**Modeling, recording, communicating
and interoperability of consent**

W3C - Data Privacy Controls and Vocabularies
Georg Philip Korg - georg@signatu.com

What is required to automate lawful processing of data in a network?

I want to know what's going on and I want control

Ending questions

- 3rd party decided to launch a new feature => is the existing consent valid???
- If yellow and red have different purposes - how to event get consent when there is no way to communicate with the subject?
- Subject withdraws consent => how is it communicated in network?
