

ESG Book announces strategic partnership with Vyzrd

Collaboration combines ESG Book's sustainability data with Vyzrd's Climate Risk and ESG analytics platform.

- **With almost 200,000 corporate disclosures, ESG Book's cloud-based platform offers ESG and climate data, company and portfolio-level scores, and analytical tools.**
- **Vyzrd's Climate Risk Solutions quantify the financial implications of physical and transition risk to forward-looking company enterprise valuation, via their proprietary Climate Forward (Clif™) metrics.**
- **Leveraging ESG Book's data, Vyzrd's ESG solutions quantify the enterprise valuation impact from ESG integration.**
- **Partnership will enable ESG Book's and Vyzrd's clients to additionally support regulatory disclosures and develop value-centric net-zero plans.**

21 August 2024 – London and Sydney – ESG Book, a global leader in sustainability data and technology, today announced a strategic partnership with Vyzrd, a leading Climate Risk and ESG intelligence platform.

Financial institutions, corporates and consultants are increasingly looking to establish the crucial link between sustainability data and the financial performance of a company to support value accretive strategic and investment decision-making. This addresses the growing demand to quantify the financial impact of climate change and net-zero transition policies to enable effective investment planning, climate risk management, and transition risk mitigation strategies.

Such demand is driven by a combination of investor pressure, mandatory climate and sustainability disclosures, and increased understanding that climate risk is a financial risk that needs to be proactively managed. This was underscored in April 2024 when the Basel Committee on Banking Supervision added climate risk to the Basel Core Principles, the standard for establishing a sound foundation for the regulation, supervision, governance and risk management for the global banking sector.

The new partnership combines ESG Book's industry-leading sustainability data with Vyzrd's unique portfolio of software and data solutions designed to support advanced climate risk analytics, effective Net Zero transition planning, regulatory disclosure, and improved ESG integration.

On today's announcement, Justin Fitzpatrick, CEO of ESG Book said: "Access to high quality climate and ESG data is critical for clients to conduct climate risk assessments, meet regulatory requirements, and deliver more sustainable outcomes through their investments. We are delighted to partner with Vyzrd to provide high quality solutions that enable financial market participants to manage and navigate the increasing complexities of sustainable finance."

Sunil Rana, Founder and CEO of Vyzrd said, "Through this partnership we're bringing industry-leading solutions that will equip corporates and financial institutions with the insights and tools they need to drive ESG value creation and manage climate risks effectively in an increasingly complex regulatory environment. From portfolio analysis and investment decisions to due diligence, corporate sustainability planning, and regulatory disclosures, our integrated approach supports clients across their varied needs."

ESG Book offers a wide range of sustainability related data, scoring, and technology products that are used by many of the world's largest investors, financial institutions, and corporates. Combining market-leading sustainability and climate data with a SaaS-based platform that provides access to almost 200,000 corporate disclosures and analytics, ESG Book directly connects companies with financial institutions. The firm's cloud-based sustainability dashboard offers best-in-class ESG performance management, peer benchmarking, and regulatory compliance solutions.

Vyzrd is an industry leading SaaS analytics platform in Climate Risk and ESG integration intelligence, seamlessly integrating financial modelling, organisational analysis, and climate scenario evaluation. Vyzrd's Gen-AI enabled risk analytics engine combines climate, industry, and company level sustainability and fundamental data into a range of financial analysis. This empowers businesses with actionable insights for strategic decision-making, robust investment risk analysis, and comprehensive Net Zero planning.
