

FCC FACT SHEET*

Review of Submarine Cable Landing License Rules and Procedures to Assess Evolving National Security, Law Enforcement, Foreign Policy, and Trade Policy Risks; Amendment of the Schedule of Application Fees Set Forth in Sections 1.1102 through 1.1109 of the Commission’s Rules

Notice of Proposed Rulemaking – OI Docket No. 24-523, MD Docket No. 24-524

Background: In this proceeding, we would undertake the first major comprehensive review of the Commission’s submarine cable rules since 2001. Over the last two decades, technology, consumer expectations, international submarine cable traffic patterns, and investment in and construction of submarine cable infrastructure have greatly changed. Notably, national security and law enforcement threat environments have evolved significantly. The Notice of Proposed Rulemaking (NPRM) in this proceeding would seek comment on how best to improve and streamline the Commission’s submarine cable rules to facilitate efficient deployment of submarine cables while at the same time ensuring the security, resilience, and protection of this critical infrastructure.

What the Notice of Proposed Rulemaking Would Do:

- Proposes to codify the Commission’s legal jurisdiction and other legal requirements in its rules to provide regulatory certainty to submarine cable owners and operators;
- Proposes a three-year periodic review process for cable landing licenses and seeks comment on shortening the current 25-year license term (or in combination with periodic reporting) to improve the Commission’s oversight of submarine cable licensees;
- Seeks comment on updating application requirements for national security purposes and to ensure the Commission has targeted and granular information regarding the ownership, control, and use of a submarine cable system;
- Proposes new regulatory compliance certifications to protect against national security, law enforcement, and other risks;
- Seeks comment on steps the Commission can take to protect submarine cable infrastructure, including activities in coordination with our federal partners;
- Proposes and seeks comment on updating submarine cable rules and certain targeted requirements to protect submarine cable systems from national security and law enforcement risks;
- Seeks comment on streamlining the FCC’s submarine cable review processes; and
- Seeks comment on improving the quality of the Circuit Capacity data and facilitating the sharing of such information with other Federal Agencies.

* This document is being released as part of a “permit-but-disclose” proceeding. Any presentations or views on the subject expressed to the Commission or its staff, including by email, must be filed in OI Docket No. 24-523 and MD Docket No. 24-524, which may be accessed via the Electronic Comment Filing System (<https://www.fcc.gov/ecfs/>). Before filing, participants should familiarize themselves with the Commission’s *ex parte* rules, including the general prohibition on presentations (written and oral) on matters listed on the Sunshine Agenda, which is typically released a week prior to the Commission’s meeting. See 47 CFR § 1.1200 et seq.

APPENDIX A—Proposed Rules

APPENDIX B—Technical Appendix

APPENDIX C—Initial Regulatory Flexibility Act Analysis

APPENDIX D—Three-Year Periodic Reporting Prioritization Schedule

I. INTRODUCTION

1. In this Notice of Proposed Rulemaking (*Notice*), we undertake the first major

comprehensive review of our submarine cable rules since 2001.¹ Over the last two decades, technology, consumer expectations, international submarine cable traffic patterns, and investment in and construction of submarine cable infrastructure have greatly changed.² Notably, national security and law enforcement threat environments have evolved significantly.³ By this proceeding, we seek comment on how best to improve and streamline the submarine cable rules to facilitate efficient deployment of submarine cables while at the same time ensuring the security, resilience, and protection of this critical infrastructure. Specifically, in this *Notice*, we take a number of actions to:

- ***Codify the Commission’s legal jurisdiction and other legal requirements in the Commission’s rules to provide regulatory certainty to submarine cable owners and operators.*** We propose to codify in the Commission’s rules: (1) when a submarine cable license is required under the Cable Landing License Act; (2) an appropriate definition of a submarine cable system; (3) the existing public interest standard; (4) the character qualification requirements; and (5) a process to withhold or revoke a cable landing license.
- ***Improve the Commission’s oversight of submarine cable licensees and information regarding a submarine cable system and its licensees during the 25-year license term.*** We propose to adopt a three-year periodic review process for cable landing licenses. We seek comment on shortening the current 25-year submarine cable license term or adopting a shorter license term in combination with periodic reporting.
- ***Update application requirements for national security purposes and ensure the Commission has targeted and granular information regarding the ownership, control, and use of a submarine cable system.*** We seek comment on modernizing our existing application rules to better identify and capture information on those entities that own and control the submarine cable system and connect with terrestrial networks in the United States. We propose to adopt a presumption that any entity whose application for international section 214 authority that was

³ *See e.g.*, Staff Report of Senate Permanent Subcommittee on Investigations, Committee on Homeland Security and Governmental Affairs, 116th Cong., Threats to U.S. Networks: Oversight of Chinese Government-Owned Carriers at 16 (June 9, 2020) (“During the past two decades, Chinese state-owned telecommunications carriers have established operations across the world, including in the United States . . . [and indicating] how the Chinese government may use its state-owned telecommunications carriers to further China’s national interests”), <https://www.hsgac.senate.gov/subcommittees/investigations/library/files/threats-to-us-networks-oversight-of-chinese-government-owned-carriers/>.

previously denied or whose domestic or international section 214 authority was previously revoked in view of national security and law enforcement concerns, and its current and future affiliates and subsidiaries, shall not be qualified to become a new submarine cable landing licensee. Further, we propose to adopt this presumption with respect to any entity and its current and future affiliates and subsidiaries whose application is or was previously denied or whose authorization or license is or was previously revoked and/or terminated on national security or law enforcement grounds. We seek comment on whether to lower the current 10% ownership reporting threshold to five percent (5%) and propose to require submarine cable applicants to (1) provide detailed information concerning the submarine cable infrastructure and (2) include in their applications information about the services they currently offer or plan to offer.

Additionally, we seek comment on whether certain information should be presumptively subject to confidential treatment.

- ***Adopt new compliance certifications to protect against national security, law enforcement, and other risks.*** We propose that all submarine cable applicants certify: (1) whether they are in compliance with the Commission’s rules and regulations, the Act, and other laws; (2) that they have created, updated, and implemented cybersecurity risk management plans; and (3) as a condition of the potential grant of their application, that the submarine cable system will not use covered equipment or services identified on the Commission’s “Covered List” that the Commission maintains pursuant to the Secure and Trusted Communications Networks Act. We also propose that all submarine cable landing licensees certify as to whether or not they use, for the relevant submarine cable system, equipment or services identified on the “Covered List” within 60 days of the release of any Report and Order in this proceeding. Additionally, we propose to amend our rules by adding a new routine condition and a certification requirement in the proposed periodic reports prohibiting licensees from using, for the relevant submarine cable system, equipment or services identified on the “Covered List.” We also seek comment on whether to require a certification by all applicants/licensees that they have the ability to promptly and effectively interrupt, in whole or in part, traffic to and from the United States on the submarine cable system.
- ***Protect submarine cable infrastructure, including activities in coordination with our federal partners.*** We solicit recommendations for any additional steps the Commission can take to protect this critical infrastructure, including activities in coordination with other federal agencies.
- ***Update submarine cable rules and certain targeted requirements to protect submarine cable systems from national security and law enforcement risks.*** We seek comment on (1) whether to require basic information about an applicant’s lessors of submarine cable landing stations and/or data centers housing hardware; (2) ways the Commission can address vulnerabilities associated with logical access to submarine cable systems; (3) challenges posed by submarine cable licensees’ use of remote service vendors and their services and steps the Commission could take to mitigate those challenges. We propose, among other things (1) to require applicants/licensees, with or without reportable foreign ownership, to report whether or not they use and/or will use Managed Network Service Providers (MNSPs) and (2) that any applicant that indicates it uses and/or will use a foreign-owned MNSP will answer the Standard Questions and those applications would be routinely referred to the relevant Executive Branch agencies.⁴ Also, we

⁴ The standardized national security questions for submarine cable landing licenses (Standard Questions) require applicants to provide basic information about each applicant, applicant ownership information, relationships between the applicant and foreign entities or governments, criminal history of the applicant, information about the proposed submarine cable system, security plans for the submarine cable system, information about the submarine

propose to require all applicants to provide a list of the anticipated addresses or physical locations for the Network Operations Center (NOC) on a confidential basis in their applications and in the periodic reporting.

- ***Streamline procedures to expedite the FCC’s submarine cable review processes.*** We seek comment on, for example, (1) ways to modify our streamlining procedures to expedite submarine cable processing while ensuring national security and law enforcement concerns are addressed and (2) actions or measures the Commission can take to expedite the review and licensing process.
- ***Improve the quality of the Circuit Capacity data and facilitate the sharing of such information with other Federal Agencies.*** We seek comment on modifying the circuit capacity reporting rules to improve the usefulness and reliability of the annual circuit capacity report data while protecting confidential information. Also, we seek comment on adopting a rule allowing the sharing of confidential circuit capacity data with the relevant federal agencies.

II. BACKGROUND

2. *Legal Authority.* The Commission’s authority to grant, withhold, revoke, or condition submarine cable landing licenses derives from the Cable Landing License Act⁵ and Executive Order 10530.⁶ Section 34 of the Cable Landing License Act states that “no person shall land or operate in the United States any submarine cable directly or indirectly connecting the United States with any foreign country, or connecting one portion of the United States with any other portion thereof, unless a written license to land or operate such cable has been issued by the President of the United States.”⁷ Section 35 of the Cable Landing License Act provides that:

the President may withhold or revoke such license when he shall be satisfied after due notice and hearing that such action will assist in securing rights for the landing or operation of cables in foreign countries, or in maintaining the rights or interests of the United States or of its citizens in foreign countries, or will promote the security of the United States, or may grant such license upon such terms as shall be necessary to assure just and reasonable rates and service in the operation and use of cables so licensed.⁸

3. On May 12, 1954, Executive Order 10530 delegated the President’s authority under the

cable system network, and whether the system provides critical infrastructure services, among other information. *See generally* 47 CFR § 1.40003 (listing the categories of information an applicant, petitioner, and/or other filer subject to referral must provide to the executive branch agencies). *See Process Reform for Executive Branch Review of Certain FCC Applications and Petitions Involving Foreign Ownership*, IB Docket No. 16-155, Second Report and Order, 36 FCC Rcd 14848, Attachs. A-G (2021) (*2021 Standard Questions Order*); *The Office of International Affairs Announces that the Executive Branch Review Rules and the Standard Questions Take Effect on August 23, 2024*, IB Docket No. 16-155, Public Notice, DA 24-856 (OIA Aug. 23, 2024).

⁵ *See* Cable Landing License Act, *supra* n.1; 47 U.S.C. §§ 34-39.

⁶ Executive Order 10530.

⁷ 47 U.S.C. § 34. Section 34 states further that “[t]he conditions of sections 34 to 39 of this title shall not apply to cables, all of which, including both terminals, lie wholly within the continental United States.” *Id.*

⁸ 47 U.S.C. § 35. The Communications Act of 1934 (the, “Act”) amended section 35 to include the following sentence: “Nothing herein contained shall be construed to limit the power and jurisdiction of the Federal Communications Commission with respect to the transmission of messages.” Communications Act of 1934, ch. 652, 48 Stat. 1102, Title VII, § 702(c) (1934) (formerly Title VI, § 602(c)) (codified as amended at 47 U.S.C. § 35).

Cable Landing License Act to the Commission.⁹ The Executive Order states that “no such license shall be granted or revoked by the Commission except after obtaining approval of the Secretary of State and such advice from any executive department or establishment of the Government as the Commission may deem necessary.”¹⁰

4. Notably, the Commission regulates both U.S.-international submarine cable systems as well as domestic submarine cable systems, unless all of the cable, including both terminals, lies wholly within the continental United States.¹¹ Pursuant to the Cable Landing License Act and Executive Order 10530, the Commission also authorizes modifications, transfers of control or assignments of interests in existing cable landing licenses, and renews cable landing licenses.

5. *Submarine Cable Licensing.* The Commission began its last comprehensive review of its submarine cable rules on June 22, 2000.¹² The primary focus of that proceeding was not on national security concerns but on incentivizing competition, such as by adopting streamlining procedures to, among other things, “provide incentives for the development of facilities-based competition and capacity expansion to meet increasing demands.”¹³ As a result of that proceeding, in the *2001 Cable Report and Order*, the Commission adopted rules to achieve three key objectives: (1) institute an expedited licensing process to speed the deployment of cable capacity to the market; (2) ensure careful Commission review of certain applications to guard against anti-competitive behavior; and (3) adopt a pro-competitive model that could be used around the world.¹⁴ The rules were designed to streamline the application process and reduce regulatory burdens.¹⁵

6. Section 1.767 of the Commission’s rules sets forth the framework for the Commission’s consideration of applications for cable landing licenses. It specifies among other things: (1) the information required to be in an application for a new license or the transfer or assignment of an existing license; (2) the entities that, at a minimum, must be part of an application for a cable landing license; (3) the procedures for processing applications, including eligibility for streamlined processing; (4) routine conditions that are imposed on the grant of each cable landing license; and (5) reporting requirements that, as a general rule, apply to licensees affiliated with a carrier with market power in a country at the foreign end of the cable.¹⁶ In addition, section 1.768 of the Commission’s rules specifies notification and approval requirements for licensees that are, or propose to become, affiliated with a foreign carrier

⁹ Executive Order 10530.

¹⁰ Since 1954, the Commission has exercised the authority granted by the Cable Landing License Act and Executive Order 10530. *See Commission Announces Department of State’s Revised Procedures for its Consideration of Submarine Cable Landing License Applications*, IB Docket No. 16-155, Public Notice, 37 FCC Rcd 5183 (2022) (setting forth revised procedures for State Department review of cable landing licenses pursuant to Executive Order 10530 in light of the issuance of Executive Order 13913); Exec. Order No. 13913, 85 Fed. Reg. 19643, 19643 (Apr. 8, 2020) (Executive Order 13913); *see e.g., Tel-Optik Limited, Application for a License to Land and Operate in the United States a Submarine Cable Extending Between the United States and the United Kingdom*, Memorandum Opinion and Order, File Nos. I-SCL-84-002, I-S-C-L-84-003, 100 F.C.C.2d 1033, 1034, para. 21 (1985) (explaining that the President issued cable landing licenses until 1954, when the President delegated that authority to the Commission by executive order).

¹¹ *See* 47 U.S.C. § 34; *see supra* para. 2.

¹⁶ 47 CFR § 1.767.

authorized to operate in a destination market, including an entity that owns or controls a cable landing station in that market.¹⁷

7. *Coordination with Executive Branch Agencies.* As part of the Commission’s review of an application for a submarine cable landing license, the Commission considers several factors and examines the totality of the circumstances in each particular application. As the Commission explained in its 1997 *Foreign Participation Order*, Executive Order 10530 “requires us to obtain the approval of the State Department, and, as appropriate, to seek advice from other Executive Branch agencies, before granting any such license.”¹⁸ The Commission outlined how it seeks feedback from the relevant Executive Branch agencies on any national security, law enforcement, foreign policy, or trade policy considerations related to the foreign ownership of applicants, including cable landing license applicants, as part of its overall public interest analysis of an application.¹⁹ In 2020, the Commission, in its *Executive Branch Review Report and Order*, formalized the process by which it refers such applications for review consistent with Executive Order 13913 of April 4, 2020 that established the Committee for the Assessment of Foreign Participation in the United States Telecommunications Services Sector (Committee).²⁰ The Commission adopted the rules to increase the transparency and timeliness of the process by which the Commission coordinates with the relevant Executive Branch agencies those applications or petitions with foreign ownership, including submarine cable applications.²¹ The Commission stated that the rules also would improve the ability of the Executive Branch agencies to

²⁰ See generally *Process Reform for Executive Branch Review of Certain FCC Applications and Petitions Involving Foreign Ownership*, IB Docket No. 16-155, Report and Order, 35 FCC Rcd 10927, 10929-30, 10935, paras. 5-6, 18-21, erratum, 35 FCC Rcd 13164, 13166 (2020) (*Executive Branch Review Report and Order*); Executive Order 13913 (stating in sec. 1 that, “[t]he security, integrity, and availability of United States telecommunications networks are vital to United States national security and law enforcement interests”); *id.* (stating in sec. 3 that “[t]he function of the Committee shall be . . . to review applications and licenses for risks to national security and law enforcement interests posed by such applications or licenses. . . .”); *id.* at 19643-44 (establishing the “Committee,” composed of the Secretary of Defense (DOD), the Secretary of Homeland Security (DHS), and the Attorney General of the Department of Justice (DOJ), who serves as the Chair, and the head of any other executive department or agency, or any Assistant to the President, as the President determines appropriate (Members), and also providing for Advisors, including the Secretary of State, the Secretary of Commerce, and the United States Trade Representative (USTR)); see also FCC, Office of International Affairs, *Requirements for Applications and Petitions Subject to Executive Branch Review* (Oct. 1, 2024), <https://www.fcc.gov/international-affairs/requirements-applications-and-petitions-subject-executive-branch-review>.

²¹ *Executive Branch Review Report and Order*, 35 FCC Rcd at 10929-30, 10935, paras. 5-6, 18-21 (specifying that the term “applications” includes submarine cable landing licenses as well as applications to assign, transfer control of, or modify those licenses, where the applicant has reportable foreign ownership); see also 47 CFR § 1.40001(a)(1). The *Executive Branch Review Report and Order* also (1) required referred applicants to provide responses to a set of standardized national security and law enforcement questions directly to the Executive Branch at the same time they file with the Commission, increasing the efficiency of the process; (2) required referred applicants to provide certain certifications in order to facilitate faster reviews, make mitigation unnecessary for a number of applications reviewed by the Committee, strengthen compliance, and assist the Commission in its ongoing regulatory obligations; and (3) adopted a unified set of rules for referring applications to Executive Branch agencies. *Executive Branch Review Report and Order*, 35 FCC Rcd at 10935, paras. 18-21.

expeditiously and efficiently review the applications and make the review process more transparent.²²

8. The Commission's rules allow for either streamlined or non-streamlined processing of applications for cable landing licenses or modification, assignment, or transfer of control of such licenses. Where the applicant can demonstrate eligibility for streamlining under the Commission's rules, the rules contemplate that the Commission can take action within 45 days of release of the public notice.²³ If an applicant has reportable foreign ownership, the application process usually is not streamlined, and the Office of International Affairs (OIA) refers the application to the Executive Branch agencies, including the Committee agencies, for review at the time it places the application on "Accepted for Filing" public notice.²⁴ As part of the rules and procedures adopted in the *Executive Branch Review Report and Order*, applicants with reportable foreign ownership are required to submit answers to a set of standardized national security questions to the Committee at the time the applicant files its application with the Commission to enable the Committee to begin its review of an application in a timely manner.²⁵ The Committee has 120 days for initial review²⁶ plus an additional 90 days for secondary assessment if the Committee determines that the risk to national security or law enforcement interests cannot be mitigated with standard mitigation measures.²⁷ The Committee may recommend the Commission grant the application contingent on mitigation measures, recommend the Commission deny the application due to the risk to national security or law enforcement interests of the United States, or indicate that the Committee has no recommendation and no objection to the grant of the application.²⁸ The Commission ultimately makes its public interest assessment in light of the information in the record, including any information provided by the applicant, authorization holder, or licensee in response to any filings by the Executive Branch agencies.²⁹

9. Under the Cable Landing License Act and Executive Order 10530, the Commission must coordinate with and obtain approval from the State Department on all submarine cable applications. The Executive Order states, "that no such license shall be granted or revoked by the Commission except after obtaining approval of the Secretary of State . . ."³⁰ For applications that are not subject to review by the Committee, the State Department has authorized the Commission to act on applications when the Commission notifies the State Department in writing of the filing of an application and the State

²² *Id.* at 10928, para. 2.

²³ 47 CFR § 1.767(i), (k).

²⁴ 47 CFR § 1.40002(a).

²⁵ See generally 47 CFR § 1.40003 (listing the categories of information an applicant, petitioner, and/or other filer subject to referral must provide to the executive branch agencies). See *2021 Standard Questions Order*, 36 FCC Rcd at Attachs. A-G).

²⁶ The 120 days begins when the Committee "determines that the applicant's responses to any questions and information requests from the Committee are complete." Executive Order 13913, § 5(b)(iii).

²⁷ 47 CFR § 1.40004(b)-(c); Executive Order 13913, § 5(b)(i)(C).

²⁸ 47 CFR § 1.40004(b)(1)-(3), (c)(2)(i)-(iii); Executive Order 13913, § 9(a).

²⁹ 47 CFR § 1.40001(b) ("The Commission will evaluate concerns raised by the executive branch and will make an independent decision concerning the pending matter."); see *Foreign Participation Order*, 12 FCC Rcd at 23921, para. 66 ("We emphasize that the Commission will make an independent decision on applications to be considered and will evaluate concerns raised by the Executive Branch agencies in light of all the issues raised (and comments in response) in the context of a particular application.").

³⁰ Executive Order 10530, § 5(a).

Department does not object within 30 days of the notification.³¹ For applications that are reviewed by the Committee, the State Department has a 10-day review period that starts when the Commission notifies the State Department of the Committee's final recommendation on the application and the licensing outcome proposed by the OIA, including any proposed license conditions.³²

10. *Circuit Capacity Rules Requirements.* A related set of rules requires submarine cable landing licensees to “file annual international circuit capacity reports as required by § 43.82” of the Commission's rules.³³ In particular, submarine cable landing licensees are required to file capacity information for each cable system as of December 31 of the current reporting period (i.e., available capacity) and two years from the current reporting period (i.e., planned capacity).³⁴ Additionally, submarine cable landing licensees and common carriers that owned or leased capacity on a submarine cable between the United States and any foreign point are required to file capacity information as of December 31.³⁵ The Commission considers such data “essential for our national security and public safety responsibilities in regulating communications, an important linchpin of the Commission's statutory authority. . . . [given] submarine cables are critical infrastructure and the circuit capacity data are important for the Commission's contributions to the national security and defense of the United States.”³⁶ As the Commission has explained, “[w]e use the data, for example, to have a complete understanding of the ownership and use of submarine cable capacity and to assist in the protection, restoration, and resiliency of the infrastructure during national security or public safety emergencies, such as hurricanes. [Department of Homeland Security (DHS)] also finds this information to be critical to its national and homeland security functions.”³⁷

11. *Current Licensed Submarine Cables and Circuit Capacity Data.* There are 84 submarine cable systems licensed by the Commission that are currently either operating or planning to enter service at a future date.³⁸ According to the Commission's records, 63 of the 84 cables are U.S.-international

³⁸ These totals are based on the Commission's records as of October 29, 2024. FCC, *MyIBFS*, <https://licensing.fcc.gov/myibfs/welcome.do>; see FCC, *Submarine Cable Landing Licenses*,

submarine cables and the remaining 21 cables are domestic cables, cables that do not connect the United States with foreign points.³⁹ Based on the Commission’s circuit capacity data, licensees of the U.S.-international cables operating as of December 2022 reported 5.3 million gigabits per second (Gbps) of available capacity and planned capacity of 6.8 million Gbps for 2024.⁴⁰

12. Importantly, three of the 84 licensed submarine cable systems land in a “foreign adversary” country,⁴¹ as defined in the Department of Commerce’s rule.⁴² Specifically, the New Cross-Pacific (NCP) system and the Trans-Pacific Express (TPE) Cable Network, land in the People’s Republic of China (China) mainland, among other foreign locations, and the Asia America Gateway system lands

<https://www.fcc.gov/research-reports/guides/submarine-cable-landing-licenses> (last visited Oct. 7, 2024). There are a total of 96 licensed submarine cables in ICFS, however, six (6) submarine cable landing licenses were licensed by the Commission in the 1980s and 1990s, but there is no Commission record that the licensees commenced or ceased operations. ⁴⁶ Application of GU Holdings, Edge Cable Holdings, and Pacific Light Data Communication Co. for a Cable Landing License, File No. SCL-LIC-20170421-00012 (filed April 4, 2017) (PLCN Application).

⁴⁷ Application of ARCOS-1 USA, Inc. and A.SurNet, Inc. for a Modification to Cable Landing License, SCL-MOD-20210928-00039 (filed September 28, 2021) (ARCOS-1 Application).

⁴⁸ Executive Branch Recommendation for a Partial Denial and Partial Grant of the Application for a Submarine Cable Landing License for the Pacific Light Cable Network, File Nos. SCL-LIC-20170421-00012, SCL-AMD-

applications were ultimately withdrawn by the applicants.⁴⁹ We describe each application below.⁵⁰

14. First, on April 4, 2017, GU Holdings Inc. (GU Holdings), Edge Cable Holdings USA, LLC (Edge USA), and Pacific Light Data Communication Co. Ltd. (PLDC) filed an application for a submarine cable license extending between the continental United States and Hong Kong, Taiwan, and the Philippines for the PLCN cable system.⁵¹ The submarine cable system was novel because it would have allowed for the highest capacity subsea cable connection between the United States and Asia and would have been the first direct connection between the United States and Hong Kong.⁵² On June 17, 2020, the Executive Branch agencies recommended to the Commission that it should partially deny the license application with respect to PLCN's connection to Hong Kong and with respect to PLCN's foreign owners, Hong Kong based PLDC and China-based ultimate parent entity Dr. Peng Telecom & Media Group Co., Ltd.⁵³ On August 27, 2020, the applicants withdrew the cable landing license application and

20171227-00025 (filed June 17, 2020) (*Executive Branch Recommendation for a Partial Denial and Partial Grant*); Recommendation of the Committee for the Assessment of Foreign Participation in the U.S. Telecommunications Services Sector to Deny the Application, File No. SCL-MOD-20210928-00039 (filed Nov. 29, 2022).

⁴⁹ Notice of Withdrawal of Application for Cable Landing License filed by GU Holdings Inc., Edge Cable Holdings USA, LLC, and Pacific Light Data Communication Co. Ltd., File Nos. SCL-LIC-20170421-00012, SCL-AMD-20171227-00025 (Aug. 27, 2020); Letter from Ulises R. Pin and Stephany Fan, Counsel to Applicants, Morgan Lewis, to Marlene H. Dortch, Secretary, FCC (Dec. 15, 2022).

⁵⁰ In addition, three cable landing license applications were withdrawn prior to the completion of Executive Branch review. Notice of Withdrawal of Cable Landing License Application filed by RTI Solutions, Inc., RTI HK-G Pte. Ltd., RTI Connectivity Pte. Ltd., and GU Holdings Inc., File No. SCL-LIC-20191122-00037 (Nov. 22, 2019) (withdrawing an application for a license to construct, land, and operate the Hong Kong-Guam (HK-G) submarine cable system connecting the United States and Hong Kong); Notice of Withdrawal of Cable Landing License Application filed by Edge Cable Holdings USA, LLC, China Mobile International Limited, and Amazon Data Services, Inc., File No. SCL-LIC-20181125-00037 (Sept. 10, 2020) (withdrawing an application for a license to construct, land, and operate the Bay to Bay Express submarine cable system connecting the United States, Singapore, Hong Kong, and Malaysia); Notice of Withdrawal of Cable Landing License Application and Associated Request for Special Temporary Authority filed by Edge Cable Holdings USA, LLC, China Telecommunications Corporation, China Telecom Global Limited, China United Network Communications Group Company Limited, RTI Express Pte. Ltd., Tata Communications (Bermuda) Limited, and Telstra Corporation Limited, File Nos. SCL-LIC-20180711-00018, SCL-STA-20201217-00049 (Mar. 9, 2021) (withdrawing an application for a license to construct, land, and operate the Hong Kong-Americas (HKA) submarine cable system connecting Chung Hom Kok, Hong Kong SAR; Toucheng, Taiwan; Manchester, California; and Hermosa Beach, California and a request for special temporary authority).

⁵¹ See PLCN Application, *supra* n.46.

⁵² File No. SCL-LIC-20170421-00012, *Streamlined Submarine Cable Landing License Applications Accepted for Filing*, Report No. SCL-00204S (IB Nov. 1, 2017); Letter from Debbie Wheeler, National Security Division, U.S. Department of Justice to Marlene H. Dortch, Secretary, FCC (Nov. 1, 2017) (on file in File No. SCL-LIC-20170421-00012). On November 1, 2017, the U.S. Department of Justice, with the concurrence of the U.S. Department of Defense and the U.S. Department of Homeland Security (collectively, "the Agencies"), requested that the Commission defer action on the application.

⁵³ *Executive Branch Recommendation for a Partial Denial and Partial Grant* at 1-2; see Press Release, Department of Justice, Team Telecom Recommends that the FCC Deny Pacific Light Cable Network System's Hong Kong Undersea Cable Connection to the United States (June 17, 2020), <https://www.justice.gov/opa/pr/team-telecom-recommends-fcc-deny-pacific-light-cable-network-system-s-hong-kong-undersea>. This application was later withdrawn by the applicants. Notice of Withdrawal of Application for Cable Landing License filed by GU Holdings Inc., Edge Cable Holdings USA, LLC, and Pacific Light Data Communication Co. Ltd., File Nos. SCL-LIC-20170421-00012, SCL-AMD-20171227-00025 (Aug. 27, 2020). The applicants filed a new application for the PLCN cable system that did not include PLDC as an applicant and the proposed connection to Hong Kong.

filed a new application for the PLCN cable that did not include PLDC as an applicant or Hong Kong as a proposed landing point.⁵⁴ Ultimately, the Commission granted the cable landing license for PLCN as to the two U.S. applicants and the connections to the Philippines and Taiwan; the grant is expressly conditioned on each licensee abiding by the commitments and undertakings contained in their respective National Security Agreements with the Committee.⁵⁵

15. Second, on September 28, 2021, ARCOS-1 USA, Inc. (ARCOS) and A.SurNet, Inc. (ASN) filed an application to modify the cable landing license for the ARCOS-1 cable system to include a new landing point in Cuba.⁵⁶ On November 29, 2022, the Committee filed a recommendation requesting that the Commission deny the modification application due to national security and law enforcement risks.⁵⁷ The Committee stated that “[i]f the application is granted as proposed, U.S. persons’ Internet traffic, data, and communications transiting the proposed ARCOS-1 cable expansion (Segment 26) to Cuba are very likely to be compromised,” given the “Cuban government maintains tight control of the Cuban telecommunications networks through [Empresa de Telecomunicaciones de Cuba S.A. (ETECSA)].”⁵⁸ The Committee added that, “[b]y landing a subsea cable in Cuban territory, the Government of Cuba would be well positioned to collect all U.S. persons’ communications and sensitive data traversing Segment 26 [of] the cable.”⁵⁹ Ultimately, by letter dated December 15, 2022, the applicants withdrew the modification application, and the Commission dismissed the application at the applicants’ request.⁶⁰

16. *Recent Commission Actions to Address National Security and Law Enforcement Concerns.* Over the past several years, the Commission has undertaken various national security and law

Application of GU Holdings Inc. and Edge Cable Holdings Inc. for a Cable Landing License, File No. SCL-LIC-20200827-00038 (filed August 27, 2020).

⁵⁴ Notice of Withdrawal of Application for Cable Landing License filed by GU Holdings Inc., Edge Cable Holdings USA, LLC, and Pacific Light Data Communication Co. Ltd., File Nos. SCL-LIC-20170421-00012, SCL-AMD-20171227-00025 (Aug. 27, 2020).

enforcement actions with regard to communications infrastructure and systems, including submarine cable systems.⁶¹ These actions are necessitated by evolving risks in the national security landscape in the United States since the early 2000s. At that time, the national security focus was on international terrorism, including the risk of use of weapons of mass destruction against the United States and its allies.⁶² Also at that time, a number of entities ultimately majority-owned and controlled by the Chinese government—including China Telecom (Americas) Corporation (CTA),⁶³ China Unicom (Americas) Operations Limited (CUA),⁶⁴ Pacific Networks Corp. (Pacific Networks),⁶⁵ and ComNet (USA) LLC (ComNet)⁶⁶—entered the U.S. telecommunications market by obtaining authority to provide telecommunications services between the United States and foreign points under section 214 of the Communications Act of 1934.⁶⁷ Over the past decade, a number of additional entities ultimately majority-owned and controlled by the Chinese government—including China Telecommunications

⁶⁷ In 1999, the Commission granted all telecommunications carriers blanket authority under section 214 of the Communications Act to provide domestic interstate services and to construct or operate any domestic transmission line. *Implementation of Section 402(b)(2)(A) of the Telecommunications Act of 1996*; *Petition for Forbearance of the Independent Telephone & Telecommunications Alliance*, Report and Order and Second Memorandum Opinion and Order, 14 FCC Rcd 11364, 11365-66, para. 2 (1999).

Corporation (China Telecom),⁶⁸ China Telecom Global Limited (China Telecom Global),⁶⁹ China Mobile International Limited (China Mobile Limited),⁷⁰ and China United Network Communications Group Company Limited (China Unicom)⁷¹—became licensees on FCC licenses to land and operate submarine cables connecting the United States to China and other foreign locations.

17. During the past five years the Commission opened proceedings that addressed national security and law enforcement risks concerning telecommunications service offered pursuant to section 214 of the Act. Importantly, the Commission denied an application for international section 214 authority⁷² and revoked, on national security grounds, the international and domestic section 214 authority of certain entities that are majority-owned and controlled by the Chinese government.⁷³ The Commission's actions were based on a record that included recommendations and comments from interested Executive Branch agencies regarding evolving national security and law enforcement concerns.⁷⁴ In the *China Mobile USA Order*, *China Telecom Americas Order on Revocation and*

⁶⁸ China Telecom is a joint cable landing licensee of the Trans-Pacific Express (TPE) Cable Network, which connects the United States, China, Japan, South Korea, and Taiwan. File No. SCL-LIC-20070222-00002, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00052, 23 FCC Rcd 227 (IB 2008) (*TPE Grant Public Notice*); File No. SCL-MOD-20080321-00003, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00069, 23 FCC Rcd 11016 (IB 2008) (*2008 TPE Modification Grant Public Notice*); File No. SCL-MOD-20080714-00012, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00086, 24 FCC Rcd 7051 (IB 2009) (*2009 TPE Modification Grant Public Notice*). The TPE Cable Network commenced service on September 30, 2008. See Letter from Nancy J. Victory, Wiley Rein LLP, to Marlene H. Dortch, Secretary, FCC (Oct. 17, 2008) (on file in File No. SCL-LIC-20070222-00002). China Telecom is also a joint cable landing licensee of the New Cross-Pacific (NCP) system, which connects the United States, China, Japan, South Korea, and Taiwan. File No. SCL-LIC-20151104-00029, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00193, 32 FCC Rcd 348 (IB 2017) (*2017 NCP Grant Public Notice*). The NCP system commenced service on February 22, 2018. Letter from Kent Bressie, Counsel to Microsoft Infrastructure Group, LLC, to Marlene H. Dortch, Secretary, FCC (July 31, 2018) (on file in File No. SCL-LIC-20151104-00029); File No. SCL-LIC-20151104-00029, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00222, 33 FCC Rcd 8211 (IB 2018).

⁶⁹ China Telecom Global is a joint cable landing licensee of the FASTER Cable System, which connects the United States, Japan, and Taiwan. File No. SCL-LIC-20150626-00015, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00183, 31 FCC Rcd 5437 (IB 2016) (*2016 FASTER Grant Public Notice*). The FASTER Cable System commenced service on August 17, 2016. Letter from Ulises R. Pin, Counsel to GU Holdings Inc., Morgan, Lewis & Bockius LLP, to Marlene H. Dortch, Secretary, FCC (Sept. 7, 2016) (on file in File No. SCL-LIC-20150626-00015).

⁷⁰ China Mobile Limited is a joint cable landing licensee of the FASTER Cable System. *2016 FASTER Grant Public Notice*. China Mobile Limited is also a joint cable landing licensee of the NCP system. *2017 NCP Grant Public Notice*.

⁷¹ China Unicom is a joint cable landing licensee of the TPE Cable Network. *TPE Grant Public Notice*; *2008 TPE Modification Grant Public Notice*; *2009 TPE Modification Grant Public Notice*. China Unicom is also a joint cable landing licensee of the NCP system. *2017 NCP Grant Public Notice*.

⁷² *China Mobile International (USA) Inc.; Application for Global Facilities-Based and Global Resale International Telecommunications Authority Pursuant to Section 214 of the Communications Act of 1934, as Amended*, Memorandum Opinion and Order, 34 FCC Rcd 3361 (2019) (*China Mobile USA Order*).

⁷³ See *China Telecom Americas Order on Revocation and Termination*, *aff'd*, *China Telecom. (Ams.) Corp. v. FCC*; *China Unicom Americas Order on Revocation*; *Pacific Networks and ComNet Order on Revocation and Termination*, *aff'd*, *Pacific Networks Corp. v. FCC*.

⁷⁴ See *China Telecom Americas Order on Revocation and Termination*, *aff'd*, *China Telecom. (Ams.) Corp. v. FCC*; *China Unicom Americas Order on Revocation*; *Pacific Networks and ComNet Order on Revocation and Termination*, *aff'd*, *Pacific Networks Corp. v. FCC*.

Termination, China Unicom Americas Order on Revocation, and Pacific Networks and ComNet Order on Revocation and Termination, the Commission found that these entities are subject to exploitation, influence, and control by the Chinese government, and that mitigation would not address the national security and law enforcement concerns.⁷⁵

18. The Commission has taken further steps to protect the nation's communications networks from potential national security threats. In November 2019, the Commission prohibited the use of public funds from the Commission's Universal Service Fund (USF) to purchase, obtain, maintain, improve, modify, or otherwise support any equipment or services produced or provided by companies posing a national security threat to the integrity of communications networks or the communications supply chain.⁷⁶ In December 2020, the Commission enacted rules to, among other things, (1) create and maintain the Covered List, which identifies communications equipment and services that pose an unacceptable risk to the national security of the United States or the security and safety of United States persons within the meaning of the Secure and Trusted Communications Networks Act of 2019 (Secure and Trusted Communications Networks Act);⁷⁷ (2) prohibit the use of Federal subsidies made available through a program administered by the Commission that provides funds for the capital expenditures necessary for the provision of advanced communications service to purchase, rent, lease, or otherwise obtain any covered communications equipment and service on the Commission's Covered List, or to maintain any such equipment or service that was previously purchased, rented, leased, or otherwise obtained;⁷⁸ (3) require eligible telecommunications carriers receiving USF support to remove and replace covered

⁷⁵ See *China Telecom Americas Order on Revocation and Termination, aff'd, China Telecom. (Ams.) Corp. v. FCC; China Unicom Americas Order on Revocation; Pacific Networks and ComNet Order on Revocation and Termination, aff'd, Pacific Networks Corp. v. FCC*.

⁷⁶ *Protecting Against National Security Threats Order*, 34 FCC Rcd at 11433, para. 26, *aff'd, Huawei Technologies USA v. FCC*, 2 F.4th 421 (5th Cir. 2021). For the purposes of section 54.9 of the Commission's rules, covered communications equipment and services only include communications equipment and services produced or provided by Huawei Technologies Company (Huawei) and ZTE Corporation (ZTE). See 47 CFR § 54.9(b) (establishing a process to designate entities subject to the prohibition in section 54.9 of the Commission's rules); *Protecting Against National Security Threats to the Communications Supply Chain Through FCC Programs—Huawei Designation*, PS Docket No. 19-351, Order, 35 FCC Rcd 6604 (PSHSB 2020); *Protecting Against National Security Threats to the Communications Supply Chain Through FCC Programs—ZTE Designation*, PS Docket No. 19-352, Order, 35 FCC Rcd 6633 (PSHSB 2020).

⁷⁷ *Protecting Against National Security Threats to the Communications Supply Chain Through FCC Programs*, WC Docket No. 18-89, Second Report and Order, 35 FCC Rcd 14284, 14311, para. 58 (2020) (*2020 Protecting Against National Security Threats Order*) (implementing the Secure and Trusted Communications Networks Act of 2019, 47 U.S.C. §§ 1601-1609). In March 2021, the Commission's Public Safety and Homeland Security Bureau announced the publication of a list of communications equipment and services (Covered List) that are deemed to pose an unacceptable risk to the national security of the United States or the security and safety of United States persons. *Public Safety and Homeland Security Bureau Announces Publication of the List of Equipment and Services Covered by Section 2 of the Secure Networks Act*, Public Notice, 36 FCC Rcd 5534 (PSHSB 2021). In March 2022 and September 2022, the Public Safety and Homeland Security Bureau announced additions to the Covered List. *Public Safety and Homeland Security Bureau Announces Additions to the List of Equipment and Services Covered by Section 2 of the Secure Networks Act*, Public Notice, DA 22-320 (PSHSB 2022); *Public Safety and Homeland Security Bureau Announces Additions to the List of Equipment and Services Covered by Section 2 of the Secure Networks Act*, Public Notice, DA 22-979 (PSHSB 2022).

⁷⁸ 47 CFR § 54.10; *2020 Protecting Against National Security Threats Order*, 35 FCC Rcd at 14325-26, paras. 94-95; 47 U.S.C. § 1602.

communications equipment and services from their networks;⁷⁹ (4) establish the Secure and Trusted Communications Networks Reimbursement Program (Reimbursement Program) to reimburse providers of advanced communications service for costs reasonably incurred to permanently remove, replace, and dispose of covered communications equipment and services from their networks;⁸⁰ and (5) implement a new data collection applying to all providers of advanced communications service that requires these providers to annually report on covered communications equipment and services that were purchased, rented, leased, or otherwise obtained on or after certain dates.⁸¹ In November 2022, the Commission adopted revisions to its equipment authorization program to prohibit authorization of equipment that has been identified on the Commission’s Covered List as posing an unacceptable risk to national security of the United States or the security or safety of United States persons, and prohibited the marketing and importation of such equipment in the United States.⁸²

19. In 2023, the Commission began a rulemaking in the *Evolving Risks NPRM* to seek comment on proposed rules and possible alternative approaches that will further its goal of ensuring that the Commission continually accounts for evolving public interest considerations associated with international section 214 authorizations.⁸³ The Commission, among other things, proposed to adopt a 10-year renewal framework or, in the alternative, periodic review of such authorizations, and to prioritize

⁷⁹ 47 CFR § 54.11 (requiring eligible telecommunications carriers receiving universal service support to certify that they do not use covered communications equipment and services prior to receiving a funding commitment or support); *2020 Protecting Against National Security Threats Order*, 35 FCC Rcd at 14292-99, paras. 21-31.

⁸⁰ 47 U.S.C. § 1603(a) (directing the Commission to establish the Reimbursement Program); 47 CFR § 1.50004; *2020 Protecting Against National Security Threats Order*, 35 FCC Rcd at 14331-68, paras. 108-208. In July 2021, the Commission modified its rules to incorporate the Consolidated Appropriations Act, 2021 (CAA) amendments to the Secure and Trusted Communications Networks Act of 2019. *Protecting Against National Security Threats to the Communications Supply Chain Through FCC Programs*, WC Docket No. 18-89, Third Report and Order, 36 FCC Rcd 11958, para. 1 (2021) (*2021 Protecting Against National Security Threats Order*); Consolidated Appropriations Act, 2021, Pub. L. No. 116-260, § 901, 134 Stat. 1182 (2020); Secure and Trusted Communications Networks Act of 2019, Pub. L. No. 116-124, 134 Stat. 158 (2020) (codified as amended at 47 U.S.C. §§ 1601-1609). These rule modifications included, but were not limited to, revising the eligibility to participate in the Reimbursement Program to providers of advanced communications service with 10 million or fewer customers and adopting the CAA’s prioritization scheme if program demand exceeds available funding. *2021 Protecting Against National Security Threats Order*, 36 FCC Rcd at 11963 at para. 13. The Commission also concluded that, pursuant to the CAA’s amendments to the Secure and Trusted Communications Networks Act, “covered communications equipment and services” eligible for Reimbursement Program support is limited to communications equipment and services produced or provided by Huawei or ZTE and obtained by providers on or before June 30, 2020. *Id.* at 11965, 11978, paras. 18-19, 46. The certification requirement in section 54.11 of the Commission’s rules is also limited to communications equipment and services produced or provided by Huawei or ZTE. *Id.* at 11975, para. 39 (aligning the scope of equipment and services required for removal under section 54.11 with the scope of equipment and services eligible for reimbursement through the Reimbursement Program).

⁸¹ 47 CFR § 1.50007; *2020 Protecting Against National Security Threats Order*, 35 FCC Rcd at 14368-71, paras. 209-17.

⁸² *Protecting Against National Security Threats to the Communications Supply Chain through the Equipment Authorization Program; Protecting Against National Security Threats to the Communications Supply Chain through the Competitive Bidding Program*, ET Docket No. 21-232, EA Docket No. 21-233, Report and Order, Order, and Further Notice of Proposed Rulemaking, FCC 22-84, 37 FCC Rcd 13493 (2022) (*2022 Protecting Against National Security Threats Order*).

⁸³ *Review of International Section 214 Authorizations to Assess Evolving National Security, Law Enforcement, Foreign Policy, and Trade Policy Risks, Amendment of the Schedule for Application Fees Set Forth in Sections 1.1102 through 1.1109 of the Commission’s Rules*, IB Docket No. 23-199, MD Docket No. 23-134, Order and Notice of Proposed Rulemaking, 38 FCC Rcd 4346, 4362, para. 24 (2023) (*Evolving Risks NPRM*).

renewal applications⁸⁴ with foreign ownership to regularly reassess any evolving national security, law enforcement, foreign policy, and/or trade policy concerns.⁸⁵ The *Evolving Risks NPRM* is also examining, for example, requiring targeted certifications, an ownership reporting threshold of 5% or greater, and information on foreign-owned MNSPs.⁸⁶

20. Most recently, in the *2024 Open Internet Order*, the Commission excluded the following entities and their current and future affiliates and subsidiaries from blanket section 214 broadband authority—China Mobile International (USA) Inc. (China Mobile USA), CTA, CUA, Pacific Networks, and ComNet—whose application for international section 214 authority was previously denied or whose domestic and international section 214 authority was previously revoked by the Commission in view of national security and law enforcement concerns.⁸⁷ The Commission in the *2024 Broadband Gateway Protocol NPRM*, also adopted a notice proposing steps applicable to providers of broadband Internet access service (BIAS) designed to improve the security of BGP routing, which is central to the Internet’s global routing system.⁸⁸

21. *Other National Security Initiatives Concerning Submarine Cables.* On February 28, 2024, President Biden issued Executive Order 14117 to prevent access to Americans’ bulk sensitive personal data and United States government-related data by countries of concern.⁸⁹ Under this order, the Committee will prioritize “the initiation of reviews of existing licenses for submarine cable systems that are owned or operated by persons owned by, controlled by, or subject to the jurisdiction or direction of a country of concern, or that terminate in the jurisdiction of a country of concern.”⁹⁰ Additionally, on April 30, 2024, President Biden issued National Security Memorandum on Critical Infrastructure Security and Resilience. Under this memorandum, the President asked the Commission, to the extent permitted by law, and in coordination with DHS and other federal departments and agencies, to: (1) identify and prioritize communications infrastructure by collecting information regarding communications networks; (2) assess communications sector risks and work to mitigate those risks by requiring, as appropriate, regulated entities to take specific actions to protect communications networks and infrastructure; and (3) collaborate with communications sector industry members, foreign governments, international

⁸⁹ Preventing Access to Americans’ Bulk Sensitive Personal Data and United States Government-Related Data by Countries of Concern, Exec. Order No. 14117, 89 Fed. Reg. 15421 (Feb. 28, 2024) (Executive Order 14117).

⁹⁰ *Id.* at 15426 (stating that the Committee, among other things, “shall, to the extent consistent with its existing authority and applicable law: prioritize, for purposes of and in reliance on the process set forth in section 6 of Executive Order 13913, the initiation of reviews of existing licenses for submarine cable systems that are owned or operated by persons owned by, controlled by, or subject to the jurisdiction or direction of a country of concern, or that terminate in the jurisdiction of a country of concern . . .”). Executive Order 14117 states, among other things, that the risk of access to bulk sensitive personal data and United States Government-related data “by countries of concern can be, and sometime is, exacerbated where the data transits a submarine cable that is owned or operated by persons owned by, controlled by, or subject to the jurisdiction or direction of a country of concern, or that connects to the United States and terminates in the jurisdiction of a country of concern.” *Id.*

organizations, and other stakeholders to identify best practices and impose corresponding regulations.⁹¹

III. NOTICE OF PROPOSED RULEMAKING

22. In this *Notice*, we initiate a comprehensive review of our submarine cable rules to develop forward-looking rules to better protect submarine cables, identify and mitigate harms affecting national security and law enforcement, and facilitate the deployment of cables and capacity to the market. We believe this proceeding will improve Commission review and oversight of submarine cable landing licenses and ensure each licensee continues to serve the public interest in an evolving national security and law enforcement landscape.

A. Legal Authority under the Cable Landing License Act of 1921

1. Commission Jurisdiction

a. General License Requirement.

23. As an initial matter, we propose to codify in our rules when a submarine cable license is required under the Cable Landing License Act.⁹² The Cable Landing License Act states that “no person shall land or operate in the United States any submarine cable directly or indirectly connecting the United States”⁹³ with any foreign country, or connecting one portion of the United States with any other portion, without a written license issued by the President. The Cable Landing License Act further states that the “conditions of sections 34 to 39 of this title shall not apply to cables, all of which, including both terminals, lie wholly within the continental United States.”⁹⁴

24. Specifically, we propose to adopt a rule stating that a submarine cable landing license must be obtained prior to landing a submarine cable that connects:

- (1) the continental United States with any foreign country;
- (2) Alaska, Hawaii or the U.S. territories or possessions with a
 - (i) foreign country,
 - (ii) the continental United States, or
 - (iii) with each other; and
- (3) points within the continental United States, Alaska, Hawaii or a territory or possession in which the cable is laid in international waters.⁹⁵

⁹¹ The White House, National Security Memorandum on Critical Infrastructure Security and Resilience, National Security Memorandum/NSM-22 (Apr. 30, 2024) (NSM-22), <https://www.whitehouse.gov/briefing-room/presidential-actions/2024/04/30/national-security-memorandum-on-critical-infrastructure-security-and-resilience/>.

⁹² 47 U.S.C. §§ 34-39; Executive Order 10530.

⁹³ 47 U.S.C. § 34.

⁹⁴ 47 U.S.C. § 34. In 1921, the definition of “United States” included “the Canal Zone, the Philippine Islands, and all territory, continental or insular, subject to the jurisdiction of the United States of America.” 47 U.S.C. § 38 (1921). In 1946, following the proclamation of the independence of the Philippines by the President, the definition was amended to remove the Philippines. 47 U.S.C. § 38 (1946). In 1959, Hawaii and Alaska became part of the United States and were admitted as states. Proc. No. 2695, eff. July 4, 1946, 11 Fed. Reg. 7517, 60 Stat. 1352. The Cable Landing License Act definition, however, was not later amended to incorporate Hawaii and Alaska as part of the continental United States, or other territories or possessions.

⁹⁵ See 47 U.S.C. §§ 34-39; Executive Order 10530.

Although we believe that the scope of the Cable Landing License Act has been well-understood,⁹⁶ we also believe that codifying these requirements will bring additional clarity to the application process and provide regulatory certainty to submarine cable owners and operators.

b. Submarine Cable System Definition

25. For the same reasons we propose to codify in our rules when a submarine cable landing license must be obtained, we seek comment generally on whether to adopt a definition of a submarine cable system. Conceptually and in simple terms, a submarine cable system is comprised of a cable laid beneath the water that carries telecommunication transmission signals between two or more cable landing stations containing equipment that converts submarine cable signals to terrestrial signals.⁹⁷ The wet segment of the submarine cable system makes landfall at the beach manhole or beach joint that, in turn, connects to the dry segment and submarine cable landing stations. A submarine cable landing station is a dry land facility where submarine telecommunications cables terminate traffic, allowing data to be transmitted to terrestrial or local networks.⁹⁸ At the terminal, equipment such as Submarine Line Terminal Equipment (SLTE),⁹⁹ converts cable signals to terrestrial signals allowing the cable to interconnect to terrestrial facilities in the United States.

26. Based on the description above, we seek comment on whether it is necessary to adopt a definition of submarine cable for purposes of our licensing process. If so, should we define submarine cables as “cable(s) laid beneath the water¹⁰⁰ that transmit data between terminal cable landing stations

⁹⁶ See e.g., File No. SCL-LIC-20060413-00004, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00014, DA 06-1213 (IB 2006); File No. SCL-LIC-20100914-00021, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00111, DA 10-2090 (IB 2010); File No. SCL-LIC-20160325-00009, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00198, DA 17-312 (IB 2017).

⁹⁷ See Appx. B for a technical description of a submarine cable system.

⁹⁸ *Id.* Cable landing stations contain equipment that supplies power to optical submarine cables and equipment that receives signals from submarine cables and transmits signals to a carrier’s backhaul network that terminates at a carrier’s Point of Presence (POP). *Id.* A data center can serve as a cable landing station, and POPs can be located within a cable landing station or data center. *Id.* Appendix B provides a detailed explanation of a submarine cable system and its components. *Id.*

⁹⁹ The SLTE determines the cable’s data throughput or performance. *Id.*

¹⁰⁰ As explained above, the Cable Landing License Act does not apply to cables wholly within the continental United States, such as a cable traversing a river or a lake located wholly within the continental United States. See *supra* at n.93. A submarine cable license is required under the Cable Landing License Act, however, if that cable connects the United States to a foreign country, such as Canada or Mexico. 47 U.S.C. § 34. The Commission has granted licenses to land and operate a cable under the Rio Grande River connecting the United States and Mexico, a cable in a tunnel going under a river connecting the United States and Canada, and a cable laid in Lake Erie connecting Ontario and New York. File No. SCL-LIC-20210930-00042, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00376, 37 FCC Rcd 7380 (IB 2022) (granting Neural Networks USA LLC’s application for a submarine cable landing license connecting Laredo, Texas and Nuevo Laredo, Tamaulipas, Mexico); *GTE Sprint Communications Corp., Application for a license to land in the United States a submarine cable extending between the United States at Detroit, Michigan and Canada at Windsor, Ontario*, S-C-L-85-002, Cable Landing License, 1986 WL 292524 at *1, para. 3 (CCB rel. Jan. 10, 1986) (granting GTE Sprint Communications Corp. (GTE Sprint) a cable landing license for a cable that “will be located within the conduit space of the Detroit-Windsor tunnel which traverses the Detroit River between Detroit, Michigan and Windsor, Ontario”); File No. SCL-LIC-20180216-00002, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00226, DA 18-1026, 2018 WL 4851455 at *2 (IB 2018) (granting application for a license to land and operate in the United States a non-common carrier fiber-optic submarine cable system connecting Toronto, Ontario, with Cambria, New York).

that, among other functions, contain and protect SLTE located in the continental United States, Alaska, Hawaii, or the U.S. territories or possessions.” We believe that defining a submarine cable accordingly would account for a submarine cable system that may have more than one terminal landing point located on or near the coast. Moreover, we believe this definition is sufficiently flexible to also account for the various technical options available to cable owners and operators for routing traffic from a cable landing station located near the coast—which may have only certain equipment such as Power Feed Equipment (PFE)¹⁰¹—to another cable landing station, PoP, or similar facility.¹⁰² We seek comment on this definition and whether it would capture the current state of submarine cable systems and account for the evolution and upgrades of submarine cable technologies.

c. Public Interest Standard

27. We propose to codify in our rules the longstanding practice that applicants seeking a submarine cable landing license or modification, assignment, transfer of control, or renewal of their license must include in their applications information demonstrating how the grant of the application will serve the public interest, convenience, and necessity. The Commission has long found that national security, law enforcement, foreign policy, and trade policy concerns are important to its public interest analysis of submarine cable landing license applications, and these concerns warrant continued consideration in view of evolving and heightened threats to the nation’s communications infrastructure.¹⁰³ Our determination assesses whether the public interest, convenience, and necessity would be served by the grant of an application for a cable landing license and is based on the totality of the circumstances presented by each application, supplemented with additional information as necessary. We seek comment on this proposed codification.

d. Character Qualifications

28. We propose to codify in our rules regarding submarine cable applications the Commission’s longstanding practice regarding the character qualifications of applicants for Commission licenses and authorizations. Specifically, we propose that the Commission will consider whether an applicant seeking a cable landing license or modification, assignment, transfer of control, or renewal of a cable landing license has the requisite character qualifications, including whether the applicant has violated the Cable Landing License Act of 1921, the Communications Act of 1934, or Commission rules, including making false statements or misrepresentations to the Commission; whether the applicant has been convicted of a felony; and whether there is an adjudicated determination that the applicant has violated U.S. antitrust or other competition laws, has been found to have engaged in fraudulent conduct before another government agency, or has engaged in other non-FCC misconduct the Commission has

¹⁰¹ Power feed equipment (PFE), in general, provides the electrical current that powers submarine cable system repeaters and/or optical branching units, and are located in or close to terminal landing stations. We provide a more detailed explanation of this critical submarine cable component in Appendix B.

¹⁰² We provide a technical definition of a submarine cable system in Appendix B that defines the specific components of a submarine cable system.

¹⁰³ See *Executive Branch Review Report and Order*, 35 FCC Rcd at 10927 (setting rules and procedures for referring applications for Executive Branch review consistent with Executive Order No. 13913); *Foreign Participation Order*, 12 FCC Rcd at 23918-21, paras. 59-66 (in opening the U.S. telecommunications market to foreign entry in 1997, the Commission affirmed that it would consider national security, law enforcement, foreign policy, and trade policy concerns related to reportable foreign ownership as part of its overall public interest review of application for international section 214 authority, submarine cable landing licenses, and declaratory rulings to exceed the foreign ownership benchmarks of section 310(b) of the Act). See also *Applications of T-Mobile US, Inc. and Sprint Corporation for Consent to Transfer Control of Licenses and Authorizations, et al.*, WT Docket 18-197, Memorandum Opinion and Order, Declaratory Ruling, and Order of Proposed Modification, 34 FCC Rcd 10578, 10732-33, para. 349 (2019) (*T-Mobile/Sprint Order*) (same).

found to be relevant in assessing the character qualifications of a licensee or authorization holder.¹⁰⁴ The Commission has found in other contexts that such conduct demonstrates that an applicant may fail to comply with the Commission's rules and policies as well as any conditions on its authorization.¹⁰⁵ The public interest may therefore require, in a particular case, that the Commission deny an application for a cable landing license or modification, assignment, transfer of control, or renewal of a license that is submitted by an applicant that has violated Commission rules, the Act, or other laws that may be indicative of the applicant's truthfulness and reliability, or that the Commission revoke a cable landing license on such grounds. We believe consideration of a cable landing licensee's regulatory compliance and adherence to other relevant laws is also consistent with the Commission's review of applications in other contexts¹⁰⁶ and is important to the Commission's assessment as to whether the public interest, convenience, and necessity would be served by grant of the applications. We seek comment on this proposed codification.

e. Process to Withhold or Revoke a Cable Landing License

29. In this *Notice*, we propose and seek comment on adopting a procedural framework that the Commission may use to consider whether withholding a grant of a cable landing license or revocation of a cable landing license is warranted pursuant to the Cable Landing License Act and Executive Order 10530.¹⁰⁷ The Commission has specific statutory authority to withhold or revoke cable landing licenses under the Cable Landing License Act and Executive Order 10530.¹⁰⁸ Section 35 of the Cable Landing License Act states that the "President may withhold or revoke such license when he shall be satisfied after due notice and hearing that such action will assist in securing rights for the landing or operation of cables in foreign countries, or in maintaining the rights or interests of the United States or of its citizens in foreign countries, or will promote the security of the United States"¹⁰⁹ In addition, section 5 of Executive Order 10530 states that the Commission is "designated and empowered to . . . withhold [] or revoke licenses to land or operate submarine cables in the United States"¹¹⁰ The Commission has not prescribed specific procedures applicable to withholding or revocation of a cable landing license, yet in the *Executive Branch Review Report and Order*, it has stated that if it is considering revoking a license

¹⁰⁴ See generally *Policy Regarding Character Qualifications in Broadcast Licensing*, 102 FCC 2d 1179 (1986) (*Character Qualifications*), modified, 5 FCC Rcd 3252 (1990) (*Character Qualifications Modification*); see *infra* Section III.B.6. The term "non-FCC misconduct" refers to misconduct other than a violation of the Rules or the Act. *Character Qualifications*, 102 FCC 2d at 1183 n.11, para. 7. The Commission and the courts have recognized that "[t]he FCC relies heavily on the honesty and probity of its licensees in a regulatory system that is largely self-policing." See *Contemporary Media, Inc., v. FCC*, 214 F.3d 187, 193 (D.C. Cir. 2000). Reliability is a key, necessary element to operating a broadcast station in the public interest. See *Character Qualifications*, 102 F.C.C.2d at 1195, para. 35. An applicant or licensee's propensity to comply with the law generally is relevant because a willingness to be less than truthful with other government agencies, to violate other laws, and, in particular, to commit felonies, is potentially indicative of whether the applicant or licensee will in the future conform to the Commission's rules or policies. See *Character Qualifications Modification*, 5 FCC Rcd at 3252, para. 3.

¹⁰⁵ *Foreign Participation Order*, 12 FCC Rcd at 23915, para. 53 & n.90. See *Character Qualifications*, 102 FCC 2d at 1195-97, 1200-03, paras. 34-37, 42-44; see also *MCI Telecommunications Corp.; Petition for Revocation of Operating Authority*, 3 FCC Rcd 509, 512, n.14 (1988) (stating that character qualifications standards adopted in the broadcast context, while not applicable to common carriers, can provide guidance in the common carrier context).

¹⁰⁶ See, e.g., FCC Form 303-S (broadcast license renewal application), Instructions at 7-8, <https://www.fcc.gov/sites/default/files/form303s.pdf>.

¹⁰⁷ 47 U.S.C. § 35; Executive Order 10530, § 5(a).

¹⁰⁸ *Id.*

¹⁰⁹ 47 U.S.C. § 35.

¹¹⁰ Executive Order 10530, § 5(a).

that was granted following referral to the Committee or its predecessor pursuant to Executive Order 13913, it will provide “such notice and an opportunity to respond as is required by due process and applicable law, and appropriate in light of the facts and circumstances.”¹¹¹ Below, we seek to adopt a process applicable to withholding or revocation of cable landing licenses that will enable the Commission to fulfill its statutory responsibilities—including, among other things, promotion of the national and economic security of the United States and other public interest considerations, such as character issues—while ensuring procedural safeguards to protect licensees’ due process rights.

30. Specifically, we seek comment on integrating the approach utilized by the Commission in recent section 214 revocation proceedings—and which the Court of Appeals for the D.C. Circuit upheld¹¹²—where the Commission exercised its discretion to “resolve disputes of fact in an informal hearing proceeding on a written record,”¹¹³ and reasonably determined that the issues raised in those cases could be properly resolved through the presentation and exchange of full written submissions before the Commission itself.¹¹⁴ We tentatively find that the Commission may exercise similar procedural discretion in its evaluation of each case as to whether withholding or revocation of a cable landing license is warranted. We believe that the statutory language “withhold . . . such license”¹¹⁵ is identical to the concept of denying an application. For purposes of submarine cable licenses, withholding of an application would apply to the Commission’s consideration of a grant of an initial application, an application to renew or extend a cable landing license, or an application to assign or transfer control of a license.¹¹⁶ We seek comment on whether the Commission may use the same informal hearing process or an alternative process if it considers termination of a cable landing license due to a licensee’s failure to

¹¹¹ *Executive Branch Review Report and Order*, 35 FCC Rcd at 10964, para. 92. Section 6 of Executive Order 13913 provides that the Committee may at any time “review existing licenses to identify any additional or new risks to national security or law enforcement interests of the United States.” Executive Order 13913, § 6. Executive Order 13913 defines “license” as “any license, certificate of public interest, or other authorization issued or granted by the Federal Communications Commission (FCC) after referral of an application by the FCC to the Committee established by subsection 3(a) of this order or, if referred before the date of this order, to the group of executive departments and agencies involved in the review process that was previously in place.” *Id.* at § 2(a).

¹¹² *China Telecom. (Ams.) Corp. v. FCC*, 57 F.4th at 256, 269; *id.* at 262 (citing *Procedural Streamlining of Administrative Hearings*, Report and Order, 35 FCC Rcd 10729, 10732-33, para. 11 (2020) (*Administrative Hearings Order*) (“The Communications Act gives the Commission the power of ruling on facts and policies in the first instance. In exercising that power, the Commission may resolve disputes of fact in an informal hearing proceeding on a written record. And the Commission may reach any decision that is supported by substantial evidence in the record.”); *Pacific Networks Corp. v. FCC*, 77 F.4th 1160.

¹¹³ *Evolving Risks NPRM*, 38 FCC Rcd at 4382, para. 78 (citing *Administrative Hearings Order*, 35 FCC Rcd at 10732-33, para. 11).

¹¹⁴ *China Telecom (Ams.) Corp. v. FCC*, 57 F.4th at 256, 269 (“As explained above, the FCC has broad discretion to craft its own rules ‘of procedure and to pursue methods of inquiry capable of permitting them to discharge their multitudinous duties.’ *Schreiber*, 381 U.S. at 290, 85 S.Ct. 1459 (internal quotations omitted); see also *Vermont Yankee*, 435 U.S. at 543, 98 S.Ct. 1197). The Commission has exercised this discretion to ‘resolve disputes of fact in an informal hearing proceeding on a written record.’ *Streamlining Order*, 35 FCC Rcd. at 10732. Here, the Commission reasonably determined that the issues raised in this case could be properly resolved through the presentation and exchange of full written submissions before the Commission itself.”); *Pacific Networks Corp. v. FCC*, 77 F.4th 1160.

¹¹⁵ 47 U.S.C. § 35.

¹¹⁶ Section 1.767(g)(15) sets forth that “[t]he cable landing license shall expire twenty-five (25) years from the in-service date, unless renewed or extended upon proper application. Upon expiration, all rights granted under the license shall be terminated.” 47 CFR § 1.767(g)(15).

comply with any condition of the license.¹¹⁷

31. Further, we propose to delegate authority to the OIA to implement these procedures described above for denial, revocation, and/or termination, as required by due process and applicable law and in light of the relevant facts and circumstances, including providing the applicant or licensee with notice and opportunity to respond.¹¹⁸

(i) Due Process and Procedural Requirements

32. We tentatively find that the process we seek to apply in cases involving withholding or revocation of cable landing licenses—which, in effect, would constitute an informal hearing process through the presentation and exchange of full written submissions before the Commission—is consistent with due process and procedural requirements under relevant statutes including the Cable Landing License Act, the Communications Act, and the Administrative Procedure Act (APA). The Cable Landing License Act sets forth, among other things, that “[t]he President may withhold or revoke such license when he shall be satisfied after due notice and hearing that such action will assist in securing rights for the landing or operation of cables in foreign countries, or in maintaining the rights or interests of the United States or of its citizens in foreign countries, or will promote the security of the United States”¹¹⁹ The authority vested in the President, including the authority to withhold or revoke cable landing licenses, is delegated to the Commission pursuant to Executive Order 10530, on the condition that “[n]o such license shall be granted or revoked by the Commission except after obtaining approval of the Secretary of State and such advice from any executive department or establishment of the Government as the Commission may deem necessary.”¹²⁰ Currently, the Commission’s rules codify as a condition of such license that “[t]he cable landing license is revocable by the Commission after due notice and opportunity for hearing pursuant to section 2 of the Cable Landing License Act, 47 U.S.C. 35, or for failure to comply with the terms of the license or with the Commission’s rules.”¹²¹

33. The Cable Landing License Act, which is the source of authority from which authority to withhold or revoke a cable landing license emanates, states that the President may “withhold or revoke such [cable landing] license . . . after due notice and hearing,”¹²² but does not identify particular procedures that must be followed. As the Commission has stated, where an agency’s enabling statute does not expressly require an “on the record” hearing and instead calls simply for a “hearing,” a “full

¹¹⁷ See generally *China Telecom Americas Order on Revocation and Termination*.

¹¹⁸ See *Evolving Risks NPRM*, 38 FCC Rcd at 4382, para. 78; *Numbering Policies for Modern Communications et al.*, WC Docket No. 13-97 et al., Second Report and Order and Second Further Notice of Proposed Rulemaking, 38 FCC Rcd 8951, 8972, para. 64 (2023) (*2023 VoIP Direct Access to Numbers Report and Order*). OIA’s implementation could include, for example, establishing response and pleading cycle deadlines, addressing waiver requests, addressing requests for live hearing procedures, seeking additional information, and providing for additional pleading cycles.

¹¹⁹ 47 U.S.C. § 35.

¹²⁰ Executive Order 10530, § 5(a) (“The Federal Communications Commission is hereby designated and empowered to exercise, without the approval, ratification, or other action of the President, all authority vested in the President by the act of May 27, 1921, ch. 12, 42 Stat. 8 (47 U. S. C. 34 to 39, inclusive), including the authority to issue, withhold, or revoke licenses to land or operate submarine cables in the United States: Provided, That no such license shall be granted or revoked by the Commission except after obtaining approval of the Secretary of State and such advice from any executive department or establishment of the Government as the Commission may deem necessary.”).

¹²¹ 47 CFR § 1.767(g)(14). Except as otherwise ordered by the Commission, the rules in subpart (g) apply to each licensee of a cable landing license granted on or after March 15, 2002. 47 CFR § 1.767(g) (“Routine Conditions”).

¹²² 47 U.S.C. § 35.

hearing,” or uses similar terminology, the statute does not trigger the APA’s formal adjudication procedures absent clear evidence of congressional intent to do so.¹²³ Agencies must adhere to the formal hearing procedures in sections 554, 556, and 557 of the APA only in cases of “adjudication required by statute to be determined on the record after opportunity for an agency hearing.”¹²⁴ In addition to the Cable Landing License Act, neither the Communications Act, the Commission’s rules, nor the APA requires trial-type hearing procedures.¹²⁵ Congress has granted the Commission broad authority to “conduct its proceedings in such manner as will best conduce to the proper dispatch of business and to the ends of justice.”¹²⁶ The Commission has broad discretion to craft its own rules “of procedure and to pursue methods of inquiry capable of permitting them to discharge their multitudinous duties.”¹²⁷ Furthermore, the Communications Act gives the Commission the power of ruling on facts and policies in the first instance.¹²⁸ In exercising that power, the Commission may resolve disputes of fact in an informal hearing proceeding on a written record.¹²⁹ For instance, the Commission’s subpart B hearing rules provide procedures for hearings in appropriate circumstances,¹³⁰ including procedures for the revocation of station licenses and construction permits.¹³¹ In the *2023 VoIP Direct Access to Numbers Report and Order*, the Commission delegated authority to the Wireline Competition Bureau and the Enforcement Bureau to determine appropriate procedures and initiate revocation and/or termination proceedings and to revoke and/or terminate a direct access authorization, as required by due process and applicable law and in light of the relevant facts and circumstances, including providing the direct access authorization holder

¹³¹ Section 1.91 of the Commission’s rules applies subpart B hearing rules to revocations of “station license[s]” or “construction permit[s],” which refer to spectrum licenses issued under Title III of the Communications Act. See 47 CFR § 1.91.

with notice and opportunity to respond.¹³²

34. As discussed below, we propose an informal written process for Commission actions on denial of applications and revocation and termination of cable landing licenses.¹³³ We seek comment on the procedural measures necessary to ensure the development of an adequate administrative record, including procedures for participation by other interested parties, and on the appropriate procedural safeguards to ensure due process. To determine what process is due, we consider the factors set forth in the *Mathews v. Eldridge* three-part test: (1) “the private interest that will be affected by the official action;” (2) “the risk of an erroneous deprivation of such interest through the procedures used, and the probable value, if any, of additional or substitute procedural safeguards;” and (3) “the Government’s interest, including the function involved and the fiscal and administrative burdens that the additional or substitute procedural requirement would entail.”¹³⁴ With regard to the first *Mathews* factor (the nature of the private interest), while we recognize that denial of a cable landing license application or revocation of a cable landing license will have an impact on the applicant(s) or on the licensee(s) and any customers, we tentatively find that private companies have no unqualified right to land or operate a submarine cable in the United States. On the contrary, the Cable Landing License Act sets forth that a cable landing license may be withheld or revoked, stating that the President may “withhold or revoke such license when he shall be satisfied after due notice and hearing that such action will assist in securing rights for the landing or operation of cables in foreign countries, or in maintaining the rights or interests of the United States or of its citizens in foreign countries, or will promote the security of the United States.”¹³⁵ The Cable Landing License Act and Executive Order 10530, which delegates this denial and revocation authority to the Commission, thereby puts regulated parties on notice that any application for a cable landing license is subject to denial by the Commission and any grant of a cable landing license is contingent on the Commission’s authority to revoke such license. Further, whereas licensees facing revocation have a private interest in continuing to operate licensed facilities, applicants typically have no such interest.

35. With regard to the second *Mathews* factor (risk of erroneous deprivation without additional procedures and their probable value), we tentatively find that the process we seek to apply would provide cable landing licensees with sufficient due process—notice and the opportunity to be heard “at a meaningful time and in a meaningful manner.”¹³⁶ Neither the Cable Landing License Act, the APA, nor the Communications Act requires the conduct of evidentiary hearings for denial of cable landing license applications or revocation of cable landing licenses. We tentatively find it sufficient due process to provide cable landing licensees with timely and adequate notice of the reasons for any denial or revocation action, and opportunity to respond with their own evidence and to make any factual, legal, or policy arguments. Further, the process we propose would provide any other interested parties, including any joint applicants or licensees or other proposed or existing owners of a submarine cable, with notice and the opportunity to be heard. Finally, as noted above, the private interests in grant of an application typically are less than the private interests in continued use of licensed facilities, thus, we believe that the Commission may appropriately deny an application with fewer procedures than would be appropriate for revocation. We seek comment on this analysis. Would our proposed process for denying initial applications be appropriate for renewal applications or for assignment or transfer of control applications?

¹³² 2023 *VoIP Direct Access to Numbers Report and Order*, 38 FCC Rcd at 8972, para. 64.

¹³³ See *infra* section III.A.1.e.ii.

¹³⁴ *Mathews v. Eldridge*, 424 U.S. 319, 335 (1976).

¹³⁵ 47 U.S.C. § 35.

¹³⁶ See, e.g., *Mathews*, 424 U.S. at 333 (citing *Armstrong v. Manzo*, 380 U.S. 545, 552 (1965)); cf. 5 U.S.C. § 558(c)(1)-(2) (permitting “revocation . . . of a license” following “notice by the agency in writing” of any basis for revocation and an “opportunity to demonstrate compliance”).

If not, what is the due process rationale for using different procedures in these circumstances?

36. With regard to the third *Mathews* factor (the Government's interest), we tentatively find that "the fiscal and administrative burdens" on the Commission and the relevant Executive Branch agencies, including the Committee, weigh in favor of our proposal to base its procedures on those utilized by the Commission in the denial of an international section 214 application of China Mobile USA and in subsequent section 214 revocation proceedings involving Chinese state-owned entities.¹³⁷ As the Commission stated in the *China Telecom Americas Order on Revocation and Termination*, *China Unicom Americas Order on Revocation*, and *Pacific Networks and ComNet Order on Revocation and Termination*, courts have recognized that hearings before an administrative law judge, with live testimony and cross examination, impose significant temporal and cost burdens on agencies.¹³⁸ The Commission determined, among other things, that the fiscal and administrative burden on the government would be especially heavy in those cases, as a trial before an administrative law judge could require participation by officials from other agencies¹³⁹ and take time away from their essential duties to participate in additional administrative proceedings.¹⁴⁰ For these same reasons, we tentatively find that the administrative burden on the government would be heavy in cases involving denial of cable landing license applications or revocation of cable landing licenses. More importantly, given the national security issues that may be at stake, any resulting unwarranted delay could be harmful.¹⁴¹ We also believe that traditional live hearing procedures involving testimony and cross-examination could entail significant administrative burdens on the Commission even in cases involving other issues that do not involve the Executive Branch agencies, such as character concerns, or other Commission rule violations. We seek comment on this assessment.

37. We seek comment generally on our *Mathews* analysis and whether the process we propose herein would provide applicants and cable landing licensees with sufficient due process and notice and opportunity to respond. We note that the process that we propose to apply in cases involving denial of cable landing license applications or revocation of cable landing licenses is distinct from the Commission's subpart B hearing rules, including the written hearing rules codified in sections 1.371 through 1.377.¹⁴² The Commission has never applied its subpart B hearing rules to every adjudication,¹⁴³

FCC*; see, e.g., *California ex rel. Lockyer v. FERC*, 329 F.3d 700, 711, 713 (9th Cir. 2003) (agency has a strong interest in reaching a decision at the earliest practicable time when delay could endanger the agency's administrative mission by preventing it from acting to mitigate harm).

¹⁴² See CFR §§ 1.201-1.377 (rules governing hearing proceedings).

¹⁴³ *China Telecom Americas Order on Revocation and Termination*, 36 FCC Rcd at 15982, para. 22, *aff'd*, *China Telecom. (Ams.) Corp. v. FCC*. See *Administrative Hearings NPRM*, 34 FCC Rcd at 8343, para. 4 & n.16. In fact,

and has never had an established practice of requiring subpart B hearings for denial of cable landing license applications or revocation of cable landing licenses. Indeed, we do not believe it would be appropriate to require subpart B rules and procedures, including the written hearing rules providing for discovery and the ability to request an oral hearing before a presiding officer,¹⁴⁴ in all proceedings to deny cable landing license applications or to revoke cable landing licenses, particularly in cases involving national security issues, where the Commission has previously concluded that the burdens on the Government of implementing such procedures outweighed the private interest and the probable value of additional procedures.¹⁴⁵ Moreover, under the subpart B hearing rules, if the Commission were to delegate initial responsibility to an administrative law judge, the resulting decision could be appealed to the full Commission—which would be required to review the record independently and would not owe any deference to the administrative law judge’s determinations.¹⁴⁶ We tentatively conclude that the extra step of appointing an administrative law judge to preside prior to the Commission’s independent review, rather than simply proceeding directly before the Commission, will not be necessary for nor will enhance the ability of the Commission, which will be the ultimate arbiter, to decide matters that may arise in the Commission’s evaluation of applications for cable landing license or existing cable landing licenses. Further, courts have held that the question of whether to hold an evidentiary hearing is “within [the agency’s] discretion, and it may ‘properly deny an evidentiary hearing if the issues, even disputed issues, may be adequately resolved on the written record, at least where there is no issue of motive, intent or credibility.’”¹⁴⁷ Nevertheless, we seek comment on whether we should provide a process by which an applicant for a cable landing license or a cable landing licensee may request a live hearing in certain cases. We also seek comment on whether we should use different procedures for matters that do not involve Executive Branch expertise. If so, what due process or administrative considerations are relevant to this determination?

38. Furthermore, unlike revocations of Title III station licenses and construction permits, the Commission may not revoke a cable landing license “except after obtaining approval of the Secretary of State and such advice from any executive department or establishment of the Government as the Commission may deem necessary.”¹⁴⁸ Therefore, in contrast to subpart B hearings,¹⁴⁹ any revocation procedures for cable landing licenses must integrate approval or objection by the State Department before the Commission may issue a final decision. We note that the Commission and the Department of State have existing procedures by which the Department of State approves the Commission’s grant of a cable landing license applications or revocation of a cable landing license, as required by Executive Order

section 1.201 of those rules provides that subpart B applies only to cases that “have been designated for hearing.” 47 CFR § 1.201. An explanatory note makes clear that the new procedures for written hearings are a subset of such cases. *Id.* at 8341, n.1.

¹⁴⁴ 47 CFR §§ 1.372, 1.376.

¹⁴⁵ *See supra* n.143.

¹⁴⁶ *See Kay v. FCC*, 396 F.3d 1184, 1189 (D.C. Cir. 2005) (explaining how “an agency reviewing an ALJ decision is not in a position analogous to a court of appeals reviewing a case tried to a district court”); *China Telecom Americas Order on Revocation and Termination*, 36 FCC Rcd at 15986, para. 29.

¹⁴⁷ *China Telecom Americas Order on Revocation and Termination*, 36 FCC Rcd at 15984, para. 24, *aff’d*, *China Telecom (Ams.) Corp. v. FCC*.

¹⁴⁸ Executive Order 10530, § 5(a).

¹⁴⁹ *See, e.g.*, 47 CFR §§ 1.267, 1.276, 1.282.

10530,¹⁵⁰ and these procedures would continue to apply to any revocation of a cable landing license.¹⁵¹ Such procedures would not apply to the Commission’s denial of a cable landing license application, given Executive Order 10530 does not require the Department of State’s approval of a denial action and expressly states that “no such license shall be *granted or revoked* by the Commission except after obtaining approval of the Secretary of State”¹⁵² We note that the language in Executive Order 10530 appears inconsistent with 1.767(b) of the existing rules, which states that cable license applications are “acted upon by the Commission after obtaining the approval of the Secretary of State.”¹⁵³ The term “acted upon” would appear to include denial of an application. We propose to amend the rule so that it does not state that an application denial requires approval by the Secretary of State. We seek comment on the change. While the procedures under subpart B do not automatically apply to denial of cable landing license applications or revocation of cable landing licenses, we seek comment on whether the Commission should incorporate these or similar procedures, including hearings before the ALJ, should the Commission determine they are appropriate in a specific case, for example where a matter does not involve Executive Branch participation. Under what circumstances, if any, should any such procedures be incorporated in denial or revocation proceedings involving cable landing licenses? We further seek comment on whether our procedures for denial of an application might be more streamlined than our procedures for revocation of an existing license, consistent with the Cable Landing License Act, the APA, and due process.¹⁵⁴ Should our procedures for denial of an application for assignment or transfer of control or for renewal applications mirror our procedures or denial of an initial application? What considerations are relevant to this determination?

(ii) Denial and Revocation Proceedings

39. Under our existing rules, the filing of an initial application, an application to renew or extend a license, or an application to assign or transfer control of a license commences a proceeding in which the Commission may grant or deny an application. Commission staff may seek additional

¹⁵⁰ Executive Order 10530, § 5(a) (stating that the Commission may not revoke a cable landing license “except after obtaining approval of the Secretary of State and such advice from any executive department or establishment of the Government as the Commission may deem necessary”).

¹⁵¹ See *Commission Announces Department of State’s Revised Procedures For Its Consideration of Submarine Cable Landing License Applications*, IB Docket No. 16-155, Public Notice, 37 FCC Rcd 5183 (IB 2022) (2022 State Department Revised Procedures Public Notice); *id.*, Attach., Letter from Jose W. Fernandez, Under Secretary for Economic Growth, Energy, and the Environment, United States Department of State, to Jessica Rosenworcel, Chairwoman, Federal Communications Commission (Feb. 23, 2022) (2022 State Department Letter).

¹⁵² Executive Order 10530, § 5(a) (emphasis added).

¹⁵³ 47 CFR § 1.767(b).

¹⁵⁴ We note, for example, that the Commission denied China Mobile USA’s application for an international section 214 authorization after review of the Executive Branch recommendation, China Mobile USA’s opposition, and the Executive Branch reply. *China Mobile USA Order*, 34 FCC Rcd at 3365. In contrast, when the Commission subsequently revoked the international section 214 authorizations of CTA, the Commission provided notice and an opportunity to respond before it instituted a revocation proceeding. See, e.g., *China Telecom. (Ams.) Corp. v. FCC*, 57 F.4th 256, 263 (D.C. Cir. 2022). Similarly, under the APA, the procedure for denying an application need not mirror the procedure for revoking a license. Compare 5 U.S.C. § 558(c) (“When application is made for a license required by law, the agency, with due regard for the rights and privileges of all the interested parties or adversely affected persons and within a reasonable time, shall set and complete proceedings required . . . by law and shall make its decision”) with *id.* (“Except in cases of willfulness or those in which public health, interest, or safety requires otherwise, the withdrawal, suspension, revocation, or annulment of a license is lawful only if, before the institution of agency proceedings therefor, the licensee has been given--(1) notice by the agency in writing of the facts or conduct which may warrant the action; and (2) opportunity to demonstrate or achieve compliance with all lawful requirements.”).

information after an application is filed.¹⁵⁵ Any Executive Branch recommendation to deny or condition the grant of an application is included in the record of the proceeding, and the Commission provides the applicant a written opportunity to respond. The Commission considers the entire record in reaching its determination. The Commission or OIA, pursuant to its delegated authority, can deny applications for cable landing licenses.¹⁵⁶ Consistent with our rules, applicants may seek reconsideration of a denial of an application.¹⁵⁷ We seek comment on the extent to which existing procedures for denial of applications should be modified in any respect. We tentatively conclude that additional procedures are not warranted but that the OIA should have delegated authority to adopt additional procedures on a case by case basis as circumstances warrant, and consistent with due process. We propose that the Commission may commence a revocation proceeding either on its own initiative or upon the filing of a recommendation by the Executive Branch agencies, including the Committee, to revoke the license of a cable landing licensee. To the extent the Commission considers whether revocation of a cable landing license is warranted, we propose to implement the approach the Commission used in the most recent section 214 revocation proceedings.¹⁵⁸ Specifically, in those revocation proceedings, the Commission exercised its discretion to “resolve disputes of fact in an informal hearing proceeding on a written record,”¹⁵⁹ and reasonably determined that the issues raised in those cases could be properly resolved through the presentation and exchange of full written submissions before the Commission itself.¹⁶⁰ The Commission explained that although the Commission adopted regulations prescribing certain procedures for the revocation of station licenses and construction permits pursuant to part 1, subpart B of its rules, those regulations do not apply to the revocation of a section 214 authorization.¹⁶¹ To provide affected carriers with due process, the Commission allowed them to submit evidence and arguments in writing and determined the need for the revocation and/or termination of section 214 authorizations on the basis of a written record.¹⁶² The court of appeals affirmed the Commission’s use of these procedures.¹⁶³ We seek comment on whether the Commission should incorporate similar procedures to determine whether revocation of a cable landing license is warranted. We also seek comment on whether the Commission should retain authority to modify these procedures on a case by case basis as circumstances warrant, as

¹⁵⁵ See 47 CFR § 1.767(a)(10) (“Any other information that may be necessary to enable the Commission to act on the application.”).

¹⁵⁶ 47 CFR § 0.351(a)(9) (delegating authority to OIA “[t]o act upon applications for cable landing licenses pursuant to § 1.767 of this chapter”).

¹⁵⁷ 47 CFR § 1.106.

¹⁵⁸ See *China Telecom Americas Order on Revocation and Termination*, *aff’d*, *China Telecom. (Ams.) Corp. v. FCC*; *China Unicom Americas Order on Revocation*; *Pacific Networks and ComNet Order on Revocation and Termination*, *aff’d*, *Pacific Networks Corp. v. FCC*.

¹⁵⁹ *Evolving Risks NPRM*, 38 FCC Rcd at 4382, para. 78 (citing *Administrative Hearings Order*, 35 FCC Rcd at 10732-33, para. 11).

¹⁶⁰ *China Telecom. (Ams.) Corp. v. FCC*, 57 F.4th at 256, 269.

¹⁶¹ See 47 CFR §§ 1.201-1.377; 47 CFR § 1.91(a), (d).

¹⁶² See generally *China Telecom Americas Order on Revocation and Termination*, *aff’d*, *China Telecom. (Ams.) Corp. v. FCC*; *China Unicom Americas Order on Revocation*; *Pacific Networks and ComNet Order on Revocation and Termination*, *aff’d*, *Pacific Networks Corp. v. FCC*.

¹⁶³ *China Telecom (Americas) Corp.*, 57 F.4th at 262 (citing *Administrative Hearings Order*, 35 FCC Rcd at 10732-33, para. 11) (“The Communications Act gives the Commission the power of ruling on facts and policies in the first instance. In exercising that power, the Commission may resolve disputes of fact in an informal hearing proceeding on a written record. And the Commission may reach any decision that is supported by substantial evidence in the record.”); *id.* at 268-71 (holding that discovery and live hearing procedures, and an opportunity to achieve or demonstrate compliance were not required “by statute, regulation, FCC practice, or the Constitution”).

long as any alternative procedures provide adequate due process.

40. We seek comment on whether the Commission may use the same process or an alternative process if it considers termination of a cable landing license due to a licensee's failure to comply with any condition of the license. As discussed above, under section 5 of Executive Order 10530, the Commission is "designated and empowered to . . . withhold[] or revoke licenses to land or operate submarine cables in the United States . . ." ¹⁶⁴ Separate and apart from revocation, the Commission uses the term "termination" where a license or authorization is terminated based on the licensee's or authorization holder's failure to comply with a condition of the license or authorization, ¹⁶⁵ and has determined that the procedures applicable to termination need not mirror the procedures used for revocation of licenses or authorizations. ¹⁶⁶ We propose to delegate authority to OIA to determine appropriate procedures, within the framework authorized by the Commission and consistent with Commission precedent and guidance, and initiate revocation and/or termination proceedings and revoke and/or terminate a cable landing license, as required by due process and applicable law and in light of the relevant facts and circumstances, including providing a licensee with notice and opportunity to respond and, where appropriate, to achieve compliance with all lawful requirements. ¹⁶⁷

41. We seek comment on whether this procedural framework would provide cable landing licensees and any other affected parties with sufficient notice of the basis for any denial, revocation, or termination action, an opportunity to present evidence and arguments that support their respective positions, and an opportunity to respond to opposing evidence and arguments. We also seek comment on whether this process would ensure the development of an adequate administrative record, including procedures for participation by other affected individuals and entities, and appropriate procedural safeguards to ensure due process.

42. *Cable Landing Licenses/Licensees That are Insolvent or No Longer Exist.* Section 1.767(m)(2) of the rules requires that "[a]ny licensee that seeks to relinquish its interest in a cable landing license shall file an application to modify the license." ¹⁶⁸ The Commission's records in ICFS and other records, indicate that some submarine cables licensed by the Commission may not have commenced

¹⁶⁴ Executive Order 10530, § 5(a).

¹⁶⁵ Pursuant to the *Executive Branch Order*, applicants for cable landing licenses must certify in the application, among other things, "[t]hat the applicant understands that if the applicant or authorization holder fails to fulfill any of the conditions and obligations set forth in the certifications set out in paragraph (q) of [section 63.18] or in the grant of an application or authorization and/or that if the information provided to the United States Government is materially false, fictitious, or fraudulent, applicant and authorization holder may be subject to all remedies available to the United States Government, including but not limited to revocation and/or termination of the Commission's authorization or license." 47 CFR §§ 1.767(a)(8)(i), 63.18(q)(1)(v); *Executive Branch Order*, 35 FCC Rcd at 10954-55, paras. 73-74.

¹⁶⁶ *2023 VoIP Direct Access Report and Order*, 38 FCC Rcd at 8983, n.214; see *China Telecom Americas Order on Revocation and Termination*, 36 FCC Rcd at 15988, para. 35; see also *id.* at 15989, para. 36 ("[S]ection 558(c)(2) does not grant a substantive right to escape from a condition that terminates a license."); *Atlantic Richfield Co. v. United States*, 774 F.2d 1193, 1200-01 (D.C. Cir. 1985) (holding that the procedural requirements of section 558(c) apply only where "the licensee [may] be able to establish compliance with all legal requirements or . . . change its conduct in a manner that will put its house in lawful order") (internal quotation and citations omitted).

¹⁶⁷ See *China Telecom. (Ams.) Corp. v. FCC*, 57 F.4th 256, 270 (D.C. Cir. 2022) ("Given the futility of offering China Telecom even more of an opportunity to demonstrate or achieve compliance than they received, the Commission did not err in denying it."); *Pacific Networks Corp. v. FCC*, 77 F.4th 1160, 1166 (D.C. Cir. 2023) ("In short, the FCC reasonably explained why no realistic agreement could have worked given the carriers' proven lack of trustworthiness.").

¹⁶⁸ 47 CFR § 1.767(m)(2).

service and/or some cable landing licensees of record may be insolvent or no longer in operation.¹⁶⁹ Furthermore, some licensees that may be insolvent or no longer exist did not file a modification application to relinquish their interest in the cable landing license or otherwise notify the Commission.¹⁷⁰ We seek comment on what processes the Commission should adopt when submarine cables and/or licensees are insolvent or no longer exist generally. We seek comment on whether the same process proposed above are appropriate in all cases involving cable landing licenses, or whether the Commission should consider alternative processes. For example, should the Commission adopt a similar cancellation process as proposed in the *Evolving Risks NPRM* for international section 214 authorization holders that are no longer in business, where failure to timely respond to an information collection or other inquiry by the Commission may be deemed presumptive evidence that the cable landing licensee is no longer in operation?¹⁷¹ In these instances, the Commission or OIA may assess whether the cable landing licensee no longer complies with certain terms of the license or the Commission's rules,¹⁷² and thus revocation and/or termination of the license or the licensee's rights under the license and the Cable Landing License Act is warranted.¹⁷³

43. For consortium cables, if any of the cable landing licensees no longer exists and was unable to file an application to modify the license to relinquish its interest in the license, should we adopt rules requiring the remaining joint licensee(s) of the cable, if any, to collectively file a modification application to remove the licensee from the license by demonstrating and certifying that (1) the licensee no longer exists as a legal entity and that (2) the remaining licensee(s) will retain collectively *de jure* and

¹⁶⁹ See *supra* para. 11; see, e.g., Letter from Peter J. Schildkraut, Counsel for AT&T Mobility Puerto Rico Inc., to Marlene H. Dortch, Secretary, FCC at 2-3 (Feb. 5, 2020) (on file in File No. SCL-MOD-20191202-00038) (filing supplement to modification application and addressing, among other things, that the corporate status of certain licensees is void according to state records).

¹⁷⁰ See *id.*

¹⁷¹ See *Evolving Risks NPRM*, 38 FCC Rcd at 4363, paras. 25-26 (“If an international section 214 authorization holder fails to timely respond to the information collection required in the Order, we propose to cancel its authorization. We would deem the failure to respond to the Order as presumptive evidence that the authorization holder is no longer in operation. We propose to publish a list of non-responsive authorization holders in the Federal Register and provide an additional 30 days from that publication for those authorization holders to respond to the information collection requirement or surrender the authorization. If an authorization holder has not responded within 30 days of the publication of the notice in the Federal Register, we propose that those authorizations would be automatically cancelled); *id.* at 4377, para. 66 (“Through our assessment of the one-time information collection, we propose to delegate authority to the Office of International Affairs to (1) identify which authorization holders are existing and active and would undergo the renewal or other periodic review process; (2) identify which authorization holders fail to respond to the Order and thus presumptively are no longer in operation, and cancel their authorizations pursuant to the process proposed above”).

¹⁷² 47 CFR § 1.767(g)(14) (“The cable landing license is revocable by the Commission after due notice and opportunity for hearing pursuant to section 2 of the Cable Landing License Act, 47 U.S.C. 35 , or for failure to comply with the terms of the license or with the Commission's rules”).

¹⁷³ For instance, the Commission's rules require, as a condition of a cable landing license, that “[t]he licensee, or in the case of multiple licensees, the licensees collectively, shall maintain *de jure* and *de facto* control of the U.S. portion of the cable system, including the cable landing stations in the United States, sufficient to comply with the requirements of the Commission's rules and any specific conditions of the license.” 47 CFR § 1.767(g)(11); see also 47 CFR § 1.767(m)(2) (“Any licensee that seeks to relinquish its interest in a cable landing license shall file an application to modify the license. Such application must include a demonstration that the applicant is not required to be a licensee under paragraph (h) of this section and that the remaining licensee(s) will retain collectively *de jure* and *de facto* control of the U.S. portion of the cable system sufficient to comply with the requirements of the Commission's rules and any specific conditions of the license, and must be served on each other licensee of the cable system.”).

de facto control of the U.S. portion of the cable system sufficient to comply with the requirements of the Commission’s rules and any specific conditions of the license? Or, should we adopt rules requiring joint licensees of a submarine cable system to identify the lead licensee responsible for administrative matters concerning the cable system, including directing the lead licensee to submit a filing in the record demonstrating and certifying whether or not the identified licensee is insolvent or has ceased to exist and that the remaining licensee(s) will retain collectively *de jure* and *de facto* control of the U.S. portion of the cable system?

2. Three-Year Periodic Reporting

44. Currently, a cable landing license expires “twenty-five (25) years after the in-service date for the cable, unless renewed or extended upon proper application” pursuant to section 1.767(g)(15) of the Commission’s rules.¹⁷⁴ The Commission, however, does not routinely require a submarine cable landing licensee to provide updated ownership and related submarine cable system information during the 25-year term with the exception of annual circuit capacity data.¹⁷⁵ The annual circuit capacity data, however, lacks critical ownership and facilities information that would allow the Commission and other government agencies to assess for evolving national security and law enforcement concerns. To ensure that the Commission has the information it needs to timely monitor and continually assess national security or other risks that may arise over the course of a licensee’s 25-year license term, we propose to require licensees to provide certain information to the Commission every three years.

45. As a fundamental matter, it is critical that the Commission has a continuous and systematic understanding of who owns and controls submarine cables and how they are used because they are a significant component of the global communications ecosystem. Submarine cables serve as the foundation for the global Internet infrastructure¹⁷⁶ and carry over 99% of transoceanic digital communications.¹⁷⁷ Submarine cables are also critical infrastructure that historically have carried more than 95 percent of all U.S.-international voice, data, and Internet traffic, including civilian and military U.S. Government traffic.¹⁷⁸ And increasing demand for capacity¹⁷⁹ has spurred the deployment of more

¹⁷⁴ 47 CFR § 1.767(g)(15) (“The licensee must notify the Commission within thirty (30) days of the date the cable is placed into service. The cable landing license shall expire twenty-five (25) years from the in-service date, unless renewed or extended upon proper application. Upon expiration, all rights granted under the license shall be terminated.”). See *2001 Cable Report and Order*, 16 FCC Rcd 22167 (codifying the 25-year license term condition in 1.767(g)(14), and which is currently codified in 1.767(g)(15)). The 25-year license term is one of the routine conditions the Commission adopted in 2001 that applies to “each licensee of a cable landing licenses granted on or after March 15, 2002.”

¹⁷⁵ 47 CFR § 43.82.

¹⁷⁶ See Mary Jander, *Internet Growth Fuels Undersea Cable Race*, Futuriom (Feb. 23, 2021), <https://www.futuriom.com/articles/news/whats-happening-in-submarine-cable/2021/02>.

¹⁷⁷ Jill C. Gallagher, Cong. Research Serv., R47237, *Undersea Telecommunication Cables: Technology Overview and Issues for Congress* at 1 (Sept. 13, 2022), <https://crsreports.congress.gov/product/pdf/R/R47237>.

¹⁷⁸ *Section 43.62 Reporting Requirements*, Report and Order, 32 FCC Rcd 8115, 8129, para. 28 (2017); see *Communications, Security, Reliability, and Interoperability Council (CSRIC) IV, Final Report — Protection of Submarine Cables Through Spatial Separation*, at 1 (2014), http://transition.fcc.gov/pshs/advisory/csric4/CSRIC_IV_WG8_Report1_3Dec2014.pdf (CSRIC IV Report).

¹⁷⁹ Telegeography reports that, “[a]s recently as 2016, internet backbone providers accounted for the majority of demand.” At that time, Internet backbone providers or Internet Service Providers (ISPs) included businesses, such as AT&T, Verizon, Comcast, Tata Communications, CenturyLink, Cogent Communications, Deutsche Telekom, GTT, NTT Communications, and Sprint, among others. Alan Mauldin, *Used International Bandwidth Reaches New Heights*, Blog, TeleGeography (May 15, 2024), <https://blog.telegeography.com/used-international-bandwidth-reaches-new-heights> (*International Bandwidth*). Now, Internet backbone providers no longer dominate the demand

submarine cables.

46. Because the Commission does not ordinarily receive updated information about changes in the ownership of licensees or the submarine cable system over the course of the 25-year license term, the Commission likely has incomplete and outdated information regarding submarine cable landing licensees with foreign ownership and the submarine cable system itself. The Commission does receive such information when an applicant/licensee seeks Commission consent to the substantial transfer of control and/or assignment or modification of its existing cable landing license, or the licensee undergoes a *pro forma* transfer of control and/or assignment that require(s) notification to the Commission, but that information is limited to that particular licensee and does not provide updated information about the other licensees.¹⁸⁰ The Commission also has authority to conduct an *ad hoc* assessment of whether a licensee's cable landing license presents national security, law enforcement, foreign policy, and/or trade policy risks that warrant revocation.¹⁸¹ Reliance on sporadic submissions of applications and *ad hoc* assessments for important information regarding this critical infrastructure, however, creates an information gap that limits the Commission's knowledge of the licensees, updated information on the cable itself, and our ability to assess any national security, law enforcement, foreign policy, and/or trade policy concerns.

47. We tentatively conclude that the periodic reporting requirement would improve the Commission's oversight of submarine cable licenses and ensure the license continues to serve the public interest. In this regard, we tentatively find that the information we would obtain from our proposed three-year periodic reporting requirement provides crucial information about submarine cables that complements the capacity information we already receive from the annual section 43.82 circuit capacity and operator reports provided by filing entities.¹⁸² Among other things, we tentatively conclude information derived from the periodic review filings such as updated contact information for licensees and cable landing stations and geographic coordinates of the cable landing stations, coupled with information from our annual circuit capacity reports, would better enable the Commission to carry out its public interest responsibilities such as assessing capacity information and conducting time-sensitive outreach to licensees during a natural disaster or in a state of emergency. Importantly, we believe the updated information regarding this critical infrastructure would improve consistency in the Commission's consideration of evolving public interest risks (including national security risks), completeness of the Commission's information regarding submarine cable licensees, and timely Commission attention to issues that warrant heightened scrutiny.

48. Additionally, we tentatively conclude the periodic review requirement would ensure a more consistent and complete referral of relevant evolving issues to the Executive Branch agencies, including the Committee, for their review and ultimately, improved protection of U.S. telecommunications infrastructure. With updated information regarding this critical infrastructure, we tentatively conclude the Commission, in coordination with the relevant Executive Branch agencies, could assess national security and other public interest risks and, if necessary, pursue remedial action and/or initiate a revocation or termination proceeding. As noted above, the Executive Branch agencies recommended that the Commission revoke certain international section 214 authorizations that posed

for global submarine cable capacity. Hyperscalers or Internet Content Providers (ICPs) constitute two thirds of the traffic over submarine cables and "led the way in building mega Data Centers to meet th[e] growing demand [for data processing and storage capacity]." *Id.* (quoting David Coughland, Subcom Chief Executive Officer, "And the data demands of hyperscalers' subsea cable is surging 45% to 60% per year"). "As of 2023, content and cloud networks accounted for more than 70% of all bandwidth usage." See Mauldin, *International Bandwidth*.

¹⁸⁰ See, e.g., 47 CFR §§ 1.767(a)(11)(i)-(iii), (g)(7), 1.768, 63.24(f). We note that submarine cable landing licensees are required to submit annual circuit capacity data under section 43.82 of the Commission's rules. 47 CFR § 43.82.

¹⁸¹ 47 U.S.C. § 35; 47 CFR § 1.767(g)(14).

¹⁸² 47 CFR § 43.82. For a discussion of our circuit capacity rules, see *supra* para. 10; *infra* Section III.D.

unacceptable risks to national security or law enforcement interests of the United States.¹⁸³ Ultimately, we believe that our proposed periodic reporting requirement would meet our principal goal of providing the Commission with updated critical information regarding licensees and the cable systems and “promote the security of the United States . . .” in accordance with the Cable Landing License Act.¹⁸⁴

49. Accordingly, as discussed below, we propose to adopt and codify in the Commission’s rules a routine condition that would require all submarine cable landing licensees to jointly or separately submit to the Commission every three years updated information about, among other things, the licensee and its ownership, points of contact for the submarine cable system, use of foreign owned MNSPs, as well as cybersecurity and regulatory compliance certifications (hereinafter, “periodic reporting”).¹⁸⁵ We also propose that failure to timely submit a periodic report would constitute a breach of this condition that could warrant Commission enforcement action or revocation, the procedures of which are discussed above.¹⁸⁶ We tentatively conclude that the proposed reporting requirement would address the aforementioned information gap by providing the Commission with updated critical information necessary to fulfill its national security and other public interest responsibilities on a more regular and systematic basis.¹⁸⁷ We seek comment on this proposal and the impact on small entities as well any alternatives.

50. Under our proposed approach, the submarine cable landing license would continue in force throughout its term. To the extent circumstances in any particular situation raise national security, law enforcement, foreign and trade policy or other concerns (for example, due to incompleteness or new foreign ownership), the Commission could initiate a further inquiry to assess the risks and concerns raised and/or coordinate with the relevant Executive Branch agencies¹⁸⁸ that may, in turn, result in FCC enforcement action, Executive Branch mitigation efforts, and/or a revocation or termination proceeding. Our proposed periodic reporting would not supplant existing Commission authority to conduct an *ad hoc* assessment of whether a licensee’s cable landing license presents public interest concerns, including national security, law enforcement, foreign policy, and/or trade policy risks nor would this periodic reporting replace the 25-year license term.¹⁸⁹ We propose that each periodic report would be submitted through a filing in the Commission’s International Communications Filing System (ICFS), or any successor system, under each licensee’s license file number and would not require action from the Commission, i.e. a grant or confirmation. We propose that licensees with reportable foreign ownership as of thirty (30) days prior to the date of the submission or that have a mitigation agreement with the Committee or particular agencies must also file a copy of the report directly with the Committee.

51. We seek comment generally on this approach and whether a three-year period is the appropriate timeframe. We propose a three-year period because it strikes an appropriate balance between the Commission’s need for current ownership, location and facilities information and the reporting burden on our licensees. We can also stagger the reviews over three years, reducing the workload on the Commission and on the Committee. We seek comment on whether the Commission should adopt a time period that is longer or shorter for purposes of assessing national security and law enforcement risks. We

¹⁸³ See *supra* para. 17.

¹⁸⁴ 47 U.S.C. § 35.

¹⁸⁵ We discuss these requirements in greater detail below. See *infra* Section III.C.

¹⁸⁶ See *supra* paras. 29-42.

¹⁸⁷ We propose below rules for the periodic reporting requirement for submarine cable landing licenses. See *infra* Appx. A (Proposed Rules).

¹⁸⁸ See *supra* paras. 7-9.

¹⁸⁹ See 47 CFR § 1.767(g)(15).

note, however, that because the marketplace changes quickly, we believe requiring periodic information longer than three years might result in the Commission missing significant changes in ownership and changes in facilities, thus potentially endangering national security and other concerns.

52. We propose that any new report would reflect updated information since the report three-years prior or other substantive filing. If no changes have occurred since the licensee's last periodic report or other substantive filing—which may be the initial license application, a modification, a transfer of control, or an assignment—should the licensee have to provide only a periodic statement that its license remains in compliance with the Commission's rules and with its most recent periodic report, or other substantive filing? How should we account for a situation where the substantive filing does not require all of the same information that would be in a periodic report? Lastly, should the licensee re-certify, such as to the character qualification requirements, among other requirements?

53. We seek comment on how to properly account for numerous licensees on a submarine cable system. We propose to require joint licensees to submit one joint periodic reporting statement per submarine cable system, subject to the proposed filing contents requirements. In what we expect will be the unlikely event of potential issues that may prevent a joint filing,¹⁹⁰ we seek comment on whether to permit an individual licensee to file its own reporting statement. Should we adopt a rule that consortium members must identify a lead licensee that would be required to file the periodic reports on behalf of the consortium? How can consortium members provide the periodic information while remaining accountable for providing truthful, complete, and accurate information? Additionally, how can we minimize burdens on licensees while balancing our policy considerations with administrative efficiency for the Commission and the relevant Executive Branch agencies, including the Committee? What other options should we consider given evolving national security, law enforcement, foreign policy, and/or trade policy risks?

a. Prioritizing the Periodic Reporting and Other National Security and Law Enforcement Concerns

54. We propose to adopt a schedule that prioritizes the filing and review of reports based on whether the cable's licensee(s) currently have reportable foreign ownership and the length of the time since the Commission's most recent review of the authorization. The proposal structures the timing of the submission of periodic reports to minimize burdens on licensees, the Commission,¹⁹¹ and the Executive Branch staff, while ensuring that the Commission receives the information it needs to protect this critical infrastructure. We also propose to delegate authority to the OIA to establish and modify, as appropriate, the filing categories and associated deadlines, and if needed, to consult with the relevant Executive Branch agencies concerning prioritization of the periodic reports.

55. As set forth below, we propose to assign each of the existing licensed cable systems to one of four categories with a different deadline for each, and with the deadlines separated by six months. We propose to require that licensees of submarine cable systems in Category 1 shall submit their initial periodic report by six months following the effective date of new rules adopted in this proceeding, and existing licensees of submarine cable systems in Categories 2, 3, and 4, respectively, shall submit their initial periodic reports thereafter in fixed intervals separated by six months.

- **Category 1:** Submarine cable systems that: (1) have a licensee that is directly or indirectly

¹⁹⁰ See, e.g., *infra* paras. 188-90 (discussing joint and individual filings in the context of the cable operator reports).

¹⁹¹ See *Review of the Commission's Assessment and Collection of Regulatory Fees for Fiscal Year 2024 Assessment and Collection of Space and Earth Station Regulatory Fees for Fiscal Year 2024*, Second Report and Order, FCC-24-93, para. 45 (2024) (noting that “in the Office of International Affairs, there are eight Full-Time Equivalents (FTEs) within the Telecommunications and Analysis Division that work on international bearer circuit-related issues, including the services provided over submarine cables . . .”).

wholly or partially owned by a government of, or other entities with a place of organization in, a “foreign adversary” country, as defined in the Department of Commerce’s rule, 15 CFR § 791.4; (2) have a licensee with a place of organization in a “foreign adversary” country; or (3) land in a “foreign adversary” country.¹⁹²

- **Category 2:** Submarine cable systems where the Commission’s recent review of the license¹⁹³ occurred 4 or more years ago¹⁹⁴ and where a licensee has reportable foreign ownership.
- **Category 3:** Submarine cable systems where the Commission’s most recent review of the license occurred less than 4 years ago and where a licensee has reportable foreign ownership.
- **Category 4:** All other submarine cable systems, including those where no licensee has reportable foreign ownership.

56. *FCC’s Preliminary Review of Existing Licensed Submarine Cables.* Commission staff have conducted a preliminary review of its records, and based on this review, we assess that eight of the 84 licensed submarine cable systems would meet one or more of these criteria: (1) Americas-1 Cable System, (2) Asia-America Gateway (AAG), (3) FASTER Cable System, (4) Japan-U.S. Cable Network,¹⁹⁵ (5) Jupiter, (6) New Cross-Pacific (NCP), (7) PPC-1, and (8) Trans-Pacific Express (TPE) Cable Network. Based on our preliminary review of our 84 licensed cables to date,¹⁹⁶ Category 1 would

¹⁹² 15 CFR § 7.4 (stating “[t]he Secretary has determined that the following foreign governments or foreign non-government persons have engaged in a long-term pattern or serious instances of conduct significantly adverse to the national security of the United States or security and safety of United States persons and, therefore, constitute foreign adversaries solely for the purposes of the Executive Order, this rule, and any subsequent rule” promulgated pursuant to the Executive Order); *see* 15 CFR § 7.2 (“Foreign adversary means any foreign government or foreign non-government person determined by the Secretary to have engaged in a long-term pattern or serious instances of conduct significantly adverse to the national security of the United States or security and safety of United States persons.”); *see* Executive Order 13873 of May 15, 2019, Securing the Information and Communications Technology and Services Supply Chain, 84 Fed. Reg. 22689 (May 15, 2019).

¹⁹³ We refer to the Commission’s review of the license to include the grant of an initial application for a cable landing license or an application for modification, substantial assignment, substantial transfer of control, or renewal of a cable landing license.

¹⁹⁴ The last action would include grant of a new cable landing license or modification, assignment, transfer of control, or renewal of a license and ensure that the Committee also reviewed the cable system for any national security and/or law enforcement concerns.

¹⁹⁵ On June 18, 2024, the current licensees of the Japan-U.S. Cable Network filed an application to modify the license to remove all licensees except Verizon Business Global LLC (Verizon) from the license, and request a waiver of section 1.767(h)(1) to replace AT&T Enterprises, LLC with Verizon as the licensee that controls the cable landing facilities in Makaha, Hawaii. Verizon Business Global LLC et al., Application to Modify the Cable Landing License for the Japan-U.S. Cable Network and Request for Waiver of Section 1.767(h)(1), File No. SCL-MOD-20240618-00027 (filed June 18, 2024). On July 25 2024, Verizon and Hawaiian Telcom Services Company, Inc. filed an application for a license to land and operate the California-Hawaii S1, which will consist of Segment 1 of the Japan-U.S. Cable Network. Verizon Business Global LLC and Hawaiian Telcom Services Company, Inc., Application for a License to Land and Operate a Domestic, Private Fiber-Optic Submarine Cable System Connecting Makaha, Hawaii and Morro Bay, California, to be Known as the California-Hawaii S1 Cable System, File No. SCL-LIC-20240725-00034 (filed July 25, 2024). To the extent the Commission grants these applications prior to the adoption of any final Report and Order in this proceeding, we propose that the Commission would adjust the categorization of the Japan-U.S. Cable Network accordingly in such Report and Order.

¹⁹⁶ This number of 84 licensed cables does not include cables for which the license expired and has not been renewed or extended, including where an application is pending before the Commission to renew or extend the license. *See, e.g.*, File No. SCL-STA-20240626-00028, Actions Taken Under Cable Landing License Act, Report

include 8 submarine cable systems; Category 2 would include 21 submarine cable systems; Category 3 would include 36 submarine cable systems; and Category 4 would include 19 submarine cable systems.¹⁹⁷ The full set of categories and the licensed submarine cable systems associated with each category are set forth in Appendix D.¹⁹⁸ We seek comment on the results of our preliminary review.

57. *FCC's Review of Future Licensed Submarine Cables.* We propose to require that cable landing licensees of submarine cable systems that are licensed after the effective date of new rules shall submit their initial periodic report by a deadline of three years following the date of the grant of authority. We propose to require licensees of future licensed submarine cable systems to file the periodic reports every three years after the deadline of their initial periodic report. We seek comment on whether a cable landing licensee should file the required report every three years based on the date of such grant of authority, until and unless the Commission grants a subsequent application filed by the licensee, at which point the three-year reporting cycle would commence anew as of the date of the new grant.

58. We believe these approaches would simplify the reporting process and minimize administrative burdens while prioritizing the Commission's consideration of those licensees that most likely raise national security, law enforcement, foreign policy, and/or trade policy concerns. Prioritizing our review in the manner described above ensures the Commission focuses on those cables that potentially raise concerns and those that have not been reviewed by the Commission and the Committee. We believe this approach would accomplish our national security objectives and provide regulatory certainty to licensees. What are the benefits and potential drawbacks of this approach? Should we instead follow the *Evolving Risks* proposal and factor in mitigation agreements?¹⁹⁹ Why or why not? We seek comment generally on this and other approaches for periodic reporting of licensed submarine cables.

b. Shorten the 25 Year License Term

59. We seek comment on whether shortening the current 25-year submarine cable license term or adopting a shorter license term in combination with periodic reporting would similarly account for evolving national security, law enforcement, and other risks. Like our proposed periodic reporting requirement, we would codify either of these options as a routine condition in the Commission's rules. We note that by rule, a submarine cable landing licensee's failure to renew its license would cause the license to expire, and "[u]pon expiration, all rights granted under the license shall be terminated."²⁰⁰

60. Given changed circumstances since we codified the 25-year license term, we believe that a shortened the license term or a shortened term in combination with periodic reporting, would be consonant with the Commission's public interest responsibilities under the Cable Landing License Act

No. SCL-00484, DA 24-926 (OIA 2024) (granting the request for special temporary authority (STA) filed by GCI Communication Corp. to continue operation of the Alaska United East Cable System (AU-East) (SCL-LIC-19961205-00615, SCL-LIC-19980602-00008, SCL-MOD-20020409-00018, SCL-MOD-20020409-00019) while the Commission considers an application for a new cable landing license for the cable system (SCL-LIC-20240815-00036)). To the extent the Commission grants any application to renew or extend a cable landing license prior to the adoption of any final Report and Order in this proceeding, we propose that the Commission would include or adjust the categorization of the respective cable system accordingly in such Report and Order.

¹⁹⁷ See *infra* Appx. D.

¹⁹⁸ See *infra* Appx. D.

¹⁹⁹ *Evolving Risks NPRM*, 38 FCC Rcd at 4362, para. 63.

²⁰⁰ See 47 CFR § 1.767(a)(9) (requiring applicant to certify "that the applicant accepts and will abide by the routine conditions specified in paragraph (g) of this section"; 47 CFR § 1.767(g)(15) ("[T]he cable landing license shall expire twenty-five (25) years from the in-service date, unless renewed or extended upon proper application. Upon expiration, all rights granted under the license shall be terminated.").

regarding national security.²⁰¹ We note that the 25-year license term appears to relate to operational aspects of submarine cable systems and it is an extremely long time period within which not to review a license given the constantly changing national security environment.²⁰² Shortening the license term by itself or in combination with periodic reporting, could enable the Commission to assess—earlier than the end of a 25-year license term—whether a particular cable landing license complies with the relevant statutory and rule requirements, whether there are any rule-compliant but unreported changes in ownership or operations, or other factors that present national security, law enforcement, foreign policy and/or trade policy concerns, and whether the license continues to serve the public interest.²⁰³

61. We tentatively conclude that a shortened license term or a shortened term in combination with periodic reporting would provide the Commission and the relevant Executive Branch agencies the ability and opportunity to assess in a more timely and systematic manner, the evolving national security, law enforcement, foreign policy, and/or trade policy risks associated with cable landing licenses.²⁰⁴ We seek comment on an appropriate time frame to better account for evolving risks while minimizing burdens on licensees, recognizing the significant capital expenditures and long lead times in planning and constructing undersea cable systems. What is the current lifespan of a modern submarine cable system, and should that factor into the Commission’s analysis? We also seek comment on the economic impact of shortening the 25-year license term. Would a 5-year or 10-year license term alter investment incentives in new submarine cable infrastructure? Would shortened license terms impact the upgradation and maintenance of existing submarine cable systems? We note that the Commission has adopted various license terms for differing services. For example, wireless and broadcast licensees have renewal terms.²⁰⁵ For Miscellaneous Wireless Communications Services (WCS), the license term varies according to spectrum band, which results in different license periods such as 10, 12, or 15 years.²⁰⁶ License terms for satellites also vary. Space stations licensed under part 25 of the Commission’s rules have a 15-year license term, except that small satellites have a 6-year license term and certain SDARS and DBS space stations have an 8-year license term.²⁰⁷ In the context of broadcast licensing, each license granted for the

²⁰¹ 47 U.S.C. § 151.

²⁰² For example, according to a working group report of the Communications Security, Reliability and Interoperability (CSRIC) Council IV Advisory Committee, “[t]he planned commercial lifespan of the cables is 25 years, though they often get used for longer periods of time. Nevertheless, the commercial lifespan of submarine cable systems may extend well beyond 25 years, particular where the systems have been upgraded or redeployed. Consistent with these characteristics, the Federal Communications Commission (‘FCC’) grants cable landing licenses for a term of 25 years (subject to renewal) from commencement of commercial service.” The Communications Security, Reliability and Interoperability Council IV, Working Group 8 Submarine Cable Routing And Landing, Final Report – Protection of Submarine Cables Through Spatial Separation (Dec. 2014), https://transition.fcc.gov/pshs/advisory/csric4/CSRIC_IV_WG8_Report1_3Dec2014.pdf; *Submarine Cable Frequently Asked Questions* (“[c]ables are engineered with a minimum design life of 25 years. . .”).

²⁰³ See 47 U.S.C. §§ 34-39; Executive Order 10530; 47 CFR § 1.767.

²⁰⁴ See *Executive Branch Review Report and Order*, 35 FCC Rcd at 10934-35, para. 17 (discussing Executive Branch referral process for those applications for international section 214 authorizations and submarine cable licenses or to assign, transfer control or modify such authorizations and licenses where the applicant has reportable foreign ownership filed pursuant to sections 1.767, 63.18 and 63.24 of the rules, 47 CFR §§ 1.767, 63.18 and 63.24).

²⁰⁵ See 47 CFR § 27.13; 47 U.S.C. § 307(c).

²⁰⁶ See 47 CFR § 27.13.

²⁰⁷ 47 CFR § 25.121(a). For geostationary space stations issued an initial license term for a period of 15 years, licensees may apply for a modification to extend the license term in increments of five years or less. 47 CFR § 25.121(f)(1).

operation of a broadcasting station is limited to a term not to exceed eight years.²⁰⁸ In our *Evolving Risks NPRM*, we tentatively concluded that a 10-year timeframe is reasonable under the proposed renewal framework for structuring a formalized and systemic reassessment of carriers' international section 214 authority.²⁰⁹

62. Would a shortened license term similar to the terms for a broadcast or wireless license or the proposed 10-year timeframe proposed for international section 214 authorizations be appropriate, and if so, why? Or would adopting license terms similar to satellites be more appropriate given the large capital investment required to launch satellite systems? Would a 10- to 15-year renewal time frame, as opposed to a 25-year term, better ensure that the Commission and the relevant Executive Branch agencies can continually reassess and account for evolving national security and other concerns? We also seek comment on whether licensees should or could ask for different terms based on their particular circumstances. Some cable licensees have asked for a cable landing license renewal term of five or more years.²¹⁰ Should we adopt a rule reserving our discretion to impose a shorter license term on a case-by-case basis based on risk factors where the Commission deems it would be in the public interest?²¹¹ Should a license term reset if a submarine cable landing licensee undergoes a complete review, such as during the review of a substantial assignment or transfer of control application?²¹² What factors should we take into consideration in our analysis of whether to shorten the submarine cable landing license term and renewal process? We seek comment on whether to adopt a renewal expectancy standard for submarine cable licenses. Should such a standard apply only in the event we shorten the license term? Should a specific showing at renewal be required, such as certification that the licensee has been in

²⁰⁸ 47 U.S.C. § 307(c); see, e.g., 47 CFR §§ 73.733, 73.1020(a), 74.15(d), 74.15(e); see generally *Implementation of Section 203 of the Telecommunications Act of 1996 (Broadcast License Terms)*, Report and Order, 12 FCC Rcd 1720 (1997) (*1997 Broadcast License Terms Order*).

²⁰⁹ See *Evolving Risks NPRM*, 38 FCC Rcd 4346. In the *Evolving Risks NPRM*, we tentatively found that a renewal timeframe of 10 years—in conjunction with the proposal in that NPRM to require authorization holders to provide updated ownership information, cross border facilities information, and other information every three years—would ensure that the Commission and the relevant Executive Branch agencies can continually reassess and account for evolving national security, law enforcement, foreign policy, and/or trade policy concerns associated with international section 214 authorizations. Moreover, we noted that a 10-year timeframe would minimize burdens on authorization holders and balance our policy considerations with administrative efficiency for the Commission and the relevant Executive Branch agencies, including the Committee. *Id.*, 38 FCC Rcd at 4369-70, para. 45.

²¹⁰ File No. SCL-MOD-20190305-00007, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00238, DA 19-355 (IB 2019) (granting Hawaiian Telecom, Inc.'s application to modify the cable landing license for the Hawaiian Interisland Cable System, to extend the license term for an additional five-year period).

²¹¹ The Commission's rules expressly preserve the Commission's discretion to grant individual broadcast station licenses for less than the standard license term if the public interest, convenience, and necessity would be served by such action. See 47 CFR § 73.1020(a) ("Both radio and TV broadcasting stations will ordinarily be renewed for 8 years. However, if the FCC finds that the public interest, convenience and necessity will be served thereby, it may issue either an initial license or a renewal thereof for a lesser term."); *id.* § 74.15(d) ("Lower power TV and TV translator station and FM translator station licenses will ordinarily be renewed for 8 years. However, if the FCC finds that the public interest, convenience or necessity will be served, it may issue either an initial license or a renewal thereof for a lesser term. The FCC may also issue a license renewal for a shorter term if requested by the applicant."); *1997 Broadcast License Terms Order*, 12 FCC Rcd at 1729, 1739, n.24, Appx. A. See also 47 U.S.C. § 309(k)(2) (where applicant fails to meet the standards for renewal, the Commission may grant the application "on terms and conditions as are appropriate, including renewal for a term less than the maximum otherwise permitted.").

²¹² For example, assuming we were to adopt a 10-year license term, if an entity that is granted a license in 2025, so that its 10-year renewal period would be 2035, files a substantial transfer of control application which is granted in 2030, should the 10-year renewal period be reset to 2040?

operation consistent with their initial application for a license?²¹³ Commenters should address the burdens that will be placed on the licensees based on the length of the license term and identify the costs/benefits overall and impact, if any, on small businesses.

63. We tentatively affirm that, regardless of whether we separately adopt any new license term or in combination with periodic reporting, the Commission will continue to exercise its existing authority, as it deems necessary, to conduct *ad hoc* reviews of submarine cable landing licenses at any time during any license term. For instance, if the Commission were to adopt a license term of 10 years combined with periodic reporting, the Commission might still elect to exercise its existing authority to review and, if necessary, modify or revoke or terminate licenses at any time during the 10-year license term.²¹⁴ We seek comment on our proposed approach.

64. *Potential Rules Would Apply to All Licensees.* We generally seek comment on the application of any new license term we may adopt to all submarine cable landing licensees. In particular, we seek comment on whether all submarine cable landing licenses, regardless of issuance date, should be subject to any new license term, and whether the following is the appropriate framework for the new rules.

65. *Licensees Whose License is Granted After the Effective Date of New Rules.* With respect to licensees whose license is granted after the effective date of any new rules adopted in this proceeding, we tentatively conclude that we will apply the new license term (if any). If the Commission adopts a new license term, we propose to direct OIA to include a condition on submarine cable landing licenses granted after the effective date of any new rules requiring compliance with the new license term. We seek comment on this approach.

66. *Licensees Whose License Was or is Granted Prior to the Effective Date of New Rules.* With respect to licensees whose license was or is granted prior to the effective date of the new rules, we seek comment on whether their existing license term should remain the same, but that at the time of renewal, the Commission would apply any new license we adopt in this proceeding.²¹⁵ We also seek comment on whether any license granted after the issuance of this Notice and before the effective date of the new rules should be subject to any shortened term we may adopt in this proceeding.²¹⁶ If the Commission applies a shortened license term to existing licenses, how should it handle situations in which an existing license has been in effect for a period that exceeds the new license terms, how should it handle situations in which an existing license has been in effect for a period that exceeds the new license term?

67. *Other Matters.* We seek comment on whether to apply any shortened license term as a condition of granting an application for a substantial and/or *pro forma* assignment or transfer of control of an existing submarine cable landing license. We also seek comment on whether cable landing licensees that have a pending renewal application prior to the effective date of any shortened license term should be

²¹³ We note that broadcast licenses must be renewed unless the Commission makes one of the findings enumerated by statute. 47 U.S.C. § 309(k). See also *Amendment of Parts 1, 22, 24, 27, 74, 80, 90, 95, and 101 To Establish Uniform License Renewal, Discontinuance of Operation, and Geographic Partitioning and Spectrum Disaggregation Rules and Policies for Certain Wireless Radio Services*, WT Docket No. 10-112, Second Report and Order and Further Notice of Proposed Rulemaking, 32 FCC Rcd 8874 (adopting rules that, among other things, establish a consistent standard for renewing wireless licenses).

²¹⁴ 47 U.S.C. § 35.

²¹⁵ *Id.*

²¹⁶ We note that applicants seeking licenses after issuance of the *Notice* will be aware of the possibility that the Commission may adopt a shortened license term and that any new license term may be a condition of grant of their application.

subject to any new license term we might adopt.

68. *Due Process and Retroactivity.* We seek comment on due process and retroactivity concerns—including “primary” versus “secondary” retroactivity—that may arise from modifying existing licenses to conform the license term with any shorter term that may be adopted in final rules or from applying a new, shorter license term to applications for assignment or transfer of control or to applications to renew existing licenses.²¹⁷

69. The courts have established a distinction for rules between “primary” retroactivity and “secondary” retroactivity. A rule is primarily retroactive if it (1) “increase[s] a party’s liability for past conduct”; (2) “impair[s] rights a party possessed when he acted”; or (3) “impose[s] new duties with respect to transactions already completed.”²¹⁸ The standard for primary retroactivity assesses whether a rule has changed the past legal consequences of past actions.²¹⁹ In contrast, a rule would be “secondarily” retroactive if it “affects a regulated entity’s investment made in reliance on the regulatory status quo before the rule’s promulgation.”²²⁰ Secondary retroactivity will be upheld “if it is reasonable.”²²¹

70. We tentatively conclude that any shorter license term we ultimately adopt would not be “primarily” retroactive, as the mere adoption of such a requirement would not make past conduct unlawful, alter rights the carrier had at the time when it acted, or impose new duties with respect to completed transactions.

71. We recognize, however, that such a requirement could upset the expectations of existing submarine cable landing licensees. To the extent that applying any new license term may constitute “secondary” retroactivity, we seek comment on any impact of applying a new license term to existing licensees. How would such an impact compare to the benefits of applying a shortened license term to existing submarine cable landing licenses, include those granted before the issuance of this *Notice*, such as providing for a more timely, systematic, and uniform review process that will enable the Commission to consider pertinent issues, including national security, law enforcement, foreign policy, and/or trade policy concerns, in the context of a renewal application without waiting for current licenses to expire, potentially decades from now? We also seek comment on whether and under what circumstances denial of a submarine cable landing license renewal application or an application for assignment/transfer of control would trigger primary or secondary retroactivity concerns. For example, if we adopt a shorter license term and apply it to existing licensees, would non-renewal of a submarine cable landing license based on evolving national security, law enforcement, foreign policy, and/or trade policy risks, regardless of that submarine cable landing licensee’s ongoing compliance with the Commission’s rules, have primary or secondary retroactive effect? Additionally, would the application of a new license term to existing authorization holders require different standards or procedures based on retroactivity, reliance interests, or fair notice concerns? How would application of a new license term to existing licensees affect those licensees’ operations, financial position, or investment incentives?

B. Updated Application Requirements for National Security and Other Purposes

72. In this section, we propose and seek comment on appropriate applicant and application requirements to account for the evolution of technologies and facilities and changes in the national security landscape over the last two decades. Our goal is to update and improve our rules to ensure the

²¹⁷ See, e.g., *Mobile Relay Assocs. v. FCC*, 457 F.3d 1, 11 (D.C. Cir. 2006) (non-renewal resulting from a new regulatory framework may “upset[] expectations based on prior law,” but that is not primarily retroactive).

²¹⁸ *Landgraf v. USI Film Prods.*, 511 U.S. 244, 280 (1994).

²¹⁹ *Bowen v. Georgetown Univ. Hosp.*, 488 U.S. 204, 217-20 (1988).

²²⁰ *Mobile Relay Assoc.*, 457 F.3d at 11.

²²¹ *Id.*

Commission has targeted and granular information regarding the ownership, control, use of a submarine cable system, and other things, which are critical to the Commission's review to assess potential national security risks and other important public interest factors.

1. Requirements to be an Applicant/Licensee

73. We seek comment on modernizing our existing rules setting forth minimum applicant/licensee eligibility for initial cable landing licenses and modifications of such licenses to ensure that the Commission identifies and captures information on those entities that own and control the submarine cable system and connect with terrestrial networks in the United States.²²² Currently, section 1.767(h) of the Commission's rules identifies the following as those entities that, at a minimum, shall be applicants for and licensees on a cable landing license: (1) "[a]ny entity that owns or controls a cable landing station in the United States[,]"²²³ and (2) "[a]ll other entities owning or controlling a five percent (5%) or greater interest in the cable system and using the U.S. points of the cable system."²²⁴ We seek comment generally on an appropriate rule that would capture who should be an applicant/licensee under the Cable Landing License Act today and in the future to ensure the Commission meets its public interest responsibilities.

74. *Entities that Own or Control a U.S. Landing Station or Submarine Line Terminal Equipment (SLTE)*. We seek comment on whether to require entities that own or control not only the cable landing station, as currently required by our rules, but also require those entities that own or control the SLTE or equivalent equipment to be applicants and licensees. The SLTE is among the most important equipment associated with the submarine cable system and this modification to our definition would enable the Commission to know and assess any national security and law enforcement concerns related to the entities that will deploy SLTE and thus who can significantly affect the cable system's operations. Specifically, we seek comment on whether to expand the applicant/licensee requirement to include any entity that owns or controls or operates a cable landing station(s) or the submarine line terminal equipment or equivalent that converts submarine signals into terrestrial signals located in the U.S. portion of a cable system. We believe that including the term "submarine line terminal equipment" and a general description of the functionality of the equipment would better reflect technological advances in submarine cable systems. Would this be consistent with the statutory requirement that no person shall "land or operate . . . any submarine cable" without a license as specified in the Cable Landing License Act?²²⁵ Moreover, we believe that including such language would capture the potential of a submarine cable system having more than one cable landing station or a cable landing station that includes multiple SLTEs that could be located farther inland such as in another facility (e.g., a data center). A proposed cable system could also have multiple locations where SLTE is deployed. We seek comment on whether and if so, how, to incorporate entities with ownership and control of SLTEs into our regulatory framework. Lastly, we seek comment on how this potential change could impact existing entities, including small business entities, that were not previously required to obtain a cable landing license but now would be required to do so because they own or control SLTE. Should we apply any new requirement to such

²²² The Commission has reserved the ability to expand the minimum requirements for applicants and licensees who must apply for a cable landing license. 47 CFR § 1.767(h) ("Except as otherwise required by the Commission . . ."). Although the Commission prescribes the minimum requirements for who must be an applicant and licensee on a cable landing license, this does not foreclose entities that do not meet the minimum requirements from applying to be joint applicants and licensees.

²²³ 47 CFR § 1.767(h)(1).

²²⁴ 47 CFR § 1.767(h)(2). The Commission has reserved the ability to expand the types of entities who must be applicants and licensees on a cable landing license. 47 CFR § 1.767(h) (stating that "Except as otherwise required by the Commission . . ."). Thus, other entities are not foreclosed from applying to be a joint applicant and licensee.

²²⁵ 47 U.S.C. § 34.

existing entities and if so, when should we require such existing entities to submit applications? We seek comment on the burdens this potential change could have on such existing entities, as well as existing licensees, which may include small entities, including how long it would take them to comply with this potential requirement.

75. This option would require any entity with ownership or control of a cable landing station or SLTE or equivalent equipment to be applicants/licensees for a submarine cable landing license. With this option, Indefeasible Right of Use (IRU)²²⁶ holders or grantees likely meet these requirements. As background, companies that own and operate submarine cable systems may choose to use the capacity on their submarine cables systems themselves or seek to lease, sell, or swap unused or unowned capacity to recoup their investment in the submarine cable project. Internet Content Providers (ICPs) that are licensees may use the capacity themselves to connect to their data centers abroad to serve customers globally. Instead or as well, they may choose to sell, lease, or swap capacity of the submarine cable fiber to telecommunications companies or other entities in need of capacity along a certain route, such as research institutions, education institutions, governments, banks, and enterprises, among others.²²⁷

76. Although IRUs can be short-term, they more typically constitute long-term contracts of 20 years or longer and provide a holder or grantee with a certain amount of bandwidth of capacity or fiber on a submarine cable system.²²⁸ These contracts provide holders or grantees with the rights to use the capacity, which includes equipment, fibers, or capacity, and may constitute assets as well, even though legal title is held by the grantor.²²⁹ Holders or grantees of these rights may further lease out capacity to other companies that need only a portion of the holder's capacity. The contracts to lease unused or unowned capacity typically constitute short-term contracts of five years or may be shorter or longer and, unlike IRUs, generally do not require an upfront payment. However, these lease contracts do typically require monthly payments during the course of the lease term and provide a grantee with a certain amount of bandwidth of capacity or spectrum of a fiber on a submarine cable system. Importantly, as noted above, some IRU holders or grantees, such as dark fiber IRU holders, may own, control, and use specific SLTE at the ends of the cable system to interconnect with their terrestrial networks,²³⁰ and such SLTE

²²⁶ See also Katie Terrell Hanna, *Indefeasible Right of Use (IRU)*, Definition, TechTarget (“In telecommunications, the Indefeasible Right of Use (IRU) is a contractual agreement (temporary ownership) of a portion of the capacity of an international cable. As the name suggests, the contract provides an indefeasible right to use a cable and cannot be annulled or voided. IRU contracts are specified in terms of a certain number of channels of a given bandwidth.”) (*IRU Definition*). “Large-scale internet service providers (ISPs) are typical IRU owners. This gives ISPs the ability to assure their own customers of international telecom service on a long-term basis. IRU fibers are also referred to as dark fibers. Here, dark fiber means fiber between two locations that has no electronics attached to it. This needs to be lit by the IRU grantee rather than the cable provider.” *Id.*

²²⁷ Grace Hopper Cable System, Submarine Cable Map, TeleGeography <https://www.submarinecablemap.com/submarine-cable/grace-hopper> (last visited Aug. 9, 2024); see also Mauldin, *International Bandwidth*, supra n.179.

²²⁸ *Understanding IRU Fiber: A Comprehensive Guide*, 123NET (Mar. 15, 2024), <https://www.123.net/blog/understanding-iru-fiber-a-comprehensive-guide/> (“An Indefeasible Right of Use (IRU) agreement is a legal contract that grants the buyer a permanent right to use a portion of a fiber-optic cable’s capacity for a set period.”).

²²⁹ Fernando Margarit et al., *IRUS AND FIBER OPTIC CABLES: An Overview and Examination of Associated Risks*, Submarine Telecoms Forum, <https://subtelforum.com/telecom-indefeasible-rights-of-use/> (last visited Aug. 11, 2024) (“These critical instruments grant exclusive, long-term rights to use specific assets, such as fiber cables, closely mirroring actual ownership without the transfer of legal title.”).

²³⁰ *Open Submarine Cables Handbook*, at 4 (“Apart from increased competition for the SLTE supply and deployment of the latest SLTE technology, the open cable model is also more adapted to new business models by providing multiple system owners more independence. Many recent new cables have been built with a per-fiber pair

could be physically or logically accessed by IRU holders or grantees, thus potentially raising national security and law enforcement concerns arising from our lack of information about and regulatory oversight of these relationships and the ownership of the IRU holder or grantee.

77. Would requiring entities with ownership or control of a cable landing station or SLTE to be applicants/licensees for a submarine cable landing license appropriately address national security and law enforcement concerns regarding physical and/or logical access? Would this be consistent with the statutory requirement that no person shall “land or operate . . . any a submarine cable” without a license as specified in the Cable Landing License Act?²³¹ Does the Commission’s legal authority to withhold or grant a cable landing license extend to authorizing such purchases or sales? Would this be consistent with the statutory requirement to obtain a license to “land or operate . . . any submarine cable”?²³² If the Commission requires such entities that meet the requirement to be applicants/licensees of a submarine cable, how should this requirement be implemented as to such existing entities as well as existing licensees? We seek comment on the burdens this potential change could have on affected entities, including small entities and to identify how long it would take them to comply with this potential requirement.

78. We note that with respect to the entities that own or control the cable landing stations, the Commission frequently receives waiver requests from entities, such as data center owners that do not seek to become an applicant or licensee. These entities state that they own the real property/facility in which the cable landing station is located but do not have any ability to significantly affect the cable system’s operation.²³³ We have granted such waiver requests, based on our review of the particular circumstances raised in each waiver request and done so in coordination with the Committee, as necessary.²³⁴ We seek comment generally on the applicability of our rules to data centers owners, including the access they have over submarine cables and the site operations, such as physical security, power, backup power, HVAC, and other environmental support essential to proper operations of cable landing systems housed in their facilities.

79. *Own or Control a 5% or Greater Interest in the Cable System and Using the U.S. Points of the Cable System.* We seek comment on whether we should retain the requirement that an entity that owns or controls a 5% or greater interest in the cable and uses the U.S. points of the cable system shall continue to be an applicant and licensee. Prior to the rules adopted in 2001, there was no exception for those entities that owned less than a 5% interest in the cable. In the *2001 Cable Report and Order*, the Commission recognized that “the greater a firm’s investment in a cable system, the greater ability the firm has to influence the way in which a cable is operated . . . [and] observed that entities with minimal investment in a cable system, on the other hand, do not have the same ability to affect the operation of the

ownership model allowing multiple cable systems owners to use different SLTE (including management systems) on their own fiber pairs. Spectrum sharing within a fiber pair can also be supported. Lastly, when the different owners want to upgrade, they can do so independently from the other owners.

²³¹ 47 U.S.C. § 34.

²³² 47 U.S.C. § 34.

²³³ We have seen instances where a submarine cable system will land in an Internet exchange, PoP, data center, or a like facility that is owned by a company that leases colocation space and services to submarine cable owners and operators but does not have any ability to significantly affect the cable system’s operation.

²³⁴ See e.g., File No. SCL-LIC-20210329-00020, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00353, DA 22064 (IB 2022) (granting the applicants’ request for a waiver of 47 CFR § 1.767(h)(1)).

cable system[.]”²³⁵ The Commission concluded that “there is not the same need, therefore, to subject these entities to the conditions and responsibilities that come with a cable landing license”²³⁶ unless such entities had at least a 5% or greater ownership interest in the cable system and used the U.S. points of the cable system. At the time of that proceeding, it was commonplace for consortia of many telecommunications companies to join to co-fund and own and operate a submarine cable system. Now, it is less common for consortia of more than a few entities to jointly pursue a submarine cable project. Moreover, the 5% ownership threshold was created in part to not unduly burden small carriers or investors that lacked the ability to significantly affect the operation of a cable system, such as those consortia members that entered the consortia to obtain capacity on the cable system, but held minimal investments in the cable system and did not have any ability to control the submarine cable system.²³⁷

80. Should we retain the 5% or greater interest threshold requirement for the same reasons noted above? Is the same rationale to retain the 5% threshold reasonable in today’s national security environment? Do commenters believe we can accomplish our goals in this proceeding by retaining the 5% threshold? At this level of ownership, can we continue to properly assess whether certain applicants present any national security and law enforcement risks? If we retain the 5% threshold, will we be able to assess whether entities should not obtain a submarine cable license based on public interest assessments? Or, should we instead adopt a lower or higher threshold and if so, why? If we retain a threshold for when an owner of the cable must be an applicant/licensee, we seek comment on whether we should require the applicant(s) must identify all of the owners of the cable, and for those owners that are not applicants, provide an explanation for each one as to why it is not required to be an applicant/licensee.

81. We also seek comment on how entities are currently calculating ownership interest to determine if they hold a 5% or greater interest.²³⁸ Should the Commission specify a method for making this calculation? If so, what is an appropriate basis for the calculation given all of the varying pieces of infrastructure in a cable system—the U.S. cable landing station(s) that has the terminal equipment, including the SLTE and the dry segment, the wet segment (including the U.S. beach manhole and every segment and branching unit of the cable system to the foreign beach manhole(s)), and ultimately the foreign dry plant(s) terminating with the SLTE in the cable landing station(s)? Should the calculation be based on the number of fiber pairs owned by each entity? The percentage of capacity held by each entity? The percent of the total cost of the cable system that each applicant is contributing? Or the percentage of the total distance of the cable system SLTE to SLTE or from beach manhole to beach manhole?²³⁹ We seek comment on these and other bases for making this calculation.

²³⁵ *2001 Cable Report and Order*, 16 FCC Rcd at 22167, n.131 (citing *2000 Cable NPRM*, 15 FCC Rcd at 20824, para. 82); see *2001 Cable Report and Order*, 16 FCC Rcd at 22194-95, paras. 53-54 (modifying the rules to require any entity that could exert influence or control over the cable system or who owned or controlled the cable landing station(s), or the facilities that would permit the cable to interconnect to a terrestrial network in the United States, to be an applicant and licensee on a cable landing license).

²³⁶ *2001 Cable Report and Order*, 16 FCC Rcd at 22196, n.131 (citing *2000 Cable NPRM*, 15 FCC Rcd at 20824, para. 82).

²³⁷ *2001 Cable Report and Order*, 16 FCC Rcd at 22178-80.

²³⁸ 47 CFR § 1.767(h)(2) (“All other entities owning or controlling a five percent (5%) or greater interest in the cable system and using the U.S. points of the cable system” shall be applicants for, and licensees on, a cable system). The Commission has reserved the ability to expand the types of entities who must be applicants and licensees on a cable landing license. 47 CFR § 1.767(h) (stating that “Except as otherwise required by the Commission . . .”). Thus, other entities are not foreclosed from applying to be a joint applicant and licensee.

²³⁹ For example, assuming that the total cable system distance was 20,000 km, and Company A owns a segment of a cable system that is 1,000 km in length and will use the U.S. points of the cable system, should Company A be attributed with a 5% ownership ($1,000 \text{ km} / 20,000 \text{ km} = 0.05$) and required to be an applicant/licensee?

82. In discussing the basis for adopting the 5% requirement in the *2000 Cable NPRM*, the Commission stated that it intended for an entity that has a “five percent or greater ownership interest in the proposed cable . . . and . . . will use the U.S. points of the cable system in *any capacity*, unless that use was simply to hard patch through the United States and would not drop traffic in the United States or would use the U.S. points to re-originate traffic,” to be included as an applicant.²⁴⁰ The Commission, however, did not further define the phrase “use of the U.S. points of the cable system” in the *2001 Cable Report and Order*. Since the Commission adopted this rule two decades ago, are there new developments in the landing and operation of submarine cable systems that we should take into account when providing guidance on what it means to use the U.S. points of the cable system? In addition, how should we consider use of the U.S. points of the cable system when the traffic’s destination is not the United States? We seek comment on whether and how the Commission should consider “use of the U.S. point” today and for the benefit of any public interest concerns.

83. *Any Entity that Owns the Submarine Cable System*. We seek comment on whether we should instead require any entity that owns the submarine cable system to be an applicant/licensee, even if the entity does not use the system. Should we require that any entity that owns any interest in the cable to become a licensee similar to the Commission’s rules prior to 2001? Prior to the rules adopted in 2001, there was no exception for those entities that owned less than a 5% interest in the cable. Would this be consistent with the statutory requirement that no person shall “land or operate . . . any submarine cable” without a license as specified in the Cable Landing License Act?²⁴¹ Given the importance of this critical infrastructure and to protect against national security and law enforcement threats, would a rule requiring applicants/licensees that have any ownership in the cable system be more appropriate today and into the future? Could we better accomplish our goals by adopting this requirement? What are the benefits and concerns with adopting this rule and how would this increase the number of applicants/licensees? What burdens would be imposed on existing and future applicants/licensees, including any implementation concerns? How would this option affect investment incentives and what would be the implementation of this option on existing licenses? How long would it take for entities to come into compliance? How would this change affect small entities? If we were to adopt this rule, would the Commission be able to better assess applicants/licensees for any public interest concerns, including national security or law enforcement risks?

84. *Any Entity that Has Capacity on the Submarine Cable System*. We seek comment generally on whether to include any entity that has capacity on the submarine cable to be an applicant/licensee. Would this be consistent with the statutory requirement that no person shall “land or operate . . . any submarine cable” without a license as specified in the Cable Landing License Act?²⁴² Any entity that has capacity on the submarine cable system, such as an entity that leases capacity and may not own the terminal equipment or SLTE may still have an ability to operate a portion of the cable system. Would this broader requirement better facilitate the Commission’s public interest assessment? Would small entities be affected by this rule change? For example, we seek comment on whether having capacity on the cable system should be defined to include the leasing, purchasing, selling, buying, or swapping of a fiber (spectrum, capacity, partial fiber pair, or a full fiber pair, among others) for transmission of data, voice, video, Internet, and cloud communications over the cable system to interconnect with a U.S. terrestrial network. We seek comment on whether the rule should limit entities that have capacity and are selling, leasing, and/or swapping spectrum or capacity or extend to those entities that enter into contracts or arrangements to receive spectrum or capacity or a fiber pair? We seek the same implementation questions as above. For example, what burdens would be imposed on existing

²⁴⁰ *2000 Cable NPRM* at 20823-24, para. 81 (emphasis added).

²⁴¹ 47 U.S.C. § 34.

²⁴² 47 U.S.C. § 34.

and future applicants/licensees? How would this option affect investment incentives and what would be the implementation of this option on existing licenses? How long would it take for entities to come into compliance? How would this change affect small entities? Should the rule apply to entities that lease or employ SLTE in the U.S. point(s) of the cable system for operation of spectrum or capacity? We intend that the rule should not extend to customers on the edge of a network and should instead apply to entities that have capacity and are using the U.S. end, which may include ICPs,²⁴³ telecommunications providers, or other businesses.

2. Presumption of Entities Not Qualified to Become a New Submarine Cable Licensee

85. To protect U.S. communications networks from national security and law enforcement threats, we propose to adopt a presumption that certain entities and their current and future affiliates and subsidiaries shall not be qualified to become a new submarine cable landing licensee. We propose that such entities shall bear the burden of overcoming this presumption if they file an application for a cable landing license. We also seek comment on whether we should instead adopt a categorical qualifying condition that would preclude the grant of a cable landing license application filed by any applicant that is directly and/or indirectly owned or controlled by, or subject to the influence of (1) a government organization of a foreign adversary country, and/or (2) an individual or entity that has a citizenship(s) or place(s) of organization in a foreign adversary country, as defined under 15 CFR § 791.4.²⁴⁴

86. Specifically, we propose to adopt a presumption that any entity whose application for international section 214 authority was previously denied or whose domestic or international section 214 authority was previously revoked in view of national security and law enforcement concerns, and its current and future affiliates and subsidiaries, shall not be qualified to become a new cable landing licensee.²⁴⁵ We propose to apply the definitions of affiliate and subsidiary that are set out in section 2.903(c) of the rules and seek comment on this approach.²⁴⁶ We propose that such entities shall bear the burden of overcoming this presumption if they file an application for a cable landing license. Accordingly, we propose to adopt this presumption with respect to the following entities and their current and future affiliates and subsidiaries—China Mobile International (USA) Inc. (China Mobile USA), China Telecom (Americas) Corporation (CTA), China Unicom (Americas) Operations Limited (CUA), Pacific Networks Corp. (Pacific Networks), and ComNet (USA) LLC (ComNet).²⁴⁷ In the *China Mobile*

²⁴³ See *supra* n.179.

²⁴⁴ 15 CFR § 791.4(a); see *supra* para. 12.

²⁴⁵ *China Telecom Americas Order on Revocation and Termination*, 36 FCC Rcd at 15966-67, para. 1; *China Unicom Americas Order on Revocation*, 37 FCC Rcd at 1480-81, para. 1; *Pacific Networks and ComNet Order on Revocation and Termination*, 37 FCC Rcd at 4220-21, para. 1.

²⁴⁶ 47 CFR § 2.903(c) (defining “affiliate” as “an entity that (directly or indirectly) owns or controls, is owned or controlled by, or is under common ownership or control with, another entity; for purposes of this paragraph, the term ‘own’ means to have, possess, or otherwise control an equity interest (or the equivalent thereof) of more than 10 percent”); *id.* (defining “subsidiary” as “any entity in which another entity directly or indirectly: (i) Holds de facto control; or (ii) Owns or controls more than 50 percent of the outstanding voting stock”).

²⁴⁷ See *China Telecom Americas Order on Revocation and Termination*; *China Unicom Americas Order on Revocation*; *Pacific Networks and ComNet Order on Revocation and Termination*. Our proposed approach would not modify the cable landing licenses currently held by affiliates of these identified entities. See *supra* para. 17 (discussing a number of entities ultimately majority-owned and controlled by the Chinese government—including China Telecom, China Telecom Global, China Mobile Limited, and China Unicom—became licensees on FCC licenses to land and operate submarine cables connecting the United States to China and other foreign location). The Commission retains the authority to revoke a licensee’s cable landing license when warranted. See *supra* Section III.A.5.b.

USA Order, China Telecom Americas Order on Revocation and Termination, China Unicom Americas Order on Revocation, and Pacific Networks and ComNet Order on Revocation and Termination, the Commission found that these entities are subject to exploitation, influence, and control by the Chinese government, and that mitigation would not address the national security and law enforcement concerns.²⁴⁸ Further, in the *2024 Open Internet Order*, the Commission excluded China Mobile USA, CTA, CUA, Pacific Networks, ComNet, and their current and future affiliates and subsidiaries from grant of blanket section 214 authority for the provision of broadband Internet access service (BIAS).²⁴⁹ Consistent with the Commission’s findings in those proceedings, we believe that allowing entities whose authorizations have been denied or revoked on national security and law enforcement grounds to access critical communications infrastructure would present significant and unacceptable risks.²⁵⁰ Furthermore, we propose to adopt this presumption with respect to any entity and its current and future affiliates and subsidiaries whose application (including an application for any authorization or license) is or was previously denied or whose authorization or license is or was previously revoked and/or terminated on national security or law enforcement grounds.

87. We tentatively find that our proposal to adopt a presumption that these entities shall not be qualified to become a new cable landing licensee is consistent with the Commission’s statutory authority to withhold cable landing licenses under the Cable Landing License Act and Executive Order 10530.²⁵¹ The Cable Landing License Act sets forth, among other things, that the President “may withhold or revoke such license when he shall be satisfied after due notice and hearing that such action . . . will promote the security of the United States.”²⁵² The authority vested in the President is delegated to the Commission pursuant to Executive Order 10530.²⁵³ We tentatively find that the Commission has authority to adopt this presumption with respect to a class of entities, and to assign them the burden of overcoming the presumption in any cable landing license application, where it relates to the Commission’s evaluation as to whether withholding a cable landing license from such entities would

²⁵⁰ See *China Telecom Americas Order on Revocation and Termination, aff’d, China Telecom. (Ams.) Corp. v. FCC; China Unicom Americas Order on Revocation; Pacific Networks and ComNet Order on Revocation and Termination, aff’d, Pacific Networks Corp. v. FCC; 2024 Open Internet Order* at [x], paras. 339-340; see also *id.* at para. 32 (“There can be no question about the importance to our national security of maintaining the integrity of our critical infrastructure, including communications networks . . . Disruptions of communications can easily have significant cascading effects on other critical infrastructure sectors that rely on communications.”).

²⁵¹ 47 U.S.C. § 35; Executive Order 10530, § 5(a).

²⁵² 47 U.S.C. § 35 (“The President may *withhold* or revoke such license when he shall be satisfied after due notice and hearing that such action will assist in securing rights for the landing or operation of cables in foreign countries, or in maintaining the rights or interests of the United States or of its citizens in foreign countries, *or will promote the security of the United States . . .*”) (emphasis added).

²⁵³ 47 U.S.C. § 35; Executive Order 10530, § 5(a) (The Federal Communications Commission is hereby designated and empowered to exercise, without the approval, ratification, or other action of the President, all authority vested in the President by the act of May 27, 1921, ch. 12, 42 Stat. 8 (47 U.S.C. 34 to 39), including the authority to issue, withhold, or revoke licenses to land or operate submarine cables in the United States: Provided, That no such license shall be granted or revoked by the Commission except after obtaining approval of the Secretary of State and such advice from any executive department or establishment of the Government as the Commission may deem necessary. The Commission is authorized and directed to receive all applications for the said licenses.)

“promote the security of the United States.”²⁵⁴ We seek comment on these tentative findings.

88. In the recent section 214 denial proceeding and revocation proceedings, the Commission extensively evaluated national security and law enforcement considerations raised by existing section 214 authorizations and determined, based on thorough record development, that the present and future public interest, convenience, and necessity was no longer served by those carriers’ retention of their section 214 authority.²⁵⁵ We believe the same national security and law enforcement concerns identified in those proceedings equally exist with respect to these entities seeking to land or operate a submarine cable in the United States. We therefore believe that the Commission’s determinations in those proceedings are directly relevant to the determination as to whether grant of a new cable landing license to the identified entities and their current and future affiliates and subsidiaries would serve the public interest.²⁵⁶ We seek comment on this proposal.

89. We also propose to presume that any entity whose application for a Commission authorization is or was previously denied, or whose license or authorization for any service is or was previously revoked and/or terminated, for national security and/or law enforcement reasons is presumptively unqualified to hold a cable landing license. We note this approach would supplement the Commission’s existing character qualifications policy, which looks to whether an applicant has violated the Communications Act or Commission rules, has been convicted of a felony, or has engaged in other specified types of misconduct indicating that the applicant is not trustworthy or reliable.²⁵⁷ We also seek comment on whether there are other types of entities that also pose national security, law enforcement, or other concerns and to which the Commission should apply a similar presumption that such entities shall not be qualified to become cable landing licensees and must overcome such a presumption in any cable landing license application that they file with the Commission. What factors or criteria should inform our determination of any such types of entities and whether they pose national security, law enforcement, and other concerns that warrant adoption of such a presumption? We also seek comment on whether we should apply a standard in assessing whether such entities have overcome this presumption in any application that is filed for a new cable landing license.

90. We seek comment on whether we should instead adopt a categorical qualifying condition that would preclude grant of any submarine cable application—including an application for a cable landing license or the modification, assignment, transfer of control, or renewal of such license—filed by any applicant that is directly and/or indirectly owned or controlled by, or subject to the influence of, (1) a government organization of a “foreign adversary” country, and/or (2) an individual or entity that has a citizenship(s) or place(s) of organization in a “foreign adversary” country, as defined under 15 CFR § 791.4.²⁵⁸ If so, what ownership threshold should we apply to any categorical condition precluding the grant of a cable landing license application filed by applicants that are owned by foreign interest holders associated with a foreign adversary country? For example, should we preclude grant of a cable landing license application filed by any applicant that is directly and/or indirectly majority-owned by such foreign

²⁵⁴ 47 U.S.C. § 35; Executive Order 10530, § 5(a).

²⁵⁸ 15 CFR § 791.4(a); *see supra* para. 12.

interest holders? Or should we preclude grant of a cable landing license application filed by any applicant that has a direct and/or indirect 10% or greater foreign interest holder associated with a foreign adversary country? Is 10% the appropriate threshold, or should we adopt a greater or lesser threshold?

91. We seek comment on whether the Commission should prohibit cable landing licensees from entering into arrangements for IRUs or leases for capacity on submarine cables landing in the United States, with any entity that has a citizenship(s) or place(s) of organization in a “foreign adversary” country, as defined under 15 CFR § 791.4.²⁵⁹ We also seek comment on whether the Commission should prohibit cable landing licensees from entering into such arrangements with any entity that is directly and/or indirectly owned or controlled by, or subject to the influence of, (1) a government organization of a foreign adversary country, and/or (2) any individual or entity that has a citizenship(s) or place(s) of organization in a “foreign adversary” country, as defined under 15 CFR § 791.4.²⁶⁰ What ownership threshold should we apply to the extent we prohibit cable landing licensees from entering into arrangements for IRUs or leases for capacity with entities that are owned by foreign interest holders associated with a foreign adversary country? For example, should we prohibit licensees from entering into such arrangements with any entity that is directly and/or indirectly majority-owned by such foreign interest holders? Or should we prohibit licensees from entering into such arrangements with any entity that has a direct and/or indirect 10% or greater foreign interest holder associated with a foreign adversary country? Is 10% the appropriate threshold, or should we adopt a greater or lesser threshold? Additionally, we seek comment on whether to adopt rules that prohibit cable landing licensees from landing a cable licensed by the Commission in certain locations, such as landing points in a “foreign adversary” country, as defined under 15 CFR § 791.4.²⁶¹

3. Five (5) Percent Threshold for Reportable Interests

92. We seek comment on whether to lower the current 10% ownership reporting threshold to five percent (5%) or greater direct and indirect equity and/or voting interests in the applicant(s) and licensee(s). The 5% threshold would apply to initial applications and applications for modification, assignment, transfer of control, and renewal of submarine cable licenses. Currently, applicants for an initial submarine cable landing license must submit the information required in section 63.18(h),²⁶² including identification of “any individual or entity that directly or indirectly owns ten percent or more of the equity interests and/or voting interests, or a controlling interest, of the applicant, and the percentage of equity and/or voting interest owned by each of those entities (to the nearest one percent).”²⁶³

93. We find that greater insight into the ownership of applicants and licensees who own, control, and operate submarine cable systems is crucial to responding to the evolving threat environment, and that the current reporting threshold of 10% may not capture all interests that may present national security and policy concerns. When the Commission adopted the Standard Questions in 2021, in the *2021 Standard Questions Order*, it incorporated input from the Committee recommending a 5% ownership threshold.²⁶⁴ The Committee stated it was important because “when ownership is widely held, five percent can be a significant interest” and “a group of foreign entities or persons, each owning nine percent and working together, could easily reach a controlling interest in a company without having to

²⁶⁴ *2021 Standard Questions Order*, 36 FCC Rcd at 14856, para. 16.

disclose any of their interests.”²⁶⁵

94. Moreover, both the Commission and other federal government entities use a 5% reporting threshold. We note that the Commission uses a 5% ownership threshold in the broadcast context.²⁶⁶ Additionally, a reporting threshold of 5% applies to information that U.S. public companies and their shareholders provide to the Securities and Exchange Commission (SEC).²⁶⁷ The Exchange Act Rule 13d-1 requires a person or “group” that becomes, directly or indirectly, the “beneficial owner” of more than 5% of a class of equity securities registered under Section 12 of the Exchange Act to report the acquisition to the SEC.²⁶⁸ We note that various SEC forms filed by issuers, including their annual reports (or proxy statements) and quarterly reports, require the issuer to include a beneficial ownership table that contains, among other things, the name and address of any individual or entity, or “group,” who is known to the issuer to be the beneficial owner of more than 5% of any class of the issuer’s voting securities.²⁶⁹ A reporting threshold of 5% would also be consistent with that required by the Committee on Foreign Investment in the United States (CFIUS)²⁷⁰ from parties to a voluntary notice filed with CFIUS.²⁷¹ The 5% threshold thus appears to be a generally accepted benchmark for understanding the investors in an entity. We also anticipate, based on this fact, that entities generally will or should already know their 5% interest holders. Thus, we tentatively conclude that our proposal to adopt a reporting threshold of 5% would be consistent with the reporting requirements of other federal agencies and would impose minimal burdens on applicants.

95. We seek comment on whether a reporting threshold of 5% equity and/or voting interest adequately captures the relationship, association, and/or extent of influence that an investor may have in an applicant. Would a reporting threshold of 5% equity and/or voting interests sufficiently account for powers held by shareholders with less than 5% equity and/or voting interests but who may hold other special privileges or powers in the corporate structure? For instance, would the proposed reporting threshold account for a situation where a foreign government interest holder with a smaller ownership and/or voting interest, below the 5% threshold, may wield a disproportionately significant influence on

²⁷⁰ CFIUS is “an interagency committee authorized to review certain transactions involving foreign investment in the United States and certain real estate transactions by foreign persons, in order to determine the effect of such transactions on the national security of the United States.” U.S. Department of Treasury, *The Committee on Foreign Investment in the United States (CFIUS)*, <https://home.treasury.gov/policy-issues/international/the-committee-on-foreign-investment-in-the-united-states-cfius> (last visited Oct. 22, 2024); *see* U.S. Department of Treasury, *CFIUS Overview*, <https://home.treasury.gov/policy-issues/international/the-committee-on-foreign-investment-in-the-united-states-cfius/cfius-overview> (last visited Oct. 22, 2024).

²⁷¹ *See* 31 CFR §§ 800.502(c)(1)(v)(C), 802.502(b)(1)(vi)(C).

the applicant through “golden shares?”²⁷² Should we require additional information about an applicant’s reportable interest holders? Should we expand the reportable interests beyond percentages of equity and/or voting interests, for example by requiring applicants to identify other types of interests or interest holders, such as management agreements? What other indicia of significant influence or control should the Commission seek in order to fully identify interest holders that are either foreign governments or foreign state-owned entities? What additional information would fully inform and assist the Commission’s assessment of any national security, law enforcement, foreign policy, and trade policy risks raised by such interest holders?

96. We seek comment on what, if any, potential burdens would be imposed on applicants if required to report direct and indirect equity and/or voting interests at a 5% threshold, and we also seek comment on ways for the Commission to minimize those burdens. While we anticipate that most entities should readily be able to identify their 5% interest holders given other, existing reporting requirements at that threshold, we seek comment on this belief. We likewise invite comment on whether this lower reporting threshold will generally result in the identification of a substantially, or only marginally, greater number of interest holders.²⁷³

97. Commenters should also address whether there are any privacy concerns implicated by the lower reporting threshold, and whether this information is “financial information” of a privileged and confidential nature.²⁷⁴ Do licensees and interest holders actually treat this information as confidential? What, if any privacy or other harms, would result from disclosure of these interest holders?²⁷⁵ We tentatively conclude that the privacy interest of 5% holders if any, in not being identified in applications, and any interest in withholding privileged and confidential financial information of this nature is outweighed by the public interest and national security benefits from such reporting. Moreover, we believe that these interests can be otherwise protected. For instance, if we adopt a 5% reporting threshold, filers can seek confidential treatment, as is the case under our current reporting threshold. We seek comment on whether we should instead treat the disclosure of certain ownership interests of 5% and

²⁷² See, e.g., *In re Franchise Services of North America, Inc. v. U.S. Trustee*, 891 F.3d 198, 205 (5th Cir. 2018) (“Generally speaking, a ‘golden share’ is ‘[a] share that controls more than half of a corporation’s voting rights and gives the shareholder veto power over changes to the company’s charter.’ E.g., Golden Share, Black’s Law Dictionary (10th ed. 2014); see also Mariana Pargendler, *State Ownership and Corporate Governance*, 80 Fordham L. Rev. 2917, 2967 (2012) (noting that in the context of formerly stated-owned entities, ‘[g]olden shares are essentially a special class of stock issued to the privatizing government that grants special voting and veto rights that are disproportionate to, or even independent of, its cash-flow rights in the company’.”); see also Ryan McMorow, Qianer Liu, Cheng Leng, *China moves to take ‘golden shares’ in Alibaba and Tencent units* (Jan. 12, 2023), <https://www.ft.com/content/65e60815-c5a0-4c4a-bcec-4af0f76462de>; Reuters, *Fretting about data security, China’s government expands its use of “golden shares”* (Dec. 15, 2021), <https://www.reuters.com/article/china-regulationdata-idCAKBN2IU2B7> (“Seeking influence, Beijing began taking golden shares in private online companies – usually about 1% of a firm – some five years ago. The stakes are bought by government-backed funds or companies which gain a board seat and/or veto rights for key business decisions.”).

²⁷³ To the extent that the lower reporting threshold results in a substantial increase in the number of interest holders identified—or as otherwise required by other proposals in this notice, see *infra* Section III.B.13—the Commission will make necessary changes to applicable Privacy Act System of Records Notices (SORNs). See, e.g., Federal Communications Commission, *Privacy Act; System of Records*, 88 F.R. 77580 (Nov. 13, 2023) (FCC-2); Federal Communications Commission, *Privacy Act; System of Records*, 86 F.R. 43237 (Aug. 6, 2021) (IB-1).

²⁷⁴ See 47 CFR § 0.457(d).

²⁷⁵ Commenters should identify any harms from disclosure that would warrant the withholding of this information under the Commission’s rules and the Freedom of Information Act (FOIA). See 47 CFR § 0.457; 5 U.S.C. § 552(b).

up to less than 10% as presumptively confidential,²⁷⁶ without requiring the authorization holder to file a request for confidentiality.²⁷⁷ We note that the ownership information must not be publicly available elsewhere either in this country or another country for us to treat it as presumptively confidential. Alternatively, should the Commission require public disclosure of ownership interests of 5% and up to less than 10% only when those interest holders are citizens, entities, or government organizations of foreign adversary countries, as defined in the Department of Commerce's rule, 15 CFR § 791.4?

4. Submarine Cable Infrastructure Information

98. Consistent with our goal of ensuring the Commission has sufficient information concerning this critical infrastructure,²⁷⁸ we propose to require applicants²⁷⁹ for a cable landing license or modification, assignment, transfer of control, or renewal of a license; and licensees seeking to submit their periodic reports to provide additional detailed information concerning the submarine cable infrastructure. Currently, section 1.767(a)(4) of our rules requires applicants for a cable landing license to provide “[a] description of the submarine cable, including the type and number of channels and the capacity thereof[.]”²⁸⁰

99. We propose to also require that the detailed information regarding the submarine cable system include the length of the cable by segment and in total, the location of branching units, the location, address, and county or county equivalent of U.S. and non-U.S. cable landing points, the number of optical fiber pairs in the cable, and the design capacity of the system.²⁸¹ We also propose to modify the requirement for applicants and licensees to provide the geographic coordinates of cable landing stations as

²⁷⁶ Other Commission requirements, such as supply chain annual reporting, provide for a checkbox certification and the submission of information that is presumptively confidential. *2020 Protecting Against National Security Threats Order*, 35 FCC Rcd at 14369-70, para. 214 (“We believe that the public interest in knowing whether providers have covered equipment and services in their networks outweighs any interest the carrier may have in keeping such information confidential Other information, such as location of the equipment and services; removal or replacement plans that include sensitive information; the specific type of equipment or service; and any other provider specific information will be presumptively confidential.”). In order to request confidential treatment of a Circuit Status Report, a submitter simply has to check a box that appears on the certification form accompanying all submissions. *Reporting Requirements for U.S. Providers of International Telecommunications Service; Amendment of Part 43 of the Commission’s Rules*, IB Docket No. 04-112, Second Report and Order, 28 FCC Rcd 575, 613, para. 119 (IB 2013).

²⁷⁷ See, e.g., *Section 43.62 Reporting Requirements for U.S. Providers of International Services; 2016 Biennial Review of Telecommunications Regulations*, Report and Order, 32 FCC Rcd 8115, 8125-26, para. 22 (2017); 47 CFR § 0.457.

²⁷⁸ See Executive Order 10530, § 5(a).

²⁷⁹ For purposes of the information requirements proposed in this *Notice*, unless otherwise indicated, we use the terms “applicant” or “applicants” to refer to an applicant or licensee that files an application or notification under section 1.767 of the Commission’s rules, as well as the proposed rules for certain types of applications: (1) applicants that file an initial application for a cable landing license or an application for modification, substantial assignment, substantial transfer of control, or renewal of a cable landing license; (2) cable landing licensees that file a notification of *pro forma* assignment or transfer of control of a cable landing license; and/or (3) applicants that file a request for an STA related to the operation of a submarine cable. See 47 CFR § 1.767(a), (g)(6)-(7); 47 CFR § 63.24(e) (referring to “substantial” transactions); 47 CFR § 63.24(d) (defining “Pro forma assignments and transfers of control”). Unless otherwise indicated, we use the term “submarine cable application” to refer to an initial application for a cable landing license or an application for modification, substantial assignment, substantial transfer of control, or renewal of a cable landing license. Unless otherwise indicated, we use the term “notification” to refer to a *pro forma* assignment or transfer of control notification.

²⁸⁰ 47 CFR § 1.767(a)(4).

²⁸¹ See *infra* Appx. A.

well as beach manholes, to the extent they differ from cable landing station coordinates.²⁸² Under our proposal, for example, applicants could provide a specific description of the dry plants, including geographic data in generally accepted GIS formats (e.g., GeoJSON, Shapefile, Geopackage, etc.) with a map that specifies the location of (1) each beach manhole, (2) each cable landing station including locations of each power feed equipment and each submarine line terminal equipment (SLTE), and (3) each Network Operations Center²⁸³ providing remote access to the submarine cable system. For example, the GIS data could include the routing of the optical fiber pair cable and the routing of the power feed supply cable from the beach manhole to the cable landing station or like facility/facilities with SLTE. A map also could specify the geographical coordinates (longitude and latitude) and street address, county and county equivalent, if applicable, of each beach manhole and cable landing station or like facility where the SLTE is located. Should applicants provide maps and coordinates of the location of the components of the dry plants of the submarine cable system that are at the U.S. and foreign ends? We propose to delegate authority to OIA, in consultation with the Office of Economics and Analytics, to determine the file formats and specific data fields in which data will ultimately be collected. We seek comment on the above proposals.

100. *Route Position Lists.* Relatedly, we seek comment on whether we should require applicants for cable landing licenses and cable landing licensees to file with the Commission route position lists containing the geographic coordinates of the wet segment of the submarine cable. We note that maps showing the exact location of submarine cables are treated as presumptively confidential under our rules.²⁸⁴ The Commission's rules require applicants for cable landing licenses to submit a map showing specific geographic coordinates of each landing station and the coordinates of any beach joint where those coordinates differ from the coordinates of the landing station.²⁸⁵ Should we also require applicants and licensees to submit the geographic coordinates of the entire wet segment of the submarine cable (for example, including the U.S. and foreign portions of the cable) and/or other components of the cable? Would such data enhance the ability of the Commission and other federal agencies to identify, prevent, or mitigate spatial conflicts affecting submarine cables and further ensure the protection of this critical infrastructure?

101. *Confidential Treatment of Submarine Cable Landing Geographic Coordinates and Other Information.* We propose to provide confidential treatment for the exact addresses and specific geographic coordinates of cable landing stations, beach manholes, and other sensitive locations associated with a submarine cable system under the Commission's rules.²⁸⁶ Given the risks associated with the public availability of critical aspects of these systems, we believe the exact addresses and geographic coordinates and other specific location information should be treated as presumptively confidential. We seek comment on the extent to which, if any, this information is treated as privileged and confidential, and what impacts might the publicly availability of this information have on the commercial interests of

²⁸² See 47 CFR § 1.767(a)(5); see *infra* Appx. A.

²⁸³ A Network Operations Center (NOC) is a centralized location where information technology administrators can continuously monitor the performance of the wet and dry segments of the submarine cable system, either on site or from a remote location. Rahul Awati, TechTarget Network, *Definition, Network Operations Center (NOC)*, <https://www.techtarget.com/searchnetworking/definition/network-operations-center> (last visited Oct. 21, 2024). The NOC's role is to "provide full visibility" into the infrastructure and equipment. *Id.* "From a security perspective, the NOC functions as the first line of defense that enables the organization to monitor network security and recognize and address any attacks or disruptions to the network." *Id.*

²⁸⁴ 47 CFR § 0.457(c)(1)(i) (withholding from public inspection "[m]aps showing the exact location of submarine cables").

²⁸⁵ 47 CFR § 1.767(a)(5), (g)(8).

²⁸⁶ See 47 CFR § 0.457.

system owners and users?

102. Among the most sensitive parts of a submarine cable system are the wet segment as it approaches the shore, the submarine cable as it reaches the beach manhole, and the dry segment including the cable landing station(s), such as where SLTE is located. At present, several applicants for initial cable landing licenses have requested that such information should be confidential and filed a request for confidential treatment.²⁸⁷ We propose to protect the exact location information from public dissemination. We propose to only release more general information, such as the city, state/province/department, and country in which the submarine cable system will land. We seek comment on applicants' commercial interests in this information, the extent to which such information is treated as confidential by the applicants, and what harms would result to applicants' commercial interests if the information were disclosed to the public.²⁸⁸ We seek comment on how to treat such information if it is already publicly available from another source.

103. *Sharing with Federal Agencies.* To the extent confidential treatment is requested for submarine cable infrastructure information, any sharing of the information with other federal agencies would be subject to the procedures set out in section 0.442 of the rules.²⁸⁹ Under section 0.442,²⁹⁰ the Commission may disclose to other federal agencies, upon the Commission's own motion or another agency's request, records that have been submitted to the Commission in confidence²⁹¹ subject to providing the filer notice of the proposed sharing and ten (10) days to object.²⁹² In general, under federal law, the Commission may share information it has collected pursuant to an information collection with other federal government agencies.²⁹³ If it does, all provisions of law that relate to the unlawful disclosure of information apply to the employees of the agency to which the information is released "to the same extent and in the same manner" as they do to employees of the collecting agency.²⁹⁴ We seek comment on whether to adopt a rule that would allow the Commission to share submarine cable landing geographic coordinates, the route position lists, and other information with relevant federal agencies, including information for which confidential treatment is requested, without the pre-notification procedures of section 0.442(d).²⁹⁵ We note that we are seeking comment on this same process for sharing the cybersecurity plans and annual circuit capacity data.²⁹⁶ We seek comment generally on this process to

²⁸⁷ See, e.g., Letter from Craig J. Brown, Assistant General Counsel, Lumen to Marlene H. Dortch, Secretary, Federal Communications Commission at 1 (Feb. 15, 2023) (requesting confidential treatment of coordinate information, citing security risks to the cable) (on file in File No. SCL-LIC-20230222-00005); Letter from Ulises R. Pin and Brett P. Ferenchak, Counsel for GU Holdings, Inc., to Marlene H. Dortch, Secretary, Federal Communications Commission at 1-2 (June 9, 2023) (requesting confidential treatment of coordinate and address information, citing security risks to the cable) (on file in File No. SCL-LIC-20230511-00013); Letter from Ulises R. Pin and Brett P. Ferenchak, Counsel for Starfish Infrastructure Inc., to Marlene H. Dortch, Secretary, Federal Communications Commission at 1-2 (July 8, 2024) (requesting confidential treatment of coordinate and address information, citing security risks to the cable) (on file in File No. SCL-LIC-20240621-00030).

²⁸⁸ See 47 CFR § 0.457(d).

²⁸⁹ 47 CFR § 0.442.

²⁹⁰ 47 CFR § 0.442.

²⁹¹ 47 CFR § 0.442(b).

²⁹² 47 CFR § 0.442(d).

²⁹³ 44 U.S.C. § 3510.

²⁹⁴ 44 U.S.C. § 3510(b)(1).

²⁹⁵ 47 CFR § 0.442(d).

²⁹⁶ See *infra* Section III.D.5.

ensure the Commission and other federal agencies have adequate information on submarine cable infrastructure to assess for any national security and law enforcement concerns.

5. Current and Future Service Offerings

104. We propose to require applicants for an initial cable landing license or applicants/licensees for modification, assignment, transfer of control, and renewal of such license to include in their applications information about the capacity services they currently offer or plan to offer for the submarine cable system. This information includes the capacity they currently own or lease, the amount of capacity they intend to sell or lease, and the capacity management services they will provide. We also propose to require applicants, licensees, transferees, and assignees (as appropriate) to disclose current and expected future service offerings as part of their applications for modifications, transfers of control, and assignments of submarine cable landing licenses, and to institute such a requirement for licensees in renewals of submarine cable landing licenses. Collecting such information will help the Commission properly evaluate national security risk and infrastructure robustness of submarine cables on an ongoing basis. Such requirements would bring submarine cable landing licenses in line with proposals for international section 214 authorizations in the *Evolving Risks NPRM*²⁹⁷ and incorporate insights from the Executive Branch agencies' efforts to seek information about services from applicants with reportable foreign ownership.²⁹⁸

105. Specifically, we propose to require applicants and licensees to provide the following information regarding services that they provide or will provide in the submarine cable system: (1) identification and description of the specific services the applicant(s) and licensee(s) provides or intends to provide; (2) types of customers that are served or will be served, including those with whom the applicant(s) and licensee(s) lease, sell, share, or swap fiber, spectrum, or capacity; (3) whether the applicant(s) and licensee(s) own or control capacity on the U.S. portion of the submarine cable system including the submarine cable landing station(s) through an IRU or leasehold interest; (4) identifying where the applicant expects to market, offer, and/or provide services; and (5) the general terms and conditions applicable to the service provided such as contract term length, minimum capacity/bandwidth requirements, IRU requirements, termination clauses, security requirements, delivery or SLA (Service Level Agreement) requirements, dispute resolution, and other applicable provisions. This information might be provided as service tiers, ranges or other applicable frames of reference. We seek comment whether this information should be considered presumptively confidential, similar to our proposal for coordinates of sensitive components of a submarine cable system, such as the cable landing station(s) and beach manholes, among others,²⁹⁹ and if so, the basis for presumptively confidential treatment under the Commission's rules and the FOIA, in other words, to what extent does this information constitute privileged or confidential trade secrets or commercial or financial information?³⁰⁰ To what extent, if any, is this information already publicly available?

6. Regulatory Compliance Certifications

106. Given concerns about ensuring the security and integrity of this critical infrastructure, we propose new certifications to protect against national security, law enforcement, and other risks. We tentatively conclude that such requirements would help mitigate national security, economic security, law

²⁹⁷ See *Evolving Risks NPRM*, 38 FCC Rcd at 4396-97, paras. 98-100.

²⁹⁸ See, e.g., *2021 Standard Questions Order*, 36 FCC Rcd at 14912, Attach. C ("The questions seek further details regarding the Applicant and its security-related practices, and some questions are particularly directed at identifying and assessing the complete scope of the equipment that the Applicant will be operating and the services the Applicant will be offering should the FCC grant those authorities.").

²⁹⁹ See *supra* paras. 101-02.

³⁰⁰ See 47 CFR § 0.457(d); 5 U.S.C. § 552(b).

enforcement and other concerns associated with threats to the security of submarine cable infrastructure. We also expect that applicants' provision of these certifications will help to expedite Commission review. We seek comment on our proposals below.

107. *Compliance with FCC Rules.* We propose that all applicants seeking a cable landing license or modification, assignment, transfer of control, or renewal of such license, and licensees filing their three-year periodic reports must certify in the applications and the reports whether or not they are in compliance with the Commission's rules and regulations, the Act, and other laws. Specifically, we propose to require each applicant to certify in its application whether or not the applicant has violated the Cable Landing License Act of 1921, the Communications Act of 1934, or Commission rules, including making false statements or misrepresentations to the Commission; whether the applicant has been convicted of a felony; and whether there is an adjudicated determination that the applicant has violated U.S. antitrust or other competition laws, has been found to have engaged in fraudulent conduct before another government agency, or has engaged in other non-FCC misconduct the Commission has found to be relevant in assessing the character qualifications of a licensee or authorization holder. We seek comment on these proposals. We also seek comment on whether the Commission should require applicants to disclose any pending FCC investigations, including any pending Notice of Apparent Liability, and any adjudicated findings of non-FCC misconduct. In addition, we seek comment on whether the Commission should require applicants to disclose any violations of the Communications Act, Commission rules, or U.S. antitrust or other competition law, or any other non-FCC misconduct only where there has been adjudication or notification of a violation by an agency or court.

108. *Cybersecurity Certifications.* We propose to require all applicants for cable landing licenses and modification, assignment, transfer of control, renewal, and licensees filing their three-year periodic reports to certify in the application or report that they have created, updated, and implemented cybersecurity risk management plans. We also propose to require that existing licensees shall certify to the same for the first time based on the prioritization schedule set out in Section III.A.2.³⁰¹ To facilitate our review of existing cable landing licenses, we propose to require that existing licensees provide this cybersecurity certification in their respective periodic reports consistent with the categories and deadlines to be established by the OIA as proposed above.³⁰² We also propose to require these applicants and licensees to certify that they take reasonable measures to protect the confidentiality, integrity, and availability of their systems and services that could affect their provision of communications services. In this regard, we propose that applicants' and licensees' cybersecurity risk management plans must identify the cyber risks they face, the controls they use or plan to use to mitigate those risks, and how they ensure that these controls are applied effectively to their operations. The plans would also describe how the applicant or licensee employs its organizational resources and processes to ensure the confidentiality, integrity, and availability of its systems and services. We seek comment on these proposals.

109. Given the importance of cybersecurity, we believe that the operation of submarine cable systems should meet baseline security requirements to safeguard systems against threats. We believe these proposals are consistent with the National Cybersecurity Strategy and, in that connection, are in keeping with a whole-of-government effort to "establish cybersecurity requirements to support national security and public safety."³⁰³ We expect that creating, updating, and implementing cybersecurity risk

³⁰¹ See *supra* section III.A.2.

³⁰² See *supra* section III.A.2; see *infra* section III.C.

³⁰³ White House, National Cybersecurity Strategy at 8 (2023), <https://www.whitehouse.gov/wp-content/uploads/2023/03/National-Cybersecurity-Strategy-2023.pdf>. Other federal agencies are likewise either requiring or proposing to require their regulated entities to take cybersecurity measures to protect their systems. For example, the Commodity Futures Trading Commission (CFTC) requires registrants to establish and maintain information security controls as part of their mandatory system safeguards and to implement five types of security

management plans would help protect applicants' and licensees' systems and services from serious threats to national security, public safety, and the economy. These proposals would require specific actions to protect communications networks and infrastructure and collaborating with communications sector industry members to identify best practices.³⁰⁴ We seek comment on these expectations and on any national security, economic, or public safety benefits of effective cybersecurity practices and cybersecurity risk management for applicants and licensees.

110. We propose that each applicant or licensee have flexibility to structure its cybersecurity risk management plan in a manner that is tailored to its organization, provided that the plan demonstrates that the applicant or licensee is taking affirmative steps to analyze security risks and improve its security posture. While we believe there are many ways that an applicant or licensee may satisfy this requirement, we propose that they could successfully demonstrate compliance with this proposed requirement by following an established risk management framework, such as the National Institute of Standards and Technology (NIST) Cybersecurity Framework (CSF).³⁰⁵ The NIST CSF is designed to be scalable and adaptable to the needs and capabilities of companies both large and small, is well understood by industry, and is flexible. We seek comment on this flexible approach, including whether it would reduce the costs imposed on applicants and licensees. What other risk management frameworks do applicants and licensees implement other than the NIST CSF? To the extent commenters believe we should mandate a particular risk management framework or take a less flexible approach, we seek comment on their proposed alternative, as well as their rationale and why it would serve the public interest. For example, should we require applicants and licensees to apply the NIST CSF, as we have done in other proceedings?³⁰⁶ We further seek comment on how an applicant should demonstrate that it has taken affirmative steps to analyze security risks and improve its security posture after it has implemented a cybersecurity risk management plan.

111. We propose that an applicant's Chief Executive Officer (CEO), Chief Financial Officer (CFO), Chief Technology Officer (CTO), or a similarly situated senior officer responsible for governance of the organization's security practices would be required to sign the applicant's cybersecurity risk

testing through ongoing risk assessments and board oversight: (1) vulnerability testing; (2) penetration testing; (3) controls testing; (4) security incident response plan testing; and (5) enterprise technology risk assessment. See generally CFTC, *Fact Sheet: Final Rules on System Safeguards Testing Requirements* (Sept. 8, 2016), http://www.cftc.gov/idc/groups/public/@newsroom/documents/file/syssafeguard_factsheet090816.pdf. The Securities and Exchange Commission (SEC) has proposed periodic cybersecurity reporting requirements that include disclosing a registrant's policies and procedures to identify and manage cybersecurity risks. The Securities and Exchange Commission (SEC) adopted cybersecurity reporting requirements that include disclosing a registrant's policies and procedures to identify and manage cybersecurity risks. See SEC, *Cybersecurity Risk Management, Strategy, Governance, and Incident Disclosure* (July 26, 2023), <https://www.sec.gov/files/rules/final/2023/33-11216.pdf>.

³⁰⁴ See Exec. Off. of the President, National Security Memorandum on Critical Infrastructure Security and Resilience (Apr. 30, 2024), <https://www.whitehouse.gov/briefing-room/presidential-actions/2024/04/30/national-security-memorandum-on-critical-infrastructure-security-and-resilience/>.

³⁰⁵ See NIST, NIST Cybersecurity Framework 2.0 (2024), <https://nvlpubs.nist.gov/nistpubs/CSWP/NIST.CSWP.29.pdf> (NIST CSF).

³⁰⁶ See *Connect America Fund: A National Broadband Plan for Our Future High-Cost Universal Service Support et al.*, WC Docket No. 10-90 et al., Report and Order, Notice of Proposed Rulemaking, and Notice of Inquiry, 38 FCC Rcd 7040, 7086-87 para. 111 (2023) (*Enhanced A-CAM Order*); (requiring Enhanced A-CAM support recipients to implement cybersecurity risk management plans that reflect the latest version of the NIST CSF as a condition of receiving support); *Establishing a 5G Fund for Rural America*, GN Docket No. 20-32, Second Report and Order, Order on Reconsideration, and Second Further Notice of Proposed Rulemaking, FCC 24-89, at 64-65, para. 122 (Aug. 14, 2024) (*5G Fund Second Report and Order*) (requiring 5G Fund support recipients to implement cybersecurity risk management plans that reflect the NIST CSF as a condition of receiving 5G Fund support).

management plan. We believe that a signatory with visibility into the full network and organization is essential to ensure the plan encompasses all necessary elements and is executed through the organization. In recommendations made to Microsoft after the Cyber Safety Review Board's investigation of an incident resulting in compromise of Microsoft's systems as a result of a threat actor associated with the Chinese government, the Board noted the importance of "rigorous risk management" and focus on security at the executive level.³⁰⁷ We seek comment on this approach. Are there additional steps that we should take to ensure that cybersecurity is an integral part of corporate governance for applicants and licensees?

112. We seek comment on whether to require applicants' and licensees' cybersecurity risk management plans to include provisions for identifying, assessing, and mitigating supply chain cybersecurity threats. According to NIST, "[g]iven the complex and interconnected relationships in this ecosystem, supply chain risk management . . . is critical for organizations."³⁰⁸ To what extent do applicants' and licensees' cybersecurity risk management plans already identify and mitigate supply chain cybersecurity risks? We note that the Commission already requires participants in the Enhanced A-CAM and 5G Fund programs to submit separate supply chain risk management plans that incorporate best practices published by NIST, such as those discussed in *Key Practices in Cyber Supply Chain Risk Management: Observations from Industry (NISTIR 8276)*, and *Cybersecurity Supply Chain Risk Management Practices for Systems and Organizations (NIST 800-161)*, in addition to cybersecurity risk management plans.³⁰⁹ Should we require all applicants and licensees to certify to having created, updated, and implemented cybersecurity supply chain risk management plans, either as part of their cybersecurity risk management plan or as a separate document?

113. We propose to require applicants' and licensees' risk management plans to describe their implementation of security controls sufficient to ensure the confidentiality, integrity, and availability of all aspects of their communications systems and services. While we believe there are many ways for applicants and licensees to satisfy this aspect of the requirement, we propose that applicants and licensees will satisfy it if they demonstrate they have successfully implemented an established set of cybersecurity best practices, such as CISA's Cross-Sector Cybersecurity Performance Goals (CPGs)³¹⁰ or the Center for Internet Security Critical Security Controls (CIS Controls).³¹¹ We expect that compliant cybersecurity risk management plans will not be limited to a predetermined set of specific measures, but instead plans will vary based on individual applicants' and licensees' needs and circumstances sufficient to protect against cyber threats.³¹² We seek comment on this proposal.

³¹⁰ See CISA, *Cross-Sector Cybersecurity Performance Goals*, <https://www.cisa.gov/cross-sector-cybersecurity-performance-goals>.

³¹¹ See Center for Internet Security, *Critical Security Controls Version 8*, <https://www.cisecurity.org/controls> (last visited Oct. 22, 2024) (providing security controls grouped by priority and feasibility for different sizes and resources of businesses in Implementation Groups).

³¹² We note that the Commission has also sought comment on whether applicants for international section 214 authority and modification, assignment, transfer of control, and renewal of international section 214 authority should be required to certify in the application that they will undertake to implement and adhere to baseline cybersecurity standards based on universally recognized standards such as those provided by CISA or NIST. *Review of*

114. In conjunction with this proposal, we seek comment on whether to require applicants and licensees to implement specific security controls sufficient to protect the confidentiality, integrity, and availability of their systems and services. In the *Alerting Security NPRM*, the Commission proposed to require alerting participants to implement the following six controls, among other measures: (a) changing default passwords prior to operation, (b) installing security updates in a timely manner, (c) securing equipment behind properly configured firewalls or using other segmentation practices, (d) requiring multifactor authentication, where applicable, (e) addressing the replacement of end-of-life equipment, and (f) wiping, clearing, or encrypting user information before disposing of old devices.³¹³ These six controls were drawn from CISA's common baseline of cybersecurity controls.³¹⁴ We seek comment on whether we should require the implementation of these or some other subset of common security controls to protect applicants' and licensees' systems and services.

115. We observe that applicants and licensees can benefit from free and low-cost resources that are available to help identify and implement best practices and improve their security over time without requiring the hiring of outside experts. NIST publishes guidance that could assist organizations with measuring their safeguards, including how to address ransomware, malware, malicious code, spyware, distributed denial of service (DDoS) attacks, phishing, securing networks, and threats to mobile phones.³¹⁵ CISA offers vulnerability scanning at no cost for critical infrastructure, which includes communications providers,³¹⁶ and also provides CPG Assessment Training with regional cybersecurity experts that will help communications providers better understand CPGs and the cybersecurity risk assessment process.³¹⁷ We assume that these resources, along with any number of other publicly available resources that we have not specifically identified or that may arise in the future, will assist applicants' and licensees' employees and their existing technical contractors in identifying and implementing appropriate security controls without needing specialized cybersecurity expertise. We seek comment on this assumption.

International Authorizations to Assess Evolving National Security, Law Enforcement, Foreign Policy, and Trade Policy Risks; Amendment of the Schedule of Application Fees, IB Docket No. 23-119, MD Docket No. 23-134, Notice of Proposed Rulemaking, 38 FCC Rcd at 4405, paras. 122-123 (2023). We assess that the proposals in this *Notice* do not limit any proposals from that proceeding. *Id.* We seek comment on this assessment.

³¹³ *Amendment of Part 11 of the Commission's Rules Regarding the Emergency Alert System; Wireless Emergency Alerts; Protecting the Nation's Communications Systems from Cybersecurity Threats*, PS Docket Nos. 15-94, 15-91, & 22-329, Notice of Proposed Rulemaking, 37 FCC Rcd 12932, 12945, para. 25 (Oct. 27, 2022) (*Emergency Alert System Cybersecurity NPRM*). On August 22, 2022, PSHSB advised EAS participants to promptly secure their equipment against potential Internet-based risks, emphasizing the importance of updating software, changing default passwords, and implementing security measures to prevent unauthorized access. The advisory addressed a vulnerability identified by the Federal Emergency Management Agency and underscored the responsibility of EAS participants to ensure proper functioning during operational times to avoid enforcement consequences. These requirements are grounded in the guidance provided in that Public Notice. See FCC, *Public Safety and Homeland Security Bureau Urges Emergency Alert System (EAS) Participants to Take Immediate Steps to Secure EAS Equipment* (Aug. 5, 2022), <https://docs.fcc.gov/public/attachments/DA-22-828A1.pdf>.

³¹⁴ See CISA, *Cross-Sector Cybersecurity Performance Goals (CPGs) Common Baseline: Controls List (Draft)*, https://www.cisa.gov/sites/default/files/publications/Common_Baseline_v2_Controls_List_508c.pdf (CISA Baseline).

³¹⁵ See NIST, *Cybersecurity Risks* (Nov. 3, 2023), <https://www.nist.gov/itl/smallbusinesscyber/cybersecurity-basics/cybersecurity-risks>.

³¹⁶ CISA, *CISA Vulnerability Scanning*, <https://www.cisa.gov/resources-tools/services/cisa-vulnerability-scanning> (last visited Oct. 22, 2024).

³¹⁷ CISA, *Cybersecurity Performance Goals (CPG) Assessment Training*, <https://www.cisa.gov/resources-tools/training/cybersecurity-performance-goals-cpg-assessment-training> (last visited Oct. 22, 2024).

116. We propose that applicants and licensees submit cybersecurity risk management plans to the Commission upon request. We propose to delegate to OIA, in coordination with the Public Safety and Homeland Security Bureau, the authority to request, at its discretion, submission of such cybersecurity risk management plans and to evaluate them for compliance against the rules that are adopted under this proceeding. Access to applicants' and licensees' cybersecurity risk management plans would allow the Commission to confirm whether plans are being regularly updated, review a specific plan as needed, or proactively review a sample of applicants' and licensees' plans to confirm they identify the cybersecurity risks to those applicants' and licensees' communications systems and services. We would treat the cybersecurity risk management plans as presumptively confidential under our rules.³¹⁸ We seek comment on this approach, including the types of information included in these plans that warrant confidential treatment and the reasons why that information should be considered confidential. Do providers treat this information as confidential when it is used in other contexts? What harms could befall a provider if its plan was publicly disclosed? In addition, we seek comment on whether to adopt a rule that would allow the Commission to share the plans with relevant federal agencies, including information for which confidential treatment is requested, without the pre-notification procedures of section 0.442(d). We propose that the Commission could share the plans with federal agencies, such as CISA and other components of the Department of Homeland Security, and give notice to the applicant. Under section 0.442,³¹⁹ the Commission may disclose to other federal agencies, upon the Commission's own motion or another agency's request, records that have been submitted to the Commission in confidence subject to providing the filer notice of the proposed sharing and ten (10) days to object.³²⁰ We believe that forgoing these pre-notification procedures when sharing plans with relevant federal agencies would more rapidly facilitate the federal government's response to cyber incidents affecting the communications sector. We seek comment on this approach.

117. We also propose that applicants and licensees must preserve data and records related to their cybersecurity risk management plans, including any information that is necessary to show how the cybersecurity risk management plan is implemented, for two years from the submission of the related risk management plan certification to the Commission. We seek comment on this approach. Should we require applicants and licensees to retain prior versions of their cybersecurity risk management plans for a shorter or longer period of time? If so, why?

118. We believe it would promote neither public safety nor national security if applicants and licensees could escape responsibility for the cybersecurity of their systems and services by outsourcing the provision of those systems and services to third parties. Accordingly, if an applicant relies on a third-party contractor for provision of a communications system or service, we propose to require the applicant's cybersecurity risk management plan to cover the systems and services offered by the third-party contractor. We propose to hold applicants and licensees responsible for the acts, omissions, or failures of third-party contractors that impact the cybersecurity of the applicant's systems and services. In connection with our requirement to take reasonable measures to protect the confidentiality, integrity, and availability of its communications systems and services, if an applicant relies on a third-party contractor to provide equipment or services, and an unreasonable act or omission of that third-party contractor results in the applicant's failure to protect the confidentiality, integrity, or availability of its systems and services, we propose to hold the applicant responsible for that act or omission. We seek comment on this

³¹⁸ See 47 CFR §§ 0.457 and 0.459.

³¹⁹ 47 CFR § 0.442.

³²⁰ 47 CFR § 0.442(b). In general, under federal law, the Commission may share information it has collected with other federal government agencies information it has collected pursuant to an information collection and, if it does, all provisions of law that relate to the unlawful disclosure of information apply to the employees of the agency to which the information is released "to the same extent and in the same manner" as they do to employees of the collecting agency. 44 U.S.C. § 3510(b)(1). 44 U.S.C. § 3510.

approach. We also seek comment on the extent to which applicants and licensees currently include minimum cybersecurity requirements in their contracts with third parties.

119. *“Covered List” Certification for Applicants.* To protect U.S. communications networks and the communications supply chain against national security threats, we propose to require that applicants, as a condition of the potential grant of their application, certify that the submarine cable system will not use covered equipment or services identified on the Commission’s “Covered List” that the Commission maintains pursuant to the Secure and Trusted Communications Networks Act.³²¹ Such equipment and services have been deemed to pose an unacceptable risk to the national security of the United States or the security and safety of United States persons.³²² We propose that this certification would apply to covered equipment or services purchased, rented, leased, or otherwise obtained on or after August 14, 2018 (in the case of Huawei, ZTE, Hikvision, Dahua, and Hytera), or on or after 60 days after the date that any equipment or service is placed on the Covered List.³²³ Given the national security and law enforcement risks to the submarine cable systems, we also propose to adopt a rule prohibiting use of such equipment or services in the submarine cable system. We seek comment on this proposal, the financial burdens on applicants, and any alternatives to this proposal.

120. *“Covered List” Certification for Licensees.* Additionally, we propose to require that licensees certify as to whether or not they use, for the relevant submarine cable system, equipment or services identified on the “Covered List.” We also propose that this certification would apply to covered equipment or services purchased, rented, leased, or otherwise obtained on or after August 14, 2018 (in the case of Huawei, ZTE, Hikvision, Dahua, and Hytera), or on or after 60 days after the date that any equipment or service is placed on the Covered List. We propose that licensees provide this certification within 60 days of the release of any Report and Order in this proceeding.

121. In the event that existing licensees use such equipment or services, we seek comment on whether we should require those licensees to remove such equipment or services to ensure the security and reliability of submarine cable systems. Should we require those licensees to develop plans to address the removal of such equipment and services with specified timelines? If so, should we require licensees to submit their plans with the Commission? Additionally, we seek comment on whether the Commission should prohibit licensees from purchasing, obtaining, maintaining, improving, modifying, or otherwise supporting any equipment or services produced or provided by entities on the Covered List. If so, what penalties would apply for non-compliance? To what extent should the Commission’s framework for requiring the recipients of reimbursement funds under section 4 of the Secure Networks Act³²⁴ and carriers receiving Universal Service Fund support to remove and replace equipment and services that are

³²¹ Pursuant to sections 2(a) and (d) of the Secure and Trusted Communications Networks Act of 2019, and sections 1.50002 and 1.50003 of the Commission’s rules, the Federal Communications Commission’s Public Safety and Homeland Security Bureau (PSHSB) publishes a list of communications equipment and services that have been determined by one of the sources specified in that statute to pose an unacceptable risk to the national security of the United States or the security and safety of United States persons (“covered” equipment). Secure and Trusted Communications Networks Act of 2019, Pub. L. No. 116-124, 133 Stat. 158 (2020) (codified as amended at 47 U.S.C. §§ 1601-1609) (Secure Networks Act); 47 CFR §§ 1.50002, 1.50003.

³²² See 47 U.S.C. §§ 1601–1609; 47 CFR § 1.50000 *et seq.*; see also FCC, *List of Equipment and Services Covered by Section 2 of the Secure Networks Act*, <https://www.fcc.gov/supplychain/coveredlist> (last updated July 24, 2024) (*List of Covered Equipment and Services*).

³²³ See *Protecting Against National Security Threats to the Communications Supply Chain Through FCC Programs*, WC Docket No. 18-89, Second Report and Order, 35 FCC Rcd 14284, 14334 para. 116 (2020) (*Supply Chain Second Report and Order*).

³²⁴ See Secure Networks Act § 4(a).

included on the “Covered List” from the submarine cable system inform our approach here?³²⁵ What would be our source of legal authority for applying a prohibition on covered equipment and services on our licensees? Are there scenarios in which replacement of removed equipment and services is not necessary? Are there networks in which there is sufficient redundancy that, if removed, the covered equipment and services need not be replaced? We seek comment on the timing and deadlines for removal of covered equipment and services. We specifically seek comment on the amount of time that may be necessary to remove covered equipment and services and the financial cost to our licensees. We also seek comment on whether there are other sources of information that we should consider to inform our decisions on removal timing and deadlines and to understand the scope of the effort. We seek comment on these proposals and generally on what other certifications the Commission should adopt concerning the “Covered List.”

122. We seek comment on whether we should rely solely on the “Covered List” or consider other lists or sources of information to identify equipment or services that should be prohibited, including but not limited to the Department of Commerce’s Entity List and the Department of Defense’s List of Chinese Military Companies (1260H List). Are there gaps or limitations with the “Covered List” that alternative sources would assist with reducing? Is there information or guidelines that would assist in providing certifications regarding the “Covered List” or other sources? Should applicants and licensees certify, in addition or as an alternative to these proposed certifications, that they will not use vendors for equipment or services from certain countries, such as any foreign country that is a “foreign adversary” as defined in the Department of Commerce’s rule, 15 CFR § 791.4(a)? We seek comment generally on how best to promote the security and integrity of the communications supply chain with respect to submarine cable systems.

123. *Interrupt Traffic on Submarine Cable System Certification.* Submarine cable license mitigation agreements typically include a term requiring the licensee entering into the agreement to have the ability to physically or logically interrupt, in whole or in part, traffic to and from the United States on the submarine cable system by disabling or disconnecting circuits at the U.S. cable landing station or at other locations within the United States and will configure all necessary systems to ensure the licensee can suspend or interrupt the optical signal or all communications functionality of the licensed submarine cable system.³²⁶ Given the importance of submarine cables, we seek comment on whether and how we should incorporate this requirement into our rules. Should we adopt a certification that would effectively impose these requirements directly in the cable landing license requirements or should this requirement be incorporated as a routine condition under our rules? We tentatively conclude that every application must include an assurance from the applicant(s) that the licensee will be able to suspend or interrupt the optical signal or all communications functionality. We seek comment on whether joint licensees may appoint one party to be responsible for complying with this requirement.

7. Third-Party Access

124. National security and law enforcement risks can and do arise with third-party access to a submarine cable system, whether that access involves physical or logical access to the cable system. In this regard, we are concerned about the risks posed by non-licensee individuals and entities with access to U.S.-licensed submarine cable systems. This includes, but is not limited to, owners of the buildings that house submarine cable systems, the cable landing station, co-tenants of the submarine cable system’s

³²⁵ See 47 CFR §§ 1.50004-.50007.

³²⁶ See, e.g., Letter of Agreement between the Bahamas Telecommunications Company Limited and U.S. Department of Justice, U.S. Department of Homeland Security, and U.S. Department of Defense, File No. SCL-LIC-20220422-00016, at 5 (July 12, 2023); see also Letter of Agreement between AT&T Corp. and U.S. Department of Justice, U.S. Department of Homeland Security, and U.S. Department of Defense, File No. SCL-LIC-20220114-00004 (Jan. 23, 2022).

location, contractors hired by the licensee to manage the cable system, including MNSPs and other third-party entities with access to the cable system's NOC.

125. *Physical Access to Submarine Cable Systems.* The physical security of a submarine cable system, including its sturdiness and impenetrability and prevention of unauthorized access into the cable landing station, is important to the safety of the system,³²⁷ and knowledge of who has physical access to a submarine cable system, including the cable landing station, is important for determining vulnerabilities. We seek comment on whether to require basic information about an applicant's lessors of submarine cable landing stations and/or data centers housing hardware. Additionally, we seek comment on the overlap between physical and logical access to submarine cable systems – are there aspects of the submarine cable systems' physical operation that can be controlled or managed remotely?

126. *Logical Access to the Submarine Cable Systems.* We are interested in understanding and addressing the vulnerabilities posed by third party individuals and entities with logical access to submarine cable systems.³²⁸ We generally seek comment on ways the Commission can address vulnerabilities associated with such logical access.

127. *Remote Access Services.* We understand submarine cable licensees sometimes employ third parties' services to remotely manage the submarine cable networks.³²⁹ Such access to a submarine cable system can pose a vulnerability, not only from the third party itself but from any hostile actor that breaches the third party's remote management system.³³⁰ In October 2021, the Commission adopted the *2021 Standard Questions Order* that requires certain applicants and petitioners with reportable foreign ownership to provide answers to a set of standardized national security and law enforcement questions.³³¹ The Standard Questions ask applicants about applicants' capabilities to "control or monitor operations . . . via Remote Access" and whether any "third-party vendors, associated companies, or Owners have Remote Access."³³² We seek comment on the challenges posed by submarine cable licensees' use of remote service vendors and their services and steps the Commission could take to mitigate those challenges.

128. *Foreign-Owned Managed Network Service Providers.* We propose to require all applicants/licensees, with or without reportable foreign ownership, to report whether or not they use and/or will use foreign-owned MNSPs in the operation of the submarine cable. We propose to require this information in the initial licensing application, upon grant of a license, and as an ongoing requirement

³²⁷ Communications Security, Reliability, and Interoperability Council Working Group 4A Submarine Cable Resiliency, Final Report – Clustering of Cables and Cable Landings at 5 (Aug. 2016), https://transition.fcc.gov/bureaus/pshs/advisory/csric5/WG4A_Final_091416.pdf (highlighting the importance of protecting a cable landing station from physical threats such as "intrusion, ballistic, [and] surveillance.").

³²⁸ United States Government Accountability Office, *Cybersecurity - Internet Architecture Is Considered Resilient, but Federal Agencies Continue to Address Risks*, Report to the Committee on Armed Services, House of Representatives, GAO-22-104560 at 13 (2022), <https://www.gao.gov/assets/gao-22-104560.pdf> (identifying "[m]alicious insider(s)," defined as "[a]n individual or group with authorized access . . . that has the potential to harm an information system or enterprise through destruction, disclosure, modification of data, and/or denial of service," as a threat to submarine cable systems. *Id.*).

³³⁰ *Id.*

³³¹ *See generally 2021 Standard Questions Order*, 36 FCC Rcd at 14906.

³³² *2021 Standard Questions Order*, 36 FCC Rcd at 14912, Attach. C (Standard Questions for a Submarine Cable Landing License Application).

in the three-year periodic reports; we seek comment on how often to require such information in the event we shorten the license term. Below, we propose and seek comment on criteria for how we propose to define “foreign-owned.”³³³ We propose to define an MNSP as any entity other than the applicant(s) or licensee(s) (i.e., third party entity) with whom the applicant(s) or licensee(s) contracts to provide, supplement, or replace certain functions for the U.S. portion of the submarine cable system (including any cable landing station and submarine line terminal equipment (SLTE) located in the United States) that require or may require access to the network, systems, or records of the applicant(s) or licensee(s). Such functions could include, but are not limited to: operations and management support; network operations and service monitoring, including intrusion testing; network performance, optimization, and reporting; installation and testing; network audits, provisioning and development; and the implementation of changes and upgrades.³³⁴

129. The Standard Questions adopted in the Commission’s *2021 Standard Questions Order*,³³⁵ define the term “Managed Services” (or “Enterprise Services”) as “the provision of a complete, end-to-end communications solutions to customers.”³³⁶ Specifically, the Standard Questions associated with submarine cable landing license applications require applicants to respond whether any “third-party vendors, associated companies, or Owners will have Remote Access/monitoring of the network, systems, or records to provide Managed Services,” and if so, to “provide additional details, i.e., third party identifying information, role, and reason for their access.”³³⁷

130. The Standard Questions require an applicant to submit answers directly to the Committee, and applicants without reportable foreign ownership are not routinely referred to the Committee or to other relevant Executive Branch agencies. Applicants whose applications are not referred to the Committee or to other Executive Branch agencies nevertheless may reach contractual agreements or have other arrangements with foreign-owned MNSPs, thereby granting the foreign-owned MNSPs access to the submarine cable system and potentially allowing them to act in ways that are contrary to U.S. interests without the Commission or Committee ever being informed.

131. We propose to require all applicants/licensees for submarine cable landing licenses, regardless of reportable foreign ownership, to report in their application whether or not they use and/or will use foreign-owned MNSPs. We also propose to require such disclosure of foreign-owned MNSP use in applications to assign, transfer control of, modify, or renew a submarine cable license, noting that the Standard Questions for license assignments and transfers of control ask whether “any third-party vendors, associated companies, or Owners have Remote Access/monitoring to the network, systems, or records to

³³³ See *infra* para. 131.

³³⁴ This definition is based on the definitions of “Managed Network Service Provider” articulated by the Departments of Justice, Homeland Security, and Defense in recent National Security Agreements with cable landing licensees. See GU Holdings Inc. National Security Agreement with Department of Justice, Department of Homeland Security, Department of Defense at 3 (Dec. 14, 2021), and Edge and Meta Platforms, Inc.’s National Security Agreement with the Department of Justice, Department of Homeland Security, and Department of Defense, at 3 (Dec. 14, 2021), on file at SCL-LIC-20200827-00038.

³³⁵ In the *2021 Standard Questions Order*, the Commission adopted a set of standardized national security and law enforcement questions (Standard Questions) that certain applicants and petitioners with reportable foreign ownership will be required to answer as part of the Executive Branch review process of their applications and petitions. *2021 Standard Questions Order*, 36 FCC Rcd at 14848.

³³⁶ *2021 Standard Questions Order*, 36 FCC Rcd at 14914, Attach. C.

³³⁷ *Id.* at 14920 Attach. C (listing Standard Questions for a Submarine Cable Landing License Application); see also *id.* at 14933 Attach. D (listing Standard Questions for an Application for Assignment or Transfer of a Submarine Cable Landing License, such as “Do/will any third-party vendors, associated companies, or Owners have Remote Access/monitoring to the network, systems, or records to provide Managed Services?”).

provide managed services.”³³⁸ We propose that any applicant that indicates it uses and/or will use a foreign-owned MNSP will answer the Standard Questions and those applications would be routinely referred to the Executive Branch agencies, including the Committee.³³⁹ We seek comment on whether the applicants should answer all of the Standard Questions, only those Standard Questions relating to MNSPs, or if a new set of questions should be devised.

132. We propose and seek comment on the specific criteria for considering an MNSP to be “foreign-owned,” such that an applicant would have to report its use. We propose that an MNSP be considered “foreign-owned” if it is majority-owned and/or controlled by one or more non-U.S. individual(s) or entity/entities. We seek comment on whether we should require applicants to explain in detail the foreign individuals’ or entities’ involvement and management roles in the foreign-owned MNSP.³⁴⁰ In addition, we seek comment on whether any MNSPs also possess physical access to the submarine cable system. Relatedly, we seek comment on which functions of the submarine cable system can be controlled remotely. Further, are there other functions of a submarine cable system that are being managed by third party companies, including MNSPs, that we have not addressed here in this *Notice* and should take into account?

133. We generally seek comment on our definition of MNSP and the use of MNSPs and managed network services by submarine cable operators. We seek information as to whether our proposed list of services offered by an MNSP is sufficiently comprehensive. Are there other vulnerabilities associated with contracted services we should consider?

134. *Network Operation Centers.* We are interested in logical access to and control of Network Operations Centers (NOCs),³⁴¹ the locations and facilities where network management, monitoring, maintenance, performance measurement, or other operational functions are performed for the submarine cable system.³⁴² The Standard Questions require applicants with reportable foreign ownership to provide “a list of the anticipated addresses or physical locations” for “[t]he NOC (and back-up NOC, if any).”³⁴³ We propose to require all applicants, regardless of foreign ownership, to supply this information on a presumptively confidential basis in their applications. We seek comment on our proposal to also require such disclosure in all applications for modification, assignment, transfer of control, renewal, and periodic reporting of submarine cable landing licenses.³⁴⁴ Should the requirement to report locations of NOCs also encompass other submarine cable system architecture, such as data centers, PoPs, and/or main

³³⁸ *Id.* at 14933, Attach. D.

³³⁹ *See generally* 2021 *Standard Questions Order*, Attach. C-D.

³⁴⁰ *Id.* at 14920, Attach. C (Requesting of applicants that they provide, for “any third-party vendors, associated companies, or Owners [that] have Remote Access/monitoring to the network, systems, or records to provide Managed Services,” additional details such as “third party identifying information, role, and reason for their access.” *Id.*).

³⁴¹ *See supra* *Definition, Network Operations Center*, n.283.

³⁴² *See, e.g.*, Letter of Agreement from Brian Quigley, GU Holdings Inc., to Under Secretary for Strategy, Policy and Plans Office of Strategy, Policy, and Plans, U.S. Department of Homeland Security; Chief, Foreign Investment Review Section (FIRS) and Deputy Chief, Compliance and Enforcement (FIRS) On Behalf of the Assistant Attorney General for National Security, U.S. Department of Justice; and the Office of Foreign Investment Review, and Director Undersecretary of Acquisition and Sustainment, U.S. Department of Defense at 3 (Nov. 30, 2022) (on file in SCL-LIC-20220422-00015) (*GU Holdings Firmina LOA*).

³⁴⁴ *See id.* at 14932, Attach. D. (requiring license holders with reportable foreign ownership to report “addresses or physical locations” for “[t]he NOC (and back-up NOC, if any).”).

distribution facilities?³⁴⁵ On what basis would presumptively confidential treatment of the foregoing information be warranted under the Commission's rules and the FOIA?³⁴⁶ Is the information publicly available, or is it treated as confidential in the industry? To what extent, if any, would this information constitute trade secrets?³⁴⁷ What harms to commercial interests could result from public disclosure of this information?

135. We also seek comment on whether third-party ownership of NOCs may fall under our proposed definition of an MNISP and whether there are benefits or consequences to including or excluding such NOCs from the proposed definition.

8. Other Risks to Submarine Cable Infrastructure

136. We seek comment generally on how the Commission can take action to strengthen the security and resilience of submarine cable infrastructure, pursuant to its legal authority, including activities in coordination with its federal partners. In particular, we seek comment on what actions the Commission can take to mitigate risks and strengthen the security and resilience of this critical infrastructure, pursuant to its legal authority, including activities in coordination with its federal partners. Given the role of submarine cables to the nation's communications networks and other vital infrastructure and assets, it is important to ensure the protection, security, and resilience of this critical infrastructure. Accordingly, damage to submarine cable infrastructure would affect other critical infrastructure sectors that rely on communications and would have a debilitating impact on the nation's economic and national security. The Commission's responsibilities in securing communications networks are well-established. Congress created the Commission, among other reasons, "for the purpose of the national defense, [and] for the purpose of promoting safety of life and property through the use of wire and radio communication."³⁴⁸ Furthermore, the President's recent National Security Memorandum, NSM-22, directs the Commission, among other things, to "assess communications sector risks and work to mitigate those risks by requiring, as appropriate, regulated entities to take specific actions to protect communications networks and infrastructure" and to "collaborate with communications sector industry members, foreign governments, international organizations, and other stakeholders to identify best practices and impose corresponding regulations," to the extent permitted by law and in coordination with DHS and other federal departments and agencies.³⁴⁹ As an initial matter, to further these efforts, we seek comment on risks to submarine cable infrastructure, including human and natural risks, and what steps the Commission can take to mitigate such threats of damage and ensure the protection of this critical infrastructure.

137. *Malicious Threats.* We observe that NSM-22 addresses malicious threats to U.S. critical infrastructure, stating, "[t]he United States also faces an era of strategic competition with nation-state actors who target American critical infrastructure and tolerate or enable malicious actions conducted by

³⁴⁵ *GU Holdings Firmina LOA* at 5 (requiring disclosure of network management information including "locations and functions of any NOCs, data centers, Points of Presence (PoPs) and main distribution facilities" "[w]ithin 60 days of the execution of [the] LOA, and, thereafter, within 30 days upon . . . request." *Id.* at 4-5.).

³⁴⁶ 47 CFR § 0.457; 5 U.S.C. § 552(b).

³⁴⁷ 47 CFR § 0.457(d).

³⁴⁸ 47 U.S.C. § 151.

³⁴⁹ National Security Memorandum on Critical Infrastructure Security and Resilience, NSM-22, at 14 (Apr. 30, 2024) (NSM-22), <https://www.whitehouse.gov/briefing-room/presidential-actions/2024/04/30/national-security-memorandum-on-critical-infrastructure-security-and-resilience/>; *id.* at 33 (defining critical infrastructure as "systems and assets, whether physical or virtual, so vital to the United States that the incapacity or destruction of such systems and assets would have a debilitating impact on national security, national economic security, national public health or safety, or any combination of those matters").

non-state actors.”³⁵⁰ We have reason to believe that adversaries and other malicious actors may be targeting submarine cables landing and operated in the United States and invite comments providing examples, details about geography, extent, and frequency of such targeting. What measures are implemented by the submarine cable industry to protect submarine cable infrastructure against malicious threats? How can the Commission facilitate information sharing between national security agencies and industry, consistent with NSM-22? We seek comment on any actions the Commission can take to mitigate those threats pursuant to its legal authority, including in coordination with its federal partners. We also seek comment on what measures are implemented by the submarine cable industry to mitigate such risks.

138. *Spatial Conflicts.* We seek comment as to whether, and to what extent, close spatial proximity between submarine cables and other marine infrastructure and activities presents risks of damage to submarine cables landing in the United States. In 2014, the Communications, Security, Reliability, and Interoperability Council (CSRIC)³⁵¹ issued a report examining risks to submarine cable infrastructure, including activities that “pose direct risks to submarine cables by threatening installed cables with equipment, anchors, infrastructure installation and operation, and resource exploration, exploitation, and transport.”³⁵² CSRIC identified “traditional risks” including commercial fishing,³⁵³

³⁵⁰ NSM-22 at 2.

³⁵¹ The purpose of the Communications Security, Reliability, and Interoperability Council (CSRIC), an advisory committee established under the Federal Advisory Committee Act, is to provide recommendations to the Commission regarding ways the Commission can help to ensure security, reliability, and interoperability of communications systems. FCC, *Advisory Committees of the FCC*, <https://www.fcc.gov/about-fcc/advisory-committees-fcc> (last visited Oct. 23, 2024); FCC, *Communications Security, Reliability, and Interoperability Council*, <https://www.fcc.gov/about-fcc/advisory-committees/communications-security-reliability-and-interoperability-council-0> (last visited Oct. 23, 2024).

³⁵² Communications Security, Reliability and Interoperability Council (CSRIC) IV, Final Report—Protection of Submarine Cables Through Spatial Separation at 5 (Dec. 2014) (CSRIC IV Report), https://transition.fcc.gov/pshs/advisory/csric4/CSRIC_IV_WG8_Report1_3Dec2014.pdf; *id.* at 2 (“Although damage to submarine cables is rare, it is most often caused by human activities such as commercial fishing (in which trawl nets, clam dredges, and other bottom-contact gear ensnare cables), vessel anchoring, dredging related to sand and mineral extraction, petroleum extraction, pipeline construction and maintenance, renewable energy construction and maintenance, and other cable activity.”); *see also* Communications Security, Reliability and Interoperability Council (CSRIC) V, Final Report—Clustering of Cables and Cable Landings at 9-10 (Aug. 2016) (CSRIC V Report), https://transition.fcc.gov/bureaus/pshs/advisory/csric5/WG4A_Final_091416.pdf. CSRIC identified “traditional risks” including commercial fishing, anchoring, sand and gravel dredging and beach replenishment, and oil and gas development, among other things. *See* CSRIC IV Report at 31-36. CSRIC also identified “emerging risks” such as offshore renewable energy development—namely, offshore wind projects, marine and hydrokinetic (MHK) projects, and ocean thermal energy conversion (OTEC) projects—and deep-sea mining, while noting the risks remain uncertain. CSRIC IV Report at 36-42; CSRIC V Report at 9.

³⁵³ While the CSRIC IV Report stated, “[h]istorically, commercial fishing has accounted for more than 40 percent of all submarine cable faults worldwide,” it also noted that “it is relatively rare in the U.S. territorial sea and [outer continental shelf (OCS)], as the mitigation strategies pursued by submarine cable operators have proved very effective in the United States.” CSRIC IV Report at 31-32.

anchoring,³⁵⁴ sand and gravel dredging and beach replenishment,³⁵⁵ and oil and gas development,³⁵⁶ among other things.³⁵⁷ CSRIC also identified “emerging risks” such as offshore renewable energy development—namely, offshore wind projects, marine and hydrokinetic (MHK) projects, and ocean thermal energy conversion (OTEC) projects³⁵⁸—and deep-sea mining,³⁵⁹ while noting the risks remain uncertain.³⁶⁰

139. Given the passage of time, we seek updated information on any new facts or circumstances that can inform our evaluation of the equities, risks of damage, and mitigation measures associated with spatial relationships between submarine cables and other marine infrastructure and activities. What, if any, spatial conflicts today present the most significant risks of damage to submarine cables landing in the United States? To the extent other marine infrastructure and activities cross or are in close proximity to submarine cables, what spatial distance is necessary to reduce or eliminate the risk of damage to submarine cables? Are there examples of how installation or maintenance of marine infrastructure and activities near or over submarine cable infrastructure resulted in damage to submarine cables landing in the United States, or affected the maintenance or repair of such submarine cables? Where do such incidents, if any, occur geographically? What is the extent and frequency of any damage to submarine cables?

140. We also seek comment on what measures the submarine cable industry has implemented/will implement to protect submarine cable infrastructure in the event of any spatial conflicts with wind farms, or electric or other infrastructure or activities that may affect cables. For example, do cable landing licensees coordinate with other industries and establish crossing agreements to mitigate risks of damage to each respective infrastructure? Do cable landing licensees consult and address these risks with federal agencies that authorize other marine infrastructure and activities? If so, at what stage of the permitting or licensing process or deployment of such marine projects do cable landing licensees coordinate with other industries or federal agencies?

³⁵⁴ CSRIC IV Report at 32 (“Anchoring accounts for approximately 15 percent of cable faults worldwide”).

³⁵⁵ See CSRIC IV Report at 32-33; *id.* at 32 (“These practices can be highly incompatible with submarine cables, which can be damaged by the dredging process itself and by anchors used by vessels, barges, and pipelines used to recover, transport, and pump dredged material back onto shore.”).

³⁵⁶ See CSRIC IV Report at 33-35; *id.* at 34 (“Although the submarine cable and offshore oil and gas industries have a long history of working with each other, the renewed focus on U.S. domestic energy production and possible opening of the U.S. Atlantic OCS regions to oil and gas development (in the event the current development moratorium expires in 2017) will increase the risks to submarine cables.”).

³⁵⁷ See CSRIC IV Report at 35-36 (addressing risks associated with clustering of submarine cable systems, earthquakes and tsunamis, sea floor geology, and weather conditions).

³⁵⁸ See CSRIC IV Report at 36-41.

³⁵⁹ See CSRIC IV Report at 41-42.

³⁶⁰ CSRIC IV Report at 36 (noting, “[b]ecause offshore renewable energy is an emerging industry, the risks remain uncertain. Consequently, submarine cable operators, offshore renewable energy developers, and regulators have yet to develop systematic risk minimization strategies and consultation and coordination mechanisms, which has resulted in some unresolved conflicts.”); *id.* at 41 (“At present, deep-sea mining present a low risk to installed cables, as the mining of particular marine minerals has not yet proved economic. Nevertheless, it is very likely that improved (and cheaper technologies) and increasing demand for particular minerals (and/or a more stable supply thereof) will pose greater threats to installed submarine cables and limit routes for future cables.”); CSRIC V Report at 9 (stating, “[i]t remains to be seen whether other marine infrastructure, such as oil and gas exploration or marine renewable energy will have a significant effect on the routing of submarine cables or the selection of landing sites for those cables.”).

9. Interagency Coordination and Submarine Cable Protection

141. We seek comment on what actions the Commission can take to mitigate both the risks identified previously in this *Notice* and any other risks and strengthen the security and resilience of submarine cable infrastructure, pursuant to its legal authority, including activities in coordination with its federal partners. Should the Commission play a more active role in coordinating with other agencies that have jurisdiction over other marine infrastructure that may impact submarine cables, or other agencies that regulate or oversee the installation and protection of submarine cables? In particular, the Commission has previously recognized that “interagency coordination is very important to protect submarine cable infrastructure.”³⁶¹ With regard to spatial conflicts, in addition to submarine cables, CSRIC addressed how various federal agencies regulate a number of other marine infrastructure and activities, including offshore renewable energy projects,³⁶² oil and natural gas development,³⁶³ dredging and coastal replenishment,³⁶⁴ and other matters.³⁶⁵ We ask commenters whether interagency consultation,

³⁶¹ *2016 Submarine Cable Outage Report and Order*, 31 FCC at 7976, para. 80 (“To this end, the International Bureau, in coordination with the Public Safety and Homeland Security Bureau, will continue to lead interagency coordination efforts to help increase transparency and information sharing among the government agencies, cable licensees, and other stakeholders and promote improved interagency coordination processes to mitigate threats to undersea cables and facilitate new projects to improve geographic diversity.”); *see also 2015 Submarine Cable Outage NPRM*, 30 FCC Red at 10509, para. 47.

³⁶² *See, e.g., FCC, Activities Related to Undersea Cables* (last updated Oct. 3, 2016) (*Activities Related to Undersea Cables*), <https://www.fcc.gov/activities-related-undersea-cables>; CSRIC IV Report at 5-7, 30-42. For example, the Federal Energy Regulatory Commission (FERC), among other things, licenses non-federal hydropower projects, which includes marine and hydrokinetic (MHK) projects. *Activities Related to Undersea Cables*; FERC, *What FERC Does* (last updated Feb. 12, 2024), <https://www.ferc.gov/what-ferc-does>; FERC, *Hydropower—Commission’s Responsibilities* (last updated Jan. 25, 2023), <https://www.ferc.gov/industries-data/hydropower>; FERC, *Hydrokinetic Projects* (last updated Aug. 15, 2024), <https://www.ferc.gov/licensing/hydrokinetic-projects> (defining hydrokinetic projects as “[p]rojects that generate electricity from waves or directly from the flow of water in ocean currents, tides, or inland waterways”). The Outer Continental Shelf Lands Act of 1953, as amended (OCSLA), authorizes the Bureau of Ocean Energy Management (BOEM) to grant leases and prescribe regulations that govern mineral and renewable energy development on the U.S. outer continental shelf (OCS). *Activities Related to Undersea Cables*; BOEM, BOEM Governing Statutes, <https://www.boem.gov/about-boem/regulations-guidance/boem-governing-statutes> (last visited Aug. 22, 2024). BOEM, among other things, issues leases, easements and rights of way on the OCS for projects that generate electricity from offshore wind, wave and currents and for renewable energy transmission projects. *Activities Related to Undersea Cables*; BOEM, *Renewable Energy*, <https://www.boem.gov/renewable-energy> (last visited Aug. 22, 2024).

³⁶³ For example, under the OCSLA, BOEM authorizes leases, easements and rights of way for oil and natural gas development and other marine minerals such as sand and gravel for coastal restoration activity. *Activities Related to Undersea Cables*; BOEM, *Oil and Gas Energy*, <https://www.boem.gov/oil-and-gas-energy> (last visited Aug. 22, 2024).

³⁶⁴ *See* BOEM, *Marine Minerals*, <https://www.boem.gov/marine-minerals> (last visited Aug. 22, 2024); U.S. Army Corps of Engineers, *Dredging*, <https://www.iwr.usace.army.mil/Missions/Coasts/Tales-of-the-Coast/Corps-and-the-Coast/Navigation/Dredging/> (Aug. 22, 2024); CSRIC IV Report at 32-33 (stating that “[t]he Army Corps of Engineers and the Bureau of Ocean Energy Management of the U.S. Department of the Interior (‘BOEM’) frequently authorize sand and gravel dredging in the U.S. territorial sea and OCS.”).

³⁶⁵ *See, e.g., CSRIC IV Report at 5-7, 30-42.* For example, the National Marine Sanctuaries Act allows the National Oceanic and Atmospheric Administration (NOAA) to identify, designate and protect areas of the marine and Great Lakes environment with special national significance due to their conservation, recreational, ecological, historical, scientific, cultural, archaeological, educational, or aesthetic qualities as national marine sanctuaries. NOAA, *Designations*, <https://sanctuaries.noaa.gov/management/designations.html> (last visited Aug. 22, 2024). If a submarine cable system will traverse a national marine sanctuary, the cable owner must also obtain a permit from NOAA’s Office of National Marine Sanctuaries under the National Marine Sanctuaries Act. *See also 2015*

information-sharing, and other coordination could help to mitigate risks of damage to submarine cable infrastructure that arise from its spatial relationship to other marine infrastructure and activities. In addition, we seek comment on whether coordination with states that regulate marine infrastructure and activities could help to mitigate risks of damage to submarine cable infrastructure. What are examples of how the Commission could coordinate with relevant agencies to protect submarine cable infrastructure while taking into consideration the U.S. government's equities in other critical marine infrastructure and resources? For example, do federal statutes provide any source of authority for the Commission to take regulatory and operational actions to mitigate or reduce risks of damage to submarine cables in marine areas subject to U.S. jurisdiction, including in coordination with other federal or state agencies?³⁶⁶

10. Streamlining Procedures to Expedite Cable Processing

142. We seek comment on ways to modify our streamlining procedures to expedite submarine cable processing while ensuring national security and law enforcement concerns are addressed. We seek comment on actions or measures the Commission or Committee can take to expedite the review and licensing process. The Commission originally adopted streamlining procedures for processing applications for submarine cable landing licenses in the *2001 Cable Report and Order*.³⁶⁷ The intent was to adopt rules that “are designed to facilitate the expansion of capacity and facilities-based competition in the submarine cable market . . . [and] to enable submarine cable applicants and licensees to respond to the demands of the market with minimal regulatory oversight and delay, saving time and resources for both industry and government, while preserving the Commission’s ability to guard against anti-competitive behavior.”³⁶⁸ The Commission assessed that this framework would result in a reduction of costs for deploying submarine cables and ultimately benefit U.S. consumers.³⁶⁹ It created a procedure and competitive safeguards that were aligned with those adopted for section 214 authorizations, whereby applications qualifying for streamlining generally would be acted on in a 45-day period.³⁷⁰ In addition to adopting specific criteria for streamlining eligibility, the Commission also sought to ensure that licensees having a significant ability to affect the operation of a cable system were applicants and thus became licensees upon grant so that they are subject to the conditions and responsibilities that are associated with a cable landing license by “providing that entities that do not own or control a landing station in the United States or have a five percent or greater interest in the proposed cable system generally will not be required to become licensees.”³⁷¹ The Commission also allowed for post-transaction notifications for *pro*

Submarine Cable Outage NPRM, 30 FCC Rcd at 10509, para. 45; NOAA, *Policy & Planning*, <https://sanctuaries.noaa.gov/management/> (last visited Aug. 22, 2024).

³⁶⁶ We note that the national laws of countries such as Australia and New Zealand authorize the establishment of submarine cable protection zones within specific geographic areas. Telecommunications Act 1997, Schedule 3A—Protection of submarine cables; Submarine Cables and Pipelines Protection Act 1996, Part 2—Protection and enforcement, 12(1) (“Protected areas”). Additionally, the national laws and regulations of some countries establish minimum spatial distance requirements with regard to submarine cables. *See, e.g.*, CSRIC IV Report at 50-51 (identifying “foreign governments [that] have established default or minimum separation distances to protect submarine cables”).

³⁶⁷ *2001 Cable Report and Order*, 16 FCC Rcd at 22168.

³⁶⁸ *Id.*

³⁶⁹ *See id.*

³⁷⁰ *Id.*

³⁷¹ *Id.*; *see also 2001 Cable Report and Order*, 16 FCC Rcd at 22168 (“an entity that (1) owns or control a U.S. landing station or (2) owns or controls a five percent or greater interest in the cable system and will use the U.S. points of the cable system”); *id.* at 22194, para. 53 (required applicants and licensees). The 2001 proceeding focused on capacity expansion and facilities-based competition and, although adopting safeguards against anti-

forma assignments or transfers of control in cable landing licenses.³⁷² Over time, the Commission modified these rules to address changes in Commission policy and to assist in the expeditious review of applications.³⁷³

143. In 2020, the Commission adopted rules that sought to codify the timeframes set forth under Executive Order 13913 and Commission procedures for the referral of submarine cable landing license applications or assignment or transfer of control of a submarine cable landing license,³⁷⁴ among other types of applications, to the Executive Branch agencies including the Committee for their feedback on any national security, law enforcement, foreign policy, or trade policy issues associated with the foreign ownership of applicants.³⁷⁵ The Commission codified its policy that it would continue referring applications to the Executive Branch agencies where the applicant has reportable foreign ownership, i.e. “when an applicant has a 10% or greater direct or indirect foreign investor[.]”³⁷⁶ The Commission further noted that it “retains discretion to determine which applications it will refer to the [Executive Branch] agencies [including the Committee] for review.”³⁷⁷

144. *Eligibility for streamlining.* Under the Commission’s rules, each applicant for a cable landing license seeking streamlining must request such processing in its application, follow the procedure set out under 47 CFR § 1.767(i) and (j), and provide the following information and certifications:

- (1) Certifying that it is not a foreign carrier and it is not affiliated with a foreign carrier in any of the cable's destination markets;
- (2) Demonstrating pursuant to § 63.12(c)(1)(i) through (iii) of this chapter that any such foreign carrier or affiliated foreign carrier lacks market power; or
- (3) Certifying that the destination market where the applicant is, or has an affiliation with, a foreign carrier is a World Trade Organization (WTO) Member and the applicant agrees

competitive conduct associated with market power in foreign markets where U.S.-licensed cable systems land and operate, to the detriment of competition in U.S. markets, *id.* at 22178-86, paras. 19-39, did not otherwise address specific national security concerns.

³⁷² *Id.*

³⁷³ In 2014, the Commission adopted rules that eliminated the effective competitive opportunities (ECO) test that was previously adopted by the Commission in 1995 “as a condition to entry into the U.S. international telecommunications services market by foreign carriers that possess market power on the foreign end of a U.S.-international route on which they seek to provide service pursuant to section 214 of the Communications Act of 1934, as amended[.]” *Reform of Rules and Policies on Foreign Carrier Entry Into the U.S. Telecommunications Market*, IB Docket No. 12-299, Report and Order, 29 FCC Rcd 4256, 4256, para. 1 (2014). The Commission determined that it was no longer necessary to apply the ECO test to non-WTO members, or otherwise, to protect competition and found that a market based approach, where the applicant or notification filer from a non-WTO Member country must demonstrate whether or not it has market power in the country where the cable lands, would reduce regulatory burdens and provide an expeditious review for foreign entry to benefit U.S. consumers. *See generally id.*

³⁷⁴ *Executive Branch Review Report and Order*, 35 FCC Rcd at 10929, para. 4.

³⁷⁵ *Id.* at 10971-89, Appendix B (providing final rule that amended 47 CFR 1.767(k)). The Commission added another requirement for entities seeking streamlining to certify that cable landing license applicants that any entity that has a 10% or greater equity and/or voting interest in the applicant are U.S. citizens or entities organized in the U.S. This final rule also adopted timeframes consistent with EO 13913, *see supra* n.26, that were intended to provide certainty to industry as to the length of time a cable landing license application, among other types of applications, will be reviewed by the Executive Branch agencies including the Committee.

³⁷⁶ *Executive Branch Review Report and Order*, 35 FCC Rcd 10929, para. 4.

³⁷⁷ *Id.*

to accept and abide by the reporting requirements set out in paragraph (l) of this section. An application that includes an applicant that is, or is affiliated with, a carrier with market power in a cable's non-WTO Member destination country is not eligible for streamlining.

- (4) Certifying that for applications for a license to construct and operate a submarine cable system or to modify the construction of a previously approved submarine cable system the applicant is not required to submit a consistency certification to any state pursuant to section 1456(c)(3)(A) of the Coastal Zone Management Act (CZMA), 16 U.S.C. 1456.
- (5) Certifying that all ten percent or greater direct or indirect equity and/or voting interests, or a controlling interest, in the applicant are U.S. citizens or entities organized in the United States.³⁷⁸

145. The rules provide that, for applications that are eligible for streamlined processing, the Commission will take action upon such application within 45 days after release of the public notice announcing the application was acceptable for filing and eligible for streamlining.³⁷⁹ The Commission will publish a public notice indicating if an application is ineligible for streamlined processing. The rules also provide that the Commission will take action upon a non-streamlined application within 90 days or provide public notice of additional time, which may be further extended, if an application raises questions of extraordinary complexity.³⁸⁰ Applications that involve foreign ownership or control of the applicants and may present national security, law enforcement, foreign policy, and trade policy issues are referred to the Executive Branch agencies for their review and feedback.³⁸¹ Since the beginning of 2016, on average, more than 10 cable landing license applications per year are referred to the Executive Branch agencies, including the Committee, for national security, law enforcement, foreign policy, and trade policy review.³⁸² For the five-year period of 2016 through 2020, the pre-Committee agencies took on average 367 days to complete review after receiving all pre-review answers to questions.³⁸³ From 2021 to the present, the Committee has taken on average 237 days to complete review of cable landing license applications.³⁸⁴ The average time of review by the Committee once an application is on the clock has dropped significantly from the review time for pre-Committee reviews, but we understand that this process can be improved.

146. We seek comment on measures the Commission can take to provide a streamlining process that is effective and beneficial to both industry and government, while ensuring national security and network security review. We understand that applying for a cable landing license can be a lengthy and complex process that requires considerable advanced planning on the part of submarine cable owners

³⁷⁸ 47 CFR § 1.767(k).

³⁷⁹ § 1.767(i).

³⁸⁰ *Id.*

³⁸¹ *See* 47 CFR §1.5001 *et seq.*

³⁸² Since the beginning of 2016 through the end of 2020, a total of 84 submarine cable landing license applications, including initial cable landing license applications, renewals, modifications, assignments, and transfer of control applications, were referred to the Executive Branch agencies for national security, law enforcement, foreign policy, and trade policy review.

³⁸³ For 2016 to 2021, the Commission referred 52 submarine cable landing license applications to the Executive Branch agencies.

³⁸⁴ For 2021 to the present, the Commission has referred 32 submarine cable landing license applications to the Executive Branch agencies.

and operators. We understand that submarine cable systems can take years to plan, finance, license, construct, test, and prepare for operation. We seek to identify mechanisms to reduce the time it takes to review and grant a submarine cable landing license in the current environment in which hostile threats and malicious actors pose significant risks to critical infrastructure. For example, if an applicant for a cable landing license is a frequent filer with the Commission because it has numerous submarine cable projects, are there mechanisms the Commission can adopt to reduce the time it takes to review and act on an application for a cable landing license from such filer? What additional steps can the Commission take to streamline its review of an application? Are there specific certifications or other filings applicants can provide to the Committee in order to expedite the review of a referred application? Should the Commission revisit the Standard Questions associated with submarine cable applications? Should the Commission create a program that would separate out the reviews of applicants' ownership and cable management qualifications, barring any significant changes in ownership, from the investigation of specific risk factors associated with each cable system's route, landing stations, and equipment? We seek comment on this question as well as on other mechanisms that may reduce the time it takes to receive a cable landing license while providing for assessment of national security risks³⁸⁵ and ensuring that grant of the cable landing license is in the public interest.

11. Other Changes to Current Requirements

147. We seek to improve and formalize our current application requirements set forth in section 1.767(a) of the Commission's rules. We believe modifications to the rules would, among other things, reduce uncertainty for applicants by clarifying application requirements and address any gaps in our rules that impact the national security of the United States. We also propose to adopt new and updated information requirements and certification requirements. We propose specific requirements for other types of applications, including applications to assign, transfer control of, modify, or renew cable landing licenses, requests for special temporary authority, and *pro forma* assignment and transfer of control applications and notifications, among other matters as applicable. In this regard, and to further improve the clarity of the rules, we propose to create a new subpart in Part 1 of the rules to address each type of application. We seek comment generally on whether there are specific rules applicable to submarine cable applications and notifications where the benefits do not outweigh the burdens and whether the Commission should eliminate or modify such rules.

148. *Contact Information.* The Commission's rules currently require applicants for cable landing licenses and for assignments and transfers of control of such licenses to provide "[t]he name, address, and telephone number(s) of the applicant" and "[t]he name, title, post office address, and telephone number of the officer and any other contact point" in the applications.³⁸⁶ Additionally, the rules require that, while an application is pending for purposes of section 1.65 of the rules, the applicant is responsible for the continuing accuracy and completeness of all information submitted and that "the applicant agrees to inform the Commission and the Committee of any substantial and significant changes while an application is pending."³⁸⁷ The rules also require that, after the application is no longer pending for purposes of section 1.65 of the rules, "the applicant must notify the Commission and the Committee of any changes in the . . . licensee information and/or contact information promptly, and in any event within thirty (30) days."³⁸⁸ We propose to amend the submarine cable licensing rules to expressly apply these requirements to applications for modification and renewal of cable landing licenses.³⁸⁹ We also propose

³⁸⁵ 47 CFR § 151.

³⁸⁶ 47 CFR § 1.767(a)(1), (3), (11)(i).

³⁸⁷ 47 CFR §§ 1.767(a)(8), (a)(11)(i); 63.18(q)(1)(iv)(a).

³⁸⁸ 47 CFR §§ 1.767(a)(8), (a)(11)(i); 63.18(q)(1)(iv)(b).

³⁸⁹ See 47 CFR §§ 1.767(a)(1), (3), (11)(i); 63.18(q)(1)(iv)(a)-(b).

to require applicants for cable landing licenses and for modification, assignment, transfer of control, and renewal of licenses to provide an e-mail address on behalf of the applicant and an e-mail address on behalf of the officer and any other contact point, to whom correspondence regarding the application can be addressed.

149. *Renewal Applications.* To provide regulatory certainty, we propose to adopt rules for cable landing licensees that seek to renew or extend the term of their license. Under the Commission's rules, a cable landing license expires "twenty-five (25) years from the in-service date, unless renewed or extended upon proper application."³⁹⁰ Although section 1.767(e) of the rules requires that an application must be filed with respect to each submarine cable system for which a renewal or extension of an existing license is requested,³⁹¹ the rules do not set out specific requirements for such applications. In addition, the rules do not expressly address the Commission's longstanding policy of considering national security, law enforcement, foreign policy and trade policy considerations in its review of such applications.

150. We propose, as a baseline, to require applicants seeking to renew or extend a cable landing license to provide in the application the same information and certifications required in an application for a new cable landing license under sections 1.767(a) and 63.18(h), (o), (p), (q) of the rules,³⁹² as well as any new requirements adopted in this proceeding.³⁹³ Specifically, the current application rules for a new cable landing license require important information and attestations concerning an applicant's contact information, the submarine cable (including the landing locations), whether the cable will be operated on a common carrier or non-common carrier basis, among other things.³⁹⁴ We propose to adopt rules applying these provisions of sections 1.767(a) and 63.18(h), (o), (p), (q) to applications to renew or extend a cable landing license (collectively, "renewal applications"). To the extent we adopt any new or modified information and certification requirements that we propose in this *Notice* with respect to applications for a new cable landing license, we propose to similarly apply those requirements to renewal applications and thus harmonize the application requirements.³⁹⁵ We further propose to codify longstanding practice that applicants must demonstrate how grant of the renewal application will serve the public interest, convenience, and necessity. We seek comment on these approaches.

151. *Renewal Streamlined Processing Procedures.* We seek comment on whether we should adopt streamlined processing for renewal applications in certain situations. For instance, section 1.767(i) of the Commission's rules provides that, "[t]he Commission will take action upon an application eligible for streamlined processing, as specified in paragraph (k) of this section, within forty-five (45) days after release of the public notice announcing the application as acceptable for filing and eligible for streamlined processing."³⁹⁶ In current practice, once filed, Commission staff review the renewal application for compliance with the Commission's rules and place the application on an Accepted for Filing public notice once it is acceptable for filing. Should we adopt similar streamlined processing procedures for renewal applications in certain situations, subject to the State Department's approval of any proposed grant of a

³⁹⁰ 47 CFR § 1.767(g)(15).

³⁹¹ Section 1.767(e) of the rules states that "[a] separate application shall be filed with respect to each individual cable system for which a license is requested or a modification of the cable system, *renewal, or extension of an existing license is requested.* Applicants for common carrier cable landing licenses shall also separately file an international section 214 authorization for overseas cable construction." 47 CFR § 1.767(e) (emphasis added).

³⁹² See 47 CFR §§ 1.767(a)(1)-(10); 63.18(h), (o), (p), (q).

³⁹³ See *supra* section III.B.1-7.

³⁹⁴ See, e.g., 47 CFR §§ 1.767(a)(1)-(10); 63.18(h), (o), (p), (q).

³⁹⁵ See *supra* section III.B.1-7.

³⁹⁶ 47 CFR § 1.767(i).

renewal application? Specifically, we seek comment on whether the Commission should place a renewal application on streamlined Accepted for Filing public notice and grant such application within forty-five (45) days after release of the public notice if: (1) the Commission does not refer the application to the Executive Branch agencies because the applicant does not have reportable foreign ownership and the application does not raise other national security, law enforcement, or other considerations warranting Executive Branch review; (2) the application does not raise other public interest considerations, including regulatory compliance; (3) the Executive Branch agencies do not separately request during the comment period that the Commission defer action and remove the application from streamlined processing; (4) no objections to the application are timely raised by an opposing party; and (5) any proposed grant of a renewal application is approved by the State Department.

152. *Licenses Pending Renewal.* As with Title III licensees pursuant to section 307(c) of the Act, and consistent with the Administrative Procedure Act, we propose to adopt a rule that an applicant that has timely applied for renewal or extension of its cable landing license may continue operating the submarine cable system while its renewal application is pending review.³⁹⁷ We propose that the Commission may deny the renewal application, for instance, if an applicant fails to provide any information that is required by the rules or is reasonably requested by staff in its review of the renewal application.³⁹⁸ We tentatively conclude that this proposal is consistent with the Administrative Procedure Act, and seek comment on this tentative conclusion.³⁹⁹ We also propose to amend section 1.767(g)(15) by providing that, upon expiration, all rights granted under the license shall be terminated if the licensee has not timely filed a renewal application.⁴⁰⁰ Should we further amend the rule by expressly requiring the filing of a renewal application before the cable landing license expires? Alternatively, to the extent a licensee fails to timely file a renewal application, should we allow the licensee to continue operating the submarine cable following the expiration of a license if the licensee files a request for an STA, either prior to or after such expiration and pending the filing of an application to renew or extend the cable landing license? Or should we require the filing of a waiver demonstrating good cause to allow a late filing of a renewal application? In any instance where a licensee fails to timely file a request for an STA or a renewal application and seeks to continue operating the submarine cable, we propose that the Commission shall reserve the right to take enforcement action for unauthorized operations following expiration of the license and the filing of a request for an STA or renewal application. We seek comment on these approaches.

153. *Modification Applications.* We propose to adopt rules for cable landing licensees that seek to modify a cable landing license. Additionally, we seek comment on whether the Commission should amend the rules by clarifying the types of facts and circumstances that warrant the filing of an application to modify a cable landing license. Section 1.767 of the rules addresses certain cases where a modification application is required, including situations where a licensee seeks to add a new licensee to the cable landing license,⁴⁰¹ or relinquish its interest in a cable landing license,⁴⁰² or add a new landing

³⁹⁷ See 5 U.S.C. § 558(c) (“When the licensee has made timely and sufficient application for a renewal or a new license in accordance with agency rules, a license with reference to an activity of a continuing nature does not expire until the application has been finally determined by the agency.”); *id.* § 551(8) (“license” defined to mean “the whole or a part of an agency permit, certificate, approval, registration, charter, membership, statutory exemption or other form of permission”).

³⁹⁸ See *supra* at III.A.1.ii.

³⁹⁹ See 5 U.S.C. § 558(c).

⁴⁰⁰ 47 CFR § 1.767(g)(15) (stating that, “[u]pon expiration, all rights granted under the license shall be terminated”).

⁴⁰¹ 47 CFR § 1.767(m)(1).

⁴⁰² *Id.* § 1.767(m)(2).

point that is not included in the grant of authority for the submarine cable system.⁴⁰³ We propose to codify our practice in a new subsection of the rules that will address requirements related to modifying a cable landing license, including the current requirement that licensees must obtain prior Commission approval of certain changes to a license such as the addition or removal of a licensee and the addition of a new landing point.⁴⁰⁴ We also propose that licensees must obtain prior approval to remove or otherwise change the location of a landing point previously authorized by the Commission. Further, we propose that licenses must obtain prior approval to construct or add a new connection, such as a segment or a branching unit, to an FCC-licensed submarine cable system.

154. Additionally, we propose to codify our longstanding practice by specifying in the rules the required contents of a modification application. We propose to require that applicants seeking to modify a cable landing license must include in the application a narrative description of the modification(s) that is being requested, including relevant facts and circumstances. We propose to adopt application requirements and certifications from sections 1.767(a) and 63.18(h), (o), (p), (q) of the rules that are tailored to the type of modification requested, such as a modification to (1) add a cable landing station, a segment, or other material change to the cable system; (2) add a new licensee to the cable landing license; (3) remove a licensee from the cable landing license; or (4) add, modify, or remove a condition on the cable landing license. For instance, we propose that the Commission would require information about the change to the submarine cable system, specifically the location of the new landing point, the ownership and control of the landing point, and other information, whereas, for a modification to add a licensee to a cable landing license, the Commission would seek information about the applicant and its ownership, among other information. What other information should the Commission require from an applicant that seeks to modify a cable landing license by adding or removing a licensee, adding or removing a landing point, or adding, modifying, or removing a condition on a cable landing license? To the extent we adopt any new or modified information and certification requirements that we propose in this *Notice* with respect to applications for a new cable landing license, we propose to similarly apply those requirements to modification applications.⁴⁰⁵ We further propose to codify longstanding practice that applicants must demonstrate how grant of the modification application will serve the public interest, convenience, and necessity. We seek comment on these approaches.

155. Over the years, Commission staff have received questions as to whether a modification application must be filed for the construction or addition of new segments or branching units to FCC-licensed submarine cable systems, which may not always involve the addition of new landing points. We understand that many cable systems are constructed with branching units to allow new connections in the future. These connections are often to new landings or sometimes to other cable systems. We propose to adopt a specific rule prescribing that if a new connection to a branching unit is to be made after the Commission has issued a license, the licensee must file an application to modify the license before constructing, landing, and operating the new connection. We set forth two examples where a modification application would be required of a licensee under our proposed rule.

156. *Adding a Segment Connecting Two FCC-Licensed Cables.* In this example, there are two

⁴⁰³ See 47 U.S.C. § 34; 47 CFR § 1.767(a)(5) (“The applicant initially may file a general geographic description of the landing points; however, grant of the application will be conditioned on the Commission’s final approval of a more specific description of the landing points, including all information required by this paragraph, to be filed by the applicant no later than ninety (90) days prior to construction.”); 47 CFR § 1.767 (g)(8) (“Unless the licensee has notified the Commission in the application of the precise locations at which the cable will land, as required by paragraph (a)(5) of this section, the licensee shall notify the Commission no later than ninety (90) days prior to commencing construction at that landing location.”).

⁴⁰⁴ See 47 CFR § 1.767(a)(5), (g)(8), (m)(1)-(2).

⁴⁰⁵ See *supra* section III.B.1-7.

separately owned and FCC-licensed submarine cable systems that connect two separate points in the United States to two separate foreign countries. The licensees of the cable systems (Company A and Company B, respectively) both seek to install a new segment in the deep waters that will connect to each other's cable via a branching unit. There would be no new landing points in the United States, no new foreign landing points, and no change in the ownership of either cable. Company A would hold capacity, through an IRU, on Company B's cable to reach Company B's U.S. landing point (via the new segment), but would not have access to Company B's foreign landing point. Company B would not have access to Company A's U.S. or foreign landing points. Under our proposed rule, the licensees would be required to obtain prior approval for the new connection by such segment of the two separately owned and FCC-licensed submarine cable systems on the high seas by filing a modification application with the Commission.

157. *Adding a New Foreign Landing Point.* In this example, Company D is the licensee of an FCC-licensed submarine cable system that connects a U.S. landing point to a foreign landing point in Country D. A portion of the cable system is deployed in waters near another foreign country, Country C. Company C from Country C has constructed a cable landing station on its shores and deployed a submarine cable with the intent to connect its cable to Company D's cable system through a branching unit. Company D will not own any portion of Company C's cable system and will not use Company C's landing point in Country C. In turn, Company C will not own any portion of Company D's cable system, including the portion connecting a U.S. landing point to the landing point in Country D. Company C plans to purchase from Company D capacity on the portion of Company D's cable system from the new branching unit (i.e., located in the waters near Country C) to the landing point in Country D. Under our proposed rule, Company D, as the FCC licensee, would be required to obtain prior approval for the new connection of its cable to Company C's cable system by such branching unit by filing a modification application with the Commission.

158. *Assignment and Transfer of Control Applications.* We propose to amend section 1.767(a)(11) of the rules to incorporate changes consistent with the approach we propose in this *Notice*.⁴⁰⁶ The rules currently require, as a condition of a cable landing license, that the license and rights granted in the license shall not be transferred or assigned without prior approval by the Commission.⁴⁰⁷ Applicants seeking authority to assign or transfer control of an interest in a submarine cable system are required to file an application that contains information in accordance with section 1.767(a)(11) of the rules.⁴⁰⁸ As an initial matter, we propose to amend section 1.767(a)(11)(i) of the rules to clarify that applicants seeking to assign or transfer control of a cable landing license must include the percentage of voting and ownership

⁴⁰⁶ See *supra* section III.A.2.

⁴⁰⁷ See 47 CFR § 1.767(g)(6). A *pro forma* assignee or person or company that is the subject of a *pro forma* transfer of control of a cable landing license is not required to seek prior approval for the *pro forma* transaction to the extent the cable landing license was granted on or after March 15, 2002, or modified to incorporate section 1.767(g)(7) of the routine conditions. *Id.* § 1.767(g)(7); *Id.* § 1.767(g) (“Except as otherwise ordered by the Commission, the following rules apply to each licensee of a cable landing license granted on or after March 15, 2002 . . .”). A *pro forma* assignee or person or company that is the subject of a *pro forma* transfer of control must notify the Commission no later than thirty (30) days after the assignment or transfer of control is consummated. *Id.* § 1.767(g)(7).

⁴⁰⁸ See 47 CFR § 1.767(a)(11)(i) (“If applying for authority to assign or transfer control of an interest in a cable system, the applicant shall complete paragraphs (a)(1) through (a)(3) of this section for both the transferor/assignor and the transferee/assignee. Only the transferee/assignee needs to complete paragraphs (a)(8) through (a)(9) of this section. The applicant shall include both the pre-transaction and post-transaction ownership diagram of the licensee as required under paragraph (a)(8)(i) of this section. The applicant shall also include a narrative describing the means by which the transfer or assignment will take place. The applicant shall also specify, on a segment specific basis, the percentage of voting and ownership interests being transferred or assigned in the cable system, including in a U.S. cable landing station.”).

interests being assigned or transferred “including in the U.S. portion of the cable system, which includes all U.S. cable landing station(s).” Currently, section 1.767(a)(11)(i) refers more narrowly to “a U.S. cable landing station” by stating that applicants must provide, on a segment specific basis, “the percentage of voting and ownership interests being transferred or assigned in the cable system, including in a U.S. cable landing station.”⁴⁰⁹ We believe our proposed change to expressly state “including in *the U.S. portion of the cable system* (which includes all U.S. cable landing station(s))” (emphasis added) would improve the clarity of the rule and is also consistent with the approaches we propose in this *Notice*, including our proposed definition of a submarine cable system and our proposed amendments to the application requirements for new cable landing licenses.⁴¹⁰ Additionally, we propose to amend section 1.767(a)(11)(i) to codify the long-standing requirement that applicants must demonstrate that grant of the transaction will serve the public interest, convenience, and necessity. To the extent we adopt any new or modified information and certification requirements that we propose in this *Notice* with respect to applications for a new cable landing license, we propose to similarly apply those requirements to assignment and transfer of control applications.⁴¹¹ We seek comment on these approaches and whether we should adopt other changes to the rules to improve clarity or ensure consistency with our overall objectives in this proceeding.

159. *Pro Forma Assignment and Transfer of Control Post-Transaction Notifications.* We propose to amend the rules applicable to *pro forma* assignments and transfers of control of cable landing licenses by clarifying what information must be provided in such notifications. To improve the organization and clarity of the rules applicable to *pro forma* assignment and transfer of control notifications, we propose to create a new subsection that would address the specific requirements. As discussed in Section III.B.12, we propose to eliminate the distinction in section 1.767(g) that applies the routine conditions—including the *pro forma* condition under section 1.767(g)(7)—only “to each licensee of a cable landing license granted on or after March 15, 2002,”⁴¹² and to apply the routine conditions to all cable landing licensees.⁴¹³ Section 1.767(g)(7) of the rules requires, as a condition of a cable landing license, that “[a] *pro forma* assignee or person or company that is the subject of a *pro forma* transfer of control must notify the Commission no later than thirty (30) days after the assignment or transfer of control is consummated,” and such notification “must certify that the assignment or transfer of control was *pro forma*, as defined in § 63.24 of this chapter and, together with all previous *pro forma* transactions, does not result in a change of the licensee’s ultimate control.”⁴¹⁴ As part of our proposed

⁴⁰⁹ *Id.*

⁴¹⁰ *See supra* sections III.A.1, III.B.1.

⁴¹¹ *See supra* section III.B.1-7.

⁴¹² 47 CFR § 1.767(g) (“Routine conditions. Except as otherwise ordered by the Commission, the following rules apply to each licensee of a cable landing license granted on or after March 15, 2002 . . .”).

⁴¹³ *See infra* section III.B.12; 47 CFR § 1.767(g), (g)(6)-(7). In the *2001 Cable Report and Order*, the Commission determined that “[t]he rules we adopt today carve out a limited exception to this condition for *pro forma* transactions for all cable landing licenses that the Commission grants after the effective date of this Report and Order,” and “[f]or cable landing licenses granted prior to the effective date of this Report and Order, a licensee may file an application with the Commission seeking a modification of its license to incorporate this limited exception to the prior approval requirement currently set forth in the applicable license condition.” *2001 Cable Report and Order*, 16 FCC Rcd at 22200, paras. 62-63. As discussed below, we believe this distinction in section 1.767(g) between cable landing licenses granted prior to and on or after March 15, 2002 is no longer meaningful given that licenses granted prior to March 15, 2002, including those that have not been modified to incorporate the exception to section 1.767(g)(6) as applied to *pro forma* transactions, either have expired or are nearing the expiration of their 25-year term. Where a renewal of a cable landing license is granted, it is Commission practice to apply the routine conditions of section 1.767(g)(6) to the terms of the new license. *See infra* section III.B.12.

⁴¹⁴ 47 CFR § 1.767(g)(7); *see* 47 CFR § 63.24.

reorganization of the rules, we propose to move the text of section 1.767(g)(7) that specifically addresses the information requirements of *pro forma* assignment and transfer of control notifications into the new subsection.⁴¹⁵ With respect to section 1.767(g)(7), we propose to retain the outstanding text of the routine condition, while adding a statement that the *pro forma* assignment and transfer of control notifications must be filed in accordance with the requirements set forth in the new subsection applicable to *pro forma* transactions. We propose to incorporate into this new subsection the text of section 63.24(d), to which section 1.767(g)(7) currently refers, and further clarify references contained therein to other parts of the Commission's rules.⁴¹⁶

160. Upon receiving a *pro forma* assignment or transfer of control notification, Commission practice involves reviewing the notification for compliance with the rules, including whether it contains information required under section 1.767(a)(11)(i) and whether the assignment or transfer of control was in fact *pro forma*⁴¹⁷ and, accordingly, issuing an "Actions Taken" Public Notice. To reduce regulatory uncertainty, we propose to codify existing Commission practice by clarifying that the requirements under section 1.767(a)(11)(i) are not only applicable to substantial assignments and transfers of control, but also apply to *pro forma* assignment and transfer of control notifications.⁴¹⁸ Therefore, a *pro forma* assignee or person or company that is the subject of a *pro forma* transfer of control must also submit information consistent with such requirements.⁴¹⁹ Accordingly, we propose that the new aforementioned subsection will incorporate the requirements set out in section 1.767(a)(11)(i) by requiring that *pro forma* assignment and transfer of control notifications shall (1) provide information as required under section 1.767(a)(1) through (3) of the rules for both the assignor/transferor and the assignee/transferee; (2) provide

⁴¹⁵ Specifically, we propose to move to the new subsection the text of section 1.767(g)(7) that states, "[t]he notification must certify that the assignment or transfer of control was *pro forma*, as defined in § 63.24 of this chapter, and, together with all previous *pro forma* transactions, does not result in a change of the licensee's ultimate control. The licensee may file a single notification for an assignment or transfer of control of multiple licenses issued in the name of the licensee if each license is identified by the file number under which it was granted." 47 CFR § 1.767(g)(7).

⁴¹⁶ See 47 CFR § 63.24(d) ("*Pro forma assignments and transfers of control*. Transfers of control or assignments that do not result in a change in the actual controlling party are considered non-substantial or *pro forma*. Whether there has been a change in the actual controlling party must be determined on a case-by-case basis with reference to the factors listed in Note 1 to this paragraph (d). The types of transactions listed in Note 2 to this paragraph (d) shall be considered presumptively *pro forma* and prior approval from the Commission need not be sought."). By incorporating the text of section 63.24(d) into a new subsection under section 1.767(a), we propose to specify that "Note 1 to this paragraph (d)" and "Note 2 to this paragraph (d)" refer to those respective notes in section 63.24(d) of the rules. Our proposed approach is limited to the new subsection that we propose to adopt in section 1.767(a). We do not propose amendments to section 63.24(d) in this *Notice*. In the *Evolving Risks NPRM*, the Commission proposed, among other administrative changes, the conversion of certain Notes into respective subsections for consistency with the Office of Federal Register requirements, including Note 1 and Note 2 of section 63.24(d). See *Evolving Risks NPRM*, 38 FCC Rcd at 4417, para. 166; *id.* at 4440, Appx. A.

⁴¹⁷ 47 CFR § 1.767(a)(11)(i), (g)(7).

⁴¹⁸ See 47 CFR § 1.767(a)(11)(i).

⁴¹⁹ *Id.* ("If applying for authority to assign or transfer control of an interest in a cable system, the applicant shall complete paragraphs (a)(1) through (3) of this section for both the transferor/assignor and the transferee/assignee. Only the transferee/assignee needs to complete paragraphs (a)(8) and (9) of this section. The applicant shall include both the pre-transaction and post-transaction ownership diagram of the licensee as required under paragraph (a)(8)(i) of this section. The applicant shall also include a narrative describing the means by which the transfer or assignment will take place. The applicant shall also specify, on a segment specific basis, the percentage of voting and ownership interests being transferred or assigned in the cable system, including in a U.S. cable landing station. The Commission reserves the right to request additional information concerning the transaction to aid it in making its public interest determination.").

information as required under section 1.767(a)(8) and (9) of the rules for only the assignee/transferee; (3) include both the pre-transaction and post-transaction ownership diagram of the licensee as required under section 1.767(a)(8)(i) of the rules; (4) include a narrative describing the means by which the *pro forma* assignment or transfer of control occurred, and (5) specify, on a segment specific basis, the percentage of voting and ownership interests that were assigned or transferred in the cable system, including in *the U.S. portion of the cable system* (which includes all U.S. cable landing station(s)). The Commission reserves the right to request additional information concerning the transaction to aid it in making its public interest determination.⁴²⁰ Additionally, we propose to make administrative changes to section 1.767(a)(11) by changing “transferor/assignor” and “transferee/assignee” to instead reflect “assignor/transferor” and “assignee/transferee,” consistent with the overall structure of section 1.767(a)(11).⁴²¹ We tentatively find that these approaches are consistent with the Commission’s longstanding practice. We seek comment on these proposals and whether there are additional ways that we should clarify the rules applicable to *pro forma* assignment and transfer of control notifications.

161. *Requests for an STA.* To provide clarity in the rules and reduce regulatory uncertainty, we propose to adopt a framework for applicants requesting an STA to allow, at the applicant’s own risk, the construction, testing, or operation of a submarine cable. Generally, the Commission may receive requests for an STA from applicants: (1) seeking to commence construction of or commercial service on a cable system while the cable landing license application is pending Commission approval; (2) seeking to continue operating a cable system following the expiration of a license and pending the filing of an application to renew or extend the cable landing license; (3) who are operating a cable system without first obtaining a license; (4) that consummated a transaction without prior Commission consent; or (5) seeking to provide emergency service arising from a need occasioned by conditions unforeseen by, and beyond the control of, the licensee(s), among other examples. It is the Commission’s current practice to place a request for an STA on “Accepted for Filing” public notice and to send a courtesy copy of such public notice to the Committee for STA requests where the applicant has reportable foreign ownership. The Commission may consult with the Committee on a particular request for an STA, where appropriate, prior to releasing the public notice. Any grant of a request for an STA does not prejudice action by the Commission on any underlying application, including enforcement action, as is set forth in public notices issued in association with the request.⁴²²

162. We propose to adopt rules based on our current practice above. We propose to require that any person or entity seeking an STA with respect to the construction, testing, or operation of a submarine cable must expeditiously file all requisite applications related to the request for an STA—including any application(s) for a cable landing license or modification, assignment, transfer of control, or renewal of such license—before or immediately upon submitting the request for an STA. We propose to require that applicants requesting an STA must identify the file number(s) of any pending application(s) associated with the request for an STA. We seek comment on whether the Commission should impose any other requirements related to filing a request for an STA.

163. We propose to adopt rules requiring that applicants requesting an STA related to the

⁴²⁰ *See id.*

⁴²¹ *See id.*

⁴²² *See, e.g.,* File No. SCL-STA-20220318-00011, *Non-Streamlined Submarine Cable Landing License Applications Accepted for Filing*, Public Notice, Report No. SCL-00371NS (IB Apr. 22, 2022) (releasing an “Accepted for Filing” public notice and stating that the applicant “acknowledges that grant of such STA will not prejudice action by the Commission on the underlying application, and that the STA is subject to cancellation or modification upon notice without a hearing”); File No. SCL-STA-20220318-00011, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00374, 37 FCC Rcd 6065 (IB 2022) (granting the request for an STA and stating that the applicant “acknowledges that grant of the STA will not prejudice action by the Commission on the underlying application and that the STA is subject to cancellation or modification upon notice without a hearing.”).

construction, testing, or operation of a submarine cable must provide the following information in its request: (1) applicant and contact information as required under section 1.767(a)(1) through (3) of the rules;⁴²³ (2) a description of the request for an STA, the reason why applicants seek an STA, and the justification for such request; (3) the name of the cable system for which applicants request an STA; (4) the name(s) and citizenship(s) or place(s) of organization of each applicant requesting an STA with respect to the submarine cable, including the licensees that jointly hold a cable landing license; (5) a statement as to whether or not any individual or entity directly or indirectly owns 5% or more of the equity interests and/or voting interests, or a controlling interest, of any applicant requesting an STA (or 10% or more to the extent we retain the current ownership reporting threshold); (6) the type of request for an STA, such as a new request for an STA, a request to extend or renew an STA, or other type; (7) whether or not the request for an STA is associated with an application(s) pending with the Commission, and if so, identification of the related file number(s); (8) the date by which applicants seek grant of the request for an STA; (9) the duration for which applicants seek an STA.⁴²⁴

164. In addition to these proposed requirements, we seek comment on whether the Commission should require applicants requesting an STA to provide any information required by section 63.25 of the Commission's rules.⁴²⁵ While section 63.25 addresses requirements relating to temporary or emergency service by international carriers,⁴²⁶ it has been the Commission's long-standing practice to rely on section 63.25 to review and act on requests for STAs involving submarine cables.⁴²⁷ We seek comment on whether we should continue to rely on section 63.25 instead of adopting new rules specifically for submarine cables. To the extent we integrate the provisions of section 63.25 into our proposed framework, should we require applicants to comply with the requirements set out in section 63.25 to the extent they are applicable? We seek comment on whether certain requirements in section 63.25 are inapplicable in the submarine cable context.⁴²⁸

165. We also propose to require applicants requesting an STA related to the construction, testing, or operation of a submarine cable to provide certain certifications in such request. Specifically, we propose to adopt in our rules the following certification requirements: (1) applicants must provide the same certifications required in an application for a new cable landing license, including the certification

⁴²³ See 47 CFR § 1.767(a)(1)-(3).

⁴²⁴ See para. 163.

⁴²⁵ 47 CFR § 63.25.

⁴²⁶ See *id.*

⁴²⁷ Section 63.25(a)(1) defines "[t]emporary service" as "a period not exceeding 6 months." 47 CFR § 63.25(a)(1). Section 63.25(a)(2) defines "[e]mergency service" as "service for which there is an immediate need occasioned by conditions unforeseen by, and beyond the control of, the carrier." *Id.* § 63.25(a)(2). Section 63.25(c) provides that an application may be filed to request continuing authority to provide temporary or emergency service. *Id.* § 63.25(c).

⁴²⁸ See, e.g., 47 CFR § 63.25(c) (providing that any carrier may request continuing authority "to provide temporary or emergency service by the construction or installation of facilities where the estimated construction, installation, and acquisition costs do not exceed \$35,000 or an annual rental of not more than \$7,000 provided that such project does not involve a major action under the Commission's environmental rules"); *id.* (requiring that any carrier to which continuing authority has been granted must file, following the end of each 6-month period covered by such authority, certain information with the Commission, including "[t]he type of facility constructed, installed, or leased," "[t]he route kilometers thereof (excluding leased facilities)," "[t]he terminal communities served and the airline kilometers between terminal communities in the proposed project," "[t]he cost thereof, including construction, installation, or lease," and "[w]here appropriate, the name of the lessor company, and the dates of commencement and termination of the lease").

required in section 63.18(o) of the rules,⁴²⁹ as well as any new certification requirements adopted in this proceeding,⁴³⁰ (2) applicants must acknowledge that any grant of the request for an STA does not prejudice action by the Commission on any underlying application(s); (3) applicants must acknowledge that any grant of the request for an STA is subject to revocation/cancellation or modification by the Commission on its own motion without a hearing; and (4) applicants must acknowledge that any grant of the request for an STA does not preclude enforcement action for non-compliance with the Cable Landing License Act, the Communications Act, or the Commission's rules. In addition, we propose to codify our long-standing practice of requiring applicants requesting an STA to demonstrate that grant of such request would serve the public interest, convenience, and necessity. We seek comment on these proposed requirements. Should we require applicants requesting an STA to provide additional information or certifications for the Commission's assessment?

166. *Amendments.* We propose to codify our longstanding practice to set forth in the rules that any submarine cable application may be amended as a matter of right prior to the date of any final action taken by the Commission or designation for hearing. We also propose to require that amendments to applications shall be signed and submitted in the same manner as was the original application. Further, we propose to require that if a petition to deny or other formal objection has been filed in response to the application, the amendment shall be served on the parties.

12. Routine Conditions Applicable to All Licensees

167. Below, we propose to amend the routine conditions that are attached to cable landing licenses under section 1.767(g) of the rules,⁴³¹ which provide a set of public, standard requirements and procedures to ensure that all licensees consistently certify that they will comply with the conditions imposed on the license following grant of an application. The routine conditions provide the Commission with important information about licensee status and updated points of contact for the submarine cables licensed by the Commission, and other updated information for purposes of assessing any national security, law enforcement, and other concerns.

168. *Eliminate 2002 Distinction.* We propose to eliminate the distinction in section 1.767(g) that applies the routine conditions only “to each licensee of a cable landing license granted on or after March 15, 2002.”⁴³² We believe that this distinction is no longer meaningful given that cable landing licenses granted prior to March 15, 2002 either have expired or are nearing the expiration of their 25-year term. Further, to the extent we grant applications to renew the license of a submarine cable, our current practice is to issue a new cable landing license based on the rules that were effective as of March 15, 2002, instead of renewing the terms of the license that were in effect prior to this date.⁴³³ Therefore, we

⁴²⁹ See 47 CFR § 1.767(a)(8)(i), (a)(11)(i); 47 CFR § 63.18(o) (requiring “[a] certification pursuant to §§ 1.2001 through 1.2003 of this chapter that no party to the application is subject to a denial of Federal benefits pursuant to Section 5301 of the Anti-Drug Abuse Act of 1988. See 21 U.S.C. 853a.”); see 47 CFR § 1.2002(b) (explaining the meaning of “party to the application” for purposes of this section); *Id.* § 1.2002(c) (“The provisions of paragraphs (a) and (b) of this section are not applicable to the Amateur Radio Service, the Citizens Band Radio Service, the Radio Control Radio Service, to users in the Public Mobile Services and the Private Radio Services that are not individually licensed by the Commission, or to Federal, State or local governmental entities or subdivisions thereof.”).

⁴³⁰ See *supra* sections III.B.1-7.

⁴³¹ 47 CFR § 1.767(g) (“Routine conditions”).

⁴³² *Id.* (“Routine conditions. Except as otherwise ordered by the Commission, the following rules apply to each licensee of a cable landing license granted on or after March 15, 2002 . . .”).

⁴³³ See, e.g., File No. SCL-LIC-20230222-00005, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00435, DA No. 23-945, 38 FCC Rcd 9350 (OIA 2023); File No. SCL-LIC-20180702-00019,

propose to amend section 1.767(g) by eliminating the text “granted on or after March 15, 2002” and to apply the routine conditions, as they may be amended in this proceeding, “to each licensee of a cable landing license” irrespective of the date of grant. We seek comment on this proposal.

169. *Points of Contact.* We propose to amend our rules by adding a new routine condition requiring cable landing licensees to notify the Commission of any changes to their contact information within thirty (30) days of such change, consistent with the information requirements on which we seek comment in this proceeding.⁴³⁴ It is essential for the Commission to maintain updated contact information for the appropriate points of contact to whom any matters concerning a licensed submarine cable may be addressed. Specifically, we propose that cable landing licensees must inform the Commission of any changes to the contact information provided in their most recent submarine cable application—including the application for a new cable landing license or any modification, assignment, transfer of control, or renewal of the license—and the most recent three-year periodic report. We seek comment on this proposal.

170. *Notification of Changes to the Name of the Licensee or Submarine Cable System.* We propose to amend our rules by adding a new routine condition requiring licensees to notify the Commission of any changes to the name of the licensee (including the name under which it is doing business) or the name of its submarine cable within thirty (30) days of such change. If there are multiple licensees of the submarine cable, we propose that the lead licensee must file the notification with the Commission within the 30-day timeframe. It is important for the Commission to maintain updated information that is critical to identifying the licensees and the licensed submarine cable system. We seek comment on this proposal.

171. *Covered List Equipment.* We propose to amend our rules by adding a new routine condition prohibiting licensees from using, for the relevant submarine cable system, equipment or services identified on the “Covered List.” We also propose that this prohibition would apply to covered equipment or services purchased, rented, leased, or otherwise obtained on or after August 14, 2018 (in the case of Huawei, ZTE, Hikvision, Dahua, and Hytera), or on or after 60 days after the date that any equipment or service is placed on the Covered List.

172. *Commencement of Service Requirement.* Currently, an entity can obtain a cable landing license and then not construct, land, or operate the cable pursuant to the license. This may occur because business plans change or the entity goes out of business, and it has resulted in the retention of cable landing licenses in our records where the license likely was not used to construct or operate the cable. Section 1.767(g)(15) of the rules requires that “the licensee must notify the Commission within thirty (30) of the date the cable is placed into service.”⁴³⁵ In addition, section 1.767(g)(15) sets forth that “[t]he cable landing license shall expire twenty-five (25) years from the in-service date, unless renewed or extended upon proper application.”⁴³⁶ However, there currently is no rule requiring licensees to notify the Commission that they have not utilized the licenses and, as a result, there are a few licenses associated with submarine cable systems that likely were not built, but are reflected as current licenses in ICFS.⁴³⁷

Actions Taken Under Cable Landing License Act, Public Notice, Report No. SCL-00301, DA No. 21-113, 36 FCC Rcd 1363 (IB 2021); File No. SCL-LIC-20190326-00009, *Actions Taken Under Cable Landing License Act*, Public Notice, Report No. SCL-00274, DA No. 20-758, 35 FCC Rcd 7146 (IB 2020).

⁴³⁴ See *supra* section III.B.11.

⁴³⁵ 47 CFR § 1.767(g)(15).

⁴³⁶ *Id.*

⁴³⁷ See, e.g., *HAWAII EXPRESS COMMUNICATIONS, L.L.C.; Application for a license to land and operate a submarine fiber optic cable extending between the U.S. Mainland and the State of Hawaii*, File Nos. SCL-95-010,

We note that the Commission has requirements for other licensees of regulated services where the licensee must begin providing service within a set period of time or its license is cancelled.⁴³⁸ We propose to adopt similar requirements for cable landing licensees. This proposed requirement would provide the Commission with more accurate information as to which license grants were not utilized to construct and operate submarine cables and improve the administration of the Commission's rules.

173. We tentatively conclude that cable landing licensees should retain their license only if they construct and operate the submarine cable under that license. Consequently, we propose to adopt a rule requiring a cable landing licensee to commence commercial service on the cable under its license within three years following the grant. We propose that if a cable landing licensee seeks a request for a waiver of the three-year time period, the licensee must identify the projected in-service date and reasons for the delay and demonstrate good cause for grant of a waiver.⁴³⁹ We also seek comment on whether the Commission should instead allow a licensee to request an extension of the three-year time period rather than requesting a waiver. We propose that if a cable landing licensee does not notify the Commission of the commencement of service or file a request for a waiver within three years following the grant of the license, such failure to meet this condition will result in automatic cancellation of the license. Other Commission rules have similar automatic cancellations.⁴⁴⁰ We seek comment on this proposal, including whether three years after license grant is sufficient time to commence commercial operation or if another time period may be appropriate. The Commission's records in ICFS indicate that most licensees of operating submarine cables commenced service within this timeframe.

13. Foreign Carrier Affiliation Notifications

174. We propose to amend section 1.768(e)(4) of the rules to require that licensees must include in a notification of a foreign carrier affiliation voting interests, in addition to the equity interests, and a diagram of individuals or entities with a 10% or greater direct or indirect ownership in the licensee. Currently, a licensee is required to include, among other things, in a foreign carrier affiliation notification "[t]he name, address, citizenship, and principal business of any person or entity that directly or indirectly owns at least ten percent (10%) of the equity of the licensee, and the percentage of equity owned by each of those entities (to the nearest one percent (1%))."⁴⁴¹ We propose revisions to section 1.768(e)(4) that

SCL-LIC-19951010-00036, Cable Landing License, 11 FCC Rcd 8707 (1996); *GST INTERNATIONAL, INC.*; *Application for a license to land and operate a submarine fiber optic cable extending between the United States and Mexico, Guatemala, Costa Rica, and Panama*, File Nos. SCL-96-006, SCL-LIC-19961121-00589, Cable Landing License, 12 FCC Rcd 5911 (1997); *Project Oxygen (USA) LLC*; *Application for a license to land and operate in the United States a private fiber optic submarine cable system extending between the United States and various overseas points*, File No. SCL-LIC-19981014-00020, Cable Landing License, 14 FCC Rcd 3924 (1999).

⁴³⁸ 47 CFR § 1.946(c) (requiring, with regard to a licensee in the Wireless Radio Services, "[i]f a licensee fails to commence service or operations by the expiration of its construction period or to meet its coverage or substantial service obligations by the expiration of its coverage period, its authorization terminates automatically (in whole or in part as set forth in the service rules), without specific Commission action, on the date the construction or coverage period expires"); *see also* 47 CFR § 1.955(a)(2) ("Authorizations automatically terminate (in whole or in part as set forth in the service rules), without specific Commission action, if the licensee fails to meet applicable construction or coverage requirements.").

⁴³⁹ 47 CFR § 1.3. Under the "good cause" standard, waiver is appropriate only if both (1) special circumstances warrant a deviation from the general rule, and (2) such deviation better serves the public interest. *NetworkIP, LLC v. FCC*, 548 F.3d 116, 125-128 (D.C. Cir. 2008) (citing *Northeast Cellular Telephone Co.*, 897 F.2d 1164, 1166 (1990)); *see also WAIT Radio v. FCC*, 418 F.2d 1153, 1157 (D.C. Cir. 1969) ("An applicant for waiver faces a high hurdle even at the starting gate.").

⁴⁴⁰ *See* 47 CFR §§ 1.946(c), 1.955(a)(2), 30.104(e), 90.757(a), 90.767(c), 90.769(c), 73.3598(e).

⁴⁴¹ 47 CFR § 1.768(e)(4).

would be consistent with the ownership reporting requirements of other submarine cable applications and notifications.⁴⁴² Specifically, we propose to amend section 1.768(e)(4) to require that licensees must provide the name, address, citizenship, and principal businesses of any individual or entity that directly or indirectly owns 10% or more of the equity interests and/or voting interests, or a controlling interest, of the licensee, and the percentage of equity and/or voting interest owned by each of those entities (to the nearest one percent). Where no individual or entity directly or indirectly owns ten percent or more of the equity interests and/or voting interests, or a controlling interest, of the licensee, we propose that the license must provide a statement to that effect. We further propose to amend section 1.768(e)(4) by integrating the provisions set out in section 63.18(h)(1)(i) and (ii) of the rules, which address calculation of indirect equity interests and voting interests, respectively, and are applicable to other submarine cable applications and notifications.⁴⁴³

175. Additionally, we propose to amend section 1.768(e) by requiring that licensees must provide an ownership diagram that illustrates the licensee's vertical ownership structure, including individuals or entities with a 10% or greater direct or indirect ownership (equity and voting) interests, or a controlling interest, in the licensee. To the extent the Commission adopts a 5% ownership reporting threshold as a requirement of applications for a cable landing license and modification, assignment, transfer of control, and renewal of the license, as discussed above,⁴⁴⁴ we propose that the Commission amend section 1.768(e)(4) by similarly adopting a 5% ownership reporting threshold and thus harmonize the requirements. We seek comment on this proposal.

14. Other Changes to the Rules

176. We propose to amend section 1.767 of the rules by eliminating certain provisions that we tentatively conclude are no longer applicable or consistent with the Commission's current rules or practice. Specifically, we propose to eliminate section 1.767(c), which states that "[o]riginal files relating to submarine cable landing licenses and applications for licenses since June 30, 1934, are kept by the Commission. Such applications for licenses (including all documents and exhibits filed with and made a part thereof, with the exception of any maps showing the exact location of the submarine cable or cables to be licensed) and the licenses issued pursuant thereto, with the exception of such maps, shall, unless otherwise ordered by the Commission, be open to public inspection in the offices of the Commission in Washington, D.C."⁴⁴⁵ Additionally, we propose to eliminate section 1.767(d), which states that "[o]riginal files relating to licenses and applications for licenses for the landing operation of cables prior to June 30, 1934, were kept by the Department of State, and such files prior to 1930 have been transferred to the Executive and Foreign Affairs Branch of the General Records Office of the National Archives. Requests for inspection of these files should, however, be addressed to the Federal Communications Commission, Washington, D.C., 20554; and the Commission will obtain such files for a temporary period in order to permit inspection at the offices of the Commission."⁴⁴⁶ We note that the requirements set forth in section 1.767(c) and (d) are not required under the Cable Landing License Act or section 5 of Executive Order 10530.⁴⁴⁷ Furthermore, the Commission does not implement these record-keeping practices with respect to other Commission records. We tentatively find that the Commission should maintain consistent record-keeping practices with respect to its records, including records relating to cable landing licenses and applications for cable landing licenses. In addition, we tentatively conclude that the

⁴⁴² See 47 CFR § 1.767(a)(8)(i), (a)(11)(i); *id.* § 63.18(h).

⁴⁴³ See 47 CFR § 63.18(h)(1)(i)-(ii); *id.* § 1.767(a)(8)(i), (a)(11)(i).

⁴⁴⁴ See *supra* section III.B.3.

⁴⁴⁵ 47 CFR § 1.767(c).

⁴⁴⁶ 47 CFR § 1.767(d).

⁴⁴⁷ See *generally* Cable Landing License Act; Executive Order 10530, § 5(a).

requirements under section 1.767(c) and (d) are inconsistent with the electronic filing requirements set out in section 1.767(n)(1) of the rules, which states that, “[w]ith the exception of submarine cable outage reports, and subject to the availability of electronic forms, all applications and notifications described in this section must be filed electronically through the International Communications Filing System (ICFS).”⁴⁴⁸ We seek comment on these proposals.

177. We also propose to eliminate section 1.767(f), which requires that “[a]pplicants shall disclose to any interested member of the public, upon written request, accurate information concerning the location and timing for the construction of a submarine cable system authorized under this section. This disclosure shall be made within 30 days of receipt of the request.”⁴⁴⁹ We tentatively find that this requirement under section 1.767(f) is inconsistent with section 0.457(c)(1)(i) of the rules, which provides that “[m]aps showing the exact location of submarine cables” should be withheld from public inspection.⁴⁵⁰ Further, this requirement is inconsistent with our proposal in this *Notice* to provide confidential treatment for the exact addresses and specific geographic coordinates of cable landing stations, beach manholes, and other sensitive locations associated with a submarine cable system.⁴⁵¹ We seek comment on this proposal.

15. Other Administrative Modifications

178. *New Subpart FF.* We propose to reorganize the submarine cable rules codified in sections 1.767 and 1.768 by relocating those rules from subpart E of Part 1 to a new subpart in Part 1. Specifically, we propose to redesignate those rules under a new subpart FF. Currently, subpart E addresses “Complaints, Applications, Tariffs, and Reports Involving Common Carriers” and the submarine cables are identified in that subpart as a specific type of application under Title II of the Communications Act.⁴⁵² As discussed above, in light of changes in the submarine cable industry, we believe this designation of submarine cable applications is no longer applicable. Additionally, we tentatively conclude that reorganizing the submarine cable rules into a separate subpart will provide clarity for applicants seeking to file any type of submarine application with the Commission. To the extent the Commission amends any rule provisions currently set forth under section 1.767 and 1.768, we propose to codify such changes under subpart FF. Further, we propose to improve the clarity and structure of section 1.767 by reorganizing existing rules and implementing any new rules adopted in this proceeding into specific subsections by topic.

179. *Other Administrative Changes.* Throughout Appendix A, we have proposed various ministerial, non-substantive changes not individually discussed in this Notice. These changes include, among other things, the conversion of Notes into respective subsections for consistency with the Office of Federal Register requirements. We seek comment on whether to require applicants file a copy of the application with Cybersecurity and Infrastructure Security Agency (CISA), DHS. We also seek comment on whether we should add certain existing requirements in the submarine cable subpart rather than a cross reference to other rules.⁴⁵³

C. Three-Year Periodic Reporting Requirement

180. Below, we discuss the information we propose to require all licensees to file in the three-

⁴⁴⁸ 47 CFR § 1.767(n)(1).

⁴⁴⁹ 47 CFR § 1.767(f).

⁴⁵⁰ 47 CFR § 0.457(c)(1)(i).

⁴⁵¹ See *supra* section III.B.4.

⁴⁵² See 47 CFR, Part 1, Subpart E.

⁴⁵³ See *e.g.*, 47 CFR § 1.767(a)(8)(1) (cross references to 47 CFR §§ 63.18(h), (o), (p), and (q)).

year periodic reporting requirement. As discussed in section III.A.1. of this *Notice*, we propose to codify, as a routine condition a requirement that all cable landing licensees must provide to the Commission updated information about their ownership, points of contact, description of the submarine cable system, and other critical information every three years.⁴⁵⁴ Specifically, we propose that all licensees must provide in their periodic reports updated information and certifications identical to what is required in an application, including new information and certification requirements that we may adopt in this proceeding.⁴⁵⁵ We also seek comment on whether to require additional information as part of the periodic reporting requirement. We seek comment on the nature and extent of the potential burdens of this proposed reporting requirement.

181. *Reports Must Provide Current Information.* We generally propose to require cable landing licensees to provide in the periodic reports updates every three years. The information will be updates from the time they submitted their application for the cable landing license or any modification, assignment, transfer of control, or renewal of the license or the last periodic report, whichever is most recent, consistent with the application requirements.⁴⁵⁶ We propose that these periodic reports must contain information that is current as of thirty (30) days prior to the date of the submission. To the extent that certain information has not changed since last filed in an application for the cable landing license or the modification, substantial assignment, transfer of control, renewal of the license or last periodic report, should we allow the cable landing licensee to include a certification attesting that its current information is identical to the information contained in such application?

182. *Submarine Cable Infrastructure Information.* We propose to require licensees to provide additional detailed information concerning the submarine cable infrastructure in their periodic reports. We propose among other things that licensees must provide updated submarine cable system information including the length of the cable by segment and in total, the location of branching units, the location, address, and county or county equivalent of U.S. and non-U.S. cable landing points, the number of optical fiber pairs in the cable, and the design capacity of the system. We also propose to modify requirement for applicants and licensees to provide the geographic coordinates of cable landing stations as well as beach manholes, to the extent they differ from cable landing station coordinates. Additional information regarding this requirement is described in section III.B.4. above.⁴⁵⁷

183. *Current and Future Service Offerings.* We propose to require licensees to submit as part of the periodic report information about the capacity services they currently offer or plan to offer through the submarine cable system. The service includes the capacity it currently owns, the amount of capacity it intends to sell and the capacity management services. We also propose to require applicants, licensees, transferees, and assignees (as appropriate) to disclose current and expected future service offerings as part of their applications for modifications, transfers of control, and assignments of submarine cable landing licenses, and to institute such a requirement for licensees in renewals of submarine cable landing licenses. Additional information regarding this requirement is described in section III.B.5. above.⁴⁵⁸

184. *Regulatory Compliance Certifications.* We propose to require cable landing licensees to certify in the report whether or not they are in compliance with the Commission's rules and regulations,

⁴⁵⁴ As needed, we propose that Commission staff may require licensees to submit information required as part of the periodic review filing prior to the three-year reporting deadline.

⁴⁵⁵ See *supra* section III.B; see *infra* Appx. A.

⁴⁵⁶ See *supra* section III.A.6.

⁴⁵⁷ See *supra* section III.B.7.

⁴⁵⁸ See *supra* section III.B.7.

the Communications Act, and other laws as described in section III.B.6.⁴⁵⁹ Specifically, we propose to require each licensee to certify in its report whether or not the licensee has violated the Cable Landing License Act of 1921, the Communications Act of 1934, or Commission rules, including making false statements or misrepresentations to the Commission; whether the applicant has been convicted of a felony; and whether there is an adjudicated determination that the applicant has violated U.S. antitrust or other competition laws, has engaged in fraudulent conduct before another government agency, or has engaged in other non-FCC misconduct the Commission has found to be relevant in assessing the character qualifications of a licensee or authorization holder.⁴⁶⁰ We also seek comment on whether the Commission should require cable landing licensees to disclose any pending FCC investigations, including any pending Notice of Apparent Liability, and any adjudicated findings of non-FCC misconduct. In addition, we seek comment on whether the Commission should require cable landing licensees to disclose any violations of the Communications Act, Commission rules, or U.S. antitrust or other competition law, or any other non-FCC misconduct only where there has been adjudication or notification of a violation by an agency or court.

185. *Cybersecurity Certifications.* We propose to require cable landing licensees to make the cybersecurity certifications described in section III.B.6. above.⁴⁶¹ Among other things, we propose that licensees certify in the report that they have created, updated, and implemented cybersecurity risk management plans. We also propose to require these applicants and licensees to certify that they take reasonable measures to protect the confidentiality, integrity, and availability of their systems and services that could affect their provision of communications services.⁴⁶²

186. *“Covered List” Certification.* We propose to require cable landing licensees to make the “covered list” certifications described in section III.B.6. above. We propose to require that licensees, in their periodic reports, certify that they have not purchased and/or used, and will not purchase and/or use, equipment or services produced or provided by entities (and their subsidiaries and affiliates) identified on the Commission’s “Covered List” deemed pursuant to the Secure and Trusted Communications Networks Act⁴⁶³ to pose an unacceptable risk to the national security of the United States or the security and safety of United States persons.⁴⁶⁴ We propose that this certification would apply to covered equipment or services purchased, rented, leased, or otherwise obtained on or after August 14, 2018 (in the case of Huawei, ZTE, Hikvision, Dahua, and Hytera), or on or after 60 days after the date that any equipment or service is placed on the Covered List.⁴⁶⁵ This periodic reporting certification ensures licensees continue to comply with the rule and the licensees’ routine condition that protects against national security and law enforcement risks.

⁴⁵⁹ See *supra* section III.B.6.

⁴⁶⁰ See *supra* section III.B.6.

⁴⁶¹ See *supra* section III.B.6.

⁴⁶² See *supra* section III.B.6.

⁴⁶³ Pursuant to sections 2(a) and (d) of the Secure and Trusted Communications Networks Act of 2019, and sections 1.50002 and 1.50003 of the Commission’s rules, the Federal Communications Commission’s Public Safety and Homeland Security Bureau (PSHSB) publishes a list of communications equipment and services that have been determined by one of the sources specified in that statute to pose an unacceptable risk to the national security of the United States or the security and safety of United States persons (“covered” equipment). Secure and Trusted Communications Networks Act of 2019, Pub. L. No. 116-124, 133 Stat. 158 (2020) (codified as amended at 47 U.S.C. §§ 1601-1609) (Secure Networks Act); 47 CFR §§ 1.50002, 1.50003.

⁴⁶⁴ See 47 U.S.C. §§ 1601–1609; 47 CFR § 1.50000 *et seq.*; see also *List of Covered Equipment and Services*.

⁴⁶⁵ See *Supply Chain Second Report and Order*, 35 FCC Rcd at 14334, para. 116 (*Supply Chain Second Report and Order*).

187. *Foreign-Owned MNSPs.* We propose to require cable landing licensees, with or without reportable foreign ownership, to report whether or not they use and/or will use foreign-owned MNSPs in the operation of the submarine cable, as described in section III.B.7.⁴⁶⁶

188. *Licensee Information and Points of Contact.* We propose to require cable landing licensees to include in their periodic reports updated information concerning: (1) the name, address, telephone number, and e-mail address of the licensee, and (2) the name, title, address, telephone number, e-mail address, of the officer and any other contact point, such as legal counsel, to whom correspondence concerning the cable landing license is to be addressed.⁴⁶⁷ We further propose to require cable landing licensees to provide any updated information concerning the Government, State, or Territory under the laws of which the licensee is organized.

189. In addition to the proposals above, we seek comment on whether to require other information as part of the periodic reporting requirement. We also seek comment on the nature and extent of the potential burdens of this proposed reporting requirement.

190. *Ownership of the Submarine Cable System.* We seek comment on whether, as part of the periodic reporting requirement, the cable landing licensee should provide information identifying any individuals or entities that hold an ownership interest in the submarine cable system that does not meet the threshold eligibility requirements requiring them to be licensees of the cable, including the proposed eligibility requirements on which we seek comment in this proceeding. To the extent we require this information, should we also require the cable landing licensee to provide additional information about those other owners of the submarine cable, such as (1) their citizenship(s) and place(s) of organization and (2) identification of any individuals and entities that hold a certain threshold of direct and/or indirect equity and/or voting interests (e.g., 10% or greater), or a controlling interest, in those other owners of the submarine cable? Would information concerning other owners of the submarine cable system that are not licensees better ensure that the Commission can more fully account for evolving national security, law enforcement, foreign policy, and/or trade policy risks to submarine cable infrastructure? Should the criteria for identification of any individuals and entities that hold a certain threshold of direct and/or indirect equity and/or voting interests in those other owners of the submarine cable be set at 5% or greater instead? Should the Commission inquire about U.S. citizens' other non-U.S. citizenships, as in other Commission proceedings?⁴⁶⁸

191. *Ownership of Licensees.* We seek comment on whether the cable landing licensee should provide updated ownership information. For example, if the Commission adopts a 5% reportable ownership threshold, licensees would be required to provide updated ownership as required by the rules.⁴⁶⁹ We seek comment on whether an ongoing reporting requirement every three years should be broader and include additional information about ownership, control, and/or influence by foreign governments or foreign state-owned entities. If so, how should the Commission define "influence"?

192. *Other Information.* We seek comment on what other information we should require generally in the periodic reports so that we can address evolving national security, law enforcement, foreign policy, and/or trade policy risks. We seek comment on the types of ongoing information that the Commission should refer to the Executive Branch agencies for review. For example, should the Commission require cable landing licensees to periodically notify the Commission of any criminal

⁴⁶⁶ See *supra* section III.B.7.

⁴⁶⁷ 47 CFR 1.767(a)(1)-(3); see *supra* section III.B.11-12.

⁴⁶⁸ See *Evolving Risks NPRM* at 4361, para. 20 n.79-80.

⁴⁶⁹ See *supra* section III.B.3.

convictions involving the licensee? We note that a similar requirement applies to broadcast licensees.⁴⁷⁰

193. *Application Fees.* We seek comment on whether to require cable landing licensees to pay a fee when submitting the three-year periodic reports that we propose in this *Notice*.⁴⁷¹ Section 8(a) of the Communications Act states that “[t]he Commission shall assess and collect application fees at such rates as the Commission shall establish in a schedule of application fees to recover the costs of the Commission to process applications.”⁴⁷² The Commission has adopted a schedule of fees based on the cost of processing applications, with cost determined based on direct labor costs.⁴⁷³ The Commission uses time and staff compensation estimates to establish the direct labor costs of application fees, which are, in turn, based on applications processed by Commission staff found to be typical in terms of the amount of time spent on processing each type of application. The Commission has broadly construed the term “applications” to apply to a wide range of submissions for which filing fees are required. For example, we note that the Commission applies an application fee for the Biennial Ownership Report as applied to

⁴⁷⁰ See 47 CFR § 1.65(c) (“All broadcast permittees and licensees must report annually to the Commission any adverse finding or adverse final action taken by any court or administrative body that involves conduct bearing on the permittee’s or licensee’s character qualifications and that would be reportable in connection with an application for renewal as reflected in the renewal form”); see *Policy Regarding Character Qualifications in Broadcast Licensing, Amendment of Part 1, the Rules of Practice and Procedure, Relating to Written Responses to Commission Inquiries and the Making of Misrepresentations to the Commission by Applicants, Permittees, and Licensees, and the Report of Information Regarding Character Qualifications*, MD Docket No. 81-500, Policy Statement and Order, 5 FCC Rcd 3252, para. 4 (1990) (“[E]vidence of any conviction for misconduct constituting a felony will be relevant to our evaluation of an applicant’s or licensee’s character.”).

⁴⁷¹ See *supra* section III.A.2.

⁴⁷² The Commission has the authority to assess application fees under Section 8 of the Communications Act and has assessed application fees since 1986. Consolidated Omnibus Budget Reconciliation Act of 1985, Pub. L. No. 99-272, §§ 5002(e), (f), 100 Stat. 82, 118-121 (1986). In 2018, Congress revised the Commission’s application fee authority by amending section 8 and adding section 9A to the Communications Act. Repack Airwaves Yielding Better Access for Users of Modern Services Act of 2018 (RAY BAUM’S Act), Consolidated Appropriations Act, 2018, Pub. L. No. 115-141, 132 Stat. 1084, Division P, Title I, § 103 (2018). In doing so, Congress modified section 8 of the Communications Act to change the application fee program from a statutory schedule of application fees to a requirement that the Commission update and amend the existing schedule of application fees by rule to recover the costs of the Commission to process applications. Section 8(c) of the Act also requires the Commission to, by rule, amend the application fee schedule if the Commission determines that the schedule requires amendment to ensure that: (1) such fees reflect increases or decreases in the costs of processing applications at the Commission or (2) such schedule reflects the consolidation or addition of new categories of applications. In order to implement the RAY BAUM’S Act, the Commission sought comment on and adopted a new streamlined schedule of application fees that aligns with the types of applications received by the Commission in 2020. *Amendment of the Schedule of Application Fees Set Forth in Sections 1.1102 through 1.1109 of the Commission’s Rules*, Notice of Proposed Rulemaking, 36 FCC Rcd 1618 (2020) (*2020 Application Fee Notice of Proposed Rulemaking*); *Amendment of the Schedule of Application Fees Set Forth in Sections 1.1102 through 1.1109 of the Commission’s Rules*, MD Docket No. 20-270, Report and Order, 35 FCC Rcd 15089 (2020) (*2020 Application Fee Report and Order*) (the *2020 Notice of Proposed Rulemaking* and the *2020 Application Fee Report and Order* collectively explain the statutory changes and the methodology for adopting and maintaining the new schedule of application fees and discussing how it will be maintained) (collectively *2020 Application Fee Proceeding*). See 47 CFR subpart G (Schedule of Statutory Charges and Procedures for Payment).

⁴⁷³ See *2020 Application Fee Report and Order*, 35 FCC Rcd at 15092, para. 10. In reviewing any particular methodology, it is important to note that the agency is not required to calculate its costs with “scientific precision.” *Central & Southern Motor Freight Tariff Ass’n v. United States*, 777 F.2d 722, 736 (D.C. Cir. 1985). Instead, reasonable approximations will suffice. *Id.*; *Mississippi Power & Light v. U.S. Nuclear Regulatory*, 601 F.2d 223, 232 (5th Cir. 1979); *National Cable Television Ass’n v. FCC*, 554 F.2d 1094, 1105 (D.C. Cir. 1976).

Full Power TV Stations, Commercial AM Radio Stations, and Commercial FM Radio Stations.⁴⁷⁴

194. We anticipate that staff review of the periodic reports will require a significant investment of labor hours. The Commission also envisions a substantive filing comprising not only certifications but substantive updates of the infrastructure used in the cable system including locations of dry plants, the services being offered by the licensees, ownership of the cable and ownership of the licensees. Such submissions must be carefully reviewed by Commission staff to determine if they are complete and provide the required information, including specific descriptions of the cable system and services. The review will also need to determine the significance of any changes to the information previously filed with the Commission and whether the changes had been properly and timely reported to the Commission and appropriately sought approval when necessary, such as changes in ownership. The review will also require a determination as to whether the information provided in the report provides a basis for referring the license to the Committee for review for national security or law enforcement concerns. Such review would require staff resources, including analysts to review each filing, attorneys to perform compliance assessments, specialists to process the GIS location data and to review the cybersecurity certifications, and a supervisory attorney to oversee the process and coordinate the referral to the Committee, other federal agencies or other bureaus and offices within the Commission. The total amount of staff hours could be approximately two hours of review by an analyst, two hours of review by a GIS specialist, 20 hours of review by an attorney and 5 hours of supervisory attorney review. We therefore seek comment on adding a new category of fees in section 1.1107 of the Commission's rules, and to set that application fee based on our final cost estimate.

195. We seek comment on whether any fee adopted for the periodic reports should be consistent with the fee for applications for a renewal of a cable landing license because the periodic report, similar to a renewal application, will require the licensee(s) to update information about the cable system.⁴⁷⁵ We seek comment on whether the new fee should be added to the established fee category of "International Service"⁴⁷⁶ and follow the fee calculation methodology adopted by the Commission in the *2020 Application Fee Report and Order*.⁴⁷⁷ Currently, the fee for an application for a renewal of cable

⁴⁷⁴ See Application Fee Filing Guide For Media Bureau (Effective March 2, 2023), <https://docs.fcc.gov/public/attachments/DOC-391414A1.pdf>. The fee is calculated based on the number of stations for which the report is filed. It is currently \$95 per station.

⁴⁷⁵ See 47 U.S.C. § 158(a); 47 CFR § 1.1101; 47 CFR § 1.1107. Section 8(c)(2) of the Act does not mandate that the Commission update our fee schedule to reflect "the consolidation or addition of new categories of applications" within any particular timeframe. 47 U.S.C. § 158(c). Rather, we have determined that if the application fee schedule may require an amendment pursuant to section 8(c), the Commission will initiate a rulemaking to seek comment on any proposed amendment(s) to the application fee schedule. *2022 Application Fee Order*, 37 FCC Rcd 14994, at n.2. We do so here.

⁴⁷⁶ *2020 Application Fee Report and Order*, 35 FCC Rcd 15089, 15094, para. 15.

⁴⁷⁷ *Id.* at 15092, para. 11 (adopting the methodology proposed in the *2020 Application Fee Notice of Proposed Rulemaking* to "base the application fees on an estimate of direct labor costs where possible," as modified therein); *id.* at 15132, para. 137 ("We adopt the proposed cost-based cable landing license fees in the [*2020 Application Fee Notice of Proposed Rulemaking*] with one change to reduce the cost of a pro forma assignment or transfer of control."); *2020 Application Fee Notice of Proposed Rulemaking*, 36 FCC Rcd 1618, 1654-55, para. 140 ("New cable landing license applications are filed online using the International Bureau Filing System (IBFS) and involve International Bureau staff review. Staff must review the application for compliance with our rules and the technical aspects of the proposed submarine cable system, including information regarding cable landing stations and ownership of the applicants. As noted above, the Commission coordinates the application with the State Department and other federal agencies, as necessary. We estimate that the Commission's resources to process a typical new cable landing license application consist of the following: industry analyst processing and review, staff attorney review, and supervisory review.").

landing license is \$2,725.⁴⁷⁸ We seek comment on whether a fee of \$2,725 is appropriate for review of the periodic reports. We seek comment on whether there are other filings that commenters consider analogous to the proposed periodic report. And if so, would our processes for those filings suggests that we adopt a different fee here? We generally seek comment on what fee calculation methodology should be adopted to determine a fee amount, if any, for the three-year periodic reports for cable landing licensees. In so doing, we remind commenters that fees collected pursuant to our Section 8 authority are deposited in the general fund of the U.S. Treasury. Thus, while the determination of the fee amount will be based on cost, the collected fees are not used to fund Commission activities. In crafting comments, we ask that commenters explain whether their proposals are supported by the statute.

D. Improving the Quality of the Circuit Capacity Data

196. The Commission receives two types of annual circuit capacity reports regarding U.S.-international submarine cables.⁴⁷⁹ First, licensees of a submarine cable between the United States and any foreign point must report the capacity of the submarine cable as of December 31 of the reporting period (i.e., available capacity) and two years from the reporting period (i.e., planned capacity).⁴⁸⁰ Second, cable landing licensees and common carriers must report their capacity on submarine cables between the United States and any foreign point as of December 31 of the current reporting period.⁴⁸¹ The Commission has found that the data from the circuit capacity reports are necessary for the Commission to fulfill its

⁴⁷⁸ 2022 Application Fee Order at Appx.; 47 CFR § 1.1107. This fee rate became effective on March 2, 2023. See Federal Communications Commission, Schedule of Application Fees, 88 Fed. Reg. 6169 (Jan. 31, 2023).

⁴⁷⁹ See 47 CFR § 43.82. The requirement to file submarine cable circuit capacity data dates back to the 1970s when it was included as a condition in many of the international section 214 authorizations granted by the Commission. *Rules for the Filing of International Circuit Status Reports*, CC Docket No. 93-157, Notice of Proposed Rulemaking, 8 FCC Rcd 4902, para. 2 (1993); *Section 43.62 Reporting Requirements for U.S. Providers of International Services*; *2016 Biennial Review of Telecommunications Regulations*, Report and Order, 32 FCC Rcd 8115, 8117, para. 4 (2017) (*2017 Section 43.62 Report and Order*). The requirement was subsequently incorporated into the Commission's rules and extended to all facilities-based international common carriers and to cable landing licensees. *Rules for the Filing of International Circuit Status Reports*, CC Docket No. 93-157, Report and Order, 10 FCC Rcd 8605 (1995); see *Section 43.62 Reporting Requirements for U.S. Providers of International Services*; *2016 Biennial Review of Telecommunications Regulations*, Report and Order, 32 FCC Rcd 8115, 8117, para. 4 (2017) (*2017 Section 43.62 Report and Order*). Pursuant to section 43.82 of the rules, authority is delegated to the Chief of the Office of International Affairs to prepare instructions and reporting requirements for the filing of these reports prepared and published as a Filing Manual. 47 CFR § 43.82(c); see Filing Manual for Section 43.82 Circuit Capacity Reports (IB Feb. 2020) (Filing Manual), <https://docs.fcc.gov/public/attachments/DOC-362660A1.pdf>.

⁴⁸⁰ 47 CFR § 43.82(a)(1); *Reporting Requirements for U.S. Providers of International Telecommunications Services*; *Amendment of Part 43 of the Commission's Rules*, IB Docket No. 04-112, Second Report and Order, 28 FCC Rcd 575, 608, para. 108 (2013) (*2013 Part 43 Second Report and Order*).

⁴⁸¹ 47 CFR § 43.2(a)(2). Any U.S. international common carrier or cable landing licensee that owned or leased capacity on a submarine cable between the United States and any foreign point on December 31 of the reporting period is required to file capacity amounts for the following categories: (1) owned capacity; (2) net indefeasible rights-of-use (IRUs); (3) net inter-carrier leaseholds (ICLs); (4) net capacity held (i.e., the total of categories (1) through (3)); (5) activated capacity; and (6) non-activated capacity. *Section 43.62 Reporting Requirements for U.S. Providers of International Services*, *2016 Biennial Review of Telecommunications Regulations*, IB Docket Nos. 17-55, 16-131, Report and Order, 32 FCC Rcd 8115, 8117-18, para. 4 & n.20 (2017) (*2017 Section 43.62 Report and Order*); *Reporting Requirements for U.S. Providers of International Telecommunications Services*, *Amendment of Part 43 of the Commission's Rules*, IB Docket No. 04-112, Second Report and Order, 28 FCC Rcd 575, 608, para. 108, 660-62, Appx. D (2013) (*2013 Part 43 Second Report and Order*); Filing Manual at 6-7, paras. 32-34.

statutory obligations and serve a vital public interest role for other federal agencies.⁴⁸² The Committee regularly requests this data for its work on national security and law enforcement issues,⁴⁸³ as has DHS for its national security and homeland security functions.⁴⁸⁴ The Commission has honored these requests for access to the data that has been filed on a business confidential basis after giving the filers an opportunity to comment.

197. In light of our goal in this proceeding to strengthen the Commission's ability to assess national security, law enforcement, and other concerns relating to submarine cable infrastructure and its ownership and operation, we seek comment on how we could improve the collection of circuit capacity data. We also seek comment on streamlining the process for sharing the confidential data provided in the reports with other federal agencies for national security, law enforcement, and emergency preparedness purposes. Below we discuss and seek comment on how to improve the quality and usefulness of the data and provide greater clarity on the reporting requirements to Filing Entities.⁴⁸⁵

1. Cable Operators Report

a. Who Should File a Cable Operator Report

198. Section 43.82 of the Commission's rules requires the licensee or licensees to report the available and planned capacity of the cable.⁴⁸⁶ The current Filing Manual requires that, "[w]here there are multiple licensees for a cable, only one cable landing licensee may file the Cable Operator Report for that cable. The licensees shall determine which licensee will file the capacity data for that submarine cable."⁴⁸⁷ This requirement is based on a rule that the Commission initially adopted in the *2013 Part 43 Second Report and Order*.⁴⁸⁸ Subsequently, in the *2017 Part 43.62 Report and Order*, the Commission removed this requirement from the rules,⁴⁸⁹ noting the concerns raised in the proceeding "that allowing only one licensee to file the Cable Capacity Report for a consortium cable requires licensees to share information about their capacity and planned upgrades that may be competitively sensitive."⁴⁹⁰ The

⁴⁸² *2017 Section 43.62 Report and Order*, 32 FCC Rcd at 8127, para. 24; *id.* at 8128-29, para. 28; *id.* at 8118, para. 5 ("The circuit capacity data provide information on ownership of submarine cable capacity that is used for national security and public safety purposes.").

⁴⁸³ See, e.g., Letter from David Plotinsky, Acting Chief, Foreign Investment Review Section, National Security Division, U.S. Department of Justice, to Denise Coca, Chief, Telecommunications and Analysis Division, International Bureau, FCC (Jul. 19, 2021) (on file in IB Docket No. 21-439) (requesting access to circuit capacity data for the 2015 to 2020 reporting periods, including data for which confidential treatment has been requested).

⁴⁸⁴ See Letter from Bryan S. Ware, Assistant Director, Cybersecurity Division, Cybersecurity and Infrastructure Security Agency, DHS, and Scott Glabe, Assistant Secretary for Trade and Economic Security Office of Strategy, Policy, and Plans, DHS, to Denise Coca, Chief, Telecommunications and Analysis Division, International Bureau, FCC (Mar. 5, 2020) at 1 (DHS March 5, 2020 Letter) (on file in IB Docket No. 19-32) (requesting access to circuit capacity data for the 2015 to 2019 reporting periods, including data for which confidential treatment has been requested).

⁴⁸⁵ For purposes of this section, we use the term "Filing Entities" to refer to a person or entity that is required to file information with the Commission pursuant to section 43.82. See Filing Manual at para. 2 n.2.

⁴⁸⁶ 47 CFR § 43.82(a)(1).

⁴⁸⁷ Filing Manual at 6, para. 30.

⁴⁸⁸ *2013 Part 43 Second Report and Order*, 28 FCC Rcd at 629-630, Appx. C, para. 5 (adopting a requirement under section 43.62 of the rules that "[o]nly one cable landing licensee shall file the capacity data for each submarine cable. For cables with more than one licensee, the licensees shall determine which licensee will file the reports").

⁴⁸⁹ *2017 Section 43.62 Report and Order*, 32 FCC Rcd at 8132, para. 34; see *id.* at 8138, Appx. B, para. 7.

⁴⁹⁰ *Id.* at 8132, para. 34 (citing *ICIO Aug. 31 Ex Parte Letter*, Attach. at 2-3).

Commission directed the International Bureau “to consult with stakeholders on appropriate changes to the Filing Manual to allow for more than one licensee to file a cable operator report for a submarine cable if appropriate.”⁴⁹¹

199. We seek comment on whether the Filing Manual should be revised to allow more than one licensee of a submarine cable to file a cable operator report for a submarine cable that has multiple licensees. We seek comment on whether and how we can retain the single-filer requirement set out in the Filing Manual while addressing any cable landing licensee concerns about sharing of competitively sensitive information with other joint licensees. As the Commission has previously stated, the data are critical for analyzing international transport markets and for national security, defense, and public safety responsibilities.⁴⁹² We also note that the Commission has found there are no alternative reliable third party commercial sources for the reported data.⁴⁹³ We contemplate that requiring each joint licensee to submit a cable operator report capturing its own available capacity and planned capacity on the cable may not produce reliable information about the overall cable capacity given that joint licensees may report their data inconsistently. Such an approach may also be duplicative of how those licensees report their owned capacity on that cable in the capacity holder report.⁴⁹⁴ Given the important public interest benefits of the cable operator reports, is it in the public interest to retain the current requirement in the Filing Manual that only one licensee of a submarine cable may file the cable operator report for that cable?

200. To the extent commenters propose alternative methods, we request detailed explanation of how such methods would ensure the dataset fully accounts for the available capacity and planned capacity of each submarine cable. Are there alternative methods that would enable the Commission and the Committee to obtain reliable and accurate data about the capacity of submarine cables, while responding to any concerns of joint licensees about sharing competitively sensitive information? Should we allow joint licensees of a submarine cable to separately report the available and planned capacity of fiber pairs if they each own and operate their own fiber pair on the cable? Should we also require each licensee to identify in the report all other licensees, if any, on whose behalf it submits the capacity information for the cable?⁴⁹⁵

b. What Data Should be Reported in a Cable Operator Report

201. Section 43.82 requires licensees to report “the capacity of the submarine cable” and “the

⁴⁹¹ *Id.* at 8132, para. 34; *id.* (“We agree that the consortium cable reporting requirement raises issues requiring modification of our rules”).

⁴⁹² *Id.* at 8128-30, paras. 28-29; *see also id.*, 32 FCC Rcd at 8130, para. 29, n.111 (stating, among other things, “[t]he data on submarine cable capacity by region that the Commission collects and makes available provide potential entrants or new investors with an accurate industry overview showing where cable capacity connecting the United States to foreign points is presently deployed [and] provide potential new entrants, investors, and other small business entities with business planning data for assessing potential market demand”).

⁴⁹³ *Id.* at 8130, para. 29. In the *2017 Section 43.62 Report and Order*, the Commission stated, “[a]lthough certain cable capacity data may be available through other sources, those sources are not as reliable as information that has been submitted to a federal agency and verified by officials in the company.” *Id.*, 32 FCC Rcd at para. 29, n.110; *id.* at para. 29 (“For example, TeleGeography’s submarine cable reports include capacity information, but the data are not verified by company officials.”).

⁴⁹⁴ *See* Filing Manual at 6-7, para. 32-33; *see infra* section III.D.2.b. Moreover, discrepancies in the data indicate that aggregation of data from the capacity holder reports, such as aggregation of owned capacity by cable, would not be an adequate or reliable substitute for the available capacity data that are collected in the cable operator reports.

⁴⁹⁵ The Filing Manual currently advises that “[i]f a Filing Entity is filing a Cable Operator Report on behalf of other cable landing licensees on the cable, the Filing Entity should email the International Bureau with the list of licensees for which it is filing data.” Filing Manual at 6, para. 31.

planned capacity of the submarine cable.”⁴⁹⁶ While section 43.82 does not define the term “capacity of the submarine cable,” in the *2013 Part 43 Second Report and Order*, the Commission explained that cable landing licensees will be required to report the “available capacity” and “planned capacity” of an international submarine cable.⁴⁹⁷ The Commission stated that “[a]vailable capacity is all of the capacity currently available on the cable using equipment currently used on the cable”⁴⁹⁸ and that “[p]lanned capacity is the intended capacity of the international submarine cable two years out from the reporting date (December 31 of the reporting period plus two years) based on the plans of the cable operators for upgrades to the technology used with the cable.”⁴⁹⁹ On December 28, 2018, the International Bureau released a revised Filing Manual which, among other things, clarified the definition of “available capacity” to ensure that the cable operator reports capture all of the capacity of the cable.⁵⁰⁰ Specifically, the revised Filing Manual defined the term “available capacity” as “also known as design capacity,” noting that “[a]vailable capacity, also known as design capacity, is all of the capacity (both lit and unlit capacity) on the cable as of the reporting date (December 31 of the reporting period).”⁵⁰¹

202. Based on Commission staff review of the annual cable operator data and questions that staff receive from Filing Entities, we believe that clarifying the term “available capacity” would improve the consistency of data submitted in the cable operator reports. We seek comment on whether we should use a different definition of “available capacity” than set out in the Filing Manual. If so, how should we define “available capacity”? Should the definition be codified in the rules or is it appropriate to define the

⁴⁹⁶ 47 CFR § 43.82(a)(1) (“The licensee(s) of a submarine cable between the United States and any foreign point shall file a report showing the capacity of the submarine cable as of December 31 of the preceding calendar year. The licensee(s) shall also file a report showing the planned capacity of the submarine cable (the intended capacity of the submarine cable two years from December 31 of the preceding calendar year).”).

⁴⁹⁷ *2013 Part 43 Second Report and Order*, 28 FCC Rcd at 608, para. 108; *id.* at 606, para. 5 (stating, “as part of our changes to the reporting requirements we will require operators of international submarine cables to report the current capacity for the cable as well as the planned capacity.”).

⁴⁹⁸ *2013 Part 43 Second Report and Order*, 28 FCC Rcd at 608, para. 108.

⁴⁹⁹ *Id.*; see Filing Manual for Section 43.62 Annual Reports at 27, para. 136 (IB Feb. 2016), <https://docs.fcc.gov/public/attachments/DOC-337916A1.pdf> (“Available capacity is all of the capacity currently available on the cable using equipment currently used on the cable, where ‘currently’ means December 31 of the reporting period. Planned capacity is the entire intended capacity of the cable two years out from the reporting date (December 31 of the reporting period plus two years) based on the plans for upgrades to the technology used on the cable.”).

⁵⁰⁰ *International Bureau Releases Revised Filing Manual for Section 43.82 Circuit Capacity Reports*, 33 FCC Rcd 12517, 12518, Public Notice (IB 2018) (*Revised Filing Manual Public Notice*). In 2017, the Commission streamlined the international reporting requirements and eliminated the traffic and revenue reports and the requirement to file terrestrial and satellite circuit data, but retained the requirement to file submarine cable operator and capacity holder reports under a newly codified section 43.82. *Id.* at 12517; see generally *2017 Section 43.62 Report and Order*. The rule changes went into effect in April 2018. *Revised Filing Manual Public Notice*, 33 FCC Rcd at 12518; Reporting Requirements for U.S. Providers of International Services; 2016 Biennial Review of Telecommunications Regulations, Announcement of Effective Date, 83 Fed. Reg. 17931 (2018). By Public Notice, the International Bureau released a revised Filing Manual that included only the instructions for filing the section 43.82 circuit capacity reports, in light of the elimination of the traffic and revenue reports and terrestrial and satellite data, and also stated, “[b]ased on questions received from Filing Entities this year, the revised Filing Manual also clarifies the definition of ‘available capacity’ in the submarine cable operator reports.” *Revised Filing Manual Public Notice* at 12517-18.

⁵⁰¹ *Revised Filing Manual Public Notice*, 33 FCC at 12518; Filing Manual For Section 43.82 Circuit Capacity Reports at 6, para. 26 (IB Dec. 2018), <https://docs.fcc.gov/public/attachments/DA-18-1306A2.pdf>. The current Filing Manual contains this definition of “available capacity” for purposes of the cable operator report. See Filing Manual at 6, para. 28.

term in the Filing Manual? Would adopting a definition in the rule rather than the Filing Manual better ensure that Filing Entities use a consistent method of reporting the capacity of a submarine cable?

203. We seek comment on whether we should continue to use the definition in the Filing Manual, where “available capacity” of a submarine cable is also referred to as “design capacity”.⁵⁰² Alternatively, we seek comment on whether to distinguish between “available capacity” and “design capacity” to the extent this distinction is consistent with current developments in the submarine cable market and technology. We seek comment on whether the “design capacity” of a submarine cable is more appropriately understood as the maximum theoretical capacity based on equipment currently used on the cable, or as the maximum theoretical capacity based on the current plans of a cable operator to upgrade the technology used with the cable.

204. We seek comment as to how Filing Entities are measuring available capacity, given that the current and potential capacity of fiber optic submarine cables depends on the equipment currently used on a submarine cable and developments in the latest technology. The capacity of fiber optic submarine cables in the current market can change significantly (e.g., by orders of magnitude) and quickly (e.g., in a matter of days), depending on the latest technology and the equipment that is attached on those cables. We seek comment on whether we need to update our circuit capacity rules and reporting requirements to reflect the current dynamics of the submarine cable market.

205. We also seek comment on how and to what degree the initial design capacity of a submarine cable is subject to change over time due to planned upgrades. How frequently do cable operators upgrade or plan to upgrade equipment on a submarine cable, such as SLTEs, and how does this implementation affect assessment of current and future capacity on the cable? Should we reconsider the definition in the Filing Manual and instead define “available capacity” of a submarine cable as all of the capacity (both lit and unlit capacity) on the cable based on equipment currently used on the cable? If so, should we include an additional category in the cable operator report for reporting “design capacity,” separate from reporting “available capacity” and “planned capacity”? Or should we require Filing Entities to report “design capacity,” “current equipped capacity,” and “planned capacity” in the cable operator report? We also seek comment on whether the concept of “design capacity” is similar to or distinct from the “planned capacity” data collected by the Commission.⁵⁰³ We ask commenters to provide detailed comments, including any relevant facts and circumstances related to the technology, the market, or other factors, that can inform these proposed definitions and the assessment of whether to revise the reporting methodology in the cable operator report.

2. Capacity Holders Report

a. Who Should File a Capacity Holder Report

206. Section 43.82 requires cable landing licensees and common carriers to report their capacity on international cables.⁵⁰⁴ Because this reporting requirement only applies to licensees and common carriers, there exists a gap in the Commission’s knowledge of the entities that hold capacity on a particular cable as other entities that hold capacity on that cable are not required to report their capacity. This is borne out by our circuit capacity data. According to the annual capacity holder data, there is substantial capacity leased or purchased from cable landing licensees and common carriers that is not

⁵⁰² Filing Manual at 6, para. 28.

⁵⁰³ 47 CFR § 43.82(a)(1). The Filing Manual states that “[p]lanned capacity is the entire intended capacity (both lit and unlit capacity) of the cable two years out from the reporting date (December 31 of the reporting period plus two years) based on current plans to upgrade the capacity of the cable.” Filing Manual at 6, para. 28; *see 2013 Part 43 Second Report and Order*, 28 FCC Rcd at 608, para. 108.

⁵⁰⁴ 47 CFR § 43.82(a)(2).

accounted for in the data.⁵⁰⁵ We seek comment on the scope of this issue, whether this raises national security concerns, and whether the Commission should and under what authority require other entities to report their capacity.

207. We seek comment on whether we should require all entities that hold capacity on cables landing in the United States to file capacity holder reports. Would requiring the filing of circuit capacity data by all entities that hold capacity on submarine cables—including capacity held through ownership in a cable, an IRU, an ICL, or on a fiber or spectrum basis—reduce the gap in the data and provide the Commission and its federal partners with greater insight into the ownership and use of capacity on submarine cables? Are there certain entities, such as the U.S. Government, that should be exempt from reporting their capacity holdings? If the Commission requires other entities to report their capacity, should there be a threshold for the reporting requirement (e.g., 1 Gbps)? Alternatively, or in addition to requiring all holders of capacity on submarine cables landing in the United States to annually file data regarding their capacity holdings, we seek comment on whether we should require cable landing licensees and common carriers to include in their annual capacity holder reports a list of customers to whom they sold or leased capacity as of December 31 of the reporting period. To the extent we adopt these approaches, we propose to share with our federal partners the information that is collected pursuant to such requirements, including any information for which confidential treatment is requested, through the procedures we propose in this *Notice* with respect to sharing annual circuit capacity data with the Committee and DHS.⁵⁰⁶ We seek comment on these approaches and on the potential burdens on affected entities. We seek comment as to which of these approaches would be less burdensome, and whether any such information requirements could be designed to minimize the burdens on potential new filers, including small entities. We also seek comment generally on the potential benefits associated with any collection of information under these approaches.

208. We seek comment on whether the Commission has legal authority pursuant to the Cable Landing License Act, the Communications Act, or any other sources of authority, to require capacity holders not already subject to section 43.82, to submit data regarding their capacity on submarine cables landing in the United States. The Commission has long determined that it has authority to require the filing of circuit capacity data from cable landing licensees and common carriers pursuant to the Cable Landing License Act and Executive Order 10530 and section 214 of the Communications Act.⁵⁰⁷ While

⁵⁰⁵ For example, the capacity holder data for the 2022 reporting period reflect total net IRUs of -315,566.7 Gbps and total net ICLs of -120,988.1 Gbps, including net IRUs of -92,977.3 Gbps and net ICLs of -45,232.2 Gbps in the Americas region, net IRUs of -192,593.3 Gbps and net ICLs of -63,050.1 Gbps in the Atlantic region, and net IRUs of -29,996.1 Gbps and net ICLs of -12,705.8 Gbps in the Pacific region. *See FCC Releases Circuit Capacity Data for U.S.-International Submarine Cables as of December 31, 2022*, Public Notice, DA 23-1085, Tbl. 5 (OIA Nov. 16, 2023). In addition, the capacity holder data for the 2021 reporting period reflect total net IRUs of -248,551.6 Gbps and total net ICLs of -120,477.4 Gbps, including net IRUs of -78,865.1 Gbps and net ICLs of -38,099.7 Gbps in the Americas region, net IRUs of -161,244.7 Gbps and net ICLs of -54,614.6 Gbps in the Atlantic region, and net IRUs of -8,441.8 Gbps and net ICLs of -27,763.1 Gbps in the Pacific region. *See FCC Releases Circuit Capacity Data for U.S.-International Submarine Cables as of December 31, 2021*, Public Notice, 37 FCC Red 15104, 15115, Tbl. 5 (OIA 2022).

⁵⁰⁶ *See infra* paras. 210-17.

⁵⁰⁷ *See 2017 Section 43.62 Report and Order*, 32 FCC Red at 8130, para. 30 (“The Commission has authority to grant – and condition – authorizations and licenses. Specifically, Section 214 of the Communications Act gives the Commission authority to ‘attach to the issuance of the certificate such terms and conditions as in its judgment the public convenience and necessity may require.’ The Cable Landing License Act of 1921 and Executive Order 10530 authorize the Commission to condition licenses ‘upon such terms as are necessary to assure just and reasonable rates and service in the operation and use of the cables so licensed.’”); *2013 Part 43 Second Report and Order*, 28 FCC Red at 606, para. 104 (“Our authority to require the filing of international circuit data by common

the Commission adopted the circuit capacity reporting requirements for a specific class of non-common carriers in the *2013 Part 43 Second Report and Order*,⁵⁰⁸ the Commission noted that the provisions of the Cable Landing License Act “do not distinguish between common carriage and non-common carriage of services over licensed cables.”⁵⁰⁹ We seek comment on whether the Commission’s authority to require the filing of circuit capacity data extends to any and all entities—beyond cable landing licensees and Title II common carriers—holding capacity on submarine cables landing in the United States.⁵¹⁰ We seek comment on whether this information is necessary for the Commission to make informed decisions on matters within its jurisdiction and to carry out its statutory duties.⁵¹¹ This includes, for example, assessing whether to grant or deny applications for cable landing licenses or revoke licenses in the interest of national security or competition.⁵¹² Further, we seek comment on whether the Commission could rely on ancillary authority in conjunction with other primary sources of legal authority in adopting such a requirement.⁵¹³

209. *BIAS Providers.* In the *2024 Open Internet Order*, the Commission reclassified BIAS as a telecommunications service under Title II of the Communications Act.⁵¹⁴ In that Order, the Commission waived the current rules implementing section 214(a)-(d) of the Communications Act with respect to BIAS to the extent they are otherwise applicable, including section 43.82,⁵¹⁵ stating that it “expects to release a Further Notice at a future time to examine whether any section 214 rules specifically tailored to BIAS, including for small providers, are warranted.”⁵¹⁶ Although the *2024 Open Internet Order* was stayed by the Sixth Circuit pending judicial review,⁵¹⁷ we seek comment on whether and to what extent we should depart from the regulatory framework contemplated by that Order insofar as the Order becomes operative after judicial review. Given that all Title II common carriers are required to file

carriers is well established and these carriers currently file circuit data pursuant to section 43.82. We find we also have authority under the Cable Landing License Act as well as the Communications Act to require cable landing licensees that are not common carriers to report their capacity. As discussed in the *Further Notice*, the Commission licenses submarine cables and associated cable landing stations located in the United States pursuant [to] the Cable Landing License Act. The provisions of the Cable Landing License Act do not distinguish between common carriage and non-common carriage of services over licensed cables. . . .”); 47 U.S.C. § 35; Executive Order 10530; 47 U.S.C. § 214.

⁵⁰⁸ *2013 Part 43 Second Report and Order*, 28 FCC Rcd at 604-607, paras. 97-106.

⁵⁰⁹ *Id.* at 604-607, paras. 104; *Reporting Requirements for U.S. Providers of International Telecommunications Services; Amendment of Part 43 of the Commission’s Rules*, IB Docket No. 04-112, First Report and Order and Further Notice of Proposed Rulemaking, 26 FCC Rcd 7274, 7317, para. 124 (2011).

⁵¹⁰ Below, we address separately whether to apply the circuit capacity reporting requirements to entities that provide only broadband Internet access service (BIAS).

⁵¹¹ *See 2013 Part 43 Second Report and Order*, 28 FCC Rcd at 606, para. 104.

⁵¹² 47 U.S.C. § 35.

⁵¹³ To exercise ancillary authority “two conditions [must be] satisfied: (1) the Commission’s general jurisdictional grant under Title I [of the Communications Act] covers the regulated subject and (2) the regulations are reasonably ancillary to the Commission’s effective performance of its statutorily mandated responsibilities.” *Am. Library Ass’n v. FCC*, 406 F.3d 689, 691-92 (D.C. Cir. 2005).

⁵¹⁴ *See generally 2024 Open Internet Order.*

⁵¹⁵ *2024 Open Internet Order* at *132-133, paras. 342-344 & n.1379; *id.* at *133, para. 344 (“We find that the public interest is served by this waiver as it will ensure that consumers can continue to receive the broadband Internet access services to which they presently subscribe and avoid any disruption to, or uncertainty for, BIAS consumers and BIAS providers”).

⁵¹⁶ *2024 Open Internet Order* at *132, para. 342.

⁵¹⁷ *See In re: MCP No. 185*, at *1.

annual circuit capacity reports under section 43.82(a)(2) of the rules,⁵¹⁸ we seek comment generally on whether the Commission should consider retaining or removing the waiver of section 43.82 of the rules as applied to BIAS providers, subject to judicial review of that *Order*. Do the important public interest benefits of the circuit capacity data collection warrant the collection of capacity holder data from entities providing *only* BIAS?⁵¹⁹ We seek comment, for example, on whether such information would provide the Commission and its federal partners important insight into the ownership and use of submarine cable capacity for national security and public safety purposes.

210. Further, if the Commission were to eliminate the waiver, should we adopt the same requirements applicable to all other reporting entities or tailored requirements as applied to entities providing only BIAS? For example, should a transition period be provided for entities providing only BIAS to submit an initial capacity holder report? What potential burdens, if any, would be imposed on such BIAS providers if they were required to file data regarding their submarine cable capacity, including capacity held through ownership in a cable, an IRU, an inter-carrier lease (ICL), or on a fiber or spectrum basis? To the extent the Commission adopts any changes to section 43.82 of the rules and the current reporting requirements as addressed in this *Notice*,⁵²⁰ we seek comment on whether those changes should similarly be applied to entities providing only BIAS as well as the potential burdens, if any, that would be imposed upon such BIAS providers.

b. What Data Should be Filed in a Capacity Holder Report

211. Section 43.82 does not specify the data to be reported in the capacity holder report. The Commission, however, stated in the *2013 Part 43 Second Report and Order* that cable landing licensees and common carriers should report their available capacity on a cable “by the type of ownership interest they have in the capacity – ownership in the cable, an indefeasible right of use (IRU) or an inter-carrier lease (ICL).”⁵²¹ The Commission further explained that available capacity consists of the sum of (1) capacity that a Filing Entity owns; (2) the net of IRUs leased from other capacity holders less IRUs leased to other capacity holders; and (3) the net of ICLs leased from other capacity holders less ICLs leased to other capacity holders.⁵²² These requirements are reflected in the Filing Manual.⁵²³

212. As discussed above in the context of cable operator reports, we seek comment on how the Commission should define “available capacity.” We also seek comment on whether we should require Filing Entities to use the same definition of “available capacity” when reporting their owned capacity in their capacity holder reports. To assess the accuracy of reported data, our current practice is to compare the total available capacity reported in the cable operator reports with the total owned capacity reported in the capacity holder reports by region.⁵²⁴ Should we ensure that these data continue to be consistent and

⁵¹⁸ 47 CFR § 43.82(a)(2).

⁵¹⁹ See 47 CFR § 8.1.

⁵²⁰ See generally Section III.D.

⁵²¹ *2013 Part 43 Second Report and Order*, 28 FCC Rcd at 605, para. 100.

⁵²² *Id.*

⁵²³ Filing Manual at 7, para. 32. Each Filing Entity is required to calculate its available capacity as the sum of (1) cable ownership; (2) the net of IRUs leased from other entities less IRUs leased to other entities; and (3) the net of ICLs leased from other entities less ICLs leased to other entities. *Part 43 Second Report and Order*, 28 FCC Rcd at 604-5, 608, paras. 100, 108; Filing Manual at 6-7, para. 32.

⁵²⁴ Ideally, we expect that the total available capacity reported in the cable operator report for a given cable (filed on behalf of the licensee or joint licensees) should match the aggregated owned capacity reported in all of the capacity holder reports on that cable. See, e.g., *FCC Releases Circuit Capacity Data for U.S.-International Submarine Cables as of December 31, 2022*, Public Notice, DA 23-1085, Tbl. 6 (OIA Nov. 16, 2023); *FCC Releases Circuit*

comparable for purposes of our assessment and use of the data for national security and public safety purposes?⁵²⁵ We also seek comment on whether any approach we may adopt with regard to defining the “available capacity” of a submarine cable should similarly be applied to other data submitted in the capacity holder report, including the net amount of IRUs,⁵²⁶ net amount of ICLs,⁵²⁷ and net capacity, and whether the net capacity is activated (i.e., lit) or non-activated (i.e., unlit).⁵²⁸ Overall, would requiring Filing Entities to apply the approach used to define “available capacity” of a submarine cable to similarly report their capacity holdings assist our efforts to verify the accuracy and consistency of the data reported in the cable operator reports and capacity holder reports?

213. We seek comment on whether the capacity holder report should be revised to capture new developments in the provisioning of capacity in the submarine cable market. In the *2017 Part 43.62 Report and Order*, the Commission noted the comments raised in the proceeding, “that in addition to sales through IRUs and ICLs, capacity is now sold on a fiber pair or spectrum basis.”⁵²⁹ We seek detailed comments on any new facts or circumstances which may inform our understanding of how capacity is owned, sold, or leased in the submarine cable market, and how to capture this information in the capacity holder report if appropriate. In particular, information about capacity held on a submarine cable is relevant to Commission and other federal government agency assessments of the impact on communications during national security or public safety emergencies, including where a cable is rendered inoperable, and to factor the information into emergency response efforts. Currently, to what extent is submarine cable capacity sold or leased through IRUs, short-term leases, or other means such as on a fiber pair or spectrum basis? How is submarine cable capacity sold or leased by fiber pair or spectrum? Does the licensee of a submarine cable sell or lease capacity by fiber pair or spectrum to other entities, or do entities other than the licensee of a cable also sell or lease capacity by fiber pair or spectrum? Where a cable landing licensee sells or leases capacity by fiber pair to other entities, how does the licensee maintain *de jure* and *de facto* control of the U.S. portion of the submarine cable system as

Capacity Data for U.S.-International Submarine Cables as of December 31, 2021, Public Notice, 37 FCC Rcd 15104, 15116, Tbl. 6 (OIA 2022). Thus, we expect that the total available capacity and the total owned capacity by region should also match, though there may be discrepancies between these figures. For example, some amount of capacity may be owned by non-reporting entities, such as entities that own capacity on a cable through an ownership interest in the submarine cable system but are not required to be a licensee under section 1.767(h) of the Commission’s rules and are otherwise not common carriers.

⁵²⁵ For instance, if we adopt a definition in the rules that “[a]vailable capacity, also known as design capacity, is all of the capacity (both lit and unlit capacity) on the cable as of the reporting date (December 31 of the reporting period),” should we clarify that Filing Entities must report their owned capacity using a similar methodology? On the other hand, if we distinguish between “available capacity” and “design capacity” and create separate categories for reporting these data in the cable operator report, how should Filing Entities report their owned capacity on a submarine cable in the capacity holder report?

⁵²⁶ See Filing Manual at 11 (“Indefeasible Right of Use (IRU) refers to an arrangement in which the holder has made an upfront payment for the full length of the lease, such as 5, 10, 20 years, or the remaining useful life of the asset.”).

⁵²⁷ See Filing Manual at 11 (“Inter-Carrier Lease (ICL), for section 43.82 reporting purposes, refers to a lease of bare capacity between one entity and another.”).

⁵²⁸ See Filing Manual at 6-7, paras. 32-34.

⁵²⁹ *2017 Section 43.62 Report and Order*, 32 FCC Rcd at 8132, para. 34 (citing *ICIO Aug. 31 Ex Parte Letter*, Attach. at 3). The Commission directed the International Bureau “to consult with stakeholders and to review and revise as needed the categories of ownership interests reported in the cable capacity holder reports to reflect changes in industry’s provisioning of capacity, while ensuring that the capacity holder data are accurately captured by our reporting requirements.” *2017 Section 43.62 Report and Order*, 32 FCC Rcd at 8132, para. 34.

required by the Commission's rules?⁵³⁰ Is there additional information related to these and other types of capacity holdings that would enhance the Commission's understanding of the ownership and use of capacity or assist the Commission in the protection, restoration, and resiliency of submarine cable infrastructure during national security or public safety emergencies?

214. To the extent we revise the capacity holder report to include additional categories of capacity holdings, how should such information be reported? For instance, if we include additional categories for reporting capacity that is sold, purchased, or leased by fiber pair or spectrum, how should Filing Entities calculate the net capacity they hold on the submarine cable?⁵³¹ Should Filing Entities report those capacity holdings as an amount in Gbps?⁵³² Should we require Filing Entities to annually report all whole fiber pairs that they own (including for their own use or which they have leased out) or manage on submarine cables landing in the United States? Do national security, law enforcement, or other concerns warrant that we obtain updated information each year confirming who currently owns and/or manages the fiber pairs on such submarine cables, especially if the entity that manages the fiber pair of a particular cable is not the licensee whose original application was subject to review by the Committee? We also seek comment on what it means for an entity to "manage" a fiber pair to the extent the role and capabilities differ from solely having ownership of a fiber pair. To the extent the manager of a fiber pair is neither a cable landing licensee nor a common carrier subject to section 43.82 of the rules, should we require that the licensee of a submarine cable landing in the United States identify the entities that own and/or manage each fiber pair on the cable? Should we require Filing Entities to identify the U.S. and foreign landing points of any fiber pair that they sell or lease to other entities for use of capacity? Should any or all of this information be provided in the cable operator report, capacity holder report, or a separate report?

3. Reporting of Capacity on Domestic Cables

215. The requirement to file circuit capacity reports applies only to U.S.-international cables, and not to domestic cables (i.e., cables that do not connect the United States with foreign points).⁵³³ However, the national security environment has changed significantly since the Commission adopted this approach in 2013.⁵³⁴ In light of evolving national security, law enforcement, and other risks, we seek comment on whether the distinction between U.S.-international submarine cables and domestic submarine cables for purposes of reporting circuit capacity information is justified. We seek comment on whether the lack of information on domestic cables creates a critical gap in the Commission's insight into the ownership and use of capacity on submarine cables regulated by the Commission. For example, would collecting capacity information regarding domestic submarine cables allow the Commission and the Committee to identify whether any entities associated with a "foreign adversary" country, as defined in the Department of Commerce's rule,⁵³⁵ hold capacity on those cables?⁵³⁶ Would this information enhance

⁵³⁰ See 47 CFR § 1.767(g)(11).

⁵³¹ See Filing Manual at 7, para. 32.

⁵³² See Filing Manual at 7, para. 35; *International Bureau Releases Revised Filing Manual for Section 43.82 Circuit Capacity Reports*, Public Notice, 34 FCC Rcd 12478 (IB 2019).

⁵³³ 47 CFR § 43.82(a)(1)-(2); *2013 Part 43 Second Report and Order*, 28 FCC Rcd at 604, para. 100 & n.173. Licensees and common carriers are not required to file a cable operator report or capacity holder report with respect to submarine cables that only connect points within the United States, such as cables connecting the Hawaiian Islands or Alaska to the conterminous United States. *2013 Part 43 Second Report and Order*, 28 FCC Rcd at 604, para. 100 & n.173; Filing Manual at 6, n.18; see also 47 U.S.C. § 34.

⁵³⁴ See, e.g., *Evolving Risks NPRM*.

⁵³⁵ 15 CFR § 791.4.

⁵³⁶ See *Evolving Risks NPRM*, 38 FCC Rcd at 4361, para. 20.

the Commission's ability to use the circuit capacity data to assist in the protection, restoration, and resiliency of submarine cable infrastructure during national security or public safety emergencies, even where there is no foreign ownership, especially given the role that domestic submarine cables also have in providing connectivity among the continental United States and Alaska, Hawaii, Guam, American Samoa, the Northern Mariana Islands, Puerto Rico, and the U.S. Virgin Islands?

216. If we find that circuit capacity reports should be filed for domestic cables, we seek comment on whether we should require Filing Entities to include in the cable operator report and the capacity holder report the same capacity information that we collect for U.S.-international submarine cables, with respect to submarine cables that do not have a foreign landing point and connect (1) Alaska, Hawaii, or the U.S. territories or possessions with the continental United States or with each other, and (2) points within the continental United States, Alaska, Hawaii or a territory or possession in which the cable is laid within international waters. Alternatively, should Filing Entities be required to provide more limited or tailored capacity information relating to domestic submarine cables in a separate report? We seek comment on these approaches and on potential burdens on licensees and common carriers if we require that they include capacity data for domestic submarine cables in cable operator reports and capacity holder reports.

4. Other Issues with Reporting of Circuit Capacity Data

a. Reporting of Submarine Line Terminal Equipment

217. As discussed above, the SLTE is among the most important equipment associated with the submarine cable system for national security and law enforcement purposes.⁵³⁷ Given the importance of this equipment and who controls and operate the SLTE, we seek comment on whether the Commission should require all Filing Entities to identify in the annual capacity holder report whether they control or operate their own SLTE(s) on any of the U.S. or foreign ends of a submarine cable landing in the United States.⁵³⁸ In addition, should we require all Filing Entities to file a notification of any installation of their own SLTE on the U.S. or foreign ends of a submarine cable landing in the United States, within a certain time period following such installation (such as 30 days)? If the Commission were to extend the circuit capacity reporting requirements to new entities not currently subject to section 43.82, as addressed herein,⁵³⁹ should we require such entities to similarly identify in the annual capacity holder report, or in a separate report, whether they control or operate their own SLTE and to provide notification of any installation of their own SLTE within a certain time period (such as 30 days)? To the extent we adopt these approaches, we propose to share with our federal partners the information that is collected pursuant to such requirements, including any information for which confidential treatment is requested, through the procedures.⁵⁴⁰ We seek comment on these approaches and what potential burdens, if any would be imposed by requiring such information.

b. Which Corporate Entity May File Reports

218. The Filing Manual requires affiliated entities to file separate circuit capacity reports to the extent that they are considered to be separate legal entities, unless the Commission has authorized such affiliated entities to submit a consolidated FCC Form 499-A filing.⁵⁴¹ The Commission chose to use

⁵³⁷ See *supra* section III.B.1.

⁵³⁸ See *supra* paras. 74-77.

⁵³⁹ See *supra* para. 214.

⁵⁴⁰ See *supra* para. 207.

⁵⁴¹ The Filing Manual states that affiliated companies "must file separate section 43.82 reports to the extent that they are considered to be separate legal entities where they have separate articles of incorporation, articles of formation,

this standard for administrative convenience because common carriers are familiar with this requirement. This requirement originated when the Filing Manual covered not only the Circuit Capacity Reports but also the International Traffic and Revenue Reports, which were filed by common carriers and interconnected VOIP providers, which also had to file 499 reports.⁵⁴² The Filing Manual retained this requirement even after the Commission eliminated the International Traffic and Revenue Reports and the Filing Manual now only covers the Circuit Capacity Reports.⁵⁴³

219. We seek comment on whether to allow any subsidiary, parent entity, or affiliate of a Filing Entity to file the annual circuit capacity reports on behalf of the Filing Entity, so long as the subsidiary, parent entity, or affiliate identifies the Filing Entity in the reports. Specifically, should the Filing Manual be revised to allow any subsidiary, parent entity, or affiliate to file the annual circuit capacity reports on behalf of a Filing Entity? Is there any reason to parallel the filing procedure applicable to FCC Form 499-A filings? To what extent do current Filing Entities comprise of telecommunications carriers or other providers that are required to submit FCC Form 499-A filings?⁵⁴⁴

220. We seek comment generally on whether it is common practice for cable landing licensees and common carriers to maintain, track, or consolidate their capacity information with affiliated entities in the ordinary course of business. In such cases, we seek comment on what potential burdens, if any, would be imposed upon Filing Entities if we were to require all affiliated entities to file their own annual circuit capacity reports instead of submitting consolidated reports. If a subsidiary, parent entity, or affiliate files the annual circuit capacity reports on behalf of a Filing Entity, how can the Commission improve the efficiency of its current practice, which involves informal inquiries by Commission staff, to confirm whether the Filing Entity has complied with its reporting obligations?⁵⁴⁵ To the extent a subsidiary, parent entity, or affiliate submits the circuit capacity reports on its behalf, we tentatively conclude that the Filing Entity shall be held accountable for any defects in the certification as to the accuracy and

or similar legal documents,” but where the Commission has authorized them “to make a consolidated FCC Form 499-A filing, the affiliated companies similarly shall make a consolidated section 43.82 filing.” Filing Manual at 2, para. 5.

⁵⁴² See Filing Manual For Section 43.62 Annual Reports (IB Feb. 2016) available at <https://docs.fcc.gov/public/attachments/DOC-337916A1.pdf>.

⁵⁴³ 2017 Section 43.62 Report and Order, 32 FCC Rcd at 8116, paras. 1-3. Previously, any person or entity that holds an international Section 214 authorization to provide International Telecommunications Services (ITS) and/or any person or entity that is engaged in the provision of Interconnected Voice over Internet Protocol (VoIP) Services through the Public Switched Telephone Network (PSTN) between the United States and any foreign point was required to file an annual Traffic and Revenue Report. *Id.* at para. 3.

⁵⁴⁴ The Communications Act requires that the Commission establish mechanisms to fund universal service, interstate telecommunications relay services, the administration of the North American Numbering Plan, and the shared costs of local number portability administration. 47 U.S.C. §§ 151, 225, 251, 254. To accomplish these congressionally-directed objectives, the Commission requires telecommunications carriers and certain other providers of telecommunications (including Voice over Internet Protocol (VoIP) service providers) to report each year on the FCC Form 499-A the revenues they receive from offering service. See 47 CFR §§ 52.17(b), 52.32(b), 54.708, 54.711, 64.604(b)(5)(iii)(B); *Wireline Competition Bureau Releases the 2024 Telecommunications Reporting Worksheets and Accompanying Instructions*, WC Docket No. 06-122, Public Notice, 38 FCC Rcd 10216 (WCB 2023).

⁵⁴⁵ The Filing Manual advises that “[i]f a Filing Entity is filing a consolidated section 43.82 report or filing on behalf of an affiliated entity or entities, we ask the Filing Entity to email the International Bureau with the list of entities for which it is filing data.” *Id.* at 2-3, para. 6. We seek comment on any alternative, more efficient methods that the Commission can use to confirm that an entity has complied with its reporting obligations.

completeness of information filed in the circuit capacity reports.⁵⁴⁶ Should we codify such a requirement in the rules? Should we also codify the requirement in the Filing Manual that an officer of the Filing Entity must certify the accuracy and completeness of the Filing Entity's section 43.82 information?⁵⁴⁷ If a subsidiary, parent entity, or affiliate files the annual circuit capacity reports on behalf of a Filing Entity, should an officer of the Filing Entity submit a separate attachment certifying that the information in the reports is accurate and complete? We seek comment on whether and why an alternative approach may be more desirable, and how the Commission could implement any alternative approach while retaining the ability to enforce compliance against a Filing Entity.

c. Compliance

221. We propose to set forth in the rules that filing false or inaccurate certifications or failure to file timely and complete annual circuit capacity reports in accordance with the Commission's rules and the Filing Manual shall constitute grounds for enforcement action, including but not limited to a forfeiture, revocation, or termination of the cable landing license or international section 214 authorization, pursuant to the Communications Act and any other applicable law. Although the Filing Manual addresses consequences for failure to file timely section 43.82 reports⁵⁴⁸ or submission of inaccurate or untruthful information,⁵⁴⁹ we tentatively conclude that addressing the issue of compliance in the rules would ensure greater compliance overall with the reporting requirements. We seek comment on this proposal. We also seek comment on whether to allow any exceptions to the reporting requirements of section 43.82 and whether we should revise the rules or the Filing Manual accordingly. For example, should we revise section 43.82(a)(2) of the rules or the Filing Manual to set out an exception to the reporting requirements where a licensee that holds no capacity in its licensed submarine cable—for example, where a joint licensee only owns and/or controls a landing station(s) in the United States and holds no capacity at the landing station(s) or other portion of the cable—or any other cables landing in the United States need not file a capacity holder report? Should we require such licensees to file an annual certification attesting to the continuing applicability of such an exception?

5. Sharing the Circuit Capacity Data with Federal Agencies

222. We seek comment on adopting a rule which would allow the Commission to share with other federal government agencies the circuit capacity data filed on a confidential basis without the pre-notification requirements of section 0.442(d) of the Commission's rules.⁵⁵⁰ Since 2019, the Commission has annually issued a Public Notice to announce its intent to share the annual circuit capacity data with DHS⁵⁵¹ and subsequently the Committee⁵⁵² pursuant to the procedures set out in section 0.442 of the

⁵⁴⁶ *Id.* at 5, para. 21 (“Filing Entities must certify on the Registration Form the accuracy and completeness of the data filed in the accompanying Circuit Capacity Report.”).

⁵⁴⁷ *Id.* at 5, para. 21.

⁵⁴⁸ *Id.* at 3, para. 10 (“Failure to file the Circuit Capacity Report on time is a violation of the Commission's rules and could result in the imposition of forfeitures or other penalties.”).

⁵⁴⁹ *Id.* at 3, para. 10 (“Inaccurate or untruthful information contained in section 43.82 reports may lead to prosecution under section 220(e) of the Communications Act or the criminal provisions of Title 18 of the United States Code.”) (citing 47 U.S.C. § 220(e); 18 U.S.C. § 1001).

⁵⁵⁰ 47 CFR § 0.442(d); *see supra*, para. 103.

⁵⁵¹ *See Notice of Intent to Share International Circuit Capacity Data from 2015 to 2017 with Federal Agencies*, IB Docket No. 19-32, Public Notice, 34 FCC Rcd 561 (IB 2019).

⁵⁵² *See Notice of Intent to Share International Circuit Capacity Data for the 2021 and 2022 Reporting Periods with the Committee for the Assessment of Foreign Participation in the United States Telecommunications Services Sector*, OIA Docket No. 23-303, Public Notice, 38 FCC Rcd 7980 (OIA 2023) (2023 OIA Public Notice); *Notice of*

Commission's rules, and no party has opposed such disclosure of the circuit capacity data for which confidential treatment was requested.⁵⁵³ Under this approach, the Commission would be able to share the confidential data with federal agencies that have a legitimate need for the data consistent with their functions without the delay attendant to providing parties an opportunity to object to the sharing. The sharing of confidential circuit capacity data would, however, continue to be subject to the requirement that each of the other federal agencies comply with the confidentiality protections applicable both to the Commission and the other agency's relating to the unlawful disclosure of information,⁵⁵⁴ and we would provide notice to the parties whose information is being shared.

223. *Federal Agencies' Need for the Information.* The Commission may share information that has been submitted to it in confidence with other federal agencies when they have a legitimate need for the information and the public interest will be served by sharing the information.⁵⁵⁵ As we discussed above, the Commission has found that the data provided in the Circuit Capacity Reports "are essential for our national security and public safety responsibilities in regulating communications submarine cables" and that "circuit capacity data are important for the Commission's contributions to the national security and defense of the United States."⁵⁵⁶ The data are also useful for federal agencies in fulfilling their other duties and responsibilities. We contemplate that such sharing would include cable operator data, capacity holder data, and the names and contact information (including addresses, e-mail addresses, telephone numbers, and fax numbers) of individual points of contact identified in the circuit capacity reports, as well as any additional information that is collected pursuant to any new requirements adopted in this proceeding or in a revised Filing Manual.⁵⁵⁷ We seek comment on whether to make clear in section 43.82 that sharing of the annual circuit capacity data with other federal government agencies is subject to the requirements of the confidentiality protections contained in the Commission's regulations⁵⁵⁸ and 44

Intent to Share International Circuit Capacity Data with the Committee for the Assessment of Foreign Participation in the United States Telecommunications Services Sector, IB Docket No. 21-439, Public Notice, 37 FCC Rcd 88 (IB 2022) (2022 IB Public Notice).

⁵⁵³ See also Letter from Ulises R. Pin, Counsel for ARCOS-1 USA Inc. et. al, Morgan, Lewis & Bockius LLP, to Marlene H. Dortch, Secretary, FCC (Jul. 2, 2020) (on file in IB Docket No. 20-194) (stating, "[b]ecause the purpose of the disclosure is national security, law enforcement and emergency response, the Commission should only share confidential information contained in C&W Networks' circuit capacity reports with DHS and other federal agencies charged with national security, law enforcement and emergency response, including those agencies forming part of the new Committee for the Assessment of Foreign Participation in the United States Telecommunications Services Sector. The Commission, however, should not share this information other agencies that fall outside of that scope.").

⁵⁵⁴ 47 CFR § 0.442(b)(3) (citing 44 U.S.C. § 3510(b)).

⁵⁵⁵ See 44 U.S.C. § 3510; see also 47 U.S.C. § 154(j); *Examination of Current Policy Concerning the Treatment of Confidential Information Submitted to the Commission*, Report and Order, 13 FCC Rcd 24816, 24818, para. 2 (1998); *Examination of Current Policy Concerning the Treatment of Confidential Information Submitted to the Commission*, Notice of Inquiry and Notice of Proposed Rulemaking, 11 FCC Rcd 12406, 12414-15, 12417-18, paras. 15, 21 (1996).

⁵⁵⁶ 2017 Section 43.62 Report and Order, 32 FCC Rcd at 8128-29, para. 28.

⁵⁵⁷ See 47 CFR § 43.82(c). To the extent required, the Commission will ensure that any new disclosures are fully covered by applicable Privacy Act SORNs. See *supra* n.273 (citing potentially applicable SORNs); cf. IB-1, 86 F.R. at 43238 ("Information filed with a request for confidentiality may be disclosed to other Federal government agencies pursuant to 47 CFR 0.442.").

⁵⁵⁸ See 47 CFR §§ 0.442, 0.457, 0.459, and 0.461. The Commission's regulations provide that confidential proprietary and commercially sensitive information will be withheld from public disclosure, subject to the public's right to seek disclosure under the Freedom of Information Act and implementing regulations. 5 U.S.C. § 552; 47 CFR §§ 0.457(d), 0.459(d).

U.S.C. § 3510,⁵⁵⁹ and, in the case of the Committee, section 8 of Executive Order 13913⁵⁶⁰ that require the Committee to keep the information confidential.

224. In addition, we tentatively find that three agencies have a special need for the information contained in the Circuit Capacity Reports. First, we tentatively find that Executive Order 13913 provides a basis to share annual circuit capacity data with the Committee by establishing that the members and advisors of the Committee have a legitimate need for such information.⁵⁶¹ The policy of Executive Order 13913 is to ensure the “[t]he security, integrity, and availability of the United States telecommunications networks [that] are vital to United States national security and law enforcement interests.”⁵⁶² Further, in this regard, Executive Order 13913 authorizes the Committee to review not only license applications but also existing licenses.⁵⁶³ DOJ, in its capacity as Chair of the Committee, has stated in formal requests for access to the annual circuit capacity data that this information “will enhance and improve the Committee’s ability to execute its mission to assess risk to the national security and law enforcement interests of the United States.”⁵⁶⁴ In the context of reviews within the scope of Executive Order 13913, the Committee’s important role in reviewing applications and licenses for risks to national security and law enforcement interests establishes its legitimate need for the information.⁵⁶⁵ We seek comment on this tentative conclusion.

225. The Commission’s established policy in the *2017 Section 43.62 Report and Order* also provides a basis to share annual circuit capacity data with DHS by establishing that DHS has a legitimate need for such information. In that Report and Order, the Commission specifically noted that DHS “finds this information to be critical to its national and homeland security functions”⁵⁶⁶ and “[DHS] states that

⁵⁵⁹ 44 U.S.C. § 3510.

⁵⁶⁰ Executive Order 13913, § 8 (“Information submitted to the Committee pursuant to this subsection and analysis concerning such information shall not be disclosed beyond Committee Member entities and Committee Advisor entities, except as appropriate and consistent with procedures governing the handling of classified or otherwise privileged or protected information, under the following circumstances: (a) to the extent required by law or for any administrative or judicial action or proceeding, or for law enforcement purposes; (b) to other governmental entities at the discretion of the Chair, provided that such entities make adequate assurances to the Chair that they will not further disclose the shared information, including to members of the public; or (c) to the Committee on Foreign Investment in the United States with respect to transactions reviewed by that Committee pursuant to 50 U.S.C. 4565, in which case this information and analysis shall be treated consistent with the disclosure protections of 50 U.S.C. 4565(c).”).

⁵⁶¹ See 47 CFR § 0.442(b)(2) (“Information submitted to the Commission in confidence pursuant to 0.457(c)(2) and (3), (d) and (g) or § 0.459, or any other statute, rule or order, may be disclosed to other agencies of the Federal government upon request or upon the Commission’s own motion, provided . . . The other agency has established a legitimate need for the information”); see Executive Order 13913, § 1.

⁵⁶² Executive Order 13913, § 1. Under section 8 of Executive Order 13913, the Committee “may seek information from applicants, licensees, and any other entity as needed” in furtherance of its reviews and assessments of applications and licenses. *Id.* § 8.

⁵⁶³ *Id.* § 5-6.

⁵⁶⁴ DOJ Aug. 9, 2023 Letter at 1; see *2023 OIA Public Notice*, 38 FCC Rcd at 7980; *IB 2022 Public Notice*, 37 FCC Rcd at 88. DOJ has explained that having circuit capacity information “provides a clearer picture of how [submarine cables] are being used, which better enables the Committee to evaluate international data flows on various cables (and related issues such as internet topography)” and that “[w]ith this data, the Committee has another tool to assess data-security risk . . . [thus providing] additional context to the Committee’s risk-based analyses.” DOJ Aug. 9, 2023 Letter at 1-2; *2023 OIA Public Notice*, 38 FCC Rcd at 7981.

⁵⁶⁵ See Executive Order 13913, § 1.

⁵⁶⁶ *2017 Section 43.62 Report and Order*, 32 FCC Rcd at 8127, para. 26 (citing Letter from Emily Early, Director

this information, when combined with other data sources, is used to protect and preserve national security and for its emergency response purposes.”⁵⁶⁷ DHS has stated in formal requests for access to the annual circuit capacity data that “[t]his information, when combined with other data sources, will be used to protect and preserve national security and for the Department’s emergency response purposes.”⁵⁶⁸ DHS has also stated that the data will “enhance its efforts and inform its analysis and decision-making that protect the resilience of the Nation’s critical infrastructure.”⁵⁶⁹

226. Finally, we tentatively find that Executive Order 10530 provides a basis for the Commission to share annual circuit capacity data with the State Department. Executive Order 10530, which delegates the President’s authority to license submarine cables to the Commission, requires the Commission to obtain approval from the State Department for any such action.⁵⁷⁰ Our approach contemplates sharing the annual circuit capacity data with the State Department in light of the agency’s legitimate need for the information in furtherance of its functions related to approving (or disapproving) Commission actions on submarine cable licenses. We seek comment on this tentative conclusion.

E. Costs and Benefits

227. We seek comment on the potential benefits and costs of the proposals discussed throughout this *Notice*. The rule changes identified in the *Notice* would advance U.S. national security, law enforcement, foreign policy, and trade policy interests. These proposals are designed to update and formalize the submarine cable rules and to enable the Commission to better identify and address national security and law enforcement risks.

228. Among the proposals, in the *Notice*, we propose to codify the Commission’s rules and legal requirements under the Cable Landing License Act, adopt a process to withhold or revoke a cable landing license, and adopt a three-year periodic review process for cable landing licenses or, in the alternative, shorten the current 25-year submarine cable license term for national security and law enforcement concerns. We propose to adopt a presumption that certain entities and their current and future affiliates and subsidiaries shall not be qualified to become a new submarine cable landing licensee if their international section 214 authority was previously denied or revoked on national security or law enforcement grounds. We propose several certifications, including a certification that applicants have created, updated, and implemented cybersecurity risk management plans and a certification to the Commission that they are not using or will use equipment or services identified on the Commission’s “Covered List” deemed to pose an unacceptable risk to the national security of the United States or the security and safety of United States persons, pursuant to the Secure and Trusted Communications Networks Act. We propose to require applicants to disclose their use of foreign-owned MNSPs, and if so, to answer the Standard Questions and possibly refer those applications to the Executive Branch agencies, including the Committee. We also propose to adopt a rule allowing the sharing of critical submarine cable data filed in the applications and confidential circuit capacity data with federal agencies without undertaking the procedures required under section 0.442 of the rules.

229. The benefits of the proposed rules will ensure the Commission fulfills its national

(Acting), DHS NPPD Strategy, Policy, and Plans, Office of Cyber and Infrastructure Analysis, National Protection and Program Directorate, DHS, to Marlene Dortch, Secretary, FCC (Sept. 21, 2017) (DHS Sept. 21 Ex Parte Letter)).

⁵⁶⁷ *Id.* at 8129, para. 28 (citing DHS Sept. 21 Ex Parte Letter at 1-2).

⁵⁶⁸ DHS March 5, 2020 Letter at 1; *2020 Sharing Circuit Capacity Data Public Notice*, 35 FCC Rcd at 6533.

⁵⁶⁹ *Id.*

⁵⁷⁰ Executive Order 10530, § 5(a) (“*Provided*, That no such license shall be granted or revoked by the Commission except after obtaining approval of the Secretary of State . . .”).

security and public interest responsibilities under the Cable Landing License Act. Similar to our work in other related proceedings, we expect that the resulting changes would improve the Commission's oversight of submarine cable licenses and ensure that a submarine cable license and the licensees continue to serve the public interest, as the Act intended.⁵⁷¹ As we stated there, "[t]hese benefits cannot be achieved with ad hoc reviews alone."⁵⁷² By adopting a periodic reporting requirement for submarine cable licenses, this process will help ensure that the Commission and the Executive Branch agencies review submarine cable licenses on a continuing basis and have the necessary information to address evolving national security, law enforcement, foreign policy, and/or trade policy risks. While we tentatively find that a three-year periodic review process is a critical component of protecting U.S. national security, law enforcement, foreign policy, and trade policy interests against evolving threats, we acknowledge that such a process or other proposals in the *Notice* may create economic burdens for submarine cable licensees.

230. Broadly, concerning benefits, we seek to ensure the safety and reliability of the submarine cable systems while adopting processes to expedite and streamline our rules. Submarine cables carry an estimated 99% of intercontinental data traffic⁵⁷³ and our efforts will enable the industry to continue to deploy submarine cables ensuring reliable communications in a competitive marketplace, fulfilling its public interest duties. Importantly, the Commission has previously found that "a foreign adversary's access to American communications networks could result in hostile actions to disrupt and surveil our communications networks, impacting our nation's economy generally and online commerce specifically, and result in the breach of confidential data."⁵⁷⁴ Given that our national gross domestic product was over \$26 trillion in 2023,⁵⁷⁵ the digital economy accounted for \$3.7 trillion of our economy in 2021,⁵⁷⁶ and the volume of international trade for the United States (exports and imports) was \$6.9 trillion in 2023,⁵⁷⁷ even a temporary disruption in international submarine cable communications could cause billions of dollars in economic losses. The harms would be significant, causing disruption to business import and export trade, multinational corporation operations, international financial flows, online commerce, residential and government communications, and online access to information, including emergency services. A 2012 report by APEC stated that submarine cables carried over \$10

⁵⁷⁶ See Tina Highfill & Christopher Surfield, Bureau of Economic Analysis, U.S. Department of Commerce, New and Revised Statistics of the U.S. Digital Economy, 2005-2021 (November 2022), <https://www.bea.gov/system/files/2022-11/new-and-revised-statistics-of-the-us-digital-economy-2005-2021.pdf>.

⁵⁷⁷ See Press Release, Bureau of Economic Analysis, U.S. Department of Commerce, U.S. International Trade in Goods and Services, December and Annual 2023 (Feb. 7, 2024), <https://www.bea.gov/news/2024/us-international-trade-goods-and-services-december-and-annual-2023>.

trillion in financial transactions globally each day.⁵⁷⁸ Assuming the United States' share is approximately equal to its share of global GDP, it would account for nearly \$2.6 trillion per day.⁵⁷⁹ We seek comment on the expected benefits of the proposals in the *Notice*.

231. Our estimate of costs should include all the expected ongoing costs that would be incurred as a result of the rules proposed in the *Notice*. We note that the annual aggregate cost of the proposed rules described above could vary, depending on the rules adopted and whether applications and license reviews are referred to the Committee. We tentatively conclude that the benefits of establishing the proposed licensing process – which include the safety and reliability of the submarine cable systems and the protection of national security and law enforcement interests – will be in excess of these costs.

232. We base our cost estimate on the Commission's records, as described above, that indicate there are currently 84 submarine cable systems owned by approximately 145 unique licensees. Furthermore, we estimate that every year, there are approximately eight (8) cable landing license applications for new cables.⁵⁸⁰ We also estimate that there are approximately 23 applications every year for modification, assignment, transfer, or control.⁵⁸¹ Based on these groups, we estimate that 35 applications are submitted annually.⁵⁸²

233. Our cost estimate assumes that approximately 105 licensees will undergo the application process each year for the estimated 35 cable systems. We base this on the conservative assumption that each submarine cable landing license application will have an average of three licensees.⁵⁸³ We estimate that the costs to applicants related to applying for licenses would include, among other tasks, providing responses to standard questions, reporting on current and future service offerings, reporting on the use of foreign-owned MNSPs, providing information on the submarine cable infrastructure, and providing information pertaining to reportable foreign ownership. In addition to the requirements, we estimate that applicants will incur an additional cost associated with our proposal to certify compliance to baseline cybersecurity standards, including implementing the cybersecurity risk management plans. We expect that the amount of work associated with preparing a new license application likely will be similar to the work associated with preparing a renewal application.⁵⁸⁴ Additionally, the licensees would be required to

⁵⁷⁸ APEC Policy Support Unit, *Economic Impact of Submarine Cable Disruptions* at 9 (Dec. 2012), <https://www.apec.org/publications/2013/02/economic-impact-of-submarine-cable-disruptions> (citing a U.S. Federal Reserve representative's seminar presentation).

⁵⁷⁹ World Bank Group, *GDP (current US\$)* <https://data.worldbank.org/indicator/NY.GDP.MKTP.CD> (last visited Oct. 21, 2024). U.S. GDP is given as \$27.36 trillion, world GDP is given as \$105.44 trillion (27.36 / 105.44 = 25.95%).

⁵⁸⁰ Based on internal staff analysis, there were 24 cable landing license applications for new cables between January 1, 2022 and October 20, 2024, which produces an annual average of eight cable landing license applications.

⁵⁸¹ Based on internal staff analysis, there were 67 applications for modification, assignment, or transfer of control between January 1, 2022 and October 20, 2024, which produces an annual average of approximately 23 applications. We conservatively assume that the cost for an application for modification, assignment, transfer, or control is equivalent to the cost for a new application.

⁵⁸² For the purposes of renewal of existing licenses, we assume a uniform distribution of license renewal applications over the entirety of the twenty-five year license term, thereby projecting that there will be 4 applications submitted annually for existing submarine cable systems ($84 / 25 = 3.36$ rounded up to 4 applications per year). Annual number of applications submitted would therefore be approximately 35 (23 + 8 + 4).

⁵⁸³ Based on the Commission's records, there are 237 total licensees for 84 cable systems, which produces an average of 2.8 licensees per application, which we conservatively round up to 3 licensees per cable system.

⁵⁸⁴ This is based on our proposal to require applicants seeking to renew or extend a cable landing license to provide in the application the same information and certifications required in an application for a new cable landing license. *See supra* at para. 148.

provide the Commission with updated information every three years.

234. We have estimated that the preparation of a new or renewal application for each submarine cable system by an average of three licensees will require 80 hours of work by attorneys⁵⁸⁵ and 80 hours of work by support staff, at a cost of \$27,200 per application.⁵⁸⁶ To this cost, we add the cost of cybersecurity certification required for all new and renewal application, and which we estimate to be \$9,100.⁵⁸⁷ We also estimate that the 3-year periodic reporting review will require twelve hours of attorney and twelve hours of support staff time, at a cost of \$4,100, which we multiply by one-third to calculate the annual estimated cost of \$1,370.⁵⁸⁸ We then multiply the sum of these costs by 35 to produce a total estimate of approximately \$1.32 million per year for the 25-year period, as a baseline

⁵⁸⁵ Our cost data on wages for attorneys are based on the Commission's estimates of labor costs as represented in previous Paperwork Reduction Act (PRA) statements. International Section 214 Process and Tariff Requirements – 47 CFR Sections 63.10, 63.11, 63.13, 63.18, 63.19, 63.21, 63.24, 63.25, and 1.1311, OMB Control No. 3060-0686 Paperwork Reduction Act (PRA) Supporting Statement at 13 (Mar. 25, 2021), https://www.reginfo.gov/public/do/PRAViewDocument?ref_nbr=202103-3060-012 (March 2021 Supporting Statement); International Section 214 Process and Tariff Requirements – 47 CFR Sections 63.10, 63.11, 63.13, 63.18, 63.19, 63.21, 63.24, 63.25, and 1.1311, OMB Control No. 3060-0686 Paperwork Reduction Act (PRA) Supporting Statement at 14 (Nov. 28, 2017), https://www.reginfo.gov/public/do/PRAViewDocument?ref_nbr=201711-3060-029 (November 2017 Supporting Statement).

⁵⁸⁶ Consistent with the Commission's calculations in the PRA statements, we estimate the median hourly wage for attorneys as \$300 for outside counsel. *Id.* We assume that this wage reasonably represents an average for all attorney labor, across a range of authorization holders with different sizes and business models, used to comply with the rules proposed in the Notice. Also, consistent with the Commission's calculations in PRA statements, we estimate the median hourly wage for support staff (paralegals and legal assistants) as \$40. *Id.* Thus, 80 hours of work by attorneys would cost \$24,000 and 80 hours of work by support staff would cost \$3,200, for a total of \$27,200 per application.

⁵⁸⁷ Previously, the Commission had estimated a cost of drafting a cybersecurity risk management plan and submitting a certification as \$820. Specifically, the Commission estimated that compliance would take 10 hours of labor from a General and Operations Manager compensated at \$82 per hour ($\$820 = \82×10). *Emergency Alert System Cybersecurity NPRM* 37 FCC Rcd at 12939, para. 12, n.49 (2022). We update this estimate to account for a baseline increase in compensation for General and Operations Managers from \$55 to approximately \$62.18 per hour, which when accounting for a benefits estimate of 45% becomes \$90.16 ($= \62.18×1.45). See Bureau of Labor Statistics, *Occupational Employment and Wages, May 2023, 11-1021 General and Operations Managers* (Apr. 3, 2024), <https://www.bls.gov/oes/current/oes111021.htm> (General and Operation Managers Mean Hourly Wage) (mean hourly wage is \$62.18 for occupation code 11-1021 General and Operations Managers). Several commenters in that proceeding argued that the proposed cost of creating, updating, implementing and certifying cybersecurity risk management plans is too low. For example, NPR estimates that the Commission's estimate is "off by a factor of 10 or more." NPR Comments, PS Docket Nos. 15-94, 15-91, and 22-329, at 8 (filed Dec. 23, 2022); see Colorado Broadcasters Association Comments (filed Dec. 23, 2022). In light of this record, we update our estimate to \$9,100 to be consistent with the record in that proceeding ($= (100 \text{ hours per applicant}) \times (\$62.18 \text{ mean hourly wage}) \times (1 + 45\% \text{ benefit mark-up})$, which we round up to \$9,100). See also, *BGP Risk Mitigation NPRM* at 32, para. 89. To account for benefits, we mark up wages by 45%, which results in total hourly compensation of $\$62.18 \times 1.45 = \90.16 . According to the Bureau of Labor Statistics, as of June 2023, civilian wages and salaries averaged \$29.86/hour and benefits averaged \$13.39/hour. Total compensation therefore averaged $\$29.86 + \13.39 , rounded to \$43.26. See Press Release, Bureau of Labor Statistics, *Employer Costs for Employee Compensation—June 2023* (Sept. 12, 2023), <https://www.bls.gov/news.release/pdf/ecec.pdf>. Using these figures, benefits constitute a markup of $\$13.39/\$29.86 \sim 45\%$.

⁵⁸⁸ Twelve hours of work by attorneys would cost \$3,600 (12 hours x \$300 per hour) and twelve hours of work by support staff would cost \$480 (12 hours x \$40 per hour), which sums to \$4,080, which we round up to \$4,100. We then calculate the annual cost by dividing the three-year cost by 3 to produce an estimate of \$1,370 ($\$4,100 / 3 = \$1,366.67$, rounded up to \$1,370).

estimate of the annual application and license review costs.⁵⁸⁹ We anticipate that later rounds of the three-year periodic reporting review will cause significantly lower costs, since much of the information will not have changed between reviews.

235. We seek comment on the estimates provided here, which are based on our experience and calculations of the likely costs of past submarine cable application processing and cybersecurity reviews. We seek comment on the additional costs that applicants will incur from the new reporting requirements detailed above. We also seek comment on the expected costs incurred by applicants, licensees and government agencies for applications and periodic reporting reviews that are referred to the Committee for additional review. We seek comment on the potential burdens on licensees, including on small entities.⁵⁹⁰ We note that some proposals may lower industry costs by streamlining or simplifying the application process. Also, some national security requirements might financially benefit companies that had not yet fully secured their networks from harm and thus were vulnerable to costly disruptions. Indeed, some of these requirements could be considered the minimum security needed in today's communications environment, and thus should already have been implemented by all submarine cables operators. Do our assumptions represent a reasonable estimate of total costs of the proposals in the *Notice*? Any suggestions for alternative approaches should include clear explanations of the cost estimates, as well as estimates as to whether the benefits under any proposed alternatives would increase or decrease compared to the benefits described above.

F. Digital Equity and Inclusion

236. Finally, the Commission, as part of its continuing effort to advance digital equity for all,⁵⁹¹ including people of color, persons with disabilities, persons who live in rural or Tribal areas, and others who are or have been historically underserved, marginalized, or adversely affected by persistent poverty or inequality, invites comment on any equity-related considerations⁵⁹² and benefits (if any) that may be associated with the proposals and issues discussed herein. Specifically, we seek comment on how our proposals may promote or inhibit advances in diversity, equity, inclusion, and accessibility, as well the scope of the Commission's relevant legal authority.

IV. PROCEDURAL ISSUES

237. *Ex Parte Rules.* This proceeding shall be treated as a "permit-but disclose" proceeding in accordance with the Commission's *ex parte* rules.⁵⁹³ Persons making *ex parte* presentations must file a

⁵⁸⁹ \$27,200 + \$9,100 + \$1,370 = \$37,670. Multiplying by 35 applications per year, we have, \$1,318,450 (= \$37,670 × 35), which we round up to \$1,319,000 per year.

⁵⁹⁰ For example, we seek comment on the costs and benefits of requiring all applicants, including those without reportable foreign ownership, to provide information on foreign-owned MNSPs. See *supra* Section III.B.7.

⁵⁹¹ Section 1 of the Communications Act of 1934 as amended provides that the FCC "regulat[es] interstate and foreign commerce in communication by wire and radio so as to make [such service] available, so far as possible, to all the people of the United States, without discrimination on the basis of race, color, religion, national origin, or sex." 47 U.S.C. § 151.

⁵⁹² The term "equity" is used here consistent with Executive Order 13985 as the consistent and systematic fair, just, and impartial treatment of all individuals, including individuals who belong to underserved communities that have been denied such treatment, such as Black, Latino, and Indigenous and Native American persons, Asian Americans and Pacific Islanders and other persons of color; members of religious minorities; lesbian, gay, bisexual, transgender, and queer (LGBTQ+) persons; persons with disabilities; persons who live in rural areas; and persons otherwise adversely affected by persistent poverty or inequality. See Exec. Order No. 13985, 86 Fed. Reg. 7009, Executive Order on Advancing Racial Equity and Support for Underserved Communities Through the Federal Government (Jan. 20, 2021).

⁵⁹³ 47 CFR § 1.1200 *et seq.*

copy of any written presentation or a memorandum summarizing any oral presentation within two business days after the presentation (unless a different deadline applicable to the Sunshine period applies). Persons making oral *ex parte* presentations are reminded that memoranda summarizing the presentation must (1) list all persons attending or otherwise participating in the meeting at which the *ex parte* presentation was made, and (2) summarize all data presented and arguments made during the presentation. If the presentation consisted in whole or in part of the presentation of data or arguments already reflected in the presenter's written comments, memoranda, or other filings in the proceeding, the presenter may provide citations to such data or arguments in his or her prior comments, memoranda, or other filings (specifying the relevant page and/or paragraph numbers where such data or arguments can be found) in lieu of summarizing them in the memorandum. Documents shown or given to Commission staff during *ex parte* meetings are deemed to be written *ex parte* presentations and must be filed consistent with rule 1.1206(b). In proceedings governed by rule 1.49(f) or for which the Commission has made available a method of electronic filing, written *ex parte* presentations and memoranda summarizing oral *ex parte* presentations, and all attachments thereto, must be filed through the electronic comment filing system available for that proceeding, and must be filed in their native format (e.g., .doc, .xml, .ppt, searchable .pdf). Participants in this proceeding should familiarize themselves with the Commission's *ex parte* rules.

238. *Regulatory Flexibility Act.* The Regulatory Flexibility Act of 1980, as amended (RFA),⁵⁹⁴ requires that an agency prepare a regulatory flexibility analysis for notice and comment rulemakings, unless the agency certifies that "the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities."⁵⁹⁵ Accordingly, we have prepared an Initial Regulatory Flexibility Analysis (IRFA) concerning the potential impact of rule and policy changes in this Notice of Proposed Rulemaking on small entities. The IRFA is set forth in Appendix C. Written public comments are requested on the IRFA. Comments must be filed by the deadlines for comments on the Notice indicated on the first page of this document and must have a separate and distinct heading designating them as responses to IRFA.

239. *Initial Paperwork Reduction Act Analysis.* This Notice of Proposed Rulemaking may contain proposed new or modified information collection requirements. The Commission, as part of its continuing effort to reduce paperwork burdens, invites the general public and the OMB to comment on any information collection requirements contained in this document, as required by the Paperwork Reduction Act of 1995, Public Law 104-13. In addition, pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107-198, *see* 44 U.S.C. § 3506(c)(4), we seek specific comment on how we might further reduce the information collection burden for small business concerns with fewer than 25 employees.

240. *Filing of Comments and Reply Comments.* Pursuant to sections 1.415 and 1.419 of the Commission's rules, 47 CFR §§ 1.415, 1.419, interested parties may file comments and reply comments on or before the dates indicated on the first page of this document. Comments may be filed using the Commission's Electronic Comment Filing System (ECFS).

- *Electronic Filers:* Comments may be filed electronically using the Internet by accessing the ECFS: <https://www.fcc.gov/ecfs>.
- *Paper Filers:* Parties who choose to file by paper must file an original and one copy of each filing.

⁵⁹⁴ *See* 5 U.S.C. § 603.

⁵⁹⁵ *See id.* § 605(b).

- Filings can be sent by hand or messenger delivery, by commercial courier, or by the U.S. Postal Service. **All filings must be addressed to the Secretary, Federal Communications Commission.**
- Hand-delivered or messenger-delivered paper filings for the Commission's Secretary are accepted between 8:00 a.m. and 4:00 p.m. by the FCC's mailing contractor at 9050 Junction Drive, Annapolis Junction, MD 20701. All hand deliveries must be held together with rubber bands or fasteners. Any envelopes and boxes must be disposed of before entering the building.
- Commercial courier deliveries (any deliveries not by the U.S. Postal Service) must be sent to 9050 Junction Drive, Annapolis Junction, MD 20701.
- Filings sent by U.S. Postal Service First-Class Mail, Priority Mail, and Priority Mail Express must be sent to 45 L Street NE, Washington, DC 20554.

241. *People with Disabilities.* To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an e-mail to fcc504@fcc.gov or call the Consumer & Governmental Affairs Bureau at 202-418-0530 (voice), 202-418-0432 (TTY).

242. *Providing Accountability Through Transparency Act.* Consistent with the Providing Accountability Through Transparency Act, Public Law 118-9, a summary of this document is available on <https://www.fcc.gov/proposed-rulemakings>.

243. *Additional Information.* For further information regarding Notice of Proposed Rulemaking, please contact Desiree Hanssen, Attorney Advisor, Telecommunications and Analysis Division, Office of International Affairs, at Desiree.Hanssen@fcc.gov or 202-418-0887.

V. ORDERING CLAUSES

244. IT IS FURTHER ORDERED that, pursuant to sections 1, 4(i), 4(j), 201-255, 303(r), 403, 413 of the Communications Act of 1934, as amended, 47 U.S.C. §§ 151, 154(i), 154(j), 201-255, 303(r), 403, 413, and the Cable Landing License Act of 1921, 47 U.S.C. §§ 34-39, and Executive Order No. 10530, section 5(a) (May 12, 1954) reprinted as amended in 3 U.S.C. § 301, this Notice of Proposed Rulemaking IS HEREBY ADOPTED.

245. IT IS FURTHER ORDERED that the Commission's Office of the Secretary SHALL SEND a copy of this Notice of Proposed Rulemaking, including the Initial Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

FEDERAL COMMUNICATIONS COMMISSION

Marlene H. Dortch
Secretary

APPENDIX A

Proposed Rules

Parts 0, 1, and 43 of the Commission's rules are amended as follows:

PART 0 – COMMISSION ORGANIZATION

1. The authority citation of part 1 continues to read as follows:

Authority: 47 U.S.C. 151, 154(i), 154(j), 155, 225, 409, and 1754, unless otherwise noted.

2. Revise section 0.457(c)(1) to read as follows:

§ 0.457 - Records not routinely available for public inspection.

* * * * *

(c) * * *

(1) * * *

(i) * * *

(ii) * * *

(iii) * * *

(iv) The exact addresses and the specific geographic coordinates of cable landing stations, beach manholes, and other location information associated with submarine cables.

* * * * *

PART 1 – PRACTICE AND PROCEDURE

3. The authority citation of part 1 continues to read as follows:

Authority: 47 U.S.C. chs. 2, 5, 9, 13; 28 U.S.C. 2461 note; 47 U.S.C. 1754, unless otherwise noted.

4. Add subpart FF to part 1 to read as follows:

Subpart FF—Submarine Cable Landing Licenses

§ 1.70000 – Purpose

(a) *Purpose.* The provisions contained in this subpart implement the Cable Landing License Act of 1921, codified at 47 U.S.C. 34–39, as amended, and section 5(a) of Executive Order No. 10530, dated May 10, 1954, and provide requirements for initial applications for a submarine cable landing license; certifications; routine conditions; requests for special temporary authority; foreign carrier affiliation notifications; amendment of applications; modification applications; substantial assignment and transfer of control of a submarine cable landing license; *pro forma* assignment and transfer of control notifications; requests for streamlining of applications; quarterly reports; three-year periodic reports; renewal applications; public viewing of applications; electronic filing; and denial, revocation, and termination of submarine cable landing license applications or licenses.

§ 1.70001 – Definitions

(a) *Affiliated.* The term “affiliated” as used in this subpart is defined as in § 63.09 of this chapter.

(b) **Country.** The term “country” as used in this subpart refers to the foreign points identified in the U.S. Department of State’s list of Independent States of the World and its list of Dependencies and Areas of Special Sovereignty. See <http://www.state.gov>.

(c) **Foreign Carrier.** The term “foreign carrier” as used in this subpart is defined as in § 63.09 of this chapter except that the term “foreign carrier” shall also include any entity that owns or controls a cable landing station in a foreign market.

(d) **Managed Network Service Provider.** For purposes of this subpart, a managed network service provider (MNSP) is defined as any entity other than the applicant(s) or licensee(s) (i.e., third party entity) with whom the applicant(s) or licensee(s) contracts to provide, supplement, or replace certain functions for the U.S. portion of the submarine cable system (including any cable landing station and submarine line terminal equipment (SLTE) located in the United States) that require or may require access to the network, systems, or records of the applicant(s) or licensee(s).

§ 1.70002 – General Requirements

(a) **Submarine Cable Landing License Requirements.** A submarine cable landing license must be obtained prior to landing a submarine cable that connects:

- (1) the continental United States with any foreign country;
- (2) Alaska, Hawaii or the U.S. territories or possessions with a
 - (i) foreign country;
 - (ii) the continental United States; or
 - (iii) with each other; or
- (3) points within the continental United States, Alaska, Hawaii or a territory or possession in which the cable is laid in international waters.

(b) **Public Interest Standard.** An applicant seeking a submarine cable landing license or modification, assignment, transfer of control, or renewal of a submarine cable landing license shall include in the application information demonstrating how the grant of the application will serve the public interest, convenience, and necessity.

(c) **Character Qualifications.** An applicant seeking a submarine cable landing license or modification, assignment, transfer of control, or renewal of a submarine cable landing license shall certify in the application that the applicant has the requisite character qualifications, including whether the applicant has violated the Cable Landing License Act of 1921, the Communications Act of 1934, or Commission rules, including making false statements or misrepresentations to the Commission; whether the applicant has been convicted of a felony; and whether there is an adjudicated determination that the applicant has violated U.S. antitrust or other competition laws, has engaged in fraudulent conduct before another government agency, or has engaged in other non-FCC misconduct the Commission has found to be relevant in assessing the character qualifications of a licensee or authorization holder.

(d) **State Department Coordination.** Submarine cable licenses shall be granted or revoked by the Commission after obtaining the approval of the Secretary of State and such assistance from any executive department or establishment of the Government as the Commission may deem necessary. See section 5(a) of Executive Order No. 10530, dated May 10, 1954.

§ 1.70003 – Applicant/Licensee Requirements

(a) *Applicants/Licensees.* Except as otherwise required by the Commission, the following entities, at a minimum, shall be applicants for, and licensees on, a cable landing license:

- (1) Any entity that owns or controls a cable landing station in the United States; and
- (2) All other entities owning or controlling a five percent (5%) or greater interest in the cable system and using the U.S. points of the cable system.

§ 1.70004 – Presumption of Entities Not Qualified to Become a New Submarine Cable Licensee

(a) The following entities shall be presumed to be unqualified to become a new submarine cable landing licensee.

- (1) Any entity whose application for international section 214 authority was previously denied or whose domestic or international section 214 authority was previously revoked shall be presumed to be unqualified to become a new cable landing licensee as identified in the Report and Order, FCC xx-xx, __ FR __ ([INSERT DATE OF FEDERAL REGISTER PUBLICATION]).
- (2) Any entity whose application (including an application for any authorization or license) is or was previously denied or whose authorization or license is or was previously revoked and/or terminated on national security and/or law enforcement grounds shall be presumed to be unqualified to become a new cable landing licensee.
- (3) Current and future affiliates and subsidiaries, as defined in § 2.903(c), of identified entities pursuant to paragraphs (a)(1) and (a)(2).

§ 1.70005 – Initial Application for a Submarine Cable Landing License

An applicant must demonstrate in the initial application for a submarine cable landing license that they meet the requirements under § 1.70002(b)-(c), and the initial application must contain:

- (a) The name, address, e-mail address(es), and telephone number(s) of each applicant.
- (b) The Government, State, or Territory under the laws of which each corporate or partnership applicant is organized.
- (c) The name, title, address, e-mail address(es), and telephone number of the officer and any other contact point, such as legal counsel, of each applicant to whom correspondence concerning the application is to be addressed.
- (d) The name of the submarine cable system.
- (e) A description of the submarine cable, including:
 - (1) The states, territories, or possessions in the United States and the foreign countries where the cable will land;
 - (2) The number of segments in the submarine cable system and the designation of each (e.g. Segment A, Main Trunk, A-B segment);
 - (3) The length of the submarine cable by segment and in total;
 - (4) The location, by segment, of any branching units;

- (5) The address and county or county equivalent of each U.S. and non-U.S. cable landing station;
 - (6) The number of optical fiber pairs for each segment of the submarine cable;
 - (7) The design capacity for each segment of the submarine cable; and
 - (8) When the applicant(s) plan to put the submarine cable system into service.
- (f) A specific description of the submarine cable system, including geographic data in generally accepted GIS formats or other formats. OIA, in coordination with OEA, shall determine the file formats and specific data fields in which data will ultimately be collected.
- (1) The applicant initially may file a general geographic description of the landing points; however, grant of the application will be conditioned on the Commission's final approval of a more specific description of the landing points, including all information required by this paragraph, to be filed by the applicant no later than ninety (90) days prior to construction. The Commission will give public notice of the filing of this description, and grant of the license will be considered final if the Commission does not notify the applicant otherwise in writing no later than sixty (60) days after receipt of the specific description of the landing points, unless the Commission designates a different time period;
- (g) A statement disclosing whether the applicant uses foreign-owned managed network service providers (MNSPs) in the cable system. Such functions may include, but are not limited to: operations and management support; network operations and service monitoring, including intrusion testing; network performance, optimization, and reporting; installation and testing; network audits, provisioning and development; and the implementation of changes and upgrades.
- (h) (1) A statement as to whether the cable will be operated on a common carrier or non-common carrier basis;
- (2) Applicants for common carrier cable landing licenses shall also separately file an application for an international section 214 authorization for overseas cable construction under § 63.18 of this chapter.
- (i) (1) A list of all of the proposed owners of the cable system including those owners that are not applicants, their respective equity and/or voting interests in the cable system as a whole, their respective equity and/or voting interests in each U.S. cable landing station including submarine line terminal equipment, and their respective equity and/or voting interests by segment of the cable;
- (2) For those owners that are not applicants, an explanation for each one as to why it is not required to be an applicant/licensee under § 1.70003;
- (j) For each applicant:
- (1) The information and certifications required in § 63.18(h), (o), and (q) of this chapter.
 - (2) A certification as to whether or not the applicant is, or is affiliated with, a foreign carrier, including an entity that owns or controls a cable landing station, in any foreign country. The certification shall state with specificity each such country;
 - (3) A certification as to whether or not the applicant seeks to land and operate a submarine cable connecting the United States to any country for which any of the following is true. The certification shall state with specificity the foreign carriers and each country:
 - (i) The applicant is a foreign carrier in that country; or
 - (ii) The applicant controls a foreign carrier in that country; or
 - (iii) There exists any entity that owns more than 25 percent of the applicant, or controls

the applicant, or controls a foreign carrier in that country.

(iv) Two or more foreign carriers (or parties that control foreign carriers) own, in the aggregate, more than 25 percent of the applicant and are parties to, or the beneficiaries of, a contractual relation (e.g., a joint venture or market alliance) affecting the provision or marketing of arrangements for the terms of acquisition, sale, lease, transfer and use of capacity on the cable in the United States; and

(4) For any country that the applicant has listed in response to paragraph (j)(3) that is not a member of the World Trade Organization, a demonstration as to whether the foreign carrier lacks market power with reference to the criteria in § 63.10(a) of this chapter.

(5) Under § 63.10(a) of this chapter, the Commission presumes, subject to rebuttal, that a foreign carrier lacks market power in a particular foreign country if the applicant demonstrates that the foreign carrier lacks 50 percent market share in international transport facilities or services, including cable landing station access and backhaul facilities, intercity facilities or services, and local access facilities or services on the foreign end of a particular route.

(k) The certifications in § 1.70006, including a certification that the applicant accepts and will abide by the routine conditions specified in § 1.70007(a);

(l) Each applicant shall provide the following information with respect to services it expects to provide through the submarine cable system:

(1) Identification and description of the capacity services and capacity management services that the applicant will provide through the submarine cable system, including the amount of fiber, spectrum, or capacity the applicant intends to sell, lease, or swap;

(2) Types of customers that will be served, including those with whom the applicant will lease, sell, share, or swap fiber, spectrum, or capacity;

(3) Whether the applicant will own or control the U.S. portion of the submarine cable system, including the cable landing station(s), through an Indefeasible Right of Use (IRU) or leasehold interest;

(4) Identification of where the applicant in the future expects to market, offer, and/or provide services through the submarine cable system; and

(5) The general terms and conditions that will apply to the services provided through the submarine cable system, such as contact duration, minimum capacity/bandwidth requirements, IRU requirements, termination clauses, security requirements, delivery or Service Level Agreements (SLA) requirements, dispute resolution, and other applicable provisions.

(m) Each applicant shall demonstrate that it has successfully implemented an established set of cybersecurity best practices consistent with § 1.70006(c). The information provided under this subsection will be treated as presumptively confidential. Applicants and licensees shall submit cybersecurity risk management plans to the Commission upon request. OIA, in coordination with the Public Safety and Homeland Security Bureau, may request, at its discretion, submission of such cybersecurity risk management plans and to evaluate them for compliance with the Commission's rules in this subpart.

(n) Any other information that may be necessary to enable the Commission to act on the application.

(o) Applicants for cable landing licenses may be subject to the consistency certification requirements of the Coastal Zone Management Act (CZMA), 16 U.S.C. 1456, if they propose to conduct activities, in or outside of a coastal zone of a state with a federally-approved management plan, affecting any land or water use or natural resource of that state's coastal zone.

(1) Before filing their applications for a license to construct and operate a submarine cable system

or to modify the construction of a previously approved submarine cable system, applicants must determine whether they are required to certify that their proposed activities will comply with the enforceable policies of a coastal state's approved management program. In order to make this determination, applicants should consult National Oceanic Atmospheric Administration (NOAA) regulations, 15 CFR part 930, Subpart D, and review the approved management programs of coastal states in the vicinity of the proposed landing station to verify that this type of application is not a listed federal license activity requiring review.

(2) After the application is filed, applicants should follow the procedures specified in 15 CFR § 930.54 to determine whether any potentially affected state has sought or received NOAA approval to review the application as an unlisted activity. If it is determined that any certification is required, applicants shall consult the affected coastal state(s) (or designated state agency(ies)) in determining the contents of any required consistency certification(s). Applicants may also consult the Office of Ocean and Coastal Management (OCRM) within NOAA for guidance.

(3) The cable landing license application filed with the Commission shall include any consistency certification required by 16 U.S.C. 1456(c)(3)(A) for any affected coastal state(s) that lists this type of application in its NOAA-approved coastal management program and shall be updated pursuant to § 1.65 of the Commission's rules, 47 CFR § 1.65, to include any subsequently required consistency certification with respect to any state that has received NOAA approval to review the application as an unlisted federal license activity. Upon documentation from the applicant—or notification from each coastal state entitled to review the license application for consistency with a federally approved coastal management program—that the state has either concurred, or by its inaction, is conclusively presumed to have concurred with the applicant's consistency certification, the Commission may take action on the application.

§ 1.70006 - Certifications

All applicants for a submarine cable landing license, all licensees seeking modification of their license under § 1.70011, all licensees seeking renewal of their license under § 1.70017, all assignees or transferees in transactions under § 1.70012 or § 1.70013, and all licensees providing periodic reporting under § 1.70016 must certify to the following:

- (a) that the applicant/licensee accepts and will abide by the routine conditions specified in 1.70007;
- (b) that the applicant/licensee has the requisite character qualifications, including whether or not the applicant/licensee has violated the Cable Landing License Act of 1921, the Communications Act of 1934, or Commission rules, including making false statements or misrepresentations to the Commission; whether the applicant/licensee has been convicted of a felony; and whether there is an adjudicated determination that the applicant/licensee has violated U.S. antitrust or other competition laws, has engaged in fraudulent conduct before another government agency, or has engaged in other non-FCC misconduct the Commission has found to be relevant in assessing the character qualifications of a licensee or authorization holder;
- (c) that the applicant/licensee has created, updated, and implemented cybersecurity risk management plans, and
 - (1) that these plans identify the cybersecurity risks they face, the controls they use or plan to use to mitigate those risks, and how to ensure these controls are applied effectively to their organizations;
 - (2) that they will take reasonable measures to protect the confidentiality, integrity, and availability of their systems and services that could affect the provision of communications

services, describing in the cybersecurity risk management plan how they will employ their organizational resources and processes to ensure this.

(3) that the cybersecurity risk management plan has been signed by the entity's Chief Executive Officer, Chief Financial Officer, Chief Technology Officer, or similarly situated senior officer responsible for governance of the organization's security practices;

(4) that they will submit cybersecurity risk management plans to the Commission upon request; and

(5) that they will preserve data and records related to their cybersecurity risk management plans for two years from submission of the risk management plan certification.

(d) that the applicant/licensee will not use covered equipment or services identified on the Commission's "Covered List" that the Commission maintains pursuant to the Secure and Trusted Communications Networks Act.

§ 1.70007 – Routine Conditions

Except as otherwise ordered by the Commission, the following rules apply to each licensee of a cable landing license.

(a) Grant of the cable landing license is subject to:

(1) All rules and regulations of the Federal Communications Commission;

(2) Any treaties or conventions relating to communications to which the United States is or may hereafter become a party; and

(3) Any action by the Commission or the Congress of the United States rescinding, changing, modifying or amending any rights accruing to any person by grant of the license;

(b) The location of the cable system within the territorial waters of the United States of America, its territories and possessions, and upon its shores shall be in conformity with plans approved by the Secretary of the Army. The cable shall be moved or shifted by the licensee at its expense upon request of the Secretary of the Army, whenever he or she considers such course necessary in the public interest, for reasons of national defense, or for the maintenance and improvement of harbors for navigational purposes;

(c) The licensee shall at all times comply with any requirements of United States government authorities regarding the location and concealment of the cable facilities, buildings, and apparatus for the purpose of protecting and safeguarding the cables from injury or destruction by enemies of the United States of America;

(d) The licensee, or any person or company controlling it, controlled by it, or under direct or indirect common control with it, does not enjoy and shall not acquire any right to handle traffic to or from the United States, its territories or its possessions unless such service is authorized by the Commission pursuant to section 214 of the Communications Act, as amended;

(e) Prohibition on Special Concessions

(1) The licensee shall be prohibited from agreeing to accept special concessions directly or indirectly from any foreign carrier, including any entity that owns or controls a foreign cable landing station, where the foreign carrier possesses sufficient market power on the foreign end of the route to affect competition adversely in the U.S. market, and from agreeing to accept special concessions in the future.

- (2) For purposes of this section, a special concession is defined as an exclusive arrangement involving services, facilities, or functions on the foreign end of a U.S. international route that are necessary to land, connect, or operate submarine cables, where the arrangement is not offered to similarly situated U.S. submarine cable owners, indefeasible-right-of-user holders, or lessors, and includes arrangements for the terms for acquisition, resale, lease, transfer and use of capacity on the cable; access to collocation space; the opportunity to provide or obtain backhaul capacity; access to technical network information; and interconnection to the public switched telecommunications network.
- (f) The cable landing license and rights granted in the license shall not be transferred, assigned, or disposed of, or disposed of indirectly by transfer of control of the licensee, except in compliance with the requirements set out in §§ 1.70012 and 1.70013;
- (g) Entities that are parties to a pro forma assignment or transfer of control notification must notify the Commission no later than thirty (30) days after the assignment or transfer of control is consummated, and the notification must include information and certifications required under § 1.70013;
- (h) Unless the licensee has notified the Commission in the application of the precise locations at which the cable will land, as required by § 1.70005(f), the licensee shall notify the Commission no later than ninety (90) days prior to commencing construction at that landing location. The Commission will give public notice of the filing of each description, and grant of the cable landing license will be considered final with respect to that landing location unless the Commission issues a notice to the contrary no later than sixty (60) days after receipt of the specific description. See § 1.70005(f);
- (i) The Commission reserves the right to require the licensee to file an environmental assessment should it determine that the landing of the cable at the specific locations and construction of necessary cable landing stations may significantly affect the environment within the meaning of § 1.1307 implementing the National Environmental Policy Act of 1969. See § 1.1307(a) and (b). The cable landing license is subject to modification by the Commission under its review of any environmental assessment or environmental impact statement that it may require pursuant to its rules. See also § 1.1306 note 1 and § 1.1307(c) and (d);
- (j) The Commission reserves the right, pursuant to section 2 of the Cable Landing License Act, 47 U.S.C. 35, Executive Order No. 10530 as amended, and section 214 of the Communications Act of 1934, as amended, 47 U.S.C. 214, to impose common carrier regulation or other regulation consistent with the Cable Landing License Act on the operations of the cable system if it finds that the public interest so requires;
- (k) The licensee, or in the case of multiple licensees, the licensees collectively, shall maintain de jure and de facto control of the U.S. portion of the cable system, including the cable landing stations in the United States, sufficient to comply with the requirements of the Commission's rules and any specific conditions of the license;
- (l) The licensee shall comply with the requirements of § 1.70009;
- (m) The licensee shall file annual international circuit capacity reports as required by § 43.82 of this chapter.
- (n) The cable landing license is revocable or subject to termination by the Commission after due notice and opportunity for hearing for reasons set forth in section 2 of the Cable Landing License Act, 47 U.S.C. 35, or for failure to comply with the terms of the license or with the Commission's rules; and
- (o) The cable landing license shall expire twenty-five (25) years from the in-service date, unless renewed or extended upon proper application. Upon expiration, all rights granted under the license shall be terminated;

- (p) The licensee(s) must commence service provided under its license within three years following the grant of its license.
- (1) The licensee must notify the Commission within thirty (30) days of the date the cable is placed into service.
 - (2) Failure to notify the Commission of commencement of service within three years following the grant of the license shall result in automatic cancellation of the license, unless the licensee can show good cause why it is unable to commence commercial service on the cable.
- (q) Licensees shall file submarine cable outage reports as required in 47 CFR part 4;
- (r) Each licensee shall notify the Commission of any changes to the following within thirty (30) days:
- (1) the contact information of the licensee provided under §1.70005(a), (c); and,
 - (2) the name of the licensee (including the name under which the licensee is doing business) (a change in the form of the business, e.g., from a corporation to limited liability company, is a *pro forma* assignment and the Commission should be notified of such change pursuant to § 1.70013).
- (r) The licensee(s) shall notify the Commission of any changes to the following within thirty (30) days the name of the licensed submarine cable system. Joint licensees may appoint one party to act as proxy for purposes of complying with this requirement;
- (s) The licensee(s) will not use covered equipment or services identified on the Commission's "Covered List" that the Commission maintains pursuant to the Secure and Trusted Communications Networks Act; and
- (t) The licensee(s) shall submit periodic reports every three years consistent with the requirements under § 1.70016. Joint licensees may appoint one party to act as proxy for purposes of complying with this requirement.

§ 1.70008 – Requests for Special Temporary Authority

- (a) Special temporary authority may be used for construction, testing, or operation of a submarine cable service for a term up to and including 180 days.
- (b) Applicants seeking special temporary authority must file all requisite applications related to the request for special temporary authority. Applicants must identify the file number(s) of any pending application(s) associated with the request for special temporary authority.
- (c) An application for special temporary authority must include:
- (1) A narrative describing the request for a special temporary authority including, the type of request (e.g. new request, extension or renewal of previous request, or other), purpose for the special temporary authority (construction, testing, operating, or other), and the justification for such request;
 - (2) Information required by § 1.70005(a)-(c), (d), (g) of this subpart;
 - (3) whether or not the request for special temporary authority is associated with an application(s) pending with the Commission, and if so, identification of the related file number(s);
 - (4) the date by which applicants seek grant of the request for special temporary authority; and
 - (5) Any other information that may be necessary to enable the Commission to act on the application.

§ 1.70009 – Notification by and prior approval for submarine cable landing licensees that are or propose to become affiliated with a foreign carrier

Any entity that is licensed by the Commission (“licensee”) to land or operate a submarine cable landing in a particular foreign destination market that becomes, or seeks to become, affiliated with a foreign carrier that is authorized to operate in that market, including an entity that owns or controls a cable landing station in that market, shall notify the Commission of that affiliation.

(a) Affiliations requiring prior notification: Except as provided in paragraph (b) of this section, the licensee must notify the Commission, pursuant to this section, forty-five (45) days before consummation of either of the following types of transactions:

(1) Acquisition by the licensee, or by any entity that controls the licensee, or by any entity that directly or indirectly owns more than twenty-five percent (25%) of the capital stock of the licensee, of a controlling interest in a foreign carrier that is authorized to operate in a market where the cable lands; or

(2) Acquisition of a direct or indirect interest greater than twenty-five percent (25%), or of a controlling interest, in the capital stock of the licensee by a foreign carrier that is authorized to operate in a market where the cable lands, or by an entity that controls such a foreign carrier.

(b) Exceptions:

(1) Notwithstanding paragraph (a) of this section, the notification required by this section need not be filed before consummation, and may instead be filed pursuant to paragraph (c) of this section, if either of the following is true with respect to the named foreign carrier, regardless of whether the destination market where the cable lands is a World Trade Organization (WTO) or non-WTO Member:

(i) The Commission has previously determined in an adjudication that the foreign carrier lacks market power in that destination market (for example, in an international section 214 application or a declaratory ruling proceeding); or

(ii) The foreign carrier owns no facilities in that destination market. For this purpose, a carrier is said to own facilities if it holds an ownership, indefeasible-right-of-user, or leasehold interest in a cable landing station or in bare capacity in international or domestic telecommunications facilities (excluding switches).

(2) In the event paragraph (b)(1) of this section cannot be satisfied, notwithstanding paragraph (a) of this section, the notification required by this section need not be filed before consummation, and may instead be filed pursuant to paragraph (c) of this section, if the licensee certifies that the destination market where the cable lands is a WTO Member and provides certification to satisfy either of the following:

(i) The licensee demonstrates that its foreign carrier affiliate lacks market power in the cable's destination market pursuant to § 63.10(a)(3) of this chapter (see § 63.10(a)(3) of this chapter); or

(ii) The licensee agrees to comply with the reporting requirements contained in § 1.70015 effective upon the acquisition of the affiliation. See § 1.70015.

(c) Notification after consummation: Any licensee that becomes affiliated with a foreign carrier and has not previously notified the Commission pursuant to the requirements of this section shall notify the Commission within thirty (30) days after consummation of the acquisition.

Example 1 to paragraph (c). Acquisition by a licensee (or by any entity that directly or indirectly controls, is controlled by, or is under direct or indirect common control with the licensee) of a direct or indirect interest in a foreign carrier that is greater than twenty-five percent (25%) but not controlling is subject to paragraph (c) of this section but not to paragraph (a) of this section.

Example 2 to paragraph (c). Notification of an acquisition by a licensee of a hundred percent (100%) interest in a foreign carrier may be made after consummation, pursuant to paragraph (c) of this section, if the foreign carrier operates only as a resale carrier.

Example 3 to paragraph (c). Notification of an acquisition by a foreign carrier from a WTO Member of a greater than twenty-five percent (25%) interest in the capital stock of the licensee may be made after consummation, pursuant to paragraph (c) of this section, if the licensee demonstrates in the post-notification that the foreign carrier lacks market power in the cable's destination market or the licensee agrees to comply with the reporting requirements contained in § 1.767(l) effective upon the acquisition of the affiliation.

(d) Cross-reference: In the event a transaction requiring a foreign carrier notification pursuant to this section also requires a transfer of control or assignment application pursuant to the requirements of the license granted under §§ 1.70007(f)-(g), 1.70012, or 1.70013, the foreign carrier notification shall reference in the notification the transfer of control or assignment application and the date of its filing. See § 1.70007.

(e) Contents of notification: The notification shall certify the following information:

- (1) The name of the newly affiliated foreign carrier and the country or countries at the foreign end of the cable in which it is authorized to provide telecommunications services to the public or where it owns or controls a cable landing station;
- (2) Which, if any, of those countries is a Member of the World Trade Organization;
- (3) The name of the cable system that is the subject of the notification, and the FCC file number(s) under which the license was granted;
- (4) The name, address, citizenship, and principal business of any person or entity that directly or indirectly owns ten percent or more of the equity interests and/or voting interests, or a controlling interest, of the licensee, and the percentage of equity and/or voting interest owned by each of those entities (to the nearest one percent). Where no individual or entity directly or indirectly owns ten percent or more of the equity interests and/or voting interests, or a controlling interest, of the licensee, a statement to that effect.

(i) **Calculation of equity interests held indirectly in the licensee.** Equity interests that are held by an individual or entity indirectly through one or more intervening entities shall be calculated by successive multiplication of the equity percentages for each link in the vertical ownership chain, regardless of whether any particular link in the chain represents a controlling interest in the company positioned in the next lower tier. Example: An entity holds a non-controlling 30 percent equity and voting interest in Corporation A which, in turn, holds a non-controlling 40 percent equity and voting interest in the licensee. The entity's equity interest in the licensee would be calculated by multiplying the individual's equity interest in Corporation A by that entity's equity interest in the licensee. The entity's equity interest in the licensee would be calculated as 12 percent ($30\% \times 40\% = 12\%$). The result would be the same even if Corporation A held a de facto controlling interest in the licensee.

(ii) **Calculation of voting interests held indirectly in the licensee.** Voting interests that are held through one or more intervening entities shall be calculated by successive multiplication of the voting percentages for each link in the vertical ownership chain, except that wherever the voting interest for any link in the chain is equal to or exceeds 50 percent or represents actual control, it shall be treated as if it were a 100 percent interest. A general partner shall be deemed to hold the same voting interest as the partnership holds in the company situated in the next lower tier of the vertical ownership chain. A

partner of a limited partnership (other than a general partner) shall be deemed to hold a voting interest in the partnership that is equal to the partner's equity interest. Example: An entity holds a non-controlling 30 percent equity and voting interest in Corporation A which, in turn, holds a controlling 70 percent equity and voting interest in the licensee. Because Corporation A's 70 percent voting interest in the licensee constitutes a controlling interest, it is treated as a 100 percent interest. The entity's 30 percent voting interest in Corporation A would flow through in its entirety to the licensee and thus be calculated as 30 percent ($30\% \times 100\% = 30\%$).

- (5) An ownership diagram that illustrates the licensee's vertical ownership structure, including the direct and indirect ownership (equity and voting) interests held by the individuals and entities named in response to paragraph (e)(4) of this section. Every individual or entity with ownership shall be depicted and all controlling interests must be identified.
 - (6) Interlocking directorates. The name of any interlocking directorates, as defined in § 63.09(g) of this chapter, with each foreign carrier named in the notification. See § 63.09(g) of this chapter.
 - (7) With respect to each foreign carrier named in the notification, a statement as to whether the notification is subject to paragraph (a) or (c) of this section. In the case of a notification subject to paragraph (a) of this section, the licensee shall include the projected date of closing. In the case of a notification subject to paragraph (c) of this section, the licensee shall include the actual date of closing.
 - (8) If a licensee relies on an exception in paragraph (b) of this section, then a certification as to which exception the foreign carrier satisfies and a citation to any adjudication upon which the licensee is relying. Licensees relying upon the exceptions in paragraph (b)(2) of this section must make the required certified demonstration in paragraph (b)(2)(i) of this section or the certified commitment to comply with the reporting requirements in paragraph (b)(2)(ii) of this section in the notification required by paragraph (c) of this section.
- (f) If the licensee seeks to be excepted from the reporting requirements contained in § 1.70015, the licensee should demonstrate that each foreign carrier affiliate named in the notification lacks market power pursuant to § 63.10(a)(3) of this chapter. See § 63.10(a)(3) of this chapter.
- (g) Procedure. After the Commission issues a public notice of the submissions made under this section, interested parties may file comments within fourteen (14) days of the public notice.
- (1) If the Commission deems it necessary at any time before or after the deadline for submission of public comments, the Commission may impose reporting requirements on the licensee based on the provisions of § 1.70015. See § 1.70015.
 - (2) In the case of a prior notification filed pursuant to paragraph (a) of this section, the authorized U.S. licensee must demonstrate that it continues to serve the public interest for it to retain its interest in the cable landing license for that segment of the cable that lands in the non-WTO destination market. Such a showing shall include a demonstration as to whether the foreign carrier lacks market power in the non-WTO destination market with reference to the criteria in § 63.10(a) of this chapter. In addition, upon request of the Commission, the licensee shall provide the information specified in § 1.70005(j). If the licensee is unable to make the required showing or is notified by the Commission that the affiliation may otherwise harm the public interest pursuant to the Commission's policies and rules under 47 U.S.C. 34 through 39 and Executive Order No. 10530, dated May 10, 1954, then the Commission may impose conditions necessary to address any public interest harms or may proceed to an immediate authorization revocation hearing.
 - (3) Under § 63.10(a) of this chapter, the Commission presumes, subject to rebuttal, that a foreign

carrier lacks market power in a particular foreign country if the applicant demonstrates that the foreign carrier lacks 50 percent market share in international transport facilities or services, including cable landing station access and backhaul facilities, intercity facilities or services, and local access facilities or services on the foreign end of a particular route.

(h) All licensees are responsible for the continuing accuracy of information provided pursuant to this section for a period of forty-five (45) days after filing. During this period if the information furnished is no longer accurate, the licensee shall as promptly as possible, and in any event within ten (10) days, unless good cause is shown, file with the Commission a corrected notification referencing the FCC file numbers under which the original notification was provided.

(i) A licensee that files a prior notification pursuant to paragraph (a) of this section may request confidential treatment of its filing, pursuant to § 0.459 of this chapter, for the first twenty (20) days after filing.

(j) Subject to the availability of electronic forms, all notifications described in this section must be filed electronically through the International Communications Filing System (ICFS). A list of forms that are available for electronic filing can be found on the ICFS homepage. For information on electronic filing requirements, see §§ 1.1000 through 1.10018 and the ICFS homepage at <https://www.fcc.gov/icfs>. See also §§ 63.20 and 63.53 of this chapter.

§ 1.70010 – Amendment of Applications.

Any application may be amended as a matter of right prior to the date of any final action taken by the Commission or designation for hearing. Amendments to applications shall be signed and submitted in the same manner as was the original application. If a petition to deny or other formal objection has been filed in response to the application, the amendment shall be served on the parties.

§ 1.70011 – Modification Applications

A separate application shall be filed with respect to each individual cable system for which a licensee(s) seeks to modify the cable landing license. Each modification application shall include a narrative description of the proposed modification including relevant facts and circumstances leading to the request. Each modification application must contain a demonstration that the applicant meets the requirements under § 1.70002(b)-(c). Requirements for specific types of modification requests are set out below. For other situations, the licensee(s) should contact Commission staff regarding the required information for the modification application.

(a) A modification application to add a landing station(s), segment(s), or other like material changes to a submarine cable system must also include the following:

- (1) Information as required by § 1.70005(a)-(i), and (k)-(m), as it relates to the modified portion of the cable system;
- (2) Certifications set forth under § 1.70006; and
- (3) Any other information that may be necessary to enable the Commission to act on the application.
- (4) Signatures by each licensee. Joint licensees may appoint one party to act as proxy for purposes of complying with this requirement.

(b) A modification application to remove a landing station(s), segment(s), or other like material changes to a submarine cable system must also include the following:

- (1) A description of which elements will be removed from the cable system and the timing for the removal or that element(s);
 - (2) Certifications set forth under § 1.70006; and
 - (3) Any other information that may be necessary to enable the Commission to act on the application.
- (c) A modification application to add an applicant as a licensee for an existing cable landing license must also include the following:
- (1) Information required by § 1.70005(a)-(d) for the proposed new licensee;
 - (2) Information required by § 1.70005(j) for the proposed new licensee;
 - (3) Certifications set forth under § 1.70006 for the proposed new licensee;
 - (4) Signatures by the proposed licensee and each current licensee. Joint licensees may appoint one party to act as proxy for purposes of complying with this requirement; and
 - (5) Any other information that may be necessary to enable the Commission to act on the application.
- (d) A modification application for a licensee that seeks to relinquish its interest in a cable landing license must also include:
- (1) Information required by § 1.70005(a)-(c) for the licensee that seeks to relinquish its interest;
 - (2) A demonstration that the entity is not required to be a licensee under § 1.70003 and that the remaining licensee(s) will retain collectively de jure and de facto control of the U.S. portion of the cable system sufficient to comply with the requirements of the Commission's rules and any specific conditions of the license;
 - (3) A signature from the licensee that seeks to relinquish its interest;
 - (4) Any other information that may be necessary to enable the Commission to act on the application; and
 - (5) Such application must be served on each other licensee of the cable system.
- (e) A modification application to add, remove, or change a condition on an existing cable landing license must also include the following:
- (1) Information required by § 1.70005(a)-(c) for the licensee(s) that seeks to add, remove, or change a condition;
 - (2) Certifications set forth under § 1.70006;
 - (3) A signature from the licensee that seeks to add, remove, or change a condition; and
 - (4) Any other information that may be necessary to enable the Commission to act on the application.

§ 1.70012 – Substantial Assignment or Transfer of Control Applications

Each application for authority to assign or transfer control of an interest in a cable system must contain a demonstration that the requirements under § 1.70002(b)-(c) are met.

- (a) An application for authority to assign or transfer control of an interest in a cable system shall contain a narrative description of the proposed transaction, including relevant facts and circumstances, and that the

applicant meets the requirements of § 1.70002(b)-(c). The application shall also include the following information:

- (i) The information requested in paragraphs (a)-(c) of § 1.70005 for both the assignor/transferor and the assignee/transferee.
- (ii) The information requested in paragraphs (j) and (k) of § 1.70005 for the assignee/transferee.
- (iii) The pre-transaction and post-transaction ownership diagrams of the licensee as required under paragraph (j)(1) of § 1.70005.
- (iv) A narrative describing the means by which the assignment or transfer of control will take place.
- (v) The application shall also specify, on a segment specific basis, the percentage of voting and ownership interests being assigned or transferred in the cable system, including in the U.S. portion of the cable system (which includes all U.S. cable landing station(s)).
- (vi) In the event the transaction requiring an assignment or transfer of control application also requires the filing of a foreign carrier affiliation notification pursuant to § 1.70009, the application shall reference the foreign carrier affiliation notification and the date of its filing. See § 1.70009.
- (vii) The Commission reserves the right to request additional information concerning the transaction to aid it in making its public interest determination.
- (viii) An assignee or transferee must notify the Commission no later than thirty (30) days after either consummation of the assignment or transfer or a decision not to consummate the assignment or transfer. The notification shall identify the file numbers under which the initial license and the authorization of the assignment or transfer were granted.
- (ix) Certifications set forth under § 1.70006.

§ 1.70013 – Pro Forma Assignment and Transfer of Control Notifications

(a) A *pro forma* assignee or a licensee that is the subject of a *pro forma* transfer of control of a cable landing license is not required to seek prior approval for the *pro forma* transaction. A *pro forma* assignee or licensee that is the subject of a *pro forma* transfer of control must notify the Commission no later than thirty (30) days after the assignment or transfer of control is consummated.

(b) Assignments or transfers of control that do not result in a change in the actual controlling party are considered non-substantial or *pro forma*. Whether there has been a change in the actual controlling party must be determined on a case-by-case basis with reference to the factors listed in Note 1 to § 63.24(d) of this chapter. The types of transactions listed in Note 2 to § 63.24(d) of this chapter shall be considered presumptively *pro forma* and prior approval from the Commission need not be sought. A notification of a *pro forma* assignment or transfer of control shall include the following information:

- (i) The information requested in paragraphs (a) through (c), and (e) of § 1.70005 for both the assignor/transferor and the assignee/transferee.
- (ii) The information requested in paragraphs (j), (k), and (m) of § 1.70005 for the assignee/transferee.
- (iii) The pre-transaction and post-transaction ownership diagrams of the licensee as required under paragraph (j) of § 1.70005.
- (iv) A narrative describing the means by which the assignment or transfer of control will take

place.

(v) The application shall also specify, on a segment specific basis, the percentage of voting and ownership interests being assigned or transferred in the cable system, including in the U.S. portion of the cable system (which includes all U.S. cable landing station(s)).

(vi) The notification must certify that the assignment or transfer of control was *pro forma*, as defined in paragraph (a) of this section, and, together with all previous *pro forma* transactions, does not result in a change of the licensee's ultimate control.

(v) The licensee may file a single notification for an assignment or transfer of control of multiple licenses issued in the name of the licensee of each license is identified by the file number under which it was granted.

(vi) The Commission reserves the right to request additional information concerning the transaction to aid it in making its public interest determination.

(vii) Certifications set forth under § 1.70006.

§ 1.70014 - Processing of Applications and Requests for Streamlining

(a) Processing of submarine cable applications. The Commission will take action upon an application eligible for streamlined processing, as specified in paragraph (c) of this section, within forty-five (45) days after release of the public notice announcing the application as acceptable for filing and eligible for streamlined processing. If the Commission deems an application seeking streamlined processing acceptable for filing but ineligible for streamlined processing, or if an applicant does not seek streamlined processing, the Commission will issue public notice indicating that the application is ineligible for streamlined processing. Within ninety (90) days of the public notice, the Commission will take action upon the application or provide public notice that, because the application raises questions of extraordinary complexity, an additional 90-day period for review is needed. Each successive 90-day period may be so extended.

(b) Submission of application to Executive Branch agencies. On the date of filing with the Commission, the applicant shall also send a complete copy of the application, or any major amendments or other material filings regarding the application, to: U.S. Coordinator, EB/CIP, U.S. Department of State, 2201 C Street NW, Washington, DC 20520-5818; Office of Chief Counsel/NTIA, U.S. Department of Commerce, 14th St. and Constitution Ave. NW, Washington, DC 20230; and Defense Information Systems Agency, ATTN: GC/DO1, 6910 Cooper Avenue, Fort Meade, MD 20755-7088, and shall certify such service on a service list attached to the application or other filing.

(c) Eligibility for streamlining. Each applicant must demonstrate eligibility for streamlining by:

(1) Certifying that it is not a foreign carrier and it is not affiliated with a foreign carrier in any of the cable's destination markets;

(2) Demonstrating pursuant to § 63.12(c)(1)(i) through (iii) of this chapter that any such foreign carrier or affiliated foreign carrier lacks market power; or

(3) Certifying that the destination market where the applicant is, or has an affiliation with, a foreign carrier is a World Trade Organization (WTO) Member and the applicant agrees to accept and abide by the reporting requirements set out in paragraph (1) of this section. An application that includes an applicant that is, or is affiliated with, a carrier with market power in a cable's non-WTO Member destination country is not eligible for streamlining.

(4) Certifying that for applications for a license to construct and operate a submarine cable system or to modify the construction of a previously approved submarine cable system the applicant is

not required to submit a consistency certification to any state pursuant to section 1456(c)(3)(A) of the Coastal Zone Management Act (CZMA), 16 U.S.C. 1456.

(5) Certifying that all individuals or entities that hold a five percent or greater direct or indirect equity and/or voting interests, or a controlling interest, in the applicant are U.S. citizens or entities organized in the United States.

(d) Streamlining of cable landing license applications will be limited to those applications where all potentially affected states, having constructive notice that the application was filed with the Commission, have waived, or are deemed to have waived, any section 1456(c)(3)(A) right to review the application within the thirty-day period prescribed by 15 CFR 930.54.

§ 1.70015 – Quarterly Reports

(a) Reporting requirements applicable to licensees affiliated with a carrier with market power in a cable's destination market. Any licensee that is, or is affiliated with, a carrier with market power in any of the cable's destination countries must comply with the following requirements:

(1) File quarterly reports summarizing the provisioning and maintenance of all network facilities and services procured from the licensee's affiliate in that destination market, within ninety (90) days from the end of each calendar quarter. These reports shall contain the following:

(i) The types of facilities and services provided (for example, a lease of wet link capacity in the cable, collocation of licensee's equipment in the cable station with the ability to provide backhaul, or cable station and backhaul services provided to the licensee);

(ii) For provisioned facilities and services, the volume or quantity provisioned, and the time interval between order and delivery; and

(iii) The number of outages and intervals between fault report and facility or service restoration; and

(2) File quarterly, within 90 days from the end of each calendar quarter, a report of its active and idle 64 kbps or equivalent circuits by facility (terrestrial, satellite and submarine cable).

§ 1.70016 – Three-Year Periodic Reporting

(a) Licensees shall file every three years a periodic report in the relevant File Number in the Commission's International Communications Filing System (ICFS), or any successor system. Joint licensees of a particular submarine cable system must submit one joint periodic reporting filing per submarine cable system.

(b) *Contents.* The periodic report shall include all information that has changed since an application for the cable landing license or any modification, assignment, transfer of control, or renewal of the license or the last periodic report, whichever is most recent, filed with the Commission. Licensees shall include information that is current as of thirty (30) days prior to the filing deadline, as follows:

(1) Information contained in § 1.70005(a)-(c), and (e)-(g);

(2) Information about the services they currently offer or plan to offer through the submarine cable system consistent with § 1.70005(l);

(3) Certifications as set forth under § 1.70006; and

(c) *Filing Schedule.* Authority is delegated to the Office of International Affairs (OIA) to establish and

modify, as appropriate, the filing categories and associated deadlines for the periodic reports. OIA may, if needed, consult with the relevant Executive Branch agencies concerning the filing categories and associated deadlines for the periodic reports. Licensees shall file the periodic reports pursuant to the deadlines.

(d) *Filing with the Committee.* Licensees that have reportable foreign ownership as defined in § 1.40001(d) as of thirty (30) days prior to the date of the submission or that have a mitigation agreement with the Committee or other Executive Branch agencies must also file a copy of the report directly with the Committee.

§ 1.70017 – Renewal Applications

(a) Licensees seeking to renew or extend a cable landing license must file an application six months prior to the expiration of the license. The application must include the information and certifications set out in §§ 1.70002(b)-(c), 1.70005, and 1.70006.

(b) Licensees that timely file an application to renew or extend a cable landing license may continue operating the submarine cable system while the application is pending before the Commission.

§ 1.70018 – Electronic Filing

(a) With the exception of submarine cable outage reports, and subject to the availability of electronic forms, all applications and notifications described in this subpart must be filed electronically through the International Communications Filing System (ICFS). A list of forms that are available for electronic filing can be found on the ICFS homepage. For information on electronic filing requirements, see subpart Y of this part, and the ICFS homepage at <https://www.fcc.gov/icfs>.

(b) Submarine cable outage reports must be filed as set forth in part 4 of this Title.

§ 1.70019 – Denial, Revocation, and Termination

The Office of International Affairs shall implement procedures for denial of an application or revocation and/or termination of a cable landing license in light of the relevant facts and circumstances.

PART 43—REPORTS OF COMMUNICATION COMMON CARRIERS, PROVIDERS OF INTERNATIONAL SERVICES AND CERTAIN AFFILIATES

5. The authority citation of part 43 continues to read as follows:
Authority: 47 U.S.C. 35-39, 154, 211, 219, 220; sec. 402(b)(2)(B), (c), Pub. L. 104-104, 110 Stat. 129.

6. Revise section 43.82 to read as follows:
47 CFR 43.82 – Circuit Capacity Reports

(a) *International submarine cable capacity.* Not later than March 31 of each year:

(1) *Cable Operator Report.* The licensee(s) of a submarine cable between the United States and any foreign point shall file a report showing the capacity of the submarine cable as of December 31 of the preceding calendar year. The licensee(s) shall also file a report showing the planned capacity of the submarine cable (the intended capacity of the submarine cable two years from December 31 of the

preceding calendar year).

(2) **Capacity Holder Report.** Each cable landing licensee and common carrier shall file a report showing its capacity on submarine cables between the United States and any foreign point as of December 31 of the preceding calendar year.

(3) **Definition**

(i) **United States.** United States is defined in Section 3 of the Communications Act of 1934, as amended, 47 U.S.C. 153.

(b) **Registration Form.** A Registration Form, containing information about the filer, such as address, phone number, email address, etc., shall be filed with each report. The Registration Form shall include a certification enabling the filer to check a box to indicate that the filer requests that its circuit capacity data be treated as confidential consistent with Section 0.459(a)(4) of the Commission's rules.

(c) **Filing Manual.** Authority is delegated to the Chief of the Office of International Affairs to prepare instructions and reporting requirements for the filing of these reports prepared and published as a Filing Manual. The information required under this Section shall be filed electronically in conformance with the instructions and reporting requirements in the Filing Manual.

(d) **Compliance.** Submission of false or inaccurate certifications or failure to file timely and complete annual circuit capacity reports in accordance with the Commission's rules and the Filing Manual shall constitute grounds for enforcement action, including but not limited to a forfeiture or cancellation of the cable landing license or international section 214 authorization, pursuant to the Communications Act of 1934, as amended, and any other applicable law.

APPENDIX B

Technical Appendix

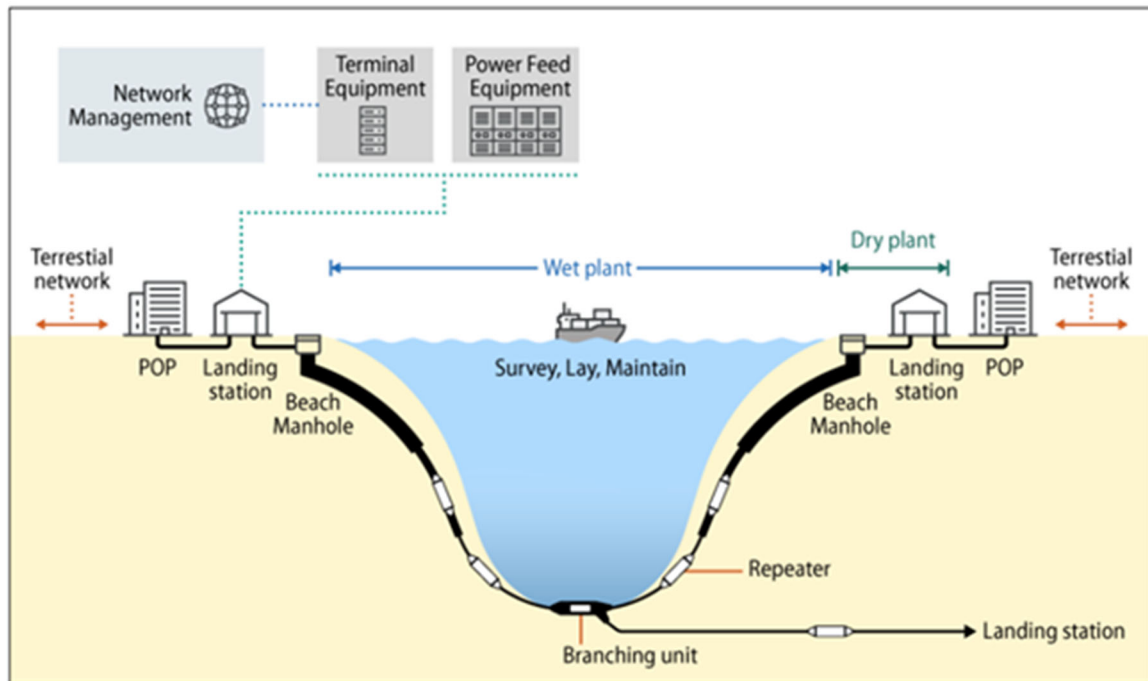

1. This technical appendix provides additional information about submarine cable systems, including definitions and an image that depicts the key parts of a submarine cable system.
2. *Submarine Cable System.* A submarine cable is an electrically powered cable that is laid beneath water and establishes communication transmission links between two or more land-based terminal cable landing stations. The cable consists of a wet (underwater) segment, a dry (not submerged under water) segment, and ancillary equipment required to support the operation and maintenance of the cable.
3. *Wet Segment.* The wet (underwater) segment of a submarine cable system typically extends from a beach manhole on one landmass to a beach manhole on another landmass. The underwater portion of the cable can consist of one or several segments, and is equipped with amplification devices (repeaters, etc.) and branching units built into the cable that allow interconnection to more than one destination country.
4. *Wet Segment Ancillary Components.* The repeaters (technically amplifiers), which are tied into the cable, amplify the optical signal to ensure it remains powerful enough for detection at the receiving or terminal landing station. The branching unit (BU) is used to split off the optical signal from the main cable segment(s) and send traffic to another location or country via a cable that connects the BU to a cable landing station.
5. *Dry Segment.* The dry (not submerged under water) segment of a submarine cable system typically extends from the beach manhole to cable landing station(s) that contain the Power Feed Equipment (PFE) and equipment (such as the Submarine Line Terminal Equipment (SLTE)) to convert submarine signals to terrestrial signals, and may include ancillary equipment or infrastructure such as equipment to operate or maintain the cable system.
6. *Dry Segment Ancillary Components.* The dry segment includes the optical fiber and power land cables that are separated at and extend from the beach manhole, a structure buried on the beach where the submarine cable first lands, and are then routed to the terminal cable landing station that may be located near the coast where the submarine cable reaches the shore, or may be located further inland.¹ The submarine cable landing station houses equipment to terminate cable traffic and equipment to power the submarine cable. The equipment used to convert submarine signals to terrestrial signals and interconnect with the U.S. terrestrial network is the SLTE, and the equipment used to power the cable (PFE) is either located in or close to the terminal landing station. There might be multiple SLTEs within a cable landing station for a given submarine cable system.² A data center can serve as a cable landing

¹ Traditionally, cable landing stations “have been historically close to network hubs to facilitate efficient connectivity to population centers, but now the focus is on being close to hyperscale data centers” that might be located farther inland and require substantial backhaul facilities to interconnect to the data station. See generally NivaYadav, *What is a Cable Landing Station?*, DataCenterDynamics (Sept. 2, 2024), <https://www.datacenterdynamics.com/en/analysis/what-is-a-cable-landing-station/>. PoPs and/or Internet Exchange Points (IXPs) can be, and are typically located in data centers or other facilities with the necessary infrastructure to support Internet traffic exchange. This infrastructure may include routers, switches, and other networking equipment, as well as power and cooling systems. See *Data Centers, PoPs, and Peering*, Bizety, <https://www.bizety.com/what-are-data-center-pop-peering-and-ixp/> (last visited, Oct. 23, 2024).

² Over the last decade, technological changes and the manner in which the dry segment submarine cable components are sold has permitted “multiple cable systems owners to use different SLTE on their own fiber pairs.” See generally Ciena, *Open Submarine Cables Handbook*, <https://www.ciena.com/insights/ebooks/open-submarine-cables-handbook/>.

station, and POPs and Internet Exchange Points (IXPs)³ can be located within a cable landing station or data center.

7. For illustrative purposes, the image below depicts the key parts of a submarine cable system and depicts, in a basic manner, a submarine cable system.⁴ We understand that not every submarine cable system may replicate the image below. For example, there may be numerous cable landing stations located further inland from the coastal landing submarine cable station.⁵

Source: Created by CRS.

³ What is an Internet exchange point? | How do IXPs work?, Cloudflare, <https://www.cloudflare.com/learning/cdn/glossary/internet-exchange-point-ixp/> (last visited, Oct. 4, 2024), (“An Internet exchange point (IXP) is a physical location through which Internet infrastructure companies such as Internet Service Providers (ISPs) and [Content Delivery Networks or] CDNs connect with each other.”)

⁴ Jill C. Gallagher, Cong. Research Serv., R47237, *Undersea Telecommunication Cables: Technology Overview and Issues for Congress* (Sept. 13, 2022), https://www.everycrsreport.com/files/2022-09-13_R47237_a284971d5aed5fa65bc26fe860ed7d5d2985d242.pdf. The graphic of the submarine cable system was prepared in a report by Congressional Research Service (CRS Report) for members and committees of Congress and is a work of the United States.

⁵ See *id.* at 5-6. Although not reflected in the graphic, the CRS Report recognizes that submarine terminal facilities could be “hundreds of miles from the seashore” with cable operators often using a longer fiber link with repeaters to connect to the cable landing station. *Id.*

APPENDIX C

Initial Regulatory Flexibility Analysis

1. As required by the Regulatory Flexibility Act of 1980, as amended (RFA),¹ the Federal Communications Commission (Commission) has prepared this Initial Regulatory Flexibility Analysis (IRFA) of the possible significant economic impact on a substantial number of small entities by the policies and rules proposed in the Notice of Proposed Rulemaking (*Notice*). Written public comments are requested on this IRFA. Comments must be identified as responses to the IRFA and must be filed by the deadlines for comments specified on the first page of the *Notice*. The Commission will send a copy of the *Notice*, including this IRFA, to the Chief Counsel for Advocacy of the Small Business Administration (SBA).² In addition, the *Notice* and IRFA (or summaries thereof) will be published in the Federal Register.³

A. Need for, and Objective of, the Proposed Rules

2. In the *Notice*, the Commission undertakes the first major comprehensive review of its submarine cable rules since it last adopted submarine cable rules in 2001.⁴ Over the last two decades, there have been substantial changes in technology, consumer expectations, international submarine cable traffic patterns, and investment in and construction of submarine cable infrastructure as well as significant evolution in national security and law enforcement threat environments. The proposed rules on which Commission seeks comment in this proceeding are intended for the Commission to determine how best to improve and streamline the submarine cable rules to facilitate deployment of submarine cables while at the same time ensuring the security, resilience, and protection of this critical infrastructure.

3. Specifically, in the *Notice*, the Commission takes a number of actions to (1) codify the Commission's legal jurisdiction and other legal requirements in the Commission's rules to provide regulatory certainty to submarine cable owners and operators; (2) improve the Commission's oversight of submarine cable licensees and information regarding a submarine cable system and its licensees during the 25-year license term; (3) update application requirements for national security purposes and ensuring the Commission has targeted and granular information regarding the ownership, control, and use of a submarine cable system; (4) adopt new compliance certifications to protect against national security, law enforcement, and other risks; (5) protect submarine cable infrastructure, including activities in coordination with its federal partners; (6) update submarine cable rules and certain targeted requirements to protect submarine cable systems from national security and law enforcement risks; (7) streamline procedures to expedite the submarine cable review processes; and (8) improve the quality of the Circuit Capacity data and facilitating the sharing of such information with other federal agencies. The Commission believes our proposed actions in this proceeding will improve Commission review and oversight of submarine cable landing licenses and ensure each licensee continues to serve the public interest in an evolving national security and law enforcement landscape.

B. Legal Basis

4. The proposed action is authorized pursuant to sections 1, 4(i), 4(j), 201-255, 303(r), 403, and 413 of the Communications Act of 1934, as amended, 47 U.S.C. §§ 151, 154(i), 154(j), 201-255,

¹ 5 U.S.C. § 603. The RFA, 5 U.S.C. § 601 *et seq.*, has been amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), Pub. L. No. 104-121, Title II, 110 Stat. 847 (1996).

⁴ *See supra* at note 1.

303(r), 403, and 413, and the Cable Landing License Act of 1921, 47 U.S.C. §§ 34-39, and Executive Order No. 10530, section 5(a), (May 12, 1954) reprinted as amended in 3 U.S.C. § 301.

C. Description and Estimate of the Number of Small Entities to Which the Proposed Rules Will Apply

5. The RFA directs agencies to provide a description of, and where feasible, an estimate of the number of small entities that may be affected by the proposed rules, if adopted.⁵ The RFA generally defines the term “small entity” as having the same meaning as the terms “small business,” “small organization,” and “small governmental jurisdiction.”⁶ In addition, the term “small business” has the same meaning as the term “small business concern” under the Small Business Act.⁷ A “small business concern” is one which: (1) is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the Small Business Administration (SBA).⁸

6. *Wired Telecommunications Carriers.* The U.S. Census Bureau defines this industry as establishments “primarily engaged in operating and/or providing access to transmission facilities and infrastructure that they own and/or lease for the transmission of voice, data, text, sound, and video using wired telecommunications networks.”⁹ Transmission facilities may be based on a single technology or a combination of technologies.¹⁰ Establishments in this industry use the wired telecommunications network facilities that they operate to provide a variety of services, such as “wired telephony services, including VoIP services, wired (cable) audio and video programming distribution, and wired broadband internet services.”¹¹ By exception, establishments providing satellite television distribution services using facilities and infrastructure that they operate are included in this industry.¹² Wired Telecommunications Carriers are also referred to as wireline carriers or fixed local service providers.¹³

7. The SBA small business size standard for Wired Telecommunications Carriers classifies firms having 1,500 or fewer employees as small.¹⁴ U.S. Census Bureau data for 2017 show that there

⁵ 5 U.S.C. § 603(b)(3).

⁶ 5 U.S.C. § 601(6).

⁷ 5 U.S.C. § 601(3). (incorporating by reference the definition of “small-business concern” in the Small Business Act, 15 U.S.C. § 632). Pursuant to 5 U.S.C. § 601(3), the statutory definition of a small business applies “unless an agency, after consultation with the Office of Advocacy of the Small Business Administration and after opportunity for public comment, establishes one or more definitions of such term which are appropriate to the activities of the agency and publishes such definition(s) in the Federal Register.”

⁸ 15 U.S.C. § 632.

⁹ See U.S. Census Bureau, *2017 NAICS Definition, “517311 Wired Telecommunications Carriers,”* <https://www.census.gov/naics/?input=517311&year=2017&details=517311>.

¹⁰ *Id.*

¹¹ *Id.*

¹² *Id.*

¹³ Fixed Local Service Providers include the following types of providers: Incumbent Local Exchange Carriers (ILECs), Competitive Access Providers (CAPs) and Competitive Local Exchange Carriers (CLECs), Cable/Coax CLECs, Interconnected VOIP Providers, Non-Interconnected VOIP Providers, Shared-Tenant Service Providers, Audio Bridge Service Providers, and Other Local Service Providers. Local Resellers fall into another U.S. Census Bureau industry group and therefore data for these providers is not included in this industry.

¹⁴ See 13 CFR § 121.201, NAICS Code 517311 (as of 10/1/22, NAICS Code 517111)..

were 3,054 firms that operated in this industry for the entire year.¹⁵ Of this number, 2,964 firms operated with fewer than 250 employees.¹⁶ Additionally, based on Commission data in the 2022 Universal Service Monitoring Report, as of December 31, 2021, there were 4,590 providers that reported they were engaged in the provision of fixed local services.¹⁷ Consequently, using the SBA's small business size standard, most of these providers can be considered small entities.

8. *Competitive Local Exchange Carriers (CLECs)*. Neither the Commission nor the SBA has developed a size standard for small businesses specifically applicable to local exchange services. Providers of these services include several types of competitive local exchange service providers.¹⁸ Wired Telecommunications Carriers¹⁹ is the closest industry with a SBA small business size standard. The SBA small business size standard for Wired Telecommunications Carriers classifies firms having 1,500 or fewer employees as small.²⁰ U.S. Census Bureau data for 2017 show that there were 3,054 firms that operated in this industry for the entire year.²¹ Of this number, 2,964 firms operated with fewer than 250 employees.²² Additionally, based on Commission data in the 2022 Universal Service Monitoring Report, as of December 31, 2021, there were 3,378 providers that reported they were competitive local service providers.²³ Of these providers, the Commission estimates that 3,230 providers have 1,500 or fewer employees.²⁴ Consequently, using the SBA's small business size standard, most of these providers can be considered small entities.

9. *Interexchange Carriers (IXCs)*. Neither the Commission nor the SBA have developed a small business size standard specifically for Interexchange Carriers. Wired Telecommunications

¹⁵ See U.S. Census Bureau, *2017 Economic Census of the United States, Selected Sectors: Employment Size of Firms for the U.S.: 2017*, Table ID: EC1700SIZEEMPFIEM, NAICS Code 517311, <https://data.census.gov/cedsci/table?y=2017&n=517311&tid=ECNSIZE2017.EC1700SIZEEMPFIEM&hidePreview=false>. At this time, the 2022 Economic Census data is not available.

¹⁶ *Id.* The available U.S. Census Bureau data does not provide a more precise estimate of the number of firms that meet the SBA size standard.

²⁴ *Id.*

Carriers²⁵ is the closest industry with a SBA small business size standard.²⁶ The SBA small business size standard for Wired Telecommunications Carriers classifies firms having 1,500 or fewer employees as small.²⁷ U.S. Census Bureau data for 2017 show that there were 3,054 firms that operated in this industry for the entire year.²⁸ Of this number, 2,964 firms operated with fewer than 250 employees.²⁹ Additionally, based on Commission data in the 2022 Universal Service Monitoring Report, as of December 31, 2021, there were 127 providers that reported they were engaged in the provision of interexchange services. Of these providers, the Commission estimates that 109 providers have 1,500 or fewer employees.³⁰ Consequently, using the SBA's small business size standard, the Commission estimates that the majority of providers in this industry can be considered small entities.

10. *Wired Broadband Internet Access Service Providers (Wired ISPs).*³¹ Providers of wired broadband Internet access service include various types of providers except dial-up Internet access providers. Wireline service that terminates at an end user location or mobile device and enables the end user to receive information from and/or send information to the Internet at information transfer rates exceeding 200 kilobits per second (kbps) in at least one direction is classified as a broadband connection under the Commission's rules.³² Wired broadband Internet services fall in the Wired Telecommunications Carriers industry.³³ The SBA small business size standard for this industry classifies firms having 1,500 or fewer employees as small.³⁴ U.S. Census Bureau data for 2017 show that there were 3,054 firms that operated in this industry for the entire year.³⁵ Of this number, 2,964 firms operated with fewer than 250 employees.³⁶

11. *Internet Service Providers (Non-Broadband).* Internet access service providers using client-supplied telecommunications connections (e.g., dial-up ISPs) as well as VoIP service providers

At this time, the 2022 Economic Census data is not available.

³⁶ *Id.* The available U.S. Census Bureau data does not provide a more precise estimate of the number of firms that meet the SBA size standard.

using client-supplied telecommunications connections fall in the industry classification of All Other Telecommunications.³⁷ The SBA small business size standard for this industry classifies firms with annual receipts of \$40 million or less as small.³⁸ For this industry, U.S. Census Bureau data for 2017 show that there were 1,079 firms in this industry that operated for the entire year.³⁹ Of those firms, 1,039 had revenue of less than \$25 million.⁴⁰ Consequently, under the SBA size standard a majority of firms in this industry can be considered small.

12. *Small Businesses, Small Organizations, Small Governmental Jurisdictions.* Our actions, over time, may affect small entities that are not easily categorized at present. We therefore describe, at the outset, three broad groups of small entities that could be directly affected herein.⁴¹ First, while there are industry specific size standards for small businesses that are used in the regulatory flexibility analysis, according to data from the Small Business Administration's (SBA) Office of Advocacy, in general a small business is an independent business having fewer than 500 employees.⁴² These types of small businesses represent 99.9% of all businesses in the United States, which translates to 33.2 million businesses.⁴³

13. Next, the type of small entity described as a "small organization" is generally "any not-for-profit enterprise which is independently owned and operated and is not dominant in its field."⁴⁴ The Internal Revenue Service (IRS) uses a revenue benchmark of \$50,000 or less to delineate its annual electronic filing requirements for small exempt organizations.⁴⁵ Nationwide, for tax year 2022, there were approximately 530,109 small exempt organizations in the U.S. reporting revenues of \$50,000 or less according to the registration and tax data for exempt organizations available from the IRS.⁴⁶

³⁷ See U.S. Census Bureau, *2017 NAICS Definition*, "517919 All Other Telecommunications," <https://www.census.gov/naics/?input=517919&year=2017&details=517919>.

³⁸ See 13 CFR § 121.201, NAICS Code 517919 (as of 10/1/22, NAICS Code 517810).

³⁹ See U.S. Census Bureau, *2017 Economic Census of the United States, Selected Sectors: Sales, Value of Shipments, or Revenue Size of Firms for the U.S.: 2017*, Table ID: EC1700SIZEREVFIRM, NAICS Code 517919, <https://data.census.gov/cedsci/table?y=2017&n=517919&tid=ECNSIZE2017.EC1700SIZEREVFIRM&hidePreview=false>. At this time, the 2022 Economic Census data is not available.

⁴⁰ *Id.* The available U.S. Census Bureau data does not provide a more precise estimate of the number of firms that meet the SBA size standard. We also note that according to the U.S. Census Bureau glossary, the terms receipts and revenues are used interchangeably, see https://www.census.gov/glossary/#term_ReceiptsRevenueServices.

⁴¹ 5 U.S.C. § 601(3)-(6).

⁴² See SBA, Office of Advocacy, "What's New With Small Business?," <https://advocacy.sba.gov/wp-content/uploads/2023/03/Whats-New-Infographic-March-2023-508c.pdf> (Mar. 2023).

⁴³ *Id.*

⁴⁴ 5 U.S.C. § 601(4).

⁴⁵ The IRS benchmark is similar to the population of less than 50,000 benchmark in 5 U.S.C § 601(5) that is used to define a small governmental jurisdiction. Therefore, the IRS benchmark has been used to estimate the number of small organizations in this small entity description. See Annual Electronic Filing Requirement for Small Exempt Organizations – Form 990-N (e-Postcard), "Who must file," <https://www.irs.gov/charities-non-profits/annual-electronic-filing-requirement-for-small-exempt-organizations-form-990-n-e-postcard>. We note that the IRS data does not provide information on whether a small exempt organization is independently owned and operated or dominant in its field.

⁴⁶ See Exempt Organizations Business Master File Extract (EO BMF), "CSV Files by Region," <https://www.irs.gov/charities-non-profits/exempt-organizations-business-master-file-extract-EO-BMF>. The IRS Exempt Organization Business Master File (EO BMF) Extract provides information on all registered tax-

14. Finally, the small entity described as a “small governmental jurisdiction” is defined generally as “governments of cities, counties, towns, townships, villages, school districts, or special districts, with a population of less than fifty thousand.”⁴⁷ U.S. Census Bureau data from the 2022 Census of Governments⁴⁸ indicate there were 90,837 local governmental jurisdictions consisting of general purpose governments and special purpose governments in the United States.⁴⁹ Of this number, there were 36,845 general purpose governments (county,⁵⁰ municipal, and town or township⁵¹) with populations of less than 50,000 and 11,879 special purpose governments (independent school districts⁵²) with enrollment populations of less than 50,000.⁵³ Accordingly, based on the 2022 U.S. Census of Governments data, we estimate that at least 48,724 entities fall into the category of “small governmental jurisdictions.”⁵⁴

15. Additionally, according to Commission data on Internet access services as of June 30, 2019, nationwide there were approximately 2,747 providers of connections over 200 kbps in at least one

exempt/non-profit organizations. The data utilized for purposes of this description was extracted from the IRS EO BMF data for businesses for the tax year 2022 with revenue less than or equal to \$50,000 for Region 1-Northeast Area (71,897), Region 2-Mid-Atlantic and Great Lakes Areas (197,296), and Region 3-Gulf Coast and Pacific Coast Areas (260,447) that includes the continental U.S., Alaska, and Hawaii. This data includes information for Puerto Rico (469).

⁴⁷ 5 U.S.C. § 601(5).

⁴⁸ 13 U.S.C. § 161. The Census of Governments survey is conducted every five (5) years compiling data for years ending with “2” and “7”. *See also* Census of Governments, <https://www.census.gov/programs-surveys/economic-census/year/2022/about.html>.

⁴⁹ *See* U.S. Census Bureau, 2022 Census of Governments – Organization Table 2. Local Governments by Type and State: 2022 [CG2200ORG02], <https://www.census.gov/data/tables/2022/econ/gus/2022-governments.html>. Local governmental jurisdictions are made up of general purpose governments (county, municipal and town or township) and special purpose governments (special districts and independent school districts). *See also* tbl.2. CG2200ORG02 Table Notes_Local Governments by Type and State_2022.

⁵⁰ *See id.* at tbl.5. County Governments by Population-Size Group and State: 2022 [CG2200ORG05], <https://www.census.gov/data/tables/2022/econ/gus/2022-governments.html>. There were 2,097 county governments with populations less than 50,000. This category does not include subcounty (municipal and township) governments.

⁵¹ *See id.* at tbl.6. Subcounty General-Purpose Governments by Population-Size Group and State: 2022 [CG2200ORG06], <https://www.census.gov/data/tables/2022/econ/gus/2022-governments.html>. There were 18,693 municipal and 16,055 town and township governments with populations less than 50,000.

⁵² *See id.* at tbl.10. Elementary and Secondary School Systems by Enrollment-Size Group and State: 2022 [CG2200ORG10], <https://www.census.gov/data/tables/2022/econ/gus/2022-governments.html>. There were 11,879 independent school districts with enrollment populations less than 50,000. *See also* tbl.4. Special-Purpose Local Governments by State Census Years 1942 to 2022 [CG2200ORG04], CG2200ORG04 Table Notes_Special Purpose Local Governments by State_Census Years 1942 to 2022.

⁵³ While the special purpose governments category also includes local special district governments, the 2022 Census of Governments data does not provide data aggregated based on population size for the special purpose governments category. Therefore, only data from independent school districts is included in the special purpose governments category.

⁵⁴ This total is derived from the sum of the number of general purpose governments (county, municipal and town or township) with populations of less than 50,000 (36,845) and the number of special purpose governments - independent school districts with enrollment populations of less than 50,000 (11,879), from the 2022 Census of Governments - Organizations tbls. 5, 6 & 10.

direction using various wireline technologies.⁵⁵ The Commission does not collect data on the number of employees for providers of these services, therefore, at this time we are not able to estimate the number of providers that would qualify as small under the SBA's small business size standard. However, in light of the general data on fixed technology service providers in the Commission's *2022 Communications Marketplace Report*,⁵⁶ we believe that the majority of wireline Internet access service providers can be considered small entities.

16. *All Other Telecommunications.* This industry is comprised of establishments primarily engaged in providing specialized telecommunications services, such as satellite tracking, communications telemetry, and radar station operation.⁵⁷ This industry also includes establishments primarily engaged in providing satellite terminal stations and associated facilities connected with one or more terrestrial systems and capable of transmitting telecommunications to, and receiving telecommunications from, satellite systems.⁵⁸ Providers of Internet services (e.g. dial-up ISPs) or Voice over Internet Protocol (VoIP) services, via client-supplied telecommunications connections are also included in this industry.⁵⁹ The SBA small business size standard for this industry classifies firms with annual receipts of \$40 million or less as small.⁶⁰ U.S. Census Bureau data for 2017 show that there were 1,079 firms in this industry that operated for the entire year.⁶¹ Of those firms, 1,039 had revenue of less than \$25 million.⁶² Based on this data, the Commission estimates that the majority of "All Other Telecommunications" firms can be considered small.

17. *Internet Publishing and Broadcasting and Web Search Portals.* This industry comprises establishments primarily engaged in 1) publishing and/or broadcasting content on the Internet exclusively or 2) operating Web sites that use a search engine to generate and maintain extensive databases of Internet addresses and content in an easily searchable format (and known as Web search portals).⁶³ The publishing and broadcasting establishments in this industry do not provide traditional (non-Internet)

⁵⁵ See Federal Communications Commission, *Internet Access Services: Status as of June 30, 2019* at 27, Fig. 30 (*IAS Status 2019*), Industry Analysis Division, Office of Economics & Analytics (March 2022). The report can be accessed at <https://www.fcc.gov/economics-analytics/industry-analysis-division/iad-data-statistical-reports>. The technologies used by providers include aDSL, sDSL, Other Wireline, Cable Modem and FTTP). Other wireline includes: all copper-wire based technologies other than xDSL (such as Ethernet over copper, T-1/DS-1 and T3/DS-1) as well as power line technologies which are included in this category to maintain the confidentiality of the providers.

⁵⁶ See *Communications Marketplace Report*, GN Docket No. 22-203, 2022 WL 18110553 at 10, paras. 26-27, Figs. II.A.5-7. (2022) (*2022 Communications Marketplace Report*).

⁶² *Id.* The available U.S. Census Bureau data does not provide a more precise estimate of the number of firms that meet the SBA size standard. We also note that according to the U.S. Census Bureau glossary, the terms receipts and revenues are used interchangeably, see https://www.census.gov/glossary/#term_ReceiptsRevenueServices.

⁶³ See U.S. Census Bureau, *2017 NAICS Definition*, "519130 Internet Publishing and Broadcasting and Web Search Portals," <https://www.census.gov/naics/?input=519130&year=2017&details=519130>.

versions of the content that they publish or broadcast.⁶⁴ They provide textual, audio, and/or video content of general or specific interest on the Internet exclusively.⁶⁵ Establishments known as web search portals often provide additional Internet services, such as e-mail, connections to other web sites, auctions, news, and other limited content, and serve as a home base for Internet users.⁶⁶ The SBA small business size standard for this industry classifies firms having 1,000 or fewer employees as small.⁶⁷ U.S. Census Bureau data for 2017 show that there were firms that 5,117 operated for the entire year.⁶⁸ Of this total, 5,002 firms operated with fewer than 250 employees.⁶⁹ Thus, under this size standard the majority of firms in this industry can be considered small.

18. *Computer Infrastructure Providers, Data Processing, Web Hosting, and Related Services.* This industry comprises establishments primarily engaged in providing computing infrastructure, data processing services, Web hosting services (except software publishing), and related services, including streaming support services (except streaming distribution services).⁷⁰ Cloud storage services, computer data storage services, computing platform infrastructure provision, Infrastructure as a service (IaaS), optical scanning services, and Platform as a service (PaaS) are included in this industry.⁷¹ Data processing establishments provide complete processing and specialized reports from data supplied by clients or provide automated data processing and data entry services.⁷² The SBA small business size standard for this industry classifies firms with annual receipts of \$40 million or less as small.⁷³ U.S. Census Bureau data for 2017 indicate that 9,058 firms in this industry were operational for the entire year.⁷⁴ Of this total, 8,345 firms had revenue of less than \$25 million.⁷⁵ Thus, under the SBA size

standard the majority of firms in this industry are small.

19. Neither the Commission nor the SBA has developed a size standard specifically for applicants or licensees of submarine cable systems under the Cable Landing License Act. The proposals outlined in the *Notice* apply to entities applying for an initial cable landing license; applicants/cable landing licensees for modification, assignment, transfer of control, and renewal of such license; cable landing licensees that will be required to submit periodic reports; and cable landing licensees and common carriers that are required to annually report their capacity on international cables pursuant to section 43.82 of the rules. The proposals, however, may affect other entities as well, including users of submarine cable service such as Internet Service Providers (ISPs) that lease capacity or purchase indefeasible rights of use (IRUs) on submarine cable systems. The Commission, therefore, encourages these entities to comment on the proposals in the *Notice*.

20. The proposals are intended to improve and streamline the submarine cable rules to facilitate efficient deployment of submarine cables while at the same time ensuring the security, resilience, and protection of this critical infrastructure. The Commission is not certain, however, as to the number of small entities that will be affected by the proposals. We base our cost estimate on the Commission's records, as described below, that indicate there are currently 84 submarine cable systems owned by approximately 145 licensees. In 2022, of all entities that filed Section 43.82 Circuit Capacity Reports, 43 were Submarine Cable Operator Reports and 102 were Submarine Cable Capacity Holder Reports. Based on this information, we estimate that there could be 50 or fewer applicants that might be a small entity.

D. Description of Projected Reporting, Recordkeeping and Other Compliance Requirements for Small Entities

21. In the *Notice*, the rules that the Commission proposes would impose new and/or additional reporting, recordkeeping, and other compliance obligations on small and other entities. The Commission's comprehensive review of its submarine cable rules identified a need to update the existing rules to advance U.S. national security, law enforcement, foreign policy, and trade policy interests. These proposals are designed to update and formalize the submarine cable rules to better protect submarine cables and provide the Commission with important information on a more regular and timely basis for the Commission to better identify and address national security, law enforcement, and other risks.

22. The scope of the proposals in the *Notice* is broad and wide ranging. We propose to codify in the rules the Commission's longstanding practices and legal requirements under the Cable Landing License Act that are applicable to small and other applicants seeking a submarine cable landing license or modification, assignment, transfer of control, or renewal of their license, including proposed rules that would require these applicants, among other things, to comply with a general license requirement, to demonstrate how grant of an application will serve the public interest, convenience and necessity, and to certify whether or not they are in compliance with the Commission's rules and regulations, the Act, and other laws. We propose and seek comment on adopting a procedural framework that the Commission may use to consider whether withholding a grant of a cable landing license or revocation of a cable landing license is warranted. We also propose to adopt a three-year periodic review process for cable landing licenses, which would require small and other licensees to provide certain information to the Commission every three years. The Commission seeks comment on shortening the current 25-year submarine cable license term or adopting a shorter license term in combination with periodic reporting.⁷⁶

23. Our proposed three-year periodic reporting requirement would require licensees to provide updated information, including (1) information that is current as of thirty (30) days prior to the

⁷⁶ See *supra* at para. 1.

date of the submission of the report; (2) information concerning the submarine cable infrastructure; (3) information about the capacity services they currently offer or plan to offer through the submarine cable system; (4) certification as to whether or not they are in compliance with the Commission's rules and regulations, the Communications Act, and other laws; (5) cybersecurity certifications, including a certification that they have created, updated, and implemented cybersecurity risk management plans; (6) certification that they have not purchased and/or used, and will not purchase and/or use, equipment or services produced or provided by entities (and their subsidiaries and affiliates) identified on the Commission's "Covered List"; (7) whether or not they use and/or will use foreign-owned MNSPs in the operation of the submarine cable; and (8) updated licensee information and points of contact. The Commission seeks comment on whether, as part of the periodic reporting requirement, cable landing licensees should provide (1) information identifying any individuals or entities that hold an ownership interest in the submarine cable system that does not meet the threshold eligibility requirements requiring them to be licensees of the cable; (2) updated ownership information; and (3) other information.

24. As part of the licensing application process, the Commission proposes several new compliance certifications for small and other applicants that would trigger reporting and recordkeeping requirements, including (1) certification that an applicant is in compliance with the Commission's rules and regulations, the Communications Act of 1934, as amended (the Act),⁷⁷ and all other applicable laws; (2) certification that an applicant has created, updated, and implemented cybersecurity risk management plans as well as certification that the applicant take reasonable measures to protect the confidentiality, integrity, and availability of their systems and services that could affect their provision of communications services; and (3) as a condition of the potential grant of their application, a certification that the submarine cable system will not use covered equipment or services identified on the Commission's "Covered List" that the Commission maintains pursuant to the Secure and Trusted Communications Networks Act. The Commission also proposes that all submarine cable landing licensees certify as to whether or not they use, for the relevant submarine cable system, equipment or services identified on the "Covered List" within 60 days of the release of any Report and Order in this proceeding. Additionally, the Commission proposes to amend its rules by adding a new routine condition and a certification requirement in the proposed periodic reports prohibiting licensees from using, for the relevant submarine cable system, equipment or services identified on the "Covered List." The Commission also seeks comment on whether to require a certification by all applicants/licensees that they have the ability to promptly and effectively interrupt, in whole or in part, traffic to and from the United States on the submarine cable system. The Commission proposes to require applicants and licensees to certify in the applications and the periodic reports whether or not they are in compliance with the Commission's rules and regulations, the Act, and other laws.

25. The cybersecurity certification will require small and other applicants and licensees to describe how the applicant or licensee employs its organizational resources and processes to ensure the confidentiality, integrity, and availability of its systems and services, and must be signed by an applicant's Chief Executive Officer (CEO), Chief Financial Officer (CFO), Chief Technology Officer (CTO), or a similarly situated senior officer responsible for governance of the organization's security practices.⁷⁸ Small and other applicants and licensees will be allowed to structure their cybersecurity risk management plan in a manner that best fits its organization, as long as the plan demonstrates that the applicant and licensee is taking affirmative steps to analyze security risks and improve its security posture. Further, small and other applicants and licensees will not be required to submit their cybersecurity risk management plans but instead, if adopted, must maintain data and records related to their cybersecurity risk management plans for two years from the submission of the related risk management plan certification to the Commission, including any information that is necessary to show

⁷⁷ 47 U.S.C. § 151 *et seq.*

⁷⁸ *See supra* at para. 111.

how the cybersecurity risk management plan is implemented. However, upon Commission request, small and other licensees must file their cybersecurity risk management plan with the Commission.

26. Other reporting requirements in the *Notice* the Commission targets to protect submarine cable systems from national security and law enforcement risks includes our (1) proposal whether to require applicants to disclose their use of MNSPs and if so, it will answer the Standard Questions and those applications would be routinely referred to the relevant Executive Branch agencies;⁷⁹ (2) proposal to require all applicants to provide a list of the anticipated addresses or physical locations for the Network Operations Center (NOC) on a confidential basis in their applications; and (3) our request for comments on whether to require applicants to submit basic information about an applicant's lessors of submarine cable landing stations and/or data centers housing hardware. We also propose to adopt rules that certain entities and their current and future affiliates and subsidiaries shall not be qualified to become a new submarine cable landing licensee if their international section 214 authority was previously denied or revoked on national security or law enforcement grounds. Additionally, the Commission proposes to expand the information reporting requirements under section 1.767(a)(4) of our rules to require small and other applicants for a cable landing license or modification, assignment, transfer of control, or renewal of a license to provide additional detailed information concerning the submarine cable infrastructure.

27. One of the Commission's goal in this proceeding is also to improve the collection of circuit capacity data which includes data from cable landing licensees and common carriers who must report their capacity on submarine cables between the United States and any foreign point as of December 31 of the current reporting period.⁸⁰ The Commission's annual capacity holder data indicates that there is substantial capacity leased or purchased from cable landing licensees and common carriers that is not accounted for in the circuit capacity data collected by the Commission,⁸¹ because entities that hold capacity on a particular cable in such arrangements are not required to report their capacity. To address this information gap, the Commission seeks comments on whether to require all entities that hold capacity on cables landing in the United States to file capacity holder reports, and in the alternative, or additionally, should cable landing licensees and common carriers be required to include in their annual capacity holder reports a list of customers to whom they sold or leased capacity as of December 31 of the reporting period. Given that all Title II common carriers are required to file annual circuit capacity reports under section 43.82(a)(2) of the rules, the Commission seeks comment generally on whether the Commission should consider retaining or removing the waiver of section 43.82 of the rules as applied to BIAS providers, subject to judicial review of that *2024 Open Internet Order*.⁸²

28. The Commission includes cost estimates in the *Notice* that estimate of all of the expected ongoing costs the industry would incur if the proposed rules were adopted. Annually, the Commission estimates the annual aggregate cost of implementation of the proposed rules should not exceed approximately \$1.32 million for the 84 submarine cable systems currently owned by approximately 145 licensees.⁸³ At this time however, the record does not include sufficient cost information to allow the Commission to quantify the costs of compliance for small entities, including whether it will be necessary for small entities to hire professionals to comply with the proposed rules if adopted.

29. The Commission also estimates that every year, there are approximately 8 cable landing license applications for new cables, and 23 applications every year for modification, assignment, transfer,

⁷⁹ See *supra* note 4.

⁸⁰ See *supra* at Section III.D.

⁸¹ *Id.*

⁸² See *supra* at para. 209.

⁸³ See *supra* at para. 234.

or control.⁸⁴ We therefore estimate that 35 applications are submitted annually.⁸⁵ Our cost estimate assumes that approximately 105 licensees will undergo the application process each year for the estimated 35 cable systems. We base this on the conservative assumption that each submarine cable landing license application will have an average of three licensees. We calculate that the costs to applicants related to applying for licenses would include, among other tasks, providing responses to standard questions, reports on current and future service offerings, reports on foreign-owned MNSPs and information pertaining to reportable foreign ownership. Additionally, the Commission calculates applicants will incur additional costs associated with our proposal for them to certify compliance to baseline cybersecurity standards, including implementing the cybersecurity risk management plans. We anticipate the amount of work associated with preparing a new license application likely will be similar to the work associated with preparing a renewal application. Licensees would also be required to provide updated information to the Commission every three years.

30. Preparation of a new or renewal application for each submarine cable system by an average of three licensees will require 80 hours of work by attorneys and 80 hours of work by support staff, at a total cost of \$27,200 per application.⁸⁶ To this cost we add the cost of the cybersecurity certification required for all new and renewal application, and which we estimate to be \$9,100. We also estimate that the 3-year periodic review will require twelve hours of attorney and twelve hours of support staff time, at a cost of \$4,100, which we multiply by one-third to calculate the annual estimated cost of \$1,370. We then multiply the sum of these costs by 35 resulting in a total estimate of approximately \$1.32 million per year for the 25-year licensing period, as a baseline estimate of the annual application and license review costs. We anticipate that later rounds of the three-year periodic reporting review will cause significantly lower costs, since much of the information will not have changed between reviews. The Commission seeks comment on these cost estimates in the *Notice*, and in particular on the costs (and burdens) that may be incurred by small entities. Small entities are encouraged to bring to the Commission's attention any specific concerns they may have with the cost estimate and the proposals outlined in the *Notice*. In addition, we seek comment on our tentative conclusion that the benefits of the proposed update and modernization of the submarine cable licensing and oversight process which includes the safety and reliability of the submarine cable infrastructure, and the protection of national security and law enforcement interests – will far exceed these estimated costs.

31. We are especially interested in estimates that address alternative means to provide the same benefits, in terms of advancing national security, law enforcement, foreign policy, and trade policy interests, at lower costs. The Commission expects the information we receive in comments including, where requested, cost and benefit analyses, to help identify and evaluate relevant compliance matters for small entities, including compliance costs and other burdens that may result if the proposals and associated requirements discussed in the *Notice* are adopted.

E. Steps Taken to Minimize the Significant Economic Impact on Small Entities and Significant Alternatives Considered

32. The RFA requires an agency to describe any significant, specifically small business, alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): “(1) the establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance and reporting requirements under the rules for such small entities; (3) the use of performance rather than design standards; and (4) an exemption from coverage of

⁸⁴ See *supra* at Section III.E.

⁸⁵ *Id.*

⁸⁶ *Id.*

the rule, or any part thereof, for such small entities.”⁸⁷

33. As described in the *Notice*, we consider and seek comment on the potential impact and burdens our proposed rules would generally have on submarine cable applicants, licensees, and common carriers that hold capacity on U.S.-international cables, some of whom may be small entities. As part of our proposals, we discuss alternative options that could potentially reduce the impacts and burdens with respect to small entities and more generally for entities subject to the Commission’s submarine cable rules.

34. Notably, we propose to require licensees to provide in periodic reports certain information to the Commission every three years. In discussing this proposal, we expressly solicit information on the impact of our proposed three-year periodic reporting requirement on small entities, and we consider and discuss alternatives. To decrease some of the administrative burden of this requirement for such entities, we propose that any new periodic report would reflect only updated information since the last report three years prior or other substantive filing, which may be the initial license application, a modification, a transfer of control, or an assignment. If there have not been any changes since a licensee’s last periodic report or other substantive filing, we ask whether we should only require a licensee provide a periodic statement that its license remains in compliance with the Commission’s rules and with its most recent periodic report, or other substantive filing. We also propose that each periodic report would be submitted through a filing in the Commission’s existing International Communications Filing System (ICFS), or any successor system, minimizing administrative burdens associated with paper filings. Along these lines, we propose to adopt a schedule that prioritizes the filing and review of reports based on whether the cable’s licensee(s) currently have reportable foreign ownership and the length of the time since the Commission’s most recent review of the authorization. The proposal structures the timing of the submission of periodic reports to minimize burdens on licensees, the Commission and the Executive branch staff while ensuring that the Commission receives the information it needs to protect this critical infrastructure. Submarine cable systems would be assigned to one of four categories with each category having a different submission deadline – submission deadlines for each category would be separated by six months.

35. We also consider the burdens on small entities in seeking comment on whether shortening the current 25-year submarine cable license term or adopting a shorter license term in combination with periodic reporting would similarly account for evolving national security, law enforcement, and other risks. In this regard, to ensure we address burdens on licensees, including small entities, we seek comment on an appropriate time frame to better account for evolving risks while minimizing burdens on licensees, recognizing the significant capital expenditures and long lead times in planning and constructing undersea cable systems. We also seek comment on the economic impact of shortening the 25-year license term. We ask whether a 5-year or 10-year license term would alter investment incentives in new submarine cable infrastructure and if a shortened license terms would impact the upgradation and maintenance of existing submarine cable systems. We identify various licensing term alternatives based on approaches the Commission has adopted for other industry licensees. For example, for Miscellaneous Wireless Communications Services (WCS), the license term varies according to spectrum band, resulting in different license periods such as 10, 12, or 15 years.⁸⁸ In the satellite industry our licensing terms likewise vary. Space stations licensed under Part 25 of the Commission’s rules have a 15-year license term, small satellites have a 6-year license term, and certain

⁸⁷ 5 U.S.C. § 603(c)(1)-(c)(4).

⁸⁸ See 47 CFR § 27.13.

SDARS and DBS space stations have an 8-year license term.⁸⁹ In the broadcasting industry, each license granted for the operation of a broadcasting station is limited to a term not to exceed eight years.⁹⁰ Additionally, more recently in the *Evolving Risks NPRM*, the Commission tentatively concluded that a 10-year timeframe is reasonable under the proposed renewal framework for structuring a formalized and systemic reassessment of carriers' international section 214 authority.⁹¹ We specifically request that commenters address the burdens that will be placed on the licensees based on the length of the license term and identify the costs/benefits overall and impact, if any, on small businesses.

36. We also discussed the potential impact on small entities with regard to our consideration of who must become a submarine cable applicant and licensee. In the *Notice*, we seek comment on whether we should retain the requirement that an entity that owns or controls a 5% or greater interest in the cable and uses the U.S. points of the cable system must become an applicant and licensee should be retained or changed. We explained that the 5% ownership threshold was created in part to not unduly burden small carriers or investors that lacked the ability to significantly affect the operation of a cable system, among others. In this regard, we ask whether the 5% threshold is reasonable in today's national security environment. We further seek comment on whether we should instead require any entity that owns any interest in the cable to become a licensee. We also consider and seek comment generally on whether to include any entity that has capacity on the submarine cable as an applicant/licensee, and how such a requirement would affect small entities. Relatedly, we seek comment on whether having capacity on the cable system should be defined to include the leasing, purchasing, selling, buying, or swapping of a fiber (spectrum, capacity, partial fiber pair, or a full fiber pair, among others) for transmission of data, voice, video, internet, and cloud communications over the cable system to interconnect with a U.S. terrestrial network.

37. Consistent with our overarching goal to promote and protect the security of the submarine cable network and infrastructure, we propose to require all applicants for cable landing licenses and modification, assignment, transfer of control, renewal, and licensees filing their three-year periodic reports to certify in the application or report that they have created, updated, and implemented cybersecurity risk management plans. Recognizing the importance of cybersecurity generally and the potential impact of cybersecurity related requirements on small entities, we propose that each applicant or licensee have flexibility to structure their cybersecurity risk management plan that is tailored to its organization, provided that the plan demonstrates that the applicant or licensee is taking affirmative steps to analyze security risks and improve its security posture. This flexibility should reduce costs for small entities. Further, we state that while we believe there are many ways that an applicant or licensee may satisfy this requirement, we propose that they could successfully demonstrate compliance with this proposed requirement by following an established risk management framework, such as the National Institute of Standards and Technology (NIST) Cybersecurity Framework (CSF).³⁰⁶ The NIST CSF is designed to be scalable and adaptable to the needs and capabilities of companies both large and small, is well understood by industry, and is flexible.

38. The Commission also proposes not to require small and other entities to submit or file their cybersecurity risk management plans at a designated time each year. Instead, we propose that applicants and licensees submit cybersecurity management plans to the Commission upon request. Additionally, we propose that applicants and licensees must preserve data and records related to their

⁸⁹ 47 CFR § 25.121(a). For geostationary space stations issued an initial license term for a period of 15 years, licensees may apply for a modification to extend the license term in increments of five years or less. 47 CFR § 25.121(f)(1).

⁹⁰ 47 U.S.C. § 307(c); *see, e.g.*, 47 CFR §§ 73.733, 73.1020(a), 74.15(d), 74.15(e); *see generally Broadcast License Terms; 1997 Broadcast License Terms Order.*

⁹¹ *See Evolving Risks NPRM*, 38 FCC Red at 4369-70, para. 45.

cybersecurity risk management plans, including any information that is necessary to show how the cybersecurity risk management plan is implemented, for two years from the submission of the related risk management plan certification to the Commission.

39. In addition, we highlight the availability of many free and low-cost resources to help small entities identify and implement best practices and improve their security over time without requiring small entities to hire outside experts. NIST publishes guidance that could assist organizations with measuring their safeguards, including how to address ransomware, malware, malicious code, spyware, distributed denial of service (DDoS) attacks, phishing, securing networks, and threats to mobile phones.⁹² CISA offers vulnerability scanning at no cost for critical infrastructure, which includes communications providers, and also provides CPG Assessment Training with regional cybersecurity experts that will help communications providers better understand CPGs and the cybersecurity risk assessment process.⁹³ We assume that these resources, along with any number of other publicly available resources that we have not specifically identified or that may arise in the future, will assist applicants' and licensees' employees and their existing technical contractors in identifying and implementing appropriate security controls without needing specialized cybersecurity expertise. Thus, the Commission believes our proposals to the submarine cable rules to protect national security and law enforcement interests as well as our streamlining proposals can be implemented by small entities without being overly burdensome.

40. To assist in the Commission's evaluation of the economic impact on small entities, as a result of actions that have been proposed in the *Notice*, and to better explore options and alternatives, the Commission has sought comment from all interested parties. In particular, the Commission seeks comment on whether, and how, any of the burdens associated with the filing, recordkeeping and reporting requirements described above and in the *Notice* can be minimized for small entities. Additionally, the Commission seeks comment on whether the costs associated with our proposed requirements can be alleviated for small entities. The Commission expects to more fully consider the economic impact and alternatives for small entities following the review of comments filed in response to the *Notice*.
