## Predictive Services Discussion:

Hot temperatures with low afternoon relative humidity will continue today across eastern Oregon, the northern and western Great Basin, northern California, and northern Rockies, but temperatures will cool in Washington behind a dry cold front. West-northwest winds will develop along and east of the Cascades and into the Idaho Panhandle as the ridge continues to flatten, with gusty and dry downslope winds are expected in north-central Montana ahead of the cold front. Moisture will be slightly more limited in the northern Great Basin this afternoon, with very isolated mainly dry thunderstorms possible in far northwest Nevada into southeast Oregon, central Idaho, northwest Wyoming, and southwest Montana. Moisture from the monsoon is expected to move northward overnight and interact with cold front over southwest and central Idaho after midnight tonight with isolated dry thunderstorms likely to develop.

Isolated to scattered wet thunderstorms are likely farther south along the eastern Sierra into the central and southern Great Basin, Colorado, and Southwest. Widespread showers and thunderstorms will develop along a stalled front from central and south Texas to the Mid-Atlantic coast, with scattered showers and thunderstorms across much of the Midwest and Northeast as well. Alaska will continue to be hot and dry today, with isolated thunderstorms possible over southeast Alaska.
