

Calculating the Eco-Points

For the environmental rating of passenger cars Topten uses a system which has been developed by the institute for research in energy and environment in Heidelberg (Institut for Energie- und Umweltforschung, IFEU). It has last been updated in 2011, according to recent scientific findings. The four categories of environmental effects contribute to the calculation of the Eco-points as follows:

60% Category A: CO₂ – global warming

20% Category B: noise emissions

15% Category C: air pollutants affecting human health

5% Category D: nature pollution

Category A: CO₂ – global warming

A car's CO2-emissions are rated here with a linear function. For CO_2 -emissions of 60 grams per kilometer 10 points are granted, while 180 grams of CO_2 per kilometer score 0 points. Vans that emit more than 180 grams get negative points in this category. The precise formula for calculating the category A Eco Points for cars with CO_2 -emissions of 60 g/km or more is:

Eco Rating points = (180 - x)*0.0833, x = CO_2 -emissions in g/km

Category B: noise emissions

The rating is based on a model's indications of the type test. The scale runs linearly between 10 points for 65 dB(A) and 0 points for 75 dB(A) and more.

Categories C and D

These categories are all rated according to the same scheme. A car's score in these categories is defined by its emission class (Euro 5 or Euro 6), according to the following table:

Emission class	Points	
	C: air pollutants	D: nature pollution
Euro 5 gasoline	9.35	7.6
Euro 5 gasoline, with direct fuel injection	7.48	7.6
Euro 5 diesel	6.4	2.8
Euro 6 gasoline	9.35	7.6
Euro 6 gasoline, with direct fuel injection	7.48	7.6
Euro 6 diesel	8.4	6.8

Cars with natural gas are treated like gasoline cars, because both use an Otto engine

Total Eco points

For a car's total score (Eco points) the scores of the single environmental effect categories are weighted, added up and multiplied by 10:

Eco points = 10*(score(cat.A)*0.6 + score(cat.B)*0.2 + score(cat.C)*0.15 + score(cat.D)*0.05)

The minimum score necessary for Topten can be found in Topten's Selection criteria (<u>www.topten.eu</u> > Cars > Selection criteria).
