Message from the Editor-in-Chief

Anatomia is a new open access journal (ISSN: 2813-0545), published by MDPI, containing peer-reviewed research articles, critical reviews, communications and technical notes that deal with all aspects of anatomical sciences. There is no restriction on the maximum length of the papers published in this journal, thus giving authors the opportunity to provide their comments and experimental data in as much detail as possible. I am proud to emphasize how the journal is supported by a qualified international Editorial Board. Please note that your submission may deal with various fields of anatomy (including history and education), in order to cover the entire ever-growing field of anatomy. Independent submissions are accepted at any time, and we are committed to processing and publishing papers as soon as possible. In fact, published manuscripts are released on the internet immediately after their acceptance.

Editor-in-Chief

Prof. Dr. Francesco Fornai

Aims

Anatomia (ISSN 2813-0545) is an international, peer-reviewed, open access scientific journal, which welcomes original articles, reviews, communications and opinions that cover every topic related to the field of anatomy, including novel methods in static, functional and clinical anatomy. The journal covers multidisciplinary approaches beyond morphological techniques, including the biochemistry of the cell and molecular and cellular biology, with outcomes strongly related to anatomical findings. The journal strongly encourages publications within novel research fields, such as how gene expression modifies or maintains anatomical structures. In vitro, in vivo and ex vivo studies on humans and animal cells, tissues and organs are welcome. Anatomical studies based on lesions, regeneration and transplants, modern imaging techniques and comparative and veterinary anatomy are fully considered. At the same time, the journal looks back to the glorious past of this discipline and focuses its attention on the history of anatomy to rediscover a long tradition of morphological investigations. Research proposals and innovative ideas are welcome, and there are no restrictions regarding paper length.

Scope

Topics of interest include, but are not limited to:

- Organogenesis
- Gross anatomy
- Topographical and surface anatomy
- Surgical anatomy
- Structural anatomy
- Functional anatomy
- Clinical anatomy
- Developmental morphology
- Comparative anatomy
- Evolutionary anatomy
- Human paleontology
- Anthropological anatomy
- Anatomy through imaging
- Engineering anatomy
- History of anatomy
- Anatomical museology
- Artistic anatomy
- Anatomical education

The anatomical districts include:

- Anatomy of the tegumentary system
- Anatomy of the endocrine system
- Anatomy of the digestive system
- Anatomy of the respiratory system
- Anatomy of the genito-urinary system
- Anatomy of the locomotor system
- Neuroanatomy

Author Benefits

Open Access

Unlimited and free access for readers

No Copyright Constraints

Retain copyright of your work and free use of your article

Thorough Peer-Review

Discounts on Article Processing Charges (APC)

If you belong to an institute that participates with the MDPI Institutional Open Access Program

No Space Constraints, No Extra Space or Color Charges

No restriction on the maximum length of the papers, number of figures or colors

Rapid Publication

A first decision is provided to authors approximately 19.8 days after submission; acceptance to publication is undertaken in 5.6 days (median values for papers published in this journal in the first half of 2024)
