

Temporary Exemption List for Use of Prohibited Pesticides

SCS Global Services Sustainably Grown

SCS Global Services (SCS) is dedicated to a systematic, transparent, and scientifically-based process for reviewing requests for temporary exemptions for use of pesticides listed in the *Sustainably Grown – Pesticide Policy and Prohibited Pesticide Reference List*. The temporary exemption request review process includes a formal assessment of risk based on actual or intended use of the pesticide, the availability of viable alternatives, plans for mitigation if an exemption is granted, and the process for evaluating alternatives to the prohibited pesticide. Requests for temporary exemption are reviewed and analyzed by SCS in consultation with the IPM Institute of North America, Inc. For temporary exemptions that have been granted, the operation must ensure adherence to all label restrictions and applicable laws, as well as ensure that the prohibited pesticides are used in a manner consistent with the additional use restrictions detailed in the client's SCS Temporary Exemption Request Expert Review Report. For more information about the temporary exemption process, see the *Temporary Exemption Procedure for Prohibited Pesticides* available online at: www.scsglobalservices.com/sustainably-grown-certification.

Following is the list of certified clients and current temporary exemptions. This list will be updated quarterly. For more detailed information regarding a specific certificate holder's temporary exemptions, please contact SCS at SGcert@SCSGlobalServices.com.
