

INNOVATION AWARD

Haematology Society of Australia and New Zealand

Innovation award: The Myeloma Specialist Practice Network (HSANZ M-SPN)

The Myeloma Specialist Practice Network (M-SPN) of the Haematology Society of Australia and New Zealand (HSANZ) Nurses Group has used myINTERACT for 4 years to proliferate key resources and tools for its members.

With an educational grant from Celgene/BMS and working closely with myINTERACT's product specialists, HSANZ M-SPN developed MyeTxScheduler, a tool for clinicians to create treatment schedules for help patients to adhere to treatment protocols. The tool is pre-populated with standard myeloma treatment schedules based on eviQ protocols but with flexibility to adapt to individual patient needs. This is then printed and provided to patients.

There is being rolled out in stages across Australia and NZ with new features incorporated based on user feedback. There is also interest from Multiple Myeloma groups in other regions to adapt and share the use of MyeTx.

“We were blessed to have met the team at myINTERACT just as we established as a specialist nurses group. Their individual passion to help us achieve our goals combined with an innovative communication platform has allowed us to build myeloma specific information portals that support our practice... The partnership between our group and myINTERACT has enabled us to reach more members and ahead, share our resources with MM specialist nurses in other regions. The myINTERACT team take our ideas and make them happen, its a win win partnership.”

- Tracy King, Chair of the HSANZ Myeloma Special Practice Network (M-SPN)
