

SCORM wrapper for DITA

*Hal Trent
Senior Consultant
Comtech Services, Inc.*

How we arrived at the SCORM Wrapper?

- DITA2SCORM is valid output for LMS, but open source LMS functionality is limited
- Found a few tools that can handle SCORM output by placing output in a custom wrapper (SCORM Cloud)
- Why can't we use webhelp, tocJS, or another tool that already exists?
 - AND...keep the out of the box functionality the DITA-OT offers

SCORM Wrapper

- Current demo sits on-top of Oxygen webhelp, but could sit on-top of other webhelp environments
- Webhelp wrapper controls content and quiz progress
 - Learning content is transformed to HTML page
 - Learning quizzes controlled by javascript
- SCO Javascript API bridges LMS to wrapper
 - Interactions are stored locally/cookies and then pushed to LMS
