*tl;dr:* We present a new open-domain QA dataset, **BeerQA**, which evaluates models in a more realistic setting of non-predetermined hops of reasoning. We also present a multi-task Transformer model, **IRRR**, that iterates between retrieval, reading comprehension, and reranking to answer questions that require arbitrary steps of reasoning, which achieves performance on prior benchmarks and BeerQA.

## Background & Main Contributions

Current open-domain QA research is dichotomized into **single-hop** and **multi-hop** datasets and models.

	Single-hop	Multi-hop
Datasets	SQuAD Open TriviaQA Natural Questions ...	HotpotQA QAngaroo
Models	DrQA Dense Passage Retrieval Sparse Transformer Matching ...	GoldEn Retriever Question Decomposition Multi-hop DPR ...

But whether a question is **single-hop** or **multi-hop** is often difficult to determine just by looking at the question itself, because it is highly **context-dependent!**

Facebook, Inc. was founded in Cambridge, <b>Massachusetts</b> .	<b>Question:</b> In which U.S. state was Facebook founded?	Facebook, Inc. was founded in a Harvard dorm room. Harvard University is located in <b>Massachusetts</b> .
<b>Matthew Perry</b> is the youngest among the six main cast members of Friends.	<b>Question:</b> Which main cast member of the TV show <i>Friends</i> is the youngest?	<i>Friends</i> ' main cast include Jennifer Aniston, Matthew Perry, ... Jennifer Aniston (born Feb 11, 1969) ... <b>Matthew Perry</b> (born Aug 19, 1969) ...

**Our main contributions:** a dataset and a model for more realistic, varying-hop open-domain QA

### BeerQA

- SQuAD + HotpotQA “time-traveled” to 2020
- 500+ test questions requiring 3+ Wiki pages to answer

### IRRR: Iterative Retriever, Reader, and Reranker

- Open-domain QA with varying hops in a single multi-task Transformer model
- Competitive performance + explainable reasoning

### BeerQA

We combine SQuAD, HotpotQA, and 500+ newly annotated 3+ hop test questions on a 2020 version of the English Wikipedia to construct a new dataset.

SQuAD
<ul style="list-style-type: none"> <li>100k questions</li> <li>On Wikipedia passages from <b>2016</b></li> <li>Passages taken <b>across entire pages</b>, from <b>a small number of popular pages</b></li> <li>Each question requires <b>one</b> Wikipedia page to answer</li> </ul>

HotpotQA
<ul style="list-style-type: none"> <li>113k questions</li> <li>On Wikipedia passages from <b>2017</b></li> <li>Passages taken from <b>introductory paragraphs</b> in a <b>large number of pages</b></li> <li>Each question requires <b>two</b> Wikipedia pages to answer</li> </ul>

Find every paragraph in a 2020 version of the English Wikipedia (sometimes the text has been significantly paraphrased or the world has changed too much that this is not always possible!)

Filter out paragraphs that don't contain the answer

### 3+ hop challenges

530 test-only questions

### SQuAD-2020

~76k questions

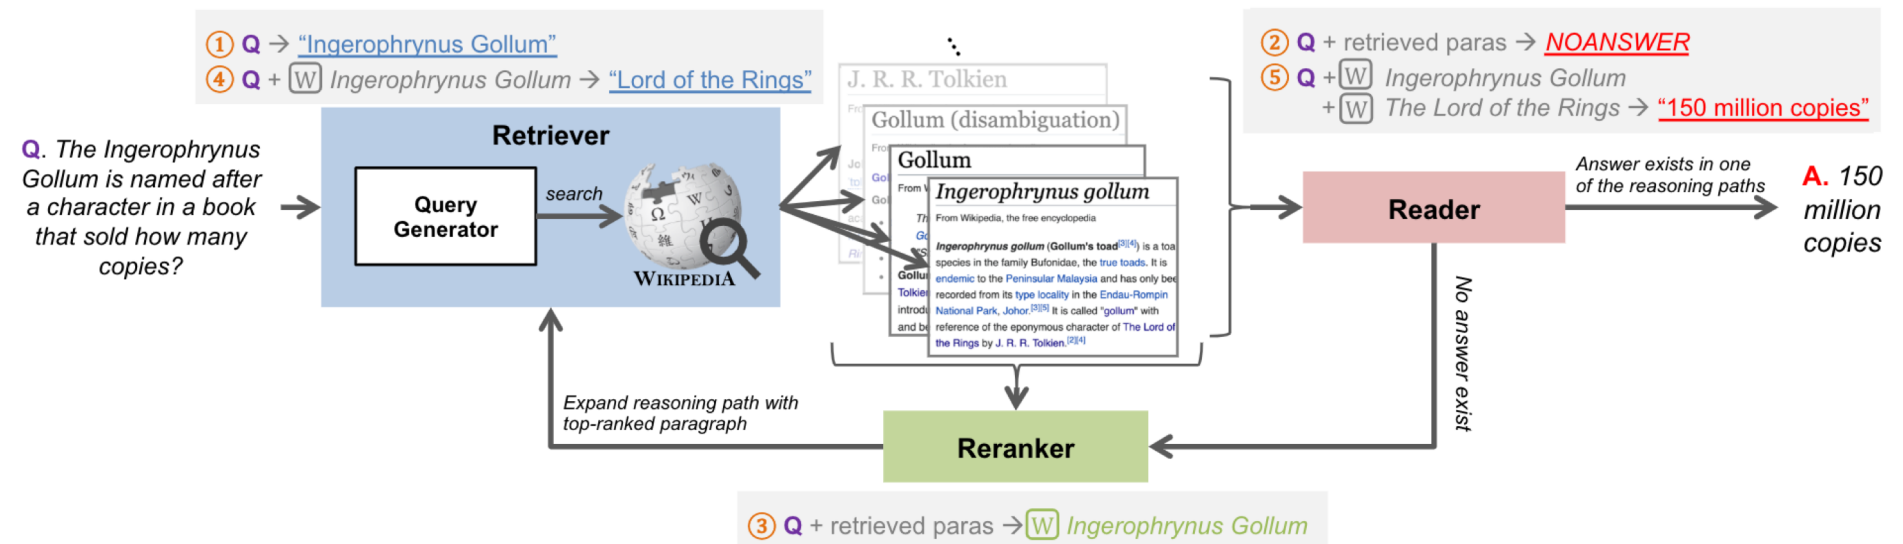

### HotpotQA-2020

~87k questions

**BeerQA:** ~163k questions of varying reasoning steps

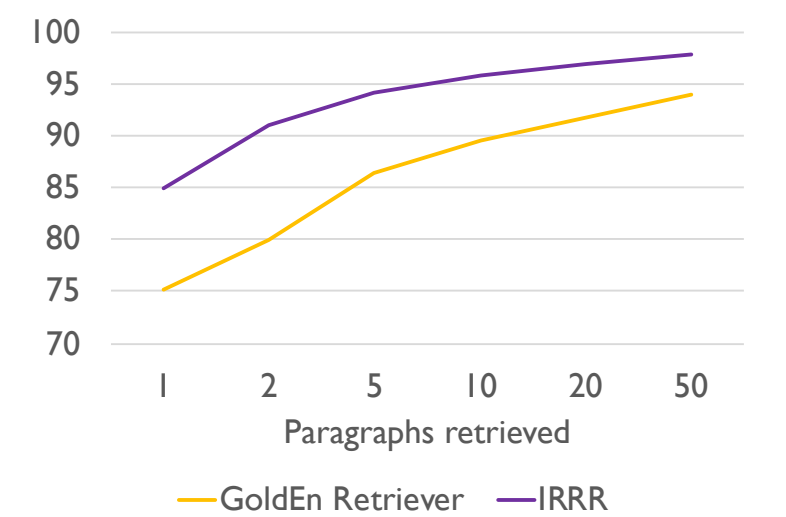

## IRRR: Iterative Retriever, Reader, and Reranker

### Retriever(Question, retrieved docs) → Natural language queries

- Prior work restrict queries to be substrings of “question + concatenated retrieved docs”
- We expand to **arbitrary subsequences** and propose an algorithm to find good ones for retriever training in  $O(n)$  time

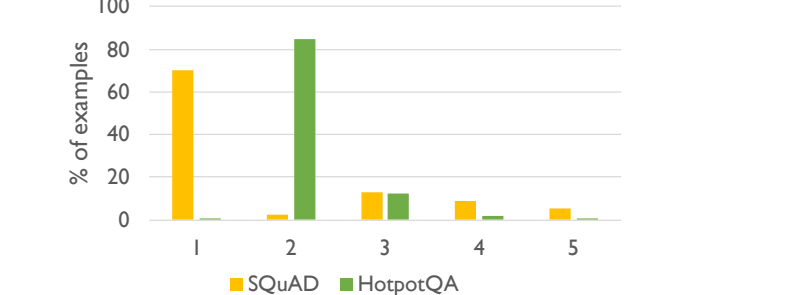

Recall of “Paragraph #2” (%)

### Reader(Question, retrieved docs) → Span answer/yes/no/NOANSWER

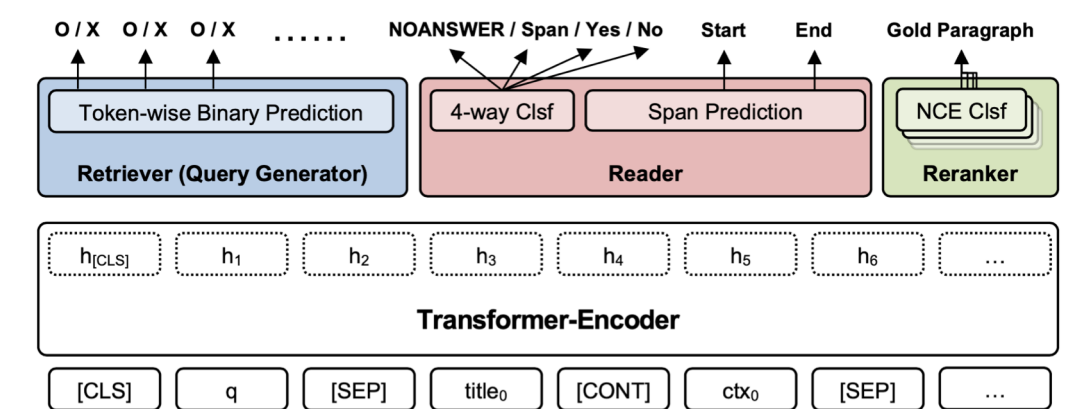

- Dynamically stops the iterative process when an answer can be predicted

Reasoning steps / example

### Reranker(Question, prev retrieved docs, newly retrieved docs) → Best newly retrieved doc to append to the reasoning path

- Contrastive loss between the gold paragraph and top retrieved candidates
- Augmented reasoning paths during training

## Experiments

### Setup

	Train	Test
Benchmark	SQuAD'16 HotpotQA'17	SQuAD'16 HotpotQA'17 3+ hop
Benchmark+	SQuAD'16 HotpotQA'17	SQuAD'16 HotpotQA'17 3+ hop
New benchmark	SQuAD'20 HotpotQA'20	BeerQA

### Benchmark Results

### Analysis

Question	The <u>Ingerophrynus gollum</u> is named after a character in a book that sold how many copies?
Step 1 (Non-Gold) Query	Ingerophrynus is a genus of true toads with 12 species. ... In 2007 a new species, “Ingerophrynus gollum”, was added to this genus. This species is named after the character Gollum created by <u>J. R. R. Tolkien</u> . <u>Ingerophrynus gollum</u> book sold copies <u>J. R. R. Tolkien</u>
Step 2 (Gold) Query	Ingerophrynus gollum (Gollum's toad) is a species of true toad. ... It is called “gollum” with reference of the eponymous character of <u>The Lord of the Rings</u> by <u>J. R. R. Tolkien</u> . <u>Ingerophrynus gollum</u> character book sold copies <u>J. R. R. Tolkien</u> true <u>Lord of the Rings</u>
Step 3 (Gold) Answer/GT	The Lord of the Rings is an epic high fantasy novel written by English author and scholar <u>J. R. R. Tolkien</u> . ... is one of the best-selling novels ever written, with <u>150 million</u> copies sold. <u>150 million</u> copies

IRRR
