Introducing iMazing 3 for macOS & Windows

Powerful iPhone management, redesigned for the future.

GENEVA, Switzerland, Apr. 24, 2024 — DigiDNA is excited to announce the release of iMazing 3 for macOS and Windows, a brand new version of the world's premier iPhone manager. iMazing 3 has been reimagined with a beautiful new user experience to complement its expansive feature set, which now includes support for connecting to Apple Vision Pro.

For nearly 20 years, the team behind iMazing has been providing capabilities beyond what Apple offers for working with iPhone, iPad, and iPod devices, as well as the data they contain, from a Mac or Windows PC.

iMazing 3 continues this trusted legacy as the most capable solution for working with Apple mobile devices locally, meaning no data leaves the computer.

Whether you're an individual, family, small business, or enterprise, iMazing provides unique features that improve the connection between your computer and mobile device, putting you in control of your data. This includes: message export, data transfer, device backups, device migration, data extraction, spyware analysis, and more.

As Apple's mobile device ecosystem has expanded, so have iMazing's abilities.

> **"In the eight years since we released iMazing 2, regular updates have improved functionality and expanded device and OS support. To achieve our vision for iMazing 3, we had to redevelop our approach, with a modern user interface and new codebase that will allow us to deliver features in the future that no one else can offer."**
>
> — Jérôme Bédat, CEO of DigiDNA.
