

UiPath™ Insights

RPA analytics to keep your automation program on track.

UiPath Insights is an RPA analytics solution that enables your business to track, measure, and manage the performance of your entire automation program — so you can scale your automation journey to the next level.

What's the true impact of RPA on your business?

Measure RPA Performance

Calculate Business Impact & ROI

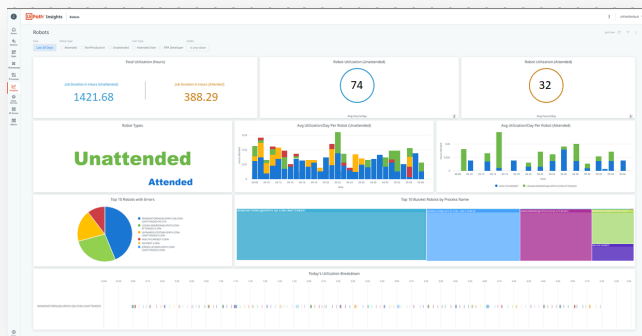

Shareable Reports

Program-wide Transparency

Start measuring so you can start improving.

Measure the Performance of RPA Operations

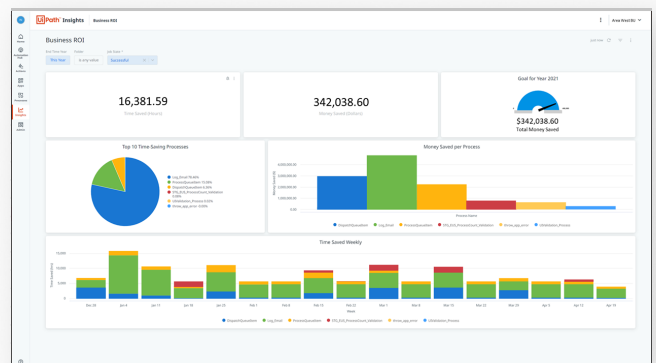

Situational awareness of your RPA operations is critical to being able to measure and analyze everything from Robot and process performance, to transactions and exceptions.

Start with the Robots, Queues, and Processes dashboards to get deeper visibility into your RPA operations.

Calculate RPA's Impact On Your Bottom Line

Your business and processes require unique KPIs to define success. With Insights you can fully customize the way that you calculate and align your automation goals to the distinct needs of your business.

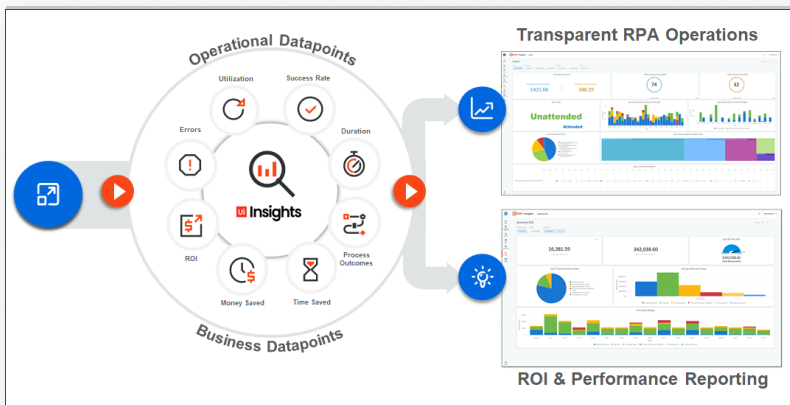

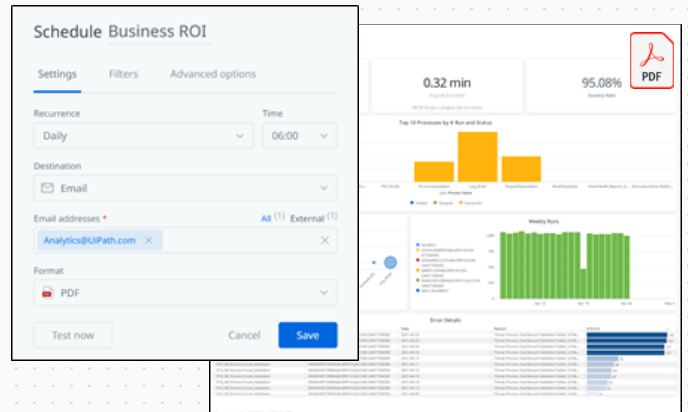

Start by tracking the time and money saved by each of your automations from the ROI dashboard.

Shareable Reports

The value of performance reporting should continue past a set of dashboards — it should drive strategic discussions and action across the entire enterprise. With Insights, you can easily share reports with key stakeholders and process owners.

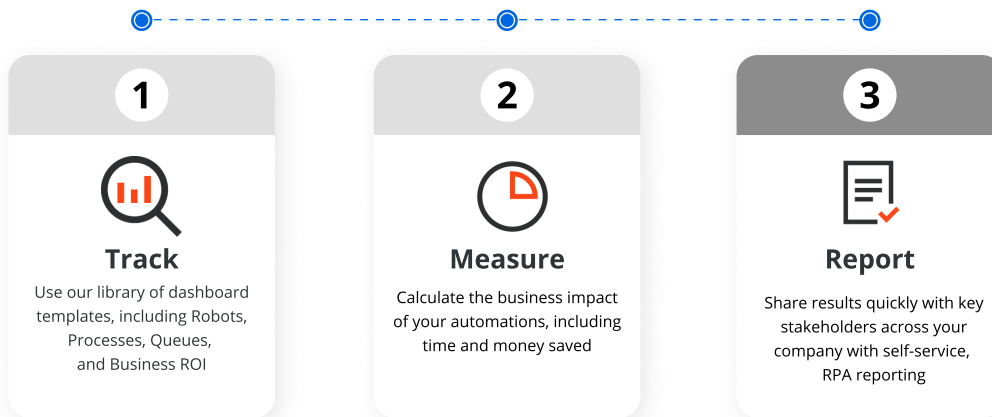

Start by creating a report based on one of our existing templates, then set it to be shared on a regular schedule.

Program-wide Transparency

RPA analytics are essential to improving and scaling an efficient automation program — from measuring robot performance to consistently reporting on the time and money saved per process.

How does Insights work?

A great automation program needs Insights beyond the bot.

UiPath Insights is available for Automation Cloud Enterprise and as an on-premises solution.
