Chapeau

Achieve the consolidation of democratic values through active citizenship processes through the use of artificial intelligence, virtual reality and augmented reality

Chapter I. Sustainable development and financing for development

Financing universal actions aimed at building citizenship and democratic development

Chapter II. International peace and security

Not included

Chapter III. Science, technology and innovation and digital cooperation

Develop actions and innovation programs in the construction of citizenship and democratic development

Chapter IV. Youth and future generations

Development of courses, video games and activities in multicultural formats and in various languages aimed at the training, motivation and participation of young people in the construction of democratic values and development. (We have developments and experiences to show)

Social and cultural fragmentation has been a structural cause of the absence of a massive and powerful process of construction and citizen inclusion in freedom. Today, technology, with its attractiveness and massiveness, opens a window of opportunity that we are ready to use to access children and young people, with attractive and useful tools, in a playful environment to allow them to appropriate the basic knowledge and skills for the good citizen performance, for the expansion and validity of their rights and freedoms, and to hinder abuses that lead to exploitation and/or trafficking in persons.

Ignorance and indifference constitute the main basis of the worst social and political vices that degrade civic culture, personal dignity and development, promoting, on the contrary, subjugation and human trafficking.

All groups excluded, or partially marginalized from development processes, will be the recipients of the tools to be developed.

1. Description of the action:

1.1. Generation of spaces for dialogue between civil society organizations and the competent authorities, generating diagnostic instruments, community and social organization through the use of technology;

1.2. Definition and implementation of advocacy strategies in the modernization of public policies and legislation at national and local level that incorporate international standards to generate new formal instruments of citizen inclusion and education for equal rights and opportunities.

1.3. Generation of appropriate programs, mechanisms and action protocols with modernized policies and legal frameworks; as well as the dissemination and implementation of existing ones, implementing technological resources and video games that will promote inclusion and citizen participation.

1.4. Training of personnel from public institutions in charge of implementing public policies and modernized legislation, through the massive use of cutting-edge technological tools in a fun environment and facilitation of training tasks.

1.5. Training for civil society organizations, defenders and victims' families on safety and protection, including the offer of adequate equipment, as well as any other type of preventive activities; technological resources will be provided to the most vulnerable populations to facilitate their access to the platforms designed and implemented for the knowledge of rights, freedoms and responsibilities in the democratic community.

1.6. Preparation and public dissemination of context reports on rights, freedoms and restrictions due to violence, monitoring of measures taken by authorities to prevent, control and repair violations of rights and freedoms and impact on democratic development. In this field, a small monitoring system will be designed and developed for the construction of indicators on violations of rights and freedoms applicable at the municipal level.

1.7. Financial aid to third parties, with a differentiated gender approach. A system of prizes and another of small subsidies will be generated for local community organizations that will constitute the Social and cultural fragmentation has been a structural cause of the absence of a massive and powerful process of construction and citizen inclusion in freedom. Today, technology, with its attractiveness and massiveness, opens a window of opportunity that we are ready to use to access children and young people, with attractive and useful tools, in a playful environment to allow them to appropriate the basic knowledge and skills for the good citizen performance, for the expansion and validity of their rights and freedoms, and to hinder abuses that lead to exploitation and/or trafficking in persons.

Ignorance and indifference constitute the main basis of the worst social and political vices that degrade civic culture, personal dignity and development, promoting, on the contrary, subjugation and human trafficking.

All groups excluded, or partially marginalized from development processes, will be the recipients of the tools to be developed.

1. Description of the action:

1.1. Generation of spaces for dialogue between civil society organizations and the competent authorities, at the federal, state and local level, generating diagnostic instruments, community and social organization through the use of technology;

1.2. • Definition and implementation of advocacy strategies in the modernization of public policies and legislation at the federal, provincial and/or local level that incorporate international standards to generate new formal instruments of citizen inclusion and education for equal rights and opportunities.

1.3. • Generation of appropriate programs, mechanisms and action protocols with modernized policies and legal frameworks; as well as the dissemination and implementation of existing ones, implementing technological resources and video games that will promote inclusion and citizen participation.

1.4. • Training of personnel from federal, provincial and local public institutions in charge of implementing public policies and modernized legislation, through the massive use of cutting-edge technological tools in a fun environment and facilitation of training tasks.

1.5. • Training for civil society organizations, defenders and victims' families on safety and protection, including the offer of adequate equipment, as well as any other type of preventive activities; technological resources will be provided to the most vulnerable populations to facilitate their access. to the platforms designed and implemented for the knowledge of rights, freedoms and responsibilities in the democratic community.

1.6. • Preparation and public dissemination of context reports on rights, freedoms and restrictions due to violence, monitoring of measures taken by authorities to prevent, control and repair violations of rights and freedoms and impact on democratic development. In this field, a small monitoring system will be designed and developed for the construction of indicators on violations of rights and freedoms applicable at the municipal level.

1.7. • Financial aid to third parties, with a differentiated gender approach. A system of prizes and another of small subsidies will be generated for local community organizations that will constitute the core of the territorial network that will be used both for the dissemination of the video game platform and technological apps that will be developed within the framework of the project, as for monitoring the results of the project in the territory and the monitoring system for violations of rights, freedoms and human trafficking.

2. Relevance of the action

One of the serious problems of democracy is the existence of millions of citizens who do not know that they are citizens. They are unaware of their rights, their freedoms, and their responsibilities of participation and control, so that the principles and values of democracy are transformed into tools for local and national development.

The proposed tools will drive a transcendent change based on the dissemination, awareness and appropriation of these instruments by children, young people and adults through technological instruments that facilitate access, dissemination and insertion of principles and values into all communities in the country. fundamental democratic rights for the exercise of human rights and for the suppression of abuses of various natures.

Chapter V. Transforming global governance

Generate courses, video games and activities in multicultural formats and in various languages, aimed at promoting values, processes and actions for global governance. Following the model mentioned in Chapter IV.
