.

Enforced Prerequisite at Enrollment: (AGBM 101 or ECON 102) and AGBM 102 and AGBM 106
International Cultures (IL)

AGBM 399: Foreign Studies - Agribusiness Management

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AGBM 407: Farm Planning and Financial Management

3 Credits

Economic principles applied to the management of farms, with particular emphasis on the financial aspects of management.

Enforced Prerequisite at Enrollment: (AGBM 101 or ECON 102) and AGBM 106

AGBM 408: Financial Decision Making for Agribusiness

3 Credits

Develop financial management and business analysis skills, integrating previous course work and finance training; principles of financial management, planning, control.

Enforced Prerequisite at Enrollment: AGBM 106 and (BA 301 or FIN 301)

AGBM 420: Agribusiness Markets & Prices

3 Credits

Understand and forecast price level and volatility for commodities, differentiated products, services. Why markets work and why they may not.

Enforced Prerequisite at Enrollment: AGBM 320

AGBM 430: U.S. Food and Agricultural Policy

3 Credits

This course introduces students to the broad array of food and agricultural policies in the United States. Food and agricultural policies encompass laws, regulations, decisions, and actions by governments, industry, and other institutions that influence food production, distribution and consumption. Real-world controversies and debates motivate the course's attention to economic principles, research tools, policy analysis, and contemporary data sources. The course assumes that society is concerned not just about the economic interests of farmers, but also about nutrition, food security, the environment, and welfare of all participants in the food system. Topics covered may include crop subsidies, crop insurance, agro-environmental policies, farm labor and immigration policies, USDA national organic standards, tariffs and other trade policies, food-safety and food-labeling policies, and food-assistance and food-access policies. For a wide range of specific policies,

students will study and discuss policy mechanics, the underlying issues that created a need for the policies, the institutional settings of the policies, and the policies' effectiveness.

Enforced Prerequisite at Enrollment: AGBM 338

AGBM 440: Food Product Innovation Management

3 Credits

A problem-based course designed to enhance decision-making skills in the context of industry's approach to developing new food products.

Enforced Prerequisite at Enrollment: AGBM 302 or junior/senior standing in Food Science

AGBM 445: AgTech Entrepreneurship

3 Credits/Maximum of 6

Recommended Preparations: Completion of AGBM 308 or Completion of MGMT 215 or ENGR 310 New firm creation and venture funding within food, agriculture and biorenewables (AgTech) is occurring at a record pace. Venture capitalists have invested billions of dollars in business start-ups that address pressing needs in food, agriculture and bio-renewables. New firm formation and venture funding are expected to significantly increase over the coming decades. Numerous stakeholders recognize the transformative power of entrepreneurship and innovation in agriculture. AgTech entrepreneurs are viewed as powerful change agents for our next innovative age in agriculture as we seek to provide for humanity and our ecosystem while addressing the constraints of population growth and resource scarcity. The proposed course will provide students with an introductory overview of entrepreneurship opportunities in AgTech, basic understanding of entrepreneurial concepts and address whether an entrepreneurial career suits their interests. Students will be guided through several self-evaluation exercises to identify their professional strengths, weaknesses and interests. In addition students will develop their business research, evaluation, writing, presentation and critical thinking skills. In order to simulate a realistic preview of entrepreneurship this course will allow students to practice self-organization skills for opportunity effectuation where few guidelines are provided. Several core entrepreneurial concepts will be reviewed in this course and contextualized within AgTech when possible. Topics are founder/team dynamics, value proposition, business models, market research, financial analysis, funding sources/considerations, business ethics and intellectual property. Each topic will be presented in a summative format with access to additional resources for better in-depth understanding. After completing the course students will have improved general business knowledge that is contextualized for new firm creation. The course utilizes a blend of lecture content, student discussion, interaction and hands on exercises that help build student comfort with ambiguity, uncertainty and complex problem solving. Students will also be required to work on projects in teams. Student teams will conduct a start-up due diligence project and lead one class discussion on an AgTech subsector topic of their interest. Students will also be required to prepare a formal eight-minute business idea pitch with accompanying investor prospectus brief.

Enforced Prerequisite at Enrollment: AGBM 308 or MGMT 215 or ENGR 310

AGBM 455: Retail Horticulture Business Management

3 Credits

The nature, operation, and management of retail garden centers, winery tasting rooms, and independent food retailers. Overview of retail marketing principles and practices as they pertain to horticultural retail businesses. Lectures, discussions, and projects focus on: selecting and pricing goods and services; how independent retailers effectively use traditional promotion avenues and social media networks to connect with customers; and how to develop a relevant brand, cause marketing effort, and loyalty program. Students will also learn: about retail layout and display strategies; that each consumer segment has different wants, interests, and abilities to obtain goods and services, and about effective employee management.

Enforced Prerequisite at Enrollment: AGBM 101 or ECON 102

Cross-listed with: HORT 455

AGBM 460: Managing the Food System

3 Credits

Firm management in the food system; coordination with suppliers and customers, including supply chain management, strategic thinking, risk management.

Enforced Prerequisite at Enrollment: AGBM 320 and AGBM 338

AGBM 470A: Comparing Agricultural and Food Systems in the US and France: Lecture

2.5 Credits

This course is designed to explore key similarities and differences in the food and agricultural systems of the United States and France. It introduces students to a number of overarching food and agricultural topics that pertain to both countries, and students explore and analyze these key issues from both countries perspective. These overarching topics include the structure of agricultural and environmental policies, the use agricultural land for biofuel production, organic agriculture, food safety, attitudes and policies surrounding the use of genetically modified crops, the role of large agribusiness firms, attitudes towards diet and health, and several others important topics. Students conduct background reading on these topics, hear lectures – sometimes from guest presenters – that frame the topics from both the U.S. and France's perspective, and write reports on specific crops or foods that expose key similarities and differences between the two food systems. Finally, students pick one crop or food for an oral presentation that contains background information on how that crop fits into the two food systems, U.S. and France, and analyzes the key issues that relate to the overarching topics already identified. This course has two components that must be taken in partnership: 470A (FOOD SYS US/FRANCE I) and 470B (FOOD SYS US/FRANCE II). The first is a classroom - based course, and meets regularly during the semester. The second is a two - week component that takes place after the end of the semester. In this second component, after traveling to France, students hear presentations from the French perspective on the overarching topics identified earlier and also explore the topics first hand via field trips to farms, wholesale markets, retail markets, and other places relevant to the French food system. This component is organized by a host university, AgroParisTech. For these two weeks, students live in dorms within the city of Paris. Knowledge of French is not required.

Enforced Prerequisite at Enrollment: INTAG 100 or AGBM 101 or ECON 102

Cross-listed with: INTAG 470A

AGBM 470B: Comparing Agricultural and Food Systems in the United States and France: Travel

0.5 Credits

Explore key differences and similarities in the food and agricultural systems of the United States and France. INTAG 470B / AGBM 470B Comparing Agricultural and Food Systems in the US and France: Travel (0.5) This course is designed to explore key similarities and differences in the food and agricultural systems of the United States and France. It introduces students to a number of overarching food and agricultural topics that pertain to both countries, and students explore and analyze these key issues from both countries perspective. These overarching topics include the structure of agricultural and environmental policies, the use agricultural land for biofuel production, organic agriculture, food safety, attitudes and policies surrounding the use of genetically modified crops, the role of large agribusiness firms, attitudes towards diet and health, and several others important topics. Students conduct background reading on these topics, hear lectures – sometimes from guest presenters – that frame the topics from both the U.S. and France's perspective, and write reports on specific crops or foods that expose key similarities and differences between the two food systems. Finally, students pick one crop or food for an oral presentation that contains background information on how that crop fits into the two food systems, U.S. and France, and analyzes the key issues that relate to the overarching topics already identified. This course has two components that must be taken in partnership: 470A (FOOD SYS US/FRANCE I) and 470B (FOOD SYS US/FRANCE II). The first is a classroom - based course, and meets regularly during the semester. The second is a two - week component that takes place after the end of the semester. In this second component, after traveling to France, students hear presentations from the French perspective on the overarching topics identified earlier and also explore the topics first hand via field trips to farms, wholesale markets, retail markets, and other places relevant to the French food system. This component is organized by a host university, AgroParisTech. For these two weeks, students live in dorms within the city of Paris. Knowledge of French is not required.

Enforced Prerequisite at Enrollment: INTAG 470A or AGBM 470A
Cross-listed with: INTAG 470B

AGBM 494: Undergraduate Research

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

AGBM 494H: Honors Thesis

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of Agribusiness Management honors thesis.

Enforced Prerequisite at Enrollment: Junior or senior standing in the Schreyer Honors College and permission of the Agribusiness Management honors advisor
Honors

AGBM 495A: Internship in Agribusiness and Rural Development

1-6 Credits/Maximum of 6

Supervised field experience in an agribusiness or rural development setting.

Enforced Prerequisite at Enrollment: Prior approval by department
Full-Time Equivalent Course

AGBM 495B: Internship in International Agribusiness

6 Credits/Maximum of 6

Supervised field experience related to student's major, minor, or option.

Enforced Prerequisite at Enrollment: Prior approval by department
Full-Time Equivalent Course

AGBM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AGBM 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

AGBM 499: Foreign Studies - Agribusiness Management

1-12 Credits/Maximum of 12

Study in selected countries of agricultural economic institutions and current agricultural economic problems.

International Cultures (IL)

Agricultural and Biorenewable Systems Management (ABSM)

ABSM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ABSM 300: Introduction to Agricultural and Biorenewable Products

3 Credits

This course provides an overview of the production, nature, and use of bioproducts, which are defined as products created from biologically derived, renewable industrial feedstocks. These materials are renewable and can be sustainably produced; as such, they will be increasingly used as society recognizes the opportunity cost of mining and using other non-renewable industrial feedstocks. The class focuses on evaluating biorenewable systems in the context of environmental impact, economics, and policy, as well as understanding where biorenewable resources come from and how they are produced. Students will engage with primary source material related to developing a circular economy in

the US, including academic R&D reports and program plans from federal agencies such as EPA, USDA, and DOE.

Enforced Concurrent at Enrollment CHEM 110

ABSM 301: Engineering Principles of Agricultural and Biorenewable Systems

3 Credits

This course provides an overview of engineering principles to students in the non-engineering Agricultural and Biorenewable Systems Management major, but who are likely to encounter challenges that require quantitative solutions. Problem solving skills are extremely important to technology. At the end of the course, students will be able to: solve problems related to agricultural and biorenewable systems using a structured, logical method combining concepts from physics and math; recognize and apply unit factoring and dimensional analysis to problem solving; quantify physical relationships and apply engineering principles to evaluate basic engineering technology problems. Hands-on examples are used throughout the course to tie the course material to applications in agricultural and biorenewable industries. This course provides the groundwork for topics explored in more detail later in the Agricultural and BioRenewable Systems Management curriculum.

Enforced Prerequisite at Enrollment: (MATH 110 or MATH 140) and (PHYS 250 or PHYS 211)

ABSM 309: Measurement & Monitoring of Hydrologic Systems

3 Credits

This course is an introduction to measurement and monitoring equipment/techniques commonly used in analyses and design of hydrologic systems and will provide students the opportunity to learn and apply basic measurement techniques that serve as critical tools in professional practice in water resources. During the first part of the course, the instruments and techniques commonly used in water resources assessment, including rainfall monitoring, flow monitoring, and interest as part of the Sustainability Institute's Sustainable Communities Collaborative. Data generated over the course of the semester are used to develop a report that is shared, along with the data with a community partner. In the second part of the course, mapping development is explored, which serves as a critical aspect of water resources engineering and planning. ArcGIS serves as a primary software tool used in engineering design and water resources planning, and students will learn to develop maps to present and process various watershed - data including land use data, soils data, and hydrography data. Various aspects of the course will coalesce around the concept of the watershed being the basic unit of water resources analyses and design, and students will experience how various measurement techniques and approaches are necessary tools for practicing professionals. This course will be useful to any undergraduates seeking degrees in a major related to water resources planning, engineering, or technology.

Enforced Prerequisite at Enrollment: CHEM 110. Enforced Concurrent at Enrollment: PHYS 211 or PHYS 250

Cross-listed with: ERM 309

ABSM 309H: Measurement & Monitoring of Hydrologic Systems

3 Credits

Introduction to measurement and monitoring equipment/techniques commonly used in analyses and design of hydrologic systems.

Cross-Listed

ABSM 310: Power Transmission in Agriculture

3 Credits

After successful completion of ABSM 310, students will apply the physical principles of mechanical power transmission system components such as shafts, belts, chains, gears, and clutches by selecting suitable mechanical drives and specifying proper maintenance procedures. Students will be able to read hydraulic and pneumatic schematics, size fluid power components such as pumps, valves, cylinders, and troubleshoot hydraulic and pneumatic systems. Students will also be able to explain the electrical and physical principles of AC and DC electric motor operation. They will be able to identify torque, speed, voltage, and current operating characteristics and will be able to select controls and circuit protection devices necessary to achieve proper performance.

Enforced Concurrent at Enrollment: ABSM 301

ABSM 320: Combustion Engines for Mobile Equipment

3 Credits

After successful completion of ABSM 320, students will explain and evaluate the theoretical and practical aspects of internal combustion engines. Students will evaluate and compare alternative engine thermodynamic cycles, alternative fuels (gasoline, diesel, biodiesel, compressed natural gas), performance enhancing attachments (turbochargers, intercoolers), and supporting systems (fuel injection, lubrication, starting, cooling, emissions cleansing). Students will be able to properly select engines and related systems for mobile applications. Students will employ important maintenance procedures required for economical useful life and proper operation. Students will be able to troubleshoot engine systems.

Enforced Prerequisite at Enrollment: ME 300 or ABSM 301

ABSM 327: Soil and Water Resource Management

3 Credits

This course equips students with the ability to understand land measurements, mapping, soils, hydrology, channel flow, erosion control techniques with emphasis on RUSLE2, subsurface drainage techniques, and water impoundments for use in storing water, managing stormwater, and capturing suspended sediment. The class concludes with a 3-week section on irrigation, which teaches water needs and pipe flow. Basic hydrology is presented using both the Soil-Cover-Complex and Rational Methods. Manning's equation is developed and discussed for use in understanding flow in open channels. The various components of the RUSLE2 soil erosion model are presented with emphasis in agricultural erosion. Irrigation is taught from both a supplemental agricultural and environmental perspective.

Enforced Concurrent at Enrollment: PHYS 250 or PHYS 211

ABSM 350: Introduction to Life Cycle Assessment

3 Credits

Life cycle assessment (LCA) is a quantitative approach to assessing the environmental, economic, and/or social impacts associated with the entire supply chain of a product, process, or service. LCA is a systematic and holistic approach that enables designers and planners to identify the most impactful stages of a supply chain so that we might strategically intervene to improve the system. In this course students will learn about the LCA standards developed by the International Organization for Standardization (ISO). Students will also develop estimation, data verification skills, how to consider uncertainty in analysis, and learn how materials and energy flows lead to impacts to ecological and human systems. Over the course of the semester students will build their own LCA project by finding appropriate data, developing a life cycle inventory, entering data into LCA software, completing an impact assessment, and finally analysis and interpretation of the results generated. LCA is a flexible methodology and students will be encouraged to focus their project on a topic relevant to their broader learning and career objectives. Learning to complete an LCA also develops critical thinking skills, or life cycle thinking, which enables people to develop the skillset to pay attention to the larger system in which they are working in order to develop the human, materials and energy transactions that can lead to more renewable and sustainable systems. Class projects will allow the students to apply LCA to biorenewable systems, including agricultural and biological processes and product development.

Enforced Prerequisite at Enrollment: 5th Semester standing and (MATH 110 or MATH 140)

ABSM 391: Communication Skills for BE and ABSM Students

2 Credits

This course is one part of a two-semester experience in discipline-specific communication and leadership skills training. A key facet of this training is contextual approach. To meet the needs of BE and ABSM students, the course emphasizes communication skills that are critical for their professional development, appreciating the technical content of students' work and the industries within which the students will ultimately work. The primary focus for this course is communication skills (oral and written) with a secondary focus on leadership and career skills. Students will be evaluated through various methods, such as writing and speaking projects, professional presentations, written homework and worksheets in class and out, creation of portfolios and reports, and in-class group and individual exercises. This course provides a foundation in General Education, Writing and Speaking (GWS) for students in the Biological Engineering (BE) and Agricultural and Biorenewable Systems Management (ABSM) majors.

Enforced Prerequisite at Enrollment: Fifth semester standing or higher
Cross-listed with: BE 391

General Education: Writing/Speaking (GWS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

ABSM 392: Leadership and Ethics for BE and ABSM Students

2 Credits

This course is the second half of a two-semester experience in leadership, ethics, and communication skills training, following ABSM/BE 391. Course modules focus on leadership and communication needs of industry within its corresponding technical content thereby representing a complete contextual approach. The primary focus of this course is on leadership, with communication, ethics, sustainability, and professional development issues presented in the context of how they relate to leadership. Topics developed for this course include personal development, ethical decision-making, corporate social responsibility, strategic group management, facilitation, and diversity.

Enforced Prerequisite at Enrollment: Fifth semester standing or higher
Cross-listed with: BE 392

General Education: Writing/Speaking (GWS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

ABSM 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ABSM 402: Foundations of Sustainable Business

3 Credits

This course will provide students with an understanding of how environmental and sustainability issues are impacting business strategies and ultimately profits. We will also examine the external stakeholders, such as environmental groups, policy-makers, and "green" consumers, that impact business management. Business students will benefit by a better understanding of environmental/sustainability issues that impact their operations and strategies. Non-business students will benefit by understanding how business decisions can impact the natural environment. An emphasis will be on a thorough understanding of making a business case for sustainability. We will also discuss the triple bottom line and its use. Some Specific Issues to Cover: 1. How are organizations shifting business models to work with sustainability trends? 2. How can we make a business case (justification) for being "green"? 3. Can firms differentiate themselves by being responsible/sustainable? Do consumers and other stakeholders care? 4. Thorough understanding of stakeholders and how they impact operations. 5. How can the "business" side of the world work with the "environmental" side? 6. Use of packaging as an example of where parts of the supply chain are working together to be more sustainable. 7. How "waste" in its many forms can be seen as a surrogate for unsustainable practices. 8. Pros and cons of metrics used to measure sustainability. 9. Impacts of business operations on the environment.

Enforced Prerequisite at Enrollment: (AGBM 101 or ECON 102 or ECON 104) and 7th semester standing

Cross-listed with: ERM 402

ABSM 411: Bioproducts Science and Technology

3 Credits

This course investigates fundamental aspects of biorenewable polymers (bioproducts) and ties their underlying chemical structure to macroscale properties. These bioproducts are created from biologically derived, renewable industrial feedstocks such as wood, cotton, grasses, and bast fibers (e.g. jute, hemp, kenaf, sisal, etc.). The course begins with an overview of descriptive organic chemistry that is relevant to biorenewable polymers. Students will build on this knowledge to identify, compare, and contrast various industrially relevant plastics. Material science of polymers, including determining molecular weights and measuring mechanical properties of bioproducts is then investigated. These properties are relevant to compare the performance of existing plastics with emerging bioproducts. A survey of the several classes of synthetic and natural polymers, fibers, and composites is the focus of the third unit in the class. Final course subjects include manufacture of soft materials and their decomposition to form recalcitrant waste and microplastics. These will be discussed in the context of 21st-century western culture predicated on the existence of cheap and disposable plastic products, and how design and deployment of new bioproducts could eliminate plastic waste, reduce the environmental impact of plastics, and enhance the economics of industrial biorefining.

Enforced Prerequisite at Enrollment: CHEM 110 and ABSM 350

ABSM 417: Processing and Manufacturing Systems for Bioproducts

3 Credits

Overview of systems and processes used in the manufacture of bioproducts. This course reviews major bioproducts and details how they are manufactured industrially. A fundamental understanding of petrochemical refining, pulp and papermaking, and sawmill operations is the foundation of the beginning of the course, since the majority of existing and emerging bioproducts are manufactured using these processes or new hybrids of these. Next, thermochemical conversion of biomass is covered, including existing technologies such as torrefaction and barrel production, and emerging technologies such as catalytic fast pyrolysis and biomass gasification. Students will then prepare and deliver presentations on traditional and emerging wood and paper products. The final portion of the course will include biomass fractionation technologies that provide cellulose, hemicellulose, and lignin to produce fuels and chemicals in a manner analogous to petrochemical refining.

Enforced Prerequisite at Enrollment: ABSM 300 and ABSM 301

ABSM 420: Principles of Off-Road Machines

3 Credits

ABSM 420 covers the technical aspects of off-road power machinery, such as tractors, self-propelled harvesters, and military, logging and construction equipment. Upon successful completion, students will understand the many facets of design and management of such vehicles (such as mechanical power generation, power allocation, power transmission, traction, operator enclosures, and electrical and electronic systems). Laboratory exercises will involve full-scale equipment with instrumentation used to measure performance. While ABSM 420 is not a prerequisite for any other course, it complements engineering and technology courses related to machinery. This course is a technical selection in the Biological Engineering and Agricultural and Biorenewable Systems Management majors and is required for the Off-Road Equipment

minor. It complements other courses for anyone interested in the off-road machinery industries. ABSM 420 covers several aspects of function and design related to off-road machinery.

Enforced Prerequisite at Enrollment: BE 306 or ABSM 310 or ME 360

ABSM 422: Energy Analysis in Agricultural and Biorenewable Systems

3 Credits

This course focuses upon first understanding the various forms of energy in common use today and then analyzing the energy equivalents of various forms of energy. Forms of energy to be studied most extensively include electricity, fossil fuels, and renewable energy sources. Principles and applications of engineering economic analyses will be emphasized because these principles are needed to evaluate the feasibility of converting from one energy form to another. Applications will focus on the biorenewable systems chain, from field and forest production through green product development and distribution. For each application area, there will be discussion of the alternatives available for using energy in a more efficient and economical manner. The infrastructure systems needed for providing energy to a specific location will be described as well as typical rate structures for the energy provided. Alternatives to the conventional energy systems will be identified and the course will conclude with discussion of energy strategies throughout the 21st century. Local, national, and international perspectives on energy resources will be infused throughout this course.

Enforced Prerequisite at Enrollment: ABSM 301

ABSM 423: Deterioration and Protection of Bioproducts

3 Credits

Timber, wood, and bioproduct deterioration from fungi, insects, fire; treatment of bioproducts for in-service protection.

Enforced Prerequisite at Enrollment: ABSM 300 Enforced Concurrent at Enrollment: ABSM 411

ABSM 424: Precision Agriculture Technology

3 Credits

Precision agriculture is a data-based approach to optimize crop production and reduce environmental footprint. This course provides an overview of major concepts in precision agriculture (such as GPS, GIS, remote sensing, and spatial variability) and case studies illustrating decisions and management. In this course, computer processing, data analysis and management, robotics, and other related advancements in technologies will be emphasized to provide necessary technical skills in precision agriculture to students. The first part of the course will cover agricultural machinery combined with GPS such as planters, combines, fertilizer application equipment, and sprayers. Students will learn how to manage these tools efficiently. The second part of the course will emphasize how to manage and analyze field variability data including yield data, soil properties with real-time sensors and create prescriptions based on actual data. The last part of the course will emphasize how precision agriculture technology can benefit a farm's financial sustainability.

Enforced Prerequisite at Enrollment: BE 301 or ME 330 or STAT 240 or STAT 200 or STAT 250

ABSM 426: Safety and Health in Agriculture and Biorenewable Industries

3 Credits

BRS 426 explores management aspects of occupational safety and health specifically as it pertains to both the agricultural and biorenewable systems industry sectors. Employers are increasingly demanding students have training in safety and health. Topics to be covered include principles of safety and health, hazard analysis, hazard prevention and control, human behavior and safety, training and education, safety and health regulations, agricultural emergencies and developing a written safety program.

Enforced Concurrent at Enrollment: 5th Semester standing or higher

ABSM 428: Electric Power and Instrumentation

3 Credits

Nearly every facet of our modern society relies on electricity and electronics. Whether engaged in product development, manufacturing, production, testing, or management, graduates of technical programs benefit from a fundamental understanding of electrical/electronic systems. This course prepares students to analyze electrical/electronic systems applicable to agricultural and biorenewable industries. Upon completion of this course, the student will be able to: demonstrate correct use of common electronic measurement tools including multimeters, oscilloscopes and others; demonstrate sound electrical construction techniques including cable preparation, soldering, circuit board construction, and others; demonstrate sound troubleshooting skills for electrical and electronic systems; understand common elements of power distribution systems; understand simple measurement and control circuits represented by schematics or ladder diagrams; understand and apply various sensors to measure temperature, pressure, strain, force, proximity, speed etc.; understand the application of dataloggers, programmable logic controllers, and computer software to collect data and/or control simple processes; understand the function of common circuit components such as resistors, capacitors, inductors, diodes, op-amps, transistors, and transformers in simple circuits; understand basic maintenance and safety requirements for facility electrical systems.

Enforced Prerequisite at Enrollment: ABSM 301

ABSM 429: Agricultural and Biorenewable Systems Analysis and Management

3 Credits

ABSM 429 covers systems analysis and optimization techniques including an introduction to systems theory, qualitative and quantitative analysis, and management science for constrained decision-making. It includes concepts of linear programming, network models, integer and binary programming, and waiting line models. All topics are presented in the form of case studies that require the students to solve problems in realistic production and processing scenarios. ABSM students should take this course in the 7th semester (or the Fall semester of their 4th year) because it integrates knowledge and experiences acquired in prior ABSM, business, and agricultural science courses, and is critical for the capstone courses, ABSM 430W and 431W.

Enforced Concurrent at Enrollment: 7th Semester standing or higher

ABSM 430W: Agricultural and Biorenewable Systems Management Capstone 1

1 Credits

Students in Agricultural and Biorenewable Systems Management learn to apply technology, business, and science to sustainable agricultural and biologically-based product systems development and management. The capstone experience is a two semester, 4th year sequence required of all ABSM students. This course is the Fall component of the sequence and introduces the student to concepts critical for analyzing real-world biorenewable systems. This includes selecting a capstone topic, technical writing review, team building, systems analysis tool application, project proposal development, and proposal presentations. The course also provides iterative writing experiences to enhance the student's ability to create technically sound and grammatically correct reports. At the end of this course, the student will be able to: Write a technically sound ABSM project proposal; be able to function in teams to address a project within the ABSM domain; be able to assess a system and apply appropriate analysis and/or business tools.

Enforced Prerequisite at Enrollment: ABSM 391 and ABSM 392 Enforced Concurrent at Enrollment ABSM 429 Writing Across the Curriculum

ABSM 431W: Agricultural and Biorenewable Systems Management Capstone 2

2 Credits

Students in Agricultural and Biorenewable Systems Management learn to apply technology, business, and science to sustainable agricultural and biologically-based product systems development and management. The capstone experience is a two semester, senior year sequence required of all ABSM students. This course is the Spring component of the sequence. The students apply quantitative systems and business tools to analyze real-world biorenewable systems, interpret the results, and provide recommendations for management decision making. The course also provides iterative writing experiences to enhance the student's ability to create technically sound and grammatically correct reports.

Enforced Prerequisite at Enrollment: ABSM 430W Writing Across the Curriculum

ABSM 490: Agricultural and Biorenewable Systems Management Colloquium

1-2 Credits/Maximum of 2

This course introduces students to various aspects of the agricultural and biorenewable systems industries with an emphasis on professional career information and insights. Outside speakers will provide perspectives on current challenges, opportunities, and future trends in agricultural, bioproduct, and related industries.

Enforced Concurrent at Enrollment: 5th Semester standing or higher

ABSM 494: Undergraduate Research

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

ABSM 494H: Honors Thesis

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of a BioRenewable Systems honors thesis.

Enforced Prerequisite at Enrollment: Junior or senior standing in the Schreyer Honors College and permission of a BioRenewable Systems honors advisor
Honors

ABSM 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

ABSM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ABSM 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ABSM 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Agricultural and Extension Education (AEE)

AEE 100: Agricultural Education Orientation

3 Credits

Examination of agricultural and extension education; exploration of aptitude and interest in teaching, including early clinical practicum. AEE 100 Agricultural Education Orientation (3) The purpose of the course is to allow students to explore the profession of teaching in both formal and non-formal settings. Students are provided opportunities, through class activities, projects, and on-site observation of teaching and learning situations, to explore the various aspects of teaching and learning. Through individual and group-work techniques students are provided the opportunity to investigate their potential interest in becoming a future educator of agriculture. Students study the history and philosophies associated with agricultural education within the state and nation. A cornerstone of the course includes instruction that allows students to understand the requirements to become certified in the state of Pennsylvania to teach Agriculture in the public school system. Along with certification requirements for teaching, students investigate what it means to join the professional ranks of teachers, and the responsibilities associated with educating today's youth. Students also learn the

many techniques for teaching in, and about, agriculture in today's society through actual teaching scenarios with their peers. Students plan and implement lessons related to the many areas of agriculture including, but not limited to horticulture, agricultural mechanics, animal science, plant science, forestry, wildlife, and biotechnology. During the course of the semester, students visit various agricultural education settings for observational purposes. The students investigate what is happening in the local agricultural education program related to the three major components of an agricultural education program; Classroom/laboratory instruction, FFA, and Supervised Agricultural Experience. These observation hours may be counted towards the Entrance to Major requirements for the Agricultural and Extension Education major certification requirements.

AEE 201: Interpersonal Skills for Tomorrow's Leaders

3 Credits

Study of concepts of self identity, values and interpersonal relations as related to professional and personal life. The purpose of the course is to aid students in becoming competent in conducting interpersonal relationships in their daily life, and to help students acquire skills basic to becoming a leader in their personal life. The following topics will be addressed. A framework for interpersonal skill development sets the stage for improving one's interpersonal skill. Understanding individual differences addresses information that is the foundation of effective interpersonal relations. Interpersonal communications deals with skills in sending and receiving messages. Developing teamwork skills sensitizes the student to a vital set of skills in the workplace as well as organizations. Group problem-solving and decision making provides additional skill in collaborative efforts. Cross-cultural relations and diversity develops cross-cultural skills in the classroom, community organizations and the work place. Resolving conflicts develops skills in finding constructive solutions to differences of opinion and disputes with others. Becoming an effective leader addresses: 1) exercising effective leadership in clubs, organizations and the workplace, 2) motivating and helping others to develop and grow through coaching, counseling and teaching, 3) using power and influence for constructive purposes, and 4) translating ethical behaviors into usable skills. Each class meeting will focus on one or more concepts related to leadership and interpersonal skill development. Students will be provided a number of experiential activities that help them practice a particular set of skills. In addition, students will be required to complete a service learning project applying their leadership and interpersonal skills with individuals in the community who are in need of their help.

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

AEE 204N: Science Literacy and Policy in the 21st Century

3 Credits

The objective of this course is to explore the nexus of scientific discovery and societal understanding. Specifically, to review the consensus of expert scientists in regard to common controversial issues and outline how public perception shapes the agricultural industry. Although many scholars have put forth definitions for what it means to be scientifically literate, most agree it involves not only technical subject matter, but the ability to evaluate and interpret scientific evidence, and developing the

capacity to engage civically in science matters. Accordingly, this course is designed to provide the foundational content knowledge necessary to understand scientific principles, as well as the experiences and discussion necessary to elicit the skills of a critical thinker and informed consumer. Scientific (e.g. genetic engineering, evolution, pesticides, climate change) and social science (e.g. human psychology, persuasion, critical thinking, policy making) subject matter will be explored through a variety of methods such as lecture, case study, discussion, and scholarly and popular press readings. In order to exercise skills in science literacy, students will engage in a variety of applied activities which include: conducting a critical analysis of a food advertising campaign, developing a policy recommendation concerning an agricultural issue, and interviewing the public on controversial agricultural topics. Students will come away from this course with an understanding of agricultural issues and honed critical thinking skills which will enable them to make better consumer decisions about food, fiber, and natural resources.

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

AEE 216: Practical Parliamentary Procedure

3 Credits

Practice in presiding over and participating in meetings conducted under rules of order.

Cross-listed with: CAS 216

AEE 295: Observation of Teaching in Agriculture and Environmental Science

1-3 Credits/Maximum of 3

Supervised observation of teacher and student activities in a selected high school; appraisal of related responsibilities of teachers of agriculture.

AEE 296: Independent Studies

1-12 Credits/Maximum of 12

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AEE 297: Special Topics

0.5-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

AEE 299: Foreign Studies

1-12 Credits/Maximum of 24

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AEE 311: Developing Youth Leadership through Organization and Program Structure

3 Credits

An orientation on how adolescents develop and emerge as leaders in their families, schools, organizations, and communities. AEE 311 Developing Youth Leadership through Organization and Program Structure (3) An orientation on how adolescents develop and emerge as leaders in their families, schools, organizations, and communities. Content will focus on the FFA organization and supervised agricultural experiences as well as 4-H & other non-formal youth organizations. While the course will be grounded in traditional and contemporary youth leadership philosophies and practices it will emphasize youth leadership development in the food, agriculture, and natural resource sciences.

AEE 313: School-Based Program Planning and Instructional Development

2 Credits

Planning and developing courses of study, summer programs, advisory committees, and facilities for vocational agriculture.

Enforced Prerequisite at Enrollment: AEE 100 and AEE 295 and AEE 311

AEE 330W: Communication in Agricultural and Natural Resource Careers

3 Credits

The course explores the conventions of writing and speaking found in agricultural professions through the use of case studies.

Enforced Prerequisite at Enrollment: ENGL 15

Writing Across the Curriculum

AEE 349: Shop Processes for Agricultural Educators

3 Credits

Instruction in agricultural mechanics processes for teacher preparation in high school settings. AEE 349 Shop Processes for Agricultural Educators (3) This course is designed for teacher candidates who want to learn more about agriculture mechanics through an experiential learning opportunity. The teacher candidates will learn in a setting similar to those that the students will be expected to teach in during their student teaching experience, and potentially their future career. Students will be provided hands-on, constructivist learning approaches to agriculture mechanics. Students will be evaluated on various agriculture mechanics techniques. These techniques are related to small gasoline engines, concrete/masonry, electrical wiring, welding, and land measurement/building layout. In each unit students will complete projects that will allow them to practice introductory mechanics skills such as; tool selection, assembly/disassembly of engines, pouring concrete, building layout/wall construction, basic welding procedures, and electrical wiring basics. Students will also learn techniques in project development, implementation, and assessment. Each student will have opportunities to build projects for future application in their own teaching experiences.

AEE 350: Teaching Methods for Agricultural and Environmental Laboratories

3 Credits

An introductory course that prepares students to instruct and manage students in laboratory settings.

AEE 360: Leadership Development for Small Groups

3 Credits

Students will learn about leadership dynamics in small groups and how to be more influential in work settings. AEE 360 Leadership Development for Small Groups (3) This course is designed to teach students the dynamics of leadership in small groups. Specifically, students will learn to identify characteristics of leaders and understand their own personal leadership style. In addition, students will participate in team building activities and understand small group and motivational factors. Evaluation will be via a series of four examinations and two papers reflecting on impact and shadowing exercises. This course will be part of a series on leadership development offered through the Department of Agricultural and Extension Education.

AEE 395: Internship

1-13 Credits/Maximum of 13

Supervised off-campus, non-group instruction including individual field experiences, practicums or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor.

AEE 400: Global Agriculture Education

3 Credits

Development and implementation of educational programs in agriculture in developing countries. AEE 400 Educational Programs in Agriculture for Developing Countries (3) The purpose of this course is to develop the global competency of future change agents in agricultural education so that they, in turn, can guide future learners to gain knowledge, develop skills, and acquire dispositions for living in a globally interdependent and culturally diverse world. The course is designed for all learners who wish further their ability to engage in formal and non-formal systems of agricultural education in all settings. As the enduring understandings of this course, students will develop 1) a knowledge of global agricultural education programs, 2) critical and comparative thinking skills, including the ability to think creatively and integrate knowledge, rather than unquestioning acceptance of knowledge, and 3) an ongoing willingness to seek out international or intercultural opportunities. The course is organized around five essential themes: 1) education as innovation, 2) access to education and employment, 3) program planning and evaluation, 4) types of agricultural education and 5) spaces of innovation. Learners in the course will be encouraged to develop their 21st century learning skills of communication collaboration, critical thinking, and creativity through authentic, experiential assessments curated around dynamic world issues in education related to agriculture, food, fiber and natural resources.

Prerequisite: INTAG100 or INTAG481

AEE 412: Methods of Teaching Agriculture and Environmental Science

4 Credits

Instructional strategies and media; directing individual and group learning activities; assessing student performance and quality of instruction in vocational agriculture. AEE 412 Methods of Teaching Agriculture and Environmental Science (4) This course is designed to utilize various instructional strategies and media, which inform students in the directing

of individual and group learning activities. Students also learn methods in which to assess student performance and quality of instruction in school-based agricultural education. The course allows students to analyze, and implement, how they best can design instruction to maximize student learning. A range of teaching methods are utilized throughout the course including, but not limited to; lectures, discussions, demonstrations, supervised study, and cooperative learning. The course prepares students to successfully develop engaging lessons and units of instruction in agricultural education. Additionally, students will learn how to modify instruction to allow each learner the opportunity to achieve total student success. A laboratory enables student to refine their skills in a peer setting, prior to the student teaching internship experience. The combination of lecture and laboratory allow students to become reflective practitioners that are capable of planning, organizing, and implementing effective teaching practices and learning experiences for their students. Also, this course will provide students the opportunity to develop the capacity to evaluate student learning utilizing both formative and summative evaluation techniques.

Enforced Prerequisite at Enrollment: AEE 100 and AEE 295 and AEE 311

AEE 413: Program Planning and Instructional Development

3-4 Credits/Maximum of 4

A course in planning, developing, and organizing school-based curriculum, summer programs, advisory councils, and facilities for environmental/ agricultural education. AEE 413 Program Planning and Instructional Development (3-4) Organization and administration of secondary programs of education in and about agricultural/environmental sciences, including Ag In The Classroom (Elementary School Agriculture), marketing, summer programs, and state vocational finances. Topics will include discussion of instructional techniques for secondary educators in agriculture, with emphasis on classroom management, discipline and motivation, and teacher evaluation. The course is arranged in 10 units (for students who have completed AEE 100 as an undergraduate certification requirement) or 15 units (for returning adult students seeking certification who have already completed an Agricultural/Environmental Science undergraduate degree). Thus, this is a variable credit offering designed to meet the needs of these two groups of students. In each unit there are objectives that need to be met by the students. The students "click" on the objective to open the lessons. Within the lessons are research materials, articles, textbook references (all copyright permission), additional WWW links, and other supporting resources. At the end of the article is an opportunity for students to enter the Penn State Coursetalk electronic "chat" room to engage in discussions.

AEE 437: Equine Facilitated Therapy

3 Credits

Equine Facilitated Therapy uses equine-related activities to contribute positively to the well-being of people with disabilities. AEE 437 / ANSC 437 Equine Facilitated Therapy (3) The primary goal of this course is to acquaint the participant to equine facilitated therapy (therapeutic riding) and to introduce them to individuals who benefit/participate in such programs through lecture, audio-visual media, discussions, program visitation, independent research and via a practicum at a therapeutic riding program. Additionally, this course is designed to introduce the participant to various exceptional characteristics and conditions which may benefit from exposure/participation in equine facilitated therapy and other animal related therapy programs.

Enforced Prerequisite at Enrollment: ANSC 327

Cross-listed with: ANSC 437

AEE 440: Communication Methods and Media

3 Credits

Mass media techniques for reporting and promoting extension and related programs, including message preparation, presentation, and strategy development.

Enforced Prerequisite at Enrollment: 3 credits in COMM

AEE 460: Foundations in Leadership Development

3 Credits

This course explores historical and contemporary leadership theories, models and perspectives within social, cross-cultural, and political contexts. AEE 460 Foundations of Leadership Development (3) This course is designed to provide students with a philosophical and theoretical framework of leadership by examining historical and contemporary theories, models and leadership styles within a social, political and global context. Students will explore leadership effectiveness and its relationship to issues of power, influence, persuasion, motivation and ethical decision-making. The overall objective of this course is to help students learn specific leadership competencies that will make them a more effective leader when addressing problems and seeking solutions in public and private domains. Evaluation will be based upon quizzes, written projects, leader interview and a final paper in which students will be expected to demonstrate an integrated application of causes, barriers and key ingredients of successful leadership practices. This course will be part of a series on leadership development offered through the Department of Agricultural and Extension Education.

Enforced Prerequisite at Enrollment: AEE 360

AEE 465: Leadership Practices: Power, Influences, and Impact

3 Credits

Explores the leader role as it relates to issues of purpose, social responsibility, political influences, and legal constraints. AEE 465 Leadership Practices: Power, Influences, and Impact (3) In this course, students will explore leadership roles as they relate to issues of purpose, social responsibility, political influences and legal constraints. It is designed to help students develop greater sensitivity to the variety of factors and forces impacting leadership processes and to acquire an increased understanding of key elements of successful leadership practices. The overall objective of this course is to help students learn specific leadership competencies that will make them a more effective leader when addressing problems and seeking solutions in public and/or private domains. Evaluation will be based upon unannounced quizzes, several short written projects, and a final paper in which students will be expected to demonstrate an integrated application of causes, barriers and key ingredients of a leader they consider to be successful. This course will be part of a series on leadership development offered through the Department of Agricultural and Extension Education.

AEE 494: Undergraduate Research

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

AEE 494H: Honors Thesis

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of Agricultural Extension Education honors thesis.

Enforced Prerequisite at Enrollment: Junior or senior status in the Schreyer Honors College and permission of the Agricultural and Extension Education honors advisor.

Honors

AEE 495: Internship

1-15 Credits/Maximum of 15

Enforced Prerequisite at Enrollment: AEE 412 and AEE 413

AEE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AEE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on topical or special interest subjects which may be offered infrequently.

AEE 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (1L)

Agricultural Communications (AGCOM)

AGCOM 462W: Advanced Agricultural Writing

3 Credits

Practice in journalistic writing strategies to report scientific and technical information in the agricultural/environmental sciences to general audiences. AGCOM 462W Advanced Agricultural Writing (3) Advanced Agricultural Writing focuses on scientific and technical topics in the agricultural/environmental sciences and public policy issues related to such subjects for the print media. Instructional objectives include: To learn and practice diverse forms of writing for general audiences, including brief news articles and feature formats, such as process, human interest, policy, and news reporting in the agricultural/environmental sciences. To recognize and use standard journalistic conventions, including grammar, mechanics, usage, and style. To develop an understanding of a writer's responsibilities and obligations within the context of journalistic ethical standards. To analyze and evaluate situations that require writing in order to respond appropriately to the needs and interests of general as well as specialized audiences. To develop feature writing skills through extensive writing and revising exercises. Student evaluation is based on writing assignments and class participation, particularly contributions to the peer review process. Every writing assignment (with the exception of short in-class exercises) is

critiqued in peer response groups in class. Before the first draft of a feature article or query letter is due, the class develops a criteria sheet that is specific to the diverse forms of writing students are doing. The day the first draft is due, the class divides into peer response groups and, using the criteria sheet, provide feedback for each writer. The instructor also offers feedback on drafts of each article. Only final drafts are evaluated and graded by the instructor.

Enforced Prerequisite at Enrollment: Grade of C or better in COMM 260W or equivalent coursework
Writing Across the Curriculum

AGCOM 495: Internship

1-3 Credits/Maximum of 3

Supervised field experiences related to student's professional interest in agricultural communications; limited to minors in agricultural communications.

Enforced Prerequisite at Enrollment: Grade of C or better in COMM 260W and prior approval of the professor-in-charge of Minor.

Agricultural Science (AGSC)

AGSC 100: AESE First Year Seminar

1 Credits

The purpose of this course is to provide a reflective experience as students begin their academic careers at the Pennsylvania State University. It will primarily be taught via guest lecturers and small group discussion. Both the instructor and students within the course will create and maintain a shared learning environment centered on the critical reflection of the first-year college experience. Students will also explore the four undergraduate majors within the Department of Agricultural Economics, Sociology, and Education (AESE) and learn career development basics. The course involves some group discussions, guest presenters, short writing assignments and other homework assignments, both during and outside of class.

First-Year Seminar

AGSC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AGSC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AGSC 299: Foreign Studies

1-12 Credits/Maximum of 24

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AGSC 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AGSC 494: Undergraduate Research

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

AGSC 494H: Honors Thesis

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of Agricultural Science honors thesis.

Enforced Prerequisite at Enrollment: Junior or senior status in the Schreyer Honors College and permission of the Agricultural Science honors advisor.

Honors

AGSC 495: Internship

1-10 Credits/Maximum of 10

Independent study and supervised field experience related to the student's professional interest. Intended for Agricultural Science majors.

Enforced Prerequisite at Enrollment: Fifth-semester standing in the Agricultural Science major with a G.P.A. of 2.00 or greater and prior approval of proposed plan before registration.

AGSC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AGSC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AGSC 499: Foreign Studies

1-12 Credits/Maximum of 24

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Agriculture (AG)

AG 100: Job Placement Skills and Strategies

1 Credits

Strategies and skills designed to identify career/life goals and implement career decisions.

Cross-listed with: SC 101

AG 113: Exploring Careers in Agriculture

1 Credits

Examination of career opportunities in agriculture with an exploration of the relationship between student interest and career decisions.

AG 150: Be a Master Student!

2 Credits

Students explore agricultural issues and research methodologies through literature review, library searches, field studies, and critical thinking.

Enforced Prerequisite at Enrollment: First or second-semester standing First-Year Seminar

AG 160: Introduction into Ethics and Issues in Agriculture

3 Credits

This course covers ethics and the social contract to include substantive ethical theories focusing on rights-based ethical theories (libertarianism and egalitarian theories) and consequentialist theories (utilitarianism and axiology). These theories assist in conceptually defining levels of participation and consent in democracy. This course explores the circumstances in which rational persons and political groups historically agree to be bound in collective decision making. The primary focus by examines four separate ethical themes illustrating why and how individuals accept a variety of terms. The course highlights philosophical/ethical decisions related to agriculture issues during the history of the United States. Issues range from non-interference rights to opportunity rights dealing with food, fiber, natural resource and environmental issues. Procedural theory emphasizes the formation of legitimate and defensible rules rather than ethics. Policy choices are assumed to be legitimate and defensible as long as individuals follow the rules/procedures for decision making. The content of this course meshes the procedural and the substance theories found throughout historical debates in agriculture communities. The course identifies traditional agrarian problem identification, policy formation, policy adoption and funding, program implementation and program evaluation. How ethics figures historically in agriculture policy processes is applied in a variety of case studies and debates as well as selected readings. The course includes an examination of the ethics of when, how and where the policy process historically influenced agriculture public policies. The course emphasizes the need to critically think about various points of view expressed by various conflicting authors.

Cross-listed with: CED 160

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

AG 160S: Introduction to Ethics and Issues in Agriculture

3 Credits

Introduce students to the University and College of Ag Sciences preparing them to succeed. Review ethical theories and issues in American agriculture. AG 160S Introduction to Ethics and Issues in Agriculture (3) This course introduces students to contemporary issues, ethical theories and principles, and the application of critical thinking and communication skills related to topics in agriculture, renewable natural

resources, and the environment. Additional emphasis will be placed on developing the skills that help achieve academic success at Penn State through these speakers and activities. Course content will include analyzing moral positions based on three ethical theories: normative ethics, descriptive ethics, and metaethics; and four ethical principles: beneficence, nonmaleficence, respect for autonomy, and justice. Guest speakers, field trips and interactive activities, which feature disciplines in the College of Agricultural Sciences, will supplement the course materials and enrich the educational experience. In addition, various career and networking opportunities with internationally acclaimed faculty and staff, current students, and alumni will be featured.

Prerequisites: first or second semester standing

AG 180N: Contemporary Issues in Food, Ag, Natural Resources, and Human Sciences

3 Credits

This course addresses how past and present impacts of food, agriculture, and natural resources have played a role in human, community, and land development in Pennsylvania and the United States within the context of the global community. With a focus on contemporary issues, ethical theories and principles, and the application of critical thinking and communication skills related to topics in agriculture, renewable natural resources, and the environment. Students will analyze moral positions based on ethical theories, principles, and ethical values. This will be accomplished through interactions with College of Agricultural Science faculty/staff, guest speakers, student investigation on various topics, exposure to the mission and role of a land grant university, introduction to issues, challenges, and discoveries in the food and fiber production and processing disciplines.

Agroecology (AGECO)

AGECO 121: Plant Stress: It's Not Easy Being Green

3 Credits

This course is an introduction to plant biology with a strong emphasis on plant "stress" biology - how plants deal with the many hazards that they face, including diseases, insects, the weather, and animals. The course covers major aspects of plant biology and physiology, including photosynthesis, light perception, sense of touch, hormones, secondary

metabolism, growth, development, and structure. The course also covers how plants obtain food and water, see their neighbors, communicate with each other, reproduce, compete with each other, consume insects, and even move around - all without muscles, eyes, or brains. The course relates all of these topics to plant stress coping mechanisms and to human needs and desires. Course activities include lectures, class discussions, in-class written assignments, guest lectures, an outdoor walk to observe plants on campus, and movies. This General Education (GN) course is designed to be accessible to non-science majors.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

AGECO 122: Atmospheric Environment: Growing in the Wind

3 Credits

Atmospheric Environment: Growing in the Wind is for students who are interested in learning about the dynamic effects of weather on plants and animals. It is about how processes at the ground surface and in the air govern weather conditions on Earth. Growing in the Wind focuses on five major weather elements: energy, temperature, moisture, pressure and wind and how these factors influence ecosystems and habitation of our planet. Emphasis is also given to human impacts on weather and climate, and current environmental issues involving the atmosphere. The lectures are organized around the central theme that the unequal distribution of incoming solar energy (both spatially and temporally) produce temperature and pressure contrasts at the Earth's surface and in the atmosphere that in turn cause storms and control the weather and climate.

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

AGECO 134N: Sustainable Agriculture Science and Policy

3 Credits

This inter-domain (GN/GS) general education course addresses the science, socio-economics, and politics of managing food and fiber production systems; and the sustainability implications of current practices and future options. The course will teach students about the soil, plant, animal, and ecological sciences; technologies, socio-economic implications, and policies of our agroecosystems in an integrated manner. We will examine agricultural scientific, agricultural policy, and economic opportunities to enhance the sustainability of agriculture for food and fiber production. Students will have many opportunities to examine and critically analyze scientific knowledge and policies during discussions, writing exercises, and role playing to develop analytical and communication skills. There are no prerequisites for this course. This course can link with other courses that address how research and efforts in agricultural sciences, ecology, policy, economics, philosophy, education, and communication influence sustainable management of natural resources for the present and the future.

AGECO 144: Principles and Practices of Organic Agriculture

3 Credits

An introduction to the science, principles and practices of organic agricultural systems for food production. This natural sciences general education (GN) 3 credit course will teach students about the science of agroecology, with a focus on organic agriculture. We will examine the science, history and development of organic agriculture and its principles and practices. Students will learn about the scientific basis and implementation of fundamental organic farming principles and practices including soil health, diversified cropping systems, organic pest management, and a system perspective. We will also discuss certified organic regulations and policies, organic farming business management and marketing. Learning activities include: i) reading and discussing agricultural scientific articles, ii) listening to guest speakers and videos, iii) hands-on laboratory and greenhouse activities, iv) field trips and group projects. The only prerequisite for this course is a high school level biology or ecology course. This course can link with other courses that address the agricultural sciences, food systems, environmental resource management and policy, land use management and design, and natural resources.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

AGECO 154: Principles of Agronomic Field Operations

2 Credits

Introduction to the cultural methods and equipment used in agronomic crop production.

AGECO 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AGECO 201: Introductory Agroecology

3 Credits

Introduction to the processes and considerations that lead to the development of integrated solutions to crop production problem solving.

AGECO 295: Agroecology Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

AGECO 418: Nutrient Management in Agricultural Systems

3 Credits

AGECO 418 / ANSC 418 / SOILS 418 Nutrient Management in Agricultural Systems is a senior-level course that applies the fundamentals of animal, plant and soil sciences to the issues and solutions in the area where livestock production intersects with water and air quality. Modern regionalization and concentration of animal production systems comes with environmental implications due to a net influx of nutrients to livestock farms. While some nutrients leave the farm in the form of animal products, 60 to 70% of the nutrients are excreted and applied to nearby crop land. If not properly managed these nutrients represent a risk to environmental quality. Students in this cross-listed course gain both scientific and practical understanding of sound nutrient management principals and strategies. The course considers big picture concepts such as nutrient cycling as well as farm-level implementations such as Nutrient Management Planning.

Enforced Prerequisite at Enrollment: (BIOL 11 and BIOL 12) or BIOL 110 or BIOL 127 or BISC 3

Cross-listed with: ANSC 418, SOILS 418

AGECO 429: Crop Scouting

2 Credits

This course will teach proper crop scouting techniques and provide reference material to aid in identification of crop pests and determination of pest economic threshold levels. AGECO 429 Crop Scouting (2) This course will introduce and provide experiential learning opportunities to students in crop scouting. Students will be taught principles and technique associated with proper crop scouting. This will include but is not limited to: identifying crop development problems, pests or damage symptoms, pest biology and economic thresholds associated with various pest control options. Students will learn: how abiotic stresses may alter crop development; pest identification; when (spring, summer, fall, wet conditions, dry conditions etc.) different pests are likely to appear; scouting techniques to properly quantify pest infestation; how to read and interpret internet sources that help forecast pest activity; and how to use Infestation/Economic Threshold Charts.

Enforced Prerequisite at Enrollment: AGRO 28 or HORT 101

AGECO 438: Principles of Weed Management

4 Credits

The study of weeds and their management is a challenging and demanding task that requires diverse abilities. The term weed is an anthropocentric construct meaning it is a human colored definition. We will study the biology and ecology of weedy plants drawing on examples from a wide range of plant systems; those systems include agricultural fields (agronomic and horticultural crops) and forests. Of course our knowledge of the biology and ecology of weedy plant populations will then be used to underpin and assess control tactics and their integration. The discipline has a history of equating management with herbicidal control and in fact some 80% of the pesticides used in U.S. agriculture are herbicides. However through novel farmer designed management systems, through a research community focused on alternative methods of management and through increased focus on invasive species, exciting breakthroughs are occurring in alternative methods of management and prevention. This course seeks to introduce you to the breadth of management approaches in use and under study.

The specific objectives are for students to describe and identify: 1) the local weed flora, 2) the fundamental aspects of weed biology and ecology relevant to managed landscapes, 3) the control methods used in managing weed populations, 4) how control measures can be integrated to accomplish acceptable levels of pest suppression, 5) operationalizing a weed management plan, 6) how herbicides enter and move to their site of action in plants, 7) classifying herbicides by their site of action, and 8) the distinction between herbicide concentration in soils and plant available herbicide concentration.

Enforced Prerequisite at Enrollment: AGRO 28 or HORT 101

Recommended Preparation: SOILS 101

Cross-listed with: AGRO 438

AGECO 457: Principles of Integrated Pest Management

3 Credits

Integrated study of pest complexes and their management, emphasizing ecological principles drawing on examples from a range of agricultural, forestry and urban systems. This course is designed for sixth, seventh, and eighth semester students and graduate students. AGECO 457 / ENT 457 Principles of Integrated Pest Management (3) The goal of this course is to introduce upper level undergraduates and graduate students to the principles and practices of integrated pest management (IPM). This course addresses IPM issues concerning insects, plant diseases, and weeds in agriculture, natural systems and urban environments. Rooted in ecology, IPM also addresses the influence of human social, economic and regulatory systems in pest management. Emphasis is placed on the basic tactics and tools of IPM including biological, cultural, legal, mechanical and chemical controls, host plant resistance, pest monitoring and decision making. The overarching goals of environmental protection, economic viability and social welfare are considered throughout the course. In addition, students will learn about IPM program implementation both domestically and internationally, including pest population modeling and the use of internet resources to inform decision makers. Several projects will provide real-world examples. These may include field trips and a semester-long project where students research and solve an actual pest management problem.

Enforced Prerequisite at Enrollment: Must take two or more of the following - ENT 313 or PPEM 405 or PPEM 318 or HORT 238

Cross-listed with: ENT 457

AGECO 495: Agroecology Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

AGECO 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

AGECO 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AGECO 499: Foreign Studies

1-2 Credits/Maximum of 4

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Agronomy (AGRO)

AGRO 28: Principles of Crop Management

3 Credits

Biological and agronomic principles applied to production and management of major feed and forage crops of the northeastern United States. This includes an overview of agronomy in the world and the United States with emphasis in the Northeast region of the country, and downscales to practical aspects such as crop identification, crop physiology, soil water management, tillage and all the interactions that make farming such a complex enterprise for farm operators and society at large. The course spans over many subjects: crop, soil, nutrient, pathogen, insect, and weed management, and emphasizes managing both profitability and environmental integrity.

AGRO 410W: Physiology of Agricultural Crops

4 Credits

Study of the relation of plants to their environment and the physiology of crop plant growth. AGRO 410 Physiology of Agricultural Crops (4) AGRO 410 is a course in plant physiology that presents fundamental aspects of plant metabolism and demonstrates how they are affected by environmental conditions such as light, water availability, temperature, and mineral nutrition. It describes how plants use photosynthesis to accumulate and partition biomass and how this contributes to crop productivity. The roles of abiotic stress such as drought and temperature extremes on crop productivity also are discussed. The course objectives are to 1] learn how plants "work" at the molecular, cellular, whole plant and population levels; 2] develop critical thinking skills by planning and conducting experiments related to the course topics and reviewing journal articles; and 3] develop and enhance communication skills through a variety of writing assignments. This course is appropriate for upper level undergraduates or beginning graduate students with interest in plant and agricultural science disciplines including, horticulture, agroecology, plant pathology, ecology, meteorology and entomology; and meshes with courses in these areas. Students will be evaluated by examinations/quizzes, writing assignments and class participation. The course is offered annually and the optimal enrollment is 20 students.

Enforced Prerequisite at Enrollment: AGRO 28
Writing Across the Curriculum

AGRO 423: Forage Crop Management

3 Credits

Application of agronomic, ecological, and physiological principles to the production and management of pasture and forage crops.

Enforced Prerequisite at Enrollment: AGRO 28

AGRO 425: Field Crop Management

3 Credits

Application of agronomic, ecological, and physiological principles to management systems for the efficient production of the major field crops.

Enforced Prerequisite at Enrollment: AGRO 28**AGRO 438: Principles of Weed Management**

4 Credits

The study of weeds and their management is a challenging and demanding task that requires diverse abilities. The term weed is an anthropocentric construct meaning it is a human colored definition. We will study the biology and ecology of weedy plants drawing on examples from a wide range of plant systems; those systems include agricultural fields (agronomic and horticultural crops) and forests. Of course our knowledge of the biology and ecology of weedy plant populations will then be used to underpin and assess control tactics and their integration. The discipline has a history of equating management with herbicidal control and in fact some 80% of the pesticides used in U.S. agriculture are herbicides. However through novel farmer designed management systems, through a research community focused on alternative methods of management and through increased focus on invasive species, exciting breakthroughs are occurring in alternative methods of management and prevention. This course seeks to introduce you to the breadth of management approaches in use and under study. The specific objectives are for students to describe and identify: 1) the local weed flora, 2) the fundamental aspects of weed biology and ecology relevant to managed landscapes, 3) the control methods used in managing weed populations, 4) how control measures can be integrated to accomplish acceptable levels of pest suppression, 5) operationalizing a weed management plan, 6) how herbicides enter and move to their site of action in plants, 7) classifying herbicides by their site of action, and 8) the distinction between herbicide concentration in soils and plant available herbicide concentration.

Enforced Prerequisite at Enrollment: AGRO 28 or HORT 101

Recommended Preparation: SOILS 101

Cross-listed with: AGECO 438

AGRO 460: Advances and Applications of Plant Biotechnology

3 Credits

This course provides a comprehensive overview and current status of plant biotech research. The course provides knowledge of plant systems that fall in the category of GMOs. BIOTC 460 / AGRO 460 Advances and Applications of Plant Biotechnology (3) This course will provide a comprehensive overview and status of current plant biotech research. The focus is on providing knowledge of the biology of plant systems. Consequences of development of a transgenic plant either for food (crops) or as a tool to understand molecular, genetic, and inheritance mechanisms of a trait will be discussed in detail. The course will deliver the current literature and understanding of mechanisms involved in herbicide resistance in transgenic plants. Specific topics that will be of interest to students from various disciplines include disease and insect resistance, quality traits, and secondary metabolites. Molecular biology of different pollination systems will be examined so that students will understand the concept of gene flow from transgenic to non-transgenic crops. Examples from recent developments on the

beneficial use of transgenic plants as producers of modified compounds, starches, antibodies and their use in phytoremediation of toxic and organic pollutants will be discussed from the perspective of genetic and molecular plant systems. Gene expression of transgenic plant traits and the stability of an engineered crop will be discussed. Specific emphasis will be on different modes of inheritance that a transgenic plant can follow after its development and release into the environment. The course also prepares students for understanding the regulatory processes that are required for testing, moving, and environment release of transgenic crops. The laboratory component of the course will introduce students to the common technique of molecular biology that are used to detect expression in transgenic plants. Transgenic maize plants will be grown in a greenhouse and analyzed for expression of introduced genes.

Enforced Prerequisite at Enrollment: BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M

Cross-listed with: BIOTC 460

AGRO 495: Internship

1-5 Credits/Maximum of 5

Supervised field experience related to the student's major.

Enforced Prerequisite at Enrollment: Approval of proposed assignment by instructor prior to registration.**AGRO 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AGRO 496A: **SPECIAL TOPICS**

3-4 Credits

AGRO 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Air Force (AIR)

AIR 151: Heritage and Values of the United States Air Force I

2 Credits

"Heritage and Values of the United States Air Force," is a survey course designed to introduce students to the United States Air Force and provides an overview of the basic characteristics, missions, and organization of the Air Force

AIR 152: Heritage and Values of the United States Air Force II

2 Credits

"Heritage and Values of the United States Air Force II," is a survey course designed to introduce students to the United States Air Force and provides an overview of the basic characteristics, missions, and organization of the Air Force.

AIR 251: Team and Leadership Fundamentals I

2 Credits/Maximum of 2

This course is designed to provide a fundamental understanding of both leadership and team building. It is imperative that students are taught from the beginning that there are many layers to leadership, including aspects that are not immediately obvious. Such things include listening, understanding themselves, being a good follower, and efficient problem solving. The students will apply these leadership perspectives when completing team building activities and discussing topics such as conflict management. Students will demonstrate basic verbal and written communication skills. The purpose of communication studies curriculum is to develop leaders with effective thinking, writing, and speaking skills. The course will begin to build on that foundation by providing opportunities to complete both briefing and writing assignments in accordance with Air Force requirements and will prepare students for the more rigorous assignments in future courses. As students mature and become more comfortable with the increasing requirements, the demands to write and speak increase as well.

AIR 252: The Evolution of USAF Air and Space Power II

2 Credits/Maximum of 2

Continued examination of air and space power from the Cold War era to the Persian Gulf War and beyond.

Prerequisite: AIR 251

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Integrative Thinking

AIR 351: Leading People and Effective Communication I

3 Credits/Maximum of 3

This course will provide students with the opportunity to utilize their communication skills as they begin more of a leadership role within an organization. The goal is for students to have a more in-depth understanding of how to effectively lead people and provide them with the tools to use throughout their leadership roles. Additionally, students will enhance their writing and briefing skills. Many of the students will be uncomfortable with public speaking, and this semester is designed to increase exposure to briefing while increasing confidence. The course continues into advanced skills and ethics training that will prepare them for becoming an officer and/or a supervisor.

AIR 352: Leading People and Effective Communication II

3 Credits

This course will provide students the opportunity to utilize their communication skills as they begin more of a leadership role within an organization. The goal is for students to have a more in-depth understanding of how to effectively lead people and provide them with the tools to use throughout their leadership roles. Additionally, students will enhance their writing and briefing skills. Many of the students will be uncomfortable with public speaking, and this semester is designed to increase exposure to briefing while increasing confidence. The course continues into advanced skills and ethics training that will prepare them for becoming an officer and/or a supervisor. The communication and public speaking requirements of the course are a culmination of five previous semesters of learning communication and speech theories and

practical application. Initial communication and speech requirements start in AIR 151 and go through AIR 351, the immediate prerequisite for AIR 351. A student cannot enroll into AIR 352 without the successful completion of AIR 151, AIR 152, AIR 251, AIR 252, and AIR 351 which all establish the initial foundation for communication and speech theory and application.

Prerequisites: AIR 351

General Education: Writing/Speaking (GWS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

AIR 451: National Security, Leadership Responsibilities, and Commissioning Preparation I

3 Credits/Maximum of 3

This course will provide a student the comprehension of the basic elements of national security policy and process. The student will understand the air and space power operations as well as grasp selected roles of the military in society, and current domestic and international issues affecting the military profession. Students will learn the responsibility, authority, and functions of an Air Force commander and selected provisions of the military justice system. The purpose of communication studies curriculum is to develop officers with effective thinking, writing, and speaking skills. The course encompasses advanced forms of communication by utilizing the skills previously learned and applying them to a written bullet exercise, individual current events briefing, space/cyberspace paper, and a group space/cyberspace briefing. These exercises are designed to provide an additional opportunity for students to refine their written and verbal communication skills and to reinforce the relevance of the ROTC curriculum by having students analyze the relationship of academic lessons and current world events.

Prerequisite: AIR 352

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Soc Resp and Ethic Reason

AIR 452: National Security, Leadership Responsibilities, and Commissioning Preparation I

3 Credits/Maximum of 3

This course will provide a student the comprehension of the basic elements of national security policy and process. The student will understand the air and space power operations as well as grasp selected roles of the military in society, and current domestic and international issues affecting the military profession. Students will earn the responsibility, authority, and functions of an Air Force commander and selected provisions of the military justice system. The course is designed to prepare a student for life as a junior officer in the Air Force. The purpose of communication studies curriculum is to develop officers with effective thinking, writing, and speaking skills. The course encompasses advanced forms of communication by utilizing the skills previously learned and applying them to a written bullet exercise, individual current events briefing, space/cyberspace paper, and a group space/cyberspace briefing. These exercises are designed to provide an additional opportunity for students to refine their written and verbal communication skills and to reinforce the relevance of the ROTC curriculum by having students analyze the relationship of academic lessons and current world events.

Prerequisite: AIR 451

American Studies (AMST)

AMST 3: The American Nation: Historical Perspectives

3 Credits

HIST/AMST 3 allows for faculty and students to work in a small setting in order to explore the history of the United States through a detailed interdisciplinary examination of a particular theme, institution, or person in American history. Faculty can structure their particular theme for this course, allowing for the incorporation of a wide range of materials, out of class field trips, examination of popular culture, primary source documents, and/or seminar-style discussions. For example, in recent years this course has been structured around the themes of "Utopianism in America" and "The Life, Times, and Legacies of Abraham Lincoln". In-depth examinations of such themes in American history offer students the opportunity to work closely with faculty in their area of interest, and to gain an understanding of American historiography and the historical profession.

AMST 83: First-Year Seminar in American Studies

3 Credits

Critical approaches to the interdisciplinary study of American culture. AMST 83 First-Year Seminar in American Studies (3) (GH;FYS) (BA) This course meets the Bachelor of Arts degree requirements. This course will be an open topic course in American Studies, limited to 20 students, and taught by an experienced professor. The course will be designed to provide a small, interactive learning environment for first-year students. Each section of 83 will address a large theme or number of themes that encourage students to examine a range of assigned texts in the context of broad questions of ethical and social value. Each section of the course will focus on a well-defined body of scholarship that is topical in the discipline, such as 'Civil Disobedience,' "Utopian Communities, and Blacks and Jews: A Multi-Cultural Perspective." In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests. Each section of the course will require active class participation from all students and a minimum of three substantial written assignments. Each of these written assignments will take one of the following forms: essay, essay exam, or a semester-long reading journal. The course fulfills a General Education humanities requirement or a Bachelor of Arts humanities requirement.

Bachelor of Arts: Humanities

First-Year Seminar

AMST 100: Introduction to American Studies

3 Credits

AMST 100 offers a broad-ranging introduction to American cultural history and the discipline of American Studies. The course examines what "America" means and what it means to be "American" within the context of specific topics that may include Social Class and American Dream, Nature and Wilderness, Consumer Culture, Holidays and Festivals, Childhood and Education, Youth Culture, Popular Amusements, Racial Identity, and the Immigrant Experience. All iterations of the course employ the interdisciplinary method of American Studies to explore the chosen topic in a holistic way. Students study not only history but also art, literature, politics, folklife, and film. American Studies 100 is a requirement for the American Studies major and minor, and offers students valuable experience in critical thinking and writing. Non-American Studies majors and minors may use this course to fulfill General Education or Bachelor of Arts requirements. The course also serves as preparation for more advanced courses in American Studies, American Literature, and American History.

Bachelor of Arts: Humanities

GenEd Learning Objective: Integrative Thinking

AMST 100Y: Introduction to American Studies

3 Credits

A study of selected attempts to identify and interpret movements and patterns in American culture. AMST100Y Introduction to American Studies (3) (GH)(BA) This course meets the Bachelor of Arts degree requirements. AMST 100 is a broad-ranging introduction to American culture. While specific topics may vary from class to class, the course examines what "America" means and what it means to be "American." These issues will be examined from a variety of perspectives: literature, history, politics, film, race, gender, and geography. The course is often broken down into discussion sections to facilitate student discussion of the material and the lecture. Requirements generally include community service projects, and students will be evaluated on essay tests, papers, journal entries and attendance. AMST 100 (or AMST 105) is a requirement for the American Studies major and minor, and offers students valuable experience in critical thinking, analysis, and writing. Non-American Studies majors and minors may use this course to fulfill a general education or Bachelor of Arts-Humanities credits. The course offers students a broad introduction to American culture, also serves as preparation for more advanced courses in American studies, American literature, and American history, in particular.

Prerequisite: third-semester standing

Bachelor of Arts: Humanities

United States Cultures (US)

Writing Across the Curriculum

AMST 103: American Masculinities

3 Credits

Introduction to aspects of masculinities and manhood in America. This course examines aspects of masculinities and manhood in America from a variety of perspectives. It views American manhood through the lens

of gender, and presents ideas on the ways that issues of masculinity and sexuality enter, or have entered, discourses of politics, literature, and medicine, among others. It takes up discussion of the varieties of masculinities in American experience across historical periods, regions, racial groups, and ethnicities. Students will view these forms of masculinities in different media, including film, art, folklore, media, advertising, and literature.

United States Cultures (US)

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

AMST 104: Women and the American Experience

3 Credits

Selected aspects of the role of women in United States history and culture from colonial to modern times. AMST 104 / WMNST 104 Women and the American Experience (3) (GH;US)(BA) This course meets the Bachelor of Arts degree requirements. AMST 104 / WMNST 104 is a broad-ranging introduction to women in American history and culture from colonial to modern times. While specific topics may vary from class to class, this survey course examines the history of American women, paying particular attention to issues of race and diversity and examining how American women's cultural, political, and economic roles have changed over time. Major themes and topics might include: work and the sexual division of labor; civic activities and the political dimensions of women's historical experience; political power and processes in American history; the role of family and personal life; women as active makers of history in the full range of national experience; the influences of art, literature, popular culture, technology, geography, regionalism, religion, immigration, and other sociological and cultural factors. This course offers students valuable experience in critical thinking, analysis, and writing and a broad introduction to American women's issues, and so serves as preparation for more advanced courses in American studies, American literature, American women's history, and women's and gender studies. AMST 104 / WMNST 104 counts towards the American Studies major and minor and the Women's Studies major and minor.

AMST 105: American Popular Culture and Folklife

3 Credits

AMST 105 / ENGL 105 offers a survey of popular culture and folklife in America's past and present. The course synthesizes a broad scope of materials from areas such as literature, movies, television, sports, amusement parks, music, media, and advertising. While selected topics for readings, lectures, and discussion vary from class to class, all courses focus on a critical examination of a variety of popular and folk cultures in order to produce an enriched understanding of America, its past, its diverse cultures, its evolving values and traditions, and its inhabitants. To meet this goal, popular and folk cultures will be examined from a variety of perspectives, including race, gender, and class. AMST 105

may be taken by students pursuing the American Studies major; for them, the course provides preparation for more advanced courses in American folklore, American literature, and American cultural history. Non-American Studies students may use this course to fulfill the general education requirement (GH). Students will receive the US designation for this course, and it meets the Bachelor of Arts degree requirements.

AMST 106N: The Mass Media and Society

3 Credits

Mass communications in the United States: organization, role, content, and effects of newspapers, magazines, television, radio, books, and films. The Mass Media and Society is an overview of the interaction between mass media and society. By drawing from selected topics, the course pays particular attention to the social influences (e.g., economics, politics, technology, law and culture) that shape media messages. Among others, the course examines the nature of media controllers as well as the character of users and consumers of media products. By so doing, students are informed about the overall structure and scope of the mass media and led to understand the power and influences associated with media messages and practices. By the end of the semester, each student should have a better understanding of the dynamic nature of the mass media in an information society.

AMST 134: American Comedy

3 Credits

ENGL 134 serves as a survey of and introduction to strands of American comedy and satire from its eighteenth- and nineteenth-century roots through its many directions in the twentieth century. Students will read works from multiple literary genres-poetry, novel, short story, drama, and essay, for instance. The course will help students to understand how both formal and contextual considerations shape American comedy through the centuries. Authors under consideration will vary from class to class, but selected texts will represent many variations of comedy embodied in American literature and present across an evolving media landscape. ENGL 134 is a General Education course in the General Humanities domain. ENGL 134 can also be used as a requirement for the English major and minor.

AMST 140Y: Religion in American Life and Thought

3 Credits

The course aims to cast light on contemporary religious life in the United States by looking at the history of American religion. The course will provide students with a broad overview of American religious life from the colonial era to the present, focusing on the diversity and vitality of American religious traditions, as well as areas of intersection and conflict around race, ethnicity, gender, class, and sexuality. The course will also ask students to consider how aspects of these histories continue to shape religious belief, practice, and public discourse in contemporary life. Students will consider important religious and philosophical writings, as well as a popular/mass cultural, ethnographic, or other documentary sources that shed light on both the intellectual and lived history of religious life and thought in the United States.

AMST 150: America in the 1960s: An Introduction

3 Credits

This course offers an introduction to the history of the United States in the 1960s. The dual goals of this course are to instill a particular body of knowledge - in this case, America in the 1960s, and to provide students with tools that will help formulate interpretations of this crucial period in U.S. history. Topics covered will include the leadership of John Kennedy, Lyndon Johnson, and Richard Nixon; the struggle for civil rights for people of color; the emergence of student movements across the country; the steady escalation of US involvement in Vietnam; shifting relations across gender lines, and particularly the rise of the modern feminist movement; and, finally, the growing influence of popular culture, such as music, literature, and film.

AMST 150N: Western Pennsylvania Art, Literature, and Culture

3 Credits

AMST 150N: Western Pennsylvania Art, Literature, and Culture (GA/GH) will survey western Pennsylvania's rich artistic, literary, and cultural heritage from pre-history to the present day. Beginning with the region's indigenous cultures and earliest settlements, the course will examine the important artists, individuals, and organizations that figured in the development of western Pennsylvania's literary and artistic culture, the important role philanthropy and industry played in that development, and how these artists, organizations, and individuals relate to historical movements across the United States. The course will be divided into six units, and each unit will explore a variety of artists and genres, including architecture, literature, music, painting, photography, and sculpture. Individuals and their works to be discussed may include but are not limited to, among others, architects Frederick J. Osterling, Henry Hobson Richardson, and Frank Lloyd Wright, authors Hugh Henry Breckenridge, Rachel Carson, Willa Cather, Annie Dillard, John Edgar Wideman, and August Wilson, musicians Art Blakey, Billy Eckstine, and Stephen Foster, painters John White Alexander, Mary Cassatt, H.O. Tanner, and Andy Warhol, photographers Charles "Teenie" Harris and W. Eugene Smith, and sculptors Glenn Kaino and Thaddeaus Mosley. During the last unit, particular attention all be paid to western Pennsylvania's dynamic contemporary art and literary scenes. The course will also discuss numerous individuals, groups, locations, and organizations that figured prominently in the region's cultural heritage. Topics to be discussed may include, among others, Andrew Carnegie, Martin Delaney, Henry Clay Frick, H. J. Heinz, Andrew Mellon, Henry Phipps, and Jane Grey Swisshelm, the Carnegie Music Hall, Library, and Art Gallery, Pittsburgh's Exposition Hall, the Scalp Level School of painters, the Carnegie International Art Show and directors John Beatty and Homer Saint-Gaudens, the Associated Artists of Pittsburgh, newspapers "The

Mystery" and "The Pittsburgh Courier," and the Crawford Grill. Depending upon the individual instructor, students may visit at several regional sites, including but not limited to the Andy Warhol Museum, the Carnegie Art Gallery, the Carrie Furnace, the Frick Museum, the Heinz History Center, the Rachel Carson Homestead, the Mattress Factory, and the Silver Eye Center for Photography. The class is a General Education Interdomain course for GH/GA and United States Cultures (US) course.

AMST 151N: Technology and Society in American History

3 Credits

This course examines the development of technology in the United States from the colonial period to the present, and places into a historical context the reception and influence of these technological developments on the social, economic, and political life of the United States. The technologies serving American society—past and present—range widely and include, for example, new harvesting techniques, railroads and motor vehicles, assembly-line mass production, and electricity and its multiple dependent technologies. Technologies have always influenced, and been influenced by, human societies; this course examines how technologies and Americans have interacted and influenced each other.

AMST 155: American Business History

3 Credits

This course examines major developments in the history of modern American business and industry from the colonial period to the present. History 155 introduces students to a number of the main themes, concepts, and events comprising American business history. Although the course has a pronounced big business/large corporation focus, it nonetheless provides a broader perspective than simply one of selected corporate histories. Indeed, the course treats the conduct of business as an integral element of American society and culture. Topics to be discussed include the colonial commitment to commerce, the effects of new technologies, the emergence of modern large-scale industrial production and the changes it brought to business management, and the importance of world events and American businesses.

AMST 160N: Introduction to Asian American Studies

3 Credits

This course offers an introduction to the history, literature, culture, and social conditions of Asian Americans. It begins with Chinese immigration to the United States in the nineteenth century and proceeds to cover the histories of other groups: Japanese, Korean, Filipino, and Indian Americans. In addition to history, students explore some of the literature of Asian Americans and examine the legal and sociological aspects of the Asian American experience. The course also addresses several central questions: How much have Asian American groups held in common, culturally and historically, with one another? What role did prejudice play in the attempted citizenship and acculturation of different Asian American groups? How did Asian values and traditions shape families and communities over time? How did the experiences of Asian American women differ from those of men? What contributions to American life - food, literature, politics, education, business, science, and physical culture - have Asian Americans made? AM ST 160/AAS 100 is an interdisciplinary course that introduces students the history, society, and cultural achievements of Asian Americans.

AMST 161: The Battle of Gettysburg in American Historical Memory

3 Credits

HIST/AMST 161 examines the history of the Battle of Gettysburg, as well as the political and social factors that have shaped perceptions of the Battle of Gettysburg as one of the Civil War's decisive battle and as a national symbol that has transformed over time. The variety of historical sources used in this course will aid students in learning how to understand and interpret history and in encouraging them to develop a critical method by which to evaluate primary and secondary historical sources.

AMST 161N: Chinese in America, Americans in China

3 Credits

This course examines the history of Americans in China, the experiences of Chinese in America, and 200 years of Sino-American Relations. Starting in the 1840s, dreams of economic opportunity inspired Chinese immigrants as they came to America to prospect for gold, build railroads, or start their own businesses. In the opposite direction, American dreamers have been lured to China for two centuries: from businessmen

enchanted by the prospect of millions of customers; to missionaries trying to save souls; to educators, doctors, and engineers hoping to validate American ideas and technology by changing China in their own image. In both cases, the dreamers faced resistance. Chinese immigrants encountered strong racial prejudice in the United States, and American expatriates confronted a China that was sometimes indifferent to their goals. These frustrations notwithstanding, the trans-Pacific exchange of people, goods, ideas, knowledge, and technology vastly impacted both countries in significant ways that continue to resonate in the present day. AM ST 161 examines the history of Americans in China, the experiences of Chinese in America, and 200 years of Sino-American Relations. Starting in the 1840s, dreams of economic opportunity inspired Chinese immigrants as they came to America to prospect for gold, build railroads, or start their own businesses. In the opposite direction, American dreamers have been lured to China for two centuries: from businessmen enchanted by the prospect of millions of customers; to missionaries trying to save souls; to educators, doctors, and engineers hoping to validate American ideas and technology by changing China in their own image. In both cases, the dreamers faced resistance. Chinese immigrants encountered strong racial prejudice in the United States, and American expatriates confronted a China that was sometimes indifferent to their goals. These frustrations notwithstanding, the trans-Pacific exchange of people, goods, ideas, knowledge, and technology vastly impacted both countries in significant ways that continue to resonate in the present day. The course also addresses several central questions. What contributions to American life - food, literature, politics, education, business, science, and physical culture - have Chinese Americans made? What kind of influence did overseas Americans have over Chinese society, education, medicine, public health, sports, and religion? What role did prejudice play in the attempted citizenship and acculturation of Chinese Americans? How did the experiences of Chinese American women differ from those of men? How is American business and commerce affecting China today? AM ST 161 is an interdisciplinary and cross-cultural course that uses methods from both Humanities and the Social Sciences to introduce students to the 200-year-old story of Sino-American cultural, economic, and political interaction and exchange.

AMST 170N: Introduction to American Folklore

3 Credits

This course introduces the verbal and nonverbal genres of folklore that have influenced literature, economics, politics and culture in North America. Approaching folklore as traditional patterns, practices, and performances, the course explains folklore to be fundamental to human cultural life, and therefore an intimate part of the identities and values that Americans express in contemporary society. It will explore these identities and values on various levels: the individual, the family, the community, the region, the nation, and the world. Folklore, you will discover, is not something confined to the past, but all around us in the present, and is continually emerging anew. Students will read and discuss a number of folk genres, including folk speech, narratives, beliefs and religious experiences, use of space, and material culture. Students will learn strategies for researching, "reading," and understanding the

verbal and nonverbal folklore of diverse communities. The class may include readings on cultural traditions drawn from Native American, Latinx, African American, and immigrant cultures, as well as other folk groups defined by social identities such as age, occupation, gender, sexuality, or religion. By the end of the course, students will be able to recognize the cultural, political, and historical implications of such traditions. Assignments will include a fieldwork project; involving first-hand interviews, site observations, and archival research; to document, annotate, and analyze oral traditions. Students will be evaluated on the basis of class discussion, oral presentation and group exercises, in-class examinations, and the fieldwork portfolio.

AMST 226N: Critical Approaches to Hip-Hop

3 Credits

This course will examine the politics of hip-hop art and culture. To do so, we will place hip-hop in broad historical context and trace its aesthetic and cultural roots from Africa to Jamaica to 1970s New York City and then forward to 1980s gangsta rap and former President Barack Obama's iPod. We will think through the implications of hip-hop's addiction to Italian-American mobsters, bling, and all-things keepin' it real. We will also search for hip-hop's political foundations in funk records, 1960s community organizing, and poetry of the Harlem Renaissance. All the while, we will analyze the varieties of hip-hop politics by paying close attention to how hip-hoppers vie for authenticity, recognition, and power through cultural practices—b-boying/girling, graffiti art, emceeing, djing, e.g.-at odds with the State, inequality, and injustice. We will also situate hip-hop politics within the ongoing history of American social movements. To avoid over-romanticizing, we will equally examine hip-hop's appetite for conspicuous consumption, misogyny, homophobia, trappin', and criminality. A deep understanding of hip-hop politics, then, requires examining its contradictions as well as the ways race, class, gender, sexuality, and geography shape hip-hop—and therefore American-culture, art, and identity. To get at these and other ideas, we will read, listen, and think broadly about why a full understanding of hip-hop truly matters.

AMST 307N: American Art and Society

3 Credits

History of art in the English colonies and the United States from the seventeenth century to the present. AMST 307N / ARTH 307N American Art (3) (GA;US)(GH)(BA) This course meets the Bachelor of Arts degree requirements. American art, from the colonial period to the present, is examined through paintings, sculpture, buildings, prints and photographs, as well as exhibitions and national/world fairs. The class places special emphasis upon the predicament of national identity by examining the ways in which the very notion of the "American" has

historically been highly contested. Special points of emphasis include: negotiations between indigenous, colonial and European artistic styles, representations of and by displaced populations (colonial subjects, Native Americans, African Americans), myths of the American landscape, the cult of domesticity and the gendering of American citizenry, later transatlantic experiences of expatriate artists, conflicts between urban and rural conceptualizations of the "typical" American experience, the role of the American avant-garde after World War II, and debates over federal funding for the arts. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender, race, and ethnicity. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to American art to a student of any major. This course has no prerequisite and presumes no prior exposure to fine art. Students will learn both the common vocabulary of art history and method of critical analysis in the field.

AMST 308N: American Architecture

3 Credits

History of the architecture of the United States, as well as its Native American and colonial antecedents. AMST / ARTH 308N American Architecture (3) (GA;GH;US)(BA) This course meets the Bachelor of Arts degree requirements. This Art History course (cross-listed with American Studies) will cover the history of American architecture and its historical contexts, from its Native American roots and colonial antecedents, through the formation of the United States, to the present. A sample of the topics that will be covered are the architecture of: Native Americans, Spanish Colonial missions, 17th-century Virginia, Puritan New England, Georgian America, Southern Plantations and Slave Cabins, Thomas Jefferson, the new federal city of Washington, D.C., the Greek Revival, the industrial revolution, utopian religious communities such as the Shakers, Gothic Revival cottages and villas, Victorian Philadelphia, Henry Hobson Richardson, the birth of the skyscraper in New York and Chicago, the City Beautiful Movement, Frank Lloyd Wright, Arts & Crafts California, Henry Ford's Michigan, Art Deco New York, Mies van der Rohe and the glass box, Levittown, Disneyland, Louis I. Kahn, Post-Modernism, Frank Gehry, and Green Buildings. Selected major buildings, architects, ideas, and urban developments will be emphasized. Architecture will be considered within the contexts of religion, politics, philosophy, culture, economics, gender, race, society, technology, engineering, landscape architecture, urban planning and interior design. This introductory survey has no prerequisite and is intended for both students of architecture/art and students unfamiliar with the field. This is an Inter-Domain General Education

course exploring American architecture from both the perspectives of the Arts (GA) and Humanities (GH). An exploration of the art, aesthetics and styles of American Architecture will be balanced with using architecture as a vehicle for understanding American history, culture, religion, society, and government.

AMST 309N: American Material Culture

3 Credits

This course covers American material culture defined as the interconnection of tangible, human-made forms in contexts representing cultural ideas and practices. It investigates the links of genres such as architecture, art, craft, dress, and food to one another in natural and social contexts such as landscapes, communities, and oceans. The spaces examined can be small, such as a desk, and analyzed ethnographically and historically. They can also be larger such as the built environment of suburbia and its symbolic meaning between city and country. Students identify aspects of form, construction, and use in such spaces and the patterns they express, including regional, ethnic, gender, religious, and class associations. The spaces can be "real" such as the house and body, and virtual, such a representation of environments that users build or that appear in video games. The course has a goal of analyzing cultural meanings and influences of material environments people create on human selves and their society.

AMST 400: Early America to 1765

3 Credits

American society and culture in the colonial period. AMST 400 Early America to 1765 (3) A study of early American history and culture from the Columbian encounter to the end of the colonial period in America. The course covers the results of contact between Native American civilizations and Europeans, forms of government and community that emerged in America, the formation of an American identity, and the

creation of a distinctive, expanding American cultural landscape. The course satisfies the "area" requirement in history for undergraduate majors in American Studies, and is open to all majors.

Prerequisite: 6 credits in American Studies or History

AMST 401: Revolution and Early Republic, 1765-1815

3 Credits

American society and culture during the period of the Revolution and the Early Republic. AMST 401 Revolution and Early Republic 1765-1815 (3) American society and culture during the period of the Revolution and Early Republic. The course satisfies the "area" requirement in history for undergraduate majors in American Studies, and is open to all majors. An objective of the course is for students to understand the significance of this formative period on the emergence of the United States as a nation. Students will examine the mythology of the Revolution as well as its historical record. They will consider the development of social and political institutions in the early years of the new nation, including the creation of pivotal texts of the Declaration of Independence and Constitution.

Prerequisite: 6 credits of American Studies or History or 5th semester standing

AMST 402: Antebellum and Civil War Era, 1815-1876

3 Credits

Social and cultural conditions, sectional rivalry, political crises, warfare, and Reconstruction from 1815 to 1876.

Prerequisite: 6 credits in American Studies or History

AMST 404: Industrial America

3 Credits

An analysis of American politics, literature, society, and economics from the 1870s to World War II.

Prerequisite: 6 credits of American Studies or History

AMST 405: Cold War

3 Credits

Examination of social and cultural currents in American life from World War II to 1990. AMST 405 Cold War America (3) Examination of social and cultural currents in American life after World War II to 1990. The course satisfies the "area" requirement in history for undergraduate majors in American Studies, and is open to all majors. Students will analyze the way that the confrontation between communist superpowers and the United States shaped politics, culture, and society. Among the events discussed are the nuclear bomb, space and arms race, Kennedy assassination, Watergate scandal, and Korean and Vietnam wars. The cultural expression of the period in film, television, literature, music, and art will be analyzed.

Prerequisite: 6 credits of American Studies or History

AMST 412: American Eras

3 Credits/Maximum of 99

Examination in depth of various and distinctive American time periods; subtitle expresses specific content. (May be repeated for credit.)
 AMST 412 American Eras (3) Examination in depth of various and distinctive American time periods. The subtitle expresses specific content. May be repeated for credit. The course satisfies the "area" requirement in history for undergraduate majors in American Studies and is open to all majors. The course covers periods or eras in American history that are not covered or emphasized in other courses. Some eras to be studied are the Great Depression, World War II, and 1960s. In addition to analyzing major events of the period, students will consider social and cultural developments.

Prerequisite: 6 credits of American Studies or History

AMST 417: American Beliefs and Myths

3 Credits/Maximum of 99

A study of symbols, beliefs, and myths in the American experience; subtitles express specific content. (May be repeated for credit.)

Prerequisite: 6 credits of American Studies

AMST 422: Religion and American Culture

3 Credits/Maximum of 6

Selected topics, problems, or historical movements in American religion; relation between religion and American culture.

Cross-listed with: RLST 422
 Bachelor of Arts: Humanities

AMST 423: Folk Groups and Genres

3 Credits

We live surrounded by folklore. From the jokes and stories we tell, to the ways we cook and eat, work and dress, even how we interact using digital media, much of what we do in our lives involves tradition. This course will provide students with detailed study of American folklore through an in-depth focus on a specific social group or creative genre. Topics covered may include group-based material such as ethnic folklore; the folklore of age groups; folklore, gender and sexuality; and occupational folklore; as well as units on genre categories such as folk narrative (folktale, legend, myth), verbal genres (proverbs, rhymes, jokes), customary forms (parades, festivals, dancing, games), material culture (dress, folk art, foodways), and musical forms (folk song, folk music). At the conclusion of this course, students will be able to explain key concepts in the study of folklore such as tradition, folk group, genre, performance, and practice, as well as how these concepts can be applied in the analysis and interpretation of culture. Students will also develop practical skills in ethnography, including participant observation, interviewing, audio and video recording, field note taking, fieldwork ethics, and folklore archiving. As part of this course, students will undertake a significant ethnographic research project, culminating in a comprehensive portfolio of field materials and an analytical or interpretive paper.

Prerequisite: (AMST 105; or ENGL 105) and (AMST 196; or ENGL 196)

AMST 432: Ethnicity and the American Experience

3 Credits

Theoretical and conceptual framework of ethnic studies: examination of specific issues related to major American ethnic and racial groups.

Bachelor of Arts: Humanities

AMST 435: Americans at Work

3 Credits

A study of occupational and organizational cultures in America.
 AMST 435 Americans at Work (3) A study of occupational and organizational cultures in America. The course examines historical and social changes in primary occupations of Americans, including agriculture, crafts and trades, mining and trapping, maritime, manufacturing, corporate, and service and information work. The role of unionism, individualism, and mobility in shaping attitudes toward work will be examined. Students will learn techniques of ethnography and historical analysis to interpret images of work in American society. Evaluation includes application of historical analysis and ethnographic observation of Americans at work in written essays, and two examinations.

Prerequisite: 6 credits in American Studies or Labor and Industrial Relations, or Sociology

AMST 439: American Regional Cultures

3-6 Credits/Maximum of 6

An interdisciplinary study of the culture of a region of the United States, such as the south or the west.

Prerequisite: seventh-semester standing
 Bachelor of Arts: Humanities

AMST 441: History of Sport in American Society

3 Credits

AMST 441 / KINES 441 History of Sport in American Society study of the background, establishment, and growth of sport in America from colonial times to the present, and the role of American sports in American culture and society. The course will examine the ways that sports have operated in the United States as the country has developed into a modern, mass society. Issues of national identity, commercialism, race, ethnicity, class, and gender will be discussed in relation to the popularity of sports. Another set of issues will center on language and media; students will employ methods of analysis such as ethnography and rhetorical criticism that emphasize the multiple layers of meaning inherent in sports culture.

Enforced Prerequisite at Enrollment: KINES 100 or KINES 341 or COMM 170 or RPTM 120 or HIST 113 or ENGL 234 or AFAM 114 or ASIA 101N or CAMS 142 or 6 credits of AMST or 6 credits of HIST or (3 credits in AMST and CAMS 142)
 Cross-listed with: KINES 441
 United States Cultures (US)

AMST 447: Recent American History

3 Credits/Maximum of 3

Contemporary economic, social, and political aspects of the United States and its role as a world power since 1945. AMST 447 / HIST 447

Recent American History (3) This course covers the history of the United States from the end of World War II to the present. Topics include but are not limited to the Marshall Plan, the Cold War, the Korean War, the rise of television, atomic power, the Eisenhower presidency, the Civil Rights and Women's Movements, the Vietnam War and protests, the space race, Watergate, the Reagan presidency, the two Iraq Wars, the Dot-com revolution, 9-11 and the War on Terror, and the Obama presidency. While addressing major historical movements, the course will also explore the culture of the period - art, literature, music, sports, television, religion, and film. Even though the course covers a relatively short span of years, students will see that American society has undergone dramatic changes in this period as the result of social movements, immigration, wars, political scandal, and technological innovation. The course will close by speculating on the current direction of the United States in light of the serious challenges the nation faces.

Prerequisite: HIST 021 , 3 additional credits in history, economics, or political science

Cross-listed with: HIST 447
Bachelor of Arts: Humanities
United States Cultures (US)

AMST 448: Ethnography of the United States

3 Credits

Ethnographic descriptions of various dimensions of life in the United States. ANTH 448 / AMST 448 Ethnography of the United States (3) Ethnographic descriptions of various dimensions of life in the United States. The course covers uses of ethnography in American Studies toward an understanding of social and cultural communication and performance. The application of ethnography and concepts of cultural anthropology to complex societies such as the United States is discussed. The course teaches students to use ethnographic methods for research of American society and culture. Attention is given to the ethics and issues of ethnographic fieldwork. The course satisfies the "area" requirement in "society" for American Studies majors.

Prerequisites: 3 credits of ANTH
Cross-listed with: ANTH 448

AMST 451: Topics in American Film

3 Credits/Maximum of 6

Critical and historical studies of American films. Analysis of directing, cinematography, editing, screenwriting, and acting.

Enforced Prerequisite at Enrollment: COMM 250
Cross-listed with: COMM 451

AMST 470: The American Renaissance

3 Credits

Studies in the works and the interrelationships of writers such as Emerson, Hawthorne, Poe, Thoreau, Whitman, Melville, and Dickinson. The course will cover Transcendentalism and the authors who contributed to this movement, many of whom lived in Concord, MA. Though the class will feature the works of Emerson, Hawthorne, and Thoreau, it can also branch out to address other authors such as Margaret Fuller, Jones Very, and Elizabeth Peabody. Departing from Concord, the course will explore Walt Whitman and Emily Dickinson, both of whom read and were inspired by Emerson. Finally, the course will include works by Herman Melville, who formed a friendship with Hawthorne prior to writing

Moby-Dick. Though literature constitutes the center piece of this course, iterations of the course may bring in other parts of the cultural, social, and political landscape: slavery, abolitionism, Jacksonian Democracy, western settlement, art, science, and technology.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Cross-listed with: ENGL 430
Bachelor of Arts: Humanities

AMST 472: Topics in American Literature

3 Credits/Maximum of 99

Focused study of a particular genre, theme, or problem in American literature. (May be repeated for credit.) ENGL 434 / AMST 472 Topics in American Literature (3) This course will allow faculty and students to focus a semester's study on a particular genre, theme, or problem in American literature. The flexibility of a topics course will allow faculty a forum in which to share current scholarship or to relate issues in American literature to larger school-wide themes in a classroom environment. Because of the potential variety of topics and faculty members, specific evaluation methods will be determined by the instructor and specified in the syllabus. The course will be offered once every two years with an expected enrollment of 25 students. The course satisfies the "area" requirement in culture for American Studies majors.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Cross-listed with: ENGL 434
Bachelor of Arts: Humanities

AMST 475: Black American Writers

3 Credits/Maximum of 6

A particular genre or historical period in the development of Black American literature. ENGL 431 / AMST 475 Black American Writers (3) (US) A study of a particular genre or historical period in the development of Black American literature. This course will allow faculty and students to focus a semester's study on a particular genre, theme, or problem in African-American literature. The flexibility of the course will allow faculty a forum in which to share current scholarship or to relate issues in African-American literature to larger school-wide themes in a classroom environment. Because of the potential variety of topics and faculty members, specific evaluation methods will be determined by the instructor and specified in the syllabus. The course will be offered once every two years with an expected enrollment of 25 students. The course satisfies the "area" requirement in culture for American Studies majors.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Cross-listed with: ENGL 431
Bachelor of Arts: Humanities
United States Cultures (US)

AMST 476: American Women Writers

3 Credits

A study of selected American women writers. ENGL 492 / AMST 476 / WMNST 491 American Women Writers (3) A study of selected women

writers, this course provides the opportunity to study writing by American women from an historical perspective and to explore the views these women have of themselves as artists. The course will concentrate on a careful reading of works by a variety of authors. It will raise the question of the role that gender—as well as other differences such as race, class, and ethnicity—play in the selection of literary forms and the development of character, theme, symbol, and rhetorical strategy. It will also explore the dimensions American women have brought to the American literary tradition. The course satisfies the area requirement in culture for American Studies majors and is open to all majors meeting the prerequisite requirements. The course will be offered once every two years and enrollment is 25.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Cross-listed with: ENGL 492, WMNST 491
Bachelor of Arts: Humanities

AMST 479: American Expressive Forms

3 Credits/Maximum of 99

Examination in depth of various and distinctive American expressive forms; subtitle expresses specific content. (May be repeated for credit.) AMST 479 American Expressive Forms (3) Examination in depth of various and distinctive American expressive forms. The subtitle expresses specific content. May be repeated for credit. The course satisfies the "area" requirement in culture for undergraduate majors in American Studies, and is open to all majors. The course covers periods or eras in American history that are not covered or emphasized in other courses. Some expressive forms to be studied are American essays, American humor, and American films. In addition to analyzing the traditions and patterns of these forms, students will consider the historical, social, and cultural context of these forms in the American experience.

Prerequisite: 6 credits in American Studies

AMST 480: Museum Studies

3 Credits

An introduction to the basic purposes, philosophies, and functions of a museum, with emphasis on the problems of museum administration. (May be repeated for credit.) AMST 480 Museum Studies (3) An introduction to the basic purposes, philosophies, and functions of a museum, with emphasis on the problems of museum administration. The course examines applications of American Studies to mechanics of operation and development of core services including exhibits, structured educational programs, and special events. The course places these functions within the philosophy of the "experience economy," whereby museums and historical organizations are challenged to meet expectations of an increasingly sophisticated audience.

Prerequisite: 6 credits in American Studies

AMST 481: Historic Preservation

3 Credits

A study of preservation practices and programs in America. AMST 481 Historic Preservation (3) A study of historic preservation practices and programs in America. This seminar will examine the historic preservation movement in the United States, including its history, function, and

practice. Its role in government, economic development, and community and regional planning will be discussed. The ways that American studies scholarship has influenced historic preservation will be considered.

Prerequisite: 6 credits in American Studies

AMST 482: Public Heritage Practices

3 Credits/Maximum of 99

A study of public heritage practices and programs in America. (May be repeated for credit.) AMST 482 Public Heritage (3) A study of public heritage practices and programs, which encompasses interpretation and education projects in American history and culture, disseminated through institutions to the general public. The areas under public heritage include the practices and programs of museums, expositions and fairs, archives, historical and cultural agencies, government bureaus, foundations, community organizations, magazines, films, festivals, and computer sites. The course traces the changes that have occurred in the public heritage movement, especially the ways that American Studies scholarship has been distilled through various public institutions and programs.

Prerequisite: 6 credits in American Studies

AMST 491W: American Studies Perspectives

3-6 Credits/Maximum of 6

This writing-intensive course covers perspectives and approaches of American Studies scholarship regarding themes, issues, and problems in American culture and their applications in society. It serves as a capstone course for American Studies majors who are required to take two sections on different themes, issues, and problems. It is open to other majors seeking exposure to the interdisciplinary methods and concepts of American Studies in addition to interpretative explorations of American society and culture. Examples of themes, issues, and problems that are covered in the course and represent key concepts in American Studies include "The American Dream," "Nature and Wilderness in American Culture," "The American Way of War," and "American Borders and Frontiers in the American Imagination." Methods that are typically covered include rhetorical/symbolic analysis, ethnography of cultural scenes, and comparative analysis of a cultural collection. Concepts include American exceptionalism, colonialism, materialism, individualism, and consumerism in a global context. A variety of evidence is typically used in the course including historical documents, literature, artifacts, oral expressions, photographs and graphics, and popular film and television. The course includes exposure to applications of American Studies knowledge in various institutions and careers such as museums and heritage organizations, government, communications, and education.

Prerequisite: seventh-semester standing

Bachelor of Arts: Humanities
Writing Across the Curriculum

AMST 493: The Folktale in American Literature

3 Credits

A survey of the literary uses of the folktale and legendary materials, with particular concentration on the literature of America.

Prerequisite: ENGL 015 or ENGL 030H

Cross-listed with: ENGL 493
Bachelor of Arts: Humanities

AMST 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities

AMST 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Bachelor of Arts: Humanities
Honors**AMST 495: Internship**

1-6 Credits/Maximum of 6

Supervised internship for undergraduate or graduate American Studies majors at a museum or another cultural, historical, or arts agency.

Prerequisite: senior-level status for undergraduate students; 18 credits of course work in major for graduate students; approval of program required

AMST 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Humanities

AMST 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Humanities

AMST 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Humanities
International Cultures (IL)

Animal Science (ANSC)

ANSC 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ANSC 100: Introduction to Animal Industries

3 Credits

This course will introduce students to the breadth and scope of animal agriculture in North America with emphasis on food producing animals. Additionally, fiber producing animals, pets, pleasure animals, and alternative livestock will also be studied. Students will be exposed to biological concepts and their relationship to contemporary production systems, economics, terminology and industry issues to enhance understanding of and appreciation for various uses of animals in North America. The course is available in a web-based format with extensive use of video tours of animal housing facilities, expert interviews, and explanations of the biology behind common production and food safety practices.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

ANSC 107: Introduction to Equine Science and the Equine Industry

3 Credits

This web based course provides students with basic knowledge about equine science and its application to the industry to prepare them to be more effective communicators with industry personnel. Inductive and deductive reasoning are introduced as a part of the scientific method and its application in critically evaluating products and concepts important to equine science and the industry. Equine science topics include basics of equine evolution, genetics and breeds, anatomy, physiology, reproduction, and nutrition. While these topics focus on the horse as a target, each topic also allows for comparisons to other mammalian species. Equine industry topics include history of use, disciplines, organization of the industry, components and careers; and prepare students to proceed into further studies in equine science. The course features presentations and interaction with industry professionals and instructors of higher level equine science courses at Penn State. In addition to the academic topics addressed, the course introduces students to using the university course management system, and the utilization of web based communication tools as individuals and as a team.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

ANSC 110: Contemporary Issues in Animal Biotechnology and Society

1 Credits

An introductory survey of animal biotechnology in society, the role for biotechnology and how it will benefit society. ANSC 110 Contemporary Issues in Animal Biotechnology and Society (1) This First-Year Seminar is designed to provide an introduction to the field of animal biotechnology. Emphasis will be placed on providing the student a perspective of the history of biotechnological innovation in animal agriculture and an overview of the scientific bases for animal biotechnology. The history, need for and development of food biotechnologies will be discussed. A major component of the course will focus on the regulatory processes in place in the U.S. for approving animal biotechnologies and the benefit/risk evaluation process used to assess safety and efficacy of new

animal biotechnologies. Social and economic implications of animal biotechnology will be discussed as well as overview about how to effectively communicate the benefits of the new food biotechnologies to policymakers and the public.

First-Year Seminar

ANSC 117: Equine Marketing

2 Credits

Principles of marketing and event planning including marketing systems, advertising, management systems, team building and other aspects of conducting a purebred livestock sale. Students learn through the planning and conducting of the annual Penn State Equine Science Showcase and Registered Quarter Horse Sale. ANSC 117 Equine Marketing (2) The Equine Marketing course is designed to allow students the opportunity to learn information related to the marketing of horses. Specific topics will include letters on marketing methods, event planning and management, advertising layout and design, the significance of pre-purchase exams to the marketing process, preparation and presentation of sale animals, and the role of the auctioneer. In addition to classroom lectures, students will have the opportunity to put the information gathered to use through the planning of Penn State's annual Equine Science Showcase and Registered Quarter Horse Sale. Students will be assigned to committees and will be responsible for all of the planning and implementation of the event. Specific tasks will include development of advertisements, public relations, development of press releases, development of an online and hard copy sale catalog, development of all office paperwork for the sale, interaction with industry leaders to gain industry buy in for the event, working with outside breeders who participate in the event, set up, clean up, and preparation and presentation of the horses being offered for sale. Through the process students will also learn many skills necessary to be successful in their future careers above and beyond those related to the marketing of horses. Some of these skills include working within a group, team building skills, communication with industry professionals, development of plans of work, and many more.

ANSC 150S: Animal Science Freshman Seminar

2 Credits

ANSC 150S is for first year University Park students intending an Animal Science major. Students will engage in college success strategies including time management, advising resources, University practices, policies and procedures, as well as campus resources and opportunities. Students will explore Penn State's animal facilities and interact with peers and faculty while building research, oral, and written communication skills.

First-Year Seminar

ANSC 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ANSC 198: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ANSC 201: Animal Science

4 Credits

Scope of animal and poultry science; genetic, physiological, nutritional, and health factors in food production. ANSC 201 Animal Science (4) This course examines the scope and diversity of disciplines comprising the animal and poultry sciences. The first portion of AN SC 201 focuses on animal products such as milk, meat, eggs, and wool. Students learn product compositions and their relevance to humans worldwide. Later lectures outline the roles that environmental, housing, nutrition, and health play in current animal production systems. A major focus of the course is digestive physiology. In-depth topics include nutrients, monogastric and ruminant digestion, and feed analysis methods. The final portions of the course focus on reproduction, lactation, behavior, genetics, and biotechnology. These areas are critical to successful animal production systems. Throughout the semester, current issues in animal sciences that are related to the course material are integrated into the lectures. The laboratories support the concepts presented in lecture related to animal products, nutrition, animal health, and reproduction.

ANSC 202W: Contemporary Issues in Animal Agriculture

3 Credits/Maximum of 3

ANSC 202W, Contemporary Issues in Animal Agriculture, is a 3 credit 200 level course, emphasizing the appropriate citation of sources and writing about contemporary issues facing the animal sciences field. Thus, writing assignments will center on new and emerging issues facing animal science students entering today's job market. Students completing this course will have produced a writing portfolio that includes a range of works appropriate for different audiences, as well as having participated in extensive self and peer evaluation of writing. Students scheduling the course should first complete ANSC 100, or have completed or be concurrently enrolled in ANSC 201. Course objectives are to teach written communication skills that will be valuable to those pursuing an education and career in animal science related fields. Upon completion of this course, students should be capable of developing a focused writing objective based on some knowledge of the designated audience, finding reliable sources of evidence, critically evaluating evidence and sources, correctly citing sources for various types of material, developing an effective outline, writing and revising drafts for a final piece of written communication, performing self and peer evaluations of writing, and producing a final piece of written communication that achieves the original objective and is valuable to the designated audience.

Enforced Prerequisite at Enrollment: ANSC 100 and Enforced Concurrent at Enrollment: ANSC 201
Writing Across the Curriculum

ANSC 207: Animal Products Technology

2 Credits

Composition, safety, palatability, preservation, and processing of foods from animals, impact of animal production and handling practices on product properties. FDSC 207 / ANSC 207 Animal Products Technology (2) This course is intended to give students

knowledge and understanding of production and processing of foods derived from animals (meat, milk, and eggs). Upon completion of this course students will be able to describe and explain the physical and biochemical characteristics of muscle foods, milk, and eggs. Students will be able to describe and compare harvesting, processing, and preservation procedures used in preparation of animal products for human consumption. Students will be prepared to predict the impact of variations in animal production, handling, harvesting, and product processing on meat, milk, and egg product characteristics. This is one of a group of courses dealing with foods from animals. Related courses offered in Animal Science covers animal growth and development and evaluation of animals and meat products. Related courses in Food Science cover food microbiology, food chemistry, and meat and dairy processing technology. The content of this course is intended to emphasize the connection between animal production and the resulting food products. FDSC 207 / ANSC 207 is intended to be of general interest to people who produce or eat animal products and thus is an integral part of the Animal Sciences major. This course will also be useful for strengthening meat industry knowledge for students in Food Science. FDSC 207 / ANSC 207 will be offered one semester per year. Student performance will be evaluated through written exams, quizzes, and written reports.

Cross-listed with: FDSC 207

ANSC 208: Animal Products Technology Laboratory

1 Credits

Harvesting and processing of foods from animals; hands-on and demonstration exercises; industry procedures for processing meat, milk, and egg products. FDSC 208 / ANSC 208 Animal Products Technology Laboratory (1) This laboratory is intended to be taken along with or following Animal Products Technology lecture. Providing students with an opportunity to experience the procedures involved in harvesting and processing foods from animals. Upon completion of this course students will be able to describe, demonstrate, and explain procedures commonly used in harvesting and processing of muscle food, milk, and egg products. Students will be able to recognize and predict the impact of incorrect procedures for harvesting and processing muscle food, milk, and egg products. The course includes hands-on exercises and demonstrations that allow students to experience the "look and feel" of industry procedures used in harvesting and processing meat, milk, and egg products for human consumption. Focus on issues related to food safety and food quality. Student performance is evaluated through weekly written reports, and a final lab exam.

Enforced Concurrent at Enrollment: ANSC 207

Cross-listed with: FDSC 208

ANSC 211: Introduction to Avian Biology

3 Credits

Introduces the biology of birds; lectures, laboratories on anatomy and function, incubation, breeding, disease control, management techniques, and student projects.

Enforced Prerequisite at Enrollment: BIOL 110

ANSC 213: Introduction to Animal Biotechnology

3 Credits

This course provides an early exposure to the emerging and diverse field of animal biotechnology. Basic principles underlying recombinant DNA technology, genetics, gene transfer technology, genomics and their technological applications will be discussed. This course is taught from the technological perspective that differs from the perspectives of basic science, or technique-oriented courses. The information provided in the required text-book, accompanying websites and current literature will be discussed extensively in the form of formal lectures, tutorials and review sessions.

Enforced Prerequisite at Enrollment: (CHEM 101 or CHEM 110 or CHEM 130) and BIOL 110

ANSC 215: Pets in Society

3 Credits

ANSC 215 Pets in Society (3) (GS) Companion animals have far-reaching influence on many aspects of human society. How humans relate to pets varies from individual to individual and is influenced by many factors. The field of human-animal interactions is quickly evolving and is supported by a variety of disciplines and empirical research. This course provides a broad introduction to the varied roles and influences of pets on human life and society. Topics of discussion include the historical, social, economic, scientific, and legal roles of pets in American society. The influence of companion animals on human development and mental health throughout the lifespan and in the case of disability is examined from a social science perspective. Genetics, breed, physical, and environmental influences play obvious and important roles in the development of canine and feline behavior and are used as examples of the multiple causes of behavioral development and expression. Learning theory and operant conditioning are discussed as they relate to dog and cat training. Newly discovered risks and benefits of animal ownership on human health are discussed, including the influence of pet ownership on cardiovascular disease and allergy development. Issues of responsible pet selection and ownership are discussed in relation to animal welfare and societal responsibility. Because of the emerging nature of human-animal interaction research, an important goal of the course is to instruct students on the scientific method and recognition of research methodologies. Critical evaluation of theoretical models and empirical research in class and small group discussions is used to show how these questions can be addressed scientifically. Throughout the course, students have the opportunity to gather information from various sources and make informed decisions on controversial topics and to understand the impact of individual actions and decisions on broader society.

General Education: Social and Behavioral Scien (GS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

ANSC 217: Introduction to Horse Judging

2 Credits

Introductory analysis of halter and performance classes of stock-type horses, with emphasis on conformation, gaits, patterns, and oral reasons. ANSC 217 Introduction to Horse Judging (2) encompasses the introductory information necessary for students to begin their

competency in horse evaluation. From external parts and critical evaluation of conformation of halter horses, to rail classes with gaits and transitions, to pattern classes with objective evaluation and scoring methods, to more specialized classes (trail, hunter hack, pleasure driving, etc.), students will expand their depth and breadth of knowledge for evaluating suitability to purpose of stock-type horses. Careful observation, critical thinking, decision-making and oral communication skills of students are repeatedly critiqued and enhanced in this course. Following successful completion of ANSC 217, students who elect to take ANSC 417 will be eligible to compete for a position on the Penn State Intercollegiate Horse Judging Team. Furthermore, this course serves as an elective for students outside of the Animal Sciences major and students throughout the University who simply have an equine interest; as well as a required course for students enrolled in the Equine Sciences minor offered by the Department of Dairy and Animal Science.

ANSC 225: Introduction to Dairy Judging

1 Credits

Training in the visual evaluation of dairy cattle and practice in defending decisions through oral reasons. ANSC 225 Introduction to Dairy Judging (1) Students will learn the basic concepts used in dairy cattle judging and evaluation. The Purebred Dairy Cattle Association Unified Scorecard will provide the framework for students to make decisions and enhance observation skills based on industry standards. Students will become familiar with terminology used to describe differences between cattle of the seven major dairy breeds as they judge classes of cows and heifers. They will develop communications skills by defending these evaluation decisions through oral reasons.

ANSC 290: Careers in Animal Agriculture

1 Credits

ANSC 290 is a required course for Animal Science majors and minors. Each week during class, students are exposed to varied potential career paths within the animal industries. Students will develop a resume and cover letter, and attend the College's career fair to interact with potential employers.

ANSC 291: Externship with Animal Science Business

1-2 Credits/Maximum of 4

Students will obtain a one-week on site work experience with an animal-related agribusiness. ANSC 291 Externship with Animal Science Business (1-2 per semester/maximum of 4) This course will provide an opportunity for students to acquire on-site skills and knowledge in a potential interest area of an animal-related agribusiness. Externship opportunities are provided during one week of winter break and one week of spring break and 1 credit is earned for each experience. Student responsibilities are to: prepare a cover letter and resume; participate in the interview process; maintain and submit a typed summary of a daily log of activities; prepare a final report to the instructors (copy sent to the agribusiness sponsor); present an oral presentation of the externship experience to their peers and a group of faculty; and complete a self evaluation of ANSC 291. Limited to Animal Sciences majors.

ANSC 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ANSC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ANSC 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ANSC 300: Integrated Animal Biology

3 Credits

An integrated study of the biology of domestic animal growth and the underlying cellular, endocrine and immune systems involved.

Enforced Concurrent at Enrollment: (BIOL 11 and BIOL 12) or BIOL 110 or at least third-semester standing
Bachelor of Arts: Natural Sciences

ANSC 301: Principles of Animal Nutrition

3 Credits

Nutrients and their metabolism; the nutritional requirements of livestock; the nutritional value of various feeds; principles of ration formulation.

Enforced Concurrent at Enrollment: CHEM 202 or CHEM 210

ANSC 305: Companion Animal Nutrition

3 Credits

Principles of care and nutrition and contemporary importance of companion animals with emphasis on canine and feline species. ANSC 305 Companion Animal Nutrition and Management (3) Students of the animal sciences must be equipped for a variety of career opportunities in the twenty-first century. It is apparent that most students will benefit from a balanced exposure to a variety of animal species. This is especially true for students who pursue a career in the many supportive agricultural industries such as the commercial feed industry, animal health, and research and development. This course is part of a series of courses related to the nutrition and management of animals. While the other courses will be related to farm animal species, this course will be the only one addressing companion animals. As such it should meet the demand of students without a strong farm background or interest; those planning to attend a veterinary or professional school; as well as a large group of students with a non-professional interest in companion animals. It is felt that the sophomore or junior level of the course is appropriate after students have completed Animal Science 201.

Enforced Prerequisite at Enrollment: ANSC 201

ANSC 306: Swine Production and Management

3 Credits

Students enrolled in ANSC 306 Swine Production and Management will study business and production-related concepts associated with modern swine production. The course will combine biology, nutrition, reproduction, health and welfare of pigs with business management, operations management, quality assurance, and marketing. Field Trips and hands-on labs at Penn State Swine Center expose students to hands-on application of classroom concepts.

Enforced Concurrent at Enrollment: ANSC 201**ANSC 308: Sheep and Goat Production and Management**

3 Credits

ANSC 308 Sheep and Goat Production and Management (3) encompasses the requisite information for students to manage any of the small ruminant livestock species including meat and wool sheep, hair sheep, and meat goats. Students will critically evaluate genetic, reproductive, nutritional, economic, and management criteria that influence profitability and sustainability of small ruminants as viable agricultural animal enterprises in Pennsylvania, the United States and the world. Hands-on learning to develop practical management skills will be provided via the laboratories held at the Penn State Sheep Barns.

Enforced Concurrent at Enrollment: ANSC 201**ANSC 309: Beef Cattle Production and Management**

4 Credits

Beef Production and Management will provide a comprehensive review of the business-related and production oriented concepts associated with modern beef production. This course will combine traditional disciplines of beef management with business management, operations management, quality control and marketing. Additional topics will include economics and factors affecting cost of production. As the course progresses, and following the exposure of students to the fundamentals of beef production, they will be given the opportunity to evaluate real production scenarios for development of business and management recommendations. In addition to the classroom, the Penn State Beef Center, College computer labs, and selected field trips will comprise the facilities used to teach the course. In addition, students will conduct problem solving exercises on beef enterprises throughout the state. Beef Production and Management will be included in the series of other production courses offered in this department. Having completed the course, students will be able to: 1. Describe the necessary management procedures in a beef enterprise that are vital for efficient and profitable production. 2. Describe and understand the fundamentals of the various segments of the cattle industry. 3. List the important components of a business management plan for a beef operation, including short and long-term capital requirements, and a projected budget. 4. Discuss the trends and important issues facing the beef industry in Pennsylvania, the nation and world. 5. Critically evaluate business and production scenarios to provide an in depth analysis and a recommended course of action for improving a beef enterprise.

Enforced Concurrent at Enrollment: ANSC 201**ANSC 310: Dairy Cattle Production and Management**

3 Credits

Principles of dairy management including the dairy industry and control points associated with nutrition, genetics, lactation, reproduction, and housing.

Enforced Prerequisite at Enrollment: ANSC 201**ANSC 311: Poultry Production and Management**

3 Credits

The application of fundamental concepts and preparation for careers in the economically integrated commercial poultry industry. ANSC 311 Poultry Production and Management (4) Poultry Production and Management will provide a comprehensive review of the business-related and production oriented concepts associated with modern commercial poultry production. The course will provide the student with an overview of poultry nutrition, physiology, genetics, health, welfare, and products and describe how these disciplines integrate with effective and efficient management, quality control, and marketing of poultry and poultry products. Additional emphasis will be given to the economics of poultry production, as well as current issues and challenges facing the industry. Throughout the course, students will be provided with experiential learning opportunities and will be required to use this knowledge to solve problems and to evaluate "real world" production scenarios in order to develop effective management and production skills. Having completed this course, students will be able to: 1. Describe and evaluate the key operational and management factors in a commercial broiler, egg-layer, and turkey operation. 2. Describe and understand the important business, environmental, food safety, and welfare issues and challenges facing the poultry meat, and egg industries in Pennsylvania, the nation, and the world. 3. Critically evaluate poultry business and production scenarios to provide a fact based analysis and recommended course of action for solving management or production problems.

Enforced Prerequisite at Enrollment: ANSC 100**ANSC 315: Small Animal Health and Disease**

3 Credits

Introduction to the principles of small animal health, including the recognition, prevention and control of common small animal diseases. ANSC 315 Small Animal Health and Disease (3) Small animals play increasingly important roles in human lives. In addition to their function as pets, they serve the disabled; protect human well-being through the police, military and border inspection services; and act as research subjects for the development of medical and technological advances. Control of disease and promotion of animal health is important in all small animal industries and uses. This course is designed to provide a basic background in the principles of health in small animal species (primarily dogs and cats). Emphasis will be on the maintenance of a healthy animal system, including the recognition, prevention and control of the most common small animal diseases. Because of the increasing amount of information available to all people through the internet and media, students will be given tools to understand basic medical terminology and will practice reading and interpreting scientific research. In addition, the importance of animal disease on public health will be addressed. Diagnosis and treatment of disease will only be covered in a general, illustrative fashion. This course is not intended to train students in the diagnosis and treatment of specific diseases, but rather to

recognize the conditions and factors which encourage disease, but rather to recognize the conditions and factors which encourage disease spread and to understand how to control and rectify those situations. Because of the varied situations in which small animals function, a primary objective will be to be able to apply the principles of animal health and disease prevention to varied facets of the small animal industry (e.g. private ownership, veterinary medicine, shelter work and management, service animal breeding/training, biomedical and nutritional research). This course is designed for students planning to work in or having a special interest in the small animal industry, including veterinary medicine, the pet food and pet products industry, the working dog industry, live animal sales, pharmaceutical sales, and research.

Enforced Prerequisite at Enrollment: MICRB 106 or MICRB 201 or permission of program

ANSC 317: Horse Handling and Training

3 Credits

Responses of horses to various stimuli during the training period. Laboratory exercises involve extensive practice with young horses.

Enforced Prerequisite at Enrollment: ANSC 327 and approved level of horsemanship

ANSC 322: Animal Genetics and Selection

3 Credits

Fundamental principles of genetics as applied to breeding farm animals. ANSC 322 Animal Genetics and Selection (3) This course teaches fundamental concepts related to genetic variation and how genetic change occurs in domestic animal populations. Students are introduced to the structure of animal genomes and molecular genetics. We discuss transcription, translation and factors that alter gene expression. Examples of mutations that underlie phenotypic variation are given and the contrast between traits influenced by single genes versus variation across the genome is emphasized. Students will learn how genetic material is passed from parent to offspring and how principles of inheritance are extended to populations. The concept of heritability for quantitative traits and factors that determine breeding values and the rate of genetic change for quantitative traits are considered. We discuss how biotechnologies can be used to alter genetic response in domestic animals, how genetic change for one trait can alter expression of correlated traits, and the animal welfare consequences that can arise due to genetic change. Genetic relationships among animals and inbreeding control strategies such as crossbreeding are considered. Students are also exposed to controversial issues relating to genetics and selection. Students participate in a breeding simulation and contrast population genetic change throughout semester to changes observed by their classmates.

Enforced Prerequisite at Enrollment: BIOL 110 or (BIOL 11 and BIOL 12)

ANSC 322H: Animal Genetics and Selection - Honors

3 Credits

Fundamental principles of genetics as applied to breeding farm animals. ANSC 322H Animal Genetics and Selection - Honors (3) This course teaches fundamental concepts related to genetic variation and how genetic change occurs in domestic animal populations. Students are introduced to the structure of animal genomes and molecular genetics. We discuss transcription, translation and factors that alter gene

expression. Examples of mutations that underlie phenotypic variation are given and the contrast between traits influenced by single genes versus variation across the genome is emphasized. Students will learn how genetic material is passed from parent to offspring and how principles of inheritance are extended to populations. The concept of heritability for quantitative traits and factors that determine breeding values and the rate of genetic change for quantitative traits are considered. We discuss how biotechnologies can be used to alter genetic response in domestic animals, how genetic change for one trait can alter expression of correlated traits, and the animal welfare consequences that can arise due to genetic change. Genetic relationships among animals and inbreeding control strategies such as crossbreeding are considered. Students are also exposed to controversial issues relating to genetics and selection. The course consists of textbook and online readings, classroom activities and a laboratory section dedicated to problem solving. Students participate in a breeding simulation and contrast population genetic change throughout semester to changes observed by their classmates. Honors students will research genetic selection or conservation programs for a species of their choice early in the semester. The student will submit a report that details the traits emphasized in the breeding program, how animals are evaluated for genetic merit, methods and cost of seedstock dissemination, and genetic trends for the species. This information will be used to guide selection decisions made during the breeding simulation. At the end of the breeding simulation, students will select an animal they developed during the semester and create a marketing report for the animal that details their genetic merit, pedigree, level of inbreeding, and performance of progeny.

Honors

ANSC 324: Value Determination of Meat Animals

3 Credits

Live animal and carcass evaluation of cattle, sheep, and swine to determine value of market animals and meat products.

ANSC 327: Horse Production and Management

4 Credits

ANSC 327, Horse Production and Management, is a 4 credit course for students pursuing careers that are directly or indirectly associated with the horse industry. This course is an in-depth examination of a broad range of topics that are fundamental to the care and welfare of all horses, as well as to managing a successful equine business. The course begins with an examination of equine behavior, with a focus on safe handling. Horse selection and judging are discussed and practiced. General health care, specific diseases, and parasitology are all covered. Significant time is spent on nutrition, reproduction, and exercise physiology. Finally, topics like facility design and management, coat color genetics, and emergency preparedness are discussed. Students completing this course should be able to: 1) Demonstrate and describe the production and management techniques necessary for the successful operation of the horse enterprise. 2) Describe the utilization of the horse's unique athletic ability in various disciplines. 3) Evaluate and apply the relationship of form to function in the use of horses for work and recreation. 4) Discuss and utilize the principles of selection, breeding, feeding, and management of horses in a range of scenarios. 5) Summarize the scope and diversity of the horse industry

Enforced Concurrent at Enrollment: ANSC 201

ANSC 331: Physiology of Animal Reproduction

3 Credits

ANSC 331 is a study of reproductive anatomy, endocrinology, physiology, behaviors, and management in animals. Students will gain an understanding of the development, organization, and functions of the reproductive system with a focus on domestic animals. This will include understanding endocrine regulation of reproductive processes and how hormones affect cellular function. Comparisons to primates, rodents, wild species, and non-mammalian species will also be made. Students will develop an understanding of factors that affect reproductive success and how this knowledge can be used to regulate/manage reproductive processes of domestic animals, wildlife, and humans.

Enforced Concurrent at Enrollment: ANSC 201**ANSC 332N: Science and policy of global greenhouse gas emissions and management**

3 Credits

This interdomain course introduces students to the science and policy of greenhouse gas emissions. The course focuses on emissions from natural sources, energy production and food production. Policy components will introduce students to the fundamentals of environmental policy and examine key policy options for mitigating and managing emissions. Global in scope, the course will also address how emissions and policy options differ in developed and developing countries. Topics will include overviews of the global carbon cycle, agriculture and land use change emissions, history of global energy use and production, overview of global climate change policy, frontiers in climate, energy and agriculture policy, amongst others.

Enforced Prerequisite at Enrollment: ENGL 15

Cross-listed with: GEOG 332N, METEO 332N

General Education: Natural Sciences (GN)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

ANSC 346: Animal Enterprise Analysis

3 Credits

Evaluating livestock operations within and across enterprises has become a vital skill to being profitable today. The nexus of financial performance and production management is the catalyst to profitable and sustainable operations. This requires the skillset and digital fluency to evaluate and interpret whole farm and enterprise analyses. Throughout the course students will investigate interactions of key livestock enterprise management practices with enterprise and whole farm finances; utilize the information provided in the laboratory sessions to interpret farm financial reports and develop well-written reports and to further understand information for a livestock farm operation; evaluate and assess financial data from various livestock enterprises and make sound recommendations for management practices improvements; develop digital fluency skills for understanding financial reports and their influence on management concepts for improving farm practices and profits.

Enforced Concurrent at Enrollment: ANSC 201**ANSC 350: Dairy Problem Solving**

2 Credits

Students will use dairy records to analyze herd performance in order to identify bottlenecks for higher productivity. ANSC 350 Dairy Problem Solving (2) This course will develop case based approaches to problem solving using dairy records. Students will learn to read and interpret dairy herd improvement herd summaries. Herd performance will be benchmarked against parameters from similar herds across the Northeast in order to identify production bottlenecks. Popular dairy herd management software will be used to analyze bottlenecks more completely. Additionally, the use of herd management software to record cow health events and set up management routines will be demonstrated. Classes will include in depth analysis of nutritional, reproductive, culling, genetic and milking management parameters as they relate to the dairy enterprise. In addition, economic and fiscal management will be presented as it relates to various aspects of the dairy industry.

Enforced Concurrent at Enrollment: ANSC 310**ANSC 357: Equine Broodmare and Foal Care**

3 Credits

ANSC 357, Equine Broodmare and Foal Care, is a 3 credit course for students pursuing careers that are directly or indirectly associated with the horse industry. This course is an in depth study of late gestation broodmares, fetal development, pre-foaling indicators of readiness for birth, and post-partum care and management of the mare and foal. Students completing this course should be well prepared to be employed on breeding farms as broodmare or foaling managers. Additionally, students completing this course should be able to: 1) Describe the basic endocrinology of gestation in the mare. 2) Summarize the development of the fetus during gestation. 3) Compare and contrast normal and the abnormal foaling process. 4) Recognize and understand the meaning of pre-foaling predictors. 5) Assist with the foaling process as needed.

Enforced Prerequisite at Enrollment: ANSC 327**ANSC 389: Supervised Experience in College Teaching**

1-3 Credits/Maximum of 4

The Supervised College Teaching course provides selected undergraduates with formal, supervised teaching experience in an Animal Science course. Faculty recruit students who excel in a particular course to serve as undergraduate teaching assistants for subsequent offerings of that course. Duties may include peer tutoring, teaching, or laboratory assistance, and developing and/or evaluating course activities and materials. Students participating in this course will develop a deeper understanding of the course material by actively teaching the material. The course is only available to students who are invited to serve as teaching assistants for an Animal Science course and enrollment is by permission of the instructor.

Enforced Prerequisite at Enrollment: Permission of program

ANSC 395: Animal Science Internship

1-12 Credits/Maximum of 12

Supervised field experience and study related to the student's major professional interest. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Animal Sciences majors; 6 credits in major plus approval of proposed assignment by instructor prior to advance registration deadline in semester preceding the semester in which the assignment is to be completed
Full-Time Equivalent Course

ANSC 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ANSC 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ANSC 410: Advanced Dairy Herd Management

4 Credits

Application of dairy herd management principles using case studies and actual dairy farm situations.

Enforced Prerequisite at Enrollment: ANSC 310

ANSC 413: Transgenic Biology

3 Credits

The fundamental concepts, relevant technologies, and applications of genetically engineered animals, with an emphasis on livestock and poultry species, are discussed in the class. Topics will include the history and progression of the animal genetic engineering field, the development and applications of genome editing technologies (e.g., CRISPR/Cas), and discussions about the regulations and ethics of genetically engineered animals. Upon completion of this course, students will be able to: (1) Provide an overview of how the developments in the basic sciences such as Molecular biology, Cell biology, Developmental biology, and Genomics are being applied to generate Transgenic animals; (2) Discuss the history and current state of animal genetic engineering; (3) Design a transgenic animal using gene-editing technologies; (4) Skillfully elaborate on ethical and regulatory considerations regarding genetically engineered animals. Assessments include in-class quizzes, take-home exams, group presentations, and class participation. There is a greater emphasis on finding and interpreting information from available resources than on memorization of materials.

Enforced Prerequisite at Enrollment: ANSC 322 or BIOL 222

ANSC 415: Companion Animal Behavior

3 Credits

Detailed study of companion animal behavior; including individual, developmental, and environmental bases of behavior with applied demonstration and discussion.

Enforced Prerequisite at Enrollment: BIOL 110

ANSC 418: Nutrient Management in Agricultural Systems

3 Credits

AGECO 418 / ANSC 418 / SOILS 418 Nutrient Management in Agricultural Systems is a senior-level course that applies the fundamentals of animal, plant and soil sciences to the issues and solutions in the area where livestock production intersects with water and air quality. Modern regionalization and concentration of animal production systems comes with environmental implications due to a net influx of nutrients to livestock farms. While some nutrients leave the farm in the form of animal products, 60 to 70% of the nutrients are excreted and applied to nearby crop land. If not properly managed these nutrients represent a risk to environmental quality. Students in this cross-listed course gain both scientific and practical understanding of sound nutrient management principals and strategies. The course considers big picture concepts such as nutrient cycling as well as farm-level implementations such as Nutrient Management Planning.

Enforced Prerequisite at Enrollment: (BIOL 11 and BIOL 12) or BIOL 110 or BIOL 127 or BISC 3

Cross-listed with: AGECO 418, SOILS 418

ANSC 419W: Applied Animal Welfare

3 Credits

Assessment of management practices impacting animal welfare; devoted to livestock species, companion animals, captive exotic species, and animals in research.

Enforced Prerequisite at Enrollment: ANSC 201 or 6 credits of biology
Writing Across the Curriculum

ANSC 420: Animal Nutrition and Feed Technology

4 Credits

Feedstuff evaluation, quality control, handling, storage: life cycle feeding of beef cattle, dairy cattle, sheep, swine, horses, and poultry.

Enforced Prerequisite at Enrollment: ANSC 301

ANSC 421: Poultry Evaluation and Selection

3 Credits

Poultry Evaluation and Selection is a hands-on course that will provide the opportunity for students to apply the principles used and standards that directly relate to evaluate the evaluation and selection of Purebred and meat breeding birds, egg production traits, as well as the processing aspects of the poultry industry. In addition, the course will cover practical and safe handling techniques of live poultry and poultry products. This course is taught every spring semester.

Enforced Prerequisite at Enrollment: ANSC 100

ANSC 422W: Dairy Cattle Evaluation and Selection

3 Credits

The course will focus on understanding the role of records and available information in designing breeding programs. Students will gain an understanding of breeds, conformation and genetic evaluation methods throughout the world. Topics will include type appraisal and linear classification, reading information sources such as sire summaries and pedigrees, and evaluating and integrating data to make herd breeding program decisions and merchandising selections. Industry breeding programs and current issues will be emphasized. A major focus throughout the course will be information management to make informed breeding decisions to maximize genetic progress and herd improvement.

Enforced Prerequisite at Enrollment: ANSC 322 or BIOL 222
Writing Across the Curriculum

ANSC 423: Comparative Physiology of Domestic Animals

3 Credits

A comparative approach to understanding body function in domesticated avian and mammalian species.

Enforced Prerequisite at Enrollment: BIOL 110

ANSC 424: Livestock Breeding Evaluation and Selection

3 Credits

Evaluation and selection of beef cattle, sheep, swine, and horses; critical analysis of performance records and genetic evaluations.

Enforced Prerequisite at Enrollment: ANSC 324

ANSC 425: Principles of Avian Diseases

3 Credits

Principles of pathogenesis and control of diseases in poultry and other avian populations. Case material used where appropriate. ANSC 425 / VBSC 425 Principles of Avian Diseases (3) This course discusses the major diseases of domestic poultry, with etiology, prevention, and treatment reviewed on each disease. Since many of these diseases also affect wild birds and pet birds these are also reviewed. Lastly, avian disease with zoonotic (human public health) potential are also discussed in the course. This course is required by those seeking a poultry minor. Previous coursework in pathogenic microbiology is beneficial.

Enforced Prerequisite at Enrollment: (MICRB 106 and MICRB 107) or (MICRB 201 and MICRB 202) Enforced Concurrent at Enrollment: ANSC 211 and ANSC 311

Cross-listed with: VBSC 425

ANSC 426: Advanced Judging and Selection

2 Credits/Maximum of 4

ANSC 426 provides students with critical thinking and communication skills through evaluation and selection of animals. This course provides intensive training in evaluation and selection of dairy, poultry, horses or meat animal livestock using subjective and objective measurements as well as the use of oral reasons to explain and defend decisions.

Enrolled students may compete against students from other colleges and universities at regional and national contests.

Enforced Prerequisite at Enrollment: ANSC 225 or ANSC 217 or ANSC 421 or ANSC 424 Recommended Preparation: AED 322

ANSC 427: Milk Secretion

3 Credits

Development and physiology of the mammary gland and factors which affect the amount and composition of milk produced.

Enforced Prerequisite at Enrollment: ANSC 201

ANSC 429: Advanced Beef Cattle Production

3 Credits

Application of scientific and business principles to practical production and management issues using case studies or selected live settings. ANSC 429 Advanced Beef Cattle Production (3) This course was developed to train students to critically evaluate management, facility, and husbandry practices of working beef cattle operations. Students visit owner facilities where they gather necessary information by interacting with the owners and inquiring about the owner's practices. The students use knowledge gained through previous courses and material covered in class to make recommendations. The students work in teams to present to the owners possible solutions to their problems. Each team will present a 30 minute critical evaluation of each case study with the owners being present. Students interact and answer questions concerning their presentation from the owners, students, and faculty. Students are introduced to the NCBA and Cattle FAX which they can use to stay abreast of beef industry concerns after completion of the class. If available, a field trip to either national or Pennsylvania state agriculture offices will occur.

Enforced Prerequisite at Enrollment: ANSC 309

ANSC 431: Physiology of Animal Reproduction

4 Credits

This course is a detailed study of reproductive processes in animals. Students will gain a fundamental understanding of the development, organization and functions of the reproductive system with a focus on domestic animals. This will include understanding endocrine regulation of reproductive processes and how hormones affect cellular function. Comparisons to primates, rodents, wild species and non-mammalian species will also be made. Students will develop an understanding of factors that affect reproductive success and how this knowledge can be used to regulate/manage reproductive processes of domestic animals, wildlife and humans. Recommended Preparations: ANSC 300

Enforced Prerequisite at Enrollment: ANSC 201 and BIOL 110

ANSC 432: Techniques in Cattle Reproduction

1 Credits

Demonstration and practice in cattle artificial insemination technique and semen handling. Instruction in reproductive systems anatomy, estrous cycle and estrus synchronization programs. ANSC 432 Techniques in Cattle Reproduction (1) This course provides instruction in the technique of artificial insemination and the associated applications of this technology. A minimum level of expertise in this technique will

be achieved through an understanding of cattle reproductive system anatomy, the estrus cycle and estrus synchronization programs. There will be a significant amount of time spent practicing artificial insemination technique in cows. This will be accompanied by instruction in semen handling and the proper use of the equipment used to store semen and to inseminate a cow. Evaluation will be based on proficiency in artificial insemination technique and semen handling in addition to a written exam. This course is offered during the fall semester by appointment.

Enforced Prerequisite at Enrollment: ANSC 309 or ANSC 310

ANSC 437: Equine Facilitated Therapy

3 Credits

Equine Facilitated Therapy uses equine-related activities to contribute positively to the well-being of people with disabilities. AEE 437 / ANSC 437 Equine Facilitated Therapy (3) The primary goal of this course is to acquaint the participant to equine facilitated therapy (therapeutic riding) and to introduce them to individuals who benefit/participate in such programs through lecture, audio-visual media, discussions, program visitation, independent research and via a practicum at a therapeutic riding program. Additionally, this course is designed to introduce the participant to various exceptional characteristics and conditions which may benefit from exposure/participation in equine facilitated therapy and other animal related therapy programs.

Enforced Prerequisite at Enrollment: ANSC 327
Cross-listed with: AEE 437

ANSC 447: Equine Exercise Physiology

3 Credits

ANSC 447, Equine Exercise Physiology, is a 3 credit junior/senior-level course for students interested in the basic and applied aspects of exercise physiology of the horse. The course begins with discussion on the history of equine sport. Students then explore the biochemistry and energetics of exercise followed by the anatomy and physiology that make the horse a unique mammalian athlete. The course then moves to the more applied aspects of exercise and training responses and training regimes specific for different disciplines. Finally, student will explore important management practices associated with the care of the equine athlete. Upon completion of this course students should be able to: 1. Apply an understanding of form and function of the horse to the diverse and unique athletic capabilities of the horse. 2. Discuss physiologic responses of the muscular, skeletal, respiratory, and cardiovascular systems of the horse to various exercise and training regimes. 3. Prepare and/or evaluate appropriate training regimes for horses preparing for different disciplines. An important component of this will be the ability to use knowledge of the basic science to improve application. 4. Design and describe physical therapy strategies for horse recovering from exercise or training related injuries. 5. Communicate to clients, customers and peers important information about exercise physiology, training, and exercise related issues, enabling them to improve the health and performance of their horse

Enforced Prerequisite at Enrollment: BIOL 110 or ANSC 201 or ANSC 327
General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

ANSC 450: Dairy Farm Management Systems

3 Credits

Capstone course emphasizing integration of dairy farm management principles into whole farm systems.

Enforced Prerequisite at Enrollment: ANSC 310 and ANSC 350 and ANSC 410 or permission of program

ANSC 451: Dairy Systems Analysis

1-2 Credits/Maximum of 2

Students will evaluate all systems of a working dairy farm business. ANSC 451 Dairy Systems Analysis (1-2 per semester/maximum of 2) This course will provide an overview of all areas of dairy business management. This course is designed to complement the dairy production courses and is meant to train students to organize material in a farm evaluation format. Various instructors (within their areas of expertise) as well as industry experts and dairy producers will be utilized to provide students with current concepts in dairy management. Requirements of the course include working in teams to visit, evaluate and make a presentation about a dairy farm business including an action plan for improving the business.

Enforced Prerequisite at Enrollment: ANSC 310 Enforced Concurrent at Enrollment: ANSC 410

ANSC 456: Animal Microbiomes

3 Credits

This course will be focused on three main aspects of the application of 'Omics' techniques in research to answer real-world problems. Students will be introduced to the concepts of multiple 'Omics' techniques, study designs, and data analysis methods. The roles played by the microbiome in different species will be discussed. Those concepts will then be put into practice through appraisal of primary literature. By the end of the semester, students will be able to apply the concepts learned to discuss scientific literature and be familiar with data analysis techniques.

Enforced Prerequisite at Enrollment: (MICRB 106 or MICRB 201)
Recommended Preparation: (STAT 200 or STAT 240 or STAT 250)

ANSC 457: Equine Reproduction and Breeding Farm Management

3 Credits

Equine Reproduction and Breeding Farm Management is intended to expand on the knowledge of equine reproduction and breeding farm management acquired in other classes. The students will get hands on experience in artificial insemination of mares and semen collection of stallions. Having completed the course, students will be able to: A. Collect semen from a stallion. B. Assess seminal characteristics and process the chilled semen to be sent to another farm. C. Artificially inseminate a mare. D. Apply scientific principles to make the decisions necessary to manage an equine breeding facility. The information covered will include but not be limited to reproductive management of the mare and stallion, foaling, and neonatology. Evaluation will typically be based on written tests, research and presentation of a selected topic, and laboratory attendance and participation.

Enforced Prerequisite at Enrollment: ANSC 327 and permission of program

ANSC 467W: Equine Nutrition and Feeding

3 Credits

Equine gastrointestinal anatomy and physiology; energy and nutrient requirements for body functions; applied interrelationships between nutrition, health, and performance. ANSC 467 Equine Nutrition and Feeding (3) is a 3 credit junior or senior-level course emphasizing the application of biological principles to the proper nutrition of horses. Students scheduling this course must first complete ANSC 301. Course objectives are that upon completion of the course, students should be able to a) Apply an understanding of form and function of the equine gastrointestinal tract to actual feeding management problems associated with athletic performance or health concerns; b) Describe the nutrient and energy requirements of horses in different physiologic states and apply these in diet evaluation and formulation; c) Communicate to clients, customers and peers important information about equine nutrition, enabling them to improve the health and performance of their horse without having to take a course on equine nutrition. Each student will complete a 3000 to 3500 word paper on how some aspect of nutrition might be applied to improve equine health or performance. The writing project will involve an oral presentation, multiple drafts and require students to review and provide feedback on each others' work. Students will be evaluated via a series of assigned homework, exams, class participation, and the overall writing project.

Enforced Prerequisite at Enrollment: ANSC 301
Writing Across the Curriculum

ANSC 477: Riding Instructor Training

1 Credits

Management of equestrian riding lessons, teaching techniques, lesson plans, program planning, time management, and handling of mounted groups. ANSC 477 Riding Instructor Training (1) The Equine Riding Instructor Training course relates to teaching, equestrian skills, developing lesson plans, program planning, events coordination, staff management, time management, and handling of mounted groups from beginners to more advanced level riders. There are many opportunities for riding instructors in the equine industry throughout the United States. Career areas include breed associations, cooperative extension, and equine facilities/stables. This course will help give students the tools to be safer and better-prepared equine riding instructors. Successful completion of the course implies students will be able to: Conduct horse riding lessons at all horsemanship skill levels, understand safe horsemanship; manage large mounted equestrian groups; and develop appropriate lesson plans.

Enforced Prerequisite at Enrollment: ANSC 327 or a demonstrable level of horsemanship

ANSC 480: Animal Growth and Development

3 Credits

Animal growth and development is the understanding of tissue interactions as they influence each other and whole animal complexity from conception to maturity. An understanding of growth and development in livestock species improves scientific advancements and improves efficiency in which animals reach growth or activity goals placed on them by producers, trainers, and caretakers. This course focuses on growth and development of meat animal species and its

influence on economically important tissues and final meat quality, however concepts are applicable across mammalian species.

Prerequisites: ANSC 201 Recommended Preparation: ANSC 300

ANSC 488: Biology of germ cells and assisted reproductive technologies

3 Credits

Germ cells are highly specialized cells that give rise to the next generation. The life history of germ cells from formation of primordial germ cells in the early embryo to formation of mature gametes will be traced in several mammalian species. Gamete maturation, fertilization and early embryo development will be covered in detail to highlight the unique features of these processes and the close relationship between germ cells, early embryonic cells and pluripotent stem cells. Special emphasis will be placed on the processes of meiosis and epigenetic reprogramming that occurs in both germ cells and early embryos. The effect of environmental factors such as diet, stress, endocrine disruptors on germ cell and early embryo reprogramming will be discussed. In the second half of the course, we will discuss how knowledge of germ cell physiology has led to the widespread use of assisted reproductive technologies (ART) which have fundamentally changed the way fertility is managed in animals and humans. ART topics covered include artificial insemination, gamete manipulation, in vitro embryo production, preimplantation genetic testing and control of ovulation. We will discuss how these technologies are used to treat infertility in both men and women. We will also cover the potential benefits and challenges of recent efforts to develop male and female non-hormonal contraceptive methods. Finally, the ethical and societal implications of advanced reproductive technologies will be discussed.

Enforced Prerequisite at Enrollment: BIOL110

ANSC 494: Undergraduate Research

1-6 Credits/Maximum of 6

Independent undergraduate research directed by an Animal Science faculty supervisor.

Enforced Prerequisite at Enrollment: Junior or senior status, approval of an Animal Science faculty supervisor, and approval of the Undergraduate Program Coordinator

ANSC 494H: Honors Thesis Research

1-6 Credits/Maximum of 6

Independent study directed by faculty supervisor culminating in an Animal Science honors thesis.

Enforced Prerequisite at Enrollment: Junior or senior status in the Schreyers Honors College and permission of an Animal Science honors advisor
Honors

ANSC 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ANSC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ANSC 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ANSC 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Anthropology (ANTH)

ANTH 1: Understanding Humans

3 Credits

ANTH 1 tells the story of humankind, how we as a species developed, and how modern Homo sapiens have developed more cultural complexity over time, moving, in the last 12,000 years, from a worldwide small population of hunter-foragers to a population so large that it strains the planet's resources, with nation-states competing for the loyalty of their citizens with powerful ethnic and religious enclaves and also with global corporations. All of these trends – biological, demographic, and cultural – are viewed from the perspective of evolution away from our earliest human patterns, toward the effects of demographic density and sociocultural complexity. The course takes a question-oriented approach to show the relevance of anthropology in today's world. Lectures are structured around what it means to be human – from a perspective of either biological anthropology, sociocultural anthropology, archaeology, or linguistics. Overall the course has three main goals: 1) provide an introduction to anthropology's subject matter, human cultural and physical characteristics, throughout our species' geographical and chronological range; 2) introduce students to some of the biological, ethnographic, archaeological, and linguistic methods that anthropologists rely on to reach their conclusions; and 3) impart a framework of knowledge that will facilitate understanding of one's own place in human history, in the larger culture, community, family, and household.

Bachelor of Arts: World Cultures

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

General Education: Social and Behavioral Science (GS)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

ANTH 2N: World Archaeology

3 Credits

ANTH 2N (World Archaeology) introduces students to the concepts and evidence used in understanding the development of cultural diversity on our planet. This course provides an interdisciplinary overview of the major developments in the early human past. Beginning with hominid tool-users, this course tracks the evolution and eventual spread of humans to all corners of the earth, Ice Age hunter-gatherers, the origins of art, the origins of agriculture and settled village life, and the rise and fall of complex urban civilizations. Through cross-cultural comparisons of indigenous cultures of the past and anthropological theory, students are exposed to topics such as the origins of gender differences in the division of labor, the role of ideology in cultural adaptation, differential access to technologies, economic production, artistic expression, the origins of social inequality, the ways that symbolic representation in the past shaped the nature of shared meaning and values, and the mechanisms of cultural change. ANTH 2N provides a unique perspective for understanding our increasingly complex and diverse contemporary world. Specifically, students will learn 1) archaeological approaches for identifying variability in the development of cultural systems; 2) anthropological concepts and archaeological evidence used to evaluate factors that shape the diversity of past cultural systems; and 3) the tools to explore the dynamic interaction between scientific process, reconstruction of past cultures, and current issues facing societies in an ever-changing world. The course also emphasizes ethical considerations within archaeology to illustrate the role of representations, values, norms, and traditions on reconstructions of past human societies. ANTH 2N fulfills 3 credits of the General Education Integrative Studies requirements by integrating two General Education Domain fields: the Social and Behavioral Sciences (GS) and the Humanities (GH). Students develop competency for combining knowledge across different domains and interpreting the past human experience in light of current issues and concerns. Students thus gain skills in evaluating their own values relative to the deep history of the human past and different ways for structuring and understanding the world. The course also fulfills an International Cultures (IL) requirement by providing an informed perspective on human cultural and behavioral diversity in the past. To achieve these educational objectives, ANTH 2N draws on multiple teaching formats and resources, including classroom lectures, hands-on labs, and readings from a textbook. Students are evaluated based on two exams and their participation and two quizzes in lab section. ANTH 2N is offered every semester.

GenEd Learning Objective: Soc Resp and Ethic Reason

ANTH 8: Aztec, Inca, Maya

3 Credits

ANTH 8 is a comparative survey of the development of the pre-Columbian Latin American civilizations. It is a general survey of three of the

great complex societies of the New World - the Aztec and the Maya of Mesoamerica (Southern Mexico and Northern Central America), and the Inca of the Central Andes of South America. Both the Aztec and the Inca empires were thriving in the 16th century when Europeans arrived, and are known almost completely from ethnographic information such as oral and written records. The Classic Maya were much earlier (AD 250-900), and are known primarily through archaeological research, but also through the lens of the New World's only sophisticated writing system. The course informs students about the methods of archaeology and places these cultures in a broader comparative perspective. By studying archaeological evidence from several sites we will address a few important theoretical issues in archaeology. These issues include: 1) the relationship between people, the environment, and social organization 2) the study of elites and commoners in archaeological cultures, and 3) the use of historical and archaeological data in reconstructing the past. Throughout the semester we will also examine varied lines of evidence, including archaeological artifacts, human remains, architecture, murals, sculpture, and historical texts (esp. codices and colonial accounts) to assess the role of evidence and theory in how we conceptualize the past. The information presented emphasizes the nature of these societies, analysis and interpretation of their basic institutions, religions, world views, as well as their culture histories. Central to the presentation is the degree to which modern Latin American cultures and populations have deep cultural and biological roots in the Pre-Columbian past, and many ethnographic models are discussed. Within the context of each segment, sociological concepts such as institutions, households, stratification, political economy, urbanization, and a host of others are used as organizing features. Issues of gender, ethnicity, and class structure are also discussed. Issues such as the peopling of the Americas, the origins of agriculture, and other Mesoamerican cultures are also reviewed.

ANTH 9N: Rise of Civilization in the Old World

3 Credits

ANTH 9N introduces students to the anthropology of early complex societies in the Old World, with an emphasis on the civilizations of Mesopotamia, Egypt, the Indus Valley and China. Course information emphasizes the nature of these societies, analysis and interpretation of their basic institutions, their religions and world views, and their culture histories. Within the context of each segment sociological concepts such as "institution", "household", "stratification", "political economy", "urbanization", and a host of others are used as organizing features. Issues of gender, ethnicity, and class structure are also discussed, and much information is presented in weeks 2 and 3 that is pertinent to an understanding of human biological variation and our cultural attitudes toward it, with obvious implications for issues of race. The course is much broader, however, in that it attempts to place the emergence of these ancient civilizations into the overall perspective of the larger evolutionary career of the human species in the Old World, including human biological and cultural evolution during the later stages of the Paleolithic, the origins and spread of early agriculture, etc. During the first part of the course there is also a series of introductory lectures designed to inform students about what archaeology is and how prehistoric archaeologists carry out scientific research to reconstruct and explain

what happened in the past. A great deal of emphasis is placed on ideas, concepts, and theories used by anthropological archaeologists to design and interpret their research and to explore not only what happened in the past, but to develop ideas about why things happened as well. Also included are lectures about archaeological finds or issues that have been particularly well publicized and about which students often express considerable curiosity. The main objectives are a) to expose students to a series of historically significant non-modern, non-Western societies and cultures using overtly evolutionary, behavioral, and sociological perspectives; b) to enlighten students concerning the kinds of extant information that are available for these societies, how research is designed to acquire new data, and how scholar's interpret these data, and c) to stress the nature of the agrarian human condition out of which modern societies so recently emerged, and under which people in many developing societies still live. Central to the latter are issues of subsistence agriculture and human demography. Central to ANTH 9 are comparisons among several great Old World civilizations, comparisons with other world civilizations and cultures, and comparisons with modern society.

ANTH 11: North American Archaeology

3 Credits

The story of the indigenous peoples of North America and its parallels with developments elsewhere in the world have captured the imaginations of many people over the years. But it takes more than imagination to explore this saga -- it takes the careful application of archaeology. This course surveys the archaeology of North America, including Mexico. The archaeological history of North American Indians is traced from their origins in Eurasia over 14,000 years ago into the period of European colonization. An ecological approach is taken to the examination of all major regions of the continent. The Eastern Woodlands coverage will include the many burial mound and temple mound cultures of the region. The objectives of the course are to familiarize students with the wide range of human adaptations that prevailed over time and space, to link the evolution of those adaptations to the surviving descendant native cultures of North America, and to provide students with a framework for understanding the many archaeological sites that are open to the public across the United States, Canada, and Mexico. A secondary objective of the course is to familiarize students with the techniques and methods archaeologists use to test hypotheses using archaeological data. The course takes an explicitly scientific approach to the subject, one that is based upon well-established evolutionary and ecological theory and is also firmly grounded in the evidence. The course makes extensive use of images of sites and artifacts as well as other graphics that are necessary for a comprehensive understanding of the subject. ANTH 11 fulfills both US and IL requirements. The course is structured to cultivate students' understanding of the similarities and differences among past Native American cultures of North America. Additional international focus is provided through exploration of the

archaeological evidence for indigenous cultural traditions in locations within present-day Canada (Arctic, Iroquoians) and Mexico (Archaic, Classic, Post-Classic periods). The course fulfills the IL designation by introducing students to cultural and behavioral variation and cultural achievements of indigenous North Americans. In addition, the course fulfills the US designation by interweaving discussion of the significant influence and impact of Native American history/culture on the history and development of the United States. The ethics associated with North American archaeology and their impact on US culture and cultural perception are also explored.

ANTH 21: Introductory Biological Anthropology

3 Credits

ANTH 21 (Introductory Biological Anthropology) is designed to introduce students to the fundamental principles and findings of human evolutionary biology. This course provides an overview of current data and theory related to biological variability among living and past human populations and among the extensive fossils that document human evolution. Through comparisons between humans and other mammals, particularly the living nonhuman primates, this course provides an essential comparative zoological perspective with which we can understand the origins, evolution, and diversity of our species. The course is structured around the theory of evolution, the unifying concept of biological anthropology. Throughout the course, students will be introduced to evolutionary theory as well as to the mechanisms of evolution and their relevance for understanding variation in past and present human populations. The course covers current research and topics in human evolutionary biology including evolutionary theory, natural selection, molecular and population genetics, human variation, human biology, primate diversity and behavior, and the paleontological record of human evolution. This course not only introduces students to the core concepts within the field of Biological Anthropology, but also provides a rich foundation for understanding the human condition from a biological and anthropological perspective. By the end of the course, students will be able to 1) explain the theory of evolution and the mechanisms underlying this process; 2) discuss human variation and human biology within the context of primate diversity and adaptations; 3) describe the major behavioral and morphological trends over the course of human evolutionary history and how they relate to modern human diversity. ANTH 21 is one of three core courses required of majors and minors in the Department of Anthropology and can also be used to fulfill three credits of General Education in the Natural Sciences. The course consists of two lectures and one lab section per week. Lab exercises and hands-on demonstrations help students understand the principles and findings of biological anthropology. Brief written lab exercises foster interactive learning.

 General Education: Natural Sciences (GN)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Integrative Thinking

ANTH 22: Humans as Primates

3 Credits

Humans as Primates is intended to introduce the student to the biological bases of human anatomy and behavior by drawing comparisons to the behavior and biology of our closest living relatives, the non-human primates. The principal goal of the course is to critically evaluate arguments concerning what uniquely makes us human and the role of genetics, environment, and evolutionary history on the development of human behavior and anatomy. The course will draw heavily on studies of living non-human primates as well as evolutionary theory, paleoanthropology, and evolutionary psychology to address issues such as human growth and development, dietary adaptations, human variation, human communication, intelligence, reproduction, violence and aggression, and culture. Humans as Primates is divided into four main thematic units each designed to present a set of related lessons exploring the role of biology in various aspects of human life. The first unit provides the foundation for the course by introducing the place of humans in the natural world. This unit presents a survey of living primates and their relationship to humans as well as an overview of evolutionary processes and human evolution. The other units present topics in human biology, communication, and social behavior focusing specifically on topics of importance to current events and aspects of popular culture and modern life. This course should be of significant interest to students in a diversity of disciplines including the biological and social sciences as well as anyone interested in human behavior. The course can be used to fulfill three credits of General Education in the Natural Sciences (GN). As such this course will help students understand how scientific information from a variety of disciplines can be used to investigate and understand human biology and behavior. The course will introduce the student to methods of data collection and analysis, foster critical thinking skills, and provide a rich background for understanding human diversity, human biology, and behavior. Students will have the opportunity to synthesize information from a broad range of disciplines to develop a fuller understanding of the biological basis of human behavior.

General Education: Natural Sciences (GN)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Global Learning

ANTH 40: Biocultural Evolution

3 Credits

Examination of evolutionary models of the development of the human capacity for culture, and of culture as an adaptive mechanism.

Bachelor of Arts: Social and Behavioral Sciences

ANTH 40Q: Biocultural Evolution

3 Credits

Are we "stuck" with prehistoric genes in a rapidly changing ecological and cultural environment? What does our evolutionary history really tell us about human nature, health, and well-being? To answer these questions, we must explore the complex interplay between human biology and culture in shaping the human species throughout our evolutionary history - our biocultural evolution. This course is about how we shape our biology, perhaps just as much as it shapes us. Each week, we will explore key

topics in human evolution from a biocultural perspective. Through this lens, we will learn how human evolutionary biology shapes our diet, physical activity, reproduction, diseases, and our capacity for culture. In turn, we also examine how our culture has shaped our biological capacities and limitations. Through these explorations, students will critically examine the processes and outcomes of biocultural evolution, including feedbacks between our biology and culture, and the timescales at which evolution occurs.

ANTH 45N: Cultural Diversity: A Global Perspective

3 Credits

ANTH 45N (Cultural Diversity: A Global Perspective) is designed to introduce students to the concepts and evidence used in understanding the cultural diversity of our planet. "Culture" can be defined as a socially transmitted system of shared conventions, beliefs, practices, and behavior. Cultural systems vary across time and space, and dynamic cultural processes are involved in how humans interact with each other, other organisms, and the environment. This class provides students with the tools to approach questions about the diversity of human cultures, how they vary across different societies, how different people experience and represent social worlds, why they change, and the importance of understanding such variability for the global challenges we face in an ever-changing world. Anthropology takes as its subject the entirety of the human experience, in all of its diversity through time and space. Anthropology thus provides a unique perspective for understanding our increasingly complex and diverse contemporary world. Specifically, ANTH 45N has three goals: 1) Introduce students to anthropological approaches for describing variability in systems of shared human thought, belief, and social practice. 2) Utilize anthropological concepts and evidence to evaluate factors that shape the diversity of cultural systems over time and space. 3) Provide students the opportunity to explore the dynamic interaction between contemporary cultural systems, histories of change, and the physical environment. ANTH 45N is designed to integrate two General Education Domain fields: the Social and Behavioral Sciences (GS) and the Humanities (GH). The course integrates different methods of inquiry and different forms of knowledge about the many factors that interact to influence patterns of convention, practice, and diverse ways of life. ANTH 45N enables students to develop competency for integrating knowledge across different domains and interpreting the human experience through multiple social, historical, and environmental perspectives. Students thus gain skills in evaluating their own values relative to the broad context of diverse ways for understanding the world. To achieve these educational objectives, ANTH 45N draws on multiple teaching formats and resources, including classroom lectures and discussions, readings from general textbooks and primary literature, critical analysis of ethnographic film, and online written materials and podcasts.

ANTH 45Q: Cultural Diversity: A Global Perspective

3 Credits

ANTH 45Q (Cultural Diversity: A Global Perspective) is designed to introduce students to the concepts and evidence used in understanding the cultural diversity of our planet. "Culture" can be defined as a socially transmitted system of shared conventions, beliefs, practices, and behavior. Cultural systems vary across time and space, and dynamic cultural processes are involved in how humans interact with each other, other organisms, and the environment. This class provides students with the tools to approach questions about the diversity of human cultures, how they vary across different societies, how different people experience and represent social worlds, why they change, and the importance of understanding such variability for the global challenges we face in an ever-changing world. Anthropology takes as its subject the entirety of the human experience, in all of its diversity through time and space. Anthropology thus provides a unique perspective for understanding our increasingly complex and diverse contemporary world. Specifically, ANTH 45Q has three goals: 1) Introduce students to anthropological approaches for describing variability in systems of shared human thought, belief, and social practice. 2) Utilize anthropological concepts and evidence to evaluate factors that shape the diversity of cultural systems over time and space. 3) Provide students the opportunity to explore the dynamic interaction between contemporary cultural systems, histories of change, and the physical environment. ANTH 45Q is designed to integrate two General Education Domain fields: the Social and Behavioral Sciences (GS) and the Humanities (GH). The course integrates different methods of inquiry and different forms of knowledge about the many factors that interact to influence patterns of convention, practice, and diverse ways of life. ANTH 45Q enables students to develop competency for integrating knowledge across different domains and interpreting the human experience through multiple social, historical, and environmental perspectives. Students thus gain skills in evaluating their own values relative to the broad context of diverse ways for understanding the world. To achieve these educational objectives, ANTH 45Q draws on multiple teaching formats and resources, including classroom lectures and discussions, readings from general textbooks and primary literature, critical analysis of ethnographic film, and online written materials and podcasts.

ANTH 60N: Society and Cultures in Modern Israel

3 Credits

Israel is often portrayed in media and popular society in incomplete or distorted terms. In some cases, it is presented as a troubled, violent, dangerous place, as a place permeated by long-standing hatred between Jews and Muslims, Israelis and Arabs, Israelis and Palestinians. In others, the focus is on the state's role as the center of Judaism—a home of the "chosen people" and the source of inspiration for one of the world's great monotheistic religions. Some present it as a model for how a democracy can succeed under trying demographic, historic, and geopolitical circumstances. Others frame Israel as a place of conflagration (armageddon) that will usher in a messianic period or as a nation-state with a discriminatory regime that privileges its majority population over its minority and administers oppressive policies over Palestinians in the occupied territories it captured in the 1967 War. While there are elements of truth in each of these presentations, the full picture of Israeli society is much richer and more complex. This course teaches students to cut through the mythology, and develop a more accurate understanding of what Israel is in the 21st century. Since Israel is a culturally, ethnically, and religiously diverse society, it is only possible to understand the true nature of modern Israel through exploring the many sub-groups that comprise the Israeli citizenry. The course looks at Ashkenazi and Mizrahi Jews (both religious and secular), Muslim and Christian Palestinian Arab citizens of Israel, Ethiopian-Israelis, Russian-Israelis, Bedouins, and Druze. For each group, it looks at demographics, background histories, migration patterns, institutions, cultural norms, values, and practices. We will look at what is important to each group, how they see and organize themselves, and how they understand and experience the world around them. The course aims to convey an understanding of the geographic, demographic, and social-historical context in which Israelis live as well as the diversity of Israeli culture. Students will be challenged to be critical readers of Israeli society and the way it is represented and to strive for measured, evidence-based analyses.

ANTH 83S: First-Year Seminar in Anthropology

3 Credits

ANTH 83S First-Year Seminar in Anthropology meets the Bachelor of Arts degree requirements. This seminar introduces students to anthropology as a scientific discipline with ties to other social and natural sciences. Through active participation in the seminar, students will be exposed to an aspect of anthropology that corresponds to a faculty member's area of expertise. Because students are introduced to cutting edge research, the course content will vary from one semester to the next. Seminar topics highlight current debates in the discipline and the research process. Research design, analytical methods, and sampling issues are covered by having students read and discuss new and controversial developments in anthropology. Strong emphasis is placed on the broader societal significance of scholarly research related to the seminar's principal focus.

Student comprehension of topics raised in class will be assessed by classroom participation, exams, and papers. In addition to the academic topic and issues of this course, students can expect to gain a general introduction to the University as an academic community and have the opportunity to explore their responsibilities as members of that community. Students will develop an understanding of the learning tools and resources available to them, including the opportunity to develop relationships with faculty and other students who share their academic interests. This seminar fulfills both a first-year seminar requirement and a general education social science requirement for Bachelor of Arts.

ANTH 100N: Anthropology of Race and Racism

3 Credits

Is "race" real? This course examines the concepts of race and racism from the perspective of four-field anthropology. Relying on ethnographic, biological, linguistic, and archaeological data, the course will introduce students to what anthropologists know about human diversity, as well as how the concept of "race" was developed to classify that diversity and justify social inequality. The course introduces students to basic concepts of anthropology by highlighting the variability of the race concept across time and space. Students will learn to understand race as a biocultural concept - one that is socially constructed, but that has very real biological and material consequences. In the first section of the course, students will learn why the concept of race does not reflect a natural or biological reality. In the second section of the course, students will gain an understanding of the cultural and interpersonal processes shaping racism and race. The third section explores how and why race and racism are so durable and pernicious in reinforcing structural social inequality. Students will learn how the persistence of racism, racialized structure, and race-thinking affect human well-being, including significant disparities in economic and health outcomes.

Recommended Preparation: An introductory course in anthropology is recommended, but not required.

ANTH 120: First Farmers

3 Credits

This class compares the archaeological record of the first farming societies around the world. Beginning ca. 11,000 years ago, people started experimenting with various wild plants and animals in their surroundings through selective propagation and harvesting. These

activities eventually resulted in genetically and morphologically distinctive species. Many human societies became dependent on these domesticates, and they still form the bulk of our subsistence today. These changes occurred independently in several regions under varying social, cultural, and environmental conditions. By looking at the archaeological record for the domestication and early farming societies in cross-cultural comparison, we can begin to understand the similarities and differences in the processes that resulted in the emergence and spread of food production. The course introduces students to archaeological and anthropological concepts by viewing cultural groups in ecological and social context, and highlighting the variability of human adaptations. To further illustrate the diversity of farming practices, examples from historic and contemporary ethnography will be studied. Students will gain an appreciation not only of the variety of subsistence adaptations involving domesticates, but also of the time, skill, knowledge, and labor required as a non-industrial food producer. Ethnographic examples also provide an avenue to address the cultural, ritual, and symbolic elements of food production and consumption that are often difficult to see in the archaeological record. Animal and plant husbandry are viewed as sources of food, raw materials, and wealth, and we will examine how farming practices help shape the economic, social, ecological and religious contexts of non-industrialized societies in the past and present. Finally, students will also explore the environmental impacts of different farming techniques and learn about the natural and cultural histories of the foods they eat. The earliest domesticates, such as wheat, rice, corn, potatoes, cows, pigs, chickens, sheep and goats, still provide the bulk of the world population's caloric consumption, and relatively few additional plant and animal species have been domesticated more recently. Industrial and globalized food production techniques have limited the genetic diversity of the modern food supply and created new environmental challenges in various parts of the world. This course provides students with an understanding of the origins of their daily foods as well as an appreciation for some of the contemporary challenges in food production.

ANTH 129N: Chocolate Worlds

3 Credits

This course will examine the "world" of chocolate throughout human history. First cultivated by the ancient peoples of the Americas and then manufactured by Europeans and Pennsylvanians alike, chocolate has played a privileged role as a luxury good. An interdomain course, "Chocolate Worlds" is interdisciplinary, taught by faculty in the departments of Plant Science, Anthropology, and History. As a team we investigate the how diverse societies have differentially interacted with this crop. Rather than be organized chronologically, this course will be divided into course Units, such as the history of cocoa uses and cultivation, cocoa plant science and farming issues, chocolate making and markets, and the state of the global chocolate industry. The course's lectures and assigned readings work in concert equally directed by scientific inquiry and the queries of the social sciences and humanities. Assignments will address real world questions relating

to contemporary cocoa cultivation and production, and its role in international development and social justice. As a class we will take field trips to sites such as local chocolate manufacturing facilities and cocoa research sites and laboratories. The learning objectives of this course include students' broad knowledge of cacao production, its history, and ethnical issues surrounding its cultivation in today's global economy. Additionally, students will gain an historical appreciation for the role this crop has played in diverse human societies and a scientific understanding of its genetic structure.

ANTH 140: Anthropology of Alcohol

3 Credits

This class provides a lively tour around the world and through the millennia, telling the compelling story of humanity's quest for alcohol. Beginning about 10,000 years ago, humans in China and the Middle East became more sedentary and began to rely more on the food they grew than from hunting and gathering. The cereal grains these early societies relied upon, such as rice, wheat, and barley, soon formed the basis for the first alcoholic beverages. Relying on ethnographic, biological, linguistic, and archaeological data, the course will introduce students to what we now know about how humans created and currently use fermented beverages across cultures. The course introduces students to the basic concepts of anthropology by highlighting the variability of alcohol use through time and space. From the world's first beer in Henan, China in 7000 B.C. to modern breweries in Pennsylvania the class will explore the historical and societal impacts of alcohol production. From the ceremonial use of distilled sugarcane in southern Mexico to ritualized tailgating in the United States, students will be presented with the highly varied ways in which alcohol is consumed. Anthropology of Alcohol provides students with an understanding of the origins of one of the world's earliest and most utilized psychoactive drugs as well as an appreciation for some of the contemporary challenges of alcohol use on college campuses in the US.

ANTH 146: Indigenous North America

3 Credits

This course is a review of the indigenous cultures of North America, located north of Mexico. It will cover the cultures that developed just prior to, during, and immediately after contact with non-indigenous explorers

and pioneers. The primary themes include (1) the astonishing diversity of ways of life that developed across the North American continent; (2) the exploration of this diversity from the perspective of cultural ecology; and (3) trends of cultural change and continuity that contribute to present-day Native American cultures. Students will also explore the stereotypes that plague a richer understanding of and respect for Native American communities. The course will introduce students to cultures that differ from their own. ANTH 146 meets both United States cultures and International Cultures objectives. Approximately 50% of the course focuses on the indigenous cultures of North America prior to European contact and the later founding of the United States. The course will introduce students to the diversity of cultures that have existed in North America prior the founding of the United States and Canada. Students will develop an understanding of similarities and differences among these non-US cultures and between these indigenous cultures and the culture of the US. Approximately 50% of the course will examine the impact these indigenous cultures have had on the historic and present-day United States culture - such as plant domestication, technological achievements, linguistic influence, and stereotypes.

ANTH 150N: Human Nature: The Science of Extreme Altruism and Violence

3 Credits

Why do humans so readily help strangers in some circumstances and not others? Why does our species have a tragic history of war, genocide, and violence? Just how flexible is our tendency for altruism and violence? Human Nature: The science of extreme altruism and violence surveys and synthesizes two of the most fascinating and unusual features of humans: our extremely high levels of altruism alongside our tragic propensity for violence. Treating humans as both biological and cultural creatures, we use the tools of anthropology, biology, and psychology to explore some of the most vexing questions in the social sciences and humanities. We will consider the role of the brain, hormones, genetics, social context, and evolution in producing the best and worst our species is capable of. While there are no prerequisites, you will gain a foundation in basic neurobiology and behavioral endocrinology alongside familiarity with leading theories of violence and altruism. We will use a combination of lectures, readings, and discussions to understand the science of altruism and violence. Throughout the course, we will use well-known current events and cross-culture case studies to anchor theory in real social contexts. By the end of this course, you will have the tools to evaluate behavior as the product of a complex interaction between biological, physiological, and social structures. You will never look at the world the same again!

ANTH 215: Skin: Evolution, Biology and Culture

3 Credits

This course will explore the evolution and roles of skin and human life, including health, communication, and social wellbeing. ANTH 215 Skin: Evolution, Biology and Culture (3) (GN) Skin mediates the most important of transactions of human lives because it is our interface with the physical and social environments. Skin is constantly changing and reflects our age, ancestry, and health, while serving as our personal "billboard." In "Skin," students will explore the evolutionary and social histories of human skin, including the changes in structure and function it has undergone in the course of human evolution. Three unique attributes of human skin will be explored at length: 1) functional nakedness and sweatiness; 2) the range of skin's natural colors; and 3) skin as a surface for decoration. The course begins with an overview of the structure and function of human skin and proceeds to an exploration of the comparative biology and evolution of skin in vertebrates, especially nonhuman mammals. Special attention will be paid to the outermost layer of skin, the epidermis. This will lead to a discussion of human hairlessness and sweating, and the role of skin in temperature regulation. Detailed exploration of the evolution of human skin color follows. The key role played by melanin pigmentation in protecting skin from sunlight will be discussed as a prelude to review of the evolution of human pigmentation in human dispersals. Discussion of the role of skin color in human interactions through history follows, including an introduction to the development and manifestations of color-based racism. The importance of skin as the organ of touch and as a vehicle for communication will then be reviewed. This will introduce the subject of skin as a mirror of human emotions, as in anger and blushing. Because aging of skin is one of the most visible signs of aging and is one of the most significant of human preoccupations, this phenomenon will be discussed in detail, and some of the most common skin diseases and problems associated with "wear and tear" will be surveyed. Considerable time and discussion will be devoted to skin decoration, with particular attention paid to the use of cosmetics and paints in the establishment of identity and the advertisement of sexuality in individuals, and the importance of tattoos in expressing individuality and group identity. The course will conclude with a speculative investigation of the future of

human skin, including the prospects for artificial skin and robotic skin, and the expanding frontiers of skin decoration and communication via remote touch.

ANTH 216N: Sex and Evolution

3 Credits

This course introduces students to evolutionary theory and explores its relevance to the anthropological study of human sexuality and sex differences. In doing so, the course draws from and integrates findings from a wide array of disciplines, including evolutionary biology, genetics, neuroscience, endocrinology, behavioral ecology, anthropology, and psychology. After honing their evolutionary skills by investigating reproduction in other species, students will apply evolutionary principles to understanding human mating. Why do we prefer certain characteristics in a mate? How do these preferences differ between and within the sexes, and why? How do mating behaviors vary across cultures, and why are some behaviors more culturally variable than others? Other topics covered include infidelity, sexual jealousy, concealed ovulation, sexual conflict and rape, orgasm, parental care and abuse, and menopause. In understanding the evolutionary basis for a trait, it is helpful to understand its development. Thus, this course also covers the basics of sexual differentiation and investigates how variation in these processes might lead to variation in sexual orientation and gender identity. Students should take away not only a better understanding of human sexuality but also a way of thinking that helps them understand all living things.

ANTH 219N: Spillover: The Anthropology of Emerging Infectious Diseases

3 Credits

We live in a world of increasing global awareness and public anxiety of emerging zoonotic diseases. Why do infections continue to spillover from wildlife to humans? What will the next outbreak be? Where will it emerge? Will it become a pandemic threat? Answering these questions requires exploring how our biology interacts with social, cultural, ecological, and climatic processes to influence the spillover of infections from animals to humans. This course begins with an introduction to human determinants of infectious disease that have persisted since the origins of agriculture, including: changing modes of subsistence and human settlement patterns, environmental transformation, and social inequalities. We will then explore how these processes shape contemporary pathways of zoonotic spillover and have led to the characterization and mapping of infectious disease "hotspots." The course will continue with an overview of emerging zoonoses of global health significance from a biocultural perspective. We will then narrow in on the most salient hosts and transmission pathways, focusing on evolutionary constraints and sociocultural risk factors that shape pathogen host switching. From these examples, we will look critically at the conceptual trends that have shaped our understanding of spillover events as a public health concern, with special attention to synergies and mismatches between locally and publicly perceived health risks. This course emphasizes the value of anthropological approaches in building more holistic and equitable

solutions to emerging human health threats, including opportunities for applied anthropology within human health.

ANTH 220: Anthropology and Art/ifacts

3 Credits

This course examines anthropological approaches to the study of art works, their production, and function in diverse human societies, both past and present. ANTH 220 Anthropology and Art/ifacts (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the ways in which the discipline of anthropology has used art and artistic production as an interpretive lens, as a means to understand past human action, cultural behaviors and ancient societies as a whole. To take up this topic, the course is divided into five distinct units allowing a thematic and comparative analysis of a variety of human societies. We will critique the conceptual divide between 'art' and 'artifact' focusing on long-standing assumptions about philosophies of aesthetics, derived primarily from early modern European (Renaissance) notions of 'art'. Geographically, the course content has a global reach, but primarily focuses on the artistic production of the Americas, Africa and Oceania, challenging the label of 'primitive' that has historically been applied by modern Western approaches. During the course of the term, we will conduct analyses aimed at elucidating how scholars have used the interpretation of art objects to better understand the complexity of human experience, specifically in regards to categories such as gender, kinship, social hierarchy and cosmology. Each class meeting will consist of a lecture and also a discussion component, primarily focusing on the assigned readings to ensure complete comprehension and relevancy. Students will be evaluated on essays and exams. This course will satisfy general education requirements and provide a base for other courses in anthropology, art history, museum studies and history.

Bachelor of Arts: Humanities

International Cultures (IL)

ANTH 221N: Ancient Maya: Sacred Blood & Conjured Serpent

3 Credits

The Ancient Maya: Sacred Blood and Conjured Serpent. ANTH 221N Ancient Maya Civilization (3) (GS;GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. Great civilizations emerged independently in several parts of the world beginning about 5500 years ago. Most students have had some exposure to the great Old World civilizations (Mesopotamia, Egypt, China), but know comparatively little about their counterparts in the New World. Among these, the Classic Maya (AD 250-900) are the most familiar, and are heavily featured in popular culture. Many students have (or will) visit Maya sites as tourists, and be impressed by the flamboyant archaeological remains of these ancient people. Despite their visibility, the Maya are widely misunderstood and heavily sensationalized. ANTH 221N traces the development of ancient Maya culture from about 10000 BC through its eventual conquest by the Spaniards in the 16th century. The primary focus will be on the Classic period, when Maya civilization achieved unparalleled heights

in architecture, art, astronomy, mathematics, and writing. The course content makes extensive use of images of sites, artifacts, and artwork to introduce and immerse students to the particularities of the Ancient Maya worldview. The Maya were participants in a much wider tradition of complex civilization in the region archaeologists call Mesoamerica, and several lectures will place them in this more general context. A good amount of content in this course will come from research done by members of the Penn State Anthropology Dept., which has a long tradition of Mesoamerican/Maya research since the early 1960s, and has heavily influenced both the study of Mesoamerican societies and complex cultures in general. Content and topics in the course will also situate Maya peoples, both ancient and modern, in relation to important topics in the contemporary world such as environmental sustainability and degradation, ethnic identity, and state formation. This course will fulfill basic BA and GenEd requirements (GS, GH, IL). It may also be used to fulfill an ANTH BA or ANTHS BS additional course requirement.

ANTH 222: Archaeology of Domesticated Animals

3 Credits

Biological, ecological and cultural history of animal domestication. ANTH 222 Archaeology of Domesticated Animals (3) (GS;IL)(BA) This course meets the Bachelor of Arts degree requirements. Animals were domesticated in a variety of places throughout the world beginning about 12,000 years ago, fundamentally shifting human-animal relationships. Most students have had some exposure to domesticated animals, particularly family pets such as dogs or cats, and some farm animals commonly found in the US. Yet few students know much about the biological, ecological, and cultural history of these animals, the contexts and timing of their domestication, the changing economic and cultural significance of individual species through time, nor economically and culturally important animals in other parts of the world. ANTH 222 will trace the history of domestication of key species: sheep, goat, cow, water buffalo, yak, pig, llama, alpaca, guinea pig, chicken, dog, cat, elephant, camel, horse, donkey, and mule. Emphasis is placed on the biology (genetics, morphology, wild progenitors, ecological niche, breeds) in concert with the cultural contexts in which domestication occurred. Furthermore, students will explore a range of human-animal relationships in regard to these domesticates with examples from archaeology, ethnography, modern US society, and history. This class discusses animals as food, raw materials, wealth, labor, and companions, as well as their economic, social, religious, and environmental impacts in different cultural and ecological settings.

Bachelor of Arts: Natural Sciences

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

General Education: Social and Behavioral Scien (GS)

ANTH 240N: Livelihoods and Ecosystems: Anthropological Approaches to Human-Environment Interaction

3 Credits

This course provides an anthropological understanding of the relationship between human subsistence and environment. The impacts of environmental change on human societies, and the roles those societies play in ecological modification, have deep roots in human evolution. This class focuses on providing students with tools to understand the foundations and cross-cultural expressions of resource use, environmental transformation, and their ecological interactions. The class has three goals: 1) introduce students to ways of thinking about ecological and social factors that shape variability in how humans define, use, and consume resources, 2) provide students the opportunity to explore archaeological, ethnographic, and ecological evidence of the interaction between human livelihoods and habitats across the entirety of the human experience, 3) utilize those concepts and evidence to investigate variability in contemporary livelihoods, socio-ecological systems, and the dilemmas we all face in natural resource use and sustainability. Regarding the first goal, students are introduced to the natural science of conservation biology and community ecology, along with influential concepts in the social science of decision-making and cultural institutions of resource management. We review key models of ecosystem dynamics and social interaction from evolutionary ecology, disturbance ecology, niche construction, common property theory, and political ecology to approach questions about consumption, complex socio-ecological systems, and the role of humans in food webs and trophic interactions. The course then investigates archaeological and paleo-ecological evidence concerning the evolution of human subsistence systems, global settlement, intensification, and their implications for understanding environmental change over the last two million years. We take the broadest possible anthropological approach: we explore the diversity of ways that humans have made a living in the past, and investigate a wide variety of contemporary systems of resource use. We begin with the emergence of subsistence regimes among the earliest members of our genus and variability in environmental conditions through the Pleistocene. We then discuss the spread of modern humans and arguments concerning the ecological impact of people in the New Worlds as humans first colonized Australia, the Americas, and islands of Pacific and Indian Oceans. Finally, students investigate contemporary Indigenous systems of resource use and food production, exploring interactions between people and culturally constructed environments, commensal relationships between humans and non-human plants and animals, processes of intensification, and ecosystem function. The course incorporates these concepts with studies of inequality into new ways of understanding global issues of conservation, economics, and policy impinging on environmental change.

ANTH 294: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

ANTH 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ANTH 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ANTH 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ANTH 303: Race and Gender in the Americas: Latin American and Caribbean Cultures

3 Credits

Utilizing a theoretical framework of intersectionality, this course examines historical and cultural constructions of race and gender in Latin America and the Caribbean. AFAM 303 / ANTH 303 / WMNST 303 Race and Gender in the Americas: Latin American and Caribbean Cultures (3) (GS;IL) Utilizing a theoretical framework of intersectionality this course examines how racial, gender, sexual, and class identities are constructed in Latin American/Caribbean societies. The course applies an anthropological perspective to a wide range of countries in the region to reflect on how historical events such as the conquest, colonization, slavery, and independence movements are relevant to understanding the region today, as well as how race, gender, and sexuality inform contemporary themes of empire, nation-building, imperialism, neo-colonialism, revolution, violence, militarization, social movements, religion, neoliberalism, U.S. involvement/relations, and popular culture. The course addresses issues of power, culture, racial formation, and citizenship by incorporating interdisciplinary material beyond ethnography such as newspapers, grassroots media, biographies, films, music, novels, personal testimonies, etc. Rooted in feminist anthropological scholarship, this course emphasizes how power (from above and below) and culture mediate relationships between individual/community agency and institutions/structures. As an effort to encourage students to think about Anthropology and culture beyond superficial or romanticizing celebrations of multiculturalism, food, and music, the course stresses the theoretical importance of situating power and privilege amidst difference. We conceptualize culture not only as socially transmitted patterns of behavior and ideas/meanings, but as a complex and dynamic process/medium grounded in unequal relations in which power is constituted and resisted. The ethnographic emphasis of the course centers on the complex lived realities and voices of people, encouraging students to learn, understand, and respect cultural difference. The course offers students a broad sense of how power is central in the production of knowledge (particularly within the disciplines of Anthropology and History). Students will critically engage an array of topical issues in Latin America beyond dichotomous thinking. Discussion of course material includes contemplating issues of ethics, subjectivity, bias, and privilege. Conversations regarding processes of "Othering" and traditional "us vs. them" debates that often occur when discussing developing countries will prompt students to

situate their own power/privilege and challenge our assumptions and preconceived notions of Latin America. Moreover, this course teaches Latin American Cultures within a global context of racialization. As such it also stresses the historical and contemporary social, economic, cultural and political significance of the U.S. in Latin America, to demonstrate how we are connected and responsible to what happens "over there." In order to promote service learning, a core tenant of feminist pedagogy, this course also offers students the opportunity to participate in an optional embedded program entitled "Cuba: Identity, Diversity and Popular Culture". This two week course in Havana, Cuba promotes interactive learning in and outside the classroom with international study. This course component successfully combines academic classes, hands-on activities, and service learning.

Cross-listed with: AFAM 303, WMNST 303
International Cultures (IL)

ANTH 321W: Intellectual Background of Archaeology

3 Credits

Introduction to primary sources on the development of archaeology as a scientific discipline.

Prerequisite: 3 credits of ANTH
Writing Across the Curriculum

ANTH 375Q: Anthropology of Food Honors

3 Credits

This course is an anthropological approach to understanding temporal and spatial variation in human food consumption and nutrition: why do we eat what we eat? To answer this question, we approach it from multiple perspectives: biological, evolutionary, ecological and social. In this course, students will investigate how food tastes, preferences, and diets of different individuals and societies both in the past and present are affected by genetic variation, by processes of individual and cultural learning, by evolutionary and ecological forces and histories of ecological and social interaction, by existing social contexts and structures, and by global political and economic forces. Topics include a broad survey of human and nonhuman primate diets and their physiological and behavioral correlates; theories of optimal diet breadth and prey choice; fossil and archaeological evidence for early human diets; genetic adaptations to diet; metabolic syndrome; food security; food taboos; the origins and cross cultural uses of spices; ecological impacts of hunting, gathering, and agropastoralism especially relative to food webs, biodiversity and sustainability; cultural diversity in the social uses and meanings of food and the sharing of food and how sociopolitical contexts have shaped the overexploitation of certain resources throughout history. Students will come away from this course with an understanding of the diversity of human foodways through time and space: how biology, culture, and ecology interact to shape the food we eat, and how the food we eat shapes us.

ANTH 380: Anthropology Museum Studies

3 Credits

Introduction to the history, significance, and operation of anthropology museums. ANTH 380 Museum Studies (3) This course introduces students to the operation of anthropology museums and to the growing field of museum studies. The course explores the historical setting within which these institutions evolved and the role of museums in the development of anthropology. Students will learn about the primary functions of museums through individual and group projects. Other topics to be covered include museum organization and administration, collection management, curation and conservation, research and education, public relations and financing, and ethical and legal issues. Students will get hands-on experience with the planning and implementation of a display in the Matson Museum of Anthropology. In addition, students will learn about museum careers, museum developments in other countries, and contemporary controversies, such as repatriation and the shifting role of museums in contemporary society. The course will provide the student with an introduction not only to the behind-the-scenes nuts-and-bolts of daily museum operations but also to the institutional role of museums as the preservers, interpreters, and communicators of humanity's cultural heritage. Students are evaluated based on two papers, work on Matson Museum exhibits, and participation in class discussions. This course fulfills a 3-credit requirement for additional courses for the anthropology major. This course expands on the history of anthropology and professional employment in the field that is presented in introductory courses.

ANTH 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

ANTH 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ANTH 401: Human Evolution: The Material Evidence

3 Credits

Human origins as seen in the fossil record and comparative biology of humans and their primate relatives.

Prerequisites: 3 credits of ANTH

ANTH 403: Evolution of Human Walking

3 Credits

An in depth analysis of the biology, biomechanics, evolutionary history of human walking and running.

Prerequisites: 3 credits of ANTH

ANTH 405: Primatology

3 Credits

Nonhuman primate origins, evolution, comparative physical and behavioral characteristics, ecological context, phylogeny and taxonomy; and their importance in anthropology.

Prerequisites: 3 credits of ANTH

ANTH 408: Anthropological Demography

3 Credits

Analysis of demographic studies in traditional and very small populations. ANTH 408 Anthropological Demography (3)(BA) This course meets the Bachelor of Arts degree requirements. This course examines population-related problems from an anthropological perspective. Special emphasis is placed on ecological and economic approaches to the study of population dynamics in small-scale, preindustrial societies. This is an advanced undergraduate course that builds upon introductory anthropology and leads the student into more difficult demographic problems that are linked with economics, politics, religion and other cultural factors that shape population and population change. While the course is designed to introduce any of the basic analytical methods of demography, attention is focused primarily on fundamental theoretical issues concerning population growth, resources, fertility, mortality, age structure, and household demography in traditional societies. Data is drawn from ethnographic studies of living populations, from historical demography, and from paleodemography (the reconstruction of population patterns from skeletal samples). There will be three take-home problem sets. These will be a mixture of short essay questions and simple numerical exercises that can be solved on a pocket calculator or a spreadsheet. This course fulfills a 3 credit 400-level requirement for the Anthropology major and minor.

Prerequisites: 3 credits of ANTH

Bachelor of Arts: Social and Behavioral Sciences

ANTH 410: Osteology

4 Credits

Introduction to the systematic study of the human skeleton from an evolutionary developmental biological perspective. ANTH 410 Osteology (4) This course introduces students to the aspects of the human skeleton and dentition that are of anatomical, archaeological, forensic, and developmental significance. Topics include the identification of skeletal and dental structures; the distinction between normal and pathological bone; the estimation of age, sex, and stature from skeletons; bone metabolism; growth and development; and the functional aspects of musculoskeletal and dental systems. Up to one-half of the course is spent on bone identification and skeletal anatomy. Lectures are supplemented by labs that provide practical experience in the identification of individual bones and anatomical structures, age and sex estimation, and the differentiation of abnormal from normal bony structures. It is absolutely essential for students to attend labs to familiarize themselves with bone specimens and casts. At the close of this course, students are expected to be able to recognize human bones and be familiar with anatomical terms, the bony landmarks that define their shape, and the relation of those bones with various soft-tissue structures. Students will have a basic grasp of bone growth and development, as well as how to identify an individual's general characteristics from the skeleton, such as age, sex, and prior life-

history events including disease and trauma. The course fulfills a 400-level elective for the Anthropology (BA) major and minor, as well as the Archaeological Science and Biological Anthropology (BS) degree programs.

Prerequisites: 5th Semester standing

ANTH 411: Skeletal Forensic Anthropology

3 Credits

An introduction to anthropological forensic science with an emphasis on what can be learned from human skeletons and archaeological recovery methods. ANTH 411 Skeletal Forensic Anthropology (3) This course is a survey of forensic anthropology focusing on human skeletal remains and archaeological recovery methods. Emphasis is placed on field methods used to collect human remains from surface and buried contexts; taphonomic processes; estimating age, sex, stature, and ancestry from human skeletons; recognizing signs of trauma and scavenger damage; and identifying individuals from skeletons. Lectures are accompanied by class discussions and complemented by practical lab sections closely tied to lecture materials. There will be two exams, a midterm and a final, and students are responsible for preparing a poster and presenting a semester-long research project. This course is related to existing ANTH 410, Human Osteology, and proposed course ANTH 413, Molecular Forensic Anthropology. It fulfills a 400-level requirement for the anthropology major or minor, as well as the university's Forensic Science major.

Prerequisites: 5th Semester standing

ANTH 412: Settlement Demography

3 Credits

Examination of the demography and ecology of human settlement systems in the preindustrial past. ANTH 412 Settlement Demography (3) This seminar will examine the population dynamics of human settlement systems in preindustrial societies, living, historic, and prehistoric. The focus will be on subsistence-level agrarian settlements, but some attention will also be paid to settlement patterns in hunter-gatherers, in market economics, and in complex societies. After reviewing basic assumptions and problems of working with spatial data, the course will examine processes determining settlement size, composition, and location on the micro-level (i.e. that of individual households, farmsteads, hamlets, and villages) and then pass on to regional patterns of transport, migration, and defense. The processes of site colonization, settlement expansion and contraction, site abandonment, and re-colonization will all be considered in detail. Since human settlements are always non-randomly distributed across spatially-heterogeneous landscapes, some basic landscape ecology will be presented in the course. Some fundamentals of geostatistical analysis will also be taught, although the course is not intended to be a survey of quantitative geography or spatial analysis. Rather, it is designed to be a more specialized follow-up to ANTH 408 (Anthropological Demography); the new course builds upon the basic explored in ANTH 408 by extending them into the spatial domain. During the last quarter of the semester, students will split into 2-3 teams, each of which will re-analyze settlement data from a region and time period of its choice for presentation to the rest of the class. The proposed course will provide 3 elective credits toward the undergraduate major and minor, and will be open to graduate students as well. The overall aim is to produce scholars who can think in creative ways about the dynamics of settlement systems in their own reading and research. The course should be of interest to archaeologists, anthropological

demographers, ethnologists, and other students interested in human population science, especially as it relates to preindustrial society.

Prerequisites: ANTH 21

ANTH 413: Molecular Forensic Anthropology

3 Credits

An introduction to the field of the application of DNA methods to estimating forensically useful phenotypes. ANTH 413 Molecular Forensic Anthropology (3) This course is a survey of forensic anthropology focusing on human genetic methods. Emphasis is placed on laboratory methods for analyzing DNA variation, the genomic and geographical distributions of genetic variation, estimating genetic ancestry, sex, pigmentation, facial features, and other traits. Lectures are accompanied by class discussions and complemented by practical lab sections closely tied to lecture materials. There will be three exams and students are responsible for preparing a poster and presenting a semester-long research project. This course is related to existing ANTH 411, Skeletal Forensic Anthropology. It fulfills a 400-level requirement for the anthropology major or minor, as well as the university's new Forensic Science major.

Prerequisites: 5th Semester standing

ANTH 414: Microbial Anthropology: A microbial lens on the human experience

3 Credits

The human body contains more microorganisms than it does its own cells, yet these complex communities of microorganisms are largely absent from Anthropology textbooks. This course investigates the interplay between microbiology and anthropology, exploring the roles that microbes play in human evolution, adaptation, health, and culture. We will first review basic concepts in microbiology (what are microbes?) and microbiome science (how is DNA useful?) and apply this understanding to core concepts in anthropology, including those that guide our understanding of living, ancient, and extinct humans. For example, what human activities or practices influenced the origins of disease, both infectious and non-infectious? How are microbes shared or transmitted during human interactions? Can microbes provide information about past human behavior or culture? How do microbes help or hinder human adaptation to new environments? This examination will be done through lectures and in-class discussions based on primary literature from different scientific fields of study. This understanding will be used to apply new interdisciplinary research approaches and see anthropology in a new light.

Recommended Preparation: ANTH 21 and ANTH 461

ANTH 416: The Evolution of Human Mating

3 Credits

The Evolution of Human Mating is a science course designed to familiarize students with the primary literature on the evolution and development of human mating behavior and sex differences.

Prerequisites: 3 credits of ANTH

ANTH 418: Medical Anthropology

3 Credits

This course provides an introduction to the field of medical anthropology from an ecological, biocultural, and economic perspective. Drawing on readings and ethnographic sources, students will examine how anthropology and the social sciences have addressed issues of health in a global context. Students will begin the semester with an introduction to the study of health in anthropology. After discussing the basic theoretical frameworks, students will consider topics of nutrition, the life cycle, reproduction, and infectious disease. In the final portion of the course, students will focus on the health consequences of stress and culture change. One of the primary aims of this course is to illustrate how medical anthropology can be applied in real world settings, including during outbreak investigations, and in understanding patterns in population health.

ANTH 419: Anthropology and One Health

3 Credits

Is there a true distinction between human health, the health of animals, and the health of the environments we share? Or is there only "one health"? This course examines the interconnectedness between human, animal and environmental health that have shaped our evolutionary history and modern-day health challenges. The course will start by exploring the ways by which human-animal-environment interactions have changed over evolutionary timescales, and in response climate, landscape, and population changes. The course will focus on how these changes manifest in modern environments to contribute to the transmission and spread of pre-existing and new zoonotic diseases between animals and humans. We will also explore interactions between infectious diseases and other One Health issues, including food security, livelihoods, and biodiversity conservation. Through this course, students will be introduced to relevant anthropological theories and methods within the One Health framework. Equipped with a strong theoretical background, students will critically examine the conceptual trends that have shaped anthropological contributions to One Health. Students will engage with primary literature to learn how anthropology and social science are applied to modern day issues in global settings. This course assumes that anthropological engagement within One Health and related fields is not yet fully realized, and in turn, encourages students to explore new connections. The course thereby provides a forum for students in anthropology and other One Health related fields (e.g. biology, ecology, public health, human and veterinary medicine, sociology, geography, nutrition, and others) to engage in interdisciplinary thinking within One Health.

Recommended Preparation: ANTH 219

ANTH 420: Archaeology of the Near East

3 Credits

Culture of the Near East and India from Paleolithic times through the Bronze Age.

Prerequisite: 3 credits in CAMS or 3 credits in ANTH or permission of instructor

Cross-listed with: CAMS 430, JST 420

Bachelor of Arts: World Cultures

Bachelor of Arts: Social and Behavioral Sciences

ANTH 422: Meso-American Archaeology and Ethnography

3 Credits

Survey of ethnohistorical and ethnographic patterns of Meso-American society; origin and development of ancient civilization in Mexico, Guatemala, and Honduras.

Prerequisites: 3 credits of ANTH

Bachelor of Arts: World Cultures

Bachelor of Arts: Social and Behavioral Sciences

ANTH 423: The Evolution of American Indian Culture

3 Credits

Historic and archaeological sources used to trace American Indian lifestyles from the first immigrants to the period of Euro-American contact.

Prerequisites: 3 credits of ANTH

Bachelor of Arts: World Cultures

Bachelor of Arts: Social and Behavioral Sciences

ANTH 424: Andean Ethnology and Archaeology

3 Credits

Cultures of the Andes from earliest settlements to Inka Empire; includes discussion of life in modern Andean communities. ANTH 424 Andean Ethnology and Archaeology (3)(BA) This course meets the Bachelor of Arts degree requirements. When the Spanish conquistadors arrived in the Andes in 1532, they were astonished by the complexity and grandeur of the Inca Empire, which stretched along western South America incorporating a multitude of different societies that occupied a seemingly inhospitable landscape with coastal deserts, rugged mountain chains, and dense jungles. This course traces out the history and development of Andean cultures from the earliest peopling of the continent to the rise and fall of the Inca Empire. Using archaeological, historical, and ethnographic sources, students will learn about the relationship between Andean societies and their environments and landscapes, as well as the economic, social, and political changes that transformed small egalitarian communities through time into large, stratified states. Through the course, students will not only gain a strong background in pre-Columbian Andean history but will also hone their skills in the use of different lines of evidence to reconstruct the past while learning to critically evaluate existing interpretations. All students are expected to participate actively in discussions. Lectures will be supplemented by illustrations (slides, handouts, videos), and students will learn how societal dynamics are expressed in material culture and in the organization of architecture and settlements. Grades will be based on the results of three exams, a short paper, and participation in discussions. The course complements existing courses at the same (400) level on the archaeology of Mesoamerica (ANTH 422) and North America (ANTH 423). It continues the discussion (at a higher level) of some of the themes covered in ANTH 008 (Incans, Aztecs, Mayas). It fulfills the archaeology credits requirement for the major and is one of the 400-level courses that can be used for the minor. For students outside the major, it may be used to meet the Other Cultures or the Social Sciences requirement in Bachelor of Arts programs.

Prerequisites: 3 credits of ANTH

Bachelor of Arts: World Cultures

Bachelor of Arts: Social and Behavioral Sciences

ANTH 425: Zooarchaeology

3 Credits

Introduction to the systematic study of animal skeletal remains from archaeological sites.

Prerequisites: 3 credits of ANTH**ANTH 426W: Archaeological Laboratory Analysis**

3 Credits

Scientific laboratory methods used in the analysis of ceramic and lithic artifacts. ANTH 426W Archaeological Laboratory Analysis (3) This course, Archaeological Laboratory Analysis, employs experiential learning to teach students how to ask and answer archaeological questions using real data. While students learn the fundamentals of interpretation in other courses using already processed computer (and internet) assembled data sets, this is not how archaeological data are analyzed. Archaeological data emerge from the ground covered with dirt and the analyst must learn how to identify and measure their important attributes, and interpret what they mean. This class will provide a hands-on learning experience where students learn how to examine and use physical remains to reconstruct and interpret human behavior. Students in the Anthropology program currently learn this critical step on an ad hoc basis by working with faculty on individual research projects. This approach, while effective, is neither systematic nor comprehensive. This is a course on analytical systematics. It provides students with an introduction to problem formulation, artifact processing, artifact cataloging, attribute identification, artifact classification, analysis, data illustration and photography. At the same time, students will be introduced to two separate and distinct approaches to interpretation: 1) morphological/diacritical analysis, and 2) direct experimentation and replication. Students will be graded on the completion of nine laboratory exercises. These exercises will require that students identify the research question being addressed, the theoretical assumptions used in the analysis, the data sample, the analytical method(s) employed, and the conclusions reached. The exercises will also request that students identify personal insights and difficulties encountered during the analysis. This course fills a vital position in training undergraduate majors by providing them with practical training in research design and data analysis. It also provides the logical link between our general courses in prehistory, our courses on archaeological theory, and our method courses on field methods of data recovery. All of these courses intersect in the archaeological laboratory where data interpretations are made and new information about the past takes shape. In addition to contributing to both the BA and BS undergraduate majors and minors, this course will also provide a framework for training graduate students who enter the program with minimal field and laboratory training in archaeology.

Prerequisites: 3 credits of ANTH

Writing Across the Curriculum

ANTH 427W: Forensic Archaeology

3 Credits

Application of archaeological techniques to crime scene investigations, with practical experience in field and laboratory contexts.

Prerequisite: ANTH 2N

Writing Across the Curriculum

ANTH 428: Archaeological Methods and Theory

3 Credits

Scientific methods as applied to archaeological data: evolution, ecology, diffusion, and cyclicalism theory.

Prerequisites: 3 credits of ANTH

ANTH 430: Ancient Brews

3 Credits

Understanding how past humans altered their environments is at the core of this Ancient Brews course. Through the domestication of plants and animals to the continuous modification of technologies, our ancestors have successfully produced a wide range of alcoholic beverages. In ANTH430, we will recreate several alcohols (e.g., beer, cider, and wine) using the most basic methods through a process of experimental archaeology. From harvesting corn, apples, and grapes from Penn State's agricultural fields, to crushing barley with grinding stones, to cooking the ingredients in clay pots, the students will get firsthand experience with several ancient methods of alcohol production. Most of the semester is seminar-style, where we discuss journal articles relating to specific anthropological approaches to the evolution of alcohol.

Prerequisite: ANTH 140 Permission of program & Student must be 21 years of age on or before the first day of fall classes.

International Cultures (IL)

United States Cultures (US)

General Education: Social and Behavioral Science (GS)

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Soc Resp and Ethic Reason

ANTH 432: Environmental Archaeology

3 Credits

Introductory course in Environmental Archaeology, with emphasis on method and theory in the subfields archaeobotany, pediaeology, and zooarchaeology. ANTH 432 Environmental Archaeology (3) This class is a survey of the fast-developing field of environmental archaeology, or archaeobiology, which encompasses archaeology, the earth sciences, plant biology, and zoology. Environmental archaeologists apply techniques and insights obtained from these fields to questions concerning the relationships among humans, cultural systems, and the natural world, as reflected in the archaeological record. The general goal of the course is to promote understanding of the vital interplay between human societies, with their diverse systems of belief and cultural practices, and the natural environment, with emphasis on human interactions with biotic resources. Instruction is by lecture, supplemented by laboratory sessions emphasizing hands-on experience. Weekly topics are explored through selected readings and class discussions, augmented with laboratory assignments (practical exercises) variously focused on specific types or classes of archaeobiological materials. ANTH 432 will fulfill 3 credits of the additional courses in the Anthropology minor and major, as well as the Archaeological Science major. Anth 002 is a prerequisite.

Prerequisites: 3 credits of ANTH

ANTH 433: Archaeological Ethics and Law

3 Credits

Introductory course that examines prominent ethical and legal issues in archaeology integral to modern applied research and practice. ANTH 433 Archaeological Ethics and Law (3) This course explores the ethical, legal, and practical dimensions of modern archaeology through a consideration of the following topics: archaeology as a profession; archaeological ethics; the relationship between archaeology and others (the public, ethnic groups, avocationalists, collectors, etc.); international and national approaches to archaeological heritage management; the antiquities market; maritime law, underwater archaeology, and treasure hunting; cultural resource management in the United States; and archaeological outreach and education. Students are introduced to a variety of legal and ethical issues in archaeology that span local to international scales. Through lecture, discussion, and readings, students will consider the archaeology and ethics of ownership and stewardship, including issues centered on intellectual property rights, representation, repatriation, and reburial of cultural properties. They will be able to identify the various stakeholders in contemporary archaeology, and assess their values and interests in issues such as the treatment, ownership, and disposition of human remains, heritage sites, submerged cultural resources, and antiquities. They will consider growing problems with illicit collecting and excavation, illegal trade, and global concerns centered on the international trafficking of antiquities, and will be variously exposed to relevant national and international legislation involving cultural patrimony and management of antiquities, including international treaties such as the 1970 UNESCO Convention on Cultural Property, and related pieces of US federal legislation. The 1990 Native American Graves Protection and Repatriation Act (NAGPRA) and the Archaeological and Historic Preservation Act (ARPA) of 1974 figure prominently in the course. In general, upon completion of the course students will come to have a stronger appreciation of archaeological ethics and "archaeopolitics" they will have a good understanding of the U.S. Secretary of the Interior's standards (36CFR61) for professional archaeologists and will be able to assess and evaluate contemporary issues of archaeological ethics and law in the context of modern practice. ANTH 2 is a prerequisite of this course.

Prerequisites: 3 credits of ANTH

ANTH 434N: Black Ecologies

3 Credits

African and African Diasporic peoples have been central to the creation and transformation of global ecologies and landscapes. As the birthplace of humankind, the African continent features the longest archaeological record in the world, with abundant, yet often underrepresented, material and historical evidence for remarkable Indigenous African innovations in the areas of technology, food production, and resource and land use. This course specifically examines Black ecologies preceding and then radically transformed by the Trans-Atlantic Slave Trade. Beginning in the late fifteenth century, the enslavement of millions of Africans and their forced translocation to the Americas and Caribbean precipitated ecological transformations on all sides of the Atlantic, as African peoples, knowledge, resources and ecological inheritances were appropriated by the European mercantile system. Enslaved Africans transformed American landscapes via extractive industries of plantations and mines and suffered the emergence of toxic landscapes and disease alongside Native American communities. Africans also recreated African ecologies as they created livelihoods and landscapes of resistance and

freedom in the Americas. The legacies of the Atlantic Era maintain a persistent dynamic in which African and African Diasporic communities experience disproportionate burdens of environmental injustice today. The concept of Black ecologies reflects the marginality, systemic racism and dispossession experienced by Black peoples and their landscapes. Black ecologies also allow us to understand African and African Diasporic ecological innovations, resistance and resilience, and the pathways to future sustainability and justice they promise.

ANTH 435: Ancient Economy

3 Credits

The course examines the comparative organization and development of ancient economies in both the Old and New Worlds. ANTH 435 Ancient Economy (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the origin and development of ancient economy from its earliest beginnings to the advent of complex monetary economies that existed prior to the industrial revolution. It examines the common economic structures found in ancient foraging, pastoral, and agricultural societies and how those structures were modified and transformed as these societies were integrated into more complex monetary economies. The goal of the course is to develop a comprehensive understanding of ancient economies, the function and purpose of their economic structures, and how those structures of production and distribution were modified and retained within the modern economies that we live in today. While the economy is often approached as its own field of study, this course shows how and why the economy was embedded in social, political and religious institutions that were so prominent in the ancient past. The course will discuss the domestic and institutional economy, the origin and organization of ancient market systems, the development of urban centers and the economies that supported them, the role of merchants in ancient societies, and origins of many of our 21st century institutions including money, banking, insurance, and the organization of craft production before the industrial revolution. The class draws upon the rich literature in archaeology, history and ethnohistory that examines the structure of ancient societies. It employs a cross-cultural perspective to model ancient economies and to investigate how social forces influenced their development. A range of different historic and prehistoric societies are discussed each semester to illustrate the cross-cultural perspective. The societies discussed vary from semester to semester and include, but will not be limited to, the ancient Sumerian, Assyrian, Greek, Roman, Mongol, Aztec and Inka societies. Examples will be selected that include societies at different scales of complexity from simple hunting and gathering groups to pre-industrial states. The course fulfills the Social and Behavioral requirements in Liberal Arts. It also fulfills specific major and minor requirements for the BA in Anthropology, the BS in Archaeological Sciences, and the BS in Bioanthropology. The course is also relevant for students in CAMS, History, and Ancient History that are interested in a comparative study of New and Old World civilizations.

Bachelor of Arts: World Cultures

Bachelor of Arts: Social and Behavioral Sciences

International Cultures (IL)

ANTH 439W: Studies in Classical and Ancient Mediterranean Archaeology

3-6 Credits/Maximum of 6

CAMS 440W Studies in Classical and Ancient Mediterranean Archaeology (3-6) (BA) This course meets the Bachelor of Arts degree requirements.

CAMS 440W is a writing-across-the-curriculum upper-level archaeology course on various topics in the broad field of Classical and Mediterranean archaeology. The selected topic will emphasize interdisciplinary themes, such as comparative state formation, societal collapse, gender in the ancient world or the socio-economic and cultural development of a society or region and its interaction with other Mediterranean, Near Eastern and North African cultures. Students will learn of major publications in the field of study, and how to conduct searches of the previous archaeological literature and the related literary record. As one requirement, students will complete a research paper on a topic related to the theme of the course that semester. The sequence of writing assignments is designed to allow students to develop a project, to search for related publications, to develop a proposal, and to revise drafts of the final paper. The course is also intended to provide students with a practical background in Classical and Mediterranean archaeology that will help prepare them for archaeological fieldwork, for the interpretation of archaeological publications, and, as relevant, for utilizing the literary and/or epigraphic record for interpreting archaeological evidence. Those considering enrolling in this course may obtain information about the specific topic by asking the faculty member listed as teaching the course or the Undergraduate Officer in the Department of Classics and Ancient Mediterranean Studies.

Prerequisite: 3 credits in CAMS or 3 credits in ANTH or permission of instructor

Cross-listed with: CAMS 440W

Bachelor of Arts: Humanities

Writing Across the Curriculum

ANTH 444: The Evolution of War

3 Credits

Critical overview of the ethnography and theory of primitive warfare. ANTH 444 Primitive Warfare (3) Anthropology 444 is concerned with the phenomenon of lethal group violence in tribal societies so called "primitive war". Through lectures, readings, and research projects, this course reviews anthropological approaches to the study of primitive war, focusing both on ethnographic examples and on theoretical approaches. The course covers topics such as explanations, traditional and modern, for the existence of warfare; the primate background to human warfare; and the social causes and individual motives leading to warfare in tribal societies; as well as its consequences for those societies. Students become familiar with both general and particular manifestations of primitive warfare, and are exposed to individual ethnographic cases of primitive warfare as they motivate a variety of theoretical paradigms. All students are expected to attend all lectures and to complete all weekly readings. At the last class meeting of each week, a rotation of students are assigned to organize and direct the class discussion of the week's readings in the light of the lectures earlier in the week. Performance in this activity constitutes 40% of the student's grade. Another 40% is earned in the research term paper each student must prepare. The final 20% of the grade is based on overall student contribution to class discussion, particularly during those weeks when the student is not a

discussion leader. There is no final examination. This course can be used to fulfill major and minor requirements in Anthropology. Because warfare was and often still is a major activity in most tribal societies, this course provides an important complement to area-focused ethnography and archaeology courses such as ANTH 241 (Peoples and Cultures of Highland New Guinea), ANTH 422 (Mesoamerica), ANTH 423 (North America), ANTH 425 (American Southwest), ANTH 440 (Lowland South America), and ANTH 447 (Africa). This course is also relevant to topically focused course such as ANTH 450 (Comparative Social Organization), ANTH 451 (Economic Anthropology), ANTH 454 (Political Anthropology), and ANTH 456 (Cultural Ecology). On the graduate level, this course addresses central topics covered in ANTH 522-523 (Ecological Theory in Anthropology), ANTH 556 (Social Organization of Traditional Societies), and ANTH 559 (Behavioral Anthropology).

Prerequisites: 3 credits of ANTH

ANTH 445W: Ethnographic Film

3 Credits

Comparisons of written and visual ethnography; critical assessment of ethnographic film; cross-cultural variation. ANTH 445W Ethnographic Film (3) Students will be presented with both written and filmed ethnographic material dealing with a number of cultural subsystems (e.g., kinship and family relations, religion, political systems) and with a number of different world cultures. The aim of the course is three-fold: 1) to convey through visual anthropology the complexity and inter-relations of cultural subsystems, which is often difficult to do in written sources; 2) to develop the skills of critical viewing of ethnographic film; and 3) to provide students with critiques of their written work that will enable them to learn and practice the skills of clear, organized and convincing writing. Towards these ends, students will be expected to read and view weekly assignments for selected topics, to write twelve critical essays that compare the written and filmed sources, and to evaluate the aims, effectiveness, and methods of the films. Essays will be graded for both content and form and will provide a basis for class discussion. Students will also be required to write a term paper focused on a particular ethnographic film of their choice (one not shown in class) supplemented by additional research. As an aid in the writing of the paper, at least one class period will be devoted to learning how to do library research in Anthropology. This course will complement other courses in Anthropology such as ANTH 045 and ANTH 001. The course can be used to fulfill a requirement in both the major and minor in Anthropology and will fulfill both a Writing Intensive requirement and a Bachelor of Arts social/behavioral science requirement. It will also provide students in other departments with the opportunity to study aspects of diverse, non-western cultures.

Prerequisite: ANTH 45
Writing Across the Curriculum

ANTH 446: Mating and Marriage

3 Credits

An examination of human mating mainly from the viewpoint of behavioral ecology, centering on the species-typical institution of marriage. ANTH 446 Mating and Marriage (3) This course is an examination of human mating and marriage mainly (although not exclusively) from the viewpoint of evolutionary behavioral ecology. Its central concern is the species-typical and uniquely human institution of marriage. Why do all human societies recognize this peculiar institution, whose social and biological functions, apparently obvious, become mysterious on

close examination? What, exactly, is marriage? What are its consistent characteristics and attributes—or does it have none? How are spouses chosen, and by whom? What does being married imply for the behavior of the spouses, and that of their children and other relatives? What are the evolutionary scenarios that might have led us to marriage? Although sexual behavior is clearly a key element in answering some of these questions, and receives considerable attention, this is not a course on human sexuality. Nor is it a course on kinship, even though kinship is also crucial to understanding marriage and also receives a good deal of attention. Rather, this course attempts to bring to bear on this central social institution bodies of knowledge from the biological and social sciences that may contribute to understanding how and why marriage arose as a universal feature of human societies, and how and why it is perpetuated in contemporary societies. We begin the semester with the posing of the central problem—what is marriage and why do we have it? For about half the course, we approach this question from an evolutionary, sociobiological point of view: We look into the biological background of human mating—its evolutionary history, its physiology, its behavioral ecology, etc. as we go through a semi-popular book on the subject by a biological anthropologist. Next we turn to more academic readings, old and new, that further elucidate the ecological constraints and fitness consequences of various behaviors relating to mating and mate choice, child rearing, etc., in terms of reproductive success, survivorship, etc. In the second half of the course, we take a more social anthropological point of view. We look at what anthropologists have written about marriage and marriage customs over the years. We try to relate the traditional social anthropology to more modern human behavioral ecology. Finally, in a research project report, each student examines some specifics of marriage as it is manifested in ethnographically known societies. In these reports we are particularly interested in how and by whom mates and spouses are chosen, and who contributes what to the raising of children.

Prerequisites: 3 credits of ANTH

ANTH 448: Ethnography of the United States

3 Credits

Ethnographic descriptions of various dimensions of life in the United States. ANTH 448 / AMST 448 Ethnography of the United States (3) Ethnographic descriptions of various dimensions of life in the United States. The course covers uses of ethnography in American Studies toward an understanding of social and cultural communication and performance. The application of ethnography and concepts of cultural anthropology to complex societies such as the United States is discussed. The course teaches students to use ethnographic methods for research of American society and culture. Attention is given to the ethics and issues of ethnographic fieldwork. The course satisfies the "area" requirement in "society" for American Studies majors.

Prerequisites: 3 credits of ANTH
Cross-listed with: AMST 448

ANTH 453: Anthropology of Religion

3 Credits

Traditional and modern religions and historical and contemporary religious movements from an anthropological perspective. ANTH 453 Anthropology of Religion (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the origin, evolution and social function of religion from a cultural materialist perspective. It will begin with a general discussion of an anthropological approach to

the study of religion, using numerous examples from different cultures for purposes of illustration. Following a discussion of several topics relevant to the anthropological study of religion—including magic, rituals, witchcraft and mythology—the course will focus on the relationship between politics and religion: first discussing the role of religion as a mechanism of social and political control, and then examining the role of religion as a vehicle of sociopolitical change in the form of what anthropologists call revitalization movements. This course links to courses on the sociology, history, and philosophy of religion, to courses on intellectual history, and history of social sciences. Course evaluation will be based on 3 take-home essay examinations. Students will give the instructor 3 questions at indicated times; the instructor will return one question; the student will write an essay on the indicated question. Attendance is mandatory. This course will fulfill a 3 credit 400 level requirement for the Anthropology major and minor.

Prerequisites: 3 credits of ANTH

Bachelor of Arts: World Cultures

Bachelor of Arts: Social and Behavioral Sciences

ANTH 457: Jewish Communities: Identity, Survival, and Transformation in Unexpected Places

3 Credits

Examines the global array of smaller Jewish communities that have flourished outside the main urban centers of Jewish settlement. JST 457 / ANTH 457 / SOC 457 Jewish Communities: Identity, Survival, and Transformation in Unexpected Places (3) (US;IL) This course addresses an understudied aspect of Jewish experience. It aims to expand our understanding of Jewish communities by focusing on those that are, alternatively, small, situated in out-of-the-way places, culturally outside the Jewish urban mainstream, or embedded in a larger society with markedly different values and traditions. These communities often constitute the points-of-contact between Jews and non-Jews, and in so doing sometimes transform Jews, non-Jews, and the relationships among them. Other such communities constitute experiments in Jewish lifeways and provide mainstream Jews with pilot projects for potential social and cultural change. This course will explore the significance of small, little-known, idiosyncratic, and anomalous Jewish communities on Jewish history and culture, and draw on them to instruct students on the social and cultural processes of small or unusual communities generally. The communities studied will be located both in the U.S. and elsewhere in which Jews have lived as a minority community during modern times. The course will look at the founding, growth, and decline of such communities and at their social processes and institutions. It will explore how to understand and analyze such communities, which vary from one part of the world to another. The social world of Jewish communities, large and small, is a core interest of Penn State's Jewish Studies Program. This course will complement the current offerings in Jewish Studies, strengthening the social, cultural, and contemporary perspectives available in the Program. It will provide students with an opportunity to explore individual experience and micro-level processes among Jews, and to study the dynamics of identity and survival. It will complement the current offerings in Sociology and Anthropology by affording an opportunity to focus on community-level social processes and by adding a course on contemporary Jewry. The course will integrate knowledge from a variety of sources and fields, promote intercultural understanding, and meet US and IL requirements. Materials will be interdisciplinary, and will include ethnographies, sociological studies, population studies, histories, and personal narratives. They will include primary texts, creative works, and scholarly analyses. The assignments will be structured to facilitate preliminary experience in independent

analysis, library research, or field research. The course will be offered approximately once a year. Enrollment will be limited to 30 students in order to promote active, engaged learning. Evaluations will be based on short papers and outlines that will prepare students for their final, term papers.

Enforced Prerequisite at Enrollment: Three credits in JST or ANTH or SOC

Cross-listed with: JST 457, SOC 457

International Cultures (IL)

United States Cultures (US)

ANTH 458: Ethnographic Field Methods

3 Credits

Course introduces students to ethnographic field methods, includes student projects and simple analyses that don't require statistical sophistication. ANTH 458 Ethnographic Field Methods (3)(BA) This course meets the Bachelor of Arts degree requirements. This course is designed to introduce you to some (not all) ethnographic field methods. It will include actual projects you will have to carry out and other material that will make you a better ethnographer, such as how to pose questions that can be answered, how to select an appropriate sample for a project, how to take and use field notes. Because the emphasis is on field methods, we will do only simple analyses that don't require any statistical sophistication (e.g., descriptive statistics, chi square tests)

Prerequisite: Three credits in ANTH

Bachelor of Arts: Social and Behavioral Sciences

ANTH 460: Human Genetics

3 Credits

This course will cover the nature and contents of the human genome and the basic principles of evolution. We will also explore the future implications of personal genomics and how this information is being used to reconstruct our evolutionary history and to advance human medicine. We will carefully consider the processes by which we can identify how information contained within our genomes may affect physical and behavioral phenotypes, and what other factors may be involved (e.g., the environment). The points will be illustrated by a variety of examples of human evolution and important biomedical issues

Enforced Prerequisite at Enrollment: ANTH 21 or BIOL 133 or BIOL 222 or BIOL 230W or BIOL 230M or BIOL 322 or BMB 251 or BMB 251H

Cross-listed with: BIOL 460

ANTH 460H: Honors Human Genetics

4 Credits

This course will cover the nature and contents of the human genome and the basic principles of evolution. We will also explore the future implications of personal genomics and how this information is being used to reconstruct our evolutionary history and to advance human medicine..We will carefully consider the processes by which we can identify how information contained within our genomes may affect physical and behavioral phenotypes, and what other factors may be involved (e.g., the environment). Honors

ANTH 461: Molecular Anthropology

3 Credits

Provides framework to understand current issues in biology, genetics, and anthropology as they relate to the evolution of our species. ANTH 461 Molecular Anthropology (3) The aim of this course is to provide students with the framework to understand current issues in biology, genetics, and anthropology as they relate to the evolution of our species. Basic methods in molecular biology, structure of the genome, molecular evolution, and human population genetics will be covered in the first part of the course. Once these tools are in place we will examine both classical and contemporary research reports on a number of topics, including the place of humans among the apes; mitochondrial Eve, DNA in forensics; Neandertal DNA and other applications of ancient DNA; reconstructing recent human evolution; the biological meaning of race; disease gene mapping; recent technological advances in genomics; skin, hair, and eye color genes; and the genetic future of our species. There will be three exams that will each count for 25% of the grade. Attendance and participation are mandatory and will count for 25% of the final grade. A portion of this participation grade is earned by presenting 10 min. summaries of particular readings. Each student will be expected to summarize a scientific paper four times during the semester. These summaries are not expected to be exhaustive reports on the material, but should reflect an effort on the part of the student to understand and discuss the material and may require some background work.

Prerequisites: 3 credits of ANTH or 3 credits of BIOL

ANTH 466: The Skull

3 Credits

Survey of the mammalian skull from many perspectives including evolution, development, anatomy, function, and variability of the skull. ANTH 466 The Skull (3) This course will provide a survey of what is known about the Mammalian skull from many perspectives including evolution, development, anatomy, function, and variability of the skull. The course will consist of lectures and a laboratory component. Students will learn about the basic skull architecture and be introduced to various specializations of extinct and extant species. The section on evolution will cover the evolution of the skull from the earliest jawless vertebrates through human evolution. During the section on development, we will discuss the nature of the formation of bone embryologically. Other topics include the ways in which bone changes shape and size during prenatal and postnatal growth, how changes in growth can result in evolutionary change in morphology. The section on the function of bone will focus on biomechanical interpretations of the morphology of the skull. The lectures will focus on human anatomy but provide contrasts with other mammals (e.g., horse, dog, mouse). The last section on variability will survey the major groups of mammals highlighting similarities and differences in bony architecture and skull morphology. This portion of the course will be more laboratory-based with students examining specimens, taking measurements and leading discussions on hypotheses regarding why skull architecture is so different among mammals. The objective of this course is to provide the student with a broad survey of information relating to the mammalian skull. Through assigned readings and lectures the student will become familiar with salient anatomical and osteological features, obvious differences in skull architecture and the various biological processes responsible for these differences. During the final laboratory part of the course the students will bring their knowledge to an assigned problem and specimen in order to apply what they have

learned to a scientific question. Students will be required to attend all lectures and laboratories. Periodic quizzes will be administered as well as an exam at midterm. A paper that focuses on the student's laboratory experience will be required at the completion of the course.

Prerequisites: 3 credits of ANTH

ANTH 476W: Anthropology of Gender

3 Credits

Cross-cultural construction of gender and sex roles; theories of gender construction; case studies and practical effects. ANTH 476 / WMNST 476 Anthropology of Gender (3) Students will learn the current theoretical approaches in anthropology to the cultural construction of gender and sex roles. The first 2-3 weeks of the course will concentrate on exploring and understanding these theoretical approaches. The remaining weeks will focus on case studies of non-western gender systems, and on the practical effects of those systems, but students will also be encouraged to relate these systems to their own experience. Each meeting will be based on discussion of the readings assigned for that meeting and students will be expected to participate. During the period devoted to theoretical approaches, discussion will focus on the assumptions, advantages, and disadvantages of each approach. For the part of the course devoted to readings on individual societies, one reading each week will be the basis for a critical essay of approximately five pages. These essays will be expected to include: 1) an identification of the theoretical approach that informs the work, 2) a statement of the author's arguments or questions, 3) a discussion of the methods used to provide data in support of the arguments or to answer questions, 4) a critique of the adequacy of data, and 5) a statement suggesting which additional elements might make for a better study. These essays will be graded for both content and form and students will have the option of rewriting essays (and improving their grade) after they receive comments. These essays will provide 60% of the course grade, while participation in discussions will provide another 15%. A short research paper will also be required. The paper must focus on a question or hypothesis concerning gender, and a preliminary proposal that includes the focus of the paper, its relevance to the course, and a beginning bibliography is required. A first draft of the paper will be required two weeks before the end of the semester. The research paper will provide 25% of the course grade. The course complements other courses in Anthropology that deal with sex differences, but will provide a perspective on gender that is not available elsewhere in the curriculum. The course can be used to fulfill a Behavioral Anthropology requirement in both the major and minor in Anthropology and a writing across the curriculum requirement. It will also provide students in other departments with the opportunity to study aspects of diverse, non-western cultures. The course is currently identified as one that may be taken to fulfill the requirements of the Women's Studies minor.

Prerequisites: 3 credits of ANTH or 3 credits of WMNST
Cross-listed with: WMNST 476W
Writing Across the Curriculum

ANTH 479: Tradition, Modernity, and Cultural Change in South Asian Societies

3 Credits

India and its neighboring countries provide an interesting view of the ways cultural diversity functions in the world. The region contains one-sixth of humankind, and its people are differentiated not only by religion,

language, caste, and ethnicity, but also by ecology, technology, dress and cuisine. ASIA 472 examines how South Asia's history may have influenced the diverse behavioral, cultural, and social norms from the ancient to the modern times Beginning with a preliminary discussion of ancient medieval, and colonial Indian history, the course examines the institutions of caste, family and kinship, marriage, gender, and religious practices of the many different religious, and regional, and language communities of the sub-continent, and how they may have changed over the years. The course concludes with a review of how the different South Asian communities both within and outside the subcontinent have dealt with modernity in the realms of politics, religion, law, arts, cinema, and popular culture. This course will be cross listed with Anthropology and will be taught by both Asian Studies and Anthropology faculty. thereby making it useful to students of both Asian Studies and Anthropology. Furthermore, students in this course will be exposed to research methodologies used by scholars of history, literature, and anthropology.

Prerequisite: 5th semester standing Recommended Preparation: Introductory courses in Anthropology, Asian Studies, History, or Religions Studies would be useful background for this course.

ANTH 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ANTH 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Applied Linguistics (APLNG)

APLNG 83: First-Year Seminar in Applied Linguistics: Language as Social Practice

3 Credits

This course introduces the idea of understanding language use as social practice. This means studying how language serves to represent and to constrain speakers in various social and cultural contexts. The activity of using language will be viewed through the lens of several research domains in the field of Applied Linguistics, a discipline that studies language in the way that real speakers and writers actually use it. The class will present readings taken from fields as varied as sociolinguistics (language as social performance); second language acquisition research (language as cognition, language as participation); language and identity; pragmatics (speech, act theory; conversational analysis); and language and power (language and power (language policy; gender and language). Whether being studied as a formal school subject or learned at a mother's knee, language is inextricably bound up with who we are and who we become. Theoretical terminology, research-based findings, and innovative ideas about what language 'really' is will be introduced and explored through accessible and engaging readings and activities. Students will learn to look at language use in social contexts from multiple perspectives, seeing how it both reflects, and shapes, identity in context (while at the same time allowing speakers to modify and shape those very contexts). Given that this is a first-year class for first-semester students, emphasis will be placed on how the understanding these basic ideas of Applied Linguistics can help us to pursue a satisfying and enriched sense of self, whether as a speaker of a specific language, or as a member of multiple discourse communities. Students will conduct an interview project to better understand the issues faced by language learners in the local community. International students are particularly invited to join this course.

APLNG 200: Introduction to Language, Culture, and Social Interaction

3 Credits

This course is an introduction to the study of language as a communication system and to contemporary thought on the interrelationships among language, culture, and social interaction and their fundamental links to social identities and discourse communities in today's culturally diverse and technology driven environments. It investigates the fundamental links of language, culture, and social interaction to social identities, social role relationships, and discourse communities. Students will develop an awareness of their interpersonal and intercultural skills and who they are as communicators, an appreciation for variations and dialects of languages, and an understanding of issues related to bilingualism, language learning, and identity.

APLNG 210: Global English

3 Credits

Having developed since the fifth century in the British Isles, English has now become a global language used by millions of native and non-native speakers around the world. This course examines the historical roots of English and the factors that explain its spread as the lingua franca of globalization, adopting the metaphor of 'ecology' to illustrate how English has adapted INTERNALLY in response to, and in conjunction with, EXTERNAL circumstances. Readings and activities will explore how English language has been instrumental to globalization and how globalization has changed English. After studying the historical and geopolitical bases for the rise of English, we explore the implications of decolonization, diaspora communities, the Internet, and the new economy for diversifying the structure, norms, and usage of the English language. We will place particular emphasis on exploring new modes of literacy and discourse practices, the fluid relationships between English and other languages and cultures, and the continuing reconceptualization of language standards, linguistic identities, and literacy practices.

APLNG 220N: Multilingual Lives: Stories of Language and Culture Learning

3 Credits

This course will explore how research into language acquisition intersects with the lived experiences of multilingual speakers. Drawing upon both social sciences and the humanities, the course will give

students the opportunity to understand and appreciate multilingualism, and the complex relationships that language has with culture, education, family life, and the structures of power, gender, and class. In addition to reading formal studies of scholarly research into language acquisition, language education, motivation and identity, students will read excerpts from literary works that illuminate these topics through the lens of narrative, memoir, and fiction. The stories we read will help us find answers to questions such as these: How can we understand the processes of language learning and language loss? What are the documented cognitive benefits of bilingualism? What are the factors that influence language learning, including motivation, age, and social context? In addition to reading, analyzing, and discussing texts, students will conduct a community outreach project in which they collect and analyze stories from multilingual individuals in the local community, including members of their own family, recent immigrants, long-term residents, international students or scholars, retirees, heritage language learners or parents in a multilingual household.

APLNG 230N: Language and Social Justice

3 Credits

This course examines the contribution of language to a variety of social justice agendas by exploring how language is used to form and support unjust social structures. The course has two main aims. First, drawing from sociolinguistic theories of linguistic ideologies, the course aims to show the significance of language in how the hierarchization and ranking of languages in a society are produced, maintained, and reinforced. The second aim is to demonstrate the effects of such a hierarchization and ranking of languages on (in)equality in educational institutions and before the law. The topics covered in this course include the role of language in structuring individual identity and human relations and how this process characterizes the nature of social institutions in producing social inequality. As the course touches on issues pertinent to our daily lives, students' questions, comments, and relevant personal experiences and observations will play an important role in our exploration of how the language we use can affect opportunities and privileges in society.

APLNG 250: Peer Tutoring for Multilingual Writers

3 Credits/Maximum of 3

This class provides theoretical and practical training to prepare Writing Center Peer Tutors with specific expertise in tutoring international/multilingual students. This course provides a theoretically-grounded introduction to the principles and practices of peer tutoring with

multilingual writers (writers for whom English is not a first language). It is designed specifically for undergraduate students who wish to be employed as Peer Tutors with Penn State Learning at the Writing Center. Like ENGL 250, the class provides a basic orientation to the techniques of being an effective writing tutor, but offers a deeper understanding of the issues faced by writers whose first language is not English. The class may be of particular interest to students who study languages or education, who plan to work in academia, or who have a strong interest in cross-cultural communication or international education. However, undergraduate students of any major and of any language background are welcome to enroll in this course. Drawing upon research in second language acquisition, instructional theory, and composition pedagogy, the class examines the central roles of identity, belief, and cultural perspective in the development of tutoring expertise. Exploring the student's own development as a writer and learner, engaging in practical training activities, writing intensively, talking about writing, and engaging in reflective exercises comprise the first set of topics in the semester. In the second unit, through readings, interaction, observation and discussion, each tutor-in-training will explore the cultural and linguistic factors in the development and maintenance of second-language writing proficiency for international students in an American university context. There is a strong focus as well on tutoring pedagogy, and the class includes a 10-week structured practicum experience during which each student will tutor an ESL student from a first-year writing class (ESL 15). Students who want to work as Peer Tutors must have completed their own first-year writing requirement; it is recommended that they have completed ENGL 202 also.

Prerequisite: ENGL 015; ESL 015

APLNG 260: LANGUAGE AND TECHNOLOGY

3 Credits

Applied Linguistics is an interdisciplinary field that investigates and aims to study social issues through a linguistic lens. APLNG 260 - Language and Technology - is designed to introduce students to how technology helps shape language learning, education in general, and its impact on society. To develop students' skills in Social and Behavioral Science (GS), students are introduced to various learning theory-informed technological applications, such as natural language processing. These applications include virtual reality, gaming, speech recognition within deep learning, and virtual assistants. To develop students' skills in humanities (GH), students will develop critical and ethical awareness of applying technology use in education based on learners' needs. Theories of learning and methods will be introduced and applied to technological applications, such as learner-centered design, cloud computing, and open-source learning. The intersection of language learning and technology will be examined by understanding what is second language acquisition (SLA) and its technologies that support SLA, such as using a corpus and using mobile apps to aid in pronunciation production. Through critical reflections and designing instructional methods/materials integrating technology into various educational contexts, students will broaden their intellectual horizon regarding technological use in society, and more importantly, gain further understanding on the possible research directions linking technology, language learning within Applied Linguistics, and education.

APLNG 280N: Conducting International Comparative Research

3 Credits

APLNG 280N Conducting International Comparative Research. (3) (Gen Ed;IL; Integrative) (BA) This course meets the Bachelor of Arts degree requirements and may also serve as a methods course in the Global and International Studies (GLIS) major. The goal of this course is to equip students with effective methods for conducting international and cross-cultural research that addresses issues and problems occasioned by an increasingly globalized world. Students will acquire the background knowledge and skills necessary to analyze and evaluate existing international comparative literature and to design and propose new cross-national and cross-cultural research. The course focuses on projects in five key, contemporary domains of globalization: human rights, culture and identity, global conflict, wealth and inequality, and health and environment, and it draws on multidisciplinary methods from across the humanities and social sciences - including qualitative, quantitative, and mixed methods. Particular attention is paid to working with international datasets and the issue of translation and interpretation. As a result of the course, students will be able to: (1) locate and understand the structure and import of existing international databases, (2) design comparative, cross-national and cross-cultural research projects, (3) evaluate the validity, reliability, and significance of published international comparative research, (4) conduct basic comparative analyses of social, political, and cultural texts (documents) and oral interview data and other audio and visual data, (5) evaluate comparative quantitative data from cross-cultural surveys and other quantitative instruments, and (6) design reports and multimedia presentations of international comparative research.

APLNG 290N: Critical Approaches to Applied Linguistics

3 Credits

APLNG290N is a critical, exploratory introduction to the discipline of applied linguistics designed primarily for undergraduate students who plan to enroll in the major; as such, the course is a required course for all students who plan to major in Applied Linguistics. It serves as the prerequisite course for APLNG 450W (Research Methods) and APLNG494 (Capstone), two higher-level required courses for the major. In addition, this course is open to all interested undergraduate students as a General Education course (GH & GS). To introduce the fundamental perspectives of theory and practice in the discipline, the course draws upon several foundations: sociology, psychology, education, and linguistics. To prepare students for future study and work within the discipline, the course will give students the opportunity to define and distinguish the basic approaches and principles of Applied Linguistics (language as social practice, language diversity as the human default, how language and

culture intersect); to complete hands-on work with data and research methods (ethnographic interviews; critical and conversation discourse analysis); to analyze and critique scholarly and popular readings in discussion with classmates and instructor; and to collaborate with each other in designing and producing project work, individually and in small groups, relating to linguistic needs, challenges, and advocacy issues in a variety of workplaces and contexts. Project work might include workplaces such as corporations, media companies, and technology companies, or contemporary innovations such as artificial intelligence, user experience research, computer-mediated education, and other settings where language and culture invite exploration and responsive discussion.

APLNG 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

APLNG 310: Language Rights, Policy, and Planning

3 Credits

This is a course on language rights, policy, and planning from individual, group, inter-ethnic, and national perspectives. Linguistic minorities are a consequence of colonization by European powers in different regions of the globe. Other effects of colonization and political conflicts include mass movement, migration, and the emergence of nationalism. In such contexts, minorities have made demands for language rights and used language policy and planning as strategies to realize demands for social justice. This course will examine how linguistic minorities secure opportunities to use their own languages and have them accommodated in official legislation as mother tongue, second, or foreign languages. The course will adopt a global perspective and analyze language rights as well as language policy and planning in diverse regions of the globe, including but not restricted to, Africa, Asia, and South America. Analysis will primarily focus on how language policies can be carried out from different perspectives (e.g., literary, linguistic, and political) in different geographical regions. After examining how language policies operate in and influence society, the course will use sociopolitical ideologies to explore the nature of the relationship between language policies and language rights and the ways this relationship enables one to achieve an expanded understanding of the impact of language policies and language rights on local language practices.

Cross-listed with: AFR 310, GLIS 310
 International Cultures (IL)

APLNG 320N: Language, Ideology, and Propaganda

3 Credits

The course gives students hands-on tools for investigating ideology and propaganda through the analysis of a variety of historical and contemporary texts. With the help of different theoretical perspectives, students learn how to analyze ideologies that can be found in texts, identify whose interests those ideologies serve, and discuss their

biases, with the goal of learning how these belief systems can be used to promote and circulate specific political views (i.e., propaganda). The course begins with a historical overview of the role played by language and other meaning-making resources in the production and circulation of ideology and propaganda across a variety of historical contexts. The course will then explore contemporary practices of disinformation, and investigate alternative strategies through which to counter disinformation.

APLNG 402: Language, Culture and Cognition in East Asian Context

3 Credits

This course is a linguistic introduction to the relationship between language, culture, and cognition with a focus on Chinese, Japanese, and Korean. In this course, we study the cognitive linguistic view that human cognition is fundamentally embodied and shaped by various figurative processes such as metaphor and metonymy grounded in our bodily and cultural experiences, and that human thought and language are fundamentally metaphorical in nature. We examine how we think and speak figuratively and conceptualize our experience metaphorically in everyday life, and compare the languages in terms of cognitive universals and cultural variations. The objectives of this course are threefold: (1) to lead language students to a linguistic approach to language analysis so that they learn about how individual linguistic expressions fit into a coherent linguistic system; (2) to enable them to see how linguistic structures reflect underlying cognitive, conceptual structures which are derived from the interplay between human embodiment and cultural environment; and (3) to provide them with a broad perspective on similarities and differences among Chinese, Japanese, and Korean as components that form a coherent category known as "East Asian". Class work will include some lecture but will emphasize guided discussions, literature review writings, student presentations, and research papers. This interactive approach is intended to encourage students' participation, involvement, and cooperation in learning, to help them understand the relationship between language, culture, and cognition, and to assist them in developing both analytic and expressive abilities. This course is designed to count as a BA "Other Cultures" and International Culture. Students can take this course as long as they have an interest in the relationship between language, culture and cognition, especially in the context of East Asia.

APLNG 410: Teaching American English Pronunciation

3 Credits

Study and application of principles of North American English phonetics and theories of teaching pronunciation. APLNG 410 Teaching American English Pronunciation (3)(BA) This course meets the Bachelor of Arts degree requirements This course, for teachers who deal with speakers of other languages, integrates research and theory on the acquisition and development of pronunciation, as well as current pedagogy, to enable them to construct their own principled theory of teaching pronunciation. Students are introduced to the characteristics of the consonant and vowel systems of English. In addition, students are introduced to variations in the production of consonants and vowels by speakers of languages other than English. Students are expected to understand and to be able to describe the stress rhythm, and intonation of English as well as the adjustments that are made in connected speech. Students will learn how grammar and orthography influence the pronunciation of phonemes. Students will learn how to diagnose an individual's difficulties in the production of North American English and will learn how to develop appropriate curriculum. By focusing on instructional strategies from fields as diverse as theater arts, psychology, and instructional technology, students will be able to individualize their instruction by providing alternative ways to better respond to second language speakers' learning styles and preferences. Moreover, this course requires students to develop and implement appropriate curriculum for both hypothetical, real tutorial, and whole class instruction. The objectives of this course are for teachers 1) to develop a satisfactory understanding of the phonetics of North American English, including consonants, vowels, rhythm, stress, intonation and prominence, 2) to develop an understanding of the relationship between listening and pronunciation, as well as orthography and pronunciation, 3) to develop an ability to explain these phonetic concepts appropriate to students with varying learning styles using a variety of techniques such as kinesthetic and tactile reinforcement, 4) to develop an ability to diagnose speakers' particular pronunciation difficulties and to create instructional materials in response, 5) to develop a coherent philosophy of the teaching of pronunciation, and 6) to develop an ability to evaluate pronunciation textbooks and materials and supplement them when necessary.

Bachelor of Arts: Social and Behavioral Sciences

APLNG 412: Teaching Second Language Writing

3 Credits

This course provides opportunities for exploring various perspectives on theory, research, and pedagogical applications in second language writing. APLNG 412 Teaching Second Language Writing (3) This course has been designed to provide opportunities to explore various perspectives on theory, research, and pedagogical applications in second language writing. Through readings, writing, class discussion, and development of practical applications, students may develop an understanding of how research and theory can inform their practice, as well as an awareness of how personal and professional factors come together to inform their own theory of second language writing. By engaging in instructional activities, such as evaluating writing, responding to writing, and developing materials, students may begin to develop an understanding of how to implement theory in practice aligned with understanding. The overriding objectives are for students to help develop self-awareness as a writer and a teacher of writing, develop their own philosophy of teaching composition in an additional language context and to develop curriculum that embodies this philosophy. Students will

be evaluated on reading journals, tutoring in the Writing Center, literature review, materials development project and developing of materials. APLNG 412 is an elective course in the M.A. TESL program and/or PhD option in Applied Linguistics.

APLNG 450: Conducting Research in Applied Linguistics

3 Credits

This course is a survey of state-of-the-art research methodologies in applied linguistics. The course covers both quantitative and qualitative methodologies including corpus linguistics, conversation analysis, ethnography, interviewing, critical discourse analysis, experimental designs, and surveys. Students will leave the course with a broad understanding of research methods in applied linguistics and the ability to conduct their own studies. All relevant coursework for APLNG450 must be completed within the fifteen weeks of the semester. This course is open to all majors at Penn State.

Prerequisite: C or better in APLNG 290

APLNG 482Y: Introduction to Applied Linguistics

3 Credits

Application of theories of language to psycholinguistics, philosophy of language, anthropological linguistics, sociolinguistics, bi/multilingualism, second language acquisition and teaching. APLNG 482 Introduction to Applied Linguistics (3) (IL) This is a survey course concerned with the application of theories of language to issues in the areas of psycholinguistics, philosophy of language, anthropological linguistics, sociolinguistics, bi/multilingualism, second language acquisition, and second language teaching. Specifically, the course focuses on: a) how language influences the way people think and bring meaning to what they do, b) how language users match their utterances to specific functional purposes within specific social contexts, c) how the language practices of a particular culture are closely tied to the beliefs and conceptual principles by which people in the culture live, d) how language is used by speakers of different races, genders, and ethnic backgrounds, and e) how language is acquired, used, and perceived within bi/multilingual societies. Through reading, writing, and discussing the major issues in each of these areas students will come to understand how theories of language have influenced the way we think and bring meaning to what we do, the ways we communicate within different cultures and societies, and the way languages are learned and used.

International Cultures (IL)
Writing Across the Curriculum

APLNG 484: Discourse-Functional Grammar

3 Credits

Develop a working knowledge of the structure of English and apply such knowledge to research and/or classroom situations. APLNG 484 Linguistic Structures for English as a Second Language (3) This course is designed to enable prospective and practicing ESL/EFL teachers to understand the linguistic structures of the English language. Through the use of transformation grammar, students will interpret and analyze the basic grammatical structures of the English language. Students will apply their developing skills of linguistic analysis to recognize, and analyze, and remediate both oral and written grammatical errors in ESL/EFL instructional contexts. Students will understand the current theoretical issues related to pedagogical grammars and develop an appreciation for

the practical and theoretical relevance of linguistics analysis for second language educators.

APLNG 491: Theory: Second Language Acquisition

3 Credits

An investigation into current issues in the theoretical bases of second language acquisition. APLNG 491 Theory: Second Language Acquisition (3) This course considers the relationship between second language acquisition (SLA) theory and language teaching. An examination of various aspects of first language (L1) and second language (L2) learning/acquisition processes provides a framework for consideration of basic questions in SLA research and interpretation of findings to date. Of particular interest is the relationship of this research to teaching materials and methods. The questions addressed include the following: What is SLA? What are the methods and aims of SLA Research? How are theories of SLA related to major theoretical models of human language and human learning? What have been or could be important interdisciplinary perspectives in SLA?

APLNG 493: Teaching English as a Second Language

3 Credits

Theory, research, and pedagogy that focus on the teaching of English to speakers of other languages in varied contexts. APLNG 493 Teaching English as a Second Language (3) (IL) This course focuses on the teaching of English to speakers of other languages. Specifically, the course explores the multidimensional nature of the teacher as a learner of teaching, the context of schools and schooling within which teaching occurs, and the activities and content of second language teaching and learning. Throughout the semester, students will engage in a range of theoretical, pedagogical, and reflective activities that will enable them to: 1) understand their own beliefs and knowledge about language learning and language teaching and become aware of the impact of such knowledge and beliefs on their classroom practices, 2) recognize the highly situated and interpretative processes involved in language teaching and be able to reflect on, critically analyze, and evaluate their own teaching practices, 3) become sensitive to the complex social, cultural, political, and institutional factors that affect language teaching and students' language learning, 4) come to recognize students' strengths and development as learners and language learners, 5) understand subject matter content from an instructional perspective and learn to anticipate areas that may require additional instructional support, 6) use their knowledge of theory to inform their instructional practices, 7) participate in professional collaborations with other teachers as they learn about language teachers, language teaching, and language learning.

International Cultures (IL)

APLNG 494: Capstone: Research and Practice in APLNG

3 Credits

This is a required course for all APLNG majors and only APLNG majors may take this course except with special permission from the instructor. As the culminating disciplinary experience for undergraduate APLNG majors, this course offers students a chance to engage with a personally relevant, semester-long project, involving either research or practice, in the field of Applied Linguistics. Students work with a project mentor and the course supervisor to develop one of the following options: a research project or a practice-oriented experience related to one of the teaching units in the Department of Applied Linguistics or in the community. All

options require a final reflective research paper of 20-25 pages. Students must have completed the portal course for the major, APLNG290N Critical Approaches to Applied Linguistics, prior to enrolling in this course.

Prerequisite: APLNG 290N Concurrent: APLNG 450W

APLNG 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

APLNG 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Applied Youth, Family and Community Education (AYFCE)

AYFCE 211N: Foundations: Civic and Community Engagement

3 Credits

Through readings, discussion, deliberation, listening, and individual as well as collaborative action, this course gives students the opportunity to learn about and practice theories and habits of civic and community engagement and public scholarship with the goal of helping to build democratic capacity and sustain participatory democracy. This course emphasizes concepts and case studies that focus on the people's role in shared governance. The course also provides a foundation for understanding how a wide range of other individual and collective practices have an equally important role to play in building and sustaining community. The course draws from studies in demography, political science, sociology, psychology of racial identity formation and education to help students communicate better about and in shared governance. Among the core concepts are the role of students and other citizens in sustaining and transforming their communities, the historical and contemporary mission of Land Grant universities, the centrality of rhetoric and communication to collaborative judgment, and the relationship among media, cultures, and politics as they affect civic and community engagement. Students also learn together about the range of ways that citizens do, can, and might participate in democratic decision-making and will observe and practice these forms in several communication media and across a range of differences. Finally, learn about models of and opportunities for engaging other citizens across and beyond Penn State, including in global environments.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 30H or CAS 137H or ENGL 137H or CAS 100

AYFCE 270: Consumer and Financial Skills

3 Credits

AYFCE 270 Consumer and Financial Skill (3) (GS) This course covers essential consumer and financial skills young adults need to successfully manage resources and personal finances. It is also designed to satisfy social and behavioral general education requirements. Major themes addressed include goals and decision-making, spending sensibly, borrowing wisely, maximizing earnings /income, protecting assets, making money work, and life events that have financial implications. Some of the information has immediate application, while the remainder will become applicable to all students after graduating and living independently. Regardless of students' major or profession, the course content applies to them and can play a critical role in their professional and personal success. Course topics are related to current economic events from an individual perspective, consumers' behavior in the market, and their impact on communities and society in general. Strategies are discussed which outlines how course topics can be extended to others. For instance, future formal educators (teachers) will learn strategies for incorporating consumer and financial skills into existing curricula regardless of the subject they teach. Students who plan to work in non-formal settings (e.g., human service agencies, community agencies, youth groups or organizations) will acquire useful tools and techniques that may be used to improve the life skills and financial security of their clients. Future parents will learn easy ways to incorporate desired financial skills and behaviors in their children using daily living. The course addresses critical consumer and financial topics from the individual or household level only and with emphasis on key decisions from a social and behavioral perspective.

International Cultures (IL)

Arabic (ARAB)

ARAB 1: Elementary Modern Standard Arabic I

4 Credits

Introduction to reading, writing, pronunciation, and aural comprehension of modern standard Arabic; simple grammatical forms; basic vocabulary.

Bachelor of Arts: World Language (All)

ARAB 2: Elementary Modern Standard Arabic II

4 Credits

Continuation of ARAB 1 ; development of additional skills in conversation, reading, and writing; grammar and vocabulary building; cultural components. ARAB 2 Elementary Modern Standard Arabic II (4) (BA) This course meets the Bachelor of Arts degree requirements. This language and culture course, which counts towards the language requirement for B.A. (and some other) degrees, presents the second semester of the study of the Modern Standard Arabic language and an exploration of several aspects of Arab cultures. ARAB 2 is the continuation of ARAB 1 , an elementary course designed to introduce learners of Arabic as a second/foreign language to the basic structures of Arabic and to its uses in common situations of everyday communication. ARAB 2 begins with

a review of the basics learned in ARAB 1, and, as in some sections of ARAB 1, the course may follow the story of an Arab American family. ARAB 2 expands on vocabulary, goes into more complex grammar structures, and further introduces Arab culture. The "multiplicity" of the Arabic language and the coexistence of spoken (colloquial) and written standard forms of Arabic continue to be addressed in order to prepare the student for the complex reality of the language. This course underscores all four communication skills (reading, speaking, listening and writing) and uses audio and video material to take the learner to native speakers in their natural environment; introducing invaluable listening segments and various cultural aspects of the Arab world. The course may also have recourse to popular media such as films, comics, newspaper headlines, websites, music, and songs. Students are reminded through their oral presentations that Arabic is spoken as an official language in 22 countries with diverse and rich historical, political, economical, religious, artistic, and literary venues, and Arabic is also used in many additional parts of the world. Class activities and projects are designed to enable students to become active, creative participants, and transmitters of new knowledge to their peers. The course is designed for students who have completed Arabic 001 in Penn State's language sequence or have the equivalent level of language proficiency. In turn, this course serves as a prerequisite for AARAB 3. Placement within the Arabic language sequence follows the University's foreign language placement policy; for example, students whose native language is Arabic are not eligible to receive credit in this course.

Prerequisite: ARAB 001
Bachelor of Arts: World Language (All)

ARAB 3: Intermediate Modern Standard Arabic

4 Credits

More complex grammatical forms; vocabulary building principles; continued development of skills in conversation, reading, writing; culturally-oriented readings and films. ARAB 3 Intermediate Modern Standard Arabic (4) (BA) This course meets the Bachelor of Arts degree requirements. This language and culture course, which completes the 12th-credit-level language requirement for B.A. (and some other) degrees, presents the third semester of the study of the Modern Standard Arabic language and an exploration of several aspects of Arab cultures. ARAB 3 is an intermediate course designed as a continuation of ARAB 2 and a basis for further study of Arabic as a second or foreign language. The course intends to alert students to the wealth and intricacies involved in learning the Arabic language and its many cultures. In addition to being the official language of 22 countries, with great ancient civilizations, complex modern histories, and intense political situations, Arabic is also the language of the Islamic religion; the language of a booming music and film industry, and the language of a significant body of literature. The multiplicity of the Arabic language, as well as the coexistence of colloquial and modern standard Arabic, is addressed in this course. The course emphasizes all four communication skills (reading, speaking, listening and writing). Vocabulary and grammar are expanded. Students become involved in the Arabic language and its cultures through various activities, which may be designed around a serialized and audio-visually enhanced story set in an Arabic environment, as well as through an oral report presented in class. The course may use popular media such as films, comics, newspaper articles, music, websites, and songs. Themes relating to contemporary experience are treated, such as relationships with family members and friends, the decision to immigrate, daily life within a residence, how a child of an Arab immigrant feels, the cultural importance of hospitality, and the month of Ramadan. The course is designed for students who have completed ARAB 2 in Penn State's

language sequence or have the equivalent level of language proficiency. In turn, ARAB 3 course serves as a prerequisite for ARAB 110. Placement within the Arabic language sequence follows the University's foreign language placement policy; for example, students whose native language is Arabic are not eligible to receive credit in this course.

Prerequisite: ARAB 002
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)

ARAB 51: Elementary Intensive Arabic for Graduate Students I

3 Credits

Intensive introduction to Modern Standard or Colloquial Arabic: first half of graduate sequence in elementary reading, writing, listening, cultures. ARAB 51 Elementary Intensive Arabic for Graduate Students I (3) Students learn the Arabic alphabet. They learn to form the letters in all their different positions, they also learn to read them. Practice through dictation, listening and reading lists of words containing the different sounds and letters. Students learn how to greet one another. They also learn vocabulary words they can use in simple sentences. Lessons are taught in an authentic cultural context.

Prerequisite: graduate standing

ARAB 52: Elementary Intensive Arabic for Graduate Students II

3 Credits

Intensive introduction to Modern Standard or Colloquial Arabic: second half of graduate sequence in elementary reading, writing, speaking, listening, cultures. ARAB 52 Elementary Intensive Arabic for Graduate Students II (3) This is the second in a series of three courses designed to give students an intensive introduction to Arabic. This is the second half of graduate intensive sequence in elementary reading, writing, speaking, listening, and cultural contexts. Students will learn the Arabic vocabulary. Lessons are taught in an authentic cultural context.

Prerequisite: ARAB 051 and graduate standing

ARAB 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ARAB 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ARAB 110: Arab Language, Cultures, and Current Topics

3 Credits

ARAB 110 is a fourth-semester (upper intermediate) Arabic culture and language course, designed for students who have successfully completed Arabic 003, or those who demonstrate an equivalent competence in Modern Standard Arabic. The course focuses on selected aspects of the cultures to be found among Arabic-speaking communities and countries around the world, and it emphasizes the diversities within,

as well as between, these cultures. Learners of Arabic as a second/foreign language will improve their language skills, especially in written and spoken communication, and they will develop their intercultural competence. The material is always presented through culturally rich texts, as the course uses authentic texts in Arabic to expand the student's knowledge of both language and culture. Students have many opportunities to increase their knowledge and appreciation of the varieties of cultural production in the Arabic-speaking world. Along with continuation of language learning, students are exposed to resources such as short stories, travelers' tales, websites, film, music, graphic fiction (comics), etc. The multiplicity of colloquial versions of the Arabic language, and their coexistence with Modern Standard Arabic, are explained in order to prepare students for encountering the complex reality of the language and its many cultures. This course can be taken as a stand-alone, or used to fill a requirement for the Arabic Minor, and as a prerequisite for Penn State's 400-level courses in Arabic.

Prerequisite: ARAB 003 or permission of program
 Bachelor of Arts: World Language (All)
 Bachelor of Arts: World Lang (12th Unit)
 Bachelor of Arts: Humanities
 Bachelor of Arts: World Cultures
 International Cultures (IL)
 General Education: Humanities (GH)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Global Learning
 Exceeds 12th Unit of World Language

ARAB 164: Introduction to the Qur'an

3 Credits

The Qur'an is the sacred text of Islam. Revered by over a billion Muslims today, it is little understood by non-Muslims. This course will introduce students to the literary and religious meanings of this important text, which is seen as both the very word of God as well as the premier example of Arabic style. Attention will be given to the many cultures which have been influenced by this text, especially the Middle Eastern world. All readings will be in English translation.

Cross-listed with: RLST 164
 International Cultures (IL)
 General Education: Humanities (GH)
 GenEd Learning Objective: Global Learning
 GenEd Learning Objective: Integrative Thinking
 GenEd Learning Objective: Key Literacies

ARAB 165: Islamic States, Societies and Cultures c. 600-1500

3 Credits

This course introduces students to the history and culture(s) of the Islamic world from c. 600-1500. The course develops a historical framework for understanding developments in religious and legal thought and practice, science, medicine, and technology, philosophy, and the arts. Students will learn about culture through lecture and discussion and through examination and analysis of a variety of texts and examples of material culture from different periods and regions.

Cross-listed with: HIST 165, RLST 165
 Bachelor of Arts: Humanities
 Bachelor of Arts: World Cultures
 International Cultures (IL)

General Education: Humanities (GH)
 GenEd Learning Objective: Global Learning
 GenEd Learning Objective: Key Literacies

ARAB 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ARAB 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ARAB 295: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

ARAB 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ARAB 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ARAB 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ARAB 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ARAB 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ARAB 401: Advanced Language & Cultures I

3 Credits

Fifth-semester Modern Standard Arabic: reading more complex texts, films, further development of conversation, composition skills, Arab cultures, current issues. ARAB 401 Advanced Language & Cultures I (3) (IL) (BA) This course meets the Bachelor of Arts degree requirement. This language and culture course, which fulfills International Cultures requirement or the Other Cultures requirement within the Bachelor of Arts degree, will offer a continuation of the study of the Modern Standard Arabic language and an exploration of several aspects of Arab cultures. Language skills (reading, writing, speaking, listening) are further developed through the exploration of several culturally important themes that illustrate a range of cultural situations and contexts. Among the themes that may be discussed are the following: new opportunities and also persistent problems facing Arab youth; social and economic conditions in which fundamentalist and other groups present their agendas; the condition of women and the pressures often exerted by society's norms and traditions to keep women out of the public scene; cultural, emotional, and literary reactions to the tragedy of displaced peoples; Islam and other religions among Arab cultures; love and the images and symbolism used to describe it; the writings of one or more well-known authors, including the evolution within the works of the author(s) and the influence of these writings on Arab thought; Arabic cultures in various parts of the world, including the U.S. All themes are presented in the target language and represent a wide range of Arabic culture and current issues. The course may also involve popular media such as comics, newspaper headlines, music and songs, and a visit to the library. Class activities and projects are designed to enable students to become active and creative participants and transmitters of new knowledge to their peers. Students will be asked to conduct research using authentic material, and to write a short paper in Arabic as a wrap up of their final presentation.

Prerequisite: ARAB 110 or approval of program
Bachelor of Arts: Arts
International Cultures (IL)

ARAB 402: Advanced Language & Cultures II

3 Credits

Sixth-semester Modern Standard Arabic: reading more complex texts, films, further development of conversation, composition skills, Arab cultures, current issues. ARAB 402 Advanced Language & Cultures II (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This language and culture course, which fulfills the Humanities or the International Cultures requirement within General Education or the Other Cultures requirement within the Bachelor of Arts degree, will build upon previous courses in the Arabic curriculum and offer a continuation of the study of the Modern Standard Arabic language, an exploration of several aspects of Arab culture in a range of contexts, and the exploration of current issues and topics of interest in Middle Eastern media. Among the themes that may be discussed are the following: the achievements of Arab Nobel Prize winners, holiday traditions, colloquial Arabic, love, social and economic conditions of the poor and the middle-class, practical and psychological problems arising from belonging to a certain social class, ways in which the state (in different countries) relates to the needs of the people, Arab cultures in various parts of the world including the U.S., and a variety of the most recent social and political newspaper and magazine articles. All themes are presented in the target language and represent a wide range of

Arabic culture and current issues. The course may also involve popular media via the reading of comics, relevant headlines, music and songs, and computer practice for students to learn how to type in Arabic and benefit from available resources to equip students with this useful Arabic tool. Class activities and projects are designed to enable students to become active and creative participants and transmitters of new knowledge to their peers. Themes will often be examined comparatively and will draw on students' personal experience to connect with the material presented. The course is designed for students who have completed Arabic 401 in our language sequence or have the equivalent level of language proficiency. At University Park the course will be offered every semester or every other semester, according to enrollment patterns and the availability of staff. At other locations, course-offering patterns will be determined by their needs.

Prerequisite: ARAB 401 or approval of program
Bachelor of Arts: Arts
International Cultures (IL)

ARAB 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

ARAB 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

ARAB 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ARAB 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ARAB 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Architectural Engineering (AE)

AE 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

AE 124: Architectural Engineering Orientation

1 Credits

This course is a first-year seminar (FYS) designed for students interested in learning about architectural engineering as a major and careers in this field while also providing the skills for students to successfully navigate Penn State University. The course is broken into three major areas: (1) an overview of architectural engineering as a major and a profession; (2) professional and study skills for navigating a university environment; (3) resources available for coursework application across Penn State and within the College of Engineering; and (4) unique themed experiences related to architectural engineering topics. AE 124 introduces the field of architectural engineering and discusses the wide range of career paths that graduates can pursue. The course overviews the 5-year architectural engineering curriculum and presents the research, study-abroad, internship, and other extracurricular opportunities available for students in the major. Next, the course provides students with the necessary skills to be successful in their classes, including: how to schedule classes and plan out study habits while familiarizing themselves with campus and the resources available to engineering students. Students learn how to navigate professional settings such as the Architectural Engineering Career Fair and job interviews so they can maximize their opportunities for internships and fulltime careers in the building industry. Lastly, students take a deeper dive into a selected themed topic that explores innovative hands-on projects that reflect various aspects of the architectural engineering discipline. Themes for the hands-on projects may vary from section to section and year to year to remain relevant to the current needs of the profession. Students learn in an interactive environment that utilizes a combination of teaching styles including, but not limited to: construction site tours, behind the scenes campus building tours, field trips, active building and testing, individual and group projects, guest speakers, and more.

First-Year Seminar

AE 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

AE 202: Architectural Engineering Concepts

3 Credits

This course exposes students to (1) the interdependencies between various building systems (2) the interdisciplinary nature of the field of architectural engineering, and (3) the concept of professional practice in the building and construction industries. Students learn to integrate architectural design and detailing, the influence of thermal science, and building codes in the design of building systems. By the end of the course, students will be able to produce simple integrative building designs, attain fundamental knowledge of fire protection principles, design a roof storm water drainage system, have a fundamental knowledge of climate as a design driver, gain working knowledge of passive design strategies, attain a fundamental knowledge of psychrometrics, understand the principles defining thermal comfort, gain working knowledge of heat transfer through building envelope assemblies, calculate heat loss for a building, perform simple energy calculations and gain a fundamental knowledge of typical energy codes. The course also introduces the principles of social and environmental responsibility through discussion of sustainable design. The course

utilizes lectures, practicums, examinations, projects and presentations to deliver and reinforce the technical content. The course offers students the opportunity to work in team settings and to present their work orally to their peers. The projects present opportunities to engage students in the discussion and application of social and ethical responsibilities.

AE 210: Introduction to Architectural Structural Systems

3 Credits

Qualitative study of architectural structural systems; historical development of structures; insights of structural analysis and synthesis; comparative structural types. This course is intended for Architecture students. AE 210 Introduction to Architectural Structural Systems (3) is an introductory course in structural analysis and engineering mechanics (primarily statics) with an emphasis on buildings. This course was created specifically for Penn State architecture students. The course is designed to give students an understanding of the behavior of building structural and related architectural elements under a variety of loading conditions. AE 210 is designed to provide students with an understanding of the interpretation and application of structural aspects of building code requirements, particularly in the area of design loads. In addition, this course provides the necessary prerequisite knowledge for two additional structural design courses that are required for architecture students.

Prerequisite: algebra, trigonometry**AE 221: Building Materials, Methods and Modeling I**

3 Credits

This course covers the fundamentals of: (1) building materials to form building systems, (2) building construction methods to assemble building systems, and (3) computer modeling strategies to convey system designs. All three areas are concurrently taught to connect the lectures to a thematic area in building design. Thematic areas covered in AE 221 include: various architectural and structural materials; visual documentation of architectural designs and structural systems in 2D and 3D representations; industry accepted software tools to convey designs; and finally, building codes and their requirements. Students learn the course content in a variety of active strategies including: site tours, building construction demos and lab builds, utilizing campus buildings in assignments, guest speakers and more. By the end of the course, students will be able to comprehend trends in how materials are used to create buildings; identify and select current and emerging building materials for a variety of applications; apply technology to communicate designs to many different stakeholders; read, interpret and generate construction documents (e.g. 2D and 3D models); and connect building codes and standards requirements to building materials. AE 221 is a required course for all students in the Architectural Engineering undergraduate program.

AE 222: Building Materials, Methods and Modeling II

3 Credits

This course covers materials and methods of construction used in residences, and the preparation of working drawings for a small building. The course objective is for students to understand construction documents, to communicate construction information with sketches, and to create drawings and specifications. The course is organized around a series of modules related to working drawings. These modules consist of: 1) reading and interpreting construction documents, 2)

creating hand drawn sketches, from existing mock-ups, from existing drawings, from assigned details of existing campus buildings, from only given material and connection parameters, and 3) generating CAD drawings of plans, elevations, wall sections, building sections, details, schedules. The final partial construction documents will be in accordance with CAD standards and building various codes, including zoning. This course prepares students for further study in the advanced architectural engineering courses. Student evaluation and individual grades are based on a combination of homework, projects, in class assignments, exams, quizzes and attendance. In class assignments are generally short and given to demonstrate a concept or as practice. Special facilities consist of: 1) the drafting room, where various drawings and specifications are utilized and where students prepare sketches, 2) the computer lab, where students have access to computer aided design software, presentation software and communication software, 3) the material samples room, where actual material samples and fasteners are examined and understood and 4) the hands-on mock-up room, where true size mock-ups that represent the students' drawings are built by student groups.

Enforced Prerequisite at Enrollment: AE 221

AE 240: Programming and Data Science for Architectural Engineering

3 Credits

The goal of this course is to provide students with fundamental knowledge of programming and data science so that it can be applied to a broad set of problems in architectural engineering. The course introduces students to programming concepts in Python, such as object oriented and functional programming as well as data science concepts, including exploratory data analysis and data visualization libraries that can be applied in Python, as well as similar applications available in spreadsheet tools. Basic topics related to statistics and optimization in architectural engineering applications are also included. During the final part of the course students will synthesize the topics they learned and apply them to AE CAD software and other tasks. This course provides a foundation for architectural engineering students to apply programming and data science techniques not only to challenges that exist today, but also to new challenges that will emerge as this field changes with time.

Enforced Prerequisite at Enrollment: MATH 140

AE 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

AE 308: Introduction to Structural Analysis

4 Credits

Algebraic and graphical methods of analysis of determinate members, deflections; introduction to indeterminate analysis methods. Course includes practicums. AE 308 Introduction to Structural Analysis (4) In this introductory course, students develop skills to perform analysis of structures, with emphasis on buildings and their structural elements. The objectives of this course are as follows: 1) to determine loads that the buildings/structural elements are likely to be subjected to during the lifetime of the building; 2) to discuss procedures used to determine reactions and internal forces in trusses, beams, and frames; 3) to introduce methods that can be used to calculate deflections. These objectives can be seen as three general steps that define structural

analysis. Although the main emphasis in this course is the analysis of planar, statically determinate structures, an introduction to the analysis of indeterminate structures is also given. The course is required to be taken by all architectural engineering undergraduate students in the third year. A knowledge of statics and strength of materials is required and this course serves as prerequisite for steel and concrete design courses in the Architectural Engineering Program.

Enforced Prerequisite at Enrollment: (EMCH 211 and EMCH 213) or EMCH 210 or EMCH 210H

AE 309: Fundamentals of Architectural Acoustics

3 Credits

This course introduces students to the acoustical analysis and design of buildings by having a fundamental understanding of the physics of sound including frequency, wavelength, sound pressure, and the human auditory system. The course encompasses four distinct areas of study: (1) fundamentals of acoustics, (2) room acoustics, (3) sound isolation, and (4) human hearing. A key goal of the course is to equip students with the skills to provide building occupants with high-quality listening environments that minimize intrusion by offending noises. The course also overviews the acoustical performance of typical building materials. By manipulating architectural materials and geometric configurations, students learn to improve acoustical performance of a building, specifically reverberation time for interior room acoustics and sound transmission class for sound isolation. By the end of the course, students will be able to: perform calculations related to sound pressure level, sound power level, weighted average absorption coefficient, reverberation time, and sound transmission class; design rooms in terms of a suitable reverberation time; and design sound isolation between rooms in terms of a suitable partition selection. Through lectures, practicums, projects, and examinations, the concepts of acoustical design are delivered and reinforced. The course offers students the opportunity to work in a team setting.

Enforced Concurrent at Enrollment: AE 221

AE 310: Fundamentals of Heating, Ventilating, and Air Conditioning

3 Credits

This course explores a variety of HVAC systems and presents methods of analyzing air-conditioning processes. HVAC systems maintain not only an acceptable level of thermal comfort within conditioned spaces, but also a healthy indoor environment. Hence, the conditions for a comfortable and healthy indoor environment, such as physiological considerations, environmental indices, and control of indoor air quality are also presented. Successful design of an HVAC system requires an accurate estimate of the peak rate at which thermal energy must be added to (heating load) or removed from (cooling load) a space. Accordingly, the various types of heat transmission in buildings and methods for estimating them are discussed to prepare students to estimate a building's energy consumption and size HVAC systems properly. By the end of the course, students will have an understanding of elements that influence HVAC design (such as, climatic conditions, building enclosure and factors of integrative design); attain fundamental knowledge of cooling load estimating; be knowledgeable about typical building HVAC systems (such as, steam, hydronic, and air systems); understand the psychrometric processes involved in maintaining indoor conditions for comfort and health; and evaluate the processes needed to maintain acceptable indoor air quality.

Enforced Prerequisite at Enrollment: ME 201. Enforced Concurrent at Enrollment: AE 202

AE 311: Fundamentals of Electrical and Illumination Systems for Building
3 Credits

In Fundamentals of Electrical and Illumination Systems for Buildings (AE 311), students gain an understanding of the basic knowledge and methods for analyzing, designing, and specifying building lighting and electrical systems. Lighting content introduces vision and perception, color, photometric calculations, luminaire types and their application, lighting controls, architectural lighting design principles, and lighting design documents. By the end of the course, students will be able to analyze, design, and specify simple architectural lighting systems. More specifically, students will gain a working knowledge of the terminology and principles of architectural lighting design and the role of lighting designers within the building design process; learn to apply the Illuminating Engineering Society (IES) design guidelines, and applicable energy code requirements in various space types. They will also be able to recognize, select, configure, and specify architectural luminaires and related control systems; understand the basics of color theory and the psychological impacts of lighting; and create and validate simple computer models for the purpose of facilitating lighting design. Electrical content introduces fundamental electrical calculations, electrical design processes, power distribution layout and equipment selection; the National Electrical Code, including application of its overcurrent and grounding requirements; electrical construction documents; and utility coordination. By the end of the course, students will be able to analyze, design and document architectural electrical systems. Specifically, students will gain a working knowledge of the terminology and principles of architectural electrical systems and the role of electrical engineers within the building design process; size and specify conductors, conduit, and overcurrent protection devices according to the National Electrical Code, and coordinate and layout panelboards and switchboards; identify topics in electrical building system design that create safety issues; and understand electric utility services and rate structures as they apply to building design. Lecture material is reinforced with homework, hands-on practicums, and team projects. AE 311 is a required course for all students in the Architectural Engineering undergraduate program and typically taken in the third year. This course serves as a prerequisite for courses on building illumination and electrical systems in the Architectural Engineering undergraduate program.

Enforced Prerequisite at Enrollment: PHYS 212

AE 372: Introduction to the Building Construction Industry
3 Credits

In this course, students will gain an understanding of the basic knowledge and methods used to organize and manage the delivery of a construction project. Construction topics covered include an introduction to the construction industry; organizational and contractual arrangements for construction projects; construction cost estimating techniques; construction scheduling approaches; critical path method scheduling; construction risk management, including bonds and insurance; and project management related to safety, quality, cost, and schedule. By the end of the course, students will: understand core concepts associated with construction planning and management approaches for building projects; be able to define the goals and objectives of the various players on a construction project; select a delivery method for organizing and delivering a successful construction project; know the typical types of contracts, insurance, and bonds, along

with when they are appropriately used; create conceptual, square foot, assembly, and unit price construction cost estimates; develop a Critical Path Method (CPM) schedule for a construction project or group of activities; and define and apply the typical methods for managing and controlling a construction project. Lecture material is reinforced with hands-on practicums, team projects, and individual assignments. Upon successful completion of AE 372, students will understand core concepts associated with construction planning and management approaches for building projects.

Enforced Prerequisite at Enrollment: AE 221

AE 397: Special Topics

1-6 Credits/Maximum of 6

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

AE 401: Design of Steel and Wood Structures for Buildings
3 Credits

Design of Steel and Wood Structures for Buildings (AE 401) is a first course in structural steel and wood design that focuses on the application of principles of structural behavior and material properties to the layout, analysis, design, and detailing of structural elements in steel and wood buildings. This course will prepare students to: (1) analyze and design members in gravity systems (steel and wood) and (2) identify, interpret and apply the appropriate provisions (from the American Institute of Steel Construction and the American Wood Council) to evaluate limit states at a member level. The primary steel topics covered in AE 401 include: steel system configurations; tension and compression members; non-composite and composite beams; decking and joists; conceptual layout of steel gravity systems, and bolt and weld limit states. The primary wood topics covered in AE401 include: wood design philosophy, wood gravity systems, along with correlations between what is similar and unique between steel and wood structures.

Enforced Prerequisite at Enrollment: AE 221 and AE 222 and AE 308

AE 402: Design of Concrete Structures for Buildings
3 Credits

This course provides students in the Structural option with an ability to analyze and design reinforced concrete members along with an understanding of their theoretical behavior. The primary focus is on the analysis and design of one-way systems composed of slabs, beams, and columns. By the end of the course, students will understand how design decisions are made; understand the theoretical behavior of reinforced concrete members and the effect of various design parameters on capacity; analyze and design reinforced concrete beams for flexure and shear, including the case of compression reinforcement of a flange; analyze and design reinforced concrete columns under axial loads and a combination of moment and axial load; construct simplified axial/flexure interaction diagrams for columns; understand concrete strength and serviceability characteristics; and read, interpret and apply American Concrete Institute building code provisions. A prerequisite knowledge of structural analysis is necessary.

Enforced Prerequisite at Enrollment: AE 221 and AE 222 and AE 308

AE 403: Advanced Steel Design for Buildings

3 Credits

By the end of the course, students will be able to analyze and design multi-story steel framing systems by: understanding and applying the provisions of national standards and specifications for design loads and associated criteria; designing gravity and lateral elements in a comprehensive design project; applying state-of-the-art guidelines for serviceability; creating and validating computer models for the purpose of facilitating design; Students will also be able to identify topics in steel design that are beyond the scope of classroom instruction; identify and apply resources available from the American Institute of Steel Construction; and explain their ethical and professional responsibilities for designing safe, serviceable, and economical steel designs.

Enforced Prerequisite at Enrollment: AE 401 and AE 430

AE 404: Building Structural Systems in Steel and Concrete

3 Credits

In this course, students gain an ability to design simple building members in steel and concrete using current professional standards, specifications, and guidelines. Students will learn how to combine these members into simple structural systems and compare the performance and load carrying characteristics of these systems. The course also addresses general performance parameters of these materials, construction issues, and key systems integration issues for beams, columns, flooring and roofing systems, and lateral bracing systems constructed in steel and concrete. By the end of the course students will be able to: apply structural loads based on relevant codes and standards; understand the layout of various steel flooring and roof systems; select steel deck system based on design requirements; calculate the loads for different deck configurations and use them to assess the forces on floor members; design floor members including joists and standard steel W-shapes; calculate the loads on steel columns and design them; understand various lateral load resisting system in steel buildings and their efficient layout; understand various types of connections in steel buildings; understand various reinforced concrete floor systems and their applicability; calculate the loads and moments on beams, girders and one way-slabs; analyze beams for flexure and shear; design columns and two-way slabs using tables from the Concrete Reinforcing Steel Institute (CRSI). This course is considered to be the terminal course in structures for non-Structural option AE students, and is designed to provide a general understanding of design, construction, and integration issues that affect these structural systems. This course may not be taken by students in the Structural option in the Architectural Engineering undergraduate program or by students in the Architecture program.

Enforced Prerequisite at Enrollment: AE 221 and AE 222 and AE 308

AE 405: Geotechnical Engineering

4 Credits

This course prepares students in the analysis, evaluation, and design of the most commonly used foundation systems to support buildings with an emphasis on shallow foundations. Included is a discussion of how all structural loads on buildings, most notably gravity loads and wind/seismic lateral loads, are transferred to the soil supporting the building. The design of foundation systems is a function of soil material properties, foundation material, and the selected foundation system. Topics include the basics of soil mechanics for foundation design for both strength

(load capacity) and settlement (serviceability), and the design of the most commonly used types of foundation systems. This course provides students with the knowledge, tools, and understanding of material properties, analysis and design principles, and methods necessary for successful design and construction of common shallow foundation systems within the framework of quality control, code compliance, economic considerations and safety, while minimizing failure risks. Students are also provided with an overview of the most common forms of deep foundation systems including piles and drilled shafts.

Enforced Prerequisite at Enrollment: (AE 308 or CE 340) and (AE 402 or AE 404)

AE 421: Architectural Structural Systems I

3 Credits

Qualitative and quantitative analysis and design of architectural structures, force flow; structure configurations; measurement and experiments; design studio critique.

Enforced Prerequisite at Enrollment: AE 210 and 3 credits of MATH

AE 422: Architectural Structural Systems II

3 Credits

Continuation of A E 421, with emphasis on structural configuration and construction assemblies.

Enforced Prerequisite at Enrollment: AE 421

AE 430: Indeterminate Structures

3 Credits

Indeterminate Structures (AE 430) aims to help students develop their analytical understanding and skills related to multi-member determinate and indeterminate structures. A knowledge of statics, strength of materials, and basic structural analysis is required. Building on concepts from the introductory structural analysis class, this course expands on classical methods for the analysis for beams, columns, trusses, frames, as applied to buildings. Additionally, students will learn about gravity and environmental loads; load paths, load effects, methods of analysis, and problem-solving skills; building code provisions for wind and seismic conditions; and lateral loads. Lastly, this knowledge is synthesized for computational modeling of and validation for simple structures.

Enforced Prerequisite at Enrollment: AE 308

AE 431: Advanced Concrete Design for Buildings

3 Credits

Advanced Concrete Design for Buildings (AE 431) is the second course in reinforced concrete design that builds upon previously learned skills in reinforced concrete design and analysis of statically determinate and indeterminate systems. Successful students will gain a sufficient understanding of the theoretical basis of concrete design to be able to learn any further aspect of concrete design on their own, and a set of specific critical skills needed by a structural designer involved with reinforced concrete structures. By the end of the course, students will be able to: interpret the organization and meaning of the ACI 318; apply behavior knowledge to evaluate limit states to assess if concrete one and two way gravity and lateral systems are properly sized; execute appropriate methods for designing concrete members and systems

using the strength design approach; develop skills in layout, design and evaluation of conceptual concrete system designs for a building; analyze and design reinforced concrete structures by understanding that reinforced concrete analysis and design are inextricably linked; to interpret design issues, select and conduct the required analysis, and specify a design for a particular application.

Enforced Prerequisite at Enrollment: AE 402 and AE 430

AE 432: Design of Masonry Structures

3 Credits

Design of Masonry Structures (AE 432) prepares students to design load-bearing and non load-bearing masonry structures. Although the emphasis is on reinforced masonry, some topics in unreinforced masonry are also covered. The course begins with a discussion of the materials used in masonry construction: clay units, concrete units, mortars, grout, and reinforcement. Since masonry code covers both allowable and strength design methods, a discussion of both design philosophies is necessary. The primary focus is on the analysis and design of reinforced masonry lintels, columns, shear walls, as well as out of plane walls. Additional topics such as deep beams, deflection, anchorage, and development length are also covered. By the end of the course, students will be able to analyze and design lintels in flexure and shear; analyze and design concrete masonry columns and pilasters under restrained or unrestrained conditions; analyze distribution of lateral loads to shear walls with openings; analyze and design masonry wall (load bearing and non-load bearing) in flexure and shear for in-plane loads; analyze and design concrete masonry walls and out-of-plane loads; design deep beams; detail miscellaneous steel attachments to masonry.

Enforced Prerequisite at Enrollment: AE 402 or CE 341

AE 440: BIM Data Management and Analytics for Multi-disciplinary Integration

3 Credits

This course provides students with fundamental knowledge of Building Information Modeling (BIM) applications in a whole project lifecycle, BIM-based data analysis, data visualization, and multi-disciplinary coordination. The Architecture, Engineering, Construction, and Operation (AECO) industry generates a large amount of data every day, with BIM playing a critical role in the design, construction, and operation of buildings. This course addresses techniques and tools for extracting, revising, analyzing, and visualizing BIM data to support multi-disciplinary coordination and predict building design and construction performance based on BIM data. A team project enables students from various option areas to use BIM tools to visualize and predict design & construction performance based on their interests; for example, to predict construction cost and energy consumption, or to conduct a design constructability check. In addition, this course will provide students with an overview of the future applications of BIM.

Enforced Prerequisite at Enrollment: AE 240

AE 441: Engineering Lifecycle Economic Analysis for Buildings

1 Credits

This course will focus on understanding the economics of the building lifecycle and the analytical approaches to evaluate higher cost building systems that may reduce overall lifecycle costs. Buildings are typically prototype combinations of systems that have varying costs in terms of

utility rates and maintenance costs, system replacement, and challenging to quantify 'value' of the building operations. This course includes concepts from engineering economics to understanding and applying traditional engineering economics concepts to the lifespan of buildings and their systems. The majority of the course content will focus on understanding and applying methods and techniques for analyzing the initial and lifecycle costs associated with alternative building system decisions. In the final stages of the course, quantification of unique benefits will be considered along with how to consider these benefits in system decisions.

Enforced Prerequisite at Enrollment: AE 372

AE 445: Building Retuning

3 Credits

Building Retuning focuses on the identification and implementation of energy-efficient retuning measures for commercial buildings to detect energy savings opportunities and implement improvements. This class introduces the topics of energy efficiency management through no-cost and low-cost operational measures in the following major focus areas: lighting, building envelope, hot water/steam systems, HVAC, compressed air, indoor environmental quality, and plug loads. This course builds upon prerequisite knowledge in building energy systems and is intended to support careers in the energy services industry. Students will learn how data is acquired through several on-site building surveys and walkdowns, analyze them, convert them to graphical formats, and interpret them for operational diagnosis and write a report on their recommendations. Students will also gain experience to interact with building occupants and operators and practice how to effectively work as a team. By the end of the course, students will: understand the roles of various technologies, methods, and analytical tools designed to evaluate building energy systems, envelope, and occupancy; be proficient in the use of analytical tools used for energy modeling of existing buildings and the development of energy efficiency recommendations; be capable of synthesizing multiple sets of criteria in the design of energy efficiency measures and packages that are unique and responsive to situational conditions; and be experienced in communication with facility owners and managers in a manner that encourages actionable steps toward energy efficient systems.

Enforced Prerequisite at Enrollment: AE 424 or AE 476 or AE 454

AE 449: Ultra-High Performance Buildings: Passive House Principles & Design

3 Credits

This course covers the principles, methods, and verification processes behind passive building design, with a focus on building envelope and mechanical system design, while providing a foundation in fundamental building science principles. The course focuses on ultra-high performance design principles, including continuous insulation, strict air tightness limits, reduction of thermal bridging, and thermal comfort via balanced ventilation and heat recovery, resulting in buildings with significantly lower energy use and higher occupant comfort than conventional construction. These principles are applicable to all building types. Students will also learn how to analyze Passive House performance during the design stage using relevant software, and during construction using blower door tests and infrared camera measurements.

Enforced Prerequisite at Enrollment: AE 202 or AE 470 or ARCH 412

AE 453: Load and Energy Use Simulations for Buildings

3 Credits

This course provides students with fundamental knowledge and an understanding of the methods and computational tools used in predicting and determining energy use of whole buildings and important subsystems. Load and energy use simulation content includes: conduction, convection, and radiation heat transfer physics as applied to buildings; Heat-Balance Method for transient load and energy calculations; application of commercial modeling software; analysis, interpretation, and verification of model results; and an introduction to data-driven modeling approaches. Course material is introduced and reinforced through hands-on modeling assignments, and larger concepts are motivated through in-depth individual and team modeling projects. By the end of the course, students will be able to: quantitatively compare and contrast building designs through load and energy simulations; identify and mathematically delineate the principal conductive, radiative, and convective heat transfer processes in building heating and cooling load assessment; identify, collect, and organize all of the initial conditions data required for the mathematical simulation of the building operation demand loads and calculation of the energy required to operate the building systems; identify and quantify the internal and envelope related cooling and heating loads; determine the subsystem (lighting, heating, ventilation, cooling, occupant equipment) energy use components associated with internal and envelope related loads; and indicate the energy use measurements required to establish an inverse model of building load and energy utilization for forward model simulation reconciliation.

Enforced Prerequisite at Enrollment: AE 310

AE 454: Advanced Heating, Ventilating, and Air Conditioning

3 Credits

This course provides students with fundamental theories and advanced knowledge to design HVAC systems for energy-efficient, healthy, and sustainable buildings. Students learn approaches to analyzing complex and integrated building mechanical systems for improved energy and environmental quality performance. Using scientific theories and analysis techniques from thermodynamics, fluid mechanics, and heat transfer, students critically evaluate building environmental quality, heating and cooling loads, and energy and mass transfer in the HVAC system, building envelope, and occupied spaces. This course provides a foundation for engineering students who will design and/or operate building mechanical systems including air and water distribution systems that promote energy savings, occupant comfort, and health for commercial and residential buildings. Based on these foundations, students learn engineering design and performance analysis procedures for residential and commercial building mechanical systems. By the end of the course, students will be able to apply fundamental thermodynamics and heat transfer principles to HVAC design and analysis; interpret the role of the HVAC system in energy consumption, indoor air quality, and thermal comfort; design HVAC components for residential and commercial construction using appropriate references; calculate heating, ventilating, and air-conditioning loads for a variety of buildings; critique and evaluate energy efficiency and environmental quality associated with building environmental systems; evaluate thermal comfort, productivity, and environmental quality associated with building environmental systems; and identify building performance standards and guidelines.

Enforced Prerequisite at Enrollment: AE 310

AE 455: Advanced Heating, Ventilating, and Air Conditioning System Design

3 Credits

This focuses on the development of skills necessary to identify HVAC system types appropriate for a given building and to perform a system selection exercise to determine the best of several design alternatives based on criteria including indoor environmental quality, energy and water use, construction cost, operating and maintenance cost, and life-cycle cost. The first portion of the course is preparation for a team design project in which the team identifies alternatives for a projected building based on the owners' project requirements that comply with applicable standards for indoor environmental quality and energy efficiency. The project culminates in a report and oral presentation to a jury. By the end of the course, students will be able to recognize and distinguish among common types of HVAC systems; select system alternatives suitable for a given application; perform a budget-level mechanical system construction cost estimate; perform a life-cycle cost analysis including construction, operation, and maintenance costs; and perform and document a system selection process to recommend the best solution among several alternatives. Topics considered include schematic diagram development for HVAC systems, system selection procedures, HVAC system types, mechanical construction cost estimating, life-cycle cost analysis, and standards commonly used in the design of HVAC systems.

Enforced Prerequisite at Enrollment: AE 454

AE 457: HVAC Control Systems

3 Credits

In this course, students will gain an understanding of basic automatic control theory, control system components, and control system design for applications related to building heating, ventilation, and air conditioning systems. The course builds on knowledge of HVAC system function and design obtained in prior courses in the curriculum and prepares students for advanced design courses and the capstone project. The course begins with an introduction to concepts and terminology of automatic control, followed by detailed study of control system components: sensors, controlled devices, and controllers. Understanding of these fundamentals is then applied to the development and documentation of controls for common HVAC systems and the commissioning of control systems. Relevant standard and guideline documents are referenced as appropriate. Students gain skills to design, document, and analyze the performance of building control systems. By the end of the course, students will be able to describe the characteristics of dynamic control systems and illustrate typical responses; identify, explain, and select the components of a control system; select and explain appropriate control strategies and sequences of operation; design and specify complex building automation systems for a variety of building types; and assess and contrast HVAC control sequences.

Enforced Prerequisite at Enrollment: AE 454

AE 458: Advanced Architectural Acoustics and Noise Control

3 Credits

This course focuses on noise control and room acoustics in buildings with an emphasis on the control of HVAC system noise, sound isolation in buildings, speech privacy, and acoustic design variables in spaces for speech and music. By the end of the course, students will be able to

predict sound pressure levels (Lp) along ductwork due to sound power levels of a fan; design HVAC systems using noise control strategies to achieve suitable Lp; design noise barriers for outdoor HVAC equipment, e.g. cooling towers & rooftop units; design rooms for speech and /or music taking into account reverberation time, clarity index, room shape, materials and reflectors; specify appropriate sound transmission class (STC) of wall partitions and noise criteria (NC) for speech privacy; and design sound isolation for floor-ceiling assemblies in terms of impact insulation class (IIC).

Enforced Prerequisite at Enrollment: AE 309

AE 459: Measurement Science for High Performance Building Systems

3 Credits

This course provides students with hands-on experience in the measurement of building energy performance, thermal comfort, and indoor air quality. Students learn standardized test methods and instrumentation for field investigation of building system performance. Using the measurement data from real buildings (both commercial and residential), students will be able to critically evaluate performance of building HVAC systems, building envelopes, and environmental quality in occupied spaces. Students will also learn how to renovate building systems based on field monitoring data. By the end of the course, students will be able to apply fundamental building science principles to measure mass and energy flow in buildings; leverage instrumentation and standardized test methods for high performance buildings; assess measurement science, uncertainty, and quality control associated with field measurements; and critique energy performance and indoor environmental quality of a building using field measurements and data analysis. The topics in this course provide a foundation for engineering students on the design of net-zero energy and high-performance buildings that address energy savings, occupant comfort, productivity, and health.

Enforced Prerequisite at Enrollment: AE 310 and AE 454

AE 461: Architectural Illumination Systems & Design

3 Credits

This course enables students to design basic lighting systems by providing them with a working knowledge to (1) evaluate the applicability of different lamp, luminaire, and control types in a particular design situation; (2) establish fundamental design criteria for a variety of lighting applications; (3) conduct appropriate and accurate analyses of lighting systems to assess system performance and evaluate their ability to meet design criteria; and (4) implement a completed design by specifying all of the components of the system and providing an appropriate system layout. By the end of the course, students will be able to converse intelligently about the art and science of light; apply technical terminology utilized in the lighting industry; understand how to establish fundamental design criteria for a variety of lighting situations; apply a design process for selecting and evaluating lighting hardware including light sources and luminaires; create a lighting design, reflected ceiling plan, light fixture schedule, and be able to appropriately present design solutions; and recognize basic ethical issues and understand proper frameworks for evaluating situations. Topics covered include: lighting and color metrics; the lighting design process; psychological aspects of lighting; light sources, luminaires, lighting systems, and the layering of light; lighting system documentation; presentation skills; ethics, professional issues, and the business of lighting.

Enforced Prerequisite at Enrollment: AE 311

AE 462: Architectural Lighting Controls

3 Credits

AE 462 is designed for students who wish to gain a more thorough understanding of architectural lighting controls and integration of controls with other building systems. This course examines how sustainability, human needs, costs, psychology, codes, corporate branding, and more all overlap to drive design decisions. It builds upon a fundamental understanding of the architectural lighting design process to develop a student's awareness of control issues. Topics include control philosophy, control topologies, control componentry, design documentation, code evaluation, and advanced control logic. The course investigates the methodology and processes behind basic control systems to modern data driven IoT (Internet of Things) solutions at the cutting edge of technology.

Enforced Prerequisite at Enrollment: AE 461

AE 463: Daylight Analysis of Roman Architecture

3 Credits

Solar geometry, building orientation and form, daylight design methods, characterization of interior and exterior lighting conditions. Offered in Rome. Analysis of Roman architecture from the perspective of daylight. Topics include solar geometry; building orientation and form; daylight design methods including toplighting and sidelighting strategies; illuminance meters; characterization of interior and exterior lighting conditions; site visits. Course includes development of a software tool to compute solar geometry and daylight availability for any location on the globe and for clear, overcast, and cloudy sky conditions. The software tool will also run in reverse, providing time of day and year when the sun is in a desired position for any latitude and longitude. Offered on location in Rome.

Enforced Prerequisite at Enrollment: ARCH 130A and AE 202

AE 464: Advanced Architectural Illumination Systems & Design

3 Credits

The course focuses on advanced topics related to lighting design such as luminous flux transfer and its application to lighting analysis tools, advanced issues in photometry, advanced control systems, and the design and evaluation of daylighting systems. Course topics include: Codes and standards; photometry, lighting and daylighting system performance metrics; lighting calculations for point and area sources, methods for modeling interreflection; the Lumen Method; light loss factors; proper application of lighting system modeling software; the fundamentals of daylighting and daylight delivery systems; basic and automated lighting control systems and their application, plus their role in emergency lighting. By the end of the course, students will be able to: convey a thorough understanding of photometric data and its application, including the ability to derive photometric reports from luminous intensity data; apply engineering principles and software to evaluate lighting and daylighting system performance; recognize different daylight delivery systems and list design considerations and performance features for these systems; apply daylight performance metrics to the analysis of daylight delivery systems; apply a working knowledge on the wide range of lighting control systems available, and properly select an appropriate control system and equipment for a specific application. The course

includes hands-on practicum experiences, homework, analysis and design problems and exams.

Enforced Concurrent at Enrollment: AE 461

AE 466: Computer Aided Lighting Design

3 Credits

This course provides students with a thorough understanding of the steps involved in the lighting design process, including the design and analysis for outdoor area; floodlighting; and interior applications, including design criteria; economic analysis; modeling algorithms; and visualization. The goal of this course is to cultivate an understanding of good lighting design practice through a series of design and analysis problems. Students gain experience and skill in applying these steps to real design problems, as well as effectively communicating their designs. Topics include the design process; outdoor area and interior architectural lighting design considerations; design criteria; schematic level design; lighting system modeling, performance evaluation and visualization; equipment selection and layout; and graphic and oral communication of schematic and final lighting design solutions. By the end of the course, students will have a thorough understanding of and the ability to: establish and follow a design process from programming through construction documentation; apply nontechnical skills that are essential to success in the AE professions of lighting design and illuminating engineering, including time management, effective communication, collegiality, and initiative; analyze lighting system performance with lighting software that employs advanced modeling algorithms; present design concepts, design processes, and lighting design solutions with clarity and professionalism, both visually and orally.

Enforced Prerequisite at Enrollment: AE 461

AE 467: Advanced Building Electrical System Design

3 Credits

Advanced Building Electrical System Design (AE 467) offers an in-depth look at electrical power distribution system design for buildings. The course reviews electrical calculation fundamentals, power distribution layout and equipment selection, metering/monitoring concepts, simple power flow control concepts, the National Electrical Code, design analysis and construction documents for electrical systems, and utility coordination. Lecture material is reinforced with homework and a semester-long project completed by each student. By the end of the course, students will have mastered core concepts needed to complete assignments encountered in electrical design for buildings. Specifically, students will be able to: explain and apply the electrical design process for buildings; evaluate facility loads and select an appropriate electrical distribution system configuration for a facility that complies with owner requirements; layout basic normal and emergency power distribution systems; understand the concepts of power system redundancy; address coordination details for the utility serving a project and create a detail that explains the interface with the utility; understand power studies (fault, device coordination and arc flash energy) and how to apply the study information to project design; select normal and emergency power distribution equipment that meets owner and project requirements; design feeders, branch circuits, and motor circuits and select distribution equipment sizes based upon loads and NEC rules; know basic metering and monitoring concepts and how these are applied to project systems; understand control systems for power flow, lighting, and equipment in buildings, and how to apply simple control strategies using control switches, relays/contactors and time switches for lighting circuits and

transfer switches, as well as contactors and electrically-controlled breakers for power distribution systems; evaluate and compare power distribution system options utilizing cost data as well as an evaluation model; understand the concepts and NEC rules for residential/living unit electrical design; read and apply the National Electrical Code to normal and emergency power distribution equipment, conductors, raceways, overcurrent protection and grounding; demonstrate mastery of basic electrical calculations needed for the design of single- and three-phase systems; and understand how electrical design is presented in project contract documents.

Enforced Prerequisite at Enrollment: AE 311

AE 468: Advanced Building Electrical and Communication Systems

3 Credits

Special Building Electrical and Communication Systems is an elective course within the architectural engineering program. It addresses specialized components and analysis of building electrical systems, cost and availability of electrical energy, and power quality. Students will also develop an a more in-depth understanding of alternative electrical sources, the National Electric Code, advanced design issues of electrical systems, as well as other electrical and building communication issues. In addition, part of the course will focus on the fundamentals of special systems typically included within the electrical discipline scope of work such as fire alarm, access control, surveillance, voice, video and data systems. Upon completion of this course, students will be able to explain the fundamentals of special electrical and communication systems within a building.

Enforced Prerequisite at Enrollment: AE 467

AE 469: Photovoltaic Systems Design and Construction

3 Credits

This course offers in-depth study in the areas of solar energy sources, photovoltaic (PV) systems design, and their interface with building electrical systems. The course provides an overview of PV systems and common applications in residential and commercial buildings, including the availability, intensity, and utilization methods of solar irradiance and insolation based on latitude and climate as well as site survey and assessment methods for the positioning of PV systems. Technical topics include solar radiation modeling, calculations, and simulation, traditional and emerging photovoltaic technologies, DC-AC power inversion, energy storage systems, and system sizing and design. The integration of PV systems with the building electrical system, including discussions of the pertinent building codes, utility interconnection, and the economic analysis of PV systems, is also included in this course. By the end of the course, students will be able to calculate and account for the factors which affect the performance of PV systems in various climates and conditions; distinguish the features and performance variables of solar modules and inverters in the design of PV systems; calculate string sizing and inverter matching variables in the design of PV systems; communicate the critical design features of safe and efficient PV system integration with buildings and utilities; evaluate and quantify the factors affecting the successful installation and performance of PV systems in a variety of settings; and apply newly acquired inquiry skills to assess new products entering the solar energy marketplace. In addition to understanding the key issues with system design, students will be able to choose components properly and to design a basic grid-tied system for a chosen building. Students will also be able to conduct an economic analysis of PV systems in the context of residential and commercial

building construction. Lecture material is reinforced with homework, hands-on exercises, and a semester-long project completed by each student.

Enforced Prerequisite at Enrollment: AE 311 or EE 210 or EE 211 or EE 212

AE 470: Residential Building Design and Construction

3 Credits

Residential Building Design and Construction (AE 470) familiarizes students with the residential construction industry and allows students to apply principles studied in other coursework to residential buildings. The content of this course provides an understanding of the residential construction process and the overall design of the various structural and enclosure systems within residential buildings. This course also focuses on the role of building science and the building enclosure in the performance and efficiency of residential buildings. The scope of residential construction considered in this course is primarily focused on single-family and multi-family dwellings. Furthermore, most of the topics covered are applicable to new construction, remodeling, as well as repair projects. By the end of the course, students will be knowledgeable of the operation of the residential construction industry and its role in the local and national economy; understand the construction process and the overall design of various systems within residential dwellings; and have experience with the role that building physics and the building envelope play in the performance and efficiency of residential buildings.

Enforced Prerequisite at Enrollment: AE 372 or CE 332

AE 471: CONSTRUCTION MANAGEMENT OF RESIDENTIAL BUILDING PROJECTS

3 Credits/Maximum of 3

Understanding residential project planning, management, contracts, budget, administration, and execution; discussion of the life cycle of a residential construction business. AE 471 Construction management of Residential Building Projects (3) The course Construction Management of Residential Building Projects is designed to introduce the students to a general understanding of the construction industry, basic principles of project planning and management, contracts, budget and project administration and execution as applied to residential building construction. The content of the course is intended to provide the student with the knowledge, tools, and understanding of processes and tasks necessary to manage residential building projects to completion successfully and within the framework of quality control, code compliance, and safety, while minimizing risks. The scope of the residential construction considered in this course is primarily focused on single-family dwellings and multi-family dwellings. Furthermore, most of the topics covered can be applicable to new construction, remodeling, as well as repair projects.

Enforced Prerequisite at Enrollment: AE 372 or CE 332

AE 472: Building Construction Planning and Management

3 Credits

This course introduces students to the processes by which building construction contractors acquire building projects, and the range of services typically provided on these projects. This course offers a working understanding of the preconstruction process and methods of acquiring negotiated work in building construction; addresses cost

estimates, schedules, cash-flow curves, and site plans for building projects; and provides a working knowledge of competitive presentation strategies and helps students develop professional presentation skills. The content of the course centers upon the process by which companies plan for and acquire projects as construction managers and general contractors. Specific topics include schematic estimating and scheduling, design coordination of structural, architectural, and mechanical systems, value engineering processes, and site planning. The financial aspects of construction work are also presented, including project financing, cash flow, and accounting. A significant portion of the course is devoted to the development of strategic and competitive business presentation, including risk assessment, fee structure, team dynamics, and technical presentation skills. By the end of the course, students will understand and participate in the planning, development, and presentation of a Request for Proposal (RFP) for a construction effort. Specifically: understand the steps required to review and assemble a reply to a complex RFP; create a company organization chart, outline roles and responsibilities, company charter, and demonstrate an understanding of creating an interesting response; understand the roles of consultants and project staff; assemble schematic estimates, site logistics, project schedules, and research the project needs and drivers; apply technology to enhance their deliverables; create a safety analysis to reduce risk and learn ways to control costs, enhance fees, and communicate/document project issues; acquire presentation skills and understand ethical practices and network development. The class relies heavily upon the application of all content in the context of a team project. The project involves the distribution of a "Request for Proposal" for which students prepare a competitive proposal for an actual building construction project planned on the Penn State University Campus. Class activities include the presentation of key issues followed by in-class or independent exercises to reinforce themes and strategies to be applied in the project proposal.

Enforced Prerequisite at Enrollment: AE 475

AE 473: Building Construction Management and Control

3 Credits

In Building Construction Management and Control (AE 473), students will learn how to perform detailed construction planning, identify potential problems during construction, and manage changes throughout a construction project. Students gain an understanding of the role of the general contractor/construction manager in analyzing the construction aspects of a building project and designing the construction engineering and management systems to effectively execute the project. Additional course topics include the key decisions that construction executives make when managing a construction company and identifying potential projects to pursue; the management of changes which occur throughout a project and ethical standards for a professional engineer and their impact on decisions within the construction industry. By the end of the course, students will be able to: explain key decisions that construction executives make when managing a construction company; perform detailed planning for a construction project; implement a construction plan and monitor the progress of a project including cost, schedule, quality, and safety performance; manage changes which occur throughout the project and how to negotiate contract changes; follow ethical standards for a construction professional and explain how ethics impacts decisions within the construction industry. The course is taught via a combination of teaching methods that rely on problem-based learning through both in- and out-of-class activities; lectures by faculty

and industry experts; project case studies; student presentations; and team and individual assignments.

Enforced Prerequisite at Enrollment: AE 472

AE 475: Building Construction Engineering I

3 Credits

Building Construction Engineering I (AE 475) offers students core knowledge about the construction processes and methods of different construction systems. Key issues for the construction management of these systems are addressed. This course explores the main methods and procedures for constructing buildings, and focuses on the civil, structural, and envelope elements of buildings. Four main components of building construction engineering are investigated: preconstruction, civil systems, structural systems, and architectural systems. The objective of this course is to develop the students' fundamental understanding of the required steps to plan and construct a successful building project. By the end of the course, students will be able to: identify the construction methods for the building systems; describe the method; explain why the method is being used; provide alternatives for the design; provide a rationale to support or evaluate the choice of alternatives; use their knowledge of building materials and equipment, such as concrete, steel, and masonry, to support their decision-making on the related issues in different construction projects; describe different construction procedures and details and identify the best one for a construction project; create a reasonable project estimate and schedule using the tools for cost estimation and task scheduling; clearly identify project safety, productivity, and quality control concerns as they relate to the systems discussed in this course; show awareness of current design and construction industry trends, issues, and events; and understand team dynamics to strengthen communication and interpersonal skills for professional practice.

Enforced Prerequisite at Enrollment: AE 372

AE 476: Building Construction Engineering II

3 Credits

Construction of mechanical and electrical systems in major buildings; fire protection, sound control, elevating; trade coordination; manufacturers' developments; computer application.

Enforced Prerequisite at Enrollment: AE 475. Enforced Concurrent at Enrollment: AE 310

AE 477: Material Science for Architectural Engineers

3 Credits

This course offers an in-depth understanding of the structure-processing-properties relationship of common building and construction materials. The course provides a detailed understanding of the atomic-level composition, structures, and properties of the three most-prominent building material types: metals, ceramics, and polymers. The student will understand foundational topics in the structural make-up of building materials and their standardized determination of physical, chemical, and mechanical properties. With a combination of in-class activities and lab-based practicums, the students will be able to apply their theoretical knowledge to active experimentation of materials. By the end of this course, the student will be able to (1) identify the engineering application of building materials and explain their use to meet design criteria of structures; (2) apply process-structure-property relationships to explain

the characteristics of common building materials (metals, ceramics, polymers); and, (3) evaluate the mechanical and failure behavior of built structures due to in-service loads.

Enforced Prerequisite at Enrollment: AE 221 and EMCH 213

AE 481W: Comprehensive Architectural Engineering Senior Project I

4 Credits

Building project selection and preparation of overall plan; preliminary investigation of building design and construction issues; creation of individual Capstone Project Electronic Portfolio (CPEP) and project proposal required. AE 481 Comprehensive Architectural Engineering Senior Project I (4) The course sequence of AE 481 and AE 482 comprises the capstone engineering design program for Architectural Engineering students. AE 481 is taken by all undergraduate architectural engineering (A E) students and also serves as the writing intensive course requirement in A E. Based on an actual building project model, students will investigate the building, perform technical analysis, develop project criteria and prepare a written proposal for more detailed work to be accomplished in AE 482. Evaluation methods include but are not limited to written reports, verbal and written presentations, faculty consultations and development of a capstone project electronic portfolio (CPEP).

Enforced Prerequisite at Enrollment: (ARCH 441 or ARCH 442) and 8th semester standing or higher in AE_BAE Writing Across the Curriculum

AE 482: Comprehensive Architectural Engineering Senior Project II

4 Credits

Continuation of AE 481 Engineering analysis of building systems; emphasis on analysis and design of building structural, mechanical, lighting/electrical, and construction related systems. Final written report, web-based project portfolio and verbal presentation are required. AE 482 Comprehensive Architectural Engineering Senior Project II (4) AE 482 is the second half of the capstone engineering design project for Architectural Engineering students. The course is taken by all undergraduate architectural engineering and serves as a direct follow up to AE 481. Students perform detailed option specific work in conjunction with individual proposals written in AE 481. Students are also required to demonstrate work in the breadth areas of architectural engineering. Evaluation methods include but are not limited to written reports, verbal and written assignments, faculty consultations, maintaining their capstone project electronic portfolio, a final comprehensive written report and a verbal presentation to a faculty jury.

Enforced Prerequisite at Enrollment: AE 481W

AE 494H: Honors Thesis

1-6 Credits/Maximum of 12

This course provides students with research skills related to the following: problem formulation, literature review, research study design, data collection, and analysis of results. The student's research is directed by a faculty supervisor and culminates in the writing of an honors thesis in Architectural Engineering.

Recommended Preparations: Students must have approval of a thesis adviser before scheduling this course.
Honors

AE 494M: Senior Honors Thesis

4 Credits

Comprehensive Architectural Engineering Senior Project development and planning with an honors thesis focus. In this course, an honors student in architectural engineering will work on a real-world building project which the student has selected and for which the student has obtained drawings and specifications, as well as the owner's permission to use this project as their undergraduate thesis project. Students enrolling in this course are required to complete the following: - Develop and initiate a plan for their undergraduate senior project in Architectural Engineering which will also serve as their Schreyer Honors College thesis. Through this thesis, the student demonstrates a command of relevant scholastic work and a personal contribution to that scholarship. - Secure an honors thesis adviser and meet with that person to select an in-depth and/or integration focus for their Honors Thesis work. The student then develops a formal proposal describing the focus area for the undergraduate senior project and honors thesis, outlining the analyses, investigations, and design elements of this work and the tools that will be employed. - Summarize the existing conditions present in this building project as it relates to their AE option, systems integration, and the honors thesis topic. - Conduct a thorough review of the relevant literature that has been published in the area that is the focus of the honors thesis, including details on the relevant building, construction, and energy codes that govern this work. - Commence work on the investigation, analysis, and design portion of the thesis, together with the general activities required of all AE students in their undergraduate capstone projects.

Enforced Prerequisite at Enrollment: (ARCH 441 or ARCH 442) and 8th semester standing or higher in AE_BAE

Honors

Writing Across the Curriculum

AE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

AE 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

AE 498F: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in-depth, a comparatively narrow subject which may be topical or of special interest.

Architectural Engineering Technology (AET)

AET 101: Building Materials

3 Credits

Structural and architectural use of building materials and construction assemblies.

AET 102: Methods of Construction

3 Credits

Materials and methods of construction used in buildings, as expressed in drawings.

Prerequisite: AE T 101 , EG T 101 , EG T 102

AET 113: Site Planning

2 Credits

Energy conservation through optimum site utilization, contours, cut and fill calculations, storm drainage, spot grading, and finish grading.

AET 121: Introduction to Building Environmental Systems

2 Credits

Introduction to building environmental systems technology terminology, concepts, and the design process.

AET 206: Architectural Presentation

2 Credits

Visual communication through architectural presentation drawings. Line, value, color, and composition.

Prerequisite: E G 001 or E G 003

AET 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

AET 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Architecture (ARCH)

ARCH 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ARCH 99: Foreign Studies--Architecture

1-15 Credits/Maximum of 15

Individual or group instruction conducted in a foreign country.

International Cultures (IL)

ARCH 100: Architecture and Ideas

3 Credits

General introduction to world architecture, emphasizing the relationship between concepts, philosophies, values and ideologies in shaping the built environment. ARCH 100 Architecture and Ideas (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course introduces architecture and urbanism for a general audience. It presents key concepts that have shaped the built environment, and provides an ongoing framework for evaluations of what makes a good building or city. The material discussed is taken from prehistory to the present, and encompasses both major works of architecture and consideration of common building types and contexts. Although monuments and philosophies from the Western tradition predominate, it brings in issues and examples of global scope as well. The course is structured around a set of themes. These include: how architecture embodies spiritual beliefs; affects private and community life; evolving definitions of the architect; and how ideas about aesthetics, technology, tradition, and other cultural forces shape buildings and influence diverse, often conflicting notions of what constitutes "good" architecture. The topics discussed will demonstrate multiple ways of understanding buildings and cities. Lectures and assigned readings explore significant illustrative structures, design theories, and the cultural and intellectual contexts in which they emerge. Through the lectures and readings students will become familiar with an extensive set of architectural works, as well as a wide range of influential architectural concepts, authors, and texts. ARCH 100 will ultimately help students analyze and judge buildings and the arguments about them critically, and better understand buildings and cities as ideologically charged artifacts that influentially structure human experience.

General Education: Arts (GA)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

ARCH 121: Visual Communications I

2 Credits

Development of two and three-dimensional graphic communications skills and techniques required for the practice of architecture. ARCH 121 Visual Communications I (2)The course is designed to introduce two and three-dimensional graphic communication skills. Assignments will develop the student's understanding and skills associated with the hand-drawing techniques used in the practice of architecture. Exercises provide exposure to the variety of representational techniques available to architects for the visual communication of design ideas and design documentation. Visual Communications I is organized as an interactive studio environment which combines lectures and demonstrations with individual instruction. The basic concepts and theories of documenting, representing, and presenting architecture will be introduced through a series of lectures, seminars, and examples. In studio, skills will be developed through project workshops. Instruction includes working

sessions, individual desk reviews, technique demonstrations and group discussions. Students will learn the fundamentals of architectural drawing by hand, introductory-level descriptive geometry, orthographic projection, paraline and perspective drawings. These skills and principles are imparted primarily through studio-based assigned projects.

Enforced Concurrent at Enrollment: ARCH 131

ARCH 122: Visual Communications II

2 Credits

Development of two-dimensional digital graphic communications skills and techniques required for the practice of architecture. ARCH 122 Visual Communications II (2)The course is designed to introduce students to two-dimensional digital tools used in the practice of architecture. Assignments will develop the student's understanding and skills associated with digital techniques and software. Exercises provide exposure to the digital tools available to architects for the visual communication of design ideas and design documentation. Skills developed in ARCH 121 (drawing and modeling techniques) will provide the foundation for work performed in this course. ARCH 122 is organized as an interactive studio environment combining lectures and demonstrations with individual instruction. The basic concepts and theory of documenting, representing, and presenting architecture will be introduced through a series of lectures, seminars, and examples. In studio, skills will be developed through project workshops. Instruction includes working sessions, individual desk reviews, software and hardware demonstrations, and group discussions.

Enforced Prerequisite at Enrollment: C or better in: ARCH 131 and ARCH 121 **Enforced Concurrent at Enrollment:** ARCH 132

ARCH 130A: Basic Design and Research I

3 Credits

This beginning design studio will prepare students to communicate design ideas through drawing and modeling, promoting analog/traditional techniques, in addition to digital media and processes in design and presentation of design. This course will introduce students to the iterative process of design, involving constructive & critical feedback from peers and instructors. Students will learn to present evidence of reasoned solutions to design problems and explanation and defense of design decisions in graphic form. They will learn to visually communicate ideas and thoughts. This course will include exercises in precedent research and analysis, site analysis, response to building program and the integration of research into design proposals. The students will design and represent their proposals at various scales in response to analysis and research. They will plan, draw, and model their proposals, and present their design(s) to their peers and faculty. This course will emphasize ABET (Accreditation Board for Engineering and Technology) outcomes: - "an ability to design and conduct experiments, as well as to analyze and interpret data," - "an ability to communicate effectively," (ABET/Criteria for ABET Programs, 2007, p. 2).

Enforced Prerequisite at Enrollment: Architectural Engineering majors only

ARCH 130B: Basic Design and Research II

3 Credits

This architectural design studio is organized around exercises in precedent research and analysis, site analysis, response to building

program and the integration of research into design proposals. Students will learn to present evidence of reasoned solutions to design problems and explain and defend their design decisions in a graphic form. The students will learn to visually communicate architectural ideas. The students will design, detail, and represent their building proposals at various scales in response to the analysis and research. They will plan, draw, and model their proposals, in their site context and present their design(s) to their peers and faculty for critical comments, discussion, and review. This course will emphasize ABET (Accreditation Board for Engineering and Technology) outcomes: - "an ability to design and conduct experiments, as well as to analyze and interpret data," - "an ability to communicate effectively," (ABET/Criteria for ABET Programs, 2007, p. 2).

Enforced Prerequisite at Enrollment: Architectural Engineering majors only and ARCH 130A

ARCH 131: Basic Design Studio I

4 Credits

An introduction to the basic concepts, methods, and skills of architectural design in a project-based, active learning, studio environment. ARCH 131 Basic Design Studio I (4) This course is an introduction to the basic concepts, methods, and skills of architectural design. As a "studio" it is a project-based, active learning course where the development and evaluation of the work is driven by a critical dialogue with the instructor and one's classmates. This course is the first in a series of design studios that serve as the central thread throughout the curricula of the Architecture program. In ARCH 131, students gain knowledge about the discipline of design, develop skills of design and communication, and foster a capacity for judgment - the ability to make appropriate choices and decisions regarding design questions. As a laboratory, the design studio provides the opportunity to apply and explore the knowledge and experience gained in other courses. ARCH 131 is an intensive course that encourages creativity and industry on the part of the students. Its design projects are open-ended; there are no single "right answers." It demands energy, creativity, the willingness to take risks, and introspection. Each student is expected to be open to a diverse range of ideas, values and solutions. The student is invited to view the studio experience as an opportunity to explore, discover, and invent. The studio is divided into separate sections, each led by one studio instructor. All sections are assigned a series of common projects and exercises; however, each section instructor will establish particular and unique assignments, and criteria for each project. This introduces students to the rich variety of possibilities in architectural communication and design. The primary form of evaluation and grading for this class is the "review and critique" during which students present their work to the class and then receive comments and recommendations for improvement. When assessing the student work, the instructors will consider the students performance in the following areas: 1. Conceptual Strength: The intentions and ideas that inspire the work. 2. Design Development: The energy, effort, and growth demonstrated throughout the course of the project. 3. Product: The tangible quality of the final product as a demonstration of the student's level of craftsmanship and mastery of the skills introduced in class. 4. Student Preparedness: At desk critiques, pin-ups, and reviews. 5. Student Participation: Students are expected to actively participate and be constructively engaged in class discussions, critiques, and reviews.

Enforced Concurrent at Enrollment: ARCH 121
First-Year Seminar

ARCH 132: Basic Design Studio II

4 Credits

Continuation of ARCH 131 which further explores basic concepts, methods, and skills of architectural design with an emphasis on craftsmanship. ARCH 132 Basic Design Studio II (4) This course is a continuation of ARCH 131 and shares the same goals, methods, and means of evaluation. However, it builds upon the foundation of fundamental knowledge and skills delivered in the previous course and demands that the students expand their ability to tackle more difficult and complex problems of architectural design. The focus of this course is on "craftsmanship" and the methods and techniques of "making and building." Students are expected to thoroughly consider the implications of materials, construction, and detailing as they relate to their overall design intentions. ARCH 132 is an intensive course that encourages creativity and industry on the part of the students. Its design projects are open-ended; there are no single "right answers." It demands energy, creativity, the willingness to take risks, and introspection. Each student is expected to be open to a diverse range of ideas, values and solutions. The student is invited to view the studio experience as an opportunity to explore, discover, and invent. The studio is divided into separate sections, each led by one studio instructor. Each section instructor will establish particular and unique assignments, and criteria for each project. This introduces students to the rich variety of possibilities in architectural communication and design. When assessing the student work, the instructors will consider the students performance in the following areas: 1. Conceptual Strength: The intentions and ideas that inspire the work. 2. Design Development: The energy, effort, and growth demonstrated throughout the course of the project. 3. Product: The tangible quality of the final product as a demonstration of the student's level of craftsmanship and mastery of the skills introduced in class. 4. Student Preparedness: At desk critiques, pin-ups, and review. 5. Student Participation: Students are expected to actively participate and be constructively engaged in class discussions, critiques, and reviews.

Enforced Prerequisite at Enrollment: C or better in ARCH 131 and ARCH 121
Enforced concurrent at Enrollment: ARCH 122

ARCH 170N: Introduction to Sustainable Architecture

3 Credits

US buildings account for almost 40% of national CO2 emissions, 39% of the US total energy consumption, and 60% of US electricity alone. Worldwide, buildings consume nearly 40% of the world's energy, 25% of its wood, and 15% of its water. Building construction and use contribute significantly to global climate change. The way we design our built environment has a significant impact on consumption statistics, which is why we must consider the global environmental and health effects of buildings during the planning, design, and construction process. This course provides a broad exploration of the art and science of sustainable architecture. Architecture produces cultural artifacts with meaning. Yet, inhabiting and using architecture has a distinct and measurable impact on both local and global environments. Scientifically, this course investigates passive and active energy systems for buildings, environmental components of material production and use, and site and building design effects on the water cycle, clean air, local ecosystems, and food production. Students will calculate energy consumption and generation scenarios, produce a life-cycle analysis of a familiar product, evaluate a building based on current green building certification strategies, and evaluate biological impacts over the local and regional scale. Aesthetically, this course investigates vernacular solutions to

physical human comfort, and demonstrates the artistic and cultural place of architecture in society. Part of the course will trace historical aesthetic trends to better understand how the existing unsustainable path began. Students will understand the roles of multiple stakeholders/ social actors in every building project—from owners, to global "neighbors". Together, the course highlights the intersection of building performance and aesthetics. There will be a focus on returning to traditional solutions, as well as capitalizing on new innovations to solve environmental challenges. The underlying theme will be flourishing—both reducing negative environmental impacts as well as celebrating the healthy human condition through artistic expression and aegis of architecture.

Individual or group instruction conducted in a foreign country.

International Cultures (IL)

ARCH 203: Materials and Building Construction I

3 Credits

Instruction in the design and construction of buildings utilizing wood and steel. ARCH 203 Materials and Building Construction I (3) This course serves as an introduction to common architectural building materials and associated methods of construction. It is the first part of a two-semester sequence to be followed by ARCH 204 in the spring semester. Lectures, readings, and in-class discussions introduce students to the historical development and conventional use of architectural materials and construction technologies, while select hands-on projects offer students experience in materials application and use. The class covers a wide variety of building methodologies that includes developed and developing cultures, building systems that are technologically sophisticated, as well as traditions considered primitive/vernacular. The primary objective of the course is to make BARCH students familiar with the materials and methods employed in making architecture, so that the results of that familiarity begin to inform the student's studio work/production. In addition to materials and construction methods, the course will also touch on issues related to craft/craftsmanship, sustainable practices and ethical use of resources, and the significant role that evolving technologies play in the process and economy of building-making.

Enforced Prerequisite at Enrollment: C or better in ARCH 132 and AE 210

Enforced Concurrent at Enrollment: ARCH 231 and AE 421

ARCH 204: Materials and Building Construction II

3 Credits

This course will continue the presentations of ARCH 203, with a focus on concrete and masonry materials. ARCH 204 Materials and Building Construction II (3) The course is the second part of a two-semester sequence, following ARCH 203. ARCH 204 is an introductory course in building materials and construction. It is intended for BARCH majors and is designed to prepare students for the professional practice of architecture. The learning objectives for the course can be divided into two categories: 1., developing a sense of materials and construction methods as the media for architecture, and then learning to use these media in creative and appropriate ways; 2. developing basic knowledge of the conventions of current building materials and construction techniques. Particular emphasis is placed on the use of drawings and models to accurately depict construction systems, assemblies and details. The course combines lectures and field trips with design projects, hands-on construction experiences, required readings, drawing and modeling.

Enforced Prerequisite at Enrollment: C or better in: ARCH 203 and AE 421

Enforced Concurrent at Enrollment: ARCH 232 and AE 422

ARCH 210: Ideas Across Time in Architecture and Urbanism

3 Credits

This course presents a transversal history of ideas, arguments, and visions that shape the built environment within their cultural, technological, and philosophical contexts. Buildings, landscapes, and cities embody ideas about society, culture, technology, and how we should live in the world. Some problems and questions are exemplary of their times; others seem eternal as we continue to grapple with them today. Changes in our ideas and ideals are made visible in our built environment, giving us a unique opportunity to trace their trajectories across time to see 'how we got to now.' The course introduces architectural and urban ideas by exploring and connecting key directions, works, and texts from the Western tradition. By casting a critical eye on where we've been, the course opens new perspectives on what might be next. The course covers a period ranging from ancient Greece and Rome to the present, with emphasis on how the foundations of Western architecture collided with modernity, and how we've dealt with the hereafters of modernity since the mid-20th century. Recurring themes will include the ways in which architectural theory has defined role of the architect, architecture's foundational principles, and the relationships between architectural and urban ideas, aesthetics, and the cultural contexts in which these ideas develop. Major topics will include ancient architectural theory, Renaissance classicism, tectonics and Gothic rationalism, the Beaux-Arts, Neoclassicism and typology, organicism and functionalism, the Modern avant-garde's radical new social and aesthetic visions, the International Style, countermodernisms, phenomenology, techno-utopianism, populism, gender, race, and international post-colonialism. This course meets the Bachelor of Arts degree requirements for Arts (GA) courses by: expanding knowledge and comprehension of the role of the arts, building competence in analysis, critical thinking and interpretive reasoning through the exploration of creative works; demonstrating the aesthetic, historic, social, and cultural significance of important works of design; and, critically assessing creative works through evaluative processes of analysis and interpretation.

ARCH 231: Architectural Design I

6 Credits

Design of limited environments within defined constraints. ARCH 231 Architectural Design I (6) The second-year design curriculum introduces the student to the complexity of the architectural whole. The curriculum bridges the abstract design principles taught in the first year and the ability to put together a large building, the focus in the third-year. The objectives are to create an understanding of architectural elements and develop a sensitivity and awareness required for valid interpretations as well as to develop a reflective and critical design process with emphasis on the individual ability to articulate ideas. The major means of accomplishing development is through the design of smaller buildings/ environments. To introduce the pragmatic and expressive aspects of architectural design and integrate visual communication with the design process. The emphasis is on developing comprehensive architectural thought, on the foundations of skill and knowledge essential for designing more "complex" buildings in later years, and making the students aware of the multiplicity of factors involved in the design process and their civic responsibility in making informed choices. Thus, the pervasive issue of meaning in architecture is given a high priority and is interwoven in all stages of design exploration.

Enforced Prerequisite at Enrollment: C or better in: ARCH 132 and ARCH 122
Enforced Concurrent at Enrollment: ARCH 203 and AE 421

ARCH 311W: Architectural and Planning Theories

3 Credits

Architectural theory course with a strong focus on the reading and writing of essays about architecture and related fields. ARCH 311 Architectural and Planning Theories (3) ARCH 311 is a required course in the BARCH curriculum. The central goal of this course is to foster critical-thinking skills, in conjunction with the ability to develop and articulate theoretical positions related to the design, practice, and historical evolution of architecture, both verbally and in writing. ARCH 311 is a writing intensive seminar course fulfilling the University's Writing Across the Curriculum (WAC) requirement. Students will be introduced to various topics pertaining to advanced architectural theory. Students will critically read, then discuss significant works with the instructor. Lectures by the instructor will also be presented, discussed and analyzed. Writing assignments are utilized as instruments for learning the subject matter, methods of inquiry, and the types of writing typical of the discipline of architecture. The course format will also involve lectures by the instructor as well as presentations by the students related to past, present, and speculative architectural theories of importance to the field. In addition, students will complete writing assignments that demonstrate the development of a critical stance or idea, proficiency in critical analysis, and the use of established research techniques, citation of sources, and writing formats.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 30H and C or better in ARCH 210 and ARTH201 and ARTH202
Writing Across the Curriculum

ARCH 312: Critical Postcolonial and Contemporary Perspectives in South Asian Architecture

3 Credits

This course will examine critical postcolonial and contemporary architectural issues in South Asia in the context of cultural globalization today. ARCH 312 Critical Postcolonial and Contemporary Perspectives in South Asian Architecture (3) This course will examine the evolution of the cultures and architectures of South Asia through their encounters with colonialism and the postcolonial analysis of architectural development in the region. It will provide an introduction to precolonial architecture and urbanism in South Asia using methodologies of cultural studies via an examination of Buddhist, Hindu, Islamic (Mughal), and Western

influences. The course will introduce students to the significant variety of South Asia's architectural accomplishments and encourage them to discuss broader theoretical issues in the context of cultural globalization and their implications for contemporary architectural thought and practice. References to indigenous architecture and techniques will be an integral part of the course, as will be examples of colonial architecture, especially the works of Edwin Lutyens. In the context of globalization during the post-colonial period, three important planning and building design projects undertaken by Western architects in South Asia will become the means to segue into contemporary architectural issues and the impact of Modernist thinking on South Asian architecture: Le Corbusier's master plan and building designs for Chandigarh - the Kahn's design for the monumental second capital complex in Dhaka, Bangladesh, and the master plan for Islamabad, the capital of Pakistan, by Constantinos Doxiades. In addition, the works of such South Asian architects such as Charles Correa, Balkrishna Doshi, Raj Rewal, Geoggy Bawa, Maxharul Islam, and Nyar Dada, will be included in the lectures and discussions. The overall methodology will not be strictly chronological; rather, broad themes will be addressed during the course of the semester. This approach will enable a clear and substantive illustration of relationships between theory and practice in South Asia. It will also help students recognize the inevitable partiality and incompleteness of such theoretical descriptions - compelling as they may be - with regard to actual historical phenomena.

ARCH 316: Analysis of Human Settlements: Cities

3 Credits

This course focuses on the design and analysis of cities from ancient to modern time periods in the U.S. and the world, taking into account the cultural and historical ways human settlements develop, how cities relate to one another, and the wide array of built forms and material culture that make up built urban environments over time - from arcades, squares, and streets to gardens, monuments, and more. If you have a genuine interest in learning more about how cities evolved and the historical and modern issues confronting the many diverse individuals and groups who thought about and influenced the planning of cities, this should be an interesting semester. One broad goal of this course is to enhance your urban literacy by developing the critical analytic skills needed to understand and appreciate cities in all of their complexity. These issues are not only pertinent to urban designers, architects, landscape architects and others who are directly involved in the planning of cities, but they are also vital to the diverse cultures and social groups who inhabit, experience, and also shape urban environments. The design and development of cities is a useful barometer for also understanding the political, economic, ethical, and other forces that guide and shape their development over time. This makes cities challenging to analyze because they are not static forms. They are ever changing and evolving.

ARCH 317: Theory of Modern Japanese Architecture

3 Credits

Introduction to the development of modern Japanese architecture from the Meiji Restoration of 1868 to the present day. ARCH 317 Theory of Modern Japanese Architecture (3) ARCH 317 outlines a lineage of ideology in Japanese architectural discourse in order to examine reciprocal interactions between Japan and the West in the development of modern Japanese architecture from the Meiji Period (1868-1912), through the Metabolism of the 60's, to the present day. The concept of "tradition" itself is an invention of the Meiji (modern) era. Through this notion, the course will introduce students to crucial moments in the development of Japanese architecture, while making parallel references to the key developments in the West. Inversely, examples of traditional Japanese architecture will be introduced as counterpoint for the modern. Several topics such as the evolution of Japanese symbolic and spatial traditions in art, architecture, and landscape architecture (gardens) will be discussed. While discussing the evolution of Japanese culture, aesthetics and religions, the influences of China and Korea will be introduced, thus increasing students' familiarity to the East. A brief examination of Western architects paralleling the course content will also be presented. The key figures to be discussed during the class include Kenzo Tange, Kisho Kurokawa, Arata Izozaki, Fumihiko Maki, Tadao Ando, Shin Takamatsu, Toyo Ito, Kazuyo Sejima and Shigeru Ban. Key Western architects, including Bruno Taut, Walter Gropius, Frank Lloyd Wright, and Le Corbusier, will also be discussed. In addition, several broad themes such as geography, climate culture, and symbolic and spatial traditions in art will be introduced. Eastern values and ethics very incongruent from those of the West and their impact on architecture will be presented and discussed. Specific globalization, the resultant reciprocal and transformative cross-cultural interactions in the development of modern Japanese architecture, and the unique process of "Japanization" in which ideas from the West are adapted, refined, and absorbed into Japanese architecture through specific buildings and architects. Students in this course will be expected to become more familiar with Eastern culture; comprehend basic principles behind Japanese architecture and gardens; understand relevant terminology associated with Japanese culture, art, gardens, and architecture; and become more aware of the reciprocal and transformative cross-cultural interactions in architecture.

ARCH 331: Architectural Design III

6 Credits

Development of the design process through organizational methodologies, based on physical, functional, and social-behavioral determinants. ARCH 331 Architectural Design II (6) Development of the design process through organizational methodologies, based on physical, functional, and social-behavioral determinants. Emphasis is placed on "The Building Thoroughly Considered." The third-year design studio course is a continuation of the rigorous development of the architectural process started in the second year studio. Students will strive to develop an architectural totality, search for thoughtful decisions and sound judgments. Students continue the process of integrating the abstraction of the basics with the pragmatics of the built world. The student at the completion of this year should understand what a building is and how it responds to human needs in terms of cultural meaning, physical reality, operational prerequisites and construction.

Enforced Prerequisite at Enrollment: C or better in ARCH 232 and ARCH 204 and AE 422. **Enforced Concurrent at Enrollment:** AE 211

ARCH 332: Architectural Design IV

6 Credits

Development of the design process through organizational methodologies, based on physical, functional, and social-behavioral determinants. ARCH 332 Architectural Design IV (6) Development of the design process through organizational methodologies, based on physical, functional, and social-behavioral determinants. Emphasis is placed on "The Building Thoroughly Considered." The second semester of the third-year design studio course is a continuation of the rigorous development of the architectural process started in the third year, first semester studio. ARCH 332 extends and deepens the understanding of the "thoroughly considered" building begun in ARCH 331. Students will strive to develop an architectural totality, search for thoughtful decisions and sound judgments. Students continue the process of integrating the abstraction of the basics with the pragmatics of the built world. The student at the completion of this year should understand what a building is and how it responds to human needs in terms of cultural meaning, physical reality, operational prerequisites and construction.

Enforced Prerequisite at Enrollment: C or better in ARCH 331 and AE 211. Enforced Concurrent at Enrollment: AE 424

ARCH 380: Building Environmental Systems I

3 Credits

ARCH 380 Building Environmental Systems I (3) introduces Architecture students to the topics of building thermal environment, and passive and mechanical heating/cooling systems. Thermal environment topics include thermal comfort, natural environmental impacts, heat transfer through the building envelope, heating and cooling design, mechanical systems, and building energy consumption. Building mechanical system topics include heating, ventilating, and airconditioning systems. Emphasis is placed on building design in response to the technical, environmental, and societal challenges, with a focus on sustainable design principles and guidelines applied to achieving thermal comfort in buildings. The course utilizes lectures, practicums, examinations, projects, and presentations to deliver and reinforce the technical content. The course offers students the opportunity to work in a team setting and to present their work orally to their peers. The broad coverage of the technical and social issues and professional skills challenges the architecture students to incorporate technical issues as an integral part of the overall building design. The course is required for students enrolled in the bachelor of architecture program.

ARCH 381: Building Environmental Systems II

3 Credits

ARCH 381 Building Environmental Systems II (3). This course is a complement to ARCH 380. All environmental control systems other than thermal environmental systems are covered in this course. ARCH 381 introduces architecture students to building illumination, acoustical, fire protection, electrical and plumbing design issues. Emphasis is placed on building design as a response to the technical, environmental, and societal challenges. The course utilizes lectures, practicums, examinations, projects, presentations, and field trips to deliver and reinforce the technical content. The course offers students the opportunity to work in team settings and to present their work orally to their peers. The broad coverage of the technical and social issues and professional skills intentionally involves students in discussion

and application of social and ethical responsibilities. ARCH 380 is a prerequisite for this course.

Enforced Prerequisite at Enrollment: ARCH 380 Enforced Concurrent at Enrollment: ARCH 480

ARCH 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

ARCH 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ARCH 410: Building Material Reclamation & Reuse

3 Credits

This course is a very hands-on, project-based seminar focusing on the theory and practice of building material salvage and recycling. Through active and applied learning, students will gain experience in handling, preserving and adding value to salvaged building materials. The course will consist of a variety of small-scale design-build projects, where students will learn and practice the methods and techniques of reclamation and explore the design possibilities of reused material. In addition to being a practical hands-on seminar, this course is also intended to explore and examine the broader historical and theoretical context for the activity of building material reclamation and reuse. Since the literal fall of the Roman Empire, reclaimed building materials have been creatively used in the design and construction of new buildings, yet we lack a thoughtful theoretical (and poetic) construct that supports reclamation activity other than the simple and obvious ethics of sustainability. Themes to be explored: ruins, spoglia, palimpsests, weathering, memory and the mnemonic function of architecture.

Enforced Prerequisite at Enrollment: 5th Semester standing

ARCH 412: Integrative Energy and Environmental Design

3 Credits

Concepts and strategies for the environmentally conscious design of the built environment.

ARCH 419: Design Research and Architectural Programming

3 Credits

ARCH 419 prepares undergraduate Architecture students with the skills and tools to conduct research contributing to the pursuit of an architectural idea in a rigorous, in-depth manner, and then subsequently utilize the acquired knowledge in the development of the idea through the completion and presentation of a thoroughly considered architectural design project (building, component or system). This course will help students prepare for their independent or directed design research studio through the exploration of foundational approaches and methodologies in the field. It will foster in-depth design inquiry and research; build upon and reiterate design awareness, skills, and methods introduced in previous years; and introduce, discover and develop new ones. This course will help prepare students to identify significant design project

topics, select the proper methodology, and engage in independent or directed research.

Enforced Prerequisite at Enrollment: ARCH 332 and ARCH 311W

ARCH 441: Architectural Design Analysis

3 Credits

Studies in principles and elements of design; planning for human use; the relationship of space to physical and social environment. Architectural Engineering majors only. ARCH 441 Architectural Design Analysis (3) Studies in principles and elements of design; planning for human use; the relationship of space to physical and social environment. The objective of this course is to explore various approaches to architectural design and to reinforce the concept that there is no "right" or "wrong" answer to a design problem. "Design" is decision-making in itself – the key to a successful project lies not only in the final product, but in the process leading up to it as well. In order to be successful, design solutions must respond to both formal ideas as well as human, environmental and technical realities. Thus, the interaction between art and technology becomes imperative.

Enforced Prerequisite at Enrollment: ARCH 130A

ARCH 442: Architectural Design Analysis

3 Credits

Continuation of ARCH 441, with emphasis on functional relationship of space, form, structure, and building groups. Architectural Engineering majors only. ARCH 442 Architectural Design Analysis (3) Continuation of ARCH 441, with emphasis on functional relationship of space, form, structure, and building groups. The objective of this course is to explore various approaches to architectural design and to reinforce the concept that there is no "right" or "wrong" answer to a design problem. "Design" is decision-making in itself – the key to a successful project lies not only in the final product, but in the process leading up to it as well. In order to be successful, design solutions must respond to both formal ideas as well as human, environmental and technical realities. Thus, the interaction between art and technology becomes imperative.

Enforced Prerequisite at Enrollment: ARCH 441

ARCH 443: Architectural Design Analysis Inspection Trip

1 Credits

Faculty guided trip to metropolitan areas to investigate noteworthy architecture and building construction and to visit professional offices.

Enforced Prerequisite at Enrollment: 7th semester standing and architectural engineering majors

ARCH 451: Architectural Professional Practice

3 Credits

A study of architectural practice in today's society: education, registration, office practice, codes, standards, construction industry, contracts, and legal documents. ARCH 451 Architectural Professional Practice (3) ARCH 451 is a required course in the BARCH curriculum. It is intended to prepare students for the professional practice of architecture. The course explores the historical influences and current trends that shape the relationship between the architect, client and builder in contemporary society. This course provides an overview of the changing

roles of the architect through history as well as a detailed examination of the architectural profession in today's rapidly changing world. ARCH 451 reviews internship, architectural licensing procedures and requirements, professional development (life-long learning), architectural practice including office organizational structures, the architect's administrative role, construction cost control, professional organizations, the architect's professional, legal and ethical responsibilities (including life-safety and accessibility), leadership in the profession and the community as well as alternative architectural / design related careers.

Enforced Concurrents at Enrollment: ARCH 491 or ARCH 533

ARCH 480: Technical Systems Integration

3 Credits

Presentations of buildings' analyses from a multiplicity of viewpoints: architectural, spacial, environmental, mechanical, construction assembly. ARCH 480 Technical Systems Integration (3) This course is a synthesis of topics previously introduced in the AE sequence - such as structural, mechanical, electrical, and other systems related to a building's technical performance. Students will practice the purposeful integration of all technical aspects of a buildings design, providing them with a working knowledge of matters related to energy efficiency, sustainability, lighting, and acoustics. The focus of the course lies in questioning how technical requirements and design intentions should be integrated during the design process, so as to enhance the aesthetic and performance qualities of an architectural project. This course combines lectures, field trips, and technical assignments, along with analysis and implementation of energy, day lighting, electrical lighting, and acoustical concepts in the student's design efforts. In addition to the synthesis of building design and technical systems, this course will further develop the student's knowledge of active/passive techniques for sustainable architecture. A focus on the collaborative workings/environment of the architectural practice helps students to translate systems integration strategies into graphic/digital representation, and reinforces the interdisciplinary nature of designing and constructing successful works of architecture.

Enforced Corequisite at Enrollment ARCH 332

ARCH 481: Digital Design Media

3 Credits

Advanced course in digital modeling, rendering, animation and non-linear video for architectural investigations.

Enforced Prerequisite at Enrollment: Approval by instructor

ARCH 482: Foundations in Shape Grammars

3 Credits

Shape grammars are a powerful formalism for the generative description of designs and a key discourse in design computation. The formalism is distinctive for its interest in developing a mathematics of design through visual computations described directly with geometry. By foregrounding visual representations and visual processes, the formalism lays the foundation for shape computations that aid in explaining, understanding, and developing designs specified by rule-based, generative systems. These computations provide the basis for the generative description, interpretation, and evaluation of visual designs. This course provides a broad exploration of shape grammar theory, implementations, and applications in a variety of disciplines. More specifically, it investigates the theory of shapes, shape rules, parametric shape rules, rule schemata,

languages of designs, and more, providing students with a foundation in the rule-based analysis and specification of designs as well as a fundamental understanding on design computing. It considers the history and logic of spatial systems in the arts, architecture, and engineering to build an awareness of rule-based approaches in design, especially in relation to the theories underlying contemporary design software. Critical and creative applications in the arts, architecture, landscape, urbanism, product design, and engineering will be discussed to understand shape grammars as a visual approach to rule-based analysis and synthesis with broad potential for design and research. Building on these insights, students will learn to analyze designs with rules and use those rules to generate new design configurations. Students will also be challenged to develop their own rulebased interpretations of design processes to study how shape grammars can be understood as a generative design methodology.

ARCH 491: Architectural Design Research Studio - Directed

12-18 Credits/Maximum of 18

Problems in architectural planning and design; and/or programming, implementation methodologies and applications for various environmental design scales. ARCH 491 Architectural Design Research Studio (6) It is the goal of this program that, upon completion of ARCH 491, each student will have the ability to pursue an architectural idea in a rigorous, in-depth manner and be able to express the knowledge of and implication of that idea through the completion and presentation of a "thoroughly considered building design project." It is the intent of the Design Research Studio component of the Bachelor of Architecture program to foster the spirit of in-depth design inquiry and research, and to build upon and reiterate design awareness, skills, and methods introduced in previous years; and to introduce, discover and develop new ones. To these ends the primary educational vehicle is the use of a propositional thesis as a way of directing the study toward the linking of theory and building in a meaningful manner.

Enforced Prerequisite at Enrollment: Students must earn a C or better in ARCH 311W and ARCH 332

ARCH 492H: Architectural Design Studio

6 Credits

Continuation of select ARCH 491 sections with concentration and specialization options.

Enforced Prerequisite at Enrollment: C or better in ARCH 491
Enforced Concurrent at Enrollment: ARCH 480
Honors

ARCH 495: Advanced Architectural and Related Design/Construction Work Experience II

1-6 Credits/Maximum of 12

Supervised off-campus, nongroup instruction including field experiences, practica, or architectural and related design/construction work experience. A final presentation of activities will be evaluated by a faculty member in the Department of Architecture. Number of credits will be determined based on the total number of hours of approved work experience under the direct supervision of a registered architect or other approved professional.

Faculty approval of work experience proposal including employment agreement with an approved supervisor (e.g., registered architect or other approved professional).

ARCH 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ARCH 496H: Independent Study - Honors

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

ARCH 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ARCH 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Enforced Prerequisite at Enrollment: Seventh-semester standing
International Cultures (IL)

ARCH 499A: Rome Study-Architectural Design

6 Credits/Maximum of 12

Individual or group instruction conducted in Rome, Italy. ARCH 499A Foreign Study - Architectural Design VI (6) The semester abroad design work will focus on the difficult problem of creating new construction in the presence of an historic structure. This is an inevitable problem in the city of Rome where one can hardly avoid confronting historic or monumental buildings. However, as every place is preceded by a history, either natural, political or material, these issues are important outside of this context, the course aims to help students define critical strategies that will serve them beyond their semester abroad. Fifteen weeks is a short time to experience a place as complex and interesting as Rome, Italy. For many students, it may be a chance of a lifetime to live in and study a place as challenging and full of opportunity as this. Students are expected to approach the semester with even more seriousness than they would a semester at home. A semester in this program is not a mere travel experience but an academic exploration of a foreign and historic environment. Every activity of this studio is designed to these ends. Therefore, we have selected a very direct and limited building program, a site in the historic center, and exercises that require students to spend time in the field as well as in the studio.

Enforced Prerequisite at Enrollment: C or better in ARCH 332 and ARCH 480
Enforced Concurrent at Enrollment: ARCH 499B and ARCH 499C
International Cultures (IL)

ARCH 499B: Architectural Analysis

3 Credits/Maximum of 12

ARCH 499B Architectural Analysis (3) (IL) Architecture is amplified and embodied in cities. Since most architecture is set in cities and the city is itself an architecture, it becomes necessary for us to evaluate the relationships that affect the making of buildings for cities and the organization of buildings into a meaningful whole. This course will explore the two meanings of the term "the architecture of cities". It will propose questions leading to an analytical de-composition of the situation of cities in general and Rome in particular. The course is loosely divided into three sections. The first, Historical Overview, presents the evolution of early settlements focusing on the significance of built form. The second, Revolutions and Modernity, demonstrates the qualitative shift in emphasis that settlements undergo from the Enlightenment, through the Industrial Revolution, to the Information Revolution. The third section, the Current Debate, will present some contemporary issues and techniques proposed for the resolution of apparent problems of city architecture. Since this course is given in a unique setting, it takes full advantage of Rome, its history and its problems, to highlight the universal design elements that are part of an analytical understanding, but also of a synthetic design understanding of cities. This course is theory based and, as such, will provoke thinking, a taking apart mentally, more than a making of architecture. The studio design problem, also set in this city, is the operative dimension of thoughts generated here. In this class, students are expected to articulate thought and some clear graphic analysis concerning architecture. These thoughts, if manipulated with discipline and commitment, will become a source of illumination for design activity. Learning Objectives: * To learn the meaning of cities in Western culture * To understand the significance of foundation and other rites concerning building the human environment. * To understand the meaning of urban architecture * To understand the reasons for the form of streets, buildings and open spaces in Western cities * To achieve the analytical skills necessary to take apart the component systems and material elements of architecture

Enforced Prerequisite at Enrollment: C or better in ARCH 332 and ARCH 480 Enforced Concurrent at Enrollment: ARCH 499A and ARCH 499C
International Cultures (IL)

ARCH 499C: Urban Studies

3 Credits/Maximum of 12

ARCH 499C Urban Special Topics (3) (IL) The course is a presentation of the history of Rome through the medium of its maps. The well documented cartographic history of the city is presented along with the morphological changes that are evident in the city today. The material of Rome's physical development is presented in two distinct ways. The first involves slide presentations of Roman maps and engraving images organized by specific routes (vie consolari and others) into and out of the city. The second is by on-site walks through the same routes with the instructor. The approximately twelve routes involve a lecture presentation usually given on Tuesdays, followed by an on-site walk usually given on Thursday. Students are then assigned their own route map of the same study area to generate over the weekend. These are graded and discussed in the following sessions. Framework: * Introduction: The definition of the Urbs through maps * 14th-15th century: Limbourg, Taddeo di Bartolo * 16th century: Bufalini, Duperac * Renaissance planning and the expanding city * 17th century: Maggi, Falda * 18th century: Nolli * 19th century: Catasto Piano * 20th century: Lanciani,

Sanjust Themes: * 14th-15th century: Derivation of the iconic map from Mappaemundi and city images in art * 16th century: Images of pre-Sistine in-city and extension planning vs. Sixtus V's city outside the city * 17th century: Illustrating the Baroque point developments: Urban theater * 18th century: The new orientation and precision measurement of the Age of Reason. Nolli and Piranesi: the contemporary vs. the archaeological city * 19th century: Stasis and expansion: Nolli retreats and the master Plans for the new Capital city * 20th century: Recapitulation and expansion: Lanciani's new Forma Urbis and images of the boundless city Learning Objectives: * To learn the history of the development of one of the most important cities in the world. * To learn the importance of mapping an way-finding in the understanding of architecture. * To learn the reading of traces of the past morphological development of a city. * To understand how cities are built, change, and grow over time.

Enforced Prerequisite at Enrollment: C or better in ARCH 332 and ARCH 480 Enforced Concurrent at Enrollment: ARCH 499B and ARCH 499A
International Cultures (IL)

ARCH 499F: Architectural Design Foreign Study

3-6 Credits/Maximum of 12

The abroad design studio serves students in their fifth year of the BARCH program, giving them the option of studying abroad for a semester additional to their required Rome semester. This studio will provide our students with a much needed global perspective into architecture and urbanity as practiced elsewhere in the world. The Architectural Design Studio will be embedded in an urban location abroad, introducing students to the socio-cultural and urban-architectural forces that shape our globe. It is increasingly important to recognize different models of architectural practice within different global contexts, and this studio will permit our students to engage in these issues first hand by being immersed within a particular culture and designing for it. A semester in an abroad studio is not merely a travel experience, but an academic exploration of a global environment. Students are expected to approach the work of the semester with even more rigor than they would a semester at home, while they follow a similar semester structure. The abroad studio will involve a site in the host city, programs and infrastructure appropriate for the exploration of the new context. The semester will include an initial urban/architectural analysis of the host city, leading to the identification of sites and design research topics. The studio will continue with the introduction of programs, and additional infrastructural requirements, and will culminate with a building proposal within the context of the host city. The abroad studio will have 150 contact hours, similar to architectural design studios at home

Enforced Prerequisite at Enrollment: C or better in: ARCH 431 and ARCH 480 and ARCH 499A and ARCH 311W
International Cultures (IL)

Army (ARMY)

ARMY 101: Introduction to the Army

3 Credits

Army 101 focuses on introduction to the Army and basic Soldier skills. It introduces Cadets to the Army and the Profession of Arms. Students will examine the Army Profession and what it means to be a professional in the U.S. Army. The overall focus is on developing basic knowledge and comprehension of the Army Leadership Requirements Model while gaining a complete understanding of the Reserve Officers' Training Corps

(ROTC) program, its purpose in the Army, and its advantages for the student. Cadets also begin learning map reading and land navigation. Students will have initial classes on fieldcraft, first aid, individual/team movement techniques that will include a weekly lab facilitated by Advanced Course Cadets and supervised by Army ROTC Instructors.

ARMY 102: Foundations of Leadership

3 Credits

Army 102 introduces Cadets to the personal challenges and competencies that are critical for effective leadership. Cadets learn how the personal development of life skills such as critical thinking, time management, goal setting, and communication. Cadets learn the basics of the communications process and the importance for leader's to develop the essential skills to effectively communicate in the Army. Cadets will begin learning the basics of squad level tactics that will be reinforced during a weekly lab facilitated by Advanced Course Cadets and supervised by Army ROTC Instructors

ARMY 103: Physical Training Laboratory

1 Credits/Maximum of 8

This course is designed to guide students through an intentional physical fitness program. The course follows the ARMY Physical Fitness Training Program, but is open to any student. The design consists of a systematic increase in the intensity or duration of physical activities. Proper progression allows the body to positively adapt to the stresses of training. When intensity or duration is increased too rapidly, the student cannot adapt to the demands of training, and is unable to recover, leading to overtraining and possible injury. The following are gradually increased to produce the desired physiological effect: - Intensity (resistance and pace). - Exercise volume (number of sets and repetitions). - Duration (time). In the toughening phase, the duration of the ability group runs (AGRs) progress from 10 minutes to 30 minutes gradually over the training cycle. The pace also gradually increases over time. For example, in the sustaining phase during the conduct of CLs and speed running, Soldiers progress from wearing the individual physical fitness uniform (IPFU) to Army combat uniforms (ACUs), boots, advanced combat helmet (ACH), and improved outer tactical vest (IOTV). Progression in strength is achieved by increasing one or more of the following for each exercise when using strength training equipment. - Resistance (weight). - Number of sets. - Number of repetitions. Adhering to the scheduled intensity and duration prevents the Soldier from progressing too fast. How fast the Soldier should progress also depends on how regularly he performs challenging activities and how much rest and recovery time he gets. PRT time is a valuable resource, especially during the toughening phase. Every PRT session develops strength, endurance, and mobility. To ensure improvement, PRT sessions in IMT occur 5 or 6 times a week and last 45 to 60 minutes. PRT sessions in the sustaining phase last 60 minutes or more and occur 4 to 5 times a week. If PRT cannot be conducted first thing in the morning, it should be conducted at some other time during the duty day. Training sessions should be sequenced to ensure adequate recovery.

ARMY 201: Leadership and Ethics

3 Credits

Army 201 focuses on leadership and ethics. The course adds depth to the Cadets knowledge of the different leadership styles. Cadets will conduct a leadership analysis of famous leaders and self-assessment of their own leadership style. The Army Profession is also stressed

through understanding values, ethics and how to apply both to different situations they may encounter as a leader. Army Values and Ethics and their relationship to the Law of Land Warfare and philosophy of military service are also stressed. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during a weekly lab facilitated by Advanced Course Cadets and supervised by Army ROTC Instructors.

ARMY 202: Army Doctrine and Decision Making

3 Credits

Army 202 focuses on Army doctrine and decision making. The course begins with analytical techniques, creative thinking skills and the Army problem solving process as related to situations faced by leaders when making decisions. TLPs and OPORD will lead Cadets to an understanding of Army Doctrine and Symbology. Squad tactics will be covered in classes on Unified Land Operations, Offensive Operations and Defensive Operations. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during a weekly lab facilitated by Advanced Course Cadets and supervised by Army ROTC Instructors.

ARMY 301: Training Management and the Warfighting Functions

3 Credits

Army 301 focuses on training management and the warfighting functions. It is an academically challenging course where you will study, practice, and apply the fundamentals of Training Management and how the Army operates through the Warfighting functions. At the conclusion of this course, you will be capable of planning, preparing, and executing training for a squad conducting small unit tactics. Includes a lab per week using peer facilitation by senior Cadets and supervised by Army ROTC Instructors.

ARMY 302: Applied Leadership in Small Unit Operations

3 Credits

Army 302 focuses on applied leadership in small unit operations. It is an academically challenging course where you will study, practice, and apply the fundamentals of direct level leadership and small unit tactics at the platoon level. At the conclusion of this course, you will be capable of planning, coordinating, navigating, motivating and leading a platoon in the execution of a mission. Includes a lab per week using peer facilitation by senior Cadets and supervised by Army ROTC Instructors. Successful completion of this course will help prepare you for the Cadet Summer Training Advanced Camp, which you will attend in the summer at Fort Knox, KY.

Prerequisite: ARMY 301

ARMY 401: The Army Officer

3 Credits

Army 401 focuses on development of the Army Officer. It is an academically challenging course where you will develop knowledge, skills, and abilities to plan, resource, and assess training at the small unit level. You will also learn about Army programs that support counseling subordinates and evaluating performance, values and ethics, career planning, and legal responsibilities. At the conclusion of this course, you will be familiar with how to plan, prepare, execute, and continuously assess the conduct of training at the company level. Includes a lab

per week overseeing lesson facilitation and supervised by Army ROTC Instructors.

Prerequisite: ARMY 302

ARMY 402: Company Grade Leadership

3 Credits

Army 402 is an academically challenging course where you will develop knowledge, skills, and abilities required of junior officers pertaining to the Army in Unified Land Operations and Company Grade Officer roles and responsibilities. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, practical exercises, a mid-term exam, and an Oral Practicum as the final exam. Successful completion of this course will assist in preparing you for your Basic Officer Leader Course and is a mandatory requirement for commissioning. Includes a lab per week overseeing lesson facilitation and supervised by Army ROTC Instructors.

Prerequisite: ARMY 302

ARMY 496: Independent Studies

1-9 Credits/Maximum of 9

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Art (ART)

ART 1: Introduction to the Visual Arts

3 Credits

ART 1 is a course on understanding and interpreting art and serves as an introduction to the visual arts. The material follows an interdisciplinary approach to the practice of the visual arts, examining the social, cultural, historical, and aesthetic implications of studio activity. This course is organized around six central topics: Art as Expression, Art as Cultural Narratives, Form and Content, Two-Dimensional Art, Three-Dimensional Art, and Writing About Art.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Key Literacies

ART 2: Interactive Learning and Web-Design

3 Credits

Introduce students to research on-line, preparing verbal, visual and other elements for presentation of outcomes and posting them to the Internet. ART 2 Interactive Learning and Web-Design (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course is constructed to introduce students to doing research on-line, preparing the verbal, visual and other elements for a presentation of their research and posting them to the Internet with special emphasis placed on the aesthetics of Web design and effective communication. Both individual and group projects are included. It is intended to provide the skills to work collaboratively using computers and the Internet effectively, efficiently and with an awareness of the aesthetic qualities of that work. This final emphasis is particularly important since the quality of presentation is

not included in most classes where Web sites are developed and they are crucial to the effective use of this medium. Aesthetic judgments by the students of their peers work is central to making comprehensive and complete evaluations of it. A central message of the course is that content and presentation cannot be separated and a primary skill to be learned is how to discover, create and refine images for use on the Web in conjunction with clear, well-organized and legible text. The student's work will be evaluated on the basis of how well they grasped the problem, worked with others to solve it, when required, and the effectiveness of the final result.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Key Literacies

ART 3: Visual Images on the Web

3 Credits

Introduce students to using visual images for communication on the World Wide Web. ART 3 Visual Images on the Web (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. This course is constructed to introduce students to doing art work on-line, preparing visual, verbal and other media for presentation on the Internet with special emphasis placed on the aesthetics of image making and good Web design. Working both individually and in groups is included. Each student is assigned to a working group, which makes collaboration and communication possible. All the projects emphasize art making of different kinds - still and animated, bit-map and vector - as well as different formats - HTML, Flash format and Portable Document format. The grasping of the different kinds of images each makes available, aesthetic qualities of each and they can be used in communication at the center of the course. The student's work will be evaluated on the basis of how well they grasped the problem, worked with others, when required, to solve it and the effectiveness of the final result. The students may do the work for the course on their personal computers or in the University labs on any of the available platforms - Windows, Mac or UNIX. The course will be offered in the spring and the fall and have an enrollment of 200 students.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Key Literacies

ART 10: Introduction to Visual Studies

3 Credits

ART 10 is an introductory art appreciation course created for students without any artistic background. This course introduces students to various art movements, cultural influences, artistic genres, artists, and their artwork. The main emphasis of the course is to teach students hands-on studio arts techniques as they conduct personal research and explore their own creativity. While utilizing art historical and contemporary art concepts, the course guides the students through different time periods. Examining and discussing artwork is a crucial part of this course that encourages the students to express their opinions about art in an intelligent and articulate manner. Visiting art galleries and museums allows the students to experience art in person and to convey constructive criticism through writing. By the conclusion of the course,

students compile a portfolio of narratives and artworks reflective of their research, understanding, creativity, and personal growth.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Key Literacies

ART 11: First-Year Seminar- School of Visual Arts

1 Credits/Maximum of 1

Facilitate adjustment to high expectations, demanding workload, increased academic liberties, and other aspects of college life in the arts. The First-Year Seminar will help facilitate students' adjustment to the high expectations, demanding workload, increased academic liberties, and other aspects of the transition to college life and introduce them to their responsibilities as members of both the School of Visual Arts (SoVA) and University community. In addition, the First-Year Seminar is designed to engage students, acquaint them with the learning tools and resources available at Penn State and orient them to the SoVA community from the outset of their undergraduate studies in a way that will bridge to later experiences in their chosen program of study. The first-year seminar will serve as a broad introduction to SoVA's programs of study in Studio Art, Art Education, and Interdisciplinary Digital Studio (IDS) as well to Penn State's academic policies and procedures. Topics to be covered: Introduction to SoVA's areas of study (Studio Art, Art Education, and Interdisciplinary Digital Studio) University wide Web based academic resources, academic policies and procedures Introduction to Penn State's Student Affairs Offices (e.g., Career Services, Center for Women Students, Multicultural Resource Center, and Student Activities)

First-Year Seminar

ART 17: Introduction to Metal Arts

3 Credits

Introduction for non-art majors to fundamental jewelry making and small-scale metalsmithing processes including fabrication, surface treatment, and finishing of metalwork. ART 17 Introduction to Metal Arts (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 17 is intended as a general survey of metal arts for non-majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and a sensitivity to the various metal arts conventions. Students are given the opportunity to briefly explore many of the traditional materials and processes of metalsmithing including those that are used in cold joining, surface texture, and fabrication. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the metal arts function. As a general appreciation offering, emphasis is placed on active learning processes that involve students in basic studio materials and techniques. Since the School of Visual Arts now requires a portfolio review for visual arts majors to enroll in studio courses, ART 17 provides an opportunity for non-art majors to do studio work in conjunction with an exploration of art concepts.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

ART 20: Introduction to Drawing

3 Credits

ART 20 is intended as a general survey of the art of drawing for non-majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and on the various conventions used in drawing. Students will be given the opportunity to briefly explore many of the traditional materials of drawing, including pencil, charcoal, conte, ink and ink wash, pastel, as well as experimental tools. Slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which drawing functions. As a general appreciation offering, emphasis is placed on active learning processes that involve students in basic studio materials and techniques. Since the School of Visual Arts now requires a portfolio review for Visual Arts majors to enroll in studio courses, ART 20 provides an opportunity for non-art majors to do studio work in conjunction with an exploration of art concepts.

Bachelor of Arts: Arts

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

ART 30: Introduction to Sculpture

3 Credits

Introduction to sculpture for non-art majors consisting of lectures/basic studio work coordinated to cover broad range of processes. ART 30 Introduction to Sculpture (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 30 is intended as a general survey of the art of sculpture for non-majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various sculptural conventions. Students are given the opportunity to briefly explore many of the traditional materials of sculpture including those that are used in modeling and replication, subtractive processes, and fabrication. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the art of sculpture functions. Students enrolled in this course will be required to participate in the following active learning components: 1. Studio Assignments: a) Modeling and Replication b) Subtractive Processes c) Fabrication Assignment 2. Creating a social and historical context for sculpture making through slide presentations, studio visits and museum critiques: a) Slide presentations: students will be asked to consider the concepts of their creative projects in relationship to the sculptural works of historical and contemporary artists in order to understand the ways in which the three dimensional aspects of sculpture convey meaning. b) Studio visits: Students will visit the personal studios of local artists to learn how professional artists develop best practices as related to the three basic approaches to rendering sculptural form outlined above. Additionally, they will explore and discuss with these artists the concepts expressed in their sculptural works. c) Museum critiques: Museum visits will enable students to learn how to engage and respond to actual works of art as compared with those that they experience as slide and printed representations. The role of museums and galleries in contemporary art practice will also be discussed. Grading and evaluation: Students' sculptural projects will be evaluated according to the following criteria: 1) the uniqueness of the visual concepts developed in their studio assignments; 2) the strength of their visual compositions-their ability to communicate concepts clearly; 3) the quality of their craftsmanship-an

effective use of materials and procedures and commitment to the studio assignments-the effort expended on each project; 4) Their willingness to participate in critique sessions-a thoughtful and informed interpretation of visual ideas in sculptural works produced by them in class as well as those discussed during slide presentations, studio visits, and museum critiques.

Bachelor of Arts: Arts
 General Education: Arts (GA)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Creative Thinking

ART 40: Introduction to Printmaking

3 Credits

Instruction and practice in elementary printmaking and papermaking processes. ART 40 Introduction to Printmaking (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 40 is intended as a general survey of the art of printmaking for non-majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various printmaking conventions. Students are given the opportunity to briefly explore the various approaches to printmaking, which may utilize some or all of the following: screenprinting, relief, intaglio, lithography, and others. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the art of printmaking functions. Students enrolled in this course will be required to participate in the following active learning components: 1. Studio Printmaking Assignments: a) Screenprinting b) Relief c) Itaglio d) Lithography e) Others (collagraph, monotype, electrostatic, artists books) 2. Creating a social and historical context for printmaking through slide presentations, studio visits and museum critiques: a) Slide presentations: students will be asked to consider the concepts of their creative projects in relationship to prints of historical and contemporary artists in order to understand the ways in which the two-dimensional aspects and various processes of printmaking convey meaning. b) Studio visits: Students will visit the personal studios of local printmakers to learn how professional artists develop best practices as related to the basic approaches to printmaking outlined above. Additionally, they will explore and discuss with these artists the concepts expressed in their printed images. c) Museum critiques: Museum visits will enable students to learn how to engage and respond to actual prints as compared with those that they experience as slide and book/journal reproductions. The role of museums and galleries in exhibiting prints will also be discussed. Grading and evaluation: Students' printmaking projects will be evaluated according to the following criteria: 1) the uniqueness of the visual concepts developed in their studio assignments; 2) the strength of their visual compositions-their ability to communicate concepts clearly; 3) the quality of their craftsmanship-an effective use of materials and procedures and commitment to the studio assignments-the effort expended on each project; 4) Their willingness to participate in critique sessions-a thoughtful and informed interpretation of visual ideas in prints produced by them in class as well as those discussed during slide presentations, studio visits, and museum critiques.

ART 50: Introduction to Painting

3 Credits

Introductory experience in making of art through painting media; designed for non-majors seeking a general overview of studio practice. ART 50 Introduction to Painting (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 50 is intended as a general survey of the art of painting for non-majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various conventions used in the discipline of painting. Students are given the opportunity to briefly explore the various approaches to creating visual images by applying various painting materials, techniques, and concepts. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the art of painting functions. Students enrolled in this course will be required to participate in the following active learning components: 1. Studio Painting Assignments: a) Visual concept development: students will be introduced to the various ways that artists create meanings through painting. b) Materials development: through a process of exploration and experimentation, students will learn how to apply various painterly media and tools in creating visual images. c) Technique development: through a process of exploration, experimentation, and skill development students will learn how to render and model painterly images that range between abstract and realistic representations. 2. Creating a social and historical context for painting through slide presentations, studio visits and museum critiques: a) Slide presentations: students will be asked to consider the concepts of their creative projects in relationship to paintings by historical and contemporary artists in order to understand the ways in which the two-dimensional aspects and various processes of painting convey meaning. b) Studio visits: Students will visit the personal studios of local painters to learn how professional artists develop best practices as related to the basic approaches to painting outlined above. Additionally, they will explore and discuss with these artists the concepts expressed in their painted images. c) Museum critiques: Museum visits will enable students to learn how to engage and respond to actual paintings as compared with those that they experience as slide and book/journal reproductions. The role of museums and galleries in exhibiting paintings will also be discussed. Grading and evaluation: Students' painting projects will be evaluated according to the following criteria: 1) the uniqueness of the visual concepts developed in their studio assignments; 2) the strength of their visual compositions-their ability to communicate concepts clearly; 3) the quality of their craftsmanship-an effective use of materials and procedures and commitment to the studio assignments-the effort expended on each project; 4) Their willingness to participate in critique sessions-a thoughtful and informed interpretation of visual ideas in paintings produced by them in class as well as those discussed during slide presentations, studio visits, and museum critiques.

 GenEd Learning Objective: Creative Thinking

ART 51N: Meteorology and Visual Arts: To Know is to See

3 Credits

This course examines the inter-relationship between what we know and what we see, through an introductory exploration of art and science.

Engaging students in the study of weather formation, mainly clouds, artistic depictions within the genre of landscape, and the expressed practice of painting; fosters the development of observational skills necessary for reading the landscape and interpreting collected data. What we know and what we see is an on-going evolution of development; syncing the old with the new. Therefore, observation and interpretation are essential to critical thinking, making the intersection between art and science a fertile ground for discovery and learning. The exciting part of the course is the large amount of overlap in the general ideas and thought processes used in meteorology and art, especially when using clouds as the connective tissue. Scientists and artists are both detail oriented and worry about the quality of their work. Both involve collecting data to find the best approaches to a problem, and reasoning through challenges that arise. Students will be challenged throughout the course to seek these connections and how perspectives from each discipline inform the other. Meteorology and art have long been aligned in a common quest to understand how the world works, each seeking interpretations and explanations using a range of complementary and contrasting practices and perspectives. Clouds come in a vast array of sizes and shapes, and are depicted in art using a variety of techniques, creating a shared focus for a deeper understanding of both areas of endeavor. Students will learn about the concept of mixing, which is important to cloud formation and to painting. Students will conduct experiments to learn about cloud processes, and will learn and practice artistic techniques to convey atmospheric conditions. Ideas from both perspectives will be integrated in analysis and discussion. Data from instruments and the individual artist will be collected, shared, and analyzed. Learning how clouds form will help with painting, and questions and perspectives that arise from painting will increase the understanding of cloud processes. The common threads in this approach are a curious mind, a strong detail-oriented focus, effective communication, and respect for the creative tension between ambiguity and assurance in the search for a better sense of causes, connections, and incessant changes.

ART 80: Introduction to Ceramics

3 Credits

Introduction to the concepts and techniques fundamental to the making of pottery and ceramic sculpture. ART 80 Introduction to Ceramics (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. ART 080 is intended as a general survey of the art of ceramics for non-majors. As a studio offering, emphasis is placed on hands-on activities, which promote visual literacy and sensitivity to the various conventions in ceramics. Students are given the opportunity to briefly explore many of the traditional approaches to ceramics including those that are used in hand building, wheel throwing, glazing, and kiln firing. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the art of ceramics functions. As a general appreciation offering, emphasis is placed on active learning processes that involve students in basic studio materials and techniques. Since the School of Visual Arts now requires a portfolio review for visual arts majors to enroll in studio

courses, ART 80 provides an opportunity for non-art majors to do studio work in conjunction with an exploration of art concepts.

Bachelor of Arts: Arts

ART 100: Concepts and Creation in the Visual Arts

3 Credits

A study of the personal and cultural foundations of artistic creation and practice of creative production in the art studio. ART 100 Concepts and Creation in the Visual Arts (3) (BA) This course meets the Bachelor of Arts degree requirements. ART 100 is intended as an introduction to the concepts underpinning artistic creation. Through lectures and studio work, students will explore relationships between artistic processes and in daily life. The objective of the course is to develop in the student both an appreciation and understanding of contemporary art through an examination of art and contemporary social, cultural, and political issues surrounding artistic practice. Students will respond to the ideas presented in the lectures by completing a series of artworks intended to reflect the issues and concepts that have been presented. The intended, though not exclusive, audience for the course is non-art majors. While the focus of the course is a critical examination of both the artworks studied and the artworks created by the students, the critique will be derived from the various backgrounds and academic experiences of the students and not necessarily from their knowledge of art. In this manner, the course can become a relevant complement to all of their studies. In short, the goal of the course is to understand art as a means to critically engage and begin to understand our surroundings and not simply as an end product. Evaluation of student achievement will be done in both the classroom and studio portions of the course. Since it is not expected that students have a background in art, content knowledge assessment will primarily be based on the students' active participation in class discussions as well as objective tests in the form of written responses to the issues and concepts examined. In the studio, their work will be judged on how well students have responded to the concepts and issues explored as well as on their ability to articulate their own ideas in relation to those of other students and other aesthetic and cultural ideas to which they have been exposed. In the studio, this process will primarily be done in the form of individual conversation and group critique. Since the School of Visual Arts now requires a portfolio review for visual arts majors to enroll in studio courses, ART 50 provides an opportunity for non-art majors to do studio work in conjunction with an exploration of art concepts.

Bachelor of Arts: Arts

ART 101: Introduction to Web Design

3 Credits

A beginning level course in Web Design, with emphasis on designing with standards to assure accessibility and effective communication. ART 101 is a beginning level web design course that is concerned with the designing and creating of web sites using XHTML and recommended government standards. This emphasis is central so that the work the students do will reach the broadest audience, including people with disabilities, through the use of a broad range of software and hardware. This course will teach students how to meet the present government standards for accessibility by the disabled and the technical and accessibility standards recommended by the World Wide Web Consortium (W3C). This course will also place an emphasis on the uses of art-images to present information along with the presentation of text and typography for communication and how these elements can make projects on the web more effective. The course will introduce topics such as: clarity of art and design, ease of use (navigability), and in creating art and graphics for web delivery (optimization). There will also be discussion on the dynamics of networked communications, along with issues pertaining to the authoring and publishing of content and media on the internet.

Bachelor of Arts: Arts

ART 102: Beginning Computer Aided Design for Artists

3 Credits

ART 102 is an introduction to Computer Aided Design as an artistic media. Students will model objects in a virtual environment and then realize their objects tangibly through 3D printing and other digital output processes. ART 102 will consist of class lecture, demonstration, work periods, and critique. ART 102 is (an almost) paperless computer based class.

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Key Literacies

ART 110: Ideas as Visual Images

3 Credits

Introduction to the ideational relationships among subject, form, and content in visual images.

ART 111: Ideas as Objects

3 Credits/Maximum of 3

An introduction to the relationship between ideas and the creation of three-dimensional objects. In this course, students will learn concepts, methods, and vocabulary relative to the production of three-dimensional objects. Through slide lectures, discussions, critiques, and assigned projects, participants will investigate how to make, analyze, and critique sculptural objects within the context of contemporary art and visual culture. Students are expected to be inquisitive about the discipline and willing to immerse themselves in it. Students are expected to ask questions, explore new ideas, and engage in the course material.

Bachelor of Arts: Arts

ART 122Y: Commentary on Art

3 Credits

An introduction to verbal commentary, both oral and written, about art. The development of critical and expressive skills given emphasis.

Bachelor of Arts: Arts

United States Cultures (US)

Writing Across the Curriculum

ART 144Z: Climate Change: Arts, Agency and Activism

3 Credits

This course introduces students to contemporary art activism and environmental and humanitarian issues through research presentations, discussions and the production of artwork. It encourages students to imagine the effects of climate change and investigate how art can bring new ways of thinking about and bring a greater awareness to global issues. Media will vary depending on student ideas, it may include drawing, painting, video, sculpture, photography or installation art. Coursework integrates written, oral and visual communication. As an introductory course, assessment will be based equally on class discussion, research presentations, the content of art works produced and student's ability to articulate the synthesis of their work within the theme of climate change. ART 144Z fulfills 3 credits of the GA Domain General Education requirements. ART 144Z may also be used in combination with either BIOL 144Z or PSYCH 144Z as linked courses to fulfill 6-credits of Integrative Studies.

GenEd Learning Objective: Integrative Thinking

ART 160N: STEAM: Connecting Art to Science, Technology, Engineering and Mathematics

3 Credits

Drawing from traditions of scientific illustration, fine art and literary interpretations of scientific concepts, and collaborations between scientists and artists, this course will establish the ways in which the arts and the creative process have informed the sciences, and have served as a source of inspiration, discovery, and dissemination of scientific thought. Building upon principles shared by the creative process, design-thinking, and the scientific method, the course modules investigate the relationship between form and function in art and each of the STEM disciplines, and explore how the creative process enhances sensory processing and perception of scientific concepts. Through hands-on activities, students will develop creative thinking skills and apply them to understanding and communicating fundamental STEM concepts. The course combines lectures, visual presentations, and problem-based learning activities to build knowledge of pivotal intersections between the arts and sciences, and to develop an appreciation of the interconnectedness of STEM (Science, Technology, Engineering, and Mathematics) and the Arts (STEAM). This course will examine art objects and processes that have facilitated understanding for scientists - as a process of discovery or record; and for audiences - as form of

communication or art. Fundamental questions will be: "Can art or the creative process facilitate discovery and understanding for the scientist? How?" "Can artistic interpretations of scientific concepts facilitate communication of science to different audiences?" "Can creative practice, ie drawing, enhance skills that serve scientific method, i.e., observation?" Finally, students will seek creative forms to convey scientific concepts in class projects, with the purpose of integrating these dualistic modes of inquiry to build upon their analytic and critical thinking skills holistically.

ART 165: Artistic Concepts of Space

3 Credits

A studio course that utilizes lecture and varied media experiences to investigate space as artistic expression. ART 165 Artistic Concepts of Space (3) ART 165 Artistic Concepts of Space is a hands-on studio course supplemented by lecture. It utilizes various media experiences to investigate notions of space in artistic expression. Explorations will include traditional and contemporary ways of depicting and constructing space as well as contemporary approaches. Both 2-D and 3-D studio investigations will be employed. A lecture component will provide a historical and cultural backdrop upon which students may better understand the role of special depiction in artistic expression.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Key Literacies

ART 166: Artistic Concepts of Form

3 Credits

Modeling in light and dark - with particular attention to drawing. (Approximately 5 weeks) Cultural/historical variations of form - including, but not limited to: Egyptian, Medieval, Byzantine, and Modern, and Contemporary. (Approximately 2 weeks) Sculptural notions of form will be investigated by the actual creation of artistic objects, via exercises in modeling, construction, reduction, assemblage, and casting. (Approximately 8 weeks)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Key Literacies

ART 168: The Digital Medium

3 Credits

ART 168 The Digital Medium (3) This course will provide a much needed introductory technological/digital component wherein computing will be discussed as a media, rather than a tool. Students will be engaged in the creation of artistic manifestations of individual interpretations surrounding themes and concepts introduced in class. Each unit of the

course will build upon the next resulting in a knowledge base of the possibilities of what the digital medium includes. Students will be asked to demonstrate their knowledge of the medium with a culminating final project that uses at least four of the techniques demonstrated in class. The final project will be determined by the student, manifestations may include a web site, short film, installation, projects, or performance.

Bachelor of Arts: Arts

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Key Literacies

ART 170N: Plant and Microbial Art

3 Credits

This inter-domain general education course provides a cross-disciplinary platform for plant- and microbe-facilitated creative production and art-mediated scientific learning. The course balances studio art activities with lecture- and discussion-based learning about integrated science and art topics. Students use the media of plant and microbial pigments, growth, and biology in a hybrid studio-lab environment. The biology, chemistry, and physics of these living and life-derived media are expected to form integral parts of student presentations. Lectures will provide information about broad scientific principles and in-depth learning about specific phenomena underlying the biologically-based media as well as relevant bio-art issues and contexts in which work is produced. Student projects will represent an integration of natural science understanding with artistic expression. Students will be encouraged to go in various directions with their creative efforts, including visual mechanics (light, color, composition), mark making (painting, drawing), meaning making (metaphors, allegories, cultural appropriations), storytelling, sensing (ways of seeing, phenomenology), and new media issues (e.g., post-humanism). Some example types of bio-media and their scientific connections include: plant pigments, which facilitate discussion of light, photosynthesis, basic chemistry and chromatography; bacterial cultures, which facilitate discussion of microbiology, cell biology, and cellular movements; and fluorescent proteins, which facilitate discussion of DNA, RNA, protein structure, mutations, species concepts, and genetic engineering. Student projects integrate the scientific basis of the bio-art media used such that the media become part of the message of the art.

ART 175N: Intersections Between Art and Psychology

3 Credits

This course investigates the historical and theoretical intersections between psychology and art. These intersections are organized upon three general domains of perception, cognition, and expression. Within these domain topics may include, but are not limited to: automatic drawing, art and the subconscious, surrealism, symbolism, expressionism, and models and techniques of art therapy. Theorists may include, but are not limited to (I.E. Aristotle, Lowenfeld, Freud, Jung, Moon, etc). Students will be expected to consider the psychological structure beneath creative thought and output. Students will also be

expected to reflect on their own experiences and processes throughout their studio work.

ART 207N: LGBTQ+ Identity, Culture and The Arts

3 Credits

WMNST 207N: LGBTQ+ Identity, Culture and the Arts will blend theories and methods in the Social and Behavioral Sciences (GS) with those of the Integrative Arts (GA). The course introduces key ideas, concepts and issues related to LGBTQ+ identity and culture, while highlighting aesthetic values of LGBTQ+ expression. The course broadly traces the historical, global, political and academic trajectories of LGBTQ+ studies and considers contemporary topics (for example, global-local influences, intersectionality, activism, and the media) as they relate to LGBTQ+ identity and the arts. The course is attentive to the ways that sexual identities intersect with other types of identities, such as age, gender, race/ethnicity, ability, religion. The course will also help students develop arts-related skills and teach students to recognize and value the arts as an integral part of LGBTQ+ cultural expression. Students will write critical papers, participate in discussions with artists and scholars, explore queer art and art spaces, as well as create a performance or installation art project. Incorporating seminar - and lecture-style instruction with constructivist-creative learning and experiential strategies, the course seeks to develop a learning community stimulated by discourse, collaboration, and creative/aesthetic exploration. This course is a General Education interdomain (N) course for General Education Social and Behavioral Sciences (GS) and General Education Arts (GA), with US Cultures (US), International Cultures (IL) designate. The course is cross listed in both Women's Studies and Arts.

ART 211: Introduction to Digital Art and Design Criticism

3 Credits/Maximum of 3

An introduction to the language, aesthetics and cultural impacts of digital art and design in contemporary society. ART 211 Introduction to Digital Art and Design Criticism (3) (US)(BA) This course meets the Bachelor of Arts degree requirements. ART 211 examines 1) the conventions, language, practices, and aesthetics used by digital artists and designers and 2) the social and cultural implications that they and their works have for society with regard for the contexts of politics, philosophy, economics, race, gender, and technological development. Critical and creative thinking and expression are given primary emphasis in class activities and assignments. The course meets twice weekly and topics are explored through lectures, discussions, readings, presentations by visiting speakers, and out-of-class trips. Course assignments are writing and project based and require students to respond to ideas and concepts presented in class and to develop critiques of digital works through a variety of formats. Assignments include informal in-class projects, media reviews, a course journal, and a final project. Students build writing skills through analyzing assigned readings and developing research- and reflection-based projects about digital art and design. Speaking and listening skills are developed through discussions and collaborative activities. Course topics explore the: - social contexts of digital art/design; - significance of the computer interface to digital art and design; - practices used by digital artists and designers and their impact on audiences; and - professional issues, concerns, and controversies affecting digital art/design, artists/designers, and their audiences. Students are required to have access to the Internet and to their University e-mail account. ART 211 will enroll 25 students and will be offered spring semester.

ART 220: Figure Drawing

3 Credits

Drawing from life. Emphasis on developing the ability to comprehend and record the human figure. ART 220 Figure Drawing (3) This course is intended to further investigate the art of figure drawing for art majors.

As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various conventions used in figure drawing. Students will be given the opportunity to explore many of the traditional materials of drawing, including pencil, charcoal, cont', ink and ink wash, pastel, as well as experimental tools. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which figure drawing functions. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Enforced Concurrent at Enrollment: ART 110 or ART 111

Bachelor of Arts: Arts

ART 223: Drawing: Techniques, Materials, and Tools

3 Credits

Drawing with an emphasis on organization and the development of drawing skills through a variety of techniques, materials, and tools. ART 223 Drawing: Techniques, Materials, and Tools (3) This course is intended to further investigate the art of drawing for art majors. As a studio offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various conventions used in drawing. Students will be given the opportunity to explore many of the traditional materials of drawing, including pencil, charcoal, cont', ink and ink wash, pastel, as well as experimental tools. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which drawing functions. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. ART 240: Beginning Printmaking

3 Credits

An introduction to printmaking consisting of lectures, demonstrations, and studio work to cover a broad range of processes. ART 240 Beginning Printmaking (3) This course will consist of lectures, demonstrations, and studio practice in a broad range of printmaking processes. Critiques will be directed toward technical, aesthetic, and historical issues in black and white and color print. Various print collections within the University will be employed to acquaint the students with the work of the professional in the field. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Enforced Concurrent at Enrollment: ART 110 or ART 111

Bachelor of Arts: Arts

ART 250: Beginning Oil Painting

3 Credits

The materials and techniques of painting in oil and their uses in creative painting on panels and canvas. ART 250 Beginning Oil Painting (3) This course is designed to teach beginning students the basic fundamentals of painting and introduce them to the visual arts as a vehicle for personal expression. It is divided into technical categories for organizational purposes. The unique process of each discipline structures the course and allows for individual expression from a diversity of students with different skills and interests. The basic skills are introduced and studied through the creative process, from conception of an idea, preliminary sketches, variations, and final painting. Emphasis is placed on understanding the goals for each student and focusing on his or her shortcomings and strengths. While a basic mastery of mimetic painting is aimed at, a diverse range of aesthetic styles is presented. Thus the purpose of this course is to increase the appreciation of the visual arts through studio processes and the development of meaningful critical facility. We hope to educate students who will understand the fundamentals of painting and who will become part of an educated audience for the arts. Hopefully, they will be more imaginative and creative people. The studio emphasis on individual growth allows for flexibility in course structure to accommodate the general education objectives as well as for future painting majors. Creative and visual thinking are innately part of all students and these basic studio courses encourage and nurture them.

Enforced Concurrent at Enrollment: ART 110 or ART 111

Bachelor of Arts: Arts

ART 260: Water Media

3 Credits/Maximum of 6

This course develops artistic expression in water-based painting media while developing skills with watercolor, ink, acrylic, and natural pigments. ART 260 Water Media introduces techniques and concepts relevant to the creation of artworks using water based painting media, materials and techniques, including watercolor, ink, acrylic, and natural pigments, as well as different grounds and surfaces. Basic techniques are introduced and skills are developed while experimentation and innovation are encouraged. Water based painting media such as watercolor, ink,

acrylic, and natural pigments, are covered. Examples from historical and contemporary water media painting practice will be presented and discussed. Particular emphasis will be placed upon the development of individual expression and a critical awareness concerning processes, composition, and content. Students apply their emerging skills and expressive preferences in developing a concentrated body of work. A goal is that the work demonstrates technical competence and conceptual awareness through the pursuit and refinement of an evolving personal vision. Students are introduced to the process of critique, which is central to the critical learning skills that are core experiences to the studio experience. This course gives students the requisite technical and conceptual skills to take more advanced painting and drawing courses such as ART 320 ADVANCED DRAWING and ART 350 INTERMEDIATE PAINTING among others. ART 260 will be offered once a year in the Spring semester.

ART 265: Artistic Concepts of Color

3 Credits

A studio course that utilizes lecture and various media to investigate color as artistic expression. ART 265 Artistic Concepts of Color (3) ART 265 Artistic Concepts of Color is a hands-on studio course supplemented by lecture. It utilizes various media experiences to investigate notions of color in artistic expression. Explorations will include traditional ways of investigating and creating color as well as contemporary approaches. Both 2-D and 3-D studio investigations will be employed. A lecture component will provide a historical and cultural backdrop upon which students may better understand the role of special depiction in artistic expression.

Enforced Prerequisite at Enrollment: ART 165 and ART 166

ART 266: Artistic Concepts of Light

3 Credits

A studio course that utilizes lecture and varied media experiences to investigate light as artistic expression. ART 266 Artistic Concepts of Light (3) ART 266 Artistic Concepts of Light provides students with necessary concepts about light. Both 2-D and 3-D studio investigations will be employed. A lecture component will provide a historical and cultural backdrop upon which students may better understand the role of special depiction in artistic expression.

Enforced Prerequisite at Enrollment: ART 165 and ART 166

ART 269: Methods and Materials I

3 Credits/Maximum of 9

A studio course that focuses on specific media or techniques reflecting varied faculty expertise. ART 269 Methods and Materials I (3) This course provides students with the opportunity to experience particular areas of visual art in which

Enforced Prerequisite at Enrollment: ART 165 and ART 166

ART 280: Beginning Ceramics

3 Credits

The fundamentals of ceramics, throwing, hand-building, and glazing; acquainting the student with ceramic materials, techniques, and philosophy. ART 280 Beginning Ceramics (3) This course is intended to further investigate the art of ceramics for art majors. As a studio

offering, emphasis is placed on hands-on studio activities, which promote visual literacy and sensitivity to the various conventions used in ceramics. Students will be given the opportunity to explore many of the traditional materials of ceramics, including functional and nonfunctional applications, stoneware, and high fire glazes. As well, slide presentations, studio visits and museum critiques will augment studio exercises to facilitate a greater awareness of the cultural context in which the field of ceramics functions. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Enforced Prerequisite at Enrollment: ART 110 or ART 111 Enforced Concurrent at Enrollment: ART 110 or ART 111 Bachelor of Arts: Arts

ART 290: Beginning Photography

3 Credits

Fundamental techniques and approaches to the art of photography utilizing digital photographic technologies; digital camera required. ART 290. Beginning Photography (3)(BA) This course meets the Bachelor of Arts degree requirements. ART 290 is the first course for students who desire to pursue a concentration in photography. It will focus on the process of making photographs and the development of a critical understanding of photographic images and their evaluation. In ART 290 students will develop the habit of taking photographs on a regular basis. Each week, students will be expected to turn in 24 pictures on one of five assignments for review and critique by both instructors and members of the class. Each assignment will be covered over a three-week period. The topics of the five assignments will vary, but each will focus on important aspects of photography. They may include: portraits, self-portraits, nature photographs, travel photographs, documentary series, experimental images, action assignments, etc. The final assignment will be a self-defined topic that allows the student to explore and work in an area of personal interest. Each topic will be selected to acquaint the student with important aesthetic principals in photography and at the same time advance their technical skill in the process of making photographic images. As part of the five assignments in ART 290, students will also gain background on the history of photography and the critical evaluation of photographs. For each assignment there will be an accompanying gallery of work by other photographers (professionals, amateurs, and students) on the assigned topic area. Each photograph in the gallery will be accompanied by an "artist's statement" - a written critical statement where the photographer describes his or her work and methods. Students will be required to complete each of the five assigned topics by submitting a final "gallery" of four photographs with a written "artist's statement" that speaks to the intent, process, and result of their work. Final submissions will help students develop skills in not only making photographs but critically evaluating their own work and articulating their personal means, methods, and objectives as photographers. Grading will be based on (1) the completion of weekly submissions, (2) the quality of photographs in final submissions for each assignment, (3) attendance, and (4) participation in critiques. A digital camera is required. ART 290 will be offered fall and spring semesters.

Bachelor of Arts: Arts

ART 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts

ART 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Arts

ART 299: Foreign Study--Art

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Arts
International Cultures (IL)

ART 320: Advanced Drawing

4 Credits/Maximum of 8

Drawing for art majors; emphasis on sustained individual approaches based on figurative and nonfigurative sources. ART 320 Advanced Drawing (4 per semester/maximum of 8) This course is for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experimented with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work. Portfolios will be graded and midterm and at the end of the semester. In addition to the portfolio requirements, each student will give a presentation on a contemporary artist whose work has in some way influenced your own current body of work. Critiques will be regularly scheduled. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Enforced Prerequisite at Enrollment: ART 110

Bachelor of Arts: Arts

ART 330: Intermediate Sculpture: Metal Fabrication and Mixed-media

4 Credits/Maximum of 8

Development of technical and conceptual skills through metal fabrication, welding, and mixed-media processes. ART 330 Intermediate Sculpture: Metal Fabrication and Mixed-media (4 per semester/maximum of 8) This course is for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experimented with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques,

and their application in creating visually compelling concepts is essential to the success of completed artworks.

Enforced Prerequisite at Enrollment: ART 230 or permission of program Bachelor of Arts: Arts

ART 331: Intermediate Sculpture: Metal Casting and Mold-Making

4 Credits/Maximum of 8

Development of technical and conceptual skills through metal casting and mold-making processes. ART 331 Intermediate Sculpture: Metal Casting and Mold-Making (4 per semester/maximum of 12) This course is for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experimented with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work through the development of technical and conceptual skills through metal casting and mold-making. Students will learn both traditional and non-traditional ways of making sculptural objects that use these skills as primary means of artistic communication. Readings, lectures, movies, and demonstrations will introduce students to the materials and techniques used in the various sculpture processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Enforced Prerequisite at Enrollment: ART 230 or permission of program Bachelor of Arts: Arts

ART 340: Printmaking

4 Credits/Maximum of 8

Development of technical and expressive skills through selected problems in one or more of the print processes. ART 340 Printmaking (4 per semester/maximum of 8) This course is for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experimented with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work. Readings, lectures, movies, and demonstrations will introduce students to the materials and techniques used in the various printmaking processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Enforced Prerequisite at Enrollment: ART 240

Bachelor of Arts: Arts

ART 341: Intermediate Printmaking: Intaglio/Relief

4 Credits

Instruction and practice in the fundamentals of intaglio and relief printmaking processes in their relation to the fine arts. ART 341 Intermediate Printmaking: Intaglio/Relief (4) This course is designed

for the student who is interested in expanding her/his image making vocabulary through intaglio and relief printmaking processes. It will expose students to the history and practice of these processes, and will prepare students to competently produce original works. Readings, lectures, and demonstrations will introduce students to the materials and techniques used in the various intaglio and relief processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of complete artworks.

Enforced Prerequisite at Enrollment: ART 240
Bachelor of Arts: Arts

ART 342: Intermediate Printmaking: Lithography/Serigraphy

4 Credits

Instruction and practice in the fundamentals of the lithographic and serigraphic processes and their relationship to the meaning of the print. ART 342 Intermediate Printmaking: Lithography/Serigraphy (4) This course is designed for the student who is interested in expanding her/his image making vocabulary through lithographic and serigraphic printmaking processes. It will expose students to the history and practice of these processes, and will prepare students to competently produce original works. Readings, lectures, and demonstrations will introduce students to the materials and techniques used in the various lithographic and serigraphic processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Enforced Prerequisite at Enrollment: ART 240 or permission of program
Bachelor of Arts: Arts

ART 343: New Media Printmaking

4 Credits/Maximum of 8

A studio course concentrating on the integration of new media and traditional printmaking processes. ART 343 New Media Printmaking (4 per semester/maximum of 8) ART 343 is a studio art class that focuses on creating and critically evaluating printed media. Problem solving with new and traditional print technologies will allow the student to use both the computer and the printing press as a means to a creative end. Students will acquire the skills to critically participate in our technology driven culture, while at the same time they will develop an appreciation for the aesthetics of the handmade. This course will explore the nature and potential of printed media through lectures, readings, demonstrations, studio practice, and critiques. Various conceptually driven assignments will cover a range of graphic computer programs (Adobe Photoshop and Adobe Illustrator) and specific print outputs (digital, photo litho, photo etching and serigraphy) These assignments will engage students in research methods to advance their skills in printed media and help them to develop an understanding of the critical evaluation and assessment of Art.

Enforced Prerequisite at Enrollment: ART 240 or permission of program

Bachelor of Arts: Arts

ART 350: Intermediate Painting

4 Credits/Maximum of 8

A variable offering in painting; course conditions defined on a rotating basis according to needs of individuals and groups. ART 350 Intermediate Painting (4 per semester/maximum of 8) This course is will further develop painting techniques, using the genres of landscape, still life, and painting from the model, collage, abstraction, and some digital applications. Examples from past and contemporary painting practice will be presented and discussed. Particular emphasis will be placed upon the development of a critical awareness concerning processes and content. Readings and discussions will focus on contemporary cultural and political issues. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. This labor-intensive studio relies upon cumulative learning experience through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their creative use and application is essential to the success of completed artworks.

Enforced Prerequisite at Enrollment: ART 250 or Permission of Program
Bachelor of Arts: Arts

ART 365: Themes and Issues I

3 Credits

An advanced studio course that emphasizes individual approach to theme oriented problem solving through traditional and non-traditional multi-media explorations. ART 365 Themes and Issues I (3) ART 365 contains a common course theme wherein students will be asked to build a series of three completed works in diverse materials and techniques. Students will work to build clear concepts that are communicated through objects and images. Beginning with a thorough investigation of how artists of all fields (music, architecture, design, writing, theatre etc.) have interpreted the theme students will be guided through research, brainstorming, and concept development activities. During this they will be asked to keep a journal which documents their process through written descriptions and comments but also image based resources, sketches, diagrams, and in progress photographs. Students will be urged to complete pieces that are conceptually linked so as to begin working in series. At the completion of each piece, students and faculty will conduct group critiques.

Enforced Prerequisite at Enrollment: ART 165 and ART 166 and ART 265 and ART 266

ART 366: Themes and Issues II

3 Credits

An advanced studio course that emphasizes individual approach to theme oriented problem solving through traditional and non-traditional multi-media explorations. ART 366 Themes and Issues II (3) ART 366 contains a common course theme wherein students will be asked to build a series of three completed works in diverse materials and techniques. Students will work to build clear concepts that are communicated through objects and images. Beginning with a thorough investigation of how artists of all fields (music, architecture, design, writing, theatre etc.) have interpreted the theme students will be guided through research, brainstorming, and concept development activities. During this they will be asked to keep a journal which documents their process through written descriptions and comments but also image based resources,

sketches, diagrams, and in progress photographs. Students will be urged to complete pieces that are conceptually linked so as to begin working in series. At the completion of each piece students and faculty will conduct group critiques and each student will mount a small-scale individual exhibition at one of the many available areas for exhibition on campus.

Enforced Prerequisite at Enrollment: ART 165 and ART 166 and ART 265 and ART 266 and ART 365

ART 380: Intermediate Throwing

4 Credits/Maximum of 12

Intermediate ceramics course with focus on using wheel and throwing skills leading to personal expression in form, glazing, and firing. ART 380 Intermediate Throwing (4 per semester/maximum of 12) The purpose of this course is to explore the use of the wheel. Various types of forms will be addressed such as bowls, covered jars, and vases. Technical skills will be learned with the goal to use them to create a personal means of expression via the wheel. Both traditional and nontraditional vessels will be created. Forming, trimming and glazing techniques will be covered. There will be both group and individual critiques along with slide presentations and demonstrations. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Enforced Prerequisite at Enrollment: ART 280 or permission of program
Bachelor of Arts: Arts

ART 381: Intermediate Handbuilding

4 Credits/Maximum of 12

An intermediate ceramics course with a focus on handbuilding techniques, leading to personal expression in forming, glazing, and firing. ART 381 Intermediate Handbuilding (4 per semester/maximum of 12) The purpose of this course is to explore different means of expression with the techniques of handbuilding. Clay is unlike any other material in that it can be transformed into virtually anything. Some of the forming methods which be addressed are coil, slab, carving, modeling and slump/press molds. The course will have assignments that are technically challenging, but will call on creative and artistic abilities. Slide presentations and group and individual critiques will be part of the curriculum. This labor-intensive studio relies upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Enforced Prerequisite at Enrollment: ART 280 or permission of program or permission of the instructor
Bachelor of Arts: Arts

ART 390: Introduction to Photochemical Photography

4 Credits

Introduction to the fundamentals of black and white photochemical photography. ART 390 Introduction to Photochemical Photography (4)(BA) This course meets the Bachelor of Arts degree requirements. ART 390 will explore the art and science of 35mm black and white photography. It will introduce students to chemically based photography as a process and continue to advance their skill and background as photographers. In the course, students will learn about film cameras

and their operation, basic film types, film developing and processing, and basic photochemical printing practices. Students will also develop skills through experience in making, developing, printing, and presenting photographs created through photochemical processes. Each student will be required to turn in 20 contact sheets (36 exposures each) during the semester on required weekly assignments and develop a final project containing 25 mounted 8 x 10 black and white prints. 40% of the semester grade will be based on the final project, 40% on weekly assignments, and 20% on quizzes. A 35mm film camera with adjustable shutter speeds and aperture settings and a light meter (hand-held or built into the camera) is required. In addition, materials (film, photo paper, developing tanks, photo thermometer, etc.) will cost around \$300 to \$350. ART 390 will be offered fall and spring semesters.

Enforced Prerequisite at Enrollment: ART 110S and ART 111 and ART 290 and successful portfolio review
Bachelor of Arts: Arts

ART 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Bachelor of Arts: Arts

ART 399: Foreign Study--Art

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Bachelor of Arts: Arts

International Cultures (IL)

ART 404: Art and Life: Where They Intersect

4 Credits

This course addresses where art and life meet; how life influences what artists make, and how art influences our lives. "Art and Life: Where They Intersect" focuses on interdisciplinary areas that address notions of creativity, critical thinking, and studio practice as well as how these perspectives can influence what an artist creates. The essence of the course examines how life influences what an artist makes, and conversely how what we create influences how we live. Themes and ideas draw from interdisciplinary perspectives such as contextual approaches to creativity that are linked to themes in sociology, material theories of art as related to distributed views of cognition, expressive aesthetics that are connected to introspective perspectives of psychoanalytic theories, and other forms of creative agency found in the human sciences. The content of the course includes both studio practice and critical studies. This combination of experiential learning and critical theory is designed to give students a greater understanding and comprehension of the creative process from the point of view of individual interests and a variety of cultural contexts. The course includes students writing autobiographies in relation to their artwork. This reflective analysis is referenced to seminal essays that focus on different disciplinary perspectives on creativity. Creative studio projects will be undertaken to complement textual analysis and seminar discussion. By integrating studio practices with critical studies the creative process is more fully understood. The course curriculum relies on active student participation in class discussions and a willingness to share and take risks in the spirit of contributing to a collaborative learning experience.

Art is by nature multidisciplinary and increasingly teaching art means teaching about life. The course is designed for students with a desire to acquire a deeper understanding of their creative research in the context of contemporary culture.

Enforced Prerequisite at Enrollment: Fifth semester standing or higher

ART 409: Museum Studies

3 Credits

An introduction to the professional activities that occur in art museums. ART 409 / ARTH 409 Museum Studies (3)(BA) This course meets the Bachelor of Arts degree requirements. This course introduces students to the broad field of art museum work, specifically museum administration, education, curatorial work, registration, and exhibition design. Readings by authors in each field provide current theoretical and philosophical frameworks for all areas, which are then followed by discussions and practical experiences with professional museum practitioners, including the staff of a museum, for example, the Palmer Museum of Art, and invited guests. Museum Studies is open to students who have complete six credits in art, art education, or art history. This course is especially beneficial for majors in art, art education, and art history who are considering a career in an art museum or who want to become more aware about how an art museum functions. In addition to providing an in-depth introduction to art museum work, the course encourages students to build the critical thinking and response skills that are crucial to success in the real-world environment of a museum. The readings provide a solid foundation for later reference or further study in the student's chosen field. Offered every spring, this course will have a maximum enrollment of 20 students. Grades are based on class participation, four out-of-class projects, and a final project. Extra credit is offered for an off-campus visit to a museum, among other options.

Cross-listed with: ARTH 409

Bachelor of Arts: Arts

ART 411: Seminar in Contemporary Art

3 Credits/Maximum of 6

Trends in contemporary art investigated within the framework of studio visitations, museum tours, and through other related avenues of encounter. ART 411 Seminar in Contemporary Art (3) This seminar on contemporary art exposes students to artistic practices and to the advanced-level critical discourses accompanying them. It is relevant to all students interested in expanding their knowledge of contemporary art and essential to BFA students who are encouraged to take the course more than once. The only prerequisite for this course is ART 122. The seminar's intimate format allows for discussions and a convivial examination of the pluralistic expressions of contemporary art while articulating it with theory and criticism. From an international perspective, this seminar focuses on art since the 1960s. Besides more traditional artistic expressions such as painting, sculpture, photography, installation, performance and video, the course examines networked collaborations before and after the Internet, art and social activism, and a range of new media and new genre artistic practices. The conceptual issues these works raise include among others the dematerialization of the art object, issues of site-specificity and public art, and institutional critique. The course approaches these developments through artists' writings and essays in contemporary theory and criticism. Works of art are presented through videos, power points, films, performances, gallery visits, field trips, and discussions of related essays. Critical "reading" includes an extensive introduction to the work's historical contexts,

readings from primary source materials, and the exploration of critical methods of analysis. From a cross-disciplinary perspective - including historical, esthetic and philosophical approaches - this course examines principles, assumptions, and tensions inherent in artist's works as well as in our responses to them. Student evaluation is based on short written papers such as an exhibition review or an interview, participation in class discussions, and a creative project (ranging from a web site to an installation, artist's book, or a performance), which must reflect a general understanding of the issues addressed in the course. The course is offered at least once a year with the enrollment of 15 students.

Enforced Prerequisite at Enrollment: ART 122Y or Permission of the Instructor

Bachelor of Arts: Arts

United States Cultures (US)

ART 413: Performance Art

3 Credits

The development, production, and presentation of performance art works, and the study of performance art theory and history. ART 413 Performance Art (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will consist of lectures, readings, demonstrations, critiques, and studio practices in performance art. The course will begin with introductory exercises aimed toward the use and understanding of objects, images, materials, and actions of the body as performance elements. Performance assignments will range from autobiographical works to those which will address political issues effecting art and the body today such as sexuality, ethnicity, health, ecology, the art market, government intervention, and others. Reading and discussion assignments will cover the theory and history of performance art in the twentieth-century.

Bachelor of Arts: Arts

ART 421: Drawing

4 Credits/Maximum of 12

Drawing for advanced students, with total emphasis on sustained individual approaches.

Enforced Prerequisite at Enrollment: ART 320

Bachelor of Arts: Arts

ART 422: Advanced Figure Drawing

4 Credits/Maximum of 8

Concentrated work in recording and understanding the human figure.

Enforced Prerequisite at Enrollment: ART 220 or Permission of program

Bachelor of Arts: Arts

ART 430: Advanced Sculpture

4 Credits/Maximum of 12

Advanced work in sculpture, with an emphasis on professional practice and individual development.

Enforced Prerequisite at Enrollment: ART 230 or permission of program

Bachelor of Arts: Arts

ART 431: Installation Art

4 Credits

Study and production of original visual statements through installation work as an art form.

Bachelor of Arts: Arts

ART 432: Flexible Molds: Parting Seams and Sculptural Concepts

4 Credits/Maximum of 8

ART 432 FLEXIBLE MOLDS: PARTING SEAMS & SCULPTURAL CONCEPTS introduces the relevancy of producing material specific multiples in a contemporary sculptural practice. It will offer students a broad understanding of the conceptual ramifications of molding an object and referencing a "mass-produced" look versus casting in an organic "fused form" way. Technical information on how to make one, two and three (+) part flexible molds in urethane compounds to be cast in concept relevant materials is emphasized. While the technical mold making and casting applications learned will be consistent for all members of the class, the results of the skills learned are expected to fold into each individual's artistic strengths differently. These technical skills are folded into three projects. The intent of these is to refine the students' craftpersonship in relation to constructing a mold and see construction precision as a portal to an expansive approach to casting. These multiple types of casting processes are expected to fold into projects that incorporate multiple genres. The course prerequisites, ART 230 or ART 280 allow for beginning level students to take the course while its 400 level welcomes both undergraduate and graduate students. If a student may repeat the class, the content of the class customizes to match the students increased technical skill. With repeating students, a more advanced approach to realizing individually proposed project ideas is expected.

Enforced Prerequisite at Enrollment: ART 230 or ART 280 or permission of instructor

ART 433: Sustainable Studio

4 Credits/Maximum of 8

Sustainable Studio is designed to provide students the opportunity to form a community of makers interested in issues regarding sustainability as related to artistic practice. From rural Pennsylvania to megacities of China, people are leading the charge to take on the big challenges of sustainability. How do we reach across boundaries and disciplines, to farmers, architects, scientists, poets, writers and together aim towards a sustainable planet. We will reach out across disciplines at PSU, to Bioengineering, Geography, Agriculture, Philosophy, Women Studies (to name but a few) and seek out collaborative projects and intersectionality of ideas and production. This class will introduce you to concepts of sustainability and societal wellbeing through the language of creativity and the studio. We will address interconnected and evolving issues in food, water, biodiversity, energy, and climate, land use and examine how ethical and imaginative people can work together to deal with them. Both ancient and modern production methods using sustainable resources will be explored through hands-on workshops and investigative research. Traditional methods of making pigments and papers will be re-examined with contemporary considerations. We will also research non-toxic biodegradable art materials such as bioplastics, botanical dyes, bio-leathers and exploratory substructures and medias. This hands-on studio offering provides students the opportunity to create and exhibit artworks made from their hand-made materials: charcoal, pastels,

sketchbooks, paint, hand-made papers and surfaces from locally and globally sourced materials. Visiting artists and lecturers will facilitate awareness of cultural context and historical uses of art materials from around the world. Special studio sessions, labs and DIY workshops will provide students with an opportunity to make their own art materials expanding skill sets and knowledge of how art materials are made. Auxiliary activities such as working on location at the student farm and the Sustainability Experience Center, attending special community events, making documented presentations, and museum & library visits will serve to augment studio sessions, facilitating a greater awareness of the cultural context in which art contributes to the larger conversation of sustainability.

Enforced Prerequisite at Enrollment: (ART 110 and ART 111) or Permission of instructor

ART 438: The Body: Issues and Objects

4 Credits/Maximum of 8

Creating representations of the human body and related objects as a means of sculptural expression. ART 338 The Body: Issues and Objects (4 per semester/maximum of 8) This course is for students who have a firm commitment in the arts, who have adequate background in the use of techniques and materials, and who have experimented with a variety of approaches to subject matter. This course is designed to focus and develop personal approaches to subject matter and to encourage a sustained interest in work through the exploration of both historical and contemporary artmaking practice concerning the representation of the human body and objects related to identity. Students will learn both traditional and non-traditional ways of making sculptural objects that use the body as a primary means of artistic communication. Readings, lectures, movies, and demonstrations will introduce students to the materials and techniques used in the various sculpture processes. Projects will be assigned throughout the semester and group critiques will be scheduled at regular intervals. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Enforced Prerequisite at Enrollment: ART 230 or permission of program Bachelor of Arts: Arts

ART 440: Advanced Printmaking

4 Credits/Maximum of 12

Individual projects in one or more of the printmaking processes. Emphasis is on developing a portfolio of prints.

Enforced Prerequisite at Enrollment: ART 240 or permission of program Bachelor of Arts: Arts

ART 446: Artists Books

4 Credits

Study and production of original visual statements through the book as an art form. ART 446 ART 446 Artists Books (4) This course will consist of lectures, demonstrations, and studio practice in production of artists books. Lectures and demonstrations will include hand papermaking, signature binding, book design, new and alternative book forms, and container construction. Each student will produce six either unique or editioned books during the semester; each book will have a mock up, title, colophon page, and will be signed. This labor-intensive studio relies

upon cumulative learning experiences through increasingly demanding projects. Competency is expected in numerous new skills and techniques, and their application in creating visually compelling concepts is essential to the success of completed artworks.

Enforced Prerequisite at Enrollment: ART 110 and ART 111 and ARTH 111 and ARTH 112 and enrollment in the ARTBA_BA, ARBFA_BFA, AED_BS, or INART_BA degree program.
Bachelor of Arts: Arts

ART 450: Advanced Painting

4 Credits/Maximum of 12

Development of the artist through a series of commitments; each semester serves as a contractual agreement along professional lines.

Enforced Prerequisite at Enrollment: ART 350
Bachelor of Arts: Arts

ART 455: Advanced Painting Critique

4 Credits/Maximum of 8

The painter in relation to his peers and his profession.

Enforced Prerequisite at Enrollment: ART 350 or Permission of Program
Bachelor of Arts: Arts

ART 465: Individual Approaches I

3 Credits

An advance studio where students are expected to explore personal themes and individual concepts in their art work. ART 465 ART 465 Individual Approaches I (3) ART 465 is an advanced studio course concentrating on creating art within a series. Students will be asked to complete 4-6 pieces that stem from an individual idea. Medium is open and can be traditional or non-traditional. Students will be required to document and maintain a journal outlining the steps needed to complete each piece. Weekly formal and/or informal critiques will allow students constant feedback of their progress.

Enforced Prerequisite at Enrollment: ART 165 and ART 166 and ART 265 and ART 266 and ART 365 and ART 366

ART 466W: Individual Approaches II

3 Credits

An advance studio/lecture addressing the preparation for potential employment and/or entrance into graduate studies. ART 466W ART 466W Individual Approaches II (3)(BA) This course meets the Bachelor of Arts degree requirements. ART 466W is the Visual Art Studies capstone experience where students are given the opportunity to experience the professional aspects of a practicing artist. In addition to completing the last 2-4 pieces toward their exit portfolio students will address vital activities surrounding applying for employment and graduate school. Students will create "packets" including resumes, cover letters, post cards, slides, and portfolio CDs that can be used directly out of school for various calls and job listings. In addition topics that will be addressed in depth are photo-documentation, and inventory of work through database maintenance. All of these issues will culminate with small group exhibitions which will be curated, installed, and promoted by the students.

Enforced Prerequisite at Enrollment: ART 240 or permission of program
Bachelor of Arts: Arts
Writing Across the Curriculum

ART 468: The Intermediate Digital Medium

3 Credits

An advanced studio course using the computer as an artistic media. ART 468 ART 468 The Intermediate Digital Medium (3) This course will provide the much needed advanced technological/digital component wherein computing will be discussed as a media, rather than a tool. Students will be engaged in the creation of graphic/moving/three-dimensional imagery and sound that explores themes and concepts introduced in class. While most of the course will center around the use of industry standard computers there will be some forays into hardware associated with production, sound, and projection of images.

Enforced Prerequisite at Enrollment: ART 165 and ART 166 and ART 168

ART 469: Methods and Materials II

3 Credits/Maximum of 9

A studio course that focuses on specific media or techniques reflecting varied faculty expertise. ART 469 ART 469 Methods and Materials II (3) This course provides students the opportunity to experience particular areas of visual art in which

Enforced Prerequisite at Enrollment: ART 165 and ART 166 and ART 265 and ART 269

ART 476: History and Theory of Digital Art

3 Credits

History and theories of contemporary digital art emphasizing humanistic approaches to technology. ART 476 / ARTH 476 History and Theory of Digital Art (3)(BA) This course meets the Bachelor of Arts degree requirements. Approaches to Digital Art is a survey class that will offer the web designer, cyberspace architect, MUD traffic controller or enthusiastic surfer an opportunity to examine the humanistic aspects of contemporary digital art. Through readings and direct interaction with digital media and digital artists, the class will develop an appreciation of the ways in which the interface between human beings and technology has been historically constructed and is subject to critical investigation. The goal of the class is to prepare each student so that she or he may engage with digital media in a way that is every more historically and socially self aware. Students will address the ways in which digital technologies transform artistic practices such as museum display, the writing of art criticism, the definition of works of art, changing role of the artist and the changing space of the art studio. More important, however, by engaging with digital works of art students will learn to think critically about technology and its engagement with culture at large. They will be encouraged to think about the political, economic and social impact of digital technologies. This humanistic approach to technology would make this course particularly useful to students of art history, philosophy, comparative literature, art education, and the visual/plastic arts. A significant portion of the course will be devoted to the ways in which art on the internet and digital art in general challenge the integrity of categories such as race and national identity. For example, students will have an opportunity to engage with African American artists such as Keith Obadike, whose on-line performances include an attempt to put his "blackness" up for sale on ebay.com in August of 2001. Students may also look at the ways in which net.art (Art made to be viewed on

the internet) can critique commercial cooptation of global culture: etoy.com, for example, is an international and collaborative artist's group that satirizes global capital by camouflaging itself as a multinational corporation. This class will depend largely upon written responses and class discussion, rather than upon tests. Thus, students will learn how to approach difficult theoretical sources that have been assigned to them, and they will learn how to ask the kinds of questions that will help them understand such sources. This course will emphasize critical thinking rather than memorization, so students will develop analytical skills that will be useful in many other contexts. Because students will be given weekly writing assignments, they will be able to improve their skills in composition.

Enforced Prerequisite at Enrollment: 3 credits of ARTH

Cross-listed with: ARTH 476

Bachelor of Arts: Arts

ART 477: Curator's Workshop

3 Credits

In Curator's Workshop, students will gain valuable experience in curatorial practices, exhibition design, and arts administration. Focus topics include how to generate an effective exhibition concept; liaising with artists, institutions, and other curators; curatorial research in support of an exhibition concept; questions and concerns in spatial design; and the writing of didactic materials such as labels, wall texts, press releases, checklists, and others. Students will engage in a final project requiring them to generate a complete exhibition proposal, inclusive of a budget, written and visual support and documentation, and a clearly defined concept. Through field trips, readings, guest lectures, and research, students will gain a fuller understanding of the role of the curator in today's art world, relating their work back to their individual fields of study.

Enforced Prerequisite at Enrollment: Fifth semester standing or above

ART 480: Advanced Ceramic Arts

4 Credits/Maximum of 12

Individual exploration of ceramic materials and construction leading to graduate study or career development as a professional potter.

Enforced Prerequisite at Enrollment: ART 280 or permission of program

Bachelor of Arts: Arts

ART 490: View Camera Photography

4 Credits

Experience with diverse camera formats and applications; particular emphasis on view camera. ART 490 ART 490 View Camera Photography (4)(BA) This course meets the Bachelor of Arts degree requirements. ART 490 will provide students with experience in diverse camera formats and application with particular emphasis on view camera and its creative applications. The course will give students background in the history of large format photography and understanding of its application in specialized fields such as architectural photography, portraiture, and landscape photography. Students will gain experience in view camera operation and the creation of large format photographs in a variety of different applications. Grading will be based on a minimum of five projects that will account for 80% of the semester grade. The remaining 20% of the semester grade will be based on participation in class critiques. The final course grade will be dropped one full grade for each

absence or late submission beginning with the second late submission or absence. ART 490 will be offered in the fall semester each year.

Enforced Prerequisite at Enrollment: ART 390

Bachelor of Arts: Arts

ART 494: Research Projects Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

ART 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Permission of Program

Bachelor of Arts: Arts

ART 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bachelor of Arts: Arts

AED 101S: Introduction to Art Education

3 Credits

This course introduces students to issues, concepts, and ideas in Art Education. A ED 101S Introduction to Art Education (3) The objective of the course is to introduce students to basic ideas, areas of inquiry, and experiences in art education. This will be a required course that serves as the first of a sequence of courses in the Art Education major and will provide a beginning point for the rest of the courses in the major. The Art Education Program has two emphases. The first leads to public school teacher certification and the second to an understanding of arts education in settings such as museums and community arts organizations. This introductory course will be broadly based and the content and will be applicable to students in both emphases. This course will be conducted in a seminar format. Evaluation methods for the course will include, for example, critical response papers to readings, observation reports of early field experiences, tests, and portfolio assessment.

First-Year Seminar

International Cultures (IL)

AED 201W: History and Philosophy of Art Education in Schools and Cultural Institutions

3 Credits

Introduction to historical, philosophical, and sociological foundations art education in schools and cultural institutions, museums, and community organizations. A ED 201W A ED 201W History and Philosophy of Art Education in Schools and Cultural Institutions (3) Art education is not an isolated phenomenon; art teaching and learning has always occurred in the context of broader cultural changes and a range of social factors, including technological developments and population diversity. This course examines the historical, philosophical, and sociological foundations of art education in the United States. Art education can be found in a variety of formal and informal settings, including schools, community arts organizations and museums. Students will examine questions such as, what was the purpose of teaching art in the past? Was art study a means to improving social status, to attaining technical literacy, or to vocational training? Did education in art promote a democratic way of life? Or did it help reproduce existing divisions of race, gender, class, and ethnicity in American society? This course examines past and present developments in art education, paying special attention to the relation of art teaching and learning in contexts of art worlds, schooling, cultural institutions, and changing demographics. While the course will focus on art education in the United States, art education in a global context will be addressed as appropriate.

Writing Across the Curriculum

AED 211W: Interpreting Art Experience: Social-cultural Perspectives

3 Credits

A ED 211W Interpreting Art Experience: Social-Cultural Perspectives (3) (W)(GA)(BA) This course meets the Bachelor of Arts degree requirements and is a "writing across the curriculum" course. Through reflective and exploratory writing about art experiences, participants in the course explore how art can teach and be learned within specific cultures and subcultures. Students investigate how interpretations and valuations of images and objects respond to and influence social-cultural perspectives. Students develop critical consciousness of art experiences as transformative learning and as collective memory. Explorations are guided through an introduction to theories of ways of knowing through art experiences such as embodied, sensory, relational, entangled, intersectional, collaborative, community-based, and through affect and lived experiences, among other theories. Students draw upon their own personal and cultural histories and consult accounts written by others to explore the role of visual art in contemporary life. Students research art experiences as case studies to individually and collectively discern social-cultural perspectives.

AED 212: Interpreting Art Experience: Educational Implications

1 Credits

In-depth study of the educational implications of the information on art making and response introduced in A ED 211. A ED 212 Interpreting Art

Experience: Educational Implications (1) A special discussion section attached to A ED 211 and required of students majoring in art education. A ED 212 focuses on the educational implications of the perspectives on art experience presented in A ED 211. This segment of the course will attend specifically to issues related to learners and learning in the visual arts, including characteristics of learners at various stages of development and the ways in which curriculum and instruction can and should be shaped by these considerations.

Enforced Corequisite at Enrollment: AED 211

AED 225: Diversity, Pedagogy, and Visual Culture

3 Credits

A ED 225 Diversity, Pedagogy, and Visual Culture (3) (GA;US)(BA) meets the Bachelor of Arts degree requirements. This course is an examination of diversity, pedagogy, and visual culture using interdisciplinary approaches and research drawn from various disciplines including art education, history, sociology, cultural studies, and gender studies to explore issues of diversity in various contexts: schools, social media, and cultural institutions such as museums and arts organizations. This course will be structured to accommodate the needs of diverse learners through collaborations, peer presentations, video presentations, discussions, critiques, and lectures. Audio visuals, videos, visual culture artifacts, film clips, slides, and other visual projections are integral to the course, and will be used to vividly illustrate the issues and topics addressed in the presentations and readings. These provide multiple perspectives from various sources. A primary goal of this course is to promote a critical understanding of oneself as a social being (i.e., identity formation) through reflection and the examination of one's immediate experiences, and by asking critical questions about existing social arrangements and relationships between diverse groups. By participating in the course, students will gain a greater understanding of self as having been socialized and acculturated in very particular ways, and how that affects the ways in which they think about themselves, their future careers, and relationships with other people and institutions within society. By the end of this course, students will have a greater understanding of diversity as broadly defined in relationship to visual culture. Students will also be able to critically explore issues of race, gender, class, ability, religion, and sexual identity, among others, and the pedagogical challenges and opportunities posed by such diversity.

GenEd Learning Objective: Soc Resp and Ethic Reason

AED 233N: Learning in Maker Cultures

1-3 Credits

This course is an examination of the strategies, techniques, and theories of learning associated with participatory communities of art, design, and craft practice often found in makerspaces, as well as an introduction to case study methodology for studying these communities both online and in person. This broad range of materials, technologies, and processes emphasizes creativity, sharing knowledge, and do-it-yourself practices that are a part of maker culture. In this context, making may include advanced digital fabrication and traditional forms of craft. Coursework will involve students' hands-on creative production choosing from a

variety of maker practices. Additionally, readings and discussion will focus on social and cultural factors in community practices, iterative and creative processes of design, and collaborative learning in maker settings. To increase our understanding of makers and makerspaces, students will utilize case study as a social science methodology. Students will learn by making artifacts, doing case study research, and synthesizing theories and practices of learning in maker cultures.

AED 303: The Visual Arts in the Elementary School

3 Credits

Basic concepts of current art education theory and practice for the elementary teacher.

AED 322: Media Arts Pedagogies, Transcultural Dialogues, & Bioethics

3 Credits

The course explores how emerging technologies impact beliefs, practices, research, and communication regarding the nature of knowledge, learning, teaching, remix culture, visuality, materiality, self, and art. Engage with emerging technologies to learn about media arts and pedagogies that address bioethical issues of injustice, equity, diversity, and inclusion in which the borders of self are questioned. Course content considers the premise that humans are not discreet entities but connected through technologies in ways that are socio-cultural, geopolitical, and techno-biological. Through course experiential activities, gamification pedagogies, and a virtual fieldwork component in building and piloting ethical and accessible educational practices in online teaching, students explore identity formation encoded in social-technological practices. The Transcultural Dialogue project builds international relationships creating collaborative art and generating dialogue. The transcultural dialogue theme weaves, throughout the course, issues of contemporary visual culture, cultural practices in relation to particular places, and pedagogical approaches designed to erode assumptions, ignorance, and misunderstandings. Through media

arts pedagogies, the course raises bioethical concerns such as systemic injustice and approaches creativity as a social process in developing curriculum and teaching with emergent technologies.

Enforced Prerequisite at Enrollment: 5th semester-standing

Cross-listed with: BIOET 322

International Cultures (IL)

AED 323: Visual Culture and Art Education

3 Credits

The study and creation of contemporary art forms as visual culture critiques provide curricular and pedagogical approaches to art education. A ED 323 Visual Culture and Art Education (3) This course is for Art Education majors in the Schools option. Students will: * Read, critically examine, and discuss postmodern "texts" in relation to the ways in which the works and the critical writing that surrounds them participate in, among other issues, the construction of race and gender, and the creation of power and control. * Reflect critically on contemporary writings that address the nature of art, visual culture, artmaking, exhibition, and interpretation as pedagogical processes for making meaning through art. * Create installations, videos, and performances or any combination of the three forms, individually and/or in groups. The purpose of this course is: 1. To assist students to insightfully interpret and create artworks through both writing and artistic media. 2. To provide students with the bases for understanding, interpreting, and critically analyzing contemporary visual culture, which can provide the content of curriculum outlines and unit and lesson plans that students develop in the course for use during internships, student teaching, and as art educators. 3. To provide students with opportunities to develop connections between artworks and their own lives, the lives of their prospective students, and the societies in which they will live. 4. To encourage students to consider race, class, sexual identity, age, and gender issues in art, art education, cultural production, exhibition venues, and career opportunities. TEXTS include popular arts, film, television, video/computer games, music, theatre, fashion, museums, contemporary art, and newsmedia.

Enforced Prerequisite at Enrollment: AED_BS major

AED 355Q: Show Me Where it Hurts: Healthcare and Creative Inquiry

3 Credits

Show Me Where It Hurts: Healthcare and Creative Inquiry is an interdisciplinary exploration of the dynamics of healthcare using both storytelling and artmaking as research methods. Stories of healthcare professionals, caregivers, and self-care will be explored to understand the actions and emotions that constitute empathy as the ability to relate to another person's experiences. By the end of the course, students' deeper understanding for how sharing experiences through the arts can increase empathy in human relationships will augment perspectives on care within healthcare systems either as professionals or patients. The course investigates methods for developing empathy that employ narrative and arts-based inquiry while also exploring a range of resources unique to Penn State to increase understanding such as the Graphic Medicine Series and the Art and Design Research Incubator (ADRI). Students will develop multiple modes of communication appropriate to the social sciences and the arts to develop effective communication in writing, presenting, and artmaking in thematic projects. The course pursues three themes throughout the semester: Theme 1: Seeing, Knowing, and Understanding " Engaging with forms of narrative, art and performance to understand how artists and social scientists use observation, data, and

interpretation to inform their practices Theme 2: Developing Capacity for Empathy " Utilizing art studio explorations with materials and techniques combined with reflective writing practices, students engage in creative thinking skills to heighten empathic ways of knowing through the medium of art and narrative. Theme 3: Analyzing Perspectives in Art and Health " Analyze case studies focused on art and health to explore healthcare from three perspectives: healthcare professionals, caregivers, and self-care.

International Cultures (IL)

AED 401: Curricula, Pedagogy, and Assessment in Art Education

3 Credits

Preparation of curricula, pedagogical, and assessment strategies for elementary/secondary school and museum art education programs.

Enforced Prerequisite at Enrollment: AED_BS Major or Permission of Instructor

AED 489: Advanced Practicum

4 Credits

This course provides a broad exploration of student teaching experience and professional practices at the preK, primary and secondary levels. In particular, it investigates areas of curriculum development and classroom management under supervision from a qualified instructor. It considers teacher preparation and builds an awareness of best practices for art educators, especially in relation to experiential learning. As this course serves as the final capstone course for the art education major, students will learn of the importance of professional standards and practices in art education and identify and apply contemporary approaches in art education to determine their own preferred methods of teaching. Teacher preparation and experiential learning are enhanced through reflection, refinement, and synthesis of coursework. Building on these insights, students conduct eight weeks of supervised student teaching and apply this practicum experience to create a comprehensive professional art teacher portfolio. Students will complete and publicly present, their teaching and learning portfolios that includes evidence of professional preparation, biographical information, samples of artwork and writings on

art, and reflective statements explaining the selection and significance of specific items.

Enforced Prerequisite at Enrollment: AED 401. Enforced Concurrent at Enrollment: AED 490

AED 490: Capstone Course in Art Education

3 Credits/Maximum of 3

Synthesis of preservice art education coursework; introduction to professional practices and standards; completion of teaching and learning portfolio. AED 490 Capstone Course in Art Education (2) The capstone course has four major objectives for student learning. Each student will synthesize the experiences and understandings developed through prior courses in the undergraduate art education program. - Students will become aware of emerging trends in art education and reflect on implications of those trends for their future teaching and learning. Each student will complete, and publicly present, a teaching and learning portfolio that includes evidence of professional preparation, biographical information, samples of artwork and writings on art/visual culture, and reflective statements explaining the selection and significance of specific items. Students will gain understanding of the importance of professional standards and practices in art education. Student learning will be evaluated through assessment of the preprofessional teaching portfolio, and through a combination of written assignments, individual and small group oral presentations, and active participation in class discussions. Students will collaborate on a final installation, performance or exhibition demonstrating their readiness for the final internship. Since this is the final course in the major prior to student teaching or the internship, attendance is very important and will count toward part of the final grade. Students need access to a computer lab. The capstone course in the art education major should be taken in the final semester before student teaching or a final internship. Since one goal of the course is helping students synthesize what they have learned in their prior courses, successful completion of all of the required courses in the major is prerequisite to enrollment in the capstone course. Students will have been introduced to the teaching and learning portfolio in their introductory art education course and should have developed pieces for their pre-professional teaching portfolios in most of their earlier art education courses. Much of the work of the capstone course will, therefore, focus on reflection, refinement, and synthesis.

Enforced Prerequisite at Enrollment: Admission to Teacher Preparation Program and successful completion of all required courses in the major except Student Teaching or final internship.

AED 494: Schools and Museums

3 Credits

Museum education: issues, theories of aesthetic education and practices in schools, museums, and community art centers.

The work complete in this course (a digital and/or paper-based portfolio, and documented performance-based assessment of teaching as assessed by the university supervisor and mentor teachers/clinical instructors) will demonstrate fulfillment of the teaching/domain standards. The outcome of this work is to produce multiple experiences that support professional and personal development while preparing students for upcoming positions teaching art in multiple public and private contexts at both elementary and secondary levels. At the culmination of the student teaching semester, students will have both practical and theoretical understandings in addition to materials for application within the classroom.

Enforced Prerequisite at Enrollment: AED 489 Enforced Concurrent at Enrollment: AED 495C

AED 495E: Internship in Museums and Cultural Institutions

15 Credits

S ED 495E A ED 495E Internship in Museums and Cultural Institutions (15) The internship at a museum or other cultural institution completes the requirements for the Museums and Cultural Institutions option for the BS in Art Education. It is generally scheduled full-time for a period of 12 consecutive weeks during a double summer session, although it may also be taken during the fall or spring semester. The internship enables interns to meet their own educational objectives through participation in a supervised experience that moves them out of the classroom into the workplace. Prospective interns are encouraged to select internship sites that offer educational experiences relevant to their professional goals and desired careers. The internship incorporates guidelines consistent with the Standards and Guidelines for Museum Internships prepared by the New England Museum Association and published by the American Association of Museums (1993, 2000). A formal written internship agreement signed by the intern supervisor at the sponsoring museum or cultural institution, and by the prospective intern and university supervisor outlines the objectives of the internship, the intern's duties and responsibilities, the responsibilities of the museum and university supervisors, and the means by which the intern's work will be evaluated. Interns are integrated into the ongoing work and education programs of the museum and treated as staff members. They assume professional responsibilities and are expected to complete a project or some discrete portion of a major project that is being undertaken by the education department of the museum. Interns become acquainted with functions, programs and departments of the museum in addition to those to which they have been assigned in order to understand the relationship of their educational work to that of the museum, to the community, and to the museum field in general. Interns may participate in any workshops, lectures, professional courses, and staff training seminars that may occur at the museum during period of internship. They are also encouraged to seek professional employment after completion of the internship, and reasonable accommodation is made to allow them time to look for positions, prepare application materials, and attend interviews. Interns submit a weekly journal of activities and reflections to the university supervisor, as well as a summary report at the end. The museum supervisor submits an evaluation documenting the intern's actual working/learning experiences and critically assessing these experiences. The final evaluation is based on this assessment, on the intern's weekly journal and final report, and on the university supervisors' onsite observations and interviews.

Enforced Prerequisite at Enrollment: AED 489

AED 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

AED 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

AED 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Art History (ARTH)

ARTH 1S: First-Year Seminar in Art History

3 Credits

An introduction to the field of art history, through an examination of a selected issue in a seminar setting. ARTH 1S First-Year Seminar (3) (GA) (BA) This course meets the Bachelor of Arts degree requirements. This First-Year Seminar is open to all majors and to those who have yet to decide upon a major. It is also a 3-credit General Education in the Arts course (GA). The course will introduce entering university students to the field of art history through a case study on a selected topic. Each semester the topic will be different, potentially covering such diverse subjects as the purpose and function of Ancient Egyptian architecture to the role of sculpture in Renaissance Florence to the development of abstract painting in the early 20th century. Some semesters, the seminar may also focus upon a single exhibition at the Palmer Museum of Art. Such a focus upon a single topic will allow the class to look at a particular issue in the field from many different perspectives. The course will not be a broad survey of the history of art, but it will introduce students to the breadth of methods and approaches of art history. The seminar approach of the course will emphasize how to tackle an issue in art history, how to critically read selected texts, how to discuss in a small group the various dimensions of a problem, how to do art historical research in the library and on the internet, and how to present your own research and perspectives through public speaking and writing.

ARTH 100: Introduction to Art

3 Credits

An approach to the understanding of art through a critical analysis of selected works of architecture, painting, and sculpture. ARTH 100 Introduction to Art (3) (GA;IL)(BA). This course meets the Bachelor of

Arts degree requirements. Art History 100 provides an introduction to the history of art from prehistory to the present, through selected topics, rather than a comprehensive survey. Areas covered usually include prehistoric art, art of the Near East and Egypt, ancient Greek and Roman art, medieval art culminating with the Gothic, Renaissance art both in Italy and northern Europe, Baroque and Rococo art, and modern developments often highlighting Romanticism, Impressionism, Cubism, Dada, Surrealism, Abstract Expressionism, Pop, Feminist, and contemporary art. The course also introduces selected artistic traditions in Africa, Asia and the Americas. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and to help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts, both historical and contemporary. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender and the incorporation of non-European art forms into the Western tradition. Requirements typically include examinations combining short answer and essay questions, and one paper based library research or intensive examination of an actual work of art. As a general education course in the arts, this course provides an introduction to selected themes in the broad history of art for students in any major. It has no prerequisite and presumes no prior exposure to fine art. This course is not a requirement of Art History major or minors, and is therefore directed essentially to students outside the field. Students who have passed ARTH 110 may not schedule this course.

ARTH 101N: Introduction to Global Art History

3 Credits

This course introduces students to the history of art as a global phenomenon, interconnected by millennia of cross-cultural encounters. Rather than seeking to provide an exhaustive history of world art and architecture, this course focuses on key concepts that operate across cultures, geographies and time periods. Students will learn the basic techniques of the art historian while being exposed to a variety of in-depth case studies of concepts like (but not limited to): Significant Materials and their Use, Mapping the Cosmos, Interacting with the Divine, Honoring the Dead, Representing the Natural World, Picturing Humanity, Power and Propaganda, Cross-Cultural Encounters, and Global Art in the Modern World. Depending on the instructor, other themes/concepts could be substituted or added. Each theme/concept will be treated as a module with introductory lessons and readings followed by case studies of a single work or group of related works.

ARTH 105N: Pictures and Power

3 Credits

ARTH 105N Pictures and Power (3) (GA) (GS) (BA) In an era in which information is increasingly visual, and in an age in which our environment is ever more packed with imagery, students need powerful tools with which to interpret, compare, use and challenge images. This class is about the ways in which popular imagery pleases, informs, persuades, and otherwise exerts power. The class will analytically explore popular imagery and the influence it has exerted historically and today. The class will also acquaint students with works of art that have informed, attempted to draw upon or even contested the power of popular imagery. Particular emphasis will be placed on the interrelatedness of imagery; just as religious paintings of the Renaissance often exerted their force their meaning by virtue of their companionship with architectural sites, music and ritual practices, contemporary popular imagery (from graffiti to broadsides to memes) depends upon the larger constellation of events and artifacts in which they are embedded. The class will equip students with interpretive techniques by which they can examine and think critically about the power worked by pictures, those that exerted influence in the past as well as those students are likely to encounter day-to-day, including selfies, fashion spreads, and corporate logos and product labels.

ARTH 107N: Rocks, Minerals, and the History of Art

3 Credits

This online course investigates select rocks and minerals used in the production of art between the Prehistoric Era and the Early Modern period. Topics covered include chemical and physical properties, occurrence in nature, the processes by which natural materials are acquired and worked, their symbolic and monetary value, and specific works of art in which they are found. Each material (ochre, garnet, lapis lazuli, rock crystal [quartz], igneous rocks [basalt, diorite and porphyry], alabaster and marble) is addressed in a 2-week unit. The seven units are split equally between scientific analysis of the materials and art historical case studies. A final project integrates Geosciences and Art History topics to investigate the use of a chosen natural material in a specific work of art. Each material addressed in the course plays a crucial role in the history of art, and each one was particularly prized for its physical and material properties (color, hardness, etc.). Ochre was the first known pigment, and was in use by early humans for bodily adornment and for drawing and painting in caves and shelters as early as 100,000 years ago for bodily adornment and 40,000 years ago in cave art. Its availability worldwide and in multiple strong colors made it a desirable choice. Lapis lazuli, by contrast, was difficult to obtain, and difficult to refine as a pigment. It was first used to make small sculptures

and cylinder seals in the Ancient world, and was prized for its brilliant blue color. The difficulty in grinding and purifying blue pigment from lapis lazuli made it one of the most expensive pigments in the Medieval and Renaissance world—it was worth its weight in silver! Pure blue lapis pigment, when found in a painting, is always a sign of great expense and importance. Rock crystal was valued for its clarity and purity, and its extreme brittleness meant that works made from it were valued for their intricacy and fragility. Nero reportedly destroyed two elaborate crystal goblets in a rage, and in so doing, deprived future generations of masterpieces of the sculptor's art. In the Ancient Near East and Ancient Egypt, rock crystal was frequently used for amulets and other magical objects, while in the Medieval world, its purity was seen as a metaphor for the Virgin Mary. Garnet had a similar symbolic value in the Middle Ages: its red color was related to the blood of Christ, and it was thus used frequently in liturgical vessels. In the Ancient world, the rich red tone of garnets was prized in jewelry and in small-scale relief carvings. Igneous stones like porphyry, basalt and diorite were particularly prized for their extreme hardness and permanence, and thus the Law Code of Hammurabi was inscribed on basalt to ensure its permanence. Other Ancient Near Eastern rulers had images of themselves made from basalt and diorite in order to ensure that those works would survive for centuries. Imperial porphyry, an igneous stone with a rich red-purple color, came from a single remote quarry in the Egyptian mountains. Its use was reserved just for the Imperial family in Rome, and it was used for carved sarcophagi, for columns, for colored veneers on floors and walls, etc., as a sign of Imperial authority. Marble is of course one of the most familiar of all art materials, used frequently for sculpture from the very beginnings of art production. The Greeks and Romans in particular took great pains to obtain different types of marbles with specific colors, veining patterns, etc., for use in both sculpture and architecture. Finally, alabaster is one of the easiest of all stones to work: it is so soft that one can make a mark simply with a fingernail! Its intricate banding and translucency made it a favorite material for thin-walled bowls and vases in the Ancient Near East, Ancient Egypt, and in the Classical world. Later, in Early Christian and Medieval Italy, it was used for windows instead of glass—sun shining through alabaster casts a golden glow into a church interior. By the Late Gothic period, alabaster was being exploited as an easily sculpted material throughout Europe, with major quarries and workshops in England (Nottingham), France, and Northern Spain.

ARTH 111: Ancient to Medieval Art

3 Credits

This course is an introduction to Western art before the Renaissance, to CE 1423. The topics covered in this course include prehistoric art in Europe; art of the Near East and Egypt; Aegean art; Greek and Roman art; Early Christian, Jewish, Islamic and Byzantine art; and Medieval art including Romanesque and Gothic developments. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and to help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore

involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender and the incorporation of non-European art forms into the Western tradition. Typical requirements include exams and a paper. As a general education course in the arts, this course provides an introduction to Ancient through Medieval art to a student of any major. This course has no prerequisite and presumes no prior exposure to art history. As a course in the Art History major, it teaches students both the common vocabulary of the field and the outlines of the field that form the foundation for future study. ARTH 111 serves as a companion course to ARTH 112, which deals with art from the Renaissance to Modern Times. ARTH 111 also complements ARTH 201, "Ancient to Medieval Architecture."

ARTH 112: Renaissance to Modern Art

3 Credits

This course is a broad survey of the most important artists and developments in Western art from the early 14th century to the present, including architecture, sculpture and painting. In addition to being a survey of major monuments in art, the course is also intended as an introduction to the field of art history: to its studies of artistic style, iconography (the study of subject matter and its meaning), patronage and contextual history. Art history not only studies the formal elements of art, like the use of color and line, but also analyzes the historical circumstances (social, political, economic) that surround the production of art, and it questions the meaning of works of art for viewers of the time and for later generations. Around 1310, an artist known as Giotto painted several major series of frescoes (mural painting done on wet plaster) in which we see the beginnings of a modern Western notion of composition, dramatic narrative, and the illusion of perspective. We will look at the refinements of these elements of art through the late nineteenth and early twentieth centuries, when artists we now call avant-garde-notably Cézanne but also predecessors such as Courbet and Manet, and successors such as Picasso and Matisse-presented serious challenges to these fundamental elements of painting. We will look at

the extraordinary art produced between the time of Giotto and Cézanne, as well as the consequences of the modernist challenge to art, including 20th-century abstract painting and conceptual art.

ARTH 115N: Arts of Love

3 Credits

This course will familiarize students with expressions of love in Western arts and literature. Students will analyze the artistic, philosophical and literary representations of courtship, friendship, homoeroticism, sexuality, marriage, adultery, and familial bonds and explore how the preceding phenomena are inflected by gender roles, race and miscegenation, and class and religious differences. We will also trace the way particular narratives about love have been adapted by different artistic media. Love is a universal human experience and its study transcends disciplinary boundaries. It is a linchpin of human existence, uniting and enriching nearly any subject worthy of serious study.

ARTH 120: Asian Art and Architecture

3 Credits

This course surveys Asian art and architecture from the earliest civilizations to the present day, focusing more on the arts and monuments from China, Japan and India but also introducing those from Korea, Southeast and Central Asia. We will study how artistic traditions develop, transmit and become localized in those distinctive yet interconnected societies, and how those traditions interact with the political, religious, social and cultural contexts in which they grow. Issues investigated include (but are not limited to) the spread and metamorphosis of Buddhist, Hindu and Islamic art and architecture, the

production and consumption of art as related to political power (including colonialism, decolonization and nationalism), social hierarchies and market mechanisms, and various forms of modernity in Asian art and culture. In addition to regular class meetings, requirements include slide identification exams, essay exams and short papers. We will also have field trips to museums with collections of Asian art that are suitable for this course, and you will curate an online exhibition of artworks of your choice. As a general education course, this class provides an introduction to Asian art for students of any major. Art History majors will broaden their vocabulary, methodology and knowledge of the discipline.

ARTH 125: Islamic Architecture and Art

3 Credits

Survey of the art and architecture of Islamic lands from the late seventh century until the eighteenth century. ARTH 125 Islamic Architecture and Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 125 provides an introduction to the arts of Islam from its birth and early formation in the seventh-eighth centuries to the eighteenth century through the examination of architecture, painting and calligraphy, and the decorative arts (metalworking, ceramics, glassware, ivory carving). The focus is on the traditional Islamic areas including Spain, North Africa, the Middle East, and South Asia, although the spread of Islam to other regions (e.g., Southeast Asia and especially Indonesia, the world's most populous Islamic country) may also be included. Each of the major traditions of Islamic art will be examined in a generally chronological sequence; these include the Abbasids, the Umayyads of Spain, the Fatimids of Egypt, the Seljuqs, the Ilkhanids (Mongols), the Timurids, the Mamluks of Egypt, the Safavids of Persia, the Ottoman Turks, and the Mughals of India. The course will conclude with a discussion of "Orientalism" and more recent developments in Islamic art and architecture. The course is designed to meet two principal goals. The first is to develop skills of visual analysis and a critical vocabulary for discussing the media, technologies, styles, and composition of Islamic art. The second is to foster an understanding of art—and visual culture in general—according to social, economic, political, and religious contexts. Key topics include: patronage, issues of reception and aesthetics, the important link between art and text in the Islamic tradition, the organization and use of sacred space, gender issues, relationships between the art of various regions and cultures, and the western interpretation of Islam as part of the discourse on "Orientalism." Requirements include essay exams and at least one paper. As a general education course, this class provides an introduction to Islamic art and architecture for students of any major. It has no prerequisites, and presumes no prior exposure to art history. Students majoring in Art History will learn vocabulary, methodology, and theory that is not only basic to the field, but which will also broaden their knowledge of the discipline as a whole.

ARTH 130: Art of Africa, Oceania, and the Americas

3 Credits

A selective overview of the indigenous art of Africa, Oceania and the Americas. ARTH 130 African, Oceanic, and Native American Art (3) (GA;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. ARTH 130 provides a selective introduction to major developments and issues in African and Oceanic art. The beginning of this course will concentrate upon the art and architecture of selected regions of Africa, during the pre-colonial, colonial, and post-colonial periods. This will be followed by a discussion of the traditional arts of Oceania in Polynesia, Micronesia, Melanesia, and Australia. The course will conclude with an introduction to the Pre-Columbian art and architecture of the Americas and art from the Eastern Woodlands, Great Plains, the Southwest and Pacific Northwest of North America. Art will be examined within its cultural and social contexts. Special attention will be given to the role that art serves in a culture's religion, rituals, ceremonies, political structure, gender roles, and ethnic identity. The impact of the West upon the art of these regions, both in colonial and post-colonial contexts, will be a reoccurring issue in this course. The actual time devoted to each topic and the sequence of topics will vary from instructor to instructor. The objective of the course is to introduce students to diversity in art. In so doing, negative stereotypes associated with traditional notions of the "primitive" will be challenged. Also, the course emphasizes visual analysis and critical thinking. The course requirements will consist of exams and a paper. As a general education course, this class provides an introduction to African and Oceanic art for students of any major. The course has no prerequisites, and presumes no prior exposure to art history. On the other hand, students majoring in Art History will learn vocabulary, methodology, and theory that is not only basic to the field, but which will also broaden their knowledge of the discipline as a whole.

ARTH 140: Introduction to the Art and Architecture of the Mayas, Aztecs, and Incas

3 Credits

This course examines the artistic and architectural production of Pre-Columbian Mesoamerica and the Andes. ARTH 140 Introduction to the Art and Architecture of the Mayas, Aztecs, and Incas (3)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the art and architecture created by the Pre-Columbian indigenous cultures of Mesoamerica and South America, geographical regions today defined by the nations of Mexico, Guatemala, Belize, Honduras, Ecuador, Peru, Chile and Argentina. Its content spans a deep expanse of history, in Mesoamerica ranging from the Pre-Classic period (1200 BCE) through the Post-Classic period (CE 1521) and in South America, from

the Early Horizon (1200 BCE) through the Late Horizon (1532). Culturally, we will pay particular attention to the Maya, Aztecs and Inca, but the precursors of these societies, the Olmec, Teotihuacan, Chavin de Huantar, the Moche, will also be studied. This introductory course approaches the material both thematically and chronologically, addressing how different cultures of the Pre-Columbian world utilized art, architecture, and their production in the cultural arenas of urbanism, public ritual, politics, myth-history and intercultural exchange. In addition to lectures, the course's required reading and class discussion will aid students in acquiring a basic knowledge of Pre-Columbian cultural practices.

ARTH 201: Ancient to Medieval Architecture

3 Credits

A survey of Prehistoric, Ancient Near Eastern Egyptian, Greek, Roman, Early Christian, Byzantine, Early Medieval, Romanesque, and Gothic architecture. ARTH 201 Ancient to Medieval Architecture (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is an introduction to architecture from the Prehistoric to the Gothic periods. Some of the topics covered in this course include prehistoric architecture in Europe and the Mediterranean, architecture of the ancient Near East, Egyptian architecture, Minoan and Mycenaean architecture, the classical architecture of ancient Greece, ancient Roman architecture throughout the empire, the Early Christian architecture of western Europe and Byzantium, early medieval architecture, Middle Byzantine architecture, Islamic architecture, and the Romanesque and Gothic architecture of Western Europe. Selected major individual buildings and architectural complexes will be emphasized and will include types of buildings/complexes such as the sanctuary, temple, tomb, forum, basilica, cathedral, monastery, and castle. Architecture will be analyzed with regard to materials' construction, engineering and design, and in the contexts of culture, society, and urban or rural setting. Political, economic, religious, ethnic and gender-related issues will be presented as they are part of the dynamics contributing to many of these structures. The course has no prerequisite and is intended for both students of architecture/art and students unfamiliar with the field. This course also serves as an introductory foundation course for students in the arts,

particularly architecture and landscape architecture. The companion course to ARTH 201 is ARTH 202, "Renaissance to Modern Architecture," which examines Western architecture after A.D. 1400. ARTH 201 is a required course for the Major in Art History and the Interdisciplinary Minor in Architectural History.

ARTH 204: The Art of Marvel: Italy and Spain 1600 - 1750

3 Credits

This class is intended to provide a general introduction to the art and architecture of Italy and Spain from roughly 1590-1750. Discussion will concentrate on what constitutes the baroque and its interpretation in each geographic area as well as issues such as patronage, primary sources, iconography, and historical context. The goal is to increase your visual analysis skills and help build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second goal is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts.

ARTH 207: The Eternal City: Rome from Antiquity to the Present

3 Credits

This class provides an introduction to the architecture and urbanism of the city of Rome from its founding to the present. The class will examine the ways in which the city came into being and was shaped over time, thereby allowing students to come away with a profound understanding

of the different ways human societies have used the arts to both reflect and reinforce social and cultural traditions. Selected architects, structural ideas, buildings, and urban developments will be emphasized. In the ancient period, the class will look at the founding myths of Rome and buildings from the republican and imperial periods. With the fall of the Roman empire, the class will look at the city during the period it was controlled by the papacy, examining projects of various popes, ecclesiastical institutions, and secular patrons. The final portion of the course will look at how Rome was remade into the capital of modern Italy, and how the image of Rome was used in film. Throughout the course, buildings and urban spaces will be considered within the contexts of religion, politics, philosophy, economics, gender, and society. This course has no prerequisite and is intended for both students of architecture/art and students unfamiliar with the field.

ARTH 215: Architecture and Art of South and Southeast Asia

3 Credits

Survey of the architecture/art of South/Southeast Asia (emphasis on India) from the Bronze Age to a globalizing present. ARTH 215 / ASIA 215 Architecture and Art of South and Southeast Asia (3) (GA;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course has a focus on the architecture and art of South Asia (India, Pakistan, and Bangladesh) and Southeast Asia (particularly Thailand, Cambodia, and Indonesia). Topics will span a time period that begins with Bronze age urbanization in South Asia and concludes with the emergence of globalized architecture in the context of modern nation states. The course will be an opportunity for students to engage with artistic traditions and patronage systems that have adapted to cross-cultural currents, including the more recent forces of colonialism and globalization. Early Buddhist and Hindu architecture and sculpture, the medieval Hindu temple, the advent and adoption of Islam and its artistic forms, the emergence of an early modern empire under the Mughals and their patronage of architecture and painting, British colonial architecture and contemporary interpretations of Modernist architecture and art, are some of the topics that will be covered. Besides paying attention to the formal aspects of buildings, cities and objects, lectures will incorporate information on the emergence of Art History as a discipline in South and Southeast Asia. Lectures, exams and reading assignments will aid in providing students with an intensive introduction to the region's cultural and artistic diversity.

ARTH 220: Chinese Art

3 Credits

A general survey of the great periods of Chinese art from the Shang dynasty until the modern period. ARTH 220 Chinese Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. ARTH 220 provides an introduction to the art of China from the Neolithic period through the twentieth century. Emphasis will be placed on the major dynastic periods (Shang, Zhou, Qin, Han, Tang, Song, Ming, Yuan, and Qing); however, regional developments throughout China are examined as well. Students are introduced to a variety of artistic traditions and media, including jades, bronzes, ceramics, sculpture, painting, and architecture. The course is designed to meet two principal goals. The first is to develop skills of visual analysis and a critical vocabulary for discussing the media, technologies, styles, compositions and iconographies of Chinese art. The second is to foster an understanding of art—and visual culture in general—according to social, economic, political, and religious contexts. Key topics include: the ritual use of objects, patronage, issues of reception and aesthetics, Buddhist art, the organization and use of sacred space, depictions of gender, and regional developments/interactions. Requirements include essay exams and at least one paper. As a general education course, this class provides an introduction to Chinese art for students of any major. This course has no prerequisites and presumes no prior exposure to art history or the history of China. Students majoring in Art History will learn vocabulary, methodology, and theory that is not only basic to the field, but which will also broaden their knowledge of the discipline as a whole. Because China (currently the world's most populous nation) has one of the longest recorded and continuous artistic traditions, the course also contributes to a broader understanding of important global issues.

ARTH 222N: Intersections between Art History and the History of Psychology

3 Credits

ARTH 222Q: Intersections between Art History and Psychology Why is there a cultural association between mental illness and artistic creation? What is the history of this association? Is there a psychological foundation for it or is it a cultural stereotype with no basis in reality? To address these questions this course will explore the integrated histories of modern psychology and avant-garde art from the late 19th century to the present, comparing the different approaches to the topic in the disciplines of art history and psychology. We will discuss the possible benefits and drawbacks of each approach. By celebrating genius, art history has often been complicit in perpetuating the stereotype of the "mad" artist, even romanticizing it and discounting the reality of disease; whereas psychologists often view images as symptoms, misinterpreting the art historical context in which artists work. Interestingly, avant-garde art has often been associated with "insanity" with both negative and positive connotations. As a history of art and psychology course, the syllabus is organized as a chronological survey focusing on points of intersection between avant-garde art and psychology. Many of these points will be the lives and works of individual artists who either suffered

mental illness, such as Vincent van Gogh, or engaged with psychology and mental illness as the subject of their art, as did Edvard Munch, the creator of the famous image, *The Scream*. In each case it is interesting to look at the reciprocity between the two disciplines: how the artists represented mental illness and transformed psychological theories into visual art and how psychologists and the medical establishment have responded to these artists, using them as diagnostic subjects. We will look specifically at bi-polar disorder and the psychological debates surrounding its relationship to artistic creativity. We will also look at larger avant-garde movements such as Expressionism and Surrealism, movements inspired by therapeutic practices, the art of mental patients, and psychoanalytic theory. We will look at the legacy of each of these movements in contemporary avant-garde art, including attitudes toward Outsider or Visionary artists and modern art therapy. Particular emphasis will be placed on psychoanalytic theory. Sigmund Freud's interest in art impacted his work and has rendered his writings conducive to artistic interpretation even today, although his theories have been rejected by many contemporary psychologists. We will look at artists who directly responded to Freud's writings such as Max Ernst and Salvador Dali, female surrealists such as Leonora Carrington, and issues surrounding "hysteria" as it was adopted by both male and female surrealists as a model for creative expression, and which continues to inform feminist art practices today. While contemporary avant-garde artists continue to respond to various psychological theories and practices, contemporary psychologists use formal analysis to understand the art of mental patients and employ artistic practices in the development of modern art therapy.

ARTH 224N: Authors and Artists

3 Credits

This course explores the many links between modern art and literature, including fiction about artists, illustrations of fiction and poetry, efforts to write in the styles associated with modern art, and practices of ekphrasis (the evocation of visual art in language). These links between authors and artists have exerted a formative influence on the development of modern fiction and poetry as authors and artists in various avant-garde groupings collaborated and competed to generate modes of artistic expression appropriate to modernity. This course examines those interactions. Course objectives are to bring together for comparative examination: * Formal or generic relationships between texts and images at particular historical moments; under this rubric we will consider issues such as ekphrasis. * Creative collaboration and cross-pollination between writers and artists, which have been crucially important in the history of literature and poetry; examples include Pre-Raphaelite poetry and painting, Virginia Woolf and Post-Impressionism, Gertrude Stein and Cubism * Conceptions of creativity as these have been expressed by writers using the figure of the artist; texts in this category range from Balzac's *The Unknown Masterpiece*, through Hawthorne's *The Marble Faun*, to Paul Auster's appropriation from the performance artist Sophie Calle This course explores the ways knowledge of literature and skills in critical reading can be rewardingly brought to bear on the visual arts, and considers how

visual art can illuminate the workings of literature both for individual readers and in the classroom.

ARTH 225N: Sexuality and Modern Visual Culture

3 Credits

ENGL 225N / ARTH 225N / WMNST 225N Sexuality and Modern Visual Culture (3) (GA;GH) An examination of the visual expression of gender and sexual identities in English-speaking cultures since the late nineteenth century. The terms "feminist" and "homosexual" were invented by the Victorians and reflect profound shifts in conceptions of identity. Another invention of the nineteenth century was the idea of the literary and artistic "avant-garde" as a minority contingent with politically and/or aesthetically advanced views. These ideas of minority culture were deeply enmeshed with one another, and have exerted profound influence ever since. This course explores that history with the objectives of expanding students' knowledge of modern art and literature, and of fostering more sophisticated understandings of how evolving socio-political ideas affect our sense of who we are and how we relate to texts and images. The course is relevant to students of American and English studies, art, art history, and women's, gender and sexuality studies.

ARTH 226: The Comic Book: A History of Sequential Art

3 Credits

An overview and examination of the history of sequential art with a focus on comic books and graphic novels. ART H 226 The Comic Book: A History of Sequential Art (3) (GA)(BA) This course meets the Bachelor of Arts degree requirements. Art History 226 will lead students on a journey through one of the world's most interesting and yet most misunderstood art forms. In this class, students will familiarize themselves with various styles, terminology, and major examples of sequential art beginning with the cave paintings of Lascaux and ending with the more popular and critically acclaimed comic books of recent years. Students will not only learn a bout and appreciate sequential art, but they will also understand how deeply and significantly these works have melded into various aspects of our culture and society.

Bachelor of Arts: Arts

ARTH 250: A Chronological Survey of Photography

3 Credits

A survey of photography's place and influence in a social, cultural, and historical context. ART H 250 A Chronological Survey of Photography (3) This course explores the role played by photography over time in providing understanding and insight in a social, cultural, and historical context of the impact of the development of the photographic medium and its effect on social, political, cultural and technological events. Emphasis will be given to understanding the context that surrounds the scientific and aesthetic development of photography. This is a survey of the chronology of events in western culture that transpires from the inception of photography until the year 2000. It includes the influences and outcomes of photographers and those associated with the medium on our culture. Emphasis will be placed on the influence of photography on the world around it, and significant events and individuals in the development of the medium as a vital art form. The structure of the course will consist of research and discussion of events and individuals that characterized years selected for examination. Each week one or two decades of western culture will be highlighted. Although the thrust of research will relate to photographic subject matter, the events studied will span the culture. We will explore the development of art, literature, music, and photography, as well as, historic landmarks, and the events that have shaped present society. Each week a selection of visual material will be presented highlighting selected events, students will read literature from the period of discussion, significant pieces of music will be introduced, and accounts of periodic events will be surveyed. Each week, a group of students will be assigned to research at least one decade. Each student will gather information about a significant figure or event that occurred in the course of a given period. The student will be expected to prepare a short paper and give a five-minute oral presentation about his/her assigned year, historical figure or event. As each student presents, the chronology of events becomes clear and the multiple threads of history weaves a brilliant tapestry of our culture. For the final presentation the student will prepare a ten-page research paper about a historical figure or event. Students will be graded on the quality of the weekly oral presentations and the demonstrated level of commitment to research. Another significant part of their grade will be derived from the length of committed scholarship given to the ten-page term paper. Students must exhibit a level of originality, clarity, and insight. The student must demonstrate the capacity for the assimilation of facts and events relative to their subject and demonstrate how their subject relates to other events that occurred around the same time of their event. Toward this end students will be encouraged to work together to illustrate the interconnection of the chronology.

Cross-listed with: PHOTO 201

ARTH 260: Museum Marketing & Communications

1-3 Credits

This course provides a well-rounded introduction to strategic communications, marketing, and publicity in arts institutions. In this course, students will gain an understanding of marketing and communications theory while also acquiring the practical skills used by art-world professionals. The ever-changing world of digital marketing, content, and messaging are essential to the success of museums, galleries, auction houses, art fairs, publishers, and other arts institutions responsible for branding and promoting the arts. This course will serve art history majors and minors by giving them practical, career-oriented skills and knowledge; non-majors will likewise benefit from theoretical

and practical knowledge of strategic communications, publicity, and marketing as they are practiced in arts institutions.

ARTH 280: The Secret Lives of Things: Design and Decorative Arts since the 18th Century

3 Credits

This course will study the meanings of ordinary and extraordinary objects of daily life. Ranging from pre-Revolutionary France to the global present, we will look at furniture, interiors, graphics, appliances, ceramics, and other ornamental and useful goods in Europe and America within their aesthetic, historical, economic, social and political contexts. Among other issues, the course will consider the effects of technological change such as changing conditions of labor; industrialization and new means of production and distribution of objects; the advent of synthetic materials; and effects of production and consumption on the environment. We will discuss the relationship of objects to gender-how gender roles are encoded in, defined and redefined by objects-and patterns of domestic life. Another theme of the course will be habits of consumption, where goods are bought and sold, how meaning is attached to consumption and purchases become linked to the presentation of a social self. The course addresses the General Education objectives of Effective Communication, Key Literacies and Global Learning, and will fulfil the objectives of a GA course by demonstrating the essential methodologies of art history and visual culture, including formal analysis, formal comparison, cross-cultural comparison how historical evidence, especially primary source accounts of objects, enable us to understand a work in its original context. In familiarizing students with examples of styles, makers, and types of object, the course teaches students how works of visual and material culture embody and express cultural values and social categories and expand students' knowledge and comprehension of the role that the arts play in various aspects of human endeavor.

ARTH 292N: Witches and Witchcraft from the Middle Ages to the Present

3 Credits

This course will explore the social and cultural history of witches and witchcraft from the late Middle ages in Europe and the U.S. to the present. The very nature and broad scope of the topic lends itself to an interdisciplinary approach that combines history, folklore, religious studies, criminology, women's studies, art history, English literature and popular culture. Historically, real individuals were accused of witchcraft and suffered persecution and punishment accordingly. Others proclaimed themselves to be witches and the practice continues to attract adherents today such as in the modern Wiccan movement. However, modern consensus views witches as fictions: figures of magical power in folklore, literature, visual art and popular culture. From Shakespeare's Macbeth to the characters in the popular Harry Potter books and films, fictional witches have haunted European and American culture for centuries. This course will explore the complex interplay of fact and fiction in the history of witches and witchcraft. In other words, how do fictions become powerful enough to inform history? The course will also focus on the historical status of witches as a source of power outside of, and

in opposition to, established political, religious and social structures. Since those accused of witchcraft were predominately women, how has witchcraft functioned as a means of empowerment for women as well as a tool for their persecution? And how has the representation of witches influenced attitudes towards women both historically and today? The course will begin with an historical inquiry into the belief in witchcraft during the late Middle Ages in Europe and the social and cultural role witches played in society. We will look at texts such as the Malleus Maleficarum (Hammer of Witches) published in 1486 as a guide for hunting and destroying witches, as well as studies on the more constructive role witchcraft may have offered women and communities. The course will be organized chronologically and move back and forth between history, such as the Salem witch trials, and the representations of that history in art, literature and film. Particular emphasis will be placed on the visual arts, from the engravings of German Renaissance artists such as Albrecht Durer and Hans Baldung Grien, the gothic paintings of Francisco Goya during the Romantic period, to contemporary artist Louise Bourgeois' monument to those executed as witches in Norway. The course will end with analysis of images of witches in popular culture, movies and television, and with a discussion of the modern representations of the domesticated witch and the femme fatale.

ARTH 301: Egyptian and Mesopotamian Art

3 Credits

ARTH 301 Egyptian and Mesopotamian Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art history 301 provides

an introduction to the arts of the Ancient Near East including those of Egypt and Mesopotamia. The class is dealt with chronologically. Works studied in class include papyri, seals, fabric, codices as well as sculpture, architecture, and painting. Additional readings of primary sources focused on mythology, and religion will form a key element in the structure of the class. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to Ancient Near Eastern and Egyptian art to a student of any major. This course has no prerequisite, and presumes no prior exposure to fine art. Students majoring in Art History will learn in it both the common vocabulary of the field and the outlines of the field that form the foundation for future study.

ARTH 302: Early Medieval Art

3 Credits

A survey of the art of Western Europe from the Early Christian era through the Ottonian Empire, c.300-1050 CE. ART H 302 Illuminating the Dark Ages (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 302 concentrates on the art of northern Europe between 600 and 1050 CE, from the years which saw the art and culture of the migration period in Europe meet and merge with the Greco-Roman traditions of the Mediterranean, to the beginnings of Romanesque art. Arts of the Jewish and Islamic traditions will also be discussed. Works studied include architecture, manuscript painting, ivory carving and goldsmith work, most of which were produced by or for members of the clergy, royalty or the lay aristocracy. The basic structure of the course is chronological. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender, sexuality, and race. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to early Medieval art to a student of any major. This course has no prerequisite, and presumes no prior exposure to art. Students majoring in Art History will learn in it both the common vocabulary of the field and the outlines of the field that form the foundation for future study.

ARTH 303: Italian Renaissance Art

3 Credits

The major arts in Italy from the thirteenth century CE through the Renaissance; emphasis on sculpture and painting. ARTH 303 Italian Renaissance Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 303 provides an introduction to the art of the early and "high" Renaissance in Italy, conceived in chronological terms as the period from c. 1300 to c. 1530, and embracing developments from the emergence of the Mendicant orders on the later 13th century to the rise of Mannerism in the 16th century. Monuments form all parts of the Italian peninsula will be considered, with emphasis on the major centers of Florence, Siena, Venice, Rome, Milan, and Naples, as well as Mantua, Ferrara and Urbino. The basic structure of the course is chronological, and is divided into three sections corresponding to the three centuries defined by Giorgio Vasari in his Lives of the Artists. In each section, an attempt will be made to present the careers and major works of the most significant artists in relation to their historical and cultural context. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to Italian Renaissance art to a student of any major. This course has no prerequisite, and presumes no prior exposure to art. Students majoring in Art History will learn in it both the common vocabulary of the field and the outlines of the field that form the foundation for future study.

ARTH 305: Romanticism and Revolution

3 Credits

A survey of painting and sculpture in Europe 1780-1860, from the origins of Neoclassicism through Romanticism and Realism. ARTH 305 European Art from 1780-1860 (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 305 provides an introduction to the painting, sculpture, and graphic arts of Europe between ca. 1780 and 1860, with an emphasis on selected developments in France, Spain, England, and Germany. The course begins with the origins of Neoclassicism and the revolutionary art of Jacques Louis David. Art is examined within the context of the tumultuous history of this period, such as the decline of the French monarchy, the French Revolution

and the rise and fall of Napoleon. The course will examine the rise of Romanticism, as seen in such diverse expressions as Goya's horrific images of inhumanity, Fuseli's dreams, Turner's sublime landscapes, Friedrich's frozen visions of Gothic ruins, Delacroix's colorful battles of beasts. Realism emerges in the biting social commentaries of Daumier, the meticulous detailed paintings of the English Pre-Raphaelites, and the raw reality of Courbet's paintings. The course ends with the extraordinary art of Manet. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. As a general education course in the arts, this course provides an introduction to European art, 1780-1860, to a student of any major. This course has no prerequisite and presumes no prior exposure to fine art. Students majoring in Art History will learn both the common vocabulary of the field and the outlines of the field that form the foundation for future study.

ARTH 306: Color across Cultures: A Global History of Pigments, Dyes, Metals and Other Colorants in Art

3 Credits

Color across Cultures offers an introduction to color from the perspective of global art history. Through documents, art works and specimens of historic colorants, we will explore geological and mineral sources of mined pigments, as well as natural sources of historic dyes; students will learn techniques for identifying many such mineral and organic sources of color in works of art. We will browse a global variety of artists' recipe books for making pigments, and we will attempt to recreate a few of their colors. We will explore the ritual use of colorants, such as ochre (which, in early indigenous cultures of North America, was turned red with fire and then used to paint images of fire deities), "Maya blue" (which was used to paint both votive objects and victims of blood sacrifice), or vermilion (a red used to represent the transformative blood of Christ in medieval art because it was made through transformative alchemy). We will consider the economics of color: the capacity of purple dye to signify royalty in the pre-modern Mediterranean world, the global traffic of color-making technologies along the Silk Road, and the colonial exploitation of coloring resources (most notably in the case of enslaved populations forced to cultivate indigo for British trade in the 18th century). Students will gain an introduction to different color theories, from Sir Isaac Newton's light-refraction theory, to Goethe's emphasis on the instability of retinal color, to Thomas Young and Sir James Clerk Maxwell's RGB vision models; artistic uses and responses to such theories will be explored. We will also examine different color organization systems (the rainbow, the palette, color wheels, the Munsell system, Pantone, Hexcode numbers) from which artists have drawn their ideas about color. Among such color-organization systems, we will also explore the many, frequently problematic attempts to delineate biological species and races using color as a criterion.

ARTH 307N: American Art and Society

3 Credits

History of art in the English colonies and the United States from the seventeenth century to the present. AMST 307N / ARTH 307N American Art (3) (GA;US)(GH)(BA) This course meets the Bachelor of Arts degree requirements. American art, from the colonial period to the present, is examined through paintings, sculpture, buildings, prints and photographs, as well as exhibitions and national/world fairs. The class places special emphasis upon the predicament of national identity by examining the ways in which the very notion of the "American" has historically been highly contested. Special points of emphasis include: negotiations between indigenous, colonial and European artistic styles, representations of and by displaced populations (colonial subjects, Native Americans, African Americans), myths of the American landscape, the cult of domesticity and the gendering of American citizenry, later transatlantic experiences of expatriate artists, conflicts between urban and rural conceptualizations of the "typical" American experience, the role of the American avant-garde after World War II, and debates over federal funding for the arts. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender, race, and ethnicity. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to American art to a student of any major. This course has no prerequisite and presumes no prior exposure to fine art. Students will learn both the common vocabulary of art history and method of critical analysis in the field.

ARTH 308N: American Architecture

3 Credits

History of the architecture of the United States, as well as its Native American and colonial antecedents. AMST / ARTH 308N American Architecture (3) (GA;GH;US)(BA) This course meets the Bachelor of Arts degree requirements. This Art History course (cross-listed with American Studies) will cover the history of American architecture and its historical

contexts, from its Native American roots and colonial antecedents, through the formation of the United States, to the present. A sample of the topics that will be covered are the architecture of: Native Americans, Spanish Colonial missions, 17th-century Virginia, Puritan New England, Georgian America, Southern Plantations and Slave Cabins, Thomas Jefferson, the new federal city of Washington, D.C., the Greek Revival, the industrial revolution, utopian religious communities such as the Shakers, Gothic Revival cottages and villas, Victorian Philadelphia, Henry Hobson Richardson, the birth of the skyscraper in New York and Chicago, the City Beautiful Movement, Frank Lloyd Wright, Arts & Crafts California, Henry Ford's Michigan, Art Deco New York, Mies van der Rohe and the glass box, Levittown, Disneyland, Louis I. Kahn, Post-Modernism, Frank Gehry, and Green Buildings. Selected major buildings, architects, ideas, and urban developments will be emphasized. Architecture will be considered within the contexts of religion, politics, philosophy, culture, economics, gender, race, society, technology, engineering, landscape architecture, urban planning and interior design. This introductory survey has no prerequisite and is intended for both students of architecture/art and students unfamiliar with the field. This is an Inter-Domain General Education course exploring American architecture from both the perspectives of the Arts (GA) and Humanities (GH). An exploration of the art, aesthetics and styles of American Architecture will be balanced with using architecture as a vehicle for understanding American history, culture, religion, society, and government.

ARTH 311: Greek and Roman Art

3 Credits

ART H 311 Greek and Roman Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 311 provides a survey of Greek and Roman art. Included are the Orientalizing, Archaic, Classical and Hellenistic periods of Greece and the Republican and Imperial Rome. Special attention is paid to politics, culture, and literature. The focus of this class is painting, sculpture and architecture; ceramics and other minor arts are also addressed. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to Ancient Greek and Roman art to a student of any major. This course has no prerequisite, and presumes no prior exposure to fine art. Students majoring in Art History will learn in it both the common vocabulary of the field and the outlines of the field that form the foundation for future study.

ARTH 312: Romanesque and Gothic Art

3 Credits

Survey of the architecture, sculpture, and painting of the Christian church in western Europe from 1000 to 1500. ARTH 312 Romanesque and Gothic Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 312 concentrates on the art of northern Europe between A.D. 1000 and 1500, from Ottonian art to Romanesque art continuing to the beginnings of Gothic art. Works studied include architecture, manuscript painting, ivory carving and goldsmithwork, most of which were produced by or for members of the clergy, royalty or the lay aristocracy. The basic structure of the course is chronological. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to Romanesque and Gothic art to a student of any major. ARTH 313: Northern Renaissance Art

3 Credits

Art in northern Europe in the fifteenth and sixteenth centuries, emphasizing painters such as Van Eyck, Durer, and Bruegel. ART H 313ART H 313 Northern Renaissance Art (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 313 explores the relationship of the visual arts to power structures, political events, and social and religious issues in the Netherlands and Germany, c. 1380-1585. Topics include the forms and functions of religious art, the place of visual representation in the governing strategies of the cra's rulers, the rising status of the artist, the new technology of printing, the complex role of visual culture in bringing about the Protestant Reformation, and the wave of destruction and censorship known as the Great Iconoclasm of 1566. Particular attention is paid to the works and careers of Jan van Eyck, Hieronymus Bosch, Albrecht Diirer and Pieter Bruegel. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the

deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to Northern Renaissance art to a student of any major. This course has no prerequisite, and presumes no prior exposure to fine art. Students majoring in Art History will learn in it both the common vocabulary of the field and the outlines of the field that form the foundation for future study.

ARTH 314: Art in the Age of Rembrandt

3 Credits

Dutch and Flemish painting in the seventeenth century. ART H 314ART H 314 Art in the Age of Rembrandt (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 314 explores the relationship of the visual arts to power structures, political events, and social and religious issues in the Netherlands and Flanders, c. 1585-1672. Topics include the function of art in constructing national and urban identities, social distinctions and gender roles, the contrasting needs burgher and court patrons, the effect of the open market on both the production of and the look of artwork, the impact of foreign investment and exploration on visual imagery, and the processes of artistic collaboration and competition. Particular attention is paid to the works and careers of Hendrick Goltzius, Frans Hals, Clara Peeters, Hendrik Terbrugghen, Rembrandt van Rijn, Peter Rubens and Jan Vermeer. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. It considers such intra- and cross-cultural issues as representations of gender. Requirements include essay exams and at least one paper. As a general education course in the arts, this course provides an introduction to the Age of Rembrandt to a student of any major. ARTH 325: Impressionism to Surrealism

3 Credits

A survey of European painting, sculpture, and photography from ca. 1850 to ca. 1940. ARTH 325 Impressionism to Surrealism (3) (GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. Art History 325 is a survey of European painting and sculpture from approximately 1860 to the Nazi occupation of Paris in 1940. This course will provide an introduction to Impressionism (Manet, Monet, Renoir, Morisot), Post-Impressionism (Seurat, Czanne, van Gogh, Gauguin), Symbolism, the Nabis, Edvard Munch, Rodin, Fauvism (Matisse),

Cubism (Braque, Picasso), Italian Futurism (Boccioni), Expressionism (Kirchner, Kandinsky), Dada (Duchamp), De Stijl (Mondrian), Suprematism (Malevich), Russian Constructivism (Tatlin), the Bauhaus, Paul Klee, Marc Chagall, and Surrealism (Ernst, Miro, Dali). The course will close with Surrealist work done prior to the onset of the Second World War. The course is designed to meet two principal goals. The first is to increase students' powers of visual analysis and help them build a critical vocabulary for discussing an art object's medium, composition, style, and iconography. The second is to foster an understanding of the deep implication of the visual arts in their social and cultural contexts. The course therefore involves significant material relating to political, economic and religious issues. It investigates problems in patronage, function, reception and censorship. ARTH 326: Art Since 1940

3 Credits

An international survey of painting, sculpture, photography and other media since 1940. ART H 326 Art Since 1940 (3) (GA;US;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course offers a survey of art objects and practices after 1940. The class is international in scope, exploring the ways in which artists of different countries have responded to each other's work, and to international cultural and political events. Though the class will develop chronologically, lectures will be thematic in their emphasis. Topics to be covered include Abstract Expressionism, Pop Art and other forms of art relying upon methods of appropriation, Minimalism, Conceptualism, Fluxus and Performance Art, Land Art and Site-Specificity, and Art in protest movements (such as the Civil Rights movement). The course will also address such larger issues as: 1) the means by which art works engage in critiques of racial, sexual and national identity; 2) the political uses to which contemporary art has been put (often by figures other than the artists); 3) the dominant critical paradigms through which art has been filtered; 4) the relationship of art works to commodity culture and late capitalism; 5) and the ways in which contemporary art works challenge notions of exhibition, patronage, and ownership of art. This course should be of interest to students of Art History as well as to students interested in post-war history, literature and intellectual culture. It should also be of use to those enrolled in studio art, architecture and other practicum areas.

ARTH 335: African Art

3 Credits

Introduction to the visual arts of Africa, including contemporary African art and the influence of African art outside Africa. ARTH 335 / AFR 335 African Art (3)(GA;IL)(BA) This course meets the Bachelor of Arts degree requirements. The course will examine the arts of various African peoples in historical, religious, sociological and geographic contexts, providing an introduction to the many visual art forms of Africa including masquerade, costume, and indigenous architecture. While many of the arts in this field of study are from west and central Africa, the course will also include materials from southern and eastern Africa. Contemporary African art, African Diaspora arts, and the influence of African art on European art are important topics that may be included. In addition to the traditional format of a geographic organization of the material, students will explore thematic approaches. Each of the assignments requires completion of essays which draw upon the multiple course texts and readings. Exams include image identification and short essays.

ARTH 409: Museum Studies

3 Credits

An introduction to the professional activities that occur in art museums. ART 409 / ARTH 409 Museum Studies (3)(BA) This course meets the Bachelor of Arts degree requirements. This course introduces students to the broad field of art museum work, specifically museum administration, education, curatorial work, registration, and exhibition design. Readings by authors in each field provide current theoretical and philosophical frameworks for all areas, which are then followed by discussions and practical experiences with professional museum practitioners, including the staff of a museum, for example, the Palmer Museum of Art, and invited guests. Museum Studies is open to students who have complete six credits in art, art education, or art history. This course is especially beneficial for majors in art, art education, and art history who are considering a career in an art museum or who want to become more aware about how an art museum functions. In addition to providing an in-depth introduction to art museum work, the course encourages students to build the critical thinking and response skills that are crucial to success in the real-world environment of a museum. The readings provide a solid foundation for later reference or further study in the student's chosen field. Offered every spring, this course will have a maximum enrollment of 20 students. Grades are based on class participation, four out-of-class projects, and a final project. Extra credit is offered for an off-campus visit to a museum, among other options.

International Cultures (IL)

ARTH 426: Iconoclasm: Powerful Images and their Destruction

3 Credits

Iconoclasm: exploring the political, religious, and social motivations behind the destruction of powerful imagery throughout history. ARTH 426 Iconoclasm: Powerful Images and their Destruction (3) (US;IL) (BA) This course meets the Bachelor of Arts degree requirements. Images have been granted extraordinary powers in many human societies, and their purposeful destruction has been a recurrent feature of political, religious and social strife around the world. This course explores how and why humans have granted such power to images, and the subsequent reactions that have resulted in periodic outbreaks of iconoclasm. Topics include the historical specificity of image destruction, the role of art and its detractors in precipitating the Protestant Reformation, and the manipulation of iconoclasm in modern mass media. Victimized images covered may include the bronze bust of Sargon (3rd millennium BCE) and early Renaissance altarpieces through the statues of Saddam Hussein and beyond. We will read primary and secondary materials ranging from Biblical texts to letters to the editor in the New York Times. Through careful consideration of iconoclasms' historical contexts, we will explore art's ability to function as a societal lightning rod. This course has two major objectives: to introduce students to a subject matter that holds great relevance for our time, and to train them in the methods and ethics of scholarly research. This course fulfills elective and 400-level requirements in Art History and General Education (US and IL), but it is intended also to complement concentrations in History, Visual Studies, Religion, and Communications. It would be offered every two to three years. Evaluative criteria include analytical reading and discussion, written components such as critical essays and a research projects, and analysis of relevant current events and their media coverage. Requires a classroom with digital audio-visual capability. Course may include museum visits or field trips where appropriate.

ARTH 427: Topics in Global Artistic Communication

3 Credits/Maximum of 6

Explores a specific time period in art history cross-culturally in Europe, Asia, Africa, and/or the Americas. ART H 427 Topics in Global Artistic Communication (3 per semester/maximum of 6) (IL) This course explores specific time periods and/or issues in global artistic exchange among several diverse cultures. The course may be taken up to two times, if the topics are different. One semester the topic might be "Ca. 1800: Arts and their Global Colonial Contexts." Another semester the topic might be "Global Modernisms ca. 1930," or "Ca. 1600: Global Artistic Exchange in an Era of Increased Contact." Each offering will include theoretical discussion of the goals and challenges of such intercultural study. It will then explore the artistic traditions and responses to foreign contact of diverse cultures. The course will consist of lectures, discussions, and, in many cases, visits to the Palmer Museum of Art for the study of objects in its collection. Through critical reading, listening and looking students will develop an appreciation for the range and diversity of cultural production, and the historical specificity of responses to contact with the unfamiliar. Themes touched upon may include ethnic or religious identity, gender, cultural resistance, rejection or embrace. Learning evaluation may depend upon a combination of class participation, analytical reading, essays or research papers, and examinations.

Enforced Prerequisite at Enrollment: 3 credits of ARTH International Cultures (IL)

ARTH 429: Studies in Baroque Art

3 Credits

Selected topics in the painting, sculpture, and architecture of seventeenth-century Italy, France, Flanders, Holland, and Spain. ART H 429 Studies in Baroque Art (3) (IL) This course addresses aspects of European art of the seventeenth century, a rich and complex period in which illusionism and powerful visual effects in the arts reached maturity. Baroque painters went beyond the realism of their Renaissance predecessors to explore both the sensuous aspects of the medium of oil painting and their own increasingly subjective vision. In all the visual arts Baroque masters explored space, mass, and form with a heretofore unheard of freedom and drama. Lectures and discussion in the course may focus on painting, sculpture and/or architecture, in Italy, Flanders, France, Holland, and/or Spain. The course may include selected artists such as Bernini, Borromini, Caravaggio, A. Gentileschi, Poussin, Rembrandt, Rubens, Velazquez, and/or Vermeer. The style and meaning of Baroque art may be studied within its political and cultural setting. For example, new approaches in the visual arts in Italy, and particularly in Rome, may be explored in relation to the rise of the counter reformation. The Spanish war in the Netherlands, and the Dutch struggle for freedom, may be connected with the art of Flanders and Holland. Attendant developments in other fields such as natural philosophy (science) and literature may be related to the visual arts. For example, the use of the camera obscura may be discussed with the art of Jan Vermeer and the poetry of Giambattista Marino may be related to the art of Nicolas Poussin. Aesthetic, critical, interpretive, and theoretical ideas of major artists and writers of the seventeenth century as well as of today's art and cultural historians may be considered. The emergence of new genres such as landscape and still-life may be examined, as well as the continuing themes of mythology, portraiture, and religion. Course objectives may include students' understanding of the national and regional development of styles and schools within seventeenth-century art, the particular approaches to style and meaning by major

artists of the period, the analysis of symbolism and meaning within art works of the period; the interrelationship between the art of the period and other disciplines such as natural philosophy and literature, and particular ways in which seventeenth-century art relates to the politics of particular countries, regions, and patrons. This course may serve as an elective for undergraduate students interested in the visual arts and art history, and for graduate students seeking a deeper exposure to art history. Evaluation may be accomplished through a combination of exams, quizzes, term papers, special projects, and participation in class discussion. Special facilities include a darkened room with dimmable spot lighting, computer, computer projector, and a large projection screen.

Enforced Prerequisite at Enrollment: 3 credits of ARTH International Cultures (IL)

ARTH 430: British Art in Context

3 Credits

This course examines the history of art in Britain, with particular attention to the 18th and 19th centuries (1707 to 1914). Works of visual art are considered in close relation to history, especially the history of the British imperialism and evolving notions of British culture and identity. Among the artists whose works are addressed in this course are William Hogarth, Angelica Kauffman, Joshua Reynolds, Mary Moser, J.M.W. Turner, William Blake, the Pre-Raphaelites, Julia Margaret Cameron, James McNeill Whistler, and Vanessa Bell. Along with contextualizing works of art in their socio-historical milieu, this course also attends to the historiography of British visual culture to show how art historical scholarship propels or disrupts prevailing beliefs regarding aesthetic value, nationalism, and cultural identity. Study of the visual arts will be further augmented by selected works of relevant literature by such authors as Henry Fielding, William Wordsworth, George Eliot, and Virginia Woolf.

Enforced Prerequisite at Enrollment: 3 credits ARTH Bachelor of Arts: Arts

ARTH 435: Studies in Modern Art

3 Credits/Maximum of 6

Lectures focusing on a selected movement of nineteenth- or twentieth-century art.

Enforced Prerequisite at Enrollment: 3 credits of ARTH Bachelor of Arts: Arts International Cultures (IL)

ARTH 440: Monuments of Asia

3-9 Credits/Maximum of 9

An exploration of major Asian sites and monuments through a focus on their historical and cultural significance. ART H (ASIA) 440 Monuments of Asia(IL)(BA) This course meets the Bachelor of Arts degree requirements. In this course, major Asian monuments are introduced in their physical, historical and cultural contexts. Students are also exposed to various theoretical approaches through which these monuments will be studied. Some of the themes around which the course is structured include patronage, religious practice, cultural meaning, political relevance and the shifting meanings of monuments over time. Students will learn to understand and discuss ways of defining monuments, their formal character and lineage, historical and cultural contexts and their representation across space and time. Each semester monumental sites will be organized around a common theme such as, Hindu and

Buddhist Sites across Asia: Historical Significance and Contemporary Relevance, Patronage and Religion, Islam across Asia: Global Ideas and Local Contexts, Political and Symbolic Centers in Asia: Between Early Modernity and the Nation State or Early Modern Asia: Empire and the Built Environment. Alternately, these topics will be incorporated within a multi-themed structure. The objective of the course is to expose students to the histories and cultures of Asia in a globalizing world. Another objective is to equip students with the methodological tools of art history as a discipline, even as they learn about specific monuments. The course will build on the foundation laid by survey courses in Art History, Architectural History and Asian Studies. Weekly readings will be assigned and discussed in class. The development of analytical and writing skills will be stressed, and grades will be based partly on essay exams and short response papers. In addition, students will write a research paper, to be completed by the end of semester.

Enforced Prerequisite at Enrollment: ARTH 100 or ARTH 120 or ARTH 315 or ARTH 320 or ARTH 330

ARTH 445: Oceanic Art

3 Credits

Survey of the arts of Oceania (Polynesia, Micronesia, Melanesia), including masks, sculpture, textiles, architecture and other art forms. ARTH 445 Oceanic Art (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is a one-semester survey of the sculpture, masks, textiles, architecture and other traditional art forms of the Pacific Ocean area known as Oceania, which is usually divided into the sub-areas of Polynesia, Micronesia and Melanesia. The material examined during the semester is organized according to ethnic groups and culture areas. Objects are discussed on the basis of style, style relationships, iconography and the uses to which they were put in their traditional religious, political or social contexts. The time period covered is primarily from the period of European contact up to the present, with occasional references to archaeological findings such as the Lapita culture's (3,000 -4,000 years ago) tracing of the movement of peoples into Polynesia. Lectures, films, reading assignments, quizzes, writing requirements (term paper) and exams will aid in providing students with an extensive introduction to the region's cultural and artistic diversity.

International Cultures (IL)

ARTH 458: The City 1600-1800

3 Credits

This course examines the architecture and urbanism of cities from 1600-1800. This course will examine what transformed the cities into centers of power, culture, and learning. We will look at new building types, the creation of civic institutions, and changes in the urban plan.

The course will therefore provide an overview of the architecture and urbanism of the period and also explore the political and social contexts that made them possible. Topics include capitals of great political importance such as Paris, Beijing, and London as well as smaller centers like Turin and Lisbon that underwent major urban and architectural transformations. The social function of buildings that mark these capitals, from poor houses to opera houses, will also be explored. Primary and secondary reading, ranging from Pepy's Diary to Habermas' examination of the public sphere will offer period accounts as well as conceptual frameworks for understanding the capital. The objective is to challenge students to think deeply about our urban environment and its debts to this earlier era. This course fulfills elective and 400-level requirements in Art History and General Education (IL), but it is also designed to complement concentrations in History, Music, and Architecture.

Enforced Prerequisite at Enrollment: 3 credits of ARTH International Cultures (IL)

ARTH 460: Art and Empire: Aztec, Inca and Spanish

3 Credits

This course is a comparative study of the artistic production used in Aztec, Inca and Spanish empires. ART H 460 Art and Empire: Aztec, Inca and Spanish (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course compares the diverse visual culture of the pre-Columbian world's two most powerful empires, the Aztec and Inca, to ascertain how art, architecture and public ritual functioned as tools of hegemony. In the aftermath of the Spanish physical and "spiritual" conquests of the sixteenth century, colonists continued to exploit the central role played by Aztec and Inca imagery as a means to assert and maintain colonial control, co-opting preexisting channels of training and also imposing foreign sign systems. This course queries, how did the visual arts effectively communicate competing imperial ideologies, how was art production appropriated as a site of indigenous resistance, and how do these artifacts continue to construct communal identities, both past and present?

Enforced Prerequisite at Enrollment: 3 credits of ARTH Bachelor of Arts: Arts
Bachelor of Arts: World Cultures
International Cultures (IL)

ARTH 462: Studies in Latin American Art

3 Credits/Maximum of 6

Specific studies of the visual and material culture created in Latin America from the colonial through the modern era. ART H 462 Studies in Latin American Art (3 per semester/maximum of 6) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course analyzes the art and architecture created in Latin America from the first moments of European contact (1492) until the modern era. Each time it is taught, the class will refine its focus to study the artistic production of a specific time period (such as the early colonial period, the nineteenth century, or the modern period), a specific geographic expanse (such as the modern nation state of Mexico), or perhaps a distinct cultural group (indigenous artists). Core to this course is the study of the interaction of seemingly divergent social groups and the ways in which artistic production both reflects and reinforces the resulting cultural systems.

Enforced Prerequisite at Enrollment: 3 credits of ARTH Bachelor of Arts: Arts

Bachelor of Arts: World Cultures
International Cultures (IL)

ARTH 464: French Art and Architecture, 1589

3 Credits

This course examines painting, sculpture, and architecture in France from the Wars of Religion through the French Revolution. Over the course of a dynamic two centuries architects and patrons shaped, refined, and innovated upon distinctly French classical styles. Through an examination of some of the leading figures, such as François Mansart and Jules Hardouin-Mansart, Claude Perrault, Claude-Nicolas Ledoux, and Étienne-Louis Boullée, the course will introduce not only a wide range of key buildings, but also a distinct idea about the status of the architect in French society. Classes will also be devoted to specific themes, such as the role of academies in standardizing training, and the influence of public opinion on specific works. We will also examine the urban transformation of Paris into the capital of a centralized French state. This course examines painting, sculpture, and architecture in France from the Wars of Religion through the French Revolution, from the close of the sixteenth century through the end of the eighteenth. In the seventeenth century with the art of Poussin, French painting can be seen to have come into its own, as Poussin broke with his contemporaries in establishing a particularly French mode of classicism in Rome. We see the efflorescence of classicism in history and landscape painting in the work of Poussin and Claude Lorrain, monumental realism in the work of the Le Nain brothers, and the development of complex allegories of power in the work of Peter Paul Rubens in France. We examine the Rococo style in terms of its eroticism, its artisanal ethic, and the new patterns of aristocratic patronage that emerge in the eighteenth century. We will also consider the rise of the public sphere and its impact on artists such as Jean-Baptiste Greuze, Jacques-Louis David, and David's pupils. With regard to sculpture, we will look at a range of styles from the baroque to the neoclassical.

Enforced Prerequisite at Enrollment: 3 credits of ARTH Bachelor of Arts: Arts
International Cultures (IL)

ARTH 470: Contemporary Art

3 Credits/Maximum of 9

A focused investigation of a special topic relating to art made after 1940.

Enforced Prerequisite at Enrollment: 3 credits of ARTH Bachelor of Arts: Arts

ARTH 475: Contemporary Women Artists

3 Credits

An interdisciplinary course that investigates women artists who were integral to the production of contemporary art primarily in the Americas, Europe, and Asia.

Enforced Prerequisite at Enrollment: 3 credits of ARTH Cross-Listed
Bachelor of Arts: Arts
United States Cultures (US)

ARTH 476: History and Theory of Digital Art

3 Credits

History and theories of contemporary digital art emphasizing humanistic approaches to technology. ART 476 / ARTH 476 History and Theory of Digital Art (3)(BA) This course meets the Bachelor of Arts degree requirements. Approaches to Digital Art is a survey class that will offer the web designer, cyberspace architect, MUD traffic controller or enthusiastic surfer an opportunity to examine the humanistic aspects of contemporary digital art. Through readings and direct interaction with digital media and digital artists, the class will develop an appreciation of the ways in which the interface between human beings and technology has been historically constructed and is subject to critical investigation. The goal of the class is to prepare each student so that she or he may engage with digital media in a way that is every more historically and socially self aware. Students will address the ways in which digital technologies transform artistic practices such as museum display, the writing of art criticism, the definition of works of art, changing role of the artist and the changing space of the art studio. More important, however, by engaging with digital works of art students will learn to think critically about technology and its engagement with culture at large. They will be encouraged to think about the political, economic and social impact of digital technologies. This humanistic approach to technology would make this course particularly useful to students of art history, philosophy, comparative literature, art education, and the visual/plastic arts. A significant portion of the course will be devoted to the ways in which art on the internet and digital art in general challenge the integrity of categories such as race and national identity. For example, students will have an opportunity to engage with African American artists such as Keith Obadike, whose on-line performances include an attempt to put his "blackness" up for sale on ebay.com in August of 2001. Students may also look at the ways in which net.art (Art made to be viewed on the internet) can critique commercial cooptation of global culture: etoy.com, for example, is an international and collaborative artist's group that satirizes global capital by camouflaging itself as a multinational corporation. This class will depend largely upon written responses and class discussion, rather than upon tests. Thus, students will learn how to approach difficult theoretical sources that have been assigned to them, and they will learn how to ask the kinds of questions that will help them understand such sources. This course will emphasize critical thinking rather than memorization, so students will develop analytical skills that will be useful in many other contexts. Because students will be given weekly writing assignments, they will be able to improve their skills in composition.

Enforced Prerequisite at Enrollment: 3 credits of ARTH

Cross-listed with: ART 476

Bachelor of Arts: Arts

ARTH 495: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written or oral critique of activity required.

Arts Administration (ARTSA)

ARTSA 301: Introduction to Arts Administration

3 Credits

This course provides students with a survey of the major concepts and practices of arts administration.

ARTSA 401: Arts Event Planning and Project Management

3 Credits

Planning and managing an event for an arts organization.

Prerequisite: ARTSA301 , ARTSA495A , MKTG 301

ARTSA 402W: Strategic Management and Planning for the Arts

3 Credits

Study of strategic planning for commercial and non-profit arts organizations.

Prerequisite: 7th semester standing and ARTSA301 , ARTSA401 , MKTG 301 , ACCTG211

Writing Across the Curriculum

ARTSA 403: Fundraising and Grant Writing

3 Credits

This course explores strategies to identify and secure financial support for arts organizations and not-for-profit institutions. ARTSA 403 Fundraising and Grant Writing (3) ARTSA 403, Fundraising and Grant Writing, is an upper level requirement for the Bachelor of Arts degree in Arts Administration. This course will provide students with an understanding of common institutional and leadership structures in the world of not-for-profit organizations. The course will explore proven strategies to create and maintain fiscal stability by generating revenue from a variety of potential financial sources. These include individuals and businesses, federal, state, and community resources, and charitable foundations. Students will also examine practical methods for development, including special events, long and short term campaigns, and the writing of proposals and grants. Upon completion of this course, ARTSA majors will be equipped with the skills necessary to plan and develop organizational solvency.

ARTSA 404: Event Planning Practicum

3 Credits

Students individually plan their own arts event in a workshop setting that guides them through organization and implementation. ARTSA 404, Event Planning Practicum, is an upper level requirement for the Bachelor of Arts degree in Arts Administration. The course will function as a workshop for the planning and execution of students' capstone projects, in which they organize and implement an arts event either on or off campus. Projects may take the form of an exhibition of visual art or a theatrical or musical performance. Although students will be working independently on their own projects in consultation with a faculty advisor, the course is structured so that they will progress through the stages of event planning as a class, regularly presenting and critiquing work in progress. Topics to be covered include budget preparation, grant writing and fundraising, marketing, and program evaluation. Significant class time will also be devoted to discussing the implementation of each student's project. On completion of this course, students will be able to manage all aspects of the planning and execution of an arts event.

Prerequisite: ARTSA 301, ARTSA 401, ARTSA 403 CONCURRENT: ARTSA 402W

ARTSA 495: **SPECIAL TOPICS**

3 Credits

ARTSA 495A: Arts Administration Off Campus Internship**SPECIAL TOPICS**

3 Credits/Maximum of 3

Arts Administration Off Campus Internship (3) A professional internship experience with an established arts agency or organization outside of the university.

Prerequisite: ARTSA301

ARTSA 495B: On Campus Internship in Arts Administration

3 Credits/Maximum of 3

On Campus Internship in Arts Administration (3) An internship with an on-campus arts organization or program.

Prerequisite: ARTSA301 , ARTSA401 , ARTSA495A

ARTSA 496: Independent Study

3-9 Credits/Maximum of 9

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Arts and Architecture (AA)

AA 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

AA 100: Introduction to International Arts

3 Credits

The arts of the world can be simultaneously universal and unique. By conveying qualities of the human condition (mortality, love, lust, virtues, vices, etc.) the arts can be universal. However, the arts communicating these qualities can be as unique as the cultures that produced them. Consequently, the arts are representative of the commonality and diversity of the peoples of the world. AA 100 will use the arts to consider similarities and differences among cultures. The primary objective of this course is to develop an appreciation of the arts from a variety of cultures. The scope of this course will be open to all arts from all cultures excluding the United States of America. Given how large a field of study this represents, the course will concentrate on but will not be limited to visual arts, architecture, designed environments, theatre, and music. It will not include all arts from all countries but rather, case studies will be used to provide an in-depth examination of specific examples. Individual case studies will be selected based on qualities indicative of the culture of origin. Care will be given to selecting case studies representative of a wide variety of cultures and time periods. Effort will be made to include examples from the Americas, Asia, Africa, Oceania, South America, and Europe. AA 100 satisfies Penn State's General Education Arts (GA) and International Cultures (IL) requirements and serves as the foundation course for the International Arts Minor in the College of Arts & Architecture.

Bachelor of Arts: Arts

Bachelor of Arts: World Cultures

International Cultures (IL)

General Education: Arts (GA)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Global Learning

GenEd Learning Objective: Key Literacies

AA 103: Introduction to Interior Design

3 Credits

We spend most of our time in interior space where we live, work, learn, and play, and the interior design of these spaces impacts human health and wellbeing. Individual interior spaces and the sequences of interior spaces enable us to make sense of the physical surroundings, enrich our experiences, and express particular personalities and identities. This course introduces the spectrum of interior design necessary to

meet physical, psychological, and social human needs for the quality of life. The elements and principles of design in interior space and Gestalt psychology will be explored, while space planning and environmental human behavior theory will be discussed. Considering sustainability, indoor environment quality, and interior materials and finishes will be discussed. Interior design for special needs such as universal design and design for special populations will be introduced. Ultimately, students will recognize interior design as a profession and identify the design process and communication employed by the interior design profession.

General Education: Arts (GA)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

AA 106: Interdisciplinary Digital Studio (IDS) Seminar II

3 Credits

This course will consist of 5 modules that will introduce students to emerging technologies that are applicable to interdisciplinary electronic design study. AA 106 Interdisciplinary Digital Studio (IDS) Seminar II (3) This second foundational course will consist of five three-week modules during which students will be introduced to further study in digital design process and applications that are necessary for IDS design research and creative production. What students learn in this first of two preliminary courses during the first of year in the IDS major will have direct application in digital design problems that will be introduced in the beginning, intermediate, and advanced courses in the IDS Program. Accomplished digital artists and designers consisting of faculty in the School of Visual Arts, the School of Music, the Department of Architecture, and the Department of Landscape Architecture will teach the modules. Content of the five modules will include two and three-dimensional modeling, animation; sound, and game design concepts and processes.

Enforced Prerequisite at Enrollment: DART 100 and AAART_PMAJ major

AA 113N: Sustainable Arts and Design

3 Credits

Climate change threatens human health and economic wellbeing and impacts our interactions with the built and natural environments. The adverse impacts of climate change are disproportionately borne by vulnerable communities. Socio-ecological decisions for a sustainable future can reduce the adverse impacts of climate change on human health and economic wellbeing, especially for vulnerable groups. This course explores sustainable arts and design, which plays a leading role in addressing climate change and climate justice. It also examines how artists and designers respond with consideration to environmental integrity, economic equity, and social action and the impact of their work that stimulates the imagination and urges participation. The course provides a broad overview of sustainable arts and design thinking and practices in visual arts, performing arts, and design, considering the impact on social action and behavioral change.

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

AA 120N: Introduction to Art Therapy

3 Credits

Introduction to Art Therapy is designed to introduce undergraduates to the philosophical, pragmatic and historical bases of the human service field of art therapy, with emphasis on current applications in the field of art therapy. This course provides a brief introduction to art therapy globally, with emphasis on art therapy within the United States, and other expressive therapies and their application to the overall mental health and human service professions. Art experiences, class discussions, case studies and study of artistic productions will be utilized to explore the relationship between art and healing. Students will relate material learned in class to their community by producing a community art project that will address their local community social or cultural needs. The intellectual frameworks and methodologies of art and psychology will be explicitly outlined and drawn upon within the course lessons. Weekly discussions include prompts to stimulate integrative thinking and additionally, reflective visual journaling will be required. Drawing upon the curricular materials of both INART 1 and PSYCH 100 (though not prerequisite courses), assignments for each lesson will include both reading and written discussion about art therapy. While students will acquire knowledge of part of the practice of art therapy, they will not study to the extent of a graduate program in the field. The narrowing of scope allows for a more basic introduction to the field of art therapy, as well as providing a solid foundation for those interested in practicing to pursue a graduate degree. And while students will acquire considerable knowledge of the major approaches in the field, as articulated in selected readings, they will not complete the work necessary to become a practicing art therapist. Instead, the selected readings will allow students to reflect on the relationships and connections between case studies and their own life experiences. The main objectives of the course are to explore the scope and practice of art therapy as a human services profession, art and art making act as a non-verbal benefit to communication, how to become an art therapist, credentials and prerequisites, multiple forms of expressive therapies, and community needs that can be addressed through art making.

General Education: Arts (GA)

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

AA 121: Design Thinking and Creativity

3 Credits

This course is an introductory, general education level course based on the premise that design is a fundamental human activity that everyone engages in one way or another. Design encompasses both the ability to imagine that which does not yet exist and to make it appear in concrete form. Design is a form of deliberate, considered action that seeks solutions to problems and creates useful and purposeful artifacts. Design is simultaneously used as a noun and a verb, and to describe a discipline and many fields of practice. Yet design remains essentially a black box to most people - its methods, processes, and components are mysterious, magical, and opaque. This course will turn the "black box" of design into a glass box. The course focuses on the relationship between ideas, tools,

and artifacts in order to connect theory, practice, and outcomes. Using theory, practice, and artifacts from a range of design fields (including architecture, landscape architecture, product design, engineering, graphic design, environmental design, and design theory itself), the course will empower students to understand design from the perspective most useful to them and their work - ideas, application, and the things they encounter in the world. The course focuses on the kinds of problems, situations, and processes of thinking that are critical for designers, business professionals, engineers, humanists, social scientists and natural scientists. The course is divided into five distinct units, allowing a thematic and comparative analysis of a breadth of design topics: About Design; Design Thinking; The Elements of Design; Design as a Game; and, a Step-by-Step Guide to Design in Action. By the end of the course, students will be equipped with the necessary knowledge and skills to understand and analyze the role of design in the world and to take action themselves, including: * the breadth of design in the world * the power and responsibility of design * a range of design artifacts * how designers think and work * what creativity is and what it entails * understandings of design, design thinking, and creativity across a breadth of disciplines * the parts of design problems * how the design process can be described * strategies and methods applicable to the stages of the design process There are no prerequisites for this course. The course will serve as an introduction to fundamental ideas of design and complement design-focused courses in other departments/programs across the university. The course satisfies general education requirements for Arts (GA) requirements.

Bachelor of Arts: Arts
 General Education: Arts (GA)
 GenEd Learning Objective: Effective Communication
 GenEd Learning Objective: Crit and Analytical Think

AA 122: Introduction to Graphic Storytelling

3 Credits

Introduction to Graphic Storytelling is a studio exploring the visual language of comics and graphic novels. Assignments will include writing and drawing exercises, and weekly comics projects. Subjects of study and discussion will include contemporary comics and graphic novels, visual communications, comprehensive critical response, creative ideation and development, and the history and theory of sequential art. Through exercises, projects, readings, discussion, and communal feedback, students will develop a personal process for producing graphic narratives.

 GenEd Learning Objective: Integrative Thinking

AA 130N: Creative Arts Therapy Applications

3 Credits

Creative Arts Therapies are intermodal professions that combine the visual arts, movement, drama, music, writing and other creative processes to foster deep personal growth and community development. While AA 120N provides cursory knowledge with a brief introduction to expressive arts therapies, Creative Arts Therapy Applications is designed

to introduce undergraduates to the depth and practical application of the creative arts therapies, using a variety of approaches to wellness and healing with diverse populations. There is a need to acknowledge the rise in mental health diagnoses and recognize the need for growth and acceptance of helping professions locally, nationally and globally. Professional therapists will explain the needs of their clients, the goals of therapy with these populations, and demonstrate their approaches. Art experiences, class discussions, case studies and study of artistic productions will be utilized to explore the relationship between the arts and healing. Students will relate material learned in class to their self exploration and community by producing a reflective, interdisciplinary course project that will address social or cultural needs through art making. The intellectual frameworks and methodologies of art and human development will be explicitly outlined and drawn upon within the course lessons. The main objectives of the course are to explore the scope and practical applications of the creative arts therapies, the arts and art making of multiple modalities, credentials and prerequisites for how to become a creative arts therapist, and how health and wellness can be impacted by the creative arts at the local, national and global level.

AA 160N: The Virtual Transformational Leadership Development Experience

3 Credits

The Virtual Transformational Leadership Development (VTLD) Experience is designed to help develop the next generation of leaders to serve as agents of change in pursuit of a more civil, equitable, and just workplace, society, and world. A guiding principle of The VTLD Experience is that diversity is a fact, inclusion is a choice, equity is an action, and belonging is an outcome. It leverages technology, including artificial intelligence, machine learning, interactive arts and and employs high impact teaching practices including micro-lessons, rapid learning, reflective exercises, online discussions, meditation and mindfulness practices, an online journal, and synchronous individual transformational leadership development coaching sessions conducted via Zoom. Students enroll in the VTLD Experience from the University Park and the Commonwealth Campuses and have an opportunity to engage with artists curated by the Center for the Performing Arts at Penn State. This involves viewing performances from a distance and digital programming. Fundamentally, the course is an anti-racist, anti-oppression leadership development experience and aligns with the following foundations and thematic priorities of the university's 2016 - 2025 strategic plan: Foundations - Engaging Our Students - Advancing Inclusion, Equity and Diversity - Enabling a Sustainable Future Thematic Priorities - Transforming Education - Empowering Through Digital Innovation - Advancing the Arts and Humanities - Stewarding our Planet's Resources

AA 193N: The Craft of Comics

3 Credits

This course combines the literary analysis of comics and graphic novels with the creative practice of making comics. Students will learn through an integrated and ongoing process of interpreting select comics texts and also making their own work in that same medium. Students will gain a technical vocabulary for discussing and assessing comics, which they will then apply to formal analysis of compositional and narrative elements in select assigned texts. This analysis will occur first in class discussion, facilitated by the instructors, and then through a sequence of individual written assignments. At the same time, students will receive formal instruction in making comics as they create their own work over the course of the semester, workshoping with peers and instructors as a way of gaining further insight into the creative and technical processes of the studied texts. Formal analysis and creative work will be coordinated and progressive across the course of the semester. The culmination of this collaborative learning would be an integrated understanding and appreciation of comics art.

International Cultures (IL)

AA 230N: Arts & Wellness in Communities

3 Credits

Arts and Wellness in Communities is designed to introduce undergraduates to ways they can use the arts for wellness for themselves and in their communities. This course is centered around art-making for personal well-being, which is different from therapy with a trained clinician. Art experiences, class discussions, examples of art in community and the study of practical ways to bring art-making into students' own lives and future professions will be utilized to explore the relationship between art and healing. Students will relate material

learned in class to their future careers and/or goals by proposing a mock art project that will address the needs of a community. The intellectual frameworks and methodologies of art therapy and other creative arts therapies will be explicitly outlined and drawn upon within the course lessons. Drawing upon the curricular materials of both AA 120N and AA 130N (though not prerequisite courses), assignments for each lesson will include reading, written discussion, and visual responses about art-making in communities and for personal wellness. Weekly discussions include prompts to stimulate integrative thinking. Students will respond to the prompts with written or oral responses as well as visual reflective journaling. This course will not train students to facilitate art therapy or any other creative arts therapies as professional clinicians but will instead dive into ways we can use art for healing on our own and in our communities and workplaces.

3 Credits

Topics include: arts markets, consumptions models, targeted development of aesthetic products, analysis of websites and other marketing materials that communicate artistic value. A&A 322 Arts

Marketing (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will introduce and outline the role, purpose, and perception of "art" in various marketplaces and contexts for the emerging arts entrepreneur. Topics include: issues in marketing aesthetic products, consumer identification through art, models of consumer behavior, art and technology, targeted development of arts products/services, and the analysis of websites and other marketing materials that communicate artistic value to appropriate market(s).

Enforced Prerequisite at Enrollment: Third-semester standing Bachelor of Arts: Arts

AA 323: Arts Enterprise Development

3 Credits

Course outlines the cultural and economic environment of the arts in the United States. Topics include: feasibility study and start-up of for- and non-profit arts ventures, the role of geography, demand and infrastructure considerations in entrepreneurial decision-making. A&A 323 Arts Enterprise Development (3)(BA) This course meets the Bachelor of Arts degree requirements. This course will introduce and outline the cultural and economic environment of the arts in the United States. Topics include: feasibility study and start-up of for- and non-profit arts ventures, economic and social impact of art and artists in communities, public and private arts support, non-profit culture and basic grantsmanship, arts policy, creative economy efforts, the role of geography, demand and infrastructure considerations in entrepreneurial decision-making, and competition analysis.

Enforced Prerequisite at Enrollment: Third-semester standing

AA 324: Arts Entrepreneurship and the Law

1 Credits/Maximum of 1

Course surveys general legal considerations in the arts and pertinent issues for monetizing creative work. Course surveys general legal considerations in the arts and pertinent issues for monetizing creative work. Class meetings consist of arts and law faculty collaboratively leading discussions and/or workshops that identify and define areas of legal concern from the perspectives of artistic persons and art implicated organizations. Students will learn how to navigate the U.S. legal system and gain an understanding of intellectual property implications pertaining to the arts. Additionally, students will begin to think, speak, and act in an informed manner when dealing with legal matters, thus enabling them to better identify potential legal issues, recognize when to seek professional legal advice, and be successful artists operating within the domains of business and the law. Topics include: navigating the legal system, intellectual property, contracts, business organization and start-up, taxation, etc.

Enforced Prerequisite at Enrollment: 4th semester standing

AA 397: Special Topics

1-9 Credits/Maximum of 9

International Cultures (IL)

AA 401: International Arts Minor Final Project

1-3 Credits

The final project required for the International Arts Minor. A&A 401A&A 401 International Arts Minor Final Project (1-3) The requirements for the International Arts Minor specify that the course applied toward the minor reflect a coherent course of study constructed around a geographic, chronological, or thematic concentration. Also required for the minor is a culminating project that relates to the chosen concentration. The final project is intended to capitalize on the knowledge and experience gained from the prerequisite components of the minor. The topic of the project will be chosen by the student in consultation with the person in charge of the minor. Work toward completion of the project will be overseen by the person in charge of the minor with advice or assistance from other member(s) of the faculty as appropriate. For the purpose of the minor, the arts are very broadly defined to include topics such as the visual arts, architecture, design environments, theatre, music, and literature so most any creative endeavor may be considered for the subject of the final project. The project may result in formats such as a written paper, a work of art, an exhibition, a recital, or a musical composition as long as it conforms to the intent of the requirement for the minor. It is anticipated that the subject of most projects will be cross-cultural or multicultural in nature. For example, a research paper might be thematic such as an intercultural comparison of adaptations of a Greek myth. A studio project might be technical, such as the wood firing techniques employed by Japanese ceramicists. The requirements for the International Arts Minor specifies a project of at least one (1) credit. A7A 401 International Arts Minor Final Project will be offered for one (1) to three (3) credits to accommodate students who may be more than one (1) credit to complete the minor and for those who may propose a project worth more than one (1) credit. A&A 401 may not be repeated.

Enforced Prerequisite at Enrollment: AA 100

Bachelor of Arts: Arts

AA 424: Arts Entrepreneurship Capstone Research Project

3 Credits

Mentored research on an arts venture idea equips students for immediate, informed, individually specific action upon completion of the program. A&A 424 Arts Entrepreneurship Capstone Research Project (3) This course functions as the impetus for students to bring their specific venture idea(s) into being, by researching the geographic region where they want to operate, using the actual infrastructure necessary to their specific project. By incorporating the acquired knowledge gleaned from previous courses as applied knowledge towards their chosen venture, the students will be operating literally as the CEO, while being mentored and guided through the process. This course is a mechanism for integrating and implementing the feasibility and marketing strategies developed in the previous courses, thus equipping the students for immediate, informed, individually specific action upon completion of the program.

Enforced Prerequisite at Enrollment: AA 323

AA 494: Research Project Courses

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors**AA 495: Internship**

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

AA 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

AA 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

AA 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Asian American Studies (AAS)

AAS 100N: Introduction to Asian American Studies

3 Credits

This course offers an introduction to the history, literature, culture, and social conditions of Asian Americans. It begins with Chinese immigration to the United States in the nineteenth century and proceeds to cover the histories of other groups: Japanese, Korean, Filipino, and Indian Americans. In addition to history, students explore some of the literature of Asian Americans and examine the legal and sociological aspects of the Asian American experience. The course also addresses several central questions: How much have Asian American groups held in common, culturally and historically, with one another? What role did prejudice play in the attempted citizenship and acculturation of different Asian American groups? How did Asian values and traditions shape families and communities over time? How did the experiences of Asian American women differ from those of men? What contributions to American life - food, literature, politics, education, business, science, and physical culture - have Asian Americans made? AM ST 160/AAS 100 is an

interdisciplinary course that introduces students the history, society, and cultural achievements of Asian Americans.

ASIA 3: Introduction to the Religions of the East

3 Credits

Religious experience, thought, patterns of worship, morals, and institutions in relation to culture in Eastern religions. RLST 3 / ASIA 3 Introduction to the Religions of the East (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will explore the foundations, development, and diversity of religious traditions in Asia, focusing mostly on Hinduism, Buddhism, Confucianism, Daoism, and Shinto. It is organized according to two sections: Foundations and Developments. The Foundations section provides an introduction to the worldviews and practices of Eastern teachings. We will also discuss the structure of society, the social expectations on individuals based on gender and class, and rituals, which expose us to rich mythologies or intricate ceremonies. The second section, Developments, traces the evolution of religious doctrine and practice through history. Here, we learn to distinguish among large and small-scale movements and schools, and to familiarize ourselves with the geographical scope of each religion in South, Southeast, and East Asia. An abiding emphasis in this course will be on how to read and interpret the varied scriptures and primary texts of these religions.

ASIA 4: Introduction to Asian Literatures

3 Credits

Satisfies General Education (GH), International Cultures (IL), Other Cultures (BA) requirements. This course is designed to act as a gateway to Asian literatures and cultures - through English translation - of selected fictional and cinematic texts from Japanese, Chinese, Korean, and Asian diaspora literature (our main focus is on literature of modern Asia). Exploring the historical and cultural contexts of each work, we will pay attention to the ways in which each text depicts the diversities within geographical areas (for instance, "Japanese culture" is not monolithic than "U.S. Culture" is, and writers might see the same social reality in quite differently). The cross/inter-cultural approach used in this course invites students to acquire a global perspective on the rich traditions of Asian cultures and literatures. Students are expected to develop the

ability to comparatively analyze and express, in speech and writing, their views through the reading of literary texts and watching of films.

ASIA 83S: Asian Studies First Year Seminar

3 Credits

The meaning and advantages of a Liberal Arts education in context of a specific discipline. ASIA 083S Asian Studies First Year Seminar (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course provides an introduction to the meaning and advantages of a liberal arts education in the context of Asian Studies. Through reading, discussion, research, and writing, students in this course will develop many of the basic skills central to a liberal arts education. The specific topic will vary by instructor, but will address one or more countries of Asia. Materials may include works of fiction and literary criticism, historical documents and analysis, or other scholarship and primary materials related to the specific discipline of the instructor. Through reading, discussing, and further exploring such materials, students will build their skills of critical analysis, research, and argumentation, as well as enhancing their intercultural and international perspectives. The course fulfills the first-year seminar requirement as well as a general education or a Bachelor of Arts humanities requirement.

ASIA 100: What is Asia?

3 Credits

What are the factors that bind and define a region? What makes a geographical area, a set of cultures, or a certain group of people into a single entity? Who decides? Asian history provides a view of how a region is formed and reshaped over time. This course will address the question of what makes Asia a region by examining the shared experiences and interlocking histories and cultures of its people. This will entail study of art and architecture, literature, history, religion, philosophy, social structures, economics, and international relations, with particular attention to reading both visual and textual materials. The goals of this class are two-fold; we aim not only to learn something about times and places far removed from our own, but also to encourage thought about what we do when we study Asia. Students in this class will be expected to think critically about assigned texts and make their own interpretations of their meanings.

ASIA 101N: Sports in Asia

3 Credits

The history and contemporary practice of athletics in Asia shows that sports are much more than just games. Taking a multi-disciplinary approach to the study of sports in Asia, this course will examine what meanings have been attached to the participation in and planning of athletic events and institutions by Asian peoples and nations. The course will begin with a historical perspective, examining the place of traditional athletic practices, then tracing the introduction of Western-style athletics to various Asian countries in the 19th and 20th centuries and their incorporation into programs of national development. The second part of the course will focus on the international relations of sports mega-events like the Olympic Games and the FIFA World Cup. The third part will focus on the sociology of sports: what meanings do athletic activities and competitions hold in Asian societies, how does that shape people's behavior, and how does it compare to Western societies? Finally, the course will include an anthropological component that seeks to understand Asian societies in new ways by focusing on specific athletic activities, such as Japanese baseball and the Beijing Olympics, and by tracing the changing meanings of Asian sports like judo and karate as they spread to other parts of the world. The aim of this course is not only to build understanding of distant places and disparate peoples, but also to gain new perspectives on our own society through the shared activity of sports.

ASIA 102: Asian Popular Culture

3 Credits

An exploration of popular culture in Asia. ASIA 102 Asian Popular Culture (3) (GH;IL)(BA) Asian popular culture encompasses a broad array of cultural practices and forms that shed light on the politics and societies of Asia. This course examines "low" or non-elite cultures that allow us insight into the day-to-day lives of the people who created or enjoyed them. Along the way, we will consider how popular culture intersects with issues such as politics, economy, and society, whether on a local, national, regional, or even global scale. Through examining the contested meanings and presentations of popular culture symbols and forms, students will be introduced to the diverse media through which popular culture has been disseminated and consumed. Themes and topics will vary depending on the instructor, but may include cities and urban culture, commercial cultures, television and theater dramas, film, anime, digital video, mass literature, comics, game shows, video games, youth cultures, gender and its representations, martial arts, popular religion, food, and net cultures and social media.

ASIA 103: Introduction to Hinduism

3 Credits

Historical overview of the development of ideas that forms the basis of the south Asian religious culture. ASIA 103 / RLST 103 Introduction to Hinduism (3) (GH;IL)(BA). This course meets the Bachelor of Arts degree requirements. We begin with a discussion of the pre-Vedic Indus Valley civilization reflecting upon its influence on later south Asian cultures. The course then traces how the Vedic ritual tradition, and the Vedantic philosophy gave rise to the concepts of Karma (individual action and its underlying motives), Samsara (the cyclical view of life), and the Atman (nature of the individual). Moreover, we pause here to explore the relationship between the emerging idea of civic responsibility (Dharma) and its relationship to the Vedic and Vedantic thought. Next we examine how the Vedantic philosophical tradition may have incorporated a diversity of philosophical views including both Brahmanical as well as non-Brahmanical traditions of Buddhism, Jainism, Lokayata, etc. The class will read excerpts from the religious literature of the era. The first part of the course concludes with selected readings from the Bhagavadgita, Mahabharata, as well as some Buddhist and Jaina texts. All of these readings will be in English. Class discussions focus on how the classical Hindu worldview may have emerged from the philosophical foundation of the Vedantas, and later built the groundwork for the Hindu Bhakti (devotion) movements. The second part of the course focuses on the various regional Bhakti traditions from the middle ages onwards, analyzing how the regional cultures may have related with the great classical Brahmanic tradition. The course concludes with a discussion of how Hinduism in the post 1800s responded to the forces of colonization, exploring how the different religious and cultural traditions of south Asia may have interacted with other religious cultures (both indigenous and foreign) like Buddhism, Jainism, Islam, and Christianity. We shall read excerpts from noteworthy thinkers and writers of nineteenth and twentieth century to understand the very interesting dynamics between religion and civil society of more recent times. This course concludes with a discussion of how Hinduism in the post 1800s responded to the forces of colonization, exploring how the different religious and cultural traditions of historical south Asia may have interacted with other religious cultures (both indigenous and foreign) like Buddhism, Jainism, Islam, and Christianity. We shall read excerpts from noteworthy thinkers and writers of nineteenth and twentieth century to understand the very interesting dynamics between religion and civil society of more recent times.

ASIA 104: Introduction to Buddhism

3 Credits

A general survey of the basic doctrine, practice, and historical development of Hinayana and Mahayana Buddhism. RLST 104 / ASIA 104 Introduction to Buddhism (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course is a general survey of the historical development, basic doctrines, and practices of Hinayana, Mahayana, and Vajrayana Buddhism. The course is structured around the "Three Jewels" of Buddhism: Buddha, Dharma, and Sangha. That is to say, we will learn about the Buddha as a historical figure and spirit; we will come to understand the basic elements of his doctrinal teachings; and we will examine the community of followers who have practiced his teachings. Special attention will be paid to the various "geographies" of Buddhism as expressed through different cultures in ancient India, Southeast Asia, and East Asia. At the conclusion of the course, we will encounter Buddhism as a relatively new cultural force in America. The course revolves around the discussion of key issues in the philosophy, ethics, and theology of various forms of Buddhism.

ASIA 106N: Asian Traditions of Health, Medicine, and the Body

3 Credits

This course provides an introduction to historical and contemporary traditions of health, medicine, and the body from various parts of Asia. Potentially including such diverse topics as Ayurveda, yoga, acupuncture, taiji, qigong, Tibetan medicine, and other systems of practice, the course emphasizes comparative and multi-disciplinary frameworks. The

semester finishes with sections on the modernization and globalization of Asian traditions, including their practice in the US. Throughout, the class will approach all Asian ideas and practices on their own terms, encouraging comparison among the various traditions as well as with contemporary American ideas about health and wellness.

ASIA 107N: Bollywood: Seeing South Asia Through Cinema

3 Credits

This course is an introductory survey of Hindi cinema that examines movies of post-independent India. It aims to provide students insight into the historical contexts in which Hindi cinema developed, exposing them to a handful of key themes related to Indian society and culture. Relevant themes include nation building, social class, family dynamics, caste, gender and sexuality, marriage customs, and the role of India and Indian diasporas in the world today. Students will examine both cinema and scholarly articles related to the themes of the course to better understand the lived experiences of people and deepen their understanding of the dynamic social and political cultures of modern India. The question of how certain cultural traits compare to the cinematic culture of Hollywood and the West, and why they might differ in such ways will serve as an abiding question throughout the course. Following a two-week segment, the course first raises the question as to what makes these films quintessentially "Bollywood" by introducing students to the history, traditions, and aesthetic traits of Hindi cinema. Over the semester, students will watch a minimum of six movies that deal with particular social and political themes; actively participate in discussions; and take a quiz on each movie. Students will give one presentation and write three response papers of 3 to 5 pages each instead of midterm and final exams. At the end of the semester, they will submit a creative project on a particular social theme that reflects their knowledge and critical thinking about both the Bollywood genre and the society it reflects. Background knowledge in South Asian cinema or Hindi is not a requirement to take this course as all films will have English subtitles.

ASIA 109H: What is The Self?

3 Credits

What is the self? Are you your body? Your identities? Your consciousness? This course explores diverse views of "the self" from a

variety of different global religious and philosophical perspectives. Topics may include Asian traditions such as Buddhism, Hinduism, Taoism, and Confucianism; Abrahamic traditions such as Judaism, Christianity, and Islam; as well as indigenous traditions such as shamanism, Native American religions, and Shinto. The class may discuss, but will not prioritize, perspectives from psychology and other modern disciplines. Which specific religions are covered will depend on the instructor's fields of specialization, but the course will emphasize cross-cultural comparisons on a global scale.

ASIA 176: Survey of Indian History

3 Credits

Survey of cultural, institutional, and political history from ancient times to the present. HIST 176 Survey of Indian History (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This course surveys the history and civilization of India or South Asia from the earliest times to the modern period. The goal of the course is to enable students to form a comprehensive conception of the various facets of Indian or, South Asian civilization in a historical context. This course is an excellent foundation for the history of modern India and also complements a

variety of existing courses on the history of the non-western world. In addition to satisfying the GI requirement, HIST 175 satisfies the general credit requirements for the history major or minor, including the 'non-western' component of the major. Non-majors may use this course to satisfy a general education humanities selection. Typically, students will be evaluated on in-class quizzes, written exams, participation in class discussions of assigned readings and critical reviews of books. This course is offered once every year and has an enrollment of 50 students.

ASIA 181: Introduction to the Religions of China and Japan

3 Credits

A survey of the history, philosophy, and cultural impact of the major Far Eastern religions: Confucianism, Taoism, Buddhism, and Shinto. ASIA 181 / RLST 181 Introduction to the Religions of China and Japan (3) (GH;IL)(BA) This course meets the Bachelor of Arts degree requirements. This is an introductory survey of the historical, philosophical, and cultural dimensions of the major religious traditions in China and Japan. The course delineates and highlights the organic view of the universe and the hierarchical ordering of society in East Asia. It traces the evolution of the major traditions (Confucianism, Daoism, Buddhism in China, as well as Shinto, Buddhism and Confucianism in Japan) by examining their ideas of humanity and nature, morality and society, and metaphysics and ethics. It also reveals the interaction and interrelation between ideology, politics and society, and their impact on the development of the major religious traditions in history. A major focus is the relation between the popular and folk practices and beliefs of esoteric Daoism, devotional Buddhism, and fertility-cult Shinto and the elite and literate doctrines and precepts of Confucianism, philosophical Daoism, and monastic Buddhism. The course also devotes some attention to the influence of religion on various facets of culture, such as medicine, science, literature,

art and food. The objectives of the course are first to acquaint students with the religious beliefs, values, and practices of China and Japan by looking at their historical formations and contemporary manifestations, and second, to locate them in a global and comparative context.

ASIA 182: Asian Trade: Economy, Industrialization and Capitalism in Asia

3 Credits

An historical overview of economy, industrialization, globalization and capitalism in Asia from the 16th century to present. ASIA (HIST) 182 Asian Trade: Economy, Industrialization and Capitalism in Asia (3) (GH;IL) (BA) This course meets the Bachelor of Arts degree requirements. Asian economies have experienced spectacular growth in the second half of the 20th century. But this growth is part of a longer story of Asian commerce and trade and its relationship to and integration with (and, in some cases, isolation from) global patterns of exchange. Moreover, these exchanges are best understood alongside the politics, society, and culture--sometimes local, sometimes regional--that shaped trade and business in entrepôts, capitals, and hinterlands throughout Asia. This course begins with a historical exploration of the economic development and social change and ends by asking what lies in store for one of the world's fastest growing economic regions. By offering a historical frame for Asian economic experience, students will gain insight into the strengths and weaknesses of prevailing theories that tend to overstate centralized control, market mechanisms, and cultural determination. Asian economies and markets are quite diverse, consisting of emerging and mature markets, making it difficult to view them through a single lens. As a result this course seeks to introduce students to a variety of conceptual frameworks in these countries. Examinations of the major economic players China, India, and Japan form the backbone of the course, but the precise geographic emphasis will vary with instructor, and may also include discussions of Japan, Korea, Vietnam, Singapore, Indonesia, Taiwan, and other Asian states. Themes of the course will vary depending on instructor, but may include industrialization, sustainability and the environment, gender and labor, protest and political reform, and consumerism and advertising, among others. The course will also offer a general introduction to economic theories that underpin the concepts of globalization, capitalism, and socialism as they are understood in an Asian context. This course is intended as an introduction to Asia for those with particular interests in Business, Economics, Global Studies, Labor, and/or Government. Through weekly readings, films and class discussion students will be introduced to the development of Asian economies in the global context.

ASIA 188: Tibet: People, Places and Spaces

3 Credits

Few places generate as much curiosity, interest, or controversy, in the Western mind than Tibet. This course examines Tibet from a variety of perspectives from Tibet's political unification under a single ruler in the seventh century up to Tibet's incorporation into the People's Republic of China in the latter half of the twentieth century. Adopting a Tibet-centered focus, this course examines three core dimensions of Tibet namely its people, its religion and its strong sense of place to allow for a more nuanced and comprehensive understanding of Tibet to emerge. No background or specialized knowledge about Tibet is expected though a willingness to read primary documents on a variety of religious, ethnic and political themes will be quite useful. In this course students can expect to gain an appreciation for how religion, history and politics contribute to contemporary portrayals of Tibet, Tibetans and their society.

International Cultures (IL)

ASIA 200: What Are Asian Languages?

3 Credits

Introduction to the interrelated notions of language, interaction, and culture centering on regions and languages covered in Asian Studies. The purpose of the course is to introduce the interrelated concepts of language, interaction, communication, and culture. The focus is on Asian languages (Korean, Japanese, Chinese, Persian, Hindi, Punjabi, and Urdu) spanning the regions addressed by the Department of Asian Studies. Students explore which concepts in language and culture are universal (e.g., basic reference, time, space) and which are language-

culture specific. The course examines what constitutes human language and how human language differs from other forms of communication, e.g., animal communication, artificial languages, and computer-related languages. At issue is the concept of meaning, gradations of meaning, nuances of meaning, literal meaning, implied and inferred meaning, and so forth. The course provides an overview of the essential branches of linguistics (phonetics, phonology, morphology, semantics, syntax, and pragmatics) initially using English examples to illustrate these areas of linguistic focus. English is also used to illustrate the classical notions of parts of speech. The course provides an overview of the geographic regions in which each of the seven languages are spoken, as well as an overview of writing systems, the notions of standard languages, official languages, government oversight of language purity, and dialects. The course examines pragmatics, including basic theories of politeness. Students will gain an in-depth understanding of some of the socio-political underpinnings of the notions of "standard" language, deviant language, and dialects. Students will gain a basic understanding of the types of concepts in language and culture that are universal (e.g., basic reference, time, space) and those that are language-culture specific. Students will be expected to discern the multitudes of ways that meaning is created in language and interaction. This course is open to any students interested in learning about the language-culture interface as it applies to languages offered in Asian Studies (plus Persian). Students of any proficiency level of any of the target languages are welcome, from absolute beginners to heritage and/or native speakers.

ASIA 215: Architecture and Art of South and Southeast Asia

3 Credits

Survey of the architecture/art of South/Southeast Asia (emphasis on India) from the Bronze Age to a globalizing present. ARTH 215 / ASIA 215 Architecture and Art of South and Southeast Asia (3) (GA;IL) (BA) This course meets the Bachelor of Arts degree requirements. This course has a focus on the architecture and art of South Asia (India, Pakistan, and Bangladesh) and Southeast Asia (particularly Thailand, Cambodia, and Indonesia). Topics will span a time period that begins with Bronze age urbanization in South Asia and concludes with the emergence of globalized architecture in the context of modern nation states. The course will be an opportunity for students to engage with artistic traditions and patronage systems that have adapted to cross-cultural currents, including the more recent forces of colonialism and globalization. Early Buddhist and Hindu architecture and sculpture, the medieval Hindu temple, the advent and adoption of Islam and its artistic forms, the emergence of an early modern empire under the Mughals and their patronage of architecture and painting, British colonial architecture and contemporary interpretations of Modernist architecture and art, are some of the topics that will be covered. Besides paying attention to the formal aspects of buildings, cities and objects, lectures will incorporate information on the emergence of Art History as a discipline in South and Southeast Asia. Lectures, exams and reading assignments will aid in providing students with an intensive introduction to the region's cultural and artistic diversity.

ASIA 400: International Culture in East Asia

3 Credits

Study of the role of culture in East Asian regional and East-West international relations. ASIA 400 (PL SC 486/HIST 489) International Culture in East Asia (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the place of culture in international history through a comparative look at the role of cultural circulation and exchange in relations among China, Korea, and Japan (and between East Asia and the West) from the propagation of Buddhism in the first century A.D. to present-day circulation of popular music, movies, and comics. We will explore the international politics of culture and the politics of international culture, considering questions of what constitutes culture, whether it is ever entirely separate from politics, and how that separation has evolved over time. These larger themes of the course will be tackled by following the historical movement of concrete objects and people throughout the region. This is a course in international history, but it also seeks to explore aspects of international relations. The goals of the class are not only to gain an understanding of the uses and

impact of culture in international relations, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will think critically about assigned texts to develop their own interpretations of their meanings. Through readings, discussions, presentations, and the final project, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students' appreciation of the assigned readings, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytic and expressive abilities.

ASIA 401: Technology & Society in Modern Asia

3 Credits

Role of technology in modernization, national identity, and foreign relations of one or more Asian countries from 19th century to present day. ASIA 401 Technology & Society in Modern Asia (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The countries of Asia are often seen (or imagined) in the West today in terms of their technological capabilities. This course will examine the role of technology in the modernization, national identities, and foreign relations of one or more countries of East, South, or Southeast Asia from the mid-19th century to the present day. Specific content will vary according to individual instructor, but topics may include the relationship between technological development and international relations, national power, leisure, domestic political and aesthetic movements, war, empire, and trade, as well as the impact of technology on interconnected images of self and other on the part of the peoples of Western and Asian countries. The objectives of the course are not only to learn about the role of technology in modern East Asia, but also to encourage us to rethink the way we view other countries and the factors that go into those perceptions (as well as developing a new way of understanding of what contributes to the views other peoples hold of their own countries). Students will also consider the changing role that technology has played (and continues to play) in all modern societies.

ASIA 402: Language, Culture and Cognition in East Asian Context

3 Credits

This course is a linguistic introduction to the relationship between language, culture, and cognition with a focus on Chinese, Japanese, and Korean. In this course, we study the cognitive linguistic view that human cognition is fundamentally embodied and shaped by various figurative processes such as metaphor and metonymy grounded in our bodily and cultural experiences, and that human thought and

language are fundamentally metaphorical in nature. We examine how we think and speak figuratively and conceptualize our experience metaphorically in everyday life, and compare the languages in terms of cognitive universals and cultural variations. The objectives of this course are threefold: (1) to lead language students to a linguistic approach to language analysis so that they learn about how individual linguistic expressions fit into a coherent linguistic system; (2) to enable them to see how linguistic structures reflect underlying cognitive, conceptual structures which are derived from the interplay between human embodiment and cultural environment; and (3) to provide them with a broad perspective on similarities and differences among Chinese, Japanese, and Korean as components that form a coherent category known as "East Asian". Class work will include some lecture but will emphasize guided discussions, literature review writings, student presentations, and research papers. This interactive approach is intended to encourage students' participation, involvement, and cooperation in learning, to help them understand the relationship between language, culture, and cognition, and to assist them in developing both analytic and expressive abilities. This course is designed to count as a BA "Other Cultures" and International Culture. Students can take this course as long as they have an interest in the relationship between language, culture and cognition, especially in the context of East Asia.

ASIA 403: Food Cultures of Asia

3 Credits

Food Cultures of Asia explores cuisine as a window to the region's geography, history, and culture. Tracing the specific histories of certain Asian dishes, spices, and grains, we will not only learn about Asian cultures, but also develop an understanding of how people around the world relate to food, both as consumers and producers. Because of the diversity of cultures within Asia, and the increasing interaction of cultures across the globe leading to the emergence of novel forms of fusion cuisine, this course is well situated to fulfill not only the international cultures requirement, but also address the broader need of a well rounded education expected from a Bachelor of Arts degree. Through a comparative approach, we will reflect on our own food choices and think deeply about food's relationship with culture and identity. With readings drawn from historical records, scholarly essays, food memoirs, and popular books and podcasts on the science and culture of food habits in various Asian cultures, the course will provide insight into specific Asian societies, as well as a general awareness of food's role in cultural identity.

ASIA 406: Issues and Practices in Teaching Asian Languages

3 Credits

This course aims to provide basic pedagogical training for teaching Asian languages as second/foreign language. It involves critical reading and discussion of major pedagogical principles and issues in teaching Asian languages as second languages, with emphasis on topics such as current trends and issues in the field of language teaching (general and Asian-specific), foundation for classroom practices, teaching by principles, agency and motivation in language learning, teaching across proficiency levels, social-cultural and cognitive foundations of language acquisition, teaching language skills (listening, speaking, reading, and writing), teaching grammar and vocabulary, language assessment/measurement, and emerging trends in Asian language learning and teaching. Practical topics such as lesson planning, classroom observation, peer teaching, classroom activities, self- and peer evaluations, best practices in teaching Asian languages, and heritage language instruction are also discussed. This course is suitable for those who have completed an advanced level of Asian Languages and who wish to teach these languages in the future. The course is also suitable for those who wish to teach English in Asian countries.

Bachelor of Arts: World Cultures

ASIA 414: Chinese Language, Culture and Society

3 Credits/Maximum of 3

The study of Chinese language and culture and a perspective on the way of life in contemporary Chinese society. Through this course, the students are introduced to a cognitive approach to the study of Chinese language and culture and a broad perspective on the Chinese way of life in contemporary Chinese society. In particular, we will study how the interaction between Chinese language and culture frames the worldview

of Chinese speakers, how the usage of the Chinese language manifests the underlying conceptual structure, which in turn is shaped by the physical (including bodily) and cultural experience of its speakers, and how conventional usage of linguistic expressions of Chinese reflects, and possibly influences, the ways in which Chinese speakers see or conceptualize the world. We will focus on conventionalized expressions, which include compound words, idiomatic phrases, and proverbial sayings, in the Chinese language, and study the Chinese conventional ways of talking about reality, both external and internal, as windows into Chinese culture and cognition. More generally, we will try to understand the embodied nature of human cognition as we see how abstract thought is grounded in bodily experience in and with the physical and cultural world. We will also look at various domains of life in contemporary China in order to gain a better understanding of Chinese society. The objectives of this course are threefold: (1) to lead Chinese language students to a linguistic approach to language analysis so that they learn about how individual linguistic expressions fit into a coherent linguistic system; (2) to enable them to see how linguistic structures reflect underlying cognitive, conceptual structures which are derived from the interplay between human embodiment and cultural environment; and (3) to provide them with a broad perspective on contemporary Chinese society.

ASIA 415: China Beyond China

3 Credits

Study of modern and contemporary Chinese culture in its diversity and its intercultural contexts. CHNS 415 China Beyond China (3) (IL) In order to begin to understand Chinese culture, we cannot treat it as a monolithic, unified whole. This course will give an introduction to modern and contemporary Chinese culture (focusing on the 20th and 21st centuries) by paying special attention to China's inner diversity, as well as the continuous shaping of Chinese culture in contact, dialogue, and tension with other cultures. Through the study of literary texts, films, and other cultural material - as well as a small number of theoretical essays - this course will focus on: 1) Chinese culture in its variety by focusing on Chinese cultural spheres beyond the People's Republic (Taiwan, Hong Kong), the Chinese diaspora, as well as other ethnicities and cultures within Mainland China; and 2) the ways in which Chinese modernity was impacted by intercultural impulses, as well as the recent self-representation of China in the context of globalization. Course Objectives include: 1. Understand modern and contemporary China in its cultural diversity, as well as shaped by intercultural and global processes. 2. Critically analyze processes of cultural contact and the representations of cultural differences. 3. Think critically about globalization with its impact on such categories as the local and the national. 4. Question your assumptions about the world, re-examine your own points of view, and understand cultures and value systems that may differ from (or be shared with) your own.

ASIA 416: Gender and Sexuality in China

3 Credits

Study of gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China. CHNS 416 Gender and Sexuality in China (3) (IL) This course explores gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China (from the end of the 19th century up to today), paying attention also to developments in Chinese cultural spheres beyond the People's Republic, such as Taiwan, Hong Kong, and the Chinese diaspora. This course will use the representation of gender, sex, and sexuality as a lens through which modern and contemporary Chinese culture can be understood in its historical, social, and aesthetic changes. The analysis of representations of gender and sexuality throughout the class will focus on literary and filmic texts, as well as art, rather than on theoretical work on gender and sexuality (in China or in general). Course Objectives include: 1. Critically assess the complex construction of gender roles and sexuality in modern and contemporary Chinese literature and film. 2. Reflect critically on different ways of understanding and representing gender difference. 3. Critically assess the connections between gender and sexuality and changing political, historical, and cultural contexts. 4. Question your assumptions about gender and sexualities in the context of cultural difference, understand cultures and value systems that may be different from (or be shared with) your own.

ASIA 417: The Warrior, the Courtesan and the Ghost in Classical Chinese Novels

3 Credits

This course provides an introduction to major classical Chinese novels by focusing on three character types: the warrior, the courtesan, and the ghost. CHNS 423 417 The Warrior, the Courtesan and the Ghost in Classical Chinese Novels (3) (IL) A narrowly defined notion of modern literature is a relatively recent phenomenon that dates back only to the early twentieth century in the Chinese context. There is, however, a long tradition of the vernacular novel that remains influential till today, in spite of its marginalization by the Western-influenced Chinese Enlightenment project. This course provides an introduction to major classical Chinese novels by focusing on three character types: the warrior, the courtesan, and the ghost. The warrior is commonly found in historical romances, tales about errant knights and assassins, and martial arts fiction. Although the typical setting for the courtesan is in novels about prostitution (Xia Xie Xiaoshuo), this course will relate this figure to other female types in various domestic space, thereby tracing the genealogical connections between the domestic fiction and the courtesan fiction. The ghost can be found in Accounts of the Strange (Zhi Guai) and Tales of the Miraculous (Chuan Qi). This course will relate this figure in these narrative genres with other types of the supernatural being, such as Gods and Demons. Most readings will be drawn from the Mind-Qing period (14th -20th c) but modern and contemporary literature as well as visual or media culture that consciously continue or rewrite these narrative traditions will be considered as well. All readings and class discussions will be in English. Knowledge of Chinese or Chinese literature is not assumed or required. From year to year the content we

cover might change, but this course will always explore: 1) Major classical Chinese narrative traditions that are radically different from the Western-influenced narrative modes of the twentieth century. 2) Pre-modern practices of literary reading and criticism and pre-modern notions of literacy, literature, and modes of circulation. Course Objectives include: 1. Critically analyze major texts and genres of the classical Chinese novel. 2. Understand pre-modern practices of story-telling, literary circulation, reading, and criticism. 3. Think critically about pre-modern societies and their connections with the contemporary world.

ASIA 418: Confucius and the Great Books of China

3 Credits

This course familiarizes students with the critical texts and intellectual cultures of Warring States and early imperial China. CHNS 418 / ASIA 418 / HIST 482 Confucius and the Great Books of China (3) This course exposes students to the key texts, thinkers, and ideas that form the foundation of the Chinese classics and classical period, providing an integral foundation for the study of Chinese history, culture, or literature. While the emphasis is on the texts and their main themes, the course will encourage historical engagement with the texts by placing them into a context of competing cultural, social, political trends. Readings may be grouped around categories of teachings such as "(Confucian) ritualists," "statesmen," "military strategists," "rebels," "recluses," and "spiritual leaders." Students will learn how each of these types of teachings and thinkers related to each other, as well as how they responded to the emergent, centralized political order of the day. This will help students better understand many of the recurrent intellectual, political, and religious themes that arise in later Chinese history as well.

ASIA 419: The Chinese Rhetorical Tradition

3 Credits/Maximum of 6

Study of the rhetorical works in ancient China as well as multiple facets of modern Chinese rhetoric. CHNS 419 The Chinese Rhetorical Tradition (3 per semester/maximum of 6) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course surveys the Chinese rhetorical tradition dating back two and a half millennia. Rhetoric is defined here as the study and practice of artful means of communication, including poetic, expository, and argumentative modes. The class will first delve into the works of competing intellectual schools in pre-imperial China (pre-221 BCE), which set a corner stone for thoughts and practice of communication in the imperial period (221 BCE - 1918). These schools, including the Daoist, the Confucian, and the Legalist, developed their rhetorical notions through engaging with the political, intellectual, and ethnic Other. From here the class will examine the multiple facets of modern Chinese rhetoric, which has undergone a continual contact and

conflation with other rhetorical traditions in the global contact zone. The class will focus on topics such as feminist discourse, Chinese-American rhetoric, and the teaching of writing, which bear direct implications on our contemporary social life.

ASIA 424: Transnational Korean Literature

3 Credits

Exploration of seminal Korean texts, including poetry, fiction, autobiography, and criticism, from the early twentieth century to the contemporary era. This course provides a comprehensive overview of modern Korean literature within a transnational context. As we learn how to critically analyze seminal Korean texts, we will locate them in the social, political, economic, and cultural conditions under which they were produced and received. In grappling with some of the fundamental issues they raise, including colonialism, migration, national division, war, gender relations, developmentalism, urbanization, democratization, and contemporary consumer culture, we will also seek to situate these writings in the Korean vernacular within the larger context of global modernity. Rather than take Korean literature and global modernity as given or apart from each other, we will attend to their intersections by raising such questions as: How did modern experiences, constructed through the interface with unfamiliar Others, change preexisting ways of writing and reading? How did foreign occupations affect the formation of a national literature? In what ways do Korean writers' representations of the inter/national events and phenomena on and beyond the Korean peninsula at once enrich and complicate empirical investigations into modern histories of Korea, East Asia, and the world? In an increasingly borderless world, can we draw a boundary around what is called "Korean" literature? In parallel with these questions, we will further discuss why and how to engage in literary practices in the current age of digital reproduction. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

ASIA 425: Global Korean Cinema

3 Credits

Exploration of Korean cinema from the early twentieth century to the present, with an emphasis on its global/local dynamics. This course offers an introductory overview of Korean cinema. As we trace its history from the colonial period to the current "Korean wave," we will also engage with film criticism, the trans/national contexts of film productions, the particular aesthetics of selected auteurs/genres, and local/global receptions of Korean cinema. Our discussion of formal elements and key issues featured in these films; modernity, colonialism, division, nation, class, gender, identity, tradition, ideology, desire, violence, and migration,

among others; will be informed by readings of secondary sources and theoretical works, as well as literary materials produced during the same period. Throughout our analyses, we will seek to contextualize the cinematic texts within moments of major shifts not only in modern Korean history, but also in the transnational film industry and screen culture. In pursuing a broad and detailed perspective of Korean cinema, this course will ultimately enrich, and simultaneously complicate, our understanding of Korea, cinema, and the world. Instruction and all materials will be in English. No preliminary knowledge of Korean history or language is required for taking this course.

ASIA 428: Asian American Literatures

3 Credits/Maximum of 6

This course explores contemporary Asian American literary production by reading a wide variety of texts focused on the possibilities and limits of space and place. Our goal in this class is two-fold: to orient ourselves in relation to Asian American literatures and to orient Asian American literatures in relation to other geographical formations such as the nation, the hemisphere, the transpacific, and the world. To accomplish this, we will consider how physical and geographical spaces map on to psychic and historical ones, in the process focusing on a diverse set of locations-including ethnic enclaves, detention camps, islands, the transpacific, and the hemisphere. We will engage key concepts in Asian American literary studies such as transnationalism, globalization, racialization, imperialism, history, culture, and postracialism. Additionally, we will think about how issues of identity, belonging, contestation, aesthetics, diaspora, and genre are critical to Asian American literary production. Finally, we will interrogate the constructed, pan-ethnic nature of "Asian America" as itself an imagined nation. In the process, we will familiarize ourselves with the richness and diversity of Asian American literature by considering a variety of genres, including short stories, novels, drama, memoir, comics, and film. In encouraging students to develop understanding of the historical backgrounds, cultural and scientific contributions, economic, social, psychological, and political circumstances of Asian Americans, they will 1) Learn to see nations, cultures, and/or social identities not in isolation, but in relation to each other; 2) Gain increased knowledge of different cultural values, traditions, beliefs, and customs; 3) Appreciate the diversity that exists among persons who share a particular social identity; 4) Recognize and be sensitive to the different ways social identities have been valued; 5) Increase their understanding of stereotypes and biases; and 6) Increase their awareness of the nature of social justice and equity. These goals are supported by every aspect of the course: the reading list, the in-class conversation and lectures, the collaborative projects, the quizzes and exams, and the analytical essays. Students are not simply exposed to texts and topics but must demonstrate engagement with, understanding of, and critical analysis in relation to the course's focus.

ASIA 430: Japan in the World

3 Credits

Study of Japan's foreign relations and position in the international community from the early 19th century to the present. ASIA (JAPNS) 430 Japan in the World (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine Japan's foreign relations and changing position in the international community, from the rethinking of relations with the Western world in the early nineteenth century to its emergence as a pop culture superpower in the present day. The course will explore the structures of international relations, such as imperialism and international organizations, with the Japanese experience providing a viewpoint that differs from the standard Western-centric narrative in important ways. We will also consider the development of alternative methods of diplomacy, including cultural exchange and economic and technical assistance.

Prerequisite: JAPNS 120; JAPNS 121; ASIA 100; ASIA 101; ASIA 102; ASIA 105; ASIA 172; ASIA 175; ASIA 185; HIST 172; HIST 175; HIST 185; 5th Semester standing

ASIA 431: Courtly Japan

3 Credits

Focused study of aristocratic society and culture of Heian period Japan. JAPNS 431 (ASIA 431) Courtly Japan (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. The Heian period of Japanese history saw the apex of a refined court culture. Through readings of primary and secondary sources, this seminar-style course will explore the activities, norms, and structures of courtly society in Japan, from the centralization of imperial power in the 8th century through the court's political marginalization in the late 12th century. We will pay particular attention to religion, the arts, politics and governances, gender, and the gradual rise of samurai power in the shadows of the court. This course is intended to provide an introduction to the political, social, economic, and cultural life of the Heian court of ancient Japan. The goals of the class are not only to gain an understanding of a time and place far removed from our own, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian or literary critic themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through reading, discussions, and writing, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing. The course is intended to deepen student's appreciation of the cultural production of ancient Japan, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytic and expressive abilities. The course is designed to be suitable for all students generally interested in Japan or in various fields of humanistic study.

International Cultures (IL)

ASIA 432: War and the Warrior in Japan

3 Credits

Survey of the role of warfare and the warrior in Japan, with attention to changing cultural settings. Taught in English. JAPNS 432 (ASIA 432) War and the Warrior in Japan (3) (IL) This course is intended to provide an introduction to the social and historical roles of warfare, and the changing cultural figure of the warrior, in Japan. Some prior study of Japan (JAPNS 120 or JAPNS 121 or HIST 172) is required. All materials will be available in English. Students will learn about subjects like the causes of violence, culturally acceptable ways of resolving conflict, obligations of victor toward vanquished, expectations regarding the memory of the war dead, the ideal of the warrior as a cultural figure, and historical roles that Japanese warriors have played in ages of peace. Readings and screenings will cover several genres, such as film, historiography, history, documentary, classical epic, modern novel, and excerpts from Japanese history textbooks (in translation). The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the cultural contexts that have generated attitudes toward war and the warrior in Japan. In addition, students will learn to think critically about various media's techniques and aesthetics of representation, and will become more engaged, critical investigators of literature and related media. Readings and in-class discussion will focus on the image of the warrior as a cultural icon, exploring the many ways in which popular understandings of the warrior have changed over time, for instance, as popularized dramatics began to idealize warriors as moral exemplars in the late medieval period, and then as historical realities made the position of the warrior itself redundant in the early modern era. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students' appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. Through critical reading, group discussion and interpretive writing, students will hone skills for evaluating modes of cultural production and consumption in premodern and modern Japan. Evaluation will be through means such as in-class presentations, short writing assignments, midterms or quizzes, one analytic paper (3-7 pages), and in-class/on-line participation and discussion. The course is designed to be suitable for all students generally interested in Japan, or interested in various fields of humanistic study.

ASIA 434: Beyond Anime

3 Credits

The visual, tactile, and literary arts play key roles in how modern nation-states make sense of themselves and how they make sense of other nations. Japan provides one key example through which to observe the use and function of art to create not only the image and identity of a nation and national culture, but also the image and identity of other national cultures. In recent years, Japanese popular culture has been

reborn around the world. A global generation has grown up watching anime and reading manga in Spanish, Chinese, Russian, and English. Beyond Anime is designed to contextualize the recent appropriation and dissemination of Japanese popular culture through the cyclical history of such appropriations through the modern period. In this way, the course will explore the precursors, antecedents, and contexts to our present cultural moment. Through film, photography, posters, matchbook-labels, textiles, industrial design, novels, and myriad other popular media, this seminar-style study of Japanese popular visual culture will help students see Japanese visual arts in terms that are local to Japanese aesthetics and through those that transcend local cultures. Drawing on the long history of illustrated narrative from scrolls to chapbooks, through film and photo essay, this course confronts the exoticist notion that Japan's arts have always placed a disproportionately heavy emphasis on the visual. Through comparative readings of cultural and visual material from Japan, this course will raise questions of aesthetic, cultural, and national difference. Specific topics will vary with instructor, but may include: the rendering of three dimensional space through perspective, the use of pictures in the service of narrative versus the use of pictures as narrative, and how notions of negative space promise deep insight and risk cross stereotypes.

ASIA 440: Monuments of Asia

3-9 Credits/Maximum of 9

An exploration of major Asian sites and monuments through a focus on their historical and cultural significance. ART H (ASIA) 440 Monuments of Asia(IL)(BA) This course meets the Bachelor of Arts degree requirements. In this course, major Asian monuments are introduced in their physical, historical and cultural contexts. Students are also exposed to various theoretical approaches through which these monuments will be studied. Some of the themes around which the course is structured include patronage, religious practice, cultural meaning, political relevance and the shifting meanings of monuments over time. Students will learn to understand and discuss ways of defining monuments, their formal character and lineage, historical and cultural contexts and their representation across space and time. Each semester monumental sites will be organized around a common theme such as, Hindu and Buddhist Sites across Asia: Historical Significance and Contemporary Relevance, Patronage and Religion, Islam across Asia: Global Ideas and Local Contexts, Political and Symbolic Centers in Asia: Between Early Modernity and the Nation State or Early Modern Asia: Empire and the Built Environment. Alternately, these topics will be incorporated within a multi-themed structure. The objective of the course is to expose students to the histories and cultures of Asia in a globalizing world. Another objective is to equip students with the methodological tools of art history as a discipline, even as they learn about specific monuments. The course will build on the foundation laid by survey courses in Art History, Architectural History and Asian Studies. Weekly readings will be assigned and discussed in class. The development of analytical and writing skills will be stressed, and grades will be based partly on essay exams and short response papers. In addition, students will write a research paper, to be completed by the end of semester.

ASIA 457: Hiroshima & the Holocaust in History and Memory

3 Credits

The history and memory of the Holocaust and Hiroshima and Nagasaki are often taught separately in different disciplines. This course will examine them together through the various ways different societies remembered, understood and commemorated these. Using the extensive literature on the history of memory, this course further suggests ways in which these memories and histories affected and were entangled by each other. Specific content will vary according to individual instructor, but topics may include victim cultures, cold war nuclear history, trauma, human rights, dark tourism, memorials, architecture as well as the general impact of these tragedies on the fraught politics of memory in East Asia and the Middle East, or the way the memories of the tragedies were entangled with the civil rights and other struggles in American and global history.

ASIA 465Y: Democratization in Asia

3 Credits

A course which identifies components of democracy, such as definitions, measures, datasets, and the democratization process. PL SC (ASIA) 465Y Democratization in Asia (3) (IL) This class is an upper-level seminar on democratization in Asia. How do countries move from having an authoritarian regime to a democratic government? Why are some democratic governments stable while others are not? In this class, we will focus on democratization theory and how it applies to countries in Asia. This course is organized into two parts. In the first part of the course, we will discuss democracy and democratization theory. We will cover such components as: definitions, measures, datasets, and the different stages of the democratization process. In the second part of the course, we will apply these concepts and measures to specific Asian countries. Course topics will be explored through readings from textbooks, articles, datasets, and media sources. By the end of the course, students will have a deep knowledge about a wide range of Asian countries. Students will develop the skills to compare countries, will understand the democratization process within Asia, and will be able to generalize from their knowledge to evaluate democratization events around the world. Finally, students will gain a deeper understanding of what is democracy and how easy or difficult it is to install and maintain. This course fulfills the distribution requirement for comparative politics, as well as the advanced and related course requirements for Political Science majors. In addition, the course fulfills the supporting course requirement for International Politics majors and the related areas requirement for Asian Studies majors. Finally, the course fulfills the requirements for writing across the curriculum and other cultures.

ASIA 469: Government and Politics of South Asia

3 Credits

This course offers an overview of the politics of modern South Asia with specific focus on Afghanistan, India and Pakistan. ASIA (PL SC) 469 Government and Politics of South Asia (3) (IL) This course provides an overview of the politics of modern South Asia with particular attention to the experiences of Afghanistan, India and Pakistan. It examines theories of political and economic development and ethnic politics, the impact of the British colonial experience on South Asia, the rise of nationalism, and the emergence of independent nation states in the region. Three important themes are explored throughout the course: (1) the state of economic development in the three countries; (2) the relationship between identity politics and violence; and (3) the international relations of these countries, with particular attention to terrorism and nuclear policy. Course topics will be explored through readings from textbooks and assigned articles, articles from current news sources and documentary films from the three countries. By the end of the course, students will have knowledge of the politics of Afghanistan, India and Pakistan and the political factors that have shaped their development over the past century. Students will acquire the tools necessary to evaluate critically the impact of war, the legacy of colonialism, and the challenge in building durable democratic institutions. This course fulfills the distribution requirement for comparative politics, as well as the advanced and related course requirements for Political Science majors. The course also fulfills the supporting course requirement for International Politics majors and the related areas requirement for Asian Studies majors.

ASIA 472: Tradition, Modernity, and Cultural Change in South Asian Societies

3 Credits

India and its neighboring countries provide an interesting view of the ways cultural diversity functions in the world. The region contains one-sixth of humankind, and its people are differentiated not only by religion, language, caste, and ethnicity, but also by ecology, technology, dress and cuisine. ASIA 472 examines how South Asia's history may have influenced the diverse behavioral, cultural, and social norms from the ancient to the modern times Beginning with a preliminary discussion of ancient medieval, and colonial Indian history, the course examines the institutions of caste, family and kinship, marriage, gender, and religious practices of the many different religious, and regional, and language communities of the sub-continent, and how they may have changed over the years. The course concludes with a review of how the different South Asian communities both within and outside the subcontinent have dealt with modernity in the realms of politics, religion, law, arts, cinema, and popular culture. This course will be cross listed with Anthropology and will be taught by both Asian Studies and Anthropology faculty. thereby making it useful to students of both Asian Studies and Anthropology. Furthermore, students in this course will be exposed to research methodologies used by scholars of history, literature, and anthropology.

Prerequisite: 5th semester standing Recommended Preparation: Introductory courses in Anthropology, Asian Studies, History, or Religions Studies would be useful background for this course.

ASIA 474: Early Modern Japan

3 Credits

Japanese history from 1580-1880. ASIA 474 (HIST 474, JAPNS 426) Early Modern Japan (3) Japan's Tokugawa period can be difficult to grasp. It resembles a modern society in many respects but operated according to a logic of social organization different from that of most modern states. There was a collective sense of national identity, but its characteristics differed significantly from modern forms of Japanese identity. Moreover, modern ideologies have contributed to the characterization of early modern Japan as a rigid society and of the country as a whole having been isolated from the rest of the world. The main purpose of this course is to afford students the opportunity to study early modern Japan in detail and, insofar as possible, on its own terms. Through readings in primary and secondary sources, and through the evaluation of visual images, this seminar-style course will deepen students' knowledge of Japan and serve as basis for comparative study of other early modern societies. Although the course investigates classic areas of historical study such as institutional development and foreign relations, the emphasis is on social and environmental history. The course encourages students to think about a range of approaches to the past and to think about the ways our contemporary biases influence the ways we understand the past.

Prerequisite: HIST 172 , HIST 174 , JAPNS120 or JAPNS121

Cross-listed with: HIST 474, JAPNS 426

ASIA 475Y: The Making and Emergence of Modern India

3 Credits

India's transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle. ASIA (HIST) 475Y The Making and Emergence of Modern India (3) (IL) (BA) This course meets the Bachelor of Arts degree requirements. This course covers India's transition to social, economic, and political modernity through the experience of British colonial rule and the nationalist struggle. It begins during the early modern period, when European travelers encountered the flourishing Mughal Empire, and moves into the dynamic moment following, when the East India Company was one of various competing forces, both locally and globally. It then examines the rise of British power, and the various responses to it from collaboration to mutiny; the multiple development of nationalisms and anticolonialisms, including secular, socialist, Hindu and Muslim variations; the accompanying social reform visions, including caste abolition and feminism; the turbulent paths toward partition and independence, resulting in the postcolonial states of India, Pakistan, Bangladesh, Nepal, Sri Lanka, and Afghanistan. It then follows the continuing trajectories of these countries after independence, from the Nehruvian years to the neoliberal shift, with attention to emerging social movements and issues including caste and gender relations; religious and separatist politics; struggles around land and development; urbanization, and labor migration. This course raises important

questions about the nature of modernity and its relationship to global interconnectedness, the rise of capitalism and colonialism, industry and technology; while emphasizing South Asian social and cultural contributions and responses to these global shifts. By filling in the context of this part of the world to that global story, the course enables students to grapple with some of the major economic and geopolitical trends of the early 21st century.

ASIA 478: China and the World

3 Credits

This course examines China's economic reform and development and its engagement with the world since 1978. It pays close attention to the interplay of politics and economics. The course first examines the initiation and process of China's economic reform. This part of course covers topics including state-owned enterprise reform, township and village enterprises, fiscal decentralization, and tax reform. Then the course explores China's interactions with the world, paying special attention to trade, foreign investment, and development aid. Finally, the course addresses the issues and challenges that China faces for sustainable development, including corruption, income inequality, and environmental deterioration. The goal of this course is to give students a comprehensive view of the political economy of contemporary China and its relationship with the world and to develop students' understanding of economic reform and development in the developing world.

Cross-listed with: GLIS 478, PLSC 478

International Cultures (IL)

ASIA 480: Japan in the Age of Warriors

3 Credits

An overview of Japan from the 10th to 17th century, a period of political decentralization, cultural efflorescence, and social change. ASIA (HIST) 480 Japan in the Age of Warriors (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. By the eighth century, Japan had become a centralized state centered on the reign of a sovereign, commonly known in English as an emperor. At the end of the ninth century, the emperor's court relocated to the city of Heian (Kyoto), and soon thereafter, an elegant court culture developed in the capital. The courtly culture was based on civilian values and civilian rule. In the countryside, however, Japan was gradually becoming militarized. Local warlords began rising to prominence and vying with each other for power. One of them, Taira-no-Masakado, rebelled against the central government during the years 939-940, declaring himself "emperor" of several provinces in eastern Japan centered on Hitachi. Although the central government in Kyoto enlisted other warrior groups to put down Taira-no-Masakado's rebellion, the process of militarization was underway. Buddhist temples also participated in this process, using their wealth and influence to assemble monastic armies on occasion. This course examines Japanese history beginning approximately in the 10th century, at time when civilian high culture in the capital was approaching the height of its development. At the same time, the process of militarization of the countryside was beginning to undermine that

civilian court culture. The course ends in approximately the seventeenth century with the establishment of a military government under the Tokugawa shoguns. This development was ostensibly the peak of warrior influence, with the samurai (=warrior) class entrenched by law as the elite group within society. However, just as the warriors began their rise to power in the tenth century, by the end of the seventeenth century they were rapidly losing influence and prestige to wealthy merchants as the forces of the market economy spread throughout Japanese society. HIST 480 is a course in medieval Japanese history, broadly defined. Different instructors will emphasize different aspects of Japanese history and culture during this era. Approaches to teaching will also vary depending on the instructor. Class sessions can take the form of lectures or discussions. Assessment methods and learning activities may include debates, discussions, exams, research papers, book review papers, and other similar academic activities.

International Cultures (IL)

ASIA 481: Modern Japan Since 1800

3 Credits

The transformation of Japan from a relatively isolated, agricultural nation into a highly industrialized world power. ASIA (HIST) 481 Modern Japan Since 1800 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. In the late 19th century, Japan emerged from relative seclusion and grew, within the period of a few decades, into one of the world's major powers. Japan's remarkable transformation into an imperialist power ended suddenly with defeat by the Allied powers in August 1945. But the history of prewar and wartime Japanese nation-building and economic growth set the stage for postwar rebuilding. This course examines Japan's development as a powerful modern state, imperialist aggressor, defeated nation, economic power-house, and pop culture super-power. Specific content will vary according to individual instructor, but may include the structures of state and society in the early 19th century, the creation of the Meiji state (1868-1912), the successes and costs of the Meiji government's program of rapid modernization and Westernization, imperialist expansion, the road to war and defeat in World War II, the postwar U.S. occupation of Japan (1945-1952), Japan's resurgence as a global power, and some of the major challenges facing the Japanese state and society today. The goals of the class are not only to gain an understanding of the history of another country, but also to develop the skill of building such an understanding through primary and secondary sources, both written and visual. Students in this class will take on the role of historian themselves, thinking critically about assigned texts and making their own interpretations of their meanings. Through readings, discussions, and written work, students will enhance their ability to think critically and to express their ideas clearly in both speech and writing.

ASIA 484Y: History of Chinese Thought

3 Credits

A study of the dynamic historical development of Chinese thought with its diverse expressions from antiquity to the present. ASIA (HIST) 484Y History of Chinese Thought (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course examines the historical developments of Chinese thought and its multifarious expressions from ancient times to the eighteenth century. It explores the unique Chinese ways and means of making sense of the world and the human condition by probing China's philosophical and religious traditions. It reveals the conscious life of the Chinese in matters moral, ethical, aesthetic and metaphysical. Moreover, by showing the unity, diversity, continuity and discontinuity in Chinese thought throughout the ages, this course debunks the popular "Orientalist" myth that Chinese culture had been a hermetically sealed and stagnant monolith until the modern era when Western influences became dominant.

Writing Across the Curriculum

ASIA 485Y: China's Last Empire: The Qing Dynasty, 1644-1911

3 Credits

China from 1644 founding of Qing dynasty to 1911 fall; Chinese society and institutions, imperialism and China's internal diversity. ASIA (HIST) 485Y China's Last Empire: The Qing Dynasty, 1644-1911 (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course will examine the Qing dynasty, the last imperial dynasty to rule China, from the seventeenth to early twentieth centuries. More than doubling the size of the previous Ming dynasty, the empire also included people such as Tibetans, Muslims and Mongols who had never before considered themselves as "Chinese" but were now Qing subjects. The course will examine how Manchu ruling family, a non-Chinese people, outnumbered by the Chinese by about three hundred and fifty to one managed to conquer and rule China for nearly three hundred years. Tracing the political, social and cultural development of China starting with the foundation and consolidation of the Qing in 1644 and concluding with the collapse of the dynastic system in 1911, this course examines the role of the imperial system, internal rebellions, and the impact of Western colonialism on China. Considerable time will also be focused on China's ethnic, religious and cultural differences in order to allow a deeper understanding of major issues and themes in late imperial Chinese history. Finally, the theme of China's international relations in Asia and the world and China's shifting place in the world will be a prominent thread of the course. Through a blend of primary and secondary sources, students in this class will need to think critically, read

broadly and express their ideas clearly regarding the evolving challenges facing China's last empire.

Astronomy and Astrophysics (ASTRO)

ASTRO 1: Astronomical Universe

3 Credits

ASTRO 1 Astronomical Universe (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Students who have passed ASTRO 5, ASTRO 6, ASTRO 7N or ASTRO 10 may not take this course for credit. Overview of modern understanding of the astronomical universe. ASTRO 1 is an introductory course for non-science majors. It provides a broad introduction to Astronomy with qualitative descriptions of the dazzling and varied contents of the universe including planets, the Sun and other stars, exoplanets, red giants, white dwarfs, neutron stars, black holes, supernovae, galaxies, dark matter, and more. The course will explore how these objects form and change and interact, how the whole universe formed and changes (cosmology), and where Earth fits in the vast scheme of things. Students will learn how our relative place, orientation, and motion in space dictate our changing view of the sky (daily and yearly sky motions, phases of the moon) and conditions on Earth (arctic, tropics, and seasonal changes). Descriptions will build upon the basic physics of gravity, light, and atoms, and will be discussed in the context of the process of science as a robust and self-correcting way of learning and knowing that relies on making and testing predictions by gathering evidence. The goal of this course is to cover most of the areas of modern astronomy at a level which requires only basic mathematics.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

ASTRO 5: The Sky and Planets

3 Credits

The development of our modern understanding of the visible sky and planetary systems. Students who have passed ASTRO 1, ASTRO 7N, or ASTRO 10 may not take this course for credit. ASTRO 5 The Sky and Planets (3) (GN) will introduce students to the wonders of the universe and help them to understand how the universe works through the laws of physics. During the semester, they will learn about the different observed motions of objects in our sky, how astronomical objects influence our concepts of time, the nature of light and spectra, how planetary systems are formed and comparative details about our solar system and other planetary systems. Many colorful images and movies of the solar system have been collected by robotic satellite missions like Voyagers I & II, the Magellan mission to Venus, Mars rovers and orbiters, the Galileo and Juno missions to Jupiter, the Cassini and Huygens missions to Saturn, and the New Horizons mission to Pluto and the Kuiper Belt. These and other images will be used to convey the excitement of discovery and nature of astronomical study of the Solar System to our students.

Prerequisite: Students who have passed ASTRO 001 or ASTRO 010 may not take this course.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

ASTRO 6: Stars, Galaxies, and the Universe

3 Credits

ASTRO 6 Astronomical Universe (3) (GN) This course meets the Bachelor of Arts degree requirements. Students who have passed ASTRO 1, ASTRO 7N, or ASTRO 10 may not take this course for credit. Overview of modern understanding of stars, galaxies, and cosmology. ASTRO 6 is an introductory course for non-science majors. It provides a broad introduction to many areas of Astronomy with qualitative descriptions of the dazzling and varied contents of the universe including the Sun and other stars, red giants, white dwarfs, neutron stars, black holes, supernovae, galaxies, dark matter, and more. The course will explore how these objects form and change and interact, how the whole universe formed and changes (cosmology), and where Earth fits in the vast scheme of things. Descriptions will build upon the basic physics of gravity, light, and atoms, and will be discussed in the context of the process of science as a robust and self-correcting way of learning and knowing that relies on making and testing predictions by gathering evidence. The goal of this course is to cover most of the areas of modern astronomy at a level which requires only basic mathematics.

ASTRO 7N: The Artistic Universe

3 Credits

ASTRO 7N (GA/GN) is both an introductory course in astronomy for non-science majors and a creative space for those with science backgrounds interested in visual arts; it provides students the opportunity to demonstrate understanding and develop a personal connection to the subject by designing four art projects. Students will learn the broad concepts of astronomy by playing an immersive video game, which allows them to 1) explore seasons, phases of the Moon, light, gravity, and telescopes from a virtual colony on Mars; 2) fly from planet to planet in the Solar System and learn about their properties and formation; 3) visit the Sun and other stars, learn how they produce energy, and about their life cycles; 4) fly through the cosmos and construct their own universe, particle by particle. Students will also learn about the relationships and exchanges between arts and sciences, and explore inspiration and perspective on these topics by designing themed art projects using traditional and digital media. These projects include assembling a photo-journal of astronomically-relevant subjects, constructing their own video-game-like scene, interpreting data to inform a plausible depiction of an alien world, and producing three-color images using methods like those employed by astronomers to compose and display Hubble Space Telescope images. Students who have passed ASTRO 1, ASTRO 5, ASTRO 6 or ASTRO 10 may not take this course for credit.

General Education: Arts (GA)
 General Education: Natural Sciences (GN)
 General Education - Integrative: Interdomain
 GenEd Learning Objective: Creative Thinking
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Integrative Thinking

ASTRO 10: Elementary Astronomy

2 Credits

ASTRO 10 Elementary Astronomy) (GN) (BA) This course meets the Bachelor of Arts degree requirements. Students who have passed ASTRO 1, ASTRO 5, ASTRO 6, or ASTRO 7N may not take this course for credit. Students may not receive General Education credit for ASTRO 10 unless they also take ASTRO 11. Overview of modern understanding of the astronomical universe. ASTRO 10 is an introductory course for non-science majors. It provides a broad introduction to Astronomy with qualitative descriptions of the dazzling and varied contents of the universe including planets, the Sun and other stars, exoplanets, red giants, white dwarfs, neutron stars, black holes, supernovae, galaxies, dark matter, and more. The course will explore how these objects form and change and interact, how the whole whole universe formed and changes (cosmology), and where Earth fits in the vast scheme of things. Students will learn how our relative place, orientation, and motion in space dictate our changing view of the sky (daily and yearly sky motions, phases of the moon) and conditions on Earth (arctic, tropics, and seasonal changes). Descriptions will build upon the basic physics of gravity, light, and atoms, and will be discussed in the context of the process of science as a robust and self-correcting way of learning and knowing that relies on making and testing predictions by gathering evidence. The goal of this course is to cover most of the areas of modern astronomy at a level which requires only basic mathematics.

Bachelor of Arts: Natural Sciences
 General Education: Natural Sciences (GN)
 GenEd Learning Objective: Crit and Analytical Think
 GenEd Learning Objective: Key Literacies

ASTRO 11: Elementary Astronomy Laboratory

1 Credits

Selected experiments and explorations to illustrate major astronomical principles and techniques. Telescopic observations of planets, stars and nebulae. ASTRO 11 Elementary Astronomy Laboratory (1) (GN)(BA) This course meets the Bachelor of Arts degree requirements. ASTRO 11 is the 1 credit laboratory component of this overview of astronomy and is intended to be taken in conjunction with ASTRO 10. It covers material similar to the lecture component in ASTRO 10, but the selected topics are covered in more depth and are focused on active learning components. Weekly two-hour labs may include investigating the habitable zone of a variety of stars, investigating the phases of the moon, analysis of the properties of stars in a color-magnitude diagram, analysis of the colorful spectra of different chemical elements, and exploration of one of the deepest images of space ever obtained. In addition, students will complete a semester nighttime observing project that typically involves learning some constellations, tracing phases of the moon, and sketching images seen through telescopes or binoculars at the student observatory.

Enforced Prerequisite at Enrollment: or concurrent: ASTRO 1 or ASTRO 10
 Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)
 GenEd Learning Objective: Creative Thinking
 GenEd Learning Objective: Crit and Analytical Think

ASTRO 19N: Being in the Universe

3 Credits

"Being in the Universe" considers three fundamental questions of human existence from both humanistic and scientific perspectives: (1) What is the nature of our universe, and to what extent are creatures like ourselves a predictable consequence of it? (2) What is the nature of time, and what does it mean to be a conscious being living our lives through time? (3) What would it mean for humans to be alone in the Galaxy or the universe, or alternatively, not alone? "Being in the Universe" is an integrative GH+GN GenEd course. The course's three major units cover the following topics: (1) We discuss cosmology and religion as human enterprises, as well as the history of science; (2) We study the basic scientific theory of the Big Bang universe, and consider its implications for human life; (3) We address contemporary theories of the multiverse from scientific, philosophical, and literary perspectives; (4) We consider the thermodynamic and relativistic theories of time, and the basic philosophical approaches to time, and discuss the implications of these for our ordinary human experience of the past, present, and future; (5) We discuss the history of life in the universe, the possibility of life on other planets, and the social, religious, and imaginative reactions to those possibilities in literature and film.

ASTRO 20: First-Year Astronomy Seminar

2 Credits

Introduction to the study of modern astronomy through discussions, activities, and writing.

First-Year Seminar

ASTRO 21: Introduction to Research in Astronomy

2 Credits

The course is designed to provide first year undergraduate students in both the ASTRO and PASTR majors with necessary tools and techniques to perform research. Students will practice a variety of techniques on authentic astronomical data, which might include light curves from the Kepler mission, galaxy and stellar spectra from the Sloan Digital Sky Survey, or pulsar data from the Green Bank or Arecibo telescopes. An emphasis will be placed on using common tools for observational astronomy, such as viewing astronomical FITS images in SAOimage. Students will be introduced to the common programming languages and environments used by astronomers at the time the course is offered, which currently includes Python and IDL. Students will be given experience in calculating statistical information about a set of astronomical data using the R programming language and its built-in

tools. Students will make plots to illustrate a pattern in their data using the tools in Python, IDL, or R, for example.

ASTRO 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ASTRO 116: Introduction to Astronomy for Educators

3 Credits

This course is designed to engage students with the big ideas of astronomy in ways that will help them understand both the content of astronomy, as well as the practices of science as carried out by astronomers. The course is designed for prospective elementary and middle school teachers (PK-4 and 4-8 majors), although it is available to other non-science majors. Throughout the course, students engage in a series of investigations that lead towards the development of evidence-based explanations for patterns observed in the current Solar System. Investigations will include computer-based simulations, night-sky observations, and use of simple laboratory equipment. These investigations lead students towards an understanding of how observations of the current Solar System can be explained by the model of its formation. The course is designed to build from students' own personal observations of the day and night sky towards developing increasingly sophisticated explanations for those phenomena and beyond. Conducting these astronomy investigations will help students understand fundamental aspects of physics, thus broadly preparing them for future science teaching in these domains. The course models evidence-based pedagogy, thus helping to prepare students for future teaching careers as they learn effective strategies for teaching science.

ASTRO 120: The Big Bang Universe

3 Credits

Exploration of Cosmology, Birth, and Ultimate Fate of the Universe; Origin of Galaxies, Quasars, and Dark Matter. For non-science majors ASTRO 120 The Big Bang Universe (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. Astronomical observations made during the last 70 years, combined with mathematical physical theory (Einstein's General Relativity), has led to a dramatic new view of the history of the Universe. Ten to twenty billion years ago, all the material that is now contained in stars, planets, and galaxies was then compressed into a region, smaller than a pinhead, and so hot that atoms could not survive. This fiery cauldron cooled and expanded, forming hydrogen and helium, and eventually all the materials and structures that we know today. This course will discuss the evidence, theories and controversies of this new scientific cosmology, commonly known as 'the Big Bang'. This class is designed for the non-science students who, after learning the fundamentals of astronomy in ASTRO 1(GN), ASTRO 5 (GN) or ASTRO 10 (GN), want to pursue further the questions of cosmology. The great success of the Big Bang theory in explaining the expansion of the Universe, the synthesis of the chemical elements, and the relic radiation leftover from the first moments are reviewed. Some of the questions discussed are still debated in the scientific community. For example: Why do some galaxies have stunning spiral structures, while others are relatively featureless ellipticals? What is the "dark matter" that may have emerged from the Big Bang, and seems to make a larger

contribution to the mass of the universe than all of the material we are familiar with? What can the most distant and oldest objects we know of, the quasars, tell us about how galaxies formed? In presenting the development of this subject, the empirical and conceptual methods of modern physical science are conveyed. Students are assigned problems that exercise the use of elementary mathematics and physics to address real issues, and will confront discussions of interpretation and meaning in essays. A final project allows them to explore individual interests.

Enforced Prerequisite at Enrollment: ASTRO 1 or ASTRO 6 or ASTRO 10

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

ASTRO 130: Black Holes in the Universe

3 Credits

The predicted properties of black holes and the astronomical evidence for their existence are investigated in the context of modern ideas about space, time, and gravity. ASTRO 130 Black Holes in the Universe (3) (GN) (BA) This course meets the Bachelor of Arts degree requirements. Black Holes in the Universe introduces students to the predicted properties of black holes and the astronomical evidence for their existence. Modern ideas about the nature of space, time, and gravity are also covered. The key topics discussed in the course include Newton's and Einstein's theories of gravity, predicted properties of black holes, stars and their fates, how to detect a black hole, gamma-ray bursts, supermassive black holes in galactic nuclei, active galaxies, black hole spin, gravitational waves, Hawking radiation, singularities, and black hole child universes. The course is intended to be an attractive choice for students who are interested in enriching and broadening their understanding of modern physical science. The course is intended for students who have completed and enjoyed the one-semester survey of modern astronomy, ASTRO 1, 6, or 10. It has an interdisciplinary flavor, combining basic physical concepts, astronomical observations, and philosophical ideas to present a complete picture of the current understanding of black holes. Time is also devoted to provide historical insight into the development of our ideas about gravity from Kepler and Newton through Einstein and modern ideas about quantum gravity. Students use mathematics at the level of high school algebra.

Enforced Prerequisite at Enrollment: ASTRO 1 or ASTRO 6 or ASTRO 10

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

ASTRO 140: Life in the Universe

3 Credits

The problem of the existence of life beyond Earth is investigated, drawing from recent research in astronomy and other fields. ASTRO 140 Life in the Universe (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. The possibility of life beyond Earth is one of the great unsolved puzzles of human thought and has been debated for millennia. An answer would fundamentally change the relationship between the human race to the rest of the Universe. Advances in modern physics and astrophysics have dramatically changed and enriched the understanding of our cosmic surroundings, but have not yet produced an unambiguous

evidence concerning the extraterrestrial life. Yet, significant progress has been made on certain aspects of the problem. Recent observations of protoplanetary disks around young stars, planets around solar-type stars and a rapidly spinning pulsar (a Penn State discovery), and pervasive organic molecules throughout the Galaxy give tantalizing, albeit indirect, hints in favor of the existence of nonterrestrial life. "Life in the Universe" is envisioned to be an attractive choice for students who are interested in enriching and broadening their understanding of modern science. The course is highly interdisciplinary, combining evidence from several fields of science to describe our chances to encounter life beyond Earth and the Solar System. Selecting this course would be a logical choice for students who completed and enjoyed ASTRO 1 (GN), ASTRO 5 (GN), or ASTRO 10 (GN). The students are expected to reach the following goals from this course: - learn to appreciate limitations of human experience and a role of the interdisciplinary approach in solving scientific problems - gain understanding of a relationship between the physical Earth, its biosphere, and the rest of the observable Universe - examine in some detail a contemporary problem of scientific investigation: the astrophysical evidence for planets around stars other than the Sun - assess the scientific significance of searches for extraterrestrial life including technological civilizations. Lectures systematically cover the topics listed in the course outline at a level appropriate for non-science students, although students from the Planetary Science & Astronomy major, as well as other science and engineering majors, can take the course. While general understanding of astronomy from the prerequisite course is expected, the necessary physical and astrophysical concepts are reintroduced to assure a logical and coherent flow of information throughout the course. Videos are used to illustrate a number of topics, such as the search for extraterrestrial intelligence, physical conditions on planets of the Solar System, the detection of planets around a neutron star, and to evaluate the scientific content of science fiction movies.

Enforced Prerequisite at Enrollment: ASTRO 1 or ASTRO 5 or ASTRO 10

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

ASTRO 141N: Film and Extraterrestrial Life: Science Fact or Fiction?

3 Credits

The search for life beyond planet Earth has been the subject of much interdisciplinary scientific search and has stimulated human imagination. Scientific discoveries of exoplanets (outside of our solar system), of extremophiles (life which can survive in extreme conditions) and the discoveries of conditions on other bodies in our solar system which might be able to support life, has provided progress in answering the question of the existence of extraterrestrial life. Not only have a plethora of fictional work appeared in the film media to depict scenarios of life beyond Earth, but there has also been an abundance of video media created to present the scientific ideas to the wider audience beyond the scientific community. This course intends a critical evaluation of both nonfiction and fictional media works in the educational dissemination of scientific ideas and the effective presentation of concepts. We will analyze techniques in photography, mise en scene, editing, sound, dramatization and writing as they are applied to topics in astrobiology.

ASTRO 197G: Special Topics - GenEd

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is a GenEd course.

ASTRO 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

ASTRO 237W: Astronomy Communications

3 Credits

The class is designed to build skills in communication modes that are used every day in academic and non-academic astronomy, industry, and related natural sciences: technical writing and reading, presenting to different audiences, using professional authoring tools and software, designing posters and slides, and creating and maintaining a strong professional presence online. There will be a strong focus on improving technical writing skills, practiced by submitting small-but-regular assignments inside and outside of class. By the end of this course, students will have gained practical experience producing many professional writing products with extensive feedback and opportunities for growth as a scientific writer. This course will satisfy the "Writing Across the Curriculum" requirement.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 15A or ENGL 15S or ENGL 15E or ESL 15 or ENGL 30H or ENGL 30T or ENGL 137H or CAS 137H

Writing Across the Curriculum

ASTRO 291: Astronomical Methods and the Solar System

3 Credits

Physical processes and observational techniques in astronomical systems, characteristics of the sun, planets, and moons. ASTRO 291 Astronomical Methods and the Solar System (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. ASTRO 291 / ASTRO 292 is a two-semester overview of our current knowledge of astronomy. They are designed for students with a solid grounding in math and physics who wish to obtain a more quantitative understanding of the universe than that presented in ASTRO 1 or the 100-level ASTRO series. These courses are required for students majoring in astronomy, generally taken in the sophomore year. ASTRO 291 starts with the appearance of the sky to the naked eye and the historical development of astronomy. It then turns to an introduction to physical processes relevant to the interpretation of astronomical findings: Newtonian gravity and its applications in celestial mechanics, electromagnetic radiation, and a simplified understanding of atoms. The principal tools of astronomy, telescopes and their instrumentation are described. The course proceeds with the survey of astronomy with the constituents of the solar system: sun, planets, natural satellites, planetary rings, asteroids, and comets.

Physical processes are integrated with empirical findings to provide a profound and quantitative understanding of the phenomena; e.g. the role of angular momentum and tidal forces in establishing the orbits and spins of solar system bodies. After the development of these concepts, a survey of the properties of the constituents of the Solar System (planets, moons, rings, asteroids, comets, meteors, and the Sun) is conducted.

Enforced Prerequisite at Enrollment: PHYS 211

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

ASTRO 292: Astronomy of the Distant Universe

3 Credits

Observed properties and astrophysical understanding of stars, stellar evolution, galaxies, the large-scale universe, and cosmology. ASTRO 292 ASTRO 292 Astronomy of the Distant Universe (3) (GN)(BA) This course meets the Bachelor of Arts degree requirements. ASTRO 291/292 is a two-semester overview of our current knowledge of astronomy. They are designed for students with a solid grounding in math and physics who wish to obtain a more quantitative understanding of the universe than that presented in ASTRO 001 or the 100-level ASTRO series. These courses are required for students majoring in astronomy, generally taken in the sophomore year. ASTRO 292 continues the survey started in ASTRO 291. The first half of the course is devoted to stellar astronomy and astrophysics. The class follows the successful application of physics to astronomical data in the 19th -20th centuries to understand distances, masses and energy sources of stars. The formation, structure and evolution of stars is treated in the context of physical processes developed in ASTRO 291. The class studies the death of stars, including spectacular phenomena such as supernova explosions, pulsars and black holes, solutions to difficult problem of establishing distance scales (stellar, galactic, intergalactic) are presented. In the second half of the course, the students examine the Universe on progressive larger scales: our Milky Way galaxy, other galaxies, and massive black holes in galactic cores (e.g. quasars). Exotic phenomena such as gravitational lenses, gamma-ray bursts and cosmic rays are investigated. Finally, the class delves into the remarkable findings of modern cosmology: Hubble's discovery of the expansion of the Universe, the discovery of the cosmic microwave background and consequent dominance of Big Bang cosmology in the context of Newtonian and Einsteinian theories of gravity. Cosmological evolution is studied; e.g. formation of light elements during the first few minutes, and the growth of large-scale structure that continues to the present. Unsolved problems faced by today's scientists are emphasized.

Enforced Prerequisite at Enrollment: ASTRO 291

Bachelor of Arts: Natural Sciences

ASTRO 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ASTRO 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ASTRO 320: Observational Astronomy Laboratory

3 Credits

Basic observational astronomy techniques introduced through observational exercises, lab experiments, and lectures on relevant statistical techniques. ASTRO 320 Observational Astronomy Laboratory (3) (GN) ASTRO 320 will provide students with practical experience in basic observational and laboratory aspects of astronomical data collection and analysis, including an introduction to associated statistical concepts. Observational techniques will be introduced through an observing project using a telescope with a CCD imaging camera. Lectures will introduce fundamental principles including Poisson and Gaussian statistics, measurement precision, propagation of errors, and systematic uncertainties. These principles will be put into practice in the observing project and with laboratory experiments investigating the properties of light and cosmic rays. Experiments include: a cosmic ray telescope; a Michelson interferometer; a photodiode and monochromator; laser interference, diffraction and refraction; fluorescent gases; and a diffraction grating spectrometer.

Enforced Prerequisite at Enrollment: ASTRO 291

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

ASTRO 401: Fundamentals of Planetary Science and Astronomy

4 Credits

Overview of the techniques used and results from studies of the Solar System, stars, and galaxies. ASTRO 401 Fundamentals of Planetary Science and Astronomy (3) This course will focus in core content areas in planetary science and astronomy. Students will explore the fundamentals in robotic exploration of the Solar System, how astronomers map and navigate the night sky, our understanding of the nature and evolution of stars, and the nature and evolution of galaxies. Students will engage with real data from Solar System missions as well as ground-based and space-based telescopes. Through the use of many databases and data archives from missions and observatories, the students will become familiar with the census of astronomical objects in various categories. A particular emphasis will be placed on examples of qualitative and quantitative problem solving in these content areas. In addition, students will explore how scientists communicate their results to the public, and they will get hands-on experience, such as planning and executing a planetarium show.

Enforced Prerequisite at Enrollment: (ASTRO 1 or ASTRO 5 or ASTRO 6 or ASTRO 10) and MATH 140.

ASTRO 402W: Astronomical Telescopes, Techniques, and Data Analysis

3 Credits

Properties and use of optical telescopes, imaging and spectroscopy, multi-wavelength techniques, data analysis and statistics, practical research methods. ASTRO 402 Astronomical Telescopes, Techniques,

and Data Analysis (3) This course will provide practical experience and understanding of the telescopes and techniques by which astronomers obtain data and conduct research. The study of telescopes will include optical, infrared, radio, ultraviolet, X-ray, and gamma ray observations, and students will learn to set up and use optical telescopes. In-depth coverage of the instruments used for imaging and spectroscopic observations of a variety of astronomical objects will be provided. Applications will include topics in planets, stars, galaxies, and cosmology. Detailed examples of data analysis will be given, including the relevant statistical techniques. Finally, the process by which research in astronomy is conducted will be reviewed, from proposing observations, to obtaining them, to analyzing and interpreting them, to writing up the results. This course is a requirement for students in the Planetary Science and Astronomy major and minor. It may be taken by any students with the needed pre-requisites, but cannot be counted towards the required 400 level courses for the Astronomy and Astrophysics major or minor.

Writing Across the Curriculum

ASTRO 410: Computational Astrophysics

3 Credits

Applications of numerical methods and computer programming to astrophysics, including stellar physics and cosmology.

Enforced Prerequisite at Enrollment: (CMPSC 201 or CMPSC 121) and PHYS 212 and PHYS 213 and PHYS 214

ASTRO 414: Stellar Structure and Evolution

3 Credits

Theory of Stellar structure and evolution including energy generation and transport and an examination of stellar models. ASTRO 414 Stellar Structure and Evolution (3) ASTRO 414 covers the theory of stellar structure and evolution at an introductory level. It includes the basic physical processes that influence the structure of a star, such as energy generation in stellar cores, the transport of energy to the surface via photon diffusion and convection, equilibrium conditions, etc. It examines realistic stellar models as they apply to stars of different masses, for example, polytropes and other approximations. The treatment of stellar evolution includes gravitational collapse, stable stellar configurations on the main sequence, and the fast-paced late stages of evolution, leading up to the formation of compact objects. Realistic stellar models will be employed to illustrate the structures of different types of stars and the influence of various physical processes on these models.

Enforced Prerequisite at Enrollment: ASTRO 292 and MATH 230 and PHYS 212 and PHYS 213 and PHYS 214 and PHYS 237

ASTRO 415: Introduction to Astrostatistics

3 Credits

Astronomical data are being produced at an unprecedented rate with large-scale telescopes, and thus data analytic skills to extract meaningful information from such massive astronomical datasets are important skills for astronomers. This course is designed to provide juniors or seniors in astronomy, who have no or little background in statistics, both theoretical background and practical experience on astronomical data analyses. For this purpose, the first half of the course will cover fundamental underpinnings of probability and statistical inference, and for the other half of the class, various statistical and machine learning

tools will be introduced with hands-on coding experiences using a modern programming language, such as R.

Enforced Prerequisite at Enrollment: MATH 230 and ASTRO 292
Recommended Preparation: (CMPSC 121 or CMPSC 131 or CMPSC 201 or STAT 184)

ASTRO 416: Data Science Applications to Astronomy

3 Credits

This course is designed to increase students' data acumen and experience in how building data science skills can benefit astronomy & astrophysics research. Students analyze data from astronomical surveys to detect and characterize astronomical objects and astronomical populations. Students will build practical data science skills (e.g., querying astronomical databases, efficient approaches for data storage and manipulation, exploratory and explanatory data analysis, Bayesian modeling workflows, effective data visualization, and reproducible research practices). Students will also gain a basic familiarity with core data science terms and concepts, so they can effectively communicate with data scientists, whether working in astronomy or in industry. Astro 478 is designed to be complementary to Astro 410, Astro 415, and Astro 451.

Enforced Prerequisite at Enrollment: (ASTRO 291 or (ASTRO 401 and ASTRO 402W)) and (ASTRO 21 or CMPSC 121 or CMPSC 131 or CMPSC 201) and (MATH 230 or MATH 231) and (PHYS 211)

ASTRO 420W: Planets and Planetary System Formation

3 Credits

Solar system properties, star formation, protoplanetary disks and planet formation, solar system model, extrasolar planets, and astrobiology. ASTRO 420W Planets and Planetary System Formation (3) The course explores the wide variety of physical and chemical processes that govern the motions and properties of planets. Observations of the planets, moons, asteroids, comets and planetary rings in our Solar System are described. The properties of extrasolar planets are also emphasized. The process of planetary formation is discussed in the context of the solar system and in the context of extrasolar planets. The prospects of life and the effect of life on such planets will also be discussed. It will be taken by roughly half of the juniors and seniors majoring in Astronomy and Astrophysics (about 10 people). The course will include writing papers on current issues of debate in the areas of solar system and extrasolar planets and will satisfy the "Writing Across the Curriculum" requirement.

Enforced Prerequisite at Enrollment: ASTRO 292

Writing Across the Curriculum

ASTRO 440: Introduction to Astrophysics

3 Credits

Theoretical investigation of physical processes in astronomical objects and systems; modern physical interpretation of astronomical phenomena.

Enforced Prerequisite at Enrollment: MATH 230 and PHYS 237

ASTRO 442: Astrophysical Fluid Dynamics

3 Credits

This course covers the equations of (magneto) hydrodynamics and applications to the modeling and interpretation of astronomical observations. Applications include star formation, stellar winds, waves in stratified and magnetized plasma, instabilities, shocks, blast waves, and accretion disks.

Enforced Prerequisite at Enrollment: PHYS 212 and PHYS 213 and PHYS 214 and (MATH 230 or MATH 231) and (MATH 250 or MATH 251) and (CMPSC 101 or CMPSC 121 or CMPSC 131 or CMPSC 200 or CMPSC 201)

ASTRO 451: Astronomical Techniques

3 Credits

Practical methods of modern observational astronomy, detectors, filters, instrumentation for both ground-based and space observations, and data analysis. ASTRO 451 Astronomical Techniques (3)ASTRO 451 will introduce students to the techniques and technologies for modern observational astronomy, emphasizing the development of practical skills as well as understanding through computer-based investigations integrated with traditional lecture content. Beginning with a summary of probability theory, the students will be introduced to standard techniques of statistical analysis including hypothesis testing and the characterization of uncertainties. Subsequent lectures and computer exercises will discuss the physics and design of astronomical detectors, the principles of telescope and spectroscope design, and the data analysis methods used in processing astronomical datasets. Significant emphasis will be placed on estimation of signal-to-noise ratios for various observing scenarios. The effects of the Earth's atmosphere, interstellar matter, and the expanding Universe on the propagation of astronomical signals will also be discussed.

Enforced Prerequisite at Enrollment: PHYS 212 and PHYS 213 and PHYS 214

ASTRO 475W: Stars and Galaxies

3 Credits

Astronomical studies concerning the distribution and evolution of stars and gas in our and other galaxies.

Enforced Prerequisite at Enrollment: ASTRO 292
Writing Across the Curriculum

ASTRO 476: The Search for Extraterrestrial Intelligence

3 Credits

The Search for Extraterrestrial Intelligence is the hunt for technosignatures: signs of non-human technology beyond Earth. The search has many forms, with its targets spanning scales from small objects in the Solar System to galaxy-spanning industry, and is conducted in many ways, from the use of radio telescopes searching for communicative signals to infrared space telescopes searching for Dyson spheres. This course will offer a survey of the field as a subfield of astrobiology, and as an interdisciplinary endeavor that includes biology, astrophysics, game theory, anthropology, law, and many other fields. It begins with a history of the field and its jargon, then continues with a study of the theory of the field, including the Drake Equation and Fermi Paradox, and then the practice of the field, including a survey of the kinds

of technosignatures we might search for. It concludes with a study of the social and ethical aspects of the field, and special topics that will vary by semester. The course includes a field trip to Green Bank Observatory to conduct real radio SETI observations and learn the history of SETI at NRAO.

Enforced Prerequisite at Enrollment: ASTRO 291 or ASTRO 401

ASTRO 480: Galaxies and Cosmology

3 Credits

Fundamental issues in extragalactic astronomy and modern cosmology, including the contents of the Universe, its origin and fate, and formation and evolution of cosmic structures. Topics covered include the basic properties of spiral, elliptical, and irregular galaxies and their quantitative classification, the extragalactic distance scale, the photometric and chemical evolution of galaxies, the physics and evolution of galaxy clusters, active galactic nuclei, the formation of large-scale structure, the physics of the early universe, and the basic equations of cosmology.

Enforced Prerequisite at Enrollment: ASTRO 292 and PHYS 212 and PHYS 213 and PHYS 214

ASTRO 485: Introduction to High-Energy Astronomy

3 Credits

The study of black holes, neutron stars, white dwarfs, supernova remnants, and extragalactic objects through x-ray and gamma ray observations.

Enforced Prerequisite at Enrollment: PHYS 237

ASTRO 494H: Honors Thesis

1-6 Credits/Maximum of 6

Investigation of an original research problem, including a literature search. Preparation of a formal thesis is optional

Honors

ASTRO 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

ASTRO 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ASTRO 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Athletic Training (ATHTR)

ATHTR 135: Introduction to Athletic Training

3 Credits

Introduction to Athletic Training provides an overview of the field of athletic training exploring the breadth of athletic training terminology, issues, and injuries. After completing the course, the students will be able to describe the roles of the sports medicine team, understand the legal considerations for the athletic trainer as a health care provider, and identify the basics of physical conditioning and nutrition in reference to injury prevention. Students will be able to describe an emergency action plan for injuries, and environmental conditions. Students will be able to identify basic use of therapeutic modalities and principles of therapeutic exercise programs. Students will gain an understanding of acute vs. chronic injury conditions and be able to describe the related anatomy, etiologies, pathologies, signs and symptoms, and general treatment and management for injuries of the foot, ankle, lower leg, knee, hip/groin, shoulder, elbow, wrist, hand, cervical spine, and head. Rationale and demonstrations for a variety of taping techniques are included to address upper and lower extremity injuries. Students are also provided an overview of general medical conditions that may occur in the athletic arena.

Cross-listed with: KINES 135

ATHTR 202: Functional Human Anatomy

3 Credits

This course is designed to provide students a didactic and laboratory experience in functional human anatomy. Upon course completion, students should be able to comprehend and apply standard anatomical nomenclature pertaining to human movement science; comprehend structure and function of the musculoskeletal, systems pertaining to human movements science; comprehend the classification, structure and function of human anatomical articulations (joints) pertaining to human movement science; and comprehend the classification, structure, and function of human biological tissues (epithelium, connective, muscle and nervous) pertaining to human movement science. In the laboratory portion of the course students will learn to identify bone and capsuloligamentous tissues as well as their respective landmarks pertaining to human movement science; identify origins, insertions, actions and innervations of skeletal muscles pertaining to human movement science; and identify biomechanical characteristics and neuromuscular activity of human anatomy during the execution of active, passive as well as resistive movements. The laboratory portion of this course will use three-dimensional bone models, joint models, ligament models and cadaveric models to apply concepts covered in lecture.

Enforced Prerequisite at Enrollment: 2nd Semester Standing in HDD or KINES major or KINES minor or ATHTR major

Cross-listed with: KINES 202

ATHTR 231: Foundations of Clinical Practice I

3 Credits

This course is designed to introduce students to basic skills required for the clinical practice of athletic training. The course will teach introductory content and skills related to injury and illness prevention and management. Specific topics include preventing environmental injuries and illnesses, taping and wrapping techniques, protective equipment, pre-

participation physical examinations, preparing for emergencies in the athletic setting, and concepts of basic athletic injury management. The course requires both lecture and practical lab experiences each week. Demonstration of practical skills specific to the clinical proficiency are required to sit for the Board of Certification exam.

Enforced Prerequisite at Enrollment: Completion of the Athletic Training Pre-Professional Phase Application and Accompanying Observational Experience

ATHTR 233: Acute Care and Emergency Response

3 Credits

This course prepares students pursuing the athletic training major in the Department of Kinesiology with the knowledge and skills to respond to medical emergencies. Basic skills including rescue breathing, cardiopulmonary resuscitation for health care providers, and first aid management of injury and illness emergencies are developed. These skills are supplemented with content related to blood borne pathogens and OSHA regulations needed for personal safety and effective management of athletic training services, the causes and prevention of sudden cardiac death in athletics, and training in the use of automated external defibrillators. The second part of the course focuses on the secondary survey and evaluation and management of central nervous system, musculoskeletal injuries, and shock. The final part of the course addresses conditions of the thorax, abdomen, and musculoskeletal system, environmental hazards encountered in athletics; and drug and alcohol overdoses and poisoning. The course will include the opportunity for professional certification in first aid and cardiopulmonary resuscitation. The course includes both lab and lecture components each week. CPR certification (written and practical), blood borne pathogens certification (practical), and demonstration of practical skills specific to the clinical proficiency required to sit for the Board of Certification exam are required in this course.

Enforced Prerequisite at Enrollment: Completion of Pre-Professional Phase Application and Accompanying Observational Experience

ATHTR 235: Foundations of Clinical Practice II

3 Credits

Athletic Training Clinical Practice II provides instruction in supervised practice of the basic skills required in the practice of athletic training. Topics include documentation of medical records, postural screening, assessment and improvement of flexibility, assessment, and improvement of strength, use of functional rehabilitation protocols, use of common therapeutic modalities, and description of the use of medications in sports medicine. Students are introduced to the foundational components of evidence-based practice and methods for translation into clinical practice. Students practice skills specific to the clinical proficiencies required to sit for the Board of Certification exam. This course provides the student with the opportunity to learn and practice clinical athletic training skills before beginning practicum experiences.

Enforced Prerequisite at Enrollment: ATHTR 231 and ATHTR 233, Concurrent Courses: ATHTR 334

ATHTR 334: Examination of Injuries to the Lower Extremity, and Spine

3 Credits

This course will focus on: 1) the etiology of athletic injuries to the lower extremity and lumbosacral spine, and 2) evaluation techniques for assessing athletic injuries to the lower extremity and lumbosacral spine. The objectives of this course include: understanding the mechanisms of athletic injuries to the lower body; demonstrating proficiency in the objective and subjective assessment procedures of lower body athletic injuries; recognizing orthopedic, neurovascular, and medical emergencies associated with lower body athletic injuries; recognizing the normal and abnormal mechanics of the lumbosacral spine and lower extremity including the walking and running gait cycles; and integration of injury mechanisms into the treatment and rehabilitation plan of care for the injured physically-active person. This course includes lectures as well as hands-on laboratory sessions.

Enforced Prerequisite at Enrollment: ATHTR 231 and ATHTR 233,
Concurrent Courses: ATHTR 235

ATHTR 335: Examination of Injuries to the Head, Torso, and Upper Extremity

3 Credits

This course will focus on: 1) the etiology of athletic injuries to the upper extremity, head, cervical spine, thorax, and abdomen, 2) evaluation techniques for assessing athletic injuries to the upper extremity, head, cervical spine, thorax, and abdomen, and 3) the application of evidence-based practice principles to be able to answer focused clinical questions. The objectives of this course include: understanding the mechanisms of athletic injuries to the upper body; demonstrating proficiency in the objective and subjective assessment procedures of upper body athletic injuries; recognizing orthopedic, neurovascular, and medical emergencies associated with upper body athletic injuries; recognizing the normal and abnormal mechanics of the cervical spine and upper extremity including the overhand throwing motion; and integration of injury mechanisms into the treatment and rehabilitation plan of care for the injured physically-active person. This course includes lectures as well as hands-on laboratory sessions.

Enforced Prerequisite at Enrollment: ATHTR 235 and ATHTR 334

ATHTR 336: General Medical Principles of Clinical Practice

3 Credits

This course is designed to instruct students in general medicine content and skills related to the clinical practice of athletic training. Specific topics include pathology; pharmacology; physical examination of head, ears, eyes, nose, throat, pulmonary, cardiovascular, gastrointestinal, renal, genitourinary, and dermatological conditions commonly seen in physically-active populations; exertional heat illness; diabetes and exercise; female athlete triad; injuries in populations with physical disabilities; and psychosocial aspects of patient-provider relationships. Several lectures will be made by physicians who specialize in sports medicine. Lab activities will include the instruction, practice, and assessment of psychomotor skills related to the course content. The course will include a balance of both lecture and laboratory activities. The course includes a balance of lecture-based and laboratory activities. Students practice skills specific to the clinical proficiencies required to sit for the Board of Certification exam.

Enforced Prerequisite at Enrollment: ATHTR 335 and ATHTR 395A

ATHTR 395A: Clinical Internship I

3 Credits/Maximum of 3

This course is designed to give students practical experiences in a variety of clinical settings in which certified athletic trainers are commonly employed. Students will participate in clinical education experiences under the supervision of certified athletic trainers in a variety of clinical settings. These settings include but are not limited to: intramural sports, club sports, outpatient sports medicine clinics, high schools, and intercollegiate athletic training facilities. In addition to clinical experiences there is also a didactic portion of this course which emphasizes students gaining proficiency in important clinical skills. The objectives of this course include demonstrating proficiency in: the evaluation of a unconscious person; the recognition of cerebral concussion and closed head injury; the recognition of acute injury to the cervical spine; the recognition of fractures and dislocations; the assessment of neurovascular function; the recognition, treatment, and prevention of lower extremity injuries, heat illnesses including heat cramps, heat exhaustion, and heat stroke; the use of splints, stretchers and spine boards in the management of injured persons; the application of taping and wrapping techniques commonly used in the prevention and management of common athletic injuries; and in obtaining a medical history.

Enforced Prerequisite at Enrollment: ATHTR 235 and ATHTR 334

ATHTR 434: Rehabilitation of Injuries to the Lower Extremities, and Spine

3 Credits

Rehabilitation of Injuries to the Lower Extremities is a 3-credit course offered each fall semester with an enrollment limit of 40 students. The course provides students who have been accepted into the undergraduate athletic training option in the Department of Kinesiology with the theoretical foundation for application of manual therapy techniques and therapeutic exercises in the treatment of musculoskeletal injuries sustained by physically active individuals. Laboratory instruction and guided practice in performing manual therapy techniques and therapeutic exercises will also be provided. At the end of this course students: 1) can identify five components of a comprehensive plan of care for an injured physically-active person; 2) have a working knowledge of the effects of therapeutic exercise on tissue repair and return to activity; 3) have a working knowledge of the impact of pain on programs and therapeutic exercise; 4) are able to perform selected manual therapy techniques and integrate them into a comprehensive plan of care; 5) understand the psychological response to injury and therapeutic exercise; 6) can develop a plan of rehabilitation utilizing principles of tissue healing, therapeutic exercise and manual therapy; and 7) instruct patients in home programs of therapeutic exercise. This course will focus on the basic principles of therapeutic exercise and rehabilitation of injuries to the lower extremities.

Enforced Prerequisite at Enrollment: ATHTR 235 and ATHTR 334

ATHTR 435: Rehabilitation of Injuries to the Trunk and Upper Extremities

3 Credits

Rehabilitation of Injuries to the Trunk and Upper Extremities is a 3-credit course offered each fall semester with an enrollment limit of 40 students. The course provides students who have been accepted into the undergraduate athletic training option in the Department of Kinesiology

with the theoretical foundation for application of manual therapy techniques and therapeutic exercises in the treatment of musculoskeletal injuries sustained by physically active individuals. Laboratory instruction and guided practice in performing manual therapy techniques and therapeutic exercises will also be provided. At the end of this course students: 1) can identify five components of a comprehensive plan of care for an injured person; 2) have a working knowledge of the effects of therapeutic exercise on tissue repair and return to activity; 3) have a working knowledge of the impact of pain on programs of therapeutic exercise; 4) are able to perform selected manual therapy techniques and integrate them into a comprehensive plan of care; 5) understand the psychological response to injury and therapeutic exercise; 6) can develop a plan of rehabilitation utilizing principles of tissue healing, therapeutic exercise and manual therapy; and 7) instruct patients in home programs of therapeutic exercise. This course will focus on review of the basic principles of therapeutic exercise and rehabilitation on injuries to the trunk and upper extremities.

Enforced Prerequisite at Enrollment: ATHTR 335 and ATHTR 395A and ATHTR 434

ATHTR 436: Physical Agents in Rehabilitation

4 Credits

The course provides students with the theoretical foundation for the application of contemporary therapeutic modalities in the treatment of musculoskeletal injuries sustained by physically-active populations. At the end of this course students will: 1) have a working knowledge of the inflammatory response to tissue injury, pain perception and the body's analgesic mechanisms; 2) understand the physical principles of thermal, acoustic, electrical, light and mechanical modalities; 3) understand the physiological response to thermal, acoustic, electrical, light and mechanical modalities; 4) be able to search for and appraise clinically relevant trials involving modality application and; 5) apply these understandings and thermal, acoustic, electrical, light and mechanical modalities in the safe and effective manner.

Enforced Prerequisite at Enrollment: ATHTR 335 and ATHTR 395A and ATHTR 434

ATHTR 438W: Administrative and Professional Aspects of Sports Health Care

3 Credits

Theoretical and practical aspects for management of an Athletic Training professional practice and identifying contemporary issues related to the profession. ATHTR 438W Administration and Issues in Athletic Training (3) This course is designed to instruct students in the concepts and skills required for successful administration of an athletic training program and to understand and discuss contemporary professional issues attendant to the Athletic Training profession. General topics to be covered include theoretical basis of management, program management, human resource management, financial resource management, facility design and planning, information management, athletic injury insurance, legal aspects of sports medicine, ethical considerations in sports medicine, pre participation physical and drug-testing, professional preparation issues, professional practice issues, and clinical practice issues. Experts from the community are brought in to lecture on several of the topics. This is a writing intensive course. Writing will be used to facilitate critical thinking about course material. Written assignments are based on the technical writing requirements of an athletic training administrator.

Enforced Prerequisite at Enrollment: ATHTR 336 and ATHTR 495A and ATHTR 435 and ATHTR 436

Writing Across the Curriculum

ATHTR 495A: Clinical Internship II

3 Credits

This course is designed to provide students didactic and practical clinical experiences in a variety of practice settings in which certified athletic trainers are commonly employed. This is the second clinical assignment after a student is admitted to the Athletic Training option within the Kinesiology major. Students will complete clinical education experiences under the supervision of a certified athletic trainer in a variety of clinical settings. These settings include but are not limited to: intramural sports, club sports, outpatient sports medicine clinics, high schools, and intercollegiate athletic training facilities. The objectives of this course include demonstrating proficiency in: assisting lower level students in developing athletic training skills and mastering level-appropriate competencies; demonstrate proficiency in evaluation and documentation of common athletic injuries; assist in the development and documentation of a plan of care for common athletic injuries; demonstrate proficiency in the development and documentation of clinical progression through a plan of care; participate in the application of therapeutic modalities and therapeutic exercise under the supervision of a certified athletic trainer. In this practical experience, the student is required to demonstrate an understanding of the classroom experiences completed to date and as required by the program up to the current semester.

Enforced Prerequisite at Enrollment: ATHTR 335 and ATHTR 395A and ATHTR 434

ATHTR 495B: Clinical Internship III

3 Credits/Maximum of 3

This course is designed to provide students didactic and practical clinical experiences in a variety of practice settings in which certified athletic trainers are commonly employed. This is the third clinical assignment after a student is admitted to the Athletic Training major. Students will complete clinical education experiences under the supervision of a certified athletic trainer in a variety of clinical settings. These settings include but are not limited to: intramural sports, club sports, outpatient sports medicine clinics, high schools, and intercollegiate athletic training facilities. The objectives of this course include demonstrating proficiency in: assisting lower level students in developing athletic training skills and mastering level-appropriate competencies; demonstrate proficiency in evaluation and documentation of common athletic injuries; assist in the development and documentation of a plan of care for common athletic injuries; demonstrate proficiency in the development and documentation of clinical progression through a plan of care; participate in the application of therapeutic modalities and therapeutic exercise under the supervision of a certified athletic trainer. In this practical experience, the student is required to demonstrate an understanding of the classroom experiences completed to date and as required by the program up to the current semester.

Enforced Prerequisite at Enrollment: ATHTR 336 and ATHTR 495A and ATHTR 435 and ATHTR 436

ATHTR 495C: Clinical Internship IV

3 Credits

This course is designed to provide students didactic and practical clinical experiences in a variety of practice settings in which certified athletic trainers are commonly employed. Students will complete clinical education experiences under the supervision of a certified athletic trainer. These settings include but are not limited to: outpatient sports medicine clinics, interscholastic athletic settings, and intercollegiate athletic settings. The main objectives of this course include demonstrating proficiency in: head, ears, eyes, nose and throat assessment; peak flow and urinalysis assessment; auscultation and palpation of the chest and abdomen. The objectives also include understanding the psychosocial competencies related to athletic training (substance abuse, eating disorders, response to injury, mental health issues, catastrophic injuries, psychosocial trends in adolescent sports). In addition, students will work closely with their peers by assisting lower-level students in developing athletic training skills and mastering level-appropriate competencies; demonstrate proficiency in evaluation and documentation of common athletic injuries; assist in the development and documentation of a plan of care for common athletic injuries; demonstrate proficiency in the development and documentation of clinical progression through a plan of care; participate in the application of therapeutic modalities and therapeutic exercise under the supervision of a certified athletic trainer. In this practical experience, the student is required to demonstrate an understanding of the classroom experiences completed to date in preparation for the national Board of Certification exam. This course also offers a culminating experience for athletic training students in the form of a capstone project.

Enforced Prerequisite at Enrollment: ATHTR 438W and ATHTR 495B

Behavioral Sciences - CA (BESC)

BESC 395: Behavioral Science Internship

3-12 Credits/Maximum of 12

Internship in human service organizations providing for application of academic knowledge, reading, and discussion.

Prerequisite: 90 credits with at least 16 credits in the major

BESC 407: Small Groups Counseling

3 Credits

Intensive survey of research and theory on behavior in small groups, with emphasis on interdependence, cooperation, and attitude change.

Prerequisite: general psychology, general sociology, or general behavioral science

BESC 464: Feminine/Masculine

3 Credits

Study of sex role learning; investigating feminine/masculine labeling; implications for contemporary society. BE SC 464 BE SC (WMNST) 464 Feminine and Masculine (3) (US) This course provides a critical examination of the concepts of masculinity and femininity through a consideration of how these have shifted and changed historically and cross-culturally. It considers a variety of theories of gender difference. It investigates how gender is socially constructed and practiced. Thus,

it examines how gender is enacted in interpersonal relationships and defined, reinforced, and challenged through processes of socialization as well as through the various institutional spheres of social life. The course addresses the diversity of masculinities and femininities within a single society. Thus, attention is given to race and class-based differences as well as to trans-genderism and homosexuality.

Prerequisite: general psychology or general sociology

Cross-listed with: WMNST 464

United States Cultures (US)

BESC 494: Senior Thesis

3-9 Credits/Maximum of 9

Problem formulation, literature search, research design, data collection, analysis of results, and final write-up of a substantial research project.

Prerequisite: permission of program

Problem formulation, literature search, research design, data collection, analysis of results, and final write-up of a substantial research project.

Prerequisite: permission of program

Honors

Biobehavioral Health (BBH)

BBH 48: Values and Health Behavior

1.5 Credits

Examination of issues that impact the social, emotional, and physical well-being of college students through a values and decision-making process. BB H 048 Values and Health Behavior (1) (GHA) This is a 1 credit course designed for non-BB H majors who want a greater understanding of concepts related to health and health promotion and who want to learn practical skills related to optimizing health and improving lifestyle behaviors. General health topics that are relevant to students as they adjust to the transition into--and through--college are introduced through a values and decision-making approach to learning. The course is designed to give students a broader understanding of both short-term and long-term wellness and how it is affected by behavior. Concepts regarding personal health and development are introduced using individual and group activities. To impact behavior, a model for decision-making that includes facts, risks, and consequences is utilized within an experiential learning approach. Students will work individually to perform self-assessment of health-related activities (e.g., nutrition, alcohol and drug-related knowledge and risk behaviors) and in small groups to further assess and describe the effects of health behaviors on short-term and long-term wellness. The course will be evaluated through completion of several short reaction papers to reading assignments and internet research, a group project on health promotion, completion of a health-related journal, and completion of a personal behavior change plan.

BBH 101: Introduction to Biobehavioral Health

3 Credits

BBH 101 is an interdisciplinary study of health that emphasizes: (1) Conceptualization of health as being influenced by a variety of factors

including biology, environment, psychology, and social influences; and (2) The concept of health as a state of physical, mental, and social well-being, and not just the absence of disease. The first section of the course is a study of the foundational principles of health including a basic overview of the nervous, endocrine, immune, cardiovascular, respiratory and digestive systems as well as basic principles of genetics and psychology. The second section of the course is focused on risk factors and health-related behaviors. The importance of nutrition, exercise, sleep, stress, and environmental risk factors are studied. The final component of the emphasizes population health by addressing relevant health conditions such as diabetes, substance abuse and addiction, cardiovascular disease, cancer, HIV/AIDS, Parkinson's disease, and Alzheimer's disease.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

BBH 101H: Introduction to Biobehavioral Health

3 Credits

This is an honors course, designed to provide students with the opportunity to engage with the material at a greater depth. BBH 101H is an interdisciplinary study of health that emphasizes: (1) Conceptualization of health as being influenced by a variety of factors including biology, environment, psychology, and social influences; and (2) The concept of health as a state of physical, mental, and social well-being, and not just the absence of disease. The first section of the course is a study of the foundational principles of health including a basic overview of the nervous, endocrine, immune, cardiovascular, respiratory and digestive systems as well as basic principles of genetics and psychology. The second section of the course is focused on risk factors and health-related behaviors. The importance of nutrition, exercise, sleep, stress, and environmental risk factors are studied. The final component of the course emphasizes population health by addressing relevant health conditions such as diabetes, substance abuse and addiction, cardiovascular disease, cancer, HIV/AIDS, Parkinson's disease, and Alzheimer's disease.

GenEd Learning Objective: Soc Resp and Ethic Reason

BBH 102S: Values, Health, & Academic Success

3 Credits

This course will simultaneously address concepts related to Health & Wellness as well as address areas of academic transition for first year students. Essentially this course was designed to address all areas of life that students will encounter during their first semester of school. This course will address several aspects of a first-year students' social wellness that includes healthy relationships, alcohol awareness, sexual ethics, sexual health, mental health, positive decision making, as well as bystander intervention. This course will also address the physical wellness of first year students by addressing alcohol consumption and the impact that it has on the body physically, healthy eating and food selection on a college campus, as well as learning how to be aware of

their unconscious biases and how to live in society with people different than themselves. Additionally, this course will address the intellectual needs for enrolled students within their first academic year by outlining the academic expectations outlined by Penn State University. Students will understand how essential organization and time management is within higher education, the benefits of getting to know their professors, planning their paths to graduation, goal setting, financial literacy, resume' development as well as an extensive review of institutional academic integrity policies and its implications of academic violations. The course hopes to become an initial spring board, where students can use the information presented to guide them throughout the next 3 years of their undergraduate careers.

First-Year Seminar

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

BBH 119: Behavior, Health, and Disease

3 Credits

This course is designed for non-BB H majors who want a fundamental understanding of disease processes, disease states, and principles of disease prevention and health promotion. This course should help students in the biological and behavioral sciences better understand practical applications of theoretical approaches to health issues. The course will provide a broad understanding of the major human diseases underlying morbidity and mortality in America. The course will cover most major diseases using a variety of organizational schema including: (1) diseases according to organ systems, (2) diseases according to developmental and age-related processes, and (3) diseases according to causal factors including behavioral (lifestyle), environmental, and genetic factors. The course content is organized to encourage promotion of a healthy lifestyle, prevention of disease and understanding the causes and management of acute and chronic illness. The course includes information and assignments to allow the student to appropriately assess one's own health, estimate health trajectories, access and use the health care systems on campus and in their home communities, and develop a long-term health promotion plan. The student will also learn specific skills to find and evaluate traditional and non-traditional treatment processes when they or family members become sick with an acute illness or chronic disease, and to better engage with health care professionals and the health care system for management of illnesses that they or their family may have or develop. Students will also learn practical skills in being able to access a variety of sources to update knowledge about disease causality and treatment and to critically appraise these sources.

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

BBH 123S: First-Year Seminar in Biobehavioral Health

1 Credits

This course gives an introduction to some of the major topics in the Department of Biobehavioral Health, with the aim to meet the Penn State first-year seminar goal of orienting students to the scholarly community from the outset of their undergraduate studies in a way that will bridge to later experiences in a chosen major. The class provides an overview

of Biobehavioral Health, then focuses on a more in-depth explanation of student curricular and extracurricular opportunities, themes of scholarship, and career pathways for students in the biobehavioral health major. The course aims to help students prepare to explore their academic interests in Biobehavioral Health as they begin their education at Penn State.

Enforced Corequisite at Enrollment: PSU 14
First-Year Seminar

BBH 130: Strategies for Addressing the Obesity and Diabetes Epidemics

3 Credits

The purpose of this course is to broadly survey information and issues surrounding the development of and individual and community responses to the paired epidemics of obesity and diabetes. Students in the course will examine the biological, behavioral, and environmental factors that underlie the development of obesity and diabetes, including community level factors such as physical environment. The health consequences of both obesity and diabetes will be covered and students will explore the current science of both prevention efforts and effective treatment options. This course is designed as a general education offering and is appropriate for students with little background in biology.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

BBH 143: Drugs, Behavior, and Health

3 Credits

The primary objective of this course is to review information related to the use of recreational and therapeutic drugs like alcohol, nicotine, opiates, caffeine, prescription drugs, etc. We will discuss the biological mechanisms of these substances and how the use of these substances impacts the health and well-being of the individual. We will explore how drug use affects society and will cover social norms related to drug use, laws pertaining to drug use, and the historic context of drug use. We will investigate underlying biological, psychological, and social reasons for drug use and misuse.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

BBH 146: Introduction to Health and Human Sexuality

3 Credits

This course is designed to provide students with a solid introduction to human sexuality with an emphasis on sexual health issues. Through classroom lectures, as well as weekly smaller group meetings, students should gain both the knowledge and skills that will help to empower them to make better decisions about their sexual health practices and relationships. Fundamentals of human sexuality will be presented including: the myriad of influences that shape our sexuality, with particular emphasis on gender development, sexual orientation, health issues of the sexual female and male body, enhancements and inhibitors to sexual response, and enhancing sexual relationships. Specific sexual health issues will also be focused upon, including: unintended pregnancy, contraceptive methods, sexual assault, sexually transmitted infections,

HIV disease, and safer sex strategies. Facilitated small group work will allow students to practice critical thinking, communication, and decision making skills through structured interactive activities. We are committed to creating a vibrant learning environment in this class.

General Education: Health and Wellness (GHW)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Key Literacies
GenEd Learning Objective: Soc Resp and Ethic Reason

BBH 148: Coping with College: A First Year Transition Seminar

2 Credits

Exploration of effective learning strategies, university resources, academic requirements and planning, career development issues in discussion-centered environment.

First-Year Seminar

BBH 150N: Safe and Sound: The Intersection of Criminal Justice and Public Health

3 Credits

This course will consider the overlapping responsibilities and epistemologies of criminal justice and public health. Both fields concerned with the promotion of population welfare, the public health and criminal justice systems nevertheless confront the same social problems from different ethical perspectives, research methodologies, and knowledge bases. Each may further mobilize different institutional actors driven by divergent political agendas. While we will discuss the productive collaboration between public health and public safety agencies, we will also consider ongoing ownership struggles over certain issues, behaviors, and even populations. Given its practical relevance to many ongoing social issues and controversies of general importance, this course is motivated by a commitment to community-engaged scholarship, and thus will include topics, readings, assignments, speakers, and field trips of local and state importance. At the same time, specific topics will be framed in terms of their national and international importance, and students will be encouraged to link micro-level problems to macro-level processes.

BBH 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BBH 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BBH 201N: Health and the Media

3 Credits

The main purpose of this course is to prepare students for critically interpreting representations of health in the media. The course integrates media, social and cultural studies perspectives with health communication approaches in health promotion. The course will educate students about population level determinants of health and health communication interventions for health promotion and disease prevention. At the same time, students will be introduced to socio-cultural critiques of the media and to elements of critical textual and discourse analysis, with an emphasis on visual analyses. Based on these two sets of disciplinary exposures, students will be equipped to contextualize health contents in the media and to critically analyze media representations of health. Examples of health communication campaigns and of commercial messages targeting health consumers will be amply discussed, and general media effects on health communication will be analyzed. The course is designed for undergraduate students interested in developing their health and media literacies. The course stresses both integrative and critical thinking dimensions, and encourages students to confront important conceptual and moral issues in today's society such as over-representing individual determinants of health and obscuring social determinants of health in health communication. Students with an interest in civic engagement and in issues of individual and collective freedom and agency will find the course particularly relevant. Students pursuing careers in bio-behavioral health, health promotion, health communication, public health, medicine, nursing, psychology or other human and social services will benefit from the integrative character of the course and will acquire an understanding of the mediated nature of health concerns in society. The course offers students the opportunity to develop research in health communication or to create health communication materials.

BBH 203: Neurological Bases of Human Behavior

3 Credits

An introduction to biopsychology, emphasizing the structure and function of the human brain. BB H (PSYCH 260) 203 Neurological Bases of Human Behavior (3) The nervous system provides the biological underpinning of behavior, and several scientific fields are concerned with the relationship between the nervous system and behavior. The goal of this course is to introduce the principle methods, findings, and theories of these scientific fields. Topics include (a) the anatomy and physiology of the nervous system, (b) how the nervous system gives rise to perception, action, language, memory, emotion and reproductive behavior, and (c) how drugs and mental illnesses affect the nervous system and alter normal perceptual, cognitive, and emotional behavior. The course prepares students for a number of more advanced courses in Psychology and Biobehavioral Health that address specialized topics in neuroscience, and may satisfy a requirement of these majors.

BBH 204: Methods in Neuroscience Research

1 Credits

This course will consist of a variety of laboratory exercises and observations demonstrating the principles of neuroscience and different aspects of neuroscience research.

BBH 210: Biobehavioral Aspects of Genetics

3 Credits

An individual's DNA is a key biological process involved in behavior, health, and disease. The goal of this course is to introduce the foundational concepts of genetics in a Biobehavioral Health framework. This course will examine how genes are encoded by DNA, how DNA is transcribed into RNA, and how RNA is translated into protein. Additionally, this course will cover DNA at the global level of the chromosome. Finally, variation across levels will be explored. For example, variation at the level of an individual DNA base pair or through alterations in chromosome structure. Application of these concepts to human health and disease will be highlighted throughout the course. The course prepares students for a more advanced course in Biobehavioral Health that address specialized topics in health and developmental genetics.

Enforced Prerequisite at Enrollment: BIOL 110 or BIOL 161

BBH 251: Straight Talks I: Advanced Sexual Orientation/Gender Identity Peer Education

3 Credits

Exploration of social justice issues, diversity leadership, and group facilitation skills related to lesbian, gay, bisexual, transgender, and ally issues. BB H 251 Straight Talks I: Advanced Sexual Orientation/Gender Identity Peer Education (3) (US) Straight Talks I provides students an opportunity to explore various lesbian, gay, bisexual, transgender and allies (LGBTQA) issues from an educational perspective. Students will be exposed to theories, terminology, and various speakers who will approach topics such as LGBTQA history and multicultural issues. The course projects are designed to enhance both written and oral skills, and provide students an opportunity to work together. Finally, the course challenges students to think critically about the social, economic, and political cultures around them and how these cultures affect sexual and gender orientation issues. Course Objectives: Philosophical 1. To think critically about your spiritual, social, economic, political and cultural existences and their relationship to your understanding of sexual and gender orientation issues. 2. To develop a critical consciousness that will bring awareness of the ways custom, ritual and tradition helped shape and continue to shape our daily lives. 3. To develop a fuller understanding of the way gender and sexual orientation are conceived of by other people and the ways in which these conceptions link with other elements of identity including ethnicity, class, gender, ability etc. 4. To challenge you to consider the following questions: a) What does it mean to provide educational programming? b) What does it mean to be a peer educator? c) How do I influence others by my involvement in this program? d) How do I what to influence others by my involvement in this program? e) How do I change the world so that it is a better place when I leave it? Praxis 1. Develop facilitation and presentation skills 2. Obtain knowledge about LGBTQA history and current issues and concerns. 3. Conceive of and articulate what it means to 'come out'. 4. Acquire information on sexual

orientation, identity development and queer history. 5. Refine your ability to provide programming activities in the form of facilitation, discussion, skits, and exercises. 6. Develop a sense of community and rapport with other panelists through class discussions and projects.

United States Cultures (US)

BBH 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

BBH 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BBH 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BBH 301W: Values and Ethics in Biobehavioral Health Research and Practice

3 Credits/Maximum of 3

Examines bases for choices among values in personal and professional relations in human development processes and supporting services. This class is meant to give students both background knowledge of and practice in the process of ethical decision making. Students will learn the historical, philosophical, and psychological concepts underlying the study of morality and ethics. Course content will include the history and rationale for regulations regarding the ethical practice of research, medicine, and public health.

Enforced Prerequisite at Enrollment: BBH 101

Writing Across the Curriculum

BBH 302: Diversity and Health

3 Credits

Examines the relationship diverse personal and sociocultural factors (e.g., socioeconomic class, race-ethnicity, gender, age, and sexual orientation) have with health. BBH 302 / AFAM 302 Diversity and Health (3) (US) is an introduction to the interdisciplinary study of the impact of diversity on health in America. The course is designed to provide an understanding of the complex interaction between concepts of diversity, including but not limited to race, ethnicity, culture, gender, age, socioeconomic status, and sexual orientation. The course will also consider and critique the methods used in the study of these concepts and issues related to the measurement of health among diverse groups. The ultimate goal of this examination is to assist students in developing an appreciation of diversity and the impact diversity has on assessments and study of health, health status, and health promotion in America. The course is also designed to integrate different sources of information about diversity by utilizing critical thinking skills for the consumption of health information. The educational objectives will be to enable students to: 1) Consider the implications of race, ethnicity, gender, age,

socioeconomic status and sexual orientation on health/social policies in light of research findings, 2) Understand the legacies and historical events that have impacted our view, status, and treatment of diverse populations, 3) Appreciate the importance of understanding the origins of different health behaviors that impact biological processes, as well as the impact of biological processes in the context of social, environmental, and cultural influences when examining health issues.

Enforced Prerequisite at Enrollment: PSYCH 100 or SOC 1

Cross-listed with: AFAM 302

United States Cultures (US)

BBH 305: Introduction to Global Health Issues

3 Credits

Course will develop awareness of contemporary issues in global health. BB H 305 Introduction to Global Health Issues (3) This course is an introduction to health and related issues in the global context. It is intended to be an overview of fundamental perspectives about the historical, current, and future public health challenges facing developing and industrialized countries. The course will explore the interrelationships among social structure, culture, demography, health promotion/disease prevention, biology, ecology and health policy of various countries and international health organizations. This course will 1. present key issues related to the history, conceptual frameworks, economic conditions, and policy affecting public health in the global context, 2. examine reports and studies pertaining to major global health issues and comparative research, 3. discuss the role of social structure, culture, gender roles, government policies, and the increasing numbers of the elderly in preventive health behaviors and health promotion in the global context, and 4. critique theories and models used to inform health and development programs in non-Western nations.

Enforced Prerequisite at Enrollment: BBH 101

Cross-listed with: AFR 305

International Cultures (IL)

BBH 310: Research Strategies for Studying Biobehavioral Health

3 Credits

BBH 310 surveys the various research methodologies used in biomedical and behavioral research, including case, epidemiological, quasi-experimental and experimental approaches. The goals of this course are: (1) to provide students with a basic understanding in research methods; (2) to familiarize students with research strategies for studying Biobehavioral Health; (3) to develop critical thinkers and informed consumers of scientific research and health information; (4) to provide a basic understanding of the available approaches to research and interventions in order to address the complex set of determinants associated with public health problems that affect populations generally and those factors associated more specifically with racial and ethnic disparities in health. We will also talk about how research data are analyzed, interpreted, and translated into meaningful results in the form of a scientific paper, while addressing many of the important issues and concerns behind statistical assessments and outcomes. In addition, research ethics, responsibilities associated with conducting human research, and some of the perils of research, including issues associated with a study's method, design, and publication, will also be discussed.

Enforced Prerequisite at Enrollment: C or better in (STAT 200 or STAT 250) and BBH 101

BBH 310H: Research Strategies for Studying Biobehavioral Health

3 Credits

This course is designed for students working to earn honors in Biobehavioral Health to help them prepare for their thesis proposals. The course surveys the various research methodologies used in biomedical and behavioral research, including case, epidemiological, quasi approaches. The goals of this course are: (1) to provide students with a basic understanding in research methods; (2) to familiarize students with research strategies for studying Biobehavioral health; (3) to promote critical thinking of scientific research and health information; experimental and experimental (4) to develop a basic understanding of the available approaches to research and interventions that are needed in order to address the complex set of determinants associated with public health problems that affect populations; (5) to familiarize students with how research forms a critical component of BBH honors requirements.

Enforced Prerequisite at Enrollment: C or better in BBH 101 and (STAT 200 or STAT 250)

Honors

BBH 311: Interdisciplinary Integration in Biobehavioral Health

3 Credits

Interdisciplinary Integration in Biobehavioral Health explores the complex ways in which influences at different levels and across different domains come together to impact human health. The course will highlight the complex determinants of health by exploring diverse areas from a cellular to global level. Students will engage in a review of the literature relevant to the concepts and findings of different scientific domains as they apply to biobehavioral health. Accordingly, students will utilize literature from various domains, including human biology, sociology, psychology, and anthropology. This course will help students to synthesize and apply concepts learned in prerequisite courses in order to develop an in-depth understanding of fundamental topics in biobehavioral health.

Enforced Prerequisite at Enrollment: BBH 101 and BIOL 110 and PSYCH 100. Students are required to have a C or better in BBH 101 and PSYCH 100

BBH 315: Gender and Biobehavioral Health

3 Credits

Interdisciplinary study of gender, examining the interaction of biological, behavioral, and sociocultural factors on health differentials throughout the lifespan. BB H 315 Gender and Biobehavioral Health (3) (US) BB H 315 is an interdisciplinary study of the impact of gender differences (and similarities) in health in the United States and the world, examining the interaction of biological, behavioral, and sociocultural factors on health, morbidity, and mortality. The course will also consider and critique the methods used in the study of gender and concepts and issues related to the measurement of health in men and women. The ultimate goal of this course is to assist students in developing an appreciation of the diversity concept of gender, and the impact of this concept on assessments and study of health, health status, and health promotion in America and other nations. The course is also designed to integrate different sources of information about gender by utilizing critical thinking skills for the consumption of health information. The educational objectives will be to enable students to: 1) define the concepts of sex, gender, gender roles, and gender identity and how they contribute to differentials in morbidity and mortality at various life stages, based on epidemiological

data and other research, in the United States and other countries; 2) describe biological (e.g., genetic and hormonal) factors that contribute to gender differences and similarities in health at different life stages; 3) describe behavioral factors, such as acquired risks, self-protective behavior, and stress, that contribute to gender differences and similarities in health at various life stages; 4) describe sociocultural factors, such as gender roles, class, race/ethnicity, and educational level that contribute to gender differences and similarities in health at various life stages; 5) describe and design gender-sensitive strategies for health research and health promotion; 6) examine gender differences in a specific illness, disease, or health issue experienced by women and/or men in this country and others, and the contributing factors (e.g., sociocultural) to the differences that may exist; and 7) critique gender research on particular health issues. To achieve these objectives, the course will involve open class discussions, small break-out group discussions with written assignments, short quizzes, a paper requiring the acquisition, utilization, and critical analysis of information/research from library and internet resources, and a group presentation that requires collaborative work.

Enforced Prerequisite at Enrollment: BBH 101

United States Cultures (US)

BBH 316: Foundations and Principles of Health Promotion

3 Credits

Foundations of Health Promotion, is a 3-credit course required of all BBH majors and available to other students interested in developing a basic knowledge in health promotion interventions. The course is designed to provide students with the conceptual foundation necessary to develop health promotion programs and interventions. It will involve information on both theory and practice. The educational objectives are that students will be able to: 1) define the concepts and levels of health, health promotion, and prevention; 2) describe the variety of settings in which health promotion and preventive services exist 3) identify levels of intervention in planning health education and health promotion programs; 4) describe a rationale for health promotion programs; 5) address the role of culture, environment, and policy in health behavior; 6) explain why different levels of health promotion interventions should be planned using theoretical frameworks.

Enforced Prerequisite at Enrollment: C or better in either of the following BBH 101 or BBH 101H

BBH 324: HealthWorks Peer Education Training

3 Credits

Designed to train new HealthWorks peer educators, this course addresses behavior theories, promotion strategies, and college health issues. BB H 324 HealthWorks Peer Education Training (3)HealthWorks is a peer education/outreach group that aims to promote health among Penn State students. The mission of HealthWorks is to:-increase awareness and knowledge of health issues, such as sexual health, nutrition and fitness, wellness, alcohol, tobacco and other drugs, and body image and eating disorders,-promote healthy lifestyle choices,- provide health education programs, information, and materials to students, and-advocate for a healthy Penn State community. BB H 324 is designed to train students who have been accepted into University Health Services' HealthWorks program every fall semester. The course will address the topics of health behavior theories, health promotion strategies, and health issues relevant to college populations (i.e., alcohol, nutrition, physical activity, sexual health, sleep, stress, and tobacco). To

ensure that new HealthWorks members are trained to effectively promote health, students will gain both knowledge and practical experience in this course. Students will learn about health behavior theories, health promotion strategies, and health topics relevant to college students through formal classroom lectures and examinations. Classroom technology will be utilized to examine campus and national health campaigns and messages, illustrating the theories and strategies discussed in class. To garner practical experience and application-based learning, students will assist with current HealthWorks programming. Members of this class will additionally apply and integrate their new understanding of class topics through a semester project. The small-group project will ask students to propose a future HealthWorks program focused on one or more health topics that is built upon at least one health behavior theory and utilizes evidence-based strategies. By the conclusion of this course, HealthWorks members will possess the knowledge and skills to effectively provide health-related outreach, advocacy, community development, and education opportunities to students on the Penn State campus.

BBH 325: Health Promotion Services Training

3 Credits

This course will provide students with the knowledge and professional skills to deliver peer-based individual health promotion services for the college population. The course will cover a variety of health issues that are relevant to college students, including nutrition, physical activity, sexual health, sleep, and stress (including mindfulness and time management). Students will be taught about each of the health topics over the course of two class sessions. Students will be taught information about how each health topic specifically relates to the college population. Current data about each topic will be included. These issues will be discussed in the context of health promotion principles and applicable health promotion theories. The class will provide an overview of the ecological perspective, but the focus will be on intrapersonal and interpersonal level theories, such as the Stages of Change (Transtheoretical) and Health Belief Models, as well as Social Cognitive Theory. Students will be taught the constructs for each model/theory. Students will be taught about how the theories/models apply to delivering individual health promotion interventions. Students will receive extensive training in motivational interviewing, an evidence-based strategy for promoting health behavior change. The content is designed to help students develop an understanding of the core concepts of motivational interviewing. Students will practice motivational interviewing techniques during class time. The students will deliver individual interventions during class time. Additionally, students will be given course assignments that require them to practice delivering the interventions. Students will learn about professionalism and ethics within the context of delivering individual interventions to college students.

Enforced Prerequisite at Enrollment: PSYCH 100 or CAS 100

BBH 330: Clinic Intern Training

3 Credits/Maximum of 6

The University Health Services (UHS) clinic intern training program provides students with the opportunity to interact professionally with patients in the health service and to work closely with members of the clinical and nursing staff at UHS. The training program teaches students to conduct initial intake screenings at UHS. This includes assessing vital signs (temperature, respirations, pulse, and blood pressure), determining the reason for the visit, entering patient information into an electronic medical record, and performing simple procedures such as testing visual

acuity. Other topics covered include HIPAA training, common health concerns, patient confidentiality, and proper documentation. Enrollment in the course will involve an application and interview process; students must be willing to commit to two semesters of work to be enrolled.

BBH 368: Neuroanatomy, Behavior, and Health

3 Credits

The neuroanatomical bases of behavior, health, and disease. BB H 368 Neuroanatomy, Behavior, and Health (3) BBH 368 will examine, in detail and in depth, the relationships between the multitudinous structures of the human nervous system and their roles in monitoring and controlling all functions of the body, in behavior and in health and disease. Because of the complexity of the anatomy of the nervous system, of necessity there will be an emphasis on each student developing a three-dimensional understanding of the brain's structures and their geographic relationships to each other. For students majoring in BBH, this course provides a foundation and preparation for BBH 469 & 470, the two semester Neurobiology/Integrative Neuroscience course sequence, which assumes that the student has a basic, but detailed knowledge of the nervous system. This course will count toward fulfilling the BBH major requirement, "Take 15 credits in Biobehavioral Health." It will also count toward fulfilling the requirement of 9 credits of additional courses in the Neuroscience Minor. Upon successful completion of the course, the student should be able to: a) Identify on gross specimens and in slides of sections of the human nervous system the important nuclei, tracts and supporting structures. b) Describe the important pathways and circuits between the different components and nuclei of the human nervous system. c) Describe the role of each nucleus, tract, and circuit in controlling functions and behavior. d) Describe the expected deficits in function and behavior resulting from injury or disruption of each nucleus and tract.

Enforced Prerequisite at Enrollment: BBH 101 and (BISC 4 or BIOL 141 or PSYCH 260)

BBH 370: Environmental Health and Sustainability

3 Credits

This course explores the relationship of people to their environment; notably how the natural environment influences their physical, mental, and social well-being. This course also investigates the impact of environmental issues on community, regional and global health. Students will gain a basic understanding of how environmental factors impact the health of people and the community, and an overview of public health prevention efforts to minimize negative impacts.

Enforced Prerequisite at Enrollment: BBH 101 and BBH 316

BBH 390A: Preparation for Global Health Field Experience

3 Credits

Designed to help students prepare for the required field experience in the Global Health minor. BB H 390A Preparation for Global Health Field Experience (3) This purpose of this course is to train students admitted to the Global Health (GLBHL) minor to plan and prepare for the required field experience in a global health setting. Students in the minor must take both this course, BB H 390A, and the subsequent field experience course, BB H 390B. This course includes an examination of both practical and academic issues related to successfully completing an appropriate field placement. Focus is given to encouraging students to become reflective global health practitioners who are able to adapt to and work

through personally and professionally complex situations. Interactive class lectures, readings, case studies, discussions, assignments and projects/presentations will help students gain an awareness of the socio-cultural, economic, and political context of various kinds of global health professional settings, and to be sensitive to the constraints under which health professionals work in different parts of the world. To broaden their understanding of the realities of engaging in the field of global health, students will have opportunities to meet with individuals who have health work experience in a variety of low and middle-income settings.

Enforced Prerequisite at Enrollment: BBH 305 and (BBH 440 or HPA 440) and admission to the Global Health minor

BBH 390B: Global Health Field Experience

6 Credits

Field experience in a global health setting. BB H 390B Global Health Field Experience (6) The purpose of this course is to provide a supervised field experience in a global health setting for the students who have been admitted to the Global Health Minor (GLBHL). Students in this minor must take BBH 390A "Preparation for Global Health Field Experience" before scheduling this course. Students will spend 6 weeks in the summer working in one of several pre-approved international or domestic health care or public health settings under professional supervision.

Enforced Prerequisite at Enrollment: BBH 390A and admission to Global Health minor

BBH 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BBH 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BBH 402: African Health & Development

3 Credits

Course will address African health and development strategies in the context of health promotion programs. BB H 402 African Health & Development (3) (IL) This course is designed to address African health and development strategies in the context of health promotion programs. Students will analyze the cultural, educational, social, economic, political and environmental impact of health and development in Africa. Emphasis will be on development of health promotion strategies that locate program implementation and evaluation within their cultural contexts. The objectives are to prepare students to: 1. discuss and debate the roles of culture, social contexts, gender, and political economic impact on health behaviors in Africa; 2. critique some of the theory and models used to inform public health programs in Africa; 3. examine the role of historical, spiritual, linguistic, and political impacts on health projects in different countries in Africa; and 4. analyze health priorities in Africa and their impacts on such global initiatives as the Millennium Development Goals; 5. discuss issues related to human rights, population identities in the world and examine their impact on health in Africa. Attendance is required. Students will be expected to participate actively

by critically reviewing assigned readings, engaging in class discussions, and preparing and delivering in-class presentations. Grading is based on attendance, participation, presentations, exams and a final research paper.

Enforced Prerequisite at Enrollment: BBH 305 International Cultures (IL)

BBH 407: Global Health Equity

3 Credits

Health, social disparities, and equity in the global environment. BB H 407 Global Health Equity (3) (IL) This course focuses on issues related to health, social disparities, and equity in the global environment. It examines the theories of health disparities and equity from the vantage point of Western and non-Western countries. It explores epidemiologic data and the relationships between social structure, culture, demography, health promotion/disease prevention, and health policy of various countries and international health organizations. The course objectives are to: 1. discuss and critique the history, conceptual frameworks, and policy implications of global health disparities and equity; 2. examine epidemiologic data and studies pertaining to major global health issues and cross-national and comparative research; 3. discuss the role of social structure, culture, gender roles, and government policies in preventive health behaviors and health promotion in the global context; 4. critique theories and models used to inform health and development programs in non-Western nations.

Enforced Prerequisite at Enrollment: BBH 101 or 3 credits in SOC International Cultures (IL)

BBH 410: Developmental and Health Genetics

3 Credits

The focus of this course is on genetic influences on complex traits that are relevant to health and development. In the first part of the course, aspects of basic genetics are reviewed from the perspective of how genes work in the context of complex traits. This background information is complemented in the second part by an introduction to basic study designs and experimental approaches in genetic epidemiology, molecular genetics, and quantitative genetics. The third part of the class focuses on the application of these concepts and methods to the investigation of the genetics of health-related conditions. At the end of the course, students will have a fundamental understanding of how multiple genetic and environmental influences interplay to influence health, and the ability to evaluate critically claims of identification of genes that influence complex traits.

Enforced Prerequisite at Enrollment: (BBH 210 or BIOL 222) and (STAT 200 or STAT 250) Students are required to have a C or better in all prerequisite courses.

BBH 411W: Research and Applications in Biobehavioral Health

3 Credits

Research methods, multi-level analyses, and applications in biobehavioral health. BB H 411W Research and Applications in Biobehavioral Health (3) This is an upper-division course on research and applications in Biobehavioral Health and is the designated writing intensive (W) course for the major. The primary goals of this course are to provide the student the ability to effectively: 1) find, organize, integrate, and critique existing knowledge and research in biobehavioral health; 2) generate and analyze

new data related to a specific domain through the conduct of original research; 3) interpret, evaluate, and communicate—to both scientific and lay audiences—the results of the original research; and 4) integrate these findings—with due concern for strengths and limitations of the research—back into the body of knowledge on the biobehavioral health topic. In this course the instructor will first introduce the student into a body of knowledge related to a domain involving health and health-related behaviors. Example domains may include areas such as, stress and health, drug/alcohol addictions and health, hormonal impacts on health, smoking cessation programs, obesity and health, sexual behaviors and health, etc. Students will go through the steps involved in original research (e.g., Introduction, Methods and Procedures, Results, Discussion, Summary, Abstract, Bibliography) and written assignments will be involved for each step. Depending on the instructor, the original research may involve laboratory work, collection of survey data, analyses of publically available data, or existing data sets based on faculty's research program. Students will learn how to use available tools to descriptively summarize and analyze data using computer-assisted software. This is a required course in the Biobehavioral Health major. The course is designed to give skills to acquire, integrate, and critique health-related information and to communicate to professional and non-professional audiences. The course is appropriate for students intending to obtain positions in health promotion and disease prevention and to students seeking to advance to post-baccalaureate graduate and professional programs in medicine, public health, health policy and planning, and other health-related careers.

Enforced Prerequisite at Enrollment: C or better in BBH 101 and BBH 310 and (STAT 200 or STAT 250)
Writing Across the Curriculum

BBH 416: Health Promotion II: Planning, Implementation, and Evaluation

3 Credits

Planning, implementation, and evaluation of health promotion, prevention, and intervention programs; emphasizing evaluation.

Enforced Prerequisite at Enrollment: BBH 310 and BBH 316

BBH 417: Advanced Applications in Health Promotion

3 Credits

Advanced learning experience in health promotion applications in which students will actively participate in planning, implementing, evaluating health programs.

Enforced Prerequisite at Enrollment: BBH 416

BBH 420: Developing Stress Management Programs

3 Credits

Planning, developing, and implementing strategies for stress management programs for health education professionals in school, community, and corporate settings.

BBH 426: HealthWorks Peer Education Experience

1 Credits/Maximum of 5

BBH 426 is a one-credit course for students who have been trained to be peer educators in the HealthWorks program in Health Promotion and Wellness. Students will gain experience developing and implementing a range of college health promotion activities, including creating health

communication materials, conducting outreach events, delivering educational workshops and delivering one-on-one wellness services. The course includes a substantial amount of small group work. Students are expected to attend weekly meetings and engage in additional service work every week.

Enforced Prerequisite at Enrollment: BBH 324 or BBH 325

BBH 432: Biobehavioral Aspects of Stress

3 Credits

This course will cover the ways in which response to stress is related to human health. The course will explore the bidirectional relationship between dimensions of health and different types of stressors. Students will explore the effects of stress in different forms on physical, psychological, social, and cognitive outcomes. In addition, the course will examine how health status may change the way people respond to stressors. The course will cover the way stress response occurs in humans and how those responses can affect other aspects of physical, psychological, behavioral, and cognitive functioning.

Enforced Prerequisite at Enrollment: (BBH 101 or BBH 101H) and (BIOL 141 or BIOL 161)

BBH 440: Principles of Epidemiology

3 Credits

This course is designed to provide students with a basic understanding of the principles of Epidemiology and to familiarize students with the methods and applications of epidemiology to understanding the bases for heterogeneity of disease and health among populations. The goals of the course are: 1) recognize and use basic principles, concepts, terminology, and techniques in Epidemiology as applied to the study of infectious disease, chronic diseases, and other health-related problems; 2) examine and understand measures of risk and burden of illness on populations defined in terms of age, race, gender, class, time, and other relevant socio-cultural and demographic factors; 3) be able to interpret and critique epidemiological research reports on the identification of risk factors and casual factors for diseases in populations; 4) assess the health status and burden of diseases and health problems of populations at multiple levels of analysis for the purpose of planning health promotion activities and health care services; 5) have a basic understanding of the epidemiology tools for disease screening and other methods for primary and secondary prevention of disease and health problems; 6) examine the validity and applicability of various health interventions used to improve health status and the barriers for successful interventions; and 7) have a basic understanding of the epidemiology of the major causes of morbidity and mortality in the U.S. and for other selected regions and nations of the world. This is a required course in the Biobehavioral Health major and an elective course in the Health Policy and Administration major. The course is also appropriate for students intending to advance to post-baccalaureate graduate and professional programs in medicine, public health, health policy and planning, and other health-related careers. Students will be evaluated based on their performance on a combination of written assignments, a term paper or project, and exams.

Enforced Prerequisite at Enrollment: (BBH 310 or BIOL 230W or HPA 311) and (STAT 200 or STAT 250) Students are required to have a C or better in all prerequisite courses.

Cross-listed with: HPA 440
International Cultures (IL)

United States Cultures (US)

BBH 446: Human Sexuality as a Health Concern

3 Credits

Examination of human sexuality as a integral part of basic health education and health care for persons of all ages.

Enforced Prerequisite at Enrollment: BBH 101

BBH 451: Pharmacological Influences on Health

3 Credits

Biological and behavioral aspects of therapeutic and recreational drug use and misuse, and their relationships to health. BB H 451 Pharmacological Influences on Health (3) The primary theme of this course is to review and integrate information relevant to the actions, uses, and biobehavioral influences of psychoactive drugs. Concepts relevant to pharmacology, biobehavioral health, and drug use and abuse will be learned. The primary objectives of this course are:1. To provide an understanding of the concepts relevant to pharmacology, including: principles of drug action (pharmacokinetics, pharmacodynamics), drug safety, and drug effectiveness.2. To provide a descriptive representation of the breadth of topics relating to behavioral and biological influences of psychoactive (i.e., therapeutic, recreational) drugs on human health and disease.3. To provide exposure to and enhance critical thinking skills in current research related to the biobehavioral effects of psychoactive (i.e., therapeutic, recreational) drugs, including: psychoactive drug use and abuse, therapeutic drug use, and drug addiction treatments.

Enforced Prerequisite at Enrollment: BBH 101 and PSYCH 100 and (BIOL 141 or BIOL 161)

BBH 452: Women's Health Issues

3 Credits

The course provides the opportunity to explore priority health issues impacting the well being of women through a holistic lens including the physiologic, psychological, social, economic, political and cultural considerations. Issues affecting women in the United States and globally will be discussed. The lifespan from adolescence throughout later adulthood will be included. In depth exploration and critical analysis of key topics related to women's health will be incorporated into the course work and assignments. Students will be challenged to consider the health disparities influencing women and the impact these disparities have on the health of families and communities.

Recommended Preparation: BIOL 141 or PSYCH 100 or WMNST 100

Cross-listed with: NURS 452

United States Cultures (US)

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

BBH 458: Critical Feminist Issues in Reproduction

3 Credits

This course examines women's reproductive health issues from a feminist perspective. Reproduction has always been thought of as 'women's work,' yet decisions about reproduction are rarely made by

women. This course will focus on how various political institutions (e.g., religious, economic, governmental, legal, medical, etc.) influence all aspects of human reproduction, and how these influences affect women's reproductive health, both ideologically and practically, as well as how women's reproduction affects women's lives. This course will examine four aspects of reproduction from a feminist perspective: reproductive rights, including access to birth control and abortion along with the right to be free of forced sterilization; infertility and the new conceptive technologies; pregnancy, including screening, sex selection, maternal and 'fetal rights'; and childbirth options. Throughout the course, we will return to the question of the 'politics of reproduction' by asking ourselves which powerful institutions govern each particular aspect of reproduction and whether the decisions made are good for women. Using a feminist perspective, we'll focus on making women and their health needs the center of discussion and examining the relative lack of power held by women in decisions made about their reproductive health. In addition to class readings (which are both theoretical and applied in nature) students will learn through class discussions, films, and group projects.

Enforced Prerequisite at Enrollment: WMNST 100 or WMNST 100U or WMNST 105N or WMNST 106N or WMNST 106Q or WMNST 301 or PSYCH 100

Cross-listed with: WMNST 458

General Education: Health and Wellness (GHW)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

BBH 468: Neuroanatomical Bases for Disorders of Behavior and Health

3 Credits

An examination of the anatomical/cellular/molecular bases for human central nervous system disorders and their impacts on victims/families/caregivers. BB H 468 Neuroanatomical Bases for Disorders of Behavior and Health (3) This course will examine in detail and in depth the neuroanatomical and cellular/molecular/genetic bases for selected disorders of the human central nervous system (e.g. Parkinson's, Alzheimer's, stroke, etc.) and their impacts on the victim, his/her daily life and his/her family and care givers. Damage to, or malfunctions of, any part of the central nervous system causes specific and characteristic disruptions of normal processes, which manifest as abnormal and/or absent behaviors. Current research on the anatomical, cellular, molecular, and genetic bases for the disorders and the current/future trends in prevention/treatment of the disorders will be studied. Upon successful completion of the course, the student should be able to: a) describe the physical signs, symptoms, causes, effects on the patient and his/her family & care givers, prognoses, treatments, and support systems available to these patients, of the neurological disorders covered in this course; b) describe the neuroanatomical, cellular, and molecular bases for these conditions; c) describe the current research on these disorders and the new prevention/treatment approaches being developed. The evaluation of students' performances in the course will be typically based on multiple choice examinations and a library research paper. This course will count toward fulfilling the BB H major requirement, "Take 15 credits in Biobehavioral Health."

Enforced Prerequisite at Enrollment: BBH 368 and (BBH 469 or PSYCH 260)

BBH 469: Neurobiology

3 Credits

Students will acquire an understanding of basic neurobiology, the terminology of neuronal structures and functions, as well as experimental approaches designed to integrate the principles of neural cell biology, neurophysiology, neurochemistry, neuroendocrinology, neuropharmacology, genetics and molecular biology. The LEARNING OBJECTIVES of this course are to establish a working knowledge and understanding of: (I) the cellular structures, organelles and passive and active membrane properties important for neural function, (II) the neurotransmitters, receptors, ion channels and 2nd messenger systems underlying synaptic transmission and other forms of neural signaling, (III) the development of the nervous system including neurogenesis, neural maturation, apoptosis, synaptogenesis in both the developing and adult CNS, and (IV) the molecular mechanisms underlying synaptic plasticity and learning and memory. Lastly, (V) the course will demonstrate applications of above knowledge to select complex diseases of the central nervous system

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or BIOL 240W or BIOL 240M
Cross-listed with: BIOL 469

BBH 470: Functional and Integrative Neuroscience

3 Credits

Neurobiological function in motivated behaviors, motor and sensory function, learning and memory, development, sexual differentiation, and pathology.

Enforced Prerequisite at Enrollment: BIOL 469
Cross-listed with: BIOL 470

BBH 471: Clinical Research Practice

3 Credits

As new molecules progress from the laboratory to the bedside, the clinical trials enterprise needs a fresh generation of professionals with knowledge of the application of research applied to human health and disease; professional skills in regulatory oversight, human subjects' protections, and research administration; and a willingness to share health interventions in communities. In this course students will develop a deeper understanding of clinical research practice including legal requirements and oversight, good clinical practice, essential elements of clinical practice/operations, data management, the financing/budgeting of clinical trials, and socio-political factors impacting trials; all of which will help prepare students for internships and jobs in clinical research organizations. The course is best suited to students with fifth semester standing or higher who are considering future careers and professional certification in clinical research specialties.

Enforced Prerequisite at Enrollment: (BIOL 161 or KINES 203) and (STAT 250 or STAT 200) Recommended Preparation: Fifth semester standing or higher. Knowledge of the health services enterprise.
Cross-listed with: HHD 410

BBH 475H: Honors Biobehavioral Analysis of Addiction

3 Credits

Addiction is a ubiquitous problem, yet understandings of addiction and opinions on the causes of addiction vary greatly. This course will

apply a biobehavioral approach to examine addiction from historical, societal, behavioral, neurobiological, and genetic contexts to identify causes, challenges, and comorbidities that associated with addiction that affect individuals and populations. Some of the course topics will include: theories of addiction, the impact of developmental exposure to substances of abuse, comorbidity of substance abuse with other mental disorders, the role of genetics in addiction, the neural substrates of addiction, and treatments for addiction. Questions that will be raised include: Can addiction be cured? Is addiction one disorder or an amalgam of disorders? What is the impact of addiction? Learning objectives include: students will be able to locate, critique, and synthesize empirical research on topics related to addiction; students will engage in discussion on topics and theories of addiction and relate research to real world situations; Students will effectively communicate on a specific addiction-related topic and include research evidence, theories, and implications.

Enforced Prerequisite at Enrollment: BBH 203 or PSYCH 260 or BIOL 469 or Permission of program or comparable course neurobiology Honors

BBH 490: Introduction to Internship Experience

3 Credits

Provide an integrative learning experience to develop professional skills encountered in an internship experience and future careers in biobehavioral health. BB H 490 Introduction to Internship Experience (3) This course is a prerequisite for BB H 495, Internship Experience in Biobehavioral Health. This course will provide students with the professional and academic skills necessary to develop an internship, be successful in an internship and equip students with the tools necessary to launch a career within the field of BBH or enable students to prepare more competitive applications for entry into post baccalaureate programs in medical fields or graduate school. The primary goal of the course is to provide integrative learning experiences preparing students to be successful in their internship endeavor, while learning practical skills necessary to flourish in future career choices. Course topics include: professional self-assessment and critical reflection, experiential learning, person/environment fit, resume creation and professional writing criteria, practical skills related to securing an internship consistent with professional goals, interviewing skills, professionalism and ethics within the BBH field, effective communication and internship agreement guidelines. Through this practical application, students will gain the necessary proficiencies and awareness of career settings, protocols and contexts under which BBH specialists work and/or prepare for future educational opportunities.

Enforced Prerequisite at Enrollment: A C or better in either of the following BBH 101H or BBH 101, Permission of program

BBH 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

BBH 494H: Senior Honors Thesis

1-6 Credits/Maximum of 6

Independent study related to a student's interests directed by a faculty supervisor and culminating in the production of a thesis.

Enforced Prerequisite at Enrollment: approval of honors thesis advisor
Honors

BBH 495: Internship Experience in Biobehavioral Health

6-12 Credits

This course provides experiential learning in the field. Internship supervision and support will be provided by site and university personnel.

Enforced Prerequisite at Enrollment: BBH 490

BBH 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

BBH 496H: Independent Honors Study in BB H

1-3 Credits/Maximum of 6

For non-thesis independent study/research by Schreyer Honors College scholars.

Honors

BBH 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BBH 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Biochemistry and Molecular Biology (BMB)

BMB 1: The Science of Sickness

3 Credits

During this course, students will learn about the scientific process and how science has contributed to the knowledge used in the medical field to diagnose, treat, and prevent disease. The course will include a broad survey of the molecular and cellular factors that contribute to an understanding of select human diseases. By the end of the course, students will appreciate how various cellular, metabolic or genetic problems can give rise to a variety of diseases and disorders. The specific diseases covered each semester may vary based on student and instructor interest. Students will analyze the influence of molecular, genetic and environmental factors as well as lifestyle choices in regards to disease prevalence and severity. The knowledge gained about molecular processes will also be used in order for students to discuss the scientific basis of and ethical dilemmas related to controversial and cutting-edge diagnostic, treatment and prevention strategies such as drug development, clinical trials, genetic testing, genetic engineering or stem cell therapy. Lastly, students will gain knowledge necessary to

analyze statements made in the popular press about disease or disease treatments and determine if those statements are grounded in scientific research. As a course that meets general education (GN) requirements, students will increase their scientific literacy, their critical and analytical thinking, and ethical reasoning skills. Students will ultimately be able to use the knowledge gained in this course to better understand disease processes, and will be able to make better informed decisions regarding their health and well-being or that of a loved one.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

BMB 1Z: The Science of Sickness - Linked

3 Credits

During this course, students will learn about the scientific process and how science has contributed to the knowledge used in the medical field to diagnose, treat, and prevent disease. The course will include a broad survey of the molecular and cellular factors that contribute to an understanding of select human diseases. By the end of the course, students will appreciate how various cellular, metabolic or genetic problems can give rise to a variety of diseases and disorders. The knowledge gained about molecular processes will also be used in order for students to discuss the scientific basis of and ethical dilemmas related to controversial and cutting-edge diagnostic, treatment and prevention strategies such as drug development, clinical trials, genetic testing, genetic engineering, and stem cell therapy. Lastly, students will gain knowledge necessary to analyze statements made in the popular press about disease or disease treatments and determine if those statements are grounded in scientific research. The specific diseases covered each semester may vary based on student and instructor interest, but will include a discussion of diseases that have a well understood scientific basis as well as a lifestyle component such as certain types of cancer, as well as diabetes/metabolic syndrome. Students will analyze the influence of molecular, genetic and environmental factors as well as lifestyle choices in regards to disease prevalence and severity. Diseases that have fitness related treatment options will also be discussed in order to provide further opportunities for students to integrate material with the linked course, KINES 84Z. As a course that meets general education (GN) requirements, students will increase their scientific literacy, their critical and analytical thinking, and ethical reasoning skills. As a linked course, BMB 1Z can satisfy the Integrative Studies requirement in General Education as long as students successfully complete both BMB 1Z and KINES 84Z. Students will ultimately be able to use the knowledge gained in this course to better understand disease processes, and will be able to make better informed decisions regarding their health and well-being or that of a loved one.

Bachelor of Arts: Natural Sciences

BMB 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (1L)

BMB 205: Course-Based Research Experience in Biochemistry and Molecular Biology

2 Credits

In this research course, students will participate in a course-based undergraduate research experience while learning key foundational skills in the process, comprehension, and communication of science. Students will learn how to use critical thinking and metacognitive strategies to approach scientific problems, and will contribute to the scientific body of knowledge through the discoveries made in the research component.

BMB 205S: Course-Based Research Experience in Biochemistry and Molecular Biology FYS

3 Credits

In this integrated research and seminar course, students will participate in a course-based undergraduate research experience while learning key foundational skills in the process, comprehension, and communication of science. Students will learn how to use critical thinking and metacognitive strategies to approach scientific problems, and will contribute to the scientific body of knowledge through the discoveries made in the research component. This course will also contain a freshman seminar component that will help students adjust to the high expectations, academic rigors, and other aspects of the transition to college life.

First-Year Seminar

BMB 210: Phage Genomics

2 Credits

A course-based undergraduate research experience centered on analysis of bacteriophage (viruses that infect bacteria) genomics and writing a research proposal. Students will be introduced to various aspects of bacteriophage biology and various computational programs used to analyze bacteriophage genomic data. They will then use this knowledge to perform bacteriophage genomic analyses. Analyses conducted will be used to add to the current scientific knowledge through various routes, such as entries into scientific databases. Students will also learn to formulate a scientific question and write a hypothesis-based research proposal similar to those written for scientific funding agencies. In this way, students will be introduced to the process of scientific inquiry.

BMB 211: Elementary Biochemistry

3 Credits

An overview of biochemistry that includes properties of biomolecules, bioenergetics, metabolism, nutrition, genetics, and molecular biology. Elementary Biochemistry (3) BMB 211 is an overview of biochemistry that includes: basic properties and biosynthesis of proteins and nucleic acids, chemistry, and metabolism of major carbohydrate, lipid, and amino acid classes, energy production pathways including photosynthesis, biological transport, and principles of enzyme action. The course provides the student with a sufficient knowledge of biochemical processes, cellular

molecules and their metabolism to serve as a basis for advanced study of nutrition, genetics, biotechnology, agricultural sciences, or related biological areas that depend on a biochemical foundation. Achievement of course objectives is assessed through multiple written examinations designed to evaluate understanding of biochemical concepts and their applications to biological problems. BMB 211 is related to and a prerequisite for the companion laboratory course BMB 212 (1 credit).

Enforced Prerequisite at Enrollment: CHEM 202 or CHEM 202H or CHEM 210 or CHEM 210H

BMB 212: Elementary Biochemistry Laboratory

1 Credits/Maximum of 1

Selected experiments to illustrate major biochemical principles and techniques. B M B 212 B M B 212 Elementary Biochemistry Laboratory (1) B M B 212 exposes students to techniques typically used in industrial and academic laboratories to isolate proteins, perform enzyme kinetics, characterize carbohydrates and lipids, and study molecular biology. Data interpretation and conceptual understanding are emphasized. Specifically, students determine a weak acid's buffer range with a pH meter; quantify protein concentrations using a spectrophotometer; partially purify acid phosphatase from wheat germ, using ammonium sulfate precipitation, centrifugation and dialysis; characterize acid phosphatase kinetics; subject glycogen to acid and salivary amylase hydrolysis, then compare products using thin layer chromatography; isolate plasmid DNA from E.coli, then digest the plasmid DNA with restriction enzymes and analyze the products using agarose gel electrophoresis; make soap from commercial oils and fats; and lastly, identify fatty acids using a gas chromatograph. Students write laboratory reports to present their findings and correlate theory with actual experimental results. Written quizzes assess conceptual understanding of experiments. Teaching assistant evaluations judge the student's level of laboratory skill achievement, preparation, and ability to work with others in a professional manner. A solid chemistry knowledge base (CHEM 012 and either CHEM 034 or 038), previous laboratory experience, and the ability to work with mathematical word problems are expected of all students enrolled in the course. Biochemistry focuses on the chemistry of living organisms. This course provides basic biochemistry laboratory skills and exposure to widely-used methodology to develop a fundamental understanding of biochemistry needed for advanced courses in the student's major and compatible with the student's career interests. Outside resources for the student include reserved books and a course web site: www.bmb.psu.edu/courses/daniel/BMB212/default.htm.

Enforced Prerequisite at Enrollment or concurrent: BMB 211

BMB 221: Applied Biochemistry

2 Credits

Application and correlation of biochemical events to physiological-nutritional processes in specialized cells, fluids, and whole animals. Students may not receive credit for both B M B 221 and 401. B M B 221 B M B 221 Applied Biochemistry (2) In B M B 221, students will build on their knowledge from Elementary Biochemistry (B M B 211). Emphasis is on the application of biochemical principles to specific problems in medicine, agriculture, pharmaceuticals and biotechnology. Students review fundamental principles and learn how biochemical methods, techniques and theory are applied. Class presentations are computer based in some cases. The course may also include class discussions. Evaluation and grading varies with the instructor, but possible methods of evaluation include multiple choice examinations, essay-short answer

questions, and in-class contributions. Students will have completed at least three semesters of chemistry before B M B 221, because Elementary Biochemistry (B M B 211) is a prerequisite, and inorganic (CHEM 012) and organic chemistry (CHEM 034 or CHEM 038) are prerequisites for B M B 211. Knowledge of organic chemistry and basic biochemistry is essential so that the course can focus on applications rather than introductory material. B M B 221 is a requirement for those Biotechnology majors who choose not to take the 400-level series of introductory biochemistry courses. It is also required of students enrolled in the science option of the Dairy and Animal Science major. It serves as an elective for all other majors. It is not approved as a general education course.

Enforced Prerequisite at Enrollment: BMB 211

BMB 251: Molecular and Cell Biology I

3 Credits

BMB 251 Molecular and Cell Biology I (3) is an introduction to the fundamental principles of molecular and cellular biology, with a primary focus on eukaryotic cells. Topics covered will include elementary biochemistry; structure and function of biological macromolecules, the cell and its organelles; the role of biological membranes in bioenergetics and sub-cellular compartments. There will be a particular emphasis on the molecular mechanism of heredity; the organization and expression of genetic information; experimental methods used in the analysis of gene expression and the relationship between gene/protein structure and function.

Enforced Prerequisite at Enrollment: CHEM 112 or CHEM 112H

Recommended preparations MICRB 201 or MICRB 201H

Cross-listed with: MICRB 251

BMB 251H: Molecular and Cell Biology I

3 Credits

Biomolecules, genetic mechanisms, organization of cells and their organelles, DNA replication, protein synthesis, membranes, the cell nucleus, energy conversion. BMB 251H Molecular and Cell Biology I (3) This course is an introduction to the fundamental principles of molecular and cellular biology, with a primary focus on eukaryotic cells. Topics covered will include elementary biochemistry; structure and function of biological macromolecules, the cell and its organelles; the role of biological membranes in bioenergetics and sub-cellular compartments. There will be a particular emphasis on the molecular mechanism of heredity; the organization and expression of genetic information; experimental methods used in the analysis of gene expression and the relationship between gene/protein structure and function. A key feature of the Honors course is the use of review papers and peer-reviewed journal articles as integral components of the course. The objectives of this component of the Honors course are to: 1) introduce students to the scientific method (the formulation of hypotheses based on observation and the processes underpinning the rigorous test of such hypotheses); and 2) provide the intellectual framework for a critical evaluation of the literature. Students are expected to engage in classroom discussion and will be evaluated by a combination of classroom presentations, multiple choice and short essay exams. Students are expected to develop a "big picture" view of how the various cellular processes are related to each other and also attain a thorough understanding of the molecular details of the individual processes (e.g. the order and molecular details of events leading from transcription to protein localization within a cell).

Enforced Prerequisite at Enrollment: CHEM 112 or CHEM 112H Honors

BMB 252: Molecular and Cell Biology II

3 Credits

Continuation of BMB 251 / MICRB 251 ; cytoskeleton, cell growth, division, adhesion, signalling, germ cells, differentiation, immune system, nervous system, plant cells. BMB 252 / MICRB 252 Molecular and Cell Biology II (3) focuses on the internal organization on eukaryotic cells and their organization in multi-cellular organisms. Topics covered include cell communication, the cytoskeleton, cell cycle, fertilization and development of multi-cellular organisms, genesis of tissues, and the molecular mechanisms of cancer and immunity.

Enforced Prerequisite at Enrollment: BMB 251 or MICRB 251 or

BMB 251H or BIOL 230W or BIOL 230M

Cross-listed with: MICRB 252

BMB 252H: Molecular and Cell Biology II

3 Credits

Continuation of BMB 251H ; cytoskeleton, cell growth, division, adhesion, signaling, germ cells, differentiation, immune system, nervous system, plant cells. BMB 252H Molecular and Cell Biology II (3) This course is the second part of BMB 251H . This section focuses on the internal organization on eukaryotic cells and their organization in multi-cellular organisms. Topics covered include cell communication, the cytoskeleton, cell cycle, fertilization and development of multi-cellular organisms, genesis of tissues, and the molecular mechanisms of cancer and immunity. There will be a particular emphasis on how the basic principles and experimental approaches presented in BMB 251H are employed to address questions related to the topics that will be covered in BMB 252H . As in BMB 251H, a key feature of the Honors section will be the use of review papers and peer-reviewed journal articles as integral components of the course. The objectives of this component of the Honors section are to: 1) introduce students to the scientific method (the formulation of hypotheses based on observation and the processes underpinning the rigorous test of such hypotheses); and 2) provide the intellectual framework for a critical evaluation of the literature. Students are expected to engage in classroom discussion and will be evaluated by a combination of classroom presentations, multiple choice and short essay exams.

Enforced Prerequisite at Enrollment: BMB 251 or MICRB 251 or

BIOL 230W or BMB 251H or BIOL 230M Recommended preparations

BMB 251H or BIOL 230M

Honors

BMB 294: Research Projects

1-6 Credits/Maximum of 8

Supervised student activities on research projects identified on an individual or small-group basis.

BMB 297: Special Topics

1-9 Credits/Maximum of 9

N/A - just activating a common course number

BMB 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

BMB 398: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BMB 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BMB 400: Molecular Biology of the Gene

2-3 Credits

Biochemistry of genetic phenomena, including the structure, replication and dynamics of genes and chromosomes, their expression and regulation. BMB 400 Molecular Biology of the Gene (2-3) Molecular Biology of the Gene examines the flow of information in living things at the molecular level. Topics such as the following are included: 1) DNA replication, repair and recombination, 2) RNA transcription and modification, and 3) protein translation, folding and modification. This class is designed as a one-semester course having the objectives of understanding concepts in molecular biology and gene regulation, and exploring research materials and methods used in the laboratory. Course materials are prepared not only from the textbook but also from the primary literature. Therefore, students who want to take this course should have some familiarity with reading research articles. BMB 400 is for advanced undergraduates who have already taken introductory molecular biology and biochemistry. Knowledge of molecular biology is essential background for pursuit of a career in the life sciences, including academia, medicine, industry, forensic science and science policy.

Enforced Prerequisite at Enrollment: (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M) and (CHEM 212 or CHEM 212H)

BMB 401: General Biochemistry

3 Credits

Principles of the structure and function of biological molecules, including carbohydrates, lipids, membranes, proteins, and enzymes. BMB 401 is the first course of the general biochemistry series, a sequence designed to prepare students for careers and graduate study in the life sciences. Overall, biochemistry describes, in chemical and molecular terms, the structures, mechanisms, and chemical processes at work in all living things, and abstracts organizing principles that underlie life in all its diverse forms. Building upon concepts introduced in molecular and cellular biology and in organic chemistry, students in BMB 401 synthesize and apply this knowledge toward understanding the structure and function of the major classes of cellular constituents: water, and the various macromolecules – amino acids and proteins, sugars, and polysaccharides, nucleotides and nucleic acids, fatty acids and lipids, and membranes and various membrane proteins. These molecules interact to comprise the next level of multi- and mixed molecular structures and organelles that enable a cell to carry out its many metabolic functions.

Students also learn about the technologies used to study cellular components and processes, and current advances in biotechnology that have accelerated the pace of discovery in the field. Having gained familiarity with the molecules found in a cell, students are well-equipped to take on more advanced topics in the exciting, rapidly-evolving fields of the life sciences. An overriding theme in biochemistry is that polymers of living systems, though structurally large and functionally complex, are highly ordered chemical entities, with specific sequences of monomeric subunits giving rise to discrete structures and functions. The course includes all of the following topics: 1) an introduction to protein structure function relationships, covering the structural basis of protein functions; 2) enzyme kinetics and mechanisms; 3) simple and complex carbohydrates and topics in glycobiology that include energy storage, framework skeleton, and specific molecular recognition; 4) various classes of lipids, including phospholipids, complex lipids, membrane biology and transport systems, and 5) an analysis of the biochemical basis of signal transduction describing how specific signals regulate biomolecular activity both within a cell and between cells to keep an organism in homeostasis. Lastly, as a transition to intermediary metabolism in BMB 402, an introduction to bioenergetic principles is included to provide a framework for understanding pathways of carbon and nitrogen metabolism, using glycolytic reactions as an example. Students may not receive credit for both BMB 401 and CHEM 476 or BMB 401 and BMB 221

Enforced Prerequisite at Enrollment: (CHEM 210 or CHEM 210H) and (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M or BME 201) Recommended preparations CHEM 212 or CHEM 212H

BMB 401H: General Biochemistry

3 Credits

Principles of the structure and function of biological molecules, including carbohydrates, lipids, membranes, proteins, and enzymes. BMB 401H General Biochemistry (3) is the first course of the honors general biochemistry series, a sequence designed to prepare students for careers and graduate study in the life sciences. Overall, biochemistry describes, in chemical and molecular terms, the structures, mechanisms, and chemical processes at work in all living things, and abstracts organizing principles that underlie life in all its diverse forms. Building upon concepts introduced in molecular and cellular biology and in organic chemistry, students in BMB 401H synthesize and apply this knowledge toward understanding the structure and function of the major classes of cellular constituents: water, and the various macromolecules – amino acids and proteins, sugars, and polysaccharides, nucleotides and nucleic acids, fatty acids and lipids, and membranes and various membrane proteins. These molecules interact to comprise the next level of multi- and mixed molecular structures and organelles that enable a cell to carry out its many metabolic functions. Students also learn about the technologies used to study cellular components and processes, and current advances in biotechnology that have accelerated the pace of discovery in the field. Having gained familiarity with the molecules found in a cell, students are well-equipped to take on more advanced topics in the exciting, rapidly-evolving fields of the life sciences. An overriding theme in biochemistry is that polymers of living systems, though structurally large and functionally complex, are highly ordered chemical entities, with specific sequences of monomeric subunits giving rise to discrete structures and functions. The course begins with an introduction to proteins, covering the structural basis of protein functions and then moves on to enzyme kinetics and mechanisms. Next, students explore simple and complex carbohydrates and topics in glycobiology that include energy storage, framework skeleton, and specific molecular recognition. Various classes of lipids,

including phospholipids, complex lipids, membrane biology and transport systems, are covered next. Following is an analysis of the biochemical basis of signal transduction describing how specific signals regulate biomolecular activity-within a cell, and between cells-to keep an organism in homeostasis. Lastly, as a transition to intermediary metabolism in BMB 402H, an introduction to bioenergetic principles is included to provide a framework for understanding pathways of carbon and nitrogen metabolism, using glycolytic reactions as an example. Students may not receive credit for both CHEM 476 and BMB 401H.

Enforced Prerequisite at Enrollment: (CHEM 212 or CHEM 212H) and (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M) Honors

BMB 402: General Biochemistry

3 Credits

BMB 402 General Biochemistry (3) is a comprehensive survey of the pathways and regulation of intermediary metabolism. Most, if not all, of the students taking BMB 402 intend to pursue a Ph.D., M.D. or M.D./Ph.D. degree after graduation. Since biochemistry is an important discipline for advanced studies in life and medical sciences, a major goal of BMB 402 is to prepare students well for their future challenges in graduate or medical school. The major topics covered include glycolysis, TCA cycle, metabolism of fatty acids, lipids (phospholipids, cholesterol and sphingolipids), amino acids and nucleotides, signal transduction, and human genetic diseases. Since biochemistry is a very rapidly progressing discipline, any new developments not covered by the textbook are introduced in the lectures or via discussion of current scientific papers at an appropriate level. In addition, students must be able to integrate information learned from different but related material.

Enforced Prerequisite at Enrollment: BMB 401 or BMB 401H or CHEM 476

BMB 402H: General Biochemistry

3 Credits

Comprehensive survey of the pathways and regulation of intermediary metabolism. BMB 402H General Biochemistry (3) provides a more intimate and interactive class environment than does BMB 402. Most, if not all, of the students taking BMB 402H intend to pursue a Ph.D., M.D. or M.D./Ph.D. degree after graduation. Since biochemistry is an important discipline for advanced studies in life and medical sciences, a major goal of BMB 402H is to prepare students well for their future challenges in graduate or medical school. The textbook used is more advanced than that used in BMB 402, and it is what is typically used in biochemistry courses taught at premier medical schools and graduate schools. The class is conducted at a challenging level to provide students with the opportunity to treat topics in greater depth and to explore current development more fully than is possible in BMB 402. The major topics covered include glycolysis, TCA cycle, metabolism of fatty acids, lipids (phospholipids, cholesterol and sphingolipids), amino acids and nucleotides, signal transduction, and human genetic diseases. Since biochemistry is a very rapidly progressing discipline, any new developments not covered by the textbook are introduced in the lectures or via discussion of current scientific papers at an appropriate level. BMB 402H exams require that students understand all aspects of a particular metabolic pathway under study, including the sequential steps of the pathway, chemical structures of all intermediates, the mechanisms of all key reactions, regulation of the pathway, and the relationships

with other pathways. In addition, students must be able to integrate information learned from different but related material.

Enforced Prerequisite at Enrollment: BMB 401 or BMB 401H Honors

BMB 403: Biochemistry Laboratory

1 Credits

An introduction to techniques of experimental biochemistry, illustrating principles covered in B M B 402.

Enforced PreRequisite or concurrent at Enrollment: BMB 402

BMB 406: Molecular Biology

3 Credits

A discussion of current aspects of cell molecular biology with a laboratory emphasizing current biotechnology techniques.

Enforced Prerequisite at Enrollment: (BIOL 222 or BIOL 322) and (BIOL 230W or BMB 251) and CHEM 212

BMB 408: Instructional Practice

1-2 Credits/Maximum of 2

Participation in the instruction of undergraduate laboratory and lecture courses, including classroom preparation; discussion of principles and objectives of each exercise. B M B 408 Instructional Practice (1-2) Students in this course will gain experience in science teaching by participating in either lecture courses (as Learning Assistants) or laboratory courses (as Teaching Assistants) with the goal of making students in this course more effective as teachers and communicators in their future careers in science. Participation in instruction of selected departmental lecture and laboratory courses will include preparation of class materials, and facilitating discussion and presentation of course principles and learning objectives of each topic or exercise.

Prerequisite: 10 credits in biochemistry and molecular biology and permission of the department

BMB 411: Survey of Biochemistry and Molecular Biology Literature

1 Credits

An introduction to readings and oral presentations in biochemistry and molecular biology.

Enforced Prerequisite at Enrollment: (BMB 401 or BMB 401H) and (BMB 400 or BMB 402 or BMB 402H)

BMB 428: Physical Chemistry with Biological Applications

3 Credits

This course uses the study of physical chemistry to develop quantitative and analytical skills in biological and chemical systems. The course covers thermodynamics, solution chemistry and kinetics. The study of thermodynamics includes the three laws of thermodynamics, and the concepts of energy, entropy and enthalpy. Solution chemistry includes the study of colligative properties, ligand binding and energetics in biological systems. Kinetics covers the study of both chemical and enzyme kinetics, as well as enzyme inhibition.

Enforced Prerequisite at Enrollment: (MATH 141 or MATH 141B or MATH 141H) and (PHYS 212 or PHYS 212H or PHYS 251) and (CHEM 202 or CHEM 202H or CHEM 210 or CHEM 210H)

BMB 428H: Physical Chemistry with Biological Applications

3 Credits

Chemical thermodynamics and kinetics with applications to biological problems.

Honors

BMB 430: Developmental Biology

3 Credits

Developmental Biology introduces students to one of the most complex and exciting areas of modern biology. This course will cover basic concepts using a comparative embryology approach and focus on molecular and genetic analysis of mechanisms involved in cell differentiation and organ development. Students will learn how studies of development in different model organisms including invertebrate and vertebrate species have identified a network of evolutionarily conserved genes and signaling pathways that regulate embryonic development and morphogenesis.

Enforced Prerequisite at Enrollment: BMB 252 or MICRB 252 or BMB 252H or BIOL 230W or BIOL 230M Recommended preparations BIOL 222 or BIOL 322
Cross-listed with: BIOL 430

BMB 432: Advanced Immunology: Signaling in the Immune System

3 Credits

The study of signaling pathways that regulate the immune response. BMB 432 / MICRB 432 / VBSC 432 Advanced Immunology: Signaling in the Immune System (3) This course will use the immune system as a model in which to study how cells communicate in order to coordinate an immune response. We will focus on signaling mechanisms that regulate such immune responses as T cell activation, Th1/Th2 differentiation, macrophage activation, and migration of immune cells to sites of inflammation. All lectures are based on recent reviews by key investigators in each field, as well as primary articles to present students with the most recent advances, techniques, and approaches used. The goal of the course will be to convey a basis understanding of intracellular signaling mechanisms that will pertain to all areas of biology, an appreciation for current questions and future directions in the field, and an in depth understanding of the signals that govern immune responses. The material presented will build on the basic concepts learned in BMB 400 and MICRB 410, and will lay the foundation for more advanced courses at the graduate level.

Enforced Prerequisite at Enrollment: (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M) and (MICRB 410 or VBSC 410)
Cross-listed with: MICRB 432, VBSC 432

BMB 433: Molecular and Cellular Toxicology

3 Credits

In-depth coverage of processes by which drugs/chemicals interact with biological systems and the experimental approaches used to study these interactions.

Enforced Prerequisite at Enrollment: BMB 401 or BMB 401H or BMB 211
Cross-listed with: VBSC 433

BMB 435: Viral Pathogenesis

3 Credits

Viral Pathogenesis provides students with a general knowledge of medically relevant viruses, with a specific focus on important human viral pathogens. The course is meant to help students understand how viruses cause diseases in humans and animals. Lectures and in-class discussions will focus both on the fundamentals of viral infection and disease mechanisms, and on contemporary virology-related topics in the scientific literature. Topics discussed can be divided into two main areas: (1) general concepts related to viral pathogenesis and the control of viral infections; and (2) specific viruses that cause human disease including HIV-1, herpes viruses, papillomaviruses, influenza virus, West Nile virus, Ebola virus, and SARS virus. Although prior knowledge of virology is not required for taking this course, a working knowledge of molecular biology, cell biology, immunology, and some microbiology is helpful.

Enforced Prerequisite at Enrollment: (MICRB 201 or MICRB 201H) and (BMB 252 or MICRB 252 or BMB 252H) or (BIOL 230W or BIOL 230M)
Cross-listed with: MICRB 435, VBSC 435

BMB 442: Laboratory in Proteins, Nucleic Acids, and Molecular Cloning

3 Credits

Laboratory in enzyme purifications and assay techniques; nucleic acid isolation and characterization, including plasmid preparation. BMB 442 / MICRB 442 Laboratory in Proteins, Nucleic Acids, and Molecular Cloning (3) The DNA portion of B M B/MICRB 442 serves as an introduction to fundamental techniques of recombinant DNA technology and as a reinforcement of principles of Molecular Genetics from lecture courses. The central experiment entails all basic procedures necessary to clone a gene, i.e. to make a recombinant molecule comprised of DNA from two sources. Students use restriction enzymes to cut two distinct DNA molecules into smaller fragments. The fragments are mixed and treated with the enzyme Ligase, which randomly combines small fragments into large recombinant DNA molecules in new combinations different in composition from either original molecule. The recombinant molecules, which include genes that confer drug resistance, are transformed into *E. coli* cells that initially have no drug resistance. Cells that acquire recombinant DNA molecules are identified by selective plating on growth media containing drugs. From the transformed cells, recombinant DNA is isolated and analyzed by agarose gel electrophoresis, completing the array of basic gene cloning techniques. In addition to this central, multi-session experiment, students also do PCR and an investigation of the lac operon, a classic molecular genetic model system. The proteins portion of BMB 442 / MICRB 442 is designed to introduce students to protein biochemistry topics and laboratory techniques typically encountered in academic and commercial settings. Students will learn about buffers, spectroscopy, enzyme purification and characterization methods. Specifically, the experiments include preparation of buffers and performing kinetic studies to determine K_m and V_{max} values. Separation of a mixture of phycobiliproteins using ion-exchange column chromatography is a major experiment that the students will perform to learn protein purification methods. In this experiment they will learn how to pour a column, apply sample, elute it with salt gradient and collect fractions using automated fraction collector. Ammonium sulfate precipitation and dialysis will be part of protein purification procedures. Characterization of the separated proteins will be performed by determining the absorption spectra with spectrophotometer

and by determining the molecular weights of the subunits of the phycobiliproteins by SDS-polyacrylamide gel electrophoresis.

Enforced Prerequisite at Enrollment: (CHEM 202 or CHEM 202H or CHEM 210 or CHEM 210H) and (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M) or (MICRB 201 or MICRB 201H) Concurrent Courses: BMB 211 or BMB 401 or BMB 401H

BMB 443W: Laboratory in Protein Purification and Enzymology

3 Credits

This course is intended to provide advanced Biochemistry & Molecular Biology students with in class instruction on various laboratory methods used to explore the physical & chemical properties of proteins and other topics relevant to enzymes such as protein purification techniques and enzyme kinetic assays. In addition students will have hands-on laboratory experience conducting experiments related to 1) enzyme kinetics and product inhibition pattern to determine the order of product release, 2) purification of proteins such as rabbit muscle aldolase using a variety of protein purification methods including salt precipitation, dialysis, and ion-exchange/affinity chromatography using phosphocellulose resin, 3) determination of specific activity and purity of a student purified protein, 4) determination of molecular weight of native enzymes using gel-filtration-HPLC and subunit molecular weight by SDS-PAGE, 5) determination of isoelectric point and identification of C-terminal amino acid of a purified protein, and 6) determination of optimal conditions for protein crystal growth. Student performance is evaluated through a variety of assessments, including lab reports organized in accordance to the biochemistry journal articles and through written examinations that assess the understanding of principles and methodology.

Enforced Prerequisite at Enrollment: BMB 442 and (BMB 401 or BMB 401H)

Writing Across the Curriculum

BMB 445W: Laboratory in Molecular Genetics I

2 Credits

Laboratory in molecular techniques in gene analysis and microbial genetics, emphasizing in vitro methodologies. BMB 445W Laboratory in Molecular Genetics I (2) The objectives of BMB 445W are to provide advanced Biochemistry and Microbiology students with instruction in (1) techniques commonly used in modern research and clinical laboratories in this field, (2) evaluation of the quality of experimental data, including appropriate analysis, and (3) presentation of results of laboratory work in written form. Experiments are focused on key techniques and procedures such as DNA isolation, polymerase chain reaction, Southern hybridization analysis, cloning, and DNA sequencing. Students are evaluated via written lab reports and written examinations that assess the understanding of principles and methodology. BMB 445W is an extension of the nucleic acid section of BMB 442, which is a prerequisite for BMB 445W.

Enforced Prerequisite at Enrollment: BMB 442 and (MICRB 201 or MICRB 201H) Recommended Preparations (MICRB 202 or MICRB 203) and BMB 400

Writing Across the Curriculum

BMB 448: Model Systems and Approaches in Cell Biology Inquiry

2 Credits

Advanced laboratory that uses inquiry-based approaches to analyze organelles, genetic mechanisms, and metabolic processes in eukaryotic organisms.

Enforced Prerequisite at Enrollment: (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M) and (MICRB 202 or MICRB 203) Recommended Preparations: BMB 442

BMB 450: Bacterial Genetics

3 Credits

Emphasis will be on the role of mutations in the analysis of gene function; a detailed analysis of replication, transcription, translation, recombination and DNA repair. The course will also delve into the mechanisms involved in the regulation of gene expression both at the individual gene level as well as on a "global" scale. The course will examine the structure, replication and utilization of plasmids, transposons and bacteriophages, particularly focusing on their roles in the horizontal transfer of DNA between bacteria. The course will include both formal lecture presentations by the instructor as well as presentations of published research related to the field of bacterial genetics whenever possible.

Enforced Prerequisite At Enrollment: (BMB 251 or MICRB 251 or BMB 251H or BIOL 230W or BIOL 230M) and (MICRB 201 or MICRB 201H) Cross-listed with: MICRB 450

BMB 460: Cell Growth and Differentiation

3 Credits

Mechanisms and regulation of protein trafficking, organelle biosynthesis, cell development, signaling and cell cycle control. Emphasizes experimental design and analysis. BMB 460 / MICRB 460 Cell Growth and Differentiation (3) is a unique course that uses the primary literature to teach significant content in advanced cell biology while simultaneously exposing students to the scientific craft of experimental design and analysis. In addition to exploring historical and current cell biology research articles, students will develop two vital scientific skills; critical thinking as applied to experimental data and creative thinking about solving unresolved questions in cell biology. In this course students will read from journals to explore questions about cell biology and how cell biologists decipher cell functions. Instead of a general survey of cell biology, we delve into specific issues, often looking at "classic" papers describing how a specific phenomenon was first investigated to place current questions in context before progressing to the latest publications exploring how innovative techniques have been applied to deciphering cell function. The course is divided into units, each of which emphasizes content in a different area. Actual content may vary from year to year as the course is updated to reflect progress in a field of research. We have previously explored the general areas of cell membrane dynamics, intracellular protein trafficking, cell cycle regulation, cell signaling pathways and cancer cell biology. Finally, the course ends with a unit on stem cells and therapeutic cloning technology. A portion of the final unit is also devoted to discussing the ethical implications of stem cell research with an emphasis on how to make personal decisions about how our society should approach these issues. Reading guides are provided for each assignment to help students find and understand important points in reading assignments. Class periods are devoted to

explanations and instructor-led discussions about the readings with an emphasis on understanding the questions, the methods used to approach the questions, the experimental results and the interpretations of the results. Furthermore, periodic class periods are dedicated to experimental approach exercises where students work in groups to practice posing new questions as suggested by our readings and proposing experiments to answer these questions. These skills are vital part of what cell biologists do daily, and these exercises provide practice in thinking like a scientist. Students have previously reported that by taking this course they acquired the ability to read and understand the primary literature and have gained an in-depth understanding about how to use various experimental techniques.

Enforced Prerequisite at Enrollment: BMB 252 or MICRB 252 or BMB 252H or BIOL 230W or BIOL 230M
Cross-listed with: MICRB 460

BMB 464: Molecular Medicine

3 Credits

An exploration of the impact of advances in molecular biology on understanding disease mechanisms, medical diagnosis, and therapeutics.

Enforced Prerequisite at Enrollment: BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M

BMB 465: Protein Structure and Function

3 Credits

A study of the relationships among protein sequence, structure, and function. Course topics include description of protein structure, molecular viewing, forces that govern protein folding, macromolecular recognition, enzyme catalysis, experimental determination of protein structure, computational methods for structure prediction, and protein engineering and design.

Enforced Prerequisite at Enrollment: (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M) and (CHEM 202 or CHEM 202H or CHEM 210 or CHEM 210H)

BMB 474: Analytical Biochemistry

3 Credits

Physical/chemical theory and techniques that emphasize purification and characterization of biological macromolecules, including proteins, lipids and nucleic acids. B M B 474 Analytical Biochemistry (3) This three-credit course deals with acquiring knowledge of laboratory skills required for success in experimental biochemistry and molecular biology. It is particularly suited for students intending a career as a research scientist in the areas of biochemistry, biotechnology, bioengineering, microbiology, or molecular biology. Course content focuses on the detection, purification and identification of biological macromolecules such as practice of separation science with emphasis on diffusion, gel permeation chromatography, ion-exchange chromatography, affinity chromatography, sedimentation velocity ultracentrifugation, sedimentation equilibrium ultracentrifugation, density gradient ultracentrifugation, agarose gel electrophoresis, SDS gel electrophoresis, isoelectrofocusing, membrane filtration and dialysis (including Donan equilibrium), ligand binding, high performance gas chromatography, high performance liquid chromatography, mass spectrometry, and immunological methods of macromolecules. The second unit includes

the theory and practice of biological spectroscopy with emphasis on visible, infrared, circular dichroism, optical rotary dispersion, Raman, resonance Raman, nuclear magnetic resonance, electron paramagnetic resonance, Mossbauer, surface plasmon resonance, electron-nuclear double resonance, and electron spin echo spectroscopy of macromolecules. The lectures are designed to introduce a particular topic, to derive relevant equations, to supplement reading material with practical examples, and to clarify points in assigned problem sets. Two guest lectures by experts in the field will provide up-to-date information on mass spectroscopy and Mossbauer spectroscopy, and two site-visits, one to the mass spectrometry core facility and the other to the magnetic resonance core facility, will provide hands-on experience. Problem sets are not collected or graded; rather, answers are handed out in the following class period. This method provides the ability to collaborate with others on solving problems and to self-check work.

Enforced Prerequisite or concurrent at Enrollment: BMB 428 or CHEM 450

BMB 480: Cancer Development and Progression

3 Credits

BMB 480 / MICRB 480 Cancer Development and Progression (3) explores how cancer initiates and progresses with a focus on the interactions between tumor cells and normal tissues in the body. The goal of the course is to build fundamental knowledge of the mechanisms that drive cancer, and the current advances and challenges in cancer treatment. Genetic, biochemical, mechanical, and metabolic aspects of cancer will all be discussed along with relevant experimental techniques. RNA and DNA viruses that cause cancer will be highlighted as agents leading to the discovery of oncogene and tumor suppressor signaling pathways, and as ongoing contributors to cancer-related death. Significant attention will be given to the role of the immune system in cancer development, prevention, and treatment. By understanding mechanisms leading to the disruption of signaling pathways in cancer, students will develop a framework of how hallmark features of cancer arise and what corresponding therapeutic strategies have been developed to target them. Students are expected to participate in lectures and take part in discussion and analysis of scientific literature. This course applies core concepts from genetics, biochemistry, and cell biology to the study of cancer and provides a useful foundation for students interested in pursuing related graduate research or medical studie

Enforced Prerequisite at Enrollment: (BMB 252 or MICRB 252 or BMB 252H or BIOL 230W or BIOL 230M) and (BIOL 222 or BIOL 322) RECOMMENDED PREPARATIONS MICRB 410 and BMB 460 and MICRB 415

Cross-listed with: MICRB 480

BMB 482: Introduction to Computational Biology

3 Credits

Modern DNA sequencing technologies have transformed molecular biology into a data science. Sequencing machines can now read hundreds of millions of DNA sequence fragments in a few hours and at low cost. These technologies not only enable affordable sequencing of individual genomes (human or any other species); they also allow us to investigate numerous ways in which the genome performs its biological functions in different cell types and how mutations in genomes give rise to various phenotypes. However, given the volume of data and the noisy nature of biological measurements and signals, we require intelligent and efficient computational algorithms to make sense of genomic datasets. The discipline of bioinformatics and computational biology aims to

meet this need. This course focuses on understanding and applying the computational methods and algorithms that are used to analyze genomic data, in particular the large datasets arising from high-throughput DNA sequencing technologies. During the course, we will focus on several application areas in genomics that require computational analyses. These topics will be organized around three main themes: - Genomes: comparing DNA and protein sequences; locating sequences on the genome; assembling genomes. - Evolution: reconstructing evolutionary relationships; personal genomics; detecting disease-associated genome variations. - Function: understanding biochemical activities using functional genomics; discovering functional elements in genome sequences; characterizing regulatory relationships between genes. For each of the genomics topics listed above, we will focus on understanding the computational algorithms that are used to analyze data. Such algorithms may include dynamic programming (sequence alignment), graph algorithms (assembly), clustering methods (phylogenetics & metagenomics), and machine-learning approaches such as Expectation Maximization, Gibbs sampling, and Hidden Markov Models (various applications in discovering functional genomic elements). Students will also develop practical bioinformatics analysis skills throughout the course. Each bioinformatics topic will be accompanied by practical exercises. Students will also work in teams to research and develop a project that applies computational methods to a genomics-related problem.

Enforced Prerequisite at Enrollment: BMB 251 or BMB 251H or MICRB 251 or BIOL 230W or BIOL 230M or CMPSC 465

BMB 484: Functional Genomics

3 Credits

Biochemical, genetic and evolutionary approaches to comprehensive discovery of functional DNA segments in genomes, including genes and regulatory sequences. BMB 484 Functional Genomics (3) What in your genomic DNA makes you different from chimpanzees, mice or flies? What sequences in your DNA make it more or less likely that you will develop diabetes or cancer? These are questions of widespread interest, answers to which could play major roles in personalized medicine and in understanding our place in the biosphere. Modern genomic analysis uses powerful technologies and generates massive amounts of data, which are yielding exciting insights into answering these questions. One hallmark of genomic research is that data are released rapidly along with tools for browsing and analyzing it. Thus not only can you learn the major results by reading papers, but you can examine the underlying data and do your own analyses. Discovery is no longer the exclusive domain of the data producers - you can join in! This course will introduce students to ongoing research aimed at identifying functional regions in genomes and encourage them to use web-based bioinformatics tools for exploring the genomic and epigenetic data. Students will develop creative projects that address issues in functional genomics of high interest to them. The course has two phases, the first on the basics of genomics (sequencing, alignment, assembly, resources), and the second on the search for functional elements in genomes. The course will explore ways to find: - Protein-coding genes within genomes- Transcribed regions: How much of the genome is transcribed? Which transcribed regions do not code for proteins? What roles do they play in the cell (regulatory and enzymatic)? - Evolutionary signatures of function: How can you use genome comparisons between species to estimate the amount of functional sequence - and to identify it? - Non-genic functional sequences: How do you map epigenetic features associated with gene regulation, such as histone modifications, DNase hypersensitive sites, and transcription factor occupancy? - Function by phenotype: Given the

ability of genetic association to find loci that contribute to complex traits, such as disease susceptibility, how does functional genomics aid in finding basis of these traits?

Enforced Prerequisite at Enrollment: (BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M) and (BIOL 222 or BIOL 322)

BMB 485: Human Genomics and Biomedical Informatics

3 Credits

The purpose of this course is to introduce students to the field of Human Genomics and Biomedical Informatics, in particular in the context of genetic architecture of complex human diseases and traits. The field of Human Genomics has experienced a massive explosion in data generation technologies, new discoveries, and increasing popularity in many scientific fields. This course will cover the molecular, statistical, population, and analytical aspects of modern human genomics and translational aspects of this field in biomedical informatics. Current methods to uncover the complex underpinnings of disease including methods to explore gene-gene and gene-environment interactions and data integration will also be covered.

Enforced Prerequisite at Enrollment: BIOL 322 and (STAT 200 or STAT 250 or STAT 301 or STAT 401)

Cross-listed with: VBSC 485

BMB 488: Communities of Practice in Biochemistry and Molecular Biology

2 Credits/Maximum of 16

The course combines laboratory research in a community of practice and a seminar on topics in science, ethics, and society.

Enforced Prerequisite at Enrollment: MICRB 202 RECOMMENDED PREPARATIONS MICRB 202 or MICRB 203

BMB 490: Undergraduate Research in Cellular Dynamics I

3 Credits

In BMB 490, students will form a collaborative team to explore a research topic in cell and molecular biology. Students will learn about experimental design, laboratory techniques, data analysis, and interpretation of data. By the end of the fall semester, students will have conducted and analyzed 2-3 experiments and gained background knowledge and hands-on experience in various techniques in cell and molecular biology. BMB 490 students may choose to continue their research in BMB 491, allowing students to complete a fast-tracked start-to-finish research project that goes from designing experiments all the way through to writing up and presenting findings.

Enforced Prerequisite at Enrollment: BMB 251 or MICRB 251 or BMB 251H or BIOL 230W or BIOL 230M

BMB 491: Undergraduate Research in Cellular Dynamics II: Communicating Scientific Findings

3 Credits

BMB 491 is designed to be a continuation of BMB 490. Through BMB 490/491, students will complete a fast-tracked start-to-finish research project and in doing so will learn to perform, explain, apply, and interpret good science. In BMB 491, students focus on effectively

communicating scientific findings and preparing their data for publication. Students will use a variety of media to communicate science across different audiences. They will prepare written, oral, and visual presentations while learning to adapt content and style for different contexts. Students will complete major projects in stages, guided by weekly exercises and lectures on content, structure, and formatting for different types of scientific writing. Students will also learn how to assemble figures and visual aids to communicate their approaches and findings. Readings and figures from the scientific literature will provide opportunities to evaluate methods of visual and written communication, while continuing to promote a deeper understanding of cell structure and function. Building expertise across BMB490/491 in an area of cell and molecular biology allows students to critically evaluate the content and style of published articles, and to build conclusions about their own research results. Students will also engage in extensive peer review and will be expected to incorporate feedback into improving their writing and presentation skills. Throughout this course, students will gain an appreciation for the importance of effective communication in science, and will build the skills necessary to logically, accurately, ethically, and persuasively communicate. These skills will be extremely valuable in research-related careers, but also apply to any position where students act as consumers, producers, advocates, or interpreters of science.

Enforced Prerequisite at Enrollment: BMB 490

General Education: Writing/Speaking (GWS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

BMB 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BMB 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BMB 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Bioethics (BIOET)

BIOET 100: Bioethics

3 Credits

This course surveys core topics in recent bioethics - the study of ethical problems issuing from the use and treatment of human and non-human animals in the research and practice of medicine and biotechnology. It aims to help students think more critically and argue from specific moral theories when evaluating issues concerning human body and its enhancement, the value of life and death, abortion and euthanasia, the distinction between biological and moral conceptions of human, the nature of health, illness and disabilities, the allocation of resources for

health-care, doctor-patient relationships, and our moral conduct toward animals in medical and industrial contexts.

Cross-listed with: PHIL 132

Bachelor of Arts: Humanities

General Education: Humanities (GH)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

BIOET 110N: Health, Illness, and the Human Condition

3 Credits

This survey course explores the human experience of health and illness from a combined social/behavioral science and humanities perspective. Topics may include the following: the body in art, science, and history; models of normality and disease; family, patient, and practitioner stories; adaptation to illness; health care relationships; principles and psychology of health care ethics; cultural aspects of end-of-life; identity, meaning, and mental health in health care professionals. Reading, writing, and discussion will give students in all majors a set of skills and knowledge for understanding individuals and groups in the context of health and illness. Texts include fiction; poetry; graphic memoir; film; essays; and social science research and theory. Students will experiment with various writing genres to understand and challenge disciplinary boundaries, and creative projects will provide experience with diverse methods and types of knowledge. The arena of health and illness presents a valuable opportunity for integrating social/behavioral science and humanities in analyzing and solving real world problems. Despite technological advances, health care is essentially a human-to-human endeavor, so the humanities and social sciences are necessary to complement biomedical perspectives. This course provides transferable skills and a framework for addressing similar challenges and opportunities in a range of fields that students may encounter in the future. This is an Inter-Domain course containing two general education domains (GH/GS). Successful completion of the course fulfills 3 credits of Integrative Studies in General Education. Prerequisite: ENGL 15

Prerequisite: ENGL 015.

General Education: Humanities (GH)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

BIOET 220N: Ethics, Society, and Science Fiction

3 Credits

This inter-domain (GH and GS) course will introduce students to the application of technology-ethics and bioethics, as well as the humanities (especially health and medical humanities) and the social sciences, through the lens of science fiction and speculative fiction. As an inter-domain course, it will: (1) develop foundational knowledges across the disciplines of the humanities and the social and behavioral sciences; and (2) encourage an appreciation for the plethora of stakeholders and often-competing values and interests underlying bioethical/technology-ethics concerns. By applying ethics-based, analytical arguments and counterarguments, students will engage in civil, reasoned debate on highly charged, challenging topics using ethical frameworks. In addition,

given exposure to a wide range of non-canonical authors and other creators with varied intersectionalities, students will engage with the concepts of diversity, equity, and inclusion.

Cross-listed with: ESC 220N, HHUM 220N

BIOET 322: Media Arts Pedagogies, Transcultural Dialogues, & Bioethics

3 Credits

The course explores how emerging technologies impact beliefs, practices, research, and communication regarding the nature of knowledge, learning, teaching, remix culture, visibility, materiality, self, and art. Engage with emerging technologies to learn about media arts and pedagogies that address bioethical issues of injustice, equity, diversity, and inclusion in which the borders of self are questioned. Course content considers the premise that humans are not discreet entities but connected through technologies in ways that are socio-cultural, geopolitical, and techno-biological. Through course experiential activities, gamification pedagogies, and a virtual fieldwork component in building and piloting ethical and accessible educational practices in online teaching, students explore identity formation encoded in social-technological practices. The Transcultural Dialogue project builds international relationships creating collaborative art and generating dialogue. The transcultural dialogue theme weaves, throughout the course, issues of contemporary visual culture, cultural practices in relation to particular places, and pedagogical approaches designed to erode assumptions, ignorance, and misunderstandings. Through media arts pedagogies, the course raises bioethical concerns such as systemic injustice and approaches creativity as a social process in developing curriculum and teaching with emergent technologies.

Enforced Prerequisite at Enrollment: 5th semester-standing

Cross-listed with: AED 322

International Cultures (IL)

BIOET 401Q: Science, Ethics, Policy, and Law

3 Credits

This course explores the ethical, policy, and legal implications of science, and the implications of science for ethics, policy, and law. The course provides an introduction to scientific norms and practice; an introduction to the theories and methods employed in ethical analysis; an overview of ethics for scientists (including, but not limited, to falsification, fabrication, and plagiarism, and the protection of human and non-human animal participants); and an introduction to law and policy. In addition, the course will explore the use of science in the courts; the role of scientists in policy debates (whether they should be advocates or "honest brokers"); science education policy; science communication and scientific hype; the roles and responsibilities of professional scientists and citizen scientists; science in regulatory and policy processes; the assessment and management of risk; policymaking in the face of scientific uncertainty; and what ethics, policy, and law might learn from recent developments in social and behavioral science. In its examination of law and policy, the course will explore international and comparative

perspectives. The course will also explore a variety of special topics (that may vary according to the expertise of the instructor and the interests of the students). These topics may be drawn from a variety of spheres: medicine and public health, food and nutrition science, neuroscience, agricultural science, climate science, and the social sciences. Special topics may include the ethical and policy implications of "big data"; the ethics of science in war and as an instrument of harm; climate science, climate change denial, and ethical decision-making in the face of scientific uncertainty; the promises and perils of forensic science; the role of food science in nutrition policy; the regulation of environmental toxins; the use of behavioral science and "nudging" in public health policy; gun violence and gun control policy; contemporary challenges related to transparency, reproducibility and replication in science; the commercialization of science, and an ethical and policy assessment of the so-called "Triple Helix" of government-academy-industry relations; and the neuroscience of moral and criminal responsibility.

Prerequisites: 5th Semester standing

General Education: Humanities (GH)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

Honors

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Soc Resp and Ethic Reason

BIOET 432: Medical and Health Care Ethics

3 Credits

This course examines ethical, social, legal, and policy issues related to the research, implementation, and practice of medicine, medical technologies, and healthcare. It uses secular ethical theories, frameworks, and concepts, as well as health/medical humanities methodologies.

Enforced Prerequisite at Enrollment: fifth-semester standing

Cross-listed with: PHIL 432

Bachelor of Arts: Humanities

BIOET 496: Bioethics Independent Studies

1-9 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BIOET 497: Special Topics in Bioethics

1-9 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Bioethics and Medical Humanities (BMH)

BMH 490: Bioethics and Medical Humanities Capstone Course

3 Credits

Students will integrate knowledge from their BMH minor through discussion and writing a paper on some aspect of medical humanities.

Prerequisite: PHIL 132

Biological Engineering (BE)

BE 1: Growing Your Future—First-Year Seminar

1 Credits

First-year seminar to introduce students to the breadth of the agricultural and biological engineering profession, including bioprocessing, machinery, and natural resources. B E 001S Growing Your Future—First-Year Seminar (1) This first-year seminar introduces students to the university in general and to the breadth of the agricultural and biological engineering profession. Students participate in hands-on lab activities in the focus areas of the profession, including machinery systems, food and biological processing, and natural resource engineering. Through these lab activities and a group project, students learn how the profession is critical to providing a growing world population with food, fiber, fuel, and water under increasing environmental constraints. In addition to being introduced to Penn State as an academic community, students also become familiar with the resources, tools, and opportunities available to them. Through the lab activities and in-class discussions on research, internship, and international opportunities, students meet and establish relationships with faculty, graduate students, and undergraduate students affiliated with the Biological Engineering and BioRenewable Systems programs.

First-Year Seminar

BE 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BE 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BE 299: Foreign Studies

1-12 Credits/Maximum of 12

Course offered in foreign countries by individual or group instruction

International Cultures (IL)

BE 301: Mathematical Modeling of Biological and Physical Systems

3 Credits

The ability to quantify relationships into mathematical models, and implement the models into the computer to find solutions, is essential for engineering analysis and design. This course provides the student with tools for modeling biological and physical systems. Upon completion of this course, the student will be able to: identify a process/system and represent that process/system mathematically; solve the mathematically-represented system using computer-based modeling tools, such as Excel and MATLAB; describe the emphasis areas offered in the Biological Engineering major; and be able to develop a systems model related to each area. The course includes engineering economics, matrix operations, curve fitting, numerical integration and differentiation, linear

and non-linear systems of equations, and applications of these methods to biological and agricultural systems.

Enforced Prerequisite at Enrollment: MATH 250 or MATH 251

BE 302: Heat and Mass Transfer in Biological Systems

4 Credits

This course applies the principles of heat and mass transfer to natural and engineered biological systems, ranging from soil/water ecosystems to animal, plant, and microbial production systems. Heat transfer mechanisms (conduction, convection, and radiation) are covered, as well as analysis techniques for steady state and transient cases. Mass transfer mechanisms (diffusion, dispersion, and convection) are also covered followed by simultaneous heat and mass transfer, including psychrometrics, ventilation, and drying. Applications of heat and mass transfer to agricultural and biological engineering are interwoven throughout the course. These applications may include heat exchangers for hydraulic systems, flow through porous media, soil freezing and thawing, bioreactor design, post-harvest product storage, animal housing, and greenhouses.

Enforced Prerequisite at Enrollment: BE 301 and [MATH 251 or (MATH 250 and MATH 252)] and (ME 300 or ME 201 or CHE 220 or EMCH 302H) Enforced Concurrent at Enrollment: CE 360 or ME 320

BE 303: Structural Systems in Agriculture

3 Credits

The objective of this course is to provide the student with the essential skills necessary to engage in practical agricultural structure analysis and design. Topics include a review of shear, moment and deflection concepts; loading in agricultural structures including earth loads, grain loads and livestock loads; methods for the analysis of determinate and indeterminate beams, trusses and frames; the material properties of wood including impact of species, grain orientation, degree of hydration, etc., on member adequacy. The nano and molecular structure of wood is also discussed and how it impacts material properties. The course is focused on the practical application of basic engineering principles with examples. The course contains a design analysis project where a student team analyzes an industrially designed structure (typically a post-frame building containing a truss roof system), which has been designed for a specific area. The team then redesigns the structure for a different location with different snow and wind loadings as well as intended usage, and optimizes the structure for efficient design of the structural members. The design and analysis may be completed using a common industrial software package. The course will serve as a prerequisite for senior-level structural design courses.

Enforced Prerequisite at Enrollment: EMCH 210 or EMCH 213

BE 305: Agricultural Measurements and Control Systems

3 Credits

Principles of measurements, instruments, controls, and data acquisition systems, with emphasis on agricultural applications. B E 305 Agricultural Measurements and Control Systems (3) Engineers and scientists are routinely required to measure or control parameters of physical systems. Frequently, these parameters are quantified electronically. This course prepares the student to solve fundamental engineering instrumentation and control problems with emphasis on agricultural and biological systems. Upon completion of this course, the student will be

able to: select and apply electronic devices to solve basic engineering measurement and control problems; apply interference (noise) reduction techniques using sound engineering principles; demonstrate correct use of common electronic measurement tools including multimeters, oscilloscopes and others; demonstrate electrical construction techniques including cable preparation, soldering, crimping, circuit board fabrication, and others; explain simple measurement and control circuits represented by schematics or ladder diagrams; demonstrate the application of dataloggers, microcontrollers, programmable logic controllers, and computer software to collect data and/or control basic processes; explain the function of common circuit components such as resistors, capacitors, inductors, diodes, transistors, op-amps, and transformers in simple circuits. Students are evaluated on homework and lab worksheets, quizzes, an oral presentation, and a final project.

Enforced Prerequisite at Enrollment: PHYS 212

BE 306: Machines for Agricultural and Biological Processing

3 Credits

This course is designed to provide a broad foundation for understanding machine system design for Biological Engineering students. In addition, this course serves as a foundation for those wishing to develop a more focused understanding of agricultural and general machine systems, and is a prerequisite for ASM and BE 400 level courses. Machine systems are an integral part of many agricultural operations from field production to post-harvest processing, storage, transportation, and bio-based processing. Biomass feedstock logistics and bioenergy production systems are heavily relying on machine systems. Biological Engineers will likely encounter a wide range of powered and automated equipment in their careers. This course consists of lectures, labs, and open-ended design projects. The lab activities will focus on testing and evaluating of machine performance using prototype machines and instruments. Lab activities and design projects will be completed in the format of small groups. This course equips the students to: (1) describe operating characteristics of engines and motors and properly select models for different applications: (2) design machine elements and mechanical power transmission systems to accomplish a machine task: (3) apply basic physics and engineering principles in a variety of machine-product interaction situations: and (4) practice technical report writing and oral presentation.

Enforced Prerequisite at Enrollment: EMCH 212 and (EMCH 210 or EMCH 213)

BE 307: Principles of Soil and Water Engineering

3 Credits

BE 307 focuses on utilization and engineering of soil-water resources, including rainfall-runoff, soil-water movement, erosion/sediment transport and flow processes. For each topic, the significance, underlying principles and equations will be covered, along with further exploration in a practical and experiential mode with class participants sharing in problem formulation, team problem solving, discussions, lab activities, and explanations/presentations. Students will be exposed to map use, representative soil profiles, cropping-management systems, and watershed-scale settings. Lab activities will sequentially build from one lab period to the next, showing how each stage of soil and water engineering is used to develop a more complete watershed-type project. As appropriate, field trips will be scheduled so as to show course participants the practical settings in which basic soil and water engineering principles can be applied. The course will serve as

preparation for the senior-level soil and water engineering design courses in the Natural Resources Engineering Option of the Biological Engineering (BE) major.

Enforced Concurrent at Enrollment: CE 360 or ME 320

BE 308: Engineering Elements of Biochemistry and Microbiology

3 Credits

Introduction to basic biochemistry and microbiology as well as industrial and environmental applications. B E 308 Engineering Elements of Biochemistry and Microbiology (3) B E 308 provides an introduction to microbiology, biochemistry, and major organic compounds found in living systems such as carbohydrates, lipids, proteins, and vitamins, as a package to engineering students. Energy calculations in microbial bioenergetics will be covered. Examples of industrial and environmental applications that build on the basic principles will be presented.

Enforced Prerequisite at Enrollment: CHEM 110

BE 391: Communication Skills for BE and ABSM Students

2 Credits

This course is one part of a two-semester experience in discipline-specific communication and leadership skills training. A key facet of this training is contextual approach. To meet the needs of BE and ABSM students, the course emphasizes communication skills that are critical for their professional development, appreciating the technical content of students' work and the industries within which the students will ultimately work. The primary focus for this course is communication skills (oral and written) with a secondary focus on leadership and career skills. Students will be evaluated through various methods, such as writing and speaking projects, professional presentations, written homework and worksheets in class and out, creation of portfolios and reports, and in-class group and individual exercises. This course provides a foundation in General Education, Writing and Speaking (GWS) for students in the Biological Engineering (BE) and Agricultural and Biorenewable Systems Management (ABSM) majors.

Enforced Prerequisite at Enrollment: Fifth semester standing or higher
Cross-listed with: ABSM 391

General Education: Writing/Speaking (GWS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

BE 392: Leadership and Ethics for BE and ABSM Students

2 Credits

This course is the second half of a two-semester experience in leadership, ethics, and communication skills training, following ABSM/ BE 391. Course modules focus on leadership and communication needs of industry within its corresponding technical content thereby representing a complete contextual approach. The primary focus of this course is on leadership, with communication, ethics, sustainability, and professional development issues presented in the context of how they relate to leadership. Topics developed for this course include personal development, ethical decision-making, corporate social responsibility, strategic group management, facilitation, and diversity.

Enforced Prerequisite at Enrollment: Fifth semester standing or higher

Cross-listed with: ABSM 392

General Education: Writing/Speaking (GWS)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Soc Resp and Ethic Reason

BE 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BE 404: Engineering Properties of Food and Biological Materials

3 Credits

Engineering properties play a crucial role during the analysis, design, and synthesis phases of problem solving. The accurate knowledge of properties is essential to the precise determination of the overall system and component responses. Due to the time-dependent and environmentally-sensitive nature of properties of the agricultural, food, and biological materials, the theory and measurement systems are different from those used for conventional engineering materials and their systems. Therefore, the focus of this course is to provide the students with sound bases of the theory and measurement methods that are used to quantify physical, mechanical, thermal, biological, and chemical properties of products and their systems. In addition, the significance and importance of the inherent variation in the property values of agricultural, food, and biological materials is emphasized.

Enforced prerequisites at Enrollment: BE 301 and (EMCH 210 or EMCH 213) **Enforced Concurrent at Enrollment:** (CE 360 or ME 320) and (MATH 251 or MATH 252) and (3 credits in STAT or IE 424)

BE 460W: Biological Engineering Design I

2 Credits

BE 460W is part one of a two course sequence that provides a culminating design experience for students in the Biological Engineering major. Students will develop skills and techniques for managing and executing engineering design projects in the following fields: agricultural engineering, food and biological processing engineering, and/or natural resource engineering. Projects are sponsored by faculty, industry, or community initiatives and are structured to span two semesters. In the Fall semester, the emphasis is on classroom lectures, preliminary analyses, and project proposal development. In the Spring semester, the emphasis is on hands-on laboratory activities, project execution, and report preparation. Project teams perform all facets of the design process. This includes problem identification, planning of the project, formulation of design specifications, development and evaluation of alternative conceptual designs, development of detailed designs, consideration of safety and design optimization, design implementation, design testing, and analysis and documentation of results. Students improve their writing skills through preparation and refinement of various documents including a design notebook, proposal, statement of work, design specification report, status reports, and a final report. Students also present their results in other formats, including poster and oral presentations for both technical and non-technical audiences.

Enforced Prerequisite at Enrollment: (BE 391 or BRS 391 or ENGL 202C) and (11 or more credits of BE) and (Seventh Semester standing or higher)

Writing Across the Curriculum

BE 461: Design of Fluid Power Systems

3 Credits

This course is designed to provide a solid foundation for understanding hydraulic and pneumatic systems for power transmission and motion control, including hydrostatic transmissions and electro-hydraulic systems. Applications include mobile and stationary equipment in agricultural production and processing systems. Biological Engineers (and other engineers as well) will likely encounter a wide range of powered and automated equipment in their careers. This course equips the students to: (1) understand the key operating characteristics of most fluid power system components including compressors, pumps, valves, cylinders, and motors, (2) design fluid power circuits, (3) mathematically model the steady state operation of fluid power systems, and (4) have sufficient knowledge to obtain the Hydraulic Specialist Certification offered by the Fluid Power Society. The course includes a hands-on laboratory offering the chance for students to construct circuits, see component cutaways, experience component and system performance demonstrations, and work with electronic control of hydraulic systems. Prerequisite knowledge includes fluid mechanics and familiarity with mechanical power transmission systems. Students may be evaluated based on homework assignments, laboratory reports, a design project, and exams.

Enforced Prerequisite at Enrollment: (BE 306 or ME 360) and (CE 360 or ME 320)

BE 462: Design of Wood Structures

3 Credits

BE 462 covers structural properties of wood, design of wood structural elements, design of wood structural systems, and design of post-frame buildings. The course begins by defining the structural loads applicable to wood framed building systems. Then, students are introduced to the unique physical and structural characteristics of solid lumber and other wood products, such as plywood and other panel products and structural composite lumber, including laminated veneer lumber, parallel strand lumber and composite wood I-joists. The engineering principles and specifications for designing wood structural members, including tension members, beams, columns, and beam-columns are presented in detail using the National Design Specification for Wood Design. Design specifications for designing wood structural connections using dowels, such as nails, bolts and lag-screws, are presented. Design procedures for designing selected wood-frame systems, such as floors, trusses, structural diaphragms and shear walls, are also presented. Students are introduced to a computer program which is an invaluable aid for analyzing and designing wood framed structural systems. At the conclusion of the course students will be able to specify structural loads for wood framing systems and analyze and design wood beams, columns, beam-columns, typical wood diaphragms and shear walls, simple wood structural systems, and a range of wood structural connections. The course builds on engineering students' prior knowledge from strength of materials and elementary structural analysis. Students may be evaluated based on homework assignments, exams and a semester project.

Enforced Prerequisite at Enrollment: BE 303 or AE 308 or CE 340

BE 463: Design Principles of Mechatronics for Biosystems

3 Credits

This course applies the basics of mechatronic systems such as controller, sensor, and actuator theory to agricultural and biological systems. Applications in agricultural and biological systems will be covered throughout the semester such as developing mini-scale peach tree detector, apple harvester, animal body temperature sensing unit, nursery plant identifier, light sensor application for apple maturity evaluation, or similar topics. Students will gain hands-on experience with agricultural robotics and micro-controller programming through design and implementation of an embedded system based on microcontroller.

Enforced Prerequisite at Enrollment: BE 305 or EE 210 or EE 211 or EE 212

BE 464: Bioenergy Systems Engineering

3 Credits

In the coming decades biomass will play an increasing role in satisfying society's energy and material needs, providing a renewable alternative to fossil fuels. This course will cover the fundamental theories and applied technologies used in production and conversion of biomass into transportation fuels, heat, power, electricity, chemicals and other value-added products. Production strategies focus on sustainable cropping systems, harvest, storage, and pretreatment for diverse biomass feedstocks. Conversion technologies covered include ethanol fermentation, biodiesel catalysis, combustion, pyrolysis, gasification, anaerobic digestion, and emerging processes. System analysis will address worker safety and health, environmental impacts, policy, and economics. The course is recommended for students in engineering and science majors with a background in thermodynamics, chemistry, and biochemistry or microbiology. Evaluation may be based on class participation, homework, quizzes, exams, and a team design project. Students may take only one course from BE 464 and ABE 884 for credit.

Enforced Prerequisite at Enrollment: EME 301 or ME 201 or ME 300 or CHE 220 **Enforced Concurrent at Enrollment:** BE 308 or CHE 340 or CE 479

BE 465: Food and Biological Process Engineering

3 Credits

Engineering principles of fluid flow, thermal processes and other topics will be applied to the design of systems for the food and biological process industry. Due to the focus on unit operations and material and energy balances, the examples used will be applicable to bioreactor production, food processing, pharmaceutical manufacture, etc. At the end of this course, students will be able to do the following: use and convert units and dimensions applicable to food processing; apply laws of conservation of mass and energy to unit operations; evaluate time and temperature profiles for food pasteurization and sterilization; design an aseptic processing system; describe operation of mechanical refrigeration systems; calculate freezing times; design a continuous air blast freezing system; compute the energy requirements in single and multiple effect evaporators; and use the psychrometric chart in relation to drying processes.

Enforced Prerequisite at Enrollment: BE 302

BE 466W: Biological Engineering Design II

2 Credits

BE 466 is part two of a two course sequence that provides a culminating design experience for students in the Biological Engineering major. Students will develop skills and techniques for managing and executing engineering design projects in the following fields: agricultural engineering, food and biological processing engineering, and/or natural resource engineering. Projects are sponsored by faculty, industry, or community initiatives and are structured to span two semesters. In the Fall semester, the emphasis is on classroom lectures, preliminary analyses, and project proposal development. In the Spring semester, the emphasis is on hands-on laboratory activities, project execution, and report preparation. Project teams perform all facets of the design process. This includes problem identification, planning of the project, formulation of design specifications, development and evaluation of alternative conceptual designs, development of detailed designs, consideration of safety and design optimization, design implementation, design testing, and analysis and documentation of results. Students improve their writing skills through preparation and refinement of various documents including a design notebook, proposal, statement of work, design specification report, status reports, and a final report. Students also present their results in other formats, including poster and oral presentations for both technical and non-technical audiences.

Enforced Prerequisite at Enrollment: BE 460W
Writing Across the Curriculum

BE 467: Design of Stormwater and Erosion Control Facilities

3 Credits

This course equips students with the ability to design sediment and stormwater impoundments and erosion control structures used in agriculture and the development of the agricultural-urban interface. Predictive hydrology is presented along with an introduction to a hydrology-based model used in the land-development industry. Basins are presented as fundamental structures used to attenuate stormwater peaks as well as holding ponds to facilitate gravitational sediment removal from stormwater runoff. Various sediment traps are also included. Flood routing is developed so students understand and can design for flood peak attenuation. Low Impact Development (LID) practices such as green roofs, bioretention areas and vegetated filter strips are presented as infiltration-based alternatives to traditional stormwater management. Open channel design procedures including maximum permissible velocity and tractive force are reviewed. The course includes two design projects. Students are assigned a land parcel and the proposed development. Students are expected to develop an Erosion and Sedimentation Control Plan and a Post-Construction Stormwater Management Plan. Both projects are expected to be developed in compliance with state regulatory standards and to include LID practices as appropriate. In addition to the design projects, students may be evaluated on lab reports, in-class activities, and a mid-term exam.

Enforced Prerequisite at Enrollment: BE 307 or CE 461

BE 468: Microbiological Engineering

3 Credits

Microbiological engineering is the application of basic engineering principles and designs in biochemical and biological processes. The purpose of this course is to provide an understanding of conversions

of raw agricultural materials into value-added products via microbial fermentation. This course presents all steps in this type of bioprocessing such as mutagenesis, genetic modification for microbial manipulation, enzyme and microbial kinetics, aeration, agitation for bioreactor design, and scale-up strategies, as well as various recovery methods for downstream processing.

Enforced Prerequisite at Enrollment: BE 308 or (MICRB 201 and BMB 211)
Enforced Concurrent at Enrollment: BE 302

BE 477: Land-Based Waste Disposal

3 Credits

The course focuses on exploration of the fundamental principles and processes that determine the fate of nutrients and pollutants in liquid and semi-solid wastes that are applied to the soil for recycling and disposal. These principles then serve as the basis for design of systems for application of livestock manures, biosolids, septage, wastewater effluents, and other residual materials. Relevant state and federal regulations will be covered to illustrate the impact of regulations and policies on engineering practice. The course culminates in a project for which students design a system to dispose of municipal, agricultural, or industrial byproduct or wastewater. Principles will be reinforced with several homework sets. Field trips will expose students to land-based waste disposal processes and systems. The course will serve as a senior-level engineering science/design course in Biological Engineering (BE).

Enforced Prerequisite at Enrollment: BE 307 or CE 370

BE 487: Simulation Modeling for Water Resources Management

3 Credits

This course will provide hands-on experience of several commonly available simulation models for natural resources engineers for investigating water resources related issues. The models will serve as a base from which students can investigate the effects of different management design scenarios on watershed system responses. The course introduces general modeling concepts of data processing, model development, model calibration/validation and uncertainty analysis. Model development concepts will be introduced with data driven regression models for rainfall-runoff simulation. Then, students will work with a range of simulation models commonly used by industry or government agencies. One model might be used as an initial exploration of modeling for an entire watershed and to show the hydrologic responses for various subwatersheds (agriculturally dominated vs. urban dominated). A second model might be used to explore more in-depth modeling for an urban watershed. A third model might be used to introduce modeling concepts of demand driven closed conduit water systems in drinking water distribution systems. Students will select one of the three models to study in detail for a project where they evaluate a water management structure design or investigate a water resources related issue.

Enforced Prerequisite at Enrollment: BE 307 or CE 461

BE 494: Senior Thesis

1-9 Credits/Maximum of 9

Students must have approval of a thesis adviser before scheduling this course.

BE 494H: Honors Thesis

1-6 Credits/Maximum of 6

Independent study directed by a faculty supervisor that culminates in the production of a Biological Engineering honors thesis

Enforced Prerequisite At Enrollment: 5th semester standing or higher in Schreyer Honors College and permission of BE honors advisor
 Honors

BE 495: Agricultural Engineering Internship

1-6 Credits/Maximum of 6

Independent study and supervised cooperative education experience related to the student's career objective.

BE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BE 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Biological Science (BISC)

BISC 1: Structure and Function of Organisms

3 Credits

This course is an introduction into the cellular structures and processes that take place in living organisms, and how life displays unity even in its diversity. This course is a basic overview of several subdisciplines within biology, including biochemistry, cell biology, genetics, evolution, taxonomy, and ecology. Students will learn about basic biological chemistry and metabolism, cell organelles and their functions, and photosynthesis, and how these processes sustain life. Students will also learn about the cell cycle, basic genetics, and evolution, which are responsible for species diversity, and why genetic diversity is so important. We will also do a brief overview of taxonomy and phylogenetics, and a survey of some of the major groups of organisms found on Earth. Throughout the semester, we will discuss the ethical ramifications of medical research on humans, how informed consent has come about, and why informed consent is important in today's information-based society. Students who have passed BIOL 27, 110, or 141 may not schedule this course.

Bachelor of Arts: Natural Sciences

BISC 2: Genetics, Ecology, and Evolution

3 Credits

In BISC 2 (GN;3cr.), students will explore concepts, current issues, and the relationship between three core areas of biological sciences: Genetics, Ecology and Evolution. In studying genetics, students will discover how genetic information is inherited from one generation to the next and gain an appreciation for the potential impact of genetic mutations. In learning ecological concepts, students will explore interactions between organisms and the environment. By investigating the processes of evolution, students will learn how changes in an organism's genetics and environment can lead to changes in physical or behavioral traits of a species over time. By gaining a deeper understanding of these three, interrelated areas of science, students will construct evidence-based arguments regarding current global challenges or ethical dilemmas such as environmental issues, genetic engineering, and health and disease. Specific examples covered each semester may vary based on student and instructor interest. As a course that meets general education (GN) requirements, students will increase their scientific literacy, their integrative thinking, and societal responsibility and ethical reasoning skills. Students who have passed BIOL 110, 133, 220W, or 222 may not schedule this course.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

BISC 3: Environmental Science

3 Credits

We are living in extraordinary times. Our numbers have now become so large, our power so great, and our consumption so rampant that we are despoiling our home. Indeed, over the past half-century environmental scientists have been calling attention to the deterioration of Earth's atmosphere, Earth's oceans, Earth's forests and Earth's soils, along with the loss of Earth's biodiversity, from the tropics to the poles. The evidence is unequivocal: Planet Earth is under duress. Though we need Earth for our survival, Earth does not need us! So, will Earth shake us into oblivion or will we wake up, before it is too late, and become respectful members of Earth's community of life? This is a critical question for humankind as a whole; and it is the reason that BISC 3 exists at Penn State. So it is that, in this course, we will explore the root causes of today's environmental crisis and, in so doing, consider scientific, technological, sociological, psychological and personal responses to what is, arguable, the most significant crisis in the history of our species. If you commit to fully engaging with this course, you can expect to: 1-Discover how questions can be powerful catalysts for learning; 2-Grow in your ability to see both yourself and Planet Earth from new and liberating perspectives; 3-Appreciate the power of critical thinking and personal reflection as a means to both personal and global transformation 4-Realize that you should you choose can play a significant role in the healing of our world.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Creative Thinking

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason**BISC 4: Human Body: Form and Function**

3 Credits

BISC 4 Human Body: Form and Function (3) (GN) (BA) This course introduces students to the biological principles fundamental to understanding human life. Cell structure, biochemistry and metabolism, and the structure and function of major organ systems are explored in the course. Special emphasis on the relationship of the functioning of the human body to human disease is also emphasized. Upon completion of the course, students will be able to describe the basic biochemical, structural and functional characteristics of cells. They will learn the roles of carbohydrates, lipids, proteins and nucleic acids in cells and in the body as a whole. They will understand how these molecules are used in building cell and body structures, in energy-releasing metabolism and in the copying and use of genetic information. Students will also be expected to explain how different organ systems enable the body to meet the need for support structures, oxygen, nutrients, waste elimination, internal communication, defense against infectious disease and cancer, coordination of internal activity, and reproduction. To provide context for the normal workings of the human body, students will also analyze human diseases and the current understanding of the underlying pathophysiology. As a course that meets general education (GN) requirements, students will increase their scientific literacy, their critical and analytical thinking, and ethical reasoning skills. Students will ultimately be able to use the knowledge gained in this course to better understand disease processes, and will be able to make better informed decisions regarding to their health and well-being. Students who have passed BIOL 129, 141, 161 and 163 may not schedule this course.

BIOL 1: Preparation Skills for Success in Biology and Life Sciences

1 Credits

A foundation course that emphasizes study skills and reviews basic biological, chemistry and mathematical principles. BIOL 1 Biology of Success (1) This course is designed to facilitate success in the required science courses for allied health majors. Many students are challenged by their lack of basic skills and knowledge in one or more of the following areas: biology, chemistry, mathematics, and study skills. Thus, this course addresses these issues and positions the student for success. During the semester equal time is given to the following topics: study skills, which includes learning styles, goals, test taking strategies and organizational skills; terminology, which includes practice with prefixes, roots, and suffixes; basic math skills, which includes the metric system and practice with work problems; chemistry, which covers atoms, ions, and basic anabolic and catabolic reactions; cell structure and functioning; and body basics, which is an overview of the anatomy and functioning of body systems. Students are given a diversity of assignments and projects relevant to the various topics that will allow them to review and develop a basic level of competency in these areas in preparation for required science courses.

BIOL 3: Peer Learning in Biology

1 Credits

Group and learning skills to facilitate the understanding of complex biological processes. BIOL 3 Peer Learning in Biology (1) The study of Biology is complicated by the myriad pathways and processes that must be mastered in a way that interrelationship become apparent. A major stumbling block in a student's progress is learning how best to organize one's study so that both the details of these processes can be learned, along with how these processes fit together (i.e. integration). The second hurdle is learning how to use this information in a way that can solve real life problems and to communicate this process to others. This course is designed for students who would like to improve their ability to organize their learning strategies in order to maximize their understanding of the complexities of life's process. The course will be organized using peer learning groups which are posited on the assertion that every student can improve their performance with the proper environment and direction. Group leaders (enrolled in BIOL 251) will play an integral role in the program in that they are the connection between participant and course instructors. The group leaders will learn how to pass their skills on to other students in such a way as to encourage ownership of their education. Through regular meetings, the students enrolled in BIOL 003 will learn about time management and study skills, test taking strategies, exam writing, working with others that have divergent learning styles, and how to be multiculturally competent such that they are able to work with a diverse population.

BIOL 11: Introductory Biology I

3 Credits

The twelve primary topic areas within BIOL 11 are: An introduction to major themes within the course, defining life, and how natural selection operates through differential reproduction. All organisms are composed of matter and must obey the laws of chemistry - a review of basic chemical principles, the study of water and carbon-based macromolecules, the building blocks of organisms. The cell is the fundamental unit of life - a detailed study of the structure and function of eukaryotic cells. Organisms require energy to maintain organization - an exploration of the processes of photosynthesis, the conversion of light energy into chemical bond energy, and cellular respiration, the production of ATP. All cells arise from previously existing cells - a discussion of mitosis and meiosis. Genes carry information between generations - an examination of the principles of Mendelian genetics and their application to human disorders. The structure of DNA, how it codes for information in proteins, and the effect of mutations are explored. This history of life on earth, a discussion of the role of natural selection in populations and speciation. Plants are the only multicellular eukaryotes that photosynthesize - an inquiry into their evolution, function, structure, reproduction and response to the environment. Animals are multicellular eukaryotes that must acquire their energy/nutrients from other organisms - an exploration of the basics of the animal body plan and two human organ systems. Organisms must interact with their environment - a discussion of energy flows and nutrient cycling in ecosystems, as well as ecosystem distributions. Interactions among communities of species can be complex and these relationships will be investigated. Humans have an increasing impact on the environment, affecting all aspects of the world in which we live - an examination of human activities and solutions to environmental damage we have caused.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

BIOL 12: Introductory Biology II

1 Credits

Laboratory exercises demonstrating principles of biology.

Enforced Prerequisite at Enrollment or concurrent: BIOL 11

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

BIOL 110: Biology: Basic Concepts and Biodiversity

4 Credits

A study of the fundamental concepts of biology including the evolution of the major groups of organisms. BIOL 110 Biology: Basic Concepts and Biodiversity (GN)(BA) This course meets the Bachelor of Arts degree requirements. This is the first biology course taken by students who intend to major in biology. It provides a foundation in the basic concepts that govern life, including the evolutionary processes that have led to the biodiversity seen today. The course provides students with a fundamental understanding of: 1) the features of life from the cellular through organismal levels; 2) how cell division and genetic processes provide continuity between generations; 3) how genetic variation arises and leads to evolution ; 4) how organisms acquire and use energy; 5) how structure relates to function at all levels; 6) the evolution and diversity of life.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

BIOL 110H: Honors Biology: Basic Concepts and Biodiversity

4 Credits

Honors study of the evolution of the major groups of organisms including the fundamental concepts of biology. BIOL 110H Honors Biology: Basic Concepts and Biodiversity (4) (GN)(BA) This course meets the Bachelor of Arts degree requirements. This is the first biology course taken by students who intend to major in biology. It provides a foundation for the basic concepts that govern life. In addition, these concepts are used to explain the processes of evolution that contribute to the biodiversity that we observe today. The course objectives seek to provide students with a fundamental understanding of: 1) features of life; 2) how basic genetic processes provide continuity between generations; 3) how genetic variation arises and contributes to evolutionary processes; 4) how structure relates to function; 5) how the diversity life is studied and explained by evolution.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

Honors

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

BIOL 110S: Biology: Basic Concepts and Biodiversity

4 Credits

A study of the evolution of the major groups of organisms including the fundamental concepts of biology. This course also fulfills the First-Year Seminar requirements. BIOL 110S Biology: Basic Concepts and Biodiversity (3) (GN;FYS)(BA) This course meets the Bachelor of Arts degree requirements. This is the first biology course taken by students who intend to major in biology. It provides a foundation for the basic concepts that govern life. In addition, these concepts are used to explain the processes of evolution which contribute to the biodiversity that we observe today. The course objectives have remained unchanged and seek to provide students with a fundamental understanding of: 1) features of life; 2) how basic genetic processes provide continuity between generations; 3) how genetic variation arises and contributes to evolutionary processes; 4) how structure relates to function; 5) how the diversity life is studied and explained by evolution.

Bachelor of Arts: Natural Sciences
First-Year Seminar

BIOL 127: Introduction to Plant Biology

3 Credits

Cellular structure, organization, and metabolism; plant anatomy and physiological processes; plant reproduction and development; genetics and evolution; relationships and features of plant groups. Students who have passed BIOL 240W may not schedule this course.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Creative Thinking
GenEd Learning Objective: Crit and Analytical Think

BIOL 128: Investigations in Anatomy with Cadavers

1 Credits

This course provides students with an introduction to the science of anatomy and uses human cadavers for some activities. No previous experience in anatomy is required. Classroom discussions include the fundamentals of embalming and the details of body donation as it currently exists in the state of Pennsylvania. A personal perspective on the impact of working with donated human bodies is also included. In the lab students engage in a series of investigatory activities that help to clarify the nature of anatomic inquiry. These activities begin with free-form and directed dissections/explorations of preserved and fresh non-human specimens. Selected explorations and assessments of dissected human donor bodies follow. Assigned activities allow students to sharpen their powers of observation, familiarize themselves with the basic mammalian body plan, and recognize the inter-relatedness between structure and function as a fundamental tenet in biological science.

BIOL 129: Mammalian Anatomy

4 Credits

Anatomy of a mammal, with special reference to that of man. Students who have passed BIOL 421 may not schedule this course. BIOL 129 Mammalian Anatomy (4) (GN)(BA) This course meets the Bachelor of

Arts degree requirements. Biology 129 is a 4 credit lecture and laboratory course specifically designed to cover the fundamentals of mammalian anatomy, with emphasis on human systems, for students in a variety of life science related majors including Nursing, Kinesiology, Athletic Training, and Science. Successful completion of this course will give the student working knowledge of mammalian anatomy body plan, systems, and nomenclature with the intent on applying this information to future clinical situations they may encounter in nursing, physical therapy, athletic training, dentistry, and medical settings. The course utilizes lecture descriptions and discussions, along with laboratory specimen dissection, identification and nomenclature to give a thorough overview of anatomy. Small group collaboration is emphasized in laboratory. Course Objectives: The principle objective of the course is for every student to obtain a working knowledge and understanding of basic mammalian anatomy, emphasizing a body system approach, and where possible, relate this to the human anatomical body plan. The lecture portion of the course will stress the construction, function, and relationships between anatomical systems. The laboratory portion of the course will emphasize structure identification and nomenclature of anatomical systems and will utilize human skeletal samples, cat specimen dissections, and anatomical models. Where possible, anatomical relationships that are important in clinical situations and common medical conditions will be emphasized. The end point of both objectives is to obtain a practical understanding of anatomy that demonstrates the relationships between anatomical form and function. Students will leave the course being able to relate this knowledge and nomenclature to future clinical or personal health situations. Relationship to Courses and Programs of Study: This majority of students enrolled in this course are from the College of Health and Human Development in Nursing, Biobehavioral Health, Kinesiology, and Nutrition majors, although some students are from other colleges including the Eberly College of Science, Liberal Arts, and Agriculture. Because the majority of these students will utilize course information in future clinical settings, anatomy and its nomenclature as it relates to humans is emphasized and important clinical considerations are discussed.

Bachelor of Arts: Natural Sciences

BIOL 133: Genetics and Evolution of the Human Species

3 Credits

Human heredity and evolution, individual and social implications. The course is for non-majors; students who have passed BIOL 222, 230W, B M B 251 or any upper-division biology course may not schedule this course. BIOL 133 BIOL 133 Genetics and Evolution of the Human Species (3) (GN) BIOL 133 is a 3 credit non-majors course designed as an overview of our current knowledge of human genetics and genetic issues, with special attention to issues that are relevant to non-scientists. We discuss background information that is necessary for understanding these issues, including the structure and function of DNA and chromosomes, Mendelian inheritance, gene expression, gene mutations and chromosomal aberrations, population genetics, evolution, cancer, and genetic and reproductive technologies. This course includes multimedia presentations, textbook readings, classroom activities and problem solving. The goal for this course is to provide students with sufficient scientific knowledge to make informed decisions about genetic issues and the ability to discuss these issues intelligently.

Bachelor of Arts: Natural Sciences
General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

BIOL 141: Introduction to Human Physiology

3 Credits

BIOL141 is a 3-credit course focused on the function of the human body. Students that complete this course will develop both a foundational understanding of key terms and processes related to physiology, as well as a deeper understanding of how the key terms relate to real-world situations. The major processes examined focus on homeostasis and the feedback loops used to maintain homeostasis in the body. Additional content examines how disruptions of homeostatic mechanisms result in disease states. Students will analyze different health-related scenarios to draw connections between vocabulary, processes and resultant diseases. Students will also practice discussing complex physiological processes with peers and interpreting figures used in the field to represent and communicate these concepts, providing skills needed to excel in a physiology-related field. This course utilizes both descriptive and problem-solving techniques and, as a result, may require some review of basic science and math principles developed in previous high school courses. This is a stand-alone physiology lecture course and is not part of the 100-level 8-credit Anatomy and Physiology sequence.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

BIOL 142: Physiology Laboratory

1 Credits

Experiments demonstrating basic physiological principles, with special reference to man.

Enforced Prerequisite at Enrollment or concurrent: BIOL 141

BIOL 144: Climate Change: Biological Impacts

3 Credits

A study of the interactions of organisms with their environment through exploration of the biological impacts of climate change on individuals, populations, ecological communities, and ecosystems. Students will develop skills to make informed judgments about the implications of climate change using scientific information and expand their understanding of how and why science works to generate knowledge to address biological issues relative to climate change. Students will construct evidence-based explanations of the impacts of climate change on biological processes such as disease transmission, population dynamics, and ecosystem functioning. Because of duplication of subject matter a student may receive credit for only one of the following courses: BIOL 144, BIOL 144Z, BIOL 220W

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

BIOL 155: Introduction to the Biology of Aging

3 Credits

Biology 155 is a 3 credit General Education Science course designed to give both science and non-science majors a basic understanding of the aging process, with special emphasis on aging as it relates to the human body and health. The course reviews the aging terminology, major theories of the aging process, demography of aging examining both US and World Populations, and the general aging of the major body systems. The course will emphasize common clinical ailments associated with aging including Alzheimer's disease, diabetes, atherosclerosis, osteoporosis, arthritis, and cancer.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

BIOL 160N: Fitness with Exercise Physiology

3 Credits

Biology of Exercise is an integrative exercise physiology course that combines performing physical activity (Kinesiology) and applying biological principles (Biology). This course will explain the benefits, changes, and processes the body exhibits while exercising. Students will gain knowledge and comprehension through both a lecture (or online) setting (approximately half of the class meetings) as well as an activity component (approximately half of the class meetings) in which students will demonstrate their health related components of fitness. This includes, but is not limited to, muscular strength, muscular endurance, flexibility, power, cardiorespiratory endurance, and body composition. In the lecture component, students will describe biological principles including homeostasis, nutrition, the structure and function of musculoskeletal, cardiovascular, and respiratory systems. At the completion of this course, students will be able to argue for the lifelong significance of exercise including why it is important, benefits related to organ systems, and disease prevention.

BIOL 161: Human Anatomy and Physiology I - Lecture

3 Credits

This is the first lecture course of a two semester sequence introducing human anatomy and physiology, which is the branch of biology that focuses on the structure and function of the human body. Lectures will take a "systemic" approach to anatomy and physiology, focusing on one body system at a time. Topics covered in the Human Anatomy & Physiology I Lecture include: basic anatomical and directional terminology; fundamental concepts and principles of cell biology;

histology; the integumentary, skeletal, muscular, and nervous systems; special senses, and the endocrine system. Each unit will build on previous knowledge to establish a cohesive picture of the human body. Throughout the course, students will build a strong foundation in the form and function of the human body from the cellular to the gross anatomical level. This knowledge will be contextualized by incorporating information about clinical cases, personal health and lifestyle choices, and human development.

General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

BIOL 162: Human Anatomy and Physiology I - Laboratory

1 Credits

This is the first laboratory course of a two-semester sequence introducing human anatomy and physiology. The A&P I laboratory complements the A&P I lecture by providing students with hands-on experiences such as examination of preserved specimens and anatomical models, and performing physiological experiments. Topics covered in the Human Anatomy & Physiology I Laboratory include: anatomic orientation and terminology; the anatomy and physiology of the nervous system; special senses; skeletal system and muscular system.

Enforced Concurrent at Enrollment: BIOL 161 or BIOL 141
General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

BIOL 163: Human Anatomy and Physiology II - Lecture

3 Credits

This is the second lecture course of a two semester sequence introducing human anatomy and physiology, which is the branch of biology that focuses on the structure and function of the human body. Lectures will take a "systemic" approach to anatomy and physiology, focusing on one body system at a time. Topics covered in the Human Anatomy & Physiology II Lecture include: the cardiovascular system, lymphatic and immune systems, respiratory system, digestive system, metabolism, urinary system, and reproductive system. Each unit will build on previous knowledge to establish a cohesive picture of the human body. Throughout the course, students will build a strong foundation in the form and function of the human body from the cellular to the gross anatomical level. This knowledge will be contextualized by incorporating information about clinical cases, personal health and lifestyle choices, and human development.

Enforced Prerequisite at Enrollment: BIOL 161
General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

BIOL 164: Human Anatomy and Physiology II - Laboratory

1 Credits

This is the second laboratory course of a two-semester sequence introducing human anatomy and physiology. The A&P II laboratory complements the A&P II lecture by providing students with hands-

on experiences such as examination of preserved specimens and anatomical models, and performing physiological experiments. Topics covered in the Human Anatomy & Physiology II Laboratory include: the anatomy and physiology of the cardiovascular system, respiratory system, digestive system, urinary system, and reproductive system.

Enforced Concurrent at Enrollment: BIOL 163 or BIOL 141
General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

BIOL 169N: What it means to be human

3 Credits

This course will investigate the distinctiveness of Homo sapiens, using fossil and non-human animal comparisons to highlight how modern humans are both similar to and different from other species. Basic elements from the fields of biology, genetics, anatomy, physiology, ecology, cognition, neuroscience, social psychology, and anthropology will be integrated for a complete and robust picture of humans and their place in the animal world. Furthermore, students will expand upon this integration of fields to make inferences about how an individual's or society's perspective on human uniqueness, or the lack thereof, impacts decisions and behaviors relevant to research ethics, environmental policy, educational policy, religion, and/or social issues.

BIOL 177: Biology of Sex

3 Credits

This course presents a thorough background on the basic structure and function of the human reproductive system, gender as it relates to biology across the lifespan, endocrine regulation of the reproductive system across the lifespan, and gestation/pregnancy. Students completing the course will have sufficient scientific knowledge to understand and discuss sex-related topics and clarify their understanding of the ways the human body functions in sexual development, behavior and reproduction. Class discussions, facilitated small group activities, and writing assignments will encourage students to think critically and practically about the application of biological knowledge, in health, society, and personal decision making. Importantly, students will examine the roles of reproductive physiology, sexuality, and gender in a historical, cultural and social context, with particular emphasis on sex differences in anatomical forms, sexual expression, and hormonal regulation. The course will present ongoing research on human sex and reproduction, and explore the biology behind current issues in gender and medicine.

General Education: Natural Sciences (GN)
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Integrative Thinking

BIOL 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BIOL 200: Introduction to Pharmacological Concepts

3 Credits

Presents basic concepts of pharmacology; includes major drug classifications, pharmaceutical preparations, and biological implications relevant to these therapeutic agents.

BIOL 220M: Honors Biology: Populations and Communities

4 Credits

Honors study of the major physical, chemical, and biological factors constituting environment and their dynamic interaction with organisms forming ecosystems. A study of the structures and functions of organismic interactions from simple populations to complex ecosystems. (BIOL 220W, BIOL 230W, and BIOL 240W each carry only 1 credit of "writing"; all three courses must be taken to meet the writing requirement.) BIOL 220M is an introductory course in ecology. It introduces students to the fundamental ecological principles, concepts, patterns, and processes regarding populations, communities, and ecosystems. This course provides students with a foundation of ecological science, as well demonstrating linkages between ecology, population genetics, and evolution. The course objectives are the same as those described in the original course proposal and are to provide students with a fundamental understanding of: 1) genetic processes within populations of living things, 2) evolutionary processes involved in speciation, 3) dynamic interactions of organisms within and among populations, especially pertaining to energy cycles, various biogeochemical cycles, predator-prey interactions, and the like, and 4) distribution patterns of living organisms and the need to conserve the resources of the earth.

Enforced Prerequisite at Enrollment: BIOL 110 or BIOL 110H

Bachelor of Arts: Natural Sciences

Honors

Writing Across the Curriculum

BIOL 220W: Biology: Populations and Communities

4 Credits

A study of the structures and functions of organismic interactions from simple populations to complex ecosystems. (BIOL 220W, BIOL 230W, and BIOL 240W each carry only 1 credit of "writing"; all three courses must be taken to meet the writing requirement.) BIOL 220W is an introductory course in ecology. It introduces students to the fundamental ecological principles, concepts, patterns, and processes regarding populations, communities, and ecosystems. This course provides students with a foundation of ecological science, as well demonstrating linkages between ecology, population genetics, and evolution. The course objectives are the same as those described in the original course proposal and are to provide students with a fundamental understanding of: 1) genetic processes within populations of living things, 2) evolutionary processes involved in speciation, 3) dynamic interactions of organisms within and among populations, especially pertaining to energy cycles, various biogeochemical cycles, predator-prey interactions, and the like, and 4)

distribution patterns of living organisms and the need to conserve the resources of the earth.

Enforced Prerequisite at Enrollment: BIOL 110 or BIOL 110H

Bachelor of Arts: Natural Sciences

Writing Across the Curriculum

BIOL 222: Genetics

3 Credits

Variation and heredity in bacteria, plants, and animals; relationships of genetic knowledge to evolution and breeding practices. This course is for students in life sciences majors that are not Biology, Genetics and Development and Biochemistry and Molecular Biology. Students should have at least 3 credits of biological sciences before scheduling this course. In this course, we will discuss chromosome structure; mitosis and meiosis, in particular their application of the transmission of DNA; principles of Mendelian inheritance; structure and function of DNA, RNA, and proteins; gene expression; DNA mutations and chromosome changes; genomics; population genetics and the intersection of genetics and society. The course will include multimedia presentations, textbook readings, problem-solving and homework, in-class activities and discussions of science and society.

Enforced Prerequisite at Enrollment: BIOL 110 or BIOL 110H or MICRB 201 or MICRB 201H or BIOL 141 or BIOL 133 or BMB 251 or BMB 251H

BIOL 230M: Honors Biology: Molecules and Cells

4 Credits

This four credit course with lecture and laboratory components provides an understanding of the major unifying principles of life as they apply to the study of the molecular mechanisms underpinning the function of living organisms. Through the lab, students are expected to become proficient in the interpretation and presentation of experimental results through written and oral reports. Taken together with the other honors core courses in the biology curriculum (BIOL 110H, BIOL 220M, BIOL 240M), BIOL 230M will help students to integrate concepts ranging from molecular and cellular events through principles governing entire populations and ecosystems. Further, BIOL 230M provides the foundation on which students further their study of molecular genetics - a discipline integral to a number of the biological sciences. Through this class, and the other core course, students will develop a number of the skills outlined in the General Education mission. BIOL 230M serves a number of majors and colleges. The laboratory portion of the course requires a fully equipped laboratory room, as well as a classroom for recitation meetings. The Honor's version of the course will differ in a number of ways from the parent BIOL 230W course. First, there are more opportunities to discuss current applications of the information. In addition, a unique project (either in lab and/or in lecture) will allow students to explore a specific area of the course in more detail (e.g., take a paper from the primary literature and present the data, and its significance, to the class). Where appropriate, students will be exposed to current research in specific areas. In addition, the laboratory component will have opportunities for students to do more in depth exercises where, to some degree, they could pose their own questions.

Enforced Prerequisite at Enrollment: BIOL 110H or BIOL 110

Bachelor of Arts: Natural Sciences

Honors

Writing Across the Curriculum

BIOL 230W: Biology: Molecules and Cells

4 Credits

BIOL 230W is a four credit course with lecture and laboratory components. (BIOL 220W, BIOL 230W, and BIOL 240W each carry only 1 credit of "writing"; all three courses must be taken to meet the writing requirement.) The goal of this course is to provide an understanding of the major unifying principles of life as they apply to the study of the molecular mechanisms underpinning the function of living organisms. Through the lab, students are expected to become proficient in the interpretation and presentation of experimental results through written and oral reports. Taken together with the other core courses in the biology curriculum (BIOL 110, BIOL 220W, BIOL 240W), BIOL 230W will help students to integrate concepts ranging from molecular and cellular events through principles governing entire populations and ecosystems. Recommended preparations: CHEM 110

Bachelor of Arts: Natural Sciences

Writing Across the Curriculum

BIOL 240M: Honors Biology: Function and Development of Organisms

4 Credits

Honors study of development and physiological processes at the organismic level. (BIOL 220W, BIOL 230W, and BIOL 240W each carry only 1 credit of "writing"; all three courses must be taken to meet the writing requirement.) This course provides an understanding of the major unifying principles as they apply to the study of the development and physiological mechanisms utilized by organisms from both animals and plants. In lecture a comparative approach will be taken in the examination of reproduction, development, and physiology primarily at the organismal level. In laboratory, experimental investigations of both animal and plant systems will reinforce the concepts covered in lecture. Through the lab, students are expected to become proficient in the interpretation and presentation of experimental results through written and oral reports. Taken together with the other core courses in the biology curriculum (BIOL 110, BIOL 220, BIOL 230W), BIOL 240M will help students to integrate concepts ranging from molecular and cellular events through principles governing entire populations and ecosystems. Further, BIOL 240M provides the foundation on which students further their study of animal physiology and development - two of the largest options in the biology majors curriculum. Through this class, and the other core course, students will develop skills integral to the General Education mission. Evaluation methods in the lecture part of the course include two to three "mid-term" exams and a comprehensive final exam. Evaluation methods in the lab portion of the course include in-class quizzes, one or more formal lab reports on experiments or data analysis conducted in lab sessions, and short write-ups of existing data sets or relevant ecological issues. The Honor's version of the course will differ in a number of ways from the parent BIOL 240W course. First, there are more opportunities to discuss current applications of the information. In addition, a unique project (either in lab and/or in lecture) will allow students to explore a specific area of the course in more detail (e.g., students choose a topic in the current literature and present a paper along with its significance to the class). Where appropriate, students will be exposed to current research in specific areas. The evaluation for the

course will be modified from that of the parent course in accordance with the changes in assignments.

Enforced Prerequisites at Enrollment: BIOL 110H or BIOL 110

Writing Across the Curriculum

BIOL 251: Peer Leadership in Biology

1 Credits

Leadership training in guiding others to learn, communicate, and apply biological principles. BIOL 251 Peer Leadership in Biology (1) The study of Biology is complicated by the myriad pathways and processes that must be mastered in a way that interrelationship become apparent. A major stumbling block in a student's progress is learning how best to organize one's study so that both the details of these processes can be learned, along with how these processes fit together (i.e. integration). The second hurdle is learning how to use this information in a way that can solve real life problems and to communicate this process to others. This course is designed for students who have already mastered basic concepts in biology and who want to learn how to communicate their understanding to others who are learning these first principles. This course is unusual in that it has divergent goals. The students enrolled in this course will be trained to be more effective communicators. In the 21st century, it is critical that we train our students to be better at relating to the general population by using effective communication skills. In addition, the course will train the students to act as effective group leaders in peer learning programs so they become competent, comfortable, and confident in working with students of diverse background, learning styles and skill levels. The philosophy behind peer learning programs is that every student can improve their performance and with the help of a group leader, this goal can be realized. The group leaders play an integral role in the program that in that they are the connection between participant and course instructors. The group leaders will learn how to pass their skills on to other students in such a way as to encourage ownership of their

education. Through workshops and biweekly meetings, the group leaders will learn about time management and study skills, test taking strategies, exam writing, working with students with divergent learning styles, and how to be multiculturally competent such that they are able to work with a diverse student population. They will facilitate learning through group activities and practice their leadership skills in a small group setting. Group leaders will be monitored through review of their weekly journals as well as observation of their groups by supervising faculty. The student developed exercises will be implemented and reviewed for effectiveness.

BIOL 261: Reading Seminar in the Health Professions

1 Credits/Maximum of 2

Students will read and discuss 3 to 4 books of creative nonfiction that address issues in the health professions. These may include collections of reflective essays from health professionals, historical narratives of diseases or conditions, biographies, collections of case studies, exposé, memoirs, or other formats. Topics may include disease transmission, ethics, patient care, health care, diseases, historical events, or other relevant topics. In addition, students will read and discuss primary scientific literature and news articles on topics related to their book readings. Students must attend and participate in weekly discussion and complete online writing assignments.

BIOL 294: Research Project

1-6 Credits/Maximum of 6

Supervised student activities on research projects identified on an individual or small-group basis.

BIOL 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BIOL 296G: Special Topics

1 Credits

BIOL 296H: Independent Studies

1 Credits

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

Honors

BIOL 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BIOL 322: Genetic Analysis

3 Credits

This course describes the principles of Genetics at the level of molecules, genomes, cells, organisms, and populations. It emphasizes the structure and function of genes and genomes, the regulation of gene expression, the chromosomal basis of inheritance, biological variation resulting from

recombination, mutation, and natural selection and the use of genetic methods to address research questions related to these topics.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or MICRB 251 or BMB 251 or BMB 251H or BME 201

BIOL 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BIOL 400: Teaching in Biology

1-6 Credits/Maximum of 6

This course will train biology teaching assistants to teach in the laboratory/ recitation setting with emphasis on critical thinking skills. BIOL 400 BIOL 400 Teaching in Biology (1-3) This course provides teaching assistants with the fundamentals they will need to be effective in the laboratory and/or recitation classroom. Students will learn the fundamental skills needed to; design lesson plans; facilitate class discussions; write effective quizzes; communicate learning expectations; grade fairly; and in the case of the laboratory setting, maintain a safe learning environment. Students enrolled in this course will also be serving as teaching assistants and consequently faculty who serve as course instructors and/or lab coordinators in the relevant course will provide the instruction. Through regular meetings the course instructors will help teaching assistants adjust to their duties and solve common problems that arise in the laboratory/recitation environment. Emphasis will be placed on how teaching assistants can facilitate active learning and help their students develop sound study skills. Students enrolled in this course will be evaluated on regular attendance, organization in and preparation for their teaching, and clarity in how they communicate with their students.

Enforced Prerequisite at Enrollment: 5th semester standing

BIOL 402W: Biological Experimental Design

3 Credits

Discussion of experimental design, analysis and presentation, with a practicum providing for student design, analysis and presentation of biological experiments. Students may not take this course if they have taken BIOBD 350W. BIOL 402W Biological Experimental Design (3) This course emphasizes written and oral communication of scientific ideas. Students discuss papers from the literature, preparing written critiques of two. Critiques are reviewed in writing by the instructor and peers and may be revised twice. Peer reviews are graded in writing and may be revised once. Written proposals for biological research are required. Students must build arguments for methodological rationales, justify statistical approaches, and place their proposed research into a larger societal context. Proposals are reviewed by the instructor and three peer reviewers. Peer reviewers must prepare written critiques and present proposals to the class during an "NSF"-style panel review. Prior to the presentation, the instructor provides written and oral feedback to the author and the peer reviewer in a meeting at which strategies for presenting the proposal are discussed. Subsequent to the presentation, peer reviewers write summaries of the discussion and provide explicit guidance to authors. Proposals may be revised twice. Peer reviews and summaries are graded in writing and may be revised once. Thus, each student writes 2 critiques, 1 proposal, 2 peer reviews of critiques, 1 peer

review of a proposal, and 1 summary of the panel discussion. Each assignment is graded in writing and is subject to revision. Students also are graded on their proposal presentations and on participation in panel discussions. These activities constitute 75% of the final grade. Students must demonstrate competence in the use of SAS, a statistics package. Students must choose and apply appropriate statistical techniques to biological data. In addition to the program and its output, students write interpretations of the results. This activity constitutes 25% of the final grade. Lectures are used to review statistics and "how tos" (e.g., proposal preparation). Case histories are used to address ethics, statistical decision-making, and design. Students are expected to challenge what they learn, and the notion that scientists must acknowledge and guard against bias in their work is emphasized. Intellectual honesty and the ability to give and receive constructive criticism are demanded. This course is required in two of the six options in biology (ecology and general), and it can be taken by students in the other options. The course is required of students who have not fulfilled the WAC requirement at the 200-level (transfer students).

Enforced Prerequisite at Enrollment: STAT 250 and at least two of the following three courses: BIOL 220W and BIOL 230W and BIOL 240W Writing Across the Curriculum

BIOL 403: Biological Writing and Communication for Research

3 Credits

Each student will pose and address their own research question with support from the scientific research literature. Each student will share their own research findings in written and oral formats, both for scientific and general public audiences. Data to address each student's research question can come from their own undergraduate research or from queries with publicly-available data sets. Students should expect to give and receive regular peer feedback on writing assignments relating to their research project and incorporate that feedback from peers and from their teacher in synthesis projects. Synthesis projects, where students are expected to integrate and make revisions to writing from the semester, include a short research manuscript, a research poster and oral presentation, and a blog post geared toward the general public. Weekly workshops paired with readings on scientific theory about writing and communication will help students practice technical science writing in general.

Enforced Prerequisite at Enrollment: (BIOL 110 or BIOL 110H or MICRB 201 or MICRB 201H or BMB 251 or BMB 251H or STAT 200 or STAT 250) and (ENGL 15 or ENGL 137H or CAS 137H or ENGL 30H)
General Education: Writing/Speaking (GWS)
GenEd Learning Objective: Effective Communication
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

BIOL 404: Cellular Mechanisms in Vertebrate Physiology

3 Credits

This course is focused on cellular and molecular mechanisms governing physiological aspects of vertebrate cell signaling, and will consider how these mechanisms are adapted to particular organismal functions. To illustrate general principles, specific examples from different organ systems are discussed. For each example, some background on the relevant organismal physiology is provided and thus no physiology course is required as a pre-requisite. The main course objective is to help students better understand the scientific basis of Biology through

consideration of experimental findings and student-led discussions of primary research in the field.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H

BIOL 405: Molecular Evolution

3 Credits

This course is designed to introduce the concepts of evolution from a molecular point of view and the basic techniques of analysis of molecular sequence data. The class will include a mixture of lecture-based and student activity-based instruction that addresses various topics in molecular evolution, as well as in-class and extracurricular work on the computer to learn how to use online bioinformatics tools for sequence analysis. As a result of this course, students will be able to analyze DNA and protein data with a purpose of addressing specific scientific questions of interest. The course embraces applications of computing and statistics to the life sciences.)

Enforced Prerequisite at Enrollment: BIOL 220W or BIOL 220M and (BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or BIOL 222 or BIOL 322) Recommended Preparations: Completion of a course in Statistics is strongly recommended

BIOL 406: Symbiosis

3 Credits

Mutualisms (interactions between two species that benefit both of them) occur in every habitat on Earth, and nearly every species on the planet is involved directly or indirectly in one or more of these interactions. The influence of mutualisms transcends levels of biological organization from cells to populations, communities and ecosystems. Mutualistic associations, such as our microbiome and agricultural symbioses, are critical for human health and welfare. Mutualistic symbioses played a fundamental role on the origin of the eukaryotic cells and the evolution of multicellularity. In addition to the key role played by mutualism in the evolution of complex lifeforms on earth, mutualistic association are instrumental to understand how some important ecosystems such coral reefs and hydrothermal vents function. Mutualistic symbioses are critical for nutrient cycling in the environment and the reproduction and dispersal of numerous plant and animal species. This course will focus on unifying concepts that cut across different forms of mutualism. We will explain and tests these concepts analyzing classic examples of mutualisms. We will define and categorize the diverse array of symbiosis occurring in nature. We will explore the evolutionary origins and implications of mutualistic symbiosis, investigate the population, community and ecosystem ecology of mutualisms and we will assess current anthropogenic threats to mutualisms, their potential for resilience and the role of mutualisms in conservation. Finally, we will explore in detail the metabolic linkages using selected nutritional symbiotic mutualisms examples. The course combines in-class and online teaching, as well as a weekly discussion session, in which the students are responsible for selecting one primary scientific article, prepare a brief presentation and lead a critical discussion session in front of the class. The course takes advantage of the technology-rich Bluebox experimental classroom. This learning space has been designed to support active, collaborative learning experiences increasing student engagement.

Enforced Prerequisite at Enrollment: BIOL 220W or BIOL 220M or BIOL 230W or BIOL 230M or BIOL 240W or BIOL 240M or BMB 251 or BMB 251H

BIOL 407: Plant Developmental Anatomy

3 Credits

The course will provide students with an understanding of the developmental anatomy of plant organs, tissues and cells throughout the plant life cycle. When appropriate, the course will discuss genes involved in the formation and function of these organs and how organ development is affected by environmental inputs. In laboratory sections, observational skills will be trained and knowledge gained in lectures will be applied to the analysis of plant anatomical structures. Plant developmental adjustments to environmental stresses will be studied using light microscopy and digital image acquisition. Primary scientific literature related to the lecture topics will be assigned as reading material to be discussed in class. Students will learn how to formulate research hypotheses and, in a written assignment, research a global challenge to food security and discuss strategies to improve agricultural productivity by manipulating the biology of plants.

Enforced Prerequisite at Enrollment: BIOL 240W or BIOL 240M or BIOL 127

BIOL 409: Biology of Aging

3 Credits

This course focuses on the molecular, cellular and physiological changes that are associated with the aging process. Diseases that are associated with aging will also be addressed. Continual emphasis will be placed on interventions that may prolong the "health span" of an organism. Original research articles will be the primary sources of information in this course. By the end of the semester, students will have a firm understanding of the theories of aging and the age-related changes that take place on several levels of inquiry. Additionally, students will develop their abilities to critically evaluate scientific literature.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 240W or BIOL 141 or BMB 251

BIOL 411: Medical Embryology

3 Credits

This course offers an overview of Human Embryology, including reproductive physiology, infertility, the events and timeframes characterizing human embryological development, the structure and function of developing human body systems, and relevant clinical correlations associated with disease and congenital malformations. This course features discussions and explanations of topics in developmental biology that some students might view as controversial including comparative anatomy and evolution, contraception, assisted reproductive techniques, cloning, potential medical applications of stem cells, abortion with respect to developmental time frames, and gender development. The goal of such discussions will be to educate and give perspectives on these issues, but not to indoctrinate a particular viewpoint or philosophy.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BIOL 240W or BIOL 240M or BIOL 141 or BMB 251 or BMB 251H

BIOL 412: Ecology of Infectious Diseases

3 Credits

This course will take an ecological approach to the study and control of infectious diseases. The course examines the dynamics of disease, how parasites (worms, bacteria and viruses) spread through a host population, the consequences for the hosts and the consequences for the parasite from both an ecological and evolutionary viewpoint. Ecological insights will be used to discuss and identify effective means of controlling the parasites. Students will learn how to develop basic mathematical models to describe the dynamics of a parasitic infection and discuss how these models can be applied to make predictions and optimize control-strategies for infections. This will be illustrated with numerous work examples of human, veterinary and wildlife diseases. Students will also examine the role of parasites in the ecosystem and how environmental changes affect parasite transmission. At the finer level the course will investigate how host-parasite interactions and multi-parasite species infections are modulated by host features (e.g. age, sex, immunity) and what may cause rapid changes in infectiousness and transmission. The course will touch on a range of current issues that include pandemic outbreaks, emerging infectious diseases and the role of parasites in ecosystem functioning. The ecological approach involves applying the principles of population biology to understand infectious diseases and develop new perspectives on epidemiology, thus the title "Ecology of Infectious Diseases". This course is designed for ecology, biology and animal science majors to obtain insights into the ecology of parasitism, and for pre-meds to provide biological foundation to the study of epidemiology.

Enforced Prerequisite at Enrollment: BIOL 220W or BIOL 220M or HPA 440

BIOL 413: Cell Signaling and Regulation

3 Credits

Introduction to the molecular mechanisms by which cells send, receive, regulate, and respond to signals. Through review of primary literature, students will explore the variety of mechanism by which endocrine, paracrine, and juxtacrine signal molecules exert their effects on target cells. Subject matter will include ligand/receptor families, second messenger systems, G-proteins, kinase cascades, and effector proteins that regulate cytoskeleton dynamics, metabolism, and gene expression.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H

BIOL 414: Taxonomy of Seed Plants

3 Credits

This course provides an introduction to modern plant systematics as exemplified by the wide diversity of living plants growing in central PA. By the end of the course, students will be able to: 1) use the technical vocabulary that describes plant structures necessary for their identification, 2) characterize the major groups and families of flowering plants and gymnosperms, 3) recognize on sight 60 of the most important plant families in our region and be able to describe and contrast their major features, 4) use and write identification keys to identify and study living plants as represented in the local flora, and 5) discuss current concepts of plant systematics and phylogenetics and their applications to plant classification and the study of the evolution of and relationships among families of flowering plants.

Enforced Prerequisite at Enrollment: BIOL 240W or BIOL 240M or BIOL 127

BIOL 415: Ecotoxicology

3 Credits

Ecotoxicology is an interdisciplinary field that involves the study of chemicals and radiation on organisms and their environment. The goal of this course is to introduce the science of ecotoxicology, including a survey of classes of contaminants as well as the impacts of various toxins. The emphasis will be on organism and ecosystem effects of toxins, as well as some toxicity testing methods and pertinent government regulations. Additionally, we will undertake a research project as well as critical readings of current literature. One of the biggest challenges students face in this course is dealing with potentially conflicting data and applying scientific thinking in the process of making decisions about these controversies. These challenges will underscore the political, economic, and scientific constraints that U.S. regulatory agencies work under to protect public health. The goals of this course are to: - introduce the science and history of ecotoxicology - look at classes of contaminants and their modes of action - understand the impacts of various toxins on organisms and ecosystems - introduce some of the various U.S. agencies that evaluate and regulate contaminants in the environment - critically review scientific papers, data, and arguments - learn to communicate like a scientist with an emphasis on communicating complex topics to a lay audience - demonstrate understanding of the scientific method and apply that understanding to the development of a research project

Enforced Prerequisite at Enrollment: BIOL 220W or BIOL 220M or FOR 308 or WFS 209

BIOL 416: Biology of Cancer

3 Credits

Biology of Cancer introduces basic biological aspects of cancer development with an emphasis on molecular and cellular mechanisms of tumorigenesis. It discusses how molecular genetic approaches can be used to reveal fundamental processes of carcinogenesis. Through this course, students will learn genetic, cellular and biochemical basis of cancer development and understand how such information can be instrumental in devising strategies for prevention, detection, and treatment of cancer. As a 400 level class, students are expected to have a background in molecular biology and genetics.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or BIOL 222

BIOL 417: Invertebrate Zoology

4 Credits

Function and form of major invertebrate phyla.

Enforced Prerequisite at Enrollment: BIOL 110

BIOL 418: Biology of Human Infectious Diseases

3 Credits

In this class, students look carefully at diseases that impact human populations and the successes and failures in disease management. This class includes case studies of diseases and disease control in recent history as well as current outbreaks. Course materials will

highlight the integration of different aspects of biology and additional complexities that drive disease dynamics and determine the efficacy of disease management strategies. Students will read assigned primary literature paired with popular science texts and educational multimedia resources to learn about course topics, which will complement classroom discussions and lectures. Each student will conduct an independent research project on a relevant topic of their choice, which will require them to search and identify primary literature that is relevant to their topic and apply the broad concepts discussed in the class to their unique research project. Each student will produce a written paper and deliver a presentation to the class. Research topics are often, but not limited to, a case study of a disease that is not covered in class by the professor.

Enforced Prerequisite at Enrollment: BIOL 110 or BIOL 110H and BIOL 220W or BIOL 220M and BIOL 230W or BIOL 230M

BIOL 419: Ecological and Environmental Problem Solving

3 Credits

The course will provide a general overview of the process involved in studying a variety of ecological and environmental problems. It will provide a toolbox of techniques for understanding ecological and environmental problems, and discuss how they can be used to address questions and generate testable predictions. It will examine connections between individuals and populations and communities as well as between theory and data. The focus will be on theoretical and computer modeling approaches, while maintaining a strong link to data and real systems. After an introduction to modeling, students will learn to develop and use simple and stochastic optimization models for individual organisms, as well as applying basic game theory to interactions between individuals. They will explore a sequence of population demographic models of increasing complexity, ranging from unlimited, unstructured population growth to density-dependent, structured population growth, in non-spatial and spatial contexts, culminating in individual-based models for population dynamics. The students will then apply these models to interacting species, learning about mutualistic, competitive and host-natural enemy interactions. Finally, we will explore theory for communities of species in space and time. Applied problems will be drawn from all areas of conservation, harvesting, pest control and epidemiology throughout the semester. No modeling experience is necessary as the course will start from basic principles.

Enforced Prerequisite at Enrollment: BIOL 220W or BIOL 220M or MATH 140 or MATH 140B or MATH 140H

BIOL 419H: Ecological and Environmental Problem Solving

3 Credits

Overview of processes involved in solving environmental problems. Provides students with toolkit for understanding ecological and environmental problems. BIOL 419 Ecological and Environmental Problem Solving (3) The course will provide a general overview of the process involved in studying a variety of ecological and environmental problems. It will provide a toolbox of techniques for understanding ecological and environmental problems, and discuss how they can be used to address questions and generate testable predictions. It will examine connections between individuals and populations and communities as well as between theory and data. The focus will be on theoretical and computer modeling approaches, while maintaining a strong link to data and real systems. After an introduction to modeling, students will learn to develop and use simple and stochastic optimization models

for individual organisms, as well as applying basic game theory to interactions between individuals. Many of the class meetings will be held in computer laboratories where they will be actively engaged in working on applying these models. They will explore a sequence of population demographic models of increasing complexity, ranging from unlimited, unstructured population growth to density-dependent, structured population growth, in non-spatial and spatial contexts, culminating in individual-based models for population dynamics. The students will then apply these models to interacting species, learning about mutualistic, competitive and host-natural enemy interactions. Finally, we will explore theory for communities of species in space and time. Applied problems will be drawn from all areas of conservation, harvesting, pest control and epidemiology. This course will be one of several ecology courses that are available to students in the ecology and general option in the biology program along with the biology minor.

Honors

BIOL 420: Paleobotany

3 Credits

Classification, morphology, phylogeny, and stratigraphic occurrence of fossil plants; practicum includes field trips and study of paleobotanical techniques and specimens. GEOSC 420 BIOL (GEOSC) 420 Paleobotany (3) Land plants provide the oxygen, food, and forest structure that make our lives on land possible. They are sensitive indicators of global change in the past as well as today. This course will examine the history of green plants on the dynamic Earth from their beginnings in the Proterozoic oceans to today, with emphasis on central topics such as the colonization of land, the histories and relationships of major plant groups, the evolution of seeds and flowers, the evolution of plant-animal interactions, extinction and diversification, paleoclimates, and the origins of modern biomes such as rainforests and grasslands. This course is strongly recommended to graduate students and advanced undergraduates with interests in paleobiology and/or plant biology. Specimen observation and field trips will be important course components. Exams, assignments, and class participation will be the primary bases of evaluation.

Prerequisite: any 3 credit introductory course in historical geology or plant biology

Cross-listed with: GEOSC 420

BIOL 421: Comparative Anatomy of Vertebrates

4 Credits

BIOL 421 / VBSC 421 Comparative Anatomy of Vertebrates Students will study vertebrate anatomy from an evolutionary and developmental perspective. They will become familiar with important structures, terminology and function; a basic requirement of the biomedical sciences. Comparisons between representative vertebrate groups (including fish, amphibians, reptiles, birds and mammals) will be used to illustrate structural adaptations of each organ system from an evolutionary perspective. Specific examples comparing ancestral and descendant species will demonstrate the relationships between the lifestyle of an organism and the morphology of homologous structures. A study of early embryonic development, differentiation of primary germ layers and organ formation will provide a basis for understanding organ structure and function. Laboratory activities will involve work with preserved specimens and will focus heavily on anatomic structure identification and function. Topics include anatomic directional terminology, vertebrate classification systems, early

embryonic development and a detailed examination of the various organ systems. Specimens are selected to illustrate the anatomy of ancestral vertebrate species, the evolutionary changes observed in descendant species and the association of morphology with lifestyle. Although students will invest the majority of their time becoming familiar with the anatomy of a representative mammal (the cat), multiple species will be examined, and students will be expected to recognize selected anatomic structures in each species studied.

Enforced Prerequisite at Enrollment: BIOL 129 or BIOL 141 or BIOL 220W or BIOL 220M or BIOL 230W or BIOL 230M or BIOL 240W or BIOL 240M or BMB 251 or BMB 251H

Cross-listed with: VBSC 421

BIOL 422: Advanced Genetics

3 Credits

Now is an exciting time for evolutionary, quantitative, and disease genetics. Increasingly sophisticated technologies are making it possible to obtain dense genomic data from large numbers of individuals from a variety of taxa. Such data permits the evaluation of processes that have generated genetic variation, providing a rich resource to make inferences about natural selection and population history that have affected the current distribution of genetic diversity. In addition, when correlated with phenotypic traits, such data enables researchers to identify genomic regions underlying trait variation which is of particular importance for identifying genes involved in disease. By the end of the course, students will be able to understand how the genome is organized, learn how to find and assay genetic variation across the genome, and will know how such variation is inherited. They will learn how pedigree analysis, linkage mapping, and autozygosity mapping can be used to identify loci underlying Mendelian traits, and will be exposed to a number of examples from human disease. The students will also learn about the neutral and adaptive processes that shape genetic diversity within and across species, and will understand the basics of sequence alignment, phylogenetic reconstruction, and testing for natural selection from within and between species data. Moreover, students will acquire the fundamentals of quantitative genetics, will understand the essentials of polygenic adaptation, and will learn how to use genome-wide association studies to identify loci underlying complex traits. Finally, students will become familiar with recent advances in individual identification from genetic data, and its relationship to privacy.

Enforced Prerequisite at Enrollment: BIOL 222 or BIOL 322 or BIOL 230W or BIOL 230M or BMB 251 or BMB 251H

BIOL 424: Seeds of Change: The Uses of Plants

3 Credits

It is not possible to conceive of civilization, or life on earth for that matter, without plants. Through photosynthesis and oxygen production, plants are the major producers of biomass and constitute the base of the food pyramid. Plants also have evolved astounding diversity of forms, sizes, shapes, colors, smells and chemical compounds. This structural, nutritional and chemical flexibility has been put to innumerable uses by people, from hunter gatherers to the scientists in search of a cure for AIDS. Plants are at the core of our everyday necessities (food, clothing, shelter, medicines, beverages), simple pleasures (flower, fragrances) and pervasive problems (energy supply, drug addiction, famine). Plants have changed civilization in dramatic ways in the past. Witness, for example, the spectacular alterations in diet and the increased population growth catalyzed by the Columbian Exchange. In the future we expect

that plants will continue to affect people through an increasingly complex interplay between new technologies such as genetic engineering, the pressure on natural resources, and the search for new crops, medicines and biomaterials.

Enforced Prerequisite at Enrollment: BIOL 220W or BIOL 220M or BIOL 230W or BIOL 230M or BIOL 240W or BIOL 240M

BIOL 425: Biology of Fungi

4 Credits

BIOL 425 / PPEM 425 (4 cr.) is a lecture and laboratory survey of the diversity of Fungi, consisting of two 75-minute lecture and two 180-minute laboratory/field activity periods per week. The course moves from branch to branch in the Fungal tree of life, covering aspects of ecology, morphology, physiology and life history, as well as current and historical importance to human affairs in medicine, agriculture and industry. Topics covered as students move through the Fungal tree include: 1) Macrofungi seen in the field; 2) Fungal evolution; 3) Fungal reproduction and dispersal; 4) Fungal growth, development and structure; 5) Fungal genetics and genomics; 6) Fungi as mutualistic symbionts of plants, animals and other organisms; 7) Fungal diseases of plants, animals and humans; 8) Fungi as toxin producers; 9) Fungi as sources of food, pharmaceuticals and enzymes; and 10) Fungi as research organisms used to understand basic biological processes. Some laboratory sessions consist of field trips to local forests to observe and collect Fungi for observation in the laboratory.

Enforced Prerequisite at Enrollment: BIOL 110 and (AGECO 201 or BIOL 127 or BIOL 220W or BIOL 220M or BIOL 222 or BIOL 230W or BIOL 230M or BIOL 240W or BIOL 240M or MICRB 251 or HORT 232 or PPEM 120 or PPEM 225 or PPEM 405)

Cross-listed with: PPEM 425

BIOL 426: Developmental Neurobiology

3 Credits

This course will provide a general overview of developmental processes as they apply to the central nervous systems. From initial differentiation of neuronal tissue to the aging of human brain, this course will expose students to many hot topics in the current neuroscience research field, including synaptogenesis, axon guidance, neural stem cells, apoptosis, learning and memory, and Alzheimer's disease. Although one textbook will be assigned as the major reference book, many current research results will be integrated into the lectures so that students can grasp the most recent advancement related to each topic. The course will be divided into four parts. Part I introduces the induction of neural tissue, the polarity and regionalization of the neural tissue, and the generation and function of neural stem cells. Cutting-edge research on neural stem cells will be discussed. Part II deals with various interactions within neuronal system, including neuron-glia interaction, cell adhesion and migration, axon growth and guidance, and target selection. Part III teaches synapse formation and maturation, neurotrophic factors and their distinct functions, and neuronal cell death. Part IV talks about learning and memory from a developmental view, and also neurodegenerative diseases. Current disease research will be discussed. The lectures will be given in PowerPoint presentations. Classical models and front line research will be integrated to stimulate students' imaginative thinking. Students will be encouraged to read some current research paper and offer their own view on some particular subject, such as neural stem cells and learning and memory.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H

BIOL 427: Evolution

3 Credits

This course will study the theory of evolution and the different levels at which biological evolution can be examined ranging from macroevolution and the fossil record to microevolutionary processes at the population level. It will look at how genomes evolve from bacteria to multicellular organisms as well as the evolution of body plans in plants and animals and the molecular underpinnings of these developmental transitions. These concepts will be used to understand human evolution and learn how the genome revolution has shed light on evolutionary medicine.

Enforced Prerequisite at Enrollment: (BIOL 220W or BIOL 220M and BIOL 230W or BIOL 230M or BMB 251 or BMB 251H) or (BIOL 220W or BIOL 220M and ENVST 200)

BIOL 428: Population Genetics

3 Credits

This is an exciting time for population genetics research. Increasingly sophisticated technologies are making it possible to obtain dense genomic data from large numbers of individuals. Further, advances in population genetics theory are improving our ability to make inferences about the evolutionary forces acting on populations. However, to effectively apply these new techniques to data being generated across populations, it is important to understand how evolutionary processes shape patterns of genetic variation. In this course, students will learn about the mathematical models employed in population genetics, and how these models can be used to make inferences from data. Specifically, this course emphasizes modern population genetic theory through the coalescent process, which provides a direct application to the analysis and understanding of empirical data.

Enforced Prerequisite at Enrollment: BIOL 220W and (STAT 200 or STAT 240 or STAT 250) and (MATH 111 or MATH 141 or MATH 141B or MATH 141H)

BIOL 429: Animal Behavior

3 Credits

Physiological mechanisms, ecological relevance, and adaptive significance of animal behavior.

Enforced Prerequisite at Enrollment: (BIOL 110 or BIOL 110H) and (BIOL 220W or BIOL 220M)

BIOL 430: Developmental Biology

3 Credits

Developmental Biology introduces students to one of the most complex and exciting areas of modern biology. This course will cover basic concepts using a comparative embryology approach and focus on molecular and genetic analysis of mechanisms involved in cell differentiation and organ development. Students will learn how studies of development in different model organisms including invertebrate and vertebrate species have identified a network of evolutionarily conserved genes and signaling pathways that regulate embryonic development and morphogenesis.

Enforced Prerequisite at Enrollment: BMB 252 or MICRB 252 or BMB 252H or BIOL 230W or BIOL 230M Recommended preparations BIOL 222 or BIOL 322

Cross-listed with: BMB 430

BIOL 431: Reproductive Biology

3 Credits

Reproductive Biology is an upper-level undergraduate course. The course will discuss topics in reproductive development and physiology, which can include development of gonads and the germline, sex determination, meiosis, development of gametes, plant reproductive development, effects of environmental factors on reproductive development, cloning and asexual reproduction, infertility and birth defects. In addition to morphological and cellular description of reproductive organs and tissues, there will also be discussion of genetic basis of diseases and molecular analysis of gene functions crucial for reproductive development in human and model organisms. Students will be asked to read original research articles on various aspects of reproductive biology, and work in two-person teams on a powerpoint presentation, which they use to report their understanding of a selected article in class to other students. The lectures and exams focus upon concepts integral to reproductive biology. Exams will be a combination of multiple choice, filling blanks, and true/false questions.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BIOL 240W or BIOL 240M or BMB 251 or BMB 251H or MICRB 251

BIOL 432: Developmental Genetics

3 Credits

An advanced course in developmental biology, focusing on the use of genetics techniques to study fundamental questions of animal development. Topics taught in this course include an introduction of popular model organisms, various mutagenesis approaches, complex signaling mechanisms and cellular reprogramming. The goals for this course are 1. To acquire knowledge in advanced genetic tools commonly used to study animal development. 2. To acquire skills in reading and understanding scientific literature in the field of developmental genetics. 3. To acquire skills in applying knowledge and tools to solve basic problems in developmental genetics. 4. To gain an appreciation for the relevance of developmental genetics research to human health and other global issues.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H

BIOL 433: Evolution of Vertebrates

3 Credits

This course focuses on the evolution of vertebrate animals, beginning with an overview of vertebrate classification and a consideration of early vertebrate evolution. Each group of vertebrates (fishes, amphibians, reptiles, birds and mammals) will be explored, with an emphasis on the history of each group, adaptations (physiological, morphological, behavioral) seen within the group, and relationships among members of the group, including insights from molecular data. Consideration of extant (living) vertebrates will be emphasized, specifically convergent adaptations across taxa (including flight, swimming, and specialization for similar environments, such as arctic or desert). The student will develop a perspective on vertebrate evolution, representative groups, vertebrate classification systems, and different vertebrate body plans

and special adaptations. Additionally, a course project will reinforce broader skills of scholarly paper writing, oral presentation techniques, and collaboration. There is a single short field trip associated with this course. Over one weekend, the students will be driven to one of several sites, typically a zoo and a natural history museum. This experience provides students with an opportunity to think deeply about how the principles presented in the class shape the diversity of past and current vertebrates. The biology major strives to develop an overall perspective on evolution for our undergraduates, and this course uses an important group, the vertebrates, to fully exemplify and develop that goal. Students in other majors outside our college, including Geology/Paleontology and Wildlife Science may also find interest in this course offering, and could graduate students.

Enforced Prerequisite at Enrollment: BIOL 220W or BIOL 220M and BIOL 240W or BIOL 240M

BIOL 434: Pathobiology of Emerging Infectious Disease

3 Credits

This course examines the biology of emerging and reemerging infectious diseases. The course includes viral, bacterial, and eukaryotic pathogens causing serious mortality and morbidity. Major course topics include a historical perspective on diseases; microbiology and immunology of each class of pathogen; processes of evolutionary change in pathogens; public health efforts to detect, monitor, respond to, and/or eliminate diseases from local to international scales; zoonotic disease and host jumps; and the One Health integration of human, animal and environmental health. Students will complete quizzes, discussions, and a research project based in primary literature reporting on a current or classical infectious disease. Case studies will include, but are not limited to, influenza, HIV/AIDS, smallpox, West Nile virus, polio, dengue, tuberculosis, and malaria. Depending on class size, students may complete additional research projects or scenarios. Students with interests in disease and health from majors in many colleges may wish to take this course.

Enforced Prerequisite at Enrollment: BIOL 110 or BIOL 110H or BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or MICRB 251 or MICRB 201 or MICRB 201H

BIOL 435: Ecology of Lakes and Streams

3-4 Credits

Physical, chemical, and biological characteristics of freshwater environments, with special emphasis on factors regulating productivity in freshwater ecosystems.

Enforced Prerequisite at Enrollment: BIOL 220W

BIOL 436: Population Ecology and Global Climate Change

3 Credits

Ecological responses of individuals, populations, and communities to environmental variation, with emphasis on climate change. BIOL 436 BIOL 436 Population Ecology and Global Climate Change (3) In this course, students will be presented with a close look at the factors shaping the characteristics of populations and their dynamics in time and space, with emphasis on the responses of populations to climatic fluctuation and global climate change. The course begins with an introduction to the basic concepts necessary for understanding the responses of individuals, populations, and communities to climate change in the recent past (the past 2 centuries), present, and future.

These concepts include: the science of climate change, how temperature trends are estimated, the data used in assessment reports by the Intergovernmental Panel on Climate Change, large-scale climate systems such as the North Atlantic Oscillation and the El Niño Southern Oscillation, the basic characteristics of populations, how population densities are estimated, and the types of population data used in studies of population responses to climate change. In this first section of the course, students are also introduced to natural selection and the concepts of adaptation and vulnerability, which sets the stage for distinguishing between adaptive ecological responses to climate change vs. susceptibilities to climate change. After presenting these basic concepts, the course then moves on to examine single-species population dynamics. This section of the course teaches students about the different types of population growth, including unlimited growth, density-dependent population dynamics, and density-independent population dynamics. Here, we take a close look at case studies documenting population responses to large-scale climatic fluctuation, and case studies that demonstrate interactions between the opposing influences of density dependence and climate on population dynamics. This section of the course also introduces students to some of the analytical difficulties inherent in quantifying the contribution of climatic fluctuation to local population dynamics. This section finishes with lectures on the phenomenon of spatial synchrony in population dynamics and the implications of global climate change for widespread population decline and extinction risk. The final section of the course focuses on multi-species dynamics. Lectures in this section introduce students to inter-specific competition through examination of case studies involving desert rodents and ants; then move on to predation, with case studies of wolf predation illustrating the different types of functional and numerical responses, predator-prey cycles, and cascading effects of predators on population dynamics at lower trophic levels including herbivores and plants; and parasite-host dynamics, including discussion of the role of parasites as specialized predators in host population dynamics. This section also includes discBIOL 436 Population Ecology and Global Climate Change (3)

Enforced Prerequisite at Enrollment: BIOL 220W

BIOL 437: Histology

4 Credits

This course develops a visual, conceptual, and functional understanding of histology, the microanatomy of body cells, tissues, and organs. The lecture portion of this course will use diagrams, digital images, and didactic explanations to build a conceptual understanding of histology, stressing form, function, and clinical applications. The laboratory portion of the course emphasizes form, identification, and naming of cells, tissues, and organs at a microscopic level. As such, the lab will use microscopes and digital images to investigate actual histology slides of body tissue, with the goal of visual identification, classification, and naming of body tissues.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or BIOL 240W or BIOL 240M or BIOL 141

BIOL 438: Theoretical Population Ecology

3 Credits

This course a highly quantitative second ecology course. It emphasizes mathematical and theoretical approaches to ecological questions. The course builds on concepts from introductory ecology and requires students to use tools acquired in biostatistics and calculus to solve

ecological problems. It can act as an introduction to or as an extension of experimental design. Although it is not a writing-intensive course, students are required to use standard technical writing and public speaking skills throughout the course. The course covers topics that are relevant to, but not addressed in, evolution and evolutionary genetics. In addition, it offers an opportunity for mathematics students interested in application of mathematics to biological problems to apply models covered in mathematical modelling to real situations. Throughout the semester analytical and theoretical thinking will be emphasized, starting with simple descriptions of population phenomena and ending with development of mathematical models and the critical experiments needed to test those models. The emphasis lies on empirical tests of ecological theory and applications of ecological theory to real-world problems. Students will be evaluated by means of essay exams covering theory, mathematical models, and the design of hypothetical experiments, in-class presentations of the primary ecological literature and applications of ecological theory to current environmental problems.

Enforced Prerequisite at Enrollment: (BIOL 220W or BIOL 220M) and (MATH 140 or MATH 140B or MATH 140H) and (STAT 200 or STAT 240 or STAT 250)

BIOL 439: Practical Bioinformatics

3 Credits

Practical aspects of retrieving and analyzing biological information residing in common databases. BIOL 439 Practical Bioinformatics (3) This course focuses on practical aspects of biological databases and analyses of molecular data. Students will learn about vast resources available, how to access them, and retrieve only the desired information. Sequence comparison and alignment methods will be presented. We will discuss practical aspects of such algorithms as dot matrix plots, dynamic programming, BLAST, and FASTA. Different strategies of multiple alignments will be discussed as well. We will cover computational genomics and computational analysis of gene expression. Students will learn how to assemble short sequences into long contigs and how to infer biological information from raw sequence data. They will learn how to analyze protein sequences including secondary structure prediction, protein function prediction (based on motifs and functional domains), and structural modeling. The whole course will be well balanced between theoretical description of computational biology methods and practical aspects of bioinformatics (some sessions will meet in computer classrooms) Upon completion of this course, students will have sufficient knowledge to retrieve a desired information from biological databases based on both text and sequence data. They will learn what public resources are available in term of databases and a software. They will know how to interpret results in biological context and how to adjust different parameters in the software to get exact desired results. This course will be one of several courses that are available to students in the genetics and developmental biology and general options in the biology program along with the biology minor.

Enforced Prerequisite at Enrollment: BIOL 230W or BMB 251

BIOL 440: Evolution of Infectious Diseases

3 Credits

Infectious diseases have been adapting to humans for as long as we have been organized into communities - from small agricultural ones to the megacities of the twenty-first century. Malaria, tuberculosis, and plague shaped important aspects of human history. And modern emerging pathogens like Zika, Ebola, avian influenza, and coronaviruses

have shaped public health opinion and a new global response to the potential threat of deadly pandemics. This course will explore how infectious diseases adapt to and evolve in humans and human societies. Major topics covered will include how infectious diseases jump from animals to humans, how pathogens are forced into a race with the human immune system, why some diseases evolve to be benign and others deadly, and how pathogens evolve in response to human interventions like vaccination and drug treatment. Examples covered in this course will include influenza, malaria, HIV, dengue virus, and enteric infections. Students will learn the evolutionary principles underlying the constantly shifting relationship between these pathogens and their human hosts and will explore the basics of molecular evolution and phylogenetic tree interpretation. An understanding of basic concepts in evolution and population genetics is expected.

Enforced Prerequisite at Enrollment: BIOL 220W or BIOL 220M

BIOL 441: Plant Physiology

3 Credits

Classical and current concepts in plant constituents, mineral nutrition, water relations, respiration, photosynthesis, photoperiodism, plant growth regulators, growth and development, and responses to the environment. Using these concepts, students will be able to explain how specific processes in a plant integrate with other relevant processes to determine the overall response of the plant to a particular set of conditions; describe how multiple plant biochemical pathways intersect and influence each other; describe how energy affects processes at all levels of biological organization from the molecule and cell to organisms and ecosystems; and be able to explain how plants perceive and respond to their environment, including signal transduction, intercellular communication, and information processing. As part of their work in this course, students will demonstrate an ability to read and discuss the scientific literature on plants and critically analyze current issues in plant physiology including impacts on human health, agricultural biotechnology, and bioenergy.

Enforced Prerequisite at Enrollment: (BIOL 230W or BIOL 230M or BMB 251 or BMB 251H) and (BIOL 240W or BIOL 240M)

BIOL 442: Evolutionary Medicine

3 Credits

Evolutionary medicine is the application of evolutionary theory to the study of human health and disease. Health is affected by things like the aging process, the microbiome, cancer, infectious disease, and antibiotic resistance. Most medical research attempts to identify how factors such as these can be controlled. Evolutionary medicine attempts to explain why they exist in the first place. In this course, students will be exposed to a new perspective for understanding human health and disease. Students will think through the evolutionary causes of disease and the possible consequences (positive and negative) of medical and public health interventions. Students will also interpret arguments posed in the peer-reviewed scientific literature and critically evaluate those posed in the popular press.

Enforced Prerequisite at Enrollment: BIOL 220W or BIOL 220M

BIOL 443: Evo-devo: Evolution of Developmental Mechanisms

3 Credits

Evolutionary Developmental Biology (Evo-Devo) is an interdisciplinary field that combines developmental biology, comparative genetics, and

evolution to understand how organisms have attained their diversity in form. While the field of developmental biology aims to understand how a given organism develops, Evo-Devo focuses on how form evolves through alteration of these developmental mechanisms. Course instruction involves lectures, discussion, and student presentations/projects and features case studies from the scientific literature across the diversity of life, towards developing a predictive framework for the evolution of form.

Enforced Prerequisite at Enrollment: BIOL 240W or BIOL 240M

BIOL 444: Field Ecology

3 Credits/Maximum of 3

This field course will explore the flora and fauna of the mid-Atlantic area. BIOL 444 Field Ecology of the Central Appalachian Highlands (3) This course is designed to take advantage of the teaching opportunities presented by the West Virginia highlands. The main advantage of using this area as an outdoor classroom derives from the fact that there are large changes in elevation and soils, and a tremendous variety of community types located in a small geographic area. In this area, students can observe ecological communities ranging from river, bottom forests at 1500 to 2000 feet in elevation to dry ridge slope forests at 3000 feet to the unique acid soil heath barrens community of the Dolly Sods Wilderness at 4000 feet. Since almost all of this area was extensively logged in the past, students will have the opportunity to observe the results of succession, and how the process of succession is affected by variation in topography, soil type and local climate. There are also several types of aquatic communities available for study, including large rivers, small high elevation streams and acidic wetlands. The course will use an integrated natural history approach to study the various ecological communities. This will include discussion of the effects of human activity and the topography and geology of the area in addition to study of terrestrial and aquatic flora and fauna. At terrestrial site, we will, in part, follow the example of the US Forest Service's Forests of the Central Appalachians Projects (<http://www.spies.com/~gus/forests/>) which uses forest walk inventories to document biodiversity. Therefore, the course would have a significant plant identification and taxonomy component. Each community can be studied as a separate unit and then compared to the adjacent communities at different elevations. By the end of the course, students should understand the relationship of geology, topography and soil type to the distribution of plant communities. They should also understand the relationship of plant communities and water chemistry to the distribution of aquatic insect and vertebrate and be able to use aquatic insects as water quality indicators. This course will be one of several field courses that are available to students in the ecology and general option in the biology program along with the biology minor.

Enforced Prerequisite at Enrollment: BIOL 220W

BIOL 445: Molecular Ecology

3 Credits

Evolutionary and ecological processes can now be better understood through the application of molecular and genomic tools. The course will explore the history of the application of molecular tools as well as the contemporary application of methods with genomic data. The course involves a mix of lectures-outlining history and concepts-but a greater emphasis on bioinformatic analyses using real-world data. This will include conducting analyses on Penn State's "Roar supercomputer" and learning the statistical tools required to analyze these molecular data. The course also includes a synthetic final project, drawn from the primary

literature that includes reading and explaining the questions and tools involved in the field of Molecular Ecology.

Enforced Prerequisite at Enrollment: BIOL 220W or BIOL 220M or BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or ENVST 200 or WFS 497 or WFS 430 or WFS 310

BIOL 446: Physiological Ecology

3 Credits

This course introduces students to the study of interactions between physiological capabilities of organisms, their ecology and, more broadly, their environment. This course looks at how organisms work and what it is about their environment that has led them to work that way. Both abiotic and biotic components of the environment are considered as sources of important variation to which organisms must adapt. Plants and microbes are covered to some extent, but the primary focus will be on animals (both vertebrates and invertebrates). The primary goal is to gain an appreciation for the flexibility of physiological systems and the powers of evolutionary processes to shape the physiology of an organism in response to its environment.

Enforced Prerequisite at Enrollment: (BIOL 220W or BIOL 220M) and (BIOL 222 or BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or BIOL 240W or BIOL 240M)

BIOL 448: Ecology of Plant Reproduction

3 Credits

Analysis of the ecology, evolution, and natural history of plant reproduction. We focus on angiosperms (flowering plants) but also touch on the broader reproductive diversity in plants. Our topics include pollination, fruit-set, dispersal, and relevant plant-animal interactions. This course is highly integrative and draws on basic concepts in ecology, evolutionary biology, and genetics. We also pay especial attention to the implications of global environmental change on plant reproduction and plant diversity.

Enforced Prerequisite at Enrollment: BIOL 240W or BIOL 240M

BIOL 450W: Experimental Field Biology

3-5 Credits

This is a practical introduction to modern design of field studies and experiments in terrestrial and fresh water habitats. This is an outdoor course almost as much as a classroom one. Be prepared to go outside, develop the power of observation, and discover. Emphasis is given to learning scientific skills via active-learning methods. Students will learn to formulate research questions, and develop adequate hypotheses and study designs and experiments to test hypothesis using statistics. Students will be guided step-by-step to perform basic and advanced data analyses: from data tables and frames, to parametric, non-parametric, and multivariate statistical methods used in everyday biology and ecology research driven hypothesis-testing approaches. Each week the class meets in the classroom (Tuesdays) for discussion-format lectures, and on lab day (Thursdays) the class goes out into the field to collect data and perform experiments. Primary scientific literature will be read and discussed in the context of the lectures and field exercises. Specific Learning activities include the ecology of natural communities including terrestrial and aquatic, seed dispersal and seed ecology, predation, foraging ecology, pollination, fruit-eating mutualisms, and population census methods. Student evaluations are based on participation,

engagement, oral presentations, and written reports (no exams given in this class). At least one field trip involves staying overnight in a natural area. Specific topics covered in this class are: asking questions in science, designs of studies and experiments, ecological data collection techniques, data storing methods, statistical analyses (univariate to multivariate), graphical representation of results, oral presentation skills, research ethics, and writing and publication skills and techniques.

Enforced Prerequisite at Enrollment: (BIOL 220W or BIOL 220M and BIOL 240W or BIOL 240M) or (BIOL 220W or BIOL 220M and ENVST 200) Writing Across the Curriculum

BIOL 451: Biology of RNA

3 Credits

Ribonucleic acid (RNA) plays a central role in all organisms on earth, and was very likely the central molecule during the origin of terrestrial life. This course will explore the biological functions that RNA plays in diverse organisms, including transcription, translation, virology, and RNA-interference, and CRISPR-based genome editing. There will be a strong emphasis on the evolution of RNA functions and upon the relevance of RNA-based biological mechanisms to health, disease, and society. The course laboratory focuses on computational skills required for modern analysis of RNA, and emphasized genome-wide studies. This course requires knowledge on the basic mechanisms of molecular biology and genetics, and is designed for upper-level undergraduates and graduate students in the Biology or Biochemistry and Molecular Biology (BMB) departments. Reading materials will involve selections from textbooks, as well as from the scientific literature. Students will be evaluated on the basis of written examinations, homeworks, and a final laboratory project.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or MICRB 251

BIOL 455: Stem Cell Biology and Therapy

3 Credits

This course will give an overview of milestones in stem cell research and will expose students to current topics at the frontier of this field. It will introduce students to the different types of stem cells as well as factors and signals that are implicated in regulating stem cell fate. The course will highlight techniques for engineering of stem cells and their micro-environment. The course will also discuss gene editing and the application of gene editing in stem cell research. Furthermore, it will evaluate the use of stem cells for tissue engineering and therapies. Emphasis will be placed on discussions of current research areas and papers in this rapidly evolving field. The class is designed for upper undergraduates and graduate students with a strong interest in stem cell biology, and the desire to actively contribute to discussions in the class.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 240W or BME 201 or BMB 251 or BIOL 240M or BIOL 230M or BMB 251H
Cross-listed with: BME 455

BIOL 459: Plant Tissue Culture and Biotechnology

3 Credits

The overall goal of this course is to provide a strong overview of the techniques used in plant biotechnology and the applications made possible by those techniques. The lecture topics will be used to introduce the principles of tissue culture and molecular biology, including how they are used to produce transgenic plants. Furthermore, the course

will give students a broader and deeper knowledge in the field of Plant Biotechnology and provide a foundation for understanding the field as it changes in the future. Topics include the safety, legal and ethical issues surrounding GMOs and the study of the anti-GMO arguments surrounding each issue. In the laboratory component of the course, students will be introduced to the underlying principles of molecular biology techniques and aseptic culture of plant cells as well as the tissues and organs used to produce transgenic plants. In summary, through this course students will be introduced to many of the most important tools of the biotechnologist.

Enforced Prerequisite at Enrollment: BMB 252 or BMB 252H or MICRB 252 or BIOL 230W or BIOL 230M
Cross-listed with: BIOTC 459, HORT 459

BIOL 460: Human Genetics

3 Credits

This course will cover the nature and contents of the human genome and the basic principles of evolution. We will also explore the future implications of personal genomics and how this information is being used to reconstruct our evolutionary history and to advance human medicine. We will carefully consider the processes by which we can identify how information contained within our genomes may affect physical and behavioral phenotypes, and what other factors may be involved (e.g., the environment). The points will be illustrated by a variety of examples of human evolution and important biomedical issues

Enforced Prerequisite at Enrollment: ANTH 21 or BIOL 133 or BIOL 222 or BIOL 230W or BIOL 230M or BIOL 322 or BMB 251 or BMB 251H
Cross-listed with: ANTH 460

BIOL 460H: Honors Human Genetics

4 Credits

This course will cover the nature and contents of the human genome and the basic principles of evolution. We will also explore the future implications of personal genomics and how this information is being used to reconstruct our evolutionary history and to advance human medicine. We will carefully consider the processes by which we can identify how information contained within our genomes may affect physical and behavioral phenotypes, and what other factors may be involved (e.g., the environment). The points will be illustrated by a variety of examples of human evolution and important biomedical issues.

Enforced Prerequisite at Enrollment: ANTH 21 or BIOL 133 or BIOL 222 or BIOL 230W or BIOL 230M or BIOL 322 or BMB 251 or BMB 251H
Cross-listed with: ANTH 460H
Honors

BIOL 461: Contemporary Issues in Science and Medicine

3 Credits/Maximum of 3

Current/classical issues relating to health, research, agriculture, environment, and biotechnology. Active exploration of the impact of science on society. BIOL 461 Contemporary Issues in Science and Medicine (3) The aim of this course is to provide students of the biological and biomedical sciences with a framework to recognize, examine, and resolve conflicts which may affect their professional conduct. Current and classical issues relating to human health, scientific and medical research, agriculture, the environment, and biotechnology will be explored. The history, controversies, and current issues related

to each topic will be presented by the instructor through lecture, guest presentations, and multimedia presentations. Each topic will be explored by students through a variety of activities, including role playing, case studies (real and hypothetical), mock trials, small- and large-group discussions, writing exercises, and student research projects presented in oral and poster format. Some activities and discussions will involve the entire class simultaneously, while other activities will be structured for very small groups (2-3 students), small groups (5-6 students), or large groups (10-15 students). This course is especially relevant to any student majoring in Biology, as it allows and encourages them to relate information they have learned in other Biology courses to their own professional conduct. Although the course was specifically designed to cover issues that are relevant to students majoring in each of the Biology concentration areas (Genetics and Developmental Biology, Ecology, Plant Biology, and Vertebrate Physiology), it is also relevant to students in colleges other than Science, who may be enrolled in majors with some biological content or applications. This course is designed to be rigorous and very interactive.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or BIOL 240W or BIOL 240M Recommended preparations: Successful completion of at least one 400-level Biology course

BIOL 462: History of Biology

3 Credits

History of Biology is an exploration of the history that led to our current biological knowledge. The course is organized chronologically from the Antiquity to the end of the 20th century, focusing on the development of ideas such as life, life functions (such as respiration), structure (animal and plant anatomy), diversity (species), generation (reproduction and inheritance), embryological development, and evolution. The course involves commenting on original writings by the most influential life scientists, such as Hippocrates, Aristotle, Galen, Vesalius, Harvey, Linnaeus, Lamarck, Darwin, Mendel, Morgan, and Watson & Crick, spanning more than 2,500 years. Students are required to read those original writings prior to every lecture. A special emphasis is laid on the development of theories which are the foundations of our current biological knowledge (such as macromolecules, the cell, and the evolutionary theory). The history of biology is placed within a broader historical and cultural context: a great deal of time is dedicated to explain what was happening in each historical period beyond life sciences (e.g., the rise of the first universities in the early 1200s in the Latin West, the impact of the scientific revolution in the early modern period, and the characteristics of the Enlightenment); scientists and institutions from many different periods and countries are studied. A first course objective is the review of the historical development of the most important foundations of biology, such as macromolecules, the cell, inheritance, evolution, metabolism, biodiversity, and ecosystems. This objective will directly help biology majors to gain a deeper appreciation for the history that led to our current knowledge. Starting with the Antiquity is essential because, up the 19th century, knowledge found in books was as important as knowledge obtained from actual observations, and thus many ideas have transcended the centuries. For instance, Harvey justifies his revolutionary discovery of blood circulation by the very old Aristotelian idea that a circular motion is perfect; hence the necessity of exploring in depth Aristotle's ideas; not to mention that Darwin (who had the deepest admiration for Aristotle) struggled for a long time with the notion of perfection in living organisms, and proposed an answer which is of the utmost importance to understand the depth of his evolutionary theory. A second objective is for students to understand the

interplay between observations, theories, experiments, and techniques. So, this objective will help students understand science as a process, how scientific knowledge is built: for instance, the development of the cell theory has been dependent on the emergence of new microscopic techniques, and the development of the evolutionary theory has been dependent on the slow accumulation of observations in comparative anatomy, geology, species classification, and geographical distribution; and, obviously, theories play an absolute key role because only theories help make sense of observations. A third objective in this course is to appreciate and understand past theories and ideas with a humble, non-judgmental, and unbiased approach, keeping in mind that past scholars were not necessarily "wrong." Indeed, it is more enriching to try to understand why scientists believed in one particular theory instead of others, why they thought it was correct even though it is not. Hence the necessity of doing the most difficult thing there is in the history of science, i.e., putting ourselves in the mind of scientists of the past. The course explores many examples of theories that were once believed to be correct by everyone, or nearly everyone, and later abandoned. Overall, this course will remind students of the importance to always remain open-minded and creative in the sciences, as history shows that only those who did not fear being "wrong" occasionally ended up getting things right.

Enforced Prerequisite at Enrollment: BIOL 110 and (BIOL 220W or BIOL 230W or BIOL 240W)

BIOL 463: General Ecology

3 Credits

Illustrates science of ecology, from individual, population, and community-level perspectives, discusses applications of this science to issues of conservation of biodiversity.

Enforced Prerequisite at Enrollment: BIOL 220W

BIOL 464: Sociobiology

3 Credits

Life is social. From quorum sensing bacteria blocking up urinary catheters to the seemingly poetic integration of millions of bodies during an army ant raid. And of course there are humans; that singularly unique species once described as the 'paragon of animals'. Whether the group is bacteria, worms, ants or humans selection has resulted in precise rules that govern interactions and maintain stability. Understanding these rules is the field of sociobiology and we can even see such rules at play among the inorganic realm as researchers select for social robots. In this course we explore sociobiology through stories of adaptation that will challenge you to pinpoint where and how selection is acting. We will deal with the well known topics of natural, sexual and artificial selection as well as less precisely understood topics of kin and group selection. Many of the stories in this course bring us to the exciting front line of research where acrimonious debates are waging. Because systems are often best understood when they are broken we will also tell stories of parasites and cheaters that destroy social cohesion. We will learn of such fascinating diseases as zombie ant fungi that manipulate ant behavior to the protozoans in your brain that affect your ability to drive. In societies the response to diseases is often collective and similar defenses can be seen across widely different groups so we will hear stories of how both social insects and humans have evolved adaptive architecture to reduce disease spread. We will also ask where we humans are going? To address this question the course will focus on our past and our many inventions from agriculture to cities. We will ask how our adaptations parallel those of other organisms and how they diverge. Finally, we will tie this back to

Penn State's mission as a Land Grant School and how social behavior is important in practical and applied science delivered to the masses.

Enforced Prerequisite at Enrollment: ANTH 21 or BIOL 220W or BIOL 220M

BIOL 464H: Animal Behavior–Sociobiology

3 Credits

Biological basis of social behavior. Comparative evaluation and adaptive value of social structures, mating systems, ecological correlates of social behavior.

Honors

BIOL 465: Network analysis of biological systems

3 Credits/Maximum of 3

The survival of a cell, organism or population in a variable environment depends on mounting specific responses to external stimuli. Each of these responses is governed by the coordinated action of multiple (potentially numerous) individual functional components. Understanding the collective behavior of such a complex interacting system is enabled by representing the system as a network, where we denote the components of the system with nodes and their interactions by edges. The properties of these interaction networks can then be analyzed by computational methods. This analysis can lead to important conclusions and predictions about the possible collective, dynamical behaviors of the system. The course will cover examples of network analysis and modeling in biology and medicine, focusing on systems at the molecular and cellular level. After taking this course students will be able to integrate information to construct a network model corresponding to a biological system, to use graph theoretical measures to describe this network, and to use mathematical or computational methods to model the dynamic processes that take place in this system. These skills are important for careers in life science and medical research, in bioengineering and biotechnology.

Enforced Prerequisite at Enrollment: MATH 140 or BIOL 230W or BMB 251 or BME 201. Recommended Preparation: MATH 140B or MATH 141B or MATH 297.

Cross-listed with: PHYS 465

BIOL 467: Molecular Basis of Neurological Diseases

3 Credits

This course provides up-to date knowledge of and insight into the molecular/cellular/genetic basis of the neurological diseases. The focus will be on neurodegenerative and cognitive disorders with a relative high prevalence as listed below: Neurodegenerative disorders: Alzheimer's disease, Parkinson's disease, Huntington's disease, Ataxia, ALS Cognitive and emotional disorder: Autism spectrum disorders, Mental Retardation, Depression, Bipolar disorder, Schizophrenia, Addiction, Posttraumatic disorder

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or MICRB 251

BIOL 469: Neurobiology

3 Credits

Students will acquire an understanding of basic neurobiology, the terminology of neuronal structures and functions, as well as experimental approaches designed to integrate the principles of neural cell biology, neurophysiology, neurochemistry, neuroendocrinology, neuropharmacology, genetics and molecular biology. The LEARNING OBJECTIVES of this course are to establish a working knowledge and understanding of: (I) the cellular structures, organelles and passive and active membrane properties important for neural function, (II) the neurotransmitters, receptors, ion channels and 2nd messenger systems underlying synaptic transmission and other forms of neural signaling, (III) the development of the nervous system including neurogenesis, neural maturation, apoptosis, synaptogenesis in both the developing and adult CNS, and (IV) the molecular mechanisms underlying synaptic plasticity and learning and memory. Lastly, (V) the course will demonstrate applications of above knowledge to select complex diseases of the central nervous system

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or BIOL 240W or BIOL 240M
Cross-listed with: BBH 469

BIOL 470: Functional and Integrative Neuroscience

3 Credits

Neurobiological function in motivated behaviors, motor and sensory function, learning and memory, development, sexual differentiation, and pathology.

Enforced Prerequisite at Enrollment: BIOL 469
Cross-listed with: BBH 470

BIOL 472: Human Physiology

3 Credits

Physiology is the science explaining body function at system, organ, cellular, and biochemical levels. This course explores the fundamentals of human physiology and its clinical applications. The target audience is advanced undergraduate and graduate students studying in the life sciences, many of whom plan to study clinical medicine disciplines in the future. Physiology is an integrative science discipline and thus will apply principles developed in previous biology, chemistry, mathematics, and physics courses to problem solving situations. Core elements of this course include integrating science knowledge and applying science principles to develop a broad understanding of physiology systems and solve physiology problems.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 230M or BMB 251 or BMB 251H or BIOL 240W or BIOL 240M or BIOL 141 or (BIOL 161 and BIOL 163)

BIOL 473: Laboratory in Mammalian Physiology

2 Credits

Laboratory experiments demonstrating fundamentals in physiology.

Enforced Prerequisite or concurrent at Enrollment: BIOL 472

BIOL 474: Astrobiology

3 Credits

Astrobiology is the study of life in the universe. Astrobiology has become a major focus of scientific research in the United States and a topic often discussed in popular science literature. The recent interest in astrobiology has resulted in the formation of an Astrobiology Institute at Penn State University. This advanced undergraduate course in astrobiology will cover many topics in the field including, biochemical evolution, the origin and evolution of life on Earth, microbial diversity, protein evolution, and the distribution of life in the universe. This course is intended to provide students of the natural sciences with the opportunity to prepare for a research career in the rapidly expanding field of astrobiology. The course will also present astrobiology as a cross-disciplinary framework that ties together the diverse courses the students have already taken. The students will learn new concepts while having, to draw on their previous knowledge of chemistry, biology, and the geosciences. In summary, this course has the following objectives: (1) to develop the student's literacy in astrobiology so that they can critically evaluate claims that they encounter well after the course has ended; (2) to present a scientific question that requires the sum of the student's previous education to solve; (3) to provide a deep background to some of the astrobiological concepts that are often only briefly mentioned in other classes or in the media; (4) to develop research and communication skills required for a young scientist through a class term paper and short oral presentation; and (5) to prepare the students for graduate research in astrobiology by giving them a broad background of the field and by demonstrating many of the outstanding problems yet to be solved.

Enforced Prerequisite at Enrollment: (BIOL 110 or BIOL 110H) and (CHEM 110 or CHEM 110H)
Cross-listed with: GEOSC 474

BIOL 475: Human Pathophysiology

3 Credits

This course focuses on manifestations of human diseases and the changes that occur at the molecular, cellular, tissue, organ, and system levels to cause disease states. Topics covered include mechanisms of disease, inflammation and repair, features of selected diseases for each body system, diagnostic testing, and pharmacotherapy. The primary goal of the course is to reinforce student knowledge of normal human physiology by studying how it is altered by disease. The course will feature traditional didactics, case studies, group problem-based activities, and analysis of primary literature in pathophysiology.

Enforced Prerequisite at Enrollment: BIOL 141 or (BIOL 161 and BIOL 163) or BIOL 240W or BIOL 240M or BIOL 472

BIOL 476: Advanced Human Anatomy - cadaver based

3 Credits

Advanced Human Anatomy is an in-depth human anatomy course with both a lecture and lab component. Lecture meets twice per week for 50 minutes, and lab meets once per week for 2 hours in the cadaver lab. In lecture, there is a focus on understanding anatomy in the context of development, histology, evolution, and clinical scenarios. Lectures also include clinical correlations, where students will apply their anatomical knowledge to understand general and specific clinical cases. Learning how to identify structures in various imaging modalities (including X-ray, CT, and MRI) is an important component of this aspect of the course. A

typical lecture session often includes group-work on clinical application worksheets, completed with the help of the instructor and lecture assistants. Lab activities are conducted in the cadaver lab, and mostly focus on learning to identify structures on the cadavers. Students will also learn to identify anatomy on isolated skeletal elements, plastinated cross-sections and models, and occasionally on animal organs. In both lecture and lab, there will be an emphasis on understanding the 3-dimensional relationships between structures in the body. Examination of cadavers and real human cross-sections will greatly aid in this goal. Each week's lab activities are linked with that week's lecture topic. The course is organized regionally, meaning that each region of the body is studied in turn. This promotes a focus on understanding the interrelationships between body structures and systems. The course is divided into three blocks, each capped by an exam. The first block is Thorax, Abdomen, and Pelvis, the second block is Back and Limbs, and the third block is Head and Neck. Exams consist of written lecture exams and lab-practical examinations.

Enforced Prerequisite at Enrollment: BIOL 129 or BIOL 141 or (BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164) or (BIOL 240M or BIOL 240W) or BIOL 472 or KINES 202

BIOL 477: Biology Cadaver Dissection

3 Credits

This course is an advanced exploration of human anatomy, based around cadaveric dissection. We will take a "regional" approach to learning anatomy, meaning that we will focus on each region of the body in turn. There will therefore be an emphasis on understanding the 3-D relationships between structures, and how all body systems are interrelated. Lab activities will center around the dissection of cadavers. You will work in groups to complete the dissections. Lecture activities will focus largely around small group work on hands-on activities and worksheets.

Enforced Prerequisite at Enrollment: (BIOL 161 and BIOL 162 and BIOL 163 and BIOL 164) or BIOL 476 or KINES 202 or KINES 202H or ANTH 410

BIOL 478: COMPARATIVE NEUROANATOMY

3 Credits

This course provides instruction on the functional and structural organization of the vertebrate nervous system. In addition to lectures, students attend laboratory sessions devoted to human brain dissections, histologic sections of various vertebrate brains, neuroanatomical methods for analyzing brain and spinal cord organization, and non-invasive magnetic resonance imaging. The structural organization of the brain is described at both the gross and microscopic levels. A major aim of the course is to instill students with an understanding of the three-dimensional structure of the brain. To achieve this goal, students are taught how to recognize specific structures in different planes of sections along the major axes of the brain. Structural-functional relationships in the nervous system are explained, and particular emphasis is placed on understanding the functional impact of brain trauma and a variety of neurological diseases. While the course emphasizes the mammalian nervous system, many aspects of brain organization in non-mammalian vertebrates are also presented. As part of this, a major section of the course is devoted to understanding neurocladistics and the biological principles that have guided brain evolution across different phylogenetic lineages.

BIOL 479: General Endocrinology

3 Credits

Endocrine mechanisms regulating the morphogenesis, homeostasis, and functional integration of animals.

Enforced Prerequisite at Enrollment: BIOL 141 or BIOL 472

BIOL 482: Coastal Biology

3 Credits

BIOL 482 is a lecture course designed to introduce participants to the Caribbean coral reef biome and other near-shore environments such as rocky shores, mangroves and seagrass beds. Students will learn through theoretical and practical exercises how environmental and biological factors interact to sustain near-shore ecosystems. We will discover and describe the amazing diversity of coral reef systems, explore the physiological and behavioral adaptations that enable organisms to live in this environment and deduct the basic ecological principles that underlie the function of near-shore ecosystems. We will be reading primary literature throughout the course. Students may choose to focus on current issues in marine conservation science as part of their class projects/proposal. Topics may include but are not limited to connectivity among marine populations, metapopulations-dynamics, adaptation to climate change, and conservation genetics. BIOL 482 counts towards the Marine Science Minor

Enforced Prerequisite at Enrollment: BIOL 110 or BIOL 110H.

Recommended Preparation: BIOL 220W or GEOSC 40

BIOL 483: Coastal Biology Travel Experience

2 Credits

BIOL 483 is the optional intensive field travel experience for BIOL 482: Coastal Biology to the beautiful island of Curacao, part of the Netherland Antilles in the southern Caribbean. The course reinforces content from BIOL 482, introducing students to the Caribbean coral reef biome and other near-shore environments such as rocky shores, mangroves, and seagrass beds. Students will learn through theoretical and practical exercises how environmental and biological factors interact to sustain near-shore ecosystems. We will discover and describe the amazing diversity of coral reef systems, explore the physiological and behavioral adaptations that enable organisms to live in this environment, and deduct the basic ecological principles that underlie the function of near-shore ecosystems. Topics may include but are not limited to connectivity among marine populations, metapopulations-dynamics, adaptation to climate change, and conservation genetics. While in Curacao, we will study these topics through snorkeling and other field experiences. The colonial past and economic realities in Curacao provide an instructive backdrop to understand the complexity of marine conservation issues today. Students will accordingly interact with local researchers as well as local residents throughout their time in Curacao, exploring the local populations' differing cultural backgrounds and current concerns. This course requires strong participation and thus is most suited for highly motivated students. All participants must pass a swimming test before leaving for Curacao. Participants will be charged a fee to cover the trip costs to Curacao and have to bring their own snorkel gear. Field trip limited to 10 students.

International Cultures (IL)

BIOL 484: Biodiversity of Pennsylvania

4 Credits

In this course, students will study the species diversity of Pennsylvania. To understand the biodiversity that we see in Pennsylvania today, we will discuss the evolutionary, ecological, environmental, and historical factors that have shaped it. The course will also present the ecosystems of Pennsylvania, the major threats to biodiversity as well as the laws and programs in place for its protection. Students will explore the interconnections of all human activities (urbanization, industry, natural resources, agriculture, etc.) and biodiversity. Most weeks incorporate a field trip to allow students to explore local natural areas, and to study some of the species of organisms mentioned in lectures. This course satisfies the Evolutionary Biology category in the Biology major or the Practicum requirement as the course will incorporate 9-13 field trips throughout the semester.

Enforced Prerequisite At Enrollment: BIOL 110 or BIOL 110H

BIOL 489: Biology of Ecohealth in Tanzania

3 Credits

EcoHealth is an emerging field that examines the complex relationships among humans, animals, plants, and the environment, and how these relationships affect overall health of ecosystems. The ecohealth approach has been applied in a variety of landscapes where humans, domestic animals, and wildlife coexist in close proximity with few boundaries. This course introduces students to dry savannah ecosystems in northern Tanzania and examines how ecohealth is used as a theoretical approach to understand complex systems where zoonotic and infectious diseases have emerged into human populations and been applied practically to design interventions and improve health outcomes. A major focus of the course is to understand how cultural differences among the different ethnic groups in Tanzania impact ecohealth and solutions. The course is approximately three-weeks long and taught entirely in Tanzania during the summer session at Penn State. Students examine topics related to disease dynamics, human and veterinary health, socio-ecological systems, wildlife behavior, and conservation of natural resources. They will also learn the basics of East Africa's socio-political and historical context. Content will be delivered via lectures, readings, and student-led discussions among others. Students are given class pack containing ~20 articles related to zoonotic and vector borne diseases and dry savannah ecology. Examples of zoonotic and vector borne diseases that are currently or previously important in Tanzania include bovine tuberculosis, rabies, brucellosis, anthrax, Rift Valley Fever, Z fever, East African Sleep Sickness, malaria, and rinderpest (an infectious disease of bovines). Daily discussions about these readings are lead by students and they are encouraged to integrate what they have observed with the readings. This exceptional opportunity allows students to design and implement a basic animal behavior field experiment as well as to participate in qualitative research via guided focus groups and interviews with both pastoral and hunter-gatherer communities in the Serengeti-Mara ecosystem. The course will include guest lectures by local experts in biology, conservation, and health as well as visits to a regional hospital and to the Nelson Mandela African Institute of Science and Technology in Arusha, where Penn State researchers are engaged in collaboration to study zoonotic diseases.

Enforced Prerequisite At Enrollment: BIOL 110 or BIOL 110H or BIOL 110S or BIOL 220M or BIOL 220W or other life science courses or Permission of program

International Cultures (IL)

BIOL 492: Senior Seminar in Biology

1 Credits

Discussion of selected topics from recent biological literature; reports on current research or internship experiences.

Enforced Prerequisite at Enrollment: 7th Semester standing

BIOL 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

BIOL 495: Internship in Biology

1-12 Credits/Maximum of 12

Practical off-campus experience in Biology under the supervision of a professional and a faculty member.

Full-Time Equivalent Course

BIOL 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BIOL 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BIOL 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BIOL 498A: **SPECIAL TOPICS**

0.5-5 Credits

BIOL 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BIOL 499A: Tropical Field Ecology

3 Credits/Maximum of 999

A research-intensive, active learning course taught entirely in Costa Rica during the winter break. Students depart from wherever they are and rendezvous in Costa Rica, with detailed plans and contingencies in the event of problems with flights. We work at rustic but comfortable (beds, meals, indoor plumbing) field stations where we have immediate access to pristine habitats where we perform faculty and student-designed

research projects. These research projects involve collaborative design, data collection of data to test specific hypotheses, data analyses, oral presentation, and writing formal journal-style reports. Faculty present evening lectures comprising background and examples that connect finished work to these nascent projects. Main field sites comprise a pre-montane moist forest on the Atlantic slope and a lowland rainforest on the Pacific coast of the Osa Peninsula. Course objectives are diverse, including i) provide an opportunity for students to gain confidence traveling to a non-english speaking country, independently of family but supported by faculty, peers, and our in-country partners; ii) learn how to perform research in a setting where learning methodology is deemphasized while intellectual engagement and ownership are maximized, iii) experience and learn about a broad sweep of natural history and ecology of the neotropics.

Recommended Preparation BIOL 220W or BIOL 220M
International Cultures (IL)

Biomedical Engineering (BME)

BME 100: Biomedical Engineering Seminar

1 Credits

First-year seminar to introduce the students to the field of biomedical engineering, and related opportunities in research, and industry. BME 100S Biomedical Engineering Seminar (1) A first-year seminar designed for students interested in pursuing a career in Biomedical Engineering. Through a series of lectures, demonstrations and problem solving sessions, the multifaceted world of biomedical engineering will be explored. Students will be: 1) introduced to Penn State as an academic community, including fields of study and research with an emphasis on Biomedical Engineering 2) acquainted with the learning tools and resources available at Penn State 3) given an opportunity to develop relationships with full-time faculty and other students interested in Biomedical Engineering 4) taught about their responsibilities as part of the University community 5) engaged in discussion about Biomedical Engineering and possible career paths that are available to Biomedical Engineering graduates.

First-Year Seminar

BME 201: Fundamentals of Cells and Molecules

3 Credits

Cell and molecular biology taught from an engineering perspective. Includes biochemistry, recombinant DNA, and cell structure/function. BME 201 Cell and Molecular Bioengineering (3) This course provides students foundational knowledge in cell and molecular biology. The first quarter of the course covers fundamentals of biochemistry including ligand-receptor interactions, protein structure, enzyme kinetics, and biochemical thermodynamics. The second quarter of the course covers molecular biology including DNA replication, transcription, translation, recombinant DNA tools, and applications to biotechnology and molecular medicine. The second half of the course covers selected topics in cell biology including cell adhesion, cell signaling, the cytoskeleton, cancer, and tissue engineering. Material is taught from a quantitative and engineering perspective and students are expected to have strong foundations in chemistry, physics and math. Recurring concepts in the class include chemical kinetics, consideration of the free energy of chemical reactions and the role of mechanics at the molecular and cellular level. Tools and applications discussed include recombinant protein expression, molecular mechanisms of pharmaceuticals, genetic

testing, and the use of analytical and computational modeling to understand cellular function in health and disease.

Enforced Prerequisite at Enrollment: BIOL 141 or BIOL 240W and CHEM 112 and MATH 141 Enforced Concurrent at Enrollment: PHYS 212 and CMPSC 200

BME 301: Analysis of Physiological Systems

4 Credits

Analysis of physiological signals and modeling of physiological systems by electrical and mechanical analogs in the context of continuous linear systems. BME 301 Analysis of Physiological Systems (3) Analysis of physiological signals and modeling of physiological systems in terms of electrical and mechanical analogs in the context of continuous linear systems. The course will cover an introduction to analysis of physiological systems using Matlab to perform numerical analysis and representation of biological signals with the techniques of Fourier frequency domain and linear time domain analyses. These topics will be followed by applications to describe control and function of physiological systems in the context of traditional systems analysis of continuous linear systems. Topics will focus on electrical and mechanical analogs of physiological systems and control of physiological parameters such as blood pressure, oxygen delivery to tissue, and blood glucose levels. The lab/recitation session may be used to review homework problems and implementation of solutions to computer programming assignments.

Enforced Prerequisite at Enrollment: (BIOL 141 or BIOL 240W) and PHYS 212 and (MATH 250 or MATH 251) and CMPSC 200

BME 303: Bio-continuum Mechanics

3 Credits

Mechanical properties of fluids and solids with applications to tissue mechanics and vascular system. BME 303 Bio-continuum Mechanics (3) The course serves as an introduction to continuum mechanics for students of biomedical engineering providing a foundation for studies in fluid and solid mechanics, material sciences, and other applications of science and engineering to the biomedical field. It will provide an introduction to concepts of solid and fluid mechanics, analysis in the context of mechanical properties of biological tissues, physiological models and measurement systems. For success in the course, students will draw from their prerequisite background in calculus, physics, statics, strength of materials, vector analysis, and elementary differential equations.

Enforced Prerequisite at Enrollment: (BIOL 141 or BIOL 240W) and [EMCH 210 or (EMCH 211 and EMCH 213)] and [MATH 230 or (MATH 231 and MATH 232)] and MATH 251

BME 313: Thermodynamics for Biomedical Engineering

3 Credits

Chemical processes, including material and energy balances and heat transfer with emphasis on biological and biomedical applications. BME 313 Thermodynamics for Biomedical Engineering (3) The course provides an introduction to thermodynamics, including the fundamentals of material and energy balances with specific emphasis placed on physiological and biomedical engineering applications. This course will cover equations of state, the first and second laws of thermodynamics in both open and closed systems, and Maxwell Relations. Examples of biological applications that can be considered

are the application of thermodynamic analyses to understanding thermoregulation, the cardiac cycle, respiratory gas exchange, cell potentials and to osmosis. This course also covers heat transfer including Fourier's law of conduction, convective and radiative heat transfer. Specific biological examples that may be discussed include applications to bioinstrumentation, thermoregulation and tissue heating by radiation for cancer therapy. A general knowledge of physiology and chemistry are prerequisites; the analytical approach of the course will also require an ability to work with basic differential and multivariable calculus.

Enforced Prerequisite at Enrollment: (BIOL 141 or BIOL 240W) and CHEM 112 and [MATH 230 or (MATH 231 and MATH 232)] and MATH 251

BME 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

BME 401: Numerical Simulations in Biomedical Engineering

3 Credits

Integration of design theory and finite element analyses for the development of solutions to problems in biomedical engineering. BME 401 Numerical Simulations in Biomedical Engineering (3) Biomedical engineers develop novel devices and models to facilitate patient-specific diagnosis and care. The main goal of this course, therefore, is to help students learn how to use computational modeling software as a means to apply theoretical engineering and biological principles to solve problems in medicine and biology. The course will also focus on integration of ethics and design by continually identifying where ethical decision making and health needs of global populations influence design decisions.

Enforced Prerequisite at Enrollment: BME 301 and BME 303 and BME 313
Enforced Concurrent at Enrollment: BME 201

BME 402: Biomedical Instrumentation and Measurements

3 Credits

Biomedical measurements, including consideration of techniques, equipment, and safety. BME 402 Biomedical Instrumentation and Measurements (3) This course is designed to introduce students to the principles, applications, and design of instruments used in biomedical research and applications. The emphasis is on engineering design and analysis with supplemental discussion of relevant physiological principles. Topics covered include: sensors, biopotential signal origin, amplifiers, filtering, electrodes and signal processing; pressure and flow measurement in the cardiovascular and respiratory systems, chemical biosensors, therapeutic devices, and medical imaging modalities. Students will learn to analyze and design instrumentation and measurement systems through a variety of techniques including in-class examples, homework problems, and active participation.

Enforced Prerequisite at Enrollment: (MATH 250 or MATH 251) and (BME 301 or EE 210 or EE 212 or PHYS 402)

BME 403: Biomedical Instrumentation Laboratory

1 Credits

Building basic biomedical signal processing circuits and biomedical measurement systems, experiments in medical imaging techniques, and

measurement of bio-potentials. BME 403 Biomedical Instrumentation Laboratory (1) Laboratory course to accompany BME 402, Medical Instrumentation. Biomedical measurements laboratory where students will build basic biomedical signal processing circuits, run experiments in medical imaging techniques, use transducers to build biomedical measurement systems, and measure bio-potentials. The class is comprised of studies in medical circuits and transducers for static and dynamic biological inputs, and includes measurement of actual biomedical signals. For preparation for industry or research, proper laboratory documentation techniques are taught along with basic skills for presenting experimental data.

Enforced Concurrent at Enrollment: BME 402

BME 406: Medical Imaging

3 Credits

Physical principles and clinical applications of medical imaging methods. BME 406 Medical Imaging (3) This course covers all four major diagnostic medical imaging modalities including x-ray, ultrasound, radioisotope imaging, and magnetic resonance imaging. Physical principles, instrumentation, and biomedical applications of these modalities, as well as the basics of imaging signals and image processing will be discussed. Success in this course will require background in physics and electrical circuits, and some experience with Matlab.

Enforced Prerequisite at Enrollment: PHYS 212 and (CMPSC 200 or CMPSC 201)

BME 408: Solid Mechanics of Biological Materials

3 Credits

This course presents advanced topics in solid mechanics that are important for understanding the behavior and function of biological materials, including cardiovascular tissues (e.g., blood vessels, myocardium, epicardium), musculoskeletal tissues (e.g., tendon, bone, articular cartilage), synthetic biomaterials (e.g., hydrogels, composites), and cells. The course will begin with a review of basic concepts in mechanics and mathematics, followed by a detailed discussion of the principles of stress and strain for infinitesimal deformations. Since most biological materials undergo large deformation, the limits of our definitions for stress and strain will be discussed along with alternative methods if these limits are violated. Constitutive equations for linear elastic homogenous isotropic, orthotropic, and transversely isotropic materials will be presented. These concepts will then be applied to various mechanics problems that are relevant to biology, physiology, and medicine. The second half of the course will cover fiber-reinforced composite materials, which are relevant for both engineering prostheses as well as understanding the behavior of numerous native biological materials (e.g., tendon, epicardium, intervertebral disc). The course will conclude with a brief introduction to poroelasticity and its role in the function of articular cartilage and hydrogels.

Enforced Prerequisite at Enrollment: MATH 230 and MATH 251 and CMPSC 200 and EMCH 210

BME 409: Biofluid Mechanics

3 Credits

The fundamental relations in fluid mechanics and their application to biofluids including steady/unsteady flows, diseased states, devices and

bio rheology. BME 409 Biofluid Mechanics (3) This course is a first course in fluid mechanics, with application to biomedical problems. This course incorporates understanding of fluid properties of biological materials and applies the fundamental laws (mass, momentum, and energy) that govern fluid mechanics to solve biofluid applications such as those in the cardiovascular system, including diseased states. The course will enable students to use approximation methods and constraints in fluid mechanics to help model and solve biofluid examples. Bio rheology and cardiovascular prosthetics in the context of fluid mechanics will be discussed. The students will be able to understand and apply problem solving techniques to steady and unsteady biological flows and be exposed to wave propagation theory and oscillatory flow. Students will be exposed to biofluid devices and flow measurement techniques used to assess these devices.

Enforced Prerequisite at Enrollment: MATH 230 and MATH 251 and (BIOL 141 or BIOL 240W)

BME 410: Biomedical Applications of Microfluidics

3 Credits

Study of fluid mechanics at small length scales including fabrication of microfluidic devices and microfluidic components, lab-on-chip concept and applications. BME 410 Biomedical Applications of Microfluidics (3) Microfluidics is the study of flow phenomena at small length scales with characteristic channel dimensions typically less than the diameter of human hair. Small length scale effects become important as surface forces such as viscous drag and surface tension govern flow behavior rather than body forces (inertia) as seen in macroscale fluid mechanics. Miniaturization of fluid handling systems also allows the development of micro Total Analysis Systems (microTAS) or so called "lab on a chip" which combines biological sample preparation, separation and analysis in a single device. Topics explored in this class include: silicon based microfabrication and non-conventional micro/nano fabrication techniques; flow phenomena at small length scales, including laminar flow and flow resistance, inertial flow, diffusion, capillary effect, electrokinetic flow like electroosmosis, electrophoresis, and dielectrophoresis (DEP); microfluidic components including valves, pumps, mixers, sensors, actuators; lab-on-chip system concept and applications; hands-on lab to make and test microfluidic device; finite element simulation lab to gain better understanding of microfluidic devices.

Enforced Prerequisite at Enrollment: CHEM 112 and PHYS 211 Enforced Concurrent at Enrollment: BME 303 or ME 320 or CHE 330 or AERSP 308 or PHYS 213

BME 413: Mass Transport in Biological Systems

3 Credits

An integrated study of the fundamentals of mass transport processes with emphasis on the analysis of physiological systems. BME 413 Mass Transport in Biological Systems (3) This course provides an introduction to mass transport phenomena in biological systems. The course builds upon thermodynamic concepts of phase and chemical equilibrium to analyze ion transport and cell membrane potentials including Nernst potentials, Gibbs-Donnan equilibrium and osmotic pressure. In particular, the course provides fundamental understanding of the diffusion of gases, electrolytes and non-electrolytes in biological applications. Furthermore, the principles of oxygen transport in tissues are specifically described and analyzed using the Krogh Cylinder Modes and hemoglobin-oxygen binding relationships. The transport of substances across biological

membranes is discussed and analyzed for various biological transport mechanisms including: passive diffusion, active transport and facilitated transport. Convective transport through porous media is introduced using Darcy's Law and the Brinkman Equation. Finally, fundamental concepts of pharmacokinetic modeling are introduced and utilized for the analysis of drug transport and distribution within tissues.

Enforced Prerequisite at Enrollment: (BME 313 or ME 300 or CHE 220 or PHYS 213) and (MATH 250 or MATH 251) and (BIOL 141 or BIOL 240W)

BME 419: Artificial Organs and Prosthetic Devices

3 Credits

Analysis of function and consideration of design concerns for biomedical implants, including prosthetic joints, electrical stimulators, and cardiovascular pumps. BME 419 Artificial Organs and Prosthetic Devices (3) This course provides an overview of artificial organs and medical devices (ranging from blood pumps, hemodialysis, BioMEMS, tissue engineered technology, orthopaedic devices, cardiovascular implants, pacemakers, etc.) and how engineers use a design methodology, need to understand the clinical need, and what FDA regulations must be considered to develop these technology. Guest speakers and experts provide lectures on the various technology and students are exposed to industry and academic device development. The basics of biomaterials and biocompatibility are discussed within the context of the technology.

Enforced Prerequisite at Enrollment: (BIOL 141 or BIOL 240W or BIOL 472) and (CMPSC 200 or CMPSC 201 or CMPSC 121)

BME 423: Reaction Kinetics of Biological Systems

3 Credits

Chemical kinetics and reaction equilibria with applications to the analysis of physiological function and the design of synthetic organs. BME 423 Reaction Kinetics of Biological Systems (3) Chemical reactions are the underlying mechanism for numerous biological processes such as energy metabolism, biosynthesis pathways, mass transport, and detoxification. This course will introduce the basic concepts in chemical equilibrium and reaction kinetics. The course will then apply these chemical kinetics and analytical approaches to understand the underlying mechanisms of selected biological and physiological processes, which will include metabolic engineering, catalysis, bioreactors, and drug discoveries.

Enforced Prerequisite at Enrollment: (BIOL 141 or BIOL 240W) and CHEM 112 and (MATH 250 or MATH 251) and (BME 313 or CHE 210 or ME 300) Enforced Concurrent at Enrollment: BME 413 or CHE 410 or BE 302

BME 429: Biomedical Mechanics and Techniques Laboratory

2 Credits

Experimental laboratory that includes hands-on measurement, computational simulations, and statistical analysis of biofluids, biosolids, and biomaterial phenomena. BME 429 Biomedical Mechanics and Techniques Laboratory (2) This course focuses on three five-week modules whereby students will conduct experiments on biomaterial interfaces, biofluid mechanics, and biosolid mechanics. These experiments will be complimented with computational simulations to enable discussion between the experimental and computational results and appropriate advanced statistics. Students will apply theoretical knowledge from previous core bioengineering/biomedical engineering courses. Examples of some experiments include blood separation,

quantifying the flow through a stenosis, and measuring the material properties of bone.

Enforced Prerequisite at Enrollment: BME 201 and BME 303 and BME 401

BME 429H: Biomedical Mechanics and Techniques Laboratory

2 Credits

Experimental laboratory that includes hands-on measurement, computational simulations, and statistical analysis of biofluids, biosolids, and biomaterial phenomena.

Honors

BME 433: Drug Delivery

3 Credits

Engineering and biological principles as applied to pharmaceutical transport and designing drug carriers. BME 433 Drug Delivery (3) The success of drug delivery depends on not only the understanding of chemical synthesis, polymer sciences, and cell biology, but also the fundamental understanding of drug transport that is affected by both drug's properties and physiological barriers, which are very critical but often overlooked in the design of drug delivery systems. Therefore, this course covers two main issues: 1) physiological barriers and drug transport; 2) design and characterization of drug delivery systems. The first section of this course introduces transport mechanisms of drug delivery at the levels of cell, tissue and wholebody from the engineering viewpoint. The second section describes the rational design of various drug delivery systems and emphasizes nanomedicines. Case studies of cancer therapy/tissue engineering are described to compare, contrast and analyze current drug delivery systems.

Enforced Prerequisite at Enrollment: CHEM 112 and (BME 201 or BIOL 230W or BMB 251) and (BME 413 or BE 302 or CHE 410)

BME 437: Biomedical Data Science for Bioengineers

3 Credits

This course is an introduction to the theory and practice of biomedical data science. We will focus on applications of data analysis to problems in the diagnosis and treatment of human disease. Applied biomedical data science requires strong computer programming skills and strong data analysis skills. Students will learn basic programming skills in an open source language, intermediate programming skills required to handle diverse medical, genomic, and clinical datasets (i.e. regular expressions, reproducible programming, file handling). We will cover the underlying principles and the practice of both supervised and unsupervised techniques in statistical learning by applying them to biomedical datasets. The emphasis will be on the practice of data analysis, and students will be required to undertake large scale analyses of real biomedical data.

BME 440: Biomedical Engineering Professional Seminar

1 Credits

Seminar giving students exposure to professionals who apply engineering and related fields to biology and medicine. BME 440 Biomedical Engineering Professional Seminar (1) A senior seminar introducing students to professionals in the field of biomedical engineering and disciplines that are critical to the field (e.g. ethics, regulatory affairs, entrepreneurship). This course is designed to prepare

students for the subsequent capstone design course and allow them to consider areas where innovation and design in biomedical engineering are needed. Discussion with presenters will allow students to explore the promises and limitations of the clinical applications of biomedical engineering and to explore possible career paths. Guest speakers may include representatives and alumni from the medical device industry, biomedical entrepreneurs, medical clinicians, professionals from relevant regulatory agencies, and professionals in bioethics.

Enforced Prerequisite at Enrollment: Seventh semester standing in BME_BS

BME 443: Biomedical Materials

3 Credits

Describe properties of materials and composites and their in vivo interactions. BME 443 (MATSE 403) Biomedical Materials (3) Metals, polymers, and ceramics, and their composites, which are capable of emulating the functions of hard and soft tissues, are the subjects of this course. The subject matter shall be confined to implanted materials; external appliances, such as casts, braces, etc are not considered. The topical content of this course will be grouped into four areas. A general introduction to selected aspects of physiology will be presented. This will provide the background necessary to appreciate the factors which govern the selection of biomedical materials. Specific emphases will be placed on polymerization of biopolymers (polypeptides and polysaccharides) and the general relationships between conformation and biological function, the biochemistry of blood and blood surface interactions, the formation of teeth and bone and the relationships between microstructure, composition and function, the immune responses to implanted materials, the resorption of bone (osteoporosis) and the development of caries. The perspective placed on these topics will be that of materials science. The selection of ceramics for hard tissue prosthesis will be discussed. Orthopaedic and dental applications for ceramics will be discussed. Specific ceramic materials to be treated include dental porcelain, alumina- and zirconia-based ceramics, and bioglasses and pyrolytic carbons. Various classes of inorganic cements, gypsum, zinc phosphates, zinc carboxylates, silicates, and glassionomer cements will also be considered as ceramics. Hydroxyapatite, Hap-based composites and Hap-metal interactions will be discussed in particular. Relationships among physical properties, mechanical properties, and chemical interactions with biological fluids will be described. Dental and orthopedic applications of metals will be described. The fracture toughness of metals, their electrochemical responses in vivo, and the nature of the interfacial interactions with hard tissues will be treated. Dental amalgams and the noble metals for dental applications will be considered. Metals and alloys, such as Ti, Co-Cr, and vitallium, used in prosthetic applications, will be described and their properties and limitations discussed. The phenomenon of stress shielding and the immune responses associated with the accumulation of metallic and polymeric particular debris in the vicinity of an implant will be discussed in particular. Polymeric materials are important in a broad range of biomedical applications. Among these are soft tissue prostheses, hemostatic agents, dental restoratives, bone replacement materials, and surgical adhesives. In some applications it is desirable that a polymeric material biodegrade while in others property retention is desirable.

Enforced Prerequisite at Enrollment: (MATSE 201 or CHEM 112) and (MATH 230 or MATH 231)

Cross-listed with: MATSE 403

BME 444: Surfaces and the Biological Response to Materials

3 Credits

Focus is on special properties of surface as an important causative and mediating agent in the biological response to materials.

Enforced Prerequisite at Enrollment: CHEM 112 or MATSE 112

Cross-listed with: MATSE 404

International Cultures (IL)

BME 445: Tissue Engineering: Concepts, Calculations and Applications

3 Credits

Introduction to interdisciplinary tissue engineering concepts, associated biochemical and biomechanical engineering calculations, and cardiovascular, musculoskeletal, and other tissue application examples. BME 445 Tissue Engineering: Concepts, Calculations and Applications (3) Tissue engineering is a field of research dedicated to the design and construction of living tissues for use in repairing or regenerating tissue structures and functions compromised by disease or trauma. This course provides an introduction to interdisciplinary tissue engineering concepts, associated biochemical and biomechanical engineering calculations, and cardiovascular, musculoskeletal, and other tissue application examples. Topics covered in this course will span the entire process of creating an engineered tissue, including, among other topics: biomaterials for tissue engineering, cell-material interaction, wound healing response; techniques for cell isolation, recovery, and expansion; biodegradable polymer synthesis and degradation; scaffold design, fabrication, and cell seeding; bioreactors; special topics such as tissue engineering of neural, bone, cardiovascular, cartilage, and other tissue.

Enforced Prerequisite at Enrollment: CHEM 112 and (BME 201 or BIOL 230W or BMB 251) and PHYS 211

BME 446: Polymers in Biomedical Engineering

3 Credits

Foundations in polymer chemistry and physics, polymer design, characterization, and processing with a focus on biomedical applications.

Enforced Prerequisite at Enrollment: CHEM 112 and CHEM 113 and (CHEM 202 or CHEM 210) and EMCH 210 or (EMCH 211 and EMCH 213)

BME 446H: Polymers in Biomedical Engineering

3 Credits

Foundations in polymer chemistry and physics, polymer design, characterization, and processing with a focus on biomedical applications.

BME 448: Regulatory Affairs

3 Credits

This course provides an overview of the FDA regulatory process for drug, biologics, and device development. Through course work and class based discussion, students will have an opportunity to develop the foundations necessary to build a strong understanding of regulatory affairs. Topics include the historical perspective the development of U.S. drug laws, law vs. regulation, FDA and industry functions, drug, biologics and device approvals, Good Laboratory/Manufacturing/Clinical Practice and global regulatory frameworks. The class utilizes collaborative group work and case study based learning exercises.

Enforced Prerequisite at Enrollment: (ENGL 202C or BE 391) and (ECON 102 or ECON 104)

BME 450W: Biomedical Senior Design

3 Credits

Team based capstone design course with open ended project for industry or clinical applications related to Biomedical Engineering. BME 450W Biomedical Senior Design (3) This course is a culminating design experience where students will be presented with open-ended industry and clinically sponsored design projects related to biomedical engineering. Students will work in multi-disciplinary teams to effectively design and prototype a solution for the sponsor. Students will be required to do needs assessment, project planning, budget planning, formulation of design specifications, analysis of the design, and documentation of results. Several design review reports and assessments will be used to monitor progress throughout the semester. Students will develop teamwork and communication skills and learn how to consider the ethical implications of their design, both in construction and use. Students meet with the instructor and sponsor on a regular basis for progress assessment. Notebooks are carefully maintained and critiqued. At the end of the semester, students will demonstrate their final design in a variety of formats that may include formal presentations, posters, websites, and written reports.

Writing Across the Curriculum

BME 455: Stem Cell Biology and Therapy

3 Credits

This course will give an overview of milestones in stem cell research and will expose students to current topics at the frontier of this field. It will introduce students to the different types of stem cells as well as factors and signals that are implicated in regulating stem cell fate. The course will highlight techniques for engineering of stem cells and their micro-environment. The course will also discuss gene editing and the application of gene editing in stem cell research. Furthermore, it will evaluate the use of stem cells for tissue engineering and therapies. Emphasis will be placed on discussions of current research areas and papers in this rapidly evolving field. The class is designed for upper undergraduates and graduate students with a strong interest in stem cell biology, and the desire to actively contribute to discussions in the class.

Enforced Prerequisite at Enrollment: BIOL 230W or BIOL 240W or BME 201 or BMB 251 or BIOL 240M or BIOL 230M or BMB 251H
Cross-listed with: BIOL 455

BME 494H: Honors Thesis

1-3 Credits/Maximum of 6

Independent study research and design, leading towards honors thesis.

Honors

BME 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BME 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BME 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

Biomedical Engineering Technology (BE_T)

BE_T 101: Introduction to Medical Equipment Maintenance

1 Credits

Introduction to the field of clinical engineering and the management of medical equipment and systems. BE_T 101 Introduction to Medical Equipment Maintenance (1) BE_T 101 is an introductory course in medical equipment management. It is an entry level course intended to give students the big picture of the field of biomedical and clinical engineering. The course covers the background and history of the field, exploring how medical equipment technology has changed as well as the management of the service of the equipment. The focus of this class will be from the perspective of the biomedical equipment technician, what skills are necessary, education requirements, training opportunities, certification, job duties and descriptions, and career paths. The types of employers, their organization structures, required regulations, recommended standards and information about the work place will be presented. Business ethics of working with medical equipment, patients, clinical care givers and other health care providers will be discussed. Topics covered include: * Background and history of medical equipment management * Changes in medical equipment technology * Certification for biomedical equipment technicians * BET job duties, descriptions and requirements * BET continuing education needs * Ethical decisions in medical equipment management * Functions & Organization of clinical engineering departments * Employer types * Department organization charts * Reporting structures * Services provided by clinical engineering departments * Regulatory and standards requirements * Documentation systems

BE_T 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BE_T 201: Medical Equipment & Systems I

5 Credits

Introduction to the field of biomedical engineering technology, electrical wiring devices, theories of measurement, cardiovascular systems and ECG monitor operation. BE T 201 Medical Equipment & Systems I (5) This course introduces the student to electrical safety standards and related wiring devices, methods and systems. Grounding and leakage current is studied so the student understands the causes of leakage current, safety limits, measurement and safe control of medical devices. Electrical wiring devices, over current protective devices, power quality devices and simplified hospital electrical distribution

systems are discussed in relation to the electrical power delivery and quality required for medical devices. The electro-physiological theories of measurement, sensors, electrodes and measurement errors are discussed to provide an understanding of how signals are detected on the human body. A variety of transducers will be studied that are used with medical devices, such as: pressure, temperature, audio, relays, solenoids, lighting, video displays, motors, printers and batteries. The blood, heart, and cardiovascular system is studied in detail, as well as the electro-physiological signals of the heart. The normal and many abnormal electrocardiograph signals are studied pursuant to a thorough understanding of the function and operation of the heart. The electrocardiograph (ECG) machine is studied from an electrical/electronic design perspective so the student has an understanding of the electronic circuits required to measure and display the human ECG signal. The controls, operation, electrical safety testing, performance testing and general design of an ECG monitor is studied so the student has a full understanding of its operation, usage and preventative maintenance testing. Topics covered include: - electrical safety - grounding, leakage current and protective systems - electrical wiring devices, over current protective devices, and isolated power - power quality, disturbances and corrective methods - simplified hospital electrical distribution system - theory of measurement: terms, factors, and errors - electrodes, sensors, and transducers devices and circuits - cardiovascular anatomy and physiology - bio-potentials: electro-conduction system of the heart - common ECG waveforms: normal and abnormal - ECG monitor application and connections to patient

Enforced Prerequisite at Enrollment: EET 105**BE_T 203: Biomedical Equipment Laboratory (Internship)**

4 Credits

Practical experience, within or related to the hospital environment, on a variety of biomedical instruments. BE T 203 Biomedical Equipment Laboratory (4) The final semester internship is a curriculum requirement for the Biomedical Engineering Technology (BET) Program. It allows eligible students to develop entry level skills in the biomedical field while gaining valuable work experience before graduation. The program consists of 400 hours of hands-on experience in an actual work environment on patient care and life support equipment. The student is expected to understand and perform basic fundamentals of the operation, minor corrective repairs and perform basic preventive maintenance and electrical safety tests to a wide variety of medical devices. During the internship, the student will be expected to participate in a wide variety of clinical procedures to learn the environment, application, problems, and the routine and abnormal situations that may occur in regards to the medical devices. Students will also be exposed to the organization and management of a clinical engineering department by attending various committees, investigating education and training for biomedical equipment technicians, investigating the risk based preventative maintenance system, investigating the clinical engineering department performance indicators, and investigating the required policy and procedures of a clinical engineering department. Students will be expected to use good communication and customer skills when working with co-workers, clinical personnel, patients, visitors and all others while conducting the internship. Students will be expected to document their activities as required by the course requirements as well as the requirements of the internship location. Students will be assigned an internship supervisor that they will take direction from on a daily basis. The student will be expected to work and follow the requirements of the internship site and follow all required policies and procedures. A biomedical engineering technology student manual will be provided to the

student detailing all of the requirements for the internship. This must be the last course taken for the degree.

Enforced Prerequisite at Enrollment: (BIOL 163 and BIOL 164 or BISC 4) BE_T 204W and BE_T 206

Full-Time Equivalent Course

BE_T 204W: Medical Equipment and Systems II

5 Credits

Principles of medical equipment: operation, application; circuit and block diagrams; preventive maintenance inspections; and troubleshooting with report writing and presentations. BE T 204W Medical Equipment and Systems II (5) This course introduces various types of medical instrumentation in preparation for the biomedical internship (BET 203). Equipment operation and application, circuit and block diagrams, preventive maintenance, inspections, performance testing, and troubleshooting are explained or reviewed. In addition, the student is required to demonstrate communication skills for the biomedical field in the form of technical reports, equipment reviews, and in-service presentations. In studying the various medical devices, the human cardiopulmonary system, basic anatomy and physiology structures will be reviewed as they apply to that medical device or measurement. Topics covered include: - electrical safety -ECG monitoring -blood pressure monitoring (invasive/non-invasive) -cardiac output measurement - defibrillators -pacemakers -pulse oximeter -surgical equipment & systems -sterilization systems & process -surgical fiber-optic scopes -anesthesia gas machines -electrosurgical units -infusion devices - dialysis equipment -ventilators & respiratory therapy equipment - clinical laboratory equipment -general medical devices -FDA (510K) & SMDA requirements -regulation & standard organization review - imaging systems overview & X-ray equipment & system review - report writing -technical presentations Lectures will be supported through laboratory exercises regarding medical devices (physiological ECG monitors, electrocardiographs, blood pressure monitors, noninvasive external pacemakers, defibrillators, pulse oximeters, infusion pumps, and electrosurgical units) and perform operational and preventative maintenance testing on those devices. Written laboratory reports outlining the laboratory activity are required. Reports are graded based upon technical quality, grammar and professionalism. Computers are used to simulate electrical circuits and systems and also produce high quality weekly medical device reports and laboratory reports.

Enforced Prerequisite at Enrollment: BE_T 201 and BE_T 205 Writing Across the Curriculum

BE_T 205: Medical Electronics

4 Credits

Solid state devices, diodes, power supplies, operational amplifiers, transistors, timing circuits, high power devices, circuits as applied to medical devices. BE T 205 Medical Electronics (4) BET 205 introduces solid state devices and circuits as they apply to medical devices. This course begins with the fundamentals of solid state devices, diode models and applications, then application of these fundamentals in linear power supply design. Students design a theoretical linear power supply as a term project, applying the fundamentals of diodes, transformers, filters and regulators. Operational amplifiers, transistor devices and circuits is presented along with the applications of amplifiers, switches, filters and other related circuits. Special solid state and high power devices will be discussed and their applications to medical device circuits. This course provides students with a broad exposure to a wide variety

of solid state devices and their application to medical devices. Topics covered include: -Fundamentals of solid state principles -P-N junction, forward and reverse biasing -diode models: ideal, practical and complete -specialty diodes: zener and LED -diode specifications and testing - transformers: step up, step down & isolation -rectifier circuits: half and full wave -linear power supply: rectification, filters & regulation designs - Switching Mode Power Supply (SMPS) fundamentals -linear power supply design project -operational amplifiers: amplifiers, comparators, filters and others -transistors: BJT, JFET, MOSFET -special power devices: photo detectors, optoisolators, TRIAC, DIAC and others -timing circuits -tuned amplifiers & band width Topics are supported by laboratory exercises where students learn about solid state devices and power supplies. Students are required to complete a theoretical design of a linear power supply with given specifications. Students are also required to prepare written laboratory reports outlining the laboratory activity and power supply design project. Reports are graded on technical quality, grammar, and professionalism. Students in BET 205 are required to use computers in to simulate electrical circuits and systems and also produce high quality laboratory reports.

Enforced Prerequisite at Enrollment: EET 105

BE_T 206: Medical Computers and Networks

4 Credits

Introduction to computer hardware, software and networks for medical equipment; PC and medical equipment hardware; networking fundamentals. BE T 206 Medical Computers and Networks (4) This course provides an introduction to computer hardware, software and networks used by medical equipment with an in-depth background of PC and medical equipment hardware and networking fundamentals. The topics covered include: Microsoft Office review and advanced applications; personal computer (PC) hardware fundamentals; formatting and sectoring hard drives; installing various Windows operating systems and other required software/drivers; networking hardware component fundamentals; administrator networking software settings and configurations; fundamentals of health level 7 (HL7) standards; fundamentals of digital imaging and communication in medicine (DICOM) standards; operation of DICOM viewer software for medical images; fundamentals of picture archive and communications systems (PACS) configurations for medical applications; fundamentals of The Health Insurance Portability and Accountability Act of 1996 (HIPAA) Privacy and Security Rules in regards to medical equipment maintenance; creation of a simple PC network with several PCs and basic networking hardware components; creation of a simple physiological computer based network with several physiological devices and basic networking components; creation and testing of network cables using applicable tools and test equipment; troubleshoot and correct technical problems of a basic PC and medical equipment networks using appropriate software, tools and equipment; and analyzing and generating a written reports. Lectures will be supported by laboratory exercises in which the student learns about PC hardware, PC software, network hardware, network configuration and troubleshooting these systems. Students will be required to prepare written laboratory reports outlining the laboratory activity. Reports will be graded based both on their technical quality and their grammatical and professionalism. Students in BET 206 will be required to use computers in both class and laboratory exercises to use software, create and configure networks for PCs and physiological monitors.

Enforced Prerequisite at Enrollment: BE_T 201 Enforced Concurrent at Enrollment: IST 220

BE_T 210: Troubleshooting Medical Equipment

3 Credits

Methods and strategies for troubleshooting medical equipment, systems and electronics components. BE T 210 Troubleshooting Medical Equipment (3) BE T 210 will provide students with methods and strategies for servicing medical equipment, systems and electronics components. Many different methods can be used to identify and solve problems that include using many different skill sets. This course introduced logical methods for troubleshooting medical devices including: equipment operation, application, normal and abnormal outcomes, tools, test equipment, simulators and analyzers. In addition to the technical skills of troubleshooting, the "soft" skills or "people" skills are investigated. How to communicate with others and the customer skills will be introduced. While working with medical equipment, individuals need to have an awareness of infection control and the steps that must be followed to protect them, the patients and co-workers. Cleaning, handling and general safety methods will be discussed. Topics covered include:- Safety procedures• Skill set requirements -Test equipment, simulators, analyzers and tools -Troubleshooting methods - Troubleshooting components -Troubleshooting systems -Troubleshooting medical equipment -Hands on troubleshooting skills -Customer skills - Infection Control

Enforced Prerequisite at Enrollment: BE_T 201**BE_T 296: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

BE_T 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Biorenewable Systems (BRS)**BRS 299: Foreign Studies**

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)**BRS 393: Industry Tour**

1-2 Credits/Maximum of 2

A week-long tour of bioproducts and agricultural systems industries. BRS 393 Bioresources Industry Tour (1) This is a week long course, in which students will travel to tour relevant manufacturing facilities. Roughly half of the time (2.5 days) will be dedicated to the bioproducts industry, and the remaining time will be focused on agricultural systems. Bioproducts and agricultural systems are the two key components of the BioRenewable Systems major.

Enforced Prerequisite at Enrollment: Junior standing in BRS_BS or BE_BS**BRS 437: Bioproduct Marketing and Sales**

4 Credits

Business-to-business bioproduct sales and marketing fundamentals and market overview of key forest industry sectors including biorefinery value chain outputs. BRS 437 Bioproduct Marketing and Sales (4) This course covers business-to-business (B2B) bioproduct marketing fundamentals and a market overview of key forest industry sectors (solid wood, composite panels, and engineered wood products) including biorefinery value chain outputs (environmental services, energy, fuels, and co-products) and personal selling of bioproducts. Students will apply B2B market principles and concepts toward an understanding of bioproducts industries and markets. Personal selling techniques will be developed and applied to enhance understanding of the industrial sales function within bioproduct firms. Marketing research for decision-makers will be examined.

Enforced Prerequisite at Enrollment: BRS 300 and (AGBM 101 or ECON 102)**Biotechnology (BIOTC)****BIOTC 197: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BIOTC 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BIOTC 416: Microbial Biotechnology

3 Credits

The overall goal of Microbial Biotechnology (3 cr.) is to provide students with an opportunity to apply their knowledge of microbiology and biotechnology to the synthesis of biologically important and industrially useful products. The course will focus on the application of the tools of Microbiology, Molecular Biology, Biochemistry, Forensics, Environmental Biology and Bioinformatics to exploit microbes as "vessels" to create an array of products to benefit humans, animals and the environment. For example, discussions may address the use of microbes in the cleanup of polluted environments (bioremediation) as well as their role in producing drugs (vaccines, antibiotics, etc.), industrially important enzymes (rennet, meat tenderizers, indigo production etc.), and biodegradable plastics. Furthermore, ethics and regulations surrounding the production, marketing, and distribution of these biologics will be discussed. Students in the course will also participate in a project wherein they conceive of an idea for a value-added product, research steps necessary to bring said product to market, investigate aspects related to intellectual property, and develop a marketing plan. The student project will culminate in a class competition where students will choose to invest their "biotech bucks" in a fellow student's proposed company. Throughout the entirety of the course, the concepts of entrepreneurship and innovation will be at the forefront of class discussions.

Enforced Prerequisite at Enrollment: (BMB 442 or BIOTC 459 or HORT 459 or BIOL 459) and (MICRB 201 or MICRB 201H) and (MICRB 202 or MICRB 203)

Cross-listed with: MICRB 416

BIOTC 459: Plant Tissue Culture and Biotechnology

3 Credits

The overall goal of this course is to provide a strong overview of the techniques used in plant biotechnology and the applications made possible by those techniques. The lecture topics will be used to introduce the principles of tissue culture and molecular biology, including how they are used to produce transgenic plants. Furthermore, the course will give students a broader and deeper knowledge in the field of Plant Biotechnology and provide a foundation for understanding the field as it changes in the future. Topics include the safety, legal and ethical issues surrounding GMOs and the study of the anti-GMO arguments surrounding each issue. In the laboratory component of the course, students will be introduced to the underlying principles of molecular biology techniques and aseptic culture of plant cells as well as the tissues and organs used to produce transgenic plants. In summary, through this course students will be introduced to many of the most important tools of the biotechnologist.

Enforced Prerequisite at Enrollment: BMB 252 or BMB 252H or MICRB 252 or BIOL 230W or BIOL 230M

Cross-listed with: BIOL 459, HORT 459

BIOTC 460: Advances and Applications of Plant Biotechnology

3 Credits

This course provides a comprehensive overview and current status of plant biotech research. The course provides knowledge of plant systems that fall in the category of GMOs. BIOTC 460 / AGRO 460 Advances and Applications of Plant Biotechnology (3) This course will provide a comprehensive overview and status of current plant biotech research. The focus is on providing knowledge of the biology of plant systems. Consequences of development of a transgenic plant either for food (crops) or as a tool to understand molecular, genetic, and inheritance mechanisms of a trait will be discussed in detail. The course will deliver the current literature and understanding of mechanisms involved in herbicide resistance in transgenic plants. Specific topics that will be of interest to students from various disciplines include disease and insect resistance, quality traits, and secondary metabolites. Molecular biology of different pollination systems will be examined so that students will understand the concept of gene flow from transgenic to non-transgenic crops. Examples from recent developments on the beneficial use of transgenic plants as producers of modified compounds, starches, antibodies and their use in phytoremediation of toxic and organic pollutants will be discussed from the perspective of genetic and molecular plant systems. Gene expression of transgenic plant traits and the stability of an engineered crop will be discussed. Specific emphasis will be on different modes of inheritance that a transgenic plant can follow after its development and release into the environment. The course also prepares students for understanding the regulatory processes that are required for testing, moving, and environment release of transgenic crops. The laboratory component of the course will introduce students to the common technique of molecular biology that are used to detect expression in transgenic plants. Transgenic maize plants will be grown in a greenhouse and analyzed for expression of introduced genes.

Enforced Prerequisite at Enrollment: BMB 251 or MICRB 251 or BIOL 230W or BMB 251H or BIOL 230M

Cross-listed with: AGRO 460

BIOTC 479: Methods in Biofermentations

3 Credits

The overall goal of this course is to enable students to plan and execute fermentation processes approaching industrial scale. Students will get hands-on experience setting up and monitoring fermenters, as well as conducting practical experiments that include: 1) the effects of medium components on cell density, mixing, aeration and oxygen mass transfer in fermentation systems 2) analysis and control of key parameters for product optimization and 3) computer control of fermentation processes. In addition, the student will learn to prepare and complete documentation to support project goals that will meet GLP (good laboratory practice) standards, take proper laboratory notes on all procedures which are carried out in the laboratory, and present results to a group orally. The laboratory work will be supported by presentations and discussions on the fundamentals of microbial culture, aseptic techniques, kinetics of fermentation, recombinant microorganisms, scale-up strategies, downstream processing, economic considerations, regulatory aspects and cGMP (current good manufacturing practices).

Enforced Prerequisite at Enrollment: BMB 442 and (MICRB 201 or MICRB 201H) and (MICRB 202 or MICRB 203) and (BMB 252 or BMB 252H or MICRB 252 or BIOL 230W or BIOL 230M)

BIOTC 489: Animal Cell Culture Methods

3 Credits

The overall goal of this course is to introduce students to basic principles and techniques in animal cell culture. More specifically, the course outlines the importance of animal cell culture to the field of biotechnology as it applies to the pharmaceutical industry. Lecture discussions will be used to provide the necessary theoretical background in working with animal and insect cells, such as history of cell culture, media components, growth kinetics, principles of regulating biological products, cell line propagation, characterization, quality control and the complex issues of scale-up of cell culture from the research bench to larger reactors. Students will become familiar with the practical aspects of culturing and sub-culturing established cell lines and learn basic techniques such as creating a primary cell line, chromosome spreading and mycoplasma detection as well as maintaining insect cells. In addition to hands-on experiments, different methods and equipment employed in the scale-up of animal cell culture will be demonstrated and discussed in the laboratory.

Enforced Prerequisite at Enrollment: (MICRB 201 or MICRB 201H) and (MICRB 202 or MICRB 203) and (BMB 251 or BMB 251H or MICRB 251 or BIOL 230W or BIOL 230M)

BIOTC 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

Business Administration (BA)

BA 100: Introduction to Business

3 Credits

A comprehensive view of the contemporary environment of business. This course provides a broad overview of the study of business and its environment, organization, operation, and interrelationships with government and society. Topic areas include; economic systems, forms of business ownership, information, accounting, finance, management, marketing and supply chain principles, legal and regulatory environments, business ethics and international business. A student majoring in business will develop a broad basis for further study in a specific area in business, while other majors will become familiar with the American enterprise system and the functions and issues facing business today.

General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Creative Thinking
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

BA 100S: Introduction to Business

3 Credits

BA 100S is a broad overview of American business practices and policies. The course introduces the functions of business and how each interacts and shapes the legal, political, social, cultural and economic environments. Students who successfully complete this course will understand how a) the American free enterprise system operates b) businesses operate in our modern political, social, and economic environment c) how to analyze the methods and procedures used by people in business to arrive at effective decisions d) ethics and corporate social responsibility affect business decisions e) globalization has transformed American businesses.

First-Year Seminar
General Education: Social and Behavioral Scien (GS)
GenEd Learning Objective: Creative Thinking
GenEd Learning Objective: Crit and Analytical Think
GenEd Learning Objective: Key Literacies

BA 195: Cooperative Practicum with Business Offices

3-6 Credits/Maximum of 6

Cooperative practical work with business offices under the supervision of the instructor.

BA 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BA 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BA 241: Legal Environment of Business

2 Credits/Maximum of 2

Examines the legal system's role and impact regarding business transactions, liability issues, and ownership of intellectual property. Students earning credit for B A 241 may not earn credit toward Smeal College baccalaureate degree for B Law 243 and/or B A 243. B A 241 B A 241 Legal Environment of Business (2)As an integral part of planning and management responsibilities, a business decision-maker must be able to identify risks and opportunities from many sources. The legal environment represents a significant segment of the decision-maker's landscape. This survey course is designed to develop the student's awareness and recognition skills with respect to the major inputs in the increasingly complex commercial legal environment. Students in this course will examine the design and function of the U.S. legal system in its roles as protector of property interests and facilitator of business transactions. Alternatives to judicial resolution and enforcement will also be examined. In addition, students will learn about the legal issues affecting the formation and enforcement of business agreements. This will include studying the impact of our economy's continued shift to digital technology for communication and documentation. Finally, tort liability and intellectual property issues from a business perspective will be examined with a special emphasis upon issues created by the Internet's rapid growth. Students earning credit for B A 241 may not earn credit toward a Smeal College baccalaureate degree for B LAW 243 and/or B A 243.

BA 242: Social and Ethical Environment of Business

2 Credits

Explores the social and ethical environment of business and ethical decision making in a business context. B A 242 Social and Ethical Environment of Business (2) Modern businesses operate in an increasingly interdependent environment. The actions of businesses have major impacts on society. Conversely, society influences a wide range of corporate actions through laws and regulations as well as via public opinion and the media. With changes in information technology, corporate decisions that were once considered private are now subject to public scrutiny. Therefore, more than ever, these decisions must take into account the larger social environment. In this course, students will learn about a broad range of stakeholders and societal issues that affect corporate decision-making and they will consider the corporation's responsibility to society. They will also learn to apply ethical decision-making frameworks to a variety of ethical decisions faced by corporate managers. This course is taught in the sophomore year and therefore lays a broad foundation for other core business courses. For example, other courses tend to focus on a single stakeholder group such as customers (marketing), employees (management), or stockholders (finance). This course teaches students to think broadly about how a business fits into a more complex web of relationships within society.

BA 243: Social, Legal, and Ethical Environment of Business

4 Credits

Explores the ethical, political, social, legal and regulatory, technological, and demographic diversity environment of business. A student may not receive credit toward graduation for both B LAW 243 and B A 243.

United States Cultures (US)

BA 250: Small Business Management

3 Credits

Analysis of problems of the small firm, particularly for the student who wishes to venture into business.

Enforced Prerequisite at Enrollment: 3 credits in ECON

BA 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BA 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BA 299: Foreign Studies

1-12 Credits

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BA 301: Finance

3 Credits

The goal of BA 301 is to provide insight into the thinking of both the financial manager and the functional manager that is needed to effectively lead and manage not only their business organization but also their personal financial lives. The course will enable the student to learn the key financial concepts, constructs, and models that are used by financial managers every day around the world. Understanding of the mathematics of finance, the use of financial calculators, and development of Excel financial model problem solving will be emphasized. Ethical financial decision-making will be a common theme that is integrated throughout the course. Using a survey overview approach, the first third of the course will cover concepts such as financial statements and analysis, financial ratios and analysis, long-term financial planning and budgeting, time value of money, discounted cash flow analysis, capital budgeting, break-even analysis, and systematic/unsystematic risk. The second third of the course will provide an overview of financial topics that are normally covered in detail in financial markets courses. These topics include financial systems, money markets, the Federal Reserve and monetary policy, derivatives and speculative markets, and legal and operational issues in financial markets. The final third of the course will cover general personal finance topics of interest such as money management strategies, insurance and risk management, consumer credit, tax strategies, investing in stocks, bonds, and Exchange-Traded Funds, and retirement and estate planning. A student may receive credit toward graduation for only one of the following; BA 301, FIN 100, or FIN 301.

Enforced Prerequisite at Enrollment: ECON 102 or ECON 104

BA 301H: Finance and Financial Services

3 Credits

Overview of financial manager's role within the organization; investment, financing, and restructuring activities.

Honors

BA 302: Supply Chains

3 Credits

BA 302 provides non-business students with an introduction to the issues and decisions routinely faced by supply chain managers and the impact of effective supply chains on today's business environment. Using the Supply Chain Operations Reference model as a framework, this course considers how successful firms plan, integrate and execute sourcing, manufacturing, customer fulfillment, reverse logistics and sustainment processes across a complex marketplace to provide value to the customer. The course looks at the interplay and coordination of product, financial and information flows through a supply chain resulting in value creation for the customer and competitive advantage for the firm. Students will consider the roles of drivers such as cost, quality, time, flexibility, innovation and information sharing in designing supply chain strategies in support of overarching business strategies. Through detailed exploration of models, case studies and real world events, coupled with the application of operations management tools and techniques, the course provides the opportunity to identify and dissect issues, and develop solutions to supply chain challenges not only faced by today's business managers, but also impact the customer. The course examines supply chain organization, implementation and management planning, the evaluation and control of manufacturing processes, and the execution of supplier and customer management activities. Students will use basic information technologies and programs to leverage tools like business process mapping, value indexing, and total cost analysis to aid in the identification and mitigation of supply chain issues in a global business environment. Students will also be exposed to current supply chain issues such as sustainability and the impact of boundary-spanning information technologies as relevant keys to competitive advantage. The course provides the basic supply chain knowledge and skills necessary for the non-business major to be an effective member of a cross functional team in a professional business environment while providing a level of understanding to benefit the student in navigating the complex customer fulfillment issues present as a consumer of goods and services in today's globally connected marketplace. A student may not receive credit towards graduation for both BA 302 and and SCM 301.

Enforced Prerequisite at Enrollment: (ECON 102 or ECON 104) and ACCTG 211 and (SCM 200 or STAT 200 or STAT 250 or ECON 306 or IE 424 or DS 200)

BA 303: Marketing

3 Credits

BA 303 provides broad-based exposure and understanding of marketing and its processes. The course is a stand-alone marketing course for those interested in the role of marketing within the business context. It covers a range of topics from the basic (what is marketing), to the processes (market segmentation, marketing strategy, development of product, price, place and promotion), to the broader societal questions (why marketing exists, ethics, the future of marketing). There is also the opportunity to examine marketing from the perspective of various

industries for non-business students. Assessment will test factual knowledge of marketing and the marketing process. Written assignments will ask students to work both individually and in teams to apply course concepts. These can include assignments developing one's skill set in consumer psychology, target market selection, writing a positioning statement, developing a marketing plan, new product development concepts, promotional campaign ideas, and ethical questions to discuss and debate. Students may also be asked to form small groups for discussion and/or make presentations to the class based on set marketing topics specific to one's area of interest. Students will also be expected to participate in class discussions. A student may not receive credit towards graduation for both B A 303 and MKTG 221 or MKTG 221W. Furthermore, a student may not receive credit towards graduation for both B A 303 and MKTG 301 or MKTG 301W.

Enforced Prerequisite at Enrollment: ECON 102 or ECON 104

BA 303H: Honors Core Marketing

2 Credits

Junior Core Marketing - Honors Section. B A 303H Honors Core Marketing (2) This course is an exploration of fundamental concepts and issues in marketing. In this course, we will discuss what marketing is and learn to analyze the marketing environment and our potential customers. Based on these insights, we will then discuss strategy alternatives and the key functions of marketing. A project is a major component of the course.

Honors

BA 304: Management and Organization

3 Credits

BA 304 is an overview of a body of knowledge that exists concerning the management of modern organizations. Management is critical to business success no matter the industry, the field or the arena. Eight key functions for any manager will be covered - organizational structure, operations, staffing, recruitment, leadership, culture and ethics, planning, and innovative and responsible practices. A key take away for BA 304 is the difference between leadership and management and what do these terms mean. In recent years the focus has been on leadership as the preferred ability to strive for with management skills losing favor. In general, it has been said that leaders focus on "doing the right things" and managers focus on "doing things right". This will be a theme for review and discussion throughout the course as each subject area is covered. A student may not receive credit towards graduation for both B A 304 and MGMT 100 or MGMT 100W. Furthermore, a student may not receive credit towards graduation for both B A 304 and MGMT 301 or MGMT 301W.

Enforced Prerequisite at Enrollment: ECON 102 or ECON 104

BA 321: Contemporary Skills for Business Professionals

3 Credits

Emphasizes the development of individual, group, critical thinking, and presentation skills, through the application of modern method and business technology. B A 321 B A 321 Contemporary Skills for Business Professionals (3) This course is designed to provide fundamental skills necessary for success in the business environment. BA 321 is one of a series of courses that collectively develop the skills and competencies required of a successful business administration student. As a foundational course in the degree program BA 321 emphasizes the

following: -An introduction to student-centered learning, especially with opportunities for active and collaborative learning utilizing state of the art elements of technological business environment. -An introduction to inquiry-based processes necessary for understanding and addressing issues and opportunities in current and emerging business environment relevant subsequent course work in the student's chosen option and professional practice. -Development of basic communications skills, including oral, written, and multimedia, relevant to individual and group effectiveness. -Team building and participation while completing projects that focus on understanding individual and cultural diversity and respecting the views of others. Additionally, students develop an understanding of and competence in the multiple roles that define successful teamwork. -Establishing and respecting the roles within a team. -Awareness of the importance of the needs and opportunities of the community with which the individual contributes as a business professional. -Application of the hardware and software skills necessary for transferring knowledge of business topics in both face-to-face and virtual settings academic and professional.

Enforced Prerequisite at Enrollment: ACCTG 211 and (ECON 102 or ECON 104) and ENGL 15 and Concurrent: (SCM 200 or STAT 200) and MIS 204

BA 322: Negotiation Skills for Business Professionals

3 Credits

Emphasizes the preparation and conduct of business negotiations in a range of situations. B A 322 Negotiation Skills for Business Professionals (3) This course integrates the experiential and intellectual components of negotiation. Course instruction and learning activities emphasize the preparation for and conduct of business negotiations in a range of situations. These situations include integrative and distributive scenarios, development of negotiation relationships, and negotiation in multi-organization, multi-industry, multi-cultural, and multi-national environments. Basic negotiation theories will be addressed and applied through the recognition and the resolution of conflict by applying various bargaining strategies. Students will learn how to prepare for a negotiation event. Students will learn to select the appropriate negotiation strategies in order to match the needs of the situation. Students will develop the negotiation skills needed to meet the challenges facing today's executives. Students will develop the sophistication to analyze bargaining and conflict relationships, and an awareness of their individual bargaining style. Students will apply various techniques in order to: understand the basic elements of negotiation; make informed decisions about continuing a negotiation or walking away; participate or lead in team-based negotiations; and effectively manage international negotiations. A primary component of this course is application of negotiation theories through exercises in which the student assumes various roles within a negotiation scenario. Through practice and role playing, students will develop effective personal and professional negotiation skills.

Enforced Prerequisite at Enrollment: ACCTG 211 and (ECON 102 or ECON 104) and ENGL 15 and Concurrent: (SCM 200 or STAT 200) and MIS 204

BA 342: Socially Responsible, Sustainable and Ethical Business Practice

3 Credits

Course examines actions taken by corporations that impact global citizenship, environmental sustainability, and the economic stability of international societies. It further looks at relationships, rights, and

responsibilities between businesses, business decision-makers and their stakeholders. B A 342 Socially Responsible, Sustainable and Ethical Business Practice (3) Businesses and other large organizations have come to influence nearly all aspects of life in contemporary industrialized societies. The actions taken by businesspeople have major impacts on individuals and on society as a whole. Conversely, the expectations of citizens and their representative bodies (e.g., governments, communities, unions, interest groups) influence a wide range of corporate actions. Students of B A 342 will examine these relationships, rights, and responsibilities between businesses, business decision-makers and their stakeholders. As students enter their field of study, this course will introduce them to current ethical, social responsibility and sustainability issues that face business practitioners within their field and across related disciplines. Each business function — accounting, finance, marketing, risk, supply chain, human resource policies, etc. — has relationships and responsibilities within the larger social environment. This course considers commonalities across the business functions and teaches students to think broadly about how a business fits into a more complex web of relationships within society. The course begins with an overview of the corporation's place and role in society as well as key concepts in understanding why knowledge related to corporate governance, ethics, sustainability and social responsibility issues is critical to professional managers' responsibility and long-term career success. The stakeholder model is reviewed along with the study and application of ethical decision-making frameworks to current ethical dilemmas. Sustainability and global responsibility are introduced within the context of government regulation versus responsible stewardship. The closing section of the course provides thought and discussion on issues facing business practitioners across key business functions.

Enforced Prerequisite at Enrollment: (MGMT 301 or MGMT 301W or BA 304) Concurrent: (FIN 301 or BA 301) and (MKTG 301 or BA 303) and (SCM 301 or BA 302)

BA 364Y: International Business and Society

3 Credits

Business organizations and the sociocultural environment; current issues; corporate responsibility; international and multinational business environments. B A 364Y B A 364Y International Business and Society (3) (US;IL) This writing-intensive course will provide an overview of the relationship between business organizations and the sociocultural environment. Current issues in the media and the scholarly literature will be used to discuss and analyze this relationship. Special attention will be given to the topics of business and government relationships, corporate responsibility, environmental issues, and topics related to international and multinational business environments.

Enforced Prerequisite at Enrollment: ENGL 202D and MGMT 301

International Cultures (IL)
United States Cultures (US)
Writing Across the Curriculum

BA 395: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: prior approval of proposed assignment by instructor.

BA 395A: Practicum in Business Administration

1 Credits/Maximum of 1

Professional and guided work experience in business administration with private or public organizations. May be taken only as an elective.

Enforced Prerequisite at Enrollment: fifth-semester standing
Full-Time Equivalent Course

BA 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

BA 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BA 411: Analyzing Business and Industry

3 Credits

Prepares students to obtain an enterprise-wide view of business and industry by integrating operational and financial decisions in a team and learning environment. B A 411 B A 411 Analyzing Business and Industry (3) The course provides the students with a methodology for analyzing the business, introduces the students to sources of financial information available from private and public sources and trains the student to prepare and professionally present business analysis reports. The course, which adopts a user perspective, extends the students' basic knowledge of financial reporting and provides them with a broader context for understanding business that includes economic and social forces, the regulatory environment of businesses and their financial reporting, capital market operations and corporate governance. It applies concepts and decision tools that are studied throughout the curriculum such as present value, financial ratio analysis, break-even point analysis and statistical analysis.

Enforced Prerequisite at Enrollment: ACCTG 211 and (BA 301 or FIN 301) and (BA 302 or SCM 301) and (BA 303 or MKTG 301) and (BA 304 or MGMT 301)

BA 412H: Honors Integration and Research

2-3 Credits

The integration of the business core into a detailed financial, strategy and market analysis of actual companies selected by student teams. BA 412H Honors Integration and Research (2-3 credits) The purpose of this course is to assist students in developing their Schreyer Honors Thesis. It proceeds by exposing students to research conducted within the various business majors; the research conducted by prior honors students; and having student teams conduct research on contemporary businesses and industries. Typical readings include materials related to evaluating an actual company, prior Schreyer Honors theses, contemporary business articles, prior course projects and supporting academic literature. Written company analyses and oral presentations are made by the teams.

Enforced Prerequisite at Enrollment: ACCTG 211 and (BA 301 or FIN 301) and (BA 302 or SCM 301) and (BA 303 or MKTG 301) and (BA 304 or MGMT 301)

Honors

BA 420: Preparation for Career Management

1 Credits

This course emphasizes effective career planning by closely examining oneself, the business world, communication styles and strategies. BA 420 Preparation for Career Management (1) BA 420 develops students' career preparation and management skills through the close examination of self, the world of work and communication styles and strategies. This course is one of a series in the program which collectively develop the skills and competencies necessary for the business administration student. The course is designed on the belief that (1) career decision-making is greatly enhanced by considering personal traits such as one's interests, values, goals, and approach to making decisions; and (2) through the exploration of self and world through out-of-classroom learning experiences. The student becomes empowered to apply prior classroom learning outside of the academic environment. These skills are utilized throughout a person's career. Students who successfully complete the course will be able to: -Prepare resumes targeted to a range of industries and positions. -Write effectively to prospective employers. -Identify personal traits and qualities in the context of career management. -Demonstrate effective interview techniques.

Enforced Prerequisite at Enrollment: BA 321 or BA 322

BA 421: Project Management

3 Credits

Introduction to Project Management covering all phases of a project including proposal development, planning, execution, and closing. BA 421 Project Management (3) BA 421 is designed to provide the fundamental skills necessary for success in the business environment. BA 421 is one of a series of courses that collectively develop the skills and competencies necessary for business administration students. BA 421 is designed to provide students with the fundamental understanding of the Project Management Book of Knowledge that defines the standards of the Project Management Institute (PMI) which is the professional credentialing body of the discipline. This introductory course in project management covers all phases of a project, including; proposal development, planning, execution and closing. The course will also explore the application of the Theory of Constraints to project management, and will use project management software to demonstrate and reinforce class concepts. The software will also be instrumental in the execution of a business project. By the end of the proposed new course, students should be able to: • Identify the role of the project manager within organizations and projects. * Understand the Processes and Procedures needed to Plan and Control a Project. * Recognize the options available as well as the inherent strengths and weaknesses of different approaches. * Define the project scope and priorities. * Create Work Breakdown Structure (WBS) and integrate it with the organization. * Estimate and interpret project times and costs. * Construct project networks and find critical paths. * Understand and Implement Activity Precedence Logic * Identify, assess and respond to project risks. * Schedule project resources and evaluate resource constrained projects. * Differentiate between the options to accelerate project completion. * Use Microsoft Project Management Software as a skilled tool for Project Management.

Enforced Prerequisite at Enrollment: BA 321 or BA 322

BA 422W: Strategic Business Planning

3 Credits

Study of strategic planning and implementation in multi-industry, multi-cultural, and multi-national settings with emphasis on sustaining competitive advantages. BA 422W Strategic Business Planning is the capstone of the series of business administration courses in the BSB degree. These courses collectively develop the skills and competencies necessary for the business administration student. BA 422W is designed for students to examine the discipline of strategic management and to develop an appreciation of the criticality of strategic management in guiding a business entity through a changing and challenging environment. The course requires students to build upon their knowledge of business structure, internal and external environments, and functional design as each relates to strategy development and implementation. Students explore methods and techniques to identify strategies best suited to accomplish an entity's mission and its business objectives. As a writing intensive (W) course, there is a strong emphasis on development and reinforcement of effective writing skills. Students prepare well reasoned, organized, and constructed bodies of work. Upon successful completion of the course, students will be able to: 1. Identify environmental threats and opportunities impacting a firm. 2. Identify strengths, weaknesses and competencies of a firm. 3. Effectively apply critical thinking skills to design strategic alternatives and then the best Alternative. 4. Critique and evaluate strategic actions taken by firms. 5. Explain the profound effects that a strategic move (either at the corporate level or at the business level) can have on the entire organization. 6. Demonstrate exceptional skills in presenting complex business information and issues. 7. Efficiently research a firm or industry using a variety of sources. 8. Demonstrate proficiency in analyzing business cases and formulating well reasoned recommendations when no "right" answer exists. 9. Demonstrate effective leadership skills in a group environment.

Enforced Prerequisite at Enrollment: BA 321 and BA 322 and BA 421 and FIN 301 and MGMT 301 and MKTG 301 and SCM 301
Writing Across the Curriculum

BA 441: Strategies for Enterprise Sustainability

3 Credits

An understanding and analysis of how environmental and sustainability issues are impacting business strategies and ultimately profits. BA 441 Strategies for Enterprise Sustainability (3) Enterprise globalization warrants a greater level of awareness and responsibility in seeing that products and services maintain a high level of integrity, quality, and reliability; products need to be produced and moved throughout the supply chain in a manner that does not cause unacceptable environmental or social burdens, but that also allows for acceptable profits. We will examine both external and internal forces, such as environmental groups, policy-makers, and consumers that impact business strategies. This will be put into the context of the "triple bottom line" with an understanding of its challenges and opportunities. Business students will benefit by a better understanding of environmental/ sustainability issues that impact operations and strategies. Students will learn via analyses of cases studies and by working in teams to solve real-world problems faced by chosen organizations. Focus will include all key aspects of an enterprise, from procurement to product development, and from human resources to supply chain solutions.

Enforced Prerequisite at Enrollment: BA 342

BA 442: Sustainable Behavior of Consumers, Firms, and Societies

3 Credits

Sustainability is a broad domain concerning the extent to which environmental, economic, and social practices are viable for current and future generations. Consumer awareness of sustainability issues has evolved from an emerging social movement to mainstream values, but increasing sustainable behavior remains a challenge. This course is designed to provide students with the knowledge to enhance sustainable behaviors in firms, among consumers, and in society at large. In doing so, this course will include frameworks for understanding how to influence sustainable practices, consumer response to sustainability, and marketing communication issues as well as real-world examples of sustainable practices and issues, offering both a theoretical and applied approach. The course may also include a project which will entail student teams working on a real-world sustainable behavior problem in collaboration with a business or segment of the university campus when available or other course project addressing a relevant sustainability issue. Students should leave the course with an understanding of sustainability issues in the current marketplace and the knowledge and ability to influence sustainable behaviors. Students will enter their career with the knowledge and skills to be a sustainable business decision-maker and foster sustainable behavior.

Enforced Prerequisite at Enrollment: BA 342 or SUST 200 or CED 152
Cross-listed with: MKTG 442

BA 462: Business Strategy

3 Credits

Interpretation of business concept in the analysis of problems related to the successful management of a company, institution, or organization. Business Strategy is the study of managerial decisionmaking in a firm's competitive space. As such, the course focuses on the formulation and implementation of corporate strategy sets as if the student was on the top management team (TMT) inside a forprofit organization. The course covers topics such as decisionmaking under uncertainty, environmental scanning and sequential updating, industry structure, the firm's regulatory constraints, relative bargaining power, Porters Five Forces, industry barriers to entry, industry value chain analysis, firm-level resources and capabilities, competitive advantage, corporatelevel strategy, businesslevel strategy, and collaborative strategies such as franchising, licensing and joint ventures. The overarching goal of the strategic manager is to ensure that the firm survives and thrives and, with these goals in mind, Business Strategy addresses the actions and outcomes to corporate decisionmaking. The course has a number of objectives in addition to learning and retaining information on the aforementioned topics. These include (i) obtaining critical thinking skills necessary to function as a strategic manager or to perform the tasks comprising the strategic management process, (ii) integrate and apply the knowledge accumulated in various functional areas, such as marketing, human resource management, operations, accounting and finance, (iii) prepare you for management careers by providing inclass opportunities for you to enhance your ability to communicate orally and in written formats, (iv) to lead and to work with others in realistic work settings, (v) expose you to the ethical and societal issues raised in operating an enterprise, and (vi) to provide you with experience in dealing with real strategic decision issues facing managers in all types of organizations. This is accomplished through a number of pedagogical

mechanisms that include news articles, case studies, academic articles, documentaries, simulations and written assignments.

Enforced Prerequisite at Enrollment: FIN 301 and MGMT 301 and MKTG 301 and BA 364Y and seventh-semester standing or higher

BA 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

BA 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

BA 495: **SPECIAL TOPICS**

3-9 Credits/Maximum of 9

BA 495A: Business Internship

3-6 Credits/Maximum of 6

B A 495A Business Internship (3-6 per semester/maximum of 6) B A 495A facilitates the application of students' prior classroom learning in a field setting. This course is one of a series in the business program which collectively develop the skills and competencies necessary for success as a business administration student. The course is designed to provide students with a firsthand opportunity to experience the challenges and rewards of the business professional. Essentially, an internship bridges the gap between the academic environment and the professional environment. Internships provide an opportunity for students to link theory with practice in a nonacademic setting. Internships provide practical, real-world experiences which cannot be simulated in the classroom. Upon successful completion of an internship, students will: -Have a better understanding of employer expectations related to career advancement. -Have an enhanced strategic view of the industry/business segment in which they worked. -Have experience integrating and using their knowledge and skills from the classroom. -Have increased awareness of professional and technical areas of strengths and weakness.

Enforced Prerequisite at Enrollment: BA 321 and BA 322 and BA 420 and Permission of program.

BA 495B: Undergraduate Research in Business

3-6 Credits/Maximum of 6

B A 495B Undergraduate Research in Business (3-6 per semester/ maximum of 6) BA 495B provides students an opportunity to apply prior coursework to address a business problem or research question in far greater depth than a traditional research paper. This course is one of a series in the business program which collectively develop the skills and competencies necessary for success as a business administration student. The course provides the students with an opportunity to work intensively on a research project of extended duration and depth of analysis with a supervising faculty member. This course introduces the students to conducting business research on a more advanced level.

Students will have the opportunity to develop the research question(s), read extensively in the academic literature, gather and analyze data, and thereby extend learning from prior coursework in a research setting.

Enforced Prerequisite at Enrollment: BA 321 and BA 322 and BA 420 and Permission of program.

BA 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BA 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BA 499: Foreign Study--Business Administration

1-18 Credits/Maximum of 18

Study in selected countries of business institutions, functions, and current business problems.

Enforced Prerequisite at Enrollment: ACCTG 211 and (ECON 102 or ECON 104) and (SCM 200 or STAT 200)

International Cultures (IL)

Business Law (BLAW)

BLAW 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BLAW 243: Legal Environment of Business

3 Credits

Social control through law: courts, basic policies underlying individual and contractual rights in everyday society. May not be used to satisfy Smeal College baccalaureate degree requirements. Not available to students who have taken B A 243.

Enforced Prerequisite at Enrollment: third-semester standing

BLAW 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BLAW 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BLAW 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BLAW 341: Business Law I: Introduction to Contracts, Liability Issues, and Intellectual Property

3 Credits

An introduction to the business environment emphasizing business contracts, liability issues arising from business relations, including those in the internet realm and intellectual property issues. Alternative dispute resolution and global perspectives will be integrated throughout. B LAW 341 Business Law I: Introduction to Contracts, Liability Issues, and Intellectual Property (3) Business decisions have legal consequences. Such decisions can represent both legal risks and opportunities. It is important for one entering business to have a fundamental understanding of the governing legal principles. This course will provide an introduction to the U.S. legal system, coverage of the major components of contract law, and an examination of business liability issues under tort law. In addition, the intellectual property issues of trade secrets, trademarks, patents, and copyrights will be covered. The impact of digital technology and business globalization will be integrated into each topic discussed. The course will be taught in a lecture-discussion format to encourage interaction and exploration of difficult issues. The course text and materials will include key business legal cases.

Enforced Prerequisite at Enrollment: (MGMT 301 or MGMT 301W or BA 304) and Enforced Prerequisite or concurrent at Enrollment: (FIN 301 or BA 301) and (MKTG 301 or MKTG 301W or BA 303) and (SCM 301 or BA 302)

BLAW 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BLAW 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

BLAW 424: Real Estate Law

3 Credits

Analyze contemporary law applicable to various types of ownership interests and rights, methods of transferring ownership, and use of real property. B LAW 424 B LAW (R M) 424 Real Estate Law (3) Analysis of contemporary law applicable to various types of ownership interests and rights, methods of transferring ownership, and use of real property. The objectives for this course are: (1) to provide students with an understanding of essential U.S. real estate property law, including the rights private property owners may obtain, how ownership and transfer are handled in view of present and future interests, constitutional issues that impact real estate ownership, and the legal aspects of modern real estate contractual transactions; (2) to teach students the ability to

spot the legal issues arising from the above as future business leaders and (3) to introduce students to the legal reasoning process necessary to address and avoid the legal dilemmas presented by such issues. Instructional methods for the course will include detailed lectures and classroom discussion of readings and other materials. Student progress and mastery of the material will be evaluated through periodic examinations.

Enforced Prerequisite at Enrollment: BLAW 341 or BLAW 243

Cross-listed with: RM 424

BLAW 441: Business Law II: Agency, Employment and Business Structure

3 Credits

An examination of the laws governing agency relationships, employment, and the various structures of commercial enterprises.

Enforced Prerequisite at Enrollment: BLAW 341 and (FIN 301 or BA 301)

BLAW 444: Advanced UCC and Commercial Transactions

3 Credits

All articles of the Uniform Commercial Code, banking relationships, debtor- creditor law, and bankruptcy law. B LAW 444B LAW 444 Advanced UCC and Commercial Transactions (3) This course is designed to: (1) provide the student with a systematic study of the laws governing sales transactions, the instruments for financing those transactions and rights and liabilities of debtors and creditors (the Uniform Commercial Code governs these issues); (2) to explore current trends in the law affecting commercial transactions; (3) to develop further the student's legal reasoning processes; (4) to enhance the student's ability to identify legal issues from the business decision maker's and financial auditor's perspectives. Instructional methods will include lectures, readings, multimedia content, and class discussions. Student progress and mastery of the material will be evaluated through periodic examinations. Some state C.P.A. Boards require completion of this course as a prerequisite to obtaining certification as a public accountant. Completion of the course will be credited toward fulfillment of the requirements for the Legal Environment of Business Minor.

Enforced Prerequisite at Enrollment: (BLAW 341 or BA 241 or BA 243) and ACCTG 211 and (FIN 301 or BA 301)

BLAW 445: Advanced Intellectual Property and Competition Law

3 Credits

Copyrights, trademarks, patents, and trade secrets followed by related topics in the regulation of competition. B LAW 445 Intellectual Property & Competition Law (3) The objectives for this course are to (1) provide students with an understanding of U.S. and international law that supports the creation of beneficial information via intellectual property rights, allows government to regulate information property through antitrust and privacy statutes, and promotes business development by encouraging competitive uses of information; (2) teach students the ability to spot the legal issues arising from the above as future business leaders and (3) introduce students to the legal reasoning process necessary to address and avoid the legal dilemmas presented by such issues. Instructional methods for the course will include detailed lectures and classroom discussion of readings and other materials. The course builds on the introductory business law curriculum by providing

an advanced and detailed study of specific areas of law that are highly valuable to modern, technology-driven businesses.

Enforced Prerequisite at Enrollment: BLAW 441

BLAW 446: Employment Law

3 Credits

Examines the legal and regulatory environment of employment relationships. Topics include anti-discrimination; worker health and safety; and labor relations laws. B LAW 446 Employment Law (3) The course is designed for business students seeking a solid understanding of labor relations and employment law. It is not a general overview or introduction to law course for those seeking to enter law school. Labor and employment law has developed and changed over the past seven decades, and continues to evolve as the economic model and means of productions changes globally. With the passing of the National Labor Relations Act and subsequent amendments thereto, including development in the ability of public employees to engage in concerted activity, the understanding of the modifications in the employer-employee relationships is necessary for successful business executives and front-line managers. While a thorough understanding of the underpinnings of these laws is necessary, this is only a portion of the issues at hand. The ability to apply these laws in current working environments along with interpreting and critiquing these laws will assist in the preparation of future corporate managers. The course goes into detailed discussion regarding the employment at will doctrine, wrongful discharge, workplace torts, and employee privacy and monitoring. With this foundation, the course then covers civil rights and discrimination based on race, color, religion, gender, sexual orientation, family obligation, disability, and national origin are covered using Supreme Court cases that have tested the validity and soundness of our federal legislation. The closing part of the course focuses on organized labor through the process of unionizing and union membership, negotiations and economic pressure used to obtain concessions in collective agreements. Additionally, fair labor laws and occupational health and safety requirements to diminish workplace accidents and improve productivity is discussed. For each of the topics presented, detailed analysis of prominent cases will be discussed with the expectation that students can apply these case decisions to current employer/employee situations. Exposure to differing opinions, reversed rulings, and detailed legal processes will provide students with a broad understanding of the complex nature of legal proceedings and how these processes impact labor and employment relations in the United States. Content synthesis and critical analysis are the learning goals of the course.

Enforced Prerequisite at Enrollment: BLAW 441

BLAW 447: Entertainment Law

3 Credits

This course covers legal issues that arise in various entertainment industries through discussion of contemporary issues along with personality rights and intellectual property rights associated with entertainment assets. Issues will be covered within the context of business models, pervasive pop-culture influences affecting entrepreneurial activities, business transactions and contractual provisions unique to creative industries, commercialization of celebrity image, rights of privacy of public figures, defamation, related advanced copyright and trademark issues, ethics and fiduciary responsibilities, and other emerging topics. Students will be introduced to the legal reasoning process necessary to analyze these issues in context and compose

creative solutions that both address and avoid the legal problems presented. Instructional methods for the course will include lecture and classroom discussion focused on readings and other materials. The course builds on the introductory business law curriculum by providing an advanced study of legal principles highly relevant to businesses that employ, promote, or monetize creative talent. Upon completion of the course, students should understand the legal concepts impacting the entertainment industry and the impact this has on talent, intellectual ownership, copyrights and trademarks.

Enforced Prerequisite at Enrollment: BLAW 341

BLAW 494: Research Project

1-12 Credits/Maximum of 999

Supervised student activities on research projects identified on an individual or small-group basis.

BLAW 494H: Research Project

1-12 Credits/Maximum of 999

Supervised student activities on research projects identified on an individual or small-group basis.

Honors

BLAW 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

BLAW 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BLAW 498: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

BLAW 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Chemical Engineering (CHE)

CHE 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CHE 99: Foreign Studies

1-3 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

CHE 100: Exploring Chemical Engineering First-Year Seminar

1 Credits

The exploration of Chemical Engineering and available career opportunities.

First-Year Seminar

CHE 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CHE 210: Introduction to Material Balances

3 Credits

An integrated approach to the study of material balances and industrial chemical processes important in chemical engineering. The objective of this course is to present an introduction to chemical engineering calculations, establish mathematical methodologies for the computation of material balances and to present an overview of industrial chemical processes. It is the introductory course in the chemical engineering curriculum and is normally taken in the sophomore year. It is prerequisite for several junior-level courses in the curriculum, including courses in process fluid dynamics, heat transfer and phase equilibrium.

Enforced Prerequisite at Enrollment: MATH 141 and CHEM 112

CHE 210H: Introduction to Material Balances (Honors)

3 Credits

An integrated approach to the study of material balances and industrial chemical processes important in chemical engineering. The objective of this course is to present an introduction to chemical engineering calculations, establish mathematical methodologies for the computation of material balances and to present an overview of industrial chemical processes. It is the introductory course in the chemical engineering curriculum and is normally taken in the sophomore year. It is prerequisite for several junior-level courses in the curriculum, including courses in process fluid dynamics, heat transfer and phase equilibrium.

Enforced Prerequisite at Enrollment: MATH 141 and CHEM 112
Honors

CHE 220: Introduction to Chemical Engineering Thermodynamics

3 Credits

This is the introductory course in chemical engineering thermodynamics and is normally scheduled in the sophomore year. It places emphasis in the development of the theory of thermodynamics of pure fluids with applications to small- and large-scale processes with multiple streams and energy exchanges, computation heat and work loads, and assessment of efficiency with respect to energy utilization. Starting from small units, such as pumps, compressors, turbines, and heat exchangers,

examples grow to include large systems such as power plants and refrigeration cycle, that may involve many interconnected units and recycle streams. A parallel focus of the course is in the computation of thermodynamic properties through the use of charts, tables, and equations of state with emphasis on non-ideal systems.

Enforced Prerequisite at Enrollment: MATH 141 and CHEM 112

CHE 220H: Introduction to Chemical Engineering Thermodynamics (Honors)

3 Credits

This is the introductory course in chemical engineering thermodynamics and is normally scheduled in the sophomore year. It places emphasis in the development of the theory of thermodynamics of pure fluids with applications to small- and large-scale processes with multiple streams and energy exchanges, computation heat and work loads, and assessment of efficiency with respect to energy utilization. Starting from small units, such as pumps, compressors, turbines, and heat exchangers, examples grow to include large systems such as power plants and refrigeration cycle, that may involve many interconnected units and recycle streams. A parallel focus of the course is in the computation of thermodynamic properties through the use of charts, tables, and equations of state with emphasis on non-ideal systems.

Enforced Prerequisite at Enrollment: MATH 141 and CHEM 112 Honors

CHE 230: Computational Tools for Chemical Engineering

1 Credits

This 1-credit course will cover the key computational tools needed by Chemical Engineering students. CHE 230 Computational Tools for Chemical Engineering (1) This 1-credit course will cover the key computational tools needed by Chemical Engineering students. Specific topics of interest include: constructing high quality graphs, statistics and linear regression, solving coupled algebraic equations, solving ordinary and partial differential equations, and matrices.

Enforced Prerequisite at Enrollment: MATH 251

CHE 294: Research Project

1-12 Credits/Maximum of 12

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

CHE 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CHE 296H: Individual Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

Honors

CHE 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CHE 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CHE 300: Professional Development Seminar

1 Credits

Lectures and discussion by visiting engineers and faculty on chemical engineering, job selection, patents, licensing, ethics, and other professional problems. CHE 300 Professional Development Seminar (1) The course objective is to offer an orientation to the chemical engineering profession and to promote professional attributes such as professional ethics, lifelong learning, and awareness of environmental and societal factors and to highlight their importance in the career lives of chemical engineers. The course consists of a one-hour lecture each week by visiting speakers and Penn State faculty. For some lectures, reading material is distributed a week before the lecture and in some cases, the students must turn in the questionnaire in which they have to answer various questions related to the topic of that week. The topics vary from year to year, but several key topics are included each time the course is taught: ethics, environmental issues, process safety, patent law and intellectual property, graduate school, and job opportunities in various industries.

Enforced Prerequisite at Enrollment: Fifth semester standing

CHE 320: Phase and Chemical Equilibria

3 Credits

The course covers the fundamentals of phase and chemical equilibrium with emphasis on vapor/liquid systems and their applications to separation processes. It is the second course in chemical engineering thermodynamics and leads to the study of separations and reacting systems. Computational methodologies are presented for the calculation of the properties of mixtures and the construction of phase diagrams (P-x-y, T-x-y) using activity coefficients or equations of state. The theory is applied to the analysis of equilibrium stage separation such as distillation and extraction, including the construction of McCabe-Thiele diagrams. In the last portion of the course the principles of equilibrium are further applied to chemically reacting systems.

Enforced Prerequisite at Enrollment: C or better in CHE 210 and C or better in CHE 220 and MATH 231

CHE 330: Process Fluid Mechanics

3 Credits

This course introduces the principles of fluid mechanics that are of fundamental importance to chemical engineers. Students learn to perform scaling and dimensional analysis in physical systems. Student learn to apply microscopic and macroscopic mass, energy, and momentum balances in flowing systems, and apply them to determine

flow patterns for Newtonian fluids in simple geometries. These principles are applied to design flow equipment.

Enforced Prerequisite at Enrollment: MATH 251 and C or better in CHE 210

CHE 340: Introduction to Biomolecular Engineering

3 Credits

This course introduces students to the concepts and principles needed to apply chemical engineering principles to the design, modification, and analysis of biological systems for biotechnology applications. Students will learn to use appropriate search engines to find genes and proteins with desired regulatory or biocatalytic properties. The course will cover the similarities and differences between biological and chemical processes; statistical analyses of measurements and data; and estimation of enzymatic and growth kinetic parameters.

Enforced Prerequisite at Enrollment: BMB 251 and CHEM 212 and MATH 251 and C or better in CHE 210

CHE 350: Process Heat Transfer

3 Credits

The objective of the course is to introduce to students heat transfer mechanisms in solids and fluids and their chemical process applications. At the conclusion of the course, the student should possess the ability to model steady and unsteady heat transfer in simple systems, and design heat exchangers and heat exchanger networks. The development of the material of this course requires use of thermodynamics and fluid mechanics, and sets the basis for the design of reactors and separation processes.

Enforced Prerequisite at Enrollment: MATH 251 and CHE 230 and C or better in CHE 210

CHE 360: Mathematical Modeling in Chemical Engineering

3 Credits

Mathematical model formulation for chemical and physical processes, including applications of ordinary differential equations and numerical methods. CHE 360 Mathematical Modeling in Chemical Engineering (3) This course covers the applied mathematical techniques necessary for the simulation of physical and chemical processes such as mass transfer and reacting systems, and the analysis of process dynamics. In the former area, the formulation of ordinary differential equations for a variety of situations of interest to chemical engineers is considered. Numerical methods and mathematical packages that form the basis for computer simulations are emphasized. In the latter area, the notions of steady-state, stability and controllability are introduced. The tools discussed in this course are used in subsequent courses on the analysis and design of chemical reactors and mass transfer processes.

Enforced Prerequisite at Enrollment: MATH 230 and MATH 251 and C or better in CHE 210

CHE 396: Independent Studies

1-6 Credits/Maximum of 12

CHE 396 is for creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses. CHE 396 is an "Independent Studies" course.

CHE 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CHE 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CHE 410: Mass Transfer Operations

3 Credits

The objective of this course is to present the principles of mass transfer and their application to separation and purification processes. The course develops rate expressions for mass transfer in multiphase, multicomponent systems based on diffusion and convective processes. Starting with Fick's law and macroscopic balances the course moves to the design of large scale separation processes including equilibrium stage and continuous separations for the separation and purification of chemical compounds. Specific separation operations analyzed include distillation, absorption, extraction, membrane units, adsorption. The course also introduces the use of modern software tools in the design of such processes.

Enforced Prerequisite at Enrollment: CHE 230 and CHE 320 and (CHE 330 or CHE 350)

CHE 412: CHE and the Environment

3 Credits

In this course students will apply chemical engineering principles to important environmental problems. These chemical engineering principles include: Material balances, Thermodynamics, phase and chemical equilibrium, transport and chemical kinetics. These principles are critical to solve current environmental challenges such as access to safe drinking water, remediation of contaminated sites and sustainability of chemical processes in the field. In addition to the application of these principles, students will learn the history of the environmental field such as the first use of chlorine as a disinfection, the advent of an activated sludge tank and the development of the first environmental laws. Combining these will allow students to design solutions for current challenges such as emissions of carbon dioxide and excess waste.

Enforced Prerequisite at Enrollment: CHE 210 and CHE 220 and CHE 320 and CHE 330

CHE 423: Chemical Energy Technology

3 Credits

This course provides an overview of current and prospective chemical energy storage and conversion technologies. CHE 423 Chemical Energy Technology (3) This course provides an overview of chemical energy storage and conversion technologies. Current fossil fuel based conversion processes in power plants and transportation applications will be surveyed. The course will emphasize critical evaluation of alternative conversion technologies, with the goal of providing the skills for quantitative assessment of the potential of various storage and conversion technologies. Current conversion technologies surveyed will include coal power plants, petroleum refineries, and internal combustion engines. Alternative technologies will consider unconventional fossil fuel processing, electrochemical energy conversion, solar energy conversion, and agricultural/biological fuel conversion. A semester long student project will involve generation of a future energy scenario 25-50 years in the future. The class structure is interactive, with readings motivating class period discussions.

Enforced Prerequisite at Enrollment: C or better in CHE 210 Enforced Concurrent at Enrollment: CHE 320

CHE 430: Chemical Reaction Engineering

3 Credits

This course teaches the principles of reaction engineering and reactor design. It is one of the core subjects in the chemical engineering curriculum and it is normally scheduled in the senior year. Students learn how to apply stoichiometry in combination with a rate law to design a chemical reactor that produces the desired conversion of reactants and selectivity to products. Students will formulate rate laws from various sources, including experimental data and sequences of elementary reaction steps. The design of various types of chemical reactors is discussed at length, including continuous stirred-tank (CSTR), plug-flow (PFR), continuous-operation and batch-operation reactors, and isothermal vs non-isothermal reactors. Additional topics include heterogeneous reactors, catalytic systems, and the design and optimization of reactor networks. It leads to the capstone design course in which chemical reactors are integrated into a chemical plant.

Enforced Prerequisite at Enrollment: CHE 320

CHE 432: Petroleum Processing

3 Credits

Transportation of people and goods in many parts of the world depend almost completely on petroleum fuels, such as gasoline, jet fuel, diesel fuel, and marine fuel. Apart from the fuels, materials that are necessary for operating the combustion engines of cars, trucks, planes, and trains also come from petroleum. These materials include lubricating oils (motor oils), greases, tires on the wheels of the vehicles, and asphalt to pave the roads for smooth rides in transportation vehicles. All petroleum fuels and many materials are produced by processing of crude oil in petroleum refineries. Petroleum refineries also supply feedstock to the petrochemicals and chemical industry for producing all consumer goods from rubber and plastics (polymers) to cosmetics and medicine. This course explains how physical processes and chemical reactions that take place in separate petroleum refinery units are integrated to convert crude oil into desired fuels and materials. Refinery processes are divided into four types that include separation, conversion, finishing, and support.

The overall objective of petroleum refining is to convert crude oil into fuels and materials that comply with commercial specifications and environmental regulations. All refining processes and refinery operations are also subjected to the applicable environmental regulations. A historical evolution of process concepts is introduced to demonstrate how the refining efficiency has increased with significant reduction of pollutant emissions from individual refinery processes. The principal objectives of this course are to enable students to: 1. explain the market drivers for the refining industry (ABET student outcome 2). 2. indicate what crude oils consist of and how crude oils are characterized based on their physical properties (ABET 1, 2); 3. express the objectives of petroleum refining and classify the processes used in petroleum refining (ABET 1, 2, 7); 4. demonstrate how a petroleum refinery works and sketch a flow diagram that integrates all refining processes and the resulting refinery products (ABET 2); 5. examine how each refinery process works and how physical and chemical principles are applied to achieve the objectives of each refinery process (ABET 1, 2, 7); 6. assess implications of changing crude oil feedstocks on refinery configuration and propose strategies to resolve conflicts with degrading crude oil quality and increasingly stringent environmental regulations on petroleum fuels (ABET outcome 4, 7); 7. discuss different sources of natural gas and explain how natural gas is processed at well sites and in processing plants with application of selected refinery processes and other physical operations (ABET 1, 2).

Enforced Prerequisite at Enrollment: CHEM 202 or CHEM 210
Cross-listed with: FSC 432

CHE 438: Bioprocess Engineering

3 Credits

Introduction to the biotechnology field including consideration of upstream and downstream processing of biochemicals.

Enforced Prerequisite at Enrollment: CHEM 212

CHE 442: Polymer Processing Technology

3 Credits

Basic principles of polymer melt processing are reviewed and subsequently applied to the most important industrial processing operations. MATSE 448 (CH E 442) Polymer Processing Technology (3) MATSE 448 involves both lectures and laboratory experiments illustrating the interrelations between structure, processing conditions, and physical properties of industrial polymer products. Students apply engineering fundamentals and principles of polymer melt rheology to analyze industrial processing operations. Unlike typical polymer processing courses offered at most U.S. universities, MATSE 448 covers detailed analyses of individual processing operations, rather than dwelling on underlying polymer science fundamentals that are covered elsewhere in our curriculum. Students learn to optimize processing variables, given a particular set of materials and conditions, establishing how processing conditions impact the physical properties of finished polymer products. We explore the physics governing processing operations including extrusion, mixing, calendaring, blow molding, thermoforming fiber spinning compression molding, injection molding, and nanolithography.

Enforced Prerequisite at Enrollment: MATSE 447
Cross-listed with: MATSE 448

CHE 443: Introduction to Polymer Science

3 Credits

Introduction to synthesis, structure, characterization and processing of polymers. Single molecule properties, polymer solutions, glasses, crystals and blends. CHE 443 Introduction to Polymer Science (3) The objective of this course is to introduce students to the synthesis, structure, characterization and processing of polymers. Emphasis is placed on the molecular origins of polymer properties. The course will provide an overview of single molecule properties and polymeric solutions, glasses, crystals and mixtures from a Chemical Engineering perspective. The course builds on CHE 320, Chemical and Phase Equilibria, to develop a more in-depth description of the thermodynamics of polymers. This course will also build on CHEM 210, Organic Chemistry, to analyze more in-depth strategies for the synthesis of polymers. At the end of the course, the students will be able to evaluate the viability of synthetic pathways for various polymers, estimate the size of polymer chains in solution and in the melt, calculate thermodynamics phase diagrams of polymer blends and solutions, and compare and contrast different approaches to describe the physical properties of polymers.

Enforced Prerequisite at Enrollment: CHE 320 and CHEM 210

CHE 444: Chemical Game Theory

3 Credits

"Chemical Game Theory" (CGT), uses well-known, rigorous principles from Chemistry and Chemical Engineering to solve strategic decision problems that could be analyzed using Traditional Game Theory (TGT). In strategic decisions, players each can choose from among two or more alternative possibilities, and the outcome depends upon the collective choices from all players. In this course we will analyze some of the premises of TGT as compared with CGT. In CGT, the players' choices are treated as metaphorical molecules, and outcomes are calculated according to chemical reaction methods. The important concept of entropic choices is introduced, and pre-bias effects are included naturally as initial concentrations of reactants. CGT is not a generalization of TGT; rather, it represents contested decision problems differently, and gives different solutions. In this article we use the formalism of Chemistry to provide a "knowlecular approach" to analyzing contested decisions. This approach has a rich capacity to represent decision-making scenarios and serve as a decision-making algorithm for contested decisions, where leadership power plays an important role.

Enforced Prerequisite at Enrollment: CHE 210 and CHE 320

CHE 445: Bioremediation/Green Chemistry

3 Credits

Man has polluted his environment but biotechnology holds great promise for cleansing it and for synthesizing the chemicals that we all need in a modern society in a manner that limits generating new pollution. The course focuses on the application of biological and engineering principles toward the remediation of hazardous wastes and for the synthesis of chemicals in a sustainable manner; i.e., in a manner that limits the production of unwanted compounds. The tools that will be explained for accomplishing this are metabolic engineering, systems biology, and protein engineering. Students will also gain knowledge related to the design of biological contacting devices for waste remediation and green chemistry. Emphasis will also be placed on the evolution of bacterial pathways for accomplishing engineering goals. Discussion

will also ensue on societal issues such as the wisdom of the release of genetically-engineered microorganisms and the limitations of biotechnological approaches.

Enforced Prerequisite at Enrollment: CHE 340

CHE 446: Transport Phenomena

3 Credits

Fundamental treatment of mass, heat, and momentum transfer; emphasis on transport properties and mathematical models of chemical engineering transport processes. CHE 446 Transport Phenomena (3) This is an intermediate course in transport phenomena intended to expand on the materials introduced in the required undergraduate courses on momentum, heat and mass transfer. It builds on the prerequisite material with a rigorous formulation of transport problems using the conservation principles and flux expressions, and identifies the similarities and differences among the transport processes for momentum, heat, and mass. The main focus of the course is on microscopic treatment of transport problems, with particular emphasis on proper use of dimensional analysis and scaling arguments. Transport phenomena is a rather mathematical subject and the student is assumed to be familiar with ordinary and partial differential equations, elementary vector analysis, and elementary numerical techniques. This course is intended to prepare the student for a graduate-level course in transport phenomena.

Enforced Prerequisite At Enrollment: CHE 330 and CHE 350
Enforced Concurrent At Enrollment: CHE 410

CHE 449: Bioseparations

3 Credits

Analysis and design of separation processes for the purification of biological molecules. CHE 449 Bioseparations (3) This course introduces students to the principles and applications of separation processes used for the purification of biological molecules, including fine chemicals, pharmaceuticals, and therapeutic proteins. By the end of the course students will be able to perform preliminary design calculations and scale-up of specific separation systems including centrifugation, filtration, chromatography, and membrane processes. Students will also be able to develop outlines of overall separation schemes appropriate for the purification of different biological products. This course is required for the Bioprocessing and Biomolecular Engineering Option in Chemical Engineering.

Enforced Prerequisite at Enrollment: CHE 410

CHE 450: Process Dynamics and Control

3 Credits

Analysis of time-dependent variables in chemical process plants; reactor design and control; computer applications. CHE 450 Process Dynamics and Control (3) The course is an introduction to chemical process dynamics and control and is offered as a technical elective. The first part of the course is devoted on the dynamical behavior of systems and the mathematical tools (differential equations, Laplace transforms) used in their analysis. The second part of the course covers the design and operation of various types of controllers, including proportional, integral and differential and their combinations. The theoretical principles are

demonstrated with applications to chemical engineering processes such as storage tanks, chemical reactors and separation processes.

Enforced Prerequisite at Enrollment: MATH 251 and C or better in CHE 210

CHE 452: Chemical Process Safety

3 Credits

This course provides an overview of Process Safety in the Chemical Industry, focusing on the nature of chemical plant accidents. CHE 452 Chemical Process Safety (3) The course will provide an overview of Process Safety in the Chemical Industry, focusing on the nature of chemical plant accidents, their causes, and steps to eliminate them, with emphasis on inherently safe designs. Chemical Plant accidents deal most often with Flammability and Toxicity issues and these are dealt with in great detail. The role of Human Error in accidents is also examined. Actual case studies (including Bhopal, BP Texas City, Piper Alpha) will be examined to show the relevance in today's workplace. The course requires active student participation via discussions of system designs, their weakness and improvements. Guest lecturers will also be invited to supplement the material. This is offered as a senior elective in Chemical Engineering.

Enforced Prerequisite at Enrollment: CHE 320 Enforced Concurrent at Enrollment: CHE 330 and CHE 350

CHE 455: Drug Delivery, Pharmacokinetics, and Artificial Organs

3 Credits

CHE 455 is an elective course that examines the application of chemical engineering principles (thermodynamics, transport, and kinetics) to the analysis of a number of medically related phenomena and devices. Specific topics include drug delivery systems, pharmacokinetics, artificial organs, biological transport phenomena, and temperature regulation. One of the important goals of the course is to understand how chemical engineers go about developing appropriate physical models for complex biological systems. Emphasis will be placed on identifying the key physical / biological phenomena governing the system behavior. Where appropriate, the course will also examine some of the social, political, and economic implications of medical technology in our society, e.g., the artificial kidney program. Students do not need a background in biology or physiology – the key biological phenomena will be covered at appropriate places throughout the semester.

Enforced Prerequisite at Enrollment: CHE 350 or BME 409 or BME 413 or BE 302 Recommended Preparation: CHE 410

CHE 470: Design of Chemical Plants

3 Credits

The chemical engineering capstone design course introduces the principles of process design and economic evaluation utilizing various industry computer tools, with special emphasis on process simulators. The student will develop critical design logic to evaluate a process, starting with block flow diagrams and simple material balances utilizing practical heuristics and then build the process flowsheet through computer simulation, flowsheet optimization, and detailed equipment design.

Enforced Prerequisite at Enrollment: CHE 350 and CHE 410 and CHE 430

CHE 480M: Chemical Engineering Laboratory (Honors)

3 Credits

Data interpretation and analysis from student-operated experiments on pilot-plant equipment. Individual written and oral technical reports. CHE 480M CHE 480M Chemical Engineering Laboratory (Honors) (3) CHE 480M is the laboratory course in chemical engineering. The objectives of CHE 480M is to provide hands-on experience with chemical engineering equipment and consists of a series of experiments that cover the major subjects in chemical engineering, namely, fluid flow, heat transfer, separations and reactions. The subject matter on which these experiments are based is taught in various junior-senior-level classes. This course does not introduce new material but focuses instead on planning, execution and interpretation of experiments. The special aspect of the honors section is that students will be given an open-ended experimental research project.

Enforced Prerequisite at Enrollment: CHE 230 and CHE 320 and CHE 330 and CHE 350 Enforced Concurrent at Enrollment: CHE 410 Honors Writing Across the Curriculum

CHE 480W: Chemical Engineering Laboratory

3 Credits

Data interpretation and correlation from student-operated experiments on pilot-plant equipment. Individual written and oral technical reports. CHE 480W Chemical Engineering Laboratory (3) This is the laboratory course in Chemical Engineering. Its objective is to provide hands-on experience with chemical engineering equipment and consists of a series of experiments that cover the major subjects in chemical engineering, namely, fluid flow, heat transfer, separations and reactions. The subject matter on which these experiments are based is taught in various junior- and senior-level classes. CHE 480W does not introduce new material but focuses instead on planning, execution and interpretation of experiments. The course is team-based and includes laboratory sessions as well as lectures. Evaluation is based on the written and oral reports given based on experiments performed. These reports undergo several drafts, in which at different times students or faculty evaluate the report, suggesting corrections. Course evaluation may also include a "pre-exam" to assure that the students understand technical material coming into the course. Peers assess each others' performance (contributing to the grade), as does the faculty.

Enforced Prerequisite at Enrollment: CHE 230 and CHE 320 and CHE 330 and CHE 350 Enforced Concurrent at Enrollment: CHE 410 Writing Across the Curriculum

CHE 494: Research Projects in Chemical Engineering

1-6 Credits/Maximum of 6

An original problem, including a search of the literature, experimental investigation, and preparation in formal thesis form.

Enforced Prerequisite at Enrollment: Permission of program

CHE 494H: Research Projects in Chemical Engineering (Honors)

1-6 Credits/Maximum of 6

An original problem, including a search of the literature, experimental investigation, and preparation in formal thesis form. CHE 494H CHE 494H Research Projects in Chemical Engineering (1-6) Undergraduate

research projects for honors students leading to the generation of a thesis for the Schreyer Honors College. The content of this course typically falls within the research interests of the chemical engineering faculty. The work can be computational, theoretical or experimental in nature and culminates with the writing of an honors thesis. Students should select a thesis advisor prior to enrolling in this course and file an honors thesis proposal report form with the Schreyer honors College. A student outside of chemical engineering can take the course if they are working towards an honors thesis in chemical engineering. A student in chemical engineering can take this course with a co-advisor outside of chemical engineering; however, the CHE

Enforced Prerequisite at Enrollment: Permission of program Honors

CHE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CHE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CHE 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Chemistry (CHEM)

CHEM 1: Molecular Science

3 Credits

Selected concepts and topics designed to give non-science majors an appreciation for how chemistry impacts everyday life. Students who have received credit for CHEM 3, 101, 130, or 110 may not schedule this course. CHEM 1 is designed for students who want to gain a better appreciation of chemistry and how it applies to everyone's everyday life. You are expected to have an interest in understanding the nature of science, but not necessarily to have any formal training in the sciences. During the course, you will explore important societal issues that can be better understood knowing some concepts in chemistry. The course is largely descriptive, though occasionally a few simple calculations will be done to illuminate specific information. The course does rely on your ability to think systematically, and to relate things to each other. From year to year and instructor to instructor, the course may cover any number of a large variety of topics related to current events, including, but not limited to: air and water pollution, ozone depletion, global warming, acid rain, new and old methods of energy generation and energy use in modern society, examples of production and use of modern polymers, examples of production and use of modern drugs, examples of the chemistry of nutrition, examples of advances in biochemistry and how they affect us.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

CHEM 3: Molecular Science With Laboratory

3 Credits

CHEM 3 is a course that includes both lecture and laboratory. It is designed for students who want to gain a better appreciation of chemistry and how it applies to everyone's everyday life. The student is expected to have an interest in understanding the nature of science, but not necessarily to have any formal training in the sciences. The course explores important societal issues that can be better understood knowing some concepts in chemistry. The course is largely descriptive, though occasionally a few simple calculations will be done to illuminate specific information. The course does rely on an ability to think systematically, and to relate things to each other. From year to year and instructor to instructor, the course may cover any number of a large variety of topics related to current events, including but not limited to: air and water pollution, ozone depletion, global warming, acid rain, new and old methods of energy generation and energy use in modern society, examples of production and use of modern polymers, examples of production and use of modern drugs, examples of the chemistry of nutrition, examples of advances in biochemistry and how they affect us. In the laboratory component, students will conduct experiments that are related to the lecture material being covered.

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

CHEM 5: Kitchen Chemistry

3 Credits

CHEM 5 Kitchen Chemistry (3) (GN)(BA) CHEM 5 focuses on an elementary discussion of the chemistry associated with foods and cooking. It incorporates lectures and videos, reading, problem-solving, and "edible"; home experiments to facilitate students' understanding of chemical concepts and scientific inquiry within the context of food and cooking. Please note that this is a chemistry class presented in a real world interactive way, not a cooking class! The course will start from a primer on food groups and cooking, proceed to the structures of foods, and end with studies of the physical and chemical changes observed in foods. Students will develop an enhanced understanding of the chemical principles involved in food products and common cooking techniques.

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

CHEM 20: Environmental Chemistry

3 Credits

Applications of chemistry to environmental problems, including air, water, thermal pollution; pesticides; drugs and birth control agents;

food additives; etc. For non-chemistry majors; chemistry majors will not receive credit. CHEM 020 Environmental Chemistry (3) Topics include the study of air, air quality, and the effects of various substances that create air pollution. Significant detail is given to ozone and its interactions in various layers of the atmosphere. The study of fossil fuels and hydrocarbon chemistry leads to an extensive discussion of global warming. Water contamination due to acid rain and acid mine drainage is studied in conjunction with acid-base chemistry. The concept of pH is discussed in detail. Newer sources of energy including fuel cells, photovoltaic cells, biomass fuels, and nuclear energy are investigated with much consideration given to the economics of fuels. These energy topics require a study of electrochemistry, nuclear chemistry, radioactivity and organic chemistry. Biological topics of drug design, toxic substances, pesticides, genetic engineering and food safety complete the course by covering numerous aspects of organic chemistry and biochemistry. Most topics also deal with the associated analytical chemistry of the substances discussed and the challenge of sample procurement, sample preparation, chemical analysis, and result interpretation considering analytical error. Methods of chemistry data presentation to the general public are investigated and criticized.

CHEM 21: Environmental Chemistry Laboratory

1 Credits

Introduction of basic laboratory techniques and data analysis used in environmental chemistry. CHEM 021 CHEM 021 Environmental Chemistry Laboratory (1) This course will provide an introduction of basic laboratory techniques and data analysis used in environmental chemistry. The suggested laboratory experiments will consist of a broad range of scientific inquiry that will enhance the lecture material covered in CHEM 020. The course will provide laboratory experience in the chemistry of air, water, and solids. Experiments have been chosen that have a strong biology component such as Stream Ecology, Toxicity, Testing, and Dissolved Oxygen experiments. These experiments should relate to the BIOL 110 and 220 courses. The Chi-Square and Probability experiments will relate to STAT 250 course. The course will be an integral part of the Environmental Studies major providing an experimental chemistry background and experience.

Enforced Concurrent at Enrollment: CHEM 20

CHEM 101: Introductory Chemistry

2-3 Credits

Selected principles and applications of chemistry. Prior study of chemistry is not assumed. Students may take only one course for General Education credit from CHEM 101 or CHEM 110. CHEM 101 CHEM 101 Introductory Chemistry (2-3) CHEM 101 is an introductory chemistry course designed to prepare students for college level chemistry courses, such as CHEM 110 or CHEM 202. Prior study of chemistry is not assumed, so the course introduces the vocabulary along with some basic principles of chemical problem solving. The course covers the following topics: matter and measurement, molecules and molecular compounds, ions and ionic compounds, chemical reaction types, stoichiometry, atomic and molecular weights, the mole, simple quantitative calculations with chemical reactions, the periodic table, nomenclature, electronic structure of atoms, simple periodic properties of the elements, chemical bonding, molecular geometry, and properties of various states of matter, acids and bases, and the basics of chemical equilibrium. There are 2 and

3 credit versions of this course offered at different locations. The 3-credit version usually involves a laboratory component.

Enforced Prerequisite at Enrollment: Completion or placement beyond MATH 21.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

CHEM 106: Introductory and General Chemistry

5 Credits

Introductory chemistry and chemical principles for students who are required to take additional chemistry, e.g., CHEM 112, but are unprepared for CHEM 110. CHEM 106 Introductory and General Chemistry (5) (GN) (BA) This course meets the Bachelor of Arts degree requirements. CHEM 106 is an extended version of the first-semester comprehensive general chemistry course. It includes more class time for preparing students so that they learn introductory chemistry and general college level chemistry in one semester. As in CHEM 110, CHEM 106 introduces students to the basic principles of chemistry with an emphasis on the relationships between the microscopic structure and macroscopic properties of matter. Principles are illustrated with a wide variety of examples from the sciences, from engineering and technology, and from everyday life. The course covers the following topics: matter and measurement, molecules and molecular compounds, ions and ionic compounds, chemical reaction types, atomic and molecular weights, the mole, quantitative calculations with chemical reactions, the periodic table, nomenclature, aqueous reactions and solution stoichiometry, thermochemistry, electronic structure of atoms, periodic properties of the elements, chemical bonding, molecular geometry, the gaseous, liquid, and solid states of matter, properties of solutions, some basic aspects of chemical equilibrium, and applications to the real world including environmental chemistry. GN credit for CHEM 106 requires that CHEM 111 also be completed.

Enforced Prerequisite at Enrollment: Completion or placement of MATH 22 or higher

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

CHEM 108: Problem Solving in Chemistry

1 Credits

Techniques, strategies, and skills for solving problems in general chemistry for students potentially at risk in CHEM 110. CHEM 108 CHEM 108 Problem Solving in Chemistry (1) The purpose of CHEM 108 is to facilitate success in the first semester general chemistry course (CHEM 110). Students who need extra help in CHEM 110 are strongly encouraged to take CHEM 108 with CHEM 110. The course covers the same topics in the same sequence as the concurrent CHEM 110 course. It provides an opportunity for students to develop stronger problem solving skills through active and collaborative learning activities and skill building. CHEM 108 does not satisfy the General Education requirement and will not count toward graduation in some majors.

Enforced Corequisite at Enrollment: CHEM 110

CHEM 109: A Research Experience in Chemistry

3 Credits

This introductory chemistry laboratory course is a research experience in chemistry. It is designed to ease students into the process and practice of chemical research. Students will be posed with a novel idea or known problem that requires investigation. This investigation begins with background reading and discussions of the chosen chemistry research project, which is taken from the labs of Penn State chemistry research faculty. Students review high school chemistry concepts in addition to learning new concepts required for the understanding of the project. Acting as their own principal investigators, students design and execute experiments while maintaining a proper scientific notebook. Once a procedure is complete, students analyze the data collected. Throughout the semester, students are required to summarize and communicate their findings through writing assignments. These assignments lead up to a formal final report assignment, formatted to mimic a research journal article. The semester ends with student groups presenting their semester's work by a formal presentation.

CHEM 110: Chemical Principles I

3 Credits

CHEM 110 is the first semester of a two-semester, comprehensive general chemistry course which introduces students to the basic principles of chemistry with an emphasis on the relationships between the microscopic structure and macroscopic properties of matter. Principles are illustrated with examples from the sciences, engineering and technology, and from everyday life. Topics covered are atomic structure and periodic properties, molecular compounds and chemical bonding, molecular structure, intermolecular forces, the properties of gases, liquids, and solutions, chemical reactions, stoichiometry and thermochemistry. Students may only receive credit for one of CHEM 110 or CHEM 106 (4 credits) or CHEM 130.

Enforced Prerequisite at Enrollment: Completion of or placement beyond MATH 22

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Integrative Thinking

GenEd Learning Objective: Key Literacies

CHEM 110H: Chemical Principles I - Honors

3 Credits

CHEM 110H is the first in a two-semester comprehensive course in general chemistry for majors in science, engineering, and related disciplines. Chemistry impacts virtually every area of our lives, from how our bodies work, to the environment, to new materials, to how we live and work. The goals of this course are to teach students to recognize that what happens at the molecular level directly shapes the macroscopic world. Students will gain an understanding of (1) how atoms combine to form molecules; (2) how molecules interact and react with each other; and (3) how molecular-level structure and interactions affects a material's macroscopic properties. Students will also learn the problem-solving skills necessary to apply and interpret simple mathematical models and graphical representations of chemical and physical phenomena. The honors version of CHEM 110 covers the same

topics as the regular offering but at a level appropriate for students with advanced backgrounds and talents.

Enforced Prerequisite at Enrollment: Completion of or placement beyond MATH 22

CHEM 111: Experimental Chemistry I

1 Credits

CHEM 111 is a one-credit introductory general chemistry laboratory course. It is designed to complement the lecture course CHEM 110. Students are introduced to laboratory safety and good experimental technique, how to keep a proper laboratory notebook, and interpret experimental data. The course introduces laboratory experimentation in the context of a variety of specific topics, such as reactions in solutions, spectroscopy, acids and bases, and the synthesis and analysis of chemical compounds.

Enforced Prerequisite or Concurrent at Enrollment: CHEM 110 or CHEM 106 or CHEM 130

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

CHEM 112: Chemical Principles II

3 Credits

CHEM 112 builds upon the subject matter of CHEM 110, covering the following topics: reaction rates and chemical kinetics, nuclear applications, catalysis, gas phase and aqueous equilibrium, chemical thermodynamics, entropy, free energy, acid-base equilibria, the pH scale, the common-ion effect, buffers, acid-base titrations, factors that affect aqueous solubility, electrochemistry, oxidation-reduction reactions, oxidation states, voltaic cells, batteries, corrosion, electrolysis, transition metals, crystal field theory, molecular orbital theory, bonding in solids, and properties of modern materials.

CHEM 113: Experimental Chemistry II

1 Credits

CHEM 113, Experimental Chemistry II, is the second introductory general chemistry laboratory course in the CHEM 111/113 sequence. CHEM 113 is meant to complement the lecture course, CHEM 112. The course builds on the material learned in CHEM 111, emphasizing quantitative and analytical procedures. Essential material covered includes proper use of a laboratory notebook, writing a formal laboratory report, use of the chemical literature, experimental design, laboratory safety, introduction into chemical instrumentation, and interpretation of data, including basic statistics.

Enforced Prerequisite at Enrollment: CHEM 111. Prerequisite or Concurrent: CHEM 112 or CHEM 112H

Bachelor of Arts: Natural Sciences

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

CHEM 113B: Experimental Chemistry II–Bioscience

1 Credits

CHEM 113B, Experimental Chemistry II, is the second introductory general chemistry laboratory course in the CHEM 111/113 sequence. CHEM 113B is meant to complement the lecture course, CHEM 112, but using experiments with biological relevance. The course builds on the material learned in CHEM 111, emphasizing quantitative and analytical procedures. Essential material covered includes proper use of a laboratory notebook, writing a formal laboratory report, use of the chemical literature, experimental design, laboratory safety, introduction into chemical instrumentation, and interpretation of data, including basic statistics.

Enforced Prerequisite at Enrollment: CHEM 111. Prerequisite or Concurrent: CHEM 112 or CHEM 112H

General Education: Natural Sciences (GN)

GenEd Learning Objective: Effective Communication

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

CHEM 130: Introduction to General, Organic, and Biochemistry

3 Credits

This course is a one-semester, rigorous college level introductory Chemistry course covering the fundamental principles of general, organic, and biochemistry. One year of high school chemistry is strongly recommended, and students should have math placement beyond the level of Math 021. 3 Credits, fulfills the General Education requirements. Course topics include dimensional analysis, atomic structure and periodicity, chemical bonding, molecular structure, states of matter and intermolecular forces, basic gas laws, solutions and solubility, acids, bases and equilibria, reaction stoichiometry and thermodynamics. In addition, fundamentals of organic nomenclature, properties of main organic functional groups, structure and function of biological macromolecules, as well as metabolism will be discussed. The course will emphasize chemistry in environmental and health-related contexts. This course is primarily designed for students in a program that does not require the more theoretical and mathematically oriented general chemistry courses (CHEM 110/112), such as some majors in the colleges of Nursing, Agriculture Sciences, and Health & Human Development. It is a suitable prerequisite for the organic chemistry course sequence CHEM 202/203. This course is not appropriate for medical school preparation and will not serve as a prerequisite for the organic chemistry CHEM 210/212 course sequence. Students majoring in chemistry, other natural sciences, or engineering will normally register in the CHEM 110/112 sequence. Consult your advisor and the instructor if you have questions about CHEM 130 vs. CHEM 110/112.

Enforced Prerequisite at Enrollment: Completion or placement beyond MATH 21.

General Education: Natural Sciences (GN)

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

CHEM 197: Special Topics

1-9 Credits

CHEM 197N: Special Topics - InterDomain

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject offered infrequently; several different topics may be taught in one year or semester. This Special Topics is a GenEd course.

CHEM 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CHEM 202: Fundamentals of Organic Chemistry I

3 Credits

Introduction to organic chemistry, with emphasis on the properties of organic compounds of biochemical importance. Because of duplication of subject matter, students may not receive credit for both CHEM 202 and CHEM 210. CHEM 202 CHEM 202 Fundamentals of Organic Chemistry I (3) CHEM 202 is a one-semester, comprehensive course that introduces

the students to the fundamental principles of organic chemistry including relationships between the molecular structure of organic compounds and their macroscopic properties. Some of the principles are illustrated with a variety of examples from nature and everyday life. The course covers the following topics: alkanes; alkenes, including polymers; alkynes; benzene and aromaticity; alcohols and phenols; ethers; aldehydes; ketones; carboxylic acids and their acyl derivatives; amines; alkyl halides; nomenclature; stereochemistry, including conformational analysis and chirality. Chemical reactions of the functional groups will be discussed along with the mechanistic details, including stereospecificity, of some of these processes. Biological molecules such as carbohydrates, lipids, steroids, peptides/proteins and nucleic acids, along with their importance in living systems, will be surveyed.

Enforced Prerequisite at Enrollment: CHEM 101 or CHEM 106 or CHEM 110 or CHEM 110H or CHEM 130

CHEM 203: Fundamentals of Organic Chemistry II

3 Credits

Introduction to organic chemistry, with emphasis on the identification of organic compounds by characteristic chemical reactions and by spectroscopy. The course involves both lecture and laboratory. Because of duplication of subject matter, students may not receive credit for both CHEM 203 and CHEM 213. CHEM 203 CHEM 203 Fundamentals of Organic Chemistry II (3) CHEM 203 is a one-semester organic chemistry course that has both lecture and laboratory components. The lecture introduces students to the basic theory and application (structure determination) of different types of spectroscopy (nuclear magnetic resonance spectroscopy, infrared spectroscopy, and ultraviolet-visible spectroscopy) and mass spectrometry. Certain chemical reactions learned in CHEM 202 will be reviewed along with the mechanistic details of some of these processes. Special topics such as drug discovery, natural product isolation, and synthesis will be surveyed. The laboratory teaches students the fundamental techniques used by organic chemists such as recrystallization, melting point determination, distillation, extraction, thin-layer chromatography, and column chromatography. Mastery of these basic techniques lays the foundation for carrying out organic syntheses and/or natural product isolations. Students are given hands-on access to instrumentation for the characterization of synthetic products or organic unknowns using standard analysis methods such as IR, NMR, UV/V is spectroscopy, mass spectrometry, polarimetry, HPLC, GC and GC-MS. Students are responsible for writing laboratory reports for all experiments.

Enforced Prerequisite at Enrollment: CHEM 202

CHEM 210: Organic Chemistry I

3 Credits

Bonding theories for organic molecules; stereochemistry and conformational analysis; reactions (and mechanisms) of alkyl halides, alkenes, alkynes, aromatics, and alcohols. CHEM 210 Organic Chemistry I (3) Organic chemistry is an essential subject for many scientific disciplines, particularly those in the life, materials, and chemical sciences, as well as chemical engineering. The fundamentals of organic chemistry, as developed in CHEM 210, the first part of a two-semester organic chemistry sequence, are required for scientists to understand the electronic structure and reactivity of simple and complex molecules. Concepts taught in CHEM 210 include hierarchical bonding models (Lewis dot, valence bond, molecular orbital), Lewis acids and bases, conformational analysis and stereochemistry, functional groups and their

reactivity (alkenes, alkynes, alkyl halides, dienes, aromatics, alcohols, and ethers), organic reaction mechanisms focusing on electrophiles and nucleophiles, and aromaticity. Successful students will understand and be able to apply various structural and reactivity models to solving problems in organic chemistry.

Enforced Prerequisite at Enrollment: CHEM 112 or CHEM 112H

CHEM 210H: Organic Chemistry I - Honors

4 Credits

Principles and theories; nomenclature; chemistry of the functional groups; applications of spectroscopy. Because of duplication of material, students may not receive credit for both CHEM 210 and 202. CHEM 210H Organic Chemistry I - Honors (4) Chemistry 210H is the first semester of an in-depth two semester survey of organic chemistry. It should be followed by Chemistry 212H. The concentrated and fast-moving pace of this course is facilitated by four class periods/week, seven (biweekly) hour exams and an evening recitation dedicated to the informal discussion of the subject material covered in previous or pending hour exams. This course will emphasize the mechanistic underpinning of organic chemistry. That is, students will not only learn what happens in organic chemistry but also, and more importantly, why and how. It is hoped that students will develop an intuition for the structure, function and reactivity properties of organic compounds which is of fundamental importance for subsequent studies in the life, material and chemical sciences. The course begins with an introduction to the structural aspects of organic compounds and an appreciation of the three-dimensionality of the subject based upon the important concepts of molecular orbital theory, valence bond theory, hybridization and conformational analysis. Reaction mechanisms and organic synthesis, two important topics that are emphasized throughout the course, are introduced early in the context of addition reactions of alkenes and alkynes. Perhaps the most abstract/vexing topic in organic chemistry is next encountered, namely, stereochemistry. These fundamentals are then used to explore the reactivity properties of various classes of compounds including substitutions and eliminations of alkyl halides, free radical reactions of alkenes, isomerization and cycloadditions of conjugated pi systems, and electrophilic substitution reactions of aromatic compounds.

Enforced Prerequisite at Enrollment: CHEM 112 or CHEM 112H Honors

CHEM 212: Organic Chemistry II

3 Credits

Continuation of CHEM 210. Emphasis is placed on the role of organic reactions in biological chemistry. CHEM 212 CHEM 212 Organic Chemistry II (3) This course will continue to build upon the important concepts learned in the prerequisite course, CHEM 210, with an emphasis on reactions mechanisms and organic synthesis. The course will begin with conceptually new material that will be applied in the laboratory course, namely, the elucidation of the structures of organic compounds using mass spectrometry, infrared spectroscopy and nuclear magnetic resonance spectroscopy. The majority of the new material is concerned with the chemistry of carbonyl compounds and includes: 1) the nucleophilic addition reactions of ketones and aldehydes; 2) nucleophilic acyl substitution reactions of acid chlorides, anhydrides, esters and amides; 3) carbonyl alpha-substitution reactions and 4) carbonyl condensation reactions. The latter part of the course will be

concerned with biologically relevant compounds such as amines, amino acids/peptides/proteins and carbohydrates.

Enforced Prerequisite at Enrollment: CHEM 210 or CHEM 210H

CHEM 212H: Organic Chemistry II - Honors

3 Credits

Continuation of CHEM 210(H). Emphasis is on the chemistry of carbonyl compounds, spectroscopic analysis and pericyclic reactions. CHEM 212H Organic Chemistry II - Honors (3) CHEM 212H is the second semester of a comprehensive year-long treatment of introductory organic chemistry at an advanced level. CHEM 210H is recommended but not required. This honors course focuses more on depth than breadth, and will delve into some of the more modern approaches/theories to key topics. Most of the material derives from the chemistry of carbonyl compounds. The classic topics – carbonyls as electrophiles and as nucleophile (enolate) precursors – will be covered. In addition, discussions of stereochemical selectivity issues will provide the framework to introduce contemporary concepts of stereoelectronic and steric effects into these topics. For example, Cram, Felkin-Ahn and chelation-based models for stereoselective addition of nucleophiles to aldehydes/ketones will be developed, as will chiral auxiliary chemistry for stereoselective enolate addition reactions. In addition to carbonyl chemistry, an introduction to spectroscopic techniques for compound characterization will be included. These techniques include mass spectrometry, infrared spectroscopy, and nuclear magnetic resonance spectroscopy. Finally, a survey of pericyclic reactions, along with the molecular orbital (stereoelectronic) underpinnings of chemical selectivity observed in these processes, will be pursued. Class grades will be based on 5 exams, 5 (out of 6) homework assignments, and a final exam.

Enforced Prerequisite at Enrollment: CHEM 210 or CHEM 210H Honors

CHEM 213: Laboratory in Organic Chemistry

2 Credits/Maximum of 2

Basic laboratory operations; synthesis and chemical or instrumental analysis. Because of duplication of subject matter, students may not receive credit for both CHEM 203 and CHEM 213. CHEM 213 CHEM 213 Laboratory Organic Chemistry (1-2) A strong foundation in organic laboratory skills is provided by this laboratory course. Laboratory work includes learning the basic techniques and recrystallization/melting point determination, distillation, liquid/liquid extraction, thin layer, chromatography and column chromatography. Mastery of these basic techniques lays the foundation for carrying out a number of organic syntheses or natural product isolations. Students are often provided with hands-on access to instrumentation for the characterization of synthetic products or organic unknowns using standard analysis methods such as IR, NMR, UV/V is spectroscopy, mass spectrometry, polarimetry, HPLC, GC and GC-MS. Chemistry 210 is a prerequisite and CHEM 212 may be* a co-requisite for this course, because they provide the theoretical background for the reaction chemistry as well as the spectroscopic characterization of organic molecules.*Note: The number of credits and meeting times vary from location to location. Some locations offer CHEM 213 as two one-credit courses to be taken in sequential semesters, whereas other locations offer CHEM 213 as a single-semester two-credit course. Normally, the latter format involves two 3-hour labs per week in addition to extensive written work outside of the laboratory. The prerequisite /

concurrent requirement for CHEM 212 does not apply when CHEM 213 is taken as a 1 credit course.

Enforced Prerequisite at Enrollment: CHEM 210 or CHEM 210H and Prerequisite or Concurrent: CHEM 212 or CHEM 212H

CHEM 213M: Laboratory in Organic Chemistry - Honors, Writing Intensive

2 Credits

Basic laboratory techniques learned in context via theme-based modules, spectral analysis, multi-step synthesis, and professional scientific writing. Because of similarity of subject matter, students may not receive credit for both CHEM 203 and CHEM 213.

Enforced Prerequisite at Enrollment: CHEM 210 or CHEM 210H and Prerequisite or Concurrent: CHEM 212 or CHEM 212H Honors

Writing Across the Curriculum

CHEM 213W: Laboratory in Organic Chemistry - Writing Intensive

2 Credits

Basic laboratory techniques learned in context via theme-based modules, spectral analysis, multi-step synthesis, and professional scientific writing. Because of similarity of subject matter, students may not receive credit for both CHEM 203 and CHEM 213.

Enforced Prerequisite at Enrollment: CHEM 210 or CHEM 210H and Prerequisite or Concurrent: CHEM 212 or CHEM 212H Writing Across the Curriculum

CHEM 227: Analytical Chemistry

4 Credits

The purpose of this course is to provide students with a rigorous and comprehensive exposure to the techniques and methods used in biotech, environmental, forensic, and pharmaceutical industrial and research laboratories. The principles, methodology and practical aspects of both traditional and modern chemical analysis will be discussed. Laboratory and lecture are fully integrated, emphasizing the importance of the laboratory component to achieving mastery of overall course content. Concepts will include acid-base, precipitation, chelation, electrochemistry, UV/Vis spectroscopy, and introductory chromatography, as well as some more advanced topics at the instructor's discretion. Students will be expected to develop both their chemical problem solving and laboratory skills, and will be evaluated on their ability to speak and write clearly, solve context-based chemical problems, maintain a research style laboratory notebook, and carry out reliable chemical analysis individually as well as part of a team. This course is relevant to any student majoring or minoring in Chemistry or Forensic Science.

Enforced Prerequisite at Enrollment: C or better in CHEM 112 or CHEM 112H and C or better in CHEM 113 and C or better in MATH 140

CHEM 233N: Chemistry and Literature

3 Credits

This pedagogically innovative course will be team taught by an instructor from the English department and one from the Chemistry department. Both instructors will be present in the classroom throughout the semester, providing joint presentations and leading discussions. The

integration of humanities and natural sciences domain content will encourage students from humanities and natural science backgrounds, as well as other interested students, to take the course and learn how to integrate these two domains of knowledge in their education and their lives after leaving Penn State. This course teaches both basic concepts of chemistry and their cultural elaboration in literature, and it models a critical assessment of the implications of chemistry and literature emerging from a shared cultural field, rather than autonomously from two separate cultures. The course seeks to provide students with a nuanced understanding of how literature and science inform each other and negotiate cultural, religious, and political tensions. Understanding the origin and development of these ideas, perspectives, and discoveries is an essential component of science and scientific achievement, but too often our methods of teaching science focus almost exclusively on teaching facts and theories at the expense of the historical discovery, creation, and development of those facts and theories. This course teaches both the scientific facts and theories and the contexts of their production in order to sharpen students' abilities at critical evaluation of facts. The literary and scientific focus will vary from class to class, but may include writings by literary authors such as Mary Shelley, Edward Bulwer-Lytton, Bram Stoker, H. G. Wells, Garrett Serviss, Aldous Huxley, Roald Hoffmann, Carl Djerassi, Don DeLillo, William Butler Yeats, Arthur Machen, D.H. Lawrence, A. E. Waite, Aleister Crowley, Arthur Conan Doyle, Camille Flammarion, and Rachel Carson, and scientific texts by scientists such as T.H. Huxley, William Crookes, William Ramsay, Frederick Soddy, Ernest Rutherford, Wilhelm Conrad Roentgen, Henri Becquerel, J.J. Thomson, Niels Bohr, and Marie Curie. Key concepts of environmental chemistry. The specific focus of this class will vary from class to class, but all sections will spend approximately 40% of the class on units specifically devoted to key concepts in basic chemistry, 40% of the class on literary interpretations of and influences upon concepts in chemistry in specific historical periods, and 20% of the class on significant methods of theorizing the boundaries between and interrelationships of science and culture., and on the concept of the "culture of science." However, these subjects will be interwoven throughout the semester. Indeed, the pedagogy of the course depends upon the literature and the science not being neatly separated from each other. Instead, students will learn up-to-date science while exploring the origins, development, and cultural dimensions of that science, and will learn to integrate their understanding of the domains of science and the humanities through the course. The course will be offered once every year with approximately 20-35 seats per offering.

Cross-listed with: ENGL 233N

Bachelor of Arts: Humanities

General Education: Humanities (GH)

General Education: Natural Sciences (GN)

General Education - Integrative: Interdomain

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

CHEM 294: Special Problems and Research

1-4 Credits/Maximum of 12

Designed for freshman or sophomore students who are prepared to undertake special problems and research by arrangement with a faculty member.

CHEM 294H: Special Problems and Research - Honors

1-4 Credits/Maximum of 12

Designed for freshman or sophomore students who are prepared to undertake special problems and research by arrangement with a faculty member.

Enforced Prerequisite at Enrollment: Permission of instructor
Honors

CHEM 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses.

CHEM 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CHEM 301: Environmental Chemistry and Analysis

3 Credits

Chemical principles, interpretation, and methods of analysis for groundwater, water supply, wastewater treatment, stream pollution. CHEM 301 CHEM 301 Environmental Chemistry and Analysis (3) The objective of the course is to introduce students to water quality chemistry and the associated laboratory analytical techniques commonly used in groundwater, water supply, wastewater treatment, stream pollution control. This course will be instructed with classroom lectures, laboratory exercises, and a project. These laboratory exercises include pH, solids, turbidity, alkalinity, acidity, dissolved oxygen, biochemical oxygen demand, chemical oxygen demand, total organic carbon, chlorine residual, chlorine demand, nitrogen, phosphorus, nitrate, sulfate, chloride, hardness, and metals. This course involves two lecture periods and one laboratory period each week. The students will be evaluated with quizzes, midterm examination, final examination, laboratory reports, and a project report. The course has a prerequisite of a two-semester General Chemistry course and the associated laboratory courses. This course is a prerequisite for Water Supply and Pollution Control which is one of core courses for Environmental Engineering Program.

Enforced Prerequisite at Enrollment: (CHEM 112 or CHEM 112H) and CHEM 113

CHEM 310: Introductory Inorganic Chemistry

3 Credits

Conceptual and descriptive aspects of inorganic chemistry, focusing on structures, bonding, and properties. CHEM 310 Introductory Inorganic Chemistry (3) CHEM 310 covers the structure, bonding, and properties of inorganic molecules and solids. Theories and models of chemical bonding, including valence bond theory, crystal field theory, and molecular orbital theory are applied to inorganic molecules, coordination compounds, and solids. Aspects of structural inorganic chemistry are presented, including molecular geometry and structures of metallic, ionic, and covalent solids. Transition metal chemistry is discussed, including key aspects of bonding, properties, and reactions. The course also covers acids and bases, oxidation and reduction, and coordination

chemistry. Special topics such as solid-state inorganic materials, inorganic nanoscience, and bioinorganic chemistry may also be included.

Enforced Prerequisite at Enrollment: CHEM 112 or CHEM 112H

CHEM 316: The Professional Chemist

1 Credits

Industrial employment opportunities and challenges; graduate and professional school opportunities; tailoring the chemistry curriculum to career goals. CHEM 316 CHEM 316 The Professional Chemist (1) This junior-level seminar course is designed to help prepare chemistry majors to take advantage of opportunities provided by the Department and community of professional chemists in choosing, attaining, and furthering their career goals. A number of guest lectures cover a variety of career-related topics. Careers in the pharmaceutical, chemical production, biotechnology, and analytical sectors and other specialty companies will be discussed. Also, various academic careers paths are presented and compared. Preparing for chemistry graduate school and other post graduate training will be an important element of this seminar. Most of the meetings of the course will be primarily informational. A graded short presentation on a chemistry related topic is also required.

Enforced Prerequisite at Enrollment: 4th semester standing or higher in Chemistry

CHEM 358: Literature, Conduct and Safety in the Chemical Sciences

3 Credits

CHEM 358 is designed to prepare a student majoring in chemistry to interact with the scientific community as a professional. The course will be divided into three major units. The first unit will focus on communicating scientific information and research results. This will include searching, reading and interpreting peer-reviewed scientific literature, preparation of formal reports suitable for publication, and presenting research orally. Students may be asked to attend public events related to science outside the normal meeting hours for the course. The second unit will focus on developing career skills needed to become a successful professional in the field. This will include examining various career paths related to chemistry, professional networking, resume and job seeking skills, and instruction on effective interview strategies. Outside speakers will be invited to help reinforce particular topics. Additionally, scientific integrity will be discussed. The third unit will focus on an introduction to chemical hygiene in order to promote advanced safety practices above what students have learned in previous laboratory courses. This will include complying with safety regulations, understanding when and how to use proper personal protective equipment, understanding the categories of hazards associated with chemicals and how to read chemical labels, and interpreting Safety Data Sheets (SDS).

Enforced Prerequisite at Enrollment: CHEM 213

CHEM 395: Chemistry Teacher Assistant Training

1-2 Credits/Maximum of 2

Instruction and practice in the role of the teaching assistant in the undergraduate chemistry laboratory.

CHEM 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CHEM 400: Chemical Literature

1 Credits

Instruction in use of the library and of the literature of chemistry. CHEM 400 Chemical Literature (1) CHEM 400 covers an orientation to use the library; sources of organic and inorganic synthesis information; use of relevant indexing and abstracting services; spectral data sources; patent literature; sources related to general chemical information, and properties data. Additional topics may be included as time permits.

Enforced Prerequisite at Enrollment: (CHEM 210 or CHEM 210H) and Prerequisite or Concurrent: (CHEM 212 or CHEM 212H)

CHEM 402: Environment Chemistry: Atmosphere

3 Credits

Environmental Chemistry is an upper-level elective chemistry class focusing on environmental issues and their intersection with chemistry. Specifically, the course will focus on the ways in which environmental processes can be understood in terms of their underlying chemistry as well as the impact of chemicals on the environment. Topics include climate change, air pollution, and the ozone hole. Chem 402 is the first semester of a two semester sequence in environmental chemistry. Chem 402 focuses on the atmosphere and Chem 404 covers topics relevant to water and soil chemistry. These courses are independent of each other. Students can take one or both in any order.

Enforced Prerequisite at Enrollment: (CHEM 212 or CHEM 212H) and Prerequisite or Concurrent: CHEM 450 or CHE 320

CHEM 404: Environmental Chemistry: Water and Soil

3 Credits

Environmental Chemistry: Water and Soil is an upper-level elective chemistry class focusing on environmental issues and their intersection with chemistry. Specifically, the course will focus on the ways in which environmental processes can be understood in terms of their underlying chemistry as well as the impact of chemicals on the environment. Topics will include water and soil chemistry, water treatment, heavy metals, organic pollutants, and remediation strategies. Chem 404 is the second semester of a two semester sequence in environmental chemistry. Chem 402 focuses on the atmosphere and Chem 404 covers topics relevant to water and soil chemistry. These courses are independent of each other. Students can take one or both in any order.

Enforced Prerequisite at Enrollment: CHEM 212 Enforced Concurrent at Enrollment: CHEM 450 or CHE 320

CHEM 406: Nuclear and Radiochemistry

3 Credits

Theory of radioactive decay processes, nuclear properties and structure, nuclear reactions, interactions of radiation with matter, biological effects of radiation. CHEM 406 Nuclear and Radiochemistry (3) CHEM 406 provides a basic introduction to many of the important

physical phenomena in nuclear and radiochemistry and the theories that describe them. The exposition of both experimental phenomena and theory complements the content of other upper-level courses in physical chemistry such as CHEM 450 and 452. Specifically, the types of radioactive decay are described, and, using this information, the equations that relate the growth and decay, i. e., the kinetics, of radioactive nuclei are derived. In parallel, a variety of types of nuclear reactions, such as neutron capture are introduced and used to develop the equations that governing the kinetics of nuclear reactions, including the concept of cross section. To describe the nature of nuclear matter, the relationships between energy, binding energy, and mass, are developed and augmented with the introduction of related quantities including the nuclear magnetic-dipole moment, total angular momentum of the nucleus, and Fermi-Dirac and Bose-Einstein statistics. A basic introduction to quantum mechanics, including several problems of increasing complexity, namely, the one-dimensional particle-in-a-box, the three-dimensional particle-in-a-cubic-box, and the particle-in-a-spherical box is then provided. The latter problem forms the basis for developing the single-particle shell-model of the nucleus, which is compared to the single-particle shell-model of the atom, namely, the hydrogen-atom problem. The barrier-penetration theory of alpha-decay, Fermi's phase-space theory of beta-decay, and the selection rules for gamma-ray decay are then presented. Final topics include the interactions of radiation with matter and the biological effects of radiation.

Enforced Prerequisite at Enrollment: CHEM 452 or PHYS 237 or NUCE 301

Cross-listed with: NUCE 405

CHEM 408: Computational Chemistry

3 Credits

Introduction to numerical and nonnumerical computer uses in physical science. CHEM 408 CHEM 408 Computational Chemistry (3) CHEM 408 introduces some of the many ways in which computers are used in modern chemical research. The main emphasis is on "molecular modeling" including such topics as electronic structure calculation, molecular mechanics, molecular dynamics and Monte Carlo simulation methods. In lesser detail, chemical informatics will also be considered, time permitting. Discussion of the theoretical underpinnings of these various methods and their range of applicability will be combined with exercises illustrating the use of several current chemical software packages and with assignments based on critical reading of illustrative literature papers.

Enforced Prerequisite or Concurrent at Enrollment: CHEM 452

CHEM 410: Inorganic Chemistry

3 Credits

Conceptual and descriptive aspects of nontransition elements, covering structural, thermodynamic, and kinetic features. CHEM 410 Inorganic Chemistry (3) CHEM 410 covers structure and bonding in inorganic chemistry, including the chemistry of main group elements and selected topics in transition metal chemistry. Theories and models of chemical bonding (valence bond theory, crystal field theory, and molecular orbital theory) are applied to inorganic molecules, coordination compounds, and solids. The course also covers the following topics: periodic trends in the chemistry of the d- and p-block elements, structural solid state chemistry, magnetism of transition metal complexes and inorganic solids, ionic and covalent bonding in solids, electronic properties of metals, alloys,

superconductors, and semiconductors, synthesis of inorganic materials, and properties of nanoscale inorganic solids.

Enforced Prerequisite at Enrollment: (CHEM 112 or CHEM 112H) and (CHEM 202 or CHEM 210 or CHEM 210H) and Prerequisite or Concurrent: CHEM 450 or CHEM 452

CHEM 412: Transition Metal Chemistry

3 Credits

Structure and bonding of compounds containing transition metals. CHEM 412 Transition Metal Chemistry (3) CHEM 412 covers the chemistry of the transition metals, and in particular the d-block elements. Major areas of emphasis include coordination chemistry, organometallics, and the role(s) of transition metals in biology. The course covers the following topics: molecular symmetry with applications to bonding and vibrational spectroscopy, coordination chemistry, structural and optical isomers, crystal and ligand field theories, electronic structure and electronic transitions, spectroscopic methods for probing transition metal complexes, kinetics and thermodynamics of ligand substitution reactions, oxidation-reduction reactions, organometallic complexes and their basic reaction types, homogeneous and heterogeneous organometallic catalysts and their reaction cycles, the interactions of metal ions with biological molecules, the function of transition metal ions in metalloproteins, and medically-important transition metal complexes.

Enforced Prerequisite at Enrollment: (CHEM 202 or CHEM 210 or CHEM 210H) and CHEM 310 and Prerequisite or Concurrent: CHEM 450 or CHEM 452

CHEM 413: Chemistry of the Elements

4 Credits

Theoretical and descriptive chemistry of the elements; laboratory synthesis and measurements in inorganic, coordination, and transition metal chemistry.

Enforced Prerequisite at Enrollment: CHEM 213 or CHEM 213W or CHEM 213M

CHEM 423W: Chemical Spectroscopy

4 Credits

Modern methods and instruments of spectroscopy and their applications to problems of chemical structure and analysis. CHEM 423W Chemical Spectroscopy (4) This course reviews modern methods and instruments of spectroscopy and their applications to problems of chemical structure and analysis. Topics include electronics, optics, and atomic and molecular spectroscopy (UV-VIS, Fluorescence, FTIR, Raman, liquid- and solid-state NMR). The course thoroughly integrates lecture and laboratory activities. The laboratory component incorporates skill-building exercises with open-ended guided-inquiry laboratory exercises and a semester-long laboratory- and literature-based research project. Students work in small groups (2-3 students) to complete each assignment. Students are required to write research papers during the semester. The reports are linked to the core course topics and the fifth is associated with the semester-long research project. All reports require students to search for and read the relevant published literature. The course is designed to be rigorous and comprehensive in scope. The writing component for this course includes: maintaining a proper laboratory notebook; reports; and

an oral poster presentation. All writing elements are reviewed and graded by the instructor and teaching assistants.

Enforced Prerequisite at Enrollment: C or better in CHEM 227 and Prerequisite or Concurrent: CHEM 452
Writing Across the Curriculum

CHEM 425W: Chromatography and Electrochemistry

4 Credits

Gas, liquid, and other forms of chromatography; important techniques of electrochemistry.

Enforced Prerequisite at Enrollment: (CHEM 227 or CHEM 221) and CHEM 450
Writing Across the Curriculum

CHEM 430: Structural Analysis of Organic Compounds

3 Credits

Spectroscopic methods as tools in gross and detailed structural analysis and interpretation within the framework of modern theory. CHEM 430 CHEM 430 Structural Analysis of Organic Compounds (3) This course is designed to introduce students to the spectroscopic techniques that are used to elucidate the structures of organic molecules of various molecular weights. Some theoretical background will be provided and is necessary, but the emphasis is on solving problems. The course starts with fundamental concepts and techniques learned in sophomore organic chemistry and builds toward state-of-the-art methods used by modern organic and bioorganic chemists. Topics to be covered include: UV spectroscopy, 1D- 1H and 13C NMR, spin-spin (scalar) coupling and chemical shifts, IR spectroscopy, simple and advanced mass spectroscopic techniques, stereochemistry, advanced NMR topics including advanced 1D and 2D NMR and correlation spectroscopies. Some consideration will also be given to the challenges associated with structure determination in biomolecules.

Enforced Prerequisite at Enrollment: (CHEM 210 or CHEM 210H) and Prerequisite or Concurrent: (CHEM 213 or CHEM 213W or CHEM 213M)

CHEM 431W: Organic and Inorganic Preparations

4 Credits

Preparation, purification, and characterization of both organic and inorganic compounds by modern methods. CHEM 431W CHEM 431W Organic and Inorganic Preparations (3) CHEM 431W is a one-semester, writing-intensive advanced laboratory course that focuses on the preparation, isolation, purification, and characterization of organic, organometallic, and inorganic compounds. Students are expected to use the techniques learned in the introductory organic chemistry laboratory and will learn more advanced techniques such as the use of air-free and anhydrous reaction conditions, glove bags, vacuum manifolds, vacuum distillations, flash chromatography, solvent stills, and gas-tight syringes. Molecular modeling techniques are also introduced. Students are given hands-on access to instrumentation for the characterization of synthetic products or organic unknowns using standard analysis methods such as IR, NMR, UV/V is spectroscopy, mass spectrometry, polarimetry, HPLC, GC and GC-MS. Students are expected to search the chemical literature using databases and online journals and to write formal lab reports in ACS style. The lab assignments include syntheses, separating an

unknown mixture, and a team project, which includes a written proposal, synthetic work, a final report, and a poster presentation.

Enforced Prerequisite at Enrollment: CHEM 213 or CHEM 213W or CHEM 213M
Writing Across the Curriculum

CHEM 432: Organic Reaction Mechanisms

3 Credits

The study, evaluation, and discussion of the mechanisms of selected organic reactions.

Enforced Prerequisite at Enrollment: CHEM 212 or CHEM 212H

CHEM 433: Industrial Medicinal Chemistry Lab

3 Credits

This course is designed to build upon synthetic organic chemistry lab skills in the context of medicinal chemistry, specifically drug development. Students will learn how the pharmaceutical industry approaches the design, synthesis, and testing of drug targets. This knowledge will be applied as students propose and design novel drug targets. The syntheses of these drug targets will be carried out and optimized. The targets will be tested via the appropriate studies and assays to study the targets' properties and bioactivities. Students will have regular interactions with an industrial medicinal chemist to report on their work progress. An electronic notebook will allow for collaborative work and remote feedback from the industrial chemist. The semester culminates with a tour to a pharmaceutical company where students present their semester work in a poster session to scientists at the company.

Enforced Prerequisite at Enrollment: CHEM 431

CHEM 440: Instrumental Analysis

3 Credits

This course presents analytical methods used in chemistry in a way that extends and complements the treatment in CHEM 227. Preliminary discussions will entail sample preparation for organic and inorganic samples, quantitative and qualitative measurements, sensitivity and limit of detection. Techniques addressed will cover the areas of separation, optical spectroscopy, mass spectrometry, electroanalytical techniques and surface analysis. Students are expected to learn how instruments produce signals and how to choose the appropriate technique for a particular analysis.

Enforced Prerequisite at Enrollment: CHEM 227

CHEM 441: Instrumental Analysis Laboratory

1 Credits

This laboratory course presents analytical methods used in the chemistry field in a way that extends and compliments the treatment in CHEM 440. Techniques addressed will cover the areas of separation, optical spectroscopy, mass spectrometry, electroanalytical techniques and surface analysis. Students are expected to learn how instruments produce signals and how to choose the appropriate technique for a particular analysis.

Enforced Prerequisite at Enrollment: CHEM 227. Prerequisite or Concurrent: CHEM 440

CHEM 446: X-Ray Crystallography

3 Credits

Theoretical and practical aspects of structure determination using x-ray diffraction, from crystal growth to structure solution. CHEM 446 X-Ray Crystallography (3) CHEM 446 introduces the student to the basic principles of molecular structure determination through the diffraction of X-rays by single crystals. The emphasis is on small organic, coordination and organometallic compounds. However the principles can provide the basis for extensions into disciplines ranging across geology, materials, molecular biology, and nanoscience. The course is organized in the same way that an actual crystal structure determination might proceed, with theoretical considerations introduced as needed. Techniques of crystal growth and selection are summarized. X-ray sources and instrumentation are described briefly. Unit cells, Miller planes, unit cell geometry and Bragg's law give rationale to the diffraction experiment. Space group symmetry is connected with data collection and the contents of the unit cell. Practical considerations of data collection and instrumentation are covered next. The theoretical description of structure factors and Fourier synthesis leads to consideration of solutions to the phase problem. The remainder of the course illustrates the process of structure solution using real data and software readily available to the students. All the details of publication of a crystal structure; the CIF, ORTEP figures and the format of the experimental section of most journals is described using actual student selected publications. Related structural techniques such as protein crystallography and molecular modeling may be reviewed time permitting.

Enforced Prerequisite at Enrollment: CHEM 210 or CHEM 210H

CHEM 448: Surface Chemistry

3 Credits

Surface chemistry, emphasizing the physical and chemical aspects of surfaces important for applications in colloids, catalysis, microelectronics and biocompatibility. CHEM 448 Surface Chemistry (3) introduces the student to the basic principles of the chemical behavior of surfaces with an emphasis on the fundamental aspects, including surface structure, bonding, thermochemistry and dynamical behavior. The course is intended to provide the basis for extensions into disciplines ranging across geology, materials, environmental engineering, biology, agriculture, physics and nanoscience. Fundamental concepts and relationships of the chemical behavior of organic and inorganic substances that the student has already learned in previous courses will be assembled, correlated and directed towards understanding the behavior of the special case of the surfaces and interfaces of liquids and solids. Starting from the basic principles the student will be guided to evolve a fundamental understanding and predictive ability for important man made and natural applications and phenomena of practical interest, including colloids, surface coatings, lubrication, heterogeneous catalysis, weather, geology, chemical sensing, microelectronics and biocompatibility.

Enforced Prerequisite at Enrollment: CHEM 212 and (CHEM 450 or CHE 220)

CHEM 450: Physical Chemistry - Thermodynamics

3 Credits

Introduction to physical chemistry with primary emphasis on chemical thermodynamics and its molecular interpretation. (Graduate credit not allowed for students majoring in Biochemistry and Molecular Biology, Chemistry, or Chemical Engineering.) CHEM 450 Physical Chemistry - Thermodynamics is a physical chemistry course that introduces students to chemical properties of matter and the fundamentals of chemical thermodynamics. The theoretical foundations of thermodynamic principles are covered and illustrated with a wide variety of examples from the sciences, engineering and technology fields. The course covers the following topics: gas laws, equations of state, the First Law of Thermodynamics, work and heat, internal energy, enthalpy changes, heat capacity, the Second Law of Thermodynamics, entropy and entropy changes, the Third Law of Thermodynamics, Helmholtz and Gibbs energies, phase stability and phase boundaries, phase diagrams, phase equilibrium, surface tension, capillary action, partial molar quantities, thermodynamics of mixing, chemical potential, solvent and solute activities, colligative properties, the phase rule, thermodynamics of two-component systems, chemical equilibrium, spontaneity of chemical reactions, the response of equilibria to experimental conditions, and equilibrium electrochemistry. Note: Students cannot receive credit for both CHEM 450 and CHE 320.

Enforced Prerequisite at Enrollment: CHEM 112 or CHEM 112H and MATH 141 and (PHYS 211 or PHYS 212). Students cannot receive credit for both CHEM 450 and CHE 320.

CHEM 451: Experimental Physical Chemistry I

1 Credits

CHEM 451 is a laboratory course designed to illustrate several of the principles of chemical thermodynamics presented in CHEM 450 and to demonstrate proper treatment and presentation of quantitative data. The experimental topics for this course include heat capacity ratio of gases, diffusion of gases, Joule-Thomson coefficients for gases, enthalpies of combustion, freezing point depression, and vapor pressures of liquids. Students will learn how to write quantitative laboratory reports complete with analysis of the uncertainties of the measurements they make. They will also learn how these uncertainties are propagated through each calculation that make use of the initial measurements. Students will become more aware of the importance of experimental design, proper use of instrumentation, and careful data collection.

Enforced Prerequisite or Concurrent at Enrollment: CHEM 450

CHEM 452: Physical Chemistry - Quantum Chemistry

3 Credits

Introduction to physical chemistry with primary emphasis on molecular structure, spectroscopy, and chemical kinetics. (Graduate credit not allowed for students majoring in Biochemistry and Molecular Biology, Chemistry, or Chemical Engineering.) CHEM 452 Physical Chemistry - Quantum Chemistry (3) is an introductory physical chemistry course that covers quantum chemistry and atomic and molecular spectroscopy. If time permits other topics may include chemical kinetics, statistical thermodynamics, nuclear magnetic resonance, and electron spin resonance spectroscopy. Quantum chemistry topics covered are Schrodinger's equation, the particle in a box, in a ring, on a spherical surface, the free particle, barrier penetration, the harmonic oscillator,

the hydrogen atom, electron spin and multi-electron atoms, molecular structure and symmetry will be covered. Spectroscopy topics are atomic spectra, and the microwave, infrared, and visible spectra of molecules. Chemical kinetics may include rate laws, mechanisms, chain reactions, polymerization reactions, catalysis, molecular reaction dynamics (collision theory and activated complex theory), and nature of potential energy surfaces for reactions.

Enforced Prerequisite at Enrollment: CHEM 112 or CHEM 112H and (PHYS 211 or PHYS 212) and MATH 141. Recommended Preparation: MATH 231 or MATH 230

CHEM 453: Experimental Physical Chemistry II

1 Credits

CHEM 453 is a laboratory course designed to illustrate several of the principles of chemical kinetics and quantum mechanics presented in CHEM 452, and to demonstrate proper treatment and presentation of quantitative data. The experimental topics for this course include kinetics of decomposition and hydrolysis reactions, and different spectroscopic techniques such as ultra violet-visible, infrared, emission and nuclear magnetic resonance spectroscopies. Students will learn how to write quantitative laboratory reports complete with analysis of the uncertainties of the measurements they make. They will also learn how these uncertainties are propagated through each calculation that make use of the initial measurements. Students will become more aware of the importance of experimental design, proper use of instrumentation, and careful data collection.

Enforced Prerequisite or Concurrent at Enrollment: CHEM 452

CHEM 457: Experimental Physical Chemistry

1-2 Credits/Maximum of 2

Laboratory experiments designed to illustrate the principles of physical chemistry and teach techniques of error analysis and the presentation of quantitative data. (Graduate credit not allowed for students majoring in Biochemistry and Molecular Biology, Chemistry, or Chemical Engineering.) CHEM 457 CHEM 457 Experimental Physical Chemistry (2) CHEM 457 is a laboratory course designed to illustrate some of the principles of physical chemistry presented in CHEM 450 and 452 and to teach proper treatment and presentation of quantitative data. In this course, students will learn how to write quantitative laboratory reports complete with analysis of the uncertainties of the measurements they make. They will also learn how these uncertainties are propagated through each calculation that make use of the initial measurements. In doing so, students should become more aware of the importance of experimental design, proper use of instrumentation, and careful data collection.

Enforced Prerequisite or Concurrent at Enrollment: CHEM 450 or CHE 320

CHEM 459W: Advanced Experimental Physical Chemistry

4 Credits

Laboratory experiments and projects for students interested in advanced study in physical chemistry. CHEM 459W Advanced Experimental Physical Chemistry (4) CHEM 459W Advanced Experimental Physical Chemistry is a project-based course designed as a follow-up to CHEM 457. CHEM 459W provides students with further experience in laboratory techniques used for quantitative experimentation and with the processing and interpretation of quantitative data. Experiments and short research projects are designed to complement the theoretical knowledge

acquired in lecture courses so as to enhance students' competence in problem solving in a research environment. Particular attention will be devoted to written communication of experimental results in an effective and concise manner according to American Chemical Society journal standards.

Enforced Prerequisite at Enrollment: CHEM 450 and CHEM 457 and Prerequisite or Concurrent: CHEM 452 Writing Across the Curriculum

CHEM 464: Chemical Kinetics and Dynamics

3 Credits

Introduction to chemical kinetics and molecular dynamics. CHEM 464 CHEM 464 Chemical Kinetics and Dynamics (3) CHEM 464 is a one-semester course that introduces students to chemical kinetics and molecular dynamics, the branch of chemistry concerned with the rates of chemical reactions and the microscopic details of how reactions occur. The course covers old and new experimental, theoretical, and computational methods for kinetics and dynamics. Example systems are chosen from a variety of application including gas-phase reactions, reactions in solution, atmospheric chemistry, and reactions in biological systems. Topics covered are: basic concepts, phenomenological treatments, mechanisms, chain reactions, potential energy surfaces, collision theory, transition state theory, analysis, reactions of surfaces, photochemistry, molecular beams, Monte Carlo methods, molecular dynamics, energy requirements for reaction, and energy disposition.

Enforced Prerequisite at Enrollment: (CHEM 450 or CHE 220) and CHEM 452

CHEM 466: Molecular Thermodynamics

3 Credits

Introduction to physical chemistry with a primary emphasis on the statistical and molecular interpretation of thermodynamics. CHEM 466 CHEM 466 Molecular Thermodynamics (3) CHEM 466 is a physical chemistry course that emphasizes the statistical and molecular interpretation of thermodynamics. This focus enables the student to consider macroscopic properties based on the constituent molecular properties. After a very brief introduction to classical thermodynamics, the statistics of large systems is introduced, used to develop the Boltzmann distribution of energies and then combined with the quantum mechanical structure of energy levels to form a basis to predict and understand atomic and molecular properties such as heat capacity and chemical reaction equilibrium. Solution thermodynamics, interfacial phenomena and colligative properties are discussed in terms of lattice models. The course then turns to a molecular view of transport and chemical reaction rates. Molecular transport is described in terms of random molecular motion and intermolecular forces that tie together to give macroscopic behavior such as ionic conductivity and mass diffusion. Reaction rates are formulated in terms of the distributions of energies and statistical probabilities of the combined reactants in a transition state. Cooperativity in phase transitions is discussed, followed by adsorption and catalysis. Examples with proteins and other biomolecules, as well as polymers and various solutions, appear throughout the course.

Enforced Prerequisite at Enrollment: CHEM 450 or CHE 220

CHEM 468: Molecular Spectroscopy

3 Credits

It is said that there are more than nine million organic chemical compounds. If you add to this list, inorganic complexes, composite materials such as alloys, minerals, and intermediate species like radicals and transition states, the list becomes truly monstrous. Also, the number of properties that interest scientists and engineers is vast (although modest compared to the above). A fascinating aspect of science is that it reveals a small number of general principles that govern the huge number of substances and their reactivities and properties. One powerful tool in the chemist's toolbox is Spectroscopy, which allows us to identify and monitor molecules at stages prior, during, and post reaction. Spectroscopy has allowed chemists to generalize many aspects of molecular behavior in a wide assortment of environments, ranging from vacuum to physiological conditions. In this course, condensed-phase spectroscopy will be emphasized, and we will focus largely on how the tools of molecular spectroscopy can be used to describe interactions between molecules and their surroundings. These interactions can have broad chemical consequences, which include changing molecular polarizabilities and reaction energetics. Therefore, the outcomes of condensed-phase chemical processes are largely influenced by these molecule-surroundings interactions. In this context, we will address important questions of how solvents modify molecular spectroscopic signals, and how these changes can be used for understanding chemical processes. We will begin by describing the properties of electromagnetic radiation and the absorption and emission of light by molecules. In particular, we will introduce, discuss, and apply the concepts of eigenvalues, eigenfunctions, and superpositions of molecular electronic and vibrational states. We will demonstrate how these concepts can be used to predict spectra for isolated (i.e. gas-phase) molecules. We will then extend these concepts to understand how solvents and other environmental influences impact these spectra. Another focus of the course will include explanations of how specific experimental techniques, such as transient and photoluminescence spectroscopy, can be used to understand the efficiencies of specific chemical transformations (e.g. isomerization, electron and proton transfer, dissociation), which are central to reactions in chemical, biological, and materials environments. We will also discuss recent experimental advances that have expanded the spatial, temporal, and energy resolutions of spectroscopic measurements.

Enforced Prerequisite at Enrollment: CHEM 452

CHEM 472: General Biochemistry I

3 Credits

Basic structure and function of cellular components; principles of enzyme kinetics and regulation. CHEM 472 General Biochemistry I (3) CHEM 472 will serve as an introductory course in biochemistry. The course will begin with a review a number of chemical concepts applicable to biochemistry including molecular interactions, acid-base reactions, buffers, titrations and basic thermodynamic and kinetic concepts. The focus will then shift to a discussion of the structures of the biomolecules that make up living matter including carbohydrates, lipids, membranes, proteins, and enzymes, emphasizing the relationship between chemical structure and biological function.

Enforced Prerequisite at Enrollment: CHEM 212 or CHEM 212H

CHEM 476: Biological Chemistry

3 Credits

Fundamentals of Biochemistry for Chemists. Students cannot receive credit for both CHEM 476 and BMB 401. CHEM 476 Biological Chemistry (3) This course is designed to be an introduction to biological chemistry from a chemistry student's perspective. The course will cover the basics of protein, nucleic acid, lipid and carbohydrate structure. The three-dimensional structural aspects of these biological macromolecules will be emphasized, showing their structure-function relationships. The course will also cover some of the chemical logic in enzymatic reactions, drawing from advanced organic and inorganic chemistry concepts, and include a focus on physical processes such as reaction kinetics and binding equilibria. More advanced topics of interest to chemistry students will also be covered, including the biochemical aspects of drug design and discovery. Throughout, the approach will be to introduce the analytical tools that have led to major advances in biochemistry as well as the physical and chemical principles underlying each topic. The course will follow a textbook designed for chemistry students. It will also include reading assignments of several types, including historical papers and current scientific literature dealing with recent advances in the field. The course also includes assignments that require students to familiarize themselves with modern biochemical databases such as those from the National Center for Biotechnology Information.

Enforced Prerequisite at Enrollment: (CHEM 212 or CHEM 212H) and CHEM 450

CHEM 480: Chemistry and Properties of Polymers

3 Credits

This course will be an introduction to the chemistry and properties of polymers. Topics will include in-depth focus on polymerization mechanisms and kinetics (radical, anionic, cationic; ring opening polymerization, coordination polymerization; copolymerization), methods for polymer characterization, structure-property relationships in polymers (especially how the chemical structure affects mechanical and thermal properties), and overview of key chemical processing methods for polymers. Some special topics will also be included, such as conducting polymers for electronics, polymers for biomedical applications, the chemistry/processing of photo resists for photolithography and multiphoton lithography, and 3D printing.

Enforced Prerequisite at Enrollment: CHEM 210 or CHEM 210H

CHEM 491: Instructional Practice

1-2 Credits/Maximum of 3

CHEM 491 Instructional Practice (1-2). Students will participate on an instructional team in the teaching of an undergraduate chemistry laboratory or lecture course. Students in CHEM 491 will gain experience in science education and professional development by participating in either lecture or laboratory courses. The goal of this course is to make students more effective as facilitators, teachers, leaders, and communicators in their chosen careers. Participation in instruction will include working with a team, preparation and presentation of class materials, completion of an individual project, facilitation of student discussions, promotion of a motivating and inclusive course climate, and teaching of course principles and learning objectives.

Enforced Concurrent at Enrollment: SC 220

CHEM 494: Chemical Research

1-10 Credits/Maximum of 20

Experimental investigation of an original research problem. Preparation of a formal thesis is optional. (Credit not allowed for graduate students in Biochemistry, Chemistry or Chemical Engineering.)

CHEM 494H: Chemical Research

1-10 Credits/Maximum of 20

Experimental investigation of an original research problem. Preparation of a formal thesis is optional. (Credit not allowed for graduate students in Biochemistry, Chemistry or Chemical Engineering.)

Honors**CHEM 495: Internship**

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practica, or internships. Written and oral critique of activity required.

Enforced Prerequisite at Enrollment: Prior approval of proposed assignment by instructor

CHEM 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CHEM 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CHEM 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Child Maltreatment and Advocacy Studies (CMAS)

CMAS 258N: Introduction to Child Maltreatment and Advocacy Studies

3 Credits

Introduction to the multidisciplinary field of child maltreatment. CMAS (HD FS) 258 Introduction to Child Maltreatment and Advocacy Studies (3) This course will focus on the identification, investigation, service, advocacy, prosecution, and prevention of child maltreatment as well as the treatment of adverse health outcomes for children who have been maltreated. Specific topics include the causes, correlates, and consequences of child maltreatment, best practices for reporting and investigating an allegation of child maltreatment, evidence-based prevention and intervention programs, the Child Welfare System, and

relevant legal issues (e.g., termination of parental rights, children's testimony in court, etc.). By definition, this course will detail issues related to the abuse and neglect of children. This material can be difficult to hear, view, and discuss. This course is a required course, and a prerequisite for all advanced courses, for a Minor in Child Maltreatment and Advocacy Studies.

Cross-listed with: HDFS 258N, SOC 258N

General Education: Health and Wellness (GHW)

General Education: Social and Behavioral Scien (GS)

General Education - Integrative: Interdomain

GenEd Learning Objective: Crit and Analytical Think

GenEd Learning Objective: Key Literacies

GenEd Learning Objective: Soc Resp and Ethic Reason

CMAS 465: Child Maltreatment: Prevention and Treatment

3 Credits

Advanced examination in approaches for preventing child maltreatment and treating its consequences. HD FS (CMAS) 465 Child Maltreatment: Prevention and Treatment (3) Child maltreatment, including physical abuse, sexual abuse, emotional abuse, and neglect, is a highly prevalent condition affecting nearly one million children each year in the United States alone. This course will delineate the long-term health consequences affecting those who have experienced child maltreatment with an emphasis on those outcomes exerting the greatest impact on overall public health throughout the lifespan. Importantly, a focus on the etiology of such health consequences in the child maltreatment population will be made in order to understand the causal pathways leading to these health consequences. This focus on etiology will serve as a segue into the remaining sections of this course, specifically the prevention and treatment of child maltreatment and its consequences. Universal and targeted prevention programs, where the focus is to prevent an initial instance of child maltreatment from occurring, will be detailed, as will tertiary prevention programs, where the focus is on preventing a re-occurrence of child maltreatment. Similarly, prevention of adverse health outcomes for those affected by child maltreatment will also be covered. Finally, evidenced-based interventions applied with children who have been maltreated and are currently experiencing clinical levels of impairment (e.g. post-traumatic stress disorder) will be detailed. Identification and rehearsal of treatment components commonly used in prevention and clinical intervention programs will be emphasized. Students successfully completing this course will have direct knowledge of the consequences of child maltreatment and the established methods used in prevention and intervention programs applied with this population.

Enforced Prerequisite at Enrollment: CMAS 258N or HDFS 258N or SOC 258N

Cross-listed with: HDFS 465

CMAS 466: Systems and Community Responses

3 Credits

An exploration of the multidisciplinary response to child maltreatment. CMAS 466 / NURS 466 Systems and Community Responses (3) An exploration of the multidisciplinary response to child maltreatment. The roles, responsibilities, and interconnected relationships between the systems that interact when responding to child maltreatment issues will be analyzed. The forensic medical response, challenges, and multidisciplinary team best practices to child maltreatment case are examined. Students will explore responses and best practices within the

health care, judicial, child protection, social service, educational, mental health, human service, and community systems. This course provides students with the opportunity to work with a variety of majors and understand more clearly the interdisciplinary nature of child maltreatment prevention, advocacy, and response.

Recommended Preparation: CMAS 258

Cross-listed with: NURS 466

CMAS 493: Child Maltreatment and Advocacy Studies: Capstone Experience

1-3 Credits/Maximum of 3

This course serves as the capstone experience for students enrolled in the Child Maltreatment and Advocacy Studies minor.

Enforced Prerequisite at Enrollment: CMAS 258N or HDFS 258N or SOC 258N Enforced Concurrent at Enrollment: (CMAS 465 or HDFS 465) and (CMAS 466 or NURS 466)

Cross-listed with: EDPY 493

Chinese (CHNS)

CHNS 1: Level One Chinese A

4 Credits

Introductory study of Chinese language, with audio-lingual practice of Mandarin Chinese and attention to structure and the writing system.

Bachelor of Arts: World Language (All)

CHNS 2: Level One Chinese B

4 Credits

Continued audio-lingual practice of Mandarin Chinese, further study of structure, practice in reading and writing Chinese.

Prerequisite: CHNS 001

Bachelor of Arts: World Language (All)

CHNS 3: Level Two Chinese A

4 Credits

Continued audio-lingual practice of Mandarin Chinese, more extensive practice in reading and writing; study of Chinese culture.

Prerequisite: CHNS 002

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

CHNS 97: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CHNS 99: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CHNS 110: Level Two Chinese B

4 Credits

Readings in selected modern Chinese literature (short stories, plays, essays, poems) and other texts; practice in conversation and simple composition. CHNS 110 Conversation, Reading, and Composition (4) (IL) (BA) This course meets the Bachelor of Arts degree requirements. As the fourth course in the Chinese language series, CHNS 110 continues to focus on the four skills of listening, speaking, reading, and writing. It intends to introduce students to frequently-used grammatical constructions in the Chinese language and to give students an active vocabulary of about 800 words. Building on the skills students acquired in Chinese 001 to 003 (the prerequisites to Chinese 110), this course expands their knowledge of the language and cultures of the Chinese-speaking peoples in China, Hong Kong, Taiwan, and around the world. To that end, there are both language-learning objectives and socio-cultural ones in this course. About 85% of the class time will be spent in language learning and about 15% in cultural issues. Research indicates that the more knowledge students have about the context in which the target language is used, the higher their overall linguistic proficiency level will be. To facilitate students' learning of Chinese culture, CHNS 110 also incorporate into the curriculum a variety of culture-related activities, including interviewing native speakers, film screening, calligraphy workshops etc. Class activities include group discussion, mini-presentations, and in-class conversation practice. Evaluation will be through means such as vocabulary and sentence pattern quizzes, weekly journals and reaction papers, chapter exams, in-class oral presentations, writing assignments, and a final oral interview with instructor. Chinese 110 counts towards the Chinese minor and may also fulfill other requirements, such as providing credits towards the major in Comparative Literature or the major in Asian Studies- check with advisors in those majors.

Prerequisite: CHNS 003

Bachelor of Arts: World Language (All)

Bachelor of Arts: World Lang (12th Unit)

International Cultures (IL)

Exceeds 12th Unit of World Language

CHNS 120: Introduction to Chinese Literature and Culture

3 Credits

This course provides an introduction to Chinese cultural production from ancient times to the postmodern era, with an emphasis on literature. In its more recent segments, the course will include film as well as considerations of Chinese cultures in the Chinese diaspora (such as the United States) and throughout the Chinese-speaking world. Students will learn about major eras of Chinese literature and the diversity of Chinese cultures in such locations as mainland China, Taiwan, Hong Kong, and the worldwide Chinese diaspora. Readings will represent several genres, such as poetry, folktale, short story, novel, prose fiction, drama, and historical annals. Through this course students can develop a historical and cultural perspective in order to understand the contexts and value systems that have inspired literary works. Students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, and post modern consumer culture, among others. Students will read literature and related materials from different periods, with examples from other media such as films where

appropriate. Class work may include lectures or presentations by the instructor and student participation through means such as guided discussions, group discussions, and students' presentations. This participatory approach is intended to deepen students' appreciation of the texts, to help them understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist students in developing analytical and expressive abilities. CHNS 120 is designed to be suitable for all students generally interested in China and the Chinese-speaking world, or interested in literature and other fields of humanistic study, whether or not they have previously studied Chinese culture. All materials will be available in English. Taught in English.

 GenEd Learning Objective: Global Learning
 GenEd Learning Objective: Key Literacies

CHNS 121N: Chinese Film and New Media

3 Credits

Survey of Chinese film and new media in the twentieth century and beyond, with attention to changing cultural settings. Taught in English. CHNS 121N Chinese Film and New Media (3) (GH;GA;IL) (BA) This course meets the Bachelor of Arts degree requirements. This is intended to provide an introduction to modern and cutting-edge forms of cultural production in the Chinese-speaking world from the twentieth century to the present day. Prior study of China is not required and materials will be available in English. Students will learn about major technologies and forms of media, including film, TV, and various forms of new media (cell-phone novels, blogs, MMOGs, IM, and Web 2.0 for instance). Readings and screenings will cover several artistic modes including formalism, historiography, documentary, period drama, and experimental works. The course, or individual units within the course, will be structured so that students develop an historical perspective, allowing them to understand the cultural contexts that have inspired the creative works under study. By examining Chinese-language film and new media with attention to changing cultural settings, students will investigate such topics as the relation between social institutions and the individual, the formation and expression of identity, changing gender roles and family structures, the impact of technological and economic trends on social structure, and changing climates of censorship and freedom of expression. In addition, students will learn to think critically about various media's techniques and aesthetics of representation, and will become more engaged, critical spectators of film and related media. Class work includes some lecture but emphasizes guided discussions, group work, writing exercises, and some student presentations. This participatory approach is intended to deepen students' appreciation of the works, to help them understand value systems that may differ from those predominant in western cultures, and to assist students in developing both analytical and expressive abilities. Through critical reading, group discussion and interpretive writing, students will hone skills for evaluating modes of cultural production and consumption in the Chinese-speaking world. The course is designed to be suitable for all students generally interested in China, or interested in various fields of humanistic study, whether or not they have previously studied Chinese culture. It is designed to count as General Education and as a B.A. "Other Cultures" course. This course will be taught in the active-learning mode, featuring a variety of instructional components such as lecture, discussion, oral presentations, web-based

activities, etc., to provide students abundant opportunity for expressing their opinions. As a general education course, all versions will include writing, speaking, self-expression; information gathering, synthesis, and analysis; and international/intercultural components.

CHNS 403M: Level Four Chinese A

4 Credits

Continuation of CHNS 402. Aims to improve students' proficiency in all four language skills, with a special emphasis on writing. CHNS 403W Level Four Chinese A (4) This is a four credit course designed for those who have completed Level Three Chinese B or the equivalent. The course aims to further develop students' proficiency in all four language skills, with a special emphasis on writing. Students will study several topics on current social issues in modern Chinese society, such as education and housing issue, woman's status, through a selected textbook, news reading, and by interviewing native speaker of Chinese from different regions. Via all the debatable topics, students will be guided to explore and practice various writing styles, such as description, narration, argumentation, and expository writing throughout the semester. Comparison of rhetorical strategies between Chinese and English writing will also be introduced to help students think and write more like a native when using the target language. The majority of reading and writing assignments will be done outside of class, with some guidance from the instructor. Class time will be used mainly for discussions of content, feedback on writing. All class activities will be conducted in Chinese.

Writing exercises include short response papers on topics, summarizes of the readings, and short essays. Through the writing exercises, students will reflect more deeply on certain topics, synthesize information from course materials, provoke critical thinking and express their opinions and support ideas by referring to and citing from source texts. This will help students be prepared for a longer thesis in the next course in the sequence. This course will help students further advance their writing skills by continuously building their vocabulary, understanding the target culture, and its social issues through various sources of structured and authentic materials. Students will also write a resume and formal letter that help them start building their career in Chinese.

Prerequisite: CHNS 402

Writing Across the Curriculum

CHNS 404: Level Four Chinese B

4 Credits

Continuation of CHNS 403W. Aims to improve students' proficiency in all four language skills through content-based language learning. CHNS 404 Level Four Chinese B (4) This is a four credit course designed for those who have completed Level Four Chinese A or the equivalent. The course aims to further develop students' proficiency in all four language skills. Students will study several topics on current social issues in contemporary Chinese society. For example, economic spurt in China, environmental protection, values conflict between traditional

Chinese culture and Western culture, etc. Students will learn those topics via a textbook, interviewing native speakers of Chinese from different regions, and variety of media, such as newspaper, TV news, and movie. The majority of reading and writing assignments will be done outside of class, with some guidance from the instructor. Students will be guided to use appropriate resources such as dictionaries, reference books, online dictionaries and other online resource to facilitate their learning. Class time will be used mainly for discussion of content, feedback on writing, and presentations by students. All class activities will be conducted in Chinese. Students will be mainly evaluated by writing exercises and presentations. Writing exercises include short response papers on topics, summaries of the readings, short essays and a final thesis. Through the writing exercises, students will reflect more deeply on certain topics, synthesize information from course materials, provoke critical thinking and express their opinions and support ideas by referring to and citing from source texts. Presentations include debates, individual and group presentation, which will help students advance their communication and presentational skills. E-portfolio will sample the work students have done in the course.

Prerequisite: CHNS 403W

CHNS 410: Chinese Through Film

3 Credits

This course is designed for students who finish Level Two Chinese or higher and aims to help them develop Chinese proficiency through movies. CHNS 410 Chinese Through Film (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course aims to provoke students' critical thinking on China-related issues and improve their Chinese language proficiency by encouraging them to reenact and remake selected scenes from the movies, investigate and discuss the social issues as shown from the movies. This is a three credit course designed to go beyond the day-to-day topics to further develop students' understanding of the social issues in contemporary China and thus enhance their Chinese language proficiency. Through watching movies in Chinese, students will listen to authentic Chinese and expose to broader aspects of Chinese people's lives and Chinese society. In addition, they will have opportunities to conduct culture comparisons between China and the U.S., East and West, which will enable them to make in-depth analysis when examining a complex social, political or economic issue in China. The follow-up class activities include both speaking and writing assignments. Depending on the topics, speaking assignments may include: reenactment or recreation of a selected scene from the movies, class or group discussions, debates and presentations. Writing assignments may include: writing a new story or different ending for the movies, and reflection essays.

Prerequisite: CHNS 110 or equivalent
Bachelor of Arts: Humanities
International Cultures (IL)

CHNS 411: Chinese Written Characters

3 Credits

This course aims to establish a solid foundation of students' Chinese orthography and prepare students for continuing study in subsequent Chinese courses. CHNS 411 Chinese Written Characters (3) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course aims to equip students' knowledge and skills of Chinese orthography through both cognitive and meta-cognitive approach of learning, where it is expected to lay a solid foundation for students' continuing study of

subsequent Chinese language courses. Students will learn and apply radical and component-building approach to synthesize their already-acquired characters, and further learn approximately 500 additional characters. Characters selected for study in this course are based upon the references of HSK (Hanyu Shuiping Kaoshi) Level V and TOP-Huayu (Test of Proficiency- Huayu) Intermediate level. Building upon these characters, students will further expand their vocabulary volume through character association strategy and extensive reading. Cooperative learning approach will be largely incorporated to promote in-class active learning, such as developing and sharing character learning strategies through keeping learning journal, group reading, discussing cultural connotations of selected amount of characters, etc. Students will also learn the origin, history and evolution of Chinese characters through textbook reading and multimedia materials learning, such as DVD and You Tube video clips that help visualize the evolution process of selected characters for demonstration. Instructional Objectives (what the student is expected to learn; what skills s/he will develop): 1. Understand the origin, history and evolution of Chinese characters 2. Develop and apply strategies on learning Chinese characters 3. Familiarize with available resources that assist Chinese characters learning and memorizing 4. Strengthen and synthesize students' existing knowledge of Chinese orthography 5. Learn approximately 500 new characters 6. Expand vocabulary volume derived from the acquired characters 7. Expand reading experience by reading semi-authentic and authentic articles that are constituted of the acquired characters 8. Strengthen listening and speaking skills of the target language through intensive in-class discussions and lectures

Prerequisite: CHNS 110 or the equivalent
International Cultures (IL)

CHNS 412: Business Chinese

3 Credits

This is a three-credit course designed for those who have completed Level Two Chinese or the equivalent. Business knowledge is presented as a means to facilitate language learning, while the content-based materials enhance cultural awareness. Emphasis will be given to helping students gain the linguistic skills that characterize advanced level second language learners, especially linguistic conventions essential to functioning in business environments. Real cases involving successful multinational Chinese and foreign companies and issues such as marketing, branding, mergers and acquisitions, OEM, and international expansion will be used as texts. The selected textbook is in Chinese with English explanations, but students will be guided through in-class discussions in Chinese. Approximately 80% of the instructional language will be conducted in Chinese. This course is designed to give students exposure to China's vibrant business scene and to enhance both their Chinese skills in the business context and their understanding of the social and cultural aspects of "doing business" in China and the impact of Chinese economy in the globalization era. Students will discuss real business cases from multinational companies that have successfully entered the Chinese market and from large Chinese corporations that have been successful in the global market, especially in the United States. By reading, discussing, and performing communicative tasks related to those cases, students will learn how to use Chinese as a "carrier of culture", thus acquiring a better understanding of China in economic and cultural terms. In addition to the business case analysis, supplementary reading, writing and listening exercises as well as media materials, such as clips of Chinese talk shows and television interviews, will also be provided. Highlights of these exercises are: listening comprehension of business news reports on current issues;

analysis of the Chinese financial market; discussion of Chinese business laws, translation of business terms and documents, and commercial language and word processing. Students are supported and guided through the course as they develop the skills they need to continue learning on their own. Students are encouraged to explore and keep up to date with new developments in China's economy through their own efforts, thus developing an independent learning style and connecting classroom learning to the real world.

Prerequisite: CHNS 110

CHNS 414: Chinese Language, Culture and Society

3 Credits/Maximum of 3

The study of Chinese language and culture and a perspective on the way of life in contemporary Chinese society. Through this course, the students are introduced to a cognitive approach to the study of Chinese language and culture and a broad perspective on the Chinese way of life in contemporary Chinese society. In particular, we will study how the interaction between Chinese language and culture frames the worldview of Chinese speakers, how the usage of the Chinese language manifests the underlying conceptual structure, which in turn is shaped by the physical (including bodily) and cultural experience of its speakers, and how conventional usage of linguistic expressions of Chinese reflects, and possibly influences, the ways in which Chinese speakers see or conceptualize the world. We will focus on conventionalized expressions, which include compound words, idiomatic phrases, and proverbial sayings, in the Chinese language, and study the Chinese conventional ways of talking about reality, both external and internal, as windows into Chinese culture and cognition. More generally, we will try to understand the embodied nature of human cognition as we see how abstract thought is grounded in bodily experience in and with the physical and cultural world. We will also look at various domains of life in contemporary China in order to gain a better understanding of Chinese society. The objectives of this course are threefold: (1) to lead Chinese language students to a linguistic approach to language analysis so that they learn about how individual linguistic expressions fit into a coherent linguistic system; (2) to enable them to see how linguistic structures reflect underlying cognitive, conceptual structures which are derived from the interplay between human embodiment and cultural environment; and (3) to provide them with a broad perspective on contemporary Chinese society.

Prerequisites: ASIA 4; ASIA 100; ASIA 101; ASIA 102; ASIA 175; CMLIT 4; HIST 175; CHNS 120; CHNS 121; 5th Semester standing

CHNS 415: China Beyond China

3 Credits

Study of modern and contemporary Chinese culture in its diversity and its intercultural contexts. CHNS 415 China Beyond China (3) (IL) In order to begin to understand Chinese culture, we cannot treat it as a monolithic, unified whole. This course will give an introduction to modern and contemporary Chinese culture (focusing on the 20th and 21st centuries) by paying special attention to China's inner diversity, as well as the continuous shaping of Chinese culture in contact, dialogue, and tension with other cultures. Through the study of literary texts, films, and other cultural material - as well as a small number of theoretical essays - this course will focus on: 1) Chinese culture in its variety by

focusing on Chinese cultural spheres beyond the People's Republic (Taiwan, Hong Kong), the Chinese diaspora, as well as other ethnicities and cultures within Mainland China; and 2) the ways in which Chinese modernity was impacted by intercultural impulses, as well as the recent self-representation of China in the context of globalization. Course Objectives include: 1. Understand modern and contemporary China in its cultural diversity, as well as shaped by intercultural and global processes. 2. Critically analyze processes of cultural contact and the representations of cultural differences. 3. Think critically about globalization with its impact on such categories as the local and the national. 4. Question your assumptions about the world, re-examine your own points of view, and understand cultures and value systems that may differ from (or be shared with) your own.

CHNS 416: Gender and Sexuality in China

3 Credits

Study of gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China. CHNS 416 Gender and Sexuality in China (3) (IL) This course explores gender roles and the imaginary of sexuality in the literary, filmic, and artistic production of modern China (from the end of the 19th century up to today), paying attention also to developments in Chinese cultural spheres beyond the People's Republic, such as Taiwan, Hong Kong, and the Chinese diaspora. This course will use the representation of gender, sex, and sexuality as a lens through which modern and contemporary Chinese culture can be understood in its historical, social, and aesthetic changes. The analysis of representations of gender and sexuality throughout the class will focus on literary and filmic texts, as well as art, rather than on theoretical work on gender and sexuality (in China or in general). Course Objectives include: 1. Critically assess the complex construction of gender roles and sexuality in modern and contemporary Chinese literature and film. 2. Reflect critically on different ways of understanding and representing gender difference. 3. Critically assess the connections between gender and sexuality and changing political, historical, and cultural contexts. 4. Question your assumptions about gender and sexualities in the context of cultural difference, understand cultures and value systems that may be different from (or be shared with) your own.

CHNS 417: The Warrior, the Courtesan and the Ghost in Classical Chinese Novels

3 Credits

This course provides an introduction to major classical Chinese novels by focusing on three character types: the warrior, the courtesan, and the ghost. CHNS 423 417 The Warrior, the Courtesan and the Ghost in Classical Chinese Novels (3) (IL) A narrowly defined notion of modern literature is a relatively recent phenomenon that dates back only to the early twentieth century in the Chinese context. There is, however,

a long tradition of the vernacular novel that remains influential till today, in spite of its marginalization by the Western-influenced Chinese Enlightenment project. This course provides an introduction to major classical Chinese novels by focusing on three character types: the warrior, the courtesan, and the ghost. The warrior is commonly found in historical romances, tales about errant knights and assassins, and martial arts fiction. Although the typical setting for the courtesan is in novels about prostitution (Xia Xie Xiaoshuo), this course will relate this figure to other female types in various domestic space, thereby tracing the genealogical connections between the domestic fiction and the courtesan fiction. The ghost can be found in Accounts of the Strange (Zhi Guai) and Tales of the Miraculous (Chuan Qi). This course will relate this figure in these narrative genres with other types of the supernatural being, such as Gods and Demons. Most readings will be drawn from the Mind-Qing period (14th -20th c) but modern and contemporary literature as well as visual or media culture that consciously continue or rewrite these narrative traditions will be considered as well. All readings and class discussions will be in English. Knowledge of Chinese or Chinese literature is not assumed or required. From year to year the content we cover might change, but this course will always explore: 1) Major classical Chinese narrative traditions that are radically different from the Western-influenced narrative modes of the twentieth century. 2) Pre-modern practices of literary reading and criticism and pre-modern notions of literacy, literature, and modes of circulation. Course Objectives include: 1. Critically analyze major texts and genres of the classical Chinese novel. 2. Understand pre-modern practices of story-telling, literary circulation, reading, and criticism. 3. Think critically about pre-modern societies and their connections with the contemporary world.

CHNS 418: Confucius and the Great Books of China

3 Credits

This course familiarizes students with the critical texts and intellectual cultures of Warring States and early imperial China. CHNS 418 / ASIA 418 / HIST 482 Confucius and the Great Books of China (3) This course exposes students to the key texts, thinkers, and ideas that form the foundation of the Chinese classics and classical period, providing an integral foundation for the study of Chinese history, culture, or literature. While the emphasis is on the texts and their main themes, the course will encourage historical engagement with the texts by placing them into a context of competing cultural, social, political trends. Readings may be grouped around categories of teachings such as Confucianism, Buddhism, and Daoism, or around thinkers such as "(Confucian) ritualists," "statesmen," "military strategists," "rebels," "recluses," and "spiritual leaders." Students will learn how each of these types of teachings and thinkers related to each other, as well as how they responded to the emergent, centralized political order of the day. This will help students better understand many of the recurrent intellectual, political, and religious themes that arise in later Chinese history as well.

Prerequisite: ASIA 3; ASIA 100; ASIA 104; ASIA 175; ASIA 181; HIST 175; CHNS 120; CHNS 121; ENGL 15; RLST 3; RLST 181; 5th Semester standing

CHNS 419: The Chinese Rhetorical Tradition

3 Credits/Maximum of 6

Study of the rhetorical works in ancient China as well as multiple facets of modern Chinese rhetoric. CHNS 419 The Chinese Rhetorical Tradition (3 per semester/maximum of 6) (IL)(BA) This course meets the Bachelor of Arts degree requirements. This course surveys the Chinese rhetorical tradition dating back two and a half millennia. Rhetoric is defined here as the study and practice of artful means of communication, including poetic, expository, and argumentative modes. The class will first delve into the works of competing intellectual schools in pre-imperial China (pre-221 BCE), which set a corner stone for thoughts and practice of communication in the imperial period (221 BCE - 1918). These schools, including the Daoist, the Confucian, and the Legalist, developed their rhetorical notions through engaging with the political, intellectual, and ethnic Other. From here the class will examine the multiple facets of modern Chinese rhetoric, which has undergone a continual contact and conflation with other rhetorical traditions in the global contact zone. The class will focus on topics such as feminist discourse, Chinese-American rhetoric, and the teaching of writing, which bear direct implications on our contemporary social life.

Prerequisites: ENGL 15; ASIA 3; ASIA 100; ASIA 104; ASIA 175; ASIA 181; HIST 175; CHNS 120; CHNS 121; RLST 3; RLST 181; 5th Semester standing

International Cultures (IL)

CHNS 452: Contemporary China: Culture and Trends

3 Credits/Maximum of 6

Survey of aspects of the contemporary Chinese-speaking world. Includes readings from Chinese newspapers, magazines, and fiction. Topics may vary each semester. CHNS 452 Contemporary China: Culture and Trends (3) (IL) BA - This course meets the Bachelor of Arts degree requirements. This course surveys Chinese cultural production in the contemporary period, with an emphasis on literature. Taught in Chinese; readings and assignments in Chinese. The course will examine the diverse forms of cultural expression (literature, film, new media, theater, television) throughout the Chinese-speaking world. Students will learn about major cultural trends in such locations as mainland China, Taiwan, Hong Kong, and the worldwide Chinese diaspora. Readings will represent several genres, such as poetry, folktale, short story, novel, prose fiction, and drama. Through this course students can develop a historical and cultural perspective in order to understand the contexts and value systems that have inspired literary works in the contemporary period. Students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, and postmodern consumer culture, among others. Class work will include lectures or presentations by the instructor and student participation through means such as guided discussions, group discussions, and students' presentations. This participatory approach is intended to deepen students' appreciation of the texts, to help them understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist students in developing analytical and expressive abilities. Chinese 452 is designed to be suitable for students (Chinese majors) who have completed Chinese 401. The course is designed to count

as international cultures, and as a B.A. 'Other Cultures' course. This course will be taught in the active-learning mode, featuring a variety of instructional components such as lecture, discussion, oral presentations, web-based activities, etc., to provide students abundant opportunity for expressing their opinions. The course will include writing, speaking, self-expression; information gathering, synthesis, and analysis; and international/intercultural components.

Prerequisite: CHNS 401
Bachelor of Arts: World Cultures
International Cultures (IL)

CHNS 453: Chinese Film

3 Credits/Maximum of 6

Selected films and directors representing various aspects of Chinese culture and cinema. Topics may vary each semester. Taught in Chinese. CHNS 453 Chinese Film (3) (IL) BA - This course meets the Bachelor of Arts degree requirements. This course surveys Chinese film from the early twentieth century to the present time, with an emphasis on film and national history. Taught in Chinese; readings and assignments in Chinese. The course will examine the diverse forms of film language in the works of filmmakers from mainland China, Taiwan, and Hong Kong. Readings will include interviews, reviews, film criticism, and other relevant texts (such as a short story that inspired a film). Through this course students can develop a historical and cultural perspective in order to understand the contexts and value systems that have inspired Chinese-language films. Students will investigate such topics as the relation between social institutions and the individual, the traditional patriarchal system, the changing roles of women, westernization, and postmodern consumer culture, among others. Class work will include lectures or presentations by the instructor and student participation through means such as guided discussions, group discussions, and students' presentations. This participatory approach is intended to deepen students' appreciation of the texts, to help them understand value systems that may differ from, or else be shared with, those predominant in modern Western cultures, and to assist students in developing analytical and expressive abilities. Chinese 453 is designed to be suitable for students (Chinese majors) who have completed Chinese 401. This course will be taught in the active-learning mode, featuring a variety of instructional components such as lecture, discussion, oral presentations, web-based activities, etc., to provide students abundant opportunity for expressing their opinions. The course will include writing, speaking, self-expression; information gathering, synthesis, and analysis; and international/intercultural components.

Prerequisite: CHNS 401
Bachelor of Arts: World Cultures
International Cultures (IL)

CHNS 454: Introduction to Classical Chinese

3 Credits/Maximum of 6

Basic patterns and structures of Classical Chinese to the first millennium B.C. to the 19th century. CHNS 454 Introduction to Classical Chinese (3) (IL) BA - This course meets the Bachelor of Arts degree requirements. This course introduces students to the basic patterns and structures of Classical Chinese. Classical Chinese is a language shaped in the latter half of the first millennium B.C. that still persists as a living medium of expression today. Knowledge of Classical Chinese is important to help students read and understand sophisticated modern Chinese texts, which make frequent use of Classical allusions and constructs. In this

course, students will learn basic grammar, syntax, and commonly-used vocabulary. The cultural and literary implications of classical Chinese will be discussed throughout the course in order to provide the students not only with the linguistic knowledge of classical Chinese, but the rich historical backgrounds implied in this particular style of Chinese. The main goal of the course is for students to acquire skills in reading Classical Chinese and expand their knowledge and understanding of ancient Chinese culture, society and history in relation to modern and contemporary Chinese culture, such as Confucianism and family values. With this knowledge and training, not only will students be more comfortable reading the Chinese Classics, they will also thereby increase their proficiency in modern Chinese and their knowledge of Chinese culture. This course will fulfill the Intercultural Cultures and B.A. 'Other Cultures' and foreign language requirements.

Prerequisite: CHNS 401 or equivalent (such as study abroad credit)

Bachelor of Arts: World Lang (12th Unit)
Bachelor of Arts: World Cultures
International Cultures (IL)
Exceeds 12th Unit of World Language

CHNS 455: Masterpieces of Traditional Chinese Literature

3 Credits

Survey of traditional Chinese literature, including poetry, historical narratives, philosophical texts, and drama and novel. CHNS 455 Masterpieces of Traditional Chinese Literature (3) (IL) BA - This course meets the Bachelor of Arts degree requirements. CHNS 455 Masterpieces of Traditional Chinese Literature presents an overview of China's literary tradition, focusing, in particular, on literary techniques used in a variety of text types such as poetry, essays, fiction and drama. This course aims to develop students' advanced knowledge of the features of traditional Chinese literature and its intellectual, cultural, and social background. Through close reading of selected major works, students will become familiar with the features of various genres. For example, students will study prose writings, the major poetic forms and some of the important poets from the Tang period, and aspects of literati culture through close reading of texts from the late imperial period. At the end of this course, a student will have read and discussed sample writings from philosophical and poetic traditions and well as sample writings on the cultural and scholastic activities of the literati. Students should also be able to deal with classical texts on a reasonable level, to identify problematic passages and to be able to clarify them with the help of secondary reference material. Students should also be able to appreciate some of the civilizing aspects of Chinese culture as well as literary and poetic devices such as tonal patterns, rhyme schemes, structure and writing techniques, and discussion of the poets and their work, and have an understanding of the main genres in classical Chinese literature and philosophy.

Prerequisite: CHNS 401 or equivalent
Bachelor of Arts: World Language (All)
Bachelor of Arts: World Lang (12th Unit)
Bachelor of Arts: World Cultures
International Cultures (IL)
Exceeds 12th Unit of World Language

CHNS 494: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

CHNS 494H: Research Project

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

Honors**CHNS 496: Independent Studies**

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CHNS 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Civic and Community Engagement (CIVCM)

CIVCM 211N: Foundations: Civic and Community Engagement

3 Credits

Through readings, discussion, deliberation, listening, and individual as well as collaborative action, this course gives students the opportunity to learn about and practice theories and habits of civic and community engagement and public scholarship with the goal of helping to build democratic capacity and sustain participatory democracy. This course emphasizes concepts and case studies that focus on the people's role in shared governance. The course also provides a foundation for understanding how a wide range of other individual and collective practices have an equally important role to play in building and sustaining community. The course draws from studies in demography, political science, sociology, psychology of racial identity formation and education to help students communicate better about and in shared governance. Among the core concepts are the role of students and other citizens in sustaining and transforming their communities, the historical and contemporary mission of Land Grant universities, the centrality of rhetoric and communication to collaborative judgment, and the relationship among media, cultures, and politics as they affect civic and community engagement. Students also learn together about the range of ways that citizens do, can, and might participate in democratic decision-making and will observe and practice these forms in several

communication media and across a range of differences. Finally, learn about models of and opportunities for engaging other citizens across and beyond Penn State, including in global environments.

Enforced Prerequisite at Enrollment: ENGL 15 or ENGL 30H or CAS 137H or ENGL 137H or CAS 100

CE 100S: Topics and Contemporary Issues in Civil and Environmental Engineering: First-Year Seminar

1 Credits

First-Year Seminar exploring a specific topic or contemporary issue in civil and environmental engineering. CE 100S Topics and Contemporary Issues in Civil and Environmental Engineering: First-Year Seminar (1) (FYS)The first-year seminar in civil engineering will provide an opportunity for students to explore a specific topic or contemporary issue, which may fall within one of the Department of Civil and Environmental Engineering's technical emphasis areas, or include many of the facets of civil engineering. Civil engineers plan, design, construct, operate, and maintain the physical works and facilities essential to modern life: highways, streets, bridges, dams and levees, water distribution and wastewater collection, and treatment systems. Civil engineers work with architects and other engineers in the design and construction of buildings and industrial structures and facilities. They also have a major responsibility for identifying and remediating environmental hazards. The specific course topic, chosen by the course instructor, will vary by section and semester and will be indicated by the section subtitle. Examples of the topics that may form the core of a seminar section include droughts and floods, lessons from structural failures, engineers as environmental change agents, beneficial reuse of treated wastewater, highway accident reconstruction and engineering, and landmark civil engineering projects. Within the context of the specific seminar topic, each section will provide students with an introduction to the civil engineering field, exposure to some of the professional skills and competencies associated with academic study and the practice of engineering, and access to relevant student and professional societies. Each seminar section will include an active learning element that may include laboratory experiments, group projects, class discussions, and possible trips,

providing close interaction with the faculty member teaching the course. This seminar course will help incoming students become acclimated to University life and become aware of available resources and support services.

First-Year Seminar

CE 197: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CE 199: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CE 209: Fundamentals of Surveying

2 Credits

Fundamental surveying measurements, traverse computations, coordinate geometry, mapping, CAD applications. Intended for architectural engineering students. (The lecture will be taught concurrently with C E 211.)

Enforced Prerequisite at Enrollment: MATH 141

CE 254: Personal & Occupational Safety

3 Credits

Students will learn about principles of safety in work and personal settings. C E 254 Personal & Occupational Safety (3) (GHA; US) This is a 3 credit course designed for students who want an understanding of safety, practices related to the individual's wellness and developing knowledge, attitudes, habits and skills needed for a safe healthful lifestyle. General safety topics that are relevant to students as they adjust to the transition into and through college are introduced through a values and decision making approach to learning. The students will understand direct and indirect cost related to an accident; identifying the major occupational and general injuries and deaths and the role of workers compensation, and safe procedures. OSHA will be discussed including its structure & organization, citations & fines, inspections, various standard areas, and developing an effective safety program. The course content will also be related to principles of personal and general safety including, preventive and protective systems, highway/road safety, general child safety, emergency response, and how safety is integrated with their lifestyle and our society. The course is designed to give students a broader understanding of both short-term and long-term wellness and how it is affected by safety behavior.

United States Cultures (US)

CE 271: Water and Wastewater Transport Systems

3 Credits

Water, wastewater quantities; water storage; design of water distribution and sewerage systems; pumping stations; introduction to water-wastewater treatment processes.

CE 296: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CE 297: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CE 299: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CE 310: Surveying

3 Credits

Fundamental surveying measurements, traverse computations, coordinate geometry, mapping, GPS and GIS, circular and parabolic curves, earthwork, boundary surveys, CAD applications. C E 310 Surveying (3) This is an introductory course in the fundamentals of surveying designed for Civil Engineering students. It includes basic measurement techniques of distance and angles, both horizontal and vertical. Traverse measurements analysis and mapping are discussed. Boundary surveys and legal descriptions are studied. Instruction includes the analysis of circular and parabolic curves, earthwork, and the use of coordinate geometry. Global positioning and graphic information systems are studied.

Enforced Prerequisite at Enrollment: EDSGN 100 and MATH 141

CE 321: Highway Engineering

3 Credits

Highway engineering principles, vehicle and driver characteristics; geometric and pavement design; highway drainage; traffic engineering, capacity analysis, and signal timing. C E 321 Highway Engineering (3) This course provides an introduction to highway engineering and is designed for civil engineering students. It includes topics such as vehicle motion, highway cross-sections, horizontal and vertical alignment, and sight distance. Other topics are pavement design, drainage analysis, traffic engineering and highway capacity. The students will also have a CAD lab where they design a highway using computer software. The semester project provides hands-on highway design experience. This course serves as a prerequisite for advanced highway engineering study.

Enforced Prerequisite at Enrollment: CE 310

CE 332: Professionalism, Economics & Construction Project Delivery

3 Credits

Introduction to engineering management process; economic analysis; pricing; contract documents; estimating; ethics; professional practice and engineering economy. C E 332 C E 332 Project Development (3) The first five weeks of the course introduces concepts relating to engineering ethics, professionalism including the importance of licensure, and

engineering economy. The remainder of the semester concentrates on project development and the design and construction of the delivery process. Topics include: scope of design services; conceptual cost estimates; the bidding process, estimating; and risk management.

CE 333W: Construction Management I

3 Credits

Components of a construction organization, managerial terminology and documents, labor laws and relations, insurance and safety. C E 333W C E 333W Construction Management I (3) The object of this course is to have a broad understanding of the business process in the construction industry. The construction industry offers a variety of organization with each having specialized needs and processes in operating an effective business. The professional constructor deals with a complex process of decisions and auctions that start from the time of projects conception until the project is completed. The course addresses issues involving legal and code requirements, necessary documents in selecting projects, developing estimates, determining delivery systems, planning and scheduling, and managing a construction project. Also covered are the liability issues that will be required, insurances or bond requirements, and the ethical role of the constructor. The managerial and safety role of the professional constructor is also introduced.

Writing Across the Curriculum

CE 335: Engineering Mechanics of Soils

3 Credits

Soil compositions, classification, subsurface exploration, ground water flow, stress analysis, compaction, soil behavior, bearing capacity, lateral earth pressure, slope stability. C E 335 C E 335 Engineering Mechanics of Soils (3) This course explores the engineering properties of soils, fundamental soil mechanics, and their applications of foundation design and analysis. Specific topics covered in this course include soil compositions, soil classification, subsurface exploration, ground water flow and seepage analysis, stress analysis, compaction, consolidation, strength behavior, bearing capacity, lateral earth pressure, and slope stability analysis.

Enforced Prerequisite at Enrollment: EMCH 210 or EMCH 213 Enforced Concurrent at Enrollment: GEOSC 1

CE 336: Materials Science for Civil Engineers

3 Credits

C E 336 Materials Science for Civil Engineers (3) This course introduces engineering students to the structure, properties and behavior of construction materials, providing the bridge between engineering mechanics and engineering design. The course is an engineering science course focused at providing the students with a working knowledge of the nature and engineering properties of construction materials to understand prediction models and statistical variations for quality control. The course provides an introduction to aggregates, concrete, asphalt, timber, steel, structural alloys, and polymers used in civil infrastructure and in building construction. Durability, life expectancy, recycling, and variability of materials will be examined in addition to their mechanical properties. The students will achieve these objectives through in-class practices or quizzes, homework exercises, reading assignments and exams.

Enforced Prerequisite at Enrollment: EMCH 210 or EMCH 213 Enforced Concurrent at Enrollment: IE 424 or STAT 401

CE 337: Civil Engineering Materials Laboratory

1 Credits

Laboratory investigating the physical and mechanical properties of civil engineering materials; soils, aggregates, concrete; steel; wood; and polymers. C E 337 C E 337 Civil Engineering Materials Laboratory (1) The understanding of the structure, physical and mechanical properties and behavior of engineering materials is at the very core of engineering design. A command of this knowledge is essential for all civil engineers. This 1-credit laboratory provides a hands-on experience with the testing and evaluation of civil engineering materials, including soils, aggregates, concrete, steel, wood and polymers. In addition, this lab builds on the topics of professional communication and engineering in groups that are present throughout the Civil Engineering curriculum. This course is required for all Civil Engineering majors and is a required laboratory component for ABET review. The course also may serve selected Architectural Engineering students that currently enroll in Material Science for Engineers. The laboratory will be taught every semester with an offering of 4-6 sections per semester. The Civil Engineering Materials Laboratory is directly tied to Engineering Mechanics of Soils and Material Science for Civil Engineers. It replaces the laboratory component of both of the existing courses to create a comprehensive materials laboratory experience. By creating a stand-alone course, students may schedule the laboratory separate from the lecture time, eliminating multiple course conflicts. The course meets 3 hours each week throughout the semester with an introductory lecture and training session on lab safety. Concurrent or previous enrollment in Engineering Mechanics of Soils or Material Science for Engineers ensures that the students have completed the Strength of Materials course and have a clear point of reference to the relevance of the material in the course. The Civil Engineering Materials Laboratory will incorporate the use of a variety of equipment, including universal testing machines, Charpy fracture toughness device, Rockwell Hardness device, soil compaction devices, sieves, plasticity index devices, concrete mixing equipment, electronic strain devices, direct/biaxial/triaxial shear devices and other similar equipment.

Enforced Concurrent at Enrollment: CE 335 or CE 336

CE 340: Structural Analysis

3 Credits

Analysis of statically determinate and indeterminate trusses, beams, and frames; reactions, axial forces, shears, moments, deflections. Introduction to influence lines. The course includes an introduction to structural systems and basic analysis methods for beams, frames, and trusses. Topics covered include the analysis of statically determinate and indeterminate structures, deflection calculations, influence lines, and an introduction to the stiffness method and a software package for structural analysis.

Enforced Prerequisite at Enrollment: EMCH 210 or EMCH 213

CE 341: Design of Concrete Structures

3 Credits

Design of reinforced concrete beams, slabs, and columns, with emphasis on ultimate-strength methods; prestressed concrete; building and bridge applications. C E 341 Design of Concrete Structures (3) This course provides students with an understanding of the structural design process,

the mechanics of reinforced concrete, and the ability to design and proportion structural concrete members including slabs, beams, and columns for strength, serviceability, and economy. Design procedures are based on the Building Code Requirements for Structural Concrete published by the American Concrete Institute. The mechanics underlying the code design equations are explained as well as their application to practical design problems. In addition to regular homework assignments the students complete a design project in which the design of specific components is integrated into the design of the structure as a whole.

Enforced Prerequisite at Enrollment: CE 340 Enforced Concurrent at Enrollment: CE 336

CE 342: Design of Steel Structures

3 Credits

Design of steel tension members, beams, columns, beam-columns, and connections; elastic and plastic methods; design applications. CE 342 Design of Steel Structures (3) This is a first course in design of steel structures intended to develop a fundamental ability to evaluate and design steel tension members, beams, columns, beam-columns, composite beams, and connections. Discussion of design requirements focuses on failure mechanisms and behavior, evaluation of existing components, and the process to develop economical steel member designs. All discussions are based on the current American Institute of Steel Construction steel design specifications with an overview of historical requirements as appropriate. Students complete a design project of a multi-story, steel, commercial building that is intended to synthesize the course material and create a realistic context for the course. Weekly assignments are typically derived from the course project. Computer applications are an important component of these assignments.

Enforced Prerequisite at Enrollment: CE 336 and CE 340

CE 360: Fluid Mechanics

3 Credits

Mechanics of fluids; flow in conduits and around bodies, friction and energy loss, fluid measurements. CE 360 Fluid Mechanics (3) The course objective is to provide students with the fundamental physical and analytical principles of fluid mechanics through the understanding of the conservation of mass, conservation of energy, and the conservation of momentum equations. The student will demonstrate the understanding of these fundamentals by solving problems dealing with: fluid properties, fluid statics, pressure on plane and curved surfaces, buoyancy and floatation, kinematics, systems, control volumes, conservation principles, ideal incompressible flow, impulse-momentum, and flow of a real fluid. Fluid mechanics is a prerequisite to all courses in hydrosystems and environmental engineering. It is typically offered fall and spring semesters and during summer session. A series of homework problems are assigned after each lecture and there are typically 3 examinations given during the semester and final examination during the final examination period.

Enforced Prerequisite at Enrollment: EMCH 212

CE 370: Introduction to Environmental Engineering

3 Credits

Nature and scope of environmental issues; air, water, land impacts; fundamentals and processes of pollution control. CE 370 Introduction

to Environmental Engineering (3) The objectives of this course are to introduce science and engineering principles for dealing with natural and engineered environmental systems; to provide quantitative tools to solve environmental engineering problems dealing with water and wastewater treatment, air pollution control, and management of solid and hazardous wastes; and to identify alternative ways to deal with pollution and to minimize pollution.

Enforced Prerequisite at Enrollment: CHEM 110 and (MATH 111 or MATH 141)

CE 371: Water and Wastewater Treatment

3 Credits

Water treatment; water storage; design of water distribution and wastewater systems; pumping stations. CE 371 Water and Wastewater Treatment (3) This course includes engineering design of water and wastewater treatment facilities, and it emphasizes quantitative problem solving. Numerous examples pertain to contemporary water and wastewater treatment facility designs. This course will nurture the ability to use the techniques, skills and state-of-the-art engineering tools so as to prepare students for water and wastewater treatment engineering practice. Water treatment-related topics include: water quality criteria for potable water, reactor characteristics, reaction rates in water and wastewater treatment, mixing and flocculation sedimentation, rapid sand filtration, chlorination and alternative disinfection. Wastewater pretreatment, biological principles for treatment of wastewater, suspended growth bio-systems, attached film bio-systems, nutrient removal processes, and de-watering and treatment processes for sludges is also included.

Enforced Prerequisite at Enrollment: CE 360 and CE 370

CE 396: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CE 397: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

CE 399: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

CE 402: Computing Methods for Civil and Environmental Engineering

3 Credits

This course will cover essential computing methods, implementations, and applications in civil and environmental engineering. Computing is essential for the civil and environmental engineering profession. It is used in many aspects of civil and environmental engineering, for example analyzing data and making impressive visualizations, computing backwater curve in a river, solving species concentration in chemical reactors, finding deflection of a beam, or calculating seepage

and consolidation of soils. In engineering practice, computers are used to solve real world, complex problems beyond the capability of hand calculations. Major topics covered in this course include basic programming with Python, scientific and technical visualization, root finding, interpolation and curve fitting, direct and iterative solution of linear equation systems, numerical integration, numerical differentiation, and numerical solution of ordinary differential equations. Application examples of these computing techniques will be introduced and explained to help students understand the context. For example, root finding can be used to solve the nonlinear Manning's equation to design drainage channels, curve fitting and regression can be used to analyze measurement data, the solution of linear equation systems is at the core of many modern engineering software solving governing differential equations, numerical integration can be used to calculate wind load on buildings, numerical differentiation is essential for solving governing differential equations, the solution of ordinary differential equations can be used to model the dynamics of a structure or a reaction system. The objectives are for the students to have a fundamental understanding of algorithms and solution techniques for common computing problems in civil and environmental engineering, the ability to correctly implement computing algorithms with a programming language, and the ability to utilize existing numerical libraries and understand their strength and limitations. The course is structured to have two lectures and one computer lab session per week. Students will work on simple problems with manual calculations and more complex problems with computer codes which implement the covered computing methods. Homework and exams will draw on many application examples students may encounter in their coursework for the civil and environmental engineering major and in their future professional career.

Prerequisite: CMPSC 200; or CMPSC 201 or CMPSC 121; or CMPSC 131
Concurrent: MATH 251

CE 403: Energy Use, Climate Change, and Our Engineered Infrastructure
 3 Credits

Massive changes to our personal consumption patterns and civil infrastructure systems are needed to decrease CO₂ emissions and minimize the impacts of climate change. In this course we will quantify energy use; study how much energy, water, and food we use in our daily lives; and determine how much CO₂ gets emitted from these personal activities and by components of our public infrastructure (including buildings, electric power industries, food systems, and transportation). We will evaluate how design choices in our homes, buildings, agricultural systems, and transportation infrastructure can be modified to reduce energy consumption and carbon emissions. Greenhouse gases that cause climate change include more than just carbon from fossil fuels; we will therefore also discuss sources of other greenhouse gases and natural and engineered strategies to mitigate and reduce their emissions. Other topics include modeling rates of renewable energy growth, energy storage, climate science, infrastructure's role in environmental and climate justice, and the economic aspects of climate solutions.

Enforced Prerequisite at Enrollment: CHEM 110 and (MATH 111 or MATH 141) Recommended Preparations: CE 370: Introduction to Environmental Engineering is recommended, but not required.

CE 410: Sustainable Residential Subdivision Design
 3 Credits

CE 410 provides students with a working knowledge of the residential land development design process, including conservation and green

design approaches, site assessment, grading and earthwork, utility design and layout, and stormwater management. The course covers the subdivision and land development regulatory processes, zoning issues, and the elements of civil infrastructure design required in the residential land development process. Conservation design and sustainable development techniques are emphasized throughout the course. For effective residential subdivision design, students must be proficient in applying basic principles of mathematics, science, and economics included in accredited academic engineering programs. An understanding of design software and its application has also become an integral part of the land development design process. The course discusses the scope and nature of the residential land development process. Students will be expected to perform design and analysis necessary for appropriate subdivision layout and infrastructure design. Issues in engineering ethics and professional responsibility related to land development are interwoven into class discussions and assignments. The course is an elective for students in the Civil Engineering major and an elective in the Residential Construction Minor.

Enforced Prerequisite at Enrollment: CE 332 or AE 372 Enforced
Concurrent at Enrollment: 7th Semester standing in AE or CE major.

CE 411: Residential Construction Design Project

1 Credits

Interdisciplinary teams will develop a complete design and investment package for a real life new residential or real estate development.

Enforced Prerequisite at Enrollment: Fifth semester standing or higher

CE 421W: Transportation Design

3 Credits

Design of streets and highway facilities; emphasis on geometric elements, intersections and interchanges, roadway drainage, and pavement design. CE 421W CE 421W Transportation Design (3) This course provides advanced study in highway engineering and is designed for civil engineering students who are interested in Transportation Engineering careers. It includes topics such as functional classification, highway cross-sections, horizontal and vertical alignment and sight distance. Other topics are pavement design, drainage intersection and interchange design and highway signs. The students will also have a CAD lab where they design a complete highway system. The semester project provides hands-on highway design experience and includes the planning and operational aspects of a new highway design. This course serves as a capstone design course with writing projects. Students are expected to do in-class presentations of their projects.

Enforced Prerequisite at Enrollment: CE 321
 Writing Across the Curriculum

CE 422: Transportation Planning

3 Credits

CE 422 Transportation Planning (3) In this course, students acquire basic knowledge on the history and recent developments in transportation planning problems and quantitative methods. They will develop an understanding of transportation planning, transportation modeling, transportation system simulation, data collection techniques, and gain laboratory experience with each. Students will use mathematical/statistical models and GIS software to analyze, simulate, and forecast the

demand for transport services. They will gain familiarity with the software used in transportation planning practice.

Enforced Prerequisite at Enrollment: STAT 401 or IE 424

CE 423: Traffic Operations

3 Credits

The highway capacity manual, concepts and analyses, freeway operations, signalized and unsignalized intersections, signal coordination, traffic impact studies. This course focuses on the concepts and techniques essential for the practice of traffic engineering. The content includes topics such as use of traffic control devices, field studies for traffic data collection, traffic signal warrants, signal phasing and timing plans, and analysis of signalized intersection operation. The course also provides an introduction to several key texts and references, including the Manual on Uniform Traffic Control Devices, Highway Capacity Manual and ITE Trip Generation Handbook.

Enforced Prerequisite at Enrollment: CE 321

CE 424: Project Info. Modeling

3 Credits/Maximum of 3

Project Information Modeling is the process of constructing a 3D digital model of a project with attached information. Project Information Modeling (PIM) is an integrated process built on coordinated, reliable information about a project from design through construction and into operations. It is a new approach to project delivery in which a digital representation of the project process is used to facilitate the exchange and interoperability of information. Implementation of PIM generates significant benefits, including improved design quality, reduction in design errors, improved field productivity, reduction in conflicts and changes, and finally reduction in construction cost and time. In this course, students will learn applications of PIM used in the industry by different disciplines (e.g., architectural, engineering and construction), design model-based development and coordination (e.g., 3D, 4D, 5D, and XD), value engineering concepts, system clash prevention, and understand the benefits of various parametric modeling applications that can be used. Upon completion of this course, students will have full understanding of PIM concepts throughout the lifecycle of a building or an infrastructure project, from planning, design, pre-construction, construction and operations.

Enforced Prerequisite at Enrollment: EDSGN 100 and (CE 332 or CE 333W)

CE 432: Construction Project Management

3 Credits

Fundamentals of project management, construction scheduling using the CPM technique, construction project preplanning, and control of quality, safety, and costs. C E 432 C E 432 Construction Project Management (3) This course introduces students to the basic practical aspects of the construction process and the quantitative methods used to manage projects within budget, deadline, and prescribed quality. Students will understand the construction market and the inter-relationships among the various players involved. Focus in this course is on integrating the various facets of construction cost estimating, planning, scheduling, control, and overall project management.

Enforced Prerequisite at Enrollment: CE 332

CE 434: Geotechnical Engineering Design

3 Credits

This is an advanced design course in geotechnical engineering, offered to undergraduate senior and graduate students in civil engineering. This course covers fundamental engineering geology, subsurface exploration including geophysical techniques, principles of shallow and deep foundation designs, slope stability, geosynthetics design, groundwater and drainage, and geotechnical earthquake engineering. The course is typically delivered in lecture format and concentrates on practice-oriented design problems in geotechnical engineering.

Enforced Prerequisite at Enrollment: CE 335

CE 435: Foundation Engineering

3 Credits

C E 435 provides students with a working knowledge of the state-of-practice of foundation engineering, covering bearing capacity, settlement, and structural design of shallow foundations; lateral earth pressure; design of retaining and sheet-pile walls; and an introduction to deep foundations. The course is an elective for students in the civil engineering major and serves as an essential prerequisite for continued study in the areas of construction and structural engineering. The course concentrates on practice-oriented design problems in foundation engineering.

Enforced Prerequisite at Enrollment: CE 335

CE 436: Construction Engineering Materials

3 Credits

C E 436 Construction Engineering Materials (3) The course provides students with a working knowledge of the safe design, production and application of quality construction materials unique to civil engineering. The course builds upon the understanding of civil engineering materials gained in the introductory course. C E 436 focuses on the materials design and quality control of aggregates, steel, portland cement concrete, and asphalt concrete.

Enforced Prerequisite at Enrollment: CE 336 and (STAT 401 or IE 424)

CE 437: Engineering Materials for Sustainability

3 Credits

Environmental impact of materials; life-cycle assessment; material selection to optimize performance; design, evaluation, and production of green construction materials.

Enforced Prerequisite at Enrollment: CE 336

CE 438W: Construction Engineering Capstone Design

3 Credits

Construction project integrating geotechnical reports; materials specifications; quality control; equipment; estimation; scheduling; design details: excavations, foundations, retaining walls, formwork, pavements. C E 438W C E 438W Construction Engineering Capstone Design (3) This course is intended to establish the foundation for organizational and procedural understanding in construction engineering. The student will gain the knowledge necessary to apply engineering principles in analyzing economical approaches to construction problems. This course

will cover construction methods, equipments, and cost estimation of the construction materials, excavation, foundation, and other phases of civil engineering construction projects.

Enforced Prerequisite at Enrollment: CE 432 and (CE 435 or CE 436)
Writing Across the Curriculum

CE 439W: Geotechnical and Materials Engineering Design Capstone

3 Credits

Subsurface site evaluation; integrated design of retaining walls, foundations, pavements, and materials for airports, highways, dams, or other facilities.

Enforced Prerequisite at Enrollment: CE 435 and (CE 436 or CE 437)
Writing Across the Curriculum

CE 441: Structural Design of Foundations

3 Credits

Design of concentrically and eccentrically loaded square, rectangular, and combined footings; analysis and design of mat foundations; retaining walls; piles caps; flexible retaining design, and caissons. C E 441 Structural Design of Foundations (3) This course prepares the structural engineering student to analyze, proportion, size reinforcing, and select steel sections for structural foundations designs based on the state of practice presented in ACI 318, AISC, and available industry literature. Structural foundation analysis techniques for many foundation types are presented with extensive use of EXCEL in the design process. Analysis and design of foundation systems are developed for concrete shear walls, concentrically loaded square and rectangular footings, eccentrically loaded square and rectangular footings, and combined footings. Use of approximate and finite element analysis methods for analyzing mat foundations and grid foundations are presented. Working knowledge of retaining wall, pile cap, and flexible earth retaining structure design methods are also developed. This course is an elective for students in the civil engineering major and serves as an essential prerequisite for continued study in structural engineering and advancement to the structures capstone course. This course is delivered in lecture format and concentrates on practice-oriented structural foundation analysis and design problems.

Enforced Prerequisite at Enrollment: CE 341 Enforced Concurrent at Enrollment: CE 342

CE 445: Advanced Structural Analysis

3 Credits

Analysis of trusses and frame stiffness matrix method of analysis. Analysis of indeterminate beams, trusses, and frames using classical methods. C E 445 C E 445 Advanced Structural Analysis (3) The course is an advanced analysis which includes an analysis of structures using classical and matrix methods. Topics covered include the analysis of statically determinate and indeterminate beams; trusses and frames. An introduction to the stiffness method and a software package for structural analysis will also be covered.

Enforced Prerequisite at Enrollment: CE 340

CE 447: Structural Analysis by Matrix Methods

3 Credits

Analysis of truss and frame structures using flexibility and stiffness methods of matrix analysis. Computer applications.

Enforced Prerequisite at Enrollment: CE 340

CE 448W: Structural Design Capstone

3 Credits

Wind, snow, seismic, bridge loads; building design using steel, concrete, and prestressed concrete; advanced steel connections; capstone project; computer applications. C E 448W C E 448W Advanced Structural Design (3) The objectives of the course are to develop an understanding of advanced structural engineering design issues in a capstone context that will merge knowledge gained in prerequisite structural design and analysis courses. Building on concepts introduced in introductory steel building, concrete building, and foundation design, students will gain proficiency in structural conceptualization, environmental and induced load determination, modeling and analysis, detailed design of steel and concrete structures, and graphical communication.

Enforced Prerequisite At Enrollment: CE 341 and CE 342
Writing Across the Curriculum

CE 449: Advanced Structural Design

3 Credits

Special systems, frames and bracing in steel, wood and reinforced or precast concrete. Introduction to composite construction. C E 449 C E 449 Advanced Structural Design (3) This course provides students with an understanding of advanced structural design processes, the mechanics of special systems (such as prestressed concrete) as well as the ability to design and proportion structural connections and bracing members including reinforced concrete and steel. The course will also introduce the LRDF approach and composite construction in which the design of specific components is integrated into the design of the structure as a whole.

Enforced Prerequisite at Enrollment: CE 340 and CE 341 and CE 342

CE 454: Safety

3 Credits

This course will focus on safety issues as they relate to OSHA.

Enforced Prerequisite at Enrollment: Permission of program

CE 455: Construction Cost Estimating

3 Credits

This course focuses on introducing the fundamental principles of detailed cost estimating and bidding in civil infrastructure projects, including classifying work in accordance with specifications standards, extracting quantity take-offs from drawings, compiling and pricing estimates, finalizing bids, and the utilization of software and spreadsheets to automate estimating functions. The course also introduces estimating methods used for the preparation of conceptual and preliminary estimates.

Enforced Prerequisite at Enrollment: CE 332 or AE 372

CE 456: Planning and Scheduling

3 Credits

Theory and practice used in planning and scheduling projects; defining task and resources, creating logic diagrams, and monitoring the projects. C E 456 C E 456 Planning & Scheduling (3) "Planning and Scheduling" encompasses construction tenets and fundamentals including organizing, staffing, directing, and controlling representing concepts and principles integral to career applications in project and design management. Students who successfully complete this course will be able to: 1) understand and use planning, scheduling, and control techniques for managing construction projects 2) understand scheduling techniques and computer applications in critical path methods, PERT, and resource scheduling 3) understand construction financing and schedule / cost relations 4) understand the principles of project tracking, progress measurements, trend analysis, and forecasting

Enforced Prerequisite at Enrollment: CE 332 or CE 333W

CE 457: Construction Equipment and Methods

3 Credits

Introduction to major construction equipment along with selected construction methods for civil infrastructure projects. This includes understanding construction equipment economics, selection of appropriate equipment based on operational parameters, principles of equipment productivity analysis and measurement, methods for equipment productivity improvement, safe operation of construction equipment, techniques for optimizing equipment utilization, and technologies for enhancing equipment integration and automation.

Enforced Prerequisite at Enrollment: CE 332 or AE 372

CE 458: Construction Management II

3 Credits

Procedures in construction organization including procurement, ethics, field supervision, legal and managerial problems, personnel, cost accounting, and construction business practices. C E 458 C E 458 Construction Management II (3) This course presents policies, procedures, and applications in construction management and organization including procurement, ethics, field supervision, legal and managerial problems, personnel, cost accounting, and construction business practices. The course encompasses construction tenets and fundamentals including planning, organizing, staffing, directing, and controlling. Students who successfully complete this course will be able to: 1) understand organizational issues concerning development of a project delivery system 2) comprehend the roles and responsibility of the Resident Project Representative and members of the construction team and the respective utility of the resident inspection office responsibilities 3) know the various documentation construction records/reports normally 4) recognize the salient features of specifications and drawings and the fundamentals for using them in contract administration 5) become familiar with the prevailing construction laws, policies, and procedures dealing with labor and safety 6) understand the utility of meetings during construction and the principles and techniques of negotiation 7) apply risk management through contractual allocation of risk and liability 8) become well versed in planning/orchestrating during reconstruction operations 9) apply management principles of directing and controlling construction operations and resources including

CPM scheduling, inspections, tests, and contractor submittals 10) understand the concept of value engineering in construction operations 11) understand the critical control issues involved with measurement and payments, controlling construction materials and workmanship, and changes and extra work

Enforced Prerequisite at Enrollment: CE 333W and CE 456

CE 461: Water-resource Engineering

3 Credits

Qualitative and quantitative description of the hydrologic cycle, flood and drought frequency analysis, climate and land use change impacts, risk analysis and uncertainty, water resource management at regional, national and global scale.

Enforced Prerequisite at Enrollment: CE 360

CE 462: Open Channel Hydraulics

3 Credits

Free surface flow in rivers, canals, steep chutes, stilling basins, and transitions. C E 462 Open Channel Hydraulics (3) This is an advanced senior level course dealing with steady gradually varied flow. The laws of conservation of mass, energy and momentum are applied to gradually varied steady flow problems in rectangular and non-rectangular channels. Basic definitions and equations governing flow are developed for uniform and nonuniform flow conditions. The students will use their knowledge of fluid mechanics, calculus, numerical analysis and computer science to solve practical open channel flow problems.

Enforced Prerequisite at Enrollment: CE 360

CE 465W: Water Resources Capstone Course

3 Credits

Hydraulic design of river structures and open channels including supercritical and spatially varied flow; hydrologic/hydraulic computer modeling; design project. C E 465W C E 465W Water Resources Capstone Course (3) This course is designed to provide seniors in the water resources area with a major design project. In addition, the course has a writing component, which satisfies the University's writing across the curriculum requirement. Projects cover hydrologic and hydraulic design. Hydrologic analysis is performed to size the hydraulic structure systems that convey the design flows. The students utilize Geographic Information Systems data bases, utilize several state of the art computer models, and are required to write several computer programs.

Enforced Prerequisite at Enrollment: CE 461 Enforced concurrent at Enrollment: CE 462

Writing Across the Curriculum

CE 472W: Environmental Engineering Capstone Design

3 Credits

Principles and design of unit operations for water; domestic and industrial wastewater treatment; equipment selection and application. C E 471 C E 472W Environmental Engineering Capstone Design (3) This course will integrate engineering science and design skills through application to an open-ended environmental problem dealing with one or more of the following: industrial sustainability and pollution prevention; water transmission and treatment; wastewater collection and treatment;

solid waste collection, treatment, and disposal; remedial investigation and feasibility studies for a hazardous waste site.

Enforced Prerequisite At Enrollment: CE 370
Writing Across the Curriculum

CE 473: Ecological Design of Regenerative Aquatic Systems

3 Credits

This course begins with an introduction to natural wetlands, and then extends those fundamental ecological principles to the design of constructed wetlands for wastewater and mine water treatment. In the second half of the course, these ecological principles are applied to the design of a variety of aquaponics systems for fish and vegetable production. Throughout the semester, emphasis is given to how beneficial byproducts (food, energy, water) can be produced in ecological systems to support sustainable communities in both developed and developing countries. The course culminates with a final team project on the design of an ecological system for a real community.

Enforced Prerequisite at Enrollment: CE 370

CE 475: Water Quality Chemistry

4 Credits

CE 475 Water Quality Chemistry (4) Water Quality Chemistry is focused on both theoretical aspects of water chemistry and applied aspects of engineering practice. The course will cover a wide range of fundamental chemical principles that will be investigated further in the laboratory exercises and through an independent research project. The course covers reaction stoichiometry and reaction type with specific examples of processes typically encountered in water, wastewater and hazardous waste treatment situations. The course distinguishes between kinetic and equilibrium reactions and presents mathematical formulations for both types of reactions. The course reviews thermodynamics and electrochemistry and relates them to equilibrium constants and the spontaneity of reactions. The course covers redox reactions especially with respect to the corrosion of civil infrastructure, the generation of acid rock drainage, and biological wastewater treatment processes. The course covers acid/base reactions especially with respect to disinfection of drinking water and pH adjustments commonly used to enhance air stripping of pollutants. The course introduces the use of computer models for determining chemical speciation of acid/base constituents. The course covers alkalinity and the carbonate system especially with respect to the issues of acid rain, acidification of the Earth's oceans, and limestone buffering of surface waters in Pennsylvania. Computer models are used to calculate chemical speciation in carbonate-containing systems. The course covers pH-dependent solubility of common minerals - primarily carbonates, hydroxides and aluminosilicates. The course covers engineering applications related to metal solubility including water softening, coagulation for turbidity removal in water treatment plants, heavy metal generation from acid rock drainage, and heavy metal removal in hazardous waste treatment. The course covers complexation reactions especially with respect to effects on metal solubility and toxicity. Computer models are used to calculate chemical speciation in multi-complexant systems. The course covers analytical chemistry especially with respect to the most common parameters measured in water and wastewater treatment systems, and with respect to the principles of measurement (i.e. gravimetric, spectrometric, volumetric, potentiometric analyses). The course involves a research project on a local water quality problem of concern. In the past, this project has focused on the proposed "Beneficial Reuse" of wastewater in Centre

County, and on the impact of acid rock drainage from the construction of I-99 on Buffalo Run in Centre County.

Enforced Prerequisite at Enrollment: CE 370

CE 476: Solid and Hazardous Wastes

3 Credits

With industrialization, humans have produced a variety of solid and hazardous wastes that have negatively impacted ecosystems and human health around the world. This course covers three main topics: 1) municipal solid waste handling and disposal (including landfill-gas-to energy, direct waste-to-energy, and recycling options); 2) the fate and transport of hazardous wastes that have been released into the environment through air, soil, and water; and 3) the selection and design of appropriate remediation technologies for soil and groundwater contaminated with hazardous wastes.

Enforced Prerequisite At Enrollment: CE 370

CE 479: Environmental Microbiology for Engineers

3 Credits

Environmental Microbiology for Engineers is comprised of three main sections: (1) the fundamentals of microbial structure, function, nutrition, and growth for students with no prior formal instruction in microbiology; (2) microbial diversity and ecology; and (3) the application of these fundamental microbial principles to environmental systems. In the fundamentals section, the course covers microbial nomenclature, macromolecules, cell biology, energetics, growth, and genetic regulation. This is illustrated with calculations of thermodynamic constraints in microbially catalyzed reactions, the calculation of efficiencies based on energy conservation from common pathways, and the connection of these efficiencies to microbial growth in a chemostat. Building on these fundamental concepts of metabolic potential and conserving energy and acquiring reducing equivalents from redox reactions, the second section covers the reactions and energetics of the primary microbial functional diversity such as phototrophy, lithotrophy, autotrophy, anaerobic respirations, and fermentations. It also introduces modern molecular biology techniques for studying microbial systems, and pulls the concepts of functional diversity together by illustration with the major nutrient cycles, including discussions of environments in which each reaction might be encountered. Finally, the last section applies these ecological principles to several specific engineered environments of interest. Homework assignments throughout the semester involve questions about the methods, findings, or applications of recent articles that highlight the recently covered material, giving the students experience in the critical evaluation of primary literature and demonstrating the relevance of the material to environmental microbiology research and application. Complementing the progression of the lectures are eight instructional laboratories that provide hands-on application of diagnostic microbiological techniques to the characterization of environmental enrichment cultures and pure cultures. For example, a microscopy lab immediately follows the lecture material on cell biology, an enrichment experiment follows the material on nutrition, an enumeration experiment follows the section on microbial growth, etc. The final seven weeks of the laboratory period are devoted to group projects, in which students apply the techniques they have learned as appropriate to answer specific short-term research hypotheses. The final period is devoted to group presentations of their projects.

Enforced Prerequisite at Enrollment: CE 370

CE 488C: Capstone Project - Construction

4 Credits/Maximum of 4

This course consists of a project either selected by the students with approval or assigned by the instructor. C E 488C Capstone Project - Construction (4) This course integrates the structural design and construction skills through an application to a project focusing in the construction management area. The course is serves as the capstone of the senior student's education courses. The course C E 488C identifies the student selection of a construction capstone project. The student works on a team during the course project process. The team will be evaluated on different assignments during the project as well the final product. The team will submit a final written report as well make an oral presentation. The SDCET advisory board is invited to participate in the oral participations. The 4 credit hour course is separated into two parts which are taken in two consecutive semesters. The first course offering is for 1 credit to provide the students an overview of the course and an introduction to the project. The course is then repeated for 3 credits the following semester for the project. This is to allow the necessary time for students to complete the project.

Enforced Prerequisite at Enrollment: Eighth-semester Structural Design and Construction Engineering Technology (SDCET_BS) Enforced Concurrent at Enrollment: CET 430 and CET 431 and CET 432 and CET 435 and CE 456

CE 488D: Capstone Project - Structural Design

4 Credits/Maximum of 4

This course consists of a structural design project either selected by the students with approval or assigned by the instructor. C E 488D Capstone Project - Structural Design (4) This course integrates the structural design and construction skills through an application to a project focusing in the construction management area. The course is serves as the capstone of the senior student's education courses. The course C E 488D identifies the student selection of a structural design capstone project. The student works on a team during the course project process. The team will be evaluated on different assignments during the project as well the final product. The team will submit a final written report as well make an oral presentation. The SDCET advisory board is invited to participate in the oral participations. The 4 credit hour course is separated into two parts which are taken in two consecutive semesters. The first course offering is for 1 credit to provide the students an overview of the course and an introduction to the project. The course is then repeated for 3 credits the following semester for the project. This is to allow the necessary time for students to complete the project.

Enforced Prerequisite at Enrollment: Eighth-semester Structural Design and Construction Engineering Technology (SDCET_BS) Enforced Concurrent at Enrollment: CET 430 and CET 431 and CET 432 and CET 435

CE 494: Senior Thesis

1-9 Credits/Maximum of 9

Students must have approval of a thesis adviser before scheduling this course.

CE 494H: Honors Senior Thesis

1-6 Credits

Investigation of an original project in the area of Civil Engineering. C E 494H C E 494H Honors Senior Thesis (1-6) Investigation of an original project in the area of Civil Engineering. The thesis topic must be approved by the honors advisor and thesis advisor and submitted as a thesis proposal to the Schreyer Honors College prior to scheduling the course. Students may register for a total of 6.0 credits over their last two semesters.

Honors

CE 496: Independent Studies

1-18 Credits/Maximum of 18

Creative projects, including research and design, which are supervised on an individual basis and which fall outside the scope of formal courses.

CE 497: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

CE 499: Foreign Studies

1-12 Credits/Maximum of 12

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

Civil Engineering Technology (CET)

CET 308: Construction Methods and Materials

3 Credits

The study of the methods and materials used in the construction industry.

Prerequisite: MATH 022 , MATH 026 , EDSGN 100 or EGT 101 and EGT 102

CET 342: Civil Engineering Materials - Concrete and Bituminous

3 Credits

Properties and tests for aggregates, portland cement, fresh and hardened concrete, concrete mix designs. Bituminous Materials: properties, mixtures and tests.

Prerequisite: MATH 022 , MATH 026

CET 343: Soils Mechanics

3 Credits

This course presents the fundamentals of engineering soil mechanics related to civil engineering. CET 343 Soil Mechanics (3) This course presents the fundamentals of engineering soil mechanics related to civil engineering. The course provides the initial exposure to soil mechanics, presenting the fundamentals essential to further study in foundation engineering and other advanced courses. The course begins with

coverage of how soil properties influence the different types of structures or facilities built by structural and construction engineers. Students study the formation of natural soil deposits by the geological and biological events in the earth's history. The soil sampling procedures are briefly explained, and then various index properties of soils are determined, and utilized in engineering classifications of soils. Options available for compacting soils in the lab and field are studied. The laboratory tests for finding soil permeability are studied, followed by coverage of empirical equations for estimating the permeability. Simple cases of seepage are analyzed using graphical flow net method. Elastic half-space theories and approximate methods are used for estimating the stress distribution in soils. The concepts of pore water pressure and effective stress are introduced. The covered strength theories include the unconsolidated undrained shear strength parameters. Elastic compression and consolidation compression are covered in this course. The course ends with simple field soil investigation procedures.

Prerequisite: MATH 140 , Statics; Concurrent: ET 322 or EMCH 213 or MET 213

CET 361: Fluid Flow

3 Credits

Fluid flow theory; hydrostatics; dimensional analysis and similitude; pipe flow; flow measurement; open channels; flow forces; fluid machinery.

Prerequisite: MATH 140 , Statics, Dynamics

CET 430: Structural Analysis

3 Credits

Analysis of determinate structures; use of influence lines; deflection of structures; classical methods of analysis of statically indeterminate structures.

Prerequisite: Statics, Strength of Materials, MATH 140

CET 431: Structural Design-Steel

3 Credits

Design of steel beams, columns, truss members, decks, bar joists and selected connections.

Prerequisite: Statics, Strength of Materials, MATH 140; Concurrent: CET 430

CET 432: Structural Design-Reinforced Concrete

3 Credits

Design of reinforced concrete beams, columns, slabs, and selected framing systems for bending and shear. Introduction to formwork design.

Prerequisite: Statics, Strength of Materials, MATH 140; Concurrent: CET 430

CET 434: Foundations

3 Credits

Analysis and design of footings, piling, retaining walls; consideration of construction problems involving soils and foundations of structures.

Prerequisite: CET 343 , CET 430 , CET 432

CET 435: Construction Estimating

3 Credits

Methods and techniques used in estimating construction cost; practice in takeoffs, costing and final bid preparation; microcomputer applications/class projects.

Prerequisite: ED&G 100 , ET 200 , C E 333W

Classics and Ancient Mediterranean Studies (CAMS)

CAMS 1: Greek and Roman Literature

3 Credits

CAMS 1 Greek and Roman Literature (3) (GH)(BA) This course surveys the traditions of classical literature exemplified by the masterworks of Greek and Roman authors. The choice of readings (in English translation) may vary from semester to semester, but the curriculum typically covers mythological epic (Homer, Virgil, and Ovid); tragedy (Aeschylus, Sophocles, Euripides, and Seneca); and comedy (Aristophanes and Plautus). The course may also examine minor poetic genres such as lyric, elegy, and satire; or the development of prose genres such as historiography, philosophical dialogue, rhetoric and oratory, and biography. The principal objective of CAMS 1 is to acquire knowledge of the story world of Greek and Roman literature, whose characters include the gods, goddesses, heroes, and heroines of classical mythology. A second objective is to understand the rules that govern the genres of Greek and Roman literature. Third, students learn how to interpret classical literature within its social and historical context as well as through the application of both ancient and modern literary theory. CAMS 1 is an introductory course that may be credited toward every Classics and Ancient Mediterranean Studies major, option, and minor. CAMS 1 meets the Bachelor of Arts degree requirements and is a General Education course in the Humanities (GH).

GenEd Learning Objective: Key Literacies

CAMS 4: Jewish and Christian Foundations

3 Credits

This course seeks to help students better understand the Bible and appreciate its role as an authoritative collection of sacred texts for Jews and Christians. The Bible is a difficult book, one that is demanding on many levels. In order to read the Bible intelligently, it is important to understand the historical and cultural backgrounds of the biblical writings. This course explores the history and geography of ancient Near Eastern civilizations that shaped the experience of ancient Israel and, later, the Greek and Roman imperial contexts that shaped Second Temple Judaism and early Christianity. The focus of the course, however, is on the biblical narrative itself and the particular ways that the story of Israel and its covenant with God was represented in scripture: in tales, poems, hymns, dialogues, and genealogies. A basic goal of the course, then, is to promote intelligent, well-informed reading of the Bible. Also important is the willingness to read the Bible closely and critically, with a view toward

larger questions raised by biblical texts: how is God to be known and understood? What is the purpose of human life in the world? What moral obligations ought to structure our common life? Does human history have direction and purpose? What is the good and how do we follow it? The Bible takes up these questions and many more. Though an ancient anthology shaped by the succession of Assyrian, Babylonian, Persian, Hellenistic, and Roman empires, the Bible is not merely a product of its original contexts. Millennia of transmission and interpretation have made it a product of history in a much more extended and dynamic sense. In this course, we will examine larger questions raised by the biblical writers and consider the ways that the Bible has shaped, informed, and guided Jewish and Christian ways of life.

CAMS 5: Ancient Mediterranean Civilizations

3 Credits

Survey of the history and cultures of ancient Mediterranean civilizations in Mesopotamia, Egypt, Syro-Levant, Anatolia, Greece, and Rome. CAMS (HIST) 5 Ancient Mediterranean Civilizations (3) (GH;IL) This course provides an introduction to the history and cultural traditions of the ancient civilizations of the Mediterranean. From the origins of cities and the invention of writing, it surveys the intellectual, artistic, and political traditions that laid the foundations for the later civilizations of Europe and western Asia. Students will acquire a basic historical framework for the ancient Mediterranean from the third millennium BCE through the end of antiquity in the first millennium CE. Within this framework cross-cultural relationships of time and ideas will be established among religious texts, epic literatures, and political and legal traditions. In the part of the world where the division between Asia and the East and Europe and the West was born, the course will examine the development of regional and ethnic identities along with the historical development of concepts of the universal nature of humanity. This course is designed to serve as the foundation course for all majors in the department of Classics and Ancient Mediterranean Studies (CAMS).

CAMS 10: Mesopotamian Civilization

3 Credits

This course will introduce students to the history of the civilization and the culture of Ancient Mesopotamia (Modern Iraq), which contributed to shape both the Western world and the modern Middle East. Ancient Mesopotamia was a land of contrasts between city and countryside,

between sedentary and nomadic populations, between official cult and popular religion, between royal ideology and political skepticism. This course will encompass the variegated nature of this civilization and all the cultures that determine the nature of the historical records (written texts and material culture), through which one can reconstruct the history of Mesopotamia, and, in general, the whole Syro-Mesopotamian region. Furthermore, the connections between this region and other areas of the Ancient near East (Iran, Anatolia, Syro-Palestine, and Egypt) will be explored.

CAMS 12N: Lands of the Bible

3 Credits

Utilizing the textual and archaeological evidence, this course introduces students to the lands, cultures, and peoples associated with the Hebrew Bible, New Testament, and Qur'an. Geographically, the lands of the Bible encompass what is often referred to as the Cradle of Civilization or Fertile Crescent - an arc-shaped region defined by the Nile, Jordan, Tigris and Euphrates river valleys. Today this crescent includes the modern countries and regions of Egypt, Israel, the Palestinian territories, Jordan, Syria, southeastern Turkey, and Iraq. Spanning ten millennia of history (ca. 9000 BCE-750 CE), this course explores a series of landmarks in the history of human development, which are considered together with Jewish, Christian, and Islamic traditions. These include the birth of religion and the agricultural revolution (Garden of Eden), the first cities and the invention of writing (Tower of Babel; Patriarchal/Matriarch

traditions), Egyptian imperial rule in Canaan (Exodus), the collapse of the Bronze Age (Emergence of Israel), impact of empire (united and divided kingdoms of Israel and Judah), Alexander the Great and the Roman imperial expansion to the east (world of Jesus and development of rabbinic Judaism), Byzantine Palestine (expansion of Christianity), and the Islamic conquest of the Holy Land. Through an integration of numerous disciplines, including historical geography, archaeology, ancient history, biblical studies, epigraphy, and anthropology, students will investigate the interaction between the cultures of the ancient Near East and the religious traditions that developed in the lands associated with the Bible, a relationship that continues to shape the region and the world until today.

CAMS 15: Wonders of the Ancient World

3 Credits

Overview of the ancient world by focusing on the famed "Seven Wonders" and similar achievements from 3000 B.C.E.-1st Century C.E. The core of this course is comprised of the Seven Wonders of the Ancient World: the Great Pyramid in Egypt, the Hanging Gardens of Babylon, the Temple of Artemis at Ephesos, the Statue of Zeus Olympios, the Mausoleum of Halikarnassos, the Colossus of Rhodes, and the Lighthouse of Alexandria. Throughout the semester other wondrous monuments and archaeological discoveries are covered as well. Depending on the expertise of the professor other archaeological sites and monuments may also include the Egyptian capital and reign of the Pharaoh Akhenaten and Nefertiti, the unlooted tomb of the Pharaoh Tutankamen, the Bronze Age Palaces of the Minoans of Crete and the Mycenaeans of mainland Greece, Troy, Shipwrecks of the Late Bronze Age, the mystery of the End of the Bronze Age, the Parthenon and Cult Statue of Athena on the Acropolis in Athens, the Temple of Zeus Olympios and athletic games at Olympia, Alexander the Great and his conquests in the East, the Royal Cemetery at Vergina and its unlooted tombs, and new explorations in Alexandria Egypt. If taught by an Egyptologist the course might include additional monuments and archaeological sites in Egypt, whereas if taught by a Near Eastern specialist the course might include additional monument and sites in the Near East.

CAMS 16: How to Live

3 Credits

Philosophy considers how best to live. This is valuable, since there is a lot that is uncertain. Should one mostly eliminate superstition and fear and practice mental tranquility? Or control bodily desires and practice endurance? Or examine one's beliefs and practice modesty? Or think about your every action and practice justice? Or change how others think and practice institutional change? Different philosophical and reflective cultures have focused on one or another of these possibilities, or proposed yet others. This course studies a range of cultures that have formulated the question, "How should I/we live?" and have developed a set of candidate answers. Ancient or medieval cultures studied - for 1-3 weeks each - include those from ancient Greece, Rome, other areas around the Mediterranean, Indian, and Chinese. Modern cultures studied, as comparison cases, vary by instructor. Class-time focuses on historical context, literary content, and philosophical argument. Outside-of-class work includes reading, for instance Socratic dialogues, Stoic handbooks, meditation mantras, existential dramas, political manifestos, nature journals, or book reviews. It also includes, as the distinctive element of this course, a practical experience for each unit. Students track, process, and evaluate their experiences through journaling and discussion with other students. At the semester's end, students develop their own philosophical "best way of life," formulating and justifying rules, models, or virtues to live by, and engage in conversation with other students on this topic. Students should leave the class recognizing the diversity and challenge of a range of way-of-life ideals, their historical context and contemporary promise, how to decide on their appropriateness for themselves, and what it would mean to adopt, refine, and support their own "philosophy" of life.

CAMS 20: Egyptian Civilization

3 Credits

This course will introduce the student to a number of basic problems inherent in the advent and nature of complex society which resonate in all world cultures, and for which Egypt can be used as the most revealing case study. The themes to be addressed include: the appearance of monarchy and civil service, the invention of writing and the needs it fulfilled, the concept of the nation state, the technological advancement of ancient river valley civilizations, civic religion, systems collapse, the concept of empire, and the relationship of Egypt to the surrounding Mediterranean world.

CAMS 25: Greek Civilization

3 Credits

This course explores the cultural, political, and historical identity of the ancient Greeks who they were, what they achieved, how they organized their society, and what they believed. This is not a history of ancient Greece, but an examination into the different facets of ancient Greek civilization, including the Trojan War myth, the ancient Olympics, the rise of democracy, slavery, the cultural and political contexts of artistic performance, and the sex-gender system. Students will pursue these topics and others using an interdisciplinary approach, consulting evidence from Greek literature, art, history, and philosophy. Ultimately, this course will provide students with a broad background in ancient Greek civilization and prepare them for more advanced work in the ancient Mediterranean world. As such, it fulfills both the GH and IL requirements.
